Service Manual: GENERAL INFORMATION

DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > INTRODUCTION

> *WARNING: Before beginning any service procedure in this article, refer to health and safety warnings in this article. Failure to follow this instruction may result in serious personal injury.*

For additional information, refer to: Health and Safety Precautions .

This article describes and directs repair procedures specified by Ford Motor Company for the vehicle. Critical health and safety precautions are included. Anyone who deviates from these instructions risks compromising personal safety or vehicle integrity.

ARTICLE CONTENT

This service information is divided into articles. Article contents may include:

- Specifications
  - Fluid capacities, component specifications and torque values not covered in other procedures
- Description and Operation
  - Overview of the system, component locations, and system operation
- Diagnosis and Testing
  - Symptom charts, DTC charts and diagnostic tests
  - See the Diagnosis and Testing Information in this article
- General Procedures
  - Service adjustments, electronic programming and other special procedures
- Removal and Installation
  - Component removal and installation instructions
- Removal
  - Component removal instructions
- Installation
  - Component installation instructions
- Disassembly and Assembly
  - Component disassembly and assembly instructions

- Disassembly and Assembly of Subassemblies
    - Assembly disassembly and assembly instructions

IMPORTANT INFORMATION

General Information articles contains the following important information (including this article):

- Critical Health and Safety Precautions - service safety precautions applicable to the entire article. For additional information, refer to: Health and Safety Precautions .
- A Symbols Glossary - definitions of the action directed by each symbol. For additional information, refer to: Symbols Glossary .
- Diagnostic Methods - support information for diagnostics.

DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > WARNINGS, NOTICES AND NOTES

WARNINGS

Warnings provide information to avoid personal injury and to make sure service actions on critical safety systems are performed correctly. Warnings that apply to an entire system or service information article are located in Health and Safety Precautions .

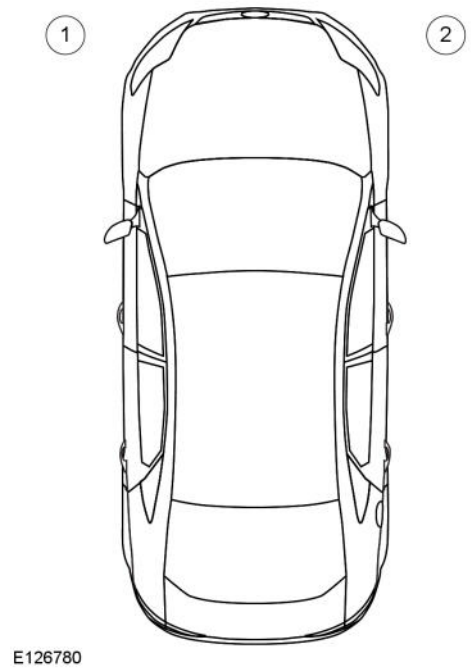
NOTICES (in some publications, CAUTIONS)

Notices provide information to avoid damage to the vehicle or a component.

NOTES

Notes provide information critical for a complete and effective repair.

Warnings, Notices, or Notes that apply to an entire procedure will be placed at the beginning of the procedure. Warnings, Notices, or Notes that apply to a single step are placed at the beginning of the step. Those that apply to a group of steps will be placed at the first step requiring it.

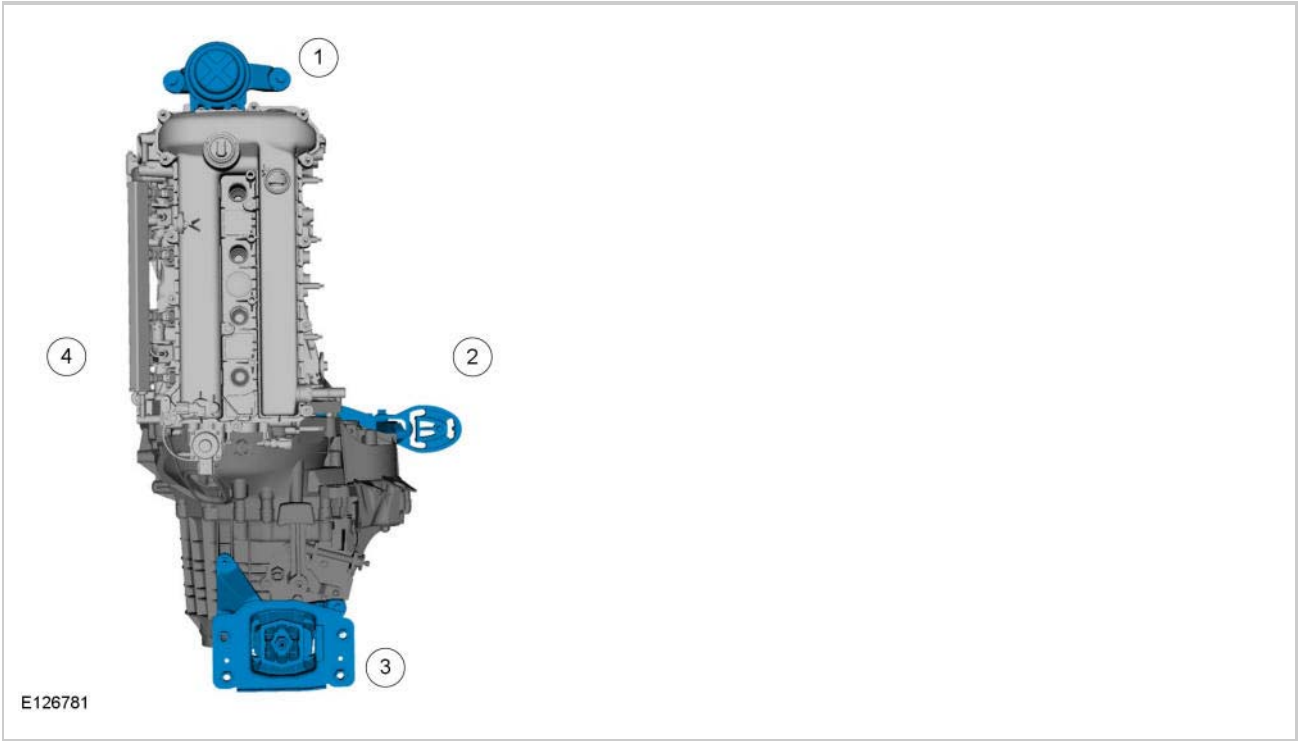


DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > SPECIFIED CHEMICALS OR MATERIALS

Throughout this service information, chemicals or materials are specified that must be used to properly complete a service procedure or diagnostic step. In the event a specific material is not readily available, a substitute material meeting the same specification may be used. Ford has not reviewed third party products for compliance with environmental, health or safety regulations and is not responsible for their use. Use of third party products is at your own risk. Additionally, such products may cause degraded performance, premature failures, and/or vehicle component damage. All chemicals or materials used for vehicle servicing should be checked for compliance with local environmental and health and safety regulations.

DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > LH AND RH DESIGNATIONS

All LH and RH designations are oriented from the driver's seat position looking forward.



Vehicle LH and RH definition

Item	Part Number	Description
1	-	LH (left-hand)
2	-	RH (right-hand)

All LH and RH engine designations are oriented from the flywheel position looking toward the crankshaft pulley.

Powertrain LH and RH definition

Item	Part Number	Description
1	-	Front
2	-	RH (right-hand)
3	-	Rear
4	-	LH (left-hand)

DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > STANDARD PRACTICES

The following rules apply, unless specified differently in the procedure:

FASTENERS

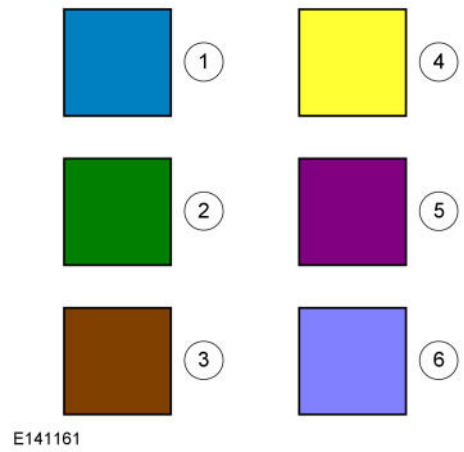
- Reuse standard fasteners.
- Replace fasteners with self-locking features.
    - Examples of fastener self-locking coatings or mechanical locking (with the locking features highlighted yellow) are shown in the illustration.
- Replace fasteners with torque angle specifications (those tightened a specified number of degrees).

Examples of self-locking nuts and bolts

Item	Part Number	Description
1	-	Completely coated self-locking bolt
2	-	Partially coated self-locking bolt
3	-	Self-locking bolt with a locking washer
4	-	Self-locking nut with a plastic locking insert
5	-	Self-locking nut with thread deformation (3 indentations)
6	-	Self-locking nut with thread deformation (to oval shape)
7	-	Self-locking nut with integrated locking ring

SEALS AND GASKETS

Replace seals and gaskets, unless specified differently in the procedure.



EXTERIOR TRIM PARTS

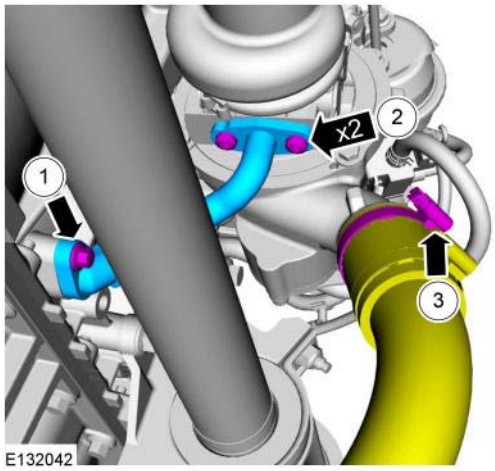
Replace exterior trim parts fastened with glue or adhesive tape, unless specified differently in the procedure.

DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > MECHANICAL PROCEDURES

Illustrations in this service information may be used instead of written step instructions. Color-coding (see color scheme illustration) is used to communicate the required step action or actions. Service action icons may be used to add information regarding the required action. For additional information, refer to: Symbols Glossary .

Illustration Color-coding

Item	Part Number	Description
1	-	Blue - Target or primary component to be removed/installed (or disassembled/assembled).
2	-	Green - Components that need to be removed prior to or installed after the target/primary.
3	-	Brown - Components that need to be removed prior to or installed after the target/primary.
4	-	Yellow - Components to be set aside for access, but not removed. Also highlighted areas to inspect or adjust.
5	-	Magenta - Electrical connectors and fasteners such as nuts, bolts, clamps, or clips to be: detached, attached, loosened, moved, removed or installed.
6	-	Pale Blue - Special tool(s), general equipment, or common tools used in an uncommon way.

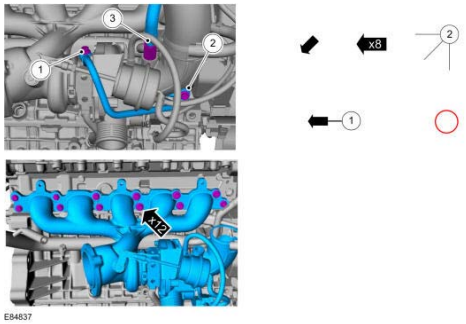


Other color coding

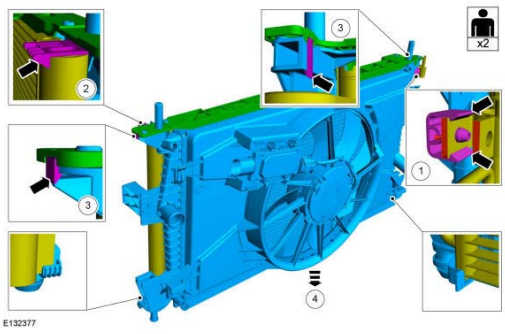
- Alternating Blue and White
  - Chemical, adhesive or sealer apply areas
- Red
  - Sectioned or cut-away areas
- Grey
  - Background components shown for location information

ILLUSTRATION TASK SEQUENCE

Components that must be removed or installed in a specific sequence are identified with a numbered callout. Any associated step text is numbered accordingly.



Simple procedure example showing color-coding and task sequence.

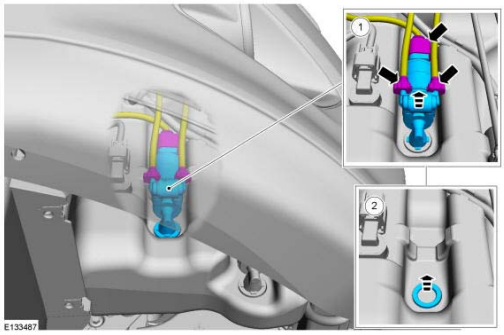


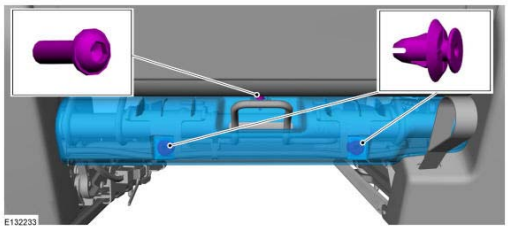
Black arrows are used to draw attention to components (usually fasteners). Arrows with multiples specified (here, x2) identify an identical number of fasteners or items. Callouts (numbers inside circles) show a required sequence or tightening torque.

In the illustration, the callouts indicate the removal sequence, **which is reversed for installation** . The yellow coloring of the hose indicates it is to be positioned aside (not removed). Two identical (magenta-colored) fasteners are indicated by the x2 arrow. The fasteners in this illustration require different torques (same torque for the x2 fasteners) so numbered callouts are used to identify them with torque values in the associated step text. The (magenta-colored) hose clamp is another fastener to be removed.

Examples of fastener removal sequence and an identical service action for 12 fasteners. Other possible symbols are shown on the right.

Example of fastener sequence information with two persons required for the service action

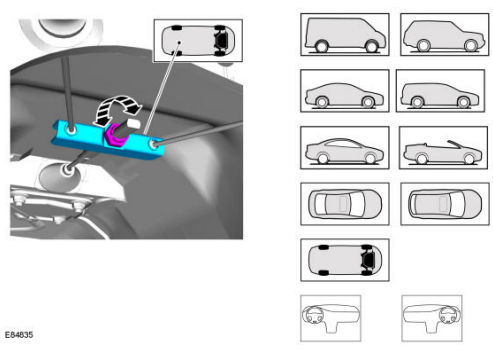


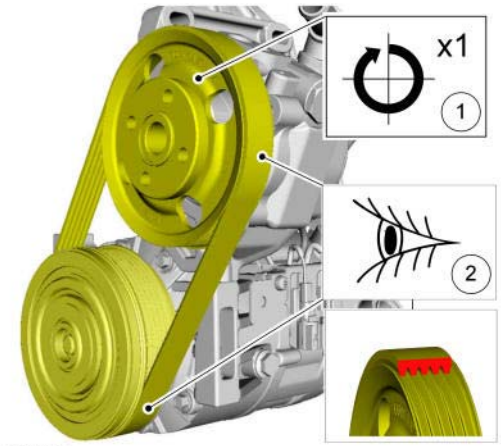


HIDDEN DETAILS

Separate detail boxes or transparent components may be used to show hidden items in an illustration.

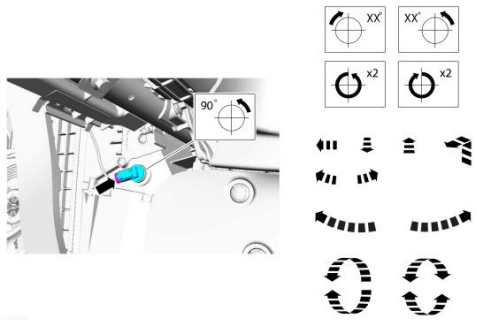
Example of hidden fastener information



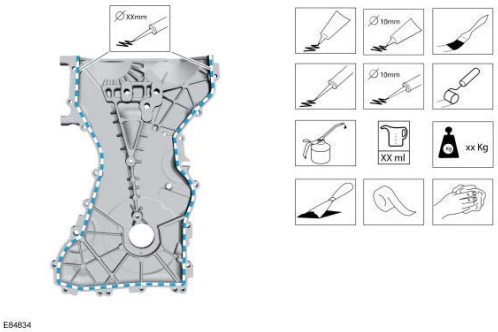


SERVICE ACTION ICONS

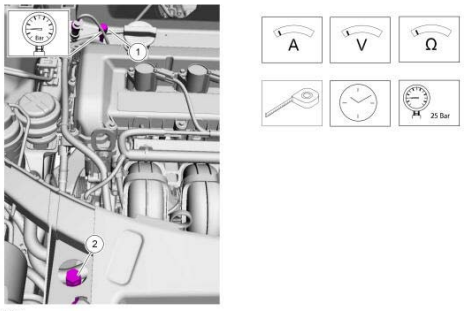
Service action icons may be used to add information regarding the required action. For additional information, refer to: Symbols Glossary .



Location symbols show the location of a component or system on the vehicle.

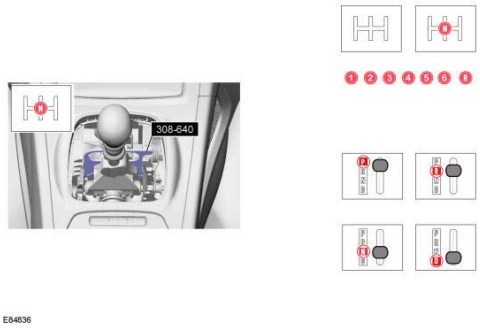


Example of service action icons pointing to highlighted components.

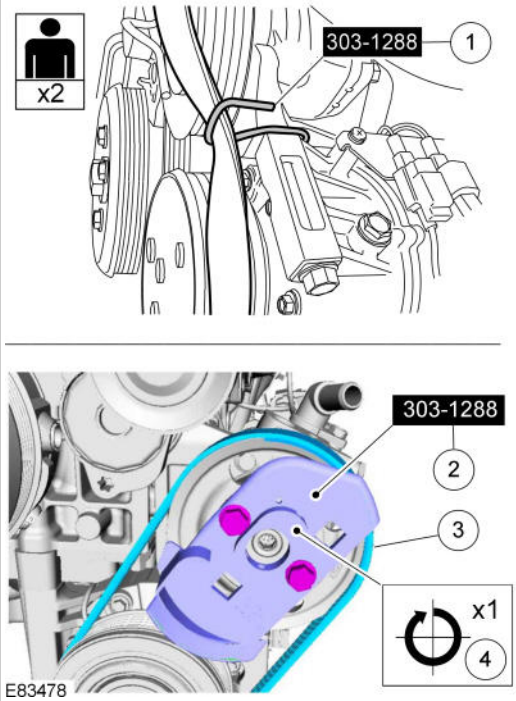


Movement arrows and service action icons show three dimensional or rotational movements.

Color-coding and service action icons show application of sealer, lubricant, weight, tape or cleaning liquid.

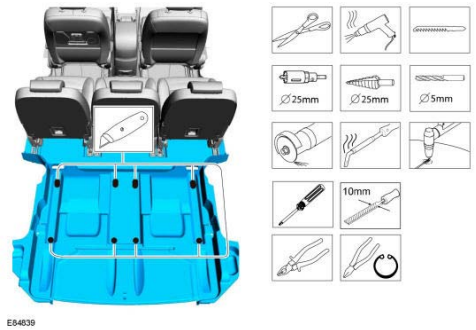


Measurement symbols provide the information required to perform a specific measurement. These symbols may include specific values.



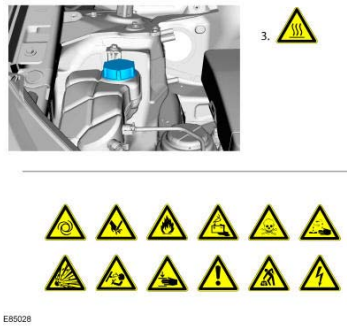
SPECIAL TOOLS, EQUIPMENT, MATERIALS AND TORQUE VALUES

When Ford special tools are required for the procedure, the tool and tool number are shown in an illustration. Special tool numbers, general equipment, materials or torque values for the procedure step are shown in the text steps.

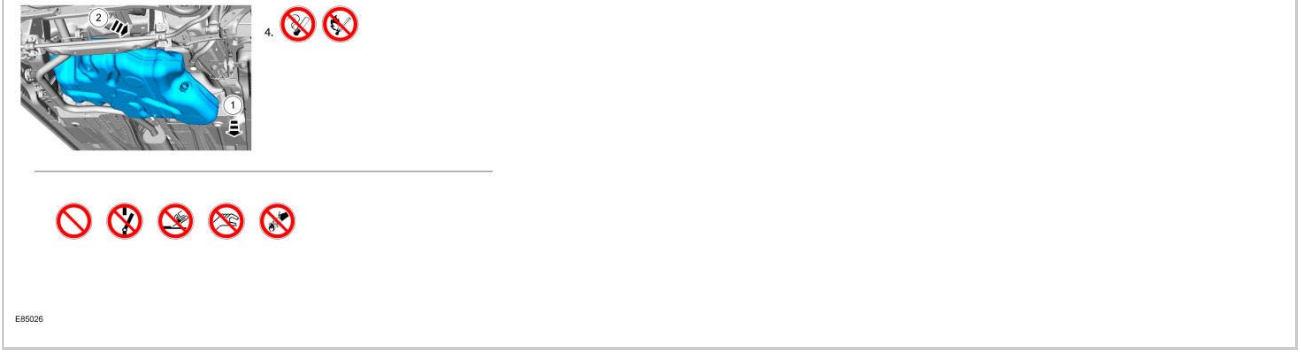


Example of special service tool and symbol used to hold the gear shift in the required gear position. Other possible symbols are shown on the right.

Example of two illustrations used together with sequence steps, service action icons and special service tools



Tool symbols direct the use of standard tools. The tool size or dimension may be specified.



HEALTH AND SAFETY SYMBOLS

Some procedures may contain health and safety symbols that are associated with a specific service action. For additional information, refer to: Symbols Glossary . Always read and understand all health and safety precautions before beginning any procedure. For additional information, refer to: Health and Safety Precautions .

ISO warning symbols may be used to indicate potential hazards.

These symbols prohibit various hazardous actions

These symbols direct the use of personal protection equipment

DESCRIPTION AND OPERATION > ABOUT THIS SERVICE INFORMATION > DIAGNOSIS AND TESTING INFORMATION

ELEMENTS OF DIAGNOSIS AND TESTING

Diagnosis and Testing may include:

- Preliminary Inspection
    - In older service information, Inspection and Verification
- Symptom Chart
- DTC Chart
- Pinpoint Tests
- Component Tests

Some diagnostics may be contained in Symptom Based Diagnostics. Some engine performance and emission diagnostics may be placed in a separate "Engine Controls" article.

MODULE NAMES MATCH THE DIAGNOSTIC SCAN TOOL

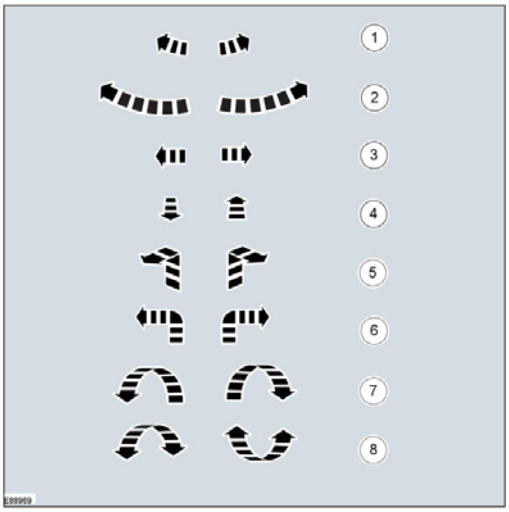
Module names and PID names in this service information match the Ford diagnostic scan tool: IDS.

The same diagnostic scan tool module name is found in some DTC definitions (for example, U024B Lost

Communication with Seat Control Module "G").

MODULE DESCRIPTIVE NAMES

A descriptive name is sometimes added to the diagnostic scan tool name to clarify module function. The descriptive name will be followed by the diagnostic scan tool acronym in brackets.



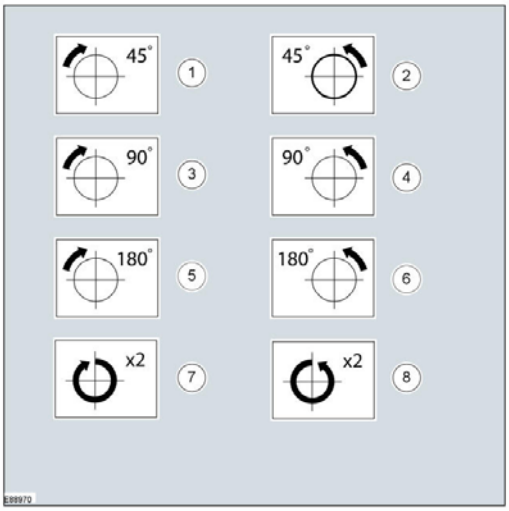
- Example: "Driver Active Motion Seat Module [SCMG]".
- Driver Active Motion Seat Module is the descriptive name added to clarify the function of the SCMG.
- The SCMG acronym is used by diagnostic scan tool, defined as "Seat Control Module G".

DESCRIPTION AND OPERATION > SYMBOLS GLOSSARY

Symbols are used inside the graphics and in the text area to enhance the information display.

Movement Symbols

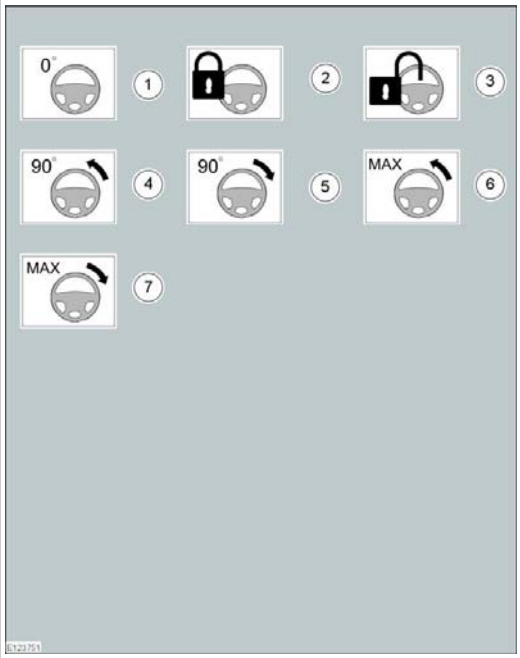
Movement symbols provide detailed information to a required component movement. These component movements can be rotational or 1-3 dimensional movements.



Item	Part Number	Description
1	-	Minor component movement clockwise/counterclockwise
2	-	Major component movement clockwise/counterclockwise
3	-	Component movement to the left/right/up/down
4	-	Component movement towards/away
5	-	3 dimensional component movement
6	-	2 dimensional component movement
7	-	3 dimensional component rotation

8	-	3 dimensional component cycling

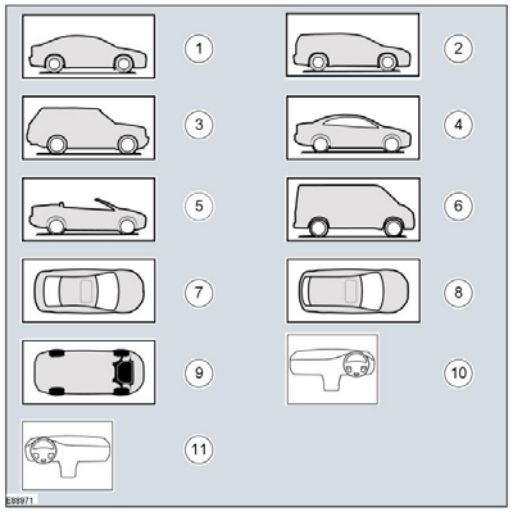
Turn Symbols



Turn symbols are used to provide further information on the direction or angle of component turns.

Item	Part Number	Description
1	-	Turn the component clockwise through 45 °
2	-	Turn the component counterclockwise through 45 °
3	-	Turn the component clockwise through 90 °
4	-	Turn the component counterclockwise through 90 °
5	-	Turn the component clockwise through 180 °
6	-	Turn the component counterclockwise through 180 °
7	-	Turn the component clockwise through 2 complete turns
8	-	Turn the component counterclockwise through 2 complete turns

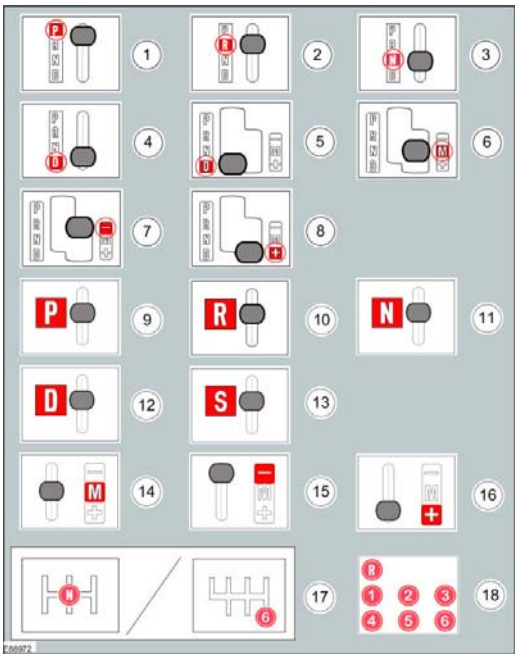
Steering Wheel Symbols



Steering wheel symbols are used to provide further information to a required steering wheel position or steering column lock status.

Item	Part Number	Description
1	-	Steering wheel in straight ahead position
2	-	Steering column lock locked
3	-	Steering column lock unlocked
4	-	Turn the steering wheel to the 90 ° left position
5	-	Turn the steering wheel to the 90 ° right position
6	-	Turn the steering wheel to the left-hand end position
7	-	Turn the steering wheel to the right-hand end position

Body Types

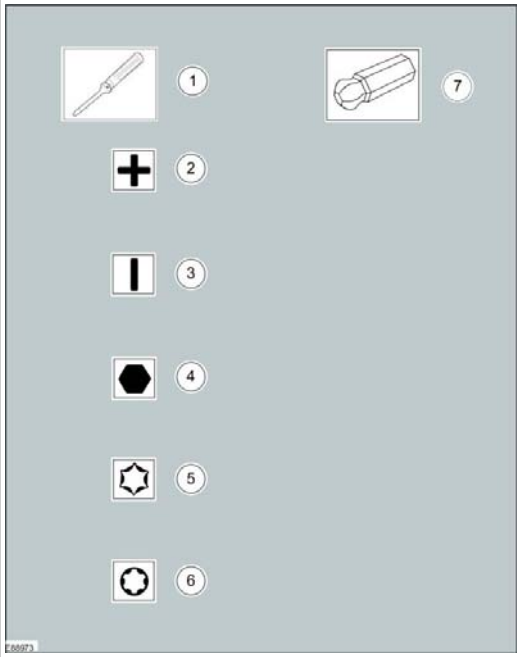


Body type symbols are used to identify different body configurations.

Item	Part Number	Description
1	-	3, 4, 5-door body style
2	-	Wagon body style
3	-	Sports utility vehicle body style
4	-	Coupe body style
5	-	Convertible body style
6	-	Van body style
7	-	3, 4, 5-door body style - Top View
8	-	Wagon body style - Top View
9	-	Underview
10	-	Right-hand drive (RHD) vehicle
11	-	Left-hand drive (LHD) vehicle

Gearshift lever and selector lever position symbols

Gearshift lever and selector lever position symbols are used to show the lever position that is required to be selected to carry out a procedure step.

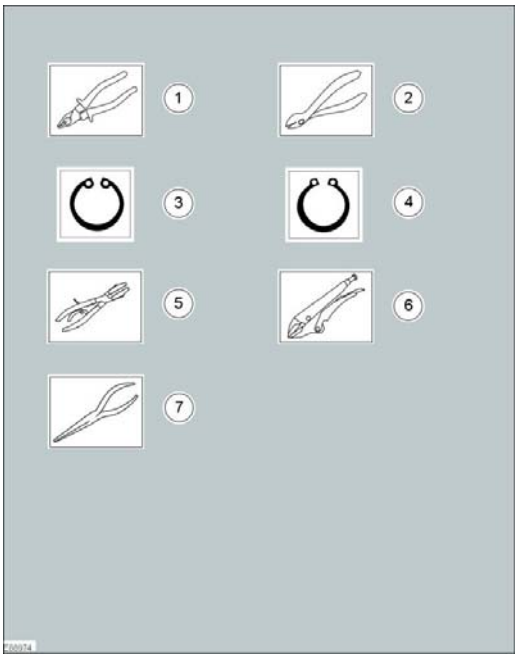


Item	Part Number	Description
1	-	Replaced by symbol 9
2	-	Replaced by symbol 10
3	-	Replaced by symbol 11
4	-	Replaced by symbol 12

5	-	Replaced by symbol 12
6	-	Replaced by symbol 14
7	-	Replaced by symbol 15
8	-	Replaced by symbol 16
9	-	Set the selector lever to the park (P) position
10	-	Set the selector lever to the reverse (R) position
11	-	Set the selector lever to the neutral (N) position
12	-	Set the selector lever to the drive (D) position
13	-	Set the selector lever to the drive (S) position
14	-	Set the selector lever to the drive (M) position
15	-	Set the selector lever to the drive (-) position
16	-	Set the selector lever to the drive (+) position
17	-	Set the gearshift lever to the neutral (N) position
18	-	Further gearshift lever positions that may appear in illustrations

Screwdriver symbols

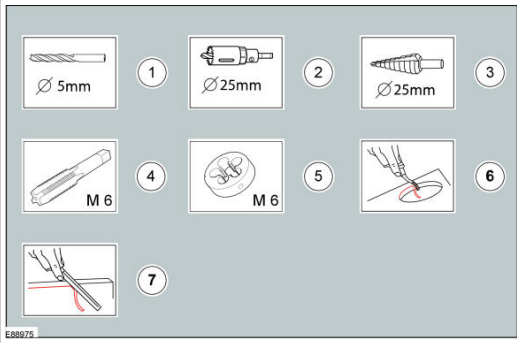
The screwdriver symbols are used to show which screwdriver bit is recommended to carry out a procedure step.



Item	Part Number	Description
1	-	Screwdriver
2	-	Cross bladed screwdriver / Cross bladed Bit Socket

3	-	Flat bladed screwdriver / Flat bladed Bit Socket
4	-	Hexagonal screwdriver / Hexagonal Bit Socket
5	-	TORX screwdriver / TORX Bit Socket
6	-	Polydrive screwdriver / Polydrive Bit Socket
7	-	Ball drive hex bit

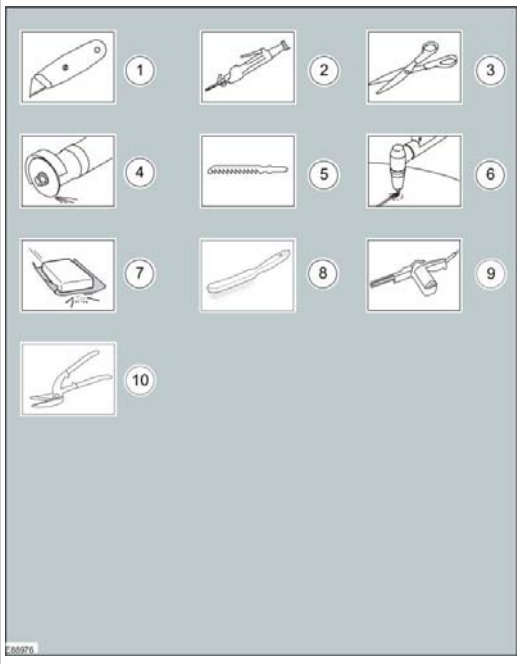
Pliers symbols



The pliers symbols are used to show which pliers is recommended to carry out a procedure step.

Item	Part Number	Description
1	-	Combination pliers
2	-	Side cutter pliers
3	-	Securing ring - inner
4	-	Securing ring - outer
5	-	Hose clamp pliers
6	-	Locking pliers
7	-	Long nose pliers

Drill symbols

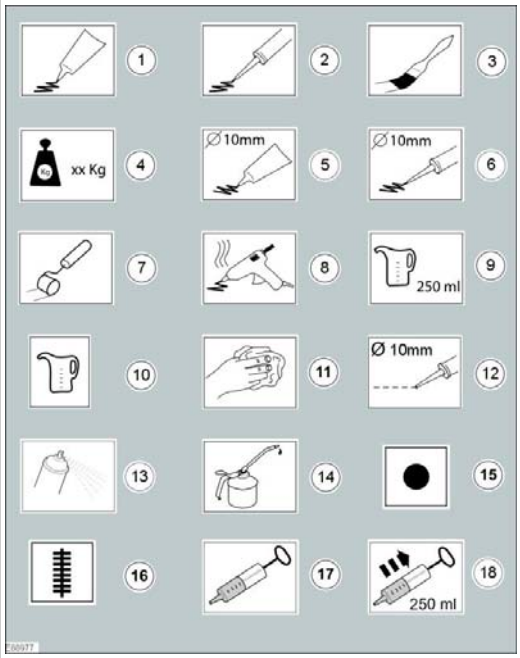


The drill symbols are used to show which type and size of drill bit is recommended to carry out a procedure step.

Item	Part Number	Description
1	-	Drill bit with a specified diameter
2	-	Hole saw with a specified diameter
3	-	Stepped drill bit with a specified diameter
4	-	Tap with a specified diameter
5	-	Die with a specified diameter
6	-	Scraper for circular holes
7	-	Scraper for straight edges

Cutting tool symbols

The cutting tool symbols are used to show which type of cutting tool is recommended to carry out a procedure step.

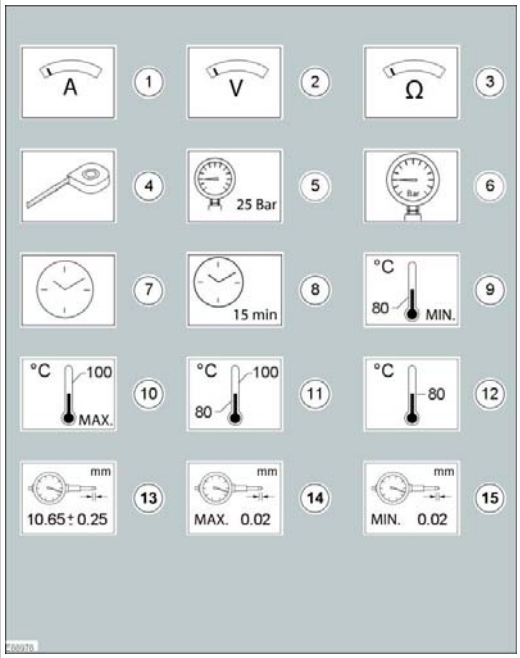


Item	Part Number	Description
1	-	Cutting knife

2	-	Air body saw
3	-	Scissors
4	-	Grinder
5	-	Jig saw
6	-	Plasma cutter
7	-	Sanding Paper
8	-	Wire brush
9	-	Belt Sander
10	-	Tin Snipes

Apply Chemical or load symbols

The apply chemical or load symbols are used to show where to apply which type of chemical or load to carry out a procedure step.

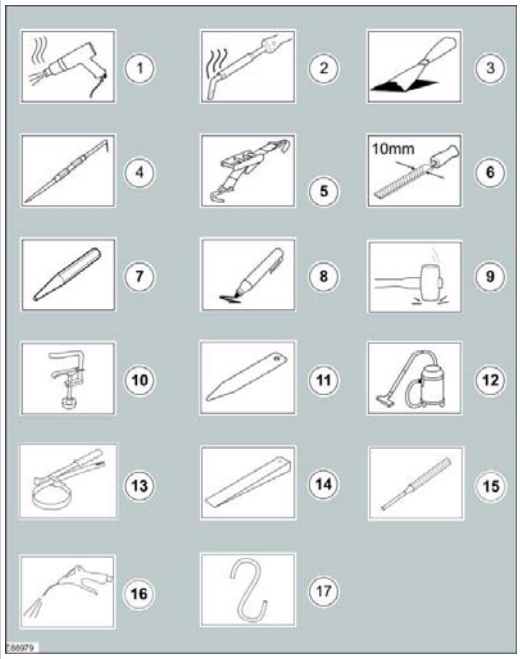


Item	Part Number	Description
1	-	Apply the substance from the specified tube
2	-	Apply the substance from the specified cartridge
3	-	Apply the specified chemical with a brush
4	-	Apply the specified load to the specified component
5	-	Apply a bead with a specific diameter from the specified tube
6	-	Apply a bead with a specific diameter from the specified cartridge
7	-	Apply the specified chemical with a roller

8	-	Apply hot glue to the specified component
9	-	Apply the specified amount of fluid from the fluid can
10	-	Apply fluid from the fluid can
11	-	Clean the specified component with the specified material
12	-	Apply a broken bead from the specified tube
13	-	Apply the specified chemical from a spray can
14	-	Apply the specified lubricant to the specified component
15	-	Apply spot welds to the specified component
16	-	Apply a continuous weld to the specified component
17	-	Handle the fluid using a syringe
18	-	Extract the specified amount of fluid using a syringe

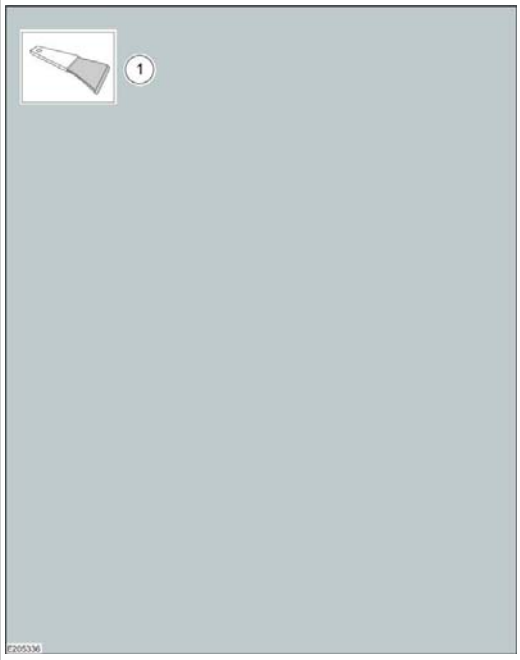
Measurement symbols

The measurement symbols are used to show where to measure which type of measurement to carry out a procedure step.



Item	Part Number	Description
1	-	Measure the current using a digital multimeter
2	-	Measure the voltage using a digital multimeter
3	-	Measure the resistance using a digital multimeter
4	-	Measure the length/distance

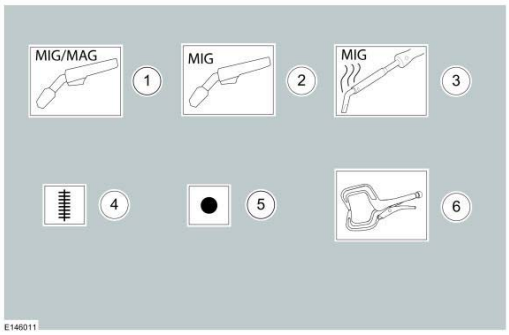
5	-	Check that the specified pressure is available using a suitable pressure gauge
6	-	Measure the pressure at the specified port using a suitable pressure gauge
7	-	Measure the time using a suitable stopwatch
8	-	Wait for the specified period of time
9	-	The specified task requires the specified minimum temperature
10	-	The specified task requires the specified maximum temperature not to be exceeded
11	-	The specified task requires the specified temperature range
12	-	The specified task requires the specified temperature
13	-	Measure and check for the specified value using a dial indicator gauge
14	-	Measure and check for the specified MAX value using a dial indicator gauge
15	-	Measure and check for the specified MIN value using a dial indicator gauge



General equipment symbols

The general equipment symbols are used to show where to use which type of general equipment to carry out a procedure step.

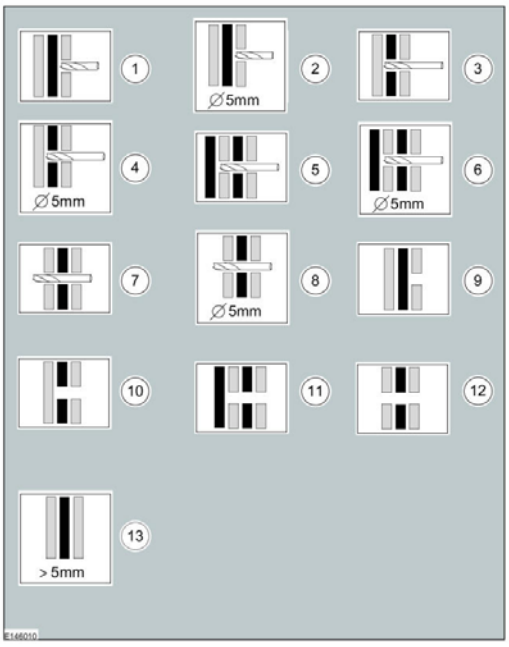
Item	Part Number	Description
1	-	Hot air gun
2	-	Soldering iron
3	-	Scraper
4	-	Scriber



5	-	Securing strap
6	-	File with a specified size
7	-	Center punch
8	-	Marker
9	-	Mallet
10	-	Hose clamp
11	-	Interior trim remover
12	-	Vacuum cleaner
13	-	Strap wrench
14	-	Wedge
15	-	Pin Punch
16	-	Air blow gun
17	-	Relocate and support the component
18	-	C-clamp

Item	Part Number	Description
1	-	Plastic scraper

Welding symbols

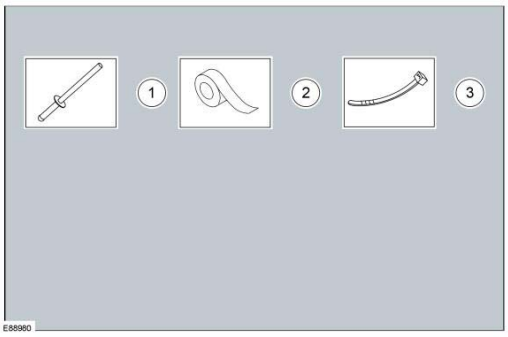


These symbols indicate the type of welding to be used.

Item	Part Number	Description
1	-	Metal inert gas (MIG) / Metal active gas (MAG) welding equipment
2	-	Metal inert gas (MIG) welding equipment
3	-	Metal inert gas (MIG) brazing equipment
4	-	Apply a continuous weld to the specified component
5	-	Apply spot welds to the specified component
6	-	C-clamp

Drilling and grinding symbols

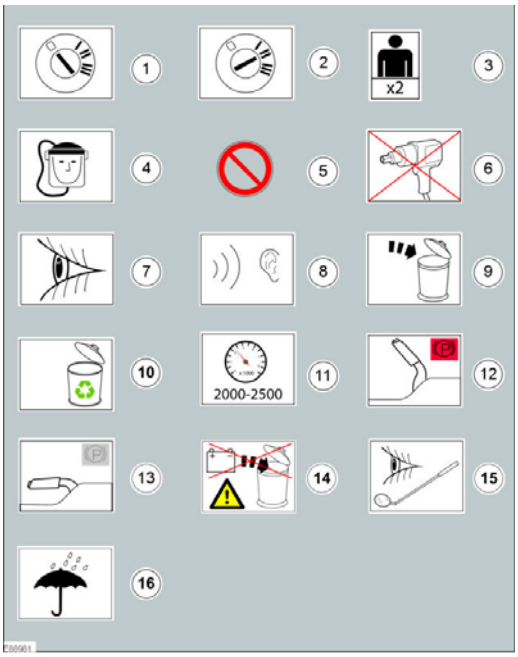
These symbols indicate the type of drilling or grinding to be used.



Item	Part Number	Description
1	-	Drill through first body layer with a suitable diameter
2	-	Drill through first body layer with the specified diameter
3	-	Drill through the indicated number of body layers with a suitable diameter

4	-	Drill through the indicated number of body layers with the specified diameter
5	-	Drill through the indicated number of body layers with a suitable diameter
6	-	Drill through the indicated number of body layers with the specified diameter
7	-	Drill through all body layers with a suitable diameter
8	-	Drill through all body layers with the specified diameter
9	-	Grind one layer
10	-	Grind two layers
11	-	Grind to last layer
12	-	Grind all layers
13	-	Material thickness > Xmm

Material symbols

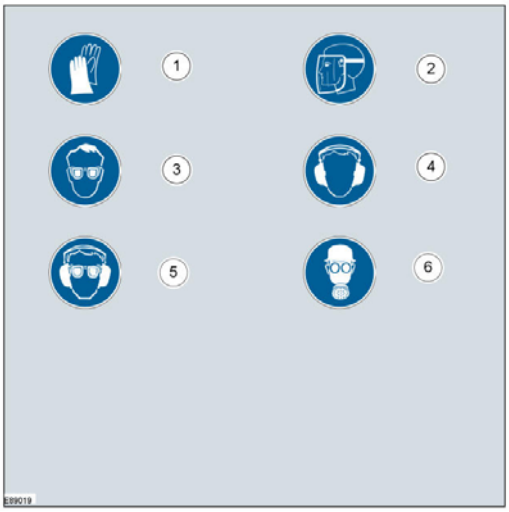


The material symbols are used to show where to use which type of material to carry out a procedure step.

Item	Part Number	Description
1	-	Remove/Install the specified blind rivet
2	-	Apply tape to the specified component/area
3	-	Remove/Install the specified cable tie

Miscellaneous symbols

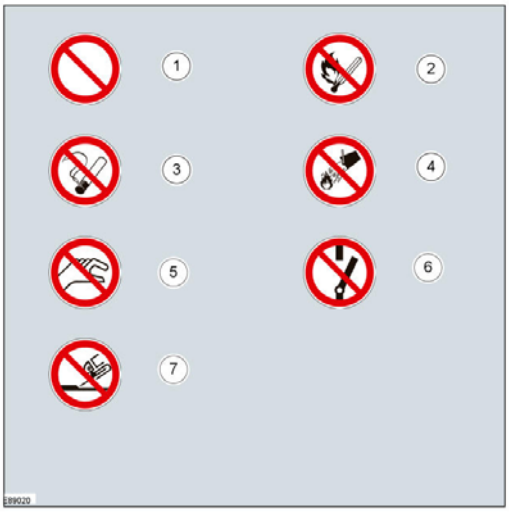
These symbols provide further information that is required to carry out a procedure step.



Item	Part Number	Description
1	-	Set the ignition switch to the 0 position
2	-	Set the ignition switch to the II position
3	-	The procedure step requires the aid of the specified number of supporting technicians
4	-	Self contained breathing apparatus
5	-	General prohibition used in combination with another symbol
6	-	Do not use power tools
7	-	Visual check
8	-	Noise check
9	-	Dispose the specified component
10	-	Replaced by item 9 (Dispose the specified component)
11	-	Set the engine speed to the specified value
12	-	Fully apply the parking brake lever
13	-	Fully release the parking brake lever
14	-	Do not dispose of batteries into the waste bin
15	-	Visual check using a mirror
16	-	Area/component must be dry

Mandatory Protective equipment - Health and safety symbols

The protective equipment symbols advise to use a mandatory protective equipment to avoid or at least

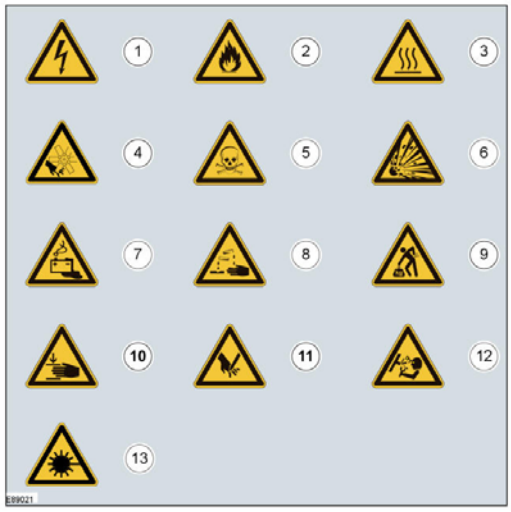


reduce possible health and safety risks.

Item	Part Number	Description
1	-	Wear protective gloves
2	-	Wear face guard
3	-	Wear safety goggles
4	-	Wear ear protectors
5	-	Wear safety goggles and ear protectors
6	-	Wear a respirator

Prohibition - Health and safety symbols and component damage

The prohibition symbols are used to prohibit the specified actions to avoid or at least reduce possible component damage and health and safety risks.

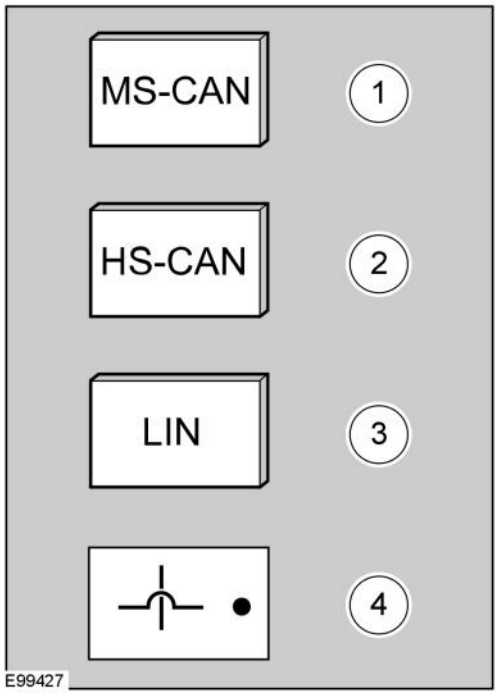


Item	Part Number	Description

1	-	General prohibition symbol
2	-	No naked flames
3	-	No smoking
4	-	No water
5	-	Do not touch
6	-	Do not switch
7	-	No grinding

Warning symbols - Health and safety and component damage

The warning symbols are used to advise on hazardous conditions to avoid or at least reduce possible component damage and health and safety risks.



Item	Part Number	Description
1	-	Hazardous voltage/Electrical shock/Electrocution
2	-	Fire Hazard/Highly flammable
3	-	Burn hazard/Hot surface
4	-	Automatic start-up
5	-	Toxic
6	-	Explosive material
7	-	Battery hazard
8	-	Corrosive material
9	-	Lifting hazard
10	-	Hand crush/Force from above
11	-	Cutting of fingers or hand

12	-	Pressure hazard
13	-	Invisible laser radiation. Do not view directly with optical instruments (magnifiers). Class 1M laser product

Control Diagram symbols - Description and Operation procedures

These symbols provide further information on the type of connectivity, direction of flow or type of data bus of a system.

Item	Part Number	Description
1	-	Mid-speed Controller Area Network (CAN)
2	-	High-speed Controller Area Network (CAN)
3	-	Local Interconnect Network (LIN)
4	-	Wires crossing not connected

DESCRIPTION AND OPERATION > BATTERY AND BATTERY CHARGING HEALTH AND SAFETY PRECAUTIONS

WARNING: Batteries contain sulfuric acid and produce explosive gases. Work in a well-ventilated area. Do not allow the battery to come in contact with flames, sparks or burning substances. Avoid contact with skin, eyes or clothing. Shield eyes when working near the battery to protect against possible splashing of acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes, then get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow

these instructions may result in serious personal injury.

WARNING: Always lift a plastic-cased battery with a battery carrier or with hands on opposite corners. Excessive pressure on the battery end walls may cause acid to flow through the vent caps, resulting in personal injury and/or damage to the vehicle or battery.

WARNING: Battery posts, terminals and related accessories contain lead and lead components. Wash hands after handling. Failure to follow these instructions may result in serious personal injury.

DESCRIPTION AND OPERATION > BODY REPAIR HEALTH AND SAFETY AND GENERAL PRECAUTIONS

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by SEATBELT

PROCEDURE AFTER A COLLISION . Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

WARNING: Collision damage repair must conform to the instructions contained in this service information. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this service information, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

DESCRIPTION AND OPERATION > BRAKE AND CLUTCH SYSTEMS HEALTH AND SAFETY PRECAUTIONS

WARNING: Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.

WARNING: Do not breathe dust or use compressed air to blow dust from storage containers or friction components. Remove dust using government-approved techniques. Friction component dust may be a cancer and lung disease hazard. Exposure to potentially hazardous components may occur if dusts are created during repair of friction components, such as brake pads and clutch discs. Exposure may also cause irritation to skin, eyes and respiratory tract, and may cause allergic reactions and/or may lead to other chronic health effects. If irritation persists, seek medical attention or advice. Failure to follow these instructions may result in serious personal injury.

NOTE: If the brake fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

DESCRIPTION AND OPERATION > CLIMATE CONTROL SYSTEM HEALTH AND SAFETY PRECAUTIONS

WARNING: Air conditioning R-134a liquid refrigerant is capable of harming eyes or freezing skin. Always wear safety goggles and avoid contact with liquid refrigerant. Failure to follow these instructions may result in serious personal injury.

WARNING: Air conditioning R-134a refrigerant gas is capable of displacing the air necessary for breathing in a confined space and can produce toxic gasses if burned at high temperatures. Do not release a large quantity of R-134a gas within a confined space or allow it to be exposed to a high temperature flame (such as a torch). Consult the Material Safety Data Sheet for further information. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Use extreme care and observe all safety and service precautions related to the use of refrigerants as outlined on refrigerant tank and on recovery and charging equipment. Failure to follow these instructions may result in serious personal injury.

WARNING: Before disconnecting any heater water hoses, shut OFF the engine and wait until engine is fully cool. Failure to comply with this warning may result in serious injury or burns from hot liquid escaping from the engine cooling system.

WARNING: The electric booster heater may become hot during use and can burn unprotected skin. Allow enough time for the heater to cool before servicing. Failure to follow this instruction may result in serious personal injury.

DESCRIPTION AND OPERATION > DIAGNOSTIC METHODS > EFFECTIVE DIAGNOSTIC TECHNIQUES

NOTE: Do not use this document in place of Ford-prescribed Symptom Based Diagnostics or service information diagnostics. Diagnostic Methods is intended to provide Ford vehicle diagnostic information only for support of Ford-prescribed diagnostics.

The following diagnostic process is critical for consistently successful diagnoses. Random methods work inconsistently and often lead to multiple repairs and the accompanying frustration.

- Understand and verify the **symptom** .
    - Understanding a symptom requires understanding normal operation.

    - Duplicate the concern. Recreate the same conditions that demonstrated the original concern (road testing may be necessary).
- Determine the responsible **system** .
    - Gather data, such as a visual inspection and an OASIS report.
    - Perform system tests, such as pressure tests or DTC retrieval.
- Identify the responsible **component** .
    - Test the suspect component and related parts.
- Determine the root **cause**
    - Examine related components (wiring faults, misalignments, incorrect adjustments) that may be the actual cause or may have caused the component failure.
    - Repair all related faults to avoid repeat failures.
    - Verify the repair has corrected the concern (and not created any new ones) using the identical conditions that demonstrated the original concern.

DESCRIPTION AND OPERATION > DIAGNOSTIC METHODS > DIAGNOSTIC SCAN TOOL TESTING

Network Test

Performing a network test is always recommended for analysis of electronic system concerns. Always solve network issues before addressing individual symptoms or DTCs.

Recommended Practices: Refer to MODULE COMMUNICATIONS NETWORK , Diagnosis and Testing, to diagnose a network outage or no response from an individual module (or modules).

Diagnostic Trouble Code Retrieval

Generally, a good diagnostic strategy is to resolve all on-demand codes related to the system concern. Retrieving all continuous DTCs can also be beneficial to understand historic issues or issues outside of the suspect system that may be affecting your concern. On-demand testing should be done to ensure the fault represented by a continuous DTC is still present.

Continuous Memory Diagnostic Trouble Codes

Modules that produce diagnostic trouble codes have a program that evaluates system conditions, normally while the vehicle or system is in use. Module inputs can be checked for values indicating an electrical fault with the monitoring circuit or component. Module outputs can be monitored for correct function. Codes are stored when predefined limits are exceeded and retained even if the ignition is turned off (generally a DTC is retained for 40+ ignition cycles). Not all continuous codes have a matching on-demand code - and vice versa. This varies with different modules. For example, some network communication codes are continuous only. It is important to note that the presence of a continuous DTC does not guarantee that the fault currently exists.

Clearing Continuous Memory Diagnostic Trouble Codes

Continuous Memory DTCs caused by the issue being repaired or created during the diagnosis and repair must be cleared or they will confuse future diagnosis.

NOTE: Do not clear DTCs from unresolved vehicle issues.

Ford On-Demand Diagnostic Trouble Codes

Ford Motor Company modules have a unique feature that performs a special diagnostic program at the request of the technician (using a diagnostic scan tool). This "On-demand" diagnostic program can exercise system outputs not normally running when the car is parked and record observed faults. These diagnostic codes are communicated to the scan tool, but are not recorded in module memory. An on-demand test is an effective tool for evaluating real input and output conditions during module activity - activity that might not normally be occurring during service bay conditions. For example, an air suspension module on-demand test can run the compressor, vent the system, and observe the report from the height sensor even when the car is already at correct trim height and not requiring height adjustment.

Network Communication Diagnostic Trouble Codes

Network DTCs (U-prefix codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures (such as module reprogramming or diagnostics with modules disconnected) often set network DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent recurrence of intermittent network concerns, inspect all network wiring, especially in-line and module connectors. Test the vehicle battery to make sure the vehicle voltage will be stable.

Recommended practice: Clear the DTC and retest. If the DTC repeats, test the vehicle communication network.

DTC Nomenclature (SAE J2012 and ISO 14229)

Many modules use 5-character DTCs followed by a 2-character failure-type code. The failure-type (sometimes called "fault byte") codes provide information about specific fault conditions such as opens or shorts to ground. Continuous memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

DESCRIPTION AND OPERATION > DIAGNOSTIC METHODS > INTEGRATED DIAGNOSTIC SYSTEM SCAN TOOL USAGE

If The Integrated Diagnostic System Scan Tool Does Not Communicate With The Vehicle Communication Module

1.

Check the Vehicle Communication Module connection and power from the DLC.

2.

Check the communication between the scan tool and the Vehicle Communication Module.

3.

Follow scan tool instructions to retry.

If The Integrated Diagnostic System Scan Tool Does Not Communicate With The Vehicle

The IDS scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the scan tool then attempts to communicate with all other modules on the vehicle.

1.

Verify the scan tool operation with a known good vehicle.

2.

Verify the ignition is ON.

3.

If an IDS session cannot be established with the vehicle, (IDS may state "No communication can be established with the PCM"):

Choose "NO" when the scan tool prompts to retry communication.

Enter a PCM engineering part number, tear tag, or calibration number to identify the vehicle and start a session. These identifying numbers may be found:

The PCM engineering part number and the 4-character tear tag are printed on the PCM label.

(PTS website users only) The PCM engineering part number can be determined from OASIS using the VIN. Choose "HVBoM" from the OASIS tab menu and search Powertrain engine modules for the PCM engineering part number (If the first character is a "P" in the part number, enter only the characters following the "P" into IDS).

Establish a session based on the PCM information (above).

4.

Using the tool box menu, run the network test.

Determine if all modules on the network are unresponsive or if only the PCM does not communicate.

Recommended practice: Refer to MODULE COMMUNICATIONS NETWORK , Diagnosis and Testing, to diagnose the network outage or no response from the PCM.

DESCRIPTION AND OPERATION > DIAGNOSTIC METHODS > MEASURING AUTOMOTIVE CIRCUITS

Wiring Pin (Terminal) Fit And The Use Of Rotunda Flex Probes

- To avoid wiring pin (terminal) damage, Rotunda Flex Probes NUD105-R025D or Terminal Probe Kit 29-011A must be used to connect test equipment or jumper wires to pins (terminals).

- Male to female pin (terminal) fit is critical for correct connection and durability.
    - Pin (terminal) fit may be checked by using the mating pin (terminal) to test for normal separation force (a damaged pin or terminal will have very low separation force from the mating pin or terminal)
    - Correctly checking the separation force of small pins (terminals) may require removal of the connector terminal guide/retainer if it adds drag to the pin (terminal) insertion or removal
- Replace damaged connectors or pins (terminals).

Checking Power-Providing Circuits

- Measuring a power wire with the intended load disconnected using a Digital Multimeter (DMM) will only find open circuits (open fuse or wire).
- **Recommended practice:** Circuits carrying approximately 200-1000 mA* may be loaded with a 250-350 mA test light. Measure circuit voltage with a Digital Multimeter (DMM) while the test light is connected and illuminated. A reduction in the voltage present during test-light-loading indicates excessive circuit resistance.
- **Recommended practice:** Circuits carrying more than one ampere* should be loaded with a device requiring similar current (e.g., a headlamp bulb may be effective). A reduction in the voltage present during loading indicates excessive resistance.
- *Circuit current is matched to wire gauge/size; Examples:
    - Conductor sizes of 24 gauge (.5 mm) or smaller are generally used to carry approximately 1 ampere (1000 mA) or less. Use of the test light to load these circuits is appropriate.
    - Conductor sizes of 20 gauge (.8 mm) or larger are generally used to carry approximately 5 amperes (5000 mA) or more. Match the substitute load (measure substitute load current first as necessary) to this current level.

Checking Ground-Providing Circuits

- The best method of checking ground circuits is to measure the circuit voltage drop during component operation (or attempted operation).
- An ohmmeter may be accurately used if the battery has been disconnected.
- **Recommended practice:** Expect less than 2 ohms for most small diameter (18 gauge and smaller) wires.
- Ohmmeter accuracy is limited to circuits carrying less than approximately 5 amperes (this is due to the fact that very small resistances, undetectable by a Digital Multimeter (DMM), cause significant voltage loss in higher current circuits).
- Digital Multimeter (DMM) ohmmeter readings are easily corrupted by the normal voltage present (battery connected) in many ground circuits.
    - **Recommended practice:** Reverse the leads and check for changes in the measurement. Reversing the Digital Multimeter (DMM) lead connections should never change the resistance measurement (unless the circuit contains a semi-conductor). Measurement (non-semi-conductor) differences when leads are interchanged at the test points indicate invalid test results. The presence of voltage corrupts the reading, and causes the meter reading to change when the leads are reversed.

Checking Circuit Continuity

- **Recommended practice:** Expect less than 2 ohms of resistance for most wires.
- Ohmmeter low-resistance resolution (approximately 0.1 ohm) limits its use to circuits carrying less than approximately 5 amperes. This is due to the fact that very small resistances, below the resolution of a Digital Multimeter (DMM), cause significant voltage loss in higher current circuits.
- The Digital Multimeter (DMM) applies a small amount of voltage to the circuit or component to calculate resistance. As a result, Digital Multimeter (DMM) ohmmeters are very sensitive to any level of voltage present. Voltage present in the circuit will corrupt the Digital Multimeter (DMM) reading.

Checking For Unintended Continuity (Shorts) To Other Circuits

- A Digital Multimeter (DMM) ohmmeter may be used to detect undesired circuit connections to:
    - Ground
    - Other unpowered circuits
- **Recommended practice:** Expect greater than 10, 000 ohms of resistance between two separate circuits; the best result is an open circuit Digital Multimeter (DMM) indication (no detected resistance).
- Shorts to voltage are checked with a voltmeter
- **Recommended practice:** Turn ignition on (with battery connected) and measure the circuit for any voltage present (none should be present)

Checking Circuits By Back-Probing A Connector

- Back-probing should be a testing method of last resort. It should only be employed where a diagnostic step requires a circuit to be tested under actual operating conditions. Back-probing is a risky testing method due to the uncertainty of the probe connection and the possibility of damaging terminals.
- Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors and subsequent electrical faults.
    - Use back probes specifically designed for the purpose to assist in making a good test connection and to prevent connector or terminal damage during back-probing.
- Do not test for the presence of voltage at a single point where zero volts is a possible result (you cannot tell the difference between a bad probe contact and a zero volt result).
- Do not test for continuity/opens (using an ohmmeter) between two points (you cannot tell the difference between bad probe contacts and an open circuit).
- Back-probing may be used where the circuit must be analyzed with the voltage-drop method (if the circuit carries greater than 5 amperes and no other means of testing will definitively eliminate circuit resistance as a possible fault). A zero-volt result indicates incorrect test conditions (no current flow) or bad back-probe connections.
- Occasionally, module failure mode behavior will change the operation of a circuit when it is opened

for testing. Back-probing is an acceptable remedy for these testing dilemmas.

Circuit Analysis Using Jumper Wires (Creating Substitute Circuits)

- Jumper wires may be employed for circuit analysis.
- **Cautions:**
  - Always use fused jumper wires - the recommended universal-testing jumper wire fuse is 2-5 amperes; larger fuse ratings should be used only in special circumstances.
  - Use flex probes or equivalent to prevent connector terminal damage (flex probes are not intended to carry higher currents necessary to operate motors such as a cooling fan or blower motor).
  - Follow service information testing directions when using jumper wires to avoid component or harness damage due to incorrect jumper connections.
  - Never repair a circuit by adding a new wire in parallel to the old one (overlaying the circuit) without fully understanding what caused the circuit to fail. Always find, examine, and repair the fault to correct the root cause and to repair any adjacent wiring that has been damaged.

Checking Modules

- Generally, module failure rate is very low and therefore replacement modules usually do not resolve the root cause. Incorrect replacement of a module is often the result of inadequate testing.
  - Understand the correct module function.
  - Make sure programmable parameters are set correctly for the function in question (Refer to MODULE CONFIGURATION for more information).
  - Resolve DTCs first - as directed by Diagnostic Routines.
  - Test all inputs, both hard-wired and networked.
  - Test outputs (see "Checking module switching circuits" below).
  - Check applicable TSBs for module software changes (flash programming).
- Checking module switching circuits.
  - Using the scan tool module-output command function (for example, IDS Output State Control) to activate components is a fast way to confirm an output is capable of being switched on by the module. Testing that reveals normal module-output function confirms the need to analyze the module inputs.
  - Don't apply ground or power directly to module-switched components with jumper wires (unless directed by a service information procedure), as the component could be damaged by a direct connection to ground/power.

DESCRIPTION AND OPERATION > DIESEL FUEL SYSTEM HEALTH AND SAFETY PRECAUTIONS

WARNING: Vehicles with scheduled remote start technology may start at any time. Make sure the scheduled remote start system is disabled when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not work on the fuel system until the pressure has been released and the engine has cooled. Fuel in the high-pressure fuel system is hot and under very high pressure. High-pressure fuel may cause cuts and contact with hot fuel may cause burns. Failure to follow these instructions may result in serious personal injury.

DESCRIPTION AND OPERATION > ENGINE COOLING SYSTEM HEALTH AND SAFETY PRECAUTIONS

WARNING: Always allow the engine to cool before opening the cooling system. Do not unscrew the coolant pressure relief cap when the engine is operating or the cooling system is hot. The cooling system is under pressure; steam and hot liquid can come out forcefully when the cap is loosened slightly. Failure to follow these instructions may result in serious personal injury.

DESCRIPTION AND OPERATION > GASOLINE AND GASOLINE-ETHANOL FUEL SYSTEMS HEALTH AND SAFETY PRECAUTIONS

WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Clean all fuel residue from the engine compartment. If not removed, fuel residue may ignite when the engine is returned to operation. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Always disconnect the battery ground cable at the battery when working on an evaporative emission (EVAP) system or fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

WARNING: Avoid contact with fuel during a visual inspection for fuel leaks with the engine running. Do not work on the fuel system until the pressure has been released and the engine has cooled. Fuel in the high-pressure fuel system is hot and under very high pressure. High-pressure fuel may cause cuts and contact with hot fuel may cause burns. Failure to follow these instructions may result in serious personal injury.

DESCRIPTION AND OPERATION > HEALTH AND SAFETY PRECAUTIONS > GENERAL SERVICE WARNINGS

Review carefully the information below before beginning any repair. Following these warnings is a list of specific system warnings that must be reviewed before beginning work on any listed system.

WARNING: Vehicles with scheduled remote start technology may start at any time. Make sure the scheduled remote start system is disabled when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Wear eye and ear protection when servicing a vehicle. Failure to follow this

instruction may result in serious personal injury.

WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

WARNING: Chemicals or materials specified in this service information, if used improperly, may present a personal health hazard. Always consult the material safety information sheet before using any material specified by this service information. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not work under the hood of a vehicle with a damaged cooling fan, as it can separate during operation. With the ignition OFF, inspect all cooling fans for damage, cracks or separation and replace with a new fan as necessary. Failure to follow this instruction may result in serious personal injury.

WARNING: Cooling fans may run with the ignition off. Disable the fans before working nearby. On electric vehicles, disconnect the charging cable to prevent unexpected fan operation. Failure to follow this instruction may result in personal injury.

WARNING: Vehicles with engine auto start-stop technology may start automatically with the ignition on. Make sure the ignition is off when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Serious injury may occur if the engine is accidently started by another person during service work. Remove the key from the vehicle to prevent unauthorized starts. Failure to follow this instruction may result in serious personal injury.

WARNING: Before lifting the vehicle with a jack, make sure the jack capacity is adequate for the vehicle weight, including any vehicle cargo or modifications. Identify the correct jacking points in JACKING AND LIFTING . Position the vehicle on a hard, level surface. After jacking, always support vehicle with jack stands. Never get under a vehicle supported only by a jack. Set the parking brake and block all wheels remaining on the ground. Failure to follow these instructions may result in unintended vehicle movement and serious personal injury or death.

WARNING: Before raising the vehicle on a hoist, make sure the hoist capacity is adequate for the vehicle weight, including any vehicle cargo or modifications. Always

position the hoist lift arms as shown in JACKING AND LIFTING . Do not use the engine to power the drive wheels unless all drive wheels are elevated off the ground. Incorrect hoist arm positioning or drive wheels in contact with the ground can cause unintended vehicle movement. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Removal of heavy components (such as engines, transmissions or axles) while the vehicle is lifted on a hoist may create a dangerous weight imbalance. Restrain the vehicle on the hoist with chains or straps to prevent vehicle movement. Failure to follow this instruction may result in serious personal injury or death.

WARNING: Always secure transmission, transfer case, and axle assemblies to their service jack. Avoid obstructions while lowering and raising the jack. Improperly secured assemblies or contact with obstructions may cause the assembly to fall off the jack, which could result in serious personal injury.

WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.

WARNING: Never support an engine by the intake or exhaust manifolds. The engine may drop suddenly. Failure to follow this instruction may result in serious personal injury.

WARNING: Turn off (disable) the power running boards (if equipped) before jacking, lifting or placing any object under the vehicle. Never place your hand between the power running board and the vehicle. Extended power running boards will retract when doors are closed. Failure to follow these instructions may result in serious personal injury.

WARNING: Keep solvents away from ignition sources. Solvents may be flammable and can ignite or explode if not handled correctly. Failure to follow this instruction may result in serious personal injury.

WARNING: Use tools, not fingers, to hold flagnuts. Flagnuts may slip or spin unexpectedly when removing fasteners. Failure to follow this instruction may result in injured fingers.

Carefully review the safety warnings for each system using the links below before beginning any service or repair.

DESCRIPTION AND OPERATION > LIQUEFIED PETROLEUM GAS (LPG) AND COMPRESSED NATURAL GAS (CNG) FUEL SYSTEMS HEALTH AND SAFETY PRECAUTIONS

WARNING: Vehicles with scheduled remote start technology may start at any time. Make sure the scheduled remote start system is disabled when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Service of Compressed Natural Gas (CNG) or Liquefied Petroleum Gas (LPG) vehicle systems is restricted to qualified personnel and authorized workshops. The required qualifications vary by region. Always observe local laws and legislative directives regarding CNG or LPG vehicle service. Failure to follow this instruction may result in serious personal injury or death.

WARNING: Compressed Natural Gas (CNG) or Liquefied Petroleum Gas (LPG) is highly flammable and toxic when contained in unventilated work areas. Work in a dedicated area with good ventilation and no sources of ignition. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Liquefied Petroleum Gas (LPG) is capable of harming eyes or freezing skin. Always wear personal protection gear, including safety goggles and gloves to avoid contact with liquid gas. Failure to follow these instructions may result in serious personal injury.

WARNING: Always observe local regulations regarding storage or indoor parking of

Liquefied Petroleum Gas (LPG) vehicles. Do not park vehicles near sources of heat, ignition or unventilated open pits. Failure to follow these instructions may result in serious personal injury.

WARNING: Liquefied Petroleum Gas (LPG) is heavier than air and will collect in low points in a building, such as drains or work pits. Never discharge a tank inside a building. If possible, tanks should be discharged beforehand by running the vehicle. Any discharge of gas must be done outside in well-ventilated flat areas. Failure to follow these instructions may result in the accumulation of combustible gas, which could cause personal injury or death in a fire or explosion.

WARNING: Extreme heat such as paint drying ovens will cause an increase in Compressed Natural Gas (CNG) or Liquefied Petroleum Gas (LPG) fuel tank pressure. The fuel tank must be removed before using paint drying ovens with temperatures above 60 ° C. Failure to follow this instruction may result in a release of combustible gas, which could cause personal injury or death in a fire or explosion.

WARNING: Liquefied Petroleum Gas (LPG) may present a personal health hazard if handled improperly. Always consult the LPG material safety information sheet before servicing a LPG vehicle. Failure to follow this instruction may result in serious personal injury or death.

DESCRIPTION AND OPERATION > PYROTECHNIC DEVICE HEALTH AND SAFETY PRECAUTIONS

WARNING: Always carry a live airbag with the deployment door, trim cover or tear seam pointed away from the body. Do not place a live airbag down with the deployment door, trim cover or tear seam facing down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: Always carry or transport a live safety belt inflator with the safety belt buckle bolt installed in the inflator tube hand tight. Failure to follow this instruction may result in serious personal injury in the event of an accidental deployment.

WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not bleach or re-dye the safety belt webbing, as the webbing may weaken. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the airbags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by SEATBELT PROCEDURE AFTER A COLLISION . Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

WARNING: Anytime the Safety Canopy or side air curtain has deployed, a new headliner and new roof pillar upper trim panels with attaching hardware must be installed. Make sure the headliner includes the word AIRBAG where it meets each roof B-pillar trim panel. Remove any other damaged components or hardware and replace with new. Always use new torque-prevailing type J-nuts when installing the Safety Canopy. Failure to follow these instructions may result in the Safety Canopy or side air curtain deploying incorrectly and increases the risk of serious personal injury or death in a crash.

WARNING: Do not repair or service restraint component connector terminals. If restraint connector terminals need repair, replace with the service connector pigtails. Failure to follow this instruction may result in incorrect operation of the vehicle safety restraint, which increases the risk of serious personal injury or death in a crash.

WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

WARNING: Never tamper with, repair, or modify a Restraints Control Module (RCM) or any other Supplemental Restraint System (SRS) component. Failure to follow this instruction may result in incorrect operation of the Supplemental Restraint System (SRS), which increases the risk of serious personal injury or death in a crash.

WARNING: Never probe the electrical connectors on airbag, Safety Canopy or side air curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy and cause serious personal injury or death.

WARNING: Do not obstruct or place objects in the deployment path of the Safety Canopy or side air curtain assembly. Never insert any type of fastener or tie strap around any portion of the Safety Canopy, side air curtain assembly, or related interior trim panel. Failure to follow this instruction may result in the Safety Canopy or side airbag curtain deploying incorrectly and increases the risk of serious personal injury or death in a crash.

WARNING: Occupant Classification System (OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.

WARNING: Never allow oil, grease, water or foreign contaminants to get on/in the occupant classification system (OCS) components or electrical connectors. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.

WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.

WARNING: Always carry a live Safety Canopy or side air curtain assembly with the tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

WARNING: Do not paint any airbag trim covers or deployment doors. Paint may cause the airbag to deploy incorrectly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

WARNING: Always carry the live hood actuator by holding it around the cylinder with the

mounting bracket up and with the cap pointing away from the body. Always place the live hood actuator on its side with the cap pointing away from people. Never place anything in front of the cap. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: If a vehicle has been in a pedestrian impact, inspect the impact sensor mounting areas for damage. If damaged, a new bumper cover must be installed. New pedestrian impact sensors must be installed. Failure to follow these instructions may result in serious personal injury or death in a pedestrian impact.

WARNING: Do not repair or service pedestrian protection system component connector terminals. If pedestrian protection system connector terminals need repair, replace with the service connector pigtails. Failure to follow this instruction may result in incorrect operation of the vehicle pedestrian protection system, which increases the risk of serious personal injury or death in a pedestrian impact.

WARNING: Never tamper with, repair, or modify a pedestrian protection system component. Failure to follow this instruction may result in incorrect operation of the pedestrian protection system, which increases the risk of serious personal injury or death in a pedestrian impact.

WARNING: Never probe the electrical connectors on pedestrian protection system pyrotechnic assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

WARNING: Pyrotechnic components are very hot immediately after deployment and might be covered with pyrotechnic residuals. Do not handle pyrotechnic components immediately after deployment. Always wear protective gloves, safety glasses and breathing protection to prevent skin contact and inhaling of pyrotechnic residuals. Failure to follow this instruction may result in serious personnel injury.

DESCRIPTION AND OPERATION > WHEEL AND TIRE HEALTH AND SAFETY PRECAUTIONS

WARNING: Never inflate a tire that has been run flat without first removing the tire from the wheel to inspect for damage. A damaged tire can fail during inflation. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not mount tube-type tires on tubeless wheels or tubeless tires on tube-type wheels. Incorrect combinations could result in tire separation from wheel and may result in serious injury to vehicle occupant(s).

WARNING: Cracked wheels can be dangerous. Deflate tires on cracked wheels prior to removal of wheels from the vehicle. Failure to follow this instruction may result in serious personal injury.

WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. For dual rear wheel (DRW) only, a second retightening is required within 800 km (500 mi). Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Always match the tire size to the wheel size during assembly. Incorrect matching can result in tire bead damage or tire separation from the wheel. Failure to follow this instruction may result in serious personal injury to technician or vehicle occupant(s).

WARNING: Do not weld or peen wheels. A wheel needing such repairs must have a new wheel installed. Failure to follow these instructions may result in wheel failure and serious personal injury.

Service Manual: IDENTIFICATION_CODES

DESCRIPTION AND OPERATION > IDENTIFICATION CODES > VIN

VIN Locator

The VIN is a 17-digit combination of letters and numbers. The VIN is stamped on a metal tab riveted to the instrument panel, top upper left of the dash. The VIN is also found on the VC label. If the VIN plate requires replacement, authorized dealers must contact their respective regional office.

Item	Description
1	WMI (World Manufacturer)
2	Restraint-type code
3	Vehicle line, series, body-type code
4	Engine-type code
5	Computer-generated check digit
6	Model year code
7	Assembly plant code
8	Production sequence number

World Manufacturer Identifier

The first 3 VIN positions are the WMI (world manufacturer identifier.

- 1FA - Ford Motor Company, USA, passenger car

Restraint Type

The fourth VIN position is the vehicle restraint type code.

- 6 - Active safety belts (all positions), driver and front passenger air bags, driver and front passenger knee inflatables, side inflatables 1st and 2nd row (Coupe)
- T - Active safety belts (all positions), driver and front passenger air bags, driver and front passenger knee inflatables, side inflatables 1st and 2nd row (Convertible)

Vehicle Line, Series and Body Type

Positions 5 through 7 indicate vehicle line, series and body type.

- P8A - 2-door coupe
- P8C - 2-door coupe, GT
- P8E - 2-door convertible
- P8F - 2-door convertible, GT
- P8R - 2-door coupe, 50th Anniversary
- P8T - 2-door coupe, I4
- P8U - 2-door convertible, I4

Engine Type

The eighth VIN position identifies the engine type, displacement and number of cylinders.

- F - 5.0L, DOHC, 4-valve, sequential fuel injection, V8
- H - 2.3L Ti-VCT (twin independent variable cam timing), turbo-charged, in-line 4-cylinder
- M - 3.7L, 4-valve, port fuel injection, 6-cylinder
- Z - 5.2L, DOHC, Ti-VCT (twin independent variable cam timing), super-charged, V8

Check Digit

The ninth VIN position is a government-assigned, computer-generated check digit.

- 0-9

Model Year

The tenth VIN position is the model year code.

- F - 2015

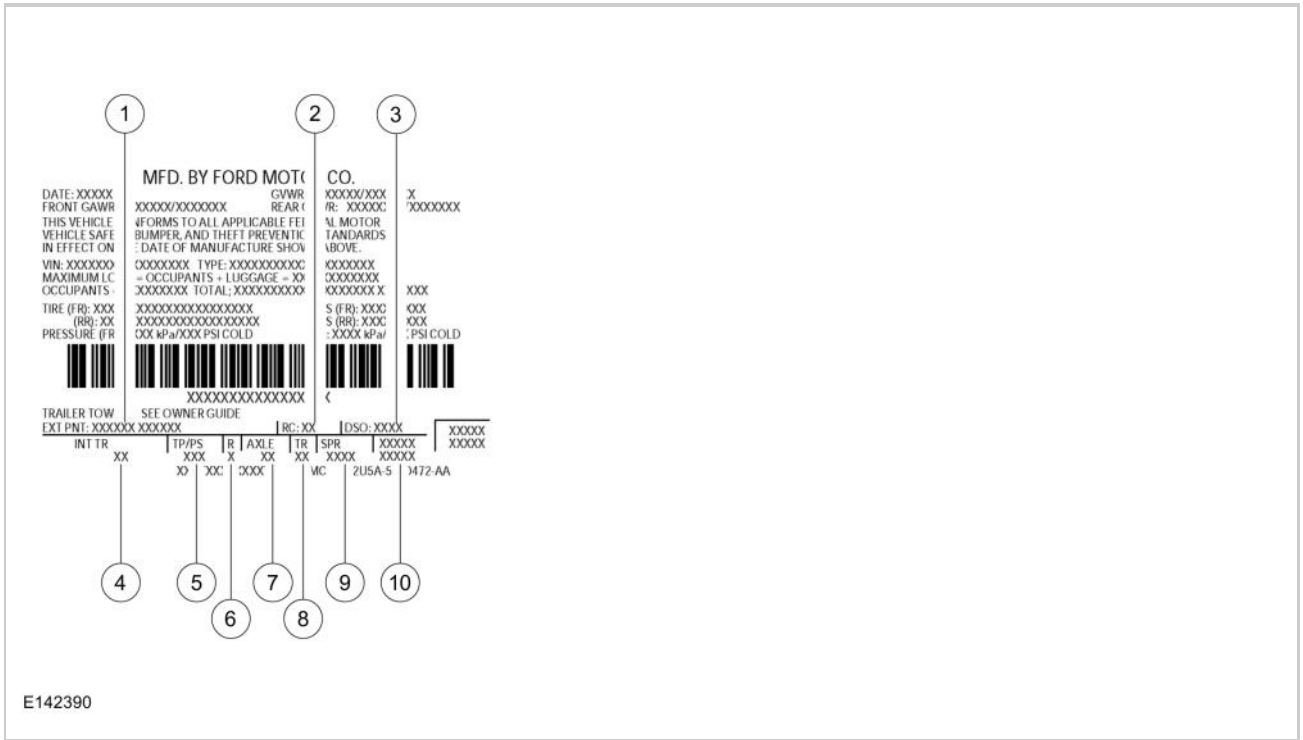
Assembly Plant

The eleventh digit identified the assembly plant code.

- 5 - Flat Rock Assembly, Flat Rock, Michigan (USA)

Production Sequence Number

The last 6 VIN positions are a numeric code for the vehicle build sequence. This is also the vehicle serial and warranty number. The serial number can also be found on the engine block, transmission and frame.



- 100001-599999

DESCRIPTION AND OPERATION > IDENTIFICATION CODES > VC CODES

VC Label Locator

The VC label contains the manufacturer name, the month and year of manufacture, the certification statement and the VIN. It also includes GVW and tire information. If a vehicle requires replacement of the VC label and is 4 years old or less, an authorized dealer must submit the VIN to their respective regional office. The regional office will submit a web form to the assembly plant for the replacement label. Once the label has been printed, a representative from the regional office will deliver the label to the dealer and witness installation on the vehicle. If a vehicle is more than 4 years old and requires a replacement label, the dealer must submit a request to the Department of Motor Vehicles.

Item	Description

1	Exterior paint code
2	Region code
3	Domestic special order code
4	Interior trim code
5	Tape/paint stripe code
6	Radio code
7	Axle code
8	Transmission code
9	Spring code
10	Powertrain calibration information

Paint Code

Paint codes are listed as a 2-part code. The first set of paint code numbers/letters indicate the vehicle primary body color. The second set of letters/numbers (if applicable) indicate a 2-tone or accent body color. All paint codes are a base coat/clear coat finish.

- CY - Competition Orange
- H3 - Triple Yellow (tri-coat)
- HN - Guard
- J4 - Deep Impact Blue
- J7 - Magnetic
- L6 - Kona Blue Metallic
- N4 - Wimbeldon White
- PQ - Race Red
- RR - Ruby Red (tri-coat)
- UA - Black
- UX - Ingot Silver Metallic
- YZ - Oxford White

Interior Trim Codes

Interior trim codes are listed as a 2-part code. The first digit listed indicates the seat and fabric style. The second digit listed indicates the interior trim color.

Trim Codes

- 1 - Chord II cloth seats
- 2 - Vinyl/cloth seats

- 3 - Recaro cloth/vinyl seats
- 4 - Trend mini-perforated milled pebble leather seats
- 5 - Natural grain leather seats
- A - Alcantra/Recaro cloth seats (SVT)
- B - Hot/Colt leather seats (SVT)
- L - Tutone natural grain leather seats (50th Anniversary)
- Q - Dash perforated leather seats
- S - Milled pebble leather seats

Interior Trim Color Codes

- 1 - Ebony
- 2 - Soft Ceramic
- 3 - Bronze Fire
- 4 - Red Line
- 5 - Ebony/Cashmere
- 6 - Cashmere

Tape/Paint Stripe Codes

Tape and paint stripe codes are:

- Blank - Less stripe
- X - Ebony

Radio Codes

The following lists available radio codes:

- 1 - AM/ FM stereo with CD player
- 2 - AM/ FM stereo, CD player and SDARS (Satellite Digital Audio Receiver System)
- 3 - AM/ FM stereo, CD player, SDARS (Satellite Digital Audio Receiver System) and HD (high-definition)
- 4 - AM/ FM stereo, CD player and dual tuner

Axle Codes

The axle codes and related gear ratios are:

- BB - 3.73 ratio with manual or automatic transmission
- DD - 3.55 ratio with manual transmission

- GG - 3.31 ratio with automatic transmission
- YY - 3.15 ratio

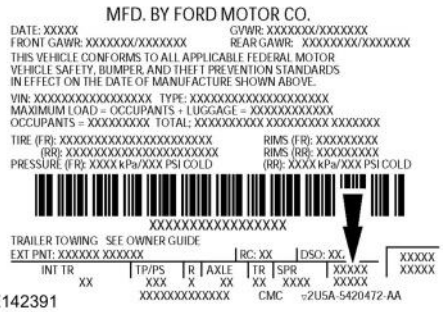
Transmission Codes

Available transmissions are as follows:

- 3 - 6-speed automatic (6R80)
- E - 6-speed manual (3160)
- X - 6-speed manual (MT82)

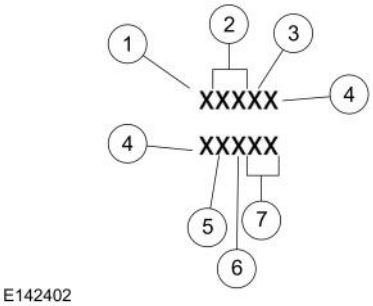
Spring Codes

Spring codes are listed as a 2-part code. The first set of characters identify the front springs. The second set of characters identify the rear springs.



Front Springs

- AA - BR33-5310-A
- BB - BR33-5310-B
- CC - BR33-5310-C
- FF - BR33-5310-F
- GG - BR33-5310-G



Rear Springs

- AA - BR33-5560-A
- BB - BR33-5560-B
- CC - BR33-5560-C
- DD - BR33-5560-D
- EE - BR33-5560-E
- FF - BR33-5560-F
- GG - BR33-5560-G
- JJ - BR3V-5560-J
- LL - BR3V-5560-L
- MM - AR3V-5560-M
- NN - AR33-5560-N

Powertrain Calibration Information

NOTE: Powertrain calibration information is limited to a maximum of 5 characters per line on the VC label. Because of this, calibration identification consisting of more than 5 characters will wrap to the second line on the VC label.

Item	Description
1	Model year (year in which the calibration strategy was first introduced)
2	Vehicle code
3	Transmission code
4	Unique calibrations (designates different hardware to similar vehicles), example: tires or drive ratios
5	Fleet code (describes fleet to which the vehicle belongs), example: 6 - EVAP
6	Certification region (lead region where multiple regions are included in one calibration), example: A - U.S. federal
7	Revision level (will advance as revisions occur), obtained through scan tool

Model Year

- F - 2015

Vehicle Code

- ZG - Mustang

Transmission Code

- 1 - Automatic transmission
- 2 - Manual transmission

Unique Calibration

The Emission/Corporate Average Fuel Economy/CO2 Compliance Department is responsible for assigning these calibration numbers. Unique identifications are assigned to cover similar vehicles to differentiate between tires, drive configurations, final drive ratios and other calibration-significant factors. These 2 characters are chosen by the analyst to provide identifiable information unique to each calibration. For example, using the number 2 to denote a 2- valve engine versus using the number 4 to denote a 4-valve engine provides an easily identifiable difference.

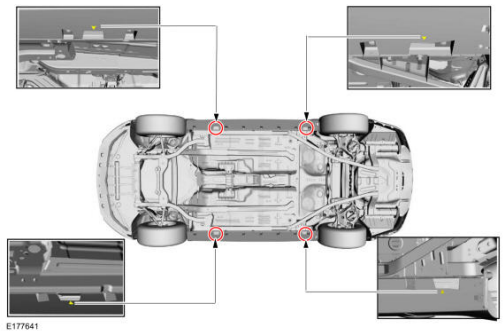
Fleet Coding

- 0 - Certification (U.S. 4K, final sale in export markets)
- 1 - Heavy duty gas engine/Dyno
- 2 - Fast Automobile Manufacturers' Association, U.S.
- 3 - Alternative durability protocol, U.S.
- 4 - Not assigned
- 5 - Not assigned
- 6 - EVAP
- 7 - Mileage accumulation aging endurance durability
- 8 - OBD
- 9 - Not assigned

Certification Region

- 5 - U.S. 50 states
- A - U.S. federal, including altitude, may include Canada and/or Mexico
- B - U.S. California standard, includes U.S. green states
- C - Canada
- D - China
- E - European Community - Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and UK (United Kingdom)
- F - European Extended Community - E-plus Croatia, Czech Republic, Estonia, Hungary, Norway, Poland, Romania, Russian Federation, Slovakia, Slovenia, Switzerland and Yugoslavia
- G - GCC (Gulf Cooperative Council) - Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and UAE

(United Arab Emirates)



- H - Hong Kong
- J - Japan
- K - Korea
- L - Malaysia
- M - Mexico
- N - New Zealand
- P - Australia
- Q - South America - Brazil
- S - Singapore
- T - Taiwan
- U - South America - unleaded fuel regions
- V - Vietnam
- X - Rest Of World
- Y - Military
- Z - Israel

Revision Level (not printed on label)

- 91-99 - Hardware and certification levels
- 01-04 - Preliminary levels
- 00 - Job 1 production (initial certification)
- 05-09 - Pre-job 1 revisions to calibrations
- 10-89 - Post-job 1 revisions to calibrations
- 0B - Durability test level
- BD - OBD intermediate level (pre-05)

Service Manual: JACKING AND LIFTING

DESCRIPTION AND OPERATION > JACKING AND LIFTING - OVERVIEW > JACKING AND LIFTING POINTS

WARNING: Identify the correct jacking points by locating the triangle stamped into the uni-body sheet metal or vehicle frame. Raising a vehicle in any other location may result in vehicle shifting or falling. Failure to follow this instruction may result in serious personal injury.

WARNING: Never get underneath a vehicle that is supported only by a jack. The jack could unintentionally lower. Always support vehicle with floor stands. Failure to follow these instructions may result in serious personal injury.

NOTE: The jack provided with the vehicle is intended to be used in an emergency for changing a deflated tire. To avoid damage to the vehicle, never use the jack to hoist the vehicle for any other purpose.

NOTE: Do not attempt to use jack pressure on either the front bumper or the rear bumper on any vehicle. Damage to bumper covers will occur.

NOTE: Damage to the suspension, exhaust or steering linkage components may occur if care is not exercised when positioning the hoist adapters prior to lifting the vehicle.

NOTE: To prevent possible damage to the underbody, do not drive the vehicle onto the drive-on lift without first checking for possible interference.

NOTE: When raising a vehicle on a two-column hoist, use care when positioning the

vehicle so that the hoisting forks do not interfere with suspension components, mounting brackets or stabilizer mounting brackets, if equipped. In addition, use care in hoist positioning to avoid possible damage to the axle or rear cover.

Service Manual: MAINTENANCE SCHEDULES

DESCRIPTION AND OPERATION > MAINTENANCE SCHEDULES - GASOLINE ENGINES > MAINTENANCE SCHEDULES - GASOLINE ENGINES

For Maintenance Schedule Information, refer to the Scheduled Maintenance Guide chapter in the vehicle's Owner's Guide. Also available at: http://www.motorcraftservice.com and select Owner Guides.

Service Manual: NOISE, VIBRATION AND HARSHNESS

DESCRIPTION AND OPERATION > NOISE, VIBRATION AND HARSHNESS (NVH) > ACCEPTABLE NOISE, VIBRATION AND HARSHNESS (NVH)

Noise is any undesirable sound, usually unpleasant in nature. Vibration is any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down. Harshness is a ride quality issue where the vehicle's response to the road transmits sharply to the customer. Harshness normally describes a firmer than usual response from the suspension system. NVH is a term used to describe these conditions, which result in varying degrees of dissatisfaction. Although a certain level of NVH caused by road and environmental conditions is normal, this information is designed to aid in the diagnosis, testing and repair of NVH symptoms. All internal combustion engines and drivelines produce some noise and vibration; operating in a real world environment adds noise that is not subject to control. Vibration isolators, mufflers and dampers reduce these to acceptable levels. A driver who is unfamiliar with a vehicle can think that some sounds are abnormal when actually the sounds are normal for the vehicle type. As a technician, it is very important to be familiar with vehicle features and know how they relate to NVH symptoms and their diagnosis. For example, if the vehicle has automatic overdrive, it is important to test drive the vehicle both in and out of overdrive mode.

DESCRIPTION AND OPERATION > NOISE, VIBRATION AND HARSHNESS (NVH) > GLOSSARY OF TERMS

Amplitude:

The quantity or amount of energy produced by a vibrating component (G-force). An extreme vibration has a high amplitude. A mild vibration has a low amplitude. See Intensity.

Boom:

Low frequency or low pitched noise often accompanied by a vibration. Also refer to Drumming.

Buffet/Buffeting:

Strong noise fluctuations caused by gusting winds. An example would be wind gusts against the side glass.

Buzz:

A low-pitched sound like that from a bee. Often a metallic or hard plastic humming sound. Also describes a high-frequency vibration. Vibration feels similar to an electric razor.

Chatter:

A pronounced series of rapidly repeating rattling or clicking sounds.

Chirp:

A short-duration, high-pitched noise associated with a slipping drive belt.

Chuckle:

A repetitious, low-pitched sound. A loud chuckle is usually described as a knock.

Click:

A sharp, brief, non-resonant sound, similar to actuating a ball point pen.

Clonk:

A hydraulic knocking sound. Sound occurs with air pockets in a hydraulic system. Also described as hammering.

Clunk/Driveline Clunk:

A heavy or dull, short-duration, low-frequency sound. Occurs mostly on a vehicle that is accelerating or decelerating abruptly. Also described as a thunk.

Conductor:

The components that carry (transmit) a vibration frequency from the originator to the reactor.

Cycles Per Second:

Cycles per second. Same as Hertz (Hz).

Cracks:

A mid-frequency sound, related to squeak. Sound varies with temperature conditions.

Creak:

A metallic squeak.

Cycle:

The process of a vibrating component going through a complete range of motion and returning to the starting point.

Decibel (dB):

A unit of measurement, referring to sound pressure level, abbreviated dB.

Drone:

A low-frequency, steady sound, like a freezer compressor. Also described as a moan.

Drumming:

A cycling, low-frequency, rhythmic noise often accompanied by a sensation of pressure on the ear drums. Also described as a low rumble, boom or rolling thunder.

Flutter:

Mid to high intermittent sound due to air flow. Similar to a flag flapping in the wind.

Frequency:

The rate at which a cycle occurs within a given time.

G-force:

The additional load or weight produced in an object during acceleration. When measuring the level or

amplitude of a vibration without sound, the unit G is added to associate the force of the vibration to gravity. This is similar to measuring the weight of an object, which is also a function of gravity.

Gravelly Feel:

A grinding or growl in a component, similar to the feel experienced when driving on gravel.

Grind:

An abrasive sound, similar to using a grinding wheel, or rubbing sand paper against wood.

Hz (Hertz):

A unit of measure used to describe noise and vibration concerns expressed in cycles per second.

Hiss:

Steady, high-frequency noise. Vacuum leak sound.

Hoot:

A steady, low-frequency tone, sounds like blowing over a long neck bottle.

Howl:

A mid-range frequency noise between drumming and whine. Also described as a hum.

Hum:

Mid-frequency steady sound, like a small fan motor. Also described as a howl.

Intensity:

The physical quality of sound that relates to the strength of the vibration (measured in decibels). The higher the sound's amplitude, the higher the intensity and vice versa. See Amplitude.

Knock:

A heavy, loud, repetitious sound, similar to a knock on the door.

Moan:

A constant, low-frequency tone. Also described as a hum.

Ping:

A short-duration, high-frequency sound, which has a slight echo.

Pitch:

The physical quality of sound that relates to its frequency. Pitch increases as frequency increases and vice versa.

Pumping Feel:

A slow, pulsing movement.

Rattle:

A random and momentary or short-duration noise.

Reactor:

The component, or part, that receives a vibration from an originator and conductor and reacts to the vibration by moving.

Roughness:

A medium-frequency vibration. A slightly higher frequency than a shake. This type of vibration is usually related to drivetrain components.

Rustling:

Intermittent sound of varying frequency, sounds similar to shuffling through leaves.

Shake:

A low-frequency vibration, usually with visible component movement. Usually relates to tires, wheels, brake drums or brake discs if it is vehicle speed sensitive, or engine if it is engine speed sensitive. Also referred to as a shimmy or wobble.

Shimmy:

An abnormal vibration or wobbling, felt as a side-to-side motion of the steering wheel in the driveshaft rotation. Also described as waddle.

Shudder:

A low-frequency vibration that is felt through the steering wheel or seat during light brake application.

Slap:

A resonance from flat surfaces, such as safety belt webbing or door trim panels.

Squeak:

A high-pitched transient sound, similar to rubbing fingers against a clean window.

Squeal:

A long-duration, high-pitched noise.

Tap:

A light, rhythmic or intermittent hammering sound, similar to tapping a pencil on a table edge.

Thump:

A dull beat caused by 2 items striking together.

Tick:

A rhythmic tap, similar to a clock noise.

Tip-In-Moan:

A light moaning noise heard during light vehicle acceleration, usually between 40.2 kmh (25 mph) - 104.6 kmh (65 mph).

Transient:

A noise or vibration that is momentary, a short duration.

Vibration:

Any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down.

Whine:

A constant, high-pitched noise. Also described as a screech.

Whistle:

High-pitched noise with a very narrow frequency band. Examples of whistle noises are a turbocharger or air flow around an antenna.

Wind Noise:

Any noise caused by air movement in, out or around the vehicle.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH)

Special Tool(s)

 ST3025-A	MASTERTECH MTS-4000 ANALYZER 257-00018
 ST2312-A	EngineEAR 107-R2100 Chassis Ears JSP97170 Squeak And Rattle Kit 164-R4900
 ST2314A	Ultrasonic Leak Detector 134-R0135

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > DIAGNOSTIC THEORY

The shortest route to an accurate diagnosis results from:

- System knowledge, including comparison with a known good system.
- System history, including repair history and usage patterns.
- Condition history, especially any relationship to repairs or sudden change.
- Knowledge of possible sources.
- Using a systematic diagnostic method that divides the system into related areas.

The diagnosis and correction of NVH symptoms requires:

- A road or system test to determine the exact nature of the symptom.
- An analysis of the possible causes.
- Testing to verify the cause.
- Repairing any symptoms found.
- A road test or system test to make sure the cause has been corrected or brought back to within acceptable range.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > DIAGNOSTIC PROCEDURE OVERVIEW

Qualifying the symptom by the particular sensation present can help narrow down the cause. Always use the "symptom" to "system" to "component" to "cause" diagnostic technique. This diagnostic method divides the problem into related areas to correct the customer concern.

- Verify the "symptom".
- Determine which "symptoms(s)" can cause the "symptom" using the diagnostic tools described in this service information.
- After determining the possible "system(s)", refer to the appropriate information in this service information to identify the worn or damaged "components".
- After identifying the 'components", identify the "cause" of the failure.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > TOOLS AND TECHNIQUES

The diagnostic tools allow for a systematic collection of information that is necessary to accurately diagnose and repair NVH problems. Remember that the vibrating source component (originator) may only generate a small vibration. This small vibration can in turn cause a larger vibration/noise to emanate from another receiving component (reactor), due to contact with other components (transfer path). For the best results, carry out the test as follows:

- Test drive the vehicle with the vibration sensor inside the vehicle.
- Place the sensor in the vehicle according to feel.

    - If the condition is felt through the steering wheel, the source is most likely in the front of the vehicle.
  - A vibration that is felt in the seat or floor only will most likely be found in the driveline, drive axle or rear wheels and tires.
- Record the readings. Also note when the condition begins, when it reaches maximum intensity and if it tends to diminish above/below a certain speed.
    - If a vibration symptom is vehicle speed related, the tire and wheel Revolutions Per Minute (RPM)/frequency and driveshaft frequency should be calculated.
    - Frequencies with an amplitude reading of 0.06 Gs or less are barely perceptible NVH levels. No corrective action is necessary.
- Place the vibration sensor on or near the suspect area outside the vehicle.
- Continue the road test, driving the vehicle at the speed the symptom occurs, and take another reading.
- Compare the readings.
    - A match in frequency indicates the problem component or area.

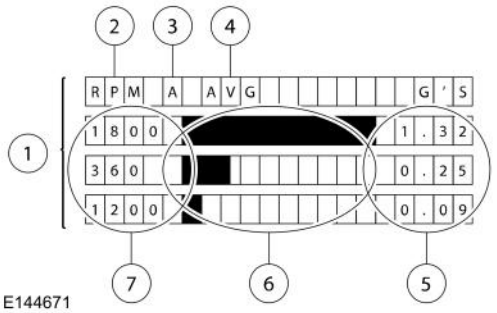
The following diagnostic tools and techniques can be used separately or in conjunction with each other to aid in the diagnosis of NVH symptoms. They are listed in order of preference for ease in their use for locating these symptoms.

Noise, Vibration and Harshness (NVH) Analyzer (Vetronix)

The MTS 4000 and the MTS 4100 NVH analyzers are tools to aid in the identification and isolation of a noise, vibration or harshness symptom in a vehicle. They measure noise and vibration data and compare it with data obtained from the vehicle's PCM as well as vehicle variants that were entered by the user such as pulley size, axle ratio and tire size in order to provide possible sources. The MTS 4000 and the MTS 4100 have the following characteristics:

- Interface with the vehicle's computer system
- Support and store vibration data input from 1 or 2 accelerometers
- Support and store noise data input from 2 microphones
- Provide a photo-tachometer for operation of the driveshaft balancing function
- Provide a strobe output capable of driving a standard timing light
- Contain a real-time clock circuit that provides time and date information which is used for tagging test data
- Have the capability to print to an external printer and interface with a personal computer
- Can be powered from a variety of power sources: cigarette lighter, AC power or the internal battery pack

The MTS 4000 and the MTS 4100 NVH analyzers have 4 main operating modes. The first is for vibration diagnosis. This mode measures data from 1 or 2 accelerometers simultaneously while obtaining data from the vehicle. Then it carries out a frequency analysis on the accelerometer information and



compares the vibration frequencies with the frequencies associated with various rotating components within the vehicle. The data can be presented in 4 different display modes: principle component, bar chart, frequency spectrum or waterfall. All display mode formats contain the same common elements, such as amplitude.

The second is for noise diagnosis. This mode measures noise from 1 or 2 microphones simultaneously. All noise measurements are in decibels (dB). All frequency bands used for noise measurements are the same as for the vibration measurements, up to 1, 000 Hertz (Hz).

The third is the strobe. A strobe or standard timing light can be connected to an analyzer, to provide a means for measuring rotation speed. The strobe function is used for isolating the source of a vibration.

Electronic Vibration Analyzer (EVA)

The Electronic Vibration Analyzer (EVA) is a hand-held electronic scan tool which will assist in locating the source of unacceptable vibrations. The vibration sensor can be remotely mounted anywhere in the vehicle for testing purposes. The unit displays the 3 most common vibration frequencies and their corresponding amplitudes simultaneously. A bar graph provides a visual reference of the relative signal strength (amplitude) of each vibration being displayed and its relative G-force. The keypad is arranged to make the Electronic Vibration Analyzer (EVA) simple to program and use. Some of the functions include the ability to average readings as well as record, play back and freeze readings. The Electronic Vibration Analyzer (EVA) has a strobe balancing function that can be used to detect imbalance on rotating components such as a driveshaft or engine accessories.

Item	Description
1	Electronic Vibration Analyzer (EVA) screen
2	Frequency mode displayed in Revolutions Per Minute (RPM) or Hertz (Hz)
3	Active sensor input (A or B)
4	Current active mode
5	G-force indicators or the strongest frequencies in descending strength of each vibration
6	Strength of each vibration
7	Frequency in Revolutions Per Minute (RPM)/ Hertz (Hz) of each vibration

Record the readings taken with the diagnostic tool.

- Frequencies should be read in the "average" mode.
- Frequencies have a range of plus or minus 2 Hertz (Hz). A reading of 10 Hertz (Hz) can be displayed as an 8 Hertz (Hz) through 12 Hertz (Hz).

Vibrate Software

Vibrate Software is a diagnostic aid which will assist in pinpointing the source of unacceptable vibrations. The engine's crankshaft is the point of reference for vibration diagnosis. Every rotating component will have an angular velocity that is faster, slower or the same as the engine's crankshaft. Vibrate Software® calculates the angular velocity of each component and graphically represents these velocities on a computer screen and on a printed vibration worksheet. The following steps outline how Vibrate Software® helps diagnose a vibration symptom:

- Enter the vehicle information. Vibrate will do all the calculations and display a graph showing tire and driveline vibrations.
- Print a Vibration Worksheet graph. The printed graph is to be used during the road test.
- Road test the vehicle at the speed where the vibration is most noticeable. Record the vibration frequency Revolutions Per Minute (RPM) and the engine Revolutions Per Minute (RPM) on the worksheet graph. The point on the graph where the vibration frequency Revolutions Per Minute (RPM) reading and the engine Revolutions Per Minute (RPM) reading intersect indicates the specific component group causing the symptom.
    - A frequency measurement tool capable of measuring vibration frequency and Revolutions Per Minute (RPM) will be needed.
- Provides graphics of diagnostic procedures to aid in testing components.

Reed Tachometer

The Reed tachometer is a hand-held vibration sensor which will assist in locating the source of unacceptable vibrations. The vibration sensor can be placed anywhere in the vehicle for testing purposes. The Reed tachometer contains several reeds that are tuned to vibrate or resonate at different frequencies ranging from 10 to 80 Hertz (Hz) or 600 to 4, 800 Revolutions Per Minute (RPM). Though the Reed tachometer is able to measure multiple frequencies, it does not measure amplitude.

Sirometer

The Sirometer measures frequency in Hertz (Hz) and Revolutions Per Minute (RPM). To use the Sirometer, place it on any vibrating component and slowly scroll the wire out by turning the knob. As the length of wire changes, so does its natural frequency. Find the length of wire that vibrates with the highest amplitude. This frequency will match that of the vibrating component. Read the frequency for that length of wire.

Combination EngineEAR/ChassisEAR

An electronic listening device used to quickly identify noise and the location under the chassis while the vehicle is being road tested. The ChassisEARs can identify the noise and location of damaged/worn wheel bearings, constant velocity joints, brakes, springs or axle bearings.

EngineEAR Basic Unit

An electronic listening device used to detect even the faintest noises. The EngineEARs can detect the noise of damaged/worn bearings in generators, coolant pumps, A/C compressors and power steering

pumps. They are also used to identify noisy lifters, exhaust manifold leaks, chipped gear teeth and for detecting wind noise. The EngineEAR has a sensing tip, amplifier and headphones. The directional sensing tip is used to listen to the various components. Point the sensing tip at the suspect component and adjust the volume with the amplifier. Placing the tip in direct contact with a component will reveal structure-borne noise and vibrations, generated by or passing through, the component. Various volume levels can reveal different sounds.

Mechanic's Stethoscope

A mechanics stethoscope is an inexpensive tool for locating noises in motors and other moving parts. It can be used to help diagnose worn gears, faulty valves, coolant pump failure, damaged gaskets, defective bearings and body squeaks.

Squeak and Rattle Repair Kit

The Squeak and Rattle Repair Kit contains lubricants and self-adhesive materials that can be used to eliminate interior and exterior squeaks and rattles. The kit consists of the following materials:

- PVC (soft foam) tape
- Urethane (hard foam) tape
- Flocked (black fuzzy) tape
- Ultra High Molecular Weight (UHMW) (frosted) tape
- Squeak and rattle oil tube
- Squeak and rattle grease tube

Leak Detector

The Leak Detector is used to detect wind noises caused by leaks and gaps in areas where there is weatherstripping or other sealing material. It is also used to identify A/C leaks, vacuum leaks and evaporative emission noises. The Leak Detector includes a multi-directional transmitter (operating in the ultrasonic range) and a hand-held detector. The transmitter is placed inside the vehicle. On the outside of the vehicle, the hand-held detector is used to sweep the area of the suspected leak. As the source of the leak is approached, a beeping sound is produced which increases in both speed and frequency.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > DIAGNOSTIC GUIDE

To begin a successful diagnosis, record the reported findings, then proceed to each of the numbered process steps to complete the diagnosis.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > 1: CUSTOMER INTERVIEW

The diagnostic process starts with the customer interview. The service advisor must obtain as much information as possible about the problem and take a test drive with the customer. There are many ways a customer will describe NVH concerns and this will help minimize confusion arising from descriptive

language differences. It is important that the concern is correctly interpreted and the customer descriptions are recorded. During the interview, ask the following questions:

- When was it first noticed?
- Did it appear suddenly or gradually?
- Did any abnormal occurrence coincide with or proceed its appearance?

Use the information gained from the customer to accurately begin the diagnostic process.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > 2: PRE-DRIVE CHECK

It is important to do a pre-drive check before road testing the vehicle. A pre-drive check verifies that the vehicle is safe to drive and eliminates any obvious faults on the vehicle.

The pre-drive check consists of a brief visual inspection. During this brief inspection, take note of anything that will compromise safety during the road test and make those repairs/adjustments before taking the vehicle on the road.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > 3: PREPARING FOR THE ROAD TEST

Observe the following when preparing for the road test:

- Review the information provided by the customer. It is important to know the specific concern the customer has with the vehicle.
- Do not be misled by the reported location of the noise/vibration. The cause can actually be some distance away.
- Remember that the vibrating source component (originator) may only generate a small vibration. This small vibration can in turn cause a larger vibration/noise to emanate from another receiving component (reactor) due to contact with other components (transfer path).
- Conduct the road test on a quiet street where it is safe to duplicate the vibration/noise. The ideal testing route is an open, low-traffic area where it is possible to operate the vehicle at the speed at which the condition occurs.
- If possible, lower the radio antenna in order to minimize turbulence. Identify anything that could potentially make noise or be a source of wind noise. Inspect the vehicle for add-on items that create vibration/noise. Turn off the radio and the heating and cooling system blower.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > 4: VERIFY THE CUSTOMER CONCERN

Verify the customer concern by carrying out a road test.

A road test may be necessary if the symptom relates to the suspension system or is sensitive to torque. Remember, a condition will not always be identifiable by carrying out these tests; however, they will eliminate many possibilities if carried out correctly.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > 5: ROAD TEST

> *NOTE: It may be necessary to have the customer ride along or drive the vehicle to point out the concern. During the road test, take into consideration the customer's driving habits and the driving conditions. The customer's concern just may be an acceptable operating condition for that vehicle.*

The following is a brief overview of each test. A review of this information helps to quickly identify the most appropriate process necessary to make a successful diagnosis. After reviewing this information, select and carry out the appropriate test(s), proceeding to the next step of this process.

- The Slow Acceleration Test is normally the first test to carry out when identifying an NVH concern, especially when a road test with the customer is not possible.
- The Heavy Acceleration Test helps to determine if the concern is torque-related.
- The Neutral Coast Down Speed Test helps to determine if the concern is vehicle speed-related.
- The Steering Input Test helps to determine how the wheel bearings and other suspension components contribute to a vehicle speed-related concern.
- The Brake Test helps to identify vibrations or noise that are brake related.
- The Road Test Over Bumps helps isolate a noise that occurs when driving over a rough or bumpy surface.
- To identify if the noise is coming from the electric motor and /or gearbox (such as for a whine issue), it can be helpful sometimes to shift into neutral while driving while the condition is present.
- The Vehicle Cold Soak Procedure helps to identify concerns occurring during initial start-up and when an extended time lapse occurs between vehicle usage.

Slow Acceleration Test

To carry out this test, proceed as follows:

- Slowly accelerate to the speed where the reported concern occurs. Note the vehicle speed, and if possible, determine the vibration frequency.
- Attempt to identify what part of the vehicle the concern is coming from.
- Attempt to identify the source of the concern.
- Proceed as necessary.

Heavy Acceleration Test

To carry out this test, proceed as follows:

- Accelerate hard from 0-64 km/h (0-40 mph).
- Decelerate in a lower gear.
- The concern is torque related if duplicated while carrying out this test.
- Proceed as necessary.

Neutral Coast Down Speed Test

To carry out this test, proceed as follows:

- Drive at a higher rate of speed than where the concern occurred when carrying out the Slow Acceleration Test.
- Place the transmission in NEUTRAL and coast down past the speed where the concern occurs.
- The concern is vehicle speed-related if duplicated while carrying out this test. This eliminates the engine or motor as a source.
- Proceed as necessary.

Steering Input Test

To carry out this test, proceed as follows:

- Drive at the speed where the concern occurs, while making sweeping turns in both directions.
- If the concern goes away or gets worse, the wheel bearings, hubs and tire tread wear are all possible sources.
- Proceed as necessary.

Brake Test

To carry out this test, proceed as follows:

- Warm the brakes by slowing the vehicle a few times from 80-32 km/h (50-20 mph) using light braking applications. At highway speeds of 89-97 km/h (50-60 mph), apply the brake using a light pedal force.
- Accelerate to 89-97 km/h (55-60 mph).
- Lightly apply the brakes and slow the vehicle to 30 km/h (20 mph).
- A brake vibration noise can be felt in the steering wheel, seat or brake pedal. A brake noise can be heard upon brake application and diminish when the brake is released.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate brake article(s) for further diagnosis and repair. If the source has not been identified, continue with the road test.

Road Test Over Bumps

To carry out this test, proceed as follows:

- Drive the vehicle over a bumpy or rough surface one wheel at a time to determine if the noise is coming from the front or the back and the left or the right side of the vehicle.
- Proceed as necessary.

Vehicle Cold Soak Procedure

To carry out this procedure, proceed as follows:

- Test preparations include matching the customer conditions (if known). If not known, document the conditions. Monitor the vibration/noise duration with a watch for up to 3 minutes.
- Park the vehicle where testing will occur. The vehicle must remain at or below the concern temperature (if known) for 6-8 hours.
- Before starting the vehicle, conduct a visual inspection under the hood.
- Listen for pumps that circulate coolant for motor, electronics, heater and battery.

> *NOTE: Never probe moving parts.*

- Isolate the vibration/noise by carefully listening. Move around the vehicle while listening to find the general location of the vibration/noise. Then, search for a more precise location by using a stethoscope or EngineEAR.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate information for further diagnosis and repair. If the source has not been identified, continue with the road test.

DIAGNOSIS AND TESTING > NOISE, VIBRATION AND HARSHNESS (NVH) > SYMPTOM CHARTS

Noise, Vibration and Harshness (NVH) Symptoms

Classify Noise, Vibration and Harshness (NVH) Symptoms

For NVH concerns, it is necessary to classify the customer's concern into one of the 3 categories: noise, vibration or harshness. The reason for this is that a customer concern may consist of a combination of symptoms involving noise and vibration, or vibration and harshness. In cases where there are combination symptoms, determine which diagnostic path to follow: noise, vibration or harshness. For example, if a customer has a concern involving a noise and a vibration, and it is determined that it is vehicle speed-related, follow the vibration diagnostic path.

Noise Symptoms

Once a symptom is classified as a noise, the particular conditions under which the noise occurs need to be identified. These conditions are identified and verified during the road test. For example, a noise may only occur while turning. The next step is to determine which systems on the vehicle are related to that condition. In this case, the steering system and wheel/tire system may be suspect. After identifying possible systems, a preliminary inspection of these systems should be done. If the source of noise is still unidentified, use a listening device (such as the ChassisEAR) to pinpoint the source. Once the source has been identified, determine if this source is related to the suspected system previously

identified. If it is related, then complete the repair to resolve the customer concern. If it is unrelated, then it is possible that the source of the noise is a reactor to a noise being transmitted through a transfer path. If this is the case, repairing the reactor will not resolve the customer concern. The transfer path must be identified and a determination made if the noise is normal, but accentuated by the transfer path (conductor), or if the originator is the fault causing excessive noise to transfer to another component through a conductor. There is a relationship between systems identified as related to conditions and the noise transfer path. In some cases, the condition under which the noise occurs has nothing to do with the identified source. This relationship is important in the diagnosis of noise concerns. It is the first clue that the identified source of noise might be a reactor and that further investigation is needed to diagnose a possible noise transfer path concern. Based on the results from the road test, make a determination of which action in the symptom chart to take first.

Vibration Symptoms

Most vibrations consist of movements back and forth or up and down that repeat. Every time the vibrating component goes through its complete range of motion and returns to the starting point is called a cycle. The rate at which these cycles occur within a given time is called the frequency. Frequency is measured in cycles per second or Hertz (Hz). One cycle per second equals one Hertz (Hz). Once the frequency of a vibration is known, calculations can be done to determine the system that is the source of the concern.

Order of Vibration

The order of a vibration refers to how often the vibration is present in one revolution of the component. For example, a vibration that is present once each revolution of a component would be a first order vibration. A vibration present twice each revolution of the component would be a second order vibration. Vibration orders do not have to be whole numbers, they can have decimal values such as 1.5 order vibration or 3.08 order vibration.

The concept of order of vibration is important to remember when the measured frequency of a vibration does not seem to match the frequency calculations of any of the likely systems or components. As the order increases, the frequency of the vibration will also increase by a multiple of that number.

For example, vibration may be present where the frequency is measured at 14 Hertz (Hz). After doing the necessary calculations it is determined the first order tire and wheel frequency is 7 Hertz (Hz) and the first order driveshaft frequency is 22 Hertz (Hz). Based on this information it can be determined the vibration is most likely a second order tire and wheel vibration: 7 Hertz (Hz) (first order tire and wheel frequency) multiplied by 2 (second order) equals 14 Hertz (Hz) (second order tire and wheel frequency).

Relationship of Vibration Frequency to Order of Vibration

After carrying out the road test as described in this service information, the vibration was determined to be either vehicle-speed related or electric motor-speed related. That determination will identify the vibration frequency calculations that should be done.

Vibration Type	Calculate
Vehicle-speed related	Tire-speed vibration frequency, Driveshaft-speed vibration frequency

In calculating and using frequency readings it is important to remember the direct relationship between Hertz (Hz) and Revolutions Per Minute (RPM). One Hertz (Hz) is equal to 60 Revolutions Per Minute (RPM). This is easy to remember. Think of Hertz (Hz) as cycles per second. There are 60 seconds in a minute, therefore multiply the Hertz (Hz) reading by 60 to get Revolutions Per Minute (RPM). Conversely,

divide Revolutions Per Minute (RPM) by 60 to get Hertz (Hz).

Use the Frequency and Revolutions Per Minute (RPM) Calculations Worksheet to calculate system/component frequencies. The worksheet provides the necessary steps to determine each system/component group frequency.

Frequency Calculations

Calculating Tire and Wheel Frequency

For a vibration concern, use the vehicle speed to determine tire/wheel frequency and Revolutions Per Minute (RPM). Calculate the tire and wheel Revolutions Per Minute (RPM) and frequency by carrying out and following:

- Measure the diameter of the tire.
- Record the speed at which the vibration occurs.
- Obtain the corresponding tire and wheel Revolutions Per Minute (RPM) and frequency from the Tire Speed and Frequency Chart.
    - If the vehicle speed is not listed, divide the vehicle speed at which the vibration occurs by 16 km/h (10 mph). Multiply that number by the 16 km/h (10 mph) tire Revolutions Per Minute (RPM) listed for that tire diameter in the chart. Then divide that number by 60. For example: a 40 MPH (Miles Per Hour) vibration with 835 mm (33 in) tires. 40 divided by 10 = 4. Multiply 4 by 105 = 420 Revolutions Per Minute (RPM). Divide 420 Revolutions Per Minute (RPM) by 60 seconds = 7 Hertz (Hz) at 40 MPH (Miles Per Hour).

Tire Speed and Frequency Chart

Tire Diameter	Tire Revolutions Per Minute (RPM)/Hertz (Hz) at value listed below	Tire Revolutions Per Minute (Revolutions Per Minute (RPM)/Hertz (Hz) at value listed below	Tire Revolutions Per Minute (RPM)/Hertz (Hz) at value listed below	Tire Revolutions Per Minute (RPM)/Hertz (Hz) at value listed below
in (mm)	9.9 mph (16 km/h)	49.7 mph (80 km/h)	60.3 mph (97 km/h)	70.2 mph (113 km/h)
19.02 in (483 mm)	182	910/15	1092/18	1274/21
20.00 in (508 mm)	173	865/14	1038/17	1211/20

29.92 in (760 mm)	115	575/10	690/11	805/13
30.91 in (785 mm)	111	555/9	666/11	777/13
31.89 in (810 mm)	108	540/9	648/11	756/13
32.87 in (835 mm)	105	525/9	630/10	735/12
34.02 in (864 mm)	102	510/8	612/10	714/12

Harshness Symptoms

Harshness is customer perception which gives the impression of no isolation from the tire/wheel and suspension system. Harshness may be caused by road conditions, temperature changes, component damage and/or incorrect customer modifications on original components/specifications. Customers usually experience harshness when the vehicle is driving over bumps or potholes and in cold weather conditions. Harshness can also be experienced with excessive tire pressure, sporty tires, heavy-duty springs and shocks, or other vehicle modifications. Some aftermarket tires, even with the correct size, may change vehicle behavior and produce customer concerns. The first step in diagnosing a harshness concern is to determine if the concern was experienced only in certain specific operating conditions, such as large potholes or extremely cold weather. In these cases, harshness should be considered normal. A known good vehicle can be driven under the same conditions and the rides can be compared to determine whether the concern is normal or vehicle specific. The second step is to check tire pressure and make sure it was set within vehicle specifications. The third step is to inspect for aftermarket or modified components and determine if they are the cause of the harshness complaint. If the harshness concern persists after the above steps, it is possible that some components are damaged. Based on the results from the road test, make a determination of which action in the symptom chart to take first.

Noise, Vibration and Harshness (NVH) Symptom Chart Categories

A good diagnostic process is a logical sequence of steps that lead to the identification of a causal system. Use the symptom and possible system categories as follows:

- Identify the operating condition that the vehicle is exhibiting.
- Match the operating condition to the symptom.

- Verify the symptom.
- Calculate the frequency and order of the symptom.
- Identify which category or system(s) could cause the symptom.
- The information indicated to identify and diagnose the symptom or confirm that the system is not the source of the condition.

Use the diagnostic instructions in this service information along with the necessary listed tools to identify the vibration order and to isolate the symptom and the possible systems associated with that symptom. Then based on the results from the road test, make a determination of which action in the symptom chart to take first. Since it is possible any one of multiple systems may be the cause of the symptom, it may be necessary to use a process of elimination type diagnostic approach to pinpoint the concern.

Symptom Chart: Vehicle-Speed Related Vibrations

> *NOTE: Any assembly that is out of balance will only cause a first order vibration, it will not cause a higher order vibration.*

When a vehicle-speed related vibration is present, both tire-speed related vibration and axle shaft-speed related vibration calculations should be carried out.

Symptom Chart-Tire-Speed Related Vibrations

Symptom Chart

Condition	Possible Sources	Actions

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - COMPONENT LOCATION

Item	Description
1	HUD module

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - OVERVIEW > OVERVIEW

The forward collision warning system alerts the driver of a collision risk with a red warning LED indicator bar (which is part of the HUD module) located above the instrument panel and an audible warning chime from the IPC.

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
IPC chime	IPC	Data used to command a warning chime during possible collision event and audio mute so that the warning chime can be heard.

Network Input Messages - CCM

Broadcast Message	Originating Module	Message Purpose
HUD data	HUD module	Used for HUD module active, available and fault status.

Network Input Messages - HUD

Broadcast Message	Originating Module	Message Purpose
HUD flash command	CCM	Flashes the HUD module LED array when commanded.
Ignition status	BCM	Used for ignition switch position input.

Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Forward collision chime request	CCM	Data used to command warning chime during possible collision event. When this message is received, the IPC sends the audio mute message to the ACM.
Forward collision warning message request	CCM	Data used to command warning chime and messages during possible collision event.

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > FORWARD COLLISION WARNING SYSTEM OPERATION

The forward collision warning system works in conjunction with the adaptive cruise control system. During a possible collision event, the CCM commands:

- the HUD to flash red warning Light Emitting Diodes (LEDs).
- the IPC to activate a chime and commands.
- the ACM to mute audio volume.

The forward collision warning system is activated when the vehicle is moving forward at a speed greater than 8 kmh (5 mph). The CCM determines the distance and relative speed of the vehicle that is in the path of travel, utilizing a radar sensor (integral to the CCM) to detect other vehicles that are moving in the same direction. If the CCM determines that a collision is possible, the CCM commands the HUD module Light Emitting Diodes (LEDs) to flash and the IPC to chime.

The forward collision warning system and audible warning chime can be enabled and disabled through the message center display in the IPC. The system reverts to ON each ignition cycle. The HUD module and/or chime activates briefly to confirm the last setting.

There are three levels of sensitivity detection (HIGH, NORMAL and LOW) that are changed in the message center Driver Assist menu display.

If a MyKey ® restricted key is in use, the forward collision warning defaults to the most sensitive setting at the beginning of each ignition cycle. However, the MyKey ® user is able to adjust the forward collision warning sensitivity.

When a system fault is detected with the forward collision warning system, the message COLLISION WARNING NOT AVAILABLE, COLLISION WARNING NOT AVAILABLE SENSOR BLOCKED SEE MANUAL, or COLLISION WARNING MALFUNCTION is displayed in the IPC message center.

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HUD - PERFORMANCE SHIFT INDICATION (SVT ONLY)

The HUD module provides performance shift indication to the driver by flashing the Light Emitting Diodes (LEDs) at set shift points. The performance shift mode, shift points and display intensity are selected by the driver through the IPC message center. The driver can select Drag, Tach, Track or Off HUD mode. Refer to: INSTRUMENTATION, MESSAGE CENTER AND WARNING CHIMES .

DESCRIPTION AND OPERATION > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

CCM

The CCM contains a radar sensor unit that determines the distance and relative speed of the vehicle that is in the path of travel.

HUD

The HUD contains the red Light Emitting Diodes (LEDs) that warn the driver of a possible collision event when commanded by the CCM.

There are certain situations when the warning Light Emitting Diodes (LEDs) cannot be seen, such as strong sunlight or when wearing sunglasses. The HUD module has a temperature sensor circuit that is integral to the module that senses the temperature of the Light Emitting Diodes (LEDs) internal to the module. When a high passenger compartment temperature such as strong sunlight is sensed by the temperature sensor, the warning Light Emitting Diodes (LEDs) can be temporarily disengaged. If this occurs, only the audible warning chime is used.

Warnings may not appear if there is little distance to the vehicle ahead or abrupt steering wheel and pedal movements are made.

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > DTC CHARTS

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > DTC CHARTS > HUD DTC CHART

DTC	Description	Action
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	GO to Pinpoint Test C
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	GO to Pinpoint Test D
U0405:68	Invalid Data Received From Cruise Control Module: Event Information	This DTC sets when the HUD module receives invalid network data from the CCM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network.
U0447:68	Invalid Data Received From Gateway "A": Event Information	This DTC sets when the HUD module receives invalid network data from the GWM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST A : THE FORWARD COLLISION WARNING SYSTEM IS INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- CCM
- HUD module
- IPC

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST A : THE FORWARD COLLISION WARNING SYSTEM IS INOPERATIVE > PINPOINT TEST A : THE FORWARD COLLISION WARNING SYSTEM IS INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 VERIFY THE CCM (CRUISE CONTROL MODULE) AND HUD (HEAD UP DISPLAY) MODULE PASS THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Do both the CCM and the HUD module pass the network test?

Yes	GO to A2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

A2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CONTINUOUS AND ON-DEMAND HUD (HEAD UP DISPLAY) MODULE SELF-TESTS

Using a diagnostic scan tool, perform the HUD module self-test.

Are any HUD module Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to DTC Charts .

No	GO to A3

A3 CHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the CCM self-tests.

Are any CCM Diagnostic Trouble Codes (DTCs) recorded?

Yes	If DTC C1132:4B is recorded, GO to Pinpoint Test E For all other CCM Diagnostic Trouble Codes (DTCs), REFER to: Cruise Control .

No	GO to A4

A4 CHECK THE MESSAGE CENTER FOR CORRECT OPERATION

Check the IPC message center for correct operation.

Does the message center operate correctly?

Yes	GO to A5

No	REFER to: Instrumentation, Message Center and Warning Chimes .

A5 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

Ignition OFF.

Disconnect and inspect HUD module connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the HUD module connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST B : THE HEAD UP DISPLAY (HUD) MODULE IS INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description .

Possible Sources

- CCM
- HUD module

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST B : THE HEAD UP DISPLAY (HUD) MODULE IS INOPERATIVE > PINPOINT TEST B : THE HEAD UP DISPLAY (HUD) MODULE IS INOPERATIVE

NOTE: Remove the vehicle from any extreme heat source or sunload condition prior to testing the vehicle.

B1 CHECK FOR HUD (HEAD UP DISPLAY) MODULE LED PROVE OUT TEST

Ignition ON.

While placing the ignition switch in RUN, observe the HUD module Light Emitting Diodes (LEDs).

Do the HUD module Light Emitting Diodes (LEDs) illuminate?

Yes	The HUD module Light Emitting Diodes (LEDs) are operating correctly at this time. The concern may have been caused by extreme temperatures.

No	GO to B2

B2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Does the HUD module pass the network test?

Yes	GO to B3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

B3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

Using a diagnostic scan tool, perform a HUD module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to DTC Charts .

No	GO to B4

B4 CHECK THE DTCS FROM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform a CCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	If DTC C1132:4B is recorded, GO to Pinpoint Test E For all other CCM Diagnostic Trouble Codes (DTCs), REFER to: Cruise Control .

No	GO to B5

B5 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

Ignition OFF.

Disconnect and inspect HUD module connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the HUD module connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST C : U0104:00

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	Sets in the HUD module if data messages received from the CCM over the HS-CAN2 are missing.

Possible Sources

- CCM
- HUD module

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST C : U0104:00 > PINPOINT TEST C : U0104:00

C1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to C2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

C2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Does the CCM pass the network test?

Yes	GO to C3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

C3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform a CCM self-test.

Is DTC C1132:4B recorded?

Yes	If DTC C1132:4B is recorded, GO to Pinpoint Test E For any other Diagnostic Trouble Codes (DTCs), REFER to: Cruise Control .

No	GO to C4

C4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

Using a diagnostic scan tool, perform a HUD module self-test.

Is DTC U3003:16 or U3003:1C recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test G For DTC U3003:1C, GO to Pinpoint Test H

No	GO to C5

C5 RECHECK THE HUD (HEAD UP DISPLAY) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the HUD module self-test.

Is DTC U0104:00 still present?

Yes	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) . CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the HUD module self-test. If DTC U0104:00 is still present, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST D : U0146:00

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	Sets in the HUD module if data messages received from the GWM over the HS-CAN2 are missing.

Possible Sources

- HUD module
- GWM

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST D : U0146:00 > PINPOINT TEST D : U0146:00

D1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable concern.

Is an observable symptom present?

Yes	GO to D2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform the network test.

Does the GWM pass the network test?

Yes	GO to D3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

D3 CHECK GWM (GATEWAY MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, retrieve GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Continuous Memory Diagnostic Trouble Codes (CMDTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to D4

D4 PERFORM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

Using a diagnostic scan tool, perform a HUD module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to DTC Charts .

No	GO to D5

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.

D5 RECHECK THE HUD (HEAD UP DISPLAY) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Repeat the HUD module self-test.

Is DTC U0146:00 still present?

Yes	GO to D6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0146:00 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, perform the continuous memory self-test.

Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0146:00 set in other modules?

Yes	INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

DIAGNOSIS AND TESTING > COLLISION WARNING AND COLLISION AVOIDANCE SYSTEM > PINPOINT TESTS > PINPOINT TEST E : C1132:4B

Normal Operation and Fault Conditions

The HUD module is designed with a temperature sensor internal to the module. Due to extremely hot weather conditions, the temperature sensor circuit allows the HUD module to disable under high temperature conditions, which could damage the HUD module Light Emitting Diodes (LEDs). The HUD module is designed with a LED prove-out test. Upon each ignition cycle when the ignition switch is in RUN, the Light Emitting Diodes (LEDs) illuminate for a period of time indicating the HUD module is functional.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1132:4B	Head Up Display: Over Temperature	Sets as a continuous memory and on-demand DTC in the CCM if the HUD module is over-temperature.

Possible Sources

- HUD module

E1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Does the HUD module pass the network test?

Yes	GO to E2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

NOTE: Remove the vehicle from any extreme heat source or sunload condition prior to testing the vehicle.

E2 CHECK FOR HUD (HEAD UP DISPLAY) MODULE LED (LIGHT EMITTING DIODE) PROVE-OUT TEST

Ignition ON.

While placing the ignition switch in RUN, observe the HUD module Light Emitting Diodes (LEDs).

Do the HUD module light emitting diodes (LEDs) illuminate?

Yes	The HUD module Light Emitting Diodes (LEDs) are operating correctly at this time. The concern may have been caused by extreme temperatures.

No	GO to E3

E3 CHECK THE DTCS FROM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

Using a diagnostic scan tool, perform the HUD module self-test.

Are any HUD module Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the DTC Charts .

No	GO to E4

E4 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

Ignition OFF.

Disconnect and inspect HUD module connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the HUD module connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

H4 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

Ignition OFF.

Disconnect and inspect HUD module connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

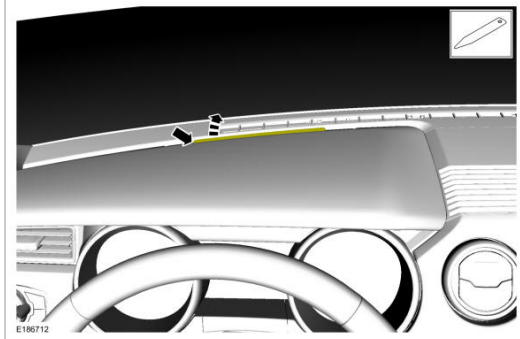
damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the HUD module connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

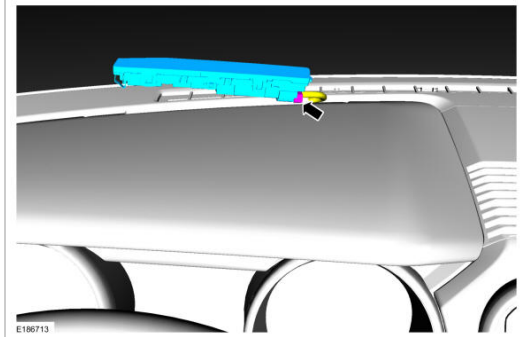
Is the concern still present?



Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

REMOVAL AND INSTALLATION > HEAD UP DISPLAY (HUD) MODULE > REMOVAL

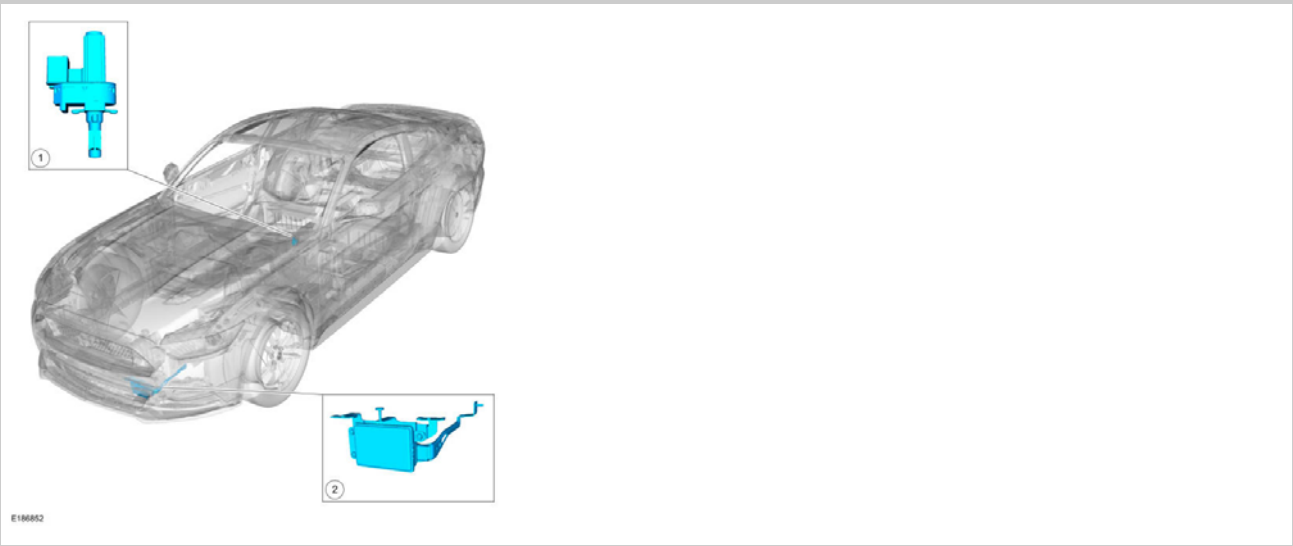


1.

Using a non-marring tool, release the tab and position the HUD up.

2.

Disconnect the electrical connector and remove the HUD.



REMOVAL AND INSTALLATION > HEAD UP DISPLAY (HUD) MODULE > INSTALLATION

1.

To install, reverse the removal procedure.

DESCRIPTION AND OPERATION > CRUISE CONTROL - COMPONENT LOCATION

Item	Description
1	CPP switch
2	CCM

DESCRIPTION AND OPERATION > CRUISE CONTROL - OVERVIEW > OVERVIEW

The cruise control system is controlled by the PCM.

The cruise control mode is selected from the steering wheel mounted switches (ON/OFF, SET+, SET-, GAP+, GAP- and CAN/RES), which are integrated into the LH steering wheel switch.

The gap setting is selected from the steering wheel mounted switch (GAP), which is integrated into the LH steering wheel switch.

The cruise control system maintains a selected vehicle speed between 29 km/h (18 mph) and the maximum limited vehicle speed. When a MyKey ® restricted key is in use and max speed limiter is turned on, vehicle speed is limited to 129 km/h (80 mph).

During normal driving, the vehicle speed can vary slightly from the set speed due to road conditions. The vehicle speed can fluctuate when driving up and down a steep hill. If the vehicle speed decreases more than 16 km/h (10 mph) below the set speed, the cruise control disengages.

DESCRIPTION AND OPERATION > CRUISE CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > CRUISE CONTROL - SYSTEM OPERATION AND

COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

Network Input Messages - ABS Module

Broadcast Message	Originating Module	Message Purpose
Adaptive cruise control deceleration request	CCM	Used for cruise control automatic braking.
Brake pedal applied	PCM	Used for brake switch input.
Vehicle lateral acceleration	RCM	Deactivates cruise control when requested.
Vehicle longitudinal acceleration		

Network Input Messages - CCM

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	Used for accelerator pedal status.
Brake pedal applied	PCM	Used for brake switch input.
Cruise control override	PCM	Driver overriding cruise control with accelerator pedal.
Ignition status	BCM	Used for ignition switch position input.
Stability control event in progress	ABS module	Deactivates cruise control when requested.
Traction control event in progress		
Vehicle yaw rate		
Vehicle lateral acceleration	RCM	Deactivates cruise control when requested.
Vehicle longitudinal acceleration		
Vehicle configuration data	BCM	Used for comparison checking adaptive cruise control configuration.

Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Adaptive cruise control gap distance display	CCM	Data used to generate message center display indicating adaptive cruise control gap setting.
Cruise control mode	PCM	Toggles between speed control and adaptive cruise control.
Cruise control override	PCM	Driver overriding cruise control with accelerator pedal.

Cruise control status	PCM	Data used for cruise control indicator status.

Network Input Messages - PCM

Broadcast Message	Originating Module	Message Purpose
Cruise control enable/cancel request	CCM	Disables cruise control when requested.
Steering wheel switch speed control request	SCCM	Used for cruise control enable/disable and operating mode request.
Stability control event in progress	ABS module	Deactivates cruise control when requested.
Traction control event in progress		
Vehicle lateral acceleration	RCM	Deactivates cruise control when requested.
Vehicle longitudinal acceleration		
Vehicle yaw rate		

DESCRIPTION AND OPERATION > CRUISE CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CRUISE CONTROL OPERATION

NOTE: For a complete illustration of the adaptive cruise control indicators and graphic displays, refer to the Owner's Literature.

The adaptive cruise control system functions much like a standard cruise control system. The adaptive cruise control system automatically adjusts the vehicle speed to maintain a set distance gap from the front of the vehicle and the vehicle in the same path of travel. When the adaptive cruise control system is on and is following a vehicle or a vehicle enters the same driving lane, a follow vehicle graphic is displayed in the message center.

The adaptive cruise control system does not function if the vehicle speed is below 20 km/h (12 mph). As the vehicle slows down during automatic braking, the adaptive cruise control system discontinues braking at 20 km/h (12 mph). At that speed, an audible alarm sounds and the automatic braking from the ABS module is released. The driver must take over the vehicle braking control.

The cruise control deactivator switch (which is integral to the BPP switch) is an additional safety feature. When the brake pedal is pressed, an electrical signal is sent from the BPP switch to the PCM deactivating the cruise control system. Under increased brake pedal effort, the cruise control system deactivator switch opens and removes the ground signal from the PCM input circuit, releasing the throttle and immediately deactivating the system.

For vehicles equipped with a manual transmission, the vehicle has a CPP switch. The CPP switch is a normally closed switch with the clutch pedal released. When the clutch pedal is pressed, an electrical signal from the CPP switch opens the circuit and signals the PCM to deactivate the cruise control system.

The CCM monitors the yaw rate signal from the ABS module and compares it to the wheel speed and steering wheel angle signals. If the ABS module determines the yaw rate is invalid, the CCM disables the adaptive cruise control. The message center displays the message COLLISION WARNING MALFUNCTION and/or ADAPTIVE CRUISE MALFUNCTION.

The CCM monitors the environment in front of the vehicle while active. If the radar beam is obstructed by a buildup of snow, ice, rain or other debris, or the vehicle is driven in a desert environment with no other traffic for extended periods of time, the sensor will trigger an "ADAPTIVE CRUISE NOT AVAILABLE SENSOR BLOCKED SEE MANUAL" message in the message center and will disable the adaptive cruise control. The adaptive cruise control will resume once the obstruction is cleared and the radar is able to detect targets, or upon a key cycle.

The adaptive cruise control system will not engage properly if the front radar sensor is not aligned correctly, and the message center will display FRONT SENSOR NOT ALIGNED. The adaptive cruise control will resume once the radar is aligned and is able to properly detect targets.

The ABS module estimates brake temperature by monitoring applied brake pressure over a period of time and sends a message to the CCM when the estimated temperature is above a given threshold. An alarm sounds and the adaptive cruise control system is deactivated until the estimated brake temperature returns to cooler operating conditions. This condition can happen in a hilly or mountainous driving terrain.

Cruise Control Indicator

The adaptive cruise control indicator located in the IPC illuminates a gray indicator lamp and displays the previous gap setting and SET graphic indicating the system is in standby mode. This notifies the driver the system is ready and the vehicle can be accelerated to the desired speed. A green adaptive cruise control indicator illuminates when the system is active.

Steering Wheel Switch Function

The adaptive cruise control steering wheel mounted switches are momentary contact switches that toggle up and down for the cruise control switch state. Pressing and releasing the steering wheel cruise control ON/OFF switch turns the cruise control system on. Pressing up (SET+) and releasing the SET switch sets the vehicle's speed and stores the set speed in memory. The adaptive cruise control indicator illuminates and the message center displays the set speed and gap setting graphic.

There are 2 ways to change the set speed. The first way is to accelerate or brake to the desired speed and press and release the SET cruise control switch until the desired set speed is shown on the message center. The second way is by tapping the SET+ or the SET- switch while in the set mode, increasing or decreasing the displayed set speed by 1.6 km/h (1 mph) per tap. If the respective button is pressed and held, the displayed set speed continues to increase or decrease until the button is released. The adaptive cruise control system may apply the brakes to slow the vehicle down to the new set speed. The set speed displays continuously in the message center while the adaptive cruise control system is active.

Pressing and releasing the OFF switch, or switching the ignition to OFF, turns the adaptive cruise control system off. The adaptive cruise control set speed memory is erased.

Pressing the brake pedal, pressing the clutch pedal (if equipped) or pressing the CNCL switch puts the adaptive cruise control system in standby mode and the last set speed is displayed in the message center with a strike through. Pressing the RES button when the adaptive cruise control system is in standby mode causes the vehicle to accelerate to the last set speed. The set speed continuously displays in the message center while the adaptive cruise control system is active. The RES button does not function if the OFF button is pressed, the ignition is cycled OFF, or if the current vehicle speed is

below the minimum operational speed.

The adaptive cruise control system has the capability for the driver to change from adaptive cruise control to standard cruise control. The LH 5-way steering wheel switch is used to switch from the adaptive cruise control system to standard cruise control system within the message center. For information on selecting the standard cruise control in the message center, refer to Owner's Literature. Once the driver has selected the standard cruise control in the message center, the adaptive cruise control indicator is replaced by the standard cruise control indicator. The vehicle no longer responds to lead vehicles or automatic braking. Upon the next vehicle ignition cycle, the vehicle defaults back to the adaptive cruise control system.

Gap Setting

When a vehicle ahead enters the same lane or a slower vehicle is ahead in the same lane, the vehicle speed adjusts automatically to maintain a preset distance gap. A bar graph graphic with 4 preset distance gap settings are displayed in the message center. Pressing up (decrease) or down (increase) on the steering wheel cruise control gap switch increases or decreases the distance from the vehicle ahead. If all of the bars are illuminated, this is the longest gap setting. If only one bar is illuminated, that is the shortest gap setting.

The vehicle maintains the distance gap to the vehicle ahead until:

- the vehicle ahead accelerates to a speed above the set speed.
- the vehicle ahead moves out of the lane or out of view.
- the vehicle speed falls below 20 km/h (12 mph).
- a new gap distance is set.

After each ignition cycle, the previous gap setting is remembered and the system is set to that gap setting.

The distance gap can be overridden by pressing the accelerator pedal. The follow vehicle graphic is not displayed in the message center and the green indicator illuminates. When the accelerator pedal is released, the adaptive cruise control system returns to normal operation and the vehicle speed decreases to the set speed or a lower speed if following a vehicle ahead.

Deceleration Control

The CCM commands the ABS module, which controls the brakes, to automatically apply the brakes to slow the vehicle to maintain a safe distance to the vehicle in front.

Steering Wheel Switches

The cruise control steering wheel mounted switches are momentary contact switches that toggle up and down for the switch state. The switches are an input to the SCCM.

Brake Switch

When the brake pedal is applied, an electrical signal from stoplamp circuit to the PCM deactivates the system. Under increased brake pedal effort, the cruise control deactivator switch opens and removes the ground signal from the PCM input circuit releasing the throttle, immediately deactivating the system.

Clutch Pedal Position (CPP) Switch

For vehicles with manual transmission, when the clutch pedal is applied, an electrical signal from the

CPP switch opens the circuit and signals the PCM to deactivate the cruise control system.

Cruise Control Module (C-CM)

The CCM contains a radar sensing unit which measures the relative speed and the distance between the front of the vehicle and the vehicle being followed. The CCM is responsible for requesting the PCM to increase vehicle speed and the ABS module to brake, when necessary.

DIAGNOSIS AND TESTING > CRUISE CONTROL > DTC CHARTS

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

C1A67:98	Forward Looking Sensor: Component or System Over Temperature	The CCM was over-temperature. This may occur during extended use in extremely high weather temperatures. The adaptive cruise control system operation resumes after the CCM cools.

U0001:88	High Speed CAN Communication Bus: Bus Off	This DTC sets when the CCM detects a CAN bus off fault or indicates a signal fault occurred at a point in time. The fault is not currently present since the module had to communicate with the diagnostic scan tool to report this DTC. VERIFY the integrity of the connectors and wiring. Refer to Module Communications Network for schematic and connector information. DIAGNOSE no HS-CAN communication, all modules are not responding. REFER to: MODULE COMMUNICATIONS NETWORK .
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test J
U0121:00	Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	GO to Pinpoint Test E
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test K
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test L
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test M
U0158:00	Lost Communication With Head Up Display: No Sub Type Information	GO to Pinpoint Test N
U0212:00	Lost Communication With Steering Column Control Module: No Sub Type Information	GO to Pinpoint Test O
U0401:86	Invalid Data Received From ECM/PCM "A": Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the PCM. Refer to ENGINE CONTROLS - INTRODUCTION (EXCEPT DIESEL & HYBRID) . If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.

U0418:86	Invalid Data Received From Brake System Control Module: Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the ABS module. REFER to: Anti-Lock Brake System (ABS) and Stability Control . If no Diagnostic Trouble Codes (DTCs) are present in the ABS module, DIAGNOSE the observable symptom.
U0423:82	Invalid Data Received From Instrument Panel Cluster Control Module: Alive/Sequence Counter Incorrect/ Not Updated	GO to Pinpoint Test S
U0429:86	Invalid Data Received From Steering Column Control Module: Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the SCCM. REFER to: Steering Wheel and Column Electrical Components . If no Diagnostic Trouble Codes (DTCs) are present in the SCCM, DIAGNOSE the observable symptom.
U0452:86	Invalid Data Received From Restraints Control Module: Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the RCM. REFER to: Airbag Supplemental Restraint System (SRS) . If no Diagnostic Trouble Codes (DTCs) are present in the RCM, DIAGNOSE the observable symptom.
U2018:51	Control Module Software #3: Not Programmed	This DTC sets when the CCM configuration has not been completed. CARRY OUT the PMI (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: MODULE CONFIGURATION .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets when the CCM configuration has not been completed. CARRY OUT the PMI (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: MODULE CONFIGURATION .
U2300:55	Central Configuration: Not Configured	This DTC sets when the CCM detects the BCM is not configured correctly. CARRY OUT the PMI

		procedure (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: MODULE CONFIGURATION .
U2300:64	Central Configuration: Signal Plausibility Failure	This DTC sets when the CCM detects the BCM is not configured correctly. CARRY OUT the PMI procedure (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: MODULE CONFIGURATION .
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:41 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:42 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .
U3000:44	Control Module: Data Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:44 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .
U3000:49	Control Module: Internal Electronic Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:49 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .
U3000:63	Control Module: Circuit/Component Protection Time-Out	GO to Pinpoint Test P
U3002:62	Vehicle Identification Number: Signal Compare Failure	This DTC sets when the stored VIN in the CCM does not match the VIN defined in the BCM. This may indicate that the original CCM is not installed in the vehicle, and has not

		been configured correctly. CARRY OUT the PMI (when the original module is not available) for the module in question as directed by the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test Q
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test R

DIAGNOSIS AND TESTING > CRUISE CONTROL > DTC CHARTS > DTC CHART: ANTI-LOCK BRAKE SYSTEM (ABS) MODULE

ABS Module DTC Chart

DTC	Description	Action
U0405:41	Invalid Data Received From Cruise Control Module: General Checksum Failure	This DTC sets when the ABS module receives invalid network data from the CCM. RETRIEVE and REPAIR all non network diagnostic trouble codes (DTCs) in the CCM.
U0405:82	Invalid Data Received From Cruise Control Module: Alive/Sequence Counter Incorrect/Not Updated	This DTC sets when the ABS module receives invalid network data from the CCM. RETRIEVE and REPAIR all non-network diagnostic trouble codes (DTCs) in the CCM.
U2107:00	Collision Mitigation By Braking: No Sub Type Information	This DTC sets in the ABS module due to long and too frequent collision mitigation brake requests from the CCM RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the CCM and other modules on the network.
U2107:68	Collision Mitigation By Braking: Event Information	This DTC is set in the ABS module due to a high acceleration value detected that differs from request, which can be caused by an abrupt vehicle stop or module failure. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM and ABS module.

U2108:00	Adaptive Cruised Control: No Sub Type Information	This DTC sets in the ABS module when the adaptive cruise control does not switch off while the driver is braking. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM and ABS module.
U2108:68	Adaptive Cruise Control: Event Information	This DTC is set in the ABS module when the module detects over-braking during automated vehicle deceleration. If the vehicle deceleration exceeds the 3.2 m/s threshold, the DTC is stored and the adaptive cruise control is deactivated until the next ignition cycle. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM and ABS module.
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Anti-Lock Brake System (ABS) and Stability Control .

DIAGNOSIS AND TESTING > CRUISE CONTROL > SYMPTOM CHART(S)

Symptom Chart: Adaptive Cruise Control

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Sources	Actions
A module does not communicate with the diagnostic scan tool	Fuse Wiring, terminals or connectors Communication concern Module	REFER to: MODULE COMMUNICATIONS NETWORK .
The adaptive cruise control is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
The cruise control switch is inoperative/does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test A
The adaptive cruise control does not disengage when the clutch pedal is applied	Refer to the Pinpoint Test	GO to Pinpoint Test C

The adaptive cruise control does not function in rain or snow conditions	Refer to the Pinpoint Test	GO to Pinpoint Test I
ADAPTIVE CRUISE NOT AVAILABLE SENSOR BLOCKED SEE MANUAL message in the IPC message center	Refer to the Pinpoint Test	GO to Pinpoint Test I
The adaptive cruise control indicator lamp is never/ always on	Wiring, terminals and connectors PCM IPC	REFER to: Instrumentation, Message Center and Warning Chimes .
Unexpected adaptive cruise control braking	CCM Front bumper cover	The adaptive cruise control system can occasionally detect and respond to out-of path vehicles, especially on curves, entry/exit ramps or when changing lanes. CHECK the CCM and front bumper cover for damage. RETEST the adaptive cruise control system.
Lack of adaptive cruise control braking	CCM Front bumper cover	The adaptive cruise control system may not detect and respond to vehicles carrying out close cut-ins or on tight curves (especially for vehicles on the passenger side) due to limited CCM field of view. CHECK the CCM and front bumper cover for damage. If no damage is observed, RETEST the adaptive cruise control system.
Noise during adaptive cruise control braking	Low speeds Brake concern	The driver can detect some noise at low speeds when adaptive cruise control braking occurs. If braking noise continues, REFER to: Brake System .
The cruise control cannot set above 105 kmh (65 mph), 113 kmh (70 mph), 121 kmh (75 mph), or 129 kmh (80 mph)	A MyKey ® restricted key is in use and MyKey ® max speed limiter is turned on	VERIFY whether a MyKey ® restricted key is in use. With an admin key, VERIFY if MyKey ® max speed limiter is turned on. REFER to the Owner's Literature. If necessary, VERIFY cruise control normal operation with an admin key.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST A : THE ADAPTIVE CRUISE CONTROL IS INOPERATIVE

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Action
B137F:09	Steering Wheel Left Switch Pack: Component Failure	A continuous and on-demand DTC that sets when one or more of the cruise control switches are stuck.
B137F:11	Steering Wheel Left Switch Pack: Circuit Short to Ground	A continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to ground.
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	A continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to voltage.

Possible Sources

- Wiring, terminals or connectors
- Cruise control switch
- Cruise control deactivator switch
- Digital TR sensor
- Stoplamp switch
- CPP switch
- Vehicle speed signal
- PCM
- ABS module
- BCM
- CCM
- SCCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST A : THE ADAPTIVE CRUISE CONTROL IS INOPERATIVE > PINPOINT TEST A :

THE ADAPTIVE CRUISE CONTROL IS INOPERATIVE

A1 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform PCM self-test.

Using a diagnostic scan tool, perform SCCM self-test.

Using a diagnostic scan tool, perform CCM self-test.

Using a diagnostic scan tool, perform ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For PCM, CCM and ABS module Diagnostic Trouble Codes (DTCs), REFER to the DTC Charts . For SCCM Diagnostic Trouble Codes (DTCs) B137F:09, B137F:11 or B137F:17, GO to A6 For all other SCCM Diagnostic Trouble Codes (DTCs), REFER to: Steering Wheel and Column Electrical Components .

No	GO to A2

A2 CHECK FOR LOST COMMUNICATION DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Clear Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds. Retrieve Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Are any lost communication Diagnostic Trouble Codes (DTCs) set in the CCM?

Yes	REFER to the DTC Charts .

No	GO to A3

A3 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	On	On

Applied lightly	On	Off
Applied firmly	Off	Off

Do the PID values agree with the brake pedal position?

Yes	For manual transmission, GO to A4 For automatic transmission, GO to A6

No	GO to Pinpoint Test B

A4 CHECK THE CLUTCH PEDAL CRUISE CONTROL DEACTIVATOR SWITCH (CPP_TOP_ PARAMETER IDENTIFICATION (PID)

Using the diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM PID CPP_TOP while pressing and releasing the clutch pedal.

Clutch Pedal Position	CPP_TOP PID
Released	No
Pressed	Yes

Does the PID value agree with the clutch pedal position?

Yes	GO to A5

No	If the PID value always reads YES (pressed), GO to A5 If the PID value always reads NO (released), GO to Pinpoint Test C

A5 CHECK THE CLUTCH PEDAL (CPP_TOP) PID (PARAMETER IDENTIFICATION) WITH THE CPP (CLUTCH PEDAL POSITION) SWITCH DISCONNECTED

Ignition OFF.

Disconnect CPP switch.

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identification (PIDs).

Monitor the clutch pedal CPP_TOP PID.

Does the PID read NO?

Yes	INSTALL a new CPP switch. REFER to: Cruise Control Deactivator Switch .

No	REPAIR the circuit.

A6 CHECK THE CRUISE CONTROL SWITCH PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).

Using the table, press each cruise control switch while monitoring the cruise control switch PID.

Cruise Control Switch	PID Value
Cruise On/Off (pressed/released)	On/Off
Cruise Cancel/Resume (pressed/released)	On/Off
SET + (pressed/released)	On/Off
SET - (pressed/released)	On/Off
GAP + (pressed/released)	On/Off
GAP - (pressed/released)	On/Off

Does the PID value agree with the switch position?

Yes	For automatic transmission, GO to A7 For manual transmission, GO to A13

No	If only one switch does not display the correct PID value, INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch . If multiple switches do not display the correct PID value, GO to A8

A7 MONITOR THE PCM (POWERTRAIN CONTROL MODULE) TR (TRANSMISSION RANGE) PID

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM TR PID.

Select DRIVE.

Does the PID value agree with the TR selector lever position?

Yes	GO to A13

No	REFER to: External Controls .

A8 CHECK FOR VOLTAGE TO THE CRUISE CONTROL SWITCHES

Ignition OFF.

Remove the driver airbag. REFER to: Driver Airbag .

Disconnect LH Steering Wheel Switch C2366 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2366-4		C2366-5
C2366-6		C2366-5
C2366-7		C2366-5

Is the voltage approximately 5 volts?

Yes	TURN the ignition off and WAIT one minute. INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch . INSTALL the driver airbag. REFER to: Driver Airbag .

No	GO to A9

A9 CHECK THE STEERING WHEEL SWITCH HARNESS FOR AN OPEN

Ignition OFF.

Disconnect Clockspring C218B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2366-4	Ω	C218B-15
C2366-5	Ω	C218B-8
C2366-6	Ω	C218B-6
C2366-7	Ω	C218B-7

Are the resistances less than 3 ohms?

Yes	GO to A10

No	Install a new steering wheel. REFER to: Steering Wheel .

A10 CHECK THE STEERING WHEEL SWITCH HARNESS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2366-4	Ω	Ground
C2366-5	Ω	Ground

C2366-6	Ω	Ground
C2366-7	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to A11

No	Install a new steering wheel. REFER to: Steering Wheel .

A11 CHECK THE STEERING WHEEL SWITCH CIRCUITS THROUGH THE CLOCKSPRING FOR AN OPEN

Disconnect Clockspring C218C.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C218B-6 (component side)	Ω	C218C-5 (component side)
C218B-7 (component side)	Ω	C218C-7 (component side)
C218B-15 (component side)	Ω	C218C-8 (component side)

Are the resistances less than 3 ohms?

Yes	GO to A12

No	Install a new clockspring. REFER to: Clockspring .

A12 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A13 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST B : P0504, P0572, P0573 OR P1703

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0504	Brake Switch A / B Correlation	A DTC that sets when the PCM

		does not sense the correct sequence of the brake pedal input signal from both the cruise control deactivator and stoplamp switches when the brake pedal is pressed and released.
P0572	Brake Switch A Circuit Low	A DTC that sets when the PCM detects an open in the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp input during start and stop driving cycles. If the stoplamp switch input to the PCM is always off during start and stop driving cycles, this DTC sets in continuous memory.
P0573	Brake Switch A Circuit High	A DTC that sets when the PCM detects a short to voltage on the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp switch input during start and stop driving cycles. If the stoplamp lamp switch input to the PCM is always on during start and stop driving cycles, this DTC sets in continuous memory.
P1703	Brake Switch Out Of Self - Test Range	A DTC that sets in the PCM during the self-test when the stoplamp switch input signal is high or does not cycle high and low.

Possible Sources

- Wiring, terminals or connectors
- Stoplamp switch
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST B : P0504, P0572, P0573 OR P1703 > PINPOINT TEST B : P0504, P0572, P0573 OR P1703

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the

correct probe adapter(s) may damage the connector.

B1 CHECK THE OPERATION OF THE STOPLAMPS

Ignition ON.

Operate the stoplamps.

Do the stoplamps and high mounted stoplamp operate correctly?

Yes	GO to B2

No	REFER to: Stoplamps .

B2 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied lightly	On	Off
Applied firmly	On	On

Do the PID values agree with the brake pedal position?

Yes	GO to B8

No	For an incorrect BOO1 PID value, GO to B3 For an incorrect BOO2 PID value, GO to B4

B3 CHECK THE STOPLAMP SWITCH CIRCUIT

Ignition OFF.

Disconnect: PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L).

Ignition ON.

While applying and releasing the brake pedal, measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead

C1551B-66		Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-67		Ground

5.0L

Positive Lead	Measurement / Action	Negative Lead
C175B-67		Ground

Is the voltage greater than 11 volts with the brake pedal applied and no voltage with the brake pedal released?

Yes	GO to B8

No	REPAIR the circuit.

B4 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH FOR CORRECT OPERATION

Ignition OFF.

Disconnect: PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L).

While firmly applying and releasing the brake pedal, measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-65	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-66	Ω	Ground

5.0L

Positive Lead	Measurement / Action	Negative Lead
C175B-66	Ω	Ground

Is the resistance less than 3 ohms with the brake pedal released, and greater than 10, 000 ohms with the brake pedal firmly applied?

Yes	GO to B8

No	GO to B5

B5 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH GROUND CIRCUIT FOR AN OPEN

Disconnect: BPP switch C278 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B6

No	REPAIR the circuit.

B6 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit.

B7 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR AN OPEN

Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C278-3		C278-2

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-65	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-66	Ω	Ground

5.0L

Positive Lead	Measurement / Action	Negative Lead
C175B-66	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new BPP switch. REFER to: Stoplamp Switch .

No	REPAIR the signal circuit for an open.

B8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS APPLIED

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- CPP switch
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS APPLIED > PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS APPLIED

C1 CHECK THE CPP (CLUTCH PEDAL POSITION) SENSOR (CPP_TOP) PARAMETER IDENTIFICATION (PID)

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM CPP_TOP PID while pressing and releasing the clutch pedal.

Does the PID value read "YES" with the clutch pedal pressed?

Yes	GO to C5
No	GO to C2

C2 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH

Ignition OFF.

Disconnect CPP top of travel switch C2354

Ignition ON.

Monitor the PCM CPP_TOP PID.

Does the PID value read YES?

Yes	INSTALL a new CPP switch. REFER to: Cruise Control Deactivator Switch .

No	GO to C3

C3 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Connect:

Positive Lead	Measurement / Action	Negative Lead
C2354-2		Ground

Ignition ON.

Monitor the PCM CPP_TOP PID.

Does the PID value read YES?

Yes	REPAIR the ground circuit.

No	REMOVE the fused jumper wire. GO to C4

C4 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH SIGNAL CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L).

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C2354-2	Ω	C1551B-6

3.7L

Positive Lead	Measurement / Action	Negative Lead
C2354-2	Ω	C1381B-8

5.0L

Positive Lead	Measurement / Action	Negative Lead
C2354-2	Ω	C175B-8

Is the resistance less than 3 ohms?

Yes	GO to C5

No	REPAIR the circuit.

C5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST D : P0833 OR P170A

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Condition- PCM

DTC	Description	Fault Trigger Conditions
P0833	Clutch Pedal Switch "B" Circuit	A DTC that sets when the PCM receives the vehicle speed input, indicating movement and does not detect the switching input signal from the clutch pedal speed control deactivator switch. This condition disables the cruise control.
P170A	Clutch Switch Out of Self-Test Range	A DTC that sets in the PCM during the self-test when the CPP top-of-travel switch input signal is high or does not cycle high and low.

Possible Sources

- Wiring, terminals or connectors
- CPP switch
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST D : P0833 OR P170A > PINPOINT TEST D : P0833 OR P170A

D1 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH (CPP_TOP) PARAMETER IDENTIFICATION (PID)

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM CPP_TOP PID while pressing and releasing the clutch pedal.

Does the PID value read "YES" with the clutch pedal pressed AND "NO" with the clutch pedal released?

Yes	GO to D4

No	If PID always read "NO", GO to Pinpoint Test C If PID always reads "YES", GO to D2

D2 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L).

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-6	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-8	Ω	Ground

5.0L

Positive Lead	Measurement / Action	Negative Lead
C175B-8	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D5

No	GO to D3

D3 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND WITH THE SWITCH DISCONNECTED

Disconnect CPP Top of Travel Switch C2354 .

Connect:

Positive Lead	Measurement / Action	Negative Lead
C2354-2		C2354-3

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-6	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-8	Ω	Ground

5.0L

Positive Lead	Measurement / Action	Negative Lead
C175B-8	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new CPP switch. REFER to: Cruise Control Deactivator Switch .

No	REPAIR the circuit.

D4 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Clear the Diagnostic Trouble Codes (DTCs). Repeat the PCM self-test.

Are any PCM Diagnostic Trouble Codes (DTCs) recorded?

Yes	If DTC P0833 or P170A is recorded, GO to D5 If any other PCM Diagnostic Trouble Codes (DTCs) are recorded, REFER to the PCM DTC Chart . For 2.3L, REFER to: Electronic Engine Controls . For 3.7L, REFER to: Electronic Engine Controls . For 5.0L, REFER to: Electronic Engine Controls .

No	GO to D5

D5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST E : U0121:00 OR U1021

Refer to Module Communications Network for schematic and connector information.

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Condition-CCM

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication with Anti-Lock Brake System (ABS) Control Module: No Sub-Type Information	Sets in the CCM if data messages received from the ABS module over the HS-CAN2 are missing.

DTC Fault Trigger Condition-PCM

DTC	Description	Fault Trigger Conditions
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	Sets in the PCM if data messages received from the ABS module over the HS-CAN2 or from the GWM over the HS-CAN1 are missing.

Possible Sources

- ABS module
- CCM
- GWM
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST E : U0121:00 OR U1021 > PINPOINT TEST E : U0121:00 OR U1021

E1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to E2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Does the ABS module pass the network test?

Yes	GO to E3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

E3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE), ABS (ANTI-LOCK BRAKE SYSTEM) MODULE AND PCM (POWERTRAIN CONTROL MODULE) SELF-TESTS

Using a diagnostic scan tool, perform a CCM self-test.

Using a diagnostic scan tool, perform a ABS module self-test

Using a diagnostic scan tool, perform a PCM self-test

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded?

Yes	For CCM DTC U3003:16, GO to Pinpoint Test Q For CCM DTC U3003:17, GO to Pinpoint Test R For all others, REFER to the PCM DTC Chart or the ABS Module DTC Chart .

No	GO to E4

E4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to E5

NOTE: If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programable Module Installation (PMI) or the Programable Module Installation (PMI) may not have been carried out.

E5 RECHECK THE CCM (CRUISE CONTROL MODULE) AND PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM and PCM self-tests.

Is CCM DTC U0121:00 or PCM DTC U0121 still present?

Yes	GO to E6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121:00 OR U0121 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, perform a self-test.

Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Does the CCM set DTC U0121:00 and the PCM set DTC U0121?

Yes	INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	If the CCM sets DTC U0121:00, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) . If the PCM sets U0121, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST F : U0104

Refer to Module Communications Network for schematic and connector information.

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104	Lost Communication With Cruise Control Module	Sets in the PCM if data messages received from the CCM over the HS-CAN2 or from the GWM over the HS-CAN1 are missing for greater than 5 seconds.

Possible Sources

- CCM
- PCM
- GWM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST F : U0104 > PINPOINT TEST F : U0104

F1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to F2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Does the CCM pass the network test?

Yes	GO to F3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

F3 CHECK THE CCM (CRUISE CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the CCM self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test Q For DTC U3003:17, GO to Pinpoint Test R

No	GO to F4

F4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to F5

F5 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, perform the PCM self-test.

Is DTC U0104 still present?

Yes	GO to F6

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0104 SET IN OTHER MODULES

Clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the continuous memory Diagnostic Trouble Codes (DTCs) from all modules.

Does DTC U0104 set in other modules?

Yes	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

No	INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST G : B142E:78 OR B1433:54

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B142E:78	Forward Looking Sensor Horizontal Alignment: Alignment or Adjustment Incorrect	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects a misalignment of the radar due to the horizontal alignment angle being out of range.
B1433:54	Forward Looking Sensor Horizontal Alignment: Missing Calibration	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects a misalignment of the radar due to the horizontal alignment angle being out of range.

Possible Sources

- CCM alignment
- CCM bracket
- CCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST G : B142E:78 OR B1433:54 > PINPOINT TEST G : B142E:78 OR B1433:54

G1 INSPECT THE CCM (CRUISE CONTROL MODULE) BRACKET

With the vehicle in NEUTRAL, position it on a hoist. REFER to: Jacking and Lifting - Overview .

Remove the front lower air deflector.

Inspect for damage to the CCM bracket.

Is the CCM bracket damaged?

Yes	REPAIR or INSTALL a new CCM bracket as necessary. REFER to: Cruise Control Module (CCM) .

No	GO to G2

NOTE: Remove the front bumper cover to carry-out the vertical alignment procedure.

G2 PERFORM THE VERTICAL AND HORIZONTAL ALIGNMENT

Perform the alignment procedures for the CCM. REFER to: Cruise Control Radar Alignment .

Does the CCM align correctly?

Yes	The system is operating correctly at this time. The concern was caused by a misaligned sensor.

No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST H : C1A67:96

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

C1A67:96	Forward Looking Sensor: Component Internal Failure	Sets when the CCM detects an internal failure or invalid radar data with the radar sensor.

Possible Sources

- CCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST H : C1A67:96 > PINPOINT TEST H : C1A67:96

H1 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM BOTH THE CONTINUOUS AND ON-DEMAND CCM (CRUISE CONTROL MODULE) SELF-TESTS

Ignition ON.

Clear Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the CCM self-test.

Check the CCM Diagnostic Trouble Codes (DTCs) from the continuous and on-demand self-tests.

Is DTC C1A67:96 recorded?

Yes	GO to H2

No	The system is operating correctly at this time. The DTC may have been set due to an intermittent fault condition. CHECK the CCM connector and the HS-CAN2 bus wire for corrosion.

H2 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the CCM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the CCM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST I : THE ADAPTIVE CRUISE CONTROL DOES NOT FUNCTION IN RAIN OR SNOW CONDITIONS

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1A67:97	Forward Looking Sensor: Component Or System Operation Obstructed Or Blocked	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects an obstruction or if the sensor is blocked. This DTC may also set when the CCM does not see a vehicle or object on the road for an extended period.

Possible Sources

- Front bumper cover
- Blockage or obstruction
- CCM mounting bracket
- CCM alignment
- CCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST I : THE ADAPTIVE CRUISE CONTROL DOES NOT FUNCTION IN RAIN OR SNOW CONDITIONS > PINPOINT TEST I : THE ADAPTIVE CRUISE CONTROL DOES NOT FUNCTION IN RAIN OR SNOW CONDITIONS

I1 INSPECT THE FRONT BUMPER COVER FOR DAMAGE

With the vehicle in NEUTRAL, position it on a hoist. REFER to: Jacking and Lifting - Overview .

Inspect for damage on the front and back of the front bumper cover.

Is the front bumper cover damaged?

Yes	REPAIR or INSTALL a new front bumper cover as necessary. If installing a new front bumper cover, REFER to: Front Bumper Cover .

No	GO to I2

I2 INSPECT THE CCM (CRUISE CONTROL MODULE) AND FRONT BUMPER COVER FOR DEBRIS, MOISTURE, SNOW OR ICE

Inspect for debris, moisture, snow or ice on the front and back of the front bumper cover and sensor.

Is the CCM obstructed or blocked?

Yes	CLEAN the front bumper cover and radar sensor portion as necessary.

No	GO to I3

I3 INSPECT THE CCM (CRUISE CONTROL MODULE) BRACKET FOR CORRECT MOUNTING

Inspect the CCM bracket for a loose connection or damage at the connection points.

Is the CCM bracket loose, bent or damaged?

Yes	Correctly INSTALL the bracket or INSTALL new grommets as necessary. ALIGN the sensor. REFER to: Cruise Control Radar Alignment .

No	GO to I4

I4 INSPECT THE CCM (CRUISE CONTROL MODULE) FOR EXTREME VERTICAL MISALIGNMENT

Visually inspect the CCM for extreme vertical misalignment. The CCM plastic face should be perpendicular to the ground.

Is the CCM visually misaligned vertically?

Yes	PERFORM vertical alignment and horizontal alignment test procedures. REFER to: Cruise Control Radar Alignment .

No	GO to I5

I5 PERFORM HORIZONTAL AIM

Using a diagnostic scan tool, perform the horizontal aim procedure.

Using a diagnostic scan tool, perform the CCM self-test.

Does horizontal aim procedure finish successfully without setting DTC C1A67:97?

Yes	The system is operating normally at this time. This condition may have been cause by previous snow or water build up or driving on very sparse rural roads.

No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST J : U0100:00

Refer to Module Communications Network for schematic and connector information.

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	Sets in continuous memory if data messages received from the PCM over the HS-CAN1 or from the GWM over the HS-CAN2 to the CCM are missing for more than 5 seconds.

Possible Sources

- CCM
- PCM
- GWM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST J : U0100:00 > PINPOINT TEST J : U0100:00

J1 VERIFY THAT THE DIAGNOSTIC SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

Using a diagnostic scan tool, verify a vehicle session can be established.

Can a vehicle session be established?

Yes	GO to J2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

J2 CHECK THE CCM (CRUISE CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Clear Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the CCM self-test.

Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the CCM.

Is DTC U0100:00 retrieved again?

Yes	GO to J3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

J3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to J4

J4 CHECK FOR CONTINOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

Using a diagnostic scan tool, perform a PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the PCM DTC Chart .

No	GO to J5

J5 CHECK THE CCM (CRUISE CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS

Using a diagnostic scan tool, perform a CCM self-test?

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test Q For DTC U3003:17, GO to Pinpoint Test R

No	GO to J6

J6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100:00 set in multiple modules?

Yes	INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST K : U0140:00

Refer to Module Communications Network for schematic and connector information.

Refer to Cruise Control for schematic and connector information.

NOTE: If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programmable Module Installation (PMI) or the Programmable Module Installation (PMI) may not have been carried out.

N4 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM self-test.

Is DTC U0158:00 still present?

Yes	GO to N5

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

N5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0158:00 SET IN OTHER MODULES

Clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0158:00 set in other modules?

Yes	INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST O : U0212:00

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST O : U0212:00 > PINPOINT TEST O : U0212:00

O1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to O2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Does the SCCM pass the network test?

Yes	GO to O3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

O3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) AND SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the CCM and SCCM self-tests.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For CCM, DTC U3003:16: GO to Pinpoint Test Q For CCM DTC U3003:17: GO to Pinpoint Test R For the SCCM, REFER to: Steering Wheel and Column Electrical Components .

No	GO to O4

NOTE: If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the PMI or the PMI may not have been carried out.

O4 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM self-test.

Is DTC U0212:00 still present?

Yes	GO to O5

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0212:00 SET IN OTHER MODULES

Clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0212:00 set in other modules?

Yes	INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST P : U3000:63

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects low battery voltage below 9.5 volts for more than 500 ms.

Possible Sources

- Wiring, terminals and connectors
- Battery
- Generator
- CCM
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST Q : U3003:16 > PINPOINT TEST Q : U3003:16

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Cruise Control .

Q1 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the self-test.

Is DTC U3003:16 still present?

Yes	GO to Q2

No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

Q2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

Using a diagnostic scan tool, perform the PCM self-test.

Are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	For 2.3L, REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . For 3.7L, REFER to: Charging System - 3.7L Duratec (227kW/301PS) . For 5.0L, REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to Q3

Q3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Check the battery condition and verify the battery is fully charged. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK and fully charged?

Yes	GO to Q4

No	INSTALL a new battery. REFER to: Battery .

Q4 CHECK THE CCM (CRUISE CONTROL MODULE) VOLTAGE SUPPLY

Ignition OFF.

Disconnect CCM C1582 .

Ignition ON.

Measure and record the voltage at the battery.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-10		Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to Q5

No	REPAIR the circuit for high resistance.

Q5 CHECK THE CCM (CRUISE CONTROL MODULE) GROUND CIRCUIT

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to Q6

No	REPAIR the circuit for high resistance.

Q6 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the CCM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the CCM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST R : U3003:17

NOTE: DTC U3003:17 may be stored in the module memory due to past battery charging or vehicle jump starting events.

R1 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17, P0563 OR P0626 SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U3003:17, P0563 (PCM) or P0626 (PCM) set in more than one module?

Yes	For 2.3L, REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . For 3.7L, REFER to: Charging System - 3.7L Duratec (227kW/301PS) . For 5.0L, REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to R2

R2 CHECK THE BATTERY VOLTAGE

Turn off all the interior/exterior lights and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	For 2.3L, REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . For 3.7L, REFER to: Charging System - 3.7L Duratec (227kW/301PS) . For 5.0L, REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to R3

R3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

Turn the engine off.

Ignition ON.

Using a diagnostic scan tool, clear the DTC Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Using a diagnostic scan tool, perform the CCM self-test.

Is DTC U3003:17 still present?

Yes	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

No	GO to S5

S5 PERFORM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the CCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to CCM DTC Chart .

No	GO to S6

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.

S6 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Repeat the CCM self-test.

Is DTC U0423:82 still present?

Yes	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) .

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

GENERAL PROCEDURES > CRUISE CONTROL RADAR ALIGNMENT

Activation

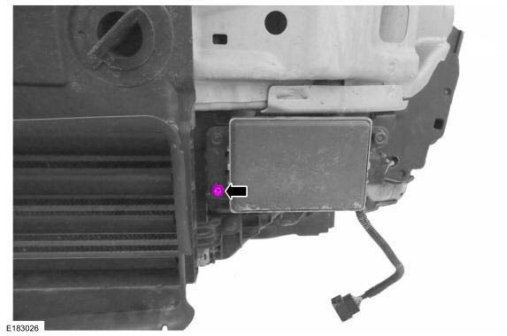
Vertical Alignment

NOTE: In order to align the CCM, the front bumper cover must be removed to access the

sensor and the vehicle must be in a wheel alignment bay station so that the vehicle is level.

NOTE: Damage to the CCM bracket may affect correct alignment. When aligning the CCM, inspect the CCM bracket for damage and repair as necessary before carrying out the alignment procedure.

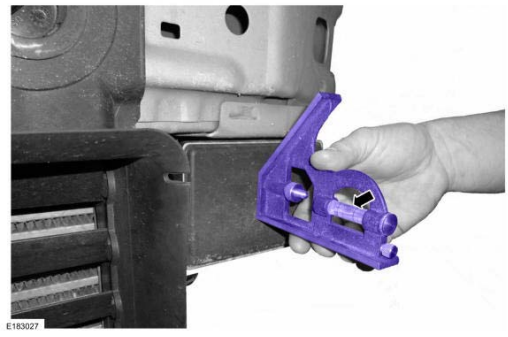
1.



Remove the front bumper cover. Refer to: Front Bumper Cover .

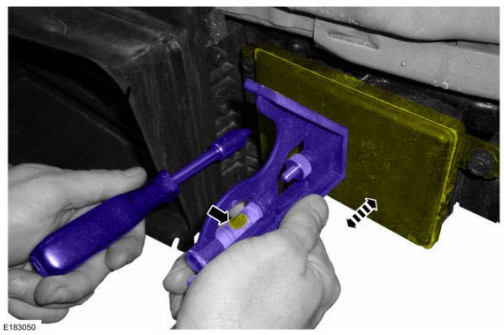
2.

Place the vehicle on a wheel alignment bay station.



3.

Locate the CCM alignment screw.



4.

Place a combination square level on the face of the CCM and check the alignment.

5.

Keeping the combination square level on the face of the CCM, adjust the pitch by using an E20 Torx ® bit to adjust the screw until the CCM is vertical and level.

NOTE: Prior to installing the front bumper cover, clean and remove any debris on the front or back of the cover.

6.
Install the front bumper cover.

Horizontal Alignment

NOTE: The horizontal alignment for the CCM is a software calibration. No manual adjustment is needed for this procedure. The scan tool calibrates the CCM through the CCM procedure in programmable parameters.

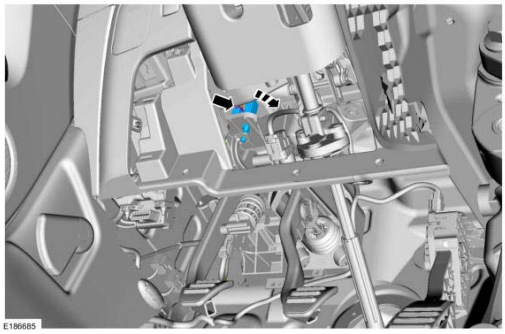
NOTE: The vehicle's engine must be running during the horizontal alignment procedure. Failure to leave the engine running throughout the entire procedure results in the cancellation of the alignment procedure and the system remains non-functional.

7.
Start the engine.

8.

Follow the scan tool on-screen instructions to carry-out the CCM calibration procedure located in IDS under Toolbox > Electrical > Cruise Control > CCM Calibration.

REMOVAL AND INSTALLATION > CRUISE CONTROL DEACTIVATOR SWITCH > REMOVAL



NOTE: Do not press, pull or otherwise move the clutch pedal while installing the cruise control deactivator switch. Install the switch with the clutch pedal in the at-rest position. Installing this switch with the clutch pedal in any other position results in incorrect adjustment and damages the switch.

1.

Remove the driver knee airbag. Refer to: Driver Knee Airbag .

2.

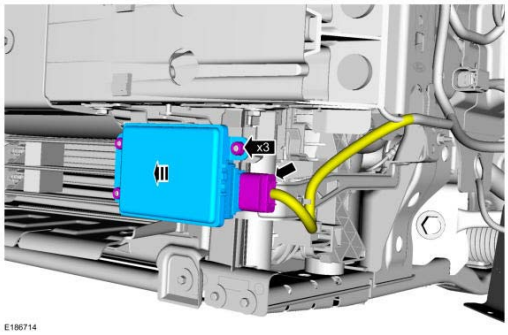
Disconnect the electrical connector and remove the cruise control deactivator switch.

REMOVAL AND INSTALLATION > CRUISE CONTROL DEACTIVATOR SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

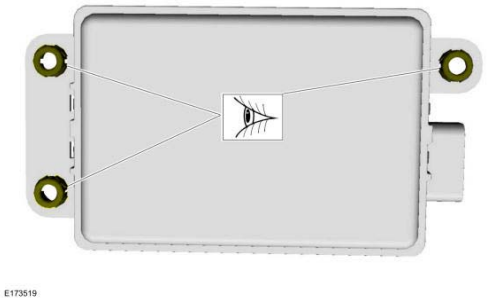
REMOVAL AND INSTALLATION > CRUISE CONTROL MODULE (CCM) > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

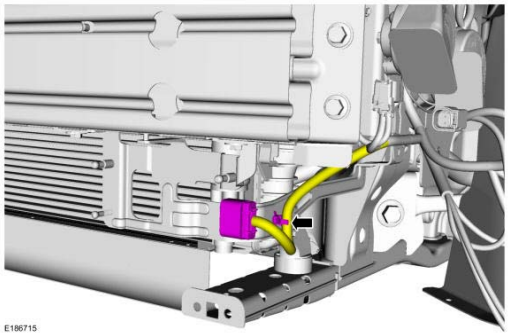
1.

Remove the front bumper cover. Refer to: Front Bumper Cover .



NOTE: Gently pry the CCM from the retaining studs.

2.
Disconnect the electrical connector and remove the CCM from the bracket.



3.

Inspect the CCM grommets for damage. Replace any damaged grommets.

4.

If bracket removal is required, separate the wiring harness guide.

5.

Remove the CCM bracket.

1.

Remove the CCM bracket bolt.

Torque

: 80 lb.in (9 Nm)

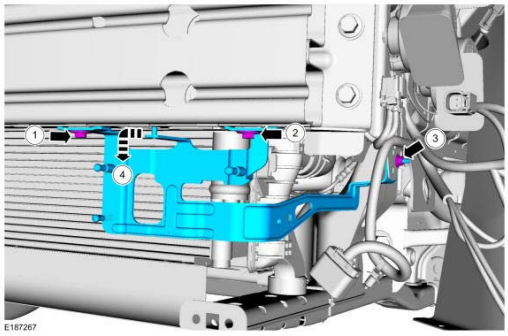
2.

Remove the CCM bracket bolt.

Torque

: 80 lb.in (9 Nm)

3.



Remove the CCM bracket nut.

Torque

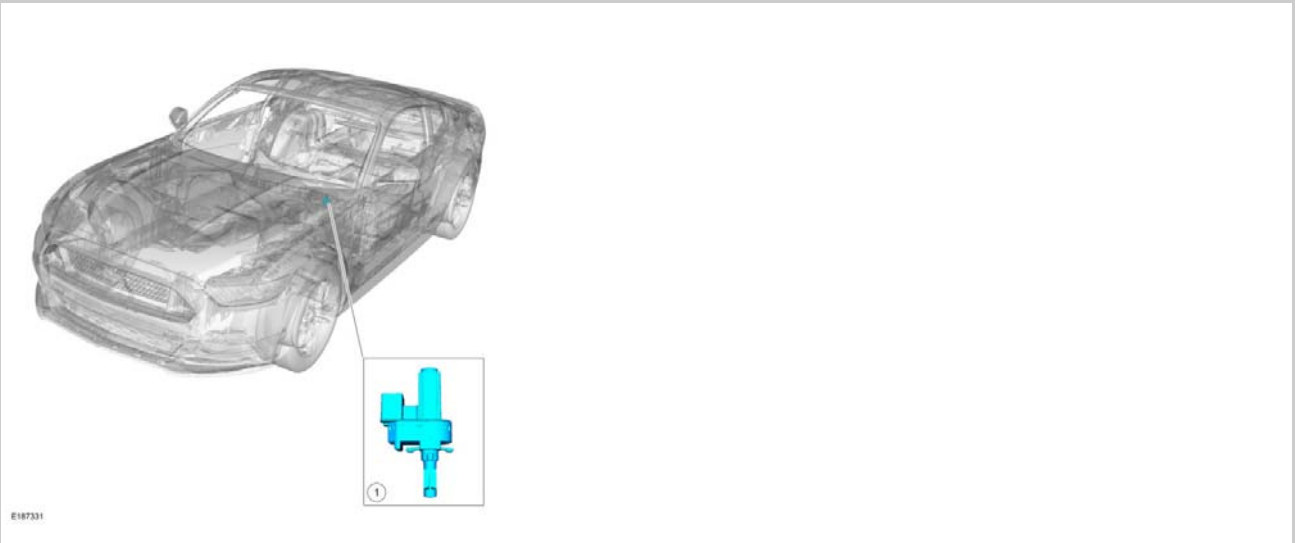
: 80 lb.in (9 Nm)

4.

Slide the CCM bracket left and then down.

REMOVAL AND INSTALLATION > CRUISE CONTROL MODULE (CCM) > INSTALLATION

1.



To install, reverse the removal procedure.

2.

Align the CCM. Refer to: Cruise Control Radar Alignment .

Service Manual: CRUISE CONTROL

DESCRIPTION AND OPERATION > CRUISE CONTROL - COMPONENT LOCATION

Item	Description
1	CPP switch

DESCRIPTION AND OPERATION > CRUISE CONTROL - OVERVIEW > OVERVIEW

The cruise control system is controlled by the PCM.

The cruise control mode is selected from the steering wheel mounted switches (ON/OFF, SET+, SET- and CAN/RES), which are integrated into the LH steering wheel switch.

The cruise control system maintains a selected vehicle speed between 32 km/h (20 mph), or 29 km/h (18 mph) (metric cluster), and the maximum limited vehicle speed. When a MyKey ® restricted key is in use and max speed limiter is turned on, vehicle speed is limited to 129 km/h (80 mph).

During normal driving, the vehicle speed can vary slightly from the set speed due to road conditions. The vehicle speed can fluctuate when driving up and down a steep hill. If the vehicle speed decreases more than 16 km/h (10 mph) below the set speed, the cruise control disengages.

DESCRIPTION AND OPERATION > CRUISE CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Cruise control override	PCM	Driver overriding cruise control with accelerator pedal.

Cruise control status	PCM	Data used for speed control indicator status.
Cruise control set speed display	PCM	Data used for speed control indicator display.

Network Input Messages - PCM

Broadcast Message	Originating Module	Message Purpose
Steering wheel switch speed control	SCCM	Used for cruise control enable/disable and operating mode request.
Stability control event in progress	ABS module	Deactivates speed control when requested.
Traction control event in progress		
Vehicle lateral acceleration	ABS module	Deactivates speed control when requested.
Vehicle longitudinal acceleration		
Vehicle yaw rate	RCM	

DESCRIPTION AND OPERATION > CRUISE CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CRUISE CONTROL OPERATION

The cruise control functions include:

- turning on the cruise control system.
- setting and maintaining the desired vehicle speed.
- accelerating the vehicle speed.
- coasting down to a lower speed.
- resuming the prior vehicle speed.
- turning off the cruise control system.

The cruise control system maintains a selected vehicle speed within a range between 32 km/h (20 mph), or 29 km/h (18 mph) if equipped with a metric cluster, and the maximum limited vehicle speed. When a MyKey ® restricted key is in use, the vehicle speed will not exceed the MyKey ® maximum limited speed. During normal driving conditions, the vehicle speed can fluctuate slightly from the selected set speed due to road conditions. The vehicle speed can fluctuate more noticably when driving up and down steep hills.

Certain conditions cause the cruise control system to deactivate:

- Application of the parking brake
- Transmission gear selector is placed into a position other than D or OD

- Cruise control set speed is overridden with the accelerator pedal for a period longer than 5 minutes
- Cruise control switch is pressed or stuck longer than 2 minutes
- Clutch pedal is pressed (if equipped)
- Vehicle speed decreases more than 16 km/h (10 mph) below the set speed
- ABS fault

The BPP switch assembly (contains the stoplamp switch and cruise control deactivator switch), APP sensor and CPP switch (if equipped) are hardwired inputs to the PCM.

Electronic Throttle Body (ETB) command is a hardwired output of the PCM.

The vehicle speed is controlled by the PCM through the Electronic Throttle Control (ETC) subsystem.

The cruise control system provides self-diagnostics. Cruise control is disabled anytime an error is detected in the system. No IPC indicator or message center messages are displayed when faults occur. Fault codes are logged by the PCM or SCCM.

An Electronic Throttle Control (ETC) system fault also causes the cruise control system to be disabled. In this case, an Electronic Throttle Control (ETC) system powertrain malfunction (wrench) warning indicator is displayed.

Cruise Control Indicator

The cruise control indicator, located in the IPC, illuminates to indicate the cruise control system is active.

Steering Wheel Switch Function

Cruise control switch inputs are received by the SCCM and sent to the PCM through the GWM to the high speed controller area network 1 (HS1-CAN).

Pressing and releasing the ON (ON/OFF) switch turns the cruise control system on. Pressing (SET+) or (SET-) on the SET switch while the vehicle is traveling at the desired speed activates the cruise control system.

Pressing up or down on the SET switch while in the active mode increases or decreases the maintained vehicle speed by 2 kmh per press when displayed units are "kmh" and 1 mph per press when displayed units are "mph". If the respective switch is pressed and held, the vehicle speed continues to accelerate or decelerate until the switch is released.

Pressing and releasing the OFF (ON/OFF) switch, or turning the ignition switch to the OFF position, turns the cruise control system off. While the cruise control system is active, applying the brake pedal or pressing the CNCL (CANCEL) switch puts the cruise control system into standby mode. Pressing the RES (RESUME) switch when the cruise control system is in standby mode causes the vehicle to accelerate to the last speed. Resume does not function if the OFF switch is pressed, the ignition switch is cycled OFF, the clutch pedal is pressed (if equipped) or if the current vehicle speed is below the minimum operational speed.

Steering Wheel Switches

The cruise control steering wheel mounted switches are momentary contact switches that toggle up and down for the switch state. The switches are an input to the SCCM.

Brake Switch

When the brake pedal is applied, an electrical signal from the stoplamp circuit to the PCM deactivates the system. Under increased brake pedal effort, the cruise control deactivator switch opens and removes the ground signal from the PCM input circuit releasing the throttle, immediately deactivating the system.

Clutch Pedal Position (CPP) Switch

Vehicles equipped with a manual transmission have a CPP switch. The CPP switch is a normally closed switch with the clutch pedal released. When the clutch pedal is pressed, an electrical signal from the CPP switch opens the circuit and signals the PCM to deactivate the cruise control system.

DIAGNOSIS AND TESTING > CRUISE CONTROL > DTC CHARTS

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST A : THE CRUISE CONTROL IS INOPERATIVE > PINPOINT TEST A : THE CRUISE CONTROL IS INOPERATIVE

A1 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the PCM self-test.

Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	If PCM Diagnostic Trouble Codes (DTCs) were retrieved, REFER to the PCM DTC Chart . If SCCM DTC B137F:11 or B137F:17 was retrieved, GO to A5 For all other SCCM Diagnostic Trouble Codes (DTCs), REFER to: Steering Wheel and Column Electrical Components .

No	GO to A2

A2 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied	On	On

Do the PID values agree with the brake pedal position?

Yes	For manual transmission, GO to A3 For automatic transmission, GO to A5

No	GO to Pinpoint Test B

A3 CHECK THE CLUTCH PEDAL CRUISE CONTROL DEACTIVATOR SWITCH (CPP_TOP_ PARAMETER IDENTIFICATION (PID)

Using the diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM PID CPP_TOP while pressing and releasing the clutch pedal.

Clutch Pedal Position	CPP_TOP PID
Released	No
Pressed	Yes

Does the PID value agree with the clutch pedal position?

Yes	GO to A5

No	If the PID value always reads YES (pressed), GO to A4 If the PID value always reads NO (released), GO to Pinpoint Test C

A4 CHECK THE CLUTCH PEDAL (CPP_TOP) PID (PARAMETER IDENTIFICATION) WITH THE CPP (CLUTCH PEDAL POSITION) SWITCH DISCONNECTED

Ignition OFF.

Disconnect CPP switch.

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identification (PIDs).

Monitor the clutch pedal CPP_TOP PID.

Does the PID read NO?

Yes	INSTALL a new CPP switch. REFER to: Cruise Control Deactivator Switch .

No	REPAIR the circuit.

A5 CHECK THE CRUISE CONTROL SWITCH PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).

Using the table, press each cruise control switch while monitoring the cruise control switch PID.

Cruise Control Switch	PID Value
Cruise On (pressed/released)	On/Off
Cruise Off (pressed/released)	On/Off
Resume (pressed/released)	On/Off
Cancel (pressed/released)	On/Off
SET + (pressed/released)	On/Off
SET - (pressed/released)	On/Off

Does the PID value agree with the switch position?

Yes	For automatic transmission, GO to A6 For manual transmission, GO to A12

No	If only one switch does not display the correct PID value, INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch . If multiple switches do not

	display the correct PID value, GO to A7

A6 MONITOR THE PCM (POWERTRAIN CONTROL MODULE) TR (TRANSMISSION RANGE) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM PID TR.

Select DRIVE.

Does the PID value agree with the TR selector lever position?

Yes	GO to A12

No	REFER to: External Controls .

A7 CHECK FOR VOLTAGE TO THE CRUISE CONTROL SWITCHES

Ignition OFF.

Remove the driver airbag. REFER to: Driver Airbag .

Disconnect LH Steering Wheel Switch C2366 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2366-4		C2366-5
C2366-6		C2366-5
C2366-7		C2366-5

Is the voltage approximately 5 volts?

Yes	TURN the ignition off and WAIT one minute. INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch . INSTALL the driver airbag. REFER to: Driver Airbag .

No	GO to A8

A8 CHECK THE STEERING WHEEL SWITCH HARNESS FOR AN OPEN

Ignition OFF.

Disconnect Clockspring C218B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2366-4	Ω	C218B-15
C2366-5	Ω	C218B-8
C2366-6	Ω	C218B-6
C2366-7	Ω	C218B-7

Are the resistances less than 3 ohms?

Yes	GO to A9

No	Install a new steering wheel. REFER to: Steering Wheel .

A9 CHECK THE STEERING WHEEL SWITCH HARNESS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2366-4	Ω	Ground
C2366-5	Ω	Ground
C2366-6	Ω	Ground
C2366-7	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to A10

No	Install a new steering wheel. REFER to: Steering Wheel .

A10 CHECK THE STEERING WHEEL SWITCH CIRCUITS THROUGH THE CLOCKSPRING FOR AN OPEN

Disconnect Clockspring C218C.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C218B-6 (component side)	Ω	C218C-5 (component side)
C218B-7 (component side)	Ω	C218C-7 (component side)

C218B-15 (component side)	Ω	C218C-8 (component side)

Are the resistances less than 3 ohms?

Yes	GO to A11

No	Install a new clockspring. REFER to: Clockspring .

A11 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A12 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST B : P0504, P0572, P0573 OR P1703

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0504	Brake Switch A / B Correlation	A DTC that sets when the PCM does not sense the correct sequence of the brake pedal input signal from both the cruise control deactivator and stoplamp switches when the brake pedal is pressed and released.
P0572	Brake Switch A Circuit Low	A DTC that sets when the PCM detects an open in the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp input during start and stop driving cycles. If the stoplamp switch input to the PCM is always off during start and stop driving cycles, this DTC sets in continuous memory.
P0573	Brake Switch A Circuit High	A DTC that sets when the PCM detects a short to voltage on the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp switch input during start and stop driving

		cycles. If the stoplamp lamp switch input to the PCM is always on during start and stop driving cycles, this DTC sets in continuous memory.
P1703	Brake Switch Out Of Self - Test Range	A DTC that sets in the PCM during the self-test when the stoplamp switch input signal is high or does not cycle high and low.

Possible Sources

- Wiring, terminals or connectors
- Stoplamp switch
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST B : P0504, P0572, P0573 OR P1703 > PINPOINT TEST B : P0504, P0572, P0573 OR P1703

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK THE OPERATION OF THE STOPLAMPS

Ignition ON.

Operate the stoplamps.

Do the stoplamps and high mounted stoplamp operate correctly?

Yes	GO to B2

No	REFER to: Stoplamps .

B2 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID

Released	Off	Off
Applied lightly	On	Off
Applied firmly	On	On

Do the PID values agree with the brake pedal position?

Yes	GO to B8

No	For an incorrect BOO1 PID value, GO to B3 For an incorrect BOO2 PID value, GO to B4

B3 CHECK THE STOPLAMP SWITCH CIRCUIT

Ignition OFF.

Disconnect: PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L).

Ignition ON.

While applying and releasing the brake pedal, measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-66		Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-67		Ground

5.0L, 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-67		Ground

Is the voltage greater than 11 volts with the brake pedal applied and no voltage with the brake pedal released?

Yes	GO to B8

No	REPAIR the circuit.

B4 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH FOR CORRECT OPERATION

Ignition OFF.

Disconnect: PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L).

While firmly applying and releasing the brake pedal, measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-65	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-66	Ω	Ground

5.0L, 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-66	Ω	Ground

Is the resistance less than 3 ohms with the brake pedal released, and greater than 10, 000 ohms with the brake pedal firmly applied?

Yes	GO to B8

No	GO to B5

B5 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH GROUND CIRCUIT FOR AN OPEN

Disconnect: BPP switch C278 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B6

No	REPAIR the circuit.

B6 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit.

B7 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR AN OPEN

Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C278-3		C278-2

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-65	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-66	Ω	Ground

5.0L, 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-66	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new BPP switch. REFER to: Stoplamp Switch .

No	REPAIR the signal circuit for an open.

B8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS APPLIED

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- CPP switch
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS APPLIED > PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS APPLIED

C1 CHECK THE CPP (CLUTCH PEDAL POSITION) SENSOR (CPP_TOP) PARAMETER

IDENTIFICATION (PID)

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM CPP_TOP PID while pressing and releasing the clutch pedal.

Does the PID value read "YES" with the clutch pedal pressed?

Yes	GO to C5

No	GO to C2

C2 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH

Ignition OFF.

Disconnect CPP top of travel switch C2354

Ignition ON.

Monitor the PCM CPP_TOP PID.

Does the PID value read YES?

Yes	INSTALL a new CPP switch. REFER to: Cruise Control Deactivator Switch .

No	GO to C3

C3 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Connect:

Positive Lead	Measurement / Action	Negative Lead
C2354-2		Ground

Ignition ON.

Monitor the PCM CPP_TOP PID.

Does the PID value read YES?

Yes	REPAIR the ground circuit.

No	GO to C4

C4 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH SIGNAL CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L).

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C2354-2	Ω	C1551B-6

3.7L

Positive Lead	Measurement / Action	Negative Lead
C2354-2	Ω	C1381B-8

5.0L, 5.2L

Positive Lead	Measurement / Action	Negative Lead
C2354-2	Ω	C175B-8

Is the resistance less than 3 ohms?

Yes	GO to C5

No	REPAIR the circuit.

C5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST D : P0833 OR P170A

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description .

DTC Fault Trigger Condition- PCM

DTC	Description	Fault Trigger Conditions
P0833	Clutch Pedal Switch "B" Circuit	A DTC that sets when the PCM receives the vehicle speed input, indicating movement and does not detect the switching input signal from the clutch pedal speed control deactivator switch. This condition disables the cruise control.
P170A	Clutch Switch Out of Self-Test Range	A DTC that sets in the PCM during the self-test when the CPP top-of-travel switch input signal is high or does not cycle high and low.

Possible Sources

- Wiring, terminals or connectors
- CPP switch
- PCM

DIAGNOSIS AND TESTING > CRUISE CONTROL > PINPOINT TESTS > PINPOINT TEST D : P0833 OR P170A > PINPOINT TEST D : P0833 OR P170A

D1 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH (CPP_TOP) PARAMETER IDENTIFICATION (PID)

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the PCM CPP_TOP PID while pressing and releasing the clutch pedal.

Does the PID value read "YES" with the clutch pedal pressed AND "NO" with the clutch pedal released?

Yes	GO to D4

No	If PID always read "NO", GO to Pinpoint Test C If PID always reads "YES", GO to D2

D2 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L).

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-6	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-8	Ω	Ground

5.0L, 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-8	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D5

No	GO to D3

D3 CHECK THE CPP (CLUTCH PEDAL POSITION) TOP OF TRAVEL SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND WITH THE SWITCH DISCONNECTED

Disconnect CPP Top of Travel Switch C2354 .

Connect:

Positive Lead	Measurement / Action	Negative Lead
C2354-2		C2354-3

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-6	Ω	Ground

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-8	Ω	Ground

5.0L, 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-8	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new CPP switch. REFER to: Cruise Control Deactivator Switch .

No	REPAIR the circuit.

D4 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Clear the Diagnostic Trouble Codes (DTCs). Repeat the PCM self-test.

Are any PCM Diagnostic Trouble Codes (DTCs) recorded?

Yes	If DTC P0833 or P170A is recorded, GO to D5 If any other PCM Diagnostic Trouble Codes (DTCs) are recorded, REFER to the PCM DTC Chart . For 2.3L, REFER to: Electronic Engine Controls . For 3.7L, REFER to: Electronic Engine Controls . For 5.0L, REFER to: Electronic Engine Controls .

No	GO to D5

D5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

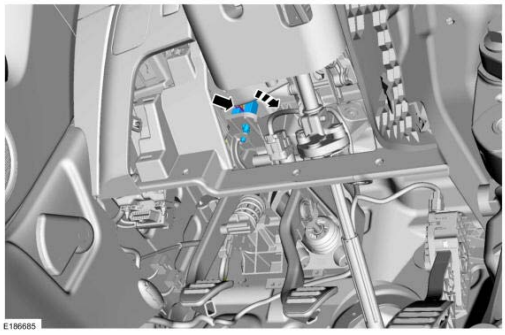
Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.



REMOVAL AND INSTALLATION > CRUISE CONTROL DEACTIVATOR SWITCH > REMOVAL

1.

Remove the driver knee airbag. Refer to: Driver Knee Airbag .

2.

Remove the cruise control deactivator switch then disconnect the electrical connector.

REMOVAL AND INSTALLATION > CRUISE CONTROL DEACTIVATOR SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: EXTERIOR LIGHTING

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > HEADLAMPS

The headlamp system consists of:

- Headlamp assemblies
- Ballasts
- Headlamp switch
- LH steering column multifunction switch
- BCM
- SCCM

The High Intensity Discharge (HID) headlamp system is a dual-beam pattern system. It consists of a replaceable High Intensity Discharge (HID) bulb in each headlamp assembly. Except China, the headlamp LED signature lamps are integrated into the headlamp assembly.

For China only, the headlamps are equipped with manual headlamp leveling.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > DRL (IF EQUIPPED)

The DRL system consists of:

- Fog lamp assemblies
- BCM

The DRL system operates the fog lamp assemblies.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > AUTOLAMPS

The autolamp system consists of:

- Light sensor
- Headlamp switch
- BCM

The autolamp system provides light sensitive automatic on/off control of the exterior lamps. The autolamp system keeps the exterior lamps on for a preselected period of time after the ignition is turned OFF (20 seconds is the factory default setting). The preselected time is adjustable up to approximately 3 minutes by using the message center controls.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > STOPLAMPS

The stoplamp system consists of:

- Stoplamp switch
- Rear lamp assemblies
- High mounted stoplamp
- BCM
- Body Control Module B (BCMB) (except China)

The stoplamp switch is located on the brake pedal assembly. When the brake pedal is applied, voltage is supplied to the rear lamps and high mounted stoplamp.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > TURN SIGNAL AND HAZARD LAMPS

The turn lamp system consists of:

- Front turn lamps (integrated in the front marker lamp assemblies)
- Rear lamp assemblies
- Exterior mirror assemblies (without hood turn signals)
- Hood turn signal lamps (without exterior mirror turn signals)
- LH steering column multifunction switch
- Hazard flasher lamp switch (integrated into the FCIM)
- BCM
- Body Control Module B (BCMB) (except China)
- SCCM
- DDM (if equipped with memory seat)
- PDM (if equipped with memory seat)

When the LH steering column multifunction switch is placed in the LH TURN or RH TURN position, the corresponding turn lamps flash on and off.

When the hazard function is active, all the turn lamps flash on and off.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > PARKING, REAR AND LICENSE PLATE LAMPS

The parking, rear and license plate lamp system consists of:

- Front marker lamps
- Rear lamp assemblies
- Rear side marker lamps
- License plate lamps
- Headlamp switch
- BCM
- Body Control Module B (BCMB) (except China)

The front parking and front side marker lamps are integrated in the front marker lamp assemblies.

The rear parking lamps are integrated into the rear lamp assemblies.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > FOG LAMP

The front fog lamp system consists of:

- Front fog lamps
- Front fog lamp switch (integrated into the headlamp switch)
- BCM

The front fog lamps can be turned on when the ignition is in RUN, the parking lamps are on, and the high beams are off.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > FOG LAMP - REAR (CHINA ONLY)

The rear fog lamp system consists of:

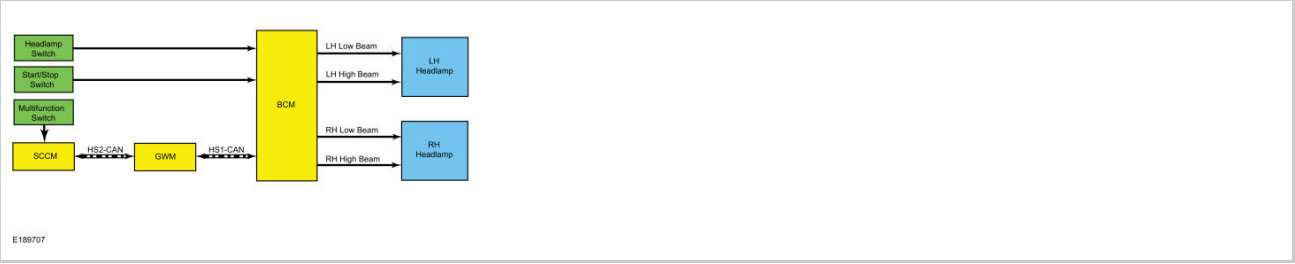
- Rear fog lamp
- Rear fog lamp switch (integrated into the headlamp switch)
- BCM

The rear fog lamp can be turned on when the ignition is in RUN and the headlamps are on.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - OVERVIEW > REVERSING LAMPS

The reverse lamp system consists of:

- Reverse lamp
- Reversing lamp switch (manual transmission)
- Transmission range sensor (automatic transmission)
- PCM
- BCM



When the transmission is placed in REVERSE, the reversing lamps are illuminated. The reversing lamp are located on the bottom of the rear bumper fascia.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HEADLAMPS - EXCEPT CHINA

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Headlamp flash to pass status	GWM	Indicates to the BCM a request for the high beams or flash-to-pass.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Headlamp flash to pass status	SCCM	Indicates to the GWM a request for the high beams or flash-to-pass.

Low Beams

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

The BCM turns the parking lamps and headlamps on when the ignition is in RUN and the BCM detects a fault from the headlamp switch or wiring. This is normal behavior of the BCM when a fault has been detected with the inputs from the headlamp switch.

The BCM supplies a high current switched voltage to the headlamp assemblies to supply the necessary current to operate the ballast and lamps.

High Intensity Discharge (HID) headlamps utilize a ballast, mounted to each headlamp assembly, to provide the necessary voltage to illuminate the High Intensity Discharge (HID) bulbs.

The BCM also provides an Field Effect Transistor (FET) protection of the exterior lamps switched voltage and low beam output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

High Beams

The SCCM monitors the LH steering column multifunction switch for a high beam request. When the LH steering column multifunction switch is in the HIGH BEAMS position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1.

When the low beams are on and the BCM receives a request for high beams, the High Intensity Discharge (HID) bulbs remains powered on and the shutter within each headlamp are activated. This changes the headlamp beam pattern to illuminate a greater distance.

The BCM supplies a high current switched voltage to the headlamp assemblies to supply the necessary current to operate the high beam shutters.

The BCM also provides an Field Effect Transistor (FET) protection of the exterior lamps switched voltage and high beam output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

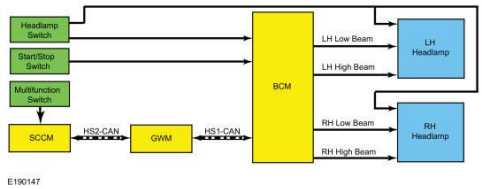
Flash-To-Pass

The SCCM monitors the LH steering column multifunction switch for a flash-to-pass request. When the LH steering column multifunction switch is in the FLASH-TO-PASS position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1.

When the ignition is in RUN and the flash-to-pass is requested, the high beams are activated as long as the LH steering column multifunction switch is held in the flash-to-pass position.

Headlamp Exit Delay

When the ignition is OFF and the LH steering column multifunction switch is placed in the FLASH-TO-PASS position and released, the parking lamps and low beams are illuminated. They remain illuminated until:



- 3 minutes have elapsed with a door open.

- 30 seconds have elapsed after all doors are closed.
- the LH steering column multifunction switch is placed in the flash-to-pass position again.
- the ignition switches to RUN.

Within the 30 second delay and all the doors closed, opening any door results in the 3 minute timer restarting.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HEADLAMPS - CHINA ONLY

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Headlamp flash to pass status	GWM	Indicates to the BCM a request for the high beams or flash-to-pass.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Headlamp flash to pass status	SCCM	Indicates to the GWM a request for the high beams or flash-to-pass.

Low Beams

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

The BCM turns the parking lamps and headlamps on when the ignition is in RUN and the BCM detects a fault from the headlamp switch or wiring. This is normal behavior of the BCM when a fault has been detected with the inputs from the headlamp switch.

The BCM supplies a high current switched voltage to the headlamp assemblies to supply the necessary current to operate the ballast and lamps.

High Intensity Discharge (HID) headlamps utilize a ballast, mounted to each headlamp assembly, to provide the necessary voltage to illuminate the High Intensity Discharge (HID) bulbs.

The BCM also provides an Field Effect Transistor (FET) protection of the exterior lamps switched voltage and low beam output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

Manual Headlamp Leveling

By pressing the headlamp button and releasing it into the popped out position, the switch can be rotated into one of 4 headlamp level positions. This allows headlamp beam height to be adjusted according to vehicle load. Once the beam is adjusted, the button can be pressed again to lock in the headlamp beam height.

High Beams

The SCCM monitors the LH steering column multifunction switch for a high beam request. When the LH steering column multifunction switch is in the HIGH BEAMS position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1.

When the low beams are on and the BCM receives a request for high beams, the High Intensity Discharge (HID) bulbs remains powered on and the shutter within each headlamp are activated. This changes the headlamp beam pattern to illuminate a greater distance.

The BCM supplies a high current switched voltage to the headlamp assemblies to supply the necessary current to operate the high beam shutters.

The BCM also provides an Field Effect Transistor (FET) protection of the exterior lamps switched voltage and high beam output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

Flash-To-Pass

The SCCM monitors the LH steering column multifunction switch for a flash-to-pass request. When the LH steering column multifunction switch is in the FLASH-TO-PASS position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1.

When the ignition is in RUN and the flash-to-pass is requested, the high beams are activated as long as the LH steering column multifunction switch is held in the flash-to-pass position.

Headlamp Exit Delay

When the ignition is OFF and the LH steering column multifunction switch is placed in the FLASH-TO-PASS position and released, the parking lamps and low beams are illuminated. They remain illuminated until:

- 3 minutes have elapsed with a door open.
- 30 seconds have elapsed after all doors are closed.
- the LH steering column multifunction switch is placed in the flash-to-pass position again.
- the ignition switches to RUN.

Within the 30 second delay and all the doors closed, opening any door results in the 3 minute timer restarting.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > DRL (IF EQUIPPED)

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Gear lever position	PCM	Indicates the gear selected is any position other than park, the BCM activates the DRL.

DRL

The DRL feature is not a programmable parameter for this vehicle.

The DRL system utilizes the fog lamp assemblies.

The BCM monitors the ignition status, the headlamp switch and autolamp status.

When the transmission is in not in PARK, the PCM sends a message over the HS-CAN1 to the BCM indicating the transmission is not in PARK.

Based on the input, the BCM activates the DRL.

The BCM supplies a high current switched voltage to the fog lamp assemblies to supply the necessary current to operate the lamps.

The BCM also provides an Field Effect Transistor (FET) protection of the exterior lamps switched voltage and DRL output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

Autolamps

System Diagram

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AUTOLAMPS

System Diagram

Autolamps

The BCM monitors the light sensor with a voltage signal. The light sensor input to the BCM varies with the ambient light conditions.

The BCM monitors the headlamp switch circuits to indicate the headlamp switch position.

When the BCM receives a headlamp switch status indicating a request for the autolamps, the BCM monitors the light sensor for the ambient light condition. If the BCM determines the ambient light level is dark, the BCM supplies voltage to the exterior lamps.

Headlamps On With Wipers On Function

If the headlamp switch is in the AUTOLAMPS ON position and the front wipers are on for more than 10 seconds (except during a mist wipe or while the wipers are on to clear washer fluid during a wash condition), the exterior lamps are turned on. The exterior lamps are turned off when the ignition switch is changed to OFF, the headlamp switch is placed in the OFF position, or the front wipers are off for more than 30 seconds. The exception to this is when the exterior lights are on because of darkness determined by the light sensor.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Stop lamp request	BCM	Indicates the BCM has received an input from the stoplamp switch indicating that the brake pedal has been pressed, and is requesting the stoplamps be illuminated.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Body Control Module (BCMB)	GWM	Indicates the BCM has received an input from the stoplamp switch indicating that the brake pedal has been pressed, and is requesting the stoplamps be illuminated.

Stoplamps

The BCM monitors the input from the stoplamp switch. When the brake pedal is applied, voltage is routed to the BCM, indicating a request for the stoplamps. The BCM then supplies voltage to the high mounted stop lamp assembly and sends a stoplamp request over the HS-CAN1 to the GWM. The GWM then sends this stoplamp request to the Body Control Module (BCMB) over the MS-CAN. When the Body Control Module (BCMB) receives this request, it supplies voltage to the rear lamp assemblies to illuminate the stoplamps.

The BCM does not activate the stoplamps when the ignition is OFF.

The BCM Body Control Module (BCMB) and also provide an Field Effect Transistor (FET) protection of the stoplamp output circuits. When an excessive current draw is detected, the BCM or Body Control Module (BCMB) disable the affected stoplamp circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn signal switch status	GWM	Indicates the turn signal stalk

		position on the LH steering column multifunction switch (left/right lane change or turn signal on or off). The BCM activates the left/right turn signals based on this input.
Turn signal lamp out status	GWM	Indicates that there is an outage of one of the rear turn signal lamps

Body Control Module (BCMB) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Left turn lamp request	GWM	A command to activate/deactivate the LH rear turn indicator.
Right turn lamp request	GWM	A command to activate/deactivate the RH rear turn indicator.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn signal switch status	SCCM	Indicates the turn signal stalk position on the LH steering column multifunction switch (left/right lane change or turn signal on or off).
Turn indication request	BCM	A command to activate/deactivate the exterior mirror turn indicator.
Turn signal lamp out status	Body Control Module (BCMB)	Indicates that there is an outage of one of the rear turn signal lamps

DDM and PDM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn indication request	GWM	A command to the DDM or PDM to activate/deactivate the exterior mirror turn indicator.

Turn Signals

The SCCM monitors the LH steering column multifunction switch position. When the LH steering column multifunction switch is in the LH or RH TURN position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1 indicating a request for the LH or RH turn signal.

When the BCM receives a request for a turn signal, the BCM supplies on/off voltage to the front turn lamps and, if not equipped with a memory seat, the exterior mirrors or hood turn lamps, if equipped. The BCM sends the turn indicator command message over the HS-CAN1 to the GWM then the GWM sends

the message to the MS-CAN to the Body Control Module (BCMB). When the Body Control Module (BCMB) receives the message, it supplies on/off voltage to the rear turn lamps.

For vehicles equipped with a memory seat, the BCM sends a turn indicator command message over the HS-CAN1 to the GWM then the GWM sends the message to the MS-CAN to the door modules for the exterior mirror turn lamps.

The timed on/off cycle for turn lamps is determined by the BCM and is set to flash approximately 70 times per minute if both the front and rear turn signal lamps operate correctly.

The rear turn lamps are Light Emitting Diodes (LEDs) in the rear lamp assemblies and have an outage circuit that tells the Body Control Module (BCMB) when the Light Emitting Diodes (LEDs) are inoperative. During normal operation, when voltage is applied to the rear turn Light Emitting Diodes (LEDs), the feedback circuit sends the same voltage back to the Body Control Module (BCMB) through the outage circuit. If the Light Emitting Diodes (LEDs) are inoperative the Body Control Module (BCMB) will not receive this voltage feedback through the outage circuit.

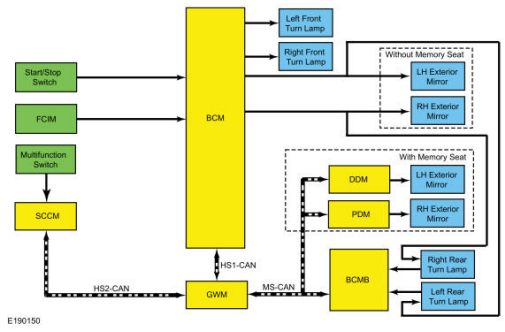
If a front or rear turn signal lamp is inoperative, the BCM fast flashes the remaining turn lamp(s) approximately 150 times per minute to indicate a bulb outage to the driver.

The LH steering column multifunction switch has 2 detents for the left turn position and 2 detents for the right turn position. When placed in the first detent and released, the corresponding turn signals flash 3 times and turn off. When the LH steering column multifunction switch is moved to the second detent, the turn signal flashes until the steering wheel is turned in the opposite direction.

The BCM Body Control Module (BCMB) and also provide an Field Effect Transistor (FET) protection of the stoplamp output circuits. When an excessive current draw is detected, the BCM or Body Control Module (BCMB) disable the affected stoplamp circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

Hazard Lamps



The BCM sends a voltage signal to the hazard flasher lamp switch (integrated into the FCIM) to monitor for a hazard lamp function request. When the hazard flasher lamp switch is pressed, the voltage signal is routed to ground, indicating a request to activate or deactivate the hazard lamp function.

When the BCM receives a request for the hazard lamps, it activates all the turn signal lamps.

The timed on/off cycle for the hazard lamps is approximately 70 times per minute, regardless of bulb outage.

Hazard Lamps

The BCM sends a voltage signal to the hazard flasher lamp switch (integrated into the FCIM) to monitor for a hazard lamp function request. When the hazard flasher lamp switch is pressed, the voltage signal is routed to ground, indicating a request to activate or deactivate the hazard lamp function.

When the BCM receives a request for the hazard lamps, it activates all the turn signal lamps.

The timed on/off cycle for the hazard lamps is approximately 70 times per minute, regardless of bulb outage.

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > PARKING, REAR, AND LICENSE PLATE LAMPS

System Diagram

Parking Lamps

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

If the BCM detects a fault from the headlamp switch or loses communication with the headlamp switch, the BCM turns the parking and headlamps on. This is normal behavior of the BCM when a fault has been detected with the inputs from the headlamp switch.

When the BCM receives an input requesting the parking lamps on, it provides voltage to the front parking, front, rear and rear side marker and license plate lamps.

The BCM supplies a high current switched voltage to the headlamp assemblies to supply the necessary current to operate the lamps and headlamp LED park/signature lamps and to the rear lamp assemblies to operate the parking lamp Light Emitting Diodes (LEDs). The BCM provides a low current voltage signal to the headlamp assemblies to switch on the LED signature lamps and to the rear lamp assemblies to switch on the parking lamp Light Emitting Diodes (LEDs).

The BCM also provides an Field Effect Transistor (FET) protection of the parking lamps output circuits. When an excessive current draw is detected, the BCM disables the affected parking lamps circuit driver.

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Reverse gear state	PCM	Indicates the transmission selector is in reverse to the BCM. When the transmission selector is in REVERSE and the ignition is in RUN, the BCM provides voltage to the reversing lamps.

Reversing Lamps

When the transmission is in REVERSE, the PCM sends a message over the HS-CAN1 to the BCM indicating the transmission is in REVERSE. The BCM provides voltage to the reversing lamps when it receives the message that the transmission is in REVERSE and the ignition is in RUN.

The BCM also provides an Field Effect Transistor (FET) protection of the reversing lamps output circuit. When an excessive current draw is detected, the BCM disables the affected reversing lamps circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description .

DESCRIPTION AND OPERATION > EXTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Headlamp Assembly

The High Intensity Discharge (HID) headlamp assembly has an integrated solenoid activated shutter which changes the headlamp beam pattern when activated. The solenoid and shutter are not serviceable separately from the headlamp assembly. The headlamp assembly is provided power on independent circuits for the low beams and the high beams.

The High Intensity Discharge (HID) headlamp also contains LED signature lamps (except China).

For China vehicles, the headlamp assemblies contain vertical headlamp adjustment actuators for the manual headlamps leveling system.

A ballast is mounted to each headlamp assembly to power the High Intensity Discharge (HID) bulb.

Exterior lamps are vented to accommodate normal changes in pressure. Condensation can be a natural by-product of this design. When moist air enters the lamp assembly through the vents, there is a possibility that condensation can occur if the temperature is cold. When normal condensation occurs, a thin mist forms on the interior of the lens. The thin mist eventually clears and exits through the vents during normal operation. The amount of time it takes to clear the lens of acceptable mist varies with ambient humidity and lamp types. Normal condensation clears from any lamp in 48 hours under dry conditions.

Do not replace a lamp assembly with acceptable levels of condensation such as:

- presence of thin mist (no streaks, drip marks or droplets are present)
- fine mist covers less than 50% of the lens

Examples of unacceptable moisture (usually caused by a lamp housing leak):

- water puddling inside the lamp
- large water droplets, drip marks or streaks present on the interior of the lens

Headlamp Switch

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

Ballast

A ballast is mounted to each High Intensity Discharge (HID) headlamp assembly. The ballasts provide high voltage to the High Intensity Discharge (HID) bulbs when voltage from the BCM (low beam outputs) is detected.

Light Sensor

The BCM sends a voltage signal to the light sensor. The light sensor provides resistance between the voltage signal and ground. The resistance varies depending on the amount of ambient light detected by the light sensor. The brighter the ambient light, the lower the resistance. By varying the resistance, the BCM can determine the amount of ambient light.

Stoplamp Switch

The stoplamp switch is a normally open switch and is provided voltage at all times. When the brake pedal is applied, the switch closes and routes voltage to the BCM.

DIAGNOSIS AND TESTING > DAYTIME RUNNING LAMPS (DRL) > SYMPTOM CHART(S)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: Daytime Running Lamps (DRL)

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .
The Daytime Running Lamps (DRL) are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A

DIAGNOSIS AND TESTING > DAYTIME RUNNING LAMPS (DRL) > PINPOINT TESTS > PINPOINT TEST A : THE DAYTIME RUNNING LAMPS (DRL) ARE INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- BCM

DIAGNOSIS AND TESTING > DAYTIME RUNNING LAMPS (DRL) > PINPOINT TESTS > PINPOINT TEST A : THE DAYTIME RUNNING LAMPS (DRL) ARE INOPERATIVE > PINPOINT TEST A : THE DAYTIME RUNNING LAMPS (DRL) ARE INOPERATIVE

A1 CHECK THE OPERATION OF THE FOG LAMPS

Ignition ON.

Place the headlamp switch in the PARKLAMPS position and activate the front fog lamps.

Do the fog lamps operate correctly?

Yes	GO to A2

No	Diagnose the fog lamps. REFER to: Fog Lamps .

A2 CHECK THE IGNITION SWITCH PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view BCM Parameter Identifications (PIDs).

Monitor the BCM Ignition Switch 1 (START_STOP_1) PID while pressing and releasing the START/STOP button.

Does the PID change state when the START/STOP button is pressed and released?

Yes	GO to A3

No	Diagnose the ignition state. REFER to: Steering Wheel and Column Electrical Components .

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10F3:11	Left Front Position Light: Circuit Short to Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH front parking lamp output circuit.
B10F3:15	Left Front Position Light: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH front parking lamp output circuit.
B10F4:11	Right Front Position Light: Circuit Short to Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH front parking lamp output circuit.
B10F4:15	Right Front Position Light: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the RH front parking lamp output circuit.
B1445:11	Rear Park Lamps Output: Circuit Short to Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the rear side

		marker and license plate lamp output circuit.
B1445:15	Rear Park Lamps Output: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the rear side marker and license plate lamp circuit.
B1446:11	Front Park Lamps Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the front sidemarker lamp output circuit.
B1446:15	Front Park Lamps Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the front sidemarker lamp output circuit.
B149E:11	Left Front Position/Sidemarker: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH front parking lamp output circuit.
B149E:15	Left Front Position/Sidemarker: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH front parking lamp output circuit.
B149F:11	Right Front Position/Sidemarker: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH front parking lamp output circuit.
B149F:15	Right Front Position/Sidemarker: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the RH front parking lamp output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes

		(DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

DIAGNOSIS AND TESTING > PARKING, REAR AND LICENSE PLATE LAMPS > PINPOINT TESTS > PINPOINT TEST A : ONE OR MORE PARKING, REAR OR LICENSE PLATE LAMPS ARE INOPERATIVE > PINPOINT TEST A : ONE OR MORE PARKING, REAR OR LICENSE PLATE LAMPS ARE INOPERATIVE

A1 DETERMINE IF ALL THE PARKING LAMPS ARE INOPERATIVE

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Are all the parking lamps inoperative?

Yes	GO to A26

No	If both front side marker lamps are inoperative, GO to A2 If both rear side marker lamps and both license plate lamps are inoperative, GO to A6 If an individual front side marker lamp is inoperative, GO to A10 If an individual front parking lamp is inoperative, GO to A13 If an individual rear side marker or license plate lamp is inoperative, GO to A18 If all LH or all RH rear parking lamps are inoperative, GO to A21 If a single LH or single RH rear parking lamp is inoperative, INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

A2 CHECK FOR VOLTAGE TO THE SIDE MARKER LAMPS

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: LH Front Side Marker Lamp C1127 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1127-2		Ground

Is the voltage greater than 11 volts?

Yes	REPAIR the front side marker lamps ground circuit for an open.

No	GO to A3

A3 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE SIDE MARKER LAMPS

Place the headlamp switch in the OFF position.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Place the headlamp switch in the PARKING LAMPS position.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1127-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new front parking lamp (turn signal) bulb or front side marker lamp bulb for the shorted bulb. REFER to: Front Turn Signal Lamp Bulb . REFER to: Parking Lamp Bulb .

No	GO to A4

A4 CHECK THE SIDE MARKER LAMPS SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280G .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1127-2	Ω	C2280G-3

Is the resistance less than 3 ohms?

Yes	GO to A5

No	REPAIR the circuit.

A5 CHECK THE SIDE MARKER LAMPS SUPPLY CIRCUIT FOR A SHORT TO GROUND

Disconnect: Except China, LH Headlamp C1021 and RH Headlamp C1041 .

Disconnect: RH Front Side Marker Lamp C1126 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1127-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A26

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A6 CHECK FOR VOLTAGE TO THE REAR SIDE MARKER AND LICENSE PLATE LAMPS

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: LH Rear Side Marker Lamp C481 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C481-2		Ground

Is the voltage greater than 11 volts?

Yes	REPAIR the rear side marker and license plate lamps ground circuit for an open.

No	GO to A7

A7 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE REAR SIDE MARKER AND LICENSE PLATE LAMPS

Place the headlamp switch in the OFF position.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Place the headlamp switch in the PARKING LAMPS position.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C481-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new license plate bulb or rear side marker lamp bulb. REFER to: Side Lamp Bulb .

No	GO to A8

A8 CHECK THE REAR SIDE MARKER AND LICENSE PLATE LAMPS SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C481-2	Ω	C2280C-12

Is the resistance less than 3 ohms?

Yes	GO to A9

No	REPAIR the circuit.

A9 CHECK THE REAR SIDE MARKER AND LICENSE PLATE LAMPS SUPPLY CIRCUIT FOR A SHORT TO GROUND

Disconnect: RH Rear Side Marker Lamp C482 .

Disconnect: LH License Plate Lamp C4046A and RH License Plate Lamp C4046B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C481-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A26

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A10 CHECK FOR VOLTAGE TO THE FRONT SIDE MARKER LAMP

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: Inoperative LH Front Side Marker Lamp C1127 or RH Front Side Marker Lamp C1126 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Measure:

LH Front Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C1127-2	+ V −	Ground

RH Front Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C1126-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to A11

No	GO to A12

A11 CHECK THE FRONT SIDE MARKER LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH Front Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C1127-2		C1127-1

RH Front Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C1126-2		C1126-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new front side marker lamp bulb. REFER to: Parking Lamp Bulb .

No	REPAIR the circuit.

A12 CHECK THE FRONT SIDE MARKER LAMP SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280G .

Measure:

LH Front Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C1127-2	Ω	C2280G-3

RH Front Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C1126-2	Ω	C2280G-3

Is the resistance less than 3 ohms?

Yes	GO to A26

No	REPAIR the circuit.

A13 CHECK FOR VOLTAGE TO THE FRONT PARKING LAMP

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: Inoperative LH Side Turn Signal Lamp C156 or RH Side Turn Signal Lamp C1042 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Measure:

LH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-2	V	Ground

RH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-2	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A15

No	GO to A14

A14 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE FRONT PARKING LAMP

Place the headlamp switch in the OFF position.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Place the headlamp switch in the PARKING LAMPS position.

Measure:

LH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-2		Ground

RH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new front parking lamp (turn signal) bulb. REFER to: Front Turn Signal Lamp Bulb .

No	GO to A15

A15 CHECK THE FRONT PARKING LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-2		C156-1

RH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-2		C1042-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new front parking lamp (turn signal) bulb. REFER to: Front Turn Signal Lamp Bulb .

No	REPAIR the circuit.

A16 CHECK THE FRONT PARKING LAMP SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280F .

Measure:

LH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-2	Ω	C2280F-30

RH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-2	Ω	C2280F-37

Is the resistance less than 3 ohms?

Yes	GO to A17

No	REPAIR the circuit.

A17 CHECK THE FRONT PARKING LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Measure:

LH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-2	Ω	Ground

RH Front Parking Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A26

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the

	Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A18 CHECK FOR VOLTAGE TO THE LICENSE PLATE OR REAR SIDE MARKER LAMP

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: Inoperative LH License Plate Lamp C4046A or RH License Plate Lamp C4046B .

Disconnect: Inoperative LH Rear Side Marker Lamp C481 or RH Rear Side Marker Lamp C482 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C4046A-2		Ground

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C4046B-2		Ground

LH Rear Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C481-2		Ground

RH Rear Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C482-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to A19

No	GO to A20

A19 CHECK THE LICENSE PLATE OR REAR SIDE MARKER LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C4046A-2		C4046A-1

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C4046B-2		C4046B-1

LH Rear Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C481-2		C481-1

RH Rear Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C482-2		C482-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new license plate bulb or rear side marker lamp bulb. REFER to: Side Lamp Bulb .

No	REPAIR the circuit.

A20 CHECK THE LICENSE PLATE OR REAR SIDE MARKER LAMP SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280C .

Measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C4046A-2	Ω	C2280C-12

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C4046B-2	Ω	C2280C-12

LH Rear Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C481-2	Ω	C2280C-12

RH Rear Side Marker Lamp

Positive Lead	Measurement / Action	Negative Lead
C482-2	Ω	C2280C-12

Is the resistance less than 3 ohms?

Yes	GO to A26

No	REPAIR the circuit.

A21 CHECK THE STOPLAMP OPERATION

Apply the brake pedal and the stoplamps.

Do all the stoplamps illuminate?

Yes	GO to A22

No	REFER to: Stoplamps .

A22 CHECK FOR VOLTAGE TO THE INOPERATIVE REAR PARKING LAMP

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: Except China, Inoperative LH Rear Lamp C498 or RH Rear Lamp C499 .

Disconnect: China Only, Inoperative LH Rear Lamp C412 or RH Rear Lamp C415 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Except China, measure:

LH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C498-2		Ground

RH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C499-2		Ground

China only, measure:

LH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C412-2		Ground

RH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C415-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	GO to A23

A23 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE REAR PARKING LAMP

Place the headlamp switch in the OFF position.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Place the headlamp switch in the PARKING LAMPS position.

Except China, measure:

LH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C498-2		Ground

RH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C499-2		Ground

China only, measure:

LH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C412-2		Ground

RH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C415-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	GO to A24

A24 CHECK THE INOPERATIVE PARKING LAMP SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280E .

Except China, measure:

LH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C498-2	Ω	C2280E-25

RH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead

C499-2	Ω	C2280E-51

China only, measure:

LH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C412-2	Ω	C2280E-25

RH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C415-2	Ω	C2280E-51

Is the resistance less than 3 ohms?

Yes	GO to A25

No	REPAIR the circuit in question.

A25 CHECK THE INOPERATIVE PARKING LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Except China, measure:

LH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C498-2	Ω	Ground

RH Rear Lamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C499-2	Ω	Ground

China only, measure:

LH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead
C412-2	Ω	Ground

RH Rear Lamp (China Only)

Positive Lead	Measurement / Action	Negative Lead

C415-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A26

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A26 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING, REAR AND LICENSE PLATE LAMPS > PINPOINT TESTS > PINPOINT TEST B : THE PARKING, REAR OR LICENSE PLATE LAMPS ARE ON CONTINUOUSLY

Refer to Parking, Rear and License Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10F3:15	Left Front Position Light: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH rear side marker lamp output circuit.
B10F4:15	Right Front Position Light: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH rear side marker lamp output circuit.
B1445:15	Rear Park Lamps Output: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the rear side marker and license plate lamp output circuit.
B1446:15	Front Park Lamps Output: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the front sidemarker lamps output circuit.
B149E:15	Left Front Position/Sidemarker: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH front parking lamp output circuit.
B149F:15	Right Front Position/Sidemarker: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH front parking lamp output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has

		permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- Low beams concern
- BCM

DIAGNOSIS AND TESTING > PARKING, REAR AND LICENSE PLATE LAMPS > PINPOINT TESTS > PINPOINT TEST B : THE PARKING, REAR OR LICENSE PLATE LAMPS ARE ON CONTINUOUSLY > PINPOINT TEST B : THE PARKING, REAR OR LICENSE PLATE LAMPS ARE ON CONTINUOUSLY

B1 CHECK LOW BEAM HEADLAMP OPERATION

Ignition ON.

Place the headlamp switch in the OFF position.

Observe the operation of the LH and RH low beams.

Are the low beams illuminated?

Yes	REFER to: Headlamps .

No	GO to B2

B2 CHECK THE BCM (BODY CONTROL MODULE) PARKING LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280C (For rear side marker or license plate lamps).

Disconnect: BCM C2280E (For rear parking lamps).

Disconnect: BCM C2280F (For front parking lamps).

Disconnect: BCM C2280G (For front side marker lamps).

Ignition ON.

Do the parking lamps continue to illuminate?

Yes	REPAIR the affected circuit.

No	GO to B3

B3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING, REAR AND LICENSE PLATE LAMPS > PINPOINT TESTS > PINPOINT TEST C : THE LED (LIGHT EMITTING DIODE) SIGNATURE LAMPS ARE NOT THE SAME INTENSITY - EXCEPT CHINA

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors

DIAGNOSIS AND TESTING > PARKING, REAR AND LICENSE PLATE LAMPS > PINPOINT TESTS > PINPOINT TEST C : THE LED (LIGHT EMITTING DIODE)

SIGNATURE LAMPS ARE NOT THE SAME INTENSITY - EXCEPT CHINA > PINPOINT TEST C : THE LED (LIGHT EMITTING DIODE) SIGNATURE LAMPS ARE NOT THE SAME INTENSITY - EXCEPT CHINA

C1 CHECK FRONT PARKING LAMP CIRCUIT FOR VOLTAGE

Ignition OFF.

Disconnect: (Dimmer LED signature lighting) LH Headlamp C1021 or RH Headlamp C1041 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-5	V	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-5	V	Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

No	GO to C2

C2 CHECK FRONT PARKING LAMP CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: BCM C2280G .

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-5	Ω	C2280G-3

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-5	Ω	C2280G-3

Is the resistance less than 3 ohms?

Yes	GO to C3

No	REPAIR the circuit.

C3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

- SCCM
- BCM

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST A : THE TURN SIGNAL FUNCTION IS INOPERATIVE OR ALWAYS ON > PINPOINT TEST A : THE TURN SIGNAL FUNCTION IS INOPERATIVE OR ALWAYS ON

A1 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) TURN SIGNAL PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).

Monitor the Turn signal Left Switch Input Status (TRN_SIG_SW_L) and Turn signal Right

Switch Input Status (TRN_SIG_SW_R) while placing the LH steering column multifunction switch in the left and right turn positions.

Do the Parameter Identifications (PIDs) match the LH steering column multifunction switch position?

Yes	GO to A2

No	INSTALL a new LH steering column multifunction switch. REFER to: Steering Column Multifunction Switch LH . TEST the system for normal operation. If the concern is still present, GO to A3

A2 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A3 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST B : ONE TURN SIGNAL LAMP IS INOPERATIVE OR ALWAYS ON - EXCEPT CHINA

One Turn Signal Lamp Is Inoperative Or Always On - Except China

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B123A:11	Left Front Turn Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH front turn lamp voltage supply circuit.
B123A:15	Left Front Turn Indicator: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the LH front turn lamp voltage supply circuit.
B123B:11	Right Front Turn Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH front turn lamp voltage supply circuit.
B123B:15	Right Front Turn Indicator: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the RH front turn lamp voltage supply circuit.

U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

- BCM

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST B : ONE TURN SIGNAL LAMP IS INOPERATIVE OR ALWAYS ON - EXCEPT CHINA > PINPOINT TEST B : ONE TURN SIGNAL LAMP IS INOPERATIVE OR ALWAYS ON - EXCEPT CHINA

B1 DETERMINE IF ANY TURN LAMP IS ALWAYS ON

Ignition ON.

Activate the lamp function.

Observe the front and the rear turn lamps.

Deactivate the lamp function.

Observe the front and the rear turn lamps.

Is any turn lamp continuously illuminated (not flashing) with the hazard lamp function deactivated?

Yes	For a front turn lamp, GO to B2 For a rear turn lamp, REFER to: Stoplamps . For an exterior mirror turn lamp or hood turn signal lamp (without memory seat), GO to B3 For an exterior mirror turn lamp (with memory seat), GO to B4

No	For a front turn lamp, GO to B5 For a rear turn lamp, if the stoplamps operate correctly, GO to B15For a rear turn lamp, if the stoplamps do not operate correctly, REFER to: Stoplamps . For an exterior mirror turn lamp or hood turn signal lamp, GO to B10

B2 CHECK THE FRONT TURN LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: BCM C2280F .

Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the affected circuit.

No	GO to B18

B3 CHECK THE EXTERIOR MIRROR TURN LAMP OR HOOD TURN SIGNAL LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE (WITHOUT MEMORY SEAT)

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: BCM C2280E .

Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the affected circuit.

No	GO to B18

B4 CHECK THE EXTERIOR MIRROR TURN LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE (WITH MEMORY SEAT)

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: DDM C501A (LH exterior mirror lamp).

Disconnect: PDM C652A (RH exterior mirror lamp).

Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the affected circuit.

No	For the LH exterior mirror turn lamp, GO to B19 For the RH exterior mirror turn lamp, GO to B20

B5 CHECK FOR VOLTAGE TO THE FRONT TURN LAMP

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: LH Side Turn Signal Lamp C156 or RH Side Turn Signal Lamp C1042 .

Ignition ON.

Activate the hazard flasher lamp function.

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to B7

No	GO to B6

B6 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE FRONT TURN LAMP

Deactivate the hazard lamp function.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Activate the hazard flasher lamp function.

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new front turn signal bulb. REFER to: Front Turn Signal Lamp Bulb .

No	GO to B8

B7 CHECK THE FRONT TURN LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3		C156-1

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3		C1042-1

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new front turn signal bulb. REFER to: Front Turn Signal Lamp Bulb .

No	REPAIR the circuit.

B8 CHECK THE FRONT TURN LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: BCM C2280F .

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3	Ω	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B9

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B9 CHECK THE FRONT TURN LAMP SUPPLY CIRCUIT FOR AN OPEN

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3	Ω	C2280F-39

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead

C1042-3	Ω	C2280F-38

Is the resistance less than 3 ohms?

Yes	GO to B18

No	REPAIR the circuit.

B10 CHECK FOR VOLTAGE TO THE EXTERIOR MIRROR OR HOOD TURN SIGNAL LAMP

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: For exterior mirror turn lamp, LH Exterior Mirror C520 or RH Exterior Mirror C626 .

Disconnect: For hood turn signal lamp, LH Hood Turn Signal Lamp C1638 or RH Hood Turn Signal Lamp C1684.

Ignition ON.

Activate the hazard flasher lamp function.

For exterior mirror turn lamp, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3		Ground

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3		Ground

For hood turn signal lamp, measure:

LH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1638-1		Ground

RH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1684-1		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to B12

No	Without memory seat, GO to B11 With memory seat, GO to B13

B11 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE EXTERIOR MIRROR OR HOOD TURN SIGNAL LAMP

Deactivate the hazard lamp function.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Activate the hazard flasher lamp function.

For exterior mirror turn lamp, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3		Ground

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3		Ground

For hood turn signal lamp, measure:

LH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1638-1		Ground

RH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1684-1		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	For exterior mirror turn lamp, INSTALL a new exterior mirror turn signal lamp. REFER to: Exterior Mirror . For hood turn signal lamp, INSTALL a new hood turn signal lamp. REFER

	to: Hood Turn Signal Indicator Lamp .

No	GO to B13

B12 CHECK THE EXTERIOR MIRROR TURN LAMP OR HOOD TURN SIGNAL LAMP GROUND

For exterior mirror turn lamp, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3		C520-7

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3		C626-7

For hood turn signal lamp, measure:

LH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1638-1		C1638-2

RH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1684-1		C1684-2

Does the voltage alternate from 0 to greater than 11 volts?

Yes	For exterior mirror turn lamp, INSTALL a new exterior mirror turn signal lamp. REFER to: Exterior Mirror . For hood turn signal lamp, INSTALL a new hood turn signal lamp. REFER to: Hood Turn Signal Indicator Lamp .

No	REPAIR the circuit.

B13 CHECK THE EXTERIOR MIRROR TURN LAMP OR HOOD TURN SIGNAL LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: Without memory seat, BCM C2280E .

Disconnect: With memory seat, DDM C501A (LH exterior mirror lamp).

Disconnect: With memory seat, PDM C652A (RH exterior mirror lamp).

For exterior mirror turn lamp, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	Ground

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	Ω	Ground

For hood turn signal lamp, measure:

LH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1638-1	Ω	Ground

RH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1684-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B14

No	With memory seat, REPAIR the circuit. Without memory seat, REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B14 CHECK THE MIRROR TURN LAMP OR HOOD TURN SIGNAL LAMP SUPPLY CIRCUIT FOR AN OPEN

For exterior mirror turn lamp, without memory seat, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	C2280E-26

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	Ω	C2280E-52

For exterior mirror turn lamp, with memory seat, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	C501A-4

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	Ω	C652A-4

For hood turn signal lamp, measure:

LH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1638-1	Ω	C2280E-26

RH Hood Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C1684-1	Ω	C2280E-52

Is the resistance less than 3 ohms?

Yes	With memory seat, LH exterior mirror turn lamp, GO to B19 With memory seat, RH exterior mirror turn lamp, GO to B20 Without memory seat, GO to B18

No	REPAIR the circuit.

B15 CHECK THE REAR TURN LAMP OUTAGE CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Inoperative LH Rear Lamp C498 or RH Rear Lamp C499 .

Disconnect: BCMB C4368A .

Ignition ON.

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C498-7		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C499-7		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B16

B16 CHECK THE REAR TURN LAMP OUTAGE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C498-7	Ω	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C499-7	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B17

No	REPAIR the circuit.

B17 CHECK THE REAR TURN LAMP OUTAGE CIRCUIT FOR AN OPEN

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C498-7	Ω	C4368A-8

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C499-7	Ω	C4368A-20

Is the resistance less than 3 ohms?

Yes	GO to B21

No	REPAIR the circuit.

B18 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B19 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B20 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B21 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) OPERATION

Disconnect and inspect all BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST C : ONE TURN SIGNAL LAMP IS INOPERATIVE OR ALWAYS ON - CHINA ONLY

One Turn Signal Lamp Is Inoperative Or Always On - China Only

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B123A:11	Left Front Turn Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH front turn lamp voltage supply circuit.
B123A:15	Left Front Turn Indicator: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the LH front turn lamp voltage supply circuit.
B123B:11	Right Front Turn Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH front turn lamp voltage supply circuit.

B123B:15	Right Front Turn Indicator: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the RH front turn lamp voltage supply circuit.
B1247:11	Left Rear Turn Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH rear turn lamp voltage supply circuit.
B1247:15	Left Rear Turn Indicator: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the LH rear turn lamp voltage supply circuit.
B1248:11	Right Rear Turn Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH rear turn lamp voltage supply circuit.
B1248:15	Right Rear Turn Indicator: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the RH rear turn lamp voltage supply circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST C : ONE TURN SIGNAL LAMP IS INOPERATIVE OR ALWAYS ON - CHINA ONLY > PINPOINT TEST C : ONE TURN SIGNAL LAMP IS INOPERATIVE OR ALWAYS ON - CHINA ONLY

C1 DETERMINE IF ANY TURN LAMP IS ALWAYS ON

Ignition ON.

Activate the lamp function.

Observe the front and the rear turn lamps.

Deactivate the lamp function.

Observe the front and the rear turn lamps.

Is any turn lamp continuously illuminated (not flashing) with the hazard lamp function deactivated?

Yes	For a front turn lamp, GO to C2 For an exterior mirror turn lamp (without memory seat) and a rear turn lamp, GO to C3 For an exterior mirror turn lamp (with memory seat), GO to C4

No	For a front turn lamp, GO to C5 For a rear turn lamp, GO to C10 For an exterior mirror turn lamp, GO to C15

C2 CHECK THE FRONT TURN LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: BCM C2280F .

Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the affected circuit.

No	GO to C20

C3 CHECK THE EXTERIOR MIRROR TURN LAMP (WITHOUT MEMORY SEAT) AND REAR TURN LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: BCM C2280E .

Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the affected circuit.

No	GO to C20

C4 CHECK THE EXTERIOR MIRROR TURN LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE (WITH MEMORY SEAT)

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: DDM C501A (LH exterior mirror lamp).

Disconnect: PDM C652A (RH exterior mirror lamp).

Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the affected circuit.

No	For the LH exterior mirror turn lamp, GO to C21 For the RH exterior mirror turn lamp, GO to C22

C5 CHECK FOR VOLTAGE TO THE FRONT TURN LAMP

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: LH Side Turn Signal Lamp C156 or RH Side Turn Signal Lamp C1042 .

Ignition ON.

Activate the hazard flasher lamp function.

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to C7

No	GO to C6

C6 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE FRONT TURN LAMP

Deactivate the hazard lamp function.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Activate the hazard flasher lamp function.

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new front turn signal bulb. REFER to: Front Turn Signal Lamp Bulb .

No	GO to C8

C7 CHECK THE FRONT TURN LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3		C156-1

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3		C1042-1

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new front turn signal bulb. REFER to: Front Turn Signal Lamp Bulb .

No	REPAIR the circuit.

C8 CHECK THE FRONT TURN LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: BCM C2280F .

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3	Ω	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C9

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C9 CHECK THE FRONT TURN LAMP SUPPLY CIRCUIT FOR AN OPEN

Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-3	Ω	C2280F-39

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C1042-3	Ω	C2280F-38

Is the resistance less than 3 ohms?

Yes	GO to C20

No	REPAIR the circuit.

C10 CHECK FOR VOLTAGE TO THE REAR TURN LAMP

Ignition OFF.

Deactivate the hazard lamp function.

Disconnect: LH Rear Lamp Assembly C412 or RH Rear Lamp Assembly C415 .

Ignition ON.

Activate the hazard flasher lamp function.

Measure:

LH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-3	V	Ground

RH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to C12

No	GO to C11

C11 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE REAR TURN LAMP

Deactivate the hazard lamp function.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Activate the hazard flasher lamp function.

Measure:

LH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-3		Ground

RH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	GO to C13

C12 CHECK THE REAR TURN LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead

C412-3		C412-4

RH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-3		C415-4

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	REPAIR the circuit.

C13 CHECK THE REAR TURN LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: BCM C2280E .

Measure:

LH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-3	Ω	Ground

RH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C14

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C14 CHECK THE REAR TURN LAMP SUPPLY CIRCUIT FOR AN OPEN

Measure:

LH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-3	Ω	C2280E-26

RH Rear Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-3	Ω	C2280E-52

Is the resistance less than 3 ohms?

Yes	GO to C20

No	REPAIR the circuit.

C15 CHECK FOR VOLTAGE TO THE EXTERIOR MIRROR

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: LH Exterior Mirror C520 or RH Exterior Mirror C626 .

Ignition ON.

Activate the hazard flasher lamp function.

Measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	V	Ground

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	V	Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to C17

No	GO to C16

C16 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE EXTERIOR MIRROR

Deactivate the hazard lamp function.

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Activate the hazard flasher lamp function.

Measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3		Ground

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new exterior mirror turn signal lamp. REFER to: Exterior Mirror .

No	GO to C18

C17 CHECK THE EXTERIOR MIRROR TURN LAMP GROUND

Measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3		C520-7

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3		C626-7

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new exterior mirror turn signal lamp. REFER to: Exterior Mirror .

No	REPAIR the circuit.

C18 CHECK THE EXTERIOR MIRROR TURN LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Deactivate the hazard flasher lamp function.

Disconnect: Without memory seat, BCM C2280E .

Disconnect: With memory seat, DDM C501A (LH exterior mirror lamp).

Disconnect: With memory seat, PDM C652A (RH exterior mirror lamp).

Measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	Ground

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C19

No	With memory seat, REPAIR the circuit. Without memory seat, REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation.If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C19 CHECK THE MIRROR TURN LAMP SUPPLY CIRCUIT FOR AN OPEN

Without memory seat, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	C2280E-26

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	Ω	C2280E-52

With memory seat, measure:

LH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	C501A-4

RH Exterior Mirror Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-3	Ω	C652A-4

Is the resistance less than 3 ohms?

Yes	With memory seat, LH exterior mirror turn lamp, GO to C21 With memory seat, RH exterior mirror turn lamp, GO to C22 Without memory seat, GO to C20

No	REPAIR the circuit.

C20 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C21 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C22 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST D : THE HAZARD LAMP FUNCTION IS INOPERATIVE OR ALWAYS ON

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D35:11	Hazard Switch: Circuit Short to Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the hazard lamp function input circuit.

Possible Sources

- Wiring, terminals or connectors
- FCIM
- BCM

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST D : THE HAZARD LAMP FUNCTION IS INOPERATIVE OR ALWAYS ON > PINPOINT TEST D : THE HAZARD LAMP FUNCTION IS INOPERATIVE OR ALWAYS ON

D1 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1D35:11 present?

Yes	GO to D2
No	GO to D4

D2 ISOLATE THE HAZARD FLASHER SWITCH

Ignition OFF.

Disconnect: FCIM C2402B .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test.

Is DTC B1D35:11 retrieved again?

Yes	GO to D3

No	GO to D5

D3 CHECK THE HAZARD FLASHER SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-20	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D6

No	REPAIR the circuit.

D4 CHECK FOR A VOLTAGE SIGNAL TO THE HAZARD FLASHER SWITCH

Ignition OFF.

Disconnect: FCIM C2402B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-20		Ground

Is the voltage greater than 11 volts?

Yes	GO to D7

No	GO to D5

D5 CHECK THE HAZARD FLASHER SWITCH INPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-20	Ω	C2280B-19

Is the resistance less than 3 ohms?

Yes	GO to D6

No	REPAIR the circuit.

D6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Disconnect and inspect all FCIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Vehicles With: AM/FM/CD/SYNC REFER to: Front Controls Interface Module (FCIM) . Vehicles With: Touchscreen Display REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST E : DTC (DIAGNOSTIC TROUBLE CODE) B1265:23, B1265:24, B1266:23 AND B1266:24

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1265:23	Left Rear Turn Lamp Feedback: Signal Stuck Low	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground or open from the LH rear turn lamp outage input circuit.
B1265:24	Left Rear Turn Lamp Feedback: Signal Stuck High	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH rear turn lamp outage input circuit.
B1266:23	Right Rear Turn Lamp Feedback: Signal Stuck Low	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground or open from the RH rear

		turn lamp outage input circuit.
B1266:24	Right Rear Turn Lamp Feedback: Signal Stuck High	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH rear turn lamp outage input circuit.

Possible Sources

- FCIM
- BCM

DIAGNOSIS AND TESTING > TURN SIGNAL AND HAZARD LAMPS > PINPOINT TESTS > PINPOINT TEST E : DTC (DIAGNOSTIC TROUBLE CODE) B1265:23, B1265:24, B1266:23 AND B1266:24 > PINPOINT TEST E : DTC (DIAGNOSTIC TROUBLE CODE) B1265:23, B1265:24, B1266:23 AND B1266:24

E1 CHECK THE REAR TURN LAMP OUTAGE CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Except China, LH Rear Lamp Assembly C498 or RH Rear Lamp Assembly C499 .

Disconnect: China only, LH Rear Lamp Assembly C412 or RH Rear Lamp Assembly C415 .

Disconnect: BCMB C4368A .

Ignition ON.

Except China, measure:

DTC B1265:23 or B1265:24

Positive Lead	Measurement / Action	Negative Lead
C498-7		Ground

DTC B1266:23 or B1266:24

Positive Lead	Measurement / Action	Negative Lead
C499-7		Ground

China only, measure:

DTC B1265:23 or B1265:24

Positive Lead	Measurement / Action	Negative Lead
C412-5		Ground

DTC B1266:23 or B1266:24

Positive Lead	Measurement / Action	Negative Lead
C415-5		Ground

Is voltage present?

Yes	REPAIR the circuit.

No	GO to E2

E2 CHECK THE REAR TURN LAMP OUTAGE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Except China, measure:

DTC B1265:23 or B1265:24

Positive Lead	Measurement / Action	Negative Lead
C498-7	Ω	Ground

DTC B1266:23 or B1266:24

Positive Lead	Measurement / Action	Negative Lead
C499-7	Ω	Ground

China only, measure:

DTC B1265:23 or B1265:24

Positive Lead	Measurement / Action	Negative Lead
C412-5	Ω	Ground

DTC B1266:23 or B1266:24

Positive Lead	Measurement / Action	Negative Lead
C415-5	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to E3

No	REPAIR the circuit.

E3 CHECK THE REAR TURN LAMP OUTAGE CIRCUIT FOR AN OPEN

Ignition OFF.

Except China, measure:

DTC B1265:23 or B1265:24

Positive Lead	Measurement / Action	Negative Lead
C498-7	Ω	C4368A-8

DTC B1266:23 or B1266:24

Positive Lead	Measurement / Action	Negative Lead
C499-7	Ω	C4368A-20

China only, measure:

DTC B1265:23 or B1265:24

Positive Lead	Measurement / Action	Negative Lead
C412-5	Ω	C4368A-8

DTC B1266:23 or B1266:24

Positive Lead	Measurement / Action	Negative Lead
C415-5	Ω	C4368A-20

Is the resistance less than 3 ohms?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly . CLEAR the diagnostic trouble codes (DTCs). PERFORM the BCMB self-test. If the DTC returns, GO to E4

No	REPAIR the circuit.

E4 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) OPERATION

Disconnect and inspect all BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > AUTOLAMPS > DTC CHART: BCM

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

BCM DTC Chart

DTC	Description	Action
B1A85:11	Ambient Sunload Sensor: Circuit Short To Ground	GO to PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY
B1A85:13	Ambient Sunload Sensor: Circuit Open	GO to PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such

		as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected,
For other BCM Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > AUTOLAMPS > SYMPTOM CHART(S)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: Autolamps

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .
The autolamps are inoperative	Refer to the Pinpoint Test	GO to PINPOINT TEST A : THE AUTOLAMPS ARE INOPERATIVE
The autolamps are on continuously	Refer to the Pinpoint Test	GO to PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY

DIAGNOSIS AND TESTING > AUTOLAMPS > PINPOINT TESTS > PINPOINT TEST A : THE AUTOLAMPS ARE INOPERATIVE

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- Headlamp concern
- Autolamp and rain sensor or sunload sensor
- BCM

DIAGNOSIS AND TESTING > AUTOLAMPS > PINPOINT TESTS > PINPOINT TEST A : THE AUTOLAMPS ARE INOPERATIVE > PINPOINT TEST A : THE AUTOLAMPS ARE INOPERATIVE

A1 CHECK THE MANUAL HEADLAMP OPERATION

Place the headlamp switch in the HEADLAMPS and then OFF positions.

Do the headlamps operate correctly?

Yes	GO to A2

No	REFER to: Headlamps .

A2 CHECK FOR VOLTAGE TO THE LIGHT SENSOR

Ignition OFF.

Disconnect: Autolamp and Rain Sensor C287 (EMTC).

Disconnect: Sunload Sensor C286 (DATC).

Ignition ON.

Place the headlamp switch in the AUTOLAMPS position.

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new autolamp and rain sensor or sunload sensor. REFER to: Light Sensor .

No	GO to A3

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > AUTOLAMPS > PINPOINT TESTS > PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A85:11	Ambient Sunload Sensor: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the light sensor input circuit.
B1A85:13	Ambient Sunload Sensor: Circuit Open	An on-demand DTC that sets when the BCM detects an open or short to voltage from the light sensor input circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has

		temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- Autolamp and rain sensor or sunload sensor
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.
- Inspect the light sensor for damage.

DIAGNOSIS AND TESTING > AUTOLAMPS > PINPOINT TESTS > PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY > PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY

B1 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODE (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the BCM self-test.

Are any BCM DTC present?

Yes	For DTC B1A85:11, GO to B3 For DTC B1A85:13, GO to B6

No	GO to B2

B2 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (NO DTC (DIAGNOSTIC TROUBLE CODE))

Ignition OFF.

Disconnect: Autolamp and Rain Sensor C287 (EMTC).

Disconnect: Sunload Sensor C286 (DATC).

Ignition ON.

Place the headlamp switch in the AUTOLAMPS position.

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new autolamp and rain sensor or sunload sensor. REFER to: Light Sensor .

No	GO to B11

B3 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC (DIAGNOSTIC TROUBLE CODE) B1A85:11)

Ignition OFF.

Disconnect: Autolamp and Rain Sensor C287 (EMTC).

Disconnect: Sunload Sensor C286 (DATC).

Ignition ON.

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead

C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new autolamp and rain sensor or sunload sensor. REFER to: Light Sensor .

No	GO to B4

B4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC (DIAGNOSTIC TROUBLE CODE) B1A85:11)

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new autolamp and rain sensor or sunload sensor. REFER to: Light Sensor .

No	GO to B5

B5 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280B .

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	Ω	Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B11

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B6 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC (DIAGNOSTIC TROUBLE CODE) B1A85:13)

Ignition OFF.

Disconnect: Autolamp and Rain Sensor C287 (EMTC).

Disconnect: Sunload Sensor C286 (DATC).

Ignition ON.

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	+ V −	Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2	+ V −	Ground

Is the voltage approximately 5 volts?

Yes	GO to B7

No	GO to B9

B7 CHECK THE LIGHT SENSOR FOR GROUND

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		C287-4

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		C286-4

Is the voltage approximately 5 volts?

Yes	INSTALL a new autolamp and rain sensor or sunload sensor. REFER to: Light Sensor .

No	GO to B8

B8 CHECK THE LIGHT SENSOR GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: BCM C2280B .

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-4	Ω	C2280B-22

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-4	Ω	C2280B-22

Is the resistance less than 3 ohms?

Yes	GO to B11

No	REPAIR the circuit.

B9 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: BCM C2280B .

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B10

B10 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR AN OPEN

Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	Ω	C2280B-24

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2	Ω	C2280B-24

Is the resistance less than 3 ohms?

Yes	GO to B11

No	REPAIR the circuit.

B11 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > FOG LAMPS > DTC CHART: BCM

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
B1046:11	Front Fog Lamp Control Switch: Circuit Short To Ground	GO to PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY .
B1047:11	Rear Fog Lamp Control Switch: Circuit Short To Ground	GO to PINPOINT TEST E : THE REAR FOG LAMP IS ON CONTINUOUSLY - CHINA ONLY .
B1147:11	Left Front Fog Lamps: Circuit Short To Ground	GO to PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE
B1147:15	Left Front Fog Lamps: Circuit Short To Battery or Open	If the fog lamp is inoperative, GO to PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE If the fog lamp is always on, GO to PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON

		CONTINUOUSLY
B1148:11	Right Front Fog Lamps: Circuit Short To Ground	GO to PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE
B1148:15	Right Front Fog Lamps: Circuit Short To Battery or Open	If the fog lamp is inoperative, GO to PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE If the fog lamp is always on, GO to PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY
B1A79:11	Rear Fog Lamp: Circuit Short To Ground	GO to PINPOINT TEST B : THE REAR FOG LAMP IS INOPERATIVE - CHINA ONLY
B1A79:15	Rear Fog Lamp: Circuit Short To Battery or Open	If the fog lamp is inoperative, GO to PINPOINT TEST B : THE REAR FOG LAMP IS INOPERATIVE - CHINA ONLY If the fog lamp is always on, GO to PINPOINT TEST E : THE REAR FOG LAMP IS ON CONTINUOUSLY - CHINA ONLY
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected,
All other BCM Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > FOG LAMPS > SYMPTOM CHART

Symptom Chart: Fog Lamps

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .
Both front fog lamps are inoperative	Refer to the Pinpoint Test	GO to PINPOINT TEST A : BOTH FRONT FOG LAMPS ARE INOPERATIVE
The rear fog lamp is inoperative - China only	Refer to the Pinpoint Test	GO to PINPOINT TEST B : THE REAR FOG LAMP IS INOPERATIVE - CHINA ONLY
An individual front fog lamp is inoperative	Refer to the Pinpoint Test	GO to PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE
The front fog lamps are on continuously	Refer to the Pinpoint Test	GO to PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY
The rear fog lamp is on continuously - China only	Refer to the Pinpoint Test	GO to PINPOINT TEST E : THE REAR FOG LAMP IS ON CONTINUOUSLY - CHINA ONLY

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST A : BOTH FRONT FOG LAMPS ARE INOPERATIVE

Refer to Fog Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- Headlamps concern

- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST A : BOTH FRONT FOG LAMPS ARE INOPERATIVE > PINPOINT TEST A : BOTH FRONT FOG LAMPS ARE INOPERATIVE

A1 CHECK THE LOW BEAM OPERATION

Ignition ON.

Place the headlamp switch in the HEADLAMPS then the OFF position.

Do the low beams operate correctly?

Yes	GO to A2

No	REFER to: Headlamps .

A2 CHECK THE HEADLAMP SWITCH

Ignition OFF.

Disconnect: Headlamp Switch C205 .

Carry out the headlamp switch component test. Refer to Component Testing for schematic and connector information.

Does the headlamp switch pass the component test?

Yes	GO to A3

No	INSTALL a new headlamp switch. REFER to: Headlamp Switch .

A3 CHECK THE BCM (BODY CONTROL MODULE) FOG LAMP SWITCH INPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead

C205-14	Ω	C2280B-20

Is the resistance less than 3 ohms?

Yes	GO to A4

No	REPAIR the circuit.

A4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST B : THE REAR FOG LAMP IS INOPERATIVE - CHINA ONLY

Refer to Fog Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A79:11	Rear Fog Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to

		ground from the rear fog lamp output circuit.
B1A79:15	Rear Fog Lamp: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the rear fog lamp output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Bulb
- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the fog lamp bulb and make sure it is OK.
- Inspect the headlamp switch for damage.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST B : THE REAR FOG LAMP IS INOPERATIVE - CHINA ONLY > PINPOINT TEST B : THE

REAR FOG LAMP IS INOPERATIVE - CHINA ONLY

B1 CHECK THE HEADLAMP SWITCH

Ignition OFF.

Disconnect: Headlamp Switch C205 .

Carry out the headlamp switch component test. Refer to Component Testing for schematic and connector information.

Does the headlamp switch pass the component test?

Yes	GO to B2

No	INSTALL a new headlamp switch. REFER to: Headlamp Switch .

B2 CHECK THE HEADLAMP SWITCH REAR FOG LAMP ENABLE CIRCUIT FOR AN OPEN

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-2	Ω	C2280B-8

Is the resistance less than 3 ohms?

Yes	GO to B3

No	REPAIR the circuit.

B3 CHECK FOR VOLTAGE TO THE REAR FOG LAMP

Connect: Headlamp Switch C205 .

Connect: BCM C2280B .

Disconnect: Rear Fog Lamp C436 .

Ignition ON.

Place the headlamp switch in the PARKING LAMPS position and engage the rear fog lamp switch.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C436-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B5

No	GO to B4

B4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE REAR FOG LAMP

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Measure:

Positive Lead	Measurement / Action	Negative Lead
C436-1		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear fog lamp bulb.

No	GO to B6

B5 CHECK FOG LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C436-1		C436-4

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear fog lamp bulb.

No	REPAIR the circuit.

B6 CHECK FOG LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C436-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B7 CHECK FOG LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C436-1	Ω	C2280C-25

Is the resistance less than 3 ohms?

Yes	GO to B8

No	REPAIR the circuit.

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE

Refer to Fog Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1147:11	Left Front Fog Lamps: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH fog lamp output circuit.
B1147:15	Left Front Fog Lamps: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH fog lamp output circuit.
B1148:11	Right Front Fog Lamps: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH fog lamp output circuit.
B1148:15	Right Front Fog Lamps: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the RH fog lamp output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.

U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Bulb
- Wiring, terminals or connectors
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the bulbs and make sure they are OK.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE > PINPOINT TEST C : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE

C1 CHECK FOR VOLTAGE TO THE INOPERATIVE FOG LAMP

Ignition OFF.

Disconnect: Inoperative LH Fog Lamp C152 or RH Fog Lamp C162 .

Ignition ON.

Place the headlamp switch in the PARKLAMPS position and engage the fog lamp switch.

Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-1		Ground

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead

C162-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to C3

No	GO to C2

C2 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE FOG LAMP

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-1		Ground

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-1		Ground

Is the voltage greater than 11 volts?

Yes	For halogen fog lamps, INSTALL a new front fog lamp bulb. REFER to: Front Fog Lamp Bulb . For LED fog lamps, INSTALL a new front fog lamp assembly. REFER to: Front Fog Lamp .

No	GO to C4

C3 CHECK THE INOPERATIVE FOG LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-1		C152-2

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-1		C162-2

Is the voltage greater than 11 volts?

Yes	For halogen fog lamps, INSTALL a new front fog lamp bulb. REFER to: Front Fog Lamp Bulb . For LED fog lamps, INSTALL a new front fog lamp assembly. REFER to: Front Fog Lamp .

No	REPAIR the circuit.

C4 CHECK FOG LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280G .

Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-1	Ω	Ground

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C5

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C5 CHECK FOG LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Place the headlamp switch in the OFF position.

Ignition OFF.

Disconnect: BCM C2280G .

Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-1	Ω	C2280G-12

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-1	Ω	C2280G-5

Is the resistance less than 3 ohms?

Yes	GO to C6

No	REPAIR the circuit.

C6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY

Refer to Fog Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1046:11	Front Fog Lamp Control Switch: Circuit Short To Ground	A continuous and on-demand DTC that sets when the BCM detects a short to ground on the headlamp switch input circuits.
B1147:15	Left Front Fog Lamps: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH fog lamp output circuit.
B1148:15	Right Front Fog Lamps: Circuit Short To Battery or Open	A continuous and on-demand DTC that sets when the BCM detects a short to voltage from the RH fog lamp beam output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY > PINPOINT TEST D : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY

D1 CHECK THE HEADLAMP SWITCH

Ignition OFF.

Disconnect: Headlamp Switch C205 .

Carry out the headlamp switch component test. Refer to Component Testing for schematic and connector information.

Does the headlamp switch pass the component test?

Yes	GO to D2

No	INSTALL a new headlamp switch. REFER to: Headlamp Switch .

D2 CHECK THE FOG LAMP VOLTAGE SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280G .

Ignition ON.

Do the fog lamps continue to illuminate?

Yes	GO to D3

No	REPAIR the circuits.

D3 CHECK THE BCM (BODY CONTROL MODULE) FOG LAMP SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-14	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D4

No	REPAIR the circuit.

D4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > FOG LAMPS > PINPOINT TESTS > PINPOINT TEST E : THE REAR FOG LAMP IS ON CONTINUOUSLY - CHINA ONLY

Refer to Fog Lamps for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D00:11	Left Low Beam: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH low beam output circuit.
B1D00:15	Left Low Beam: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH low beam output circuit.
B1D01:11	Right Low Beam: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH low beam output circuit.
B1D01:15	Right Low Beam: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the RH low beam output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Fuse(s)
- Wiring, terminals or connectors
- Bulb
- Ballast
- Headlamp assembly
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp assembly for damage.
- Verify BJB fuses 33 (20A) and 35 (20A) are OK

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST A : ONE OR BOTH LOW BEAMS IS INOPERATIVE - EXCEPT CHINA > PINPOINT TEST A : ONE OR BOTH LOW BEAMS IS INOPERATIVE - EXCEPT CHINA

A1 DETERMINE IF ONE OR BOTH LOW BEAMS ARE INOPERATIVE

Ignition ON.

Place the headlamp switch in the HEADLAMPS ON position.

Are both low beams inoperative?

Yes	GO to A9

No	VERIFY the BJB fuse 33 (20A) (LH headlamp) or 35 (20A) (RH headlamp) is OK. If OK, GO to A2 If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A2 CHECK FOR VOLTAGE TO THE HEADLAMP BALLAST

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: LH Headlamp C1021 or RH Headlamp C1041 .

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-10		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-10		Ground

Is the voltage greater than 11 volts?

Yes	GO to A3

No	REPAIR the circuit.

A3 CHECK FOR VOLTAGE FROM THE HEADLAMP LOW BEAM POWER SUPPLY CIRCUIT

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-1		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A7

No	GO to A4

A4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE FROM THE HEADLAMP LOW BEAM POWER SUPPLY CIRCUIT

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-1		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-1		Ground

Is the voltage greater than 11 volts?

Yes	CHECK the internal headlamp harness for open or shorted circuits and damaged or pushed-out pins. If the harness is OK, INSTALL a new ballast. REFER to: Headlamp Assembly . If the harness is not OK, REPAIR the harness. If the harness cannot be repaired, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

No	GO to A5

A5 CHECK THE LOW BEAM POWER SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: BCM C2280G .

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-1	Ω	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A6

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present,

	TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A6 CHECK THE LOW BEAM POWER SUPPLY CIRCUIT FOR AN OPEN

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-1	Ω	C2280G-4

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-1	Ω	C2280G-2

Is the resistance less than 3 ohms?

Yes	GO to A9

No	REPAIR the circuit in question.

A7 CHECK THE HEADLAMP GROUND CIRCUITS FOR AN OPEN

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-1	V	C1021-8
C1021-1	V	C1021-14

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-1	V	C1041-8
C1041-1	V	C1041-14

Is the voltage greater than 11 volts?

Yes	GO to A8

No	REPAIR the circuit in question.

A8 CHECK THE BULB

Substitute the known good High Intensity Discharge (HID) bulb from the same vehicle.

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

Does the inoperative headlamp illuminate?

Yes	REMOVE the known good bulb. INSTALL a new bulb. REFER to: Headlamp Bulb .

No	REMOVE the known good bulb. CHECK the internal headlamp harness for open or shorted circuits and damaged or pushed-out pins. If the harness is OK, INSTALL a new ballast. REFER to: Headlamp Assembly . If the harness is not OK, REPAIR the harness. If the harness cannot be repaired, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

A9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST B : ONE OR BOTH LOW BEAMS IS INOPERATIVE - CHINA ONLY

One Or Both Low Beams is Inoperative - China Only

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D00:11	Left Low Beam: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH low beam output circuit.
B1D00:15	Left Low Beam: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH low beam output circuit.
B1D01:11	Right Low Beam: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH low beam output circuit.
B1D01:15	Right Low Beam: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the RH low beam output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand.

		CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Fuse(s)
- Wiring, terminals or connectors
- Bulb
- Ballast
- Headlamp assembly
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp assembly for damage.
- Verify BJB fuses 33 (20A) and 35 (20A) are OK

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST B : ONE OR BOTH LOW BEAMS IS INOPERATIVE - CHINA ONLY > PINPOINT TEST B : ONE OR BOTH LOW BEAMS IS INOPERATIVE - CHINA ONLY

B1 DETERMINE IF ONE OR BOTH LOW BEAMS ARE INOPERATIVE

Ignition ON.

Place the headlamp switch in the HEADLAMPS ON position.

Are both low beams inoperative?

Yes	GO to B2

No	VERIFY the BJB fuse 33 (20A) (LH headlamp) or 35 (20A) (RH headlamp) is OK. If OK, GO to B3 If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B2 CHECK THE HEADLAMP RELAYS GROUND CIRCUIT

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: LH Headlamp Relay.

Measure:

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 3		LH Headlamp Relay Socket Pin 2

Is the voltage greater than 11 volts?

Yes	GO to B12

No	REPAIR the circuit.

B3 CHECK FOR VOLTAGE TO THE HEADLAMP RELAY

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: LH Headlamp Relay or RH Headlamp Relay.

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 1		Ground
LH Headlamp Relay Socket Pin 3		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 1		Ground
RH Headlamp Relay Socket Pin 3		Ground

Is the voltage greater than 11 volts?

Yes	GO to B5

No	For LH or RH headlamp relay socket pin 1, GO to B4 For LH or RH headlamp relay socket pin 3, REPAIR the circuit.

B4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE HEADLAMP RELAY

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 1		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 1		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new headlamp relay.

No	GO to B10

B5 CHECK THE HEADLAMP RELAY GROUND CIRCUITS FOR AN OPEN

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 3		LH Headlamp Relay Socket Pin 2

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead

RH Headlamp Relay Socket Pin 3		RH Headlamp Relay Socket Pin 2

Is the voltage greater than 11 volts?

Yes	GO to B6

No	REPAIR the circuit in question.

B6 CHECK THE HEADLAMP RELAY

Connect a fused jumper wire:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 3		LH Headlamp Relay Socket Pin 5

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 3		RH Headlamp Relay Socket Pin 5

Is the inoperative headlamp now illuminated?

Yes	REMOVE the fuse jumper wire. INSTALL a new headlamp relay.

No	REMOVE the fuse jumper wire. GO to B7

B7 CHECK THE LOW BEAM POWER SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: LH Headlamp C1021 or RH Headlamp C1041 .

Connect a fused jumper wire:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 3		LH Headlamp Relay Socket Pin 5

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 3		RH Headlamp Relay Socket Pin 5

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-10		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-10		Ground

Is the voltage greater than 11 volts?

Yes	GO to B8

No	REPAIR the circuit.

B8 CHECK THE HEADLAMP GROUND CIRCUITS FOR AN OPEN

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-10		C1021-8
C1021-10		C1021-14

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-10		C1041-8
C1041-10		C1041-14

Is the voltage greater than 11 volts?

Yes	GO to B9

No	REPAIR the circuit in question.

B9 CHECK THE BULB

Substitute the known good High Intensity Discharge (HID) bulb from the same vehicle.

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

Does the inoperative headlamp illuminate?

Yes	REMOVE the known good bulb. INSTALL a new bulb. REFER to: Headlamp Bulb .

No	REMOVE the known good bulb. CHECK the internal headlamp harness for open or shorted circuits and damaged or pushed-out pins. If the harness is OK, INSTALL a new ballast. REFER to: Headlamp Assembly . If the harness is not OK, REPAIR the harness. If the harness cannot be repaired, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

B10 CHECK THE LOW BEAM POWER BCM (BODY CONTROL MODULE) SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: BCM C2280G .

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 1	Ω	C2280G-4

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 1	Ω	C2280G-2

Is the resistance less than 3 ohms?

Yes	GO to B11

No	REPAIR the circuit in question.

B11 CHECK THE LOW BEAM POWER BCM (BODY CONTROL MODULE) SUPPLY CIRCUITS FOR A SHORT TO GROUND

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 1	Ω	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B12

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B12 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST C : ONE OR BOTH HIGH BEAMS IS INOPERATIVE

One Or Both High Beams Is Inoperative

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D02:11	Left High Beam Circuit: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH high beam output circuit.
B1D02:15	Left High Beam Circuit: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the LH high beam output circuit.
B1D03:11	Right High Beam Circuit: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the RH high beam output circuit.
B1D03:15	Right High Beam Circuit: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open from the RH high beam output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.

U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- LH steering column multifunction switch
- Headlamp assembly
- SCCM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp assembly for damage.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST C : ONE OR BOTH HIGH BEAMS IS INOPERATIVE > PINPOINT TEST C : ONE OR BOTH HIGH BEAMS IS INOPERATIVE

C1 CHECK THE LOW BEAM OPERATION

Ignition ON.

Place the headlamp switch in the HEADLAMPS ON position.

Place the LH steering column multifunction switch in the high beam position and observe the headlamps.

Place the LH steering column multifunction switch in the low beam position and observe the headlamps.

Do the low beams illuminate?

Yes	If an individual high beam is inoperative, GO to C3 If both high beams are inoperative, GO to C2

No	Except China, GO to Pinpoint Test A China only, GO to Pinpoint Test B

C2 CHECK THE LH (LEFT-HAND) MULTIFUNCTION SWITCH INPUT

Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).

Monitor the SCCM High Beam Switch (HIGH_BEAM_SW) PID while placing the LH steering column multifunction switch in the HIGH BEAM and LOW BEAM positions.

Do the PID values agree with the LH steering column multifunction switch position?

Yes	GO to C8

No	INSTALL a new LH steering column multifunction switch. REFER to: Steering Column Multifunction Switch LH . TEST the system for normal operation. If the concern still exists, GO to C7

C3 CHECK FOR VOLTAGE FROM THE HEADLAMP HIGH BEAM CIRCUIT

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: Inoperative LH Headlamp C1021 or RH Headlamp C1041 .

Ignition ON.

Place the headlamp switch in the HEADLAMPS position and the LH steering column multifunction switch in the HIGH BEAM position.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-12		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-12		Ground

Is the voltage greater than 11 volts?

Yes	CHECK the internal headlamp harness for open or shorted circuits and damaged or pushed-out pins. If the harness is not OK, REPAIR the harness. If the harness cannot be repaired, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

No	GO to C4

C4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE FRONT TURN LAMP

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the output driver if DTC U1000:00 is present).

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-12		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-12		Ground

Is the voltage greater than 11 volts?

Yes	CHECK the internal headlamp harness for open or shorted circuits and damaged or pushed-out pins. If the harness is not OK, REPAIR the harness. If the harness cannot be repaired, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

No	GO to C5

C5 CHECK THE HIGH BEAM CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: BCM C2280G .

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-12	Ω	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead

C1041-12	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C6

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C6 CHECK THE HIGH BEAM SUPPLY CIRCUIT FOR AN OPEN

Measure:

LH Headlamp (Except China)

Positive Lead	Measurement / Action	Negative Lead
C1021-12	Ω	C2280G-11

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-12	Ω	C2280G-6

Is the resistance less than 3 ohms?

Yes	GO to C8

No	REPAIR the circuit.

C7 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST D : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY - EXCEPT CHINA

One Or Both Low Beams Are On Continuously - Except China

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B143B:11	Autolamp On Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to

		ground on the autolamp on input circuit.
B143C:11	Headlamp Off Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the headlamp off input circuit.
B143D:11	Headlamp On Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the headlamp on input circuit.
B143E:11	Headlamp Switch Input: Circuit Short to Ground	A continuous memory DTC that sets when the BCM detects a short to ground on the headlamp switch input circuits.
B1447:11	Parklamp On Switch Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the parklamps on input circuit.
B1D00:15	Left Low Beam: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH low beam output circuit.
B1D01:15	Right Low Beam: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH low beam output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST D : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY - EXCEPT CHINA > PINPOINT TEST D : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY - EXCEPT CHINA

D1 CHECK LOW BEAMS OPERATION

Ignition ON.

Place the headlamp switch in the OFF position.

Observe the operation of the LH and RH low beam.

Are both low beams illuminated?

Yes	GO to D2

No	GO to D7

D2 CHECK THE HEADLAMP SWITCH

Ignition OFF.

Disconnect: Headlamp Switch C205 .

Carry out the headlamp switch component test. Refer to Component Testing for schematic and connector information.

Does the headlamp switch pass the component test?

Yes	GO to D3

No	INSTALL a new headlamp switch. REFER to: Headlamp Switch .

D3 CHECK THE HEADLAMP SWITCH GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D4

No	REPAIR the circuit.

D4 CHECK THE HEADLAMP SWITCH CIRCUITS FOR A SHORT TO GROUND

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead

C205-10	Ω	Ground
C205-11	Ω	Ground
C205-12	Ω	Ground
C205-13	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D5

No	REPAIR the circuit in question.

D5 CHECK THE HEADLAMP SWITCH CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	Ω	C2280B-16
C205-11	Ω	C2280B-2
C205-12	Ω	C2280B-15
C205-13	Ω	C2280B-21

Are the resistances less than 3 ohms?

Yes	GO to D6

No	REPAIR the circuit in question.

D6 CHECK THE HEADLAMP SWITCH CIRCUITS FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	V	Ground
C205-11	V	Ground
C205-12	V	Ground
C205-13	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to D8

D7 CHECK THE LOW BEAM CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280G .

Disconnect: LH Headlamp C1021 or RH Headlamp C1041 .

Ignition ON.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-1		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to D8

D8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST E : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY - CHINA ONLY

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B143B:11	Autolamp On Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the autolamp on input circuit.
B143C:11	Headlamp Off Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the headlamp off input circuit.
B143D:11	Headlamp On Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the headlamp on input circuit.
B143E:11	Headlamp Switch Input: Circuit Short to Ground	A continuous memory DTC that sets when the BCM detects a short to ground on the headlamp switch input circuits.
B1447:11	Parklamp On Switch Input: Circuit Short to Ground	An on-demand DTC that sets when the BCM detects a short to ground on the parklamps on input circuit.
B1D00:15	Left Low Beam: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH low beam output circuit.

B1D01:15	Right Low Beam: Circuit Short to Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH low beam output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST E : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY - CHINA ONLY > PINPOINT TEST E : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY - CHINA ONLY

E1 CHECK LOW BEAMS OPERATION

Ignition ON.

Place the headlamp switch in the OFF position.

Observe the operation of the LH and RH low beam.

Are both low beams illuminated?

Yes	GO to E2

No	GO to E7

E2 CHECK THE HEADLAMP SWITCH

Ignition OFF.

Disconnect: Headlamp Switch C205 .

Carry out the headlamp switch component test. Refer to Component Testing for schematic and connector information.

Does the headlamp switch pass the component test?

Yes	GO to E3

No	INSTALL a new headlamp switch. REFER to: Headlamp Switch .

E3 CHECK THE HEADLAMP SWITCH GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to E4

No	REPAIR the circuit.

E4 CHECK THE HEADLAMP SWITCH CIRCUITS FOR A SHORT TO GROUND

Disconnect: BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	Ω	Ground
C205-11	Ω	Ground
C205-12	Ω	Ground
C205-13	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to E5

No	REPAIR the circuit in question.

E5 CHECK THE HEADLAMP SWITCH CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	Ω	C2280B-16
C205-11	Ω	C2280B-2
C205-12	Ω	C2280B-15

C205-13	Ω	C2280B-21

Are the resistances less than 3 ohms?

Yes	GO to E6

No	REPAIR the circuit in question.

E6 CHECK THE HEADLAMP SWITCH CIRCUITS FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10		Ground
C205-11		Ground
C205-12		Ground
C205-13		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to E9

E7 CHECK THE HEADLAMP RELAY

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: LH Headlamp Relay or RH Headlamp Relay.

Ignition ON.

Does the headlamp remain illuminated?

Yes	REPAIR the low beam voltage supply circuit between the headlamp relay and the headlamp assembly for a short to voltage.

No	GO to E8

E8 CHECK THE LOW BEAM BCM (BODY CONTROL MODULE) CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280G .

Ignition ON.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
LH Headlamp Relay Socket Pin 1		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
RH Headlamp Relay Socket Pin 1		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to E9

E9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST F : ONE OR BOTH HIGH BEAMS ARE ON CONTINUOUSLY

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D02:15	Left High Beam Circuit: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH high beam output circuit.
B1D03:15	Right High Beam Circuit: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH high beam output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp assembly
- LH steering column multifunction switch
- SCCM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the LH steering column multifunction switch for damage.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST F : ONE OR BOTH HIGH BEAMS ARE ON CONTINUOUSLY > PINPOINT TEST F : ONE OR BOTH HIGH BEAMS ARE ON CONTINUOUSLY

F1 CHECK HIGH BEAMS OPERATION

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

Place the LH steering column multifunction switch in the LOW BEAM position and observe the headlamps.

Observe the operation of the LH and RH headlamps.

Are both high beams illuminated?

Yes	GO to F2

No	GO to F3

F2 CHECK THE LH (LEFT-HAND) MULTIFUNCTION SWITCH INPUT

Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).

Monitor the SCCM High Beam Switch (HIGH_BEAM_SW) PID while placing the LH steering column multifunction switch in the HIGH BEAM and LOW BEAM positions.

Do the PID values agree with the LH steering column multifunction switch position?

Yes	GO to F6

No	INSTALL a new LH steering column multifunction switch. REFER to: Steering Column Multifunction Switch LH . TEST the system for normal operation. If the concern still exists, GO to F5

F3 CHECK HIGH BEAM VOLTAGE SUPPLY CIRCUITS FOR VOLTAGE

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: LH Headlamp C1021 or RH Headlamp C1041 .

Ignition ON.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-10		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-10		Ground

Is voltage present?

Yes	GO to F4

No	INSTALL a new headlamp assembly. REFER to: Headlamp Assembly .

F4 CHECK HIGH BEAM VOLTAGE SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280G .

Ignition ON.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-10		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1041-10		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to F6

F5 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

F6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST G : THE FLASH-TO-PASS FEATURE IS INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- LH steering column multifunction switch
- SCCM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the LH steering column multifunction switch for damage.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST G : THE FLASH-TO-PASS FEATURE IS INOPERATIVE > PINPOINT TEST G : THE FLASH-TO-PASS FEATURE IS INOPERATIVE

G1 CHECK THE HIGH BEAM OPERATION

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

Activate and deactivate the high beams using the high beam function of the LH steering column multifunction switch.

Do the high beams operate correctly?

Yes	GO to G2

No	GO to PINPOINT TEST C : ONE OR BOTH HIGH BEAMS IS INOPERATIVE

G2 CHECK THE LH (LEFT-HAND) MULTIFUNCTION SWITCH INPUT

Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).

Monitor the SCCM Flash to Pass Switch (FLASH-to-PASS) PID while placing the LH steering column multifunction switch in the FLASH-TO-PASS position.

Does the PID value agree with the LH steering column multifunction switch position?

Yes	GO to G4

No	INSTALL a new LH steering column multifunction switch. REFER to: Steering Column Multifunction Switch LH . TEST the system for normal operation. If the concern still exists, GO to G3

G3 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST H : THE MANUAL HEADLAMP LEVELING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - CHINA ONLY

Refer to Headlamps/Autolamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- BCM fuse 68 (10A)

- Wiring, terminals or connectors
- Headlamp assembly

DIAGNOSIS AND TESTING > HEADLAMPS > PINPOINT TESTS > PINPOINT TEST H : THE MANUAL HEADLAMP LEVELING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - CHINA ONLY > PINPOINT TEST H : THE MANUAL HEADLAMP LEVELING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - CHINA ONLY

H1 CHECK HEADLAMP LEVELING OPERATION

Ignition ON.

Place the headlamp switch in the HEADLAMPS position.

While observing both headlamps,

Press and release the headlamp leveling switch.

Adjust the headlamp leveling setting to 4.

Press the headlamp leveling switch until it locks down.

Does either headlamp change beam change?

Yes	GO to H3

No	GO to H2

H2 CHECK FOR VOLTAGE TO THE HEADLAMP SWITCH

Ignition OFF.

Place the headlamp switch in the OFF position.

Disconnect: Headlamp switch C205 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-9		Ground

Is the voltage greater than 11 volts?

Yes	GO to H5

No	VERIFY the BJB fuse 68 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the

	OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes for the short circuit.

H3 CHECK THE INOPERATIVE HEADLAMP LEVELING MOTOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Inoperative LH Headlamp Control Module C1024 or RH Headlamp Control Module C1044 .

Ignition ON.

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1024-1		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1044-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to H4

No	VERIFY the BJB fuse 68 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes for the short circuit.

H4 CHECK THE INOPERATIVE HEADLAMP LEVELING MOTOR GROUND CIRCUIT FOR AN OPEN

Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1024-1		C1024-3

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead

C1044-1		C1044-3

Is the voltage greater than 11 volts?

Yes	GO to H5

No	REPAIR the circuit.

H5 CHECK THE HEADLAMP LEVELING CIRCUIT TO THE HEADLAMP LEVELING MOTOR FOR AN OPEN

Disconnect: Headlamp switch C205 (if not previously disconnected).

Disconnect: LH Headlamp Control Module C1024 and RH Headlamp Control Module C1044 (both inoperative).

Disconnect: LH Headlamp Control Module C1024 (LH only inoperative).

Disconnect: RH Headlamp Control Module C1044 (RH only inoperative).

Measure:

Both or LH only inoperative

Positive Lead	Measurement / Action	Negative Lead
C1024-2	Ω	C205-1

RH only inoperative

Positive Lead	Measurement / Action	Negative Lead
C1044-2	Ω	C205-1

Is the resistance less than 3 ohms?

Yes	If the only the LH or RH is inoperative, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly . If both are inoperative, GO to H6

No	REPAIR the circuit.

H6 CHECK THE HEADLAMP LEVELING CIRCUIT TO THE HEADLAMP LEVELING MOTOR FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C205-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to H7

H7 CHECK THE HEADLAMP LEVELING CIRCUIT TO THE HEADLAMP LEVELING MOTOR FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new headlamp switch. REFER to: Headlamp Switch .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > REVERSING LAMPS > DTC CHART: BCM

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

BCM DTC Chart

DTC	Description	Action
B1277:11	Reverse Lamp: Circuit Short To Ground	GO to PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE
B1277:15	Reverse Lamp: Circuit Short To Battery or Open	If the reversing lamps are is inoperative, GO to PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE If the reversing lamps are always on, GO to PINPOINT TEST B : THE REVERSING LAMP(S) ARE ON CONTINUOUSLY

U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected,
For other BCM Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > REVERSING LAMPS > SYMPTOM CHART(S)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: Reversing Lamps

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .
The reversing lamp is inoperative - Except China	Refer to the Pinpoint Test	GO to PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE
Both reversing lamps are inoperative - China Only	Refer to the Pinpoint Test	GO to PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE

One reversing lamps are inoperative - China Only	Refer to the Pinpoint Test	VERIFY the reversing lamp bulb is OK. If OK, INSTALL a new reversing lamp assembly. REFER to: Reversing Lamp . If not OK, INSTALL a new reversing lamp bulb.
The reversing lamp(s) are on continuously	Refer to the Pinpoint Test	GO to PINPOINT TEST B : THE REVERSING LAMP(S) ARE ON CONTINUOUSLY

DIAGNOSIS AND TESTING > REVERSING LAMPS > PINPOINT TESTS > PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE

Refer to Reversing Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1277:11	Reverse Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the reversing lamps output circuit.
B1277:15	Reverse Lamp: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the reversing lamps output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current

		draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Bulb
- Wiring, terminals or connectors
- Reversing lamp assembly (China only, integrated into the rear fog lamp assembly)
- Gear range concern
- Reversing lamps switch
- BCM
- PCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the bulb and make sure it is OK.

DIAGNOSIS AND TESTING > REVERSING LAMPS > PINPOINT TESTS > PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE > PINPOINT TEST A : THE REVERSING LAMP IS INOPERATIVE

A1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) COMMANDED GEAR OR REVERSE SWITCH PID (PARAMETER IDENTIFICATION)

Apply the parking brake.

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

For manual transmission vehicles, monitor the Reverse Switch (REV_SW) PCM PID.

For automatic transmission vehicles, monitor the Gear Commanded (GEAR) PCM PID.

Place the gear selector in REVERSE (R).

Does the PID indicate the gear range is in reverse?

Yes	GO to A2

No	For automatic transmission vehicles, DIAGNOSE the transmission range concern. REFER

	to: External Controls . For manual transmission vehicles, GO to A7

A2 CHECK FOR VOLTAGE TO THE REVERSING LAMP

Ignition OFF.

Apply the parking brake.

Disconnect: Except China, Reversing Lamp C496 .

Disconnect: China Only, Rear Fog Lamp C436 .

Ignition ON.

Place the gear selector in REVERSE (R).

Except China, measure:

Positive Lead	Measurement / Action	Negative Lead
C496-3		Ground

China only, measure:

Positive Lead	Measurement / Action	Negative Lead
C436-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to A4

No	GO to A3

A3 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE REVERSING LAMP

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

Except China, measure:

Positive Lead	Measurement / Action	Negative Lead
C496-3		Ground

China only, measure:

Positive Lead	Measurement / Action	Negative Lead
C436-2		Ground

Is the voltage greater than 11 volts?

Yes	For vehicles except China, INSTALL a new reversing lamp bulb. For China vehicles only, INSTALL a new reversing lamp assembly (integrated into the rear fog lamp assembly). REFER to: Reversing Lamp .

No	GO to A5

A4 CHECK THE REVERSING LAMP GROUND CIRCUIT FOR AN OPEN

Except China, measure:

Positive Lead	Measurement / Action	Negative Lead
C496-3		C496-1

China only, measure:

Positive Lead	Measurement / Action	Negative Lead
C436-2		C436-4

Is the voltage greater than 11 volts?

Yes	For vehicles except China, INSTALL a new reversing lamp bulb. For China vehicles only, INSTALL a new reversing lamp assembly (integrated into the rear fog lamp assembly). REFER to: Reversing Lamp .

No	REPAIR the circuit.

A5 CHECK THE REVERSING LAMP VOLTAGE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280C .

Except China, measure:

Positive Lead	Measurement / Action	Negative Lead
C496-3	Ω	Ground

China only, measure:

Positive Lead	Measurement / Action	Negative Lead
C436-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A6

No	REPAIR the circuit in question. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

A6 CHECK THE REVERSING LAMP VOLTAGE CIRCUITS FOR AN OPEN

Except China, measure:

Positive Lead	Measurement / Action	Negative Lead
C496-3	Ω	C2280C-11

China only, measure:

Positive Lead	Measurement / Action	Negative Lead
C436-2	Ω	C2280C-11

Is the resistance less than 3 ohms?

Yes	GO to A11

No	REPAIR the circuit in question.

NOTE: If the fuse in the jumper wire fails, refer to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

A7 BYPASS THE REVERSING LAMP SWITCH

Ignition OFF.

Disconnect: Reversing Lamp Switch C169 .

Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C169-1		Ground

Ignition ON.

Using a scan tool, monitor the Reverse Switch (REV_SW) PCM PID.

Does the PID indicate the transmission is in reverse gear?

Yes	REMOVE the jumper wire. GO to A8

No	REMOVE the jumper wire. GO to A9

A8 CHECK THE REVERSING LAMP SWITCH GROUND CIRCUIT FOR AN OPEN

Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C169-1		C169-2

Ignition ON.

Using a scan tool, monitor the Reverse Switch (REV_SW) PCM PID.

Does the PID indicate the transmission is in reverse gear?

Yes	REMOVE the jumper wire. INSTALL a new reversing lamp switch. REFER to: Reversing Lamp Switch .

No	REMOVE the jumper wire. REPAIR the circuit.

A9 CHECK THE REVERSING LAMP SWITCH INPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: PCM C1551B (2.3L).

Disconnect: PCM C1381B (3.7L).

Disconnect: PCM C175B (5.0L).

Measure:

2.3L Vehicles

Positive Lead	Measurement / Action	Negative Lead
C169-1	Ω	C1551B-11

3.7L Vehicles

Positive Lead	Measurement / Action	Negative Lead

C169-1	Ω	C1381B-32

5.0L Vehicles

Positive Lead	Measurement / Action	Negative Lead
C169-1	Ω	C175B-32

Is the resistance less than 3 ohms?

Yes	GO to A10

No	REPAIR the circuit.

A10 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. 2.3L EcoBoost REFER to: Powertrain Control Module (PCM) . 3.7L Duratec REFER to: Powertrain Control Module (PCM) . 5.0L 32V Ti-VCT REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A11 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > REVERSING LAMPS > PINPOINT TESTS > PINPOINT TEST B : THE REVERSING LAMP(S) ARE ON CONTINUOUSLY

Refer to Reversing Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1277:15	Reverse Lamp: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the reversing lamps output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current

		draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- Gear range input
- Reversing lamps switch
- BCM
- PCM

DIAGNOSIS AND TESTING > REVERSING LAMPS > PINPOINT TESTS > PINPOINT TEST B : THE REVERSING LAMP(S) ARE ON CONTINUOUSLY > PINPOINT TEST B : THE REVERSING LAMP(S) ARE ON CONTINUOUSLY

B1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) COMMANDED GEAR OR REVERSE SWITCH PID (PARAMETER IDENTIFICATION)

Apply the parking brake.

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

For manual transmission vehicles, monitor the Reverse Switch (REV_SW) PCM PID.

For automatic transmission vehicles, monitor the Gear Commanded (GEAR) PCM PID.

Place the gear selector lever in each position.

Does the PID indicate reverse when the gear selector is not in reverse?

Yes	For automatic transmission vehicles, DIAGNOSE the transmission range concern. REFER to: External Controls . For manual transmission vehicles, GO to B3

No	GO to B2

B2 CHECK THE REVERSING LAMPS SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280C .

Ignition ON.

Does the reversing lamp continue to illuminate?

Yes	REPAIR the circuit.

No	GO to B6

B3 CHECK THE REVERSING LAMP SWITCH

Ignition OFF.

Disconnect: Reversing Lamp Switch C169 .

Ignition ON.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Monitor the Reverse Switch (REV_SW) PCM PID.

Does the PID indicate the transmission is in reverse gear?

Yes	GO to B4

No	INSTALL a new reversing lamp switch. REFER to: Reversing Lamp Switch .

B4 CHECK THE REVERSING LAMP SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: PCM C1551B (2.3L).

Disconnect: PCM C1381B (3.7L).

Disconnect: PCM C175B (5.0L).

Measure:

Positive Lead	Measurement / Action	Negative Lead
C169-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B5

No	REPAIR the circuit.

B5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. 2.3L EcoBoost REFER to: Powertrain Control Module (PCM) . 3.7L Duratec REFER to: Powertrain Control Module (PCM) . 5.0L 32V Ti-VCT REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STOPLAMPS > DTC CHART: BCM

DIAGNOSIS AND TESTING > STOPLAMPS > SYMPTOM CHART(S)

Symptom Chart: Stoplamps

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .
All the stoplamps are inoperative	Refer to the Pinpoint Test	GO to PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE
One or more stoplamps are inoperative or always on - except China	Refer to the Pinpoint Test	GO to PINPOINT TEST B : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - EXCEPT CHINA
One or more stoplamps are inoperative or always on - China only	Refer to the Pinpoint Test	GO to PINPOINT TEST C : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - CHINA ONLY
The stoplamps are on continuously	Refer to the Pinpoint Test	GO to PINPOINT TEST D : THE STOPLAMPS ARE ON CONTINUOUSLY

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Stoplamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 20 (10A) is OK.

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE > PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE

A1 CHECK THE STOPLAMP SWITCH VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Brake Pedal Position Switch C278 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A2

No	VERIFY the BJB fuse 20 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

NOTE: If the fuse in the jumper wire fails, refer to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

A2 BYPASS THE STOPLAMP SWITCH

Connect a fused jumper:

Positive Lead	Measurement / Action	Negative Lead
C278-1		C278-4

Ignition ON.

Do the stoplamps illuminate?

Yes	REMOVE the fused jumper wire. INSTALL a new brake pedal position (stoplamp) switch. REFER to: Stoplamp Switch .

No	LEAVE the fused jumper wire connected. GO to A3

A3 CHECK THE STOPLAMP SWITCH INPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: BCM C2280A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280A-1		Ground

Is the voltage greater than 11 volts?

Yes	REMOVE the fused jumper wire. GO to A4

No	REMOVE the fused jumper wire. REPAIR the circuit

A4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST B : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - EXCEPT CHINA

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1115:11	High Mounted Stop Lamp Control: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the high mounted stoplamp voltage supply circuit.
B1115:15	High Mounted Stop Lamp Control: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the high mounted stoplamp voltage supply circuit.
B1271:11	Left Stop/Turn Inner Lamp: Circuit Short to Ground	A continuous memory and on-demand DTC that sets when the BCMB detects a short to ground from the LH inner stop/turn lamp voltage supply circuit.
B1271:15	Left Stop/Turn Inner Lamp: Circuit Short to Battery or Open	An on-demand DTC that sets when the BCMB detects an open or short to voltage from the LH inner stop/turn lamp voltage supply circuit.
B1272:11	Right Stop/Turn Inner Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCMB detects a short to ground from the RH inner stop/turn lamp voltage supply circuit.

B1272:15	Right Stop/Turn Inner Lamp: Circuit Short To Battery or Open	An on-demand DTC that sets when the BCMB detects an open or short to voltage from the RH inner stop/turn lamp voltage supply circuit.
B1273:11	Right Stop/Turn Middle Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCMB detects a short to ground from the RH middle stop/turn lamp voltage supply circuit.
B1273:15	Right Stop/Turn Middle Lamp: Circuit Short To Battery or Open	An on-demand DTC that sets when the BCMB detects an open or short to voltage from the RH middle stop/turn lamp voltage supply circuit.
B1274:11	Left Stop/Turn Middle Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCMB detects a short to ground from the LH middle stop/turn lamp voltage supply circuit.
B1274:15	Left Stop/Turn Middle Lamp: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCMB detects an open or short to voltage from the LH middle stop/turn lamp voltage supply circuit.
B1275:11	Left Stop/Turn Outer Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCMB detects a short to ground from the LH outer stop/turn lamp voltage supply circuit.
B1275:15	Left Stop/Turn Outer Lamp: Circuit Short To Battery or Open	An on-demand DTC that sets when the BCMB detects an open or short to voltage from the LH outer stop/turn lamp voltage supply circuit.
B1276:11	Right Stop/Turn Outer Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCMB detects a short to ground from the RH outer stop/turn lamp voltage supply circuit.
B1276:15	Right Stop/Turn Outer Lamp: Circuit Short To Battery or Open	An on-demand DTC that sets when the BCMB detects an open or short to voltage from the RH

		outer stop/turn lamp voltage supply circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM or BCMB cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM or BCMB can withstand. The cause of the excessive current draw MUST be corrected before a new BCM or BCMB is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, or INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

Possible Sources

- Rear lamp assembly
- High mounted stoplamp
- BCM
- BCMB

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST B : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - EXCEPT CHINA > PINPOINT TEST B : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - EXCEPT CHINA

B1 CHECK STOPLAMPS OPERATION

Ignition ON.

Without applying the brake pedal and observe the rear and high mounted stoplamps.

Are any stoplamps illuminated?

Yes	If all the stoplamps are illuminated, GO to Pinpoint Test D For the high mounted stoplamp, GO to B8 For an individual inner, middle or outer rear stoplamp, GO to B9

No	GO to B2

B2 IDENTIFY THE INOPERATIVE STOPLAMP

Apply the brake pedal and observe the rear and high mounted stoplamps.

Is only an individual stoplamp inoperative?

Yes	For the high mounted stoplamp, GO to B3 For an individual inner, middle or outer rear stoplamp, GO to B10

No	For all LH or RH inner, middle and outer rear stoplamps, GO to B13 If all stoplamps are inoperative, GO to PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE

B3 CHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP

Ignition OFF.

Disconnect: High Mounted Stoplamp C475 .

Ignition ON.

While applying the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B5

No	GO to B4

B4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the

lamp output driver if DTC U1000:00 is present).

While applying the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new high mounted stoplamp. REFER to: High Mounted Stoplamp - Coupe .

No	GO to B6

B5 CHECK THE HIGH MOUNTED STOPLAMP GROUND CIRCUIT FOR AN OPEN

While applying the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1		C475-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new high mounted stoplamp. REFER to: High Mounted Stoplamp - Coupe .

No	REPAIR the circuit.

B6 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280E .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B7 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1	Ω	C2280E-15

Is the resistance less than 3 ohms?

Yes	GO to B17

No	REPAIR the circuit.

B8 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: High Mounted Stoplamp C475 .

Disconnect: BCM C2280E .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1	V	Ground

Is voltage present?

Yes	REPAIR the circuit.

No	GO to B17

B9 CHECK THE REAR LAMP SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: LH Rear Lamp C498 or RH Rear Lamp C499 .

Disconnect: BCMB C4368A .

Ignition ON.

Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C498-5		Ground
Middle Stoplamp		
C498-4		Ground
Outer Stoplamp		
C498-3		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C499-5		Ground
Middle Stoplamp		
C499-4		Ground
Outer Stoplamp		
C499-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B16

B10 CHECK FOR VOLTAGE TO THE REAR LAMP ASSEMBLY

Ignition OFF.

Disconnect: Inoperative LH Rear Lamp C498 or RH Rear Lamp C499 .

Ignition ON.

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C498-5		Ground

Middle Stoplamp		
C498-4		Ground
Outer Stoplamp		
C498-3		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C499-5		Ground
Middle Stoplamp		
C499-4		Ground
Outer Stoplamp		
C499-3		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	GO to B11

B11 CHECK THE REAR STOPLAMP SUPPLY CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCMB C4368A .

Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C498-5	Ω	Ground
Middle Stoplamp		
C498-4	Ω	Ground
Outer Stoplamp		
C498-3	Ω	Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C499-5	Ω	Ground
Middle Stoplamp		
C499-4	Ω	Ground
Outer Stoplamp		
C499-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B12

No	REPAIR the circuit in question. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

B12 CHECK THE REAR STOPLAMP SUPPLY CIRCUITS FOR AN OPEN

Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C498-5	Ω	C4368A-4
Middle Stoplamp		
C498-4	Ω	C4368A-3
Outer Stoplamp		
C498-3	Ω	C4368A-2

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
Inner Stoplamp		
C499-5	Ω	C4368A-16
Middle Stoplamp		
C499-4	Ω	C4368A-15

Outer Stoplamp		
C499-3	Ω	C4368A-14

Is the resistance less than 3 ohms?

Yes	GO to B16

No	REPAIR the circuit in question.

B13 CHECK FOR VOLTAGE TO THE REAR LAMP ASSEMBLY (ALL INOPERATIVE)

Ignition OFF.

Disconnect: Inoperative LH Rear Lamp C498 or RH Rear Lamp C499 .

Ignition ON.

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C498-5	V	Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C499-5	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to B15

No	GO to B14

B14 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE REAR LAMP ASSEMBLY

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C498-5		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C499-5		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	GO to B16

B15 CHECK THE REAR LAMP ASSEMBLY GROUND CIRCUIT

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C498-5		C498-6

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C499-5		C499-6

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	REPAIR the circuit.

B16 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) OPERATION

Disconnect and inspect all BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B17 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST C : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - CHINA ONLY

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1115:11	High Mounted Stop Lamp Control: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the high mounted stoplamp voltage supply circuit.
B1115:15	High Mounted Stop Lamp Control: Circuit Short To Battery Or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the high mounted stoplamp voltage supply circuit.
B1444:11	Left Rear Stop/Position Lamp Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the LH rear stoplamp voltage supply circuit.
B1444:15	Left Rear Stop/Position Lamp Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the LH rear stoplamp voltage supply circuit.
B1448:11	Right Rear Stop/Position Lamp Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the right RH stoplamp voltage supply circuit.
B1448:15	Right Rear Stop/Position Lamp Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the right RH stoplamp voltage supply circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has

		exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected,

Possible Sources

- Rear lamp assembly
- High mounted stoplamp
- BCM

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST C : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - CHINA ONLY > PINPOINT TEST C : ONE OR MORE STOPLAMPS ARE INOPERATIVE OR ALWAYS ON - CHINA ONLY

C1 CHECK STOPLAMPS OPERATION

Ignition ON.

Without applying the brake pedal and observe the rear and high mounted stoplamps.

Are any stoplamps illuminated?

Yes	If all the stoplamps are illuminated, GO to PINPOINT TEST D : THE STOPLAMPS ARE ON CONTINUOUSLY For the high mounted stoplamp, GO to C8 For the LH or RH inner and middle rear stoplamp, GO to C9

No	GO to C2

C2 IDENTIFY THE INOPERATIVE STOPLAMP

Apply the brake pedal and observe the rear and high mounted stoplamps.

Is only an individual stoplamp inoperative?

Yes	For the high mounted stoplamp, GO to C3 For an individual inner or middle rear stoplamp, INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	For the LH or RH inner and middle rear stoplamp, GO to C10 If all stoplamps are

	inoperative, GO to PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE

C3 CHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP

Ignition OFF.

Disconnect: High Mounted Stoplamp C475 .

Ignition ON.

While applying the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to C5

No	GO to C4

C4 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

While applying the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new high mounted stoplamp. REFER to: High Mounted Stoplamp - Coupe .

No	GO to C6

C5 CHECK THE HIGH MOUNTED STOPLAMP GROUND CIRCUIT FOR AN OPEN

While applying the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead

C475-1		C475-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new high mounted stoplamp. REFER to: High Mounted Stoplamp - Coupe .

No	REPAIR the circuit.

C6 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280E .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C7

No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C7 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1	Ω	C2280E-15

Is the resistance less than 3 ohms?

Yes	GO to C15

No	REPAIR the circuit.

C8 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: High Mounted Stoplamp C475 .

Disconnect: BCM C2280E .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C475-1		Ground

Is voltage present?

Yes	REPAIR the circuit.

No	GO to C15

C9 CHECK THE REAR LAMP SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: LH Rear Lamp C412 or RH Rear Lamp C415 .

Disconnect: BCM C2280E .

Ignition ON.

Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-6		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-6		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to C15

C10 CHECK FOR VOLTAGE TO THE REAR LAMP ASSEMBLY

Ignition OFF.

Disconnect: Inoperative LH Rear Lamp C412 or RH Rear Lamp C415 .

Ignition ON.

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-6		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to C12

No	GO to C11

C11 REPEAT THE ON-Ddemand SELF-TEST AND CHECK FOR VOLTAGE TO THE REAR LAMP ASSEMBLY

Using a diagnostic scan tool, perform the BCM self-test.

Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-6		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-6		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	GO to C13

C12 CHECK THE REAR LAMP ASSEMBLY GROUND CIRCUIT

While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-6		C412-4

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-6		C415-4

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear lamp assembly. REFER to: Rear Lamp Assembly .

No	REPAIR the circuit.

C13 CHECK THE REAR STOPLAMP SUPPLY CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280E .

Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-6	Ω	Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-6	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C14

No	REPAIR the circuit in question. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present,

C14 CHECK THE REAR STOPLAMP SUPPLY CIRCUITS FOR AN OPEN

Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-6	Ω	C2280E-24

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-6	Ω	C2280E-23

Is the resistance less than 3 ohms?

Yes	GO to C15

No	REPAIR the circuit in question.

C15 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST D : THE STOPLAMPS ARE ON CONTINUOUSLY

Refer to Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0040:12	Brake Pedal Switch "A": Circuit Short To Battery	An on-demand DTC that sets when the BCM detects a short to voltage from the stoplamp switch input circuit during the on-demand self-test.

Possible Sources

- Wiring, terminals or connectors
- Stoplamp switch
- PCM
- BCM

DIAGNOSIS AND TESTING > STOPLAMPS > PINPOINT TESTS > PINPOINT TEST D : THE STOPLAMPS ARE ON CONTINUOUSLY > PINPOINT TEST D : THE STOPLAMPS ARE ON CONTINUOUSLY

D1 CHECK THE STOPLAMP SWITCH

Ignition OFF.

Disconnect: Stoplamp Switch C278 .

Ignition ON.

Do the stoplamps continue to illuminate?

Yes	GO to D2

No	INSTALL a new brake pedal position (stoplamp) switch. REFER to: Stoplamp Switch .

D2 CHECK THE PCM (POWERTRAIN CONTROL MODULE)

Ignition OFF.

Disconnect: PCM C1551B (2.3L).

Disconnect: PCM C1381B (3.7L).

Disconnect: PCM C175B (5.0L).

Ignition ON.

Do the stoplamps continue to illuminate?

Yes	GO to D3

No	GO to D4

D3 CHECK THE STOPLAMP SWITCH INPUT CIRCUIT FOR A SHORT TO VOLTAGE

Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to D5

D4 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. 2.3L EcoBoost (231kW/314PS) REFER to: Powertrain Control Module (PCM) . 3.7L Duratec (227kW/301PS) REFER to: Powertrain Control Module (PCM) . 5.0L 32V Ti-VCT REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

GENERAL PROCEDURES > FRONT FOG LAMP ADJUSTMENT

Activation

NOTE: Horizontal aim is not required for this vehicle and is not adjustable. Consult your state vehicle inspection center for recommended tolerance ranges for visual aiming.

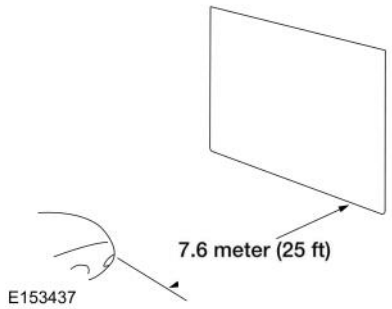
1.

1.

Before starting the fog lamp assembly adjustment:

Check the tire inflation.

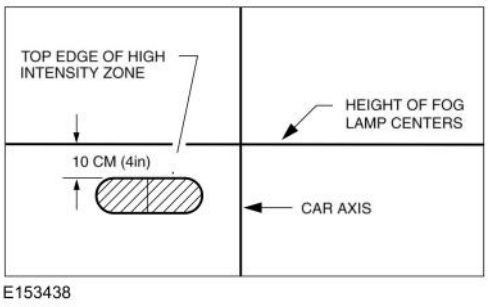
Make sure there are no other loads in the vehicle other than a half tank of fuel.



Make sure the vehicle is on level ground.

Make sure the fog lamps and headlamps are clean.

Make sure the headlamps are operating and are correctly aimed.



NOTE: The vertical wall screen must be a minimum of 2.4 m (7.87 ft)

2.
Park the vehicle on a level surface approximately 7.6 m (24.93 ft) from the vertical wall or screen directly in front of it.

3.

The correct visual aim for the fog lamps is with the top edge of the high-intensity zone 101.6 mm (4 in) below the horizontal center of the fog lamps.

GENERAL PROCEDURES > HEADLAMP ADJUSTMENT

Adjustment

NOTE: If the flash video link does not load or is incompatible with your browser, a.wmv version of the video can be accessed at: http://www.fordservicecontent.com /Ford_Content/videos/FusionHeadlampAdj2.wmv

1.

	A multimedia supplement to the instructions contained in this article is available. To view the multimedia example of the condition described go to; **http://www.youtube.com/user/Mitchell1Tips then type, "A00566967.vid1" into the "Search Channel" box.**

All headlamp types

NOTE: Refer to the Owner's Literature for the headlamp adjustment screw location.

NOTE: Consult your state vehicle inspection manual for recommended tolerance ranges for visual aiming.

NOTE: Horizontal aim is not adjustable.

2.

Identify the headlamp type. Vehicles are equipped with Visually Optically Aligned Left (VOL) or Visually Optically Aligned Right (VOR) headlamps. Molded in small letters on the headlamp lens is one of the following: VOL and SAE or VOR and SAE.

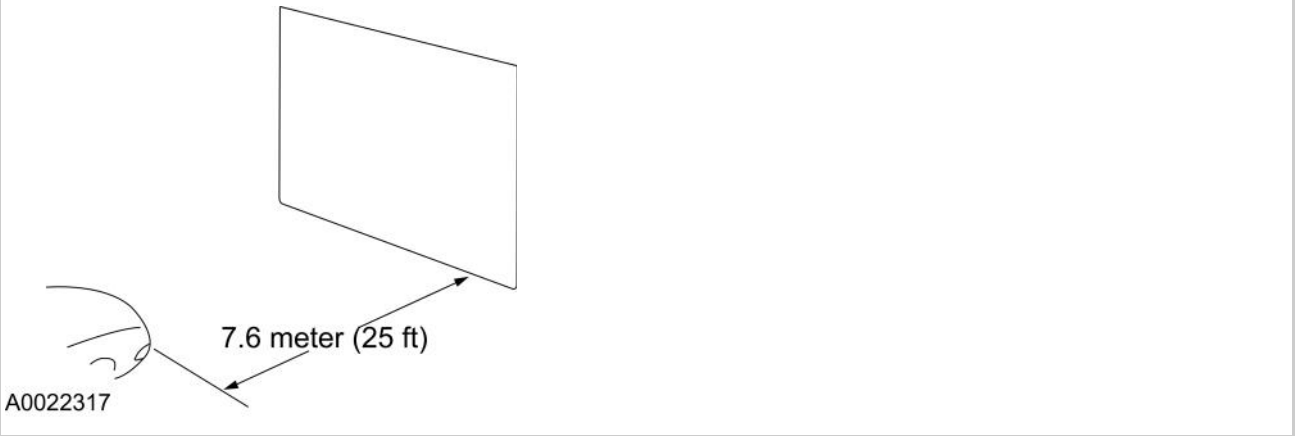
NOTE: Before starting headlamp adjustment, entry conditions must be met.

3.

Vehicle must be on level ground.

Tires must be correctly inflated.

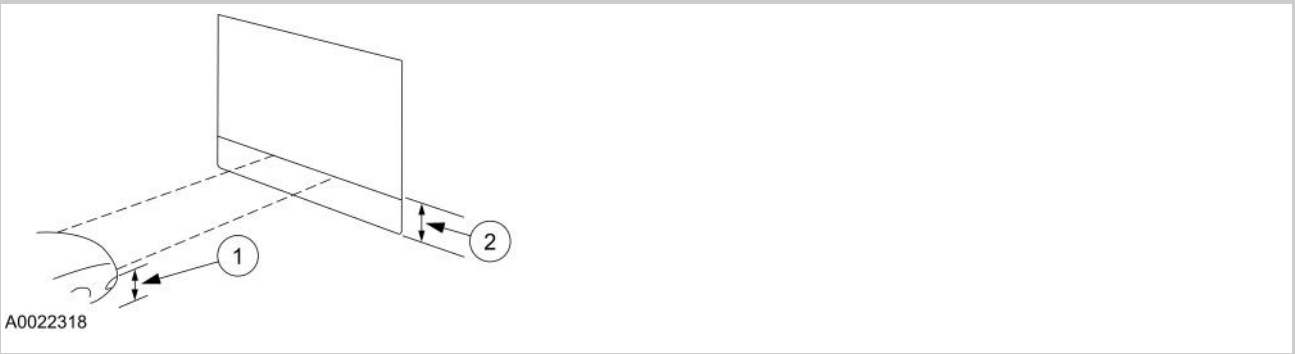
Vehicle must be normally loaded.



Headlamps must be clean.

Headlamps must operate correctly.

Air suspension switch must be on (if equipped).



NOTE: The vertical wall or screen must be a minimum of 2.4 m (8ft) wide.

4.
Park the vehicle on a level surface approximately 7.6 m (25 ft) from the vertical wall or screen directly in front of it.

NOTE: The bulb center of the low beam bulb is sometimes marked on the lens (circle, crosshair or other mark) or is the center of the low beam reflector, bulb shield or the low beam projector inner lens.

5.
Measure the center of the headlamp height to ground and record the measurement.

NOTE: Use a 2.4 m (8 ft) section of masking tape for the horizontal reference line.

6.

For vehicles with headlamp bulb center heights below 95 cm (37.5 inches), place the horizontal reference line equal to the headlamp bulb center height.

For vehicles with headlamp bulb center heights between 95 cm - 105 cm (37.5 - 41.5 inches), place the horizontal reference line at the headlamp bulb center height minus 1.3 cm (0.5 inch).

For vehicles with headlamp bulb center heights above 105 cm (41.5 inches), place the

horizontal reference line at the headlamp bulb center height minus 2.5 cm (1.0 inch).

NOTE: Carry out this procedure in a dark environment to effectively see the headlamp beam pattern.

7.
Turn the low beam headlamps on to illuminate the wall or screen and open the hood.

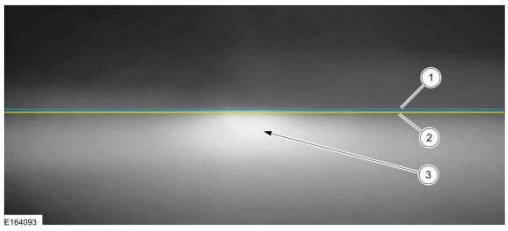
NOTE: The cut off of the beam pattern is the horizontal line of the beam pattern where there is MAXIMUM change between light and dark.

8.
On the wall or screen, locate the cut off of the beam pattern.

VOR-type headlamps

NOTE: Procedure applies to both left and right headlamps with VOR molded on lens.

NOTE: The appearance of the VOR beam pattern may vary between vehicles.



9.
There is a distinct cutoff in the right portion of the beam pattern.

10.

1 - Horizontal reference line

2 - Cut off

3 - High intensity zone

NOTE: Align one headlamp while covering the other headlamp.

11.
Align the headlamps to the horizontal reference line. Adjust the headlamp as necessary using the headlamp adjusting screw.

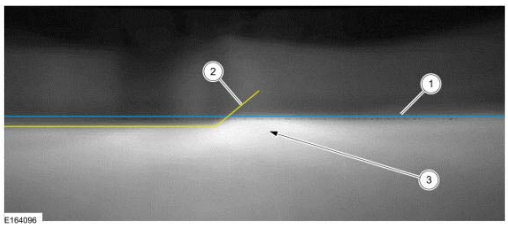
12.

Repeat the previous step for the remaining headlamp.

VOL-type headlamps

NOTE: Procedure applies to both left and right headlamps with VOL molded on lens.

NOTE: The appearance of the VOL beam pattern may vary between vehicles.



13.
For VOL-type headlamps, there is a distinct cutoff in the left portion of the beam pattern. The edge of this cutoff should be positioned 5 CM (2 in) below the horizontal reference line.

14.

1 - Horizontal reference line

2 - Cut off

3 - High intensity zone

NOTE: Align one headlamp while covering the other headlamp.

15.
Align the headlamps to the horizontal reference line. Adjust the headlamp as necessary using the headlamp adjusting screw.

16.

Repeat the previous step for the remaining headlamp.

REMOVAL AND INSTALLATION > BALLAST > REMOVAL

1.

Remove the headlamp assembly. Refer to: Headlamp Assembly .

2.

Remove the screws and position the ballast for access to the electrical connector.

3.

Disconnect the electrical connector and remove the ballast.

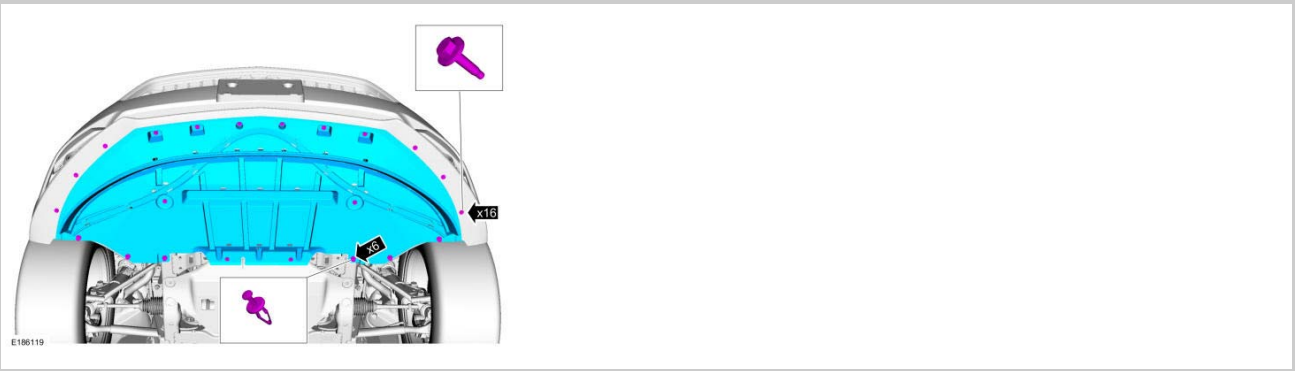
REMOVAL AND INSTALLATION > BALLAST > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT FOG LAMP > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.



NOTE: Halogen fog lamp shown, LED fog lamp similar.

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the push pins, screws and the lower air deflector.

3.

Disconnect the front fog lamp electrical connector.

4.

Remove the screws and the fog lamp assembly.

Torque

: 15 lb.in (1.7 Nm)

REMOVAL AND INSTALLATION > FRONT FOG LAMP > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Adjust the fog lamps. Refer to: Front Fog Lamp Adjustment .

REMOVAL AND INSTALLATION > FRONT FOG LAMP BULB > REMOVAL

NOTE: This procedure is for halogen fog lamps bulbs only, LED fog lamp bulbs are serviced as an assembly.

NOTE: Removal steps in this procedure may contain installation details.

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the front wheels and tires. Refer to: Wheel and Tire .

3.

Remove the push pins and position the inner fender liner aside.

4.

Disconnect the front fog lamp electrical connector.

5.

Turn the bulb counter clock-wise and remove the front fog lamp bulb.

REMOVAL AND INSTALLATION > FRONT FOG LAMP BULB > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT MARKER LAMP > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: Vehicles with fog lamp shown, all others are similar.

NOTE: LH shown, RH similar.

1.

Remove the front bumper cover. Refer to: Front Bumper Cover .

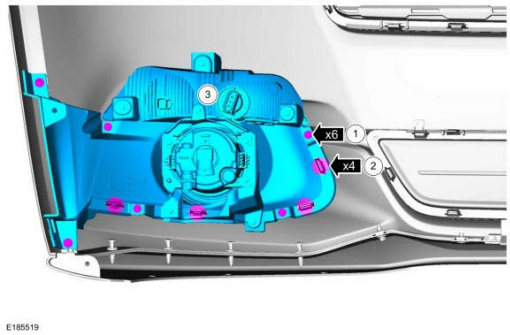
2.

Remove the front bumper grille cover.

1.

Remove the screws.

Torque



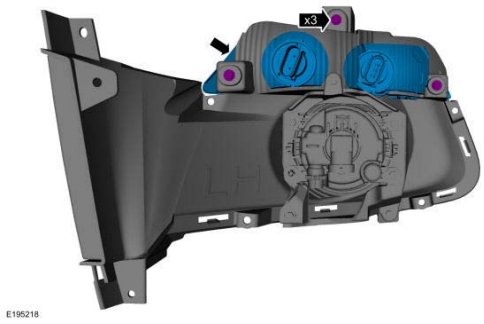
: 15 lb.in (1.7 Nm)

2.

Release the tabs.

3.

Remove the front bumper grille cover.



3.

Remove screws and the front marker lamp.

Torque

: 15 lb.in (1.7 Nm)

REMOVAL AND INSTALLATION > FRONT MARKER LAMP > INSTALLATION

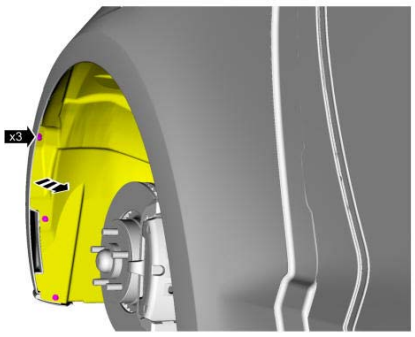
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT TURN SIGNAL LAMP BULB > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

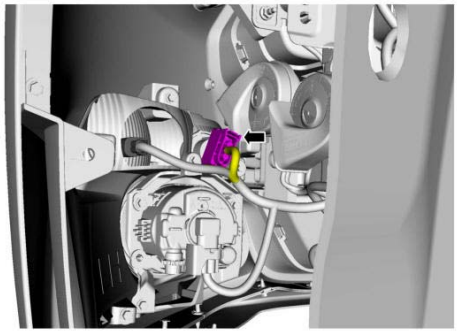
1.



Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the front wheels and tire. Refer to: Wheel and Tire .



3.

Remove the push pins and position the inner fender liner aside.

4.

Disconnect the front turn signal electrical connector.

5.

Remove the turn signal bulb.

1.

Rotate the turn signal bulb holder counter clock-wise and remove the bulb holder.

2.

Separate the turn signal bulb from the bulb holder.

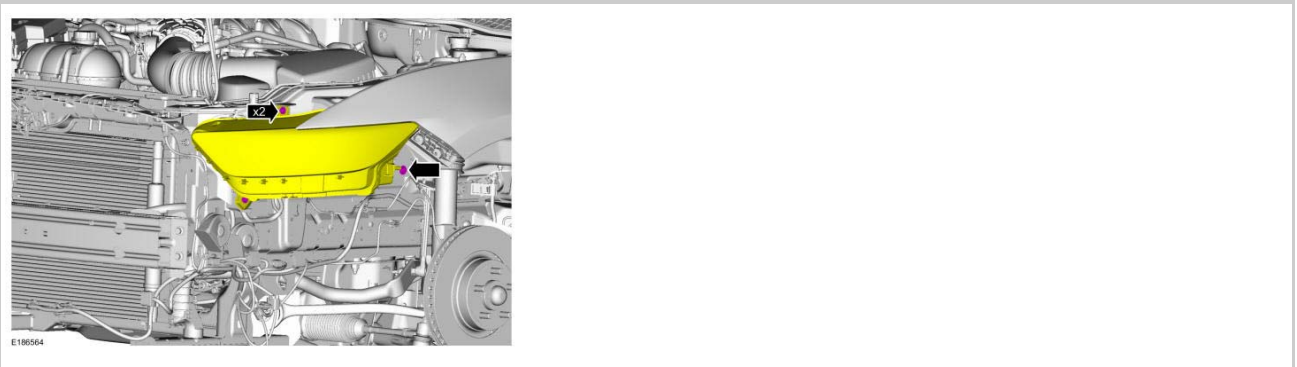
REMOVAL AND INSTALLATION > FRONT TURN SIGNAL LAMP BULB > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HEADLAMP ASSEMBLY > REMOVAL

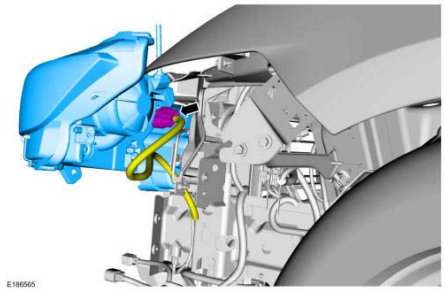
1.



Remove the front bumper cover. Refer to: Front Bumper Cover .

2.

Remove the screws and position the headlamp assembly forward.



Torque

: Front mounting bolts: 74 lb.in (8.4 Nm) Side mounting bolt: 28 lb.in (3.2 Nm)

3.

Disconnect the electrical connector and remove the headlamp assembly.

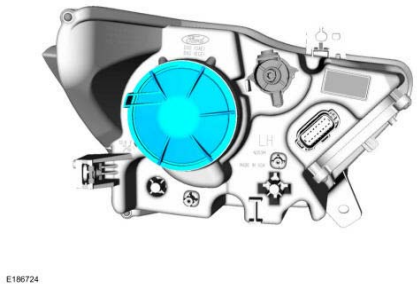
REMOVAL AND INSTALLATION > HEADLAMP ASSEMBLY > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Adjust the headlamps. Refer to: Headlamp Adjustment



REMOVAL AND INSTALLATION > HEADLAMP BULB > REMOVAL

1.

Remove the headlamp assembly. Refer to: Headlamp Assembly .

2.

Remove the headlamp bulb cover.

3.

Disconnect the headlamp bulb connector.

4.

Remove the headlamp bulb.

1.

Release the spring tabs.

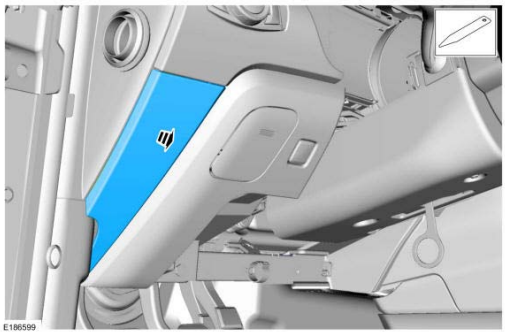
2.

Remove the headlamp bulb.

REMOVAL AND INSTALLATION > HEADLAMP BULB > INSTALLATION

1.

To install, reverse the removal procedure.



2.

Adjust the headlamps. Refer to: Headlamp Adjustment .

REMOVAL AND INSTALLATION > HEADLAMP SWITCH > REMOVAL

1.

Using a non-marring tool, remove the trim panel.

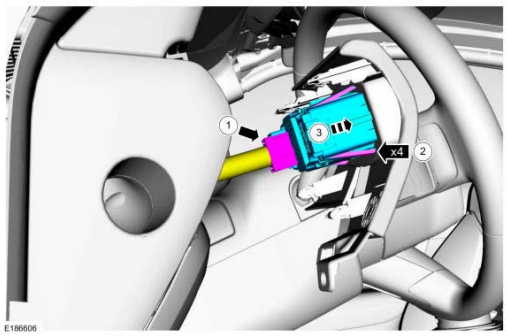
2.

Remove the screw and position the LH dash finish panel aside.

3.

Remove the headlamp switch.

1.



Disconnect the headlamp switch electrical connector.

2.

Release the tabs.

3.

Remove the headlamp switch.

REMOVAL AND INSTALLATION > HEADLAMP SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HIGH MOUNTED STOPLAMP - CONVERTIBLE > REMOVAL

1.

Remove the luggage compartment lid interior trim panel.

1.

Remove the latch cover.

2.

Remove the push pins.

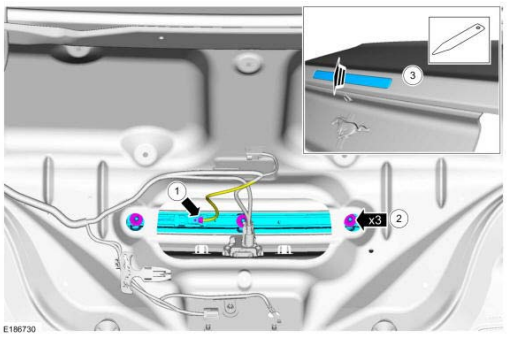
2.

Remove the center high mounted stoplamp.

1.

Disconnect the electrical connector.

2.



Remove the nuts.

Torque

: 13 lb.in (1.5 Nm)

3.

Release the two-sided seal tape.

REMOVAL AND INSTALLATION > HIGH MOUNTED STOPLAMP - CONVERTIBLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HIGH MOUNTED STOPLAMP - COUPE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Lower the rear of the headliner. Refer to: Headliner - Lowering .

2.

Remove the center mounted high stoplamp.

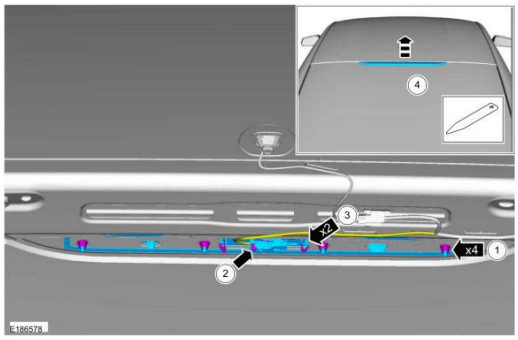
1.

Remove the nuts.

Torque

: 36 lb.in (4.1 Nm)

2.



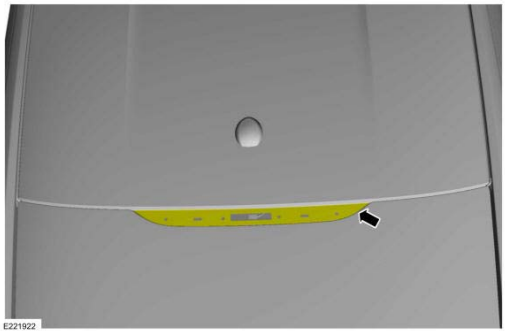
Disconnect the electrical connector.

3.

Release the tabs.

4.

Release the two-sided seal tape.



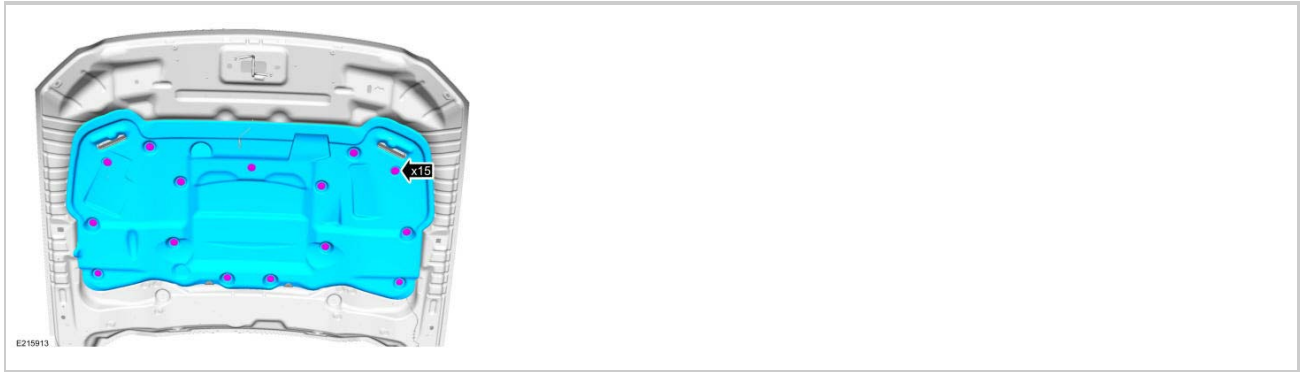
REMOVAL AND INSTALLATION > HIGH MOUNTED STOPLAMP - COUPE > INSTALLATION

1.

Clean and prepare the sealing surface.

Using 3M (TM) Specialty Adhesive Remover clean the mating surface.

Using an alcohol pad, prepare the mating surface.



2.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HOOD TURN SIGNAL INDICATOR LAMP > REMOVAL

1.

Remove the pushpins and the hood insulation panel.

NOTE: LH hood mounted turn signal lamp shown, RH is similar.

2.
Remove the hood mounted turn signal lamp.

1.

Disconnect the hood mounted turn signal lamp electrical connector.

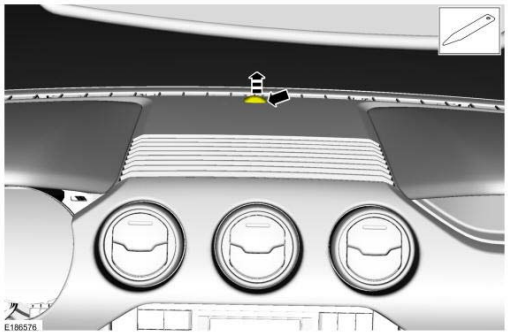
2.

Remove the screws.

3.

Release the tabs.

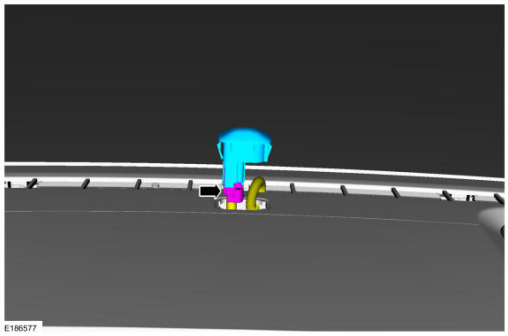
REMOVAL AND INSTALLATION > HOOD TURN SIGNAL INDICATOR LAMP > INSTALLATION



1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > LIGHT SENSOR > REMOVAL



1.

Using a non-marring tool, release the light sensor and position upward.

2.

Disconnect the electrical connector and remove the light sensor.

REMOVAL AND INSTALLATION > LIGHT SENSOR > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > PARKING LAMP BULB > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the front wheels and tires. Refer to: Wheel and Tire .

3.

Remove the push pins and position the inner fender liner aside.

4.

Disconnect the front parking lamp electrical connector.

5.

Remove the front parking lamp bulb.

1.

Rotate the front parking lamp bulb holder counter clock-wise and remove the bulb holder.

2.

Separate the front parking lamp bulb from the bulb holder.

REMOVAL AND INSTALLATION > PARKING LAMP BULB > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR LAMP ASSEMBLY > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: Coupe shown, convertible similar.

NOTE: RH rear lamp assembly shown, LH rear lamp assembly similar.

All vehicles

1.

Open the luggage compartment lid.

2.

Remove the spare tire cover.

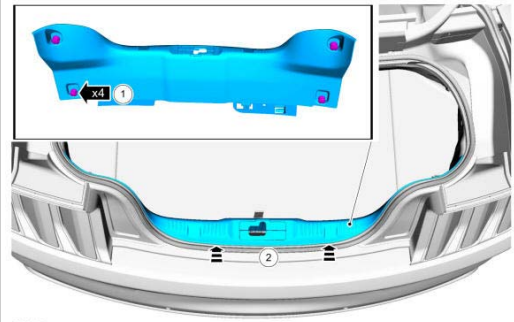
RH rear lamp assembly

3.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .

All vehicles

4.



Remove the luggage compartment scuff plate.

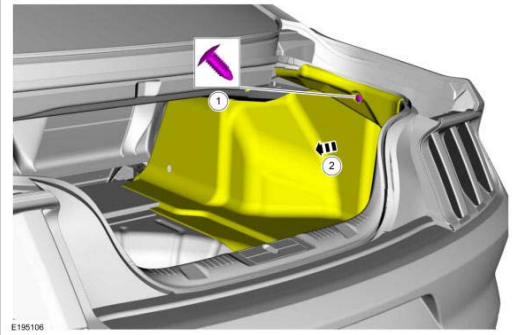
1.

Remove the thumb nut type retainers.

2.

Remove the luggage compartment scuff plate.

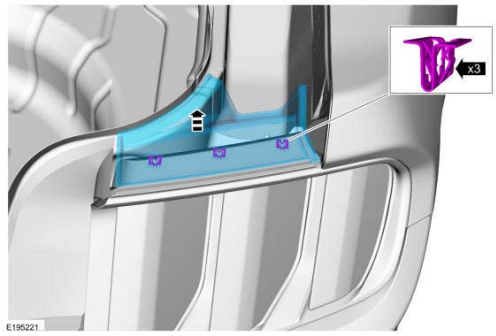
5.



Position the luggage compartment side trim panel aside.

1.

Remove the pin-type retainer.



2.

Position aside the RH or LH luggage compartment side trim panel.

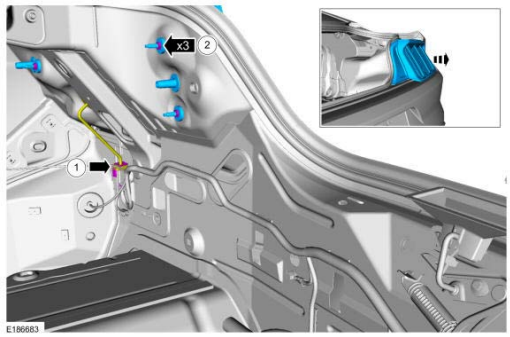
6.

Release the clips and remove the rear lamp assembly shield.

7.

Remove the rear lamp assembly.

1.



Disconnect the rear lamp assembly electrical connector.

2.

Remove the nuts.

Torque

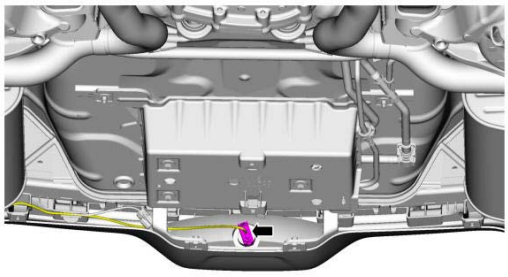
: 55 lb.in (6.2 Nm)

REMOVAL AND INSTALLATION > REAR LAMP ASSEMBLY > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REVERSING LAMP > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

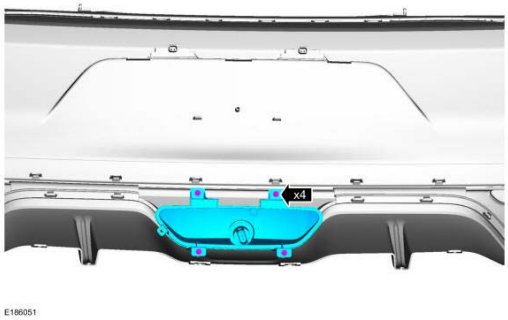
1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Disconnect the reversing lamp electrical connector.

3.



Remove the rear bumper cover. Refer to: Rear Bumper Cover .

4.

Remove the screws and the reversing lamp.

Torque

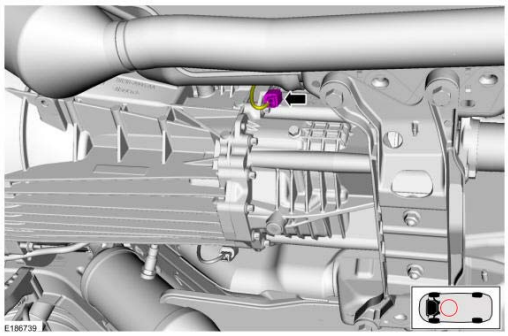
: 15 lb.in (1.7 Nm)

REMOVAL AND INSTALLATION > REVERSING LAMP > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REVERSING LAMP SWITCH > REMOVAL



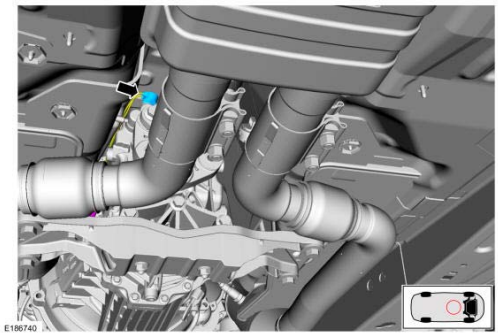
NOTE: Removal steps in this procedure may contain installation details.

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Disconnect the reversing lamp switch and separate the connector retainer.



3.

Remove the reversing lamp switch.

Torque

: 177 lb.in (20 Nm)

REMOVAL AND INSTALLATION > REVERSING LAMP SWITCH > INSTALLATION

1.

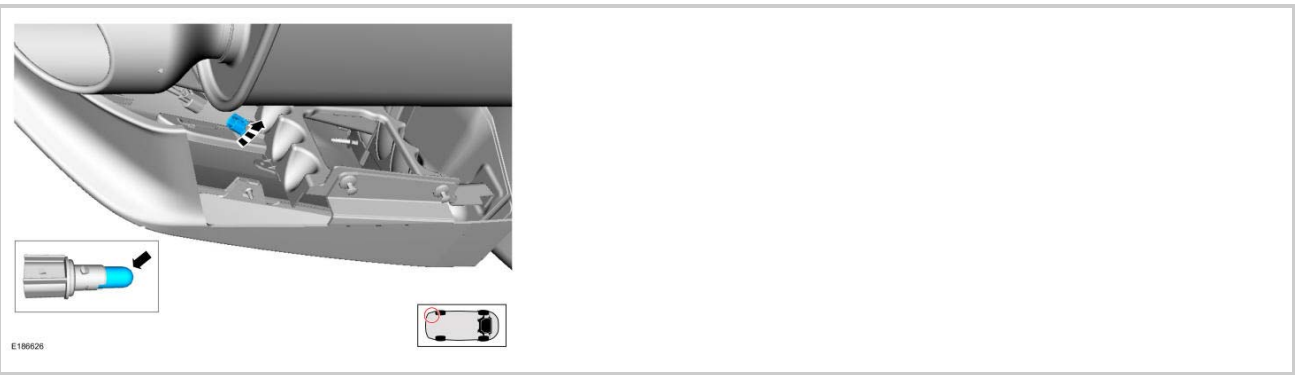
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > SIDE LAMP BULB > REMOVAL

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.



Disconnect the side lamp bulb electrical connector.

3.

Remove the bulb from the bulb holder.

Turn the bulb holder counter clockwise and remove the bulb holder.

REMOVAL AND INSTALLATION > SIDE LAMP BULB > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > SIDE TURN SIGNAL LAMP > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: LH is shown, RH is similar.

All vehicles

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

Vehicles equipped with side obstacle detection

2.

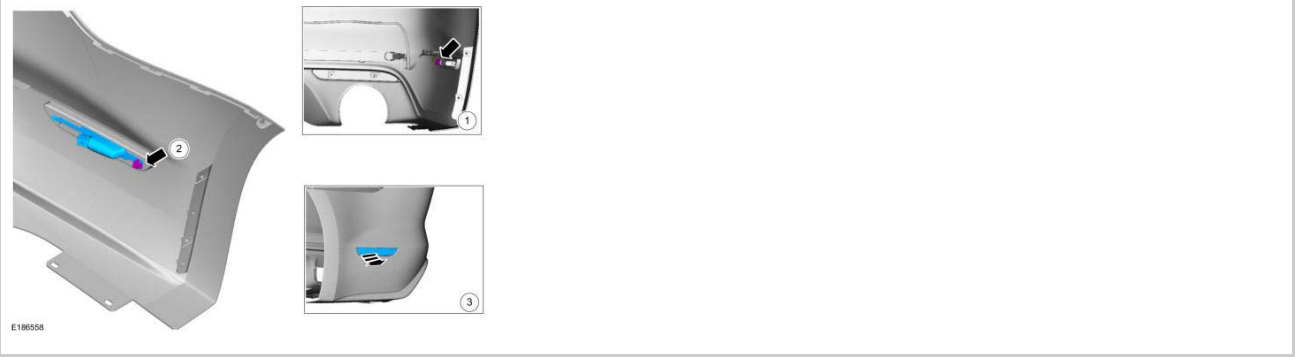
Remove the rear bumper cover. Refer to: Rear Bumper Cover .

All vehicles

3.

Remove the side turn signal.

1.



Disconnect the electrical connector.

2.

Release the tab.

3.

Remove the side turn signal.

REMOVAL AND INSTALLATION > SIDE TURN SIGNAL LAMP > INSTALLATION

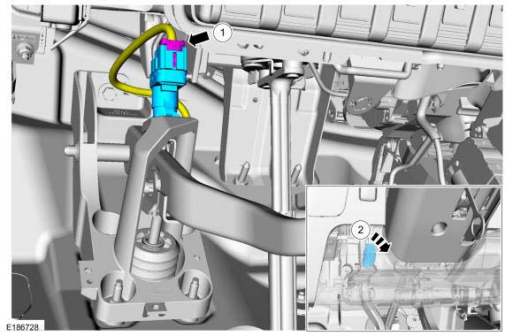
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > STOPLAMP SWITCH > REMOVAL

NOTE: Do not press or pull on brake pedal when installing or removing the stoplamp switch otherwise misadjustment or damage to the stoplamp switch can occur

1.



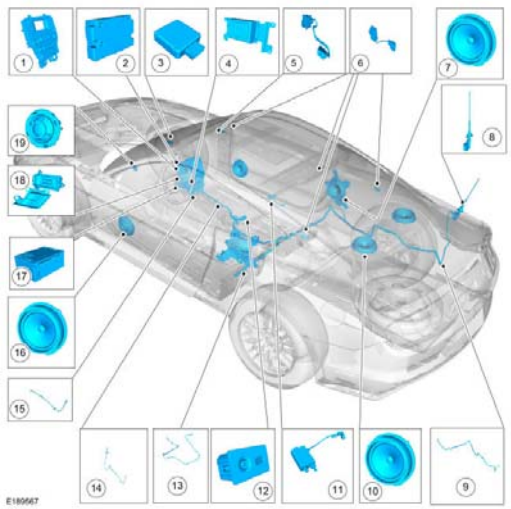
Remove the stoplamp switch.

1.

Disconnect the stoplamp switch electrical connector.

2.

Turn the stoplamp switch clockwise.



REMOVAL AND INSTALLATION > STOPLAMP SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - COMPONENT LOCATION

Item	Description
1	FCIM
2	APIM (Located behind the FCDIM)
3	GPSM
4	4.2-inch (107 mm) FCDIM
5	SYNC ® microphone (located in the overhead console)
6	ANC microphones - 2.3L only (coupe: located in the overhead console and center rear of the headliner) / (convertible: located in the overhead console, RHR quarter panel, and LHR quarter panel)
7	RHR quarter panel full-range speaker (LHR also shown) (convertible)
8	RHR fender-mounted AM/ FM mast antenna (convertible)
9	Rear AM/ FM antenna coaxial cable for the RHR fender-mounted AM/ FM mast antenna (convertible)
-	Front AM/ FM antenna coaxial cable (Not shown)
10	Left parcel shelf full-range speaker (right also shown) (coupe)
11	AM/ FM antenna amplifier (coupe)
12	Audio input jack and rear USB port (USB2)
13	Rear AM/ FM antenna coaxial cable for the AM/ FM on-glass antenna grid (coupe)
14	Rear USB port/cable (USB2)

15	Front USB port/cable (USB1)
16	LHF door midwoofer speaker (RHF also shown)
17	ACM (contains DACMC for 2.3L and 5.2L)
18	RH upper and lower steering wheel switches
19	LHF A-pillar tweeter speaker (RHF also shown)

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - OVERVIEW > OVERVIEW

The audio system consists of the following:

Main Components

- 6 speakers
- 4.2-inch (107 mm) non-touchscreen FCDIM
- ACM (contains DACMC for 2.3L and 5.2L)
- AM/ FM antenna
- APIM
- Audio input jack
- FCIM
- Front USB port/cable (USB1)
- GPSM
- Rear USB port/cable (USB2)
- RH audio steering wheel switches
- SYNC ® microphone

Main Features

- AM radio
- ANC (2.3L only)
- Battery load shed
- Compass
- ESE (2.3L and 5.2L only)
- FM radio
- MyKey ®

- Speed compensated volume
- SYNC ®
- SYNC ® AppLink™

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

A missing network message is indicated by a U-code DTC and can be the result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming can set these Diagnostic Trouble Codes (DTCs). When a missing message DTC (U-code) sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message. Refer to: MODULE COMMUNICATIONS NETWORK . See CAN Multiplex Messages.

When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication Diagnostic Trouble Codes (DTCs) may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Audio settings	IPC	Used to set the radio listening source (AM/ FM) from the steering wheel switch.

Belt-Minder ® audio mute	IPC	Used to mute speaker output so the Belt-Minder ® tone can be more easily heard. This message only applies to vehicles with a MyKey ® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Day/night status	BCM	Used for day/night illumination status for the audio system.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for ACM operating modes and fault reporting.
Instrument panel cluster chime	IPC	Used to request a warning chime to be played through the audio system.
MyKey ® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey ® restricted key is in use.
Power mode	IPC	Used to disable the functionality of the ACM due to the load shedding feature.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
Airbag deployment status	RCM	Used to monitor airbag deployment status for 911 Assist™.
eCall notification	RCM	Used to notify of a 911 Assist™ call being initiated due to airbag deployment.
FCIM bezel diagnostic status	GWM	Used to display the requested bezel diagnostics operations in the centerstack infotainment display.
FCIM button state	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.

Gear lever position	IPC	Used to verify the gear selector position for bezel diagnostics.
GPS data	GPSM	Used for vehicle positioning, heading, and direction for navigation and 911 Assist™.
Ignition key type	BCM	Used to determine if a MyKey ® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
MyKey ® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey ® restricted key is in use.
Navigation rolling wheel count and direction	ABS module	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Steering wheel switch status	SCCM	Used to indicate the button press status of the steering wheel switches.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle speed	PCM	Used for navigation functionality.

Module Network Input Messages - DACMC (2.3L and 5.2L Only)

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	Used to determine the throttle position status for the ANC system operation.
Driver's door ajar status	BCM	Used to enable the ANC system if the driver's door (and all other doors and luggage compartment lid) is closed, or to disable the ANC system if the driver's door is ajar.
Engine RPM data	PCM	Used to determine the engine rotation speed for the ANC system operation.
Engine status	PCM	Used to enable the ANC system if the engine is ON, or to disable the

		ANC system if the engine is OFF or Auto-Stopped.
Engine torque	PCM	Used for ANC system operation by indicating the amount of engine torque being produced (in Nm).
Ignition status	GWM	Used to indicate the ignition state (OFF, ACCESSORY, CRANK, RUN, and START) required for DACMC operating modes and fault reporting.
Luggage compartment lid ajar status	BCM	Used to enable the ANC system if the luggage compartment lid (and all other doors) is closed, or to disable the ANC system if the luggage compartment lid is ajar.
Passenger door ajar status	BCM	Used to enable the ANC system if the front passenger door (and all other doors and luggage compartment lid) is closed, or to disable the ANC system if the front passenger door is ajar.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.

Module Network Input Messages - FCDIM

Broadcast Message	Originating Module	Message Purpose
ACM CD data	ACM	Used to display CD data on the FCDIM.
ACM configuration	ACM	Used to verify that the correct configuration and modules are installed.
ACM radio functions	ACM	Used to display the ACM radio functions such as seek, tune and AM/ FM stations on the FCDIM.
ACM volume and mode status	ACM	Used to display audio volume and mode status on the FCDIM.
Audio source status	ACM	Used to display the selected audio source on the FCDIM.
CD load/eject	ACM	Used to display the loaded or ejected CD status on the FCDIM.

Date and time	IPC	Used to display the current date and time on the FCDIM.
Display language selection	IPC	Used to display information on the FCDIM in the selected language.
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
Ignition status	IPC	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCDIM operating modes and fault reporting.
Illumination dimming level	BCM	Used to control the backlight intensity of the FCDIM based on the dimmer switch input.
Phone call data	APIM	Used to send phone call data to the FCDIM.
Radio broadcast band selection	ACM	Used to display the selected radio tuner band on the FCDIM.
Transport Mode	IPC	Used to disable the functionality of the FCDIM until taken out of transport mode.
Vehicle configuration/information	IPC	Used to send vehicle configuration information to the FCDIM.
Vehicle speed	PCM	Used to determine the appropriate temperature display update rate.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Audio source selection	ACM	Used to indicate the selected audio system source.
Day/night status	BCM	Used for day/night illumination status for the FCIM.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.

Power mode	IPC	Used to disable the functionality of the FCIM due to the load shedding feature.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle yaw rate	RCM	Used to verify the vehicle acceleration data for navigation.
Wheel rotation count	BCM	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Wheel rotation direction	BCM	Used to determine wheel rotation direction for navigation.

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Audio source selection	ACM	Used to display the selected audio source on the IPC.
Display language request	APIM	Used to display information on the IPC in the selected language.
Multimedia player total play time status	APIM	Used to indicate the total play time of the audio track being played.

Module Network Input Messages - RCM

Broadcast Message	Originating Module	Message Purpose
eCall confirmation	APIM	Used to confirm the configuration of the 911 Assist™ feature, and to confirm the status of the 911

		Assist™ phone call.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ACCESSORY DELAY FEATURE

The accessory delay feature is a BCM-controlled software function that allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AM/ FM RADIO

The AM/ FM on-glass antenna grid (coupe) or fender-mounted antenna (convertible) receives analog radio waves and sends them through the AM/ FM antenna amplifier (coupe) and AM/ FM antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ANC - 2.3L

ANC is an audio system feature that eliminates a certain range of low frequency engine noise within the passenger compartment typically induced under wide open throttle or heavy part-throttle conditions. The system uses two (coupe) or three (convertible) microphones, a DACMC (contained within the ACM), and the audio system speakers. The DACMC determines the noise frequency to be canceled based upon engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM, as well as microphone input signals.

While the engine is running, the ANC microphones located in the overhead console and center rear of the headliner (coupe), or overhead console, RHR quarter panel, and LHR quarter panel (convertible) monitor the engine noise resonating in the passenger compartment. The microphones transmit this noise as analog signals to the DACMC (contained within the ACM), where they are converted into digital signals by the integrated analog/digital converter. The digital signals are processed and an inverted phase sound wave with the same amplitude as the original sound is created. This new sound is converted into an analog audio signal, transmitted to the DACMC internal tone generator, and output by the ACM to the LHF and RHF door midwoofer speakers, and left and right parcel shelf full-range speakers (coupe) or RHR and LHR quarter panel full-range speakers (convertible) as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AUDIO INPUT JACK MODE

When a portable audio device, such as an iPod ® with its available cable, is connected to the vehicle audio system through the audio input jack, audio from the device can be played through the vehicle speakers. Only the volume can be controlled with the vehicle audio controls. All other functions such as

seek, fast forward, pause, etc. must be carried out on the device itself.

No metadata (information such as artist, album title, song title, and genre) is transmitted when a device is connected to the audio input jack.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BATTERY LOAD SHED

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the ignition in RUN, ACC, or OFF, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, "Battery Saver - System Off" is displayed on the FCDIM to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BLUETOOTH MODE

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a minimum range of 10 meters (33 feet).

The APIM Bluetooth chipset supports multiple Bluetooth profiles, allowing the SYNC ® system to interact with both Bluetooth-enabled phones and Bluetooth-enabled media devices.

Any Bluetooth-enabled device used with the SYNC ® system must first be paired with the APIM Bluetooth chipset before it can become operational. Pairing a Bluetooth-enabled device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC ® system generates a unique PIN that must be entered on the Bluetooth-enabled device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

Multiple Bluetooth-enabled phones and Bluetooth-enabled media devices can be paired to the APIM at the same time. The APIM supports an active connection with one Bluetooth-enabled phone and one Bluetooth-enabled media device at a time. If an additional device of either type is paired and made active, the APIM ends any active connection with an already-paired device, and establishes an active connection with the new device.

It is important to understand that while most Bluetooth-enabled devices can pair with the SYNC ® system, not all Bluetooth-enabled devices have the same level of available features when interacting with the SYNC ® system. To determine if a Bluetooth-enabled device or feature is supported, review the device compatibility list. Refer to owner.ford.com/how-tos/sync-technology/all/phone-setup/how-your-device-works-with-sync.html?version=sync.

For more information, refer to "Bluetooth" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM -

SYSTEM OPERATION AND COMPONENT DESCRIPTION > CHIMES

Various vehicle systems send chime requests over the CAN to the IPC. The following are determined as the IPC processes these requests:

- Chime characteristics such as tone, tone length, number of repetitions, and time between tones
- Chime output volume
- Priority of the chime request
- Which speakers (all, front, or rear) will play the specific chime

The IPC sends the processed requests over the CAN to the ACM. The ACM outputs the left and right analog chime tones to the appropriate audio system speakers as fluctuating AC voltage.

For more information, Refer to: Warning Chimes - Overview . For even more information, Refer to: Warning Chimes - System Operation and Component Description .

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPASS

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent through the CAN to the APIM. The APIM uses this data in addition to wheel speed and wheel rotation direction CAN messages from the ABS module to calculate and provide accurate vehicle tracking. The APIM processes the data and transmits it to be displayed on the FCDIM. In the event that the GPS fix or signal is temporarily lost, the APIM will continue to use the CAN messages from the ABS module to provide accurate vehicle tracking.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ESE - 2.3L AND 5.2L

ESE is an audio system feature that enhances certain engine tones typically induced under wide open throttle or heavy part-throttle conditions. The system uses a DACMC (contained within the ACM) and the audio system speakers.

The DACMC determines the engine tone to enhance based upon engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM. The data from the PCM is processed and converted into an analog audio signal, transmitted to the DACMC internal tone generator, and output by the ACM to the LHF and RHF door midwoofer speakers as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > MYKEY ® AUDIO OPERATION

- The following MyKey ® features are always enabled when a MyKey ® is in use, and are not configurable on/off with an administrator key:

    - Belt-Minder ®: The audio system is muted, and "MyKey Buckle Up to Unmute Audio" is displayed in the information display until the safety belts are buckled.

- The following MyKey ® features are configurable with an administrator key:
    - 911 Assist™: If the administrator has selected "Always On" in the MyKey ® menu, 911 Assist™ is enabled and cannot be disabled.
    - Do Not Disturb: If the administrator has selected "Always On" in the MyKey ® menu, the Do Not Disturb feature is enabled and cannot be disabled.
    - Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.
    - Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
    - Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder vehicle speed is exceeded.
    - Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, "MyKey ® VOLUME LIMITED" is displayed on the information display.

For more information, refer to "MyKey ®" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > RDS

RDS allows metadata (information such as station call letters, artist, song title, and genre) to be contained within FM radio waves. If the RDS feature is turned on, a PTY (Program Type) can be chosen. Once the customer has chosen a single PTY such as Sports, Rock, Religious Music, or Weather, the SEEK or SCAN button is pressed, and the ACM only tunes channels within the selected category. If a channel within the selected category is not found, the ACM will continually seek or scan.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SPEED COMPENSATED VOLUME

">Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.

- Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
- Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder

vehicle speed is exceeded.

- Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, "MyKey ® VOLUME LIMITED" is displayed on the information display.

For more information, refer to "MyKey ®" in the Owner's Literature.

RDS

RDS allows metadata (information such as station call letters, artist, song title, and genre) to be contained within FM radio waves. If the RDS feature is turned on, a PTY (Program Type) can be chosen. Once the customer has chosen a single PTY such as Sports, Rock, Religious Music, or Weather, the SEEK or SCAN button is pressed, and the ACM only tunes channels within the selected category. If a channel within the selected category is not found, the ACM will continually seek or scan.

Speed Compensated Volume

The ACM compensates for wind and road noise by adjusting the audio system volume based on the VSS signal and customer-defined setting.

When a MyKey ® is in use and the MyKey ® Volume Limiter is enabled, the speed compensated volume is disabled.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > STEERING WHEEL SWITCH FUNCTIONS

The RH steering wheel switches consist of an upper 5-way switch, and a lower 4-way switch. The upper 5-way steering wheel switch operates the volume +/-, seek +/-, and the audio mode. The lower 4-way steering wheel switch operates the voice, s end/receive call, end call, and mute functions.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYNC® APPLINK™

SYNC ® AppLink™ allows Applications installed on the customer's device to be controlled using the steering wheel switches and/or FCIM.

All devices must be paired with the SYNC ® system via Bluetooth, and Apple ® devices must also be connected to a USB port.

Data is transmitted back and forth between the customer's device and the APIM through Bluetooth, or through the USB port with Apple ® devices.

For more information, refer to "AppLink" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYNC ® SYSTEM

The SYNC ® system uses audio input jack, Bluetooth, USB, microphone, and CAN message APIM inputs to control the entertainment system and phone.

The SYNC ® system provides the following abilities:

- Send and receive phone calls via a paired Bluetooth-enabled phone
- Send and receive text messages via a paired Bluetooth-enabled phone
- Connect media devices (such as an iPod ®, USB device, or Bluetooth-enabled audio device) in order to play audio files
- Initiate an emergency assistance call (911 Assist™) when the airbags deploy (for more information, refer to "911 Assist™" in the Owner's Literature)

All SYNC ® system features are not available with every phone/device. To determine if the APIM supports a particular phone, tablet, or media player, or feature of one of those devices, review the device compatibility list. Refer to owner.ford.com/how-tos/sync-technology/all/phone-setup/how-your-device-works-with-sync.html?version=sync.

The customer can update the CIP by using a USB flash drive. For more information, refer to owner.ford.com.

For more information on the SYNC ® system, refer to "SYNC" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > USB AUDIO MODE

When a portable media device, such as an iPod ® with its available cable or portable mass storage such as a USB flash drive, is connected to the vehicle audio system through the USB ports, audio from the device can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled with the vehicle's audio controls.

When playing media files stored on a mass storage device such as a USB flash drive, the SYNC ® system only plays supported file types that do not have DRM protection, and are contained on a properly formatted device. For more information, refer to "Supported Media Players, Formats and Metadata Information" in the Owner's Literature.

In addition to audio information (track length, track number, etc.), metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device connected to the USB ports. The APIM uses the metadata to create indexes that can be used to sort for particular music based on the customer's preferences. Not all USB devices can send metadata to the APIM. When a new media device is connected to the SYNC ® system, the APIM automatically indexes the information. This may take several minutes depending on the amount of data on the device, and is considered normal operation. When a device that was previously connected to the SYNC ® system is reconnected, the APIM updates the index rather than creating a new one. This reduces the time needed to index the device.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > VOICE RECOGNITION

Voice recognition allows certain phone and audio system functions to be controlled with voice commands to reduce or eliminate the need to interact with the FCIM, FCDIM, and/or device while driving.

When the voice steering wheel switch is pressed, an audible prompt originating from the APIM is heard from the speakers. Based on the customer's setting, audible prompts will either be a voice or a simple tone. When interaction mode is set to standard, detailed voice guidance is provided. When interaction mode is set to advanced, most prompts are tones only, and minimal voice guidance is provided. The microphone receives the voice commands and sends them to the APIM. For more information, refer to "voice recognition" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s)s and converts them into fluctuating AC voltage. The ACM receives stereo and mono audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes all inputs, and depending on the input received, sends stereo or mono analog audio signals to the speakers as fluctuating AC voltage.

The ACM contains the CD player.

The ACM contains the DACMC for vehicles with the 2.3L or 5.2L.

The ACM and DACMC require separate PMI procedures when the ACM is replaced.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > AM/ FM ANTENNA AMPLIFIER - COUPE

The AM/ FM antenna amplifier receives AM/ FM radio waves from the on-glass antenna grid. The AM/ FM antenna amplifier is powered by the ACM and amplifies AM audio signals to improve reception. The AM/ FM radio waves are sent through the AM/ FM antenna coaxial cable to the ACM.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > ANC MICROPHONES - 2.3L

For a coupe, two ANC microphones (overhead console-mounted and center rear headliner-mounted) measure the amplitude and phase of the engine noise inside the passenger compartment. For a convertible, three ANC microphones (overhead console-mounted, RHR quarter panel, and LHR quarter panel) measure the amplitude and phase of the engine noise inside the passenger compartment. The monitored sounds are converted into analog signals by the microphones and sent to the DACMC (contained within the ACM).

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > ANTENNA

The AM/ FM radio uses the on-glass (coupe) AM/ FM antenna grid or fender-mounted (convertible) AM/ FM antenna to receive analog radio waves. The radio waves are sent through the AM/ FM antenna amplifier (coupe) or amplifier integrated into the antenna base (convertible) and AM/ FM antenna coaxial cable to the ACM, where they are further amplified.

To compensate for AM signal strength loss as the radio waves are transmitted from the antenna to the ACM, battery voltage is applied to the antenna to boost the AM radio signal. This allows the AM radio waves entering the ACM to be approximately the same strength as they were before amplification at the antenna.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > APIM

The APIM can be operated with the ignition in RUN, ACC, or OFF.

The APIM receives stereo and mono inputs. Stereo inputs include audio from the USB ports, audio input jack, connected Bluetooth media device, and outside device during a phone call. The mono input includes signals from the SYNC ® microphone.

Stereo outputs include audio from the USB ports, audio input jack, and connected Bluetooth-enabled media device. Mono outputs include audio from the TTS feature, incoming call ringtone, ringback tone, outside device during a phone call, voice or tone prompts initiated from the voice steering wheel switch and FCIM, and SYNC ® system instructions.

The TTS feature allows the customer to hear information through the audio system speakers so it does not have to be read from the FCDIM and/or device while driving. Examples include incoming text message sender information, text messages, and metadata from audio being played via USB or Bluetooth.

The APIM consists of two internal modules: the CIP and the VIP. The modules are not replaceable individually, but can be programmed independently if required.

The CIP interfaces with all of the customer inputs to the APIM. It contains an analog-to-digital-to-analog converter, as well as the Bluetooth chipset.

The VIP provides an interface between the CIP and the vehicle inputs. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals.

The APIM requires programming when it is replaced.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT

DESCRIPTION > AUDIO INPUT JACK

The audio input jack can be used to play audio files from an audio device connected through the 1/8-inch (3.5 mm) audio jack.

Audio signals are sent from the audio input jack to the APIM.

There are no power or ground circuits to the audio input jack.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > DACMC - 2.3L OR 5.2L

The DACMC ANC and ESE functions only operate while the engine is running, and the luggage compartment lid and all doors are closed.

The DACMC is a digital signal processor that consists of an internal analog/digital converter and tone generator.

For ANC, the DACMC uses engine rotation speed data, engine torque data, accelerator pedal position data, and ANC microphone input signals to calculate the targeted frequency needed to cancel engine noise within the passenger compartment. For ESE, the DACMC uses engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM to calculate the targeted frequency needed to enhance engine noise within the passenger compartment. The DACMC engine ANC signals are output by the ACM to the LHF and RHF door midwoofer speakers, and left and right parcel shelf full-range speakers (coupe) or RHR and LHR quarter panel full-range speakers (convertible) as fluctuating AC voltage. The DACMC ESE frequency signals are output by the ACM to the LHF and RHF door midwoofer speakers as fluctuating AC voltage.

When the engine is running and the audio system is in use, the ACM fluctuating AC voltage output signals to the LHF and RHF door midwoofer speakers, and left and right parcel shelf full-range speakers (coupe) or RHR and LHR quarter panel full-range speakers (convertible) contain a mixture of the engine ANC and ESE frequency with the audio signals.

The DACMC is contained within the ACM.

The DACMC and ACM require separate PMI procedures when the ACM is replaced.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > FCDIM

The FCDIM can be operated with the ignition in RUN, ACC, or OFF.

The FCDIM displays infotainment data received from various modules over the CAN. If the FCDIM loses the signal from any of these modules, only those specific displays will be inoperative. For more information, Refer to: Information and Entertainment System - System Operation and Component Description . See Module Network Input Messages - FCDIM.

The FCDIM requires PMI when it is replaced.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > FCIM

The FCIM audio functions can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods through which the customer interacts with the infotainment system.

The FCIM is separate from the ACM.

The FCIM requires PMI when it is replaced.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > GPSM

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent over the CAN to be displayed on the FCDIM.

The GPSM provides vehicle location information for identifying the vehicle location in the event of a collision.

The GPSM requires PMI when it is replaced.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > NOISE SUPPRESSION EQUIPMENT

The radio frequency suppression equipment reduces interference transmitted through the speakers by the engine, ignition, and electrical systems. When installing any new radio suppression equipment components, make sure that a good contact is made at all connections.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > STEERING WHEEL SWITCHES

The RH upper and lower steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH upper and lower steering wheel switches on the input circuit. When a switch is pressed, the voltage is routed through the corresponding resistor(s), through the return circuit, and then to ground through the SCCM. The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the

resistance of the specific switch pressed.

The steering wheel switch inputs are sent as network messages from the FCDIM to the APIM to control SYNC ® functions, or to the ACM to control audio functions.

The RH upper steering wheel switch inputs are sent as network messages from the SCCM to the ACM to control audio functions.

The RH lower steering wheel switch inputs are sent as network messages from the SCCM to the APIM to control SYNC ® functions, or to the ACM to control audio functions.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > SYNC® MICROPHONE

The SYNC ® microphone is powered by the APIM.

The SYNC ® microphone receives SYNC ® system voice commands and outgoing audio during a phone call. The monitored sounds are converted into analog signals by the microphone and sent to the APIM as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > USB PORTS/CABLES

Data is sent from the front USB port (USB1) to the APIM (USB cable with black end) through the front USB cable. Data is sent from the rear USB port (USB2) to the APIM (USB cable with grey end) through the rear USB cable.

The USB ports are part of the USB cables, and cannot be replaced separately.

The USB ports are powered through the USB cables by the APIM and can be used to power and/or charge a device if the device supports this feature. If the device does not support this feature, an external power source is needed in order to power the device.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM

For a SYNC ®-related concern, refer to the SYNC ® System Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: ACM

DTC	Description	Action

B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	GO to Pinpoint Test G

B1A56:21	Antenna: Signal Amplitude < Minimum	If DTC B1A56:21 sets after running the bezel diagnostic tests, DISREGARD this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail.

B1D19:49	Compact Disc Unit: Internal Electronic Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the self-test. If DTC B1D19:49 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC. This is normal operation.
U0100:00	Lost Communication With ECM/ PCM "A": No Sub Type Information	GO to Pinpoint Test AE
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AF
U0142:00	Lost Communication With Body Control Module "B": No Sub Type Information	GO to Pinpoint Test AG
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AI
U0237:00	Lost Communication With Digital Audio Control Module "C": No Sub Type Information	GO to Pinpoint Test AM
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AN
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AO
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AP
U201A:51	Control Module Main Calibration Data: Not Programmed	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data, REFER to: MODULE CONFIGURATION . See As-Built Data.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete ACM configuration.

		Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data, REFER to: MODULE CONFIGURATION . See As-Built Data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data, REFER to: MODULE CONFIGURATION . See As-Built Data.
U3000:41	Control Module: General Checksum Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:96	Control Module: Component Internal Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:96 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AQ
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AR

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: APIM

DTC	Description	Action
B1252:04	USB Port: System Internal Failure	GO to Pinpoint Test U
B1252:11	USB Port: Circuit Short To Ground	GO to Pinpoint Test U

B12B8:04	USB Port #2: System Internal Failure	GO to Pinpoint Test V
B12B8:11	USB Port #2: Circuit Short To Ground	GO to Pinpoint Test V
B1D79:01	Microphone Input: General Electrical Failure	GO to Pinpoint Test S
B1D79:11	Microphone Input: Circuit Short To Ground	GO to Pinpoint Test S
B1D79:12	Microphone Input: Circuit Short To Battery	GO to Pinpoint Test S
B1D79:13	Microphone Input: Circuit Open	GO to Pinpoint Test S
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AF
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test AH
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AI
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	GO to Pinpoint Test AK
U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AL
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AP
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the BCM. REFER to: Body Control Module (BCM) .* If no Diagnostic Trouble Codes (DTCs) are present in the BCM, DIAGNOSE the observable symptom.
U0423:00	Invalid Data Received From Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the IPC. REFER to: Instrumentation, Message Center and Warning Chimes .* If no Diagnostic Trouble Codes (DTCs) are present in the IPC, DIAGNOSE the observable symptom.

U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the RCM. REFER to: Airbag Supplemental Restraint System (SRS) .* If no Diagnostic Trouble Codes (DTCs) are present in the RCM, DIAGNOSE the observable symptom.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Programming .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Programming .
U3000:04	Control Module: System Internal Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:04 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:41 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:42 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U3000:88	Control Module: Bus Off	*NOTE: The module was unable to communicate on the network at a point in time. The fault is not currently present since the module had to communicate with the diagnostic scan tool to report this*

		DTC. **To avoid repeat network concerns:** INSPECT for damaged or corroded wiring at the APIM. Refer to Module Communications Network for schematic and connector information.CLEAR the DTC.WAIT at least 10 seconds.REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AQ
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AR

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: DACMC - 2.3L AND 5.2L ONLY

DTC	Description	Action
B116A:01	Handset Microphone: General Electrical Failure	GO to Pinpoint Test AB
B117A:01	Backup Microphone: General Electrical Failure	GO to Pinpoint Test AC
B13F5:01	Microphone 3: General Electrical Failure	GO to Pinpoint Test AD
U0100:00	Lost Communication With ECM/ PCM "A": No Sub Type Information	GO to Pinpoint Test AE
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AF
U0142:00	Lost Communication With Body Control Module "B": No Sub Type Information	GO to Pinpoint Test AG
U2024:00	Control Module Cal-Config Data: No Sub Type Information	This DTC sets due to an incorrect or incomplete DACMC configuration. Using a diagnostic scan tool, PERFORM the DACMC programming procedure using as-built data. For information on as-built data, REFER to: MODULE CONFIGURATION . See As-Built Data.

U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete DACMC configuration. Using a diagnostic scan tool, PERFORM the DACMC programming procedure using as-built data. For information on as-built data, REFER to: MODULE CONFIGURATION . See As-Built Data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete DACMC configuration. Using a diagnostic scan tool, PERFORM the DACMC programming procedure using as-built data. For information on as-built data, REFER to: MODULE CONFIGURATION . See As-Built Data.
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:92	Control Module: Performance or Incorrect Operation	GO to Pinpoint Test E
U3000:94	Control Module: Unexpected Operation	If an observable symptom is **not** present, DISREGARD this DTC. If an observable symptom is present, GO to Pinpoint Test E
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AQ
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AR

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: FCDIM

DTC	Description	Action
C1001:01	Vision System Camera: General Electrical Failure	REFER to: Parking Aid . See The Rear Video Is Inoperative.
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AF

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: SCCM

DTC	Description	Action
B1380:09	Steering Wheel Right Switch Pack: Component Failure	For a RH lower steering wheel switch concern, GO to Pinpoint Test X For a RH upper steering wheel switch concern, GO to Pinpoint Test Y
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	For a RH lower steering wheel switch concern, GO to Pinpoint Test X For a RH upper steering wheel switch concern, GO to Pinpoint Test Y
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	For a RH lower steering wheel switch concern, GO to Pinpoint Test X For a RH upper steering wheel switch concern, GO to Pinpoint Test Y
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Steering Wheel and Column Electrical Components . See SCCM DTC Chart.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHART: GENERAL AUDIO SYSTEM

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals, or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK . See Symptom Chart.
The RH lower steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test X
The RH upper steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test Y
The CD player is inoperative or does not operate correctly	CD ACM	INSPECT the CD for scratches, fingerprints, a loose paper label,

		incorrect format, or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
The speed compensated volume does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test C
The audio system does not operate correctly from the FCIM	Refer to the Pinpoint Test	GO to Pinpoint Test Z
The FCIM illumination is inoperative or does not dim	Illumination system concern FCIM	REFER to: Instrument Panel and Interior Switches Illumination .
The FCDIM is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test AA
The FCDIM illumination is inoperative or does not dim	Illumination system concern FCDIM	REFER to: Instrument Panel and Interior Switches Illumination . Symptom Chart: Instrument Cluster and Panel Illumination.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHART: SOUND QUALITY

Symptom Chart: Sound Quality

Condition	Possible Sources	Actions
Poor reception - AM/ FM	Refer to the Pinpoint Test	For the coupe, GO to Pinpoint Test A For the convertible, GO to Pinpoint Test B
Continuous seek or scan - AM/ FM	Refer to the Pinpoint Test	For the coupe, GO to Pinpoint Test A For the convertible, GO to Pinpoint Test B
A loud popping sound is heard when cycling the ignition	Refer to the Pinpoint Test	GO to Pinpoint Test D
A low frequency noise is heard from the audio system (2.3L and 5.2L)	Refer to the Pinpoint Test	GO to Pinpoint Test E

Poor sound quality or distorted sound from one or more speakers (not all speakers)	Refer to the Pinpoint Test	GO to Pinpoint Test F
No sound from all speakers	Refer to the Pinpoint Test	GO to Pinpoint Test G
The LHF door speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test H
The LHF A-pillar tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test I
The RHF A-pillar tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test J
The RHF door speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test K
The RHR quarter panel speaker is inoperative (convertible)	Refer to the Pinpoint Test	GO to Pinpoint Test L
The right parcel shelf speaker is inoperative (coupe)	Refer to the Pinpoint Test	GO to Pinpoint Test M
The left parcel shelf speaker is inoperative (coupe)	Refer to the Pinpoint Test	GO to Pinpoint Test N
The LHR quarter panel speaker is inoperative (convertible)	Refer to the Pinpoint Test	GO to Pinpoint Test O

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHART: SYNC® SYSTEM

Condition	Possible Sources	Actions
The SYNC ® system is inoperative (no response is received from phone, voice, and media inputs)	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test P
All APIM stereo outputs are inoperative or do not operate correctly, REFER to: Information and Entertainment System - System Operation and Component Description . See APIM for a list of stereo outputs.	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test Q
All APIM mono outputs are inoperative or do not operate correctly REFER to: Information and Entertainment System - System Operation	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test R

and Component Description . See APIM for a list of mono outputs.		
Voice recognition is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test S
During a phone call, no outgoing audio is heard on the outside device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test S
The SYNC ® steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test X
The audio input jack is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test T
The front USB port (USB1) is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test U
The rear USB port (USB2) is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test V
Unable to pair Bluetooth device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present, GO to Pinpoint Test W
An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	Customer's device compatibility	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . INSTRUCT the customer to review the device compatibility list. REFER to www.syncmyride.com. It is normal operation for unsupported or incompatible Bluetooth features to` be unavailable through the SYNC ® system. If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
SYNC ® AppLink™ is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: RESET THE SYNC MODULE [APIM] . * If the concern is still present, INSTRUCT

		the customer to review the mobile device platform, application, and application version compatibility list. REFER to owner.ford.com/how-tos/sync-technology/all/phone-setup/how-your-device-works-with-sync.html?version=sync. It is normal operation for incompatible mobile device platforms, applications, and application versions to be unavailable through SYNC ® AppLink™. * If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth only, GO to Pinpoint Test W * If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth and the front USB port, GO to Pinpoint Test U * If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth and the rear USB port, GO to Pinpoint Test V

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (COUPE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Charging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See AM/ FM Radio, RDS, AM/ FM Antenna Amplifier - Coupe, Antenna, and Noise Suppression Equipment.

Possible Sources

- No channel found in the selected RDS category
- Noise suppression equipment
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- AM/ FM on-glass antenna grid

- AM/ FM antenna coaxial cable
- Mounting surface corrosion
- AM/ FM antenna amplifier
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (COUPE) > PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (COUPE)

A1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING

Operate the audio system in AM/ FM mode.

Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to A2
No	GO to A4

A2 CHECK THE GENERATOR

Ignition OFF.

NOTE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.

Disconnect: Generator B+ Cable C102C .

Start the engine.

Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator. * For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Generator - 2.3L EcoBoost (201kW/273PS) .* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Generator - 3.7L Duratec (227kW/301PS) .* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Generator - 5.0L 32V Ti-VCT .

No	GO to A3

A3 CHECK THE IGNITION CIRCUITS

Ignition OFF.

Connect: Generator B+ Cable C102C .

Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings.

Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.

Are the ignition components OK?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.

No	REPAIR the ignition system as necessary.

A4 CHECK THE AUDIO SYSTEM RECEPTION WITH THE REAR WINDOW DEFROST GRID ACTIVATED

Operate the audio system in AM/ FM mode.

Check the reception with the rear window defrost grid activated and deactivated.

Is poor reception only present with the rear window defrost grid activated?

Yes	The grid line material is not embedded in the glass, but is baked onto the glass surface, and consequently can be scraped off. Carefully INSPECT and REPAIR the AM/ FM on-glass antenna grid. REFER to: Heated Window Grid Wire Repair .

No	* For a concern with only the AM radio, GO to A5* For a concern with only the FM radio, or with both the AM and FM radio, GO to A8

A5 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR CORRECT VOLTAGE

Ignition OFF.

Disconnect: AM/ FM Antenna Amplifier C4082 .

Ignition ON.

Operate the audio system in AM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4082-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A8

No	GO to A6

A6 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: ACM C240A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4082-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A7

No	REPAIR the circuit.

A7 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4082-1	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to A22

No	REPAIR the circuit.

A8 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: AM/ FM antenna coaxial cable from the ACM. REFER to: Audio Front Control Module (ACM) .

Disconnect: AM/ FM antenna inline coaxial cable connection underneath the center console. REFER to: Floor Console .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to A9

A9 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A10

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A10 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Front AM/ FM antenna coaxial cable core at the inline connection
AM/ FM antenna coaxial cable shield at the ACM	Ω	Front AM/ FM antenna coaxial cable shield at the inline connection

Are the resistances less than 1 ohm?

Yes	GO to A11

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A11 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to A12

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A12 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Connect: AM/ FM antenna inline coaxial cable connection underneath the center console.

Disconnect: AM/ FM antenna coaxial cable from the AM/ FM Antenna Amplifier. REFER to: Audio Unit Antenna Amplifier .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground

AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to A13

A13 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A14

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A14 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable core at the AM/ FM antenna amplifier (harness side)
AM/ FM antenna coaxial cable shield at the ACM	Ω	AM/ FM antenna coaxial cable shield at the AM/ FM antenna amplifier (harness side)

Are the resistances less than 1 ohm?

Yes	GO to A15

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A15 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to A16

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A16 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: AM/ FM antenna coaxial cable to the AM/ FM Antenna Amplifier.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	V	Ground
AM/ FM antenna coaxial cable shield at the ACM	V	Ground

Is any voltage present?

Yes	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

No	GO to A17

A17 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A18

No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

A18 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to A19

No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

A19 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A21

No	GO to A20

A20 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

Remove the AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna shield at the AM/ FM antenna amplifier (component side)	Ω	AM/ FM antenna amplifier base (unpainted surface on the mounting tab)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the AM/ FM antenna amplifier and/or vehicle mounting surface. REINSTALL the AM/ FM antenna amplifier and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna Amplifier .

No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

A21 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COMPONENTS

Disconnect and inspect the AM/ FM antenna amplifier connector for the AM/ FM antenna circuits coming from the AM/ FM on-glass antenna grid. REFER to: Audio Unit Antenna Amplifier .

Inspect the AM/ FM antenna circuits coming from the AM/ FM on-glass antenna grid.

Inspect the AM/ FM antenna circuit connections at the AM/ FM on-glass antenna grid.

Is any damage present on the AM/ FM antenna circuits or connections?

Yes	REPAIR or REPLACE as necessary.

No	GO to A22

A22 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST B : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (CONVERTIBLE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Charging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See AM/ FM Radio, RDS, Antenna, and Noise Suppression Equipment.

Possible Sources

- No channel found in the selected RDS category
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- Noise suppression equipment

- Mounting surface corrosion
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST B : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (CONVERTIBLE) > PINPOINT TEST B : POOR RECEPTION OR CONTINUOUS SEEK

OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (CONVERTIBLE)

B1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING

Operate the audio system in AM/ FM mode.

Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to B2

No	* For a concern with only the AM radio, GO to B4* For a concern with only the FM radio, or with both the AM and FM radio, GO to B7

B2 CHECK THE GENERATOR

Ignition OFF.

NOTE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.

Disconnect: Generator B+ Cable C102C .

Start the engine.

Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator.* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Generator - 2.3L EcoBoost (201kW/273PS) .* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Generator - 3.7L Duratec (227kW/301PS) * For vehicles with the 5.0L 32V Ti-VCT, REFER to: Generator - 5.0L 32V Ti-VCT .

No	GO to B3

B3 CHECK THE IGNITION CIRCUITS

Ignition OFF.

Connect: Generator B+ Cable C102C .

Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings.

Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken

conditions.

Are the ignition components OK?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.

No	REPAIR the ignition system as necessary.

B4 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR CORRECT VOLTAGE

Ignition OFF.

Disconnect: Antenna C4823 .

Ignition ON.

Operate the audio system in AM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B7

No	GO to B5

B5 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: ACM C240A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B6

No	REPAIR the circuit.

B6 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to B20

No	REPAIR the circuit.

B7 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: AM/ FM antenna coaxial cable from the ACM. REFER to: Audio Front Control Module (ACM) .

Disconnect: AM/ FM antenna inline coaxial cable connection underneath the center console. REFER to: Floor Console .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	V	Ground
AM/ FM antenna coaxial cable shield at the ACM	V	Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to B8

B8 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B9

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B9 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Front AM/ FM antenna coaxial cable core at the inline connection
AM/ FM antenna coaxial cable shield at the ACM	Ω	Front AM/ FM antenna coaxial cable shield at the inline connection

Are the resistances less than 1 ohm?

Yes	GO to B10

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B10 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to B11

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B11 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Connect: AM/ FM antenna inline coaxial cable connection underneath the center console.

Disconnect: AM/ FM antenna coaxial cable from the antenna unit. REFER to: Audio Unit Antenna .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to B12

B12 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B13

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit

	Antenna Cable .

B13 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable core at the antenna unit (harness side)
AM/ FM antenna coaxial cable shield at the ACM	Ω	AM/ FM antenna coaxial cable shield at the antenna unit (harness side)

Are the resistances less than 1 ohm?

Yes	GO to B14

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B14 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to B15

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B15 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: AM/ FM antenna coaxial cable at the antenna unit.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

No	GO to B16

B16 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B17

No	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

B17 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to B18

No	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

B18 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to B20

No	GO to B19

B19 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

Remove the AM/ FM antenna. REFER to: Audio Unit Antenna .

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna unit shield at the antenna unit (component side)	Ω	AM/ FM antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the RHR fender-mounted AM/ FM mast antenna base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna .

No	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

B20 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST C : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See MyKey ® Audio Operation and Speed Compensated Volume.

Possible Sources

- Speed compensated volume setting
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST C : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY > PINPOINT TEST C : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

C1 CHECK THE SPEEDOMETER OPERATION

Drive the vehicle and observe the speedometer.

Does the speedometer operate correctly?

Yes	GO to C2

No	REFER to: Instrumentation, Message Center and Warning Chimes . See Symptom Chart: Instrument Panel Cluster (IPC): The speedometer is inoperative

C2 CHECK THE SPEED COMPENSATED VOLUME SETTING

Turn the speed compensated volume off. Refer to the Owner's Literature.

Operate the audio system in AM/ FM mode.

Drive the vehicle at various speeds and observe the speaker volume.

Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature.

Operate the audio system in AM/ FM mode.

Drive the vehicle at various speeds and observe the speaker volume.

Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature.

No	GO to C3

C3 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 retrieved in any audio system module?

Yes	GO to Pinpoint Test AI

No	GO to C4

C4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST D : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Starting System for schematic and connector information.

Normal Operation and Fault Conditions

The ACM receives voltage on a start signal circuit when the ignition is in the START position, and mutes the audio signal output. This prevents voltage spikes from producing popping noises through the speakers. An open on this circuit between splice CS101 and the ACM could cause voltage spikes to produce popping noises through the speakers.

Possible Sources

- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST D : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION > PINPOINT TEST D : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

D1 CHECK THE START SENSE CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: ACM C240A .

Remove: BJB Starter Relay.

Disconnect:

PCM C1551B for vehicles with the 2.3L EcoBoost (201kW/273PS).

PCM C1381B for vehicles with the 3.7L Duratec (227kW/301PS).

PCM C175B for vehicles with the 5.0L 32V Ti-VCT.

PCM C175B for vehicles with the 5.2L.

For vehicles with the 2.3L EcoBoost (201kW/273PS), measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C1551B-62

For vehicles with the 3.7L Duratec (227kW/301PS), measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C1381B-1

For vehicles with the 5.0L 32V Ti-VCT, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C175B-1

For vehicles with the 5.2L, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C175B-1

Are the resistances less than 3 ohms?

Yes	GO to D2

No	REPAIR the circuit.

D2 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST E : A LOW FREQUENCY NOISE IS HEARD FROM THE AUDIO SYSTEM (2.3L AND 5.2L)

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3000:92	Control Module: Performance or Incorrect Operation	Set by the DACMC when a fault is detected with the ANC system when running the Active Diagnostics Test.

U3000:94	Control Module: Unexpected Operation	Set by the DACMC when a fault is detected with the ANC system.

Possible Source

- Improper ANC microphone installation or damage
- Wiring, terminals, or connectors
- DACMC

Visual Inspection and Diagnostic Pre-checks

- The ANC system may not be compatible with speakers, other audio system components, and audio system architectures not approved by Ford. Ensure that no modifications have been made to the audio system.
- Inspect the LHF, RHF, RHR, and LHR door midwoofer speaker locations for items that may be blocking the speaker sound output.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST E : A LOW FREQUENCY NOISE IS HEARD FROM THE AUDIO SYSTEM (2.3L AND 5.2L) > PINPOINT TEST E : A LOW FREQUENCY NOISE IS HEARD FROM THE AUDIO SYSTEM (2.3L AND 5.2L)

E1 CHECK FOR ANC (ACTIVE NOISE CONTROL) MICROPHONE DIAGNOSTIC TROUBLE CODES (DTCS) PRESENT IN THE DACMC (DIGITAL AUDIO CONTROL MODULE C) OR SPEAKER DIAGNOSTIC TROUBLE CODES (DTCS) PRESENT IN THE ACM (AUDIO FRONT CONTROL MODULE)

Using a diagnostic scan tool, perform the self-test for the following modules:

DACMC

ACM

Are any ANC microphone Diagnostic Trouble Codes (DTCs) recorded in the DACMC or any speaker Diagnostic Trouble Codes (DTCs) recorded in the ACM?

Yes	* For DACMC ANC microphone Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: DACMC.* For ACM speaker Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: ACM.

No	GO to E2

E2 VERIFY IF THE CONCERN IS RELATED TO THE ANC (ACTIVE NOISE CONTROL) SYSTEM

Close the luggage compartment lid and all doors.

Ignition ON.

Turn the audio system off.

Determine if an observable symptom is present.

Enable the ANC system by starting the vehicle.

Determine if an observable symptom is present.

Is an observable symptom only present when the engine is on?

Yes	GO to E3

No	* If an observable symptom is only present when the engine is off, REFER to: Information and Entertainment System . See DTC Charts or Symptom Charts to diagnose the audio system.* If an observable symptom is present with the engine off and the ignition on **and** when the engine is on, REFER to: DIAGNOSIS AND TESTING . See DTC Charts or Symptom Charts to diagnose the audio system.

E3 VERIFY IF THE CONCERN IS RELATED TO THE ANC (ACTIVE NOISE CONTROL) SYSTEM WITH THE VEHICLE'S WHEELS STATIONARY

With the vehicle stationary, take the gasoline engine through the RPM range and verify if there is an observable symptom present.

Determine if an observable symptom is present.

Disable the ANC system by opening the driver's door.

With the vehicle stationary, take the gasoline engine through the RPM range and verify if there is an observable symptom present.

Is an observable symptom present when the driver's door is open?

Yes	REFER to: Information and Entertainment System . See DTC Charts or Symptom Charts to diagnose the audio system.

No	GO to E4

E4 VERIFY IF THE CONCERN IS RELATED TO THE ANC (ACTIVE NOISE CONTROL) SYSTEM WITH THE VEHICLE'S WHEELS IN MOTION

Place the vehicle on a hoist.

Ensure all four wheels are off the ground and not in contact with anything.

Close the luggage compartment lid and all doors.

Enable the ANC system by starting the vehicle.

Ensure the audio system is off.

Take the gasoline engine through the RPM range in various gears and verify if there is an observable symptom present.

Disable the ANC system by opening the driver's door.

Take the gasoline engine through the RPM range in various gears and verify if there is an observable symptom present.

Is an observable symptom present when the driver's door is open?

Yes	REFER to: Information and Entertainment System . See DTC Charts or Symptom Charts to diagnose the audio system.

No	GO to E5

E5 CHECK THE VEHICLE SERVICE HISTORY

Check the vehicle service history for recent service actions related to the headliner or ANC microphones.

Have there been recent service actions with the headliner or ANC microphones?

Yes	For vehicles with the 2.3L EcoBoost (201kW/273PS), GO to E6 For vehicles with the 5.0L 32V Ti-VCT, GO to E8 For vehicles with the 3.7L Duratec (227kW/301PS), GO to E6

No	GO to E14

E6 INSPECT THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the overhead console ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

Is the microphone mounted correctly?

Yes	GO to E7

No	INSTALL the ANC microphone correctly. REFER to: Active Noise Control Microphone .

E7 INSPECT THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or overhead console as needed. REFER to: Active Noise Control Microphone .

No	GO to E12

E8 INSPECT THE LHF (LEFT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the LHF ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

The microphone mounting bezel is properly glued to the headliner with no gaps between the headliner and all four corners of the microphone mounting bezel.

Is the microphone mounted correctly?

Yes	GO to E9

No	INSTALL the ANC microphone and/or mounting bezel correctly. REFER to: Active Noise Control Microphone .

E9 INSPECT THE LHF (LEFT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or mounting bezel as needed. REFER to: Active Noise Control Microphone .

No	GO to E10

E10 INSPECT THE RHF (RIGHT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the LHF ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

The microphone mounting bezel is properly glued to the headliner with no gaps between the headliner and all four corners of the microphone mounting bezel.

Is the microphone mounted correctly?

Yes	GO to E11

No	INSTALL the ANC microphone and/or mounting bezel correctly. REFER to: Active Noise Control Microphone .

E11 INSPECT THE RHF (RIGHT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or mounting bezel as needed. REFER to: Active Noise Control Microphone .

No	GO to E12

E12 INSPECT THE REAR ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the rear ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

The microphone mounting bezel is properly glued to the headliner with no gaps between the headliner and all four corners of the microphone mounting bezel.

Is the microphone mounted correctly?

Yes	GO to E13

No	INSTALL the ANC microphone and/or mounting bezel correctly. REFER to: Active Noise Control Microphone .

E13 INSPECT THE REAR ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or mounting bezel as needed. REFER to: Active Noise Control

	Microphone .

No	GO to E14

E14 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST F : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners

- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST F : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) > PINPOINT TEST F : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

F1 ISOLATE THE ZONE

Operate the audio system using digital media such as a CD or MP3.

Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LHF, RHF, LHR, and RHR) of the vehicle to isolate the poor sound quality.

Locate and apply pressure to the trim panel(s) around the poor sound quality area in question.

Does applying pressure to a trim panel reduce or eliminate the audible noise?

Yes	REPAIR or REPLACE the trim panel as needed.

No	GO to F2

F2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)

Remove the trim panel to access the suspect speaker.

Operate the audio system using digital media such as a CD or MP3.

Validate where the poor sound quality area is located.

Check:

Trim panel for loose components (e.g. speaker grille) around the speaker area.

Trim panel joining components for missing or broken pieces.

Lock and handle mechanical parts for correct attachment.

Wire harnesses for correct routing.

Wire harness fasteners for correct attachment.

Water shield for correct placement (speaker air path not blocked).

Water shield for correct bonding to sheet metal.

Storage areas for loose items.

All child safety belt anchors (if equipped).

All safety belt retractors.

All speaker bracket fasteners and other fasteners are secured and tightened to specified torque.

Was the source of the noise located?

Yes	REPAIR or REPLACE any loose or broken component or fastener as needed.

No	GO to F3

F3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION

Inspect for watermarks.

Check the:

Cone

Magnet

Basket

Are any watermarks present on the speaker?

Yes	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation.

No	GO to F4

F4 ISOLATE SPEAKER TO VERIFY NOISE

Remove the suspect speaker from its location and leave the speaker connected to the harness.

Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact.

Operate the audio system using digital media such as a CD or MP3.

Is the noise still present in the suspect speaker?

Yes	INSTALL a new speaker for the one in question.

No	LOCATE the source of the noise and REPAIR as needed.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST G : NO SOUND FROM ALL SPEAKERS

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM, DACMC, and Audio Unit Amplifier.

To prevent voltage spikes from producing popping noises through the speakers when the ignition is in the START position for vehicles equipped with the 3.7L Duratec (227kW/301PS) engine, the BCM provides an Ignition Status CAN message and also applies voltage on the ACM start signal circuit. When the CAN message and/or voltage is received by the ACM, the audio signal output is muted. A short to voltage on this circuit causes the ACM output to be muted continuously, and will cause the warning chimes to only sound from the IPC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	Set by the ACM when a short to voltage is detected on the start signal circuit.

Possible Sources

- Wiring, terminals, or connectors
- Fuse
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM >

PINPOINT TESTS > PINPOINT TEST G : NO SOUND FROM ALL SPEAKERS > PINPOINT TEST G : NO SOUND FROM ALL SPEAKERS

G1 VERIFY THAT THE ACM (AUDIO FRONT CONTROL MODULE) PASSES THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the ACM pass the network test?

Yes	GO to G2

No	REFER to: MODULE COMMUNICATIONS NETWORK . See The ACM Does Not Respond To The Diagnostic Scan Tool.

G2 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) P0616 OR P0617

Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0616 or P0617 set in the PCM?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Starting System . See PCM DTC Chart.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Starting System . See PCM DTC Chart.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Starting System . See PCM DTC Chart.

No	GO to G3

G3 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Disconnect: BJB Starter Relay.

Disconnect: PCM C175B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to G4

G4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST H : THE LHF (LEFT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

The LHF door speaker and LHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical	Set by the ACM when a failure is

	Failure	detected on the LHF door or LHF A-pillar tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF A-pillar tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF A-pillar tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LHF door or LHF A-pillar tweeter speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST H : THE LHF (LEFT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE > PINPOINT TEST H : THE LHF (LEFT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

H1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

Ignition OFF.

Disconnect: LHF Door Speaker C523 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	$\tilde{V}$	C523-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH .

No	GO to H2

H2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Disconnect: LHF A-pillar Tweeter Speaker C9063 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	V	Ground
C523-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to H3

H3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	Ω	Ground
C523-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to H4

No	REPAIR the circuit in question.

H4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	Ω	C240A-22
C523-4	Ω	C240A-10

Are the resistances less than 3 ohms?

Yes	GO to H5

No	REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	Ω	C523-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to H6

No	REPAIR the circuit in question.

H6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST I : THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

The LHF door speaker and LHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF A-pillar tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF A-pillar tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF A-pillar tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LHF door or LHF A-pillar tweeter speaker circuits.

Possible Sources

I1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER

Ignition OFF.

Disconnect: LHF A-pillar Tweeter Speaker C9063 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9063-1		C9063-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF A-pillar tweeter speaker. REFER to: A-Pillar Speaker .

No	GO to I2

I2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Disconnect: LHF Door Speaker C523 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9063-1		Ground
C9063-3		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to I3

I3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9063-1	Ω	Ground
C9063-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to I4

No	REPAIR the circuit in question.

I4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9063-1	Ω	C240A-22
C9063-3	Ω	C240A-10

Are the resistances less than 3 ohms?

Yes	GO to I5

No	REPAIR the circuit in question.

I5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead

C9063-1	Ω	C9063-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to I6

No	REPAIR the circuit in question.

I6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST J : THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

The RHF door speaker and RHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF A-pillar tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF A-pillar tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF A-pillar tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RHF door or RHF A-pillar tweeter speaker circuits.

Possible Sources

J1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER

Ignition OFF.

Disconnect: RHF A-Pillar Tweeter Speaker C9065 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C9065-1		C9065-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF A-pillar tweeter speaker. REFER to: A-Pillar Speaker .

No	GO to J2

J2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Disconnect: RHF Door Speaker C612 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1		Ground
C9065-3		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to J3

J3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1	Ω	Ground
C9065-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to J4

No	REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1	Ω	C240A-23
C9065-3	Ω	C240A-11

Are the resistances less than 3 ohms?

Yes	GO to J5

No	REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1	Ω	C9065-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to J6

No	REPAIR the circuit in question.

J6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST K : THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

The RHF door speaker and RHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF A-pillar tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF A-pillar tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF A-pillar tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RHF door or RHF A-pillar tweeter speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST K : THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE > PINPOINT TEST K : THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

K1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER

Ignition OFF.

Disconnect: RHF Door Speaker C612 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C612-1		C612-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH .

No	GO to K2

K2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Disconnect: RHF A-Pillar Tweeter Speaker C9065 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C612-1		Ground
C612-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to K3

K3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C612-1	Ω	Ground
C612-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to K4

No	REPAIR the circuit in question.

K4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C612-1	Ω	C240A-23
C612-4	Ω	C240A-11

Are the resistances less than 3 ohms?

Yes	GO to K5

No	REPAIR the circuit in question.

K5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C612-1	Ω	C612-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to K6

No	REPAIR the circuit in question.

K6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST L : THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the RHR quarter panel speaker circuits.
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHR quarter panel speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHR quarter panel speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the ACM when an open is detected on the RHR quarter panel speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST L : THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE) > PINPOINT TEST L : THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

L1 CHECK THE AUDIO SIGNAL TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER

Ignition OFF.

Disconnect: RHR Quarter Panel Speaker C396 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C396-1		C396-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHR quarter panel speaker. REFER to: Rear Quarter Panel Speaker .

No	GO to L2

L2 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1		Ground
C396-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to L3

L3 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1	Ω	Ground
C396-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to L4

No	REPAIR the circuit in question.

L4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1	Ω	C240A-24
C396-4	Ω	C240A-12

Are the resistances less than 3 ohms?

Yes	GO to L5

No	REPAIR the circuit in question.

L5 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1	Ω	C396-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to L6

No	REPAIR the circuit in question.

L6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST M : THE RIGHT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the right parcel shelf speaker circuits.
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the right parcel shelf speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the right parcel shelf speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the ACM when an open is detected on the right parcel shelf speaker circuits.

Possible Sources

- Speaker

- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST M : THE RIGHT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE) > PINPOINT TEST M : THE RIGHT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

M1 CHECK THE AUDIO SIGNAL TO THE RIGHT PARCEL SHELF SPEAKER

Ignition OFF.

Disconnect: Right Parcel Shelf Speaker C485 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1		C485-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new right parcel shelf speaker. REFER to: Parcel Shelf Speaker .

No	GO to M2

M2 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1		Ground
C485-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to M3

M3 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	Ω	Ground
C485-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to M4

No	REPAIR the circuit in question.

M4 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	Ω	C240A-24
C485-4	Ω	C240A-12

Are the resistances less than 3 ohms?

Yes	GO to M5

No	REPAIR the circuit in question.

M5 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	Ω	C485-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to M6

No	REPAIR the circuit in question.

M6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST N : THE LEFT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical	Set by the ACM when a failure is

	Failure	detected on the left parcel shelf speaker circuits.
B1A04:11	Speaker #4: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the left parcel shelf speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the left parcel shelf speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the ACM when an open is detected on the left parcel shelf speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST N : THE LEFT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE) > PINPOINT TEST N : THE LEFT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

N1 CHECK THE AUDIO SIGNAL TO THE LEFT PARCEL SHELF SPEAKER

Ignition OFF.

Disconnect: Left Parcel Shelf Speaker C484 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	$\tilde{V}$	C484-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new left parcel shelf speaker. REFER to: Parcel Shelf Speaker .

No	GO to N2

N2 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1		Ground
C484-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to N3

N3 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	Ω	Ground
C484-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to N4

No	REPAIR the circuit in question.

N4 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	Ω	C240A-21
C484-4	Ω	C240A-9

Are the resistances less than 3 ohms?

Yes	GO to N5

No	REPAIR the circuit in question.

N5 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	Ω	C484-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to N6

No	REPAIR the circuit in question.

N6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio

	Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST O : THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ACM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical Failure	Set by the ACM when a failure is detected on the LHR quarter panel speaker circuits.
B1A04:11	Speaker #4: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHR quarter panel speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHR quarter panel speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the ACM when an open is detected on the LHR quarter panel speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TESTS > PINPOINT TEST O : THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE) > PINPOINT TEST O : THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

O1 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER

Ignition OFF.

Disconnect: LHR Quarter Panel Speaker C395 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1		C395-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR quarter panel speaker. REFER to: Rear Quarter Panel Speaker .

No	GO to O2

O2 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1		Ground
C395-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to O3

O3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1	Ω	Ground
C395-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to O4

No	REPAIR the circuit in question.

O4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1	Ω	C240A-21
C395-4	Ω	C240A-9

Are the resistances less than 3 ohms?

Yes	GO to O5

No	REPAIR the circuit in question.

O5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1	Ω	C395-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to O6

No	REPAIR the circuit in question.

O6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST P : THE SYNC ® SYSTEM IS INOPERATIVE (NO RESPONSE IS RECEIVED FROM PHONE, VOICE, AND MEDIA INPUTS)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio Input Jack Mode, Bluetooth Mode, SYNC ® System, USB Audio Mode, Voice Recognition, APIM, Audio Input Jack, SYNC ® Microphone, and USB Port.

Possible Sources

- Customer's device
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST P : THE SYNC ® SYSTEM IS INOPERATIVE (NO RESPONSE IS RECEIVED FROM PHONE, VOICE, AND MEDIA INPUTS) > PINPOINT

TEST P : THE SYNC ® SYSTEM IS INOPERATIVE (NO RESPONSE IS RECEIVED FROM PHONE, VOICE, AND MEDIA INPUTS)

P1 VERIFY THAT THE APIM (SYNC MODULE) PASSES THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the APIM pass the network test?

Yes	GO to P2

No	REFER to: MODULE COMMUNICATIONS NETWORK . See The APIM Does Not Respond To The Diagnostic Scan Tool.

NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, deletes any Bluetooth devices paired with the SYNC ® system.

P2 CHECK THE SYNC ® SYSTEM INPUTS FOR FUNCTIONALITY

Connect: MIT 105-00120.

Using the MIT 105-00120, test the audio output for the SYNC ® audio sources (Bluetooth, USB, audio input jack) using the VOICE steering wheel switch to enter each mode.

Do all of the SYNC ® inputs function correctly?

Yes	The SYNC ® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the SYNC ® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	GO to P3

NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, deletes any Bluetooth devices paired with the SYNC ® system.

P3 RESET THE APIM (SYNC MODULE) AND RECHECK SYNC ® SYSTEM OPERATION

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Connect: MIT 105-00120.

Using the MIT 105-00120, test the audio output for the SYNC ® audio sources (Bluetooth, USB, audio input jack) using the VOICE steering wheel switch to enter each mode.

Do all of the SYNC ® inputs function correctly?

Yes	The SYNC ® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the SYNC ® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	* If there is a concern with one or more, but not all SYNC ® audio sources, REFER to: Information and Entertainment System . See Symptom Chart: SYNC ® System.* If there is a concern with the VOICE steering wheel switch, GO to Pinpoint Test X * If all inputs are inoperative, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Q : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Bluetooth Mode, Composite Audio-Video Input Mode, SD Card Mode, SYNC ® System, USB Mode, ACM, APIM, and Media Hub.

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Q : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST Q : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Q1 VERIFY THE OPERATION OF THE SYNC ® SYSTEM AUDIO SOURCES

Connect: MIT 105-00120.

Using the MIT 105-00120 and RCA Adapter 105-00121, test the audio output for the SYNC ® audio sources (Bluetooth, USB ports, and RCA jacks).

Is there poor quality, distorted, or no sound from all SYNC ® audio sources?

Yes	GO to Q2

No	* If there is a concern with one or more, but not all SYNC ® audio sources, REFER to: Information and Entertainment System . See Symptom Chart: SYNC ® System.* If all SYNC ® audio sources operate correctly with the MIT 105-00120 and RCA Adapter 105-00121, the concern is with the customer's device.

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

Q2 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

Play an audio file through the audio system using a SYNC ® audio source (Bluetooth, USB ports, RCA jacks).

While back-probing ACM C240B , measure the AC voltage.

Positive Lead	Measurement / Action	Negative Lead
C240B-12	V~	C240B-25
C240B-13	V~	C240B-26

Is a fluctuating AC voltage present?

Yes	GO to Q8

No	GO to Q3

Q3 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12		Ground
C240B-13		Ground
C240B-25		Ground
C240B-26		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to Q4

Q4 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	Ω	Ground
C240B-13	Ω	Ground
C240B-25	Ω	Ground
C240B-26	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Q5

No	REPAIR the circuit in question.

Q5 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	Ω	C2383-23
C240B-13	Ω	C2383-25
C240B-25	Ω	C2383-24

C240B-26	Ω	C2383-26

Are the resistances less than 3 ohms?

Yes	GO to Q6

No	REPAIR the circuit in question.

Q6 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	Ω	C240B-13
C240B-12	Ω	C240B-25
C240B-12	Ω	C240B-26
C240B-13	Ω	C240B-25
C240B-13	Ω	C240B-26
C240B-25	Ω	C240B-26

Are the resistances greater than 10, 000 ohms?

Yes	GO to Q7

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

Q7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

- Corrosion (clean module pins or install new connectors or terminals)
- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q8 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST R : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

All APIM Mono Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SYNC ® System, Voice Recognition, ACM, and APIM.

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST R : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST R : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

R1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Does the SYNC ® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct operation of the audible prompt feature. REFER to "SYNC ® Voice Recognition Feature" in the Owner's Literature.

No	GO to R2

R2 CHECK THE OPERATION OF THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES

Operate the audio system in AM/ FM mode.

Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to R3

No	GO to Pinpoint Test X

NOTE: This pinpoint test step directs testing circuits using a back-probe method.

Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

R3 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

Operate the audio system in AM/ FM mode.

While back-probing ACM C240B , measure the AC voltage while repeatedly operating the VOICE steering wheel switch.

Positive Lead	Measurement / Action	Negative Lead
C240B-8		C240B-21

Is a fluctuating AC voltage present each time the VOICE steering wheel switch is operated?

Yes	GO to R9

No	GO to R4

R4 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8		Ground
C240B-21		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to R5

R5 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8	Ω	Ground
C240B-21	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to R6

No	REPAIR the circuit in question.

R6 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8	Ω	C2383-3
C240B-21	Ω	C2383-4

Are the resistances less than 3 ohms?

Yes	GO to R7

No	REPAIR the circuit in question.

R7 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8	$\tilde{V}$	C240B-21

Is the resistance greater than 10, 000 ohms?

Yes	GO to R8

No	REPAIR the circuit in question.

R8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

R9 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST S : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Voice Recognition.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D79:01	Microphone Input: General Electrical Failure	Set by the APIM when a microphone is not detected during the on-demand self-test.
B1D79:11	Microphone Input: Circuit Short To Ground	Set by the APIM when a short to ground is detected on the microphone circuits.
B1D79:12	Microphone Input: Circuit Short To Battery	Set by the APIM when a short to battery voltage is detected on the microphone circuits.
B1D79:13	Microphone Input: Circuit Open	Set by the APIM when an open is detected on the microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Microphone
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM >

PINPOINT TESTS > PINPOINT TEST S : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE > PINPOINT TEST S : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

S1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Does the SYNC ® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to S3

No	GO to S2

S2 CHECK THE OPERATION OF THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES

Operate the audio system in AM/ FM mode.

Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to Pinpoint Test R

No	GO to Pinpoint Test X

S3 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C2383-5		Ground
C2383-6		Ground
C2383-29		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to S4

S4 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: Microphone (Overhead Console) C930 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-5	Ω	Ground
C2383-6	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to S5

No	REPAIR the circuit in question.

S5 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-5	Ω	C930-9
C2383-6	Ω	C930-10
C2383-29	Ω	C930-8

Are the resistances less than 3 ohms?

Yes	GO to S6

No	REPAIR the circuit in question.

S6 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-5	Ω	C2383-6
C2383-5	Ω	C2383-29
C2383-6	Ω	C2383-29

Is the resistance greater than 10, 000 ohms?

Yes	GO to S7

No	REPAIR the circuit in question.

S7 ISOLATE THE MICROPHONE

Connect: APIM C2383 .

Install a new microphone. REFER to: Microphone .

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Speak a command to test the voice recognition for normal operation.

Is the voice recognition functioning correctly?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative microphone.

No	GO to S8

S8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure they seat and latch correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST T : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio Input Jack Mode and Audio Input Jack.

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Audio input jack
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST T : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST T : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

T1 RESET THE APIM (SYNC MODULE) AND RECHECK SYNC ® SYSTEM OPERATION

Remove any devices connected to the USB port and audio input jack.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using the audio input jack.

Is the audio output OK for the audio input jack?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	GO to T2

T2 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio Input Jack C2362.

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2362-1		Ground
C2362-3		Ground
C2362-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to T3

T3 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2362-1	Ω	Ground
C2362-3	Ω	Ground
C2362-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to T4

No	REPAIR the circuit. TEST the system for normal operation.

T4 CHECK THE AUDIO INPUT JACK CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2362-1	Ω	C2383-47
C2362-3	Ω	C2383-46
C2362-4	Ω	C2383-45

Are the resistances less than 3 ohms?

Yes	GO to T5

No	REPAIR the circuit in question. TEST the system for normal operation.

T5 ISOLATE THE AUDIO INPUT JACK

Connect: APIM C2383 .

Install a new audio input jack. REFER to: Audio Input Jack .

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using the audio input jack.

Is the audio output OK for the audio input jack?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative audio input jack.

No	GO to T6

T6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST U : THE FRONT USB (UNIVERSAL SERIAL BUS) PORT (USB1) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SYNC ® AppLink™, USB Audio Mode, and USB Port.

The MIT 105-00120 is powered by the USB port

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:04	USB Port: System Internal Failure	Set by the APIM when a failure is detected on the front USB port (USB1) internal APIM circuitry.
B1252:11	USB Port: Circuit Short To Ground	Set by the APIM when a short to ground or over-current (overloaded) condition is detected

		on the front USB port/cable (USB1). This can be caused by a fault in the USB port/cable or customer's USB device.

Possible Sources

- Customer's device
- Front USB port/cable
- USB port/cable connection
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST U : THE FRONT USB (UNIVERSAL SERIAL BUS) PORT (USB1) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST U : THE FRONT USB (UNIVERSAL SERIAL BUS) PORT (USB1) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

U1 CHECK THE FRONT USB (UNIVERSAL SERIAL BUS) PORT FOR POWER OUTPUT

Ignition ON.

Connect: MIT 105-00120 to the front USB port.

Does the MIT 105-00120 power on from the front USB port?

Yes	GO to U2
No	GO to U3

U2 RESET THE APIM (SYNC MODULE) AND RECHECK THE SYNC ® SYSTEM OPERATION

Remove any devices connected to the USB ports and audio input jack.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Ignition ON.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120 to the front USB port.

Select USB mode on the MIT.

Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 105-00120 connected to the front USB port?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	GO to U3

U3 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:04 OR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11

Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

Perform the APIM self-test.

Is DTC B1252:04 or DTC B1252:11 present?

Yes	GO to U4

No	GO to U6

U4 INSPECT THE FRONT USB (UNIVERSAL SERIAL BUS) CABLE AND APIM (SYNC MODULE)

Ignition OFF.

Disconnect: Front USB Cable from the APIM (USB cable with black end). REFER to: SYNC Module [APIM] .

Inspect the APIM connector port and both ends of the front USB cable for damage. Remove any debris.

Is any damage present?

Yes	* For the front USB cable, INSTALL a new front USB port/cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .* For the APIM, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	GO to U5

U5 CHECK THE FRONT USB (UNIVERSAL SERIAL BUS) PORT FOR FUNCTIONALITY

Connect: Front USB Cable to the APIM.

Connect: MIT 105-00120 to the front USB port.

Select USB mode on the MIT.

Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 105-00120 connected to the front USB port?

Yes	The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly.

No	GO to U6

U6 ISOLATE THE FRONT USB (UNIVERSAL SERIAL BUS) PORT/CABLE

Install a new front USB port/cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

Connect: MIT 105-00120 to the front USB port.

Select USB mode on the MIT.

Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 105-00120 connected to the front USB port?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative front USB cable.

No	GO to U7

U7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM

	HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST V : THE REAR USB (UNIVERSAL SERIAL BUS) PORT (USB2) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SYNC ® AppLink™, USB Audio Mode, and USB Port.

The MIT 105-00120 is powered by the USB port

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B12B8:04	USB Port #2: System Internal Failure	Set by the APIM when a failure is detected on the rear USB port (USB2) internal APIM circuitry.
B12B8:11	USB Port #2: Circuit Short To Ground	Set by the APIM when a short to ground or over-current (overloaded) condition is detected on the rear USB port/cable (USB2). This can be caused by a fault in the USB port/cable or customer's USB device.

Possible Sources

- Customer's device
- Rear USB port/cable
- USB port/cable connection
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST V : THE REAR USB (UNIVERSAL SERIAL BUS) PORT (USB2) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST V : THE REAR USB (UNIVERSAL SERIAL BUS) PORT (USB2) IS INOPERATIVE

OR DOES NOT OPERATE CORRECTLY

V1 CHECK THE REAR USB (UNIVERSAL SERIAL BUS) PORT FOR POWER OUTPUT

Ignition ON.

Connect: MIT 105-00120 to the rear USB port.

Does the MIT 105-00120 power on from the rear USB port?

Yes	GO to V2

No	GO to V3

V2 RESET THE APIM (SYNC MODULE) AND RECHECK SYNC ® SYSTEM OPERATION

Remove any devices connected to the USB ports and audio input jack.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Ignition ON.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120 to the rear USB port.

Select USB mode on the MIT.

Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 105-00120 connected to the rear USB port?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	GO to V3

V3 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B12B8:04 OR DTC (DIAGNOSTIC TROUBLE CODE) B12B8:11

Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

Perform the APIM self-test.

Is DTC B12B8:04 or DTC B12B8:11 present?

Yes	GO to V4

No	GO to V6

V4 INSPECT THE REAR USB (UNIVERSAL SERIAL BUS) CABLE AND APIM (SYNC MODULE)

Ignition OFF.

Disconnect: Rear USB Cable from the APIM (USB cable with grey end). REFER to: SYNC Module [APIM] .

Inspect the APIM connector port and both ends of the rear USB cable for damage. Remove any debris.

Is any damage present?

Yes	* For the rear USB cable, INSTALL a new rear USB port/cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .* For the APIM, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	GO to V5

V5 CHECK THE REAR USB (UNIVERSAL SERIAL BUS) PORT FOR FUNCTIONALITY

Connect: USB Cable to the APIM.

Connect: MIT 105-00120 to the rear USB port.

Select USB mode on the MIT.

Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 105-00120 connected to the rear USB port?

Yes	The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly.

No	GO to V6

V6 ISOLATE THE REAR USB (UNIVERSAL SERIAL BUS) PORT/CABLE

Install a new rear USB port/cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

Connect: MIT 105-00120 to the rear USB port.

Select USB mode on the MIT.

Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 105-00120 connected to the rear USB

port?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.

No	GO to V7

V7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST W : UNABLE TO PAIR BLUETOOTH DEVICE

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Bluetooth Mode and SYNC ® System.

Possible Sources

- Incompatible Bluetooth device
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST W : UNABLE TO PAIR BLUETOOTH DEVICE > PINPOINT TEST W : UNABLE TO PAIR BLUETOOTH DEVICE

NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, deletes any Bluetooth devices paired with the SYNC ® system.

W1 CHECK THE BLUETOOTH CONNECTION

Connect: MIT 105-00120.

Using the MIT 105-00120, connect to the SYNC ® system using Bluetooth. Follow the tool instructions.

Using a diagnostic scan tool, view the APIM Parameter Identifications (PIDs).

Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN).

Do the Parameter Identifications (PIDs) both read "Yes"?

Yes	The SYNC ® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device.

No	GO to W2

W2 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST X : THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Steering Wheel Switch Function and Steering Wheel Switches.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH lower or RH upper steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the RH lower or RH upper steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the RH lower or RH upper steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM >

PINPOINT TESTS > PINPOINT TEST X : THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST X : THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

X1 CHECK THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each RH lower steering wheel switch.

Voice (SW_VOICE)

Mute (SW_MUTE)

Volume + (SW_VOLUP)

Volume - (SW_VOLDOWN)

Seek-/Phone (SW_SEEKMINUS)/(SW_PHONE)

Seek+/End (SW_SEEKPLUS)/(SW_END)

Do the PID values agree with the switch positions?

Yes	GO to X10

No	* If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH lower steering wheel switch. REFER to: Steering Wheel Multifunction Switch .* If all PID values are incorrect or always read one particular switch position, GO to X2

X2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the IPC.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 set in the IPC?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes . See DTC Chart: IPC.

No	GO to X3

X3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Remove the driver airbag. REFER to: Driver Airbag .

Disconnect: RH Lower Steering Wheel Switch C2367 .

Disconnect: LH Lower Steering Wheel Switch C2366 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	V	C2367-4
C2367-3	V	C2367-4
C2367-5	V	C2367-4

Is approximately 5 volts present?

Yes	INSTALL a new RH lower steering wheel switch. REFER to: Steering Wheel Multifunction Switch .

No	GO to X4

X4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: Clockspring C218B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	Ground

C2367-3	Ω	Ground
C2367-4	Ω	Ground
C2367-5	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to X5

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

X5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C218B-6
C2367-3	Ω	C218B-7
C2367-4	Ω	C218B-16
C2367-5	Ω	C218B-15

Are the resistances less than 3 ohms?

Yes	GO to X6

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

X6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C2367-3
C2367-2	Ω	C2367-4
C2367-2	Ω	C2367-5
C2367-3	Ω	C2367-4
C2367-3	Ω	C2367-5
C2367-4	Ω	C2367-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to X7

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

X7 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

Connect: Clockspring C218B .

Disconnect: Clockspring C218C.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	Ground
C2367-3	Ω	Ground
C2367-4	Ω	Ground
C2367-5	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to X8

No	INSTALL a new clockspring. REFER to: Clockspring .

X8 CHECK THE CLOCKSPRING FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C218C-5
C2367-3	Ω	C218C-7
C2367-4	Ω	C218C-10
C2367-5	Ω	C218C-8

Are the resistances less than 3 ohms?

Yes	GO to X9

No	INSTALL a new clockspring. REFER to: Clockspring .

X9 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C2367-3
C2367-2	Ω	C2367-4
C2367-2	Ω	C2367-5
C2367-3	Ω	C2367-4
C2367-3	Ω	C2367-5
C2367-4	Ω	C2367-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to X10

No	INSTALL a new clockspring. REFER to: Clockspring .

X10 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM >

PINPOINT TESTS > PINPOINT TEST Y : THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Steering Wheel Switch Function and Steering Wheel Switches.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH lower or RH upper steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the RH lower or RH upper steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the RH lower or RH upper steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Y : THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST Y : THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Y1 CHECK THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each RH upper steering wheel switch.

Up (R_CURS_UP)

Left (R_CURS_LFT)

Down (R_CURS_DWN)

Right (R_CURS_RGT)

Ok (R_CURS_OK)

Do the PID values agree with the switch positions?

Yes	GO to Y13

No	* If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH upper steering wheel switch. REFER to: Steering Wheel Multifunction Switch .* If all PID values are incorrect or always read one particular switch position, GO to Y2

Y2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

Ignition ON.

Using a diagnostic scan tool, clear the DTCs from the IPC.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 set in the IPC?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes . See DTC Chart: IPC.

No	GO to Y3

Y3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Remove the driver airbag. REFER to: Driver Airbag .

Disconnect: RH Upper Steering Wheel Switch C2999 .

Disconnect: LH Upper Steering Wheel Switch C2998 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2		C2999-3

Is approximately 5 volts present?

Yes	INSTALL a new RH upper steering wheel switch. REFER to: Steering Wheel Multifunction Switch .

No	GO to Y4

Y4 CHECK THE AIRBAG HARNESS FOR A SHORT TO GROUND

Disconnect: Inline C2606.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Y5

No	INSTALL a new driver airbag. REFER to: Driver Airbag .

Y5 CHECK THE AIRBAG HARNESS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2606-2
C2999-3	Ω	C2606-4

Are the resistances less than 3 ohms?

Yes	GO to Y6

No	INSTALL a new driver airbag. REFER to: Driver Airbag .

Y6 CHECK THE AIRBAG HARNESS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to Y7

No	INSTALL a new driver airbag. REFER to: Driver Airbag .

Y7 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

Connect: Inline C2606.

Disconnect: Clockspring C218B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Y8

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

Y8 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C218B-14
C2999-3	Ω	C218B-16

Are the resistances less than 3 ohms?

Yes	GO to Y9

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

Y9 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to Y10

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

Y10 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

Connect: Clockspring C218B .

Disconnect: Clockspring C218C.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Y11

No	INSTALL a new clockspring. REFER to: Clockspring .

Y11 CHECK THE CLOCKSPRING FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C218C-6

C2999-3	Ω	C218C-10

Are the resistances less than 3 ohms?

Yes	GO to Y12

No	INSTALL a new clockspring. REFER to: Clockspring .

Y12 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to Y13

No	INSTALL a new clockspring. REFER to: Clockspring .

Y13 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Z : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE)

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio Extended Play, FCDIM, and FCIM.

Possible Sources

- Wiring, terminals, or connectors
- FCIM
- FCDIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Z : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE) > PINPOINT TEST Z : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE)

Z1 VERIFY THAT THE ACM (AUDIO FRONT CONTROL MODULE) AND FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) PASS THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the ACM and FCDIM pass the network test?

Yes	GO to Z2

No	* If the ACM failed the network test, REFER to: MODULE COMMUNICATIONS NETWORK . See The ACM Does Not Respond To The Diagnostic Scan Tool.* If the FCDIM failed the network test, REFER to: MODULE COMMUNICATIONS NETWORK . See The FCDIM Does Not Respond To The Diagnostic Scan Tool.

Z2 CHECK FOR LOST COMMUNICATION DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

FCDIM

Is DTC U0184:00 or U0257:00 present?

Yes	* For DTC U0184:00, GO to Pinpoint Test AL * For DTC U0257:00, GO to Pinpoint Test AP

No	GO to Z3

Z3 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) PARAMETER IDENTIFICATIONS (PIDS) FOR FCIM (FRONT CONTROLS INTERFACE MODULE) BUTTON INPUTS

Ignition ON.

Using a diagnostic scan tool, view the FCDIM Parameter Identifications (PIDs).

NOTE: The button Parameter Identifications (PIDs) begin with the prefix "BTN_" and end with the indicated button. For example, PID BTN_EJECT correlates with the eject button on the FCIM.

Monitor the FCDIM Parameter Identifications (PIDs) while pressing each FCIM button.

Do the PID values agree with the button presses?

Yes	GO to Z10

No	* If one or more, but not all PID values are incorrect or always read one particular switch position, GO to Z9* If all PID values are incorrect or always read one particular switch position, GO to Z4

Z4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) VOLTAGE SUPPLY

Ignition OFF.

Disconnect: FCIM C2474.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C2474-1		Ground
C2474-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to Z5

No	REPAIR the circuit.

Z5 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2474-1		C2474-6

Is the voltage greater than 11 volts?

Yes	GO to Z6

No	REPAIR the circuit.

Z6 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: FCDIM C2123 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2474-5		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to Z7

Z7 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2474-5	Ω	C2123-8

Is the resistance less than 3 ohms?

Yes	GO to Z8

No	REPAIR the circuit.

Z8 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2474-5	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to Z9

No	REPAIR the circuit.

Z9 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connector.

Repair:

- Corrosion (clean module pins or install new connectors or terminals)
- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) . If the concern is still present, GO to Z10

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Z10 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCDIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AA : THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See FCDIM.

Possible Source

- FCDIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AA : THE FCDIM (FRONT CONTROL/DISPLAY

INTERFACE MODULE) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST AA : THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AA1 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition ON.

Turn the audio system on.

Press each FCIM button and check for proper operation.

Does each FCIM button perform the correct operation?

Yes	GO to AA2

No	GO to Pinpoint Test Z

AA2 VERIFY THAT THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) PASSES THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the FCDIM pass the network test?

Yes	GO to AA3

No	REFER to: MODULE COMMUNICATIONS NETWORK . See The FCDIM Does Not Respond To The Diagnostic Scan Tool.

AA3 OBSERVE THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) DISPLAY

Observe the FCDIM display while carrying out various operations using the FCIM controls.

Is the FCDIM screen completely inoperative or blank?

Yes	GO to AA6

No	GO to AA4

AA4 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) DISPLAY SEGMENTS

Using a diagnostic scan tool, view the FCDIM Parameter Identifications (PIDs).

Command all of the LCD segments on using the FCDIM active command LCD_SEG (All LCD Segments).

Do all of the FCDIM segments illuminate?

Yes	GO to AA5

No	GO to AA6

AA5 CHECK FOR LOST COMMUNICATION DIAGNOSTIC TROUBLE CODES (DTCS) SET IN THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE)

Ignition ON.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any lost communication Diagnostic Trouble Codes (DTCs) (U-codes) present in the FCDIM?

Yes	REFER to: Information and Entertainment System . See DTC Chart: FCDIM.

No	GO to AA6

AA6 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCDIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AB : B116A:01

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B116A:01	Handset Microphone: General Electrical Failure	Set by the DACMC when a failure is detected on the overhead console ANC microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Overhead console ANC microphone
- DACMC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AB : B116A:01 > PINPOINT TEST AB : B116A:01

AB1 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1		Ground
C240B-14		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to AB2

AB2 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1	Ω	Ground
C240B-14	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AB3

No	REPAIR the circuit in question.

AB3 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR AN OPEN

Disconnect: Overhead Console ANC Microphone C9222 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1	Ω	C9222-1
C240B-14	Ω	C9222-2

Are the resistances less than 3 ohms?

Yes	GO to AB4

No	REPAIR the circuit in question.

AB4 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1	Ω	C240B-14

Is the resistance greater than 10, 000 ohms?

Yes	GO to AB5

No	REPAIR the circuit in question.

AB5 ISOLATE THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE

Connect: ACM C240B .

Install a new overhead console ANC microphone. REFER to: Active Noise Control Microphone .

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the DACMC.

Ignition OFF.

Ignition ON.

Wait at least 5 seconds

Using a diagnostic scan tool, perform the DACMC self-test.

Is DTC B116A:01 still present in the DACMC?

Yes	GO to AB6

No	The system is operating correctly at this time. The concern was caused by an inoperative ANC microphone.

AB6 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AC : B117A:01

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B117A:01	Backup Microphone: General Electrical Failure	Set by the DACMC when a failure is detected on the LHR quarter panel ANC microphone circuits (convertible only).

Possible Sources

- Wiring, terminals, or connectors
- LHR quarter panel ANC microphone
- DACMC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AC : B117A:01 > PINPOINT TEST AC : B117A:01

AC1 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2		Ground
C240B-15		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to AC2

AC2 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	Ω	Ground
C240B-15	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AC3

No	REPAIR the circuit in question.

AC3 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR AN OPEN

Disconnect: LHR Quarter Panel ANC Microphone C4828 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	Ω	C4828-1
C240B-15	Ω	C4828-2

Are the resistances less than 3 ohms?

Yes	GO to AC4

No	REPAIR the circuit in question.

AC4 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	Ω	C240B-15

Is the resistance greater than 10, 000 ohms?

Yes	GO to AC5

No	REPAIR the circuit in question.

AC5 ISOLATE THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE

Connect: ACM C240B .

Install a new LHR quarter panel ANC microphone. REFER to: Active Noise Control Microphone .

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the DACMC.

Ignition OFF.

Ignition ON.

Wait at least 5 seconds

Using a diagnostic scan tool, perform the DACMC self-test.

Is DTC B117A:01 still present in the DACMC?

Yes	GO to AC6

No	The system is operating correctly at this time. The concern was caused by an inoperative ANC microphone.

AC6 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AD : B13F5:01

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F5:01	Backup Microphone: General Electrical Failure	Set by the DACMC when a failure is detected on the rear center headliner (coupe) or RHR quarter panel (convertible) ANC microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Rear center headliner (coupe) or RHR quarter panel (convertible) ANC microphone
- DACMC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AD : B13F5:01 > PINPOINT TEST AD : B13F5:01

AD1 CHECK THE REAR CENTER HEADLINER (COUPE) OR RHR (RIGHT-HAND REAR)

QUARTER PANEL (CONVERTIBLE) ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-7	V	Ground
C240B-20	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to AD2

AD2 CHECK THE REAR CENTER HEADLINER (COUPE) OR RHR (RIGHT-HAND REAR) QUARTER PANEL (CONVERTIBLE) ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-7	Ω	Ground
C240B-20	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AD3

No	REPAIR the circuit in question.

AD3 CHECK THE REAR CENTER HEADLINER (COUPE) OR RHR (RIGHT-HAND REAR) QUARTER PANEL (CONVERTIBLE) ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR AN OPEN

Disconnect:

Rear Center Headliner C9223 for the coupe.

RHR Quarter Panel C4829 for the convertible.

For the coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-7	Ω	C9223-1
C240B-20	Ω	C9223-2

For the convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-7	Ω	C4829-1
C240B-20	Ω	C4829-2

Are the resistances less than 3 ohms?

Yes	GO to AD4

No	REPAIR the circuit in question.

AD4 CHECK THE REAR CENTER HEADLINER (COUPE) OR RHR (RIGHT-HAND REAR) QUARTER PANEL (CONVERTIBLE) ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-7	Ω	C240B-20

Is the resistance greater than 10, 000 ohms?

Yes	GO to AD5

No	REPAIR the circuit in question.

AD5 ISOLATE THE REAR CENTER HEADLINER (COUPE) OR RHR (RIGHT-HAND REAR) QUARTER PANEL (CONVERTIBLE) ANC (ACTIVE NOISE CONTROL) MICROPHONE

Connect: ACM C240B .

Install a new rear center headliner (coupe) or RHR quarter panel (convertible) ANC microphone. REFER to: Active Noise Control Microphone .

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the DACMC.

Ignition OFF.

Ignition ON.

Wait at least 5 seconds

Using a diagnostic scan tool, perform the DACMC self-test.

Is DTC B13F5:01 still present in the DACMC?

Yes	GO to AD6

No	The system is operating correctly at this time. The concern was caused by an inoperative ANC microphone.

AD6 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AE : U0100:00

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/ PCM "A": No Sub Type Information	Set by the ACM, DACMC, and GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

Possible Source

- PCM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AE : U0100:00 > PINPOINT TEST AE : U0100:00

AE1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify if there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AE2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 set in the ACM, DACMC, or GPSM?

Yes	GO to AE3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the PCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the PCM?

Yes	* For DTC P0562 or P0563 set for vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See PCM DTC Chart.* For DTC P0562 or P0563 set for vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See PCM DTC Chart.* For DTC P0562 or P0563 set for vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See PCM DTC Chart.

No	GO to AE4

AE4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

DACMC

GPSM

Are low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM, DACMC, or GPSM?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AE5

AE5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0100:00 set in more than one module?

Yes	GO to AE6

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System.* If there is no observable symptom, the

	system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the PCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM.For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Powertrain Control Module (PCM) . For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Powertrain Control Module (PCM) . For vehicles with the 5.0L 32V Ti-VCT, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM or GPSM?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AK4

AK4 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AL : U0184:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the APIM and FCDIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

Possible Source

- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AL : U0184:00 > PINPOINT TEST AL : U0184:00

AL1 VERIFY THE CUSTOMER'S CONCERN

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AL2

No	The system is operating normally at this time. This DTC may have been set due to high network traffic or an intermittent fault condition.

AL2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0184:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184:00 set in the APIM?

Yes	GO to AL3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AL3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM or APIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AL4

AL4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AM : U0237:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0237:00	Lost Communication With Digital Audio Control Module "C": No Sub Type Information	Set by the ACM when network messages are missing from the DACMC for more than 5 seconds with the ignition in RUN.

Possible Source

- DACMC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AM : U0237:00 > PINPOINT TEST AM : U0237:00

AM1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AM2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AM2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0237:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0237:00 set in the ACM?

Yes	GO to AM3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AM3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

DACMC

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM or DACMC?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AM4

AM4 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AN : U0253:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM, FCDIM, and FCIM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

Possible Source

- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AN : U0253:00 > PINPOINT TEST AN : U0253:00

AN1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AN2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AN2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:00 set in the ACM or FCIM?

Yes	GO to AN3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AN3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, or FCIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AN4

AN4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0253:00 set in the both the ACM and FCIM?

Yes	GO to AN5

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System.* If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AN5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AO : U0256:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM and FCDIM when network messages are missing from the FCIM for more than 5 seconds with the ignition in RUN.

Possible Source

- FCIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AO : U0256:00 > PINPOINT TEST AO : U0256:00

AO1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AO2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AO2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:00 set in the ACM or APIM?

Yes	GO to AO3

No	The system is operating correctly at this time. The DTC may have been set due to high

	network traffic or an intermittent fault condition.

AO3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, or FCIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AO4

AO4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0256:00 set in both the ACM and the APIM?

Yes	GO to AO5

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System, to diagnose the observed symptom.* If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AO5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AP : U0257:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	Set by the ACM and APIM when Infotainment Controller Area Network (I-CAN) network messages are missing from the FCDIM for more than 5 seconds with the ignition in RUN.

Possible Source

- FCDIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AP : U0257:00 > PINPOINT TEST AP : U0257:00

AP1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AP2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AP2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0257:00 set in the ACM or APIM?

Yes	GO to AP3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AP3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

FCDIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, or FCDIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test AQ * For DTC U3003:17, GO to Pinpoint Test AR

No	GO to AP4

AP4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0257:00 set in both the ACM and APIM?

Yes	GO to AP5

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System.* If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AP5 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCDIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AQ : U3003:16

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM, APIM, DACMC, FCDIM, FCIM, and GPSM when the supply voltage falls below 10 volts for at least 10 seconds

		during normal operation or for more than 250 milliseconds during the self-test.

Possible Sources

- Previous low battery voltage
- Wiring, terminals, or connectors
- ACM
- APIM
- DACMC
- FCIM
- GPSM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AQ : U3003:16 > PINPOINT TEST AQ : U3003:16

AQ1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:16

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.

Wait at least 15 seconds.

Using a diagnostic scan tool, repeat the self-test for the module in question.

Is DTC U3003:16 still present?

Yes	GO to AQ2

No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

AQ2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

Using a diagnostic scan tool, perform the PCM self-test

Are any voltage-related Diagnostic Trouble Codes (DTCs) set in the PCM?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See PCM DTC Chart.* For vehicles with the 3.7L Duratec

	(227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See PCM DTC Chart.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See PCM DTC Chart.

No	GO to AQ3

AQ3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Check the battery condition and verify that the battery is fully charged. REFER to: BATTERY, MOUNTING AND CABLES . See Battery Condition Test.

Is the battery OK and fully charged?

Yes	GO to AQ4

No	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See Symptom Chart to diagnose an under voltage condition.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See Symptom Chart to diagnose an under voltage condition.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See Symptom Chart to diagnose an under voltage condition.

AQ4 CHECK THE MODULE VOLTAGE SUPPLY

Ignition OFF.

Measure and record the voltage at the battery.

Disconnect the audio system module setting DTC U3003:16.

Ignition ON.

Measure the voltage between the module setting DTC U3003:16 and ground.

For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		Ground

For the DACMC, measure:

Positive Lead	Measurement / Action	Negative Lead

C240A-1		Ground

For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26		Ground

For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		Ground

Is the voltage within 0.2 volts of the recorded battery voltage?

Yes	GO to AQ5

No	REPAIR the circuit for high resistance.

AQ5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY

Measure the voltage at the suspect module.

For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		C240A-13

For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		C2383-37

For the DACMC, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		C240A-13

For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26		C2402A-1

For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		C2398-6

Is the suspect module voltage greater than 11 volts?

Yes	* For the ACM, GO to AQ6* For the APIM, GO to AQ7* For the DACMC, GO to AQ8* For the FCIM, GO to AQ9* For the GPSM, GO to AQ10

No	REPAIR the circuit for high resistance.

AQ6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AQ7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AQ8 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AQ9 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AQ10 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AR : U3003:17

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM, APIM, DACMC, FCDIM, FCIM, and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

Possible Sources

- ACM
- APIM
- DACMC
- FCIM
- GPSM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AR : U3003:17 > PINPOINT TEST AR : U3003:17

AR1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the self-test for the module in question.

Is DTC U3003:17 present?

Yes	GO to AR2

No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

AR2 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN MULTIPLE MODULES

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are high voltage Diagnostic Trouble Codes (DTCs) such as B1676, P0563, or U3003:17 set in more than one module?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See Symptom Chart to diagnose an overvoltage condition.

No	GO to AR3

AR3 CHECK THE BATTERY VOLTAGE

Turn off all interior lights, exterior lights, and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See Symptom Chart to diagnose an overvoltage condition.

No	* For the ACM, GO to AR4* For the APIM, GO to AR5* For the DACMC, GO to AR6* For the FCIM, GO to AR7* For the GPSM, GO to AR8

AR4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio

	Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AR5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AR6 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AR7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AR8 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

GENERAL PROCEDURES > BEZEL DIAGNOSTICS

Check

1.

> *WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

Refer to: Health and Safety Precautions .

> *NOTE: If equipped with satellite radio, this procedure can be used to obtain the SIRIUS 12-digit ESN. If there is a concern with one of the following components and bezel diagnostics and channel 0 cannot be accessed, obtain the ESN by referencing the label attached to the ACM.*

- Inoperative (blank or does not power on) FCDIM (if equipped)
- Inoperative (blank or does not power on) FDIM (if equipped)
- Inoperative FCIM
- Inoperative steering wheel switch (if applicable)

Refer to appropriate article to diagnose the inoperative component.

> *NOTE: If there is a concern with one of the following components and Bezel Diagnostics cannot be accessed, obtain the module part number by referencing the label attached to the module.*

- Inoperative (blank or does not power on) FCDIM (if equipped)
- Inoperative (blank or does not power on) FDIM (if equipped)

- Inoperative FCIM
- Inoperative steering wheel switch (if applicable)

Refer to appropriate article to diagnose the inoperative component.

2.

Ignition ON.

3.

Operate the audio system in AM/ FM mode.

* For vehicles with a CD player, press and hold the EJECT button, and within 1 second, press and hold the SEEK UP button. If supported, the Speaker Walk-Around Test (All Speaker Test) will begin, and the display will indicate each speaker as it is tested.
* For vehicles without a CD player, simultaneously press and hold the steering wheel SEEK UP switch and FCIM TUNE UP button. If supported, the Speaker Walk-Around Test (All Speaker Test) will begin, and the display will indicate each speaker as it is tested.

4.

Once the Speaker Walk-Around Test (All Speaker Test) is complete, the following information is available:

Applicability	Menu	Submenu
Only for vehicles with a FCDIM.	AHU Diagnostics (AHU refers to the ACM)	Software Part Number
		Hardware Part Number
		Calibration Part Number
		Radio Signal Strength (may need to press OK for signal strength to display)
		SIRIUS ESN
		All Speaker Test
	EFP Diagnostics or EFP/ICP Diagnostics (EFP refers to the FCIM that communicates on the CAN; ICP refers to the FCIM that communicates on the LIN)	Software Part Number
		Hardware Part Number
		Calibration Part Number
		Exit Diagnostics
	MFD Diagnostics - if supported (MFD refers to the FCDIM)	Software Part Number
		Hardware Part Number
		Calibration Part Number
		Display Test (if supported)

Only for vehicles with FDIM touchscreen.	APIM Diagnostics	Part Numbers
		Software Versions
		Configuration Status
		GPS Information
		Tones Test
		Rear Tones Test (if equipped)
		Touch Screen Calibration
		Touch Screen Activation Test
		Display Test Pattern
		RGB Pixel Test
		Exit Diagnostics
	AHU Diagnostics (AHU refers to the ACM)	AHU Part Numbers / SIRIUS ESN or can also appear as SIRIUS ESN (also displays AHU part numbers)
		Radio Signal Strength
		Speaker Walk-Around Test (if not equipped with audio DSP module)
		Exit Diagnostics
	DSP Diagnostics (if equipped)	DSP Part Numbers
		Speaker Walk-Around Test
		Exit Diagnostics
	EFP Diagnostics - if equipped (EFP refers to the FCIM that communicates on the CAN)	EFP Part Numbers
		Exit Diagnostics

5.

To exit the bezel diagnostics, press the FCIM on/off button or select "Exit Diagnostics."

GENERAL PROCEDURES > RESET THE SYNC MODULE [APIM]

Programming

*NOTE: An APIM Reset consists of an APIM software cold boot and a SYNC ® system Master Reset. It may **not** be necessary to perform a Master Reset after performing a cold boot if the concern is resolved.*

1.

Ignition OFF.

2.

Remove any devices connected to the USB port(s), audio input jack/socket (if equipped), SD slot (if equipped), or RCA jacks (if equipped).

3.

Ignition ON.

4.

Cold boot the APIM software by simultaneously pressing and holding the FCIM power and seek up buttons for 8 seconds, and then releasing.

> *NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any Bluetooth devices paired with the SYNC ® system. For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased. For vehicles with a TCU, any devices paired with the MyFord ® Mobile or MyLincoln Mobile™ phone application will be deleted.*

5.
Perform a Master Reset. If necessary, refer to "Master Reset" in the Owner's Literature.

6.

Verify system function using the MIT 105-00120 to test the audio output for the USB port(s), audio input jack/socket (if equipped), and Bluetooth. If equipped, test the audio output for the RCA jacks using RCA Adapter 105-00121.

> *NOTE: If the concern remains after completing the APIM Reset procedure, advise the customer to power their device off and back on for a simple reboot. In some cases, if possible, the device's battery may also need to be removed and re-installed to complete a reboot. Delete SYNC ® from the device's Bluetooth menu prior to re-pairing the phone to the SYNC ® system. If necessary, the customer can also perform a Master Clear, Master Reset, or Factory Data Reset on their device following the manufacturer's instructions in the device's owner's manual and/or website. Customer devices may affect the operation of SYNC ® and this should be understood to prevent unnecessary diagnosis or repairs to the system.*

7.
If a concern is still present, return to the Symptom Charts.

GENERAL PROCEDURES > SYNC MODULE [APIM] PROGRAMMING

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable

Activation

1.

> *WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

Refer to: Health and Safety Precautions .

2.

If a new APIM is being installed, install the new APIM before carrying out the following procedure. Refer to: SYNC Module [APIM] .

3.

This programming procedure deletes any phones that were paired with the SYNC ® system.

To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.

A file of approximately 80 megabytes (MB) needs to be downloaded from the online database for the programming. Allow extra time for the file to download.

The diagnostic scan tool is required.

Ensure that the IDS version and patch software levels are up to date.

4.

Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5.

Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6.

Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7.

Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the vehicle's USB port. Use the General Equipment: SYNC

USB 2.0 A Male to A Male Cable

8.

Close the IDS software program.

9.

Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - Overview .

10.

Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.

Run OASIS using "Read VIN & DTCs."

If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.

11.

From the OASIS tab, select the "SYNC" button. The Last Recorded State - Software is displayed.

NOTE: There are 3 types of APIM programming available:

12.

Standard - Used to update the APIM and any currently installed Applications to the latest software levels.

Custom - Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB or FSA.

Module Replacement - Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).

13.

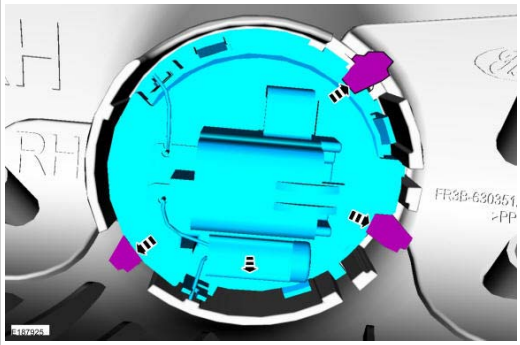
Scroll to the bottom of the screen, select 1 of the 3 options (Standard, Custom, or Module Replacement), and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), and Consumer Interface Processor (CIP) software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.

*NOTE: Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

14.
Select the "Program SYNC" button to begin the APIM programming process.

15.

Follow the diagnostic scan tool on-screen directions. After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."



REMOVAL AND INSTALLATION > A-PILLAR SPEAKER > REMOVAL

1.

Remove the A-Pillar trim panel. Refer to: A-Pillar Trim Panel - Convertible . Refer to: A-Pillar Trim Panel - Coupe .

2.

Release the tabs and remove the A-Pillar speaker.

REMOVAL AND INSTALLATION > A-PILLAR SPEAKER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > ACTIVE NOISE CONTROL MICROPHONE > REMOVAL

Front Microphone

1.

Remove the overhead console. Refer to: Overhead Console .

2.

Remove the ANC microphone.

1.

Release the tab.

2.

Disconnect the electrical connector.

Rear Microphone: Coupe

3.

Lower the headliner. Refer to: Headliner - Lowering .

4.

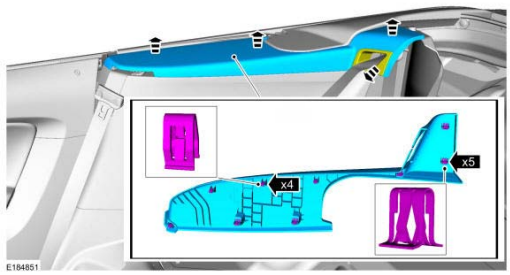
1.

Release the tabs and remove the ANC microphone.

2.

Disconnect the electrical connector.

Convertible



5.

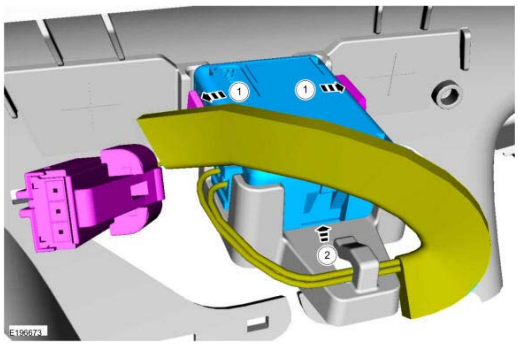
Remove the rear seat backrest. Refer to: Rear Seat Backrest - Convertible .

NOTE: RH side shown LH side similar.

6.
Position the safety belt guide aside, release the clips and remove the upper loadspace trim panel.

Disconnect the electrical connector.

NOTE: RH side shown LH side similar.



7.

1.

Release the tabs.

2.

Remove the ANC microphone.

REMOVAL AND INSTALLATION > ACTIVE NOISE CONTROL MICROPHONE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO FRONT CONTROL MODULE (ACM) > REMOVAL

NOTE: Eject any media from the ACM. If a disc fails to eject, do not forcibly remove the disc from the ACM.

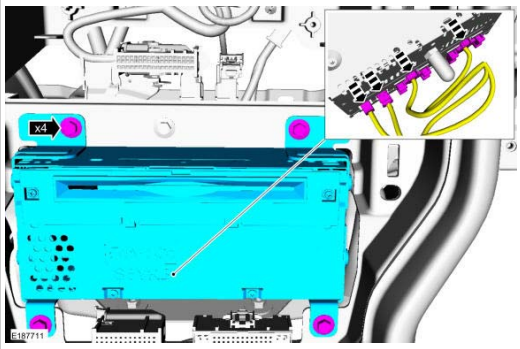
NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the ACM following the on-screen instructions.

2.

Remove the FCIM. Refer to: Front Controls Interface Module (FCIM) .



3.

Remove the bolts and the ACM.

Disconnect the electrical connectors.

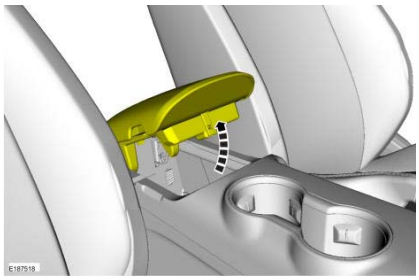
Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > AUDIO FRONT CONTROL MODULE (ACM) > INSTALLATION

1.

To install, reverse the removal procedure.

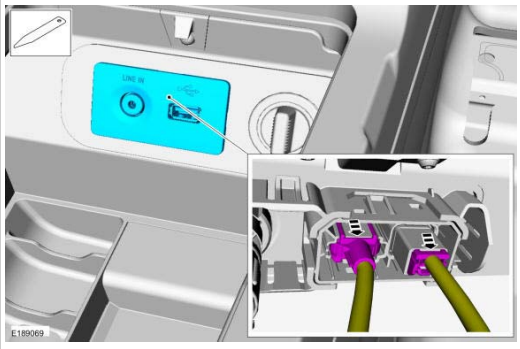


> *NOTE: This step is only necessary if replacing the component.*

2.
Using a diagnostic scan tool, complete the PMI process for the ACM following the on-screen instructions.

REMOVAL AND INSTALLATION > AUDIO INPUT JACK > REMOVAL

1.

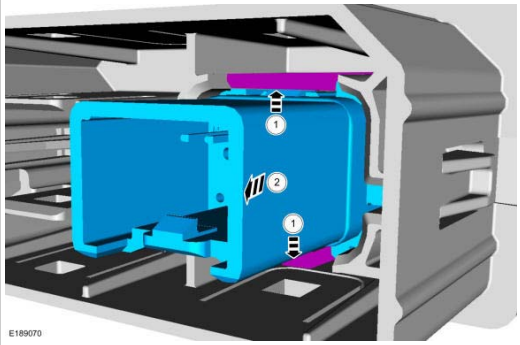


Open the floor console lid.

2.

Remove the audio input jack bezel.

Disconnect the electrical connectors.



3.

1.

Release the tabs.

2.

Remove the audio input jack.

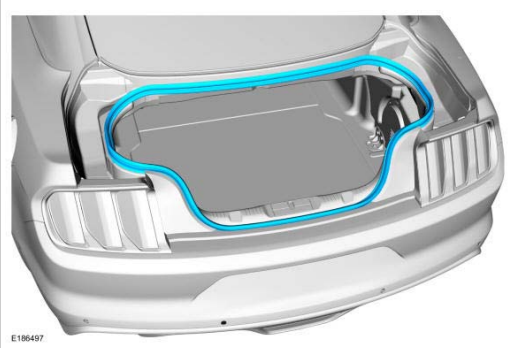
REMOVAL AND INSTALLATION > AUDIO INPUT JACK > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA > REMOVAL

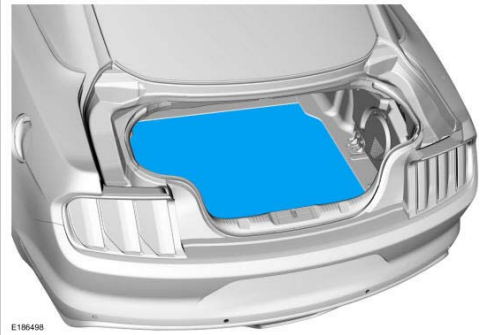
Coupe



NOTE: The audio unit antenna is part of the rear window glass.

1.
Replace the rear window glass. Refer to: Fixed Glass .

Convertible



2.

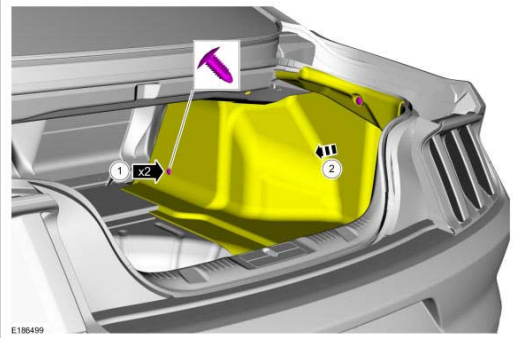
Remove the luggage compartment weatherstrip.

3.

Remove the spare tire cover.

4.

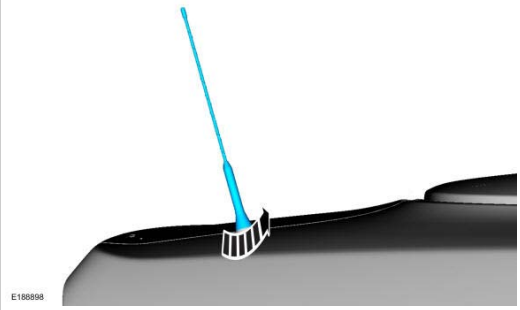
If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .



5.

1.

Remove the pin-type retainers.

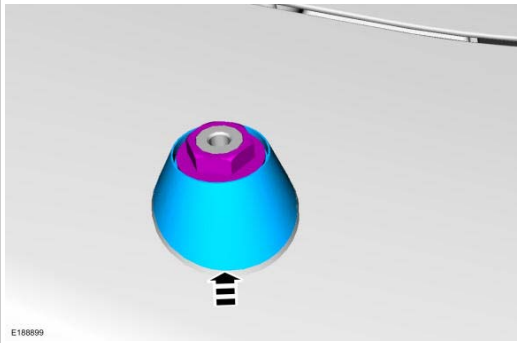


2.

Position aside the RH luggage compartment side trim panel.

6.

Remove the audio unit antenna mast.



7.

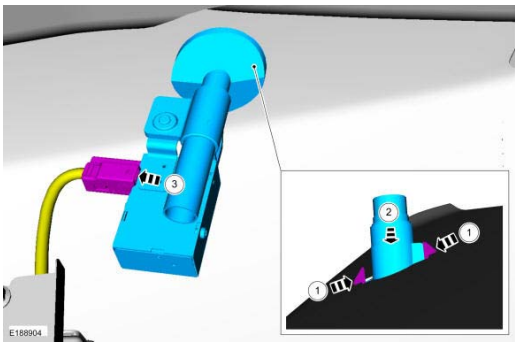
Remove the audio unit antenna mounting nut and the antenna base.

Torque

: 48 lb.in (5.4 Nm)

8.

1.



Press the tabs inward.

2.

Remove the audio unit antenna.

3.

Disconnect the electrical connector.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA > INSTALLATION

1.

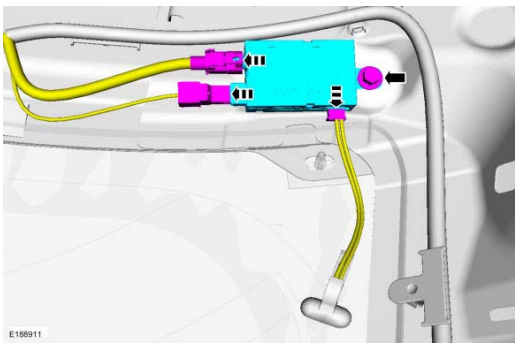
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA AMPLIFIER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Lower the headliner. Refer to: Headliner - Lowering .



2.

Remove the bolt and the audio unit antenna amplifier.

Disconnect the electrical connectors.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA AMPLIFIER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA CABLE > REMOVAL

NOTE: The original equipment AM/FM antenna cable(s) are part of the wiring harness and cannot be removed. This procedure refers to replacement of the cable(s) only by overlaying the cable(s).

NOTE: The AM/FM antenna cable inline connection is located under the floor console.

Coupe: Front Cable

1.

Remove the floor console. Refer to: Floor Console .

2.

Remove the ACM. Refer to: Audio Front Control Module (ACM) .

Coupe: Rear Cable

3.

Remove the floor console. Refer to: Floor Console .

4.

Lower the headliner. Refer to: Headliner - Lowering .

Convertible

5.

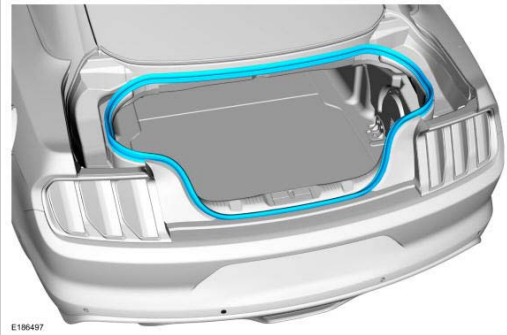
Remove the floor console. Refer to: Floor Console .

6.

Remove the ACM. Refer to: Audio Front Control Module (ACM) .

Convertible: Rear Cable

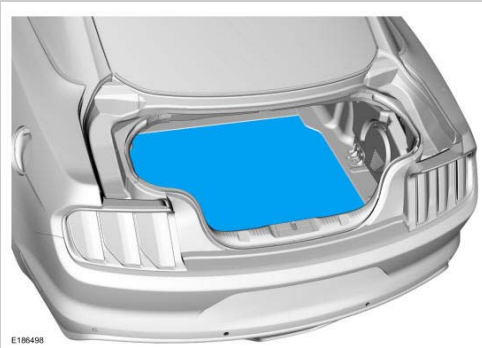
7.



Remove the floor console. Refer to: Floor Console .

8.

Remove the loadspace trim panel. Refer to: Loadspace Trim Panel - Convertible .



9.

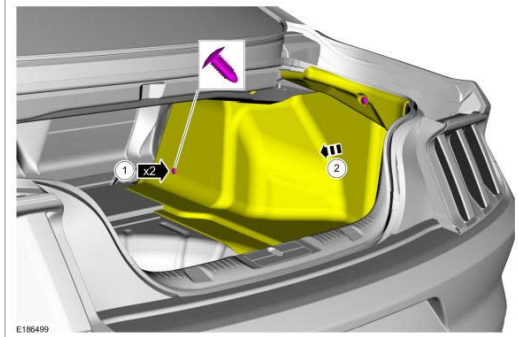
Remove the luggage compartment weatherstrip.

10.

Remove the spare tire cover.

11.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .



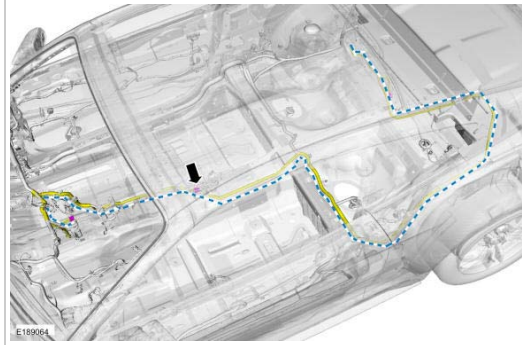
12.

1.

Remove the pin-type retainers.

2.

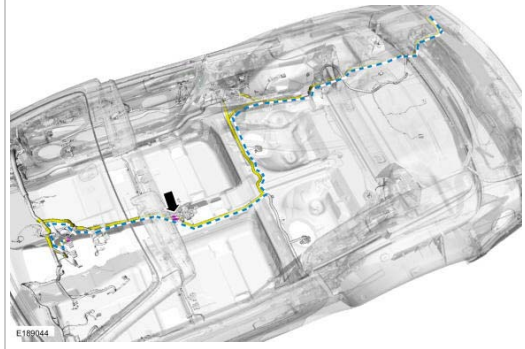
Position aside the RH luggage compartment side trim panel.



REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA CABLE > INSTALLATION

Coupe

1.



Overlay the new AM/FM antenna cable on the vehicle wiring harness following the routing shown below. Secure the new AM/FM antenna cable to the wiring harness with tape or zip ties as necessary.

Convertible

2.

Overlay the new AM/FM antenna cable on the vehicle wiring harness following the routing shown below. Secure the new AM/FM antenna cable to the wiring harness with tape or zip ties as necessary.

REMOVAL AND INSTALLATION > FRONT CONTROL DISPLAY INTERFACE MODULE (FCDIM) > REMOVAL

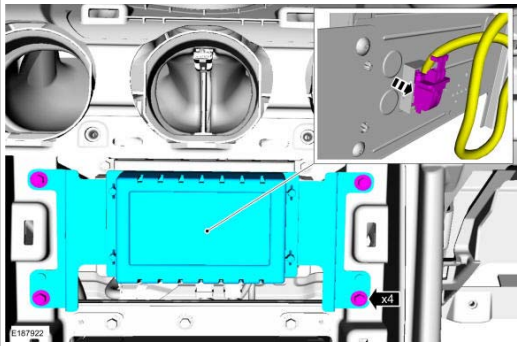
NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the FCDIM following the on-screen instructions.

2.

Remove the FCIM.



3.

Remove the bolts and the FCDIM.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > FRONT CONTROL DISPLAY INTERFACE MODULE (FCDIM) > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only necessary if replacing the component.

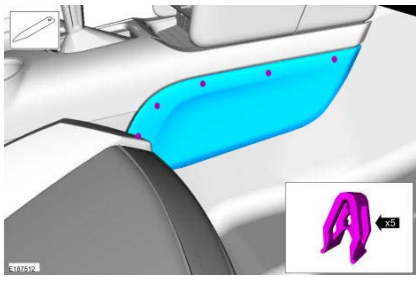
2.
Using a diagnostic scan tool, complete the PMI process for the FCDIM following the on-screen instructions.

REMOVAL AND INSTALLATION > FRONT CONTROLS INTERFACE MODULE (FCIM)

Special Tool(s) / General Equipment

Interior Trim Remover

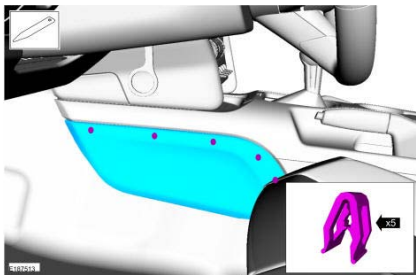
REMOVAL AND INSTALLATION > FRONT CONTROLS INTERFACE MODULE (FCIM) > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the FCIM following the on-screen instructions.

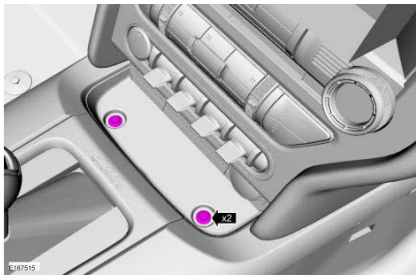


2.

Release the clips and remove the floor console RH side trim panel. Use the General Equipment: Interior Trim Remover

3.

Release the clips and the floor console LH side trim panel. Use the General Equipment: Interior Trim Remover



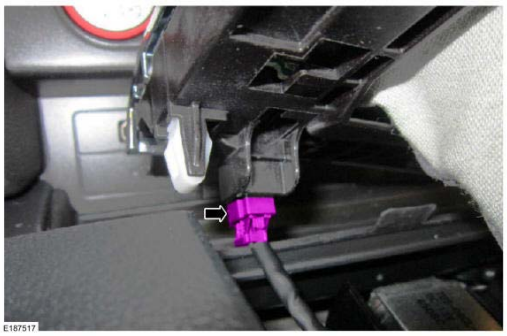
4.

Remove the stowage area mat.

5.

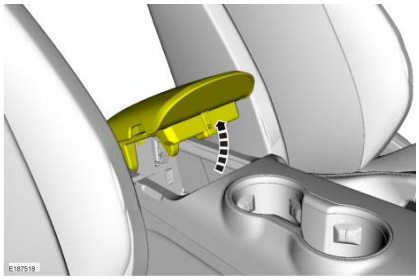
Remove the floor console upper bolts.

NOTE: Automatic transmission shown, manual transmission similar.



6.
Remove the selector lever bezel. Use the General Equipment: Interior Trim Remover

7.

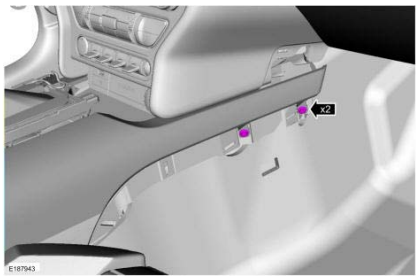


Position aside the selector lever boot.

Disconnect the electrical connector.

8.

Open the floor console lid.

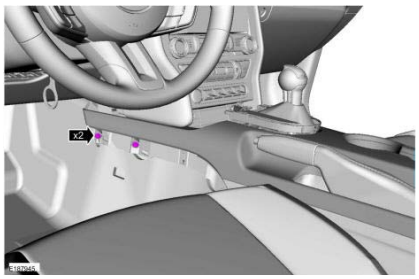


9.

Remove the RH side front retainers.

Torque

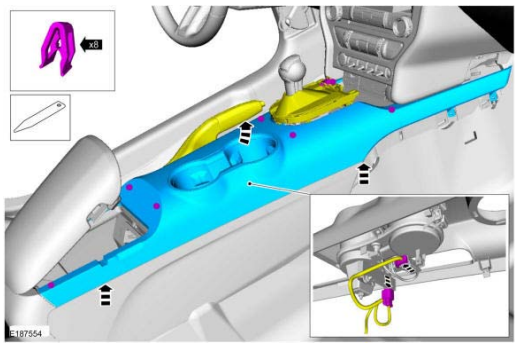
: 18 lb.in (2 Nm)



10.

Remove the LH side front retainers.

Torque



: 18 lb.in (2 Nm)

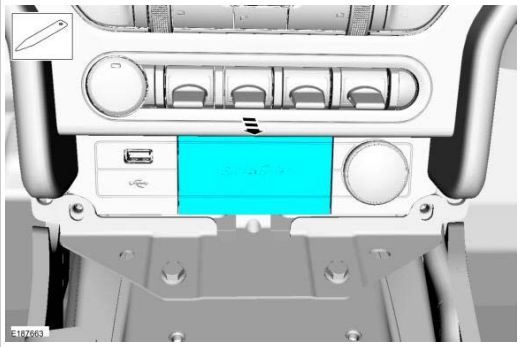
11.

Release the clips, position the gear selector cover aside and remove the floor console upper trim panel.

Disconnect the electrical connectors.

12.

Remove the stowage area tray.

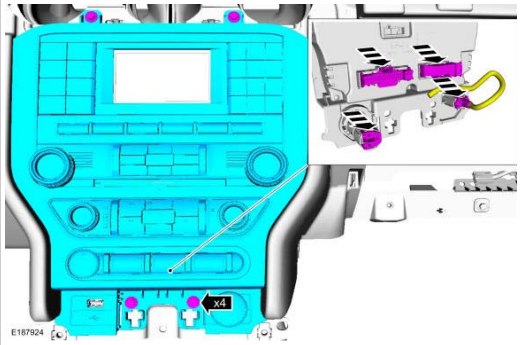


13.

Remove the instrument panel center finish panel. Refer to: Instrument Panel Center Finish Panel .

14.

Remove the trim cover. Use the General Equipment: Interior Trim Remover



15.

Remove the bolts and the FCIM.

Disconnect the electrical connectors.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > FRONT CONTROLS INTERFACE MODULE (FCIM) > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only necessary if replacing the component.

2.
Using a diagnostic scan tool, complete the PMI process for the FCIM following the on-screen instructions.

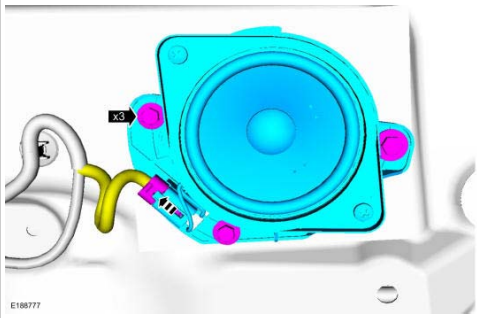
REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER LH > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

Midwoofer speaker



2.

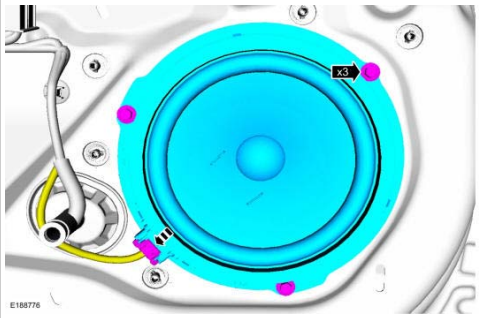
Remove the bolts and the door midwoofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

Woofer speaker



3.

Remove the bolts and the door woofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER LH > INSTALLATION

1.

To install, reverse the removal procedure.

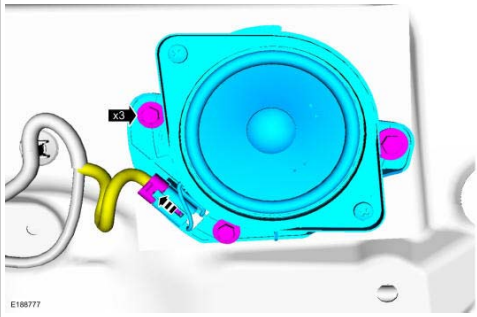
REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER RH > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

Midwoofer speaker



2.

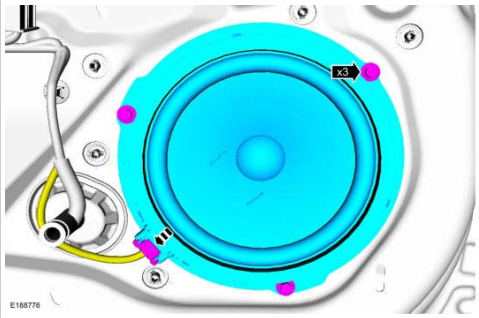
Remove the bolts and the door midwoofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

Woofer speaker



3.

Remove the bolts and the door woofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

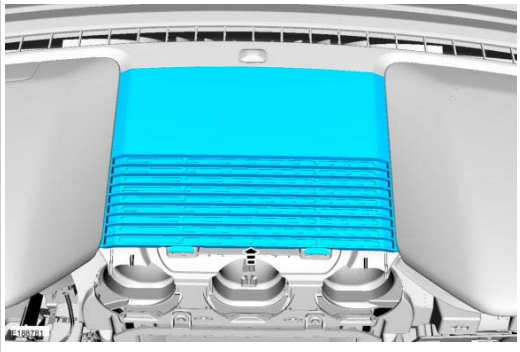
REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER RH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > GLOBAL POSITIONING SYSTEM MODULE (GPSM) > REMOVAL

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

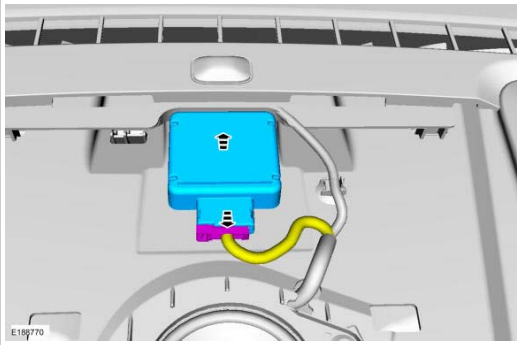


1.
Using a diagnostic scan tool, begin the PMI process for the GPSM following the on-screen instructions.

2.

Remove the instrument panel center finish panel. Refer to: Instrument Panel Center Finish Panel .

3.



Remove the instrument panel speaker grille.

4.

Pull upwards to release the GPSM and remove.

Disconnect the electrical connector.

REMOVAL AND INSTALLATION > GLOBAL POSITIONING SYSTEM MODULE (GPSM) > INSTALLATION

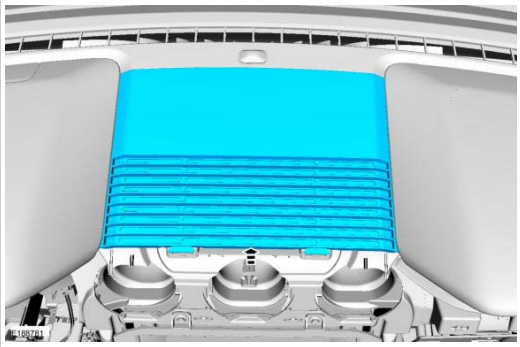
1.

To install, reverse the removal procedure.

NOTE: This step is only necessary when installing a new component.

2.
Using a diagnostic scan tool, complete the PMI process for the GPSM following the on-screen instructions.

REMOVAL AND INSTALLATION > INSTRUMENT PANEL SPEAKER > REMOVAL



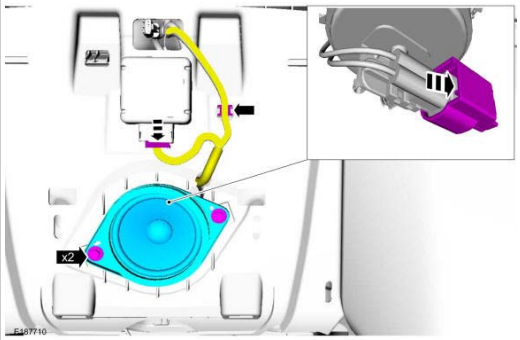
NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the instrument panel center finish panel. Refer to: Instrument Panel Center Finish Panel .

2.

Remove the instrument panel speaker grille.



3.

Remove the bolts and the instrument panel speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > INSTRUMENT PANEL SPEAKER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > MICROPHONE > REMOVAL

NOTE: The SYNC ® microphone is part of the overhead console assembly and cannot be replaced separately.

1.
Replace the overhead console. Refer to: Overhead Console .

REMOVAL AND INSTALLATION > MICROPHONE > INSTALLATION

1.

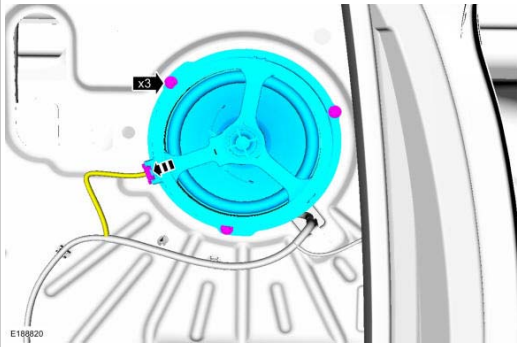
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > PARCEL SHELF SPEAKER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the parcel shelf. Refer to: Parcel Shelf - Coupe .



2.

Remove the bolts and the parcel shelf speaker. Remove the bolts and the parcel shelf speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > PARCEL SHELF SPEAKER > INSTALLATION

1.

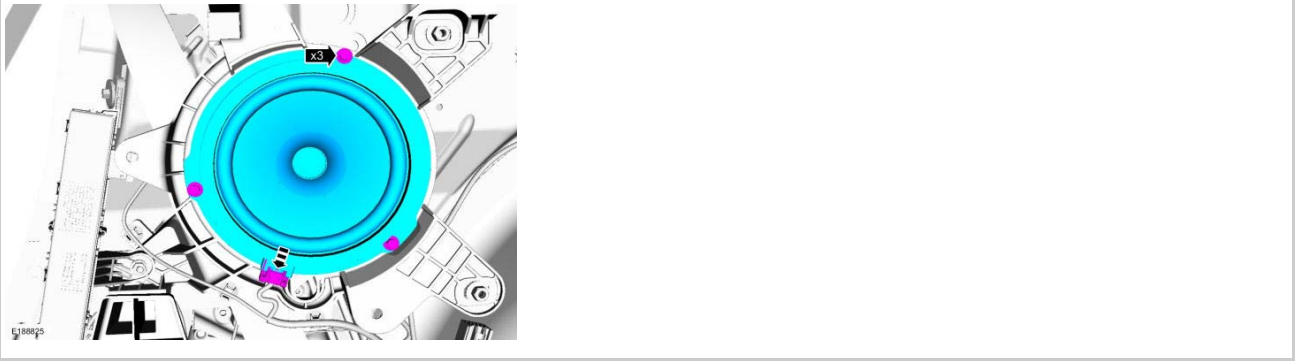
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR QUARTER PANEL SPEAKER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the convertible loadspace trim panel. Refer to: Loadspace Trim Panel - Convertible .



2.

Remove the bolts and the rear quarter panel speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > REAR QUARTER PANEL SPEAKER > INSTALLATION

1.

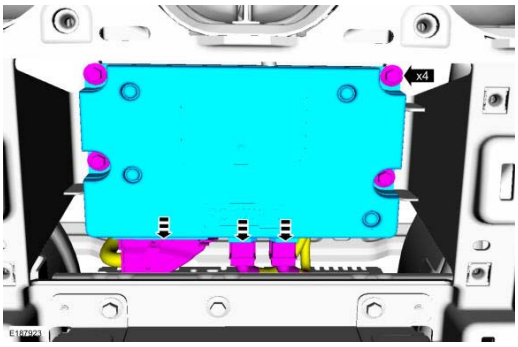
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the FCDIM. Refer to: Front Control/Display Interface Module (FCDIM) .



2.

Remove the bolts and APIM.

Disconnect the electrical connectors.

Torque

: 13 lb.in (1.5 Nm)

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] > INSTALLATION

1.

To install, reverse the removal procedure.

2.

If a new APIM is being installed, program the APIM to the correct software level. Refer to: SYNC Module [APIM] Programming .

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] TO UNIVERSAL SERIAL BUS (USB) PORT CABLE > REMOVAL

NOTE: The USB cables are taped into the wiring harness. Because the USB cables cannot be removed from the harness, this procedure applies to replacement of the USB cables only.

Vehicles With: AM/FM/CD/SYNC

1.

Remove the floor console. Refer to: Floor Console .

2.

Remove the APIM. Refer to: SYNC Module [APIM] .

Vehicles With: Touchscreen Display

3.

Remove the floor console. Refer to: Floor Console .

4.

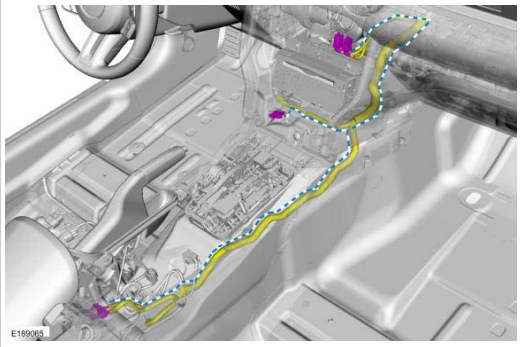
Remove the APIM. Refer to: SYNC Module [APIM] .

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] TO UNIVERSAL SERIAL BUS (USB) PORT CABLE > INSTALLATION

Vehicles With: AM/FM/CD/SYNC

> *NOTE: The rear USB port and cable located in the floor console is routed directly to the APIM.*

> *NOTE: The front USB port and cable is routed directly to the APIM.*



1.
Overlay the new USB cable following the routing shown below.

1.

Secure the new USB cable to the wiring harness with tape or zip ties as necessary.

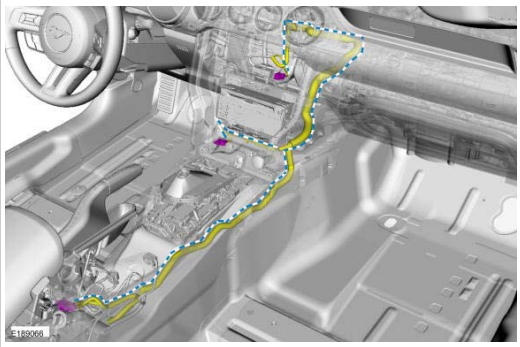
2.

Cut both ends off the original USB cable.

Vehicles With: Touchscreen Display

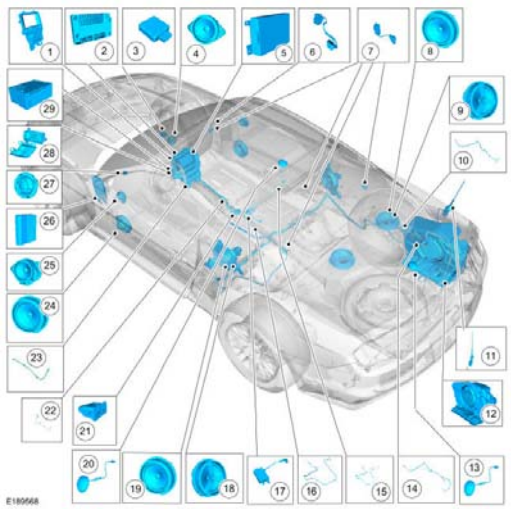
> *NOTE: The rear USB port and cable located at the media hub in the floor console is routed directly to the APIM.*

> *NOTE: The front USB port and cable is routed directly to the media hub.*



2.
Overlay the new USB cable following the routing shown below.

1.



Secure the new USB cable to the wiring harness with tape or zip ties as necessary.

2.

Cut both ends off the original USB cable.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - COMPONENT LOCATION

Item	Description
1	FCIM
2	APIM
3	GPSM
4	Center instrument panel speaker
5	8-inch (203 mm) FDIM
6	SYNC ® microphone
7	ANC microphones - 2.3L only (coupe: located in the overhead console and center rear of the headliner) / (convertible: located in the overhead console, RHR quarter panel, and LHR quarter panel)
8	Right parcel shelf full-range speaker (left also shown) (coupe) (without Shaker)
9	Right parcel shelf coaxial speaker (left also shown) (coupe) (with Shaker)
10	Rear AM/ FM/(HD Radio ® with Shaker) antenna coaxial cable for the RHR fender-mounted AM/ FM/(HD Radio ® with Shaker) mast antenna (convertible)
-	Front AM/ FM/(HD Radio ® with Shaker) antenna coaxial cable (Not shown)
11	RHR fender-mounted AM/ FM/(HD Radio ® with Shaker) mast antenna (convertible)
12	Subwoofer amplifier, speaker, and enclosure assembly
13	Satellite radio (if equipped) antenna (convertible)
14	Rear satellite radio (if equipped) antenna coaxial cable (convertible)

15	Rear satellite radio (if equipped) antenna coaxial cable (coupe)
-	Front satellite radio (if equipped) antenna coaxial cable (Not shown)
16	Rear AM/ FM/(HD Radio ® with Shaker) antenna coaxial cable for the AM/ FM/(HD Radio ® with Shaker) on-glass antenna grid (coupe)
17	AM/ FM/(HD Radio ® with Shaker) antenna amplifier (coupe)
18	LHR quarter panel coaxial speaker (RHR also shown) (convertible) (with Shaker)
19	LHR quarter panel full-range speaker (RHR also shown) (convertible) (without Shaker)
20	Satellite radio (if equipped) antenna (coupe)
21	Media hub
22	Media hub to APIM USB cable
23	Remote USB port/cable
24	LHF door woofer speaker (RHF also shown)
25	LHF door midwoofer speaker (RHF also shown)
26	Audio DSP module
27	LHF A-pillar tweeter speaker (RHF also shown)
28	RH steering wheel switches
29	ACM (contains DACMC for 2.3L and 5.2L)

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - OVERVIEW > OVERVIEW

The audio system consists of the following:

Main Components

- 9 speakers (without Shaker)
- 10 speakers (with Shaker)
- 8-inch (203 mm) FDIM touchscreen
- ACM (contains DACMC for 2.3L and 5.2L)
- AM/ FM/HD Radio ® (with Shaker) antenna
- APIM
- Audio DSP module
- FCIM
- GPSM
- Media hub

- Remote USB port/cable
- RH audio steering wheel switches
- Satellite radio (if equipped) antenna
- Subwoofer amplifier (with Shaker)
- SYNC ® microphone

Main Features

- AM radio
- ANC (2.3L only)
- Audio extended play
- Battery load shed
- Compass
- ESE (2.3L and 5.2L only)
- FM radio
- HD Radio ® (with Shaker)
- MyKey ®
- Navigation (if equipped)
- Satellite radio (if equipped)
- SIRIUS Data Services (if equipped)
- Speed compensated volume
- SYNC ®
- SYNC ® Services (if equipped)

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

A missing network message is indicated by a U-code DTC and can be the result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such

as module reprogramming can set these Diagnostic Trouble Codes (DTCs). When a missing message DTC (U-code) sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message. Refer to: MODULE COMMUNICATIONS NETWORK . See CAN Multiplex Messages.

When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication Diagnostic Trouble Codes (DTCs) may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Audio settings	IPC	Used to set the radio listening source (AM/ FM, Satellite, HD Radio ®) from the steering wheel switch.
Audio source select	IPC	Used to set the audio system listening source (AM/ FM, CD, etc.) from the steering wheel switch through the IPC RH infotainment display.
Belt-Minder ® audio mute	IPC	Used to mute speaker output so the Belt-Minder ® tone can be more easily heard. This message only applies to vehicles with a MyKey ® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Day/night status	BCM	Used for day/night illumination status for the audio system.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for ACM operating modes and fault reporting.

Instrument panel cluster chime	IPC	Used to request a warning chime to be played through the audio system.
MyKey ® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey ® restricted key is in use.
Power mode	IPC	Used to disable the functionality of the ACM due to the load shedding feature.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
Airbag deployment status	RCM	Used to monitor airbag deployment status for 911 Assist™.
Audio settings	IPC	Used to set the radio listening source (AM/ FM, Satellite, HD Radio ®) from the steering wheel switch through the IPC RH infotainment display.
Day/night status	BCM	Used for day/night illumination status for the FDIM.
Display language selection	IPC	Used to display information on the FDIM in the selected language.
eCall notification	RCM	Used to notify of a 911 Assist™ call being initiated due to airbag deployment.
FCIM bezel diagnostic status	GWM	Used to display the requested bezel diagnostics operations in the centerstack infotainment display.
FCIM button state	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Gear lever position	IPC	Used to verify the gear selector position for bezel diagnostics.
GPS compass direction	GPSM	Used to display the compass direction on the FDIM.

GPS data	GPSM	Used for vehicle positioning, heading, and direction for navigation and 911 Assist™.
Ignition key type	BCM	Used to determine if a MyKey ® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
MyKey ® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey ® restricted key is in use.
Navigation rolling wheel count and direction	ABS module	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Steering wheel switch status	SCCM	Used to indicate the button press status of the steering wheel switches.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle speed	PCM	Used for navigation functionality.

Module Network Input Messages - Audio DSP Module

Broadcast Message	Originating Module	Message Purpose
Active noise audio status	DACMC	Used to indicate the operating status of the ANC system and if the audio system is in use.
Belt-Minder ® Status	IPC	Used to mute speaker output so the Belt-Minder ® tone can be more easily heard. This message only applies to vehicles with a MyKey ® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for audio DSP module operating modes and fault reporting.
Instrument panel cluster chime	IPC	Used to request a warning chime to be played through the audio

		system.
MyKey ® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey ® restricted key is in use.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.
Set point volume	FCIM	Used to set the audio DSP module volume.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - DACMC (2.3L and 5.2L Only)

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	Used to determine the throttle position status for the ANC and ESE system operation.
Driver's door ajar status	BCM	Used to enable the ANC and ESE system if the driver's door (and all other doors and luggage compartment lid) is closed, or to disable the ANC and ESE system if the driver's door is ajar.
Engine RPM data	PCM	Used to determine the engine rotation speed for the ANC and ESE system operation.
Engine status	PCM	Used to enable the ANC and ESE system if the engine is ON, or to disable the ANC and ESE system if the engine is OFF.
Engine torque	PCM	Used for ANC and ESE system operation by indicating the amount of engine torque being produced (in Nm).
Ignition status	GWM	Used to indicate the ignition state (OFF, ACCESSORY, CRANK, RUN, and START) required for DACMC operating modes and fault reporting.
Luggage compartment lid ajar status	BCM	Used to enable the ANC and ESE system if the luggage compartment lid (and all other doors) is closed, or to disable the ANC and ESE system if the luggage compartment

		lid is ajar.
Passenger door ajar status	BCM	Used to enable the ANC and ESE system if the front passenger door (and all other doors and luggage compartment lid) is closed, or to disable the ANC and ESE system if the front passenger door is ajar.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Audio source selection	ACM	Used to indicate the selected audio system source.
Day/night status	BCM	Used for day/night illumination status for the FCIM.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.
Power mode	IPC	Used to disable the functionality of the FCIM due to the load shedding feature.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle yaw rate	RCM	Used to verify the vehicle acceleration data for navigation.
Wheel rotation count	BCM	Used to provide more accurate vehicle position tracking when the

		GPS signal is temporarily unavailable.
Wheel rotation direction	BCM	Used to determine wheel rotation direction for navigation.

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Audio source selection	ACM	Used to display the selected audio source on the IPC.
Display language request	APIM	Used to display information on the IPC in the selected language.
DSP chime status	Audio DSP module	Used to indicate the status of the warning chimes being played through the audio system.
Multimedia player total play time status	APIM	Used to indicate the total play time of the audio track being played.

Module Network Input Messages - RCM

Broadcast Message	Originating Module	Message Purpose
eCall confirmation	APIM	Used to confirm the configuration of the 911 Assist™ feature, and to confirm the status of the 911 Assist™ phone call.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ACCESSORY DELAY FEATURE

The accessory delay feature is a BCM-controlled software function that allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AM/ FM RADIO

The AM/ FM on-glass antenna grid (coupe) or fender-mounted antenna (convertible) receives analog radio waves and sends them through the AM/ FM antenna amplifier (coupe) and AM/ FM antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. For vehicles without Shaker, the audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage. For vehicles with Shaker, the audio DSP module processes the audio signals and sends them to the speakers and

subwoofer amplifier as fluctuating AC voltage. The subwoofer amplifier processes the audio signals and sends them to the subwoofer speaker as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ANC - 2.3L

ANC is an audio system feature that eliminates a certain range of low frequency engine noise within the passenger compartment typically induced under wide open throttle or heavy part-throttle conditions. The system uses two (coupe) or three (convertible) microphones, a DACMC (contained within the ACM), and the audio system speakers. The DACMC determines the noise frequency to be canceled based upon engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM, as well as microphone input signals.

While the engine is running, the ANC microphones located in the overhead console and center rear of the headliner (coupe), or overhead console, RHR quarter panel, and LHR quarter panel (convertible) monitor the engine noise resonating in the passenger compartment. The microphones transmit this noise as analog signals to the DACMC (contained within the ACM), where they are converted into digital signals by the integrated analog/digital converter. The digital signals are processed and an inverted phase sound wave with the same amplitude as the original sound is created. This new sound is converted into an analog audio signal, transmitted to the DACMC internal tone generator, and output by the ACM to the audio DSP module as fluctuating AC voltage. The audio DSP module sends the signal to the LHF and RHF door woofer speakers, and right and left parcel shelf full-range (without Shaker) or coaxial (with Shaker) speakers (coupe) or RHR and LHR quarter panel full-range (without Shaker) or coaxial (with Shaker) speakers (convertible) as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > APIM PROGRAMMING

The APIM requires specific programming procedures for correct operation. APIM programming is required when:

- The APIM is replaced.
- Directed by a TSB or FSA. Updates to resolve SYNC ® performance concerns should only be performed when directed by a TSB or FSA.
- Feature upgrades are requested. Occasional feature upgrades and/or new Applications can be programmed when they become available. This type of programming is available upon customer request and expense.

There are 3 types of APIM programming available:

- Module Replacement - Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).
- Standard - Used to update the APIM and any currently installed Applications to the latest software level.
- Custom - Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when

upgrades become available or as directed by a TSB or FSA.

There are 3 types of software installation methods:

- Full Flash [Force CIP] - A CIP program is the entire software package for the APIM. Performing a Full Flash erases the existing APIM software and installs the complete program. A Full Flash should only be performed if a Service Pack is not available. If a Full Flash is performed, all Applications must be re-installed. Performing a Full Flash by selecting Force CIP requires additional programming time and is not necessary unless directed by a TSB or FSA.
- Service Pack - A Service Pack update only provides the necessary software to update the existing APIM program to a new level. For example, a Service Pack changes the software program from an 'AA' to an 'AB' version level. It does not delete or overwrite the existing APIM software. A Service Pack is a much smaller program than a Full Flash and requires less time to download and less time to program. A Service Pack software installation should always be performed instead of a Full Flash if possible.
- Applications - Applications are special software programs that may be installed in the APIM. Applications necessary for each vehicle are determined by the vehicle build information stored in the Ford online database. Selecting individual Applications for installation may not be necessary every time the APIM is programmed.

> *NOTE: VIP programming is not selectable because the VIP is configured automatically during programming.*

There are some general programming guidelines that are applicable to multiple types of programming:

- Full Flash/Force CIP
  - The media hub must be removed for programming.
  - A diagnostic scan tool and SYNC ® Re-Flash Kit (or equivalent), are required in order to complete the flash procedure.
  - All previously paired phones are deleted from the SYNC ® system.
  - The file needs to be downloaded from the Ford online database. Allow for extra time in order to complete the download. The compressed files are between 200 and 400 megabytes (MB), and once downloaded, are extracted to the full size of approximately 2 gigabytes (GB).
  - Once diagnostic scan tool programming is complete, Applications need to be installed with the USB flash drive. This is accomplished by reinstalling the media hub and connecting the USB flash drive to the media hub.
- Service Pack and Applications
  - A USB flash drive with a minimum 1 gigabyte (GB) storage capacity is required.
  - The file is downloaded from the Ford online database onto the flash drive. The files are then transferred via the flash drive to the APIM through the vehicle USB port.

To perform APIM replacement programming, Refer to: SYNC Module [APIM] Replacement Programming .

To perform standard programming, Refer to: SYNC Module [APIM] Standard Programming .

To perform custom programming, Refer to: SYNC Module [APIM] Custom Programming .

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AUDIO EXTENDED PLAY

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. Audio extended play will not function if the battery load shed is active. To turn the audio system off, press the FCIM power button.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AUDIO INPUT JACK MODE

When a portable audio device, such as an iPod ® with its available cable, is connected to the vehicle audio system through the audio input jack in the media hub, audio from the device can be played through the vehicle speakers. Only the volume can be controlled with the vehicle audio controls. All other functions such as seek, fast forward, pause, etc. must be carried out on the device itself.

No metadata (information such as artist, album title, song title, and genre) is transmitted when a device is connected to the audio input jack.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BATTERY LOAD SHED

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the ignition in RUN, ACC, or OFF, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, "Battery Saver - System Off" is displayed on the FDIM to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BLUETOOTH MODE

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a minimum range of 10 meters (33 feet).

The APIM Bluetooth chipset supports multiple Bluetooth profiles, allowing the SYNC ® system to interact with both Bluetooth-enabled phones and Bluetooth-enabled media devices.

Any Bluetooth-enabled device used with the SYNC ® system must first be paired with the APIM Bluetooth chipset before it can become operational. Pairing a Bluetooth-enabled device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC ® system

generates a unique PIN that must be confirmed on the Bluetooth-enabled device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

Multiple Bluetooth-enabled phones and Bluetooth-enabled media devices can be paired to the APIM at the same time. The APIM supports an active connection with one Bluetooth-enabled phone and one Bluetooth-enabled media device at a time. If an additional device of either type is paired and made active, the APIM ends any active connection with an already-paired device, and establishes an active connection with the new device.

It is important to understand that while most Bluetooth-enabled devices can pair with the SYNC ® system, not all Bluetooth-enabled devices have the same level of available features when interacting with the SYNC ® system. To determine if a Bluetooth-enabled device or feature is supported, review the device compatibility list. Refer to owner.ford.com/how-tos/sync-technology/all/phone-setup/how-your-device-works-with-sync.html?version=navigation.

For more information, refer to "Bluetooth" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CHIMES

Various vehicle systems send chime requests over the CAN to the IPC. The following are determined as the IPC processes these requests:

- Chime characteristics such as tone, tone length, number of repetitions, and time between tones
- Chime output volume
- Priority of the chime request
- Which speakers (all, front, or rear) will play the specific chime

The IPC sends the processed requests over the CAN to the ACM. The ACM outputs the left and right analog chime tones to the audio DSP module over dedicated chimes circuits as fluctuating AC voltage. The audio DSP module outputs the chime tones to the appropriate audio system speakers as fluctuating AC voltage.

For more information, Refer to: Warning Chimes - Overview . For even more information, Refer to: Warning Chimes - System Operation and Component Description .

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPASS

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent through the CAN to the APIM. The APIM uses this data in addition to wheel speed and wheel rotation direction CAN messages from the ABS module to calculate and provide accurate vehicle tracking. The APIM processes the data and transmits it to be displayed on the FDIM. In the event that the GPS fix or signal is temporarily lost, the APIM will continue to use the CAN messages from the ABS module to provide accurate vehicle tracking.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > DSP

DSP chime status Audio DSP module Used to indicate the status of the warning chimes being played through the audio system. Multimedia player total play time status APIM Used to indicate the total play time of the audio track being played.

Module Network Input Messages - RCM

Broadcast Message	Originating Module	Message Purpose
eCall confirmation	APIM	Used to confirm the configuration of the 911 Assist™ feature, and to confirm the status of the 911 Assist™ phone call.

Accessory Delay Feature

The accessory delay feature is a BCM-controlled software function that allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/ FM Radio

The AM/ FM on-glass antenna grid (coupe) or fender-mounted antenna (convertible) receives analog radio waves and sends them through the AM/ FM antenna amplifier (coupe) and AM/ FM antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. For vehicles without Shaker, the audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage. For vehicles with Shaker, the audio DSP module processes the audio signals and sends them to the speakers and subwoofer amplifier as fluctuating AC voltage. The subwoofer amplifier processes the audio signals and sends them to the subwoofer speaker as fluctuating AC voltage.

ANC - 2.3L

ANC is an audio system feature that eliminates a certain range of low frequency engine noise within the passenger compartment typically induced under wide open throttle or heavy part-throttle conditions. The system uses two (coupe) or three (convertible) microphones, a DACMC (contained within the ACM), and the audio system speakers. The DACMC determines the noise frequency to be canceled based upon engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM, as well as microphone input signals.

While the engine is running, the ANC microphones located in the overhead console and center rear of the headliner (coupe), or overhead console, RHR quarter panel, and LHR quarter panel (convertible) monitor the engine noise resonating in the passenger compartment. The microphones transmit this noise as analog signals to the DACMC (contained within the ACM), where they are converted into digital signals by the integrated analog/digital converter. The digital signals are processed and an inverted phase sound wave with the same amplitude as the original sound is created. This new sound is converted into an analog audio signal, transmitted to the DACMC internal tone generator, and output by the ACM to the audio DSP module as fluctuating AC voltage. The audio DSP module sends the signal to the LHF and RHF door woofer speakers, and right and left parcel shelf full-range (without Shaker) or coaxial (with Shaker) speakers (coupe) or RHR and LHR quarter panel full-range (without Shaker) or coaxial (with Shaker) speakers (convertible) as fluctuating AC voltage.

APIM Programming

The APIM requires specific programming procedures for correct operation. APIM programming is required when:

- The APIM is replaced.
- Directed by a TSB or FSA. Updates to resolve SYNC ® performance concerns should only be performed when directed by a TSB or FSA.
- Feature upgrades are requested. Occasional feature upgrades and/or new Applications can be programmed when they become available. This type of programming is available upon customer request and expense.

There are 3 types of APIM programming available:

- Module Replacement - Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).
- Standard - Used to update the APIM and any currently installed Applications to the latest software level.
- Custom - Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB or FSA.

There are 3 types of software installation methods:

- Full Flash [Force CIP] - A CIP program is the entire software package for the APIM. Performing a Full Flash erases the existing APIM software and installs the complete program. A Full Flash should only be performed if a Service Pack is not available. If a Full Flash is performed, all Applications must be re-installed. Performing a Full Flash by selecting Force CIP requires additional programming time and is not necessary unless directed by a TSB or FSA.
- Service Pack - A Service Pack update only provides the necessary software to update the existing APIM program to a new level. For example, a Service Pack changes the software program from an 'AA' to an 'AB' version level. It does not delete or overwrite the existing APIM software. A Service Pack is a much smaller program than a Full Flash and requires less time to download and less time to program. A Service Pack software installation should always be performed instead of a Full Flash if possible.
- Applications - Applications are special software programs that may be installed in the APIM. Applications necessary for each vehicle are determined by the vehicle build information stored in the Ford online database. Selecting individual Applications for installation may not be necessary every time the APIM is programmed.

> *NOTE: VIP programming is not selectable because the VIP is configured automatically during programming.*

There are some general programming guidelines that are applicable to multiple types of programming:

- Full Flash/Force CIP
    - The media hub must be removed for programming.

    - A diagnostic scan tool and SYNC ® Re-Flash Kit (or equivalent), are required in order to complete the flash procedure.
    - All previously paired phones are deleted from the SYNC ® system.
    - The file needs to be downloaded from the Ford online database. Allow for extra time in order to complete the download. The compressed files are between 200 and 400 megabytes (MB), and once downloaded, are extracted to the full size of approximately 2 gigabytes (GB).
    - Once diagnostic scan tool programming is complete, Applications need to be installed with the USB flash drive. This is accomplished by reinstalling the media hub and connecting the USB flash drive to the media hub.
- Service Pack and Applications
    - A USB flash drive with a minimum 1 gigabyte (GB) storage capacity is required.
    - The file is downloaded from the Ford online database onto the flash drive. The files are then transferred via the flash drive to the APIM through the vehicle USB port.

To perform APIM replacement programming, Refer to: SYNC Module [APIM] Replacement Programming .

To perform standard programming, Refer to: SYNC Module [APIM] Standard Programming .

To perform custom programming, Refer to: SYNC Module [APIM] Custom Programming .

Audio Extended Play

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. Audio extended play will not function if the battery load shed is active. To turn the audio system off, press the FCIM power button.

Audio Input Jack Mode

When a portable audio device, such as an iPod ® with its available cable, is connected to the vehicle audio system through the audio input jack in the media hub, audio from the device can be played through the vehicle speakers. Only the volume can be controlled with the vehicle audio controls. All other functions such as seek, fast forward, pause, etc. must be carried out on the device itself.

No metadata (information such as artist, album title, song title, and genre) is transmitted when a device is connected to the audio input jack.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the ignition in RUN, ACC, or OFF, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, "Battery Saver - System Off" is displayed on the FDIM to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a

minimum range of 10 meters (33 feet).

The APIM Bluetooth chipset supports multiple Bluetooth profiles, allowing the SYNC ® system to interact with both Bluetooth-enabled phones and Bluetooth-enabled media devices.

Any Bluetooth-enabled device used with the SYNC ® system must first be paired with the APIM Bluetooth chipset before it can become operational. Pairing a Bluetooth-enabled device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC ® system generates a unique PIN that must be confirmed on the Bluetooth-enabled device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

Multiple Bluetooth-enabled phones and Bluetooth-enabled media devices can be paired to the APIM at the same time. The APIM supports an active connection with one Bluetooth-enabled phone and one Bluetooth-enabled media device at a time. If an additional device of either type is paired and made active, the APIM ends any active connection with an already-paired device, and establishes an active connection with the new device.

It is important to understand that while most Bluetooth-enabled devices can pair with the SYNC ® system, not all Bluetooth-enabled devices have the same level of available features when interacting with the SYNC ® system. To determine if a Bluetooth-enabled device or feature is supported, review the device compatibility list. Refer to owner.ford.com/how-tos/sync-technology/all/phone-setup/how-your-device-works-with-sync.html?version=navigation.

For more information, refer to "Bluetooth" in the Owner's Literature.

Chimes

Various vehicle systems send chime requests over the CAN to the IPC. The following are determined as the IPC processes these requests:

- Chime characteristics such as tone, tone length, number of repetitions, and time between tones
- Chime output volume
- Priority of the chime request
- Which speakers (all, front, or rear) will play the specific chime

The IPC sends the processed requests over the CAN to the ACM. The ACM outputs the left and right analog chime tones to the audio DSP module over dedicated chimes circuits as fluctuating AC voltage. The audio DSP module outputs the chime tones to the appropriate audio system speakers as fluctuating AC voltage.

For more information, Refer to: Warning Chimes - Overview . For even more information, Refer to: Warning Chimes - System Operation and Component Description .

Compass

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent through the CAN to the APIM. The APIM uses this data in addition to wheel speed and wheel rotation direction CAN messages from the ABS module to calculate and provide accurate vehicle tracking. The APIM processes the data and transmits it to be displayed on the FDIM. In the event that the GPS fix or signal is temporarily lost, the APIM will continue to use the CAN messages from the ABS module to provide accurate vehicle tracking.

DSP

The Shaker audio system (if equipped) provides theater quality sound in the vehicle. Audio signals are sent from the ACM and APIM to the audio DSP module. The audio DSP module processes the audio signals and sends them to the speakers.

The audio DSP module determines the correct audio environment based on the audio signals and network messages it receives from other audio system modules. These messages include information such as fade/balance and speed compensated volume settings.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ESE - 2.3L AND 5.2L

ESE is an audio system feature that enhances certain engine tones typically induced under wide open throttle or heavy part-throttle conditions. The system uses a DACMC (contained within the ACM) and the audio system speakers.

The DACMC determines the engine tone to enhance based upon engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM. The data from the PCM is processed and converted into an analog audio signal, transmitted to the DACMC internal tone generator, and output by the ACM to the audio DSP module as fluctuating AC voltage. The audio DSP module sends the signal to the LHF and RHF door woofer, speakers as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HD RADIO ® - WITH SHAKER

HD Radio ® is a subscription-free service.

HD Radio ® technology allows an AM or FM radio station to duplicate their traditional analog channel with a matching digital channel. Some FM radio stations subdivide the digital output signal into multiple channels that are not duplicates of the analog channel. These extra multicast channels vary in availability and are called HD2, HD3 and HD4 channels.

The AM/ FM on-glass antenna grid (coupe) or fender-mounted antenna (convertible) receives radio waves containing metadata (information such as station call letters, artist, album title, song title, and genre) and digital HD Radio ® audio. The radio waves are sent through the AM/ FM antenna amplifier (coupe) and AM/ FM antenna coaxial cable to the HD Radio ® receiver built into the ACM. The metadata is separated from the audio. The metadata is sent to be displayed on the FDIM, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. For vehicles without Shaker, the audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage. For vehicles with Shaker, the audio DSP module processes the audio signals and sends them to the speakers and subwoofer amplifier as fluctuating AC voltage. The subwoofer amplifier processes the audio signals and sends them to the subwoofer speaker as fluctuating AC voltage.

For more information, refer to "HD Radio" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > MYKEY ® AUDIO OPERATION

- The following MyKey ® features are always enabled when a MyKey ® is in use, and are not configurable on/off with an administrator key:
    - Belt-Minder ®: The audio system is muted, and "MyKey Buckle Up to Unmute Audio" is displayed in the information display until the safety belts are buckled..
    - Satellite Radio (if equipped): Adult content channels are blocked by being muted.
- The following MyKey ® features are configurable with an administrator key:
    - 911 Assist™: If the administrator has selected "Always On" in the MyKey ® menu, 911 Assist™ is enabled and cannot be disabled.
    - Do Not Disturb: If the administrator has selected "Always On" in the MyKey ® menu, the Do Not Disturb feature is enabled and cannot be disabled.
    - Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.
    - Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
    - Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder vehicle speed is exceeded.
    - Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, "MyKey ® VOLUME LIMITED" is displayed on the information display.

For more information, refer to "MyKey ®" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NAVIGATION - IF EQUIPPED

The navigation system guides the customer to a pre-entered destination.

The navigation display is shown on the FDIM.

Map data is transmitted from the map data SD card inserted into the media hub to the APIM through the media hub to APIM USB cable. The GPS antenna integral to the GPSM receives GPS data and sends it through the CAN to the APIM. The APIM uses this data in addition to wheel speed and wheel rotation direction CAN messages from the ABS module to calculate route information and provide accurate navigation tracking. The APIM processes the data and transmits it to be displayed on the FDIM. In the event that the GPS fix or signal is temporarily lost, the APIM will continue to use the CAN messages from the ABS module to provide accurate vehicle tracking.

The voice recognition system allows the customer to interface with the system without using the FDIM. A microphone located in the overhead console provides a direct input to the APIM.

For more information, refer to "Navigation" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > RDS

RDS allows metadata (information such as station call letters, artist, song title, and genre) to be contained within FM radio waves. If the RDS feature is turned on, a PTY (Program Type) can be chosen. Once the customer has chosen a single PTY such as Sports, Rock, Religious Music, or Weather, the SEEK or SCAN button is pressed, and the ACM only tunes channels within the selected category. If a channel within the selected category is not found, the ACM will continually seek or scan.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SATELLITE RADIO - IF EQUIPPED

Satellite radio is a subscription-based service. When a satellite radio subscription is activated, the ESN of the satellite radio receiver built into the ACM is associated with the VIN. The SIRIUS 12-digit ESN can be obtained by tuning to channel 0, accessing "AHU Diagnostics" in Bezel Diagnostics, or by referencing the label attached to the ACM.

The roof-mounted (coupe) or luggage compartment lid-mounted (convertible) satellite radio antenna receives signals containing metadata (information such as station name, artist, album title, song title, and genre) and digital satellite radio audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM. The metadata is separated from the audio. The metadata is sent to be displayed on the FDIM, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. For vehicles without Shaker, the audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage. For vehicles with Shaker, the audio DSP module processes the audio signals and sends them to the speakers and subwoofer amplifier as fluctuating AC voltage. The subwoofer amplifier processes the audio signals and sends them to the subwoofer speaker as fluctuating AC voltage.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SD CARD MODE

When a non-navigation SD card is connected to the vehicle audio system through the SD card slot, audio from the card can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled with the vehicle audio controls.

Image files can be saved to the APIM from a non-navigation SD card in order to be used as wallpaper backgrounds displayed on the FDIM. For more information, refer to "Edit Wallpaper" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SIRIUS DATA SERVICES - IF EQUIPPED

SIRIUS Data Services is a subscription-based service, and requires a separate subscription from the satellite radio. A map data SD card is also required.

When a SIRIUS Data Services subscription is activated, the ESN of the satellite radio receiver built into the ACM is associated with the VIN.

The satellite radio antenna receives digital signals containing data. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM. The ACM sends the data to the APIM through the SDL circuits, and then to the FDIM touchscreen to be displayed.

SIRIUS Data Services allows the customer to receive information for:

- Fuel Prices (stations, fuel type)
- Movie Listings (theaters, movie titles, ratings, start and run times)
- Ski Conditions (resorts, lodging, conditions)
- Sports (in-game and final scores, weekly schedules, headlines)
- Traffic (traffic flow, accidents, construction, road closings)
- Weather (current weather, forecasts, radar images)

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SPEED COMPENSATED VOLUME

">Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.

- Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
- Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder vehicle speed is exceeded.
- Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, "MyKey ® VOLUME LIMITED" is displayed on the information display.

For more information, refer to "MyKey ®" in the Owner's Literature.

Navigation - If Equipped

The navigation system guides the customer to a pre-entered destination.

The navigation display is shown on the FDIM.

Map data is transmitted from the map data SD card inserted into the media hub to the APIM through the media hub to APIM USB cable. The GPS antenna integral to the GPSM receives GPS data and sends it through the CAN to the APIM. The APIM uses this data in addition to wheel speed and wheel rotation direction CAN messages from the ABS module to calculate route information and provide accurate navigation tracking. The APIM processes the data and transmits it to be displayed on the FDIM. In the event that the GPS fix or signal is temporarily lost, the APIM will continue to use the CAN messages from the ABS module to provide accurate vehicle tracking.

The voice recognition system allows the customer to interface with the system without using the FDIM. A microphone located in the overhead console provides a direct input to the APIM.

For more information, refer to "Navigation" in the Owner's Literature.

RDS

RDS allows metadata (information such as station call letters, artist, song title, and genre) to be contained within FM radio waves. If the RDS feature is turned on, a PTY (Program Type) can be chosen. Once the customer has chosen a single PTY such as Sports, Rock, Religious Music, or Weather, the SEEK or SCAN button is pressed, and the ACM only tunes channels within the selected category. If a channel within the selected category is not found, the ACM will continually seek or scan.

Satellite Radio - If Equipped

Satellite radio is a subscription-based service. When a satellite radio subscription is activated, the ESN of the satellite radio receiver built into the ACM is associated with the VIN. The SIRIUS 12-digit ESN can be obtained by tuning to channel 0, accessing "AHU Diagnostics" in Bezel Diagnostics, or by referencing the label attached to the ACM.

The roof-mounted (coupe) or luggage compartment lid-mounted (convertible) satellite radio antenna receives signals containing metadata (information such as station name, artist, album title, song title, and genre) and digital satellite radio audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM. The metadata is separated from the audio. The metadata is sent to be displayed on the FDIM, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. For vehicles without Shaker, the audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage. For vehicles with Shaker, the audio DSP module processes the audio signals and sends them to the speakers and subwoofer amplifier as fluctuating AC voltage. The subwoofer amplifier processes the audio signals and sends them to the subwoofer speaker as fluctuating AC voltage.

SD Card Mode

When a non-navigation SD card is connected to the vehicle audio system through the SD card slot, audio from the card can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled with the vehicle audio controls.

Image files can be saved to the APIM from a non-navigation SD card in order to be used as wallpaper backgrounds displayed on the FDIM. For more information, refer to "Edit Wallpaper" in the Owner's Literature.

SIRIUS Data Services - If Equipped

SIRIUS Data Services is a subscription-based service, and requires a separate subscription from the satellite radio. A map data SD card is also required.

When a SIRIUS Data Services subscription is activated, the ESN of the satellite radio receiver built into the ACM is associated with the VIN.

The satellite radio antenna receives digital signals containing data. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM. The ACM sends the data to the APIM through the SDL circuits, and then to the FDIM touchscreen to be displayed.

SIRIUS Data Services allows the customer to receive information for:

- Fuel Prices (stations, fuel type)
- Movie Listings (theaters, movie titles, ratings, start and run times)
- Ski Conditions (resorts, lodging, conditions)
- Sports (in-game and final scores, weekly schedules, headlines)
- Traffic (traffic flow, accidents, construction, road closings)
- Weather (current weather, forecasts, radar images)

Speed Compensated Volume

The audio DSP module compensates for wind and road noise by adjusting the audio system volume based on the VSS signal and customer-defined setting.

When a MyKey ® is in use and the MyKey ® Volume Limiter is enabled, the speed compensated volume is disabled.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > STEERING WHEEL SWITCH FUNCTIONS

The RH steering wheel switches consist of an upper 5-way switch, and a lower 4-way switch. The upper 5-way steering wheel switch operates the volume +/-, seek +/-, and the audio mode. The lower 4-way steering wheel switch operates the voice, send/receive call, end call, and mute functions.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYNC ® SERVICES - IF EQUIPPED

SYNC ® Services is a subscription-based service, and requires a non-subscription-based SYNC ® owner account in order to subscribe. The SYNC ® Services subscription is associated with a Bluetooth-enabled mobile phone number, while the SYNC ® owner account is associated with a VIN. For SYNC ® owner account enrollment or SYNC ® Services subscription information, refer to www.syncmyride.com.

SYNC Services ® allows the customer to connect to the following services:

- Traffic (incidents, traffic flow, drive time, delays, and construction and lane closures if applicable)
- Traffic alerts via text message (incidents, new construction, and/or delays for a specified route

during a specified time period)

- Directions (route can be sent to vehicle)
- Business search (business name, address, and phone number results spoken or sent to the registered mobile phone as a text, get driving directions to business, or connect to business via telephone)
- Sports (basketball, baseball, hockey, football, golf, auto racing, tennis, wrestling, soccer, boxing)
- News (top stories, business, technology, entertainment)
- Weather (current weather, forecasts)
- Stock quotes
- Travel (airlines, hotels, rental cars)
- Entertainment (movies, horoscopes)

The customer's registered mobile phone is used to access and download information from the SYNC ® Services server. The information received by the customer's registered mobile phone is sent to the APIM.

The GPS antenna, integral to the GPSM, is used to detect the location and direction of the vehicle.

Favorites allow the customer to get customized information for sports teams, weather forecasts, stocks, news reports, and horoscopes.

Live operator assistance is available for the following services: directions and business search.

For more information, refer to www.syncmyride.com or "SYNC Services" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYNC ® SYSTEM

The SYNC ® system uses audio input jack, Bluetooth, SD card, USB, FDIM, microphone, and CAN message APIM inputs to control the entertainment system, phone, climate control system, ambient lighting system, and navigation system (if equipped).

The SYNC ® system provides the following abilities:

- Send and receive phone calls via a paired Bluetooth-enabled phone
- Send and receive text messages via a paired Bluetooth-enabled phone
- Connect media devices (such as an iPod ®, USB device, or Bluetooth-enabled audio device) in order to play audio files
- Initiate an emergency assistance call (911 Assist™) when the airbags deploy (for more information, refer to "911 Assist™" in the Owner's Literature)
- Produce Vehicle Health Reports
- Allow a single customer-supplied USB mobile broadband modem (connected to a vehicle USB port)

to provide in-vehicle Internet with the data being shared between up to eight devices. The modem can also be used in a similar fashion to a Wi-Fi or Bluetooth Hotspot (network) to allow for file sharing or playing games between connected devices. For more information, refer to "Wireless & Internet" in the Owner's Literature.

All SYNC ® system features are not available with every phone/device. To determine if the APIM supports a particular phone, tablet, or media player, or feature of one of those devices, review the device compatibility list. Refer to owner.ford.com/how-tos/sync-technology/all/phone-setup/how-your-device-works-with-sync.html?version=navigation.

The customer can update the CIP by using a USB flash drive.

For more information, refer to owner.ford.com.

For more information on the SYNC ® system, refer to "SYNC" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > USB MODE

When a portable media device, such as an iPod ® with its available cable or portable mass storage such as a USB flash drive, is connected to the vehicle audio system through the USB ports, audio from the device can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled with the vehicle's audio controls.

When playing media files stored on a mass storage device such as a USB flash drive, the SYNC ® system only plays supported file types that do not have DRM protection, and are contained on a properly formatted device. For more information, refer to "Supported Media Players, Formats and Metadata Information" in the Owner's Literature.

In addition to audio information (track length, track number, etc.), metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device connected to the USB ports. The APIM uses the metadata to create indexes that can be used to sort for particular music based on the customer's preferences. Not all USB devices can send metadata to the APIM. When a new media device is connected to the SYNC ® system, the APIM automatically indexes the information. This may take several minutes depending on the amount of data on the device, and is considered normal operation. When a device that was previously connected to the SYNC ® system is reconnected, the APIM updates the index rather than creating a new one. This reduces the time needed to index the device.

Image files can be saved to the APIM from a USB device in order to be used as wallpaper backgrounds displayed on the FDIM. For more information, refer to "Edit Wallpaper" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > VOICE RECOGNITION

Voice recognition allows certain phone, navigation system (if equipped), audio system, and climate control system functions to be controlled with voice commands to reduce or eliminate the need to interact with the FCIM, FDIM, and/or device while driving.

When the voice steering wheel switch is pressed, an audible prompt originating from the APIM is heard

from the speakers. Based on the customer's setting, audible prompts will either be a voice or a simple tone. When interaction mode is set to standard, detailed voice guidance is provided. When interaction mode is set to advanced, most prompts are tones only, and minimal voice guidance is provided. The microphone receives the voice commands and sends them to the APIM. For more information, refer to "voice recognition" in the Owner's Literature.

DESCRIPTION AND OPERATION > INFORMATION AND ENTERTAINMENT SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s) and converts them into fluctuating AC voltage. The ACM receives stereo and mono audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes all inputs, and depending on the input received, sends stereo or mono analog audio signals to the audio DSP module. For vehicles without Shaker, the audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage. For vehicles with Shaker, the audio DSP module processes the audio signals and sends them to the speakers and subwoofer amplifier as fluctuating AC voltage. The subwoofer amplifier processes the audio signals and sends them to the subwoofer speaker as fluctuating AC voltage.

The ACM receives radio waves containing satellite radio (if equipped) and HD Radio ® (with Shaker) data through the antenna coaxial cables. The data is sent to be displayed on the FDIM.

The ACM contains the CD player.

The ACM sends data to the APIM through the SDL circuits for the SIRIUS Travel Link features.

The ACM contains the DACMC for vehicles with the 2.3L or 5.2L.

The ACM and DACMC require separate PMI procedures when the ACM is replaced.

AM/ FM Antenna Amplifier - Coupe

The AM/ FM antenna amplifier receives AM/ FM radio waves from the on-glass antenna grid. The AM/ FM antenna amplifier is powered by the ACM and amplifies AM audio signals to improve reception. The AM/ FM radio waves are sent through the AM/ FM antenna coaxial cable to the ACM.

ANC Microphones

For a coupe, two ANC microphones (overhead console-mounted and center rear headliner-mounted) measure the amplitude and phase of the engine noise inside the passenger compartment. For a convertible, three ANC microphones (overhead console-mounted, RHR quarter panel, and LHR quarter panel) measure the amplitude and phase of the engine noise inside the passenger compartment. The monitored sounds are converted into analog signals by the microphones and sent to the DACMC (contained within the ACM).

Antenna

The AM/ FM radio uses the on-glass (coupe) AM/ FM antenna grid or fender-mounted (convertible) AM/ FM antenna to receive analog radio waves. The radio waves are sent through the AM/ FM antenna

amplifier (coupe) or amplifier integrated into the antenna base (convertible) and AM/ FM antenna coaxial cable to the ACM. The ACM transmits these radio waves to the audio DSP module where they are further amplified.

To compensate for AM signal strength loss as the radio waves are transmitted from the antenna to the ACM, battery voltage is applied to the antenna to boost the AM radio signal. This allows the AM radio waves entering the ACM to be approximately the same strength as they were before amplification at the antenna.

If equipped, the HD Radio ® uses the on-glass (coupe) AM/ FM antenna grid or RHR fender-mounted (convertible) AM/ FM antenna to receive radio waves containing digital audio and data. The radio waves are sent to the AM/ FM antenna amplifier (coupe) or amplifier integrated into the antenna base (convertible) where the radio waves containing digital audio are amplified to improve reception. The amplified radio waves containing audio and the radio waves containing data are sent through the AM/ FM antenna coaxial cable to the HD Radio ® receiver built into the ACM. The ACM transmits these radio waves to the audio DSP module where the radio waves containing digital audio are further amplified, and the radio waves containing data are sent to be displayed on the FDIM.

If equipped, the satellite radio uses the roof-mounted (coupe) or luggage compartment lid-mounted (convertible) satellite radio antenna to receive signals containing digital audio and data. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM.

APIM

The APIM can be operated with the ignition in RUN, ACC, or OFF.

The APIM receives stereo and mono inputs. Stereo inputs include audio from the USB ports, SD card slot, audio input jack, connected Bluetooth-enabled media device, and outside device during a phone call. The mono input includes signals from the SYNC ® microphone.

The APIM sends stereo and mono audio signals to the ACM as fluctuating AC voltage. Stereo outputs include audio from the USB ports, SD card slot, audio input jack, connected Bluetooth-enabled media device, ringback tone, outside device during a phone call, and voice or tone prompts initiated from the voice steering wheel switch. Mono outputs include audio from the TTS feature, incoming call ringtone, voice or tone prompts initiated from the FDIM, route guidance voice or tone prompts (if equipped with navigation or SYNC ® Services), and SYNC ® system instructions.

The APIM receives data from the ACM through the SDL circuits. This data is processed and sent to be displayed on the FDIM.

The TTS feature allows the customer to hear information through the audio system speakers so it does not have to be read from the FCDIM FDIM and/or device while driving. Examples include incoming text message sender information, text messages, and metadata from audio being played via USB or Bluetooth.

The APIM consists of two internal modules: the CIP and the VIP. The modules are not replaceable individually, but can be programmed independently if required.

The CIP interfaces with all of the customer inputs to the APIM. It contains an analog-to-digital-to-analog converter, as well as the Bluetooth/Wi-Fi chipset.

The VIP provides an interface between the CIP and the vehicle inputs. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs when a VHR is requested.

The APIM provides the FDIM with power and ground through the 65 pin connector.

The Touchscreen Calibration must be performed every time the APIM is separated from the FDIM.

The APIM requires programming when it is replaced.

Audio DSP Module

The audio DSP module can be operated with the ignition in RUN, ACC, or OFF.

The audio DSP module enhances the input audio signal sound quality from the ACM.

The ACM outputs voltage through the enable circuit to enable the audio DSP module amplifier. When the ACM removes voltage from this circuit, the audio will be muted. When the ACM applies the correct amount of voltage to this circuit, the audio will be unmuted. In the event of an amplifier overload, the audio DSP module reduces audio levels on the left and right audio output channels to prevent clipping and speaker damage.

The audio DSP module receives stereo and mono audio signals from the ACM in the form of fluctuating AC voltage. The audio DSP module processes and amplifies these inputs and depending on the input received, sends stereo or mono analog audio signals to the speakers and subwoofer amplifier as fluctuating AC voltage.

When the engine is running, the audio DSP module receives the engine noise cancellation frequency signal (2.3L) and ESE frequency signal (2.3L and 5.2L) from the ACM in the form of fluctuating AC voltage. The audio DSP module sends the engine noise cancellation frequency signal to the LHF and RHF door woofer speakers, and left and right parcel shelf full-range (without Shaker) or coaxial (with Shaker) speakers (coupe) or LHR and RHR quarter panel full-range (without Shaker) or coaxial (with Shaker) speakers (convertible) as fluctuating AC voltage. The ESE signal is sent to the LHF and RHF door woofer speakers as fluctuating AC voltage.

When the engine is running and the audio system is in use, the audio DSP module output to the LHF and RHF door woofer speakers contains a mixture of the engine noise cancellation and ESE frequency with the audio signals from the ACM. The output to the right and left parcel shelf full-range (without Shaker) or coaxial (with Shaker) speakers (coupe) or RHR and LHR quarter panel full-range (without Shaker) or coaxial (with Shaker) speakers (convertible) contains a mixture of the engine noise cancellation frequency with the audio signals from the APIM and ACM.

The audio DSP module requires PMI when it is replaced.

DACMC - 2.3L Or 5.2L

The DACMC ANC and ESE functions only operate while the engine is running, and the luggage compartment lid and all doors are closed.

The DACMC is a digital signal processor that consists of an internal analog/digital converter and tone generator.

For ANC, the DACMC uses engine rotation speed data, engine torque data, accelerator pedal position data, and ANC microphone input signals to calculate the targeted frequency needed to cancel engine noise within the passenger compartment. For ESE, the DACMC uses engine rotation speed data, engine torque data, and accelerator pedal position data from the PCM to calculate the targeted frequency needed to enhance engine noise within the passenger compartment. The DACMC engine noise cancellation signals are output by the ACM to the audio DSP module as fluctuating AC voltage. The audio DSP module sends the signal to the LHF and RHF door woofer speakers, and right and left parcel shelf full-range (without Shaker) or coaxial (with Shaker) speakers (coupe) or RHR and LHR quarter

panel full-range (without Shaker) or coaxial (with Shaker) speakers (convertible) as fluctuating AC voltage. The DACMC ESE frequency signals are output by the ACM to the audio DSP module as fluctuating AC voltage. The audio DSP module sends the signal to the LHF and RHF door woofer speakers as fluctuating AC voltage.

The DACMC is contained within the ACM.

The DACMC and ACM require separate PMI procedures when the ACM is replaced.

FCIM

The FCIM audio functions can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods through which the customer interacts with the infotainment system.

The FCIM is separate from the ACM.

The FCIM requires PMI when it is replaced.

FDIM

The FDIM can be operated with the ignition in RUN, ACC, or OFF.

The resistive touch FDIM provides one of the methods through which the customer interacts with the infotainment system. For more information, refer to "Using the Touchscreen" in the Owner's Literature.

The FDIM is attached to the APIM.

As the FDIM does not communicate on the CAN, the APIM acts as the proxy for all FDIM inputs and outputs requiring CAN communication. Communication between the FDIM (including FDIM customer inputs) and APIM is accomplished via the 65 pin connector. The FDIM power and ground are provided by the APIM through this connector as well.

The Touchscreen Calibration must be performed every time the FDIM is separated from the APIM.

GPSM

For vehicles equipped with SYNC Services ® or SIRIUS Data Services, the GPSM provides vehicle location information for real-time traffic reports and for traffic avoidance re-routing.

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent over the CAN to be displayed on the FDIM.

The GPSM provides vehicle location information for identifying the vehicle location in the event of a collision.

For vehicles with navigation, the GPSM acts as the antenna for the navigation system.

The GPSM requires PMI when it is replaced.

Media Hub

The media hub allows for various audio devices to play content through the vehicle speakers. The media hub is powered by circuits carrying battery voltage from the APIM. The media hub contains:

- 1 USB port

    - Data received from the remote USB port/cable or from the media hub USB port is sent to the APIM through the media hub to APIM USB cable.
    - The USB port can be used to power and/or charge a device if the device supports this feature and does not have a power consumption requirement of more than approximately 5V and.5 (about 2.5 watts).
- 1 SD card slot
    - SD card data is sent to the APIM through the USB cable.
- 1 audio input jack
    - The audio input jack can be used to play audio files from an audio device connected through the 1/8-inch (3.5 mm) audio jack. Audio signals are sent from the audio input jack to the APIM through the audio circuits.

Noise Suppression Equipment

The radio frequency suppression equipment reduces interference transmitted through the speakers by the engine, ignition, and electrical systems. When installing any new radio suppression equipment components, make sure that a good contact is made at all connections.

Remote USB Port/Cable

The remote USB port/cable sends data to the media hub.

The USB port is part of the USB cable, and cannot be replaced separately.

The remote USB port/cable is powered by the media hub (which receives power through circuits from the APIM), and can be used to power and/or charge a device if the device supports this feature and does not have a power consumption requirement of more than approximately 5V and.5A (about 2.5 watts).

Steering Wheel Switches

The RH upper and lower steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH upper and lower steering wheel switches on the input circuit. When a switch is pressed, the voltage is routed through the corresponding resistor(s), through the return circuit, and then to ground through the SCCM. The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The RH upper steering wheel switch inputs are sent as network messages from the SCCM to the ACM to control audio functions.

The RH lower steering wheel switch inputs are sent as network messages from the SCCM to the APIM to control SYNC ® functions, or to the ACM to control audio functions.

Subwoofer Amplifier - With Shaker

The subwoofer amplifier can be operated with the ignition in RUN, ACC, or OFF.

The subwoofer amplifier, speaker, and enclosure are serviced as an assembly.

The audio DSP module outputs voltage through the enable circuit to enable the subwoofer amplifier. The

audio DSP module also uses this circuit to detect an amplifier overload condition. In the event of an amplifier overload, the subwoofer amplifier modifies the voltage signal from the audio DSP module to increase the voltage on the enable circuit to a higher level than provided by the audio DSP module. This higher voltage level causes the audio DSP module to momentarily reduce the audio levels on the audio output channels to the subwoofer amplifier to prevent clipping and subwoofer speaker damage.

The subwoofer amplifier receives audio signals from the audio DSP module in the form of fluctuating AC voltage. The subwoofer amplifier processes and amplifies these inputs and sends analog audio signals to the subwoofer speaker as fluctuating AC voltage.

SYNC ® Microphone

The SYNC ® microphone is powered by the APIM.

The SYNC ® microphone receives SYNC ® system voice commands and outgoing audio during a phone call. The monitored sounds are converted into analog signals by the microphone and sent to the APIM as fluctuating AC voltage.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM

For a SYNC ®-related concern, refer to the SYNC ® System Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: ACM

DTC	Description	Action
B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	GO to Pinpoint Test I
B1A56:21	Antenna: Signal Amplitude < Minimum	If DTC B1A56:21 sets after running the bezel diagnostic tests, DISREGARD this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail.
B1A89:11	Satellite Antenna: Circuit Short To Ground	For a satellite radio concern, GO to Pinpoint Test C For a SIRIUS Data Services concern, GO to Pinpoint Test D

B1A89:13	Satellite Antenna: Circuit Open	For a satellite radio concern, GO to Pinpoint Test C For a SIRIUS Data Services concern, GO to Pinpoint Test D
B1D19:49	Compact Disc Unit: Internal Electronic Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the self-test. If DTC B1D19:49 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC. This is normal operation.
U0100:00	Lost Communication With ECM/ PCM "A": No Sub Type Information	GO to Pinpoint Test AO
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AP
U0142:00	Lost Communication With Body Control Module "B": No Sub Type Information	GO to Pinpoint Test AQ
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AS
U0237:00	Lost Communication With Digital Audio Control Module "C": No Sub Type Information	GO to Pinpoint Test AW
U0238:00	Lost Communication With Digital Audio Control Module "D": No Sub Type Information	GO to Pinpoint Test AX
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AY
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AZ

U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	*NOTE: Despite the description, this DTC applies to the FDIM, not the FCDIM.* GO to Pinpoint Test BA
U201A:51	Control Module Main Calibration Data: Not Programmed	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U3000:41	Control Module: General Checksum Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the ACM self-test. If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). WAIT at least 10 seconds. RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to:

		Audio Front Control Module (ACM) .
U3000:96	Control Module: Component Internal Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the ACM self-test. If DTC U3000:96 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test BB
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test BC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: APIM

DTC	Description	Action
B108E:01	Display: General Electrical Failure	GO to Pinpoint Test AH
B116A:01	Handset Microphone: General Electrical Failure	GO to Pinpoint Test Y
B117A:01	Backup Microphone: General Electrical Failure	GO to Pinpoint Test Y
B1215:00	External Memory Card: No Sub Type Information	GO to Pinpoint Test AI
B1252:11	USB Port: Circuit Short To Ground	For an inoperative USB port, GO to Pinpoint Test AA For an inoperative SD card slot, GO to Pinpoint Test AB
B1252:13	USB Port: Circuit Open	For an inoperative USB port, GO to Pinpoint Test AA For an inoperative SD card slot, GO to Pinpoint Test AB
B12B8:11	USB Port #2: Circuit Short To Ground	*NOTE: This DTC refers to USB port #2 on the APIM itself, which is not used.* INSPECT the APIM USB port #2 for damage and REMOVE any debris.CLEAR the Diagnostic Trouble Codes (DTCs).WAIT at least 10 seconds.REPEAT the self-test.If DTC

		B12B8:11 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
C1001:01	Vision System Camera: General Electrical Failure	REFER to: Parking Aid . See The Rear Video Is Inoperative.
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AP
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test AR
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AS
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	GO to Pinpoint Test AT
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	GO to Pinpoint Test AH
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	GO to Pinpoint Test AU
U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AV
U0238:00	Lost Communication With Digital Audio Control Module "D": No Sub Type Information	GO to Pinpoint Test AX
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AZ
U0423:00	Invalid Data Received From Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the IPC. REFER to: Instrumentation, Message Center and Warning Chimes .* If no Diagnostic Trouble Codes (DTCs) are present in the IPC, DIAGNOSE the observable symptom.
U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the RCM. REFER to: Airbag Supplemental Restraint System (SRS) .* If no Diagnostic Trouble Codes (DTCs) are

		present in the RCM, DIAGNOSE the observable symptom.
U1A00:87	Private Communication Network: Missing Message	GO to Pinpoint Test D
U2017:45	Control Module Software #2: Program Memory Failure	CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). WAIT at least 10 seconds. RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U2017:45 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U2017:51	Control Module Software #2: Not Programmed	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Standard Programming .
U2017:52	Control Module Software #2: Not Activated	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Standard Programming .
U2017:54	Control Module Software #2: Missing Calibration	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Standard Programming .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Standard Programming .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Standard Programming .

U3000:04	Control Module: System Internal Failure	CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). WAIT at least 10 seconds. RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:04 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the APIM self-test. If DTC U3000:41 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the APIM self-test. If DTC U3000:42 is retrieved again, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .
U3000:88	Control Module: Bus Off	*NOTE: The module was unable to communicate on the network at a point in time. The fault is not currently present since the module had to communicate with the diagnostic scan tool to report this DTC.* **To avoid repeat network concerns:** INSPECT for damaged or corroded wiring at the APIM. Refer to Module Communications Network for schematic and connector information.CLEAR the DTC.WAIT at least 10 seconds.REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test BB
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test BC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC

CHART: AUDIO DSP MODULE

DTC	Description	Action
B13F7:13	Audio Input 1: Circuit Open	For a RHF door woofer speaker concern, GO to Pinpoint Test P For a RHF door midwoofer speaker concern, GO to Pinpoint Test O For a RHF A-pillar tweeter speaker concern, GO to Pinpoint Test N For a RHR quarter panel speaker concern (coupe), GO to Pinpoint Test Q For a right parcel shelf speaker concern (convertible), GO to Pinpoint Test R
B13F8:13	Audio Input 2: Circuit Open	REFER to: Instrumentation, Message Center and Warning Chimes . See DTC Chart: Audio DSP Module.
B13F9:13	Audio Input 3: Circuit Open	For a LHF door woofer speaker concern, GO to Pinpoint Test J For a LHF door midwoofer speaker concern, GO to Pinpoint Test K For a LHF A-pillar tweeter speaker concern, GO to Pinpoint Test L For a left parcel shelf speaker concern (convertible), GO to Pinpoint Test T For a LHR quarter panel speaker concern (coupe), GO to Pinpoint Test U
B13FA:13	Audio Input 4: Circuit Open	REFER to: Instrumentation, Message Center and Warning Chimes . See DTC Chart: Audio DSP Module.
B13FB:11	Audio Enable Line: Circuit Short To Ground	GO to Pinpoint Test I
B1A01:01	Speaker #1: General Electrical Failure	GO to Pinpoint Test J
B1A01:11	Speaker #1: Circuit Short To Ground	GO to Pinpoint Test J
B1A01:12	Speaker #1: Circuit Short To Battery	GO to Pinpoint Test J
B1A01:13	Speaker #1: Circuit Open	GO to Pinpoint Test J

B1A02:01	Speaker #2: General Electrical Failure	For a left parcel shelf speaker concern (coupe), GO to Pinpoint Test T For a LHR quarter panel speaker concern (convertible), GO to Pinpoint Test U
B1A02:11	Speaker #2: Circuit Short To Ground	For a left parcel shelf speaker concern (coupe), GO to Pinpoint Test T For a LHR quarter panel speaker concern (convertible), GO to Pinpoint Test U
B1A02:12	Speaker #2: Circuit Short To Battery	For a left parcel shelf speaker concern (coupe), GO to Pinpoint Test T For a LHR quarter panel speaker concern (convertible), GO to Pinpoint Test U
B1A02:13	Speaker #2: Circuit Open	For a left parcel shelf speaker concern (coupe), GO to Pinpoint Test T For a LHR quarter panel speaker concern (convertible), GO to Pinpoint Test U
B1A03:01	Speaker #3: General Electrical Failure	For a LHF door midwoofer speaker concern, GO to Pinpoint Test K For a left A-pillar tweeter speaker concern, GO to Pinpoint Test L
B1A03:11	Speaker #3: Circuit Short To Ground	For a LHF door midwoofer speaker concern, GO to Pinpoint Test K For a left A-pillar tweeter speaker concern, GO to Pinpoint Test L
B1A03:12	Speaker #3: Circuit Short To Battery	For a LHF door midwoofer speaker concern, GO to Pinpoint Test K For a left A-pillar tweeter speaker concern, GO to Pinpoint Test L
B1A03:13	Speaker #3: Circuit Open	For a LHF door midwoofer speaker concern, GO to Pinpoint Test K For a left A-pillar tweeter speaker concern, GO to Pinpoint Test L
B1A05:01	Speaker #5: General Electrical Failure	GO to Pinpoint Test P
B1A05:11	Speaker #5: Circuit Short To Ground	GO to Pinpoint Test P
B1A05:12	Speaker #5: Circuit Short To Battery	GO to Pinpoint Test P

B1A05:13	Speaker #5: Circuit Open	GO to Pinpoint Test P
B1A06:01	Speaker #6: General Electrical Failure	For a right parcel shelf speaker concern (coupe), GO to Pinpoint Test R For a RHR quarter panel speaker concern (convertible), GO to Pinpoint Test Q
B1A06:11	Speaker #6: Circuit Short To Ground	For a right parcel shelf speaker concern (coupe), GO to Pinpoint Test R For a RHR quarter panel speaker concern (convertible), GO to Pinpoint Test Q
B1A06:12	Speaker #6: Circuit Short To Battery	For a right parcel shelf speaker concern (coupe), GO to Pinpoint Test R For a RHR quarter panel speaker concern (convertible), GO to Pinpoint Test Q
B1A06:13	Speaker #6: Circuit Open	For a right parcel shelf speaker concern (coupe), GO to Pinpoint Test R For a RHR quarter panel speaker concern (convertible), GO to Pinpoint Test Q
B1A07:01	Speaker #7: General Electrical Failure	For a RHF door midwoofer speaker concern, GO to Pinpoint Test O For a right A-pillar tweeter speaker concern, GO to Pinpoint Test N
B1A07:11	Speaker #7: Circuit Short To Ground	For a RHF door midwoofer speaker concern, GO to Pinpoint Test O For a right A-pillar tweeter speaker concern, GO to Pinpoint Test N
B1A07:12	Speaker #7: Circuit Short To Battery	For a RHF door midwoofer speaker concern, GO to Pinpoint Test O For a right A-pillar tweeter speaker concern, GO to Pinpoint Test N
B1A07:13	Speaker #7: Circuit Open	For a RHF door midwoofer speaker concern, GO to Pinpoint Test O For a right A-pillar tweeter speaker concern, GO to Pinpoint Test N
B1A08:01	Speaker #8: General Electrical Failure	GO to Pinpoint Test M
B1A08:11	Speaker #8: Circuit Short To Ground	GO to Pinpoint Test M

B1A08:12	Speaker #8: Circuit Short To Battery	GO to Pinpoint Test M
B1A08:13	Speaker #8: Circuit Open	GO to Pinpoint Test M
B1A09:02	Speaker #9: General Signal Failure	GO to Pinpoint Test S
U0142:00	Lost Communication With Body Control Module "B": No Sub Type Information	GO to Pinpoint Test AQ
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AS
U0237:00	Lost Communication With Digital Audio Control Module "C": No Sub Type Information	GO to Pinpoint Test AW
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AY
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	*NOTE: Despite the description, this DTC applies to the FDIM, not the FCDIM.* GO to Pinpoint Test BA
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the IPC. REFER to: Instrumentation, Message Center and Warning Chimes .* If no Diagnostic Trouble Codes (DTCs) are present in the IPC, DIAGNOSE the observable symptom.
U201A:51	Control Module Main Calibration Data: Not Programmed	This DTC sets due to an incorrect or incomplete audio DSP module configuration. Using a diagnostic scan tool, PERFORM the audio DSP module programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete audio DSP module configuration. Using a diagnostic

		scan tool, PERFORM the audio DSP module programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete audio DSP module configuration. Using a diagnostic scan tool, PERFORM the audio DSP module programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U3000:41	Control Module: General Checksum Failure	CLEAR the DTC. WAIT at least 10 seconds. REPEAT the audio DSP module self-test. If DTC U3000:41 is retrieved again, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .
U3000:42	Control Module: General Memory Failure	CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). WAIT at least 10 seconds. RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:42 is retrieved again, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test BB
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test BC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: DACMC - 2.3L AND 5.2L ONLY

DTC	Description	Action
B116A:01	Handset Microphone: General	GO to Pinpoint Test AL

	Electrical Failure	
B117A:01	Backup Microphone: General Electrical Failure	GO to Pinpoint Test AM
B13F5:01	Microphone 3: General Electrical Failure	GO to Pinpoint Test AN
U0100:00	Lost Communication With ECM/ PCM "A": No Sub Type Information	GO to Pinpoint Test AO
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AP
U0142:00	Lost Communication With Body Control Module "B": No Sub Type Information	GO to Pinpoint Test AQ
U2024:00	Control Module Cal-Config Data: No Sub Type Information	This DTC sets due to an incorrect or incomplete DACMC configuration. Using a diagnostic scan tool, PERFORM the DACMC programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete DACMC configuration. Using a diagnostic scan tool, PERFORM the DACMC programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete DACMC configuration. Using a diagnostic scan tool, PERFORM the DACMC programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the DACMC self-test.

		If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). WAIT at least 10 seconds. RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
U3000:92	Control Module: Performance or Incorrect Operation	GO to Pinpoint Test G
U3000:94	Control Module: Unexpected Operation	If an observable symptom is **not** present, DISREGARD this DTC. If an observable symptom is present, GO to Pinpoint Test G
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test BB
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test BC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: FCIM

DTC	Description	Action
B00D5:01	Restraint System Passenger Disable Indicator: General Electrical Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC B00D5:01 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .
B1034:11	Left Front Seat Heater Element: Circuit Short To Ground	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B1034:15	Left Front Seat Heater Element: Circuit Short To Battery or Open	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B1036:11	Right Front Seat Heater Element: Circuit Short To Ground	REFER to: FRONT SEATS . See DTC Chart: FCIM.

B1036:15	Right Front Seat Heater Element: Circuit Short To Battery or Open	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B1038:11	Left Front Seat Heater Sensor: Circuit Short To Ground	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B1038:15	Left Front Seat Heater Sensor: Circuit Short To Battery or Open	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B103A:11	Right Front Seat Heater Sensor: Circuit Short To Ground	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B103A:15	Right Front Seat Heater Sensor: Circuit Short To Battery or Open	REFER to: FRONT SEATS . See DTC Chart: FCIM.
B105A:12	Cabin Temperature Sensor Fan: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B105A:14	Cabin Temperature Sensor Fan: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1081:07	Left Temperature Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1081:11	Left Temperature Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1081:12	Left Temperature Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1081:13	Left Temperature Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1082:07	Right Temperature Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1082:11	Right Temperature Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1082:12	Right Temperature Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic

		Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1082:13	Right Temperature Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1083:07	Recirculation Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1083:11	Recirculation Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1083:12	Recirculation Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1083:13	Recirculation Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1086:07	Air Distribution Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1086:11	Air Distribution Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1086:12	Air Distribution Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1086:13	Air Distribution Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B10AF:11	Blower Fan Relay: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B10AF:15	Blower Fan Relay: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.

B10B5:11	Left Panel Air Discharge Temperature: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B5:15	Left Panel Air Discharge Temperature: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B6:11	Left Floor Air Discharge Temperature: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B6:15	Left Floor Air Discharge Temperature: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B8:63	Push Buttons: Circuit / Component Protection Time-Out	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC B10B8:63 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .
B10B9:12	Blower Control: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B9:14	Blower Control: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11E5:12	Left HVAC Damper Position Sensor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11E5:14	Left HVAC Damper Position Sensor: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual

		Automatic Temperature Control).
B11E6:12	Right HVAC Damper Position Sensor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11E6:14	Right HVAC Damper Position Sensor: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11E7:12	Air Distribution Damper Position Sensor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11E7:14	Air Distribution Damper Position Sensor: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11F0:12	Air Intake Damper Position Sensor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B11F0:14	Air Intake Damper Position Sensor: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1202:01	Restraint System Passenger Enable Indicator: General Electrical Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC B1202:01 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .
B1A61:11	Cabin Temperature Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1A61:15	Cabin Temperature Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.

B1A63:11	Right Solar Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1A63:15	Right Solar Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1A64:11	Left Solar Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1A64:15	Left Solar Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1A69:12	Humidity Sensor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1A69:14	Humidity Sensor: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1B71:11	Evaporator Temperature Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1B71:15	Evaporator Temperature Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
B1C83:12	Rear Defog Relay: Circuit Short To Battery	REFER to: Glass, Frames and Mechanisms . See DTC Chart: FCIM.
B1C83:14	Rear Defog Relay: Circuit Short To Ground or Open	REFER to: Glass, Frames and Mechanisms . See DTC Chart: FCIM.
C1B14:11	Sensor Supply Voltage A: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See FCIM - DATC DTC Chart.
C1B14:12	Sensor Supply Voltage A: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Dual Automatic Temperature Control (DATC) . See

		FCIM - DATC DTC Chart.
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AP
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test AR
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AS
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AY
U0401:00	Invalid Data Received from ECM/ PCM A: No Sub Type Information	**RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the PCM.** For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Electronic Engine Controls . U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete GPSM configuration. Using a diagnostic scan tool, PERFORM the GPSM programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete GPSM configuration. Using a diagnostic scan tool, PERFORM the GPSM programming procedure using as-built data. For information on as-built data, REFER to: Module Configuration - System Operation and Component Description . See As-Built Data.
U3000:09	Control Module: Component Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test.

		If DTC U3000:09 is retrieved again, DISCONNECT the battery for 1 minute, then reconnect it. CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:09 is retrieved again, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:41 is retrieved again, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). WAIT at least 10 seconds. REPEAT the self-test. If DTC U3000:42 is retrieved again, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test BB
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test BC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > DTC CHART: SCCM

DTC	Description	Action
B1380:09	Steering Wheel Right Switch Pack: Component Failure	For a RH upper steering wheel switch concern, GO to Pinpoint Test AE For a RH lower steering wheel switch concern, GO to Pinpoint Test AF
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	For a RH upper steering wheel switch concern, GO to Pinpoint Test AE For a RH lower steering wheel

		switch concern, GO to Pinpoint Test AF
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	For a RH upper steering wheel switch concern, GO to Pinpoint Test AE For a RH lower steering wheel switch concern, GO to Pinpoint Test AF
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Steering Wheel and Column Electrical Components . See SCCM DTC Chart.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHARTS > SYMPTOM CHART: GENERAL AUDIO SYSTEM

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals, or connectors Module	REFER to: Communications Network . See Symptom Chart.
The RH upper steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test AE
The RH lower steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test AF
The CD player is inoperative or does not operate correctly	CD ACM	INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .
The speed compensated volume does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test E
The compass is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test AJ
The audio system does not operate correctly from the FCIM	Refer to the Pinpoint Test	GO to Pinpoint Test AG

The FCIM illumination is inoperative or does not dim	Illumination system concern FCIM	REFER to: Instrument Panel and Interior Switches Illumination .
The FDIM touchscreen is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test AH
The SIRIUS data services are not available - if equipped	Refer to the Pinpoint Test	GO to Pinpoint Test D

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHARTS > SYMPTOM CHART: HD RADIO ® SYSTEM

Condition	Possible Sources	Actions
Echo, stutter, skip, or repeat	Radio broadcaster time alignment error	ADVISE the customer that the HD Radio ® is functioning correctly.
FM multicast channels (HD2, HD3, HD4, etc.) are unavailable that were once available	Broadcast station not broadcasting Broadcast station maintenance Broadcast program change Broadcast station change Station unavailable for the current location Digital signal loss Poor reception	ADVISE the customer that there must be an available FM multicast channel in order to output High Definition (HD) content. The HD Radio ® is functioning correctly.
FM multicast channels (HD2, HD3, HD4, etc.) are unavailable when using the seek, tune, or scan functions	Unavailable stations Insufficient waiting time	ADVISE the customer that the scan function does not scan for multicast channels. There must be an available FM multicast channel in order to output High Definition (HD) content. If FM multicast channels are available, HD Radio ® takes time to detect and switch from analog to digital. The High Definition (HD) icon turns orange when the digital broadcast is available. The HD Radio ® is functioning correctly.
FM multicast channels (HD2, HD3, HD4, etc.) are unavailable when using a radio preset or direct tune	Station unavailable for the current location Digital signal loss Poor reception	ADVISE the customer that there must be an available FM multicast channel in order to output High Definition (HD) content. The HD Radio ® is functioning correctly.
FM multicast channels (HD2, HD3, HD4, etc.) have an audio mute delay when using a radio	Insufficient waiting time	ADVISE the customer that FM multicast channels take time to decode and make the audio

preset or direct tune		available. The HD Radio ® is functioning correctly.
High Definition (HD) not immediately available when using the seek or tune functions	Insufficient waiting time	ADVISE the customer that the HD Radio ® takes time to detect and switch from analog to digital. The High Definition (HD) icon turns orange when the digital broadcast is available. The HD Radio ® is functioning correctly.
Metadata does not match audio being played	Radio broadcaster data error	ADVISE the customer that the HD Radio ® is functioning correctly.
Metadata is not shown for the selected frequency	Radio broadcaster data error	ADVISE the customer that the HD Radio ® is functioning correctly.
Sound dropout when analog transitions to High Definition (HD)	Radio broadcaster digital encoder error	ADVISE the customer to turn HD off for this frequency to allow the analog signal to be heard. The HD Radio ® is functioning correctly.
Sound dropout while listening to FM multicast channels (HD2, HD3, HD4, etc.)	Digital signal loss	ADVISE the customer that FM multicast channels do not have analog equivalents. The HD Radio ® is functioning correctly.
Sound transitioning between High Definition (HD) and analog	Digital signal loss Poor reception	ADVISE the customer that there must be an available High Definition (HD) channel in order to output High Definition (HD) content. The HD Radio ® is functioning correctly.
Volume fluctuation	Radio broadcaster audio alignment error	ADVISE the customer that the HD Radio ® is functioning correctly.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHARTS > SYMPTOM CHART: NAVIGATION - IF EQUIPPED

Condition	Possible Sources	Actions
Navigation application is inoperative or unresponsive	Refer to the Pinpoint Test	GO to Pinpoint Test AI
Map does not load or show what is expected	Refer to the Pinpoint Test	GO to Pinpoint Test AI
Navigation does not track vehicle correctly on map	Refer to the Pinpoint Test	GO to Pinpoint Test AI
GPS icon displayed over red X with FDIM navigation tab selected	Refer to the Pinpoint Test	GO to Pinpoint Test AI

Voice recognition does not operate correctly to voice navigate to a destination	Refer to the Pinpoint Test	GO to Pinpoint Test AK
The SIRIUS Data Services are not available - if equipped	Refer to the Pinpoint Test	GO to Pinpoint Test D

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHARTS > SYMPTOM CHART: SATELLITE RADIO

Condition	Possible Sources	Actions
Poor reception	Refer to the Pinpoint Test	GO to Pinpoint Test C
Poor sound quality or no sound while in satellite radio mode - all other functions operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test C
The satellite radio is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test C

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHARTS > SYMPTOM CHART: SOUND QUALITY

Condition	Possible Sources	Actions
Poor reception - AM/ FM	Refer to the Pinpoint Test	For the coupe, GO to Pinpoint Test A For the convertible, GO to Pinpoint Test B
Continuous seek or scan - AM/ FM	Refer to the Pinpoint Test	For the coupe, GO to Pinpoint Test A For the convertible, GO to Pinpoint Test B
A loud popping sound is heard when cycling the ignition	Refer to the Pinpoint Test	GO to Pinpoint Test F
A low frequency noise is heard from the audio system	Refer to the Pinpoint Test	GO to Pinpoint Test G
Poor sound quality or distorted sound from one or more speakers (not all speakers)	Refer to the Pinpoint Test	GO to Pinpoint Test H
No sound from all speakers	Refer to the Pinpoint Test	GO to Pinpoint Test I
The LHF door woofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test J

The LHF door midwoofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test K
The LHF A-pillar tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test L
The center instrument panel speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test M
The RHF A-pillar tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test N
The RHF door midwoofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test O
The RHF door woofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test P
The RHR quarter panel speaker is inoperative (convertible)	Refer to the Pinpoint Test	GO to Pinpoint Test Q
The right parcel shelf speaker is inoperative (coupe)	Refer to the Pinpoint Test	GO to Pinpoint Test R
The subwoofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test S
The left parcel shelf speaker is inoperative (coupe)	Refer to the Pinpoint Test	GO to Pinpoint Test T
The LHR quarter panel speaker is inoperative (convertible)	Refer to the Pinpoint Test	GO to Pinpoint Test U

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > SYMPTOM CHARTS > SYMPTOM CHART: SYNC ® SYSTEM

Condition	Possible Sources	Actions
All SYNC ® Services features are inoperative or inaccurate (traffic, directions, and information)	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test V
All APIM stereo outputs are inoperative or do not operate correctly REFER to: Information and Entertainment System - System Operation and Component Description . See APIM for a list of stereo outputs.	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test W
All APIM mono outputs are inoperative or do not operate	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] .

correctly REFER to: Information and Entertainment System - System Operation and Component Description . See APIM for a list of mono outputs.		If the concern is still present, GO to Pinpoint Test X
Voice recognition is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test Y
During a phone call, no outgoing audio is heard on the outside device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test Y
The SYNC ® steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test AF
All media hub functions are inoperative or do not operate correctly (USB ports, SD card, and audio input jack)	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test Z
The USB port(s) is/are inoperative or does/do not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test AA
The SD card slot is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test AB
The audio input jack is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test AC
Unable to pair Bluetooth device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . If the concern is still present, GO to Pinpoint Test AD
An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	Customer's device compatibility	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] . INSTRUCT the customer to review the device compatibility list. REFER to www.syncmyride.com. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC ® system.

		If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
911 Assist™ or VHR is inoperative or does not operate correctly	Unregistered SYNC ® owner account RCM misconfiguration IPC misconfiguration	Verify that the customer has a SYNC ® Owner Account on www.syncmyride.com. This error message appears due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or RCM. If there have been recent service actions with the IPC or RCM, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. REFER to: Module Configuration - System Operation and Component Description . See PMI. If there have been no recent service actions, the APIM has failed to retain configuration data. PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (COUPE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Charging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See AM/ FM Radio, RDS, AM/ FM Antenna Amplifier - Coupe, Antenna, and Noise Suppression Equipment.

Possible Sources

- No channel found in the selected RDS category
- Noise suppression equipment
- Charging system
- Wiring, terminals, or connectors

- Ignition system
- AM/ FM on-glass antenna grid
- AM/ FM antenna coaxial cable
- Mounting surface corrosion
- AM/ FM antenna amplifier
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (COUPE) > PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (COUPE)

A1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING

Operate the audio system in AM/ FM mode.

Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to A2

No	GO to A4

A2 CHECK THE GENERATOR

Ignition OFF.

NOTE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.

Disconnect: Generator B+ Cable C102C .

Start the engine.

Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator.* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER

	to: Generator - 2.3L EcoBoost (201kW/273PS) .* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Generator - 3.7L Duratec (227kW/301PS) .* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Generator - 5.0L 32V Ti-VCT .

No	GO to A3

A3 CHECK THE IGNITION CIRCUITS

Ignition OFF.

Connect: Generator B+ Cable C102C .

Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings.

Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.

Are the ignition components OK?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.

No	REPAIR the ignition system as necessary.

A4 CHECK THE AUDIO SYSTEM RECEPTION WITH THE REAR WINDOW DEFROST GRID ACTIVATED

Operate the audio system in AM/ FM mode.

Check the reception with the rear window defrost grid activated and deactivated.

Is poor reception only present with the rear window defrost grid activated?

Yes	The grid line material is not embedded in the glass, but is baked onto the glass surface, and consequently can be scraped off. Carefully INSPECT and REPAIR the AM/ FM on-glass antenna grid. REFER to: Heated Window Grid Wire Repair .

No	* For a concern with only the AM radio, GO to A5* For a concern with only the FM radio, or with both the AM and FM radio, GO to A8

A5 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR CORRECT VOLTAGE

Ignition OFF.

Disconnect: AM/ FM Antenna Amplifier C4082 .

Ignition ON.

Operate the audio system in AM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4082-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A8

No	GO to A6

A6 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: ACM C240A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4082-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A7

No	REPAIR the circuit.

A7 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4082-1	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to A22

No	REPAIR the circuit.

A8 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: AM/ FM antenna coaxial cable from the ACM. REFER to: Audio Front Control Module (ACM) .

Disconnect: AM/ FM antenna inline coaxial cable connection underneath the center console. REFER to: Floor Console .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to A9

A9 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A10

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A10 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Front AM/ FM antenna coaxial cable core at the inline connection
AM/ FM antenna coaxial cable shield at the ACM	Ω	Front AM/ FM antenna coaxial cable shield at the inline connection

Are the resistances less than 1 ohm?

Yes	GO to A11

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A11 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to A12

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A12 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Connect: AM/ FM antenna inline coaxial cable connection underneath the center console.

Disconnect: AM/ FM antenna coaxial cable from the AM/ FM Antenna Amplifier. REFER to: Audio Unit Antenna Amplifier .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to A13

A13 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A14

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A14 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable core at the AM/ FM antenna amplifier (harness side)
AM/ FM antenna coaxial cable shield at the ACM	Ω	AM/ FM antenna coaxial cable shield at the AM/ FM antenna amplifier (harness side)

Are the resistances less than 1 ohm?

Yes	GO to A15

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A15 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to A16

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

A16 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: AM/ FM antenna coaxial cable to the AM/ FM Antenna Amplifier.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

No	GO to A17

A17 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA

AMPLIFIER CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A18

No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

A18 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to A19

No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

A19 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A21

No	GO to A20

A20 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

Remove the AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna shield at the AM/ FM antenna amplifier (component side)	Ω	AM/ FM antenna amplifier base (unpainted surface on the mounting tab)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the AM/ FM antenna amplifier and/or vehicle mounting surface. REINSTALL the AM/ FM antenna amplifier and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna Amplifier .

No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier .

A21 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COMPONENTS

Disconnect and inspect the AM/ FM antenna amplifier connector for the AM/ FM antenna circuits coming from the AM/ FM on-glass antenna grid. REFER to: Audio Unit Antenna Amplifier .

Inspect the AM/ FM antenna circuits coming from the AM/ FM on-glass antenna grid.

Inspect the AM/ FM antenna circuit connections at the AM/ FM on-glass antenna grid.

Is any damage present on the AM/ FM antenna circuits or connections?

Yes	REPAIR or REPLACE as necessary.

No	GO to A22

A22 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST B : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (CONVERTIBLE)

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Charging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See AM/ FM Radio, RDS, Antenna, and Noise Suppression Equipment.

Possible Sources

- No channel found in the selected RDS VHR category
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- Noise suppression equipment
- AM/ FM antenna coaxial cable
- RHR fender-mounted AM/ FM mast antenna
- Mounting surface corrosion
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST B : POOR RECEPTION OR CONTINUOUS SEEK

OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (CONVERTIBLE) > PINPOINT TEST B : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) (CONVERTIBLE)

B1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING

Operate the audio system in AM/ FM mode.

Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to B2

No	* For a concern with only the AM radio, GO to B4* For a concern with only the FM radio, or with both the AM and FM radio, GO to B7

B2 CHECK THE GENERATOR

Ignition OFF.

NOTE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.

Disconnect: Generator B+ Cable C102C .

Start the engine.

Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator.* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Generator - 2.3L EcoBoost (201kW/273PS) .* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Generator - 3.7L Duratec (227kW/301PS) .* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Generator - 5.0L 32V Ti-VCT .

No	GO to B3

B3 CHECK THE IGNITION CIRCUITS

Ignition OFF.

Connect: Generator B+ Cable C102C .

Visually inspect the engine compartment and make sure all ignition coils are correctly and

securely connected, and that there are no visible cracks in the coil housings.

Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.

Are the ignition components OK?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.

No	REPAIR the ignition system as necessary.

B4 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR CORRECT VOLTAGE

Ignition OFF.

Disconnect: Antenna C4823 .

Ignition ON.

Operate the audio system in AM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B7

No	GO to B5

B5 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: ACM C240A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B6

No	REPAIR the circuit.

B6 CHECK THE AM (AMPLITUDE MODULATION) SIGNAL AMPLIFIER CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to B20

No	REPAIR the circuit.

B7 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: AM/ FM antenna coaxial cable from the ACM. REFER to: Audio Front Control Module (ACM) .

Disconnect: AM/ FM antenna inline coaxial cable connection underneath the center console. REFER to: Floor Console .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	V	Ground
AM/ FM antenna coaxial cable shield at the ACM	V	Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to B8

B8 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B9

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B9 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Front AM/ FM antenna coaxial cable core at the inline connection
AM/ FM antenna coaxial cable shield at the ACM	Ω	Front AM/ FM antenna coaxial cable shield at the inline connection

Are the resistances less than 1 ohm?

Yes	GO to B10

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B10 CHECK THE FRONT AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to B11

No	REPAIR or INSTALL a new front AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B11 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Connect: AM/ FM antenna inline coaxial cable connection underneath the center console.

Disconnect: AM/ FM antenna coaxial cable from the antenna unit. REFER to: Audio Unit Antenna .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

No	GO to B12

B12 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B13

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B13 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable core at the antenna unit (harness side)
AM/ FM antenna coaxial cable shield at the ACM	Ω	AM/ FM antenna coaxial cable shield at the antenna unit (harness side)

Are the resistances less than 1 ohm?

Yes	GO to B14

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B14 CHECK THE REAR AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to B15

No	REPAIR or INSTALL a new rear AM/ FM antenna coaxial cable. REFER to: Audio Unit Antenna Cable .

B15 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: AM/ FM antenna coaxial cable at the antenna unit.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

No	GO to B16

B16 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B17

No	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

B17 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to B18

No	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

B18 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to B20

No	GO to B19

B19 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

Remove the AM/ FM antenna. REFER to: Audio Unit Antenna .

Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna unit shield at the antenna unit (component side)	Ω	AM/ FM antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the RHR fender-mounted AM/ FM mast antenna base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna .

No	INSTALL a new RHR fender-mounted AM/ FM mast antenna. REFER to: Audio Unit Antenna .

B20 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST C : THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION OR SOUND QUALITY, OR HAS NO SOUND

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See MyKey ®, Satellite Radio, and Antenna.

When a satellite radio subscription is activated, the ESN of the satellite radio receiver built into the ACM is associated with the VIN.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the satellite radio coaxial cable for more than 1 second. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected on the satellite radio coaxial cable for more than 250 milliseconds. This DTC can be

		either continuous or on-demand.

Possible Sources

- Expired subscription
- Obstructions in the antenna's line of sight
- Incorrectly matched ESN
- Satellite radio antenna coaxial cable
- Satellite radio antenna
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST C : THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION OR SOUND QUALITY, OR HAS NO SOUND > PINPOINT TEST C : THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION OR SOUND QUALITY, OR HAS NO SOUND

C1 VERIFY AN ACTIVE SUBSCRIPTION

Operate the audio system in satellite radio mode and observe the infotainment display.

Does the display indicate that the subscription has expired?

Yes	The subscription has expired. INSTRUCT the customer to contact SIRIUS to reactivate the subscription.

No	GO to C2

C2 CHECK THE RECEPTION

Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees.

Using a diagnostic scan tool, view the ACM Parameter Identifications (PIDs).

Monitor the satellite signal strength (SAT_SIG_STR) PID.

If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained.

Can a "Good," "Very Good," or "Excellent" PID value be obtained?

Yes	GO to C3

No	GO to C6

C3 CHECK THE SATELLITE RADIO SYSTEM FOR CORRECT OPERATION

Operate multiple channels with the audio system in satellite radio mode.

Does the satellite radio system receive multiple channels with normal sound quality?

Yes	The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight.

No	GO to C4

C4 CHECK FOR PROMOTIONAL CHANNEL 184

Select channel 184.

Does the satellite radio system receive channel 184 with normal sound quality?

Yes	GO to C5

No	GO to C6

C5 VERIFY THAT THE VIN (VEHICLE IDENTIFICATION NUMBER) AND ESN (ELECTRONIC SERIAL NUMBER) ON FILE MATCH THE VIN (VEHICLE IDENTIFICATION NUMBER) AND ESN (ELECTRONIC SERIAL NUMBER) FROM THE VEHICLE

Retrieve the satellite radio ESN by tuning to channel 0.

Contact the SIRIUS Dealer Support Line (888-465-8528).

Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle.

Follow the actions from step 2 to obtain "Good," "Very Good," or "Excellent" reception.

Operate the audio system in satellite radio mode.

NOTE: It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate.

Request for SIRIUS to send the activation signal to the vehicle 2-3 times.

Operate multiple channels with the audio system in satellite radio mode.

Does the satellite radio system receive multiple channels with normal sound quality?

Yes	The system is operating correctly at this time. The concern was a result of the activation

	signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle.

No	GO to C6

C6 CHECK FOR ACM (AUDIO FRONT CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear the ACM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, perform the ACM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the ACM?

Yes	* For DTC B1A89:11 or DTC B1A89:13, GO to C7* For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC REFER to: Satellite Radio Antenna . Chart: ACM.

No	GO to C20

C7 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Satellite antenna coaxial cable from the ACM. REFER to: Audio Front Control Module (ACM) .

Disconnect: Satellite antenna inline coaxial cable connection underneath the center console. REFER to: Floor Console .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground
Satellite antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

No	GO to C8

C8 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C9

No	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

C9 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Front satellite antenna coaxial cable core at the inline connection
Satellite antenna coaxial cable shield at the ACM	Ω	Front satellite antenna coaxial cable shield at the inline connection

Are the resistances less than 1 ohm?

Yes	GO to C10

No	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

C10 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to C11

No	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

C11 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Connect: Satellite antenna inline coaxial cable connection underneath the center console.

Disconnect: Satellite antenna coaxial cable from the satellite radio antenna unit. REFER to: Satellite Radio Antenna .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground
Satellite antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

No	GO to C12

C12 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C13

No	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

C13 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable core at the antenna unit (harness side)
Satellite antenna coaxial cable shield at the ACM	Ω	Satellite antenna coaxial cable shield at the antenna unit (harness side)

Are the resistances less than 1 ohm?

Yes	GO to C14

No	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

C14 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to C15

No	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

C15 CHECK THE SATELLITE ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: Satellite antenna coaxial cable at the satellite radio antenna unit.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground
Satellite antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

No	GO to C16

C16 CHECK THE SATELLITE ANTENNA UNIT CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C17

No	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

C17 CHECK THE SATELLITE ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to C18

No	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

C18 CHECK THE SATELLITE ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to C20

No	GO to C19

C19 CHECK THE SATELLITE ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

Remove the satellite antenna. REFER to: Satellite Radio Antenna .

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna unit shield at the antenna unit (component side)	Ω	Satellite antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the satellite radio antenna base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved. REFER to: Satellite Radio Antenna .

No	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

C20 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST D : THE SIRIUS DATA SERVICES ARE NOT AVAILABLE - IF EQUIPPED

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SIRIUS Data Services and Media Hub.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the satellite radio coaxial cable for more than 1 second. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected on the satellite radio coaxial cable for more than 250 milliseconds. This DTC can be either continuous or on-demand.
U1A00:87	Private Communication Network: Missing Message	Set by the APIM when messages are missing from the ACM on the SDL circuits.

Removal of the map data SD card results in the loss of SIRIUS Data Services while the card is

removed. This is normal operation.

Possible Sources

- Map data SD card not present, not fully seated, or damaged
- Media hub
- Expired subscription
- Obstructions in the antenna's line of sight
- Incorrectly matched ESN
- Satellite radio antenna coaxial cable
- Satellite radio antenna
- Wiring, terminals, or connectors
- ACM
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST D : THE SIRIUS DATA SERVICES ARE NOT AVAILABLE - IF EQUIPPED > PINPOINT TEST D : THE SIRIUS DATA SERVICES ARE NOT AVAILABLE - IF EQUIPPED

NOTE: Ford Motor Company does not support the addition of SIRIUS Data Services to vehicles not equipped with a factory-installed navigation system.

D1 VERIFY THE MAP DATA SD (SECURE DIGITAL) CARD IS PRESENT

Check for the presence of a map data SD card in the media hub SD card slot.

Is the map data SD card present and fully seated?

Yes	GO to D2

No	INSTALL the map data SD card. TEST the system for normal operation.

D2 INSPECT THE MAP DATA SD (SECURE DIGITAL) CARD

Remove the map data SD card.

Inspect the map data SD card case and pins for damage.

Is any damage present?

Yes	INSTALL a new map data SD card.

No	GO to D3

D3 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS FOR POWER OUTPUT

Connect: MIT 105-00120.

Does the MIT 105-00120 power on from both USB ports?

Yes	GO to D4

No	* If the MIT 105-00120 powers on from only one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the MIT 105-00120 does not power on from either USB port, GO to Pinpoint Test Z

D4 RESET THE APIM (SYNC MODULE) AND VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

Remove any devices connected to the media hub.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using each USB port.

Is the audio output OK for each USB port?

Yes	GO to D5

No	* If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the audio output is not OK from both USB ports, GO to Pinpoint Test AA

NOTE: The status of the satellite radio subscription should be disregarded in this step since SIRIUS Data Services does not require a satellite radio subscription to operate.

D5 VERIFY AN ACTIVE SUBSCRIPTION

Access the Subscription Info selection in the touchscreen Travel Link menu.

Does the display indicate the subscription has expired for traffic, weather, fuel prices, movie times, sports, weather map, or ski conditions?

Yes	* If the subscription has expired for one or more, but not all categories mentioned above, GO to D30 * If the subscription has expired for all categories mentioned above, INSTRUCT the customer to contact SIRIUS to reactivate the subscription.

No	GO to D6

D6 CHECK THE RECEPTION

Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees.

Using a diagnostic scan tool, view the ACM Parameter Identifications (PIDs).

Monitor the satellite signal strength (SAT_SIG_STR) PID.

If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained.

Can a "Good," "Very Good," or "Excellent" PID value be obtained?

Yes	GO to D7

No	GO to D10

D7 CHECK THE SIRIUS DATA SERVICES FOR CORRECT OPERATION

Operate the audio system in SIRIUS Data Services mode and observe the infotainment display.

Do SIRIUS Data Services operate correctly?

Yes	The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight.

No	GO to D8

D8 CHECK FOR PROMOTIONAL CHANNEL 184

Operate the audio system in satellite radio mode.

Select channel 184.

Does the satellite radio system receive promotional channel 184 with normal sound quality?

Yes	GO to D9

No	GO to D10

D9 VERIFY THAT THE VIN (VEHICLE IDENTIFICATION NUMBER) AND ESN (ELECTRONIC SERIAL NUMBER) ON FILE MATCH THE VIN (VEHICLE IDENTIFICATION NUMBER) AND ESN (ELECTRONIC SERIAL NUMBER) FROM THE VEHICLE

Retrieve the satellite radio ESN by tuning to channel 0.

Contact the SIRIUS Dealer Support Line (888-465-8528).

Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle.

Follow the actions from step 4 to obtain "Good," "Very Good," or "Excellent" reception.

Operate the audio system in SIRIUS Data Services mode.

NOTE: It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate.

Request for SIRIUS to send the activation signal to the vehicle 2-3 times.

Operate the audio system in SIRIUS Data Services mode and observe the infotainment display.

Do SIRIUS Data Services operate correctly?

Yes	The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle.

No	GO to D10

D10 CHECK FOR ACM (AUDIO FRONT CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear the ACM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, perform the ACM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the ACM?

Yes	* For DTC B1A89:11 or DTC B1A89:13, GO to D12* For all other ACM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: ACM.

No	GO to D11

D11 CHECK FOR APIM (SYNC MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	* For DTC U1A00:87, GO to D25* For all other APIM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: APIM.

No	GO to D29

D12 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Satellite antenna coaxial cable from the ACM. REFER to: Audio Front Control Module (ACM) .

Disconnect: Satellite antenna inline coaxial cable connection underneath the center console. REFER to: Floor Console .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground
Satellite antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

No	GO to D13

D13 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D14

No	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

D14 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Front satellite antenna coaxial cable core at the inline connection
Satellite antenna coaxial cable shield at the ACM	Ω	Front satellite antenna coaxial cable shield at the inline connection

Are the resistances less than 1 ohm?

Yes	GO to D15

No	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

D15 CHECK THE FRONT SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to D16

No	REPAIR or INSTALL a new front satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

D16 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: Satellite antenna inline coaxial cable connection underneath the center console.

Disconnect: Satellite antenna coaxial cable from the satellite radio antenna unit. REFER to: Satellite Radio Antenna .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground
Satellite antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

No	GO to D17

D17 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D18

No	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

D18 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable core at the antenna unit (harness side)
Satellite antenna coaxial cable shield at the ACM	Ω	Satellite antenna coaxial cable shield at the antenna unit (harness side)

Are the resistances less than 1 ohm?

Yes	GO to D19

No	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

D19 CHECK THE REAR SATELLITE ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to D20

No	REPAIR or INSTALL a new rear satellite antenna coaxial cable. REFER to: Satellite Radio Antenna Cable .

D20 CHECK THE SATELLITE ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

Ignition OFF.

Connect: Satellite antenna coaxial cable at the satellite radio antenna unit.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM		Ground
Satellite antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

No	GO to D21

D21 CHECK THE SATELLITE ANTENNA UNIT CORE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D22

No	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

D22 CHECK THE SATELLITE ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable core at the ACM	Ω	Satellite antenna coaxial cable shield at the ACM

Is the resistance greater than 10, 000 ohms?

Yes	GO to D23

No	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

D23 CHECK THE SATELLITE ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to D29

No	GO to D24

D24 CHECK THE SATELLITE ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

Remove the satellite antenna. REFER to: Satellite Radio Antenna .

Measure:

Positive Lead	Measurement / Action	Negative Lead
Satellite antenna unit shield at the antenna unit (component side)	Ω	Satellite antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the satellite radio antenna base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved. REFER to: Satellite Radio Antenna .

No	INSTALL a new satellite radio antenna. REFER to: Satellite Radio Antenna .

D25 CHECK THE SDL (SIRIUS DATA LINK) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-6	V	Ground

C240B-19		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to D26

D26 CHECK THE SDL (SIRIUS DATA LINK) FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-6	Ω	Ground
C240B-19	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D27

No	REPAIR the circuit in question.

D27 CHECK THE SDL (SIRIUS DATA LINK) FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-6	Ω	C2383-51
C240B-19	Ω	C2383-52

Are the resistances less than 3 ohms?

Yes	GO to D28

No	REPAIR the circuit in question.

D28 CHECK THE SDL (SIRIUS DATA LINK) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-6	Ω	C240B-19

Is the resistance greater than 10, 000 ohms?

Yes	GO to D30

No	REPAIR the circuit in question.

D29 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D30 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST E : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See DSP, MyKey ® Audio Operation, and Speed Compensated Volume.

Possible Sources

- Speed compensated volume setting
- Audio DSP module

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST E : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY > PINPOINT TEST E : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

E1 CHECK THE SPEEDOMETER OPERATION

Drive the vehicle and observe the speedometer.

Does the speedometer operate correctly?

Yes	GO to E2

No	REFER to: Instrumentation, Message Center and Warning Chimes . See A virtual Gauge (Accessory Power, AWD, Brake Coach, High Voltage Battery, Integrated Power,

	Speedometer, Split Power, Tachometer Or Temperature), Is Inoperative

E2 CHECK THE SPEED COMPENSATED VOLUME SETTING

Turn the speed compensated volume off. Refer to the Owner's Literature.

Operate the audio system in AM/ FM mode.

Drive the vehicle at various speeds and observe the speaker volume.

Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature.

Operate the audio system in AM/ FM mode.

Drive the vehicle at various speeds and observe the speaker volume.

Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature.

No	GO to E3

E3 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 retrieved in any audio system module?

Yes	GO to Pinpoint Test AS

No	GO to E4

E4 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST F : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Refer to Starting System for schematic and connector information.

Normal Operation and Fault Conditions

The ACM receives voltage on a start signal circuit when the ignition is in the START position, and mutes the audio signal output. This prevents voltage spikes from producing popping noises through the speakers. An open on this circuit between splice CS101 and the ACM could cause voltage spikes to produce popping noises through the speakers.

Possible Sources

- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST F : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION > PINPOINT TEST F : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

F1 CHECK THE START SENSE CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: ACM C240A .

Remove: BJB Starter Relay.

Disconnect:

PCM C1551B for vehicles with the 2.3L EcoBoost (201kW/273PS).

PCM C1381B for vehicles with the 3.7L Duratec (227kW/301PS).

PCM C175B for vehicles with the 5.0L 32V Ti-VCT.

PCM C175B for vehicles with the 5.2L.

For vehicles with the 2.3L EcoBoost (201kW/273PS), measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C1551B-62

For vehicles with the 3.7L Duratec (227kW/301PS), measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C1381B-1

For vehicles with the 5.0L 32V Ti-VCT, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C175B-1

For vehicles with the 5.2L, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	BJB Starter Relay Socket 1

Positive Lead	Measurement / Action	Negative Lead
C240A-3	Ω	C175B-1

Are the resistances less than 3 ohms?

Yes	GO to F2

No	REPAIR the circuit.

F2 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST G : A LOW FREQUENCY NOISE IS HEARD FROM THE AUDIO SYSTEM

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, Audio DSP Module, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3000:92	Control Module: Performance or Incorrect Operation	Set by the DACMC when a fault is detected with the ANC system when running the Active Diagnostics Test.

U3000:94	Control Module: Unexpected Operation	Set by the DACMC when a fault is detected with the ANC system.

Possible Source

- Improper ANC microphone installation or damage
- Wiring, terminals, or connectors
- DACMC
- Audio DSP module

Visual Inspection and Diagnostic Pre-checks

- The ANC system may not be compatible with speakers, other audio system components, and audio system architectures not approved by Ford. Ensure that no modifications have been made to the audio system.
- Inspect the LHF, RHF, RHR, and LHR door midwoofer speaker locations for items that may be blocking the speaker sound output.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST G : A LOW FREQUENCY NOISE IS HEARD FROM THE AUDIO SYSTEM > PINPOINT TEST G : A LOW FREQUENCY NOISE IS HEARD FROM THE AUDIO SYSTEM

G1 CHECK FOR ANC (ACTIVE NOISE CONTROL) MICROPHONE DIAGNOSTIC TROUBLE CODES (DTCS) PRESENT IN THE DACMC (DIGITAL AUDIO CONTROL MODULE C) OR SPEAKER DIAGNOSTIC TROUBLE CODES (DTCS) PRESENT IN THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Using a diagnostic scan tool, perform the self-test for the following modules:

DACMC

Audio DSP module

Are any ANC microphone Diagnostic Trouble Codes (DTCs) recorded in the DACMC or any speaker Diagnostic Trouble Codes (DTCs) recorded in the audio DSP module?

Yes	* For DACMC Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: DACMC.* For audio DSP module Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: Audio DSP Module.

No	GO to G2

G2 VERIFY IF THE CONCERN IS RELATED TO THE ANC (ACTIVE NOISE CONTROL) SYSTEM

Close the luggage compartment lid and all doors.

Ignition ON.

Turn the audio system off.

Determine if an observable symptom is present.

Enable the ANC system by starting the vehicle.

Determine if an observable symptom is present.

Is an observable symptom only present when the engine is on?

Yes	GO to G3

No	* If an observable symptom is only present when the engine is off, REFER to: Information and Entertainment System . See DTC Charts or Symptom Charts to diagnose the audio system.* If an observable symptom is present with the engine off and the ignition on **and** when the engine is on, REFER to: DTC Charts or Symptom Charts to diagnose the audio system.

G3 VERIFY IF THE CONCERN IS RELATED TO THE ANC (ACTIVE NOISE CONTROL) SYSTEM WITH THE VEHICLE'S WHEELS STATIONARY

With the vehicle stationary, take the gasoline engine through the RPM range and verify if there is an observable symptom present.

Determine if an observable symptom is present.

Disable the ANC system by opening the driver's door.

With the vehicle stationary, take the gasoline engine through the RPM range and verify if there is an observable symptom present.

Is an observable symptom present when the driver's door is open?

Yes	REFER to: Information and Entertainment System . See DTC Charts or Symptom Charts to diagnose the audio system.

No	GO to G4

G4 VERIFY IF THE CONCERN IS RELATED TO THE ANC (ACTIVE NOISE CONTROL) SYSTEM WITH THE VEHICLE'S WHEELS IN MOTION

Place the vehicle on a hoist.

Ensure all four wheels are off the ground and not in contact with anything.

Close the luggage compartment lid and all doors.

Enable the ANC system by starting the vehicle.

Ensure the audio system is off.

Take the gasoline engine through the RPM range in various gears and verify if there is an observable symptom present.

Disable the ANC system by opening the driver's door.

Take the gasoline engine through the RPM range in various gears and verify if there is an observable symptom present.

Is an observable symptom present when the driver's door is open?

Yes	REFER to: Information and Entertainment System . See DTC Charts or Symptom Charts to diagnose the audio system.

No	GO to G5

G5 CHECK THE VEHICLE SERVICE HISTORY

Check the vehicle service history for recent service actions related to the overhead console, headliner, or ANC microphones.

Have there been recent service actions with the overhead console, headliner, or ANC microphones?

Yes	GO to G6

No	GO to G14

G6 INSPECT THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the overhead console ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

Is the microphone mounted correctly?

Yes	GO to G7

No	INSTALL the ANC microphone correctly. REFER to: Active Noise Control Microphone .

G7 INSPECT THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or overhead console as needed. REFER to: Active Noise Control Microphone .

No	* For coupes, GO to G12* For convertibles, GO to G8

G8 INSPECT THE LHF (LEFT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the LHF ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

The microphone mounting bezel is properly glued to the headliner with no gaps between the headliner and all four corners of the microphone mounting bezel.

Is the microphone mounted correctly?

Yes	GO to G9

No	INSTALL the ANC microphone and/or mounting bezel correctly. REFER to: Active Noise Control Microphone .

G9 INSPECT THE LHF (LEFT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or mounting bezel as needed. REFER to: Active Noise Control Microphone .

No	GO to G10

G10 INSPECT THE RHF (RIGHT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the LHF ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

The microphone mounting bezel is properly glued to the headliner with no gaps between the headliner and all four corners of the microphone mounting bezel.

Is the microphone mounted correctly?

Yes	GO to G11

No	INSTALL the ANC microphone and/or mounting bezel correctly. REFER to: Active Noise Control Microphone .

G11 INSPECT THE RHF (RIGHT-HAND FRONT) ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or mounting bezel as needed. REFER to: Active Noise Control Microphone .

No	GO to G14

G12 INSPECT THE REAR ANC (ACTIVE NOISE CONTROL) MICROPHONE INSTALLATION

Gain access to the rear ANC microphone. REFER to: Active Noise Control Microphone .

Inspect the microphone for correct mounting.

The microphone is snapped into the mounting bezel.

The microphone is seated properly.

The microphone mounting bezel is properly glued to the headliner with no gaps between the headliner and all four corners of the microphone mounting bezel.

Is the microphone mounted correctly?

Yes	GO to G13

No	INSTALL the ANC microphone and/or mounting bezel correctly. REFER to: Active Noise Control Microphone .

G13 INSPECT THE REAR ANC (ACTIVE NOISE CONTROL) MICROPHONE FOR DAMAGE

Inspect the microphone and microphone mounting bezel for damage.

Is any damage present?

Yes	REPLACE the microphone or mounting bezel as needed. REFER to: Active Noise Control Microphone .

No	GO to G14

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

G14 CHECK THE ANC (ACTIVE NOISE CONTROL) AUDIO SIGNALS FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Place the vehicle on a hoist.

Ensure all four wheels are off the ground and not in contact with anything.

Close the luggage compartment lid and all doors.

Enable the ANC system by starting the vehicle.

Ensure the audio system is off.

While taking the gasoline engine through the RPM range in various gears and back-probing ACM C240A and C240B , measure the AC voltage.

LHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-4		Ground
C240B-17		Ground

RHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240A-8		Ground
C240A-20		Ground

Rear ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-9		Ground

C240B-22		Ground

Is a fluctuating AC voltage present?

Yes	GO to G15

No	GO to G19

G15 CHECK THE ANC (ACTIVE NOISE CONTROL) CIRCUITS FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385A .

Disconnect: ACM C240A .

Disconnect: ACM C240B .

Ignition ON.

Measure:

LHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-4		Ground
C240B-17		Ground

RHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240A-8		Ground
C240A-20		Ground

Rear ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-9		Ground
C240B-22		Ground

Shield

Positive Lead	Measurement / Action	Negative Lead
C240B-16		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to G16

G16 CHECK THE ANC (ACTIVE NOISE CONTROL) CIRCUITS FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

LHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-4	Ω	Ground
C240B-17	Ω	Ground

RHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240A-8	Ω	Ground
C240A-20	Ω	Ground

Rear ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-9	Ω	Ground
C240B-22	Ω	Ground

Shield

Positive Lead	Measurement / Action	Negative Lead
C240B-16	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to G17

No	REPAIR the circuit in question.

G17 CHECK THE ANC (ACTIVE NOISE CONTROL) CIRCUITS FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

LHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-4	Ω	C2385A-11
C240B-17	Ω	C2385A-12

RHF ANC Signal

Positive Lead	Measurement / Action	Negative Lead
C240A-8	Ω	C2385A-10
C240A-20	Ω	C2385A-9

Rear Signal

Positive Lead	Measurement / Action	Negative Lead
C240B-9	Ω	C2385A-13
C240B-22	Ω	C2385A-14

Are the resistances less than 3 ohms?

Yes	GO to G18

No	REPAIR the circuit in question.

G18 CHECK THE ANC (ACTIVE NOISE CONTROL) CIRCUITS FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

C240B-17	Ω	C240B-22
C240A-20	Ω	C240B-22

Are the resistances greater than 10, 000 ohms?

Yes	GO to G20

No	REPAIR the circuit in question.

G19 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G20 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST H : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST H : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) > PINPOINT TEST H : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

H1 ISOLATE THE ZONE

Operate the audio system using digital media such as a CD or MP3.

Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LHF, RHF, LHR and RHR) of the vehicle to isolate the poor sound quality.

Locate and apply pressure to the trim panel(s) around the poor sound quality area in question.

Does applying pressure to a trim panel reduce or eliminate the audible noise?

Yes	REPAIR or REPLACE the trim panel as needed.

No	GO to H2

H2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)

Remove the trim panel to access the suspect speaker.

Operate the audio system using digital media such as a CD or MP3.

Validate where the poor sound quality area is located.

Check:

- Trim panel for loose components around the speaker area such as the speaker grille
- Trim panel joining components for missing or broken pieces
- Lock and handle mechanical parts for correct attachment
- Wire harnesses for correct routing
- Wire harness fasteners for correct attachment
- Water shield for correct placement (speaker air path not blocked)
- Water shield for correct bonding to sheet metal
- Storage areas for loose items
- All child safety belt anchors (if equipped)
- All safety belt retractors
- All speaker bracket fasteners and other fasteners are secured and tightened to specified torque

Was the source of the noise located?

Yes	REPAIR or REPLACE any loose or broken component or fastener as needed.

No	GO to H3

H3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION

Inspect for watermarks.

Check the:

- Cone
- Magnet

Basket

Are any watermarks present on the speaker?

Yes	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation.

No	GO to H4

H4 ISOLATE SPEAKER TO VERIFY NOISE

Remove the suspect speaker from its location and leave the speaker connected to the harness.

Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact.

Operate the audio system using digital media such as a CD or MP3.

Is the noise still present in the suspect speaker?

Yes	INSTALL a new speaker for the one in question.

No	LOCATE the source of the noise and REPAIR as needed.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST I : NO SOUND FROM ALL SPEAKERS

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart, Chimes, ACM, and Audio DSP Module.

If the audio DSP module detects an open, short to ground, or less than 3.5 volts on the enable circuit, the speaker output will be muted for all of the speakers.

A short to ground or short to voltage in the circuitry to one of the speakers may cause multiple speakers to lose sound due to the built-in overload protection feature of the audio DSP module. In this case, a speaker fault DTC sets.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1142:27	Ignition Status 1: Signal Rate of	Set by the ACM when a short to

	Change Above Threshold	voltage is detected on the start signal circuit.
B13FB:11	Audio Enable Line: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the enable circuit.

Possible Sources

- Wiring, terminals, or connectors
- Fuse
- ACM
- Audio DSP module

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST I : NO SOUND FROM ALL SPEAKERS > PINPOINT TEST I : NO SOUND FROM ALL SPEAKERS

I1 VERIFY THAT THE ACM (AUDIO FRONT CONTROL MODULE) AND AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE PASS THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the ACM and audio DSP module pass the network test?

Yes	GO to I2

No	* If the ACM failed the network test, REFER to: Communications Network . See The ACM Does Not Respond To The Diagnostic Scan Tool.* If the audio DSP module failed the network test, REFER to: Communications Network . See The Audio DSP Module Does Not Respond To The Diagnostic Scan Tool.

I2 CHECK FOR SPEAKER DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the audio DSP module self-test.

Are any speaker fault Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Information and Entertainment System . See DTC Chart: Audio DSP Module.

No	GO to I3

I3 CHECK THE ENABLE CIRCUIT FUNCTIONALITY BY CHECKING THE AUDIBLE PROMPT FUNCTIONALITY

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Does the SYNC ® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to I4

No	GO to I5

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

I4 CHECK FOR AN AUDIO SIGNAL TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition ON.

Operate the audio system in AM/ FM mode.

While back-probing audio DSP module C2385A , measure the AC voltage.

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	$\tilde{V}$	C2385A-17

Is a fluctuating AC voltage present?

Yes	GO to I10

No	GO to I9

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

I5 CHECK THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE ENABLE CIRCUIT FOR CORRECT VOLTAGE

While back-probing audio DSP module C2385A , measure the AC voltage.

Positive Lead	Measurement / Action	Negative Lead
C2385A-3		Ground

Is the voltage between 3.5 and 8.5 volts?

Yes	GO to I10

No	GO to I6

I6 CHECK THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE ENABLE CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385A .

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to I7

I7 CHECK THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE ENABLE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to I8

No	REPAIR the circuit.

I8 CHECK THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE ENABLE CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C240A-7

Is the resistance less than 3 ohms?

Yes	GO to I9

No	REPAIR the circuit.

I9 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

I10 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST J : THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F9:13	Audio Input 3: Circuit Open	Set by the audio DSP module when an open is detected on the LH audio signal circuits from the ACM to the audio DSP module.
B1A01:01	Speaker #1: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LHF door woofer speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the LHF door woofer speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.

B1A01:12	Speaker #1: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the LHF door woofer speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the audio DSP module when an open is detected on the LHF door woofer speaker circuits.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST J : THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER IS INOPERATIVE > PINPOINT TEST J : THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER IS INOPERATIVE

J1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER

Ignition OFF.

Disconnect: LHF Door Woofer Speaker C523 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	$\tilde{V}$	C523-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door woofer speaker. REFER to: Front Door Speaker LH .

No	GO to J2

J2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1		Ground
C523-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to J3

J3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	Ω	Ground
C523-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to J4

No	REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	Ω	C2385B-14
C523-4	Ω	C2385B-13

Are the resistances less than 3 ohms?

Yes	GO to J5

No	REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR WOOFER SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C523-1	Ω	C523-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to J6

No	REPAIR the circuit in question.

J6 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385B .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	V~	C2385A-8

Is a fluctuating AC voltage present?

Yes	GO to J12

No	GO to J7

J7 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7		Ground
C2385A-8		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to J8

J8 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	Ground
C2385A-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to J9

No	REPAIR the circuit in question.

J9 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C240A-10

C2385A-8	Ω	C240A-22

Are the resistances less than 3 ohms?

Yes	GO to J10

No	REPAIR the circuit in question.

J10 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C2385A-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to J11

No	REPAIR the circuit in question.

J11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

J12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST K : THE LHF (LEFT-HAND FRONT) DOOR MIDWOOFER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

The LHF door midwoofer speaker and LHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F9:13	Audio Input 3: Circuit Open	Set by the audio DSP module

		when an open is detected on the LH audio signal circuits from the ACM to the audio DSP module.
B1A03:01	Speaker #3: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LHF door midwoofer or LHF A-pillar tweeter speaker circuits.
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the LHF door midwoofer or LHF A-pillar tweeter speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the LHF door midwoofer or LHF A-pillar tweeter speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the audio DSP module when an open is detected on the LHF door midwoofer or LHF A-pillar tweeter speaker circuits.

Yes	REPAIR the circuit in question.

No	GO to L3

L3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9063-1	Ω	Ground
C9063-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to L4

No	REPAIR the circuit in question.

L4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9063-1	Ω	C2385C-8
C9063-3	Ω	C2385C-9

Are the resistances less than 3 ohms?

Yes	GO to L5

No	REPAIR the circuit in question.

L5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead

C9063-1	Ω	C9063-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to L6

No	REPAIR the circuit in question.

L6 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385C .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	V~	C2385A-8

Is a fluctuating AC voltage present?

Yes	GO to L12

No	GO to L7

L7 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	+ V~ −	Ground

C2385A-8		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to L8

L8 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	Ground
C2385A-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to L9

No	REPAIR the circuit in question.

L9 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C240A-10
C2385A-8	Ω	C240A-22

Are the resistances less than 3 ohms?

Yes	GO to L10

No	REPAIR the circuit in question.

L10 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C2385A-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to L11

No	REPAIR the circuit in question.

L11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST M : THE CENTER INSTRUMENT PANEL SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A08:01	Speaker #8: General Electrical Failure	Set by the audio DSP module when a failure is detected on the center instrument panel speaker circuits.
B1A08:11	Speaker #8: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the center instrument panel speaker circuits. When DTC B1A08:11 is set, the speaker output is disabled.
B1A08:12	Speaker #8: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the center instrument panel speaker circuits. When DTC B1A08:12 is set, the

		speaker output is disabled.
B1A08:13	Speaker #8: Circuit Open	Set by the audio DSP module when an open is detected on the center instrument panel speaker circuits.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST M : THE CENTER INSTRUMENT PANEL SPEAKER IS INOPERATIVE > PINPOINT TEST M : THE CENTER INSTRUMENT PANEL SPEAKER IS INOPERATIVE

M1 CHECK THE AUDIO SIGNAL TO THE CENTER INSTRUMENT PANEL SPEAKER

Ignition OFF.

Disconnect: Center Instrument Panel Speaker C2359 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1		C2359-2

Is a fluctuating AC voltage present?

Yes	INSTALL a new center instrument panel speaker. REFER to: Instrument Panel Speaker .

No	GO to M2

M2 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1		Ground
C2359-2		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to M3

M3 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1	Ω	Ground
C2359-2	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to M4

No	REPAIR the circuit in question.

M4 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1	Ω	C2385C-2
C2359-2	Ω	C2385C-3

Are the resistances less than 3 ohms?

Yes	GO to M5

No	REPAIR the circuit in question.

M5 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1	Ω	C2359-2

Is the resistance greater than 10, 000 ohms?

Yes	GO to M6

No	REPAIR the circuit in question.

M6 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST N : THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

The RHF door midwoofer speaker and RHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F7:13	Audio Input 1: Circuit Open	Set by the audio DSP module when an open is detected on the RH audio signal circuits from the ACM to the audio DSP module.
B1A07:01	Speaker #7: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits.
B1A07:11	Speaker #7: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits. When DTC B1A07:11 is set, the speaker output is disabled.
B1A07:12	Speaker #7: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits. When DTC B1A07:12 is set, the speaker output is disabled.
B1A07:13	Speaker #7: Circuit Open	Set by the audio DSP module when an open is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST N : THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER IS INOPERATIVE > PINPOINT TEST N : THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER IS INOPERATIVE

N1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER

Ignition OFF.

Disconnect: RHF A-Pillar Tweeter Speaker C9065 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1		C9065-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF A-pillar tweeter speaker. REFER to: A-Pillar Speaker .

No	GO to N2

N2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385C .

Disconnect: RHF Door Midwoofer Speaker C613 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1		Ground
C9065-3		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to N3

N3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1	Ω	Ground
C9065-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to N4

No	REPAIR the circuit in question.

N4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1	Ω	C2385C-4
C9065-3	Ω	C2385C-5

Are the resistances less than 3 ohms?

Yes	GO to N5

No	REPAIR the circuit in question.

N5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) A-PILLAR TWEETER SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9065-1	Ω	C9065-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to N6

No	REPAIR the circuit in question.

N6 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385C .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3		C2385A-4

Is a fluctuating AC voltage present?

Yes	GO to N12

No	GO to N7

N7 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3		Ground
C2385A-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to N8

N8 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	Ground
C2385A-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to N9

No	REPAIR the circuit in question.

N9 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C240A-11
C2385A-4	Ω	C240A-23

Are the resistances less than 3 ohms?

Yes	GO to N10

No	REPAIR the circuit in question.

N10 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C2385A-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to N11

No	REPAIR the circuit in question.

N11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST O : THE RHF (RIGHT-HAND FRONT) DOOR MIDWOOFER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

The RHF door midwoofer speaker and RHF A-pillar tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F7:13	Audio Input 1: Circuit Open	Set by the audio DSP module when an open is detected on the RH audio signal circuits from the ACM to the audio DSP module.
B1A07:01	Speaker #7: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits.
B1A07:11	Speaker #7: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits. When DTC B1A07:11 is set, the speaker output is disabled.

B1A07:12	Speaker #7: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits. When DTC B1A07:12 is set, the speaker output is disabled.
B1A07:13	Speaker #7: Circuit Open	Set by the audio DSP module when an open is detected on the RHF door midwoofer or RHF A-pillar tweeter speaker circuits.

Yes	REPAIR the circuit in question.

No	GO to P8

P8 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	Ground
C2385A-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to P9

No	REPAIR the circuit in question.

P9 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C240A-11
C2385A-4	Ω	C240A-23

Are the resistances less than 3 ohms?

Yes	GO to P10

No	REPAIR the circuit in question.

P10 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C2385A-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to P11

No	REPAIR the circuit in question.

P11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Q : THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F7:13	Audio Input 1: Circuit Open	Set by the audio DSP module when an open is detected on the RH audio signal circuits from the ACM to the audio DSP module.
B1A06:01	Speaker #6: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits.
B1A06:11	Speaker #6: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits. When DTC B1A06:11 is set, the speaker output is disabled.
B1A06:12	Speaker #6: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits. When DTC B1A06:12 is set, the speaker output is disabled.
B1A06:13	Speaker #6: Circuit Open	Set by the audio DSP module when an open is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Q : THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE) > PINPOINT TEST Q : THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

Q1 CHECK THE AUDIO SIGNAL TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER

Ignition OFF.

Disconnect: RHR Quarter Panel Speaker C396 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1		C396-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHR quarter panel speaker. REFER to: Rear Quarter Panel Speaker .

No	GO to Q2

Q2 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1		Ground
C396-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to Q3

Q3 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1	Ω	Ground
C396-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Q4

No	REPAIR the circuit in question.

Q4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C396-1	Ω	C2385C-15
C396-4	Ω	C2385C-3

Are the resistances less than 3 ohms?

Yes	GO to Q5

No	REPAIR the circuit in question.

Q5 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead

C396-1	Ω	C396-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to Q6

No	REPAIR the circuit in question.

Q6 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385B .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	V~	C2385A-4

Is a fluctuating AC voltage present?

Yes	GO to Q12

No	GO to Q7

Q7 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3		Ground

C2385A-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to Q8

Q8 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	Ground
C2385A-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Q9

No	REPAIR the circuit in question.

Q9 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C240A-11
C2385A-4	Ω	C240A-23

Are the resistances less than 3 ohms?

Yes	GO to Q10

No	REPAIR the circuit in question.

Q10 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C2385A-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to Q11

No	REPAIR the circuit in question.

Q11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST R : THE RIGHT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F7:13	Audio Input 1: Circuit Open	Set by the audio DSP module when an open is detected on the RH audio signal circuits from the ACM to the audio DSP module.
B1A06:01	Speaker #6: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits.
B1A06:11	Speaker #6: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits. When DTC B1A06:11 is set, the speaker

		output is disabled.
B1A06:12	Speaker #6: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits. When DTCB1A06:12 is set, the speaker output is disabled.
B1A06:13	Speaker #6: Circuit Open	Set by the audio DSP module when an open is detected on the RHR quarter panel (convertible) or right parcel shelf (coupe) speaker circuits.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST R : THE RIGHT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE) > PINPOINT TEST R : THE RIGHT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

R1 CHECK THE AUDIO SIGNAL TO THE RIGHT PARCEL SHELF SPEAKER

Ignition OFF.

Disconnect: Right Parcel Shelf Speaker C485 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	$\tilde{V}$	C485-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new right parcel shelf speaker. REFER to: Parcel Shelf Speaker .

No	GO to R2

R2 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1		Ground
C485-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to R3

R3 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	Ω	Ground
C485-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to R4

No	REPAIR the circuit in question.

R4 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	Ω	C2385C-15
C485-4	Ω	C2385C-3

Are the resistances less than 3 ohms?

Yes	GO to R5

No	REPAIR the circuit in question.

R5 CHECK THE AUDIO CIRCUITS TO THE RIGHT PARCEL SHELF SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C485-1	Ω	C485-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to R6

No	REPAIR the circuit in question.

R6 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385B .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	$\tilde{V}$	C2385A-4

Is a fluctuating AC voltage present?

Yes	GO to R12

No	GO to R7

R7 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	V	Ground
C2385A-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to R8

R8 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	Ground
C2385A-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to R9

No	REPAIR the circuit in question.

R9 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL

MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C240A-11
C2385A-4	Ω	C240A-23

Are the resistances less than 3 ohms?

Yes	GO to R10

No	REPAIR the circuit in question.

R10 CHECK THE RH (RIGHT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-3	Ω	C2385A-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to R11

No	REPAIR the circuit in question.

R11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

R12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST S : THE SUBWOOFER SPEAKER IS INOPERATIVE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module and Subwoofer Amplifier.

If the subwoofer amplifier detects an open, short to ground, or less than 4.5 volts on the enable circuit, the speaker output will be muted for the subwoofer speaker.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A09:02	Speaker #9: General Signal Failure	Set by the audio DSP module when a failure is detected on the audio signal circuits to the subwoofer amplifier.

Possible Sources

- Fuse
- Wiring, terminals, or connectors
- Audio DSP module
- Subwoofer amplifier, speaker, and enclosure assembly

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST S : THE SUBWOOFER SPEAKER IS INOPERATIVE > PINPOINT TEST S : THE SUBWOOFER SPEAKER IS INOPERATIVE

S1 CHECK THE SUBWOOFER AMPLIFIER VOLTAGE SUPPLY

Ignition OFF.

Disconnect: Subwoofer Amplifier C4109A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-5		Ground

Is the voltage greater than 11 volts?

Yes	GO to S2

No	VERIFY the BCM fuse 5 (20A) is OK. If OK, REPAIR the circuit.

S2 CHECK THE SUBWOOFER AMPLIFIER GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-5		C4109A-2

Is the voltage greater than 11 volts?

Yes	GO to S3

No	REPAIR the circuit.

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

S3 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR CORRECT VOLTAGE

Ignition OFF.

Connect: Subwoofer Amplifier C4109A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure the voltage by back-probing subwoofer amplifier C4109A :

Positive Lead	Measurement / Action	Negative Lead
C4109A-1		Ground

Is the voltage between 3.5 and 5 volts?

Yes	GO to S7

No	GO to S4

S4 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Subwoofer Amplifier C4109A .

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to S5

S5 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to S6

No	REPAIR the circuit.

S6 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-1	Ω	C2385B-9

Is the resistance less than 3 ohms?

Yes	GO to S7

No	REPAIR the circuit.

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

S7 CHECK THE AUDIO SIGNAL TO THE SUBWOOFER AMPLIFIER

Ignition OFF.

Connect: Subwoofer Amplifier C4109A .

Connect: Audio DSP Module C2385B if necessary.

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure the voltage by back-probing Subwoofer Amplifier C4109A :

Positive Lead	Measurement / Action	Negative Lead
C4109A-7		C4109A-8

Is a fluctuating AC voltage present?

Yes	GO to S13

No	GO to S8

S8 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Subwoofer Amplifier C4109A .

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-7		Ground
C4109A-8		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to S9

S9 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-7	Ω	Ground
C4109A-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to S10

No	REPAIR the circuit in question.

S10 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-7	Ω	C2385B-1
C4109A-8	Ω	C2385B-2

Are the resistances less than 3 ohms?

Yes	GO to S11

No	REPAIR the circuit in question.

S11 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4109A-7	Ω	C4109A-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to S12

No	REPAIR the circuit in question.

S12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

S13 CHECK FOR CORRECT SUBWOOFER AMPLIFIER OPERATION

Ignition OFF.

Disconnect and inspect all the subwoofer amplifier connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the subwoofer amplifier connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new subwoofer amplifier, speaker, and enclosure assembly. REFER to: Subwoofer and Amplifier Unit .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST T : THE LEFT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F9:13	Audio Input 3: Circuit Open	Set by the audio DSP module when an open is detected on the LH audio signal circuits from the ACM to the audio DSP module.
B1A02:01	Speaker #2: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the audio DSP module when an open is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

- Audio DSP module

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST T : THE LEFT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE) > PINPOINT TEST T : THE LEFT PARCEL SHELF SPEAKER IS INOPERATIVE (COUPE)

T1 CHECK THE AUDIO SIGNAL TO THE LEFT PARCEL SHELF SPEAKER

Ignition OFF.

Disconnect: Left Parcel Shelf Speaker C484 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1		C484-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new left parcel shelf speaker. REFER to: Parcel Shelf Speaker .

No	GO to T2

T2 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C484-1		Ground
C484-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to T3

T3 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	Ω	Ground
C484-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to T4

No	REPAIR the circuit in question.

T4 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	Ω	C2385B-16
C484-4	Ω	C2385B-15

Are the resistances less than 3 ohms?

Yes	GO to T5

No	REPAIR the circuit in question.

T5 CHECK THE AUDIO CIRCUITS TO THE LEFT PARCEL SHELF SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C484-1	Ω	C484-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to T6

No	REPAIR the circuit in question.

T6 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385B .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	$\tilde{V}$	C2385A-8

Is a fluctuating AC voltage present?

Yes	GO to T12

No	GO to T7

T7 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7		Ground
C2385A-8		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to T8

T8 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	Ground
C2385A-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to T9

No	REPAIR the circuit in question.

T9 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C240A-10
C2385A-8	Ω	C240A-22

Are the resistances less than 3 ohms?

Yes	GO to T10

No	REPAIR the circuit in question.

T10 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C2385A-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to T11

No	REPAIR the circuit in question.

T11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

T12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST U : THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio DSP Module.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B13F9:13	Audio Input 3: Circuit Open	Set by the audio DSP module when an open is detected on the LH audio signal circuits from the ACM to the audio DSP module.
B1A02:01	Speaker #2: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits.

B1A02:11	Speaker #2: Circuit Short To Ground	Set by the audio DSP module when a short to ground is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the audio DSP module when a short to voltage is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the audio DSP module when an open is detected on the LHR quarter panel (convertible) or left parcel shelf (coupe) speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST U : THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE) > PINPOINT TEST U : THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER IS INOPERATIVE (CONVERTIBLE)

U1 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER

Ignition OFF.

Disconnect: LHR Quarter Panel Speaker C395 .

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1		C395-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR quarter panel speaker. REFER to: Rear Quarter Panel Speaker .

No	GO to U2

U2 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Audio DSP Module C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1		Ground
C395-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to U3

U3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1	Ω	Ground
C395-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to U4

No	REPAIR the circuit in question.

U4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1	Ω	C2385B-16
C395-4	Ω	C2385B-15

Are the resistances less than 3 ohms?

Yes	GO to U5

No	REPAIR the circuit in question.

U5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) QUARTER PANEL SPEAKER FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C395-1	Ω	C395-4

Is the resistance greater than 10, 000 ohms?

Yes	GO to U6

No	REPAIR the circuit in question.

U6 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE

Ignition OFF.

Connect: Audio DSP Module C2385B .

Disconnect: Audio DSP Module C2385A .

Ignition ON.

Operate the audio system in AM/ FM mode.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	$\tilde{V}$	C2385A-8

Is a fluctuating AC voltage present?

Yes	GO to U12

No	GO to U7

U7 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	V	Ground
C2385A-8	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to U8

U8 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	Ground
C2385A-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to U9

No	REPAIR the circuit in question.

U9 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C240A-10
C2385A-8	Ω	C240A-22

Are the resistances less than 3 ohms?

Yes	GO to U10

No	REPAIR the circuit in question.

U10 CHECK THE LH (LEFT-HAND) AUDIO SIGNAL FROM THE ACM (AUDIO FRONT CONTROL MODULE) TO THE AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385A-7	Ω	C2385A-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to U11

No	REPAIR the circuit in question.

U11 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U12 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST V : ALL SYNC ® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE (TRAFFIC, DIRECTIONS, AND INFORMATION)

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SYNC ® Services.

Possible Sources

- Unregistered SYNC ® Owner Account
- Unregistered, inactive, or expired SYNC ® Services subscription
- Unregistered mobile phone number
- Mobile phone being used not selected as "Active"
- SYNC ® Services server
- Inadequate phone reception
- Obstructions in the GPS antenna's line of sight
- APIM
- GPSM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST V : ALL SYNC ® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE (TRAFFIC, DIRECTIONS, AND INFORMATION) > PINPOINT TEST V : ALL SYNC ® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE (TRAFFIC, DIRECTIONS, AND INFORMATION)

> *NOTE: Caller ID blocking must be disabled on the customer's mobile phone so the SYNC ® Services server can recognize the registered and "Active" phone number.*

V1 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC ® SERVICES WHILE AWAY FROM THE VEHICLE

Advise the customer to call SYNC ® Services (888-240-4529) from their mobile phone.

Verify that the phone call is placed and that the phone connects to SYNC ® Services.

Observe whether the SYNC ® Services subscription commercial plays, or if the system asks which Service is wanted.

Does the SYNC ® Services subscription commercial play?

Yes	GO to V2

No	GO to V4

V2 VERIFY THE CUSTOMER'S SYNC ® OWNER ACCOUNT AND SYNC ® SERVICES REGISTRATION AND SUBSCRIPTION

Verify that the customer has a SYNC ® Owner Account on www.syncmyride.com.

Verify that the customer has registered for SYNC ® Services and has an active subscription.

Does the customer have a SYNC ® Owner Account and an active SYNC ® Services subscription?

Yes	GO to V3

No	* If the customer does not have a SYNC ® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC ® Services. REFER to www.syncmyride.com.* If the customer does not have an active SYNC ® Services subscription, INFORM the customer that in order for SYNC ® Services to function, the subscription needs to be activated. REFER to www.syncmyride.com.

NOTE: Only one mobile phone number can be selected as "Active" at a time, and only the "Active" mobile phone number has access to SYNC ® Services.

V3 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS

Verify that the mobile phone being used has the correct mobile phone number registered with the SYNC ® Owner Account on www.syncmyride.com.

Verify that the mobile phone being used is selected as "Active" on www.syncmyride.com.

Is the customer using the registered and active mobile phone associated with the SYNC ® Services account?

Yes	GO to V5

No	INFORM the customer that the correct mobile phone number must be registered on the SYNC ® website and selected as "Active." REFER to www.syncmyride.com.

V4 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC ® SERVICES FROM INSIDE THE VEHICLE

Ensure the registered and "Active" mobile phone is paired with the SYNC ® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on support.ford.com/sync-technology/device-compatibility-sync.

Ensure that the customer's mobile phone has adequate reception.

Ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees.

Start the vehicle.

Connect to SYNC ® Services from the vehicle controls.

Verify that the phone call is placed and that the phone is connected to SYNC ® Services.

When prompted, select "Directions," and follow the audible prompts to get directions to an address or Saved Point.

Did SYNC ® Services indicate that the vehicle location was being obtained, the route was being sent, and that the route download from the server to the vehicle was complete?

Yes	SYNC ® Services is operating correctly at this time.

No	* If SYNC ® Services indicated that the vehicle location was **not** able to be obtained, GO to * If SYNC ® Services did **not** indicate that the vehicle location was being obtained, the route was being sent, and that the route download from the server to the vehicle was complete, there is a potential SYNC ® Services server issue. The problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance.

V5 CHECK FOR APIM (SYNC MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	REFER to: Information and Entertainment System . See DTC Chart: APIM.

No	GO to V6

V6 CHECK FOR GPSM (GLOBAL POSITIONING SYSTEM MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the GPSM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the GPSM?

Yes	REFER to: Information and Entertainment System . See DTC Chart: GPSM.

No	GO to V7

V7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING . If the concern is still present, GO to V8

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

V8 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

NOTE: Before operating the system to determine if the concern is still present, ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees so an adequate GPS signal can be obtained.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

PINPOINT TESTS > PINPOINT TEST W : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Bluetooth Mode, Composite Audio-Video Input Mode, SD Card Mode, SYNC ® System, USB Mode, ACM, APIM, and Media Hub.

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST W : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST W : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

W1 VERIFY THE OPERATION OF THE SYNC ® SYSTEM AUDIO SOURCES

Connect: MIT 105-00120.

Using the MIT 105-00120 and RCA Adapter 105-00121, test the audio output for the SYNC ® audio sources (Bluetooth, USB ports, and RCA jacks).

Is there poor quality, distorted, or no sound from all SYNC ® audio sources?

Yes	GO to W2

No	* If there is a concern with one or more, but not all SYNC ® audio sources, REFER to: Information and Entertainment System . See Symptom Chart: SYNC ® System.* If all SYNC ® audio sources operate correctly with the MIT 105-00120 and RCA Adapter 105-00121, the concern is with the customer's device.

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure

to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

W2 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

Play an audio file through the audio system using a SYNC ® audio source (Bluetooth, USB ports, RCA jacks).

While back-probing ACM C240B , measure the AC voltage.

Positive Lead	Measurement / Action	Negative Lead
C240B-12	V~	C240B-25
C240B-13	V~	C240B-26

Is a fluctuating AC voltage present?

Yes	GO to W8

No	GO to W3

W3 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	+ V⎓ −	Ground
C240B-13	+ V⎓ −	Ground
C240B-25	+ V⎓ −	Ground
C240B-26	+ V⎓ −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to W4

W4 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	Ω	Ground
C240B-13	Ω	Ground
C240B-25	Ω	Ground
C240B-26	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to W5

No	REPAIR the circuit in question.

W5 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	Ω	C2383-23
C240B-13	Ω	C2383-25
C240B-25	Ω	C2383-24
C240B-26	Ω	C2383-26

Are the resistances less than 3 ohms?

Yes	GO to W6

No	REPAIR the circuit in question.

W6 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-12	Ω	C240B-13
C240B-12	Ω	C240B-25
C240B-12	Ω	C240B-26
C240B-13	Ω	C240B-25
C240B-13	Ω	C240B-26
C240B-25	Ω	C240B-26

Are the resistances greater than 10, 000 ohms?

Yes	GO to W7

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

W7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W8 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST X : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SYNC ® System, Voice Recognition, ACM, and APIM.

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM >

PINPOINT TESTS > PINPOINT TEST X : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST X : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

X1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Does the SYNC ® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct operation of the audible prompt feature. REFER to "SYNC ® Voice Recognition Feature" in the Owner's Literature.

No	GO to X2

X2 CHECK THE OPERATION OF THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES

Operate the audio system in AM/ FM mode.

Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to X3

No	GO to Pinpoint Test AF

NOTE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

X3 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

Operate the audio system in AM/ FM mode.

While back-probing audio ACM C240B , measure the AC voltage while repeatedly operating

the VOICE steering wheel switch.

Positive Lead	Measurement / Action	Negative Lead
C240B-8		C240B-21

Is a fluctuating AC voltage present each time the VOICE steering wheel switch is operated?

Yes	GO to X9

No	GO to X4

X4 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8		Ground
C240B-21		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to X5

X5 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8		Ground

C240B-21	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to X6

No	REPAIR the circuit in question.

X6 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8	Ω	C2383-3
C240B-21	Ω	C2383-4

Are the resistances less than 3 ohms?

Yes	GO to X7

No	REPAIR the circuit in question.

X7 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-8	$\tilde{V}$	C240B-21

Is the resistance greater than 10, 000 ohms?

Yes	GO to X8

No	REPAIR the circuit in question.

X8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X9 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Y : VOICE RECOGNITION IS INOPERATIVE OR

DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Voice Recognition.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B116A:01	Handset Microphone: General Electrical Failure	Set by the APIM when a short to voltage, short to ground, or open is detected on the microphone circuits.
B117A:01	Backup Microphone: General Electrical Failure	Set by the APIM when a short to voltage or open is detected on the microphone shield.

Possible Sources

- Wiring, terminals, or connectors
- Microphone
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Y : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE > PINPOINT TEST Y : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

Y1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Does the SYNC ® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to Y3

No	GO to Y2

Y2 CHECK THE OPERATION OF THE LOWER STEERING WHEEL SWITCHES

Operate the audio system in AM/ FM mode.

Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to Pinpoint Test X

No	GO to Pinpoint Test AF

Y3 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-12		Ground
C2383-13		Ground
C2383-31		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to Y4

Y4 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: Microphone (Overhead Console) C930 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-12	Ω	Ground
C2383-13	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Y5

No	REPAIR the circuit in question.

Y5 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-12	Ω	C930-9
C2383-13	Ω	C930-10
C2383-31	Ω	C930-8

Are the resistances less than 3 ohms?

Yes	GO to Y6

No	REPAIR the circuit in question.

Y6 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-12	Ω	C2383-13
C2383-12	Ω	C2383-31
C2383-13	Ω	C2383-31

Is the resistance greater than 10, 000 ohms?

Yes	GO to Y7

No	REPAIR the circuit in question.

Y7 ISOLATE THE MICROPHONE

Connect: APIM C2383 .

Install a new microphone. REFER to: Microphone .

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Speak a command to test the voice recognition for normal operation.

Is the voice recognition functioning correctly?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative microphone.

No	GO to Y8

Y8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure they seat and latch correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Z : ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY (USB (UNIVERSAL SERIAL BUS) PORTS, SD (SECURE DIGITAL) CARD, AND RCA JACKS)

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Composite Audio-Video Input Mode, SD Card Mode, USB Mode, and Media Hub.

The media hub requires a power and ground circuit from the APIM to operate. Loss of power or ground disables all media hub functionality.

Possible Sources

- Customer's device
- Media hub
- Wiring, terminals, or connectors
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST Z : ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY (USB (UNIVERSAL SERIAL BUS) PORTS, SD (SECURE DIGITAL) CARD, AND RCA JACKS) > PINPOINT TEST Z : ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY (USB (UNIVERSAL SERIAL BUS) PORTS, SD (SECURE DIGITAL) CARD, AND RCA JACKS)

Z1 CHECK FOR APIM (SYNC MODULE) BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the APIM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test BB * For DTC U3003:17, GO to Pinpoint Test BC

No	GO to Z2

Z2 RESET THE APIM (SYNC MODULE)

Remove any devices connected to the media hub.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Test the system for normal operation.

Does the system operate correctly?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	GO to Z3

Z3 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT

Ignition OFF.

Disconnect: Media Hub C3618 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to Z4

No	GO to Z5

Z4 CHECK THE MEDIA HUB GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-1		C3618-8

Is the voltage greater than 11 volts?

Yes	INSTALL a new media hub. REFER to: Media Hub .

No	GO to Z5

Z5 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER

Ignition OFF.

Disconnect: APIM C2383 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-1	Ω	C3618-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to Z6

No	Repair the circuit in question.

Z6 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-1	Ω	C2383-8
C3618-8	Ω	C2383-38

Are the resistances less than 3 ohms?

Yes	GO to Z7

No	Repair the circuit in question.

Z7 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to Z8

No	REPAIR the circuit.

Z8 CHECK THE MEDIA HUB GROUND CIRCUIT FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-8		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to Z9

Z9 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AA : THE USB (UNIVERSAL SERIAL BUS)

PORT(S) IS/ARE INOPERATIVE OR DOES/DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See USB Mode, APIM, and Media Hub.

The MIT 105-00120 is powered by the USB port.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected on the USB cable. This can be caused by a fault on the USB cable, USB port, or by the customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected on the USB cable.

Possible Sources

- Media hub
- Customer's device
- USB cable
- USB cable connection
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AA : THE USB (UNIVERSAL SERIAL BUS) PORT(S) IS/ARE INOPERATIVE OR DOES/DO NOT OPERATE CORRECTLY > PINPOINT TEST AA : THE USB (UNIVERSAL SERIAL BUS) PORT(S) IS/ARE INOPERATIVE OR DOES/DO NOT OPERATE CORRECTLY

AA1 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS FOR POWER OUTPUT

Connect: MIT 105-00120.

Does the MIT 105-00120 power on from both USB ports?

Yes	GO to AA2

No	* If the MIT 105-00120 powers on from only one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the MIT 105-00120 does not power on from either USB port, GO to Pinpoint Test Z

AA2 RESET THE APIM (SYNC MODULE)

Remove any devices connected to the media hub.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using each USB port.

Is the audio output OK for each USB port?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	* If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the audio output is not OK from both USB ports, GO to AA3

AA3 VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

Insert a known good non-navigation SD card containing music files.

Operate the audio system in SD card mode and attempt to play an audio file.

Is the audio output OK for the SD card slot?

Yes	INSTALL a new media hub. REFER to: Media Hub .

No	GO to AA4

AA4 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR DTC (DIAGNOSTIC TROUBLE CODE) B1252:13

Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

Perform the APIM self-test.

Is DTC B1252:11 or DTC B1252:13 present?

Yes	GO to AA5

No	GO to AA7

AA5 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE, MEDIA HUB, AND APIM (SYNC MODULE)

Ignition OFF.

Disconnect: USB cable at the media hub. REFER to: Media Hub .

Disconnect: USB cable at the APIM. REFER to: SYNC Module [APIM] .

Inspect the USB cable, USB cable ends, media hub USB connector port, and APIM USB connector port for damage. Remove any debris.

Is any damage present?

Yes	* For the USB cable, INSTALL a new USB cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .* For the media hub, INSTALL a new media hub. REFER to: Media Hub .* For the APIM, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	GO to AA6

AA6 CHECK EACH USB (UNIVERSAL SERIAL BUS) PORT FOR FUNCTIONALITY

Connect: USB cable at the media hub.

Connect: USB cable at the APIM.

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using each USB port.

Is the audio output OK for each USB port?

Yes	The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly.

No	GO to AA7

AA7 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE

Install a new USB cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using each USB port.

Is the audio output OK for each USB port?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.

No	GO to AA8

AA8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AB : THE SD (SECURE DIGITAL) CARD SLOT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See SD Card Mode, APIM, and Media Hub.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to

		ground or over-current condition is detected on the USB cable. This can be caused by a fault in the USB cable, USB port, or by the customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected on the USB cable.

Possible Sources

- Customer's device
- Media hub
- USB cable
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AB : THE SD (SECURE DIGITAL) CARD SLOT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST AB : THE SD (SECURE DIGITAL) CARD SLOT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AB1 RESET THE APIM (SYNC MODULE)

Remove any devices connected to the media hub.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Insert a known good non-navigation SD card containing music files.

Operate the audio system in SD card mode and attempt to play an audio file.

Is the audio output OK for the SD card slot?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.

No	GO to AB2

AB2 VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

Using the MIT 105-00120, attempt to play an audio file using each USB port.

Is the audio output OK for each USB port?

Yes	INSTALL a new media hub. REFER to: Media Hub .

No	* If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the audio output is not OK from both USB ports, GO to AB3

AB3 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR DTC (DIAGNOSTIC TROUBLE CODE) B1252:13

Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

Perform the APIM self-test.

Is DTC B1252:11 or DTC B1252:13 present?

Yes	GO to AB4

No	GO to AB6

AB4 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE, MEDIA HUB, AND APIM (SYNC MODULE)

Ignition OFF.

Disconnect: USB cable at the media hub. REFER to: Media Hub .

Disconnect: USB cable at the APIM. REFER to: SYNC Module [APIM] .

Inspect the USB cable, USB cable ends, media hub USB connector port, and APIM USB connector port for damage and remove any debris.

Is any damage present?

Yes	* For the USB cable, INSTALL a new USB cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .* For the media hub, INSTALL a new media hub. REFER to: Media Hub .* For the APIM, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	GO to AB5

AB5 RECHECK FOR APIM (SYNC MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR DTC (DIAGNOSTIC TROUBLE CODE) B1252:13

Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

Perform the APIM self-test.

Is DTC B1252:11 or DTC B1252:13 present?

Yes	GO to AB7

No	GO to AB6

AB6 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE

Install a new USB cable. REFER to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

Insert a known good non-navigation SD card containing music files.

Operate the audio system in SD card mode and attempt to play an audio file.

Is the audio output OK for the SD card slot?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.

No	GO to AB7

AB7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AC : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Audio Input Jack Mode, SYNC ® System, APIM, and Media Hub.

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Media hub
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AC : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST AC : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AC1 RESET THE APIM (SYNC MODULE)

Remove any devices connected to the media hub.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120 and RCA Adapter 105-00121.

Using the MIT 105-00120 and RCA Adapter 105-00121, attempt to play audio content using the RCA jacks.

Is the audio output OK for the RCA jacks?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset.

No	GO to AC2

AC2 CHECK THE RCA CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Media Hub C3618 .

Disconnect: APIM C2383 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-2	V	Ground
C3618-3	V	Ground
C3618-4	V	Ground
C3618-5	V	Ground
C3618-6	V	Ground
C3618-9	V	Ground
C3618-11	V	Ground
C3618-12	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to AC3

AC3 CHECK THE RCA CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-2	Ω	Ground
C3618-3	Ω	Ground
C3618-4	Ω	Ground
C3618-5	Ω	Ground
C3618-6	Ω	Ground
C3618-9	Ω	Ground

C3618-11	Ω	Ground
C3618-12	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AC4

No	REPAIR the circuit in question.

AC4 CHECK THE RCA CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3618-2	Ω	C2383-36
C3618-3	Ω	C2383-34
C3618-4	Ω	C2383-9
C3618-5	Ω	C2383-10
C3618-6	Ω	C2383-11
C3618-9	Ω	C2383-35
C3618-11	Ω	C2383-28
C3618-12	Ω	C2383-29

Are the resistances less than 3 ohms?

Yes	INSTALL a new media hub. REFER to: Media Hub . RETEST the system for normal operation. If the concern is still present, GO to AC5

No	REPAIR the circuit in question.

AC5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AD : UNABLE TO PAIR BLUETOOTH DEVICE

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Bluetooth Mode and SYNC ® System.

Possible Sources

- Incompatible Bluetooth device
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AD : UNABLE TO PAIR BLUETOOTH DEVICE > PINPOINT TEST AD : UNABLE TO PAIR BLUETOOTH DEVICE

NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, deletes any Bluetooth devices paired with the SYNC ® system, and removes any Wi-Fi network connections (cancelling any system update download or installation in progress). For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased.

AD1 CHECK THE BLUETOOTH CONNECTION

Connect: MIT 105-00120.

Using the MIT 105-00120, connect to the SYNC ® system using Bluetooth. Follow the tool instructions.

Using a diagnostic scan tool, view the APIM Parameter Identifications (PIDs).

Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN).

Do the Parameter Identifications (PIDs) both read "Yes"?

Yes	The SYNC ® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device.

No	GO to AD2

AD2 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AE : THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Steering Wheel Switch Function and Steering Wheel Switches.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH lower or RH upper steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the RH lower or RH upper steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the RH lower or RH upper steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AE : THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST AE : THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

AE1 CHECK THE RH (RIGHT-HAND) UPPER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each RH upper steering wheel switch.

Up (R_CURS_UP)

Left (R_CURS_LFT)

Down (R_CURS_DWN)

Right (R_CURS_RGT)

Ok (R_CURS_OK)

Do the PID values agree with the switch positions?

Yes	GO to AE13

No	* If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH upper steering wheel switch. REFER to: Steering Column Multifunction Switch RH .* If all PID values are incorrect or always read one particular switch position, GO to AE2

AE2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

Ignition ON.

Using a diagnostic scan tool, clear the DTCs from the IPC.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 set in the IPC?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes . See DTC Chart: IPC.

No	GO to AE3

AE3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Remove the driver airbag. REFER to: Driver Airbag .

Disconnect: RH Upper Steering Wheel Switch C2999 .

Disconnect: LH Upper Steering Wheel Switch C2998 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2		C2999-3

Is approximately 5 volts present?

Yes	INSTALL a new RH upper steering wheel switch. REFER to: Steering Column Multifunction Switch RH .

No	GO to AE4

AE4 CHECK THE AIRBAG HARNESS FOR A SHORT TO GROUND

Disconnect: Inline C2606.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AE5

No	INSTALL a new driver airbag. REFER to: Driver Airbag .

AE5 CHECK THE AIRBAG HARNESS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2606-2
C2999-3	Ω	C2606-4

Are the resistances less than 3 ohms?

Yes	GO to AE6

No	INSTALL a new driver airbag. REFER to: Driver Airbag .

AE6 CHECK THE AIRBAG HARNESS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to AE7

No	INSTALL a new driver airbag. REFER to: Driver Airbag .

AE7 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

Connect: Inline C2606.

Disconnect: Clockspring C218B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AE8

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

AE8 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C218B-14
C2999-3	Ω	C218B-16

Are the resistances less than 3 ohms?

Yes	GO to AE9

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

AE9 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to AE10

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

AE10 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

Connect: Clockspring C218B .

Disconnect: Clockspring C218C.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AE11

No	INSTALL a new clockspring. REFER to: Clockspring .

AE11 CHECK THE CLOCKSPRING FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C218C-6
C2999-3	Ω	C218C-10

Are the resistances less than 3 ohms?

Yes	GO to AE12

No	INSTALL a new clockspring. REFER to: Clockspring .

AE12 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10, 000 ohms?

Yes	GO to AE13

No	INSTALL a new clockspring. REFER to: Clockspring .

AE13 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AF : THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Steering Wheel Switch Function and Steering Wheel Switches.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH lower or RH upper steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the RH lower or RH upper steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the RH lower or RH upper steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AF : THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY > PINPOINT TEST AF : THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

AF1 CHECK THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each RH lower steering wheel switch.

Voice (SW_VOICE)

Mute (SW_MUTE)

Volume + (SW_VOLUP)

Volume - (SW_VOLDOWN)

Seek-/Phone (SW_SEEKMINUS)/(SW_PHONE)

Seek+/End (SW_SEEKPLUS)/(SW_END)

Do the PID values agree with the switch positions?

Yes	GO to AF10

No	* If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH lower steering wheel switch. REFER to: Steering Column Multifunction Switch RH .* If all PID values are incorrect or always read one particular switch position, GO to AF2

AF2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the IPC.

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 set in the IPC?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes . See DTC Chart: IPC.

No	GO to AF3

AF3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Remove the driver airbag. REFER to: Driver Airbag .

Disconnect: RH Lower Steering Wheel Switch C2367 .

Disconnect: LH Lower Steering Wheel Switch C2366 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	V	C2367-4
C2367-3	V	C2367-4
C2367-5	V	C2367-4

Is approximately 5 volts present?

Yes	INSTALL a new RH lower steering wheel switch. REFER to: Steering Column Multifunction Switch RH .

No	GO to AF4

AF4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: Clockspring C218B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	Ground
C2367-3	Ω	Ground
C2367-4	Ω	Ground
C2367-5	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AF5

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

AF5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead

C2367-2	Ω	C218B-6
C2367-3	Ω	C218B-7
C2367-4	Ω	C218B-16
C2367-5	Ω	C218B-15

Are the resistances less than 3 ohms?

Yes	GO to AF6

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

AF6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C2367-3
C2367-2	Ω	C2367-4
C2367-2	Ω	C2367-5
C2367-3	Ω	C2367-4
C2367-3	Ω	C2367-5
C2367-4	Ω	C2367-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to AF7

No	INSTALL a new steering wheel. REFER to: Steering Wheel .

AF7 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

Connect: Clockspring C218B .

Disconnect: Clockspring C218C.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	Ground
C2367-3	Ω	Ground

C2367-4	Ω	Ground
C2367-5	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AF8

No	INSTALL a new clockspring. REFER to: Clockspring .

AF8 CHECK THE CLOCKSPRING FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C218C-5
C2367-3	Ω	C218C-7
C2367-4	Ω	C218C-10
C2367-5	Ω	C218C-8

Are the resistances less than 3 ohms?

Yes	GO to AF9

No	INSTALL a new clockspring. REFER to: Clockspring .

AF9 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2367-2	Ω	C2367-3
C2367-2	Ω	C2367-4
C2367-2	Ω	C2367-5
C2367-3	Ω	C2367-4
C2367-3	Ω	C2367-5
C2367-4	Ω	C2367-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to AF10

No	INSTALL a new clockspring. REFER to: Clockspring .

AF10 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AG : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE)

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Accessory Delay Feature, Audio Extended Play, and FCIM.

Possible Source

- FCIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AG : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE) > PINPOINT TEST AG : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM

THE FCIM (FRONT CONTROLS INTERFACE MODULE)

AG1 CHECK THE FDIM (FRONT DISPLAY INTERFACE MODULE) OPERATION

Verify the FDIM screen operation.

Does the FDIM operate correctly?

Yes	GO to AG2

No	GO to Pinpoint Test AH

AG2 VERIFY THAT THE ACM (AUDIO FRONT CONTROL MODULE), APIM (SYNC MODULE), AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE, AND FCIM (FRONT CONTROLS INTERFACE MODULE) PASS THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the ACM, APIM, audio DSP module, and FCIM pass the network test?

Yes	GO to AG3

No	* If the ACM failed the network test, REFER to: Communications Network . See The ACM Does Not Respond To The Diagnostic Scan Tool.* If the APIM failed the network test, REFER to: Communications Network . See The APIM Does Not Respond To The Diagnostic Scan Tool.* If the audio DSP module failed the network test, REFER to: Communications Network . See The Audio DSP Module Does Not Respond To The Diagnostic Scan Tool.* If the FCIM failed the network test, REFER to: Communications Network . See The FCIM Does Not Respond To The Diagnostic Scan Tool.

AG3 RESET THE AUDIO SYSTEM MODULES AND RECHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Disconnect the battery for 1 minute, then reconnect it.

Turn the infotainment system on.

Test the FCIM for normal operation.

Does the FCIM operate correctly?

Yes	The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules.

No	GO to AG4

AG4 RETRIEVE THE ACM (AUDIO FRONT CONTROL MODULE), APIM (SYNC MODULE), AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE, AND FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

Audio DSP module

FCIM

Are any Diagnostic Trouble Codes (DTCs) present in the ACM, APIM, audio DSP module, or FCIM?

Yes	* For ACM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: ACM.* For APIM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: APIM.* For audio DSP module Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: Audio DSP Module. For FCIM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: FCIM.

No	GO to AG5

AG5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AH : THE FDIM (FRONT DISPLAY INTERFACE MODULE) TOUCHSCREEN IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See FDIM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108E:01	Display: General Electrical Failure	Set by the APIM when an error is detected in the touch sensing ability of the FDIM.
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	Set by the APIM when communication is missing from the FDIM for more than 1 second with the ignition in RUN.

Possible Sources

- Object pressed against the touchscreen
- FDIM
- Uncalibrated touchscreen
- APIM

NOTE: The FDIM touchscreen can only sense one touch command at a time. If any objects are pressed against the touchscreen (including wiring or components behind the trim panel surrounding the touchscreen), the FDIM can appear to be inoperative.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AH : THE FDIM (FRONT DISPLAY INTERFACE MODULE) TOUCHSCREEN IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST AH : THE FDIM (FRONT DISPLAY INTERFACE MODULE) TOUCHSCREEN IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AH1 VERIFY THE TOUCHSCREEN RESPONSE TO TOUCH COMMANDS

Ignition ON.

Press each tab of the 4 corners on the FDIM and observe the touchscreen operation.

Does the FDIM touchscreen respond correctly when each tab is pressed?

Yes	VERIFY the customer's specific concern by duplicating the steps that were taken when the original concern was generated. If the concern is not duplicated, the system is operating correctly at this time. INSTRUCT the customer in the correct operation of the FDIM touchscreen.

No	* If the FDIM **is not** completely inoperative or blank, GO to AH2. * If the FDIM **is** completely inoperative or blank, GO to AH3.

AH2 ENSURE THE TOUCHSCREEN IS CALIBRATED

Calibrate the touchscreen. REFER to: Touchscreen Calibration .

Verify the touchscreen operation.

Does the FDIM touchscreen respond correctly?

Yes	The system is operating correctly at this time. The concern was a result of the touchscreen not being calibrated.

No	GO to AH5

AH3 VERIFY THAT THE APIM (SYNC MODULE) PASSES THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the APIM pass the network test?

Yes	GO to AH4

No	REFER to: Communications Network . See The APIM Does Not Respond To The Diagnostic Scan Tool.

AH4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0162:00 SET IN THE APIM (SYNC MODULE)

Using a diagnostic scan tool, perform the APIM self-test.

Is DTC U0162:00 set in the APIM?

Yes	INSTALL a new FDIM. REFER to: Front Display Interface Module (FDIM) .

No	GO to AH5

AH5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B108E:01 SET IN THE APIM (SYNC MODULE)

Using a diagnostic scan tool, perform the APIM self-test.

Is DTC B108E:01 set in the APIM?

Yes	INSTALL a new FDIM. REFER to: Front Display Interface Module (FDIM) .

No	GO to AH6

NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, deletes any Bluetooth devices paired with the SYNC ® system, and removes any Wi-Fi network connections (cancelling any system update download or installation in progress). For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased.

AH6 RESET THE APIM (SYNC MODULE) AND RECHECK THE SYSTEM OPERATION

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Turn the infotainment system on.

While pressing each tab of the 4 corners on the FDIM, observe the touchscreen operation.

Does the touchscreen operate correctly?

Yes	The FDIM is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature.

No	GO to AH7

AH7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AI : NAVIGATION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Navigation and GPSM.

Removal of the map data SD card results in loss of navigation while the card is removed. This is normal operation.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1215:00	External Memory Card: No Sub Type Information	Set by the APIM when the map data SD card is missing.

Possible Sources

- Media hub
- Map data SD card not present, not fully seated, or damaged
- GPSM
- APIM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AI : NAVIGATION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST AI : NAVIGATION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AI1 DETERMINE IF THE VEHICLE IS EQUIPPED WITH A FACTORY-INSTALLED NAVIGATION SYSTEM

Ensure that the correct VIN was entered on the technician service publication website.

Hover the mouse cursor over or click on the OASIS tab toward the top left of the screen.

Select "HVBoM (Historical Vehicle Bill of Material)."

Locate the

Limit to Base: text entry box toward the center of the screen.

Enter the map data SD card base part number "19H449" (do not include quotation marks).

Press Enter on the keyboard or click on "View BoM (Build of Material)."

If the vehicle is equipped with a factory-installed navigation system, a row will appear indicating "CARD - MEMORY" in the DESCRIPTION column.

If the vehicle is **not** equipped with a factory-installed navigation system, a row will **not** appear and the DESCRIPTION column will be blank.

Does the technician service publication website indicate the vehicle is equipped with a factory-installed navigation system?

Yes	GO to AI2

No	Ford Motor Company does not support the addition of a navigation system to vehicles not equipped with a factory-installed navigation system.

AI2 VERIFY THAT THE APIM (SYNC MODULE) PASSES THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the APIM pass the network test?

Yes	GO to AI3

No	REFER to: Communications Network . See The APIM Does Not Respond To The Diagnostic Scan Tool.

AI3 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS FOR POWER OUTPUT

Connect: MIT 105-00120.

Does the MIT 105-00120 power on from both USB ports?

Yes	GO to AI4

No	* If the MIT 105-00120 powers on from only one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the MIT 105-00120 does not power on from either USB port, GO to Pinpoint Test Z

AI4 RESET THE APIM (SYNC MODULE) AND VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

Remove any devices connected to the media hub.

Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.

Wait at least 2 minutes for the APIM to re-initialize.

Connect: MIT 105-00120.

Using the MIT 105-00120, attempt to play an audio file using each USB port.

Is the audio output OK for each USB port?

Yes	GO to AI5

No	* If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to: Media Hub .* If the audio output is not OK from both USB ports, GO to Pinpoint Test AA

AI5 CHECK FOR A MAP DATA SD (SECURE DIGITAL) CARD FAULT MESSAGE

Ignition ON.

Observe the FDIM display.

Does the FDIM display "Insert Nav SD Card" or "Navigation SD Card Fault?"

Yes	GO to AI6

No	GO to AI9

AI6 VERIFY THE MAP DATA SD (SECURE DIGITAL) CARD IS PRESENT

Check for the presence of a map data SD card in the media hub SD card slot.

Is the map data SD card present and fully seated?

Yes	GO to AI7

No	INSTALL the map data SD card. TEST the system for normal operation.

AI7 INSPECT THE MAP DATA SD (SECURE DIGITAL) CARD

NOTE: The media hub SD card slot is spring loaded. The SD card is removed by pushing the card inward until a faint click is heard and the card is released outward. Attempting to remove the card without properly releasing it may cause damage to the SD card pins.

Remove the map data SD card.

Inspect the map data SD card case and pins for damage.

Is any damage present?

Yes	INSTALL a new map data SD card.

No	If a known good map data SD card is available, GO to AI8 If a known good map data SD card is **not** available, GO to AI9

AI8 VERIFY NAVIGATION SYSTEM OPERATION WITH KNOWN GOOD MAP DATA SD (SECURE DIGITAL) CARD

Insert a known good map data SD card with the correct software version level.

Confirm that the navigation system operates correctly.

Does the navigation system operate correctly with the known good map data SD card?

Yes	INSTALL a new map data SD card.

No	GO to AI9

AI9 VERIFY THAT THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) PASSES THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the GPSM pass the network test?

Yes	GO to AI10

No	REFER to: Communications Network . See The GPSM Does Not Respond To The Diagnostic Scan Tool.

AI10 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE)

Using a diagnostic scan tool, perform the self-test for the following modules:

APIM

GPSM

Are any Diagnostic Trouble Codes (DTCs) present in the APIM or GPSM?

Yes	* For APIM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: APIM.* For GPSM Diagnostic Trouble Codes (DTCs), REFER to:

	Information and Entertainment System . See DTC Chart: GPSM.

No	GO to AI11

AI11 REPROGRAM THE APIM (SYNC MODULE)

Perform the APIM Standard Programming. REFER to: SYNC Module [APIM] Standard Programming .

Override the Service Pack installation and perform a Full Flash/Force CIP.

Once the APIM programming is complete and the system has re-initialized, confirm that the navigation system operates correctly.

Does the navigation system operate correctly?

Yes	The navigation system is operating correctly at this time. The concern was resolved by reprogramming the APIM.

No	GO to AI12

AI12 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

NOTE: Before operating the system to determine if the concern is still present, ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees so an adequate GPS signal can be obtained.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) . RETEST the system for normal operation. If the concern is still present, GO to AI13

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AI13 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AJ : THE COMPASS IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Compass.

Possible Source

- GPSM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AJ : THE COMPASS IS INOPERATIVE OR DOES

NOT OPERATE CORRECTLY > PINPOINT TEST AJ : THE COMPASS IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AJ1 VERIFY THAT THE APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE) PASS THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Did the APIM and GPSM pass the network test?

Yes	GO to AJ2

No	* If the APIM failed the network test, REFER to: Communications Network . See The APIM Does Not Respond To The Diagnostic Scan Tool.* If the GPSM failed the network test, REFER to: Communications Network . See The GPSM Does Not Respond To The Diagnostic Scan Tool.

AJ2 RETRIEVE THE APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

APIM

GPSM

Are any Diagnostic Trouble Codes (DTCs) present in the APIM or GPSM?

Yes	* For APIM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: APIM.* For GPSM Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System . See DTC Chart: GPSM.

No	GO to AJ3

AJ3 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

NOTE: Before operating the system to determine if the concern is still present, ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees so an adequate GPS signal can be obtained.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AK : VOICE RECOGNITION DOES NOT OPERATE CORRECTLY TO VOICE NAVIGATE TO A DESTINATION

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Navigation, Voice Recognition, and APIM.

Visual Inspection and Diagnostic Pre-checks

- Verify the key is in the ON position (navigation function may be limited in accessory mode on some vehicles).
- Verify the vehicle is located in a clear, open area to ensure the satellite information can be received by the vehicle.
- Verify the navigation SD card is present and fully seated in the SD card slot.
- Run the vehicle for at least one minute before testing the system in order for the navigation and voice recognition application to load properly.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AK : VOICE RECOGNITION DOES NOT OPERATE CORRECTLY TO VOICE NAVIGATE TO A DESTINATION > PINPOINT TEST AK : VOICE RECOGNITION DOES NOT OPERATE CORRECTLY TO VOICE NAVIGATE TO A DESTINATION

AK1 DETERMINE IF THE VEHICLE IS EQUIPPED WITH A FACTORY-INSTALLED NAVIGATION SYSTEM

Ensure that the correct VIN was entered on the technician service publication website.

Hover the mouse cursor over or click on the OASIS tab toward the top left of the screen.

Select "HVBoM (Historical Vehicle Bill of Material)."

Locate the

Limit to Base: text entry box toward the center of the screen.

Enter the map data SD card base part number "19H449" (do not include quotation marks).

Press Enter on the keyboard or click on "View BoM (Build of Material)."

If the vehicle is equipped with a factory-installed navigation system, a row will appear indicating "CARD - MEMORY" in the DESCRIPTION column.

If the vehicle is **not** equipped with a factory-installed navigation system, a row will **not** appear and the DESCRIPTION column will be blank.

Does the technician service publication website indicate the vehicle is equipped with a factory-installed navigation system?

Yes	GO to AK2

No	Ford Motor Company does not support the addition of a navigation system to vehicles not equipped with a factory-installed navigation system.

AK2 REPROGRAM THE APIM (SYNC MODULE)

Perform the APIM Standard Programming. REFER to: SYNC Module [APIM] Standard Programming .

Override the Service Pack installation and perform a Full Flash/Force CIP.

Once the APIM programming is complete and the system has re-initialized, confirm that the navigation system operates correctly.

Does the navigation system operate correctly?

Yes	The navigation system is operating correctly at this time. The concern was resolved by reprogramming the APIM.

No	GO to AK3

AK3 VERIFY THAT NO ROUTE PREFERENCE, NAVIGATION, TRAFFIC, OR AVOID AREA RESTRICTIONS ARE SELECTED

Verify that the Navigation Route Preferences are not set to avoid freeways, toll roads, ferries, and car trains. Refer to the Owner's Literature.

Verify that Traffic Preferences are set properly. Refer to the Owner's Literature.

Verify that the destination being entered is not located within the boundaries of a "to avoid" area. Refer to the Owner's Literature.

Change preferences as necessary, and operate the Voice Navigation system.

Does the Voice Navigation system operate as expected?

Yes	If the concern is not duplicated, the system is operating correctly at this time. INSTRUCT the customer in the correct operation of the route preference, navigation, traffic, and avoid area restrictions.

No	GO to AK4

AK4 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

Operate the audio system in AM/ FM mode.

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

Does the SYNC ® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to AK5

No	GO to Pinpoint Test X

AK5 CHECK THE VOICE RECOGNITION OPERATION

Operate the VOICE steering wheel switch and listen for the SYNC ® audible prompt.

NOTE: Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands.

Clearly speak the word "help."

Does the SYNC ® system respond correctly to the "help" voice command?

Yes	The voice recognition of the navigation destination concern may have been caused by an insufficiently quiet vehicle or a destination not being present in the map database. GO to AK6

No	GO to Pinpoint Test Y

NOTE: Dragging your finger and pinching two fingers will not scroll to a location or

zoom in or out as in other devices on the market. Holding your finger on a location off-center will cause the map to scroll to that location. Refer to the Owner Guide for more information about navigating the map screen.

AK6 CHECK OPERATION OF NAVIGATION SYSTEM WITH MANUAL DESTINATION ENTRY

Using the map feature, touch the screen at the requested destination.

Verify there is a road present on the map at the requested location and verify the address of the destination is correct.

Does the navigation system properly navigate to the destination requested?

Yes	The information on the navigation SD card may not include the correct map data, or is in a different format than what was expected. The system is operating correctly at this time. NOTIFY the customer that there may be an updated map upgrade available for purchase.

No	GO to Pinpoint Test AI

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AL : B116A:01

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B116A:01	Handset Microphone: General Electrical Failure	Set by the DACMC when a failure is detected on the overhead console ANC microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Overhead console ANC microphone
- DACMC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AL : B116A:01 > PINPOINT TEST AL : B116A:01

AL1 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1		Ground
C240B-14		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to AL2

AL2 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1	Ω	Ground
C240B-14	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AL3

No	REPAIR the circuit in question.

AL3 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR AN OPEN

Disconnect: Overhead Console ANC Microphone C9222 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1	Ω	C9222-1
C240B-14	Ω	C9222-2

Are the resistances less than 3 ohms?

Yes	GO to AL4

No	REPAIR the circuit in question.

AL4 CHECK THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-1	Ω	C240B-14

Is the resistance greater than 10, 000 ohms?

Yes	GO to AL5

No	REPAIR the circuit in question.

AL5 ISOLATE THE OVERHEAD CONSOLE ANC (ACTIVE NOISE CONTROL) MICROPHONE

Connect: ACM C240B .

Install a new overhead console ANC microphone. REFER to: Active Noise Control Microphone .

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the DACMC.

Ignition OFF.

Ignition ON.

Wait at least 5 seconds

Using a diagnostic scan tool, perform the DACMC self-test.

Is DTC B116A:01 still present in the DACMC?

Yes	GO to AL6

No	The system is operating correctly at this time. The concern was caused by an inoperative ANC microphone.

AL6 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AM : B117A:01

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See ANC, ANC Microphones, and DACMC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B117A:01	Backup Microphone: General Electrical Failure	Set by the DACMC when a failure is detected on the LHR quarter panel ANC microphone circuits (convertible only).

Possible Sources

- Wiring, terminals, or connectors

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AM : B117A:01 > PINPOINT TEST AM : B117A:01

AM1 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: ACM C240B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	V	Ground
C240B-15	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to AM2

AM2 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	Ω	Ground
C240B-15	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AM3

No	REPAIR the circuit in question.

AM3 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR AN OPEN

Disconnect: LHR Quarter Panel ANC Microphone C4828 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	Ω	C4828-1
C240B-15	Ω	C4828-2

Are the resistances less than 3 ohms?

Yes	GO to AM4

No	REPAIR the circuit in question.

AM4 CHECK THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240B-2	Ω	C240B-15

Is the resistance greater than 10, 000 ohms?

Yes	GO to AM5

No	REPAIR the circuit in question.

AM5 ISOLATE THE LHR (LEFT-HAND REAR) QUARTER PANEL ANC (ACTIVE NOISE CONTROL) MICROPHONE

Connect: ACM C240B .

Install a new LHR quarter panel ANC microphone. REFER to: Active Noise Control Microphone .

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the DACMC.

Ignition OFF.

Ignition ON.

Wait at least 5 seconds

Using a diagnostic scan tool, perform the DACMC self-test.

Is DTC B117A:01 still present in the DACMC?

Yes	GO to AM6

No	The system is operating correctly at this time. The concern was caused by an inoperative ANC microphone.

AM6 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AN : B13F5:01

AO1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify if there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AO2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AO2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 set in the ACM, DACMC, or GPSM?

Yes	GO to AO3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AO3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the PCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the PCM?

Yes	* For DTC P0562 or P0563 set for vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See PCM DTC Chart.* For DTC P0562 or P0563 set for vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See PCM DTC Chart.* For DTC P0562 or P0563 set for vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See PCM DTC Chart.

No	GO to AO4

AO4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

DACMC

GPSM

Are low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, DACMC, or GPSM?

Yes	* For DTC U3003:16, GO to Pinpoint Test BB * For DTC U3003:17, GO to Pinpoint Test BC

No	GO to AO5

AO5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0100:00 set in more than one module?

Yes	GO to AO6

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System.* If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AO6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the PCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Powertrain Control Module (PCM) . For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Powertrain Control Module (PCM) . For vehicles with the 5.0L 32V Ti-VCT, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With	Set by the APIM and FCIM when

	Restraints Control Module: No Sub Type Information	the airbag deployment notification message from the RCM is missing for more than 5 seconds with the ignition in RUN.

Possible Source

- RCM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AR : U0151:00 > PINPOINT TEST AR : U0151:00

AR1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AR2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AR2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:00 set in the APIM or FCIM?

Yes	GO to AR3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AR3 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR BATTERY VOLTAGE

OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the RCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the RCM?

Yes	* For DTC U3003:16, REFER to: Airbag Supplemental Restraint System (SRS) . See U3003:16.* For DTC U3003:17, REFER to: Airbag Supplemental Restraint System (SRS) . See U3003:17.

No	GO to AR4

AR4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

APIM

FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM or FCIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test BB * For DTC U3003:17, GO to Pinpoint Test BC

No	GO to AR5

AR5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0151:00 set in both the APIM and FCIM?

Yes	GO to AR6

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System.* If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AR6 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the RCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the RCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AS : U0155:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description . See Network Message Chart.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With IPC Control Module: No Sub Type Information	Set by the ACM, APIM, audio DSP module, FCIM, and GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

Possible Source

- IPC

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AS : U0155:00 > PINPOINT TEST AS : U0155:00

AS1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AS2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AS2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 set in the ACM, APIM, audio DSP module, FCIM, or GPSM?

Yes	GO to AS3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AS3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the IPC self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the IPC?

Yes	* For DTC U3003:16, REFER to: Instrumentation, Message Center and Warning Chimes . See U3003:16.* For DTC U3003:17, REFER to: Instrumentation, Message Center and Warning Chimes . See U3003:17.

No	GO to AS4

AS4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

Audio DSP module

FCIM

GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, audio DSP module, FCIM, or GPSM?

Yes	* For DTC U3003:16, GO to Pinpoint Test BB * For DTC U3003:17, GO to Pinpoint Test BC

No	GO to AS5

AS5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0155:00 set in more than one module?

Yes	GO to AS6

No	If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System, to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AS6 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

Ignition OFF.

Disconnect and inspect the IPC connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the IPC connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the IPC Guided Routine.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST AT : U0159:00

Normal Operation and Fault Conditions

AT1 VERIFY THE CUSTOMER'S CONCERN

Ignition ON.

Verify if there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AT2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AT2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0159:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0159:00 set in the APIM?

Yes	GO to AT3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AT3 CHECK THE BCM (BODY CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the BCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the BCM?

Yes	* For DTC U3006:16, REFER to: Body Control Module (BCM) . See U3006:16.* For DTC U3006:17, REFER to: Body Control Module (BCM) . See U3006:17.

No	GO to AT4

AT4 CHECK THE APIM (SYNC MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the APIM self-test.

Are low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	* For DTC U3003:16, GO to Pinpoint Test BB * For DTC U3003:17, GO to Pinpoint Test BC

No	GO to AT5

AT5 CHECK FOR CORRECT PAM (PARKING ASSIST CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the BCM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the BCM Guided Routine.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Yes	GO to BA2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BA2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

Ignition ON.

Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait at least 10 seconds.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0257:00 set in the ACM or audio DSP module?

Yes	GO to BA3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BA3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the self-test for the following modules:

ACM

APIM

Audio DSP module

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, or audio DSP module?

Yes	* For DTC U3003:16, GO to Pinpoint Test BB * For DTC U3003:17, GO to Pinpoint Test BC

No	GO to BA4

BA4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00 SET IN MULTIPLE MODULES

Review the recorded results from the self-test.

Is DTC U0257:00 set in both the ACM and audio DSP module?

Yes	INSTALL a new FDIM. CLEAR the DTCs. Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U0257:00 is still present, GO to BA5

No	* If there is an observable symptom, REFER to: Information and Entertainment System . See Symptom Chart: General Audio System, to diagnose the observed symptom.* If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BA5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST BB : U3003:16

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM, APIM, audio DSP module, DACMC, FCIM, and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

Possible Sources

- Previous low battery voltage
- Wiring, terminals, or connectors
- ACM
- APIM
- Audio DSP module
- DACMC
- FCIM
- GPSM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST BB : U3003:16 > PINPOINT TEST BB : U3003:16

BB1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:16

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.

Wait at least 15 seconds.

Using a diagnostic scan tool, repeat the self-test for the module in question.

Is DTC U3003:16 still present?

Yes	GO to BB2

No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

BB2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

Using a diagnostic scan tool, perform the PCM self-test

Are any voltage-related Diagnostic Trouble Codes (DTCs) set in the PCM?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See PCM DTC Chart.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See PCM DTC Chart.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See PCM DTC Chart.

No	GO to BB3

BB3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Check the battery condition and verify that the battery is fully charged. REFER to: Battery . See Battery Condition Test.

Is the battery OK and fully charged?

Yes	GO to BB4

No	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See Symptom Chart to diagnose an under voltage condition.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See Symptom Chart to diagnose an under voltage condition.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See Symptom Chart to diagnose an under voltage condition.

BB4 CHECK THE MODULE VOLTAGE SUPPLY

Ignition OFF.

Measure and record the voltage at the battery.

Disconnect the audio system module setting DTC U3003:16.

Ignition ON.

Measure the voltage between the module setting DTC U3003:16 and ground.

For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		Ground

For the audio DSP module, measure:

Positive Lead	Measurement / Action	Negative Lead
C2385B-14		Ground

For the DACMC, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-7		Ground

For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		Ground

Is the voltage within 0.2 volts of the recorded battery voltage?

Yes	GO to BB5

No	REPAIR the circuit for high resistance.

BB5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY

Measure the voltage at the suspect module.

For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		C240A-13

For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		C2383-37

For the audio DSP module, measure:

Positive Lead	Measurement / Action	Negative Lead
C2385B-14		C2385B-11

For the DACMC, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		C240A-13

For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-7		C2402A-1

For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		C2398-6

Is the suspect module voltage greater than 11 volts?

Yes	* For the ACM, GO to BB6* For the APIM, GO to BB7* For the audio DSP module, GO to BB8* For the DACMC, GO to BB9* For the FCIM, GO to BB10* For the GPSM, GO to BB11

No	REPAIR the circuit for high resistance.

BB6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BB7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BB8 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BB9 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BB10 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BB11 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST BC : U3003:17

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM, APIM, audio DSP module, DACMC, FCIM, and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

Possible Sources

- ACM
- APIM
- Audio DSP module
- DACMC
- FCIM
- GPSM

DIAGNOSIS AND TESTING > INFORMATION AND ENTERTAINMENT SYSTEM > PINPOINT TESTS > PINPOINT TEST BC : U3003:17 > PINPOINT TEST BC : U3003:17

BC1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.

Wait at least 10 seconds.

Using a diagnostic scan tool, perform the self-test for the module in question.

Is DTC U3003:17 present?

Yes	GO to BC2

No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

BC2 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN MULTIPLE MODULES

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are high voltage Diagnostic Trouble Codes (DTCs) such as B1676, P0563, or U3003:17 set in more than one module?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See Symptom Chart to diagnose an overvoltage condition.

No	GO to BC3

BC3 CHECK THE BATTERY VOLTAGE

Turn off all interior lights, exterior lights, and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	* For vehicles with the 2.3L EcoBoost (201kW/273PS), REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 3.7L Duratec (227kW/301PS), REFER to: Charging System - 3.7L Duratec (227kW/301PS) . See Symptom Chart to diagnose an overvoltage condition.* For vehicles with the 5.0L 32V Ti-VCT, REFER to: Charging System - 5.0L 32V Ti-VCT . See Symptom Chart to diagnose an overvoltage condition.

No	* For the ACM, GO to BC4* For the APIM, GO to BC5* For the audio DSP module, GO to BC6* For the DACMC, GO to BC7* For the FCIM, GO to BC8* For the GPSM, GO to BC9

BC4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BC5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BC6 CHECK FOR CORRECT AUDIO DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all the audio DSP module connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new audio DSP module. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BC7 CHECK FOR CORRECT DACMC (DIGITAL AUDIO CONTROL MODULE C) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BC8 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the FCIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BC9 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the GPSM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

GENERAL PROCEDURES > BEZEL DIAGNOSTICS

Check

1.

WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

NOTE: If there is a concern with one of the following components and Bezel Diagnostics cannot be accessed, obtain the module part number by referencing the label attached to the module.

- Inoperative (blank or does not power on) FDIM
- Inoperative FCIM
- Inoperative steering wheel switch (for vehicles without a CD player)

Refer to appropriate article to diagnose the inoperative component.

2.

Ignition ON.

3.

Operate the audio system in AM/ FM mode.

* For vehicles **with** a CD player, press and hold the EJECT button, and within 1 second, press and hold the SEEK UP button. If supported, the Speaker Walk-Around Test will begin, and the display will indicate each speaker as it is tested.
* For vehicles **without** a CD player, simultaneously press and hold the steering wheel SEEK UP switch and FCIM TUNE UP button. If supported, the Speaker Walk-Around Test will begin, and the display will indicate each speaker as it is tested.

4.

Once the Speaker Walk-Around Test (All Speaker Test) is complete, the following information is available:

Menu	Submenu
APIM Diagnostics	Part Numbers
	Software Versions
	Configuration Status
	Location Information
	Tones Test
	Touchscreen Activation Test
	Display Test Pattern
	RGB Pixel Test
	IVSU Versions
	Exit Diagnostics
AHU Diagnostics (AHU refers to the ACM)	AHU Part Numbers (also displays SIRIUS ESN)
	Radio Signal Strength
	Speaker Walk-Around Test Active (if **not** equipped with audio DSP module)
	Exit Diagnostics
DSP Diagnostics (if equipped)	DSP Part Numbers
	Speaker Walk-Around Test Active
	Exit Diagnostics
EFP Diagnostics - if equipped (EFP refers to the FCIM that communicates on the CAN)	EFP Part Numbers
	Exit Diagnostics

5.

To exit the bezel diagnostics, press the FCIM on/off button or select "Exit Diagnostics."

GENERAL PROCEDURES > RESET THE SYNC MODULE [APIM]

Programming

*NOTE: An APIM Reset consists of an APIM software cold boot and a SYNC ® system Master Reset. It may **not** be necessary to perform a Master Reset after performing a cold boot if the concern is resolved.*

1.

Ignition OFF.

2.

Remove any devices connected to the USB port(s), audio input jack/socket (if equipped), SD slot (if equipped), or RCA jacks (if equipped).

3.

Ignition ON.

4.

Cold boot the APIM software by simultaneously pressing and holding the FCIM power and seek up buttons for 8 seconds, and then releasing.

> *NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any Bluetooth devices paired with the SYNC ® system. For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased. For vehicles with a TCU, any devices paired with the MyFord ® Mobile or MyLincoln Mobile™ phone application will be deleted.*

5.
Perform a Master Reset. If necessary, refer to "Master Reset" in the Owner's Literature.

6.

Verify system function using the MIT 105-00120 to test the audio output for the USB port(s), audio input jack/socket (if equipped), and Bluetooth. If equipped, test the audio output for the RCA jacks using RCA Adapter 105-00121.

> *NOTE: If the concern remains after completing the APIM Reset procedure, advise the customer to power their device off and back on for a simple reboot. In some cases, if possible, the device's battery may also need to be removed and re-installed to complete a reboot. Delete SYNC ® from the device's Bluetooth menu prior to re-pairing the phone to the SYNC ® system. If necessary, the customer can also perform a Master Clear, Master Reset, or Factory Data Reset on their device following the manufacturer's instructions in the device's owner's manual and/or website. Customer devices may affect the operation of SYNC ® and this should be understood to prevent unnecessary diagnosis or repairs to the system.*

7.
If a concern is still present, return to the Symptom Charts.

GENERAL PROCEDURES > SYNC MODULE [APIM] CUSTOM PROGRAMMING

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable

SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Activation

1.

WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

NOTE: Use this procedure to show all available software options, including Applications, that can be programmed into the APIM when upgrades become available, or as directed by a TSB or FSA. For additional information about choosing the correct APIM programming procedure, see Accessory Protocol Interface Module (APIM) Programming.

2.
Refer to: Information and Entertainment System - Overview .

3.

To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.

A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

Some programming files are large (greater than 2GB). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download.

If a "Disk Space Error" is received, create additional free space on the hard drive.

The diagnostic scan tool is required.

Ensure that the IDS version and patch software levels are up to date.

During programming, the vehicle display may momentarily go blank.

4.

Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5.

Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6.

Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7.

Close the IDS software program.

8.

Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - Overview .

9.

Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.

Run OASIS using "Read VIN & DTCs."

If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.

NOTE: This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other diagnoses are to be performed after this procedure.

10.
Select "Toolbox" from the technician service publications website to retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

11.

From the OASIS tab, select the "SYNC" button. The Last Recorded State - Software is displayed.

12.

Scroll to the bottom of the screen, select "Custom," and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.

Select the software level needed as indicated by the TSB or FSA. If the software level is not known, stop this procedure and perform standard programming, which automatically selects the latest software levels. Refer to: SYNC Module [APIM] Standard Programming .

Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no reinstallation is required).

Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.

Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force Consumer Interface Processor (CIP), choosing this option requires additional programming time and is not recommended unless directed by a TSB or FSA.

Select the customer-requested upgrade or the Application directed by the TSB or FSA.

NOTE: If not performing a Full Flash/Force Consumer Interface Processor (CIP), go to step 16.

NOTE: Only Applications on a flash drive may be loaded into the APIM through the media hub.

13.

Disconnect the vehicle's USB cable by removing the media hub. Refer to: Media Hub .

If the USB cable cannot be accessed by removing the media hub, access and disconnect the USB inline connector. Refer to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

14.

Connect the USB adaptor (female type A 4-pin to female type Mini-B 5-pin) to the vehicle's USB cable.Use the General Equipment: SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the USB adaptor. Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

*NOTE: Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

15.

NOTE: This step may take 20 minutes or longer.

NOTE: Diagnostic scan tools that have never been used to program SYNC ® may

encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "Retry" button to continue programming.

16.

Select the "Program SYNC" button to begin the APIM programming process.

When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

NOTE: This step may take 20 minutes or longer.

17.
Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions to download Service Pack and Application files onto the USB flash drive. (If the diagnostic scan tool does not have an available USB port, the USB cable that is connected to the vehicle's USB cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool).

18.

Install the media hub if it was removed. Refer to: Media Hub .

Reconnect the USB inline connector if it was accessed and disconnected. Refer to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

NOTE: This step may take 20 minutes or longer.

19.

When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool and connect it to the media hub to install the Applications into the APIM.

The update should start automatically, and may take 20 minutes or longer.

It is normal for the APIM to reset during this step.

20.

Once the diagnostic scan tool programming and USB flash drive programming are complete, reinstall the flash drive into the diagnostic scan tool and select "OK." This initiates the remaining automated configuration steps and reports the software installation to the Ford online database. Failure to do so results in the loss of features such as navigation (if equipped) and SYNC ® Services.

NOTE: Calibrate the touchscreen.

21.
Refer to: Touchscreen Calibration

GENERAL PROCEDURES > SYNC MODULE [APIM] REPLACEMENT PROGRAMMING

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable
SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Activation

1.

> *WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

Refer to: Health and Safety Precautions .

> *NOTE: Use this procedure to program and provision the module when a new APIM is being installed. For additional information about choosing the correct APIM programming procedure, see Accessory Protocol Interface Module (APIM) Programming.*

2.
Refer to: Information and Entertainment System - Overview .

3.

Install the new APIM before performing this procedure. Refer to: SYNC Module [APIM] .

4.

To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.

A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

Some programming files are large (greater than 2GB). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download.

If a "Disk Space Error" is received, create additional free space on the hard drive.

The diagnostic scan tool is required.

Ensure that the IDS version and patch software levels are up to date.

During programming, the vehicle display may momentarily go blank.

5.

Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

6.

Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

7.

Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

8.

Close the IDS software program.

9.

Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - Overview .

10.

Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.

Run OASIS using "Read VIN & DTCs."

If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.

NOTE: This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other diagnoses are to be performed after this procedure.

11.
Select "Toolbox" from the technician service publications website to retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

12.

From the OASIS tab, select the "SYNC" button. The Last Recorded State - Software is displayed.

13.

Scroll to the bottom of the screen, select "Module Replacement," and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels are compared to the last recorded state in the Ford online database, and the diagnostic scan tool automatically selects the latest software for programming.

Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no reinstallation is required).

Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.

Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force Consumer Interface Processor (CIP), choosing this option requires additional programming time and is not recommended unless directed by a TSB or FSA.

NOTE: If not performing a Full Flash/Force Consumer Interface Processor (CIP), go to step 17.

NOTE: Only Applications on a flash drive may be loaded into the APIM through the media hub.

14.

Disconnect the vehicle's USB cable by removing the media hub. Refer to: Media Hub .

If the USB cable cannot be accessed by removing the media hub, access and disconnect the USB inline connector. Refer to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

15.

Connect the USB adaptor (female type A 4-pin to female type Mini-B 5-pin) to the vehicle's USB cable. Use the General Equipment: SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the USB adaptor. Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

*NOTE: Do **not** disconnect the VCM or USB cable during APIM programming*

unless directed by the diagnostic scan tool on-screen prompts.

16.

NOTE: This step may take 20 minutes or longer.

NOTE: Diagnostic scan tools that have never been used to program SYNC ® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "Retry" button to continue programming.

17.

Select the "Program SYNC" button to begin the APIM programming process.

When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

NOTE: This step may take 20 minutes or longer.

18.
Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions to download Service Pack and Application files onto the USB flash drive. (If the diagnostic scan tool does not have an available USB port, the USB cable that is connected to the vehicle's USB cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool).

19.

Install the media hub if it was removed. Refer to: Media Hub .

Reconnect the USB inline connector if it was accessed and disconnected. Refer to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

NOTE: This step may take 20 minutes or longer.

20.

When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool and connect it to the media hub to install the Applications into the APIM.

The update should start automatically, and may take 20 minutes or longer.

It is normal for the APIM to reset during this step.

NOTE: Reinstalling the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC ® traffic, directions, and information services.

21.
Once diagnostic scan tool programming and USB flash drive programming are complete, reinstall the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

NOTE: Calibrate the touchscreen.

22.
Refer to: Touchscreen Calibration .

GENERAL PROCEDURES > SYNC MODULE [APIM] STANDARD PROGRAMMING

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable
SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Activation

1.

WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

NOTE: Use this procedure to update the APIM and any installed Applications to the latest level. For additional information about choosing the correct APIM programming procedure, see Accessory Protocol Interface Module (APIM) Programming.

2.
Refer to: Information and Entertainment System - Overview .

3.

To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.

A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

Some programming files are large (greater than 2GB). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download.

If a "Disk Space Error" is received, create additional free space on the hard drive.

The diagnostic scan tool is required.

Ensure that the IDS version and patch software levels are up to date.

During programming, the vehicle display may momentarily go blank.

4.

Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5.

Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6.

Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7.

Close the IDS software program.

8.

Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - Overview .

9.

Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.

Run OASIS using "Read VIN & DTCs."

If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.

If the "SYNC - Software Programming" document is not followed, the programming may stop

or encounter errors due to improperly configured Internet browser settings.

NOTE: This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other diagnoses are to be performed after this procedure.

10.
Select "Toolbox" from the technician service publications website to retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

11.

From the OASIS tab, select the "SYNC" button. The Last Recorded State - Software is displayed.

12.

Scroll to the bottom of the screen, select "Standard," and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels are compared to the last recorded state in the Ford online database, and the diagnostic scan tool automatically selects the latest software for programming.

Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no reinstallation is required).

Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.

Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force Consumer Interface Processor (CIP), choosing this option requires additional programming time and is not recommended unless directed by a TSB, FSA or specific pinpoint test.

NOTE: If not performing a Full Flash/Force Consumer Interface Processor (CIP), go to step 16.

NOTE: Only Applications on a flash drive may be loaded into the APIM through the media hub.

13.

Disconnect the vehicle's USB cable by removing the media hub. Refer to: Media Hub .

If the USB cable cannot be accessed by removing the media hub, access and disconnect the USB inline connector. Refer to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

14.

Connect the USB adaptor (female type A 4-pin to female type Mini-B 5-pin) to the vehicle's USB cable. Use the General Equipment: SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the USB adaptor. Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

*NOTE: Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

15.

NOTE: This step may take 20 minutes or longer.

NOTE: Diagnostic scan tools that have never been used to program SYNC ® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "Retry" button to continue programming.

16.

Select the "Program SYNC" button to begin the APIM programming process.

When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

NOTE: This step may take 20 minutes or longer.

17.
Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions to download Service Pack and Application files onto the USB flash drive. (If the diagnostic scan tool does not have an available USB port, the USB cable that is connected to the vehicle's USB cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool).

18.

Install the media hub if it was removed. Refer to: Media Hub .

Reconnect the USB inline connector if it was accessed and disconnected. Refer to: SYNC Module [APIM] to Universal Serial Bus (USB) Port Cable .

NOTE: This step may take 20 minutes or longer.

19.

When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool and connect it to the media hub to install the Applications into the APIM.

The update should start automatically, and may take 20 minutes or longer.

It is normal for the APIM to reset during this step.

20.

Once the diagnostic scan tool programming and USB flash drive programming are complete, reinstall the flash drive into the diagnostic scan tool and select "OK." This initiates the remaining automated configuration steps and reports the software installation to the Ford online database. Failure to do so results in the loss of features such as navigation (if equipped) and SYNC ® Services.

NOTE: Calibrate the touchscreen.

21.
Refer to: Touchscreen Calibration .

GENERAL PROCEDURES > TOUCHSCREEN CALIBRATION

Activation

1.

WARNING: Before beginning any service procedure in this article, refer to Health and Safety Precautions in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

NOTE: Calibrate the touchscreen by following the diagnostic scan tool prompts, or the steps below.

2.

Make sure the vehicle battery is fully charged in order to avoid an inoperative touchscreen.

3.

Turn the ACM on.

4.

Operate the audio system in radio tuner AM/ FM mode.

5.

Press and hold the eject button, and within 1 second, press and hold the seek up button until the speaker walk around test begins.

6.

Press and hold the seek down button to enter the touchscreen calibration.

7.

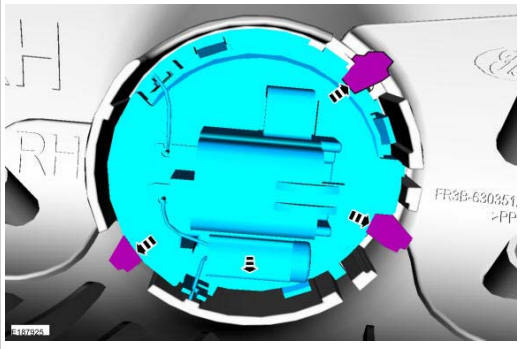
Touch and hold the touch points as they appear on the touchscreen (a stylus is not required).

8.

When "New calibration settings have been measured. Press the Enter key to accept the new settings." is displayed, touch anywhere on the screen to accept the new settings.

9.

Clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).



REMOVAL AND INSTALLATION > A-PILLAR SPEAKER > REMOVAL

1.

Remove the A-Pillar trim panel. Refer to: A-Pillar Trim Panel - Convertible . Refer to: A-Pillar Trim Panel - Coupe .

2.

Release the tabs and remove the A-Pillar speaker.

REMOVAL AND INSTALLATION > A-PILLAR SPEAKER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > ACTIVE NOISE CONTROL MICROPHONE > REMOVAL

Front Microphone

1.

Remove the overhead console. Refer to: Overhead Console .

2.

Remove the ANC microphone.

1.

Release the tab.

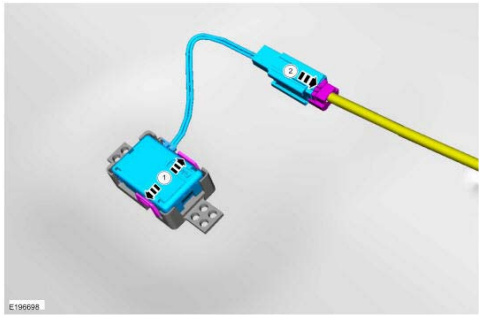
2.

Disconnect the electrical connector.

Rear Microphone: Coupe

3.

Lower the headliner. Refer to: Headliner - Lowering .



4.

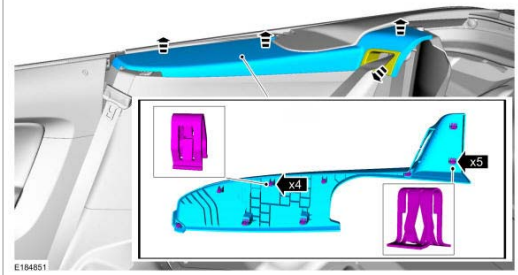
1.

Release the tabs and remove the ANC microphone.

2.

Disconnect the electrical connector.

Convertible



5.

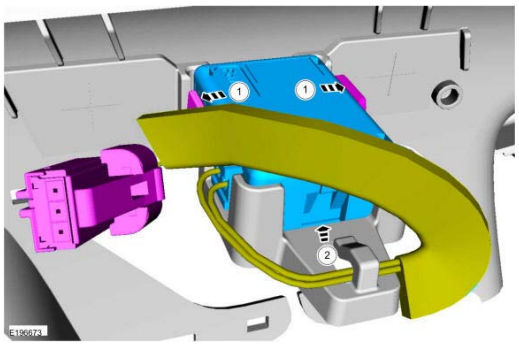
Remove the rear seat backrest. Refer to: Rear Seat Backrest - Convertible .

NOTE: RH side shown LH side similar.

6.
Position the safety belt guide aside, release the clips and remove the upper loadspace trim panel.

Disconnect the electrical connector.

NOTE: RH side shown LH side similar.



7.

1.

Release the tabs.

2.

Remove the ANC microphone

REMOVAL AND INSTALLATION > ACTIVE NOISE CONTROL MICROPHONE > INSTALLATION

1.

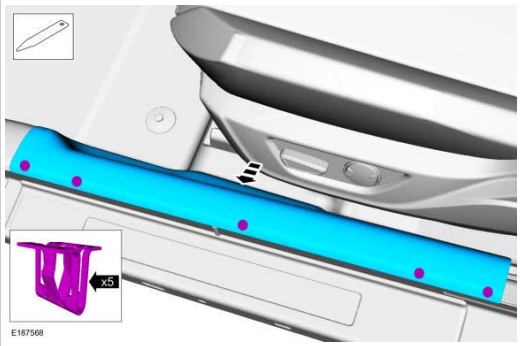
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO DIGITAL SIGNAL PROCESSING (DSP) MODULE

Special Tool(s) / General Equipment

Interior Trim Remover

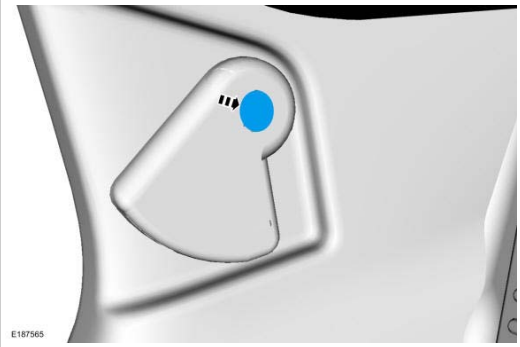
REMOVAL AND INSTALLATION > AUDIO DIGITAL SIGNAL PROCESSING (DSP) MODULE > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

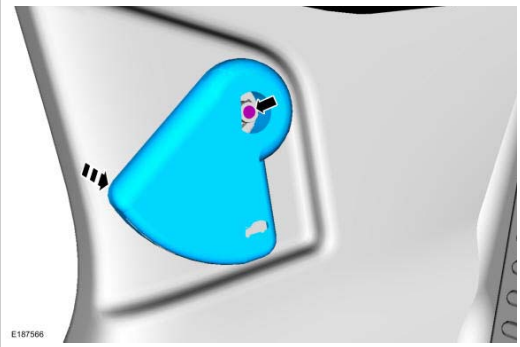
NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the ACM following the on-screen instructions.



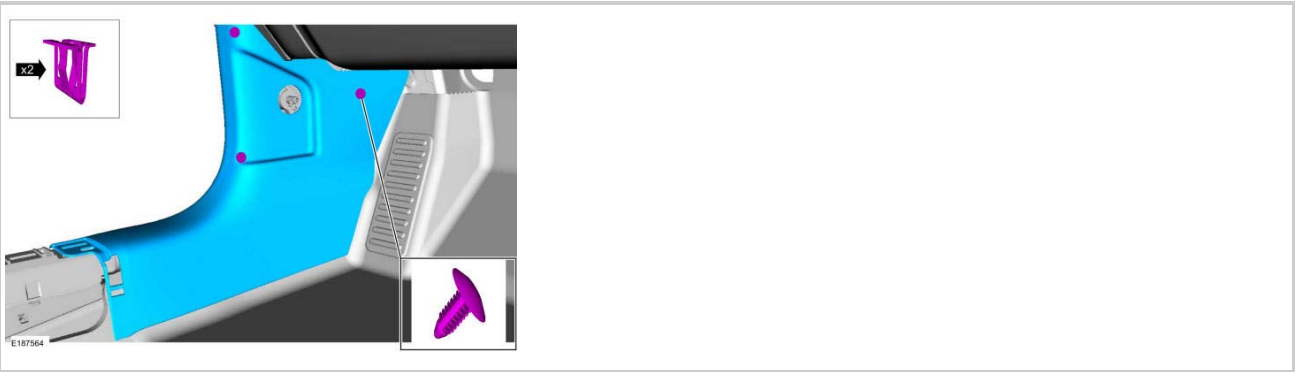
2.

Release the clips and remove the LH scuff plate. Use the General Equipment: Interior Trim Remover



3.

Remove the hood release handle bolt cover.



4.

Remove the hood release handle screw and the hood release handle.

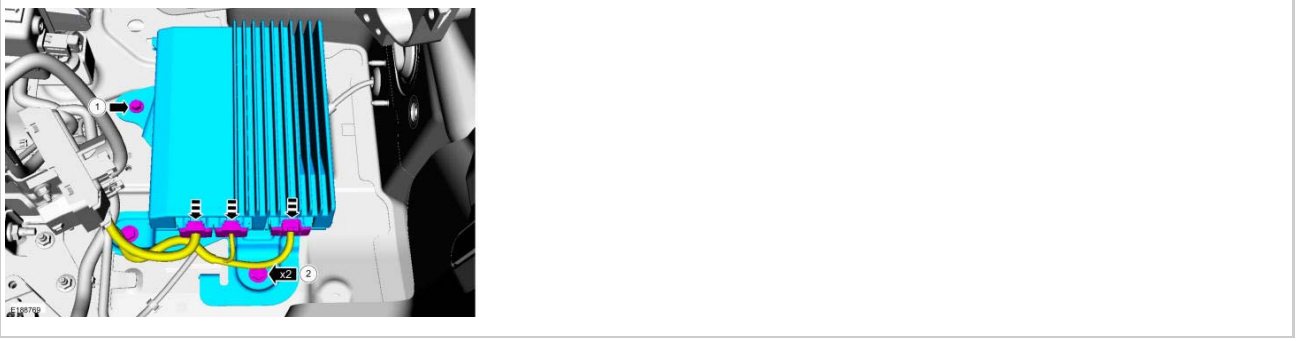
5.

Release the clips and remove the LH cowl trim panel.

6.

Remove the bolts, disconnect the electrical connectors and remove the DSP.

1.



Torque

: 106 lb.in (12 Nm)

2.

Torque

: 62 lb.in (7 Nm)

REMOVAL AND INSTALLATION > AUDIO DIGITAL SIGNAL PROCESSING (DSP) MODULE > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only required if the component is being replaced.

2.
Using a diagnostic scan tool, complete the PMI process for the DSP following the on-screen instructions.

REMOVAL AND INSTALLATION > AUDIO FRONT CONTROL MODULE (ACM) > REMOVAL

NOTE: Eject any media from the ACM. If a disc fails to eject, do not forceably remove the disc from the ACM.

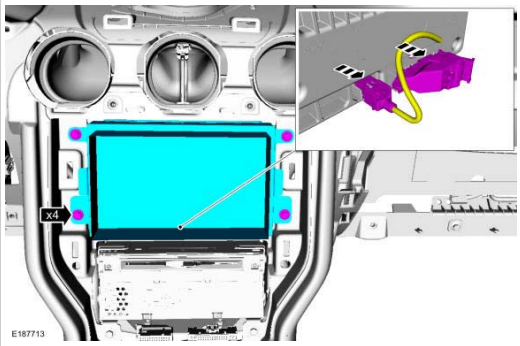
NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the ACM following the on-screen instructions.

2.

Remove the FCIM. Refer to: Front Controls Interface Module (FCIM) .



3.

Remove the bolts and the FDIM.

Disconnect the electrical connectors.

Torque

: 22 lb.in (2.5 Nm)

4.

Remove the bolts and the ACM.

Disconnect the electrical connectors.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > AUDIO FRONT CONTROL MODULE (ACM) > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only necessary if replacing the component.

2.
Using a diagnostic scan tool, complete the PMI process for the ACM following the on-screen instructions.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA > REMOVAL

Coupe

NOTE: The audio unit antenna is part of the rear window glass.

1.
Replace the rear window glass. Refer to: Fixed Glass .

Convertible

2.

Remove the luggage compartment weatherstrip.

3.

Remove the spare tire cover.

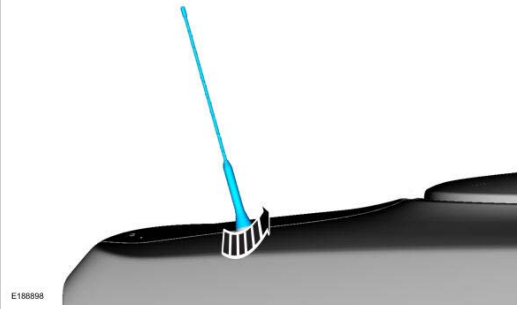
4.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .

5.

1.

Remove the pin-type retainers.

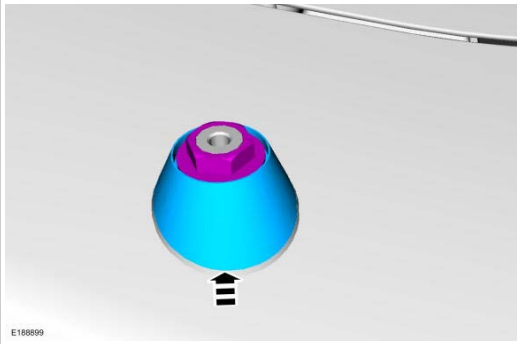


2.

Position aside the RH luggage compartment side trim panel.

6.

Remove the audio unit antenna mast.



7.

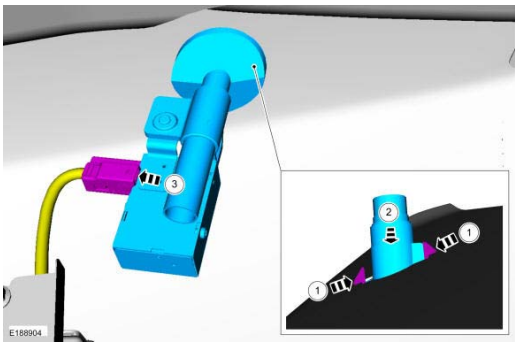
Remove the audio unit antenna mounting nut and the antenna base.

Torque

: 48 lb.in (5.4 Nm)

8.

1.



Press the tabs inward.

2.

Remove the audio unit antenna.

3.

Disconnect the electrical connector.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA > INSTALLATION

1.

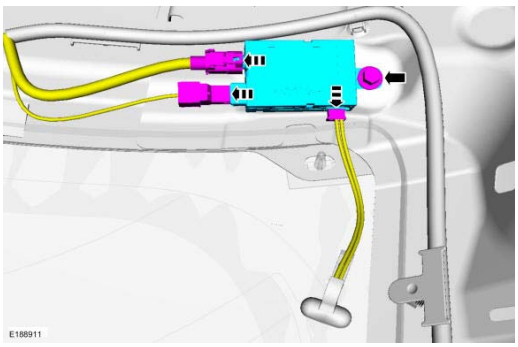
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA AMPLIFIER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Lower the headliner. Refer to: Headliner - Lowering



2.

Remove the bolt and the audio unit antenna amplifier.

Disconnect the electrical connectors.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA AMPLIFIER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA CABLE > REMOVAL

NOTE: The original equipment AM/FM antenna cable(s) are part of the wiring harness and cannot be removed. This procedure refers to replacement of the cable(s) only by overlaying the cable(s).

NOTE: The AM/FM antenna cable inline connection is located under the floor console.

Coupe: Front Cable

1.

Remove the floor console. Refer to: Floor Console .

2.

Remove the ACM. Refer to: Audio Front Control Module (ACM) .

Coupe: Rear Cable

3.

Remove the floor console. Refer to: Floor Console .

4.

Lower the headliner. Refer to: Headliner - Lowering .

Convertible

5.

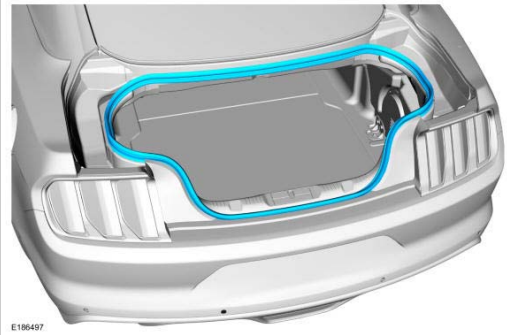
Remove the floor console. Refer to: Floor Console .

6.

Remove the ACM. Refer to: Audio Front Control Module (ACM) .

Convertible: Rear Cable

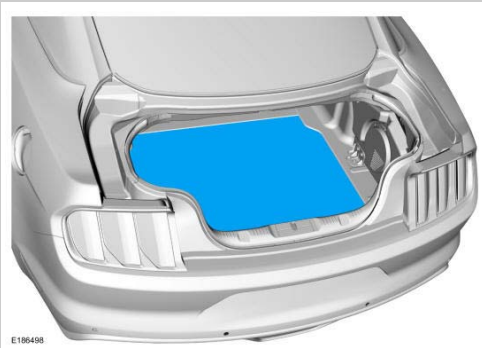
7.



Remove the floor console. Refer to: Floor Console .

8.

Remove the loadspace trim panel. Refer to: Loadspace Trim Panel - Convertible .



9.

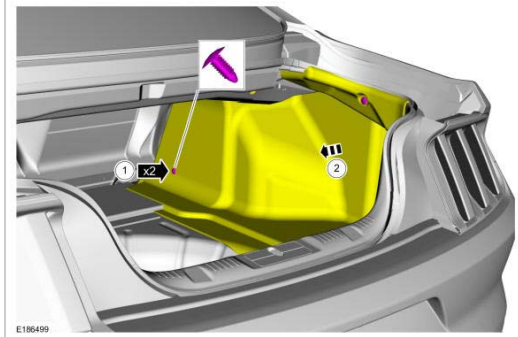
Remove the luggage compartment weatherstrip.

10.

Remove the spare tire cover.

11.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .



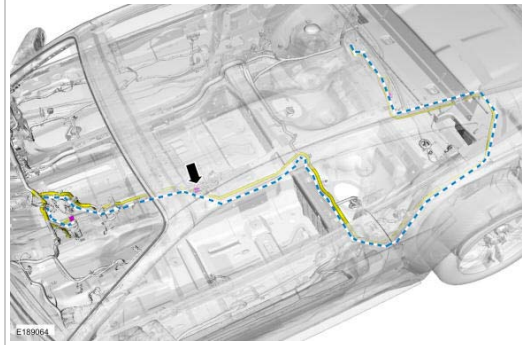
12.

1.

Remove the pin-type retainers.

2.

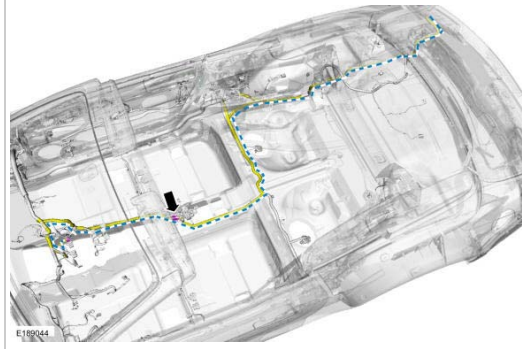
Position aside the RH luggage compartment side trim panel.



REMOVAL AND INSTALLATION > AUDIO UNIT ANTENNA CABLE > INSTALLATION

Coupe

1.



Overlay the new AM/FM antenna cable on the vehicle wiring harness following the routing shown below. Secure the new AM/FM antenna cable to the wiring harness with tape or zip ties as necessary.

Convertible

2.

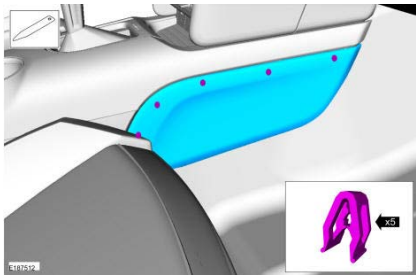
Overlay the new AM/FM antenna cable on the vehicle wiring harness following the routing shown below. Secure the new AM/FM antenna cable to the wiring harness with tape or zip ties as necessary.

REMOVAL AND INSTALLATION > FRONT CONTROLS INTERFACE MODULE (FCIM)

Special Tool(s) / General Equipment

Interior Trim Remover

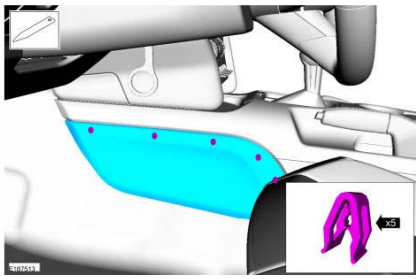
REMOVAL AND INSTALLATION > FRONT CONTROLS INTERFACE MODULE (FCIM) > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the FCIM following the on-screen instructions.

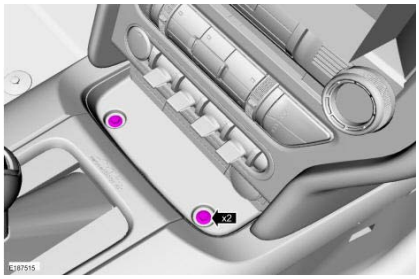


2.

Release the clips and remove the floor console RH side trim panel. Use the General Equipment: Interior Trim Remover

3.

Release the clips and the floor console LH side trim panel. Use the General Equipment: Interior Trim Remover



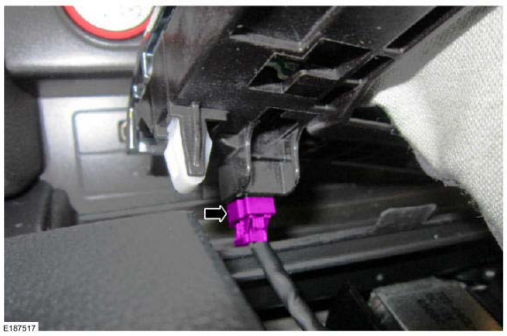
4.

Remove the stowage area mat.

5.

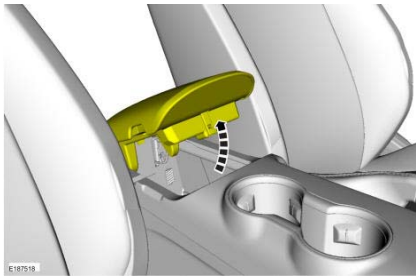
Remove the floor console upper bolts.

NOTE: Automatic transmission shown, manual transmission similar.



6.
Remove the selector lever bezel. Use the General Equipment: Interior Trim Remover

7.

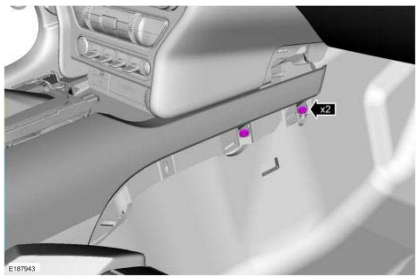


Position aside the selector lever boot.

Disconnect the electrical connector.

8.

Open the floor console lid.

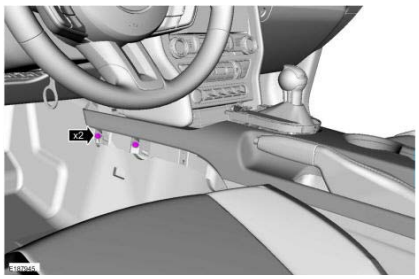


9.

Remove the RH side front retainers.

Torque

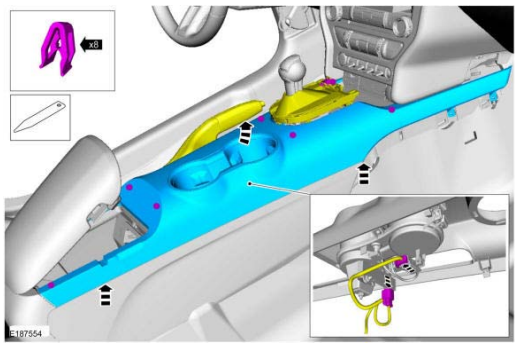
: 18 lb.in (2 Nm)



10.

Remove the LH side front retainers.

Torque



: 18 lb.in (2 Nm)

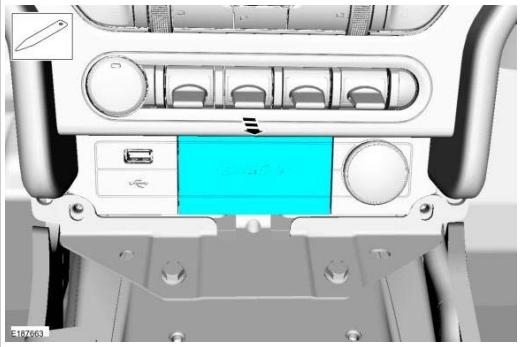
11.

Release the clips, position the gear selector cover aside and remove the floor console upper trim panel.

Disconnect the electrical connectors.

12.

Remove the stowage area tray.

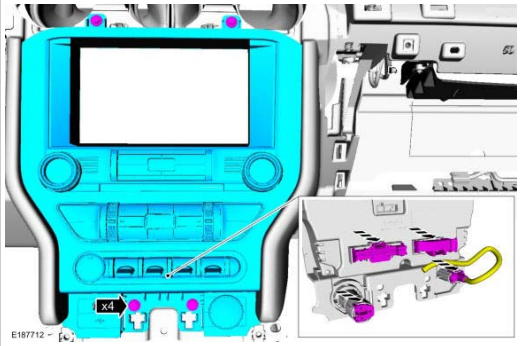


13.

Remove the instrument panel center finish panel. Refer to: Instrument Panel Center Finish Panel .

14.

Remove the trim cover. Use the General Equipment: Interior Trim Remover



15.

Remove the bolts and the FCIM.

Disconnect the electrical connectors.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > FRONT CONTROLS INTERFACE MODULE (FCIM) > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only necessary if replacing the component.

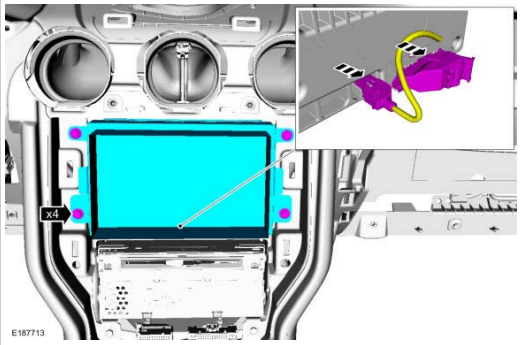
2.
Using a diagnostic scan tool, complete the PMI process for the FCIM following the on-screen instructions.

REMOVAL AND INSTALLATION > FRONT DISPLAY INTERFACE MODULE (FDIM) > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the FCIM. Refer to: Front Control/Display Interface Module (FCDIM) .



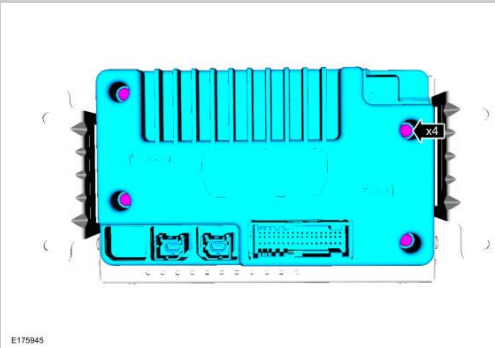
2.

Remove the bolts and the FDIM.

Disconnect the electrical connectors.

Torque

: 22 lb.in (2.5 Nm)



3.

Remove the screws and separate the APIM from the FDIM.

Torque

: 9 lb.in (1 Nm)

REMOVAL AND INSTALLATION > FRONT DISPLAY INTERFACE MODULE (FDIM) > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Calibrate the touchscreen. Refer to: Touchscreen Calibration .

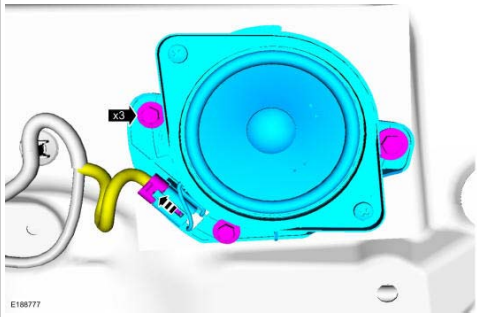
REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER LH > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

Midwoofer speaker



2.

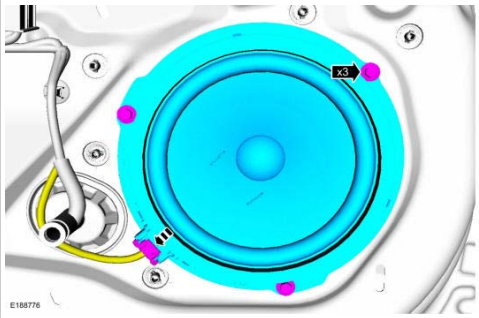
Remove the bolts and the door midwoofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

Woofer speaker



3.

Remove the bolts and the door woofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER LH > INSTALLATION

1.

To install, reverse the removal procedure.

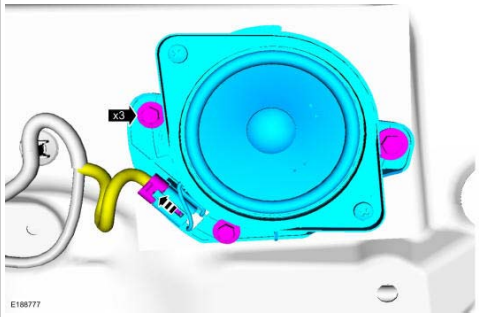
REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER RH > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

Midwoofer speaker



2.

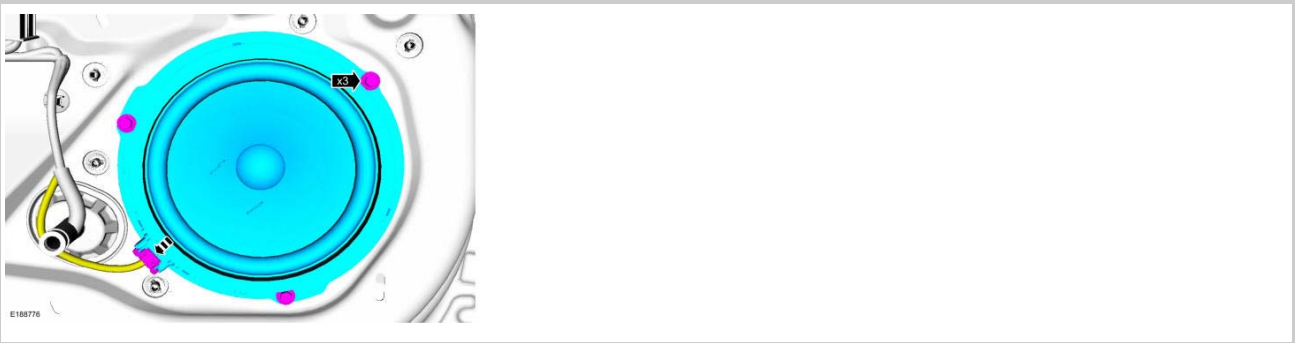
Remove the bolts and the door midwoofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

Woofer speaker



3.

Remove the bolts and the door woofer speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

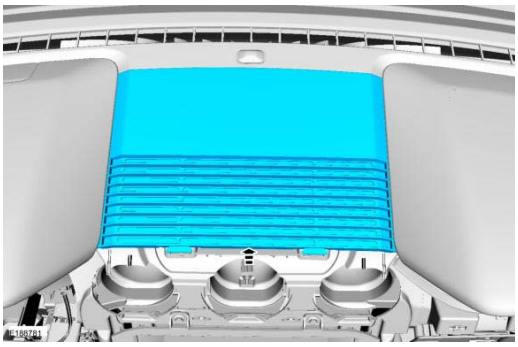
REMOVAL AND INSTALLATION > FRONT DOOR SPEAKER RH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > GLOBAL POSITIONING SYSTEM MODULE (GPSM) > REMOVAL

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

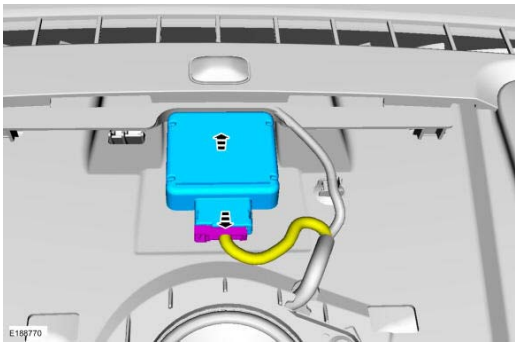


1.
Using a diagnostic scan tool, begin the PMI process for the GPSM following the on-screen instructions.

2.

Remove the instrument panel center finish panel. Refer to: Instrument Panel Center Finish Panel .

3.



Remove the instrument panel speaker grille.

4.

Pull upwards to release the GPSM and remove.

Disconnect the electrical connector.

REMOVAL AND INSTALLATION > GLOBAL POSITIONING SYSTEM MODULE (GPSM) > INSTALLATION

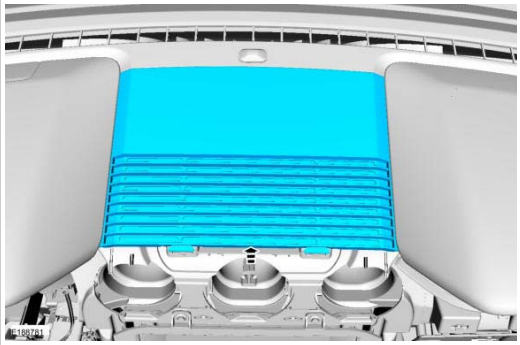
1.

To install, reverse the removal procedure.

NOTE: This step is only necessary when installing a new component.

2.
Using a diagnostic scan tool, complete the PMI process for the GPSM following the on-screen instructions.

REMOVAL AND INSTALLATION > INSTRUMENT PANEL SPEAKER > REMOVAL



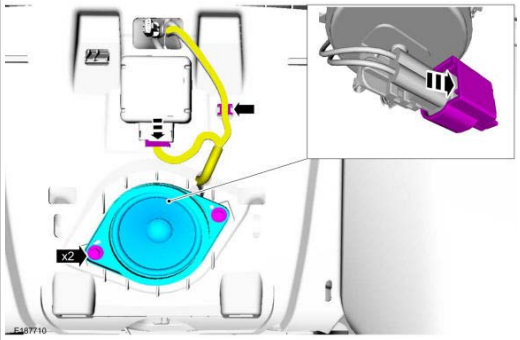
NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the instrument panel center finish panel. Refer to: Instrument Panel Center Finish Panel .

2.

Remove the instrument panel speaker grille.



3.

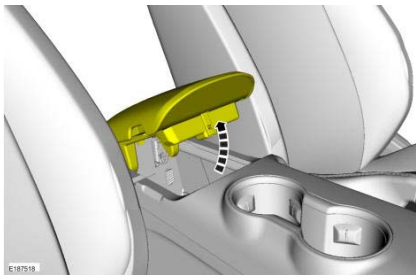
Remove the bolts and the instrument panel speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > INSTRUMENT PANEL SPEAKER > INSTALLATION

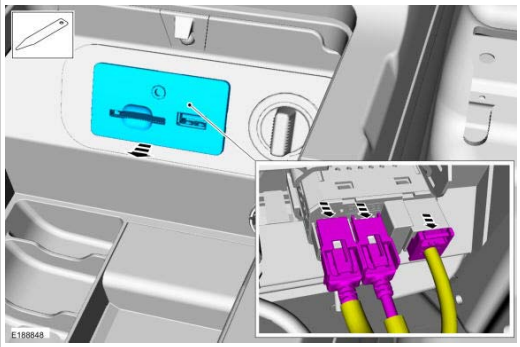


1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > MEDIA HUB > REMOVAL

1.



Open the floor console lid.

2.

Remove the media hub.

Disconnect the electrical connectors.

REMOVAL AND INSTALLATION > MEDIA HUB > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > MICROPHONE > REMOVAL

NOTE: The SYNC ® microphone is part of the overhead console assembly and cannot be replaced separately.

1.
Replace the overhead console. Refer to: Overhead Console .

REMOVAL AND INSTALLATION > MICROPHONE > INSTALLATION

1.

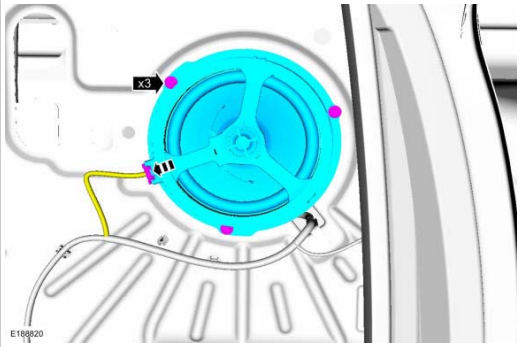
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > PARCEL SHELF SPEAKER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the parcel shelf. Refer to: Parcel Shelf - Coupe .



2.

Remove the bolts and the parcel shelf speaker. Remove the bolts and the parcel shelf speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > PARCEL SHELF SPEAKER > INSTALLATION

1.

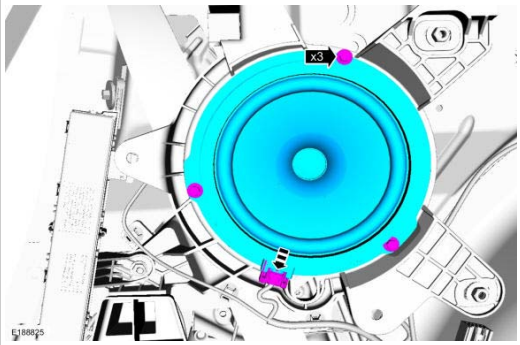
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR QUARTER PANEL SPEAKER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the convertible loadspace trim panel. Refer to: Loadspace Trim Panel - Convertible .



2.

Remove the bolts and the rear quarter panel speaker.

Disconnect the electrical connector.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > REAR QUARTER PANEL SPEAKER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > SATELLITE RADIO ANTENNA > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Coupe

1.

Lower the headliner. Refer to: Headliner - Lowering .

2.

1.

Remove the satellite radio antenna retaining bolt.

Torque

: 62 lb.in (7 Nm)

2.

Remove the satellite radio antenna retainer.

3.

Disconnect the electrical connector.

4.

Remove the satellite radio antenna.

Convertible

3.

Remove the luggage compartment lid interior trim panel.

1.

Remove the latch cover.

2.

Remove the push pins.

4.

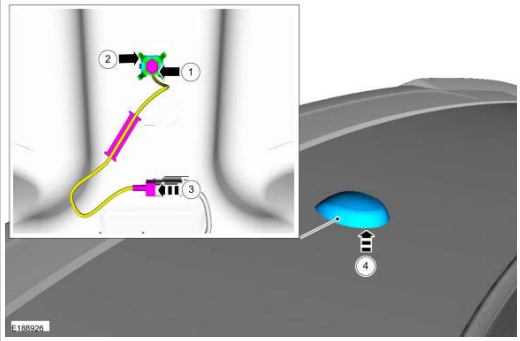
1.

Remove the satellite radio antenna retaining bolt.

Torque

: 62 lb.in (7 Nm)

2.



Remove the satellite radio antenna retainer.

3.

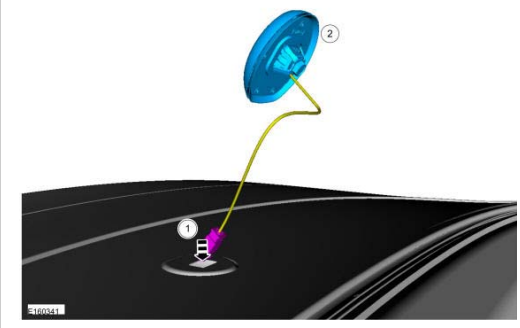
Disconnect the electrical connector.

4.

Remove the satellite radio antenna.

REMOVAL AND INSTALLATION > SATELLITE RADIO ANTENNA > INSTALLATION

NOTE: If installing a new satellite radio antenna it is not necessary to remove the bolt from the satellite radio antenna base.



1.

1.

Install harness through the opening.

2.

Install base until seated.

REMOVAL AND INSTALLATION > SATELLITE RADIO ANTENNA CABLE > REMOVAL

NOTE: The original equipment Satellite radio cable(s) are part of the wiring harness and cannot be removed. This procedure refers to replacement of the cable(s) only by overlaying the cable(s).

NOTE: The Satellite radio cable(s) inline connection is located under the floor console.

Coupe: Front Cable

1.

Remove the floor console. Refer to: Floor Console .

2.

Remove the ACM. Refer to: Audio Front Control Module (ACM) .

Coupe: Rear Cable

3.

Remove the floor console. Refer to: Floor Console .

4.

Lower the headliner. Refer to: Headliner - Lowering .

Convertible

5.

Remove the floor console. Refer to: Floor Console .

6.

Remove the ACM. Refer to: Audio Front Control Module (ACM) .

Convertible: Rear Cable

7.

Remove the floor console. Refer to: Floor Console .

8.

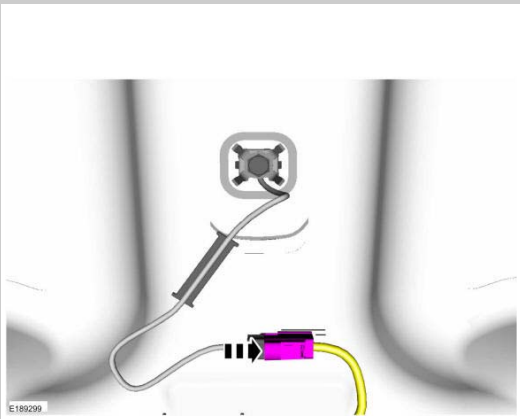
Remove the loadspace trim panel. Refer to: Loadspace Trim Panel - Convertible .

9.

Remove the luggage compartment lid interior trim panel.

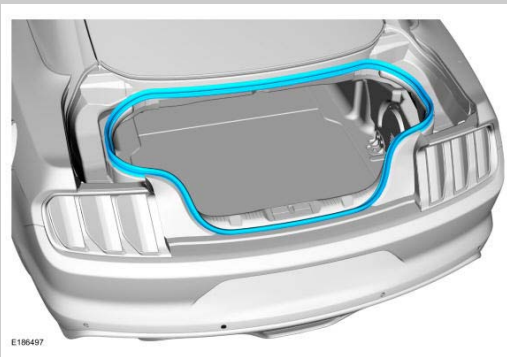
1.

Remove the latch cover.



2.

Remove the push pins.



10.

Disconnect the electrical connector.

11.

Remove the luggage compartment weatherstrip.

12.

Remove the spare tire cover.

13.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .

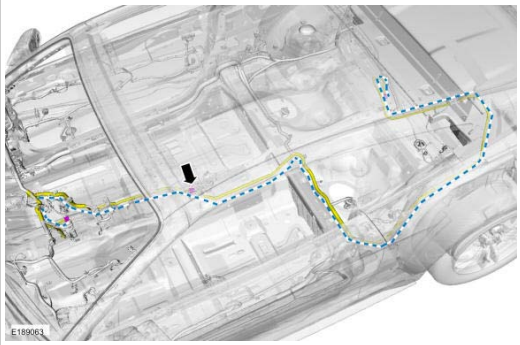
14.

1.

Remove the pin-type retainers.

2.

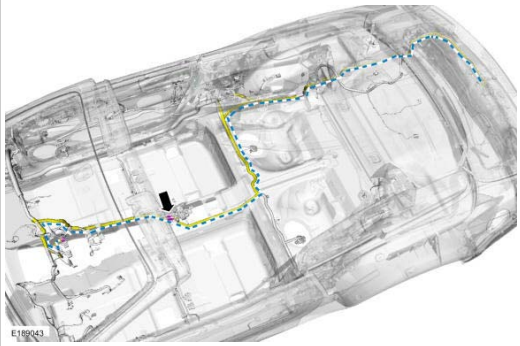
Position aside the RH luggage compartment side trim panel.



REMOVAL AND INSTALLATION > SATELLITE RADIO ANTENNA CABLE > INSTALLATION

Coupe

1.



Overlay the new Satellite radio antenna cable on the vehicle wiring harness following the routing shown below. Secure the new Satellite radio antenna cable to the wiring harness with tape or zip ties as necessary.

Convertible

2.

Overlay the new Satellite radio antenna cable on the vehicle wiring harness following the routing shown below. Secure the new Satellite radio antenna cable to the wiring harness with tape or zip ties as necessary.

REMOVAL AND INSTALLATION > SUBWOOFER AND AMPLIFIER UNIT > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the bolts and the subwoofer speaker cover.

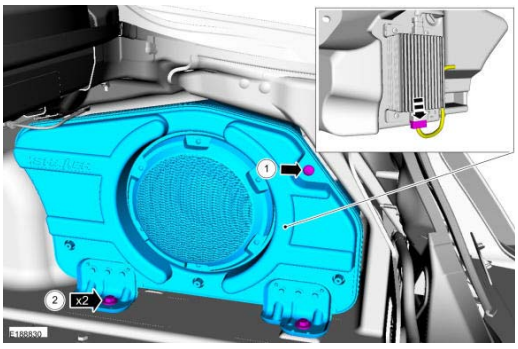
Torque

: 21 lb.in (2.4 Nm)

2.

Remove the bolts, disconnect the electrical connector and remove the subwoofer speaker.

1.



Torque

: 93 lb.in (10.5 Nm)

2.

Torque

: 93 lb.in (10.5 Nm)

REMOVAL AND INSTALLATION > SUBWOOFER AND AMPLIFIER UNIT > INSTALLATION

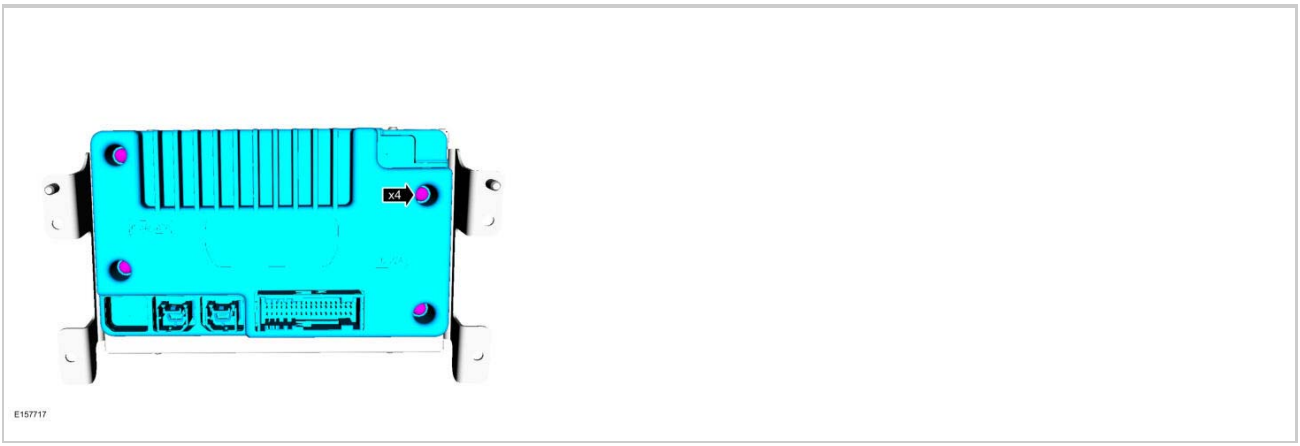
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the FDIM. Refer to: SYNC Module [APIM] .

2.

Remove the screws and separate the APIM from the FDIM.

Torque

: 9 lb.in (1 Nm)

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] > INSTALLATION

1.

To install, reverse the removal procedure

2.

If a new APIM is being installed, program the APIM to the correct software level Refer to: SYNC Module [APIM] Replacement Programming .

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] TO UNIVERSAL SERIAL BUS (USB) PORT CABLE > REMOVAL

NOTE: The USB cables are taped into the wiring harness. Because the USB cables cannot be removed from the harness, this procedure applies to replacement of the USB cables only.

Vehicles With: AM/FM/CD/SYNC

1.

Remove the floor console. Refer to: Floor Console .

2.

Remove the APIM. Refer to: SYNC Module [APIM] .

Vehicles With: Touchscreen Display

3.

Remove the floor console. Refer to: Floor Console .

4.

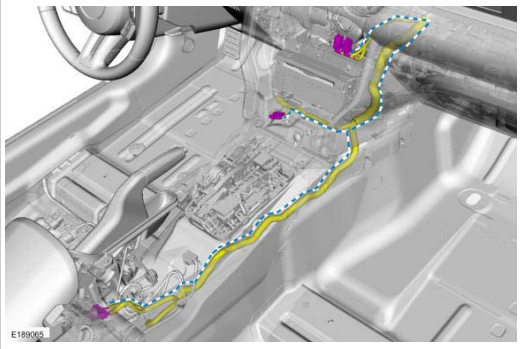
Remove the APIM. Refer to: SYNC Module [APIM] .

REMOVAL AND INSTALLATION > SYNC MODULE [APIM] TO UNIVERSAL SERIAL BUS (USB) PORT CABLE > INSTALLATION

Vehicles With: AM/FM/CD/SYNC

NOTE: The rear USB port and cable located in the floor console is routed directly to the APIM.

NOTE: The front USB port and cable is routed directly to the APIM.



1.
Overlay the new USB cable following the routing shown below.

1.

Secure the new USB cable to the wiring harness with tape or zip ties as necessary.

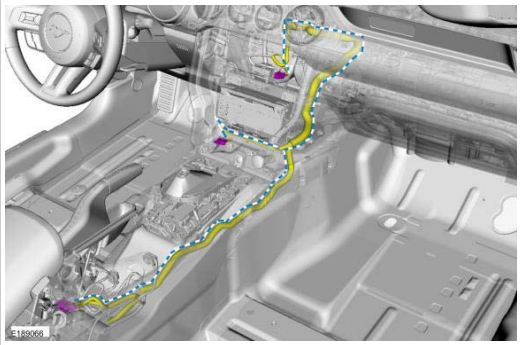
2.

Cut both ends off the original USB cable.

Vehicles With: Touchscreen Display

NOTE: The rear USB port and cable located at the media hub in the floor console is routed directly to the APIM.

NOTE: The front USB port and cable is routed directly to the media hub.



2.
Overlay the new USB cable following the routing shown below.

1.

Secure the new USB cable to the wiring harness with tape or zip ties as necessary.

2.

Cut both ends off the original USB cable.

Service Manual: INTERIOR LIGHTING

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - OVERVIEW > OVERVIEW

The interior lighting system consists of:

- Courtesy lamps
- Demand lamps
- Ambient lighting (if equipped)

The courtesy lamps subsystem consists of:

- Interior lamps (roof mounted)
- Pony projection lamps (part of the exterior mirror assemblies)
- Door ajar switches (integrated into the door latches)
- BCM

The courtesy lamps provide illumination to the interior of the vehicle when entering or exiting the vehicle.

The demand lamps subsystem consists of:

- Interior lamps (map lamps)
- Luggage compartment lid ajar switch (integrated into the luggage compartment lid latch)
- Luggage compartment lamp
- Vanity mirror lamps
- Floor console bin
- BCM

The demand lamps provide illumination to specific areas within the vehicle when needed.

The BCM energizes the battery saver output supply voltage to the demand lamps when the battery saver feature is not active.

The ambient lighting subsystem consists of:

- Ambient lighting Light Emitting Diodes (LEDs)
- IPC
- Body Control Module B (BCMB)

The ambient lighting is controlled through the IPC message center. The ambient lighting provides aesthetically colored illumination to the following locations for illuminated entry or when the ignition is ON or the parking lamps are on:

- Floor console cup holders

- Interior door release handles
- Scuff plate trim panels
- Front footwells

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ambient light color/intensity request	IPC	Indicates the color and brightness setting selected from the display interface. This commands the ambient color and brightness setting as requested by the operator.
Headlamp switch status	BCM	Indicates the headlamp switch position to enable or disable the ambient lighting.
Illuminated entry status	BCM	Indicates the status of the illuminated entry lighting to enable or disable the ambient lighting.

Body Control Module (BCMB) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ambient light color/intensity request	GWM	Indicates the color and brightness setting selected from the display interface. This commands the ambient color and brightness setting as requested by the operator.
Headlamp switch status	GWM	Indicates the headlamp switch position to enable or disable the ambient lighting.

Illuminated entry status	GWM	Indicates the status of the illuminated entry lighting to enable or disable the ambient lighting.

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BATTERY SAVER

NOTE: Time-out is 10 seconds if the vehicle is in factory mode or 1 minute if the vehicle is in transport mode.

The BCM provides automatic shut-off of the courtesy and demand lamps after a time-out period when the ignition is OFF. A timer in the BCM starts when:

- the ignition transitions to OFF.
- the front or rear interior lamp was switched ON.
- any door or the luggage compartment lid becomes ajar.
- any button of a RKE transmitter is pressed.
- a door is unlocked using the passive entry feature.
- a valid code was entered on the keyless entry keypad.

When 10 minutes (30 minutes for demand lamps) have elapsed, the BCM automatically shuts off voltage to the lamps. The timer restarts (voltage is restored if the BCM is in battery saver mode) when:

- the ignition transitions out of OFF.
- the front or rear interior lamp was switched ON.
- any door or the luggage compartment lid becomes ajar.
- any button of a RKE transmitter is pressed.
- a door is unlocked using the passive entry feature.
- a valid code was entered on the keyless entry keypad.

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COURTESY LAMPS

The BCM controls the courtesy lighting functions and timing by monitoring inputs from the following:

- Ignition state
- Door ajar switches

- RKE system

The BCM sends a voltage signal to each door ajar switch. When the doors are closed, the circuit is switched to ground and the voltage is pulled low, indicating closed doors.

For vehicles with a memory seat, the DDM and the PDM provide ground for the door ajar switch.

The BCM monitors the ignition state and inputs from the RKE system to determine when to energize the interior lighting output. When the interior lighting output is energized, voltage is provided to the interior overhead lamps.

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ILLUMINATED ENTRY AND EXIT

The illuminated entry and exit features provide temporary illumination of the parking lamps, the dimmable backlighting, the ambient backlighting and the courtesy lamps. Refer to the table for additional information.

> *NOTE: An arbitrator (software programming) within the BCM determines which actions take precedence over others (for example, an open door keeps the courtesy lamps on even when a command to lock the doors is received).*

Action	Parking Lamps	Courtesy Lamps	Dimmable Backlighting	Ambient Lighting
RKE transmitter or mechanical unlocking of the doors	On for 25 seconds	On for 25 seconds	On for 25 seconds	Off
RKE transmitter or mechanical locking of the doors	Off	Off	Off	Off 3 seconds after courtesy lamps turned off
Open a closed door after previously unlocking (no ignition state change since unlock)	Off (on for remaining time if unlocked from transmitter or mechanical unlocking of the doors)	On	Off	On
Close all doors	Off	On for 25 seconds	On for 25 seconds	On for 25 seconds
Ignition changed to ON	Off	On for 25 seconds	Off	On
Ignition changed out of ON	Off	On for 25 seconds	On for 25 seconds	On for 25 seconds

Open a door after the ignition is changed to OFF	Off	On	Off	On
Ignition is OFF and doors are unlocked from the door lock switch	Off	On for 25 seconds	Off	Off
Ignition is OFF and doors are locked from the door lock switch	Off	Off	Off	Off

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > DEMAND LAMPS

When the BCM is in not in battery saver mode, the interior light output is energized to provide voltage to the demand lamps.

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AMBIENT LIGHTING

The ambient lighting subsystem consists of the Body Control Module B (BCMB), and the Light Emitting Diodes (LEDs) located within the floor console (cup holders), front door panels (interior door release handles), front footwell areas and the scuff plate trim panels. The message center switch is used to cycle the Light Emitting Diodes (LEDs) through 132 different color combinations (7 preset colors or 125 colors created through the MyColor™ feature) or to turn the ambient lighting off. The Body Control Module B (BCMB) provides the necessary voltage to all the Light Emitting Diodes (LEDs) to illuminate the 2 different zones.

Based on the ambient lighting system selections made using the IPC message center, the IPC sends ambient light color request and ambient light intensity request messages over the HS-CAN3 to the GWM, then to the Body Control Module B (BCMB) through the MS-CAN for color and brightness settings.

The ambient lighting is split up into 2 separate zones, zone 1 and zone 3. Zone 2 is not used. Zone 1 consists of the front footwells, interior door release handles and the cup holders. Zone 3 consists of the scuff plate trim panels. Both zones share an ambient lighting LED ground circuit. Ground is provided by the Body Control Module B (BCMB).

When a door is opened, the Body Control Module B (BCMB) turns on both zones of the ambient lighting system. Zone 3 (door scuff plate Light Emitting Diodes (LEDs)) are turned off when any door is closed, or the illuminated entry request is detected by the Body Control Module B (BCMB). The zone is turned off at the same time as the courtesy lighting by the Body Control Module B (BCMB) if the key is not activated in the ignition switch. The ambient lighting is reactivated when until the parking lamps are turned on or the ignition is in ON.

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > FIELD EFFECT TRANSISTOR (FET) PROTECTION

A Field Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The Field Effect Transistor (FET) protection strategy prevents module damage in the event of excessive current flow.

The BCM utilizes a Field Effect Transistor (FET) protective circuit strategy for many of its outputs (for example, a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the Field Effect Transistor (FET) circuit protection to allow the circuit to function. The next time the driver requests a circuit to activate that has been shut down by a previous short (Field Effect Transistor (FET) protection) and the circuit is still shorted, the Field Effect Transistor (FET) protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each Field Effect Transistor (FET) protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the Field Effect Transistor (FET) and the ability of the Field Effect Transistor (FET) to withstand it. A module lifetime level of fault events is established based upon the durability of the Field Effect Transistor (FET). If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each tolerance level is reached, DTC U1000:00 sets along with the short circuit DTC that was stored on the first failure. These Diagnostic Trouble Codes (DTCs) cannot be cleared until the vehicle is repaired.

After the repair, it is necessary to clear the Diagnostic Trouble Codes (DTCs). Use the clear DTC operation on the scan tool, cycle the ignition, and run the BCM on-demand self-test.

The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur. If the number of short circuit fault events reach the third level, DTC U3000:49 sets along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the initial fault is repaired.

DESCRIPTION AND OPERATION > INTERIOR LIGHTING - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Door Ajar Switch

The door ajar switches (ground switches) each receive a voltage signal from the BCM on independent circuits. When the door is closed, the ajar switch is closed, routing the signal to ground. When the door is opened, the ajar switch opens.

Luggage Compartment Lid Ajar Switch

The luggage compartment lid ajar switch receives a voltage signal from the BCM through the cargo area lamp. The luggage compartment lid ajar switch is grounded to the vehicle. When the luggage

compartment lid is closed, the ajar switch is closed, providing ground to the luggage compartment lamp.

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > DTC CHART: BCM

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

BCM DTC Chart

DTC	Description	Action
B1175:01	Driver Door Ajar Switch: General Electrical Failure	If the courtesy lamps are always on, GO to Pinpoint Test D If the courtesy lamps are inoperative, GO to Pinpoint Test A
B1176:01	Passenger Door Ajar Switch: General Electrical Failure	If the courtesy lamps are always on, GO to Pinpoint Test D If the courtesy lamps are inoperative, GO to Pinpoint Test A
B12C2:11	Puddle Lamp: Circuit Short To Ground	GO to Pinpoint Test C
B12C2:15	Puddle Lamp: Circuit Short To Battery or Open	GO to Pinpoint Test C

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST A : THE COURTESY LAMPS DO NOT ILLUMINATE WITH A DOOR OPEN

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1175:01	Driver Door Ajar Switch: General	An on-demand DTC that sets

	Electrical Failure	when the BCM detects a fault on the LH front door ajar circuit.
B1176:01	Passenger Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the RH front door ajar circuit.

Possible Sources

- Wiring, terminals or connectors
- Door latch
- BCM

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST A : THE COURTESY LAMPS DO NOT ILLUMINATE WITH A DOOR OPEN > PINPOINT TEST A : THE COURTESY LAMPS DO NOT ILLUMINATE WITH A DOOR OPEN

A1 CHECK THE DOOR AJAR SWITCH OPERATION

Disconnect: suspect door latch.

Do the courtesy lamps illuminate?

Yes	INSTALL a new front door latch. REFER to: Front Door Latch .

No	GO to A2

A2 CHECK THE DOOR AJAR SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

Disconnect: BCM C2280E .

Measure:

LH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C525-3	Ω	Ground

RH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C609-6	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A3

No	REPAIR the circuit.

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST B : ONE OR BOTH INTERIOR OVERHEAD COURTESY LAMPS ARE INOPERATIVE OR THE INTERIOR COURTESY LAMPS STAY ON CONTINUOUSLY

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1313:11	Interior Lighting Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to

		ground from the interior lighting output circuit.
B1313:15	Interior Lighting Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the interior lighting output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- Bulb
- Interior lamp
- BCM

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST B : ONE OR BOTH INTERIOR OVERHEAD COURTESY LAMPS ARE INOPERATIVE OR THE INTERIOR COURTESY LAMPS STAY ON CONTINUOUSLY > PINPOINT TEST B : ONE OR BOTH INTERIOR OVERHEAD COURTESY LAMPS ARE INOPERATIVE OR THE INTERIOR COURTESY LAMPS STAY ON CONTINUOUSLY

B1 CHECK THE COURTESY LAMP OPERATION WITH THE DOORS CLOSED

Close the doors.

Press the RKE LOCK button.

Do the interior courtesy lamps turn off?

Yes	If one interior overhead courtesy lamp is inoperative, INSTALL a new courtesy lamp bulb. If the lamp is still inoperative, INSTALL a new overhead console. REFER to: Overhead Console . If both interior overhead courtesy lamps are inoperative, GO to B2

No	GO to B5

B2 CHECK FOR VOLTAGE TO THE INTERIOR OVERHEAD COURTESY LAMPS

Disconnect: Dome Lamp.

Open a door.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C901-4		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3

No	GO to B4

B3 CHECK THE INTERIOR OVERHEAD COURTESY LAMPS GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead
C901-4		C901-5

Is the voltage greater than 11 volts?

Yes	INSTALL a new overhead console. REFER to: Overhead Console .

No	REPAIR the circuit

B4 CHECK THE INTERIOR OVERHEAD COURTESY LAMPS VOLTAGE CIRCUIT FOR AN OPEN

Disconnect: BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C901-4	Ω	C2280C-13

Is the resistance less than 3 ohms?

Yes	GO to B6

No	REPAIR the circuit.

B5 CHECK THE INTERIOR OVERHEAD COURTESY LAMPS VOLTAGE CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: BCM C2280C .

Disconnect: Dome Lamp.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C901-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B6

B6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST C : ONE OR BOTH PONY PROJECTION LAMPS ARE INOPERATIVE OR ALWAYS ON

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B12C2:11	Puddle Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the puddle lamp (pony projection lamp) output circuit.
B12C2:15	Puddle Lamp: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or a short to voltage from the exterior door handle puddle lamp (pony projection lamp) output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output

		because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- Exterior mirror assembly
- Pony projection lamp
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the exterior mirror assembly for damage.

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST C : ONE OR BOTH PONY PROJECTION LAMPS ARE INOPERATIVE OR ALWAYS ON > PINPOINT TEST C : ONE OR BOTH PONY PROJECTION LAMPS ARE INOPERATIVE OR ALWAYS ON

C1 CHECK THE PONY PROJECTION LAMP OPERATION WITH THE DOORS CLOSED

Close the doors.

Press the RKE LOCK button.

Do the pony projection lamps turn off?

Yes	If one pony projection lamp is inoperative, GO to C2 If both pony projection lamps are inoperative, GO to C5

No	GO to C7

C2 CHECK THE PONY PROJECTION LAMP VOLTAGE SUPPLY CIRCUIT FOR VOLTAGE

Disconnect: LH exterior mirror C520 or RH exterior mirror C626 .

Ignition ON.

Using a diagnostic scan tool, select the BCM Courtesy Puddle Step Lamps (PUDDLE_LMPS) active command.

Command the pony projection lamps (Courtesy Puddle Step Lamps) ON.

Measure:

LH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-5		Ground

RH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-5		Ground

Is the voltage greater than 11 volts?

Yes	GO to C3

No	GO to C4

C3 CHECK THE PONY PROJECTION LAMP GROUND CIRCUIT

Measure:

LH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-5		C520-7

RH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-5		C626-7

Is the voltage greater than 11 volts?

Yes	INSTALL a new pony projection lamp. REFER to: Exterior Mirror .

No	REPAIR the circuit.

C4 CHECK THE PONY PROJECTION LAMP CIRCUIT FOR AN OPEN TO THE LAMP

Ignition OFF.

Disconnect: BCM C2280C .

Measure:

LH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-5	Ω	C2280C-26

RH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-5	Ω	C2280C-26

Is the resistance less than 3 ohms?

Yes	GO to C8

No	REPAIR the circuit.

C5 CHECK THE PONY PROJECTION LAMP CIRCUIT FOR AN OPEN

Disconnect: LH exterior mirror C520 .

Disconnect: BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-5	Ω	C2280C-26

Is the resistance less than 3 ohms?

Yes	GO to C6

No	REPAIR the circuit.

C6 CHECK THE PONY PROJECTION LAMP CIRCUIT FOR A SHORT TO GROUND

Disconnect: RH exterior mirror C626 .

Measure:

LH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-5	Ω	Ground

RH Pony Projection Lamp

Positive Lead	Measurement / Action	Negative Lead
C626-5	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C8

No	REPAIR the circuit.

C7 CHECK THE PONY PROJECTION LAMP CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: BCM C2280C .

Observe the pony projection lamps.

Are the pony projection lamps illuminated?

Yes	REPAIR the circuit.

No	GO to C8

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST D : ALL THE COURTESY LAMPS STAY ON CONTINUOUSLY

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1175:01	Driver Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the LH front door ajar circuit.
B1176:01	Passenger Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the RH front door ajar circuit.

Possible Sources

- Wiring, terminals or connectors
- Ajar switch
- BCM

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST D : ALL THE COURTESY LAMPS STAY ON CONTINUOUSLY > PINPOINT TEST D : ALL THE COURTESY LAMPS STAY ON CONTINUOUSLY

D1 CHECK THE DOOR AJAR SWITCH PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, view BCM Parameter Identifications (PIDs).

Monitor the BCM DOOR_SW_DRVR and DOOR_SW_PSGR Parameter Identifications (PIDs) while opening and closing the doors.

Do all the door ajar switch PID values agree with the door positions?

Yes	For the interior courtesy lamps, GO to Pinpoint Test B For the pony projection lamps, GO to Pinpoint Test C

No	GO to D2

D2 BYPASS THE SUSPECT DOOR LATCH

Disconnect: suspect door latch.

Connect a fused jumper wire:

LH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C525-3		C525-5

RH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C609-6		C609-4

Using a diagnostic scan tool, view BCM Parameter Identifications (PIDs).

Monitor the BCM DOOR_SW_DRVR and DOOR_SW_PSGR Parameter Identifications (PIDs).

Does the PID indicate the door in question is closed?

Yes	REMOVE the fused jumper wire. INSTALL a new front door latch. REFER to: Front Door Latch .

No	REMOVE the fused jumper wire. GO to D3

D3 BYPASS THE DOOR LATCH GROUND CIRCUIT

Connect a fused jumper wire:

LH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C525-3		Ground

RH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C609-6		Ground

Monitor the BCM DOOR_SW_DRVR and DOOR_SW_PSGR Parameter Identifications (PIDs).

Does the PID indicate the door in question is closed?

Yes	REMOVE the fused jumper wire. For vehicles without a memory seat, REPAIR the circuit. For vehicles with a memory seat, GO to D5

No	REMOVE the fused jumper wire. GO to D4

D4 CHECK THE SUSPECT DOOR AJAR SWITCH INPUT CIRCUIT FOR AN OPEN

Disconnect: BCM C2280E .

Measure:

LH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C525-3	Ω	C2280E-33

RH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C609-6	Ω	C2280E-21

Is the resistance less than 3 ohms?

Yes	GO to D6

No	REPAIR the door ajar input circuit in question.

D5 CHECK THE DOOR LATCH RETURN CIRCUIT TO THE DOOR MODULE FOR AN OPEN

Disconnect: suspect door module.

Connect a fused jumper wire:

LH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C501B-12		Ground

RH Front Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C652B-12		Ground

Close the door.

Monitor the BCM DOOR_SW_DRVR and DOOR_SW_PSGR Parameter Identifications (PIDs).

Does the PID indicate the door is closed?

Yes	REMOVE the fused jumper wire. For LH door, GO to D7 For RH door, GO to D8

No	REMOVE the fused jumper wire. REPAIR the door latch return circuit in question.

D6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

D7 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

D8 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST E : ONE OR MORE DEMAND LAMPS ARE INOPERATIVE

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- Demand lamp

- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the bulbs and make sure they are OK.
- Inspect the interior lamps for damage.

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST E : ONE OR MORE DEMAND LAMPS ARE INOPERATIVE > PINPOINT TEST E : ONE OR MORE DEMAND LAMPS ARE INOPERATIVE

E1 CHECK THE DEMAND LAMP OPERATION

Ignition ON.

Check the operation of the LH vanity mirror, RH vanity mirror, overhead map, center console bin and glove box lamps.

Do any of the LH vanity mirror, RH vanity mirror, overhead map, center console bin or glove box lamps illuminate?

Yes	If a vanity mirror lamp is inoperative, GO to E3 If the glove compartment lamp is inoperative, GO to E5 If both overhead map lamps are inoperative, GO to E7 If a single overhead map lamp is inoperative, INSTALL a new map lamp bulb. If the lamp is still inoperative, INSTALL a new overhead console. REFER to: Overhead Console . If the center console bin lamp is inoperative, GO to E9

No	GO to E2

E2 CHECK THE DEMAND LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Glove Compartment Lamp C254 .

Disconnect: BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C254-1	Ω	C2280C-14

Is the resistance less than 3 ohms?

Yes	GO to E11

No	REPAIR the circuit.

E3 CHECK THE VANITY MIRROR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Inoperative LH Vanity Mirror Lamp C907 or RH Vanity Mirror Lamp C906 .

Ignition ON.

Measure:

LH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C907-1		Ground

RH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C906-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to E4

No	REPAIR the circuit.

E4 CHECK THE VANITY MIRROR GROUND CIRCUIT FOR AN OPEN

Measure:

LH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C907-1		C907-2

RH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C906-1		C906-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new sun visor for the lamp in question.

No	REPAIR the circuit.

E5 CHECK THE GLOVE COMPARTMENT LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Glove Compartment Lamp C254 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C254-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to E6

No	REPAIR the circuit.

E6 CHECK THE GLOVE COMPARTMENT LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C254-1		C254-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new glove compartment lamp.

No	REPAIR the circuit.

E7 CHECK THE OVERHEAD INTERIOR LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Dome Lamp.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C901-4		Ground

Is the voltage greater than 11 volts?

Yes	GO to E8

No	REPAIR the circuit.

E8 CHECK THE OVERHEAD INTERIOR LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C901-4		C901-5

Is the voltage greater than 11 volts?

Yes	INSTALL a new overhead console. REFER to: Overhead Console .

No	REPAIR the circuit.

E9 CHECK THE CENTER CONSOLE BIN LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Center Console Lock Assembly C3463 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3463-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to E10

No	REPAIR the circuit.

E10 CHECK THE CENTER CONSOLE BIN LAMP GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead

C3463-2		C3463-3

Is the voltage greater than 11 volts?

Yes	INSTALL a new center console bin lamp.

No	REPAIR the circuit.

E11 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST F : THE LUGGAGE COMPARTMENT LAMP IS INOPERATIVE OR ON CONTINUOUSLY

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- Luggage compartment lid latch

- Luggage compartment lamp bulb

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST F : THE LUGGAGE COMPARTMENT LAMP IS INOPERATIVE OR ON CONTINUOUSLY > PINPOINT TEST F : THE LUGGAGE COMPARTMENT LAMP IS INOPERATIVE OR ON CONTINUOUSLY

F1 DETERMINE IF THE LAMP IS ON WITH THE LUGGAGE COMPARTMENT LID OPEN

Ignition ON.

Make sure the luggage compartment lid is fully open and observe the luggage compartment lamp.

Is the luggage compartment lamp illuminated?

Yes	GO to F2

No	GO to F3

F2 CHECK THE LUGGAGE COMPARTMENT LAMP GROUND CIRCUIT FOR A SHORT TO GROUND

Disconnect: Luggage Compartment Lid Latch C4339 .

Does the luggage compartment lamp continue to illuminate?

Yes	REPAIR the circuit.

No	INSTALL a new luggage compartment lid latch. REFER to: Luggage Compartment Lid Latch - Coupe . REFER to: Luggage Compartment Lid Latch - Convertible .

F3 CHECK THE OPERATION OF THE DEMAND LAMPS

Ignition ON.

Check the operation of the LH vanity mirror, RH vanity mirror, overhead map, center console bin and glove box lamps.

Does the interior demand lamps illuminate?

Yes	GO to F4

No	GO to Pinpoint Test E

F4 CHECK FOR VOLTAGE TO THE LUGGAGE COMPARTMENT LAMP

Disconnect: Luggage Compartment Lamp C428 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C428-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to F5

No	REPAIR the luggage compartment lamp voltage supply circuit for an open.

F5 ISOLATE THE LUGGAGE COMPARTMENT LAMP BULB SOCKET

Measure:

Positive Lead	Measurement / Action	Negative Lead
C428-1		C428-3

Is the voltage greater than 11 volts?

Yes	INSTALL a new luggage compartment lamp bulb socket.

No	GO to F6

F6 CHECK THE LUGGAGE COMPARTMENT LAMP GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Connect: Luggage Compartment Lamp C428 .

Disconnect: Luggage Compartment Lid Latch C4339 .

Connect a fused jumper:

Positive Lead	Measurement / Action	Negative Lead
C4339-2		Ground

Does the luggage compartment lamp illuminate?

Yes	REMOVE the fused jumper wire. GO to F7

No	REMOVE the fused jumper wire. REPAIR the circuit.

F7 CHECK THE LUGGAGE COMPARTMENT LID LATCH GROUND CIRCUIT FOR AN OPEN

Connect:

Positive Lead	Measurement / Action	Negative Lead
C4339-2		C4339-4

Does the luggage compartment lamp illuminate?

Yes	REMOVE the fused jumper wire. INSTALL a new luggage compartment lid latch. REFER to: Luggage Compartment Lid Latch - Coupe . REFER to: Luggage Compartment Lid Latch - Convertible .

No	REMOVE the fused jumper wire. REPAIR the circuit.

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST G : THE BATTERY SAVER DOES NOT DEACTIVATE AFTER TIME-OUT

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- BCM

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST G : THE BATTERY SAVER DOES NOT DEACTIVATE AFTER TIME-OUT > PINPOINT TEST G : THE BATTERY SAVER DOES NOT DEACTIVATE AFTER TIME-OUT

G1 CHECK THE DEMAND LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: BCM C2280C .

Turn any demand lamp (map or vanity mirror) on.

Does the demand lamp turn on?

Yes	REPAIR the circuit.

No	GO to G2

G2 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST H : THE AMBIENT LIGHTING IS INOPERATIVE

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- IPC
- Body Control Module B (BCMB)

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT

TEST H : THE AMBIENT LIGHTING IS INOPERATIVE > PINPOINT TEST H : THE AMBIENT LIGHTING IS INOPERATIVE

H1 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) MESSAGE CENTER OPERATION

Ignition ON.

Check the operation of other IPC message center settings.

Can other IPC message center settings be changed and saved?

Yes	GO to H2

No	REFER to: Instrumentation, Message Center and Warning Chimes .

H2 CHECK THE AMBIENT LIGHTING LED (LIGHT EMITTING DIODE) RETURN CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Body Control Module B (BCMB) C4368A .

Disconnect: Body Control Module B (BCMB) C4368B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-24		Ground

Is voltage present?

Yes	GO to H3

No	REPAIR the circuit.

H3 CHECK THE AMBIENT LIGHTING LED (LIGHT EMITTING DIODE) RETURN CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-9		C4368A-24

Does the meter indicate the circuit is good?

Yes	GO to H4

No	REPAIR the circuit.

H4 CHECK FOR CORRECT BODY CONTROL MODULE B (BCMB) OPERATION

Disconnect and inspect all Body Control Module B (BCMB) connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Body Control Module B (BCMB) connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Body Control Module B (BCMB). REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST I : THE AMBIENT LIGHTING DOES NOT CYCLE THROUGH ALL COLOR COMBINATIONS

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B127B:11	Ambient Lighting Zone 1 Output	A continuous memory and

	Red LED: Circuit Short To Ground	on-demand DTC that sets when the Body Control Module B (BCMB) module detects a short to ground from the zone 1 red ambient lighting output circuit
B127B:15	Ambient Lighting Zone 1 Output Red LED: Circuit Short To Battery or Open	An on-demand DTC that sets when the Body Control Module B (BCMB) module detects an open or a short to voltage from the zone 1 red ambient lighting output circuit.
B127D:11	Ambient Lighting Zone 3 Output Red LED: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the Body Control Module B (BCMB) module detects a short to ground from the zone 3 red ambient lighting output circuit
B127D:15	Ambient Lighting Zone 3 Output Red LED: Circuit Short To Battery or Open	An on-demand DTC that sets when the Body Control Module B (BCMB) module detects an open or a short to voltage from the zone 3 red ambient lighting output circuit.
B127E:11	Ambient Lighting Zone 1 Output Green LED: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the Body Control Module B (BCMB) module detects a short to ground from the zone 1 green ambient lighting output circuit
B127E:15	Ambient Lighting Zone 1 Output Green LED: Circuit Short To Battery or Open	An on-demand DTC that sets when the Body Control Module B (BCMB) module detects an open or a short to voltage from the zone 1 green ambient lighting output circuit.
B1280:11	Ambient Lighting Zone 3 Output Green LED: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the Body Control Module B (BCMB) module detects a short to ground from the zone 3 green ambient lighting output circuit
B1280:15	Ambient Lighting Zone 3 Output Green LED: Circuit Short To Battery or Open	An on-demand DTC that sets when the Body Control Module B (BCMB) module detects an open or a short to voltage from the zone 3 green ambient lighting output circuit.

B1281:11	Ambient Lighting Zone 1 Output Blue LED: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the Body Control Module B (BCMB) module detects a short to ground from the zone 1 blue ambient lighting output circuit
B1281:15	Ambient Lighting Zone 1 Output Blue LED: Circuit Short To Battery or Open	An on-demand DTC that sets when the Body Control Module B (BCMB) module detects an open or a short to voltage from the zone 1 blue ambient lighting output circuit.
B1283:11	Ambient Lighting Zone 3 Output Blue LED: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the Body Control Module B (BCMB) module detects a short to ground from the zone 3 blue ambient lighting output circuit
B1283:15	Ambient Lighting Zone 3 Output Blue LED: Circuit Short To Battery or Open	An on-demand DTC that sets when the Body Control Module B (BCMB) module detects an open or a short to voltage from the zone 3 blue ambient lighting output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the Body Control Module B (BCMB) has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The Body Control Module B (BCMB) cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the Body Control Module B (BCMB) has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the Body Control Module B (BCMB) can withstand. CORRECT the cause of the

		excessive current draw before installing a new Body Control Module B (BCMB).

Possible Sources

- Wiring, terminals or connectors
- Ambient lighting LED
- Body Control Module B (BCMB)

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST I : THE AMBIENT LIGHTING DOES NOT CYCLE THROUGH ALL COLOR COMBINATIONS > PINPOINT TEST I : THE AMBIENT LIGHTING DOES NOT CYCLE THROUGH ALL COLOR COMBINATIONS

I1 CHECK THE AMBIENT LIGHTING

Ignition ON.

Place the headlamp switch in the PARKING LAMPS ON position.

Observe the operation of all the ambient lighting Light Emitting Diodes (LEDs).

Are all ambient lighting Light Emitting Diodes (LEDs) effected?

Yes	GO to I3

No	GO to I2

I2 CHECK THE AMBIENT LIGHTING COLOR OUTPUT CIRCUITS

Ignition OFF.

Disconnect: Body Control Module B (BCMB) C4368A .

Disconnect: Body Control Module B (BCMB) C4368B .

For front footwell, interior door release handle and cup holder Light Emitting Diodes (LEDs), measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-11	⊣⊢	C4368A-24
C4368B-12	⊣⊢	C4368A-24
C4368B-13	⊣⊢	C4368A-24

For scuff plate trim panel Light Emitting Diodes (LEDs), measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-9	⇥⊢	C4368A-24
C4368B-10	⇥⊢	C4368A-24
C4368B-23	⇥⊢	C4368A-24

Does the meter indicate the circuit is good?

Yes	GO to I3

No	REPAIR the LED voltage supply circuit in question.

I3 CHECK FOR CORRECT BODY CONTROL MODULE B (BCMB) OPERATION

Disconnect and inspect all Body Control Module B (BCMB) connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Body Control Module B (BCMB) connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Body Control Module B (BCMB). REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST J : AN INDIVIDUAL AMBIENT LIGHTING LED (LIGHT EMITTING DIODE) IS INOPERATIVE/DOES NOT CYCLE THROUGH ALL COLOR COMBINATIONS

Refer to Interior Lamps for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - System Operation and Component Description .

Possible Sources

- Wiring, terminals or connectors
- Ambient lighting LED
- Body Control Module B (BCMB)

DIAGNOSIS AND TESTING > INTERIOR LIGHTING > PINPOINT TESTS > PINPOINT TEST J : AN INDIVIDUAL AMBIENT LIGHTING LED (LIGHT EMITTING DIODE) IS INOPERATIVE/DOES NOT CYCLE THROUGH ALL COLOR COMBINATIONS > PINPOINT TEST J : AN INDIVIDUAL AMBIENT LIGHTING LED (LIGHT EMITTING DIODE) IS INOPERATIVE/DOES NOT CYCLE THROUGH ALL COLOR COMBINATIONS

J1 CHECK THE AMBIENT LIGHTING

Ignition ON.

Place the headlamp switch in the PARKING LAMPS ON position.

Observe the operation of all the ambient lighting Light Emitting Diodes (LEDs).

Is only a scuff plate trim panel ambient lighting LED effected?

Yes	GO to J2

No	For an interior door release handle ambient lighting LED, GO to J3 For a footwell ambient lighting LED, GO to J4 For the center console cup holder ambient lighting LED, GO to J5

J2 CHECK THE SCUFF PLATE TRIM PANEL LIGHTING COLOR SUPPLY CIRCUITS

Ignition OFF.

Disconnect: LH Scuff Plate Lamp C3369 or RH Scuff Plate Lamp C3370 .

Disconnect: Body Control Module B (BCMB) C4368A .

Disconnect: Body Control Module B (BCMB) C4368B .

For the LH scuff plate lamp, measure:

Positive Lead	Measurement / Action	Negative Lead
C3369-3	Ω	C4368B-9
C3369-2	Ω	C4368B-10

C3369-1	Ω	C4368B-23
C3369-4	Ω	C4368A-24

For the RH scuff plate lamp, measure:

Positive Lead	Measurement / Action	Negative Lead
C3370-3	Ω	C4368B-9
C3370-2	Ω	C4368B-10
C3370-1	Ω	C4368B-23
C3370-4	Ω	C4368A-24

Is the resistance less than 3 ohms?

Yes	INSTALL a new ambient lighting LED.

No	REPAIR the LED voltage supply circuit in question.

J3 CHECK THE INTERIOR DOOR RELEASE HANDLE LIGHTING COLOR SUPPLY CIRCUITS

Ignition OFF.

Disconnect: LH Interior Door Release Handle Ambient Lighting Lamp C573 or RH Interior Door Release Handle Ambient Lighting Lamp C649 .

Disconnect: Body Control Module B (BCMB) C4368A .

Disconnect: Body Control Module B (BCMB) C4368B .

For the LH interior door release handle ambient lighting lamp, measure:

Positive Lead	Measurement / Action	Negative Lead
C573-1	Ω	C4368B-11
C573-3	Ω	C4368B-12
C573-5	Ω	C4368B-13
C573-4	Ω	C4368A-24

For the RH interior door release handle ambient lighting lamp, measure:

Positive Lead	Measurement / Action	Negative Lead
C649-1	Ω	C4368B-11
C649-3	Ω	C4368B-12

C649-5	Ω	C4368B-13
C649-4	Ω	C4368A-24

Is the resistance less than 3 ohms?

Yes	INSTALL a new ambient lighting LED.

No	REPAIR the LED voltage supply circuit in question.

J4 CHECK THE FOOTWELL LIGHTING COLOR SUPPLY CIRCUITS

Ignition OFF.

Disconnect: LH Footwell Lamp C209 or RH Footwell Lamp C266 .

Disconnect: Body Control Module B (BCMB) C4368A .

Disconnect: Body Control Module B (BCMB) C4368B .

For the LH interior door release handle ambient lighting lamp, measure:

Positive Lead	Measurement / Action	Negative Lead

C209-2	Ω	C4368B-12
C209-3	Ω	C4368B-13
C209-4	Ω	C4368A-24

For the RH interior door release handle ambient lighting lamp, measure:

Positive Lead	Measurement / Action	Negative Lead
C266-1	Ω	C4368B-11
C266-2	Ω	C4368B-12
C266-3	Ω	C4368B-13
C266-4	Ω	C4368A-24

Is the resistance less than 3 ohms?

Yes	INSTALL a new ambient lighting LED.

No	REPAIR the LED voltage supply circuit in question.

J5 CHECK THE CENTER CONSOLE CUP HOLDER LIGHTING COLOR SUPPLY CIRCUITS

Ignition OFF.

Disconnect: Center Console Cup Holder Ambient Lighting Lamp C3349 .

Disconnect: Body Control Module B (BCMB) C4368A .

Disconnect: Body Control Module B (BCMB) C4368B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3349-1	Ω	C4368B-11
C3349-2	Ω	C4368B-12
C3349-3	Ω	C4368B-13
C3349-4	Ω	C4368A-24

Is the resistance less than 3 ohms?

Yes	INSTALL a new ambient lighting LED.

No	REPAIR the LED voltage supply circuit in question.

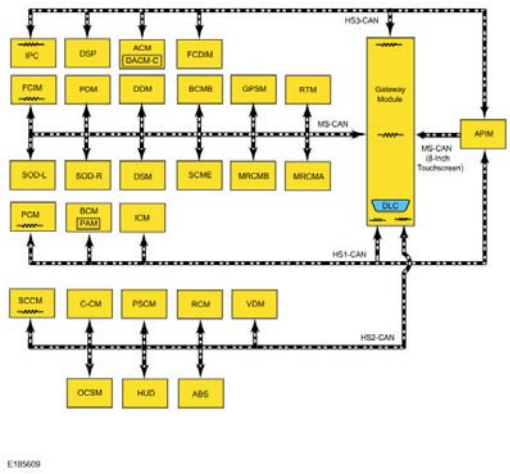
Service Manual: MODULE COMMUNICATIONS NETWORK

DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - OVERVIEW > OVERVIEW

Multiplexing is a method of sending 2 or more signals simultaneously over a single circuit. Multiplexing allows 2 or more electronic modules (nodes) to communicate over a twisted wire pair [data (+) and data (-)] network. The information or messages that can be communicated on these wires consists of commands, status or data. Multiplexing reduces the weight of the vehicle by reducing the number of redundant components and electrical wiring.

The vehicle has 2 module communication networks connected to the DLC, located under the instrument panel. The communication networks are:

- HS-CAN1
- HS-CAN2



The vehicle has 2 module communication networks that communicate on the network, but do not communicate directly with the diagnostic scan tool. The GWM translates the messages on these 2 networks, and transfers the signals to the HS-CAN2 to communicate with the diagnostic scan tool. The communication networks are:

- HS-CAN3
- MS-CAN)

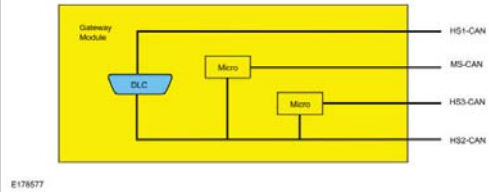
DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK TERMINATION

The CAN uses network termination to improve communication reliability. Termination modules are located at both ends of the network. As network messages are broadcast in the form of voltage signals, the network voltage signals are stabilized by the termination resistors.

Each termination module has an internal 120 ohm resistor that bridges across the positive and negative bus connection. With two 120 ohm resistors located in a parallel circuit configuration, the total network impedance, or total resistance, is 60 ohms.



Network termination improves bus message reliability by stabilizing bus voltage and eliminating electrical interference.

DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - SYSTEM OPERATION AND COMPONENT DESCRIPTION > GATEWAY MODULE

The GWM is mounted under the driver side instrument panel. The DLC connector is fitted to the GWM. The GWM acts as a central gateway to translate messages across all 4 vehicle controller area networks (CANs), and vice versa. The GWM is the only module on this vehicle with this ability. The GWM also

serves as a termination module for each of the networks to which it is connected.

The 2 module communication networks connected to the DLC are HS-CAN1 and HS-CAN2. These 2 networks communicate directly with the diagnostic scan tool. The other 2 communication networks, HS-CAN3 and MS-CAN, communicate on the network, but do not communicate directly with the diagnostic scan tool. The GWM translates the messages from these 2 networks to the HS-CAN2, which transfers the signals to the diagnostic scan tool.

DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HIGH SPEED CONTROLLER AREA NETWORK 1 AND 2 (HS-CAN1, HS-CAN2)

The HS-CAN1 and HS-CAN2 operate at a maximum data transfer speed of 500 Kbps and are designed for real time powertrain and driver feature information transfer and control. Modules on the HS-CAN1 and HS-CAN2 communicate using bussed messages. The HS-CAN uses an unshielded twisted pair cable, data bus (+) and data bus (-) circuits. In addition to scan tool communication, the HS-CAN allows sharing of information between all modules on each HS-CAN.

With the addition of more modules, network traffic has increased. This has created the need for an additional HS-CAN to manage the increased bus data carried on each network.

The GWM is used as a gateway for the messages to transfer between the scan tool and the modules on the HS-CAN1 and the modules on the HS-CAN2.

The scan tool communicates with the vehicle communication networks directly through the HS-CAN1 and HS-CAN2.

DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HIGH SPEED CONTROLLER AREA NETWORK 3 (HS-CAN3)

The HS-CAN3, or the Infotainment Controller Area Network (I-CAN), operates at a maximum data transfer speed of 500 Kbps and is designed for real time audio, multimedia and driver information transfer and control. Modules on the HS-CAN3 communicate using bussed messages. HS-CAN3 uses an unshielded twisted pair cable, data bus (+) and data bus (-) circuits, and allows sharing of information between all modules on the network.

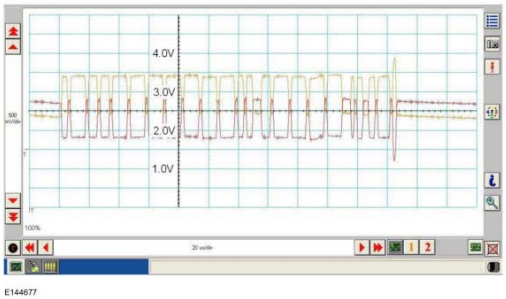
The GWM is used as a gateway for the messages to transfer between the scan tool and the modules on the HS-CAN3.

The GWM translates the diagnostic messages from the HS-CAN2 to the HS-CAN3 and vice versa,

allowing communication between the modules on the HS-CAN3 and the scan tool.

DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - SYSTEM OPERATION AND COMPONENT DESCRIPTION > MEDIUM SPEED CONTROLLER AREA NETWORK (MS-CAN)

The MS-CAN operates at a maximum data transfer speed of 125 Kbps and is designed for general information transfer. Modules on the MS-CAN communicate using bussed messages. The MS-CAN uses an unshielded twisted pair cable, data bus (+) and data bus (-) circuits. In addition to scan tool communication, the MS-CAN allows sharing of information between all modules on the network.

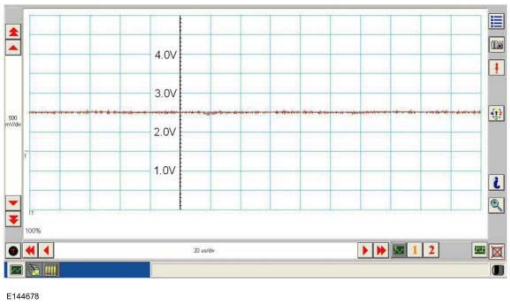


The GWM is used as a gateway for the messages to transfer between the scan tool and the modules on the MS-CAN.

The GWM translates the diagnostic messages from the HS-CAN2 to the MS-CAN and vice versa, allowing communication between the modules on the MS-CAN and the scan tool.

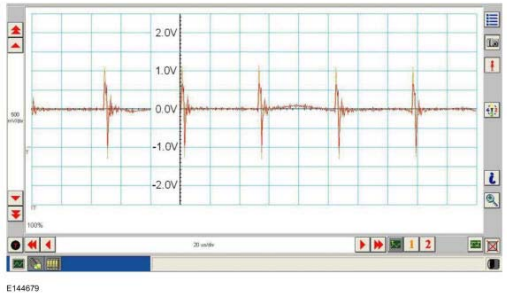
DESCRIPTION AND OPERATION > COMMUNICATIONS NETWORK - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CONTROLLER AREA NETWORK (CAN) FAULT TOLERANCE

NOTE: The oscilloscope traces shown are from the IDS oscilloscope taken using the IDS pre-configured CAN settings. The traces are for both data (+) and data (-) taken simultaneously (2-channel) at a sample rate of 1 mega-sample per second (1MS/s) or greater.



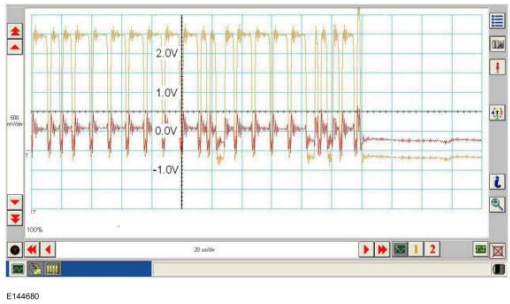
Fault Tolerance Normal Operation

The data (+) and data (-) circuits are each regulated to approximately 2.5 volts during neutral or rested network traffic. As messages are sent on the data (+) circuit, voltage is increased by approximately 1.0 volt. Inversely, the data (-) circuit is reduced by approximately 1.0 volt when a message is sent.



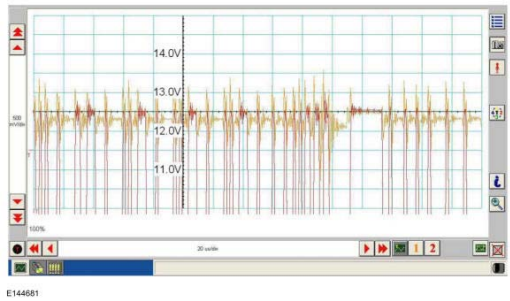
Successful communication of a message can usually be identified by the slight spike at the end of a message transmission. Any signals that are significantly different than the normal CAN waveform may cause network Diagnostic Trouble Codes (DTCs) (U-codes) to set or may cause a complete network outage.

CAN Circuits Shorted Together



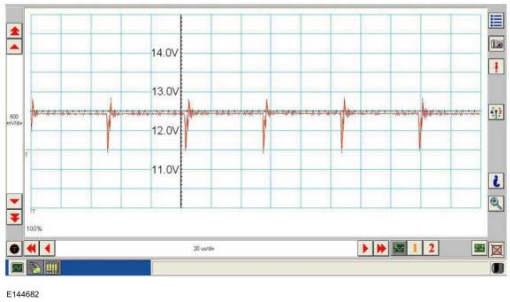
In the event the data (+) and data (-) circuits become shorted together, the signal stays at base voltage (2.5V) continuously and all communication capabilities are lost.

CAN (+) Circuit Shorted to Ground



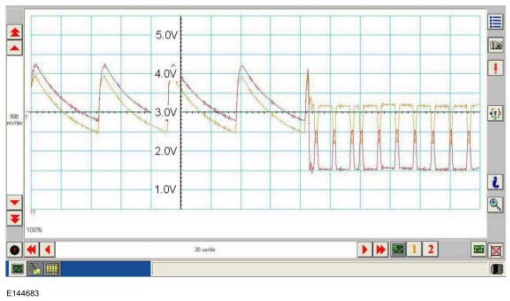
In the event the data (+) circuit becomes shorted to ground, both the data (+) and data (-) circuits are pulled low (0V) and all communication capabilities are lost.

CAN (-) Circuit Shorted to Ground



In the event the data (-) circuit becomes shorted to ground, the data (-) circuit is pulled low (0V) and the data (+) circuit reaches near-normal peak voltage (3.0V) during communication but falls to 0V instead of normal base voltage (2.5V). Communication may continue but at a degraded level.

CAN (+) Circuit Shorted to Battery Voltage



In the event the data (+) circuit becomes shorted to battery voltage, the data (+) circuit is pulled high (12V) and the data (-) circuit falls to abnormally high voltage (above 5V) during communication and reaches battery voltage (12V) for peak voltage. Communication may continue but at a degraded level.

CAN (-) Circuit Shorted to Battery Voltage

In the event the data (-) circuit becomes shorted to battery voltage, both the data (+) and data (-) circuits are pulled high (12V) and all communication capabilities are lost.

CAN Circuit Signal Corruption

Rhythmic oscillations, inductive spikes or random interference can corrupt the network communications. The corruption signal source may be outside electrical interference such as motors or solenoids or internal interference generated from a module on the network. In some cases, an open in either the data (+) or data (-) circuit to a network module may cause the module to emit interference on the one circuit which is still connected. The trace shown is an example of a "sawtooth" pattern transmitted from a module with one open network circuit.

Other corruptions may be present when a module is intermittently powered up and down. The module on power up may initiate communication out of sync with other modules on the network causing momentary communication outages.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > DTC CHART: GATEWAY MODULE (GWM)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. INSTALL As-Built data from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built.
U3000:44	Control Module: Data Memory Failure	RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:44 is retrieved, INSTALL a new GWM. REFER to: Gateway Module A (GWM) . If DTC U3000:44 is not retrieved, the module is operating correctly at this time. The concern may have been caused by an intermittent concern.
U3000:45	Control Module: Program Memory Failure	RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:45 is retrieved, INSTALL a new GWM. REFER to: Gateway Module A (GWM) . If DTC U3000:45 is not retrieved, the module is operating correctly at this time. The concern may have been caused by an intermittent concern.
U3000:49	Control Module: Internal Electronic Failure	RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:49 is retrieved, INSTALL a new GWM. REFER to: Gateway Module A

		(GWM) . If DTC U3000:49 is not retrieved, the module is operating correctly at this time. The concern may have been caused by an intermittent concern.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > SYMPTOM CHART(S)

Symptom Chart: Communication Network

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Sources	Actions
The vehicle does not start with the diagnostic scan tool connected to the DLC and/or multiple malfunction indicators are only on when the diagnostic scan tool is connected to the DLC	Refer to the Pinpoint Test	GO to Pinpoint Test AH
No HS-CAN1 communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test AD
No HS-CAN2 communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test AE
No HS-CAN3 communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test AF
No MS-CAN communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test AG
The PCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test A
The ABS module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test B
The VDM does not respond to the scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test C
The RCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test D
The OCSM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test E
The SCCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test F

The IPC does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test G
The ICM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test H
The BCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test I
The BCMB does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test J
The FCIM module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test K
The FCDIM module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test L
The ACM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test M
The GPSM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test N
The APIM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test O
The audio DSP does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test P
The DACMC does not respond to the diagnostic scan tool (integrated with the ACM)	Refer to the Pinpoint Test	GO to Pinpoint Test M
The RTM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test Q
The PSCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test R
The DSM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test S
The SCME does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test T
The DDM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test U
The PDM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test V
The SODL does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test W
The SODR does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test X
The CCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test Y

The HUD module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test Z
The PAM does not respond to the diagnostic scan tool (integrated with the BCM)	Refer to the Pinpoint Test	GO to Pinpoint Test I
The Moveable Roof Control Module A (MRCMA) does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test AA
The Moveable Roof Control Module B (MRCMB) does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test AB
The GWM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test AC
No power to the DLC	Refer to the Pinpoint Test	GO to Pinpoint Test AH

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST A : THE POWERTRAIN CONTROL MODULE (PCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Electronic Engine Controls - 5.0L for schematic and connector information.

Refer to Electronic Engine Controls - 2.3L for schematic and connector information.

Refer to Electronic Engine Controls - 3.7L for schematic and connector information.

Normal Operation and Fault Conditions

The PCM communicates with the diagnostic scan tool through the HS-CAN1. An IDS session cannot be established if the PCM communication fails when attempting to identify the vehicle.

Possible Sources

- Fuse
- Wiring, terminals and connectors
- PCM

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST A : THE POWERTRAIN CONTROL MODULE (PCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST A : THE POWERTRAIN CONTROL MODULE (PCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

A1 VERIFY WHETHER OTHER HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) MODULES PASS THE NETWORK TEST

Using a diagnostic scan tool, perform the network test.

Is the text "pass" or a DTC listed next to any of the following modules (if equipped): APIM, BCM, ICM or PCM?

Yes	If "pass" or a DTC was listed next to the PCM, a network fault is not currently present. If "pass" or a DTC was listed next to one or more modules other than the PCM, GO to A2

No	No modules are currently communicating on the HS-CAN1. GO to Pinpoint Test AD

A2 ENGINE CONTROLS ARTICLE PINPOINT TEST QA VERIFICATION CHECK

Verify Engine Controls article pinpoint test QA has been performed.

Has pinpoint test QA been performed?

Yes	GO to A3

No	Refer to ENGINE CONTROLS - INTRODUCTION (EXCEPT DIESEL & HYBRID) .

A3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTANCE

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 54 and 66 ohms?

Yes	GO to A5

No	GO to A4

A4 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE PCM (POWERTRAIN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L).

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-69	Ω	C251-6
C1551B-68	Ω	C251-14

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-75	Ω	C251-6
C1381B-76	Ω	C251-14

5.0L or 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-75	Ω	C251-6
C175B-76	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to A5

No	REPAIR the circuit in question.

A5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the PCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST B : THE ANTI-LOCK BRAKE SYSTEM (ABS) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Vehicle Dynamic Systems for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connectors
- ABS module

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuses 5 (50A), 28 (30A) and 62 (5A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST B : THE ANTI-LOCK BRAKE SYSTEM (ABS) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST B : THE ANTI-LOCK BRAKE SYSTEM (ABS) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

B1 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: ABS module C135

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1		Ground
C135-30		Ground
C135-35		Ground

Are the voltages greater than 11 volts?

Yes	GO to B2

No	VERIFY the BJB fuses 5 (50A), 28 (30A) and 62 (5A) are OK. If OK, REPAIR the circuit in question. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

B2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-14	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B3

No	REPAIR the circuit.

B3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-42	Ω	C251-3
C135-43	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to B4

No	REPAIR the circuit in question.

B4 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Ignition OFF.

Disconnect and inspect the ABS module connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ABS module connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST C : THE VEHICLE DYNAMICS CONTROL MODULE (VDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Vehicle Dynamic Suspension for schematic and connector information.

Normal Operation and Fault Conditions

The VDM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connectors
- VDM

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 66 (5A) and BCM fuse 25 (30A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST C : THE VEHICLE DYNAMICS CONTROL MODULE (VDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST C : THE VEHICLE DYNAMICS CONTROL MODULE (VDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

C1 CHECK THE VDM (VEHICLE DYNAMICS CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect:VDM C4396

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4396-16	V	Ground
C4396-32	V	Ground

Are the voltages greater than 11 volts?

Yes	GO to C2

No	VERIFY the BJB fuse 66 (5A) or BCM fuse 25 (30A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

C2 CHECK THE VDM (VEHICLE DYNAMICS CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4396-47	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to C3

No	REPAIR the circuit.

C3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE VDM (VEHICLE DYNAMICS CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4396-39	Ω	C251-3
C4396-24	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to C4

No	REPAIR the circuit in question.

C4 CHECK FOR CORRECT VDM (VEHICLE DYNAMICS CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the VDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the VDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new VDM.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST D : THE RESTRAINTS CONTROL MODULE (RCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Supplemental Restraint System for schematic and connector information.

Normal Operation and Fault Conditions

The RCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Causes

- Fuse
- Wiring, terminals and connectors
- RCM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 35 (5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST D : THE RESTRAINTS CONTROL MODULE (RCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST D : THE RESTRAINTS CONTROL MODULE (RCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

WARNING: Never probe the electrical connectors on airbag, Safety Canopy ® or side air curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

D1 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONNECTION

Ignition OFF.

Depower the SRS. REFER to: Supplemental Restraint System (SRS) Depowering .

Disconnect: RCM C310A and C310B .

Are RCM C310A pin 19 and C310B pins 47 and 48 OK?

Yes	GO to D2

No	INSTALL a new wiring harness. REPOWER the Supplemental Restraint System (SRS). REFER to: Supplemental Restraint System (SRS) Repowering .

D2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Repower the SRS. REFER to: Supplemental Restraint System (SRS) Repowering .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-19		Ground

Is the voltage greater than 11 volts?

Yes	GO to D3

No	VERIFY the BCM fuse 35 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

D3 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CASE GROUND

Ignition OFF.

Measure the resistance between the RCM case and a good chassis ground.

Is the resistance less than 3 ohms?

Yes	GO to D4

No	REPAIR the RCM case ground as necessary.

D4 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE RCM (RESTRAINTS CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Depower the SRS. REFER to: Supplemental Restraint System (SRS) Depowering .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C310B-48	Ω	C251-3
C310B-47	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to D5

No	REPAIR the circuit in question.

D5 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the RCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the RCM connector and related in-line connectors. Make sure they seat and latch correctly.

Repower the Supplemental Restraint System (SRS). REFER to: Supplemental Restraint System (SRS) Repowering .

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST E : THE OCCUPANT CLASSIFICATION SYSTEM MODULE (OCSM)

DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Supplemental Restraint System for schematic and connector information.

Normal Operation and Fault Conditions

The OCSM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- OCSM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 22 (5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST E : THE OCCUPANT CLASSIFICATION SYSTEM MODULE (OCSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST E : THE OCCUPANT CLASSIFICATION SYSTEM MODULE (OCSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

E1 CHECK THE OCSM (OCCUPANT CLASSIFICATION SYSTEM MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Wait one minute.

Disconnect: OCSM C3043

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3043-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to E2

No	VERIFY the BCM fuse 22 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the

	OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

E2 CHECK THE OCSM (OCCUPANT CLASSIFICATION SYSTEM MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3043-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to E3

No	REPAIR the circuit.

E3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE OCSM (OCCUPANT CLASSIFICATION SYSTEM MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3043-2	Ω	C251-3
C3043-3	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to E4

No	REPAIR the circuit in question.

E4 CHECK FOR CORRECT OCSM (OCCUPANT CLASSIFICATION SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the OCSM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the OCSM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new OCSM. REFER to: Occupant Classification System (OCS) Sensor .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST F : THE STEERING COLUMN CONTROL MODULE (SCCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

The SCCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Causes

- Fuse
- Wiring, terminals and connector
- SCCM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 13 (7.5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST F : THE STEERING COLUMN CONTROL MODULE (SCCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST F : THE STEERING COLUMN CONTROL MODULE (SCCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

F1 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTANCE

Ignition OFF.

Disconnect the diagnostic scan tool cable from the DLC.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 54 and 66 ohms?

Yes	GO to F3

No	GO to F2

F2 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE SCCM (STEERING COLUMN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect SCCM C226A

Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-3	Ω	C251-3
C226A-4	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to F5

No	REPAIR the circuit in question.

F3 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Disconnect SCCM C226A

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C226A-7		Ground

Is the voltage greater than 11 volts?

Yes	GO to F4

No	VERIFY the BCM fuse 13 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

F4 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to F5

No	REPAIR the circuit.

F5 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST G : THE INSTRUMENT PANEL CLUSTER (IPC) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Instrument Cluster for schematic and connector information.

Normal Operation and Fault Conditions

The IPC communicates on the HS-CAN3, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- IPC

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 13 (7.5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST G : THE INSTRUMENT PANEL CLUSTER (IPC) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST G : THE INSTRUMENT PANEL CLUSTER (IPC) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

G1 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTANCE

Ignition OFF.

Disconnect negative battery cable.

Disconnect the diagnostic scan tool cable from the DLC.

Disconnect GWM C2431

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	C2431-15

Is the resistance between 108 and 132 ohms?

Yes	GO to G3

No	GO to G2

G2 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE IPC (INSTRUMENT PANEL CLUSTER) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect IPC C220

Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-12	Ω	C2431-16
C220-13	Ω	C2431-15

Are the resistances less than 3 ohms?

Yes	GO to G5

No	REPAIR the circuit in question.

G3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) VOLTAGE SUPPLY CIRCUIT

Disconnect: IPC C220 .

Connect negative battery cable.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-8	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to G4

No	VERIFY the BCM fuse 13 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

G4 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) GROUND CIRCUIT

Ignition OFF.

Disconnect negative battery cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CONNECT negative battery cable. GO to G5

No	REPAIR the circuit.

G5 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

Ignition OFF.

Disconnect and inspect the IPC connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the IPC connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST H : THE INSTRUMENT CENTER MODULE (ICM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Instrument Cluster for schematic and connector information.

Normal Operation and Fault Conditions

The ICM communicates on the HS-CAN1.

Possible Sources

- Fuse
- Wiring, terminals and connector
- ICM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST H : THE INSTRUMENT CENTER MODULE (ICM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST H : THE INSTRUMENT CENTER MODULE (ICM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

H1 CHECK THE ICM (INFORMATION CENTER MODULE) VOLTAGE SUPPLY CIRCUIT

Disconnect: ICM C2114 .

Connect negative battery cable.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2114-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to H2

No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

H2 CHECK THE ICM (INFORMATION CENTER MODULE) GROUND CIRCUIT

Ignition OFF.

Disconnect negative battery cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2114-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CONNECT negative battery cable. GO to H3

No	REPAIR the circuit.

H3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE ICM (INFORMATION CENTER MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect ICM C2114

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2114-2	Ω	C251-6
C2114-3	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to H4

No	REPAIR the circuit in question.

H4 CHECK FOR CORRECT ICM (INFORMATION CENTER MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the ICM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ICM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ICM. REFER to: Information Center Module (ICM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST I : THE BODY CONTROL MODULE (BCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Power Distribution for schematic and connector information.

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The BCM communicates with the diagnostic scan tool through the HS-CAN1.

Possible Causes

- Fuse
- Wiring, terminals and connector
- BCM

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 7 (60A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST I : THE BODY CONTROL MODULE (BCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST I : THE BODY CONTROL MODULE (BCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

I1 CHECK THE BCM (BODY CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280H .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-1		Ground

Is the voltage greater than 11 volts?

Yes	Connect BCM C2280H . GO to I2

No	VERIFY the BJB fuse 7 (60A) is OK. If OK, repair the circuit in question. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

I2 CHECK THE BCM (BODY CONTROL MODULE) GROUND CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-6	Ω	Ground
C2280C-7	Ω	Ground
C2280C-10	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to I3

No	REPAIR the circuit in question.

I3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE BCM (BODY CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect: BCM C2280G .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-10	Ω	C251-6
C2280G-9	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to I4

No	REPAIR the circuit in question.

I4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect the BCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST J : THE BODY CONTROL MODULE B (BCMB) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

The Body Control Module B (BCMB) communicates on the MS-CAN, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuses 28 (20A) and 36 (15A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST J : THE BODY CONTROL MODULE B (BCMB) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST J : THE BODY CONTROL MODULE B (BCMB) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

J1 CHECK THE BODY CONTROL MODULE B (BCMB) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Body Control Module B (BCMB) C4368A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-1	V	Ground
C4368A-7	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to J2

No	VERIFY BCM fuse 28 (20A) or fuse 36 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

J2 CHECK THE BODY CONTROL MODULE B (BCMB) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-13	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to J3

No	REPAIR the circuit.

J3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE BODY CONTROL MODULE B (BCMB) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-11	Ω	C2431-23
C4368A-23	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to J4

No	REPAIR the circuit in question.

J4 CHECK FOR CORRECT BODY CONTROL MODULE B (BCMB) OPERATION

Ignition OFF.

Disconnect and inspect the Body Control Module B (BCMB) connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Body Control Module B (BCMB) connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Body Control Module B (BCMB). REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST K : THE FRONT CONTROLS INTERFACE MODULE (FCIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Automatic Climate Control System for schematic and connector information.

Normal Operation and Fault Conditions

The FCIM communicates on the MS-CAN, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- FCIM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 12 (7.5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST K : THE FRONT CONTROLS INTERFACE MODULE (FCIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST K : THE FRONT CONTROLS INTERFACE MODULE (FCIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

K1 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTANCE

Ignition OFF.

Disconnect negative battery cable.

Disconnect the diagnostic scan tool cable from the DLC.

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	Ω	C2431-22

Is the resistance between 108 and 132 ohms?

Yes	GO to K3

No	GO to K2

K2 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE FCIM (FRONT CONTROLS INTERFACE MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect FCIM C2402A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-17	Ω	C2431-23
C2402A-18	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to K5

No	REPAIR the circuit in question.

K3 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Connect negative battery cable.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to K4

No	VERIFY the BCM fuse 12 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to

	the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

K4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect negative battery cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CONNECT negative battery cable. GO to K5

No	REPAIR the circuit.

K5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the FCIM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. For AM/FM/CD /SYNC, REFER to: Front Controls Interface Module (FCIM) . For touchscreen display, REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST L : THE FRONT CONTROL/DISPLAY INTERFACE MODULE (FCDIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Audio System/Navigation - Am/Fm/Sync/Touchscreen Display for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Normal Operation and Fault Conditions

The FCDIM communicates on the HS-CAN3, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- FCDIM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST L : THE FRONT CONTROL/DISPLAY INTERFACE MODULE (FCDIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST L : THE FRONT CONTROL/DISPLAY INTERFACE MODULE (FCDIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

L1 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: FCDIM C2123 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to L2

No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

L2 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-9	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to L3

No	REPAIR the circuit.

L3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-4	Ω	C2431-16
C2123-5	Ω	C2431-15

Are the resistances less than 3 ohms?

Yes	GO to L4

No	REPAIR the circuit in question.

L4 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: INFORMATION AND ENTERTAINMENT SYSTEM - GENERAL INFORMATION - VEHICLES WITH TOUCHSCREEN DISPLAY .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST M : THE AUDIO CONTROL MODULE (ACM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

The ACM communicates on the HS-CAN3, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- ACM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 33 (20A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST M : THE AUDIO CONTROL MODULE (ACM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST M : THE AUDIO CONTROL MODULE (ACM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

M1 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: ACM C240A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to M2

No	VERIFY the BCM fuse 33 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

M2 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-13	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to M3

No	REPAIR the circuit.

M3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS

BETWEEN THE ACM (AUDIO FRONT CONTROL MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-14	Ω	C2431-16
C240A-15	Ω	C2431-15

Are the resistances less than 3 ohms?

Yes	GO to M4

No	REPAIR the circuit in question.

M4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ACM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. For AM/FM/CD /SYNC, REFER to: Audio Front Control Module (ACM) . For touchscreen display, REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST N : THE GLOBAL POSITIONING SYSTEM MODULE (GPSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

The GPSM communicates on the MS-CAN, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST N : THE GLOBAL POSITIONING SYSTEM MODULE (GPSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST N : THE GLOBAL POSITIONING SYSTEM MODULE (GPSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

N1 CHECK THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: GPSM C2398 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to N2

No	VERIFY BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

N2 CHECK THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-6	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to N3

No	REPAIR the circuit.

N3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-2	Ω	C2431-23
C2398-3	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to N4

No	REPAIR the circuit in question.

N4 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GPSM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. For AM/FM/CD /SYNC, REFER to: Global Positioning System Module (GPSM) . For touchscreen display, REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST O : THE ACCESSORY PROTOCOL INTERFACE MODULE (APIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

The APIM communicates with the diagnostic scan tool through the HS-CAN1 and communicates with other modules through the HS-CAN3 and the MS-CAN (touchscreen only). Diagnostic messages to modules on the HS-CAN3 and MS-CAN are sent/received between the DLC and the diagnostic scan tool through the HS-CAN2 circuits at the DLC, and translated through the GWM.

Possible Sources

- Fuse
- Wiring, terminals and connector
- APIM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST O : THE ACCESSORY PROTOCOL INTERFACE MODULE (APIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST O : THE

ACCESSORY PROTOCOL INTERFACE MODULE (APIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

O1 CHECK THE APIM (SYNC MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: APIM C2383 or C2342 (touchscreen display).

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		Ground

Touchscreen display

Positive Lead	Measurement / Action	Negative Lead
C2342-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to O2

No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

O2 CHECK THE APIM (SYNC MODULE) GROUND CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-37	Ω	Ground
C2383-38	Ω	Ground

Touchscreen display

Positive Lead	Measurement / Action	Negative Lead
C2342-37	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to O3

No	REPAIR the circuit.

O3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE APIM (SYNC MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-53	Ω	C251-6
C2383-54	Ω	C251-14

Touchscreen display

Positive Lead	Measurement / Action	Negative Lead
C2342-53	Ω	C251-6
C2342-54	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to O4

No	REPAIR the circuit in question.

O4 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE APIM (SYNC MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect GWM C2431

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-16	Ω	C2431-16
C2383-17	Ω	C2431-15

Touchscreen display

Positive Lead	Measurement / Action	Negative Lead
C2342-19	Ω	C2431-16

C2342-20	Ω	C2431-15

Are the resistances less than 3 ohms?

Yes	If equipped with touchscreen display, GO to O5 If not equipped with touchscreen display, GO to O6

No	REPAIR the circuit in question.

O5 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE APIM (SYNC MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2342-16	Ω	C2431-23
C2342-17	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to O6

No	REPAIR the circuit in question.

O6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST P : THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/CD/SYNC for schematic and connector information.

Refer to Audio System/Navigation - AM/FM/SYNC/Touchscreen Display for schematic and connector information.

Normal Operation and Fault Conditions

The DSP communicates on the HS-CAN3 and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- DSP

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 27 (30A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST P : THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST P : THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

P1 CHECK THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: DSP C2385B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385B-14		Ground

Are the voltages greater than 11 volts?

Yes	GO to P2

No	VERIFY the BCM fuse 27 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

P2 CHECK THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2385B-11	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to P3

No	REPAIR the circuit.

P3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: DSP C2470 .

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2470-15	Ω	C2431-16
C2470-16	Ω	C2431-15

Are the resistances less than 3 ohms?

Yes	GO to P4

No	REPAIR the circuit in question.

P4 CHECK FOR CORRECT DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the DSP connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DSP connector and related in-line connectors. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSP. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST Q : THE RADIO TRANSCEIVER MODULE (RTM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation and Fault Conditions

The RTM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector

- RTM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST Q : THE RADIO TRANSCEIVER MODULE (RTM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST Q : THE RADIO TRANSCEIVER MODULE (RTM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Q1 CHECK THE RTM (RADIO TRANSCEIVER MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: RTM C4458 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4458-6	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to Q2

No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

Q2 CHECK THE RTM (RADIO TRANSCEIVER MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4458-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to Q3

No	REPAIR the circuit.

Q3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE RTM (RADIO TRANSCEIVER MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4458-4	Ω	C2431-23
C4458-3	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to Q4

No	REPAIR the circuit in question.

Q4 CHECK FOR CORRECT RTM (RADIO TRANSCEIVER MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the RTM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the RTM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST R : THE POWER STEERING CONTROL MODULE (PSCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Power Steering Controls for schematic and connector information.

Normal Operation and Fault Conditions

The PSCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- PSCM

Visual Inspection and Diagnostic Pre-checks

Verify high current BJB MEGA fuse 1 (125A) and BJB fuse 64 (5A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST R : THE POWER STEERING CONTROL MODULE (PSCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST R : THE POWER STEERING CONTROL MODULE (PSCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

R1 CHECK THE PSCM (POWER STEERING CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: PSCM C1463A and C1463B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463A-1		Ground

Positive Lead	Measurement / Action	Negative Lead
C1463B-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to R2

No	VERIFY the high current BJB MEGA fuse 1 (125A) or BJB fuse 64 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

R2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463B-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to R3

No	REPAIR the circuit.

R3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE PSCM (POWER STEERING CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463A-2	Ω	C251-3
C1463A-3	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to R4

No	REPAIR the circuit in question.

R4 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the PSCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PSCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS Symptom Chart.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST S : THE DRIVER SEAT MODULE (DSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Memory Seats for schematic and connector information.

Normal Operation and Fault Conditions

The DSM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- DSM

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 12 (30A) and BCM fuse 2 (7.5A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST S : THE DRIVER SEAT MODULE (DSM) DOES NOT RESPOND TO

THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST S : THE DRIVER SEAT MODULE (DSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

S1 CHECK THE DSM (DRIVER FRONT SEAT MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: DSM C341A and C341B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341A-1		Ground

Positive Lead	Measurement / Action	Negative Lead
C341B-1		Ground

Are the voltages greater than 11 volts?

Yes	GO to S2

No	VERIFY the BJB fuse 12 (30A) or BCM fuse 2 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

S2 CHECK THE DSM (DRIVER FRONT SEAT MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341A-2	Ω	Ground

Positive Lead	Measurement / Action	Negative Lead
C341B-24	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to S3

No	REPAIR the circuit.

S3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE DSM (DRIVER FRONT SEAT MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect DSM C341D .

Disconnect GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341D-10	Ω	C2431-23
C341D-9	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to S4

No	REPAIR the circuit in question.

S4 CHECK FOR CORRECT DSM (DRIVER FRONT SEAT MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the DSM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DSM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM. REFER to: Driver Front Seat Module (DSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST T : THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- SCME

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 14 (30A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST T : THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST T : THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

T1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: SCME C3265A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-E		Ground
C3265A-F		Ground

Are the voltages greater than 11 volts?

Yes	GO to T2

No	VERIFY the BJB fuse 14 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

T2 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-M	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to T3

No	REPAIR the circuit.

T3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: SCME C3265C

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-1	Ω	C2431-23
C3265C-2	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to T4

No	REPAIR the circuit in question.

T4 CHECK FOR CORRECT SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCME connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module [SCME] .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST U : THE DRIVER DOOR MODULE (DDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The DDM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- DDM

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 11 (30A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST U : THE DRIVER DOOR MODULE (DDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST U : THE DRIVER DOOR MODULE (DDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

U1 CHECK THE DDM (DRIVER DOOR MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: DDM C501A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C501A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to U2

No	VERIFY the BJB fuse 11 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

U2 CHECK THE DDM (DRIVER DOOR MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C501A-2		Ground

Is the resistance less than 3 ohms?

Yes	GO to U3

No	REPAIR the circuit.

U3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE DDM (DRIVER DOOR MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C501A-7	Ω	C2431-23
C501A-6	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to U4

No	REPAIR the circuit in question.

U4 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the DDM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST V : THE PASSENGER DOOR MODULE (PDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The PDM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- PDM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 26 (30A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST V : THE PASSENGER DOOR MODULE (PDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST V : THE PASSENGER DOOR MODULE (PDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

V1 CHECK THE PDM (PASSENGER DOOR MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: PDM C652A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C652A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to V2

No	VERIFY the BCM fuse 26 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

V2 CHECK THE PDM (PASSENGER DOOR MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C652A-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to V3

No	REPAIR the circuit.

V3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE PDM (PASSENGER DOOR MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C652A-7	Ω	C2431-23
C652A-6	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to V4

No	REPAIR the circuit in question.

V4 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the PDM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST W : THE SIDE OBSTACLE DETECTION CONTROL MODULE LH (SOD-L) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The SODL communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- SODL

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 66 (5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST W : THE SIDE OBSTACLE DETECTION CONTROL MODULE LH (SOD-L) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST W : THE SIDE OBSTACLE DETECTION CONTROL MODULE LH (SOD-L) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

W1 CHECK THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: SODL C4369 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4369-5		Ground

Is the voltage greater than 11 volts?

Yes	GO to W2

No	VERIFY the BJB fuse 66 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

W2 CHECK THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4369-8	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to W3

No	REPAIR the circuit.

W3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4369-6	Ω	C2431-23
C4369-7	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to W4

No	REPAIR the circuit in question.

W4 CHECK FOR CORRECT SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) OPERATION

Ignition OFF.

Disconnect and inspect the SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST X : THE SIDE OBSTACLE DETECTION CONTROL MODULE RH (SOD-R) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The SODR communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- SODR

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 66 (5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST X : THE SIDE OBSTACLE DETECTION CONTROL MODULE RH (SOD-R) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST X : THE SIDE OBSTACLE DETECTION CONTROL MODULE RH (SOD-R) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

X1 CHECK THE SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: SODR C4370 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4370-5	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to X2

No	VERIFY the BJB fuse 66 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

X2 CHECK THE SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4370-3	Ω	Ground
C4370-8	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to X3

No	REPAIR the circuit.

X3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4370-6	Ω	C2431-23
C4370-7	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to X4

No	REPAIR the circuit in question.

X4 CHECK FOR CORRECT SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OPERATION

Ignition OFF.

Disconnect and inspect all the SODR connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST Y : THE CRUISE CONTROL MODULE (CCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Cruise Control for schematic and connector information.

Normal Operation and Fault Conditions

The CCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- CCM

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 66 (5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST Y : THE CRUISE CONTROL MODULE (CCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST Y : THE CRUISE CONTROL MODULE (CCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Y1 CHECK THE CCM (CRUISE CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: CCM C1582 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-10		Ground

Is the voltage greater than 11 volts?

Yes	GO to Y2

No	VERIFY the BJB fuse 66 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

Y2 CHECK THE CCM (CRUISE CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to Y3

No	REPAIR the circuit.

Y3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE CCM (CRUISE CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-8	Ω	C251-3
C1582-7	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to Y4

No	REPAIR the circuit in question.

Y4 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the CCM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the CCM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST Z : THE HEAD UP DISPLAY (HUD) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The HUD module communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- HUD module

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 66 (5A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST Z : THE HEAD UP DISPLAY (HUD) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST Z : THE HEAD UP DISPLAY (HUD) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Z1 CHECK THE HUD (HEAD UP DISPLAY) MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: HUD Module C2395 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-4		Ground

Is the voltage greater than 11 volts?

Yes	GO to Z2

No	VERIFY the BJB fuse 66 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

Z2 CHECK THE HUD (HEAD UP DISPLAY) MODULE GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to Z3

No	REPAIR the circuit.

Z3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE HUD (HEAD UP DISPLAY) MODULE AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-3	Ω	C251-3
C2395-2	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to Z4

No	REPAIR the circuit in question.

Z4 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) MODULE OPERATION

Ignition OFF.

Disconnect and inspect the HUD module connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AA : THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

The Moveable Roof Control Module A (MRCMA) communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 17 (20A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AA : THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST AA : THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

AA1 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Moveable Roof Control Module A (MRCMA) C4830 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to AA2

No	VERIFY BJB fuse 17 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

AA2 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to AA3

No	REPAIR the circuit.

AA3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS

BETWEEN THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-9	Ω	C2431-23
C4830-10	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to AA4

No	REPAIR the circuit in question.

AA4 CHECK FOR CORRECT MOVEABLE ROOF CONTROL MODULE A (MRCMA) OPERATION

Ignition OFF.

Disconnect and inspect the Moveable Roof Control Module A (MRCMA) connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Moveable Roof Control Module A (MRCMA) connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Moveable Roof Control Module A (MRCMA).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AB : THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

The Moveable Roof Control Module B (MRCMB) communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 15 (20A) is OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AB : THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST AB : THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

AB1 CHECK THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Moveable Roof Control Module B (MRCMB) C4831 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to AB2

No	VERIFY BJB fuse 15 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

AB2 CHECK THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-3	Ω	Ground
C4831-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to AB3

No	REPAIR the circuit.

AB3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-9	Ω	C2431-23
C4831-10	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to AB4

No	REPAIR the circuit in question.

AB4 CHECK FOR CORRECT MOVEABLE ROOF CONTROL MODULE B (MRCMB) OPERATION

Ignition OFF.

Disconnect and inspect the Moveable Roof Control Module B (MRCMB) connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Moveable Roof Control Module B (MRCMB) connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Moveable Roof Control Module B (MRCMB).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AC : THE GATEWAY MODULE (GWM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The GWM communicates with the diagnostic scan tool through the HS-CAN1 and HS-CAN2. The GWM operates as a gateway for communication between the modules on HS-CAN1, HS-CAN2, HS-CAN3 and MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuses 13 (7.5A) and 15 (10A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AC : THE GATEWAY MODULE (GWM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL > PINPOINT TEST AC : THE GATEWAY MODULE (GWM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

AC1 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTANCE

Ignition OFF.

Disconnect negative battery cable.

Disconnect the diagnostic scan tool cable from the DLC.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 54 and 66 ohms?

Yes	GO to AC3

No	GO to AC2

AC2 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE GWM (GATEWAY MODULE A) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-20 (component side)	Ω	C251-6
C2431-19 (component side)	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to AC3

No	GO to AC9

AC3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTANCE

Connect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 54 and 66 ohms?

Yes	GO to AC5

No	GO to AC4

AC4 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS

BETWEEN THE GWM (GATEWAY MODULE A) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-18 (component side)	Ω	C251-3
C2431-17 (component side)	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to AC5

No	GO to AC9

AC5 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTANCE, COMPONENT SIDE

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23 (component side)	Ω	C2431-22 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to AC6

No	GO to AC9

AC6 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTANCE, COMPONENT SIDE

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16 (component side)	Ω	C2431-15 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to AC7

No	GO to AC9

AC7 CHECK THE GWM (GATEWAY MODULE A) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

Connect negative battery cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-13		Ground
C2431-24		Ground

Is the voltage greater than 11 volts?

Yes	GO to AC8

No	VERIFY the BCM fuse 13 (7.5A) or fuse 15 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

AC8 CHECK THE GWM (GATEWAY MODULE A) GROUND CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-1	Ω	Ground
C2431-14	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to AC9

No	REPAIR the circuit in question.

AC9 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

Ignition OFF.

Disconnect and inspect all GWM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AD : NO HIGH SPEED CONTROLLER AREA NETWORK 1 (HS-CAN1) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The HS-CAN1 modules communicate with the diagnostic scan tool directly through the DLC circuits.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- APIM (if equipped)
- BCM
- GWM
- ICM (if equipped)
- PCM

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AD : NO HIGH SPEED CONTROLLER AREA NETWORK 1 (HS-CAN1) COMMUNICATION, ALL MODULES ARE NOT RESPONDING > PINPOINT TEST AD : NO HIGH SPEED CONTROLLER AREA NETWORK 1 (HS-CAN1) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.

AD1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

Ignition OFF.

Disconnect the diagnostic scan tool cable from the DLC.

Inspect the DLC pins 6 and 14 for damage.

Are DLC pins 6 and 14 OK?

Yes	GO to AD2

No	REPAIR the DLC as necessary.

AD2 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTANCE

Disconnect the negative battery cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 54 and 66 ohms?

Yes	GO to AD3

No	GO to AD5

AD3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	Ground
C251-14	Ω	Ground

Are the resistances greater than 1, 000 ohms?

Yes	GO to AD4

No	GO to AD11

AD4 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TO VOLTAGE

Connect the negative battery cable.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6		Ground
C251-14		Ground

Is the voltage greater than 6 volts on either circuit?

Yes	REPAIR the circuit in question.

No	GO to AD12

AD5 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTOR

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 108 and 132 ohms?

Yes	GO to AD6

No	GO to AD8

AD6 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTOR WITH THE PCM (POWERTRAIN CONTROL MODULE) DISCONNECTED

Disconnect: PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L).

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 108 and 132 ohms?

Yes	GO to AD7

No	GO to AD18

AD7 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE PCM (POWERTRAIN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Measure:

2.3L

Positive Lead	Measurement / Action	Negative Lead
C1551B-69	Ω	C251-6
C1551B-68	Ω	C251-14

3.7L

Positive Lead	Measurement / Action	Negative Lead
C1381B-75	Ω	C251-6
C1381B-76	Ω	C251-14

5.0L or 5.2L

Positive Lead	Measurement / Action	Negative Lead
C175B-75	Ω	C251-6
C175B-76	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to AD12

No	REPAIR the circuit in question.

AD8 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance less than 3 ohms?

Yes	GO to AD10

No	GO to AD9

AD9 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance greater than 10, 000 ohms?

Yes	REPAIR the DLC or REPAIR the circuit in question.

No	A capacitor internal to a module can still be draining, causing irregular resistance readings. WAIT 5 minutes. REPEAT the pinpoint test. If the concern is still present, REPAIR the circuit.

AD10 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TOGETHER WITH THE MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Disconnect modules one at a time until the resistance is greater than 3 ohms.

APIM (if equipped) C2383 or C2342 (touchscreen display)

BCM C2280G

ICM C2114 (if equipped)

PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L)

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the APIM, GO to AD21 For the BCM, GO to AD20 For the ICM, GO to AD22 For the PCM, GO to AD19

No	REPAIR the circuit in question. CONNECT all modules.

AD11 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	Ground
C251-14	Ω	Ground

Disconnect modules one at a time until the resistance to ground is greater than 1, 000 ohms.

APIM (if equipped) C2383 or C2342 (touchscreen display)

BCM C2280G

ICM C2114 (if equipped)

PCM C1551B (2.3L), C1381B (3.7L) or C175B (5.0L, 5.2L)

Did the resistance change to greater than 1, 000 ohms with one of the modules disconnected?

Yes	For the APIM, GO to AD21 For the BCM, GO to AD20 For the ICM, GO to AD22 For the PCM, GO to AD19

No	REPAIR the circuit in question. CONNECT all modules.

AD12 CHECK FOR RESTORED COMMUNICATION WITH THE PCM (POWERTRAIN CONTROL MODULE) DISABLED

NOTE: Establish an IDS session prior to disabling the PCM in this test step. If the PCM has failed communication during multiple attempts to identify the vehicle, first identify the vehicle manually by entering a PCM part number, calibration number or tear tag when prompted by IDS. When a vehicle is manually identified by a PCM part number, calibration number or tear tag, the IDS does not automatically run a network test. Manually select and run the network test. When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BJB fuse 83 (20A).

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuses. GO to Pinpoint Test A

No	INSTALL the removed fuses. GO to AD13

AD13 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 13 (7.5A) and fuse 15 (10A).

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuses. GO to Pinpoint Test AC

No	INSTALL the removed fuses. GO to AD14

AD14 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE BCM (BODY CONTROL MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 18 (5A) to disable the BCM.

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN1 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test I

No	INSTALL the removed fuse. GO to AD15

AD15 VERIFY VEHICLE EQUIPMENT - APIM (SYNC MODULE) OR ICM (INFORMATION CENTER MODULE)

Inspect the vehicle for an APIM or ICM.

Is the vehicle equipped with an APIM or ICM?

Yes	GO to AD16

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AD16 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE APIM (SYNC MODULE) AND ICM (INFORMATION CENTER MODULE) (IF EQUIPPED) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 32 (10A).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN1 modules pass the network test?

Yes	INSTALL the removed fuse. If equipped with an ICM, GO to AD17 If not equipped with an ICM, GO to Pinpoint Test O

No	INSTALL the removed fuse. The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AD17 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE ICM (INFORMATION CENTER MODULE) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: ICM C2114 .

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN1 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test H

No	INSTALL the removed fuse. The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AD18 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

Ignition OFF.

Disconnect and inspect the GWM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AD19 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the PCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.3L, REFER to: Powertrain Control Module (PCM) . For 3.7L, REFER to: Powertrain Control Module (PCM) . For 5.0L, REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

AD20 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the BCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AD21 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AD22 CHECK FOR CORRECT ICM (INFORMATION CENTER MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the ICM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ICM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ICM. REFER to: Information Center Module (ICM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AE : NO HIGH SPEED CONTROLLER AREA NETWORK 2 (HS-CAN2) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The HS-CAN2 modules communicate with the diagnostic scan tool directly through the DLC circuits.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- ABS module

- CCM (if equipped)
- GWM
- HUD module (if equipped)
- OCSM
- PSCM
- SCCM
- RCM
- VDM (if equipped)

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AE : NO HIGH SPEED CONTROLLER AREA NETWORK 2 (HS-CAN2) COMMUNICATION, ALL MODULES ARE NOT RESPONDING > PINPOINT TEST AE : NO HIGH SPEED CONTROLLER AREA NETWORK 2 (HS-CAN2) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.

AE1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

Ignition OFF.

Disconnect the diagnostic scan tool cable from the DLC.

Inspect the DLC pins 3 and 11 for damage.

Are DLC pins 3 and 11 OK?

Yes	GO to AE2

No	REPAIR the DLC as necessary.

AE2 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTANCE

Disconnect negative battery cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C251-3	Ω	C251-11

Is the resistance between 54 and 66 ohms?

Yes	GO to AE3

No	GO to AE5

AE3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	Ground
C251-11	Ω	Ground

Are the resistances greater than 1, 000 ohms?

Yes	GO to AE4

No	GO to AE11

AE4 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TO VOLTAGE

Connect negative battery cable.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3		Ground
C251-11		Ground

Is the voltage greater than 6 volts on either circuit?

Yes	REPAIR the circuit in question.

No	GO to AE12

AE5 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION

RESISTOR

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 108 and 132 ohms?

Yes	GO to AE6

No	GO to AE8

AE6 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTOR WITH THE GWM (GATEWAY MODULE A) DISCONNECTED

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 108 and 132 ohms?

Yes	GO to AE7

No	GO to AE22

AE7 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE SCCM (STEERING COLUMN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

Disconnect: SCCM C226A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-3	Ω	C251-3
C226A-4	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to AE28

No	REPAIR the circuit in question.

AE8 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance less than 3 ohms?

Yes	GO to AE10

No	GO to AE9

AE9 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance greater than 10, 000 ohms?

Yes	REPAIR the DLC or REPAIR the circuit in question.

No	A capacitor internal to a module can still be draining, causing irregular resistance readings. WAIT 5 minutes. REPEAT the pinpoint test. If the concern is still present, REPAIR the circuit.

AE10 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TOGETHER WITH THE MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Disconnect modules one at a time until the resistance is greater than 3 ohms.

ABS module C135

CCM C1582

HUD module C2395

OCSM C3043

PSCM C1463A

RCM C310B

SCCM C226A

VDM C4396

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the ABS module, GO to AE21 For the CCM, GO to AE23 For the HUD module, GO to AE24 For the OCSM, GO to AE26 For the PSCM, GO to AE25 For the RCM, GO to AE27 For the SCCM, GO to AE28 For the VDM, GO to AE29

No	REPAIR the circuits.

AE11 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	Ground
C251-11	Ω	Ground

Disconnect modules one at a time until the resistance to ground is greater than 1, 000 ohms.

ABS module C135

CCM C1582

HUD module C2395

OCSM C3043

PSCM C1463A

RCM C310B

SCCM C226A

VDM C4396

Did the resistance change to greater than 1, 000 ohms with one of the modules disconnected?

Yes	For the ABS module, GO to AE21 For the CCM, GO to AE23 For the HUD module, GO to AE24 For the OCSM, GO to AE26 For the PSCM, GO to AE25 For the RCM, GO to AE27 For the SCCM, GO to AE28 For the VDM, GO to AE29

No	REPAIR the circuit in question. CONNECT all modules.

AE12 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) AND THE SCCM (STEERING COLUMN CONTROL MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 13 (7.5A).

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to AE13

No	INSTALL the removed fuse. GO to AE14

AE13 CHECK FOR RESTORED COMMUNICATION WITH THE SCCM (STEERING COLUMN CONTROL MODULE) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: SCCM C226A .

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	CONNECT the SCCM. GO to Pinpoint Test F

No	GO to Pinpoint Test AC

AE14 CHECK FOR RESTORED COMMUNICATION WITH THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BJB fuses 5 (20A), 28 (30A) and 62 (5A).

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuses. GO to Pinpoint Test B

No	INSTALL the removed fuses. GO to AE15

AE15 VERIFY VEHICLE EQUIPMENT - ADAPTIVE CRUISE CONTROL OR VEHICLE DYNAMICS SYSTEM

Inspect the vehicle for an adaptive cruise control system or a vehicle dynamics system.

Is the vehicle equipped with adaptive cruise control or vehicle dynamics?

Yes	GO to AE16

No	GO to AE18

AE16 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE CCM (CRUISE CONTROL MODULE), HUD (HEAD UP DISPLAY) MODULE OR VDM (VEHICLE DYNAMICS CONTROL MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BJB fuse 66 (5A) to disable the HUD module and CCM (if equipped).

Disconnect: BJB fuse 66 (5A) and BCM fuse 25 (30A) to disable the VDM (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuse. GO to AE17

No	INSTALL the removed fuse. GO to AE18

AE17 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE HEAD UP DISPLAY (HUD) MODULE AND VEHICLE DYNAMICS MODULE (VDM) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: HUD module C2395 (if equipped).

Using a diagnostic scan tool, perform the network test.

Disconnect: VDM C4396 (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	If communication was restored with the HUD disconnected, CONNECT the HUD module. GO to Pinpoint Test Z If communication was restored with the VDM disconnected, GO to Pinpoint Test C

No	CONNECT the modules. GO to Pinpoint Test Y

AE18 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE PSCM (POWER STEERING CONTROL MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: High Current BJB MEGA fuse 1 (125A) and BJB fuse 64 (5A) to disable the PSCM.

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuses. GO to Pinpoint Test R

No	INSTALL the removed fuses. GO to AE19

AE19 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE RCM (RESTRAINTS CONTROL MODULE) AND THE OCSM (OCCUPANT CLASSIFICATION SYSTEM MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 35 (5A) to disable the RCM and fuse 22 (5A) to disable the OCSM.

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuses. GO to AE20

No	INSTALL the removed fuses. The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE20 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE RCM (RESTRAINTS CONTROL MODULE) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: RCM C310B

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	CONNECT RCM C310B. GO to Pinpoint Test D

No	CONNECT RCM C310B. GO to Pinpoint Test E

AE21 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Ignition OFF.

Disconnect and inspect the ABS module connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ABS module connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE22 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

Ignition OFF.

Disconnect and inspect the GWM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE23 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the CCM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the CCM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise

	Control Module (CCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE24 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) MODULE OPERATION

Ignition OFF.

Disconnect and inspect the HUD module connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE25 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the PSCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PSCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS Symptom Chart.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE26 CHECK FOR CORRECT OCSM (OCCUPANT CLASSIFICATION SYSTEM MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the OCSM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the OCSM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new OCSM. REFER to: Occupant Classification System (OCS) Sensor .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE27 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the RCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the RCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE28 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the SCCM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AE29 CHECK FOR CORRECT VDM (VEHICLE DYNAMICS CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the VDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the VDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new VDM.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AF : NO HIGH SPEED CONTROLLER AREA NETWORK 3 (HS-CAN3) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

Diagnostic messages sent/received between the diagnostic scan tool and the HS-CAN3 modules are accessed through the HS-CAN2 circuits on the DLC.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- ACM
- APIM (if equipped)
- DSP (if equipped)
- FCDIM (if equipped)
- IPC
- GWM

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AF : NO HIGH SPEED CONTROLLER AREA NETWORK 3 (HS-CAN3)

COMMUNICATION, ALL MODULES ARE NOT RESPONDING > PINPOINT TEST AF : NO HIGH SPEED CONTROLLER AREA NETWORK 3 (HS-CAN3) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.

AF1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

Ignition OFF.

Disconnect the diagnostic scan tool cable from the DLC.

Inspect the DLC pins 3 and 11 for damage.

Are DLC pins 3 and 11 OK?

Yes	GO to AF2

No	REPAIR the DLC as necessary.

AF2 CHECK FOR HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) COMMUNICATION

Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to AF3

No	GO to Pinpoint Test AE

AF3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTANCE

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	C2431-15

Is the resistance between 108 and 132 ohms?

Yes	GO to AF4

No	GO to AF6

AF4 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	Ground
C2431-15	Ω	Ground

Are the resistances greater than 1, 000 ohms?

Yes	GO to AF5

No	GO to AF11

AF5 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	V	Ground
C2431-15	V	Ground

Are the voltages greater than 6 volts?

Yes	REPAIR the circuit in question.

No	GO to AF12

AF6 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTOR, COMPONENT SIDE

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead

C2431-16 (component side)	Ω	C2431-15 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to AF8

No	GO to AF7

AF7 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTOR, HARNESS SIDE

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	C2431-15

Is the resistance between 108 and 132 ohms?

Yes	GO to AF9

No	GO to AF25

AF8 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE IPC (INSTRUMENT PANEL CLUSTER) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: IPC C220 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-12	Ω	C2431-16
C220-13	Ω	C2431-15

Are the resistances less than 3 ohms?

Yes	GO to AF23

No	REPAIR the circuit in question.

AF9 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	C2431-15

Is the resistance less than 3 ohms?

Yes	GO to AF10

No	GO to AF12

AF10 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TOGETHER WITH THE MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	C2431-15

Disconnect modules one at a time until the resistance is greater than 3 ohms.

APIM (if equipped) C2383 or C2342 (touchscreen display)

ACM C240A

DSP C2470 (if equipped)

FCDIM C2123 (if equipped)

IPC C220

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the APIM, GO to AF20 For the ACM, GO to AF21 For the DSP, GO to AF22 For the FCDIM, GO to AF24 For the IPC, GO to AF23

No	REPAIR the circuits in question.

AF11 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-16	Ω	Ground
C2431-15	Ω	Ground

Disconnect modules one at a time until the resistance to ground is greater than 1, 000 ohms.

APIM (if equipped) C2383 or C2342 (touchscreen display)

ACM C240A

DSP C2470 (if equipped)

FCDIM C2123 (if equipped)

IPC C220

Are the resistances greater than 1, 000 ohms?

Yes	For the APIM, GO to AF20 For the ACM, GO to AF21 For the DSP, GO to AF22 For the FCDIM, GO to AF24 For the IPC, GO to AF23

No	REPAIR the circuit in question. CONNECT all modules.

AF12 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) AND IPC (INSTRUMENT PANEL CLUSTER) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 13 (7.5A).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the fuse. GO to AF13

No	INSTALL the fuse. GO to AF14

AF13 CHECK FOR RESTORED COMMUNICATION WITH THE IPC (INSTRUMENT PANEL CLUSTER) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: IPC C220 .

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	CONNECT the IPC. GO to Pinpoint Test G

No	CONNECT the IPC. GO to Pinpoint Test AC

AF14 VERIFY VEHICLE EQUIPMENT - APIM (SYNC MODULE) OR FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE)

Inspect the vehicle for an APIM or a FCDIM.

Is the vehicle equipped with an APIM or a FCDIM?

Yes	GO to AF15

No	GO to AF17

AF15 CHECK FOR RESTORED COMMUNICATION WITH THE APIM (SYNC MODULE) AND FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 32 (10A) to disable the APIM (if equipped) and FCDIM (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the removed fuse. If equipped with a 4.2-inch display and SYNC ®, GO to AF16 If equipped with a touchscreen display, GO to Pinpoint Test O If not equipped with a SYNC ® system, GO to Pinpoint Test L

No	INSTALL the removed fuse. GO to AF17

AF16 CHECK FOR RESTORED COMMUNICATION WITH THE APIM (SYNC MODULE) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 32 (10A).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test O

No	INSTALL the removed fuse. GO to AF17

AF17 CHECK FOR RESTORED COMMUNICATION WITH THE ACM (AUDIO FRONT CONTROL MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 33 (20A).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test M

No	INSTALL the removed fuse. GO to AF18

AF18 VERIFY VEHICLE EQUIPMENT - DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE)

Inspect the vehicle for a DSP.

Is the vehicle equipped with a DSP?

Yes	GO to AF19

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF19 CHECK FOR RESTORED COMMUNICATION WITH THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 27 (30A).

Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL removed fuses. GO to Pinpoint Test P

No	INSTALL removed fuses. The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF20 CHECK THE APIM (SYNC MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF21 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all the ACM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ACM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. For AM/FM/CD /SYNC, REFER to: Audio Front Control Module (ACM) . For touchscreen display, REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF22 CHECK THE DSP (AUDIO DIGITAL SIGNAL PROCESSING MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all the DSP connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DSP connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSP. REFER to: Audio Digital Signal Processing (DSP) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF23 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the IPC connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the IPC connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF24 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: INFORMATION AND ENTERTAINMENT SYSTEM - GENERAL INFORMATION - VEHICLES WITH TOUCHSCREEN DISPLAY .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF25 CHECK THE GWM (GATEWAY MODULE A) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the GWM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AG : NO MEDIUM SPEED CONTROLLER AREA NETWORK (MS-CAN) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

Diagnostic messages sent/received between the diagnostic scan tool and the MS-CAN modules are accessed through the HS-CAN2 circuits on the DLC.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- APIM (if equipped)
- Body Control Module B (BCMB)
- DDM
- DSM
- FCIM
- GPSM
- GWM

- Moveable Roof Control Module A (MRCMA) (if equipped)
- Moveable Roof Control Module B (MRCMB) (if equipped)
- PDM
- RTM
- SCME (if equipped)
- SODL (if equipped)
- SODR (if equipped)

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AG : NO MEDIUM SPEED CONTROLLER AREA NETWORK (MS-CAN) COMMUNICATION, ALL MODULES ARE NOT RESPONDING > PINPOINT TEST AG : NO MEDIUM SPEED CONTROLLER AREA NETWORK (MS-CAN) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.

AG1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

Ignition OFF.

Disconnect the diagnostic scan tool cable from the DLC.

Inspect the DLC pins 3 and 11 for damage.

Are DLC pins 3 and 11 OK?

Yes	GO to AG2

No	REPAIR the DLC as necessary.

AG2 CHECK FOR HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) COMMUNICATION

Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to AG3

No	GO to Pinpoint Test AE

AG3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTANCE

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	Ω	C2431-22

Is the resistance between 108 and 132 ohms?

Yes	GO to AG4

No	GO to AG6

AG4 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	Ω	Ground
C2431-22	Ω	Ground

Are the resistances greater than 1, 000 ohms?

Yes	GO to AG5

No	GO to AG11

AG5 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TO VOLTAGE

Connect the negative battery cable.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	V	Ground

C2431-22		Ground

Are the voltages greater than 6 volts?

Yes	REPAIR the circuit in question.

No	GO to AG12

AG6 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTOR, COMPONENT SIDE

Disconnect: GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23 (component side)	Ω	C2431-22 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to AG8

No	GO to AG7

AG7 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTOR, HARNESS SIDE

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	Ω	C2431-22

Is the resistance between 108 and 132 ohms?

Yes	GO to AG9

No	GO to AG31

AG8 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE FCIM AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

Disconnect: FCIM C2402A

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-17	Ω	C2431-23
C2402A-18	Ω	C2431-22

Are the resistances less than 3 ohms?

Yes	GO to AG30

No	REPAIR the circuit in question.

AG9 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	Ω	C2431-22

Is the resistance less than 3 ohms?

Yes	GO to AG10

No	GO to AG12

AG10 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TOGETHER WITH MODULES DISCONNECTED

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-23	Ω	C2431-22

Disconnect modules one at a time until the resistance is greater than 3 ohms.

APIM (if equipped) C2383 or C2342 (touchscreen display)

Body Control Module B (BCMB) C4368A

DDM C501A

SODL C4369 (if equipped)

SODR C4370 (if equipped)

Did the resistance change to greater than 1, 000 ohms with one of the modules disconnected?

Yes	For the APIM, GO to AG28 For the Body Control Module (BCMB), GO to AG29 For the DDM, GO to AG32 For the DSM, GO to AG34 For the FCIM, GO to AG30 For the GPSM, GO to AG33 For the Moveable Roof Control Module A (MRCMA), GO to AG35 For the Moveable Roof Control Module B (MRCMB), GO to AG36 For the PDM, GO to AG37 For the RTM, GO to AG38 For the SCME, GO to AG39 For the SODL, GO to AG40 For the SODR, GO to AG41

No	REPAIR the circuit in question.

AG12 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) DISABLED

NOTE: When re-running the network test, close the Network Test application first or the screen display reverts back to the prior run Network Test results.

Disconnect BCM fuse 13 (7.5A).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test AC

No	INSTALL the removed fuse. GO to AG13

AG13 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE FCIM (FRONT CONTROLS INTERFACE MODULE) DISABLED

Disconnect: BCM fuse 12 (7.5A) to disable the FCIM.

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test K

No	INSTALL the removed fuse. GO to AG14

AG14 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE BODY CONTROL MODULE B (BCMB) DISABLED

Disconnect: BCM fuses 28 (20A) and 36 (15A) to disable the Body Control Module B (BCMB).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test J

No	INSTALL the removed fuse. GO to AG15

AG15 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE DDM (DRIVER DOOR MODULE) AND PDM (PASSENGER DOOR MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disable modules one at a time until other MS-CAN modules pass the network test. Skip to the end once network operation is restored.

Disconnect: BJB fuse 11 (30A) to disable the DDM.

Using a diagnostic scan tool, perform a network test.

Disconnect:BCM fuse 26 (30A) to disable the PDM.

Using a diagnostic scan tool, perform a network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuses. For restored communication with the DDM disabled, GO to Pinpoint Test U For restored communication with the PDM disabled, GO to Pinpoint Test V

No	INSTALL the removed fuses. GO to AG16

AG16 VERIFY VEHICLE EQUIPMENT - APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE)

Inspect the vehicle for an APIM or GPSM.

Is the vehicle equipped with an APIM or GPSM?

Yes	GO to AG17

No	GO to AG19

AG17 CHECK FOR RESTORED COMMUNICATION WITH THE GPSM (GLOBAL POSITIONING SYSTEM MODULE), APIM (SYNC MODULE) AND RTM (RADIO TRANSCEIVER MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 32 (10A) to disable the GPSM, APIM and RTM (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to AG18

No	INSTALL the removed fuse. GO to AG19

AG18 CHECK FOR RESTORED COMMUNICATION WITH THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) AND RTM (RADIO TRANSCEIVER MODULE) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: GPSM C2398 (if equipped).

Using a diagnostic scan tool, perform the network test.

Disconnect: RTM C4458 (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	CONNECT the module. For restored communication with the GPSM disabled, GO to Pinpoint Test N For restored communication with the RTM disabled, GO to Pinpoint Test Q

No	CONNECT the module. GO to Pinpoint Test O

AG19 VERIFY VEHICLE EQUIPMENT - DSM (DRIVER FRONT SEAT MODULE)

Inspect the vehicle for an DSM.

Is the vehicle equipped with a DSM?

Yes	GO to AG20

No	GO to AG21

AG20 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE DSM (DRIVER FRONT SEAT MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BJB fuse 12 (30A) and BCM fuse 2 (7.5A) to disable the DSM (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test S

No	GO to AG21

AG21 VERIFY VEHICLE EQUIPMENT - SCME (FRONT SEAT CLIMATE CONTROL MODULE)

Inspect the vehicle for a SCME.

Is the vehicle equipped with a SCME?

Yes	GO to AG22

No	GO to AG23

AG22 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BJB fuse 14 (30A) to disable the SCME (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test T

No	GO to AG23

AG23 VERIFY VEHICLE EQUIPMENT - CONVERTIBLE TOP

Inspect the vehicle for a convertible top.

Is the vehicle equipped with a convertible top?

Yes	GO to AG24

No	GO to AG25

AG24 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) AND MOVEABLE ROOF CONTROL MODULE B (MRCMB) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BCM fuse 17 (20A) to disable the Moveable Roof Control Module A (MRCMA) (if equipped).

Using a diagnostic scan tool, perform the network test.

Disconnect: BCM fuse 15 (20A) to disable the Moveable Roof Control Module B (MRCMB) (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse.For restored communication with the Moveable Roof Control Module A (MRCMA) disabled, GO to Pinpoint Test AA For restored communication with the Moveable Roof Control Module B (MRCMB) disabled, GO to Pinpoint Test AB

No	GO to AG25

AG25 VERIFY VEHICLE EQUIPMENT - SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH)

Inspect the vehicle for a SODL and SODR.

Is the vehicle equipped with a SODL and SODR?

Yes	GO to AG26

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG26 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) DISABLED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: BJB fuse 66 (5A) to disable the SODL and SODR (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to AG27

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG27 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) DISCONNECTED

NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.

Disconnect: SODR C4370 (if equipped).

Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	CONNECT the SODR. GO to Pinpoint Test X

No	CONNECT the SODR. GO to Pinpoint Test W

AG28 CHECK THE APIM (SYNC MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG29 CHECK THE BODY CONTROL MODULE B (BCMB) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the Body Control Module B (BCMB) connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Body Control Module B (BCMB) connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Body Control Module B (BCMB). REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG30 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all the FCIM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS or any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. For AM/FM/CD/SYNC, REFER to: Front Controls Interface Module (FCIM) . For touchscreen display, REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG31 CHECK THE GWM (GATEWAY MODULE A) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the GWM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

AG32 CHECK THE DDM (DRIVER DOOR MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all the DDM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG33 CHECK THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the GPSM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GPSM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. For AM/FM/CD /SYNC, REFER to: Global Positioning System Module (GPSM) . For touchscreen display, REFER to: Global Positioning System Module (GPSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG34 CHECK THE DSM (DRIVER FRONT SEAT MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all the DSM module connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DSM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM. REFER to: Driver Front Seat Module (DSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG35 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all Moveable Roof Control Module A (MRCMA) connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Moveable Roof Control Module A (MRCMA) connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Moveable Roof Control Module A (MRCMA).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG36 CHECK THE MOVEABLE ROOF CONTROL MODULE B (MRCMB) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect all Moveable Roof Control Module B (MRCMB) connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the Moveable Roof Control Module B (MRCMB) connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Moveable Roof Control Module B (MRCMB).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG37 CHECK THE PDM (PASSENGER DOOR MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the PDM connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG38 CHECK THE RTM (RADIO TRANSCEIVER MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the RTM connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the RTM connector and related in-line connectors. Make sure they seats and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG39 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the SCME connectors and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module [SCME] .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG40 CHECK THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG41 CHECK THE SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) FOR CORRECT OPERATION

Ignition OFF.

Disconnect and inspect the SODR connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AH : NO POWER TO THE DATA LINK CONNECTOR (DLC)

Normal Operation and Fault Conditions

The diagnostic scan tool is connected to the DLC to communicate with the HS-CAN1 and HS-CAN2. The GWM translates diagnostic messages for the HS-CAN3 and the MS-CAN from the HS-CAN2. A loss of ground or poor ground at the DLC can result in network faults while the diagnostic scan tool is connected.

Possible Sources

- Fuse

- Wiring, terminals or connector
- DLC
- Diagnostic scan tool

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 13 (7.5A) and fuse 15 (10A) are OK.

DIAGNOSIS AND TESTING > COMMUNICATIONS NETWORK > PINPOINT TESTS > PINPOINT TEST AH : NO POWER TO THE DATA LINK CONNECTOR (DLC) > PINPOINT TEST AH : NO POWER TO THE DATA LINK CONNECTOR (DLC)

AH1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

Ignition OFF.

Disconnect the diagnostic scan tool cable from the DLC.

Inspect DLC pins 4, 5 and 16 for damage.

Are DLC pins 4, 5 and 16 OK?

Yes	GO to AH2

No	REPAIR the DLC as necessary.

AH2 CHECK THE DLC (DATA LINK CONNECTOR) VOLTAGE SUPPLY FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-16		Ground

Is the voltage greater than 11 volts?

Yes	GO to AH4

No	GO to AH3

AH3 CHECK THE GWM (GATEWAY MODULE A) VOLTAGE SUPPLY FOR AN OPEN

Disconnect GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-13		Ground
C2431-24		Ground

Is the voltage greater than 11 volts?

Yes	GO to AH5

No	VERIFY the BCM fuse 13 (7.5A) or fuse 15 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

AH4 CHECK THE DLC (DATA LINK CONNECTOR) GROUND CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-4	Ω	Ground
C251-5	Ω	Ground

Are the resistances less than 3 ohms?

Yes	REPAIR the diagnostic scan tool.

No	GO to AH5

AH5 CHECK THE GWM (GATEWAY MODULE A) GROUND CIRCUITS FOR AN OPEN

Disconnect GWM C2431 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2431-1	Ω	Ground
C2431-14	Ω	Ground

Are the resistances less than 3 ohms?

Yes	REPAIR the diagnostic scan tool.

No	GO to AH6

AH6 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

Ignition OFF.

Disconnect and inspect the GWM connector and related in-line connectors

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

GENERAL PROCEDURES > NO COMMUNICATION BETWEEN THE INTEGRATED DIAGNOSTIC SYSTEM (IDS) AND THE VEHICLE

Configuration

1.

WARNING: Before beginning any service procedure in this article, REFER to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

2.

Establish a diagnostic scan tool session.

3.

NOTE: For vehicles with push-button start, refer to Push Button Ignition Switch in STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS .

Turn ignition to RUN.

4.

The diagnostic scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the diagnostic scan tool then attempts to communicate with all other modules on the vehicle.

5.

If an IDS session cannot be established with the vehicle, IDS may state "No communication can be established with the Powertrain Control Module (PCM)."

6.

Choose "NO" when the scan tool prompts whether or not to retry communication.

7.

Enter a PCM part number, tear tag or calibration number to identify the vehicle and start a session. The PCM part number and 4-character tear tag number are printed on the PCM label. If the PCM part number or tear tag number cannot be found, double-click on the Vehicle Identification Number (VIN) in the top LH corner of the PTS screen. The tear tag number is listed on the Detailed Vehicle Specification.

8.

If the diagnostic scan tool cannot communicate with the vehicle after manually entering the PCM part number, diagnose the PCM does not respond to the scan tool.

REMOVAL AND INSTALLATION > GATEWAY MODULE A (GWM) > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

Using a diagnostic scan tool, begin the PMI process for the GWM following the on-screen instructions.

2.

Remove the nuts and the GWM.

Disconnect the electrical connector.

Torque

: 89 lb.in (10 Nm)

REMOVAL AND INSTALLATION > GATEWAY MODULE A (GWM) > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Using a diagnostic scan tool, complete the PMI process for the GWM following the on-screen instructions.

Service Manual: MODULE CONFIGURATION

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > PROGRAMMABLE MODULE INSTALLATION (PMI)

Programmable Module Installation (PMI) is a diagnostic scan tool process which configures settings in a new module. Data used for the Programmable Module Installation (PMI) process is automatically downloaded from the original module and stored when a diagnostic scan tool session is started. If this data cannot be retrieved from the module being replaced, the diagnostic scan tool may prompt for As-Built data entry or display a list of parameter values that need to be manually selected. Some modules are reprogrammed during Programmable Module Installation (PMI) when a strategy/calibration update is available.

It is important that the diagnostic scan tool identifies the vehicle and obtains configuration data prior to removing any modules. The new module must be able to communicate with the diagnostic scan tool in order to carry out Programmable Module Installation (PMI).

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > MODULE PROGRAMMING

Module reprogramming (also referred to as "flashing") is a diagnostic scan tool process which updates the strategy/calibration in a module. Reprogramming a module with the same level of software does not improve module operation or repair a hardware failure. Module reprogramming is automatically carried out during Programmable Module Installation (PMI) when a later strategy/calibration is available.

Limit module reprogramming to circumstances where a published TSB procedure recommends doing so.

A module cannot communicate with other modules on the communication network while being reprogrammed. After the reprogramming process, clear any network communication Diagnostic Trouble Codes (DTCs) which may have been set in other modules.

Some modules are reprogrammed in coordination with other modules. Follow the IDS key cycling instructions carefully to avoid reprogramming errors, including failure of programming one or more of the modules.

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > PROGRAMMABLE PARAMETERS

Programmable parameters are customer preference items that may be modified by the dealer via the

diagnostic scan tool or in some cases, modified by the customer following a procedure listed in the Owner's Literature. While many configuration options may exist for a module, only a few of these options are programmable parameters.

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ADAPTIVE LEARNING AND CALIBRATION

Some modules require a separate learning procedure be carried out if replaced as part of a repair procedure. For adaptive learning and calibration instructions, refer to the appropriate specific module removal and installation procedures.

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > VEHICLE IDENTIFICATION (VID) BLOCK

Vehicle identification block commonly stores powertrain configuration items such as VIN, tire size, axle ratio, and whether or not the vehicle is equipped with cruise control.

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > TRANSMISSION IDENTIFICATION

The solenoid body has a unique strategy data file that must be downloaded to the PCM. There is a 12-digit solenoid body identification and a 13-digit solenoid body strategy for each solenoid body. When a new solenoid body or transmission is installed, the diagnostic scan tool must be used to retrieve the solenoid body strategy data file and download it into the PCM. If the PCM is replaced and the PCM data cannot be inhaled or exhaled, the solenoid body identification and solenoid body strategy must be downloaded into the PCM

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM OPERATION AND COMPONENT DESCRIPTION > AS-BUILT DATA

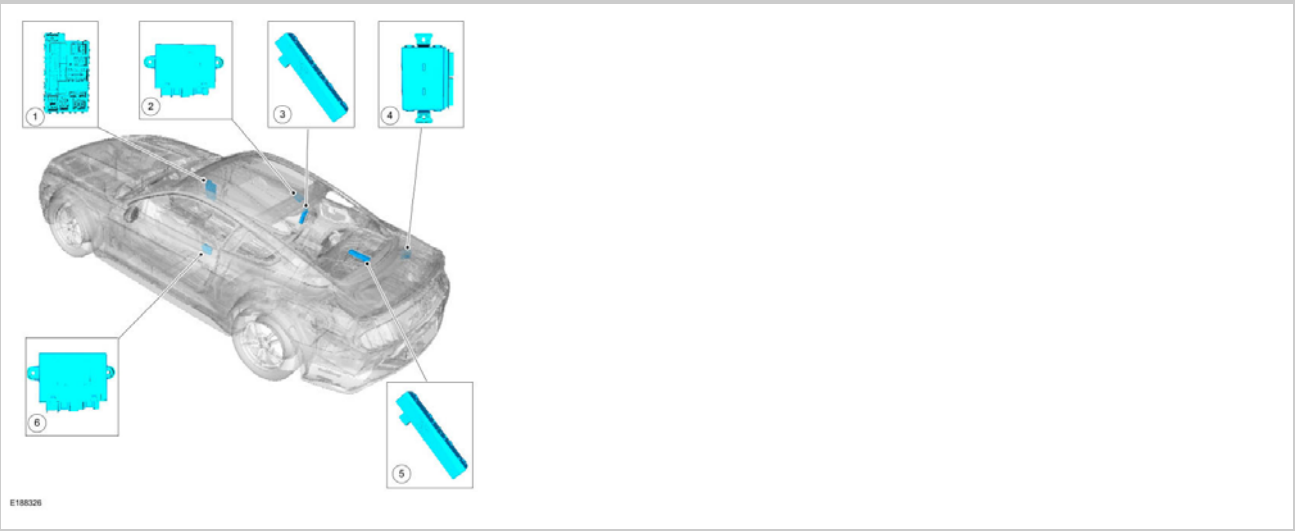
As-Built data is a VIN-specific module configuration record. During vehicle build, the configuration from all modules is downloaded and stored in the As-Built database. As-Built data does not reflect customer preference items that have been changed from the default state. These items need to be changed using programmable parameters after the module is configured.

It is not necessary to obtain As-Built data unless directed to do so by the diagnostic scan tool. This data may be accessed from the technician service publication web site.

DESCRIPTION AND OPERATION > MODULE CONFIGURATION - SYSTEM

OPERATION AND COMPONENT DESCRIPTION > MODULE CONFIGURATION AND PARAMETER CHART

The chart describes specific module configuration information:



Module Name	Module Address	Programmable Module Installation (PMI) Available	Reprogram/Flash Capable	Requires Adaptive Learning or Calibration	Available Progammable Parameters
APIM	7D0	Yes	Yes	No	None
ABS module	760	Yes	Yes	IVD initialization	Line Lock feature enabled

6	DDM

DESCRIPTION AND OPERATION > MODULE CONTROLLED FUNCTIONS - OVERVIEW > BODY CONTROL MODULE (BCM)

The BCM controls the following:

- Battery saver function
- Brake shift interlock
- Delayed accessory function
- Dimmable backlighting
- Exterior lighting
- Heated rear windows
- Heated exterior mirrors
- Horn

- Ignition state messaging
- Interior lighting
- PATS
- Perimeter alarm
- Post crash alert function
- Power door locks
- RKE system
- TPMS
- Transport mode function
- Wipers and washers

DESCRIPTION AND OPERATION > MODULE CONTROLLED FUNCTIONS - OVERVIEW > BODY CONTROL MODULE B (BCM-B)

The Body Control Module B (BCM-B) controls the following:

- Ambient lighting
- Convertible top
- Window function inhibit (convertible)
- Luggage compartment lid release inhibit (convertible)
- Reverse lamps
- Rear stop/turn lamps

DESCRIPTION AND OPERATION > MODULE CONTROLLED FUNCTIONS - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > MODULE CONTROLLED FUNCTIONS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > FIELD EFFECT TRANSISTOR (FET) PROTECTION

The BCM and BCMB utilize an Field Effect Transistor (FET) protective circuit strategy for many of its outputs, for example, lamp output circuits. Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault event is detected.

A Field Effect Transistor (FET) is a type of transistor that the control module software uses to control and monitor current flow on module outputs. The Field Effect Transistor (FET) protection strategy prevents module damage in the event of excessive current flow.

Output loads (current level) are monitored for excessive current draw (typically short circuits). When a fault event is detected the Field Effect Transistor (FET) turns off and a short circuit DTC sets. The module resets the Field Effect Transistor (FET) protection and allows the circuit to function when the fault is corrected or the ignition state is cycled off and then back on.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each Field Effect Transistor (FET) protected circuit has 3 predefined levels of short circuit tolerance based on a module lifetime level of fault events based upon the durability of the Field Effect Transistor (FET). If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each level is reached, the DTC associated with the short circuit sets along with DTC U1000:00. These Diagnostic Trouble Codes (DTCs) can be cleared using the module on-demand self-test, then the Clear DTC operation on the scan tool (if the on-demand test shows the fault corrected). The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then Diagnostic Trouble Codes (DTCs) U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC **U3000:49 cannot be cleared** and the module **must** be replaced after the repair.

DESCRIPTION AND OPERATION > MODULE CONTROLLED FUNCTIONS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BODY CONTROL MODULE (BCM)

The BCM controls various systems by monitoring inputs from switches, sensors and messages sent from other modules on the Medium Speed Controller Area Network (MS-CAN). Based on the inputs received, the BCM activates outputs. For example, the BCM monitors the headlamp switch position. Based on this input, the BCM may provide voltage to the exterior lamps. For a list of BCM controlled functions, Refer to: Module Controlled Functions - Overview .

Battery Saver

The battery saver feature is used to conserve battery voltage. The BCM provides automatic shut-off of the interior lamps after a time-out period when the ignition is off.

Refer to: Interior Lighting - System Operation and Component Description .

Battery Load Shed

The BCM monitors the battery state of charge in order to save the remaining battery charge when necessary. For more information, Refer to: Charging System - System Operation and Component Description .

Post Crash Alert Function

The post crash alert is a function controlled by the BCM. If the RCM determines an impact of enough severity has occurred (the airbags may or may not be deployed), the post crash alert function activates.

The post crash alert function:

- sounds the horn.

- turns on the hazard lights.
- turns on the interior lights.
- unlocks the doors.

The post crash alert function can be turned off by:

- pressing the hazard flasher lamp switch (which may need to be pressed twice).
- pressing the transmitter unlock button.
- pressing the RKE transmitter PANIC button.
- cycling the ignition switch (RUN-OFF-RUN-OFF-RUN).
- opening the driver door.

Factory-Transport Mode

During vehicle build, some modules (such as the IPC and the BCM) are set to factory mode. When the vehicle build is complete, the vehicle is set to transport mode.

Transport mode is used to reduce the drain on the battery during longer periods when the vehicle is not used. Various system functions can be altered or disabled when in the transport mode. While in transport mode, the IPC displays TRANSPORT MODE in the message center. Transport mode can be disabled and placed into normal operation mode. Refer to: Transport and Factory Mode Deactivation.

Car Configuration Parameters

The parameters are set in the BCM. The parameters are also set in the IPC as backup data for service, in case online As-Built data is not available. For more information, Refer to: MODULE CONFIGURATION .

Steering Column Lock Module

The steering column lock module locks and unlocks the steering column based on commands received from the BCM. For more information, Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

When the steering column lock module is replaced, the BCM **must** be configured/trained to the new steering column lock module for the steering column lock module to operate correctly. Refer to: Anti-Theft Security Access .

BCMB

The BCMB controls various systems by monitoring inputs from switches, sensors and messages sent from other modules on the MS-CAN. Based on the inputs received, the BCMB activates outputs. For example, the BCM-B monitors the stoplamp switch and messages received from the BCM regarding ignition state and door ajar status. Based on this input, the BCMB may provide voltage to the stoplamps or activate the ambient lighting. For a list of BCMB controlled functions, Refer to: Module Controlled Functions - Overview .

Component Description

BCM

The BCM is a multifunction module that requires a PMI when replaced.

Refer to: MODULE CONFIGURATION .

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > DTC CHART: BODY CONTROL MODULE (BCM)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

> *NOTE: Diagnostic Trouble Codes (DTCs) which are not listed in the DTC charts are often retrieved as a result of incorrect repair procedures. Before attempting any repairs for unlisted Diagnostic Trouble Codes (DTCs):*

- repair all other Diagnostic Trouble Codes (DTCs).
- if no other Diagnostic Trouble Codes (DTCs) are retrieved, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test.
- if the unlisted Diagnostic Trouble Codes (DTCs) return, VERIFY that the correct part number module is installed for the vehicle and if correct, install As-Built data from PTS following the diagnostic scan tool instructions under Module Programming > As-Built.

U3013:16	Control Module Input Power "C": Circuit Voltage Below Threshold	GO to Pinpoint Test K
U3013:17	Control Module Input Power "C": Circuit Voltage Above Threshold	GO to Pinpoint Test L
U3014:16	Control Module Input Power "D": Circuit Voltage Below Threshold	GO to Pinpoint Test K
U3014:17	Control Module Input Power "D": Circuit Voltage Above Threshold	GO to Pinpoint Test L

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > SYMPTOM CHART

Symptom Chart: Multifunction Electronic Modules

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Condition	Possible Sources	Action
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST A : U0100:87

Normal Operation and Fault Conditions

The BCM communicates with the PCM over the HS-CAN. REFER to: MODULE COMMUNICATIONS

NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:87	Lost Communication With ECM/PCM "A": Missing Message	A continuous memory DTC that sets in the BCM if powertrain data messages received from the PCM over the HS-CAN are missing.

Possible Sources

- Communication network concern
- Charging system concern
- PCM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST A : U0100:87 > PINPOINT TEST A : U0100:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

A1 VERIFY THE DIAGNOSTIC SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

Ignition ON.

Connect the diagnostic scan tool.

Check that a vehicle session can be established using the diagnostic scan tool.

Can a vehicle session be established?

Yes	GO to A2

No	DIAGNOSE the PCM not communicating with the diagnostic scan tool. REFER to: MODULE COMMUNICATIONS NETWORK .

A2 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:87 retrieved again?

Yes	GO to A3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	2.3L REFER to: Electronic Engine Controls . 3.7L REFER to: Electronic Engine Controls . 5.0L REFER to: Electronic Engine Controls .

No	GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the BCM DTC Chart .

No	GO to A5

A5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100 set in any other module?

Yes	GO to A6

No	GO to A7

A6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. 2.3L REFER to: Powertrain Control Module (PCM) . 3.7L REFER to: Powertrain Control Module (PCM) . 5.0L REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST B : U0142:87

Normal Operation and Fault Conditions

The BCM communicates with the BCMB through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0142:87	Lost Communication With Body Control Module "B": Missing Message	A continuous memory DTC that sets in the BCM if data messages received from the BCMB through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- BCMB
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST B : U0142:87 > PINPOINT TEST B : U0142:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

B1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to B2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

B2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the BCMB pass the network test?

Yes	GO to B3

No	DIAGNOSE no communication with the TCM. REFER to: MODULE COMMUNICATIONS NETWORK .

B3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to B4

B4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCMB (BODY CONTROL MODULE B) SELF-TEST

Using a diagnostic scan tool, perform the BCMB self-test.

Is there any DTC recorded?

Yes	REFER to: Body Control Module B (BCMB) .

No	GO to B5

B5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0142:87 still present?

Yes	GO to B6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

B6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0142 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0142 set in any other module?

Yes	GO to B7

No	GO to B8

B7 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) OPERATION

Disconnect and inspect the BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Connect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST C : U0121:87

Normal Operation and Fault Conditions

The BCM communicates with the ABS module through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:87	Lost Communication With Anti Lock Brake System (ABS) Control Module: Missing Message	A continuous memory DTC that sets in the BCM if ABS messages received from the ABS module through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- ABS module
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST C : U0121:87 > PINPOINT TEST C : U0121:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

C1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to C2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

C2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the ABS module pass the network test?

Yes	GO to C3

No	DIAGNOSE no communication with the ABS module. DIAGNOSE the PCM not communicating with the diagnostic scan tool. REFER to: MODULE COMMUNICATIONS NETWORK .

C3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to C4

C4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

Using a diagnostic scan tool, perform the ABS module self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control .

No	GO to C5

C5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121:87 still present?

Yes	GO to C6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

C6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121 set in any other module?

Yes	GO to C7

No	GO to C8

C7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Disconnect and inspect the ABS module connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ABS module connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST D : U0131:87

Normal Operation and Fault Conditions

The BCM communicates with the PSCM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0131:87	Lost Communication With Power Steering Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages received from the PSCM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- PSCM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST D : U0131:87 > PINPOINT TEST D : U0131:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

D1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to D2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

D2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the TBM pass the network test?

Yes	GO to D3

No	DIAGNOSE no communication with the PSCM. REFER to: MODULE COMMUNICATIONS NETWORK .

D3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC

TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to D4

D4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the PSCM self-test.

Is there any DTC recorded?

Yes	REFER to: POWER STEERING .

No	GO to D5

D5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0131:87 still present?

Yes	GO to D6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0131 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0131 set in any other module?

Yes	GO to D7

No	GO to D8

D7 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

Disconnect and inspect the PSCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PSCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST E : U0151:87

Normal Operation and Fault Conditions

The BCM communicates with the RCM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:87	Lost Communication With Restraints Control Module: Missing Message	A continuous memory DTC that sets in the BCM if SRS messages received from the RCM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- RCM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST E : U0151:87 > PINPOINT TEST E : U0151:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

E1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to E2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

E2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to E3

No	DIAGNOSE no communication with the RCM. REFER to: MODULE COMMUNICATIONS NETWORK .

E3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to E4

E4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the RCM self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Airbag Supplemental Restraint System (SRS) .

No	GO to E5

E5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:87 still present?

Yes	GO to E6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151 set in any other module?

Yes	GO to E7

No	GO to E8

E7 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

Disconnect and inspect the RCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the RCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

E8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST F : U0155:87

Normal Operation and Fault Conditions

The BCM communicates with the IPC over the MS-CAN through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:87	Lost Communication With Instrument Panel Cluster (IPC) Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages received from the IPC through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- IPC

- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST F : U0155:87 > PINPOINT TEST F : U0155:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

F1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to F2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

F2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the IPC pass the network test?

Yes	GO to F3

No	DIAGNOSE no communication with the IPC. REFER to: MODULE COMMUNICATIONS NETWORK .

F3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to F4

F4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes .

No	GO to F5

F5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:87 still present?

Yes	GO to F6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155 set in any other module?

Yes	GO to F7

No	GO to F8

F7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

Disconnect and inspect the IPC connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the IPC connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

F8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to G4

G4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ACM (AUDIO FRONT CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the ACM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Vehicles With: AM/FM/CD/SYNC REFER to: Information and Entertainment System . Vehicles With: Touchscreen Display, REFER to: Information and Entertainment System .

No	GO to G5

G5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184:87 still present?

Yes	GO to G6

No	The system is operating correctly at this time. The DTC may have been set due to high

	network traffic or an intermittent fault condition.

G6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0184 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184 set in any other module?

Yes	GO to G7

No	GO to G8

G7 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

Disconnect and inspect the ACM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ACM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. Vehicles With: AM/FM/CD/SYNC, REFER to: Audio Front Control Module (ACM) . Vehicles With: Touchscreen Display, REFER to: Audio Front Control Module (ACM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST H : U0199:87

Normal Operation and Fault Conditions

The BCM communicates with the DDM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0199:87	Lost Communication With "Door Control Module A": Missing Message	A continuous memory DTC that sets in the BCM if messages received from the DDM over the MS-CAN through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- DDM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST H : U0199:87 > PINPOINT TEST H : U0199:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

H1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to H2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

H2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the DDM pass the network test?

Yes	GO to H3

No	DIAGNOSE no communication with the DDM. REFER to: MODULE COMMUNICATIONS NETWORK .

H3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to H4

H4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE TRM (TRAILER MODULE) SELF-TEST

Using a diagnostic scan tool, perform the DDM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Locks, Latches and Entry Systems .

No	GO to H5

H5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0199:87 still present?

Yes	GO to H6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

H6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0199 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0199 set in any other module?

Yes	GO to H7

No	GO to H8

H7 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect the DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

H8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST I : U0200:87

Normal Operation and Fault Conditions

The BCM communicates with the PDM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0200:87	Lost Communication With "Door Control Module B": Missing Message	A continuous memory DTC that sets in the BCM if messages received from the PDM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- PDM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST I : U0200:87 > PINPOINT TEST I : U0200:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

I1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to I2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

I2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the PDM pass the network test?

Yes	GO to I3

No	DIAGNOSE no communication with the PDM. REFER to: MODULE COMMUNICATIONS NETWORK .

I3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to I4

I4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PDM (PASSENGER DOOR MODULE) SELF-TEST

Using a diagnostic scan tool, perform the PDM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Locks, Latches and Entry Systems .

No	GO to I5

I5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0200:87 still present?

Yes	GO to I6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0200 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0200 set in any other module?

Yes	GO to I7

No	GO to I8

I7 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect the PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

I8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST J : P0230:14

Refer to Electronic Engine Controls - 2.3L for schematic and connector information.

Normal Operation and Fault Conditions

The BCM provides a ground to the coil side of the BJB fuel pump relay.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0230:14	Fuel Pump Primary Circuit: Circuit Short To Ground or Open	A continuous and on-demand DTC that sets when the BCM detects a short to ground or open from the fuel pump relay coil circuit.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Fuel pump relay
- BCM

Visual Inspection and Diagnostic Pre-Checks

Inspect BJB fuse 49 (30A).

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST J : P0230:14 > PINPOINT TEST J : P0230:14

J1 CHECK THE FUEL PUMP RELAY

Ignition OFF.

Swap the fuel pump relay with a known good relay.

Ignition ON.

Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).

Perform the BCM self-test.

Is DTC P0230:14 still present?

Yes	GO to J2

No	INSTALL a new the fuel pump relay.

J2 CHECK FOR VOLTAGE AT THE BCM (BODY CONTROL MODULE)

Ignition OFF.

Disconnect: BCM C2280C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-12		Ground

Is the voltage greater than 11 volts?

Yes	GO to J3

No	VERIFY BJB fuse 49 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes for the short circuit.

J3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST K : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE BELOW THRESHOLD

Vehicle Ground Information

Refer to OEM GROUND DISTRIBUTION for schematic and connector information.

Vehicle Power Information

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

The BCM receives voltage at all times from the BJB.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3006:16	Control Module Input Power "A": Circuit Voltage Below Threshold	A continuous and on-demand DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.
U3007:16	Control Module Input Power "B": Circuit Voltage Below Threshold	A continuous DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.
U3013:16	Control Module Input Power "C": Circuit Voltage Below Threshold	A continuous DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.
U3014:16	Control Module Input Power "D": Circuit Voltage Below Threshold	A continuous DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.

Possible Sources

- Wiring, terminals or connectors
- Charging system concern

- Battery concern
- BJB
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST K : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE BELOW THRESHOLD > PINPOINT TEST K : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE BELOW THRESHOLD

K1 RECHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, perform the BCM self-test.

Is DTC U3006:16, U3007:16, U3013:16 or U3014:16 still present?

Yes	GO to K2

No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition. CLEAR the DTC.

K2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

Using a diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs).

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

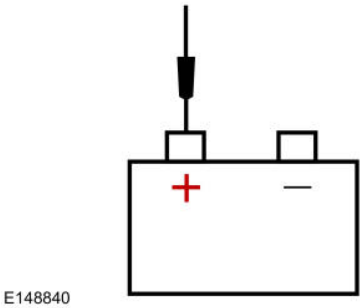
No	GO to K3

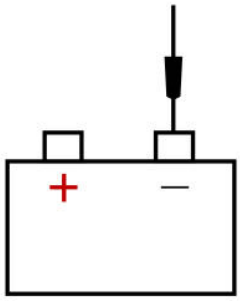
K3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Check the battery condition and verify the battery is fully charged. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK and fully charged?

Yes	GO to K4





No	If the battery is discharged, DIAGNOSE the cause of the low battery condition. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT . If the battery condition fails, INSTALL a new battery. REFER to: Battery .

K4 COMPARE THE BCM (BODY CONTROL MODULE) BATTERY VOLTAGE (V_BATT_BCM) PID (PARAMETER IDENTIFICATION) WITH THE ACTUAL BATTERY VOLTAGE

Start the engine.

Turn on accessories (climate control blower on high speed, exterior lights).

With the engine running at idle, measure and record battery voltage:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

Using a diagnostic scan tool, view the BCM PID V_BATT_BCM.

Is the recorded battery voltage within 0.2 volt of the PID?

Yes	TURN the engine off, GO to K7

No	GO to K5

K5 CHECK THE BCM (BODY CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS

Ignition OFF.

Disconnect BCM C2280G .

Disconnect BCM C2280H .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-17		Ground
C2280G-21		Ground

C2280G-22		Ground

Positive Lead	Measurement / Action	Negative Lead
C2280H-1		Ground

Are the voltages within 0.2 volt of the recorded battery voltage?

Yes	GO to K6

No	REPAIR the circuit in question for high resistance.

K6 CHECK THE BCM (BODY CONTROL MODULE) PROCESSOR GROUNDS

Ignition OFF.

Disconnect BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-6	Ω	Ground
C2280C-7	Ω	Ground
C2280C-10	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to K7

No	REPAIR the circuit in question for high resistance.

K7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST L : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE ABOVE THRESHOLD

Vehicle Ground Information

Refer to OEM GROUND DISTRIBUTION for schematic and connector information.

Vehicle Power Information

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3006:17	Control Module Input Power "A": Circuit Voltage Above Threshold	A continuous and on-demand DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.
U3007:17	Control Module Input Power "B": Circuit Voltage Above Threshold	A continuous DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.
U3013:17	Control Module Input Power "C": Circuit Voltage Above Threshold	A continuous DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.
U3014:17	Control Module Input Power "D": Circuit Voltage Above Threshold	A continuous DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.

Possible Sources

- Charging system concern
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST L : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE ABOVE THRESHOLD > PINPOINT TEST L : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE ABOVE THRESHOLD

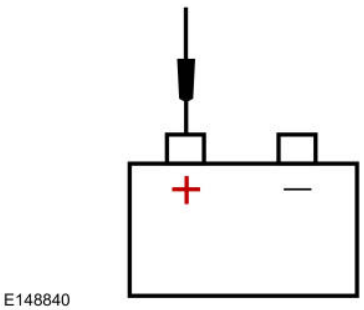
NOTE: U3006:17, U3007:17, U3013:17 or U3014:17 may be stored in the module memory due to previous battery charging or vehicle jump starting events.

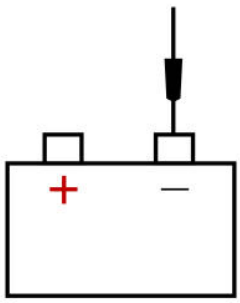
L1 CHECK FOR OVERCHARGING DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve **all** Diagnostic Trouble Codes (DTCs).

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?





Yes	DIAGNOSE the charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to L2

L2 CHECK THE BATTERY VOLTAGE

Turn off all interior/exterior lights and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

Does the battery voltage rise to 16 volts or higher?

Yes	DIAGNOSE the over-charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to L3

L3 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:17, U3007:17, U3013:17 or U3014:17 present?

Yes	GO to L4

No	The system is operating correctly at this time. The DTC may have been caused by module connections or may have been set previously during battery charging or while jump starting the vehicle. ADDRESS the root cause of any connector or pin issues.

L4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST M : U0208:87

Refer to Power Seats for schematic and connector information.

Normal Operation and Fault Conditions

The BCM communicates with the DSM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0208:87	Lost Communication With "Seat Control Module A": Missing Message	A continuous memory DTC that sets in the BCM if messages received from the DSM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- DSM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST M : U0208:87 > PINPOINT TEST M : U0208:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

M1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to M2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

M2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the PDM pass the network test?

Yes	GO to M3

No	DIAGNOSE no communication with the DSM. REFER to: MODULE COMMUNICATIONS NETWORK .

M3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to M4

M4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE DSM (DRIVER FRONT SEAT MODULE) SELF-TEST

Using a diagnostic scan tool, perform the PDM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: FRONT SEATS .

No	GO to M5

M5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0208:87 still present?

Yes	GO to M6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

M6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0208 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0208 set in any other module?

Yes	GO to M7

No	GO to M8

M7 CHECK FOR CORRECT DSM (DRIVER FRONT SEAT MODULE) OPERATION

Disconnect and inspect the DSM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DSM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM. REFER to: Driver Front Seat Module (DSM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST N : B143A:11

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

The BCM transmits an event notification signal which communicates crash status and SRS deployment status to the PCM. When the PCM receives an event notification signal which indicates a crash, it initiates fuel cut-off.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B143A:11	Crash Event Detection Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets in the BCM if the BCM senses a short to ground on the event notification signal circuit to the PCM.

Possible Sources

- Wiring, terminals or connectors
- PCM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST N : B143A:11 > PINPOINT TEST N : B143A:11

N1 CONFIRM THAT THE DTC (DIAGNOSTIC TROUBLE CODE) RESETS

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B143A:11 still present?

Yes	GO to N2

No	The system is operating correctly at this time. The DTC may have been falsely set by a BCM self-test, causing the signal to momentarily stop and set the DTC.

N2 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Disconnect PCM C1551B (2.3L EcoBoost).

Disconnect PCM C1381B (3.7L Duratec).

Disconnect PCM C175B (5.0L or 5.2L).

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B143A:11 still present?

Yes	GO to N3

No	GO to N4

N3 CHECK THE EVENT NOTIFICATION SIGNAL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280F

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-29	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to N5

No	REPAIR the circuit.

N4 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Disconnect and inspect all PCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. 2.3L REFER to: Powertrain Control Module (PCM) . 3.7L REFER to: Powertrain Control Module (PCM) . 5.0L REFER to: Powertrain Control Module (PCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST O : U0212:87

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The BCM communicates with the SCCM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0212:87	Lost Communication With Steering Column Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages received from the SCCM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- SCCM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST O : U0212:87 > PINPOINT TEST O : U0212:87

O1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to O2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

O2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the SCCM pass the network test?

Yes	GO to O3

No	DIAGNOSE no communication with the SCCM. REFER to: MODULE COMMUNICATIONS NETWORK .

O3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to O4

O4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Steering Wheel and Column Electrical Components .

No	GO to O5

O5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0212:87 still present?

Yes	GO to O6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0212 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0212 set in any other module?

Yes	GO to O7

No	GO to O8

O7 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect the SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

O8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST P : U0253:87

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The BCM communicates with the APIM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:87	Lost Communication With Accessory Protocol Interface Module: Missing Message	A continuous memory DTC that sets in the BCM if messages received from the APIM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- APIM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST P : U0253:87 > PINPOINT TEST P : U0253:87

P1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to P2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

P2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the APIM pass the network test?

Yes	GO to P3

No	DIAGNOSE no communication with the APIM. REFER to: MODULE COMMUNICATIONS NETWORK .

P3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to P4

P4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Vehicles With: AM/FM/CD/SYNC, REFER to: Information and Entertainment System . Vehicles With: Touchscreen Display, REFER to: Information and Entertainment System .

No	GO to P5

P5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:87 still present?

Yes	GO to P6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

P6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253 set in any other module?

Yes	GO to P7

No	GO to P8

P7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Disconnect and inspect the APIM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the APIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. Without touchscreen, REFER to: SYNC Module [APIM] . With touchscreen, REFER to: SYNC Module [APIM] .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST Q : U0256:87

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The BCM communicates with the APIM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:87	Lost Communication With Front Controls Interface Module "A" : Missing Message	A continuous memory DTC that sets in the BCM if messages received from the FCIM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- FCIM
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST Q : U0256:87 > PINPOINT TEST Q : U0256:87

Q1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to Q2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

Q2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the FCIM pass the network test?

Yes	GO to Q3

No	DIAGNOSE no communication with the FCIM. REFER to: MODULE COMMUNICATIONS NETWORK .

Q3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L

No	GO to Q4

Q4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Vehicles With: AM/FM/CD/SYNC, REFER to: Information and Entertainment System . Vehicles With: Touchscreen Display, REFER to: Information and Entertainment System .

No	GO to Q5

Q5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:87 still present?

Yes	GO to Q6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256 set in any other module?

Yes	GO to Q7

No	GO to Q8

Q7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Disconnect and inspect the FCIM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM.Without touchscreen, REFER to: Front Controls Interface Module (FCIM) . With touchscreen, REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST R : U1000:00

Normal Operation and Fault Conditions

The BCM uses solid state drivers to control the output of several vehicle systems. When an overload occurs on any of these drivers, the BCM disables the output and tracks the number of repetitive faults on each of these circuits. The module compares this number of overloads to 3 progressive thresholds established for each circuit. At each threshold, DTC U1000:00 sets along with the DTC associated with the affected circuit. REFER to: Module Controlled Functions - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U1000:00	Solid State Driver Protection Active: Driver Disabled: No Sub Type Information	A continuous memory DTC that sets when the BCM has disabled a circuit due to a repetitive circuit overload and a progressive threshold is met.

Possible Sources

- BCM output circuit short
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST R : U1000:00 > PINPOINT TEST R : U1000:00

R1 REVIEW THE DIAGNOSTIC TROUBLE CODES (DTCS)

Review the Diagnostic Trouble Codes (DTCs) from the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present besides U1000:00?

Yes	CORRECT the Diagnostic Trouble Codes (DTCs). REFER to the BCM DTC Chart .

No	GO to R2

R2 REPEAT THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Repeat the BCM self-test.

Is DTC U1000:00 still present?

Yes	

No	The system is operating correctly at this time. The circuit short has been repaired.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST S : U3006:1C

Vehicle Ground Information

Refer to OEM GROUND DISTRIBUTION for schematic and connector information.

Vehicle Power Information

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Charging System - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3006:1C	Control Module Input Power "A": Circuit Voltage Out of Range	A continuous memory DTC that sets in the BCM if the BCM detects out of range voltage on the voltage supply input circuits.

Possible Sources

- Wiring, terminals or connectors
- Charging system concern
- Battery concern
- BJB
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE (BCM) > PINPOINT TESTS > PINPOINT TEST S : U3006:1C > PINPOINT TEST S : U3006:1C

S1 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE BCM (BODY CONTROL MODULE)

Using a diagnostic scan tool, perform the BCM self-test.

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the BCM DTC Chart .

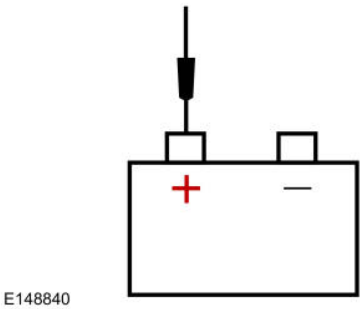
No	GO to S2

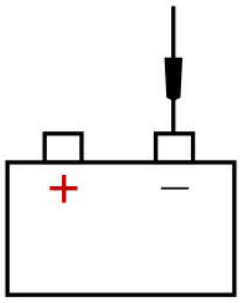
S2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs).

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?





Yes	DIAGNOSE the charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to S3

S3 CHECK THE BATTERY VOLTAGE

Turn off all interior/exterior lights and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

Does the battery voltage rise to 16 volts or higher?

Yes	DIAGNOSE the over-charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to:

	Charging System - 5.0L 32V Ti-VCT .

No	GO to S4

S4 RECHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Diagnostic Trouble Codes (DTCs).

Is DTC U3006:1C present?

Yes	GO to S5

No	The system is operating correctly at this time. The DTC may have been caused by module connections or may have been set previously during battery charging or while jump starting the vehicle. ADDRESS the root cause of any connector or pin issues.

S5 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Check the battery condition and verify the battery is fully charged. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK and fully charged?

Yes	GO to S6

No	If the battery is discharged, DIAGNOSE the cause of the low battery condition. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT . If the battery condition fails, INSTALL a new battery. REFER to: Battery .

S6 COMPARE THE BCM (BODY CONTROL MODULE) BATTERY VOLTAGE (V_BATT_BCM) PID (PARAMETER IDENTIFICATION) WITH THE ACTUAL BATTERY VOLTAGE

Start the engine.

Turn on accessories (climate control blower on high speed, exterior lights).

With the engine running at idle, measure and record battery voltage:

Positive Lead	Measurement / Action	Negative Lead
		

Using a diagnostic scan tool, view the BCM PID V_BATT_BCM.

Is the recorded battery voltage within 0.2 volt of the PID?

Yes	TURN the engine off, GO to S9

No	GO to S7

S7 CHECK THE BCM (BODY CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT

Ignition OFF.

Disconnect BCM C2280G .

Disconnect BCM C2280H .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-17	V	Ground
C2280G-21	V	Ground
C2280G-22	V	Ground

Positive Lead	Measurement / Action	Negative Lead
C2280H-1	V	Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to S8

No	REPAIR the circuit for high resistance.

S8 CHECK THE BCM (BODY CONTROL MODULE) PROCESSOR GROUNDS

Ignition OFF.

Disconnect BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-6	Ω	Ground
C2280C-7	Ω	Ground
C2280C-10	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to S9

No	REPAIR the circuit in question for high resistance.

S9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > DTC CHARTS

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

NOTE: Diagnostic Trouble Codes (DTCs) which are not listed in the DTC charts are often retrieved as a result of incorrect repair procedures. Before attempting any repairs for unlisted Diagnostic Trouble Codes (DTCs):

- repair all other Diagnostic Trouble Codes (DTCs).
- if no other Diagnostic Trouble Codes (DTCs) are retrieved, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test.
- if the unlisted Diagnostic Trouble Codes (DTCs) return, VERIFY that the correct part number module is installed for the vehicle and if correct, install As-Built data from PTS following the diagnostic scan tool instructions under Module Programming > As-Built.

Normal Operation and Fault Conditions

The BCM communicates with the PCM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:87	Lost Communication With Body Control Module: Missing Message	A continuous memory DTC that sets in the BCMB if data messages received from the BCM through the GWM are missing.

Possible Sources

- Communication network concern
- Charging system concern
- BCM
- BCMB

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST A : U0140:87 > PINPOINT TEST A : U0140:87

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.

A1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to A2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

A2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Does the BCM pass the network test?

Yes	GO to A3

No	DIAGNOSE no communication with the BCM. REFER to: MODULE COMMUNICATIONS NETWORK .

A3 CHECK THE BCMB (BODY CONTROL MODULE B) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCMB Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3003:62 recorded?

Yes	GO to PINPOINT TEST C : U3003:62

No	GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY

CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the BCM self-test.

Is there any DTC recorded?

Yes	REFER to: Body Control Module (BCM) .

No	GO to A5

A5 RECHECK THE BCMB (BODY CONTROL MODULE B) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0140:87 still present?

Yes	GO to A6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0140 set in any other module?

Yes	GO to A7

No	GO to A8

A7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect the BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A8 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) OPERATION

Disconnect and inspect all BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Connect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST B : U0155:87

Normal Operation and Fault Conditions

The BCM communicates with the PCM through the GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:87	Lost Communication With Instrument Panel Cluster (IPC) Control Module: Missing Message	A continuous memory DTC that sets in the BCMB if data messages received from the IPC through the GWM are missing.

Possible Sources

- Communication network concern
- Charging system concern
- IPC
- BCMB

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST B : U0155:87 > PINPOINT TEST B : U0155:87

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to B2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

B2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Does the IPC pass the network test?

Yes	GO to B3

No	DIAGNOSE no communication with the IPC. REFER to: MODULE COMMUNICATIONS NETWORK .

B3 CHECK THE BCMB (BODY CONTROL MODULE B) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCMB Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3003:62 recorded?

Yes	GO to PINPOINT TEST C : U3003:62

No	GO to B4

B4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the IPC self-test.

Is there any DTC recorded?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes .

No	GO to B5

B5 RECHECK THE BCMB (BODY CONTROL MODULE B) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:87 still present?

Yes	GO to B6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

B6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155 SET IN OTHER MODULES

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155 set in any other module?

Yes	GO to B7

No	GO to B8

B7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

Disconnect and inspect the IPC connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the IPC connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B8 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) OPERATION

Disconnect and inspect all BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Connect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this

	concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST C : U3003:62

Vehicle Ground Information

Refer to OEM GROUND DISTRIBUTION for schematic and connector information.

Vehicle Power Information

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

The BCMB receives hot at all times voltage from the BJB.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:62	Battery Voltage: Signal Compare Failure	A continuous memory DTC that sets in the BCMB when the BCMB detects battery voltage 1.5 volts above or below specific thresholds.

Possible Sources

- Wiring, terminals or connectors
- Charging system concern
- Battery concern
- BJB
- BCM

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST C : U3003:62 > PINPOINT TEST C : U3003:62

C1 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE BCM (BODY CONTROL MODULE)

Using a diagnostic scan tool, perform the BCM self-test.

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) .

No	GO to C2

C2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs).

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to C3

C3 RECHECK THE BCMB (BODY CONTROL MODULE B) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Using a diagnostic scan tool, check the BCMB Diagnostic Trouble Codes (DTCs).

Is DTC U3003:62 present?

Yes	GO to C4

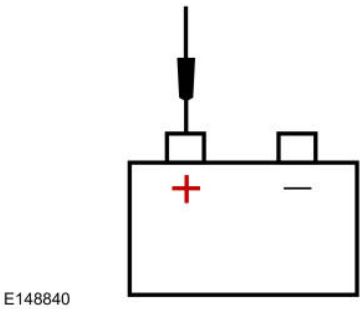
No	The system is operating correctly at this time. The DTC may have been caused by module connections or may have been set previously during battery charging or while jump starting the vehicle. ADDRESS the root cause of any connector or pin issues.

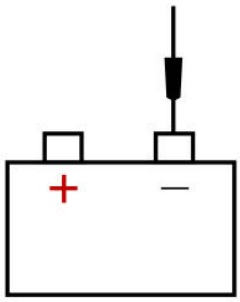
C4 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Check the battery condition and verify the battery is fully charged. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK and fully charged?

Yes	GO to C5





No	If the battery is discharged, DIAGNOSE the cause of the low battery condition. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT . If the battery condition fails, INSTALL a new battery. REFER to: Battery .

C5 CHECK THE BATTERY VOLTAGE

Turn off all interior/exterior lights and accessories.

Start the engine.

Run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

Does the battery voltage rise to 15 volts or higher?

Yes	DIAGNOSE the over-charging system concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to C6

C6 CHECK THE BCMB (BODY CONTROL MODULE B) VOLTAGE PID (PARAMETER IDENTIFICATION)

Ignition OFF.

Ignition ON.

Measure and record battery voltage:

Positive Lead	Measurement / Action	Negative Lead
		

Using a diagnostic scan tool, view the BCMB PID VPWR_BCMB.

Is the recorded battery voltage within 0.2 volt of the PID?

Yes	GO to C9

No	GO to C7

C7 CHECK THE BCMB (BODY CONTROL MODULE B) VOLTAGE SUPPLY CIRCUIT

Ignition OFF.

Disconnect BCM C2280C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-1		Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to C8

No	REPAIR the circuit for high resistance.

C8 CHECK THE BCMB (BODY CONTROL MODULE B) GROUND

Ignition OFF.

Disconnect BCM C2280A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280A-13	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to C9

No	REPAIR the circuit for high resistance.

C9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST D : U1000:00

Normal Operation and Fault Conditions

The BCMB uses solid state drivers to control the output of several vehicle systems. When an overload occurs on any of these drivers, the BCMB disables the output and tracks the number of repetitive faults on each of these circuits. The module compares this number of overloads to 3 progressive thresholds established for each circuit. At each threshold, DTC U1000:00 sets along with the DTC associated with the affected circuit. REFER to: Module Controlled Functions - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U1000:00	Solid State Driver Protection Active: Driver Disabled: No Sub Type Information	A continuous memory DTC that sets when the BCMB has disabled a circuit due to a repetitive circuit overload and a progressive threshold is met.

Possible Sources

- BCMB output circuit short
- BCMB

DIAGNOSIS AND TESTING > BODY CONTROL MODULE B (BCMB) > PINPOINT TESTS > PINPOINT TEST D : U1000:00 > PINPOINT TEST D : U1000:00

D1 REVIEW THE DIAGNOSTIC TROUBLE CODES (DTCS)

Review the Diagnostic Trouble Codes (DTCs) from the BCMB self-test.

Are any Diagnostic Trouble Codes (DTCs) present besides U1000:00?

Yes	CORRECT the Diagnostic Trouble Codes (DTCs). REFER to the BCMB DTC Chart .

No	GO to D2

D2 REPEAT THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Wait 10 seconds.

Repeat the BCMB self-test.

Is DTC U1000:00 still present?

Yes	INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The circuit short has been repaired.

GENERAL PROCEDURES > FACTORY MODE DEACTIVATION

Deactivation

*NOTE: During vehicle build, some modules, such as the IPC and BCM module are set in **factory mode** . Factory mode reduces the drain on the battery during longer periods where the vehicle is not used. While in the factory mode, various systems may be altered or disabled and the IPC displays FACTORY MODE CONTACT DEALER in the message center. If the vehicle is in factory mode, the system automatically reverts to Transport mode after 60 ignition cycles. If the IPC displays **TRANSPORT MODE CONTACT DEALER** , refer to the Transport Mode Deactivation procedure.*

1.

Place the ignition in the OFF position.

2.

Verify the battery is fully charged. Refer to: BATTERY, MOUNTING AND CABLES .

3.

Without push button start, cycle the ignition from off to on 60 times.

*NOTE: One IKT **must** be in the vehicle.*

4.
With push button start, press the Engine Start/Stop button 120 times.

5.

Refer to the

Transport Mode Deactivation procedure.

GENERAL PROCEDURES > TRANSPORT MODE DEACTIVATION

Deactivation

> *NOTE: After vehicle build, some vehicle modules are set in Transport mode including the IPC and the BCM. Transport mode reduces battery drain during longer periods where the vehicle is not used. While in transport mode, the IPC displays TRANSPORT MODE CONTACT DEALER in the message center. Various systems may be altered or are disabled when in the transport mode. The vehicle automatically reverts to normal operation mode after being driven 80 km (50 mi). The vehicle can be manually taken out of Transport mode using this procedure.*

If the IPC displays FACTORY MODE CONTACT DEALER in the message center the vehicle is set in factory mode. The system **does not** automatically revert to another mode and must be manually set to either the transport or normal operation mode. Refer to the **Factory Mode Deactivation** procedure.

1.

> *WARNING: Before beginning any service procedure in this article, refer to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

Place the ignition in the OFF position.

2.

Verify the battery is fully charged. Refer to: Battery Charging .

3.

Place the ignition in the ON position.

> *NOTE: Steps 4 and 5 must be carried out within 10 seconds.*

4.
Press and release the brake pedal 5 times.

> *NOTE: The IPC message center indicates NORMAL MODE when the procedure has been successfully completed.*

5.
Press and release the hazard switch 2 times.

6.

Start the engine.

7.

Place the ignition in the OFF position.

8.

Verify the RKE works correctly.

REMOVAL AND INSTALLATION > BODY CONTROL MODULE (BCM)

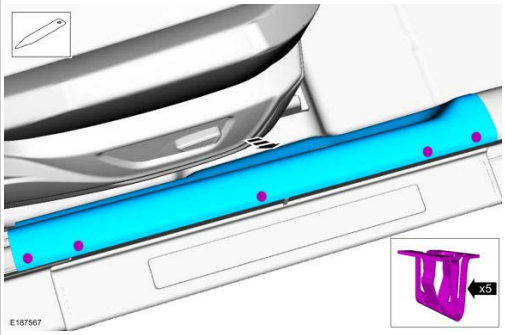
Special Tool(s) / General Equipment

Interior Trim Remover

REMOVAL AND INSTALLATION > BODY CONTROL MODULE (BCM) > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

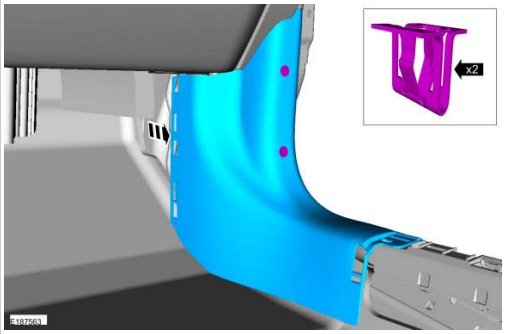
NOTE: If the BCM did not respond to the diagnostic scan tool, As-Built Data may need to be entered as part of the repair. This step is only necessary if the BCM is being replaced



1.
Using a diagnostic scan tool, begin the PMI process for the BCM following the on-screen instructions.

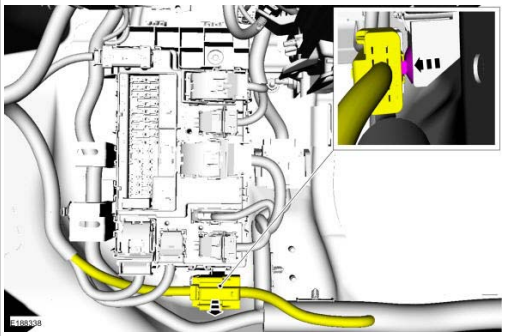
NOTE: The PAM is integral to the BCM. This step is only necessary if the BCM is being replaced.

2.
Using a diagnostic scan tool, begin the PMI process for the PAM following the on-screen instructions.



3.

Release the clips and remove the RH scuff plate. Use the General Equipment: Interior Trim Remover

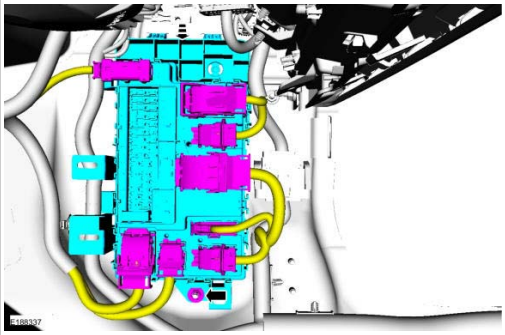


4.

Release the clips and remove the lower RH cowl trim panel.

5.

Release the harness retainer and position the harness aside.



6.

Remove the nut and the BCM.

Disconnect the electrical connectors.

Torque

: 71 lb.in (8 Nm)

REMOVAL AND INSTALLATION > BODY CONTROL MODULE (BCM) > INSTALLATION

NOTE: If installing a new BCM, the ignition cannot be turned on until a parameter reset is performed and 2 keys are programmed to the vehicle. The BCM still communicates with the diagnostic scan tool with the ignition off. Use the previous diagnostic scan tool session or start a diagnostic scan tool session using the PCM part number or tear tag number located on the PCM.

1.
To install, reverse the removal procedure.

NOTE: Carry out the remaining steps only if installing a new BCM.

*NOTE: A diagnostic scan tool should **not** be used to program keys for this specific step.*

2.
Program the keys.

Place the first key in the backup starting location. Refer to: Passive Anti-Theft System (PATS) - Component Location .

Press the START/STOP button and wait approximately 6 seconds.

Press the START/STOP button and remove the first key.

Place the second key in the backup starting location.

Press the START/STOP button.

3.

Carry out the parameter reset. Refer to: Anti-Theft Security Access .

4.

Using a diagnostic scan tool, complete the PMI process for the BCM following the on-screen instructions.

5.

Using a diagnostic scan tool, carry out the Configuration Engine Immobilizer (CEI) configuration following the on-screen instructions (Toolbox > Body > Service Functions > CEI Lock Configuration).

6.

Using a diagnostic scan tool, carry out the battery monitor sensor reset following the on-screen instructions (Toolbox > Body > BMS Reset).

7.

If equipped with video rear parking aid, using a diagnostic scan tool, carry out the new module initialization following the on-screen instructions (Toolbox > Electrical > Service Functions > LIN New Module Initialization).

NOTE: This step is only necessary if equipped with Electronic Steering Column Lock (ESCL).

8.
Carry out the BCM to Electronic Steering Column Lock (ESCL) configuration/training procedure. Refer to: Anti-Theft Security Access .

9.

Configure the customer preference programmable parameters. Refer to: MODULE CONFIGURATION .

10.

Train the tire pressure sensors. Refer to: Tire Pressure Monitoring System (TPMS) Sensor Location Calibration .

11.

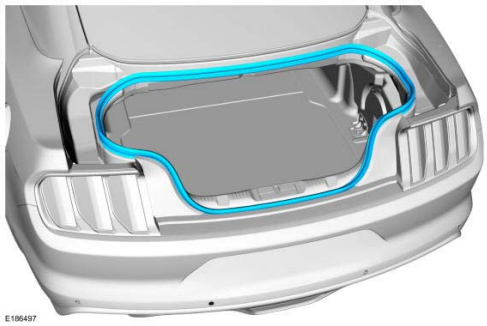
Carry out the BCM self-test (must include an on-demand self-test) and then repeat the self-test to confirm all Diagnostic Trouble Codes (DTCs) have been cleared.

12.

Using a diagnostic scan tool, complete the PMI process for the PAM following the on-screen instructions.

REMOVAL AND INSTALLATION > BODY CONTROL MODULE B (BCMB) > REMOVAL

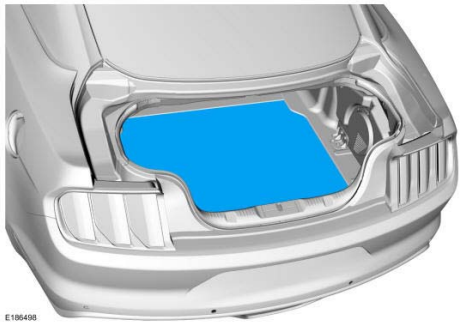
NOTE: Removal steps in this procedure may contain installation details.



NOTE: If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be

downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the BCM-B (Body Control Module-B) following the on-screen instructions.



2.

Remove the luggage compartment weatherstrip.

3.

Remove the spare tire cover.

4.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .

5.

1.

Remove the pin-type retainers.

2.

Position aside the RH luggage compartment side trim panel.

6.

Remove the nuts and the BCM-B (Body Control Module-B).

Disconnect the electrical connectors.

Torque

: 22 lb.in (2.5 Nm)

REMOVAL AND INSTALLATION > BODY CONTROL MODULE B (BCMB) > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Using a diagnostic scan tool, complete the PMI process for the BCM-B (Body Control Module-B) following the on-screen instructions.

3.

Carry out the BCM-B (Body Control Module-B) self-test (must include an on-demand self-test) and then repeat the self-test to confirm all BCM-B (Body Control Module-B) DTCs have been cleared.

REMOVAL AND INSTALLATION > DRIVER DOOR MODULE (DDM) > REMOVAL

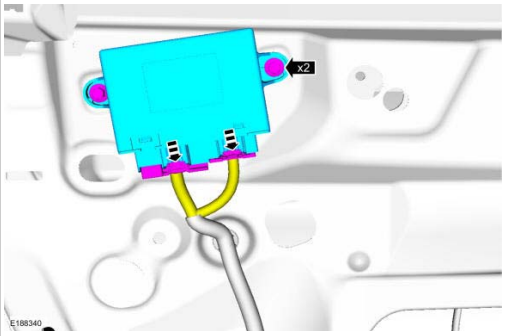
NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the diagnostic scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the DDM following the on-screen instructions.

2.

Remove the Front door trim panel. Refer to: Front Door Trim Panel .



3.

Remove the bolts and the DDM.

Disconnect the electrical connectors.

Torque

: 44 lb.in (5 Nm)

REMOVAL AND INSTALLATION > DRIVER DOOR MODULE (DDM) > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Using a diagnostic scan tool, complete the PMI process for the DDM following the on-screen instructions.

REMOVAL AND INSTALLATION > PASSENGER DOOR MODULE (PDM) > REMOVAL

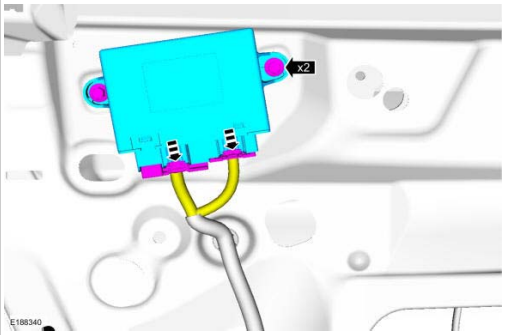
NOTE: Removal steps in this procedure may contain installation details.

NOTE: If installing a new module, it is necessary to upload the module configuration information to the diagnostic scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the PDM following the on-screen instructions.

2.

Remove the Front door trim panel. Refer to: Front Door Trim Panel .



3.

Remove the bolts and the PDM.

Disconnect the electrical connectors.

Torque

: 44 lb.in (5 Nm)

REMOVAL AND INSTALLATION > PASSENGER DOOR MODULE (PDM) > INSTALLATION

1.

To install, reverse the removal procedure

2.

Using a diagnostic scan tool, complete the PMI process for the PDM following the on-screen instructions.

REMOVAL AND INSTALLATION > RADIO TRANSCEIVER MODULE (RTM) > REMOVAL

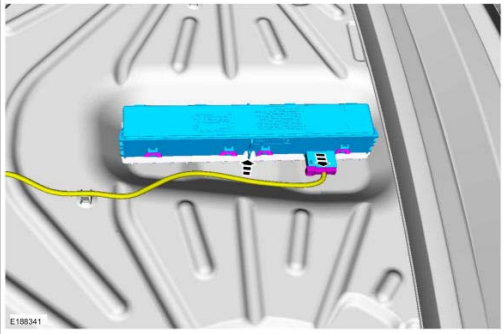
NOTE: Removal steps in this procedure may contain installation details.

All vehicles

NOTE: If installing a new module, it is necessary to upload the module configuration information to the diagnostic scan tool prior to removing the module. This information must be downloaded into the new module after installation.

1.
Using a diagnostic scan tool, begin the PMI process for the RTM following the on-screen instructions.

Coupe



2.

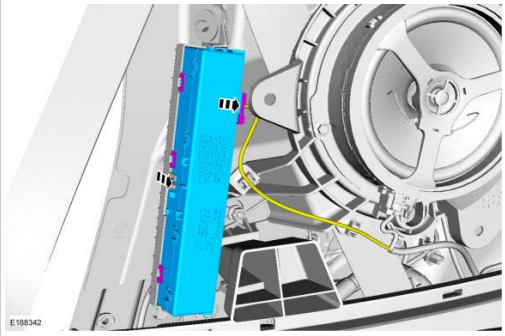
Remove the parcel shelf. Refer to: Parcel Shelf - Coupe .

3.

Release the tabs and remove the RTM.

Disconnect the electrical connectors.

Convertible



4.

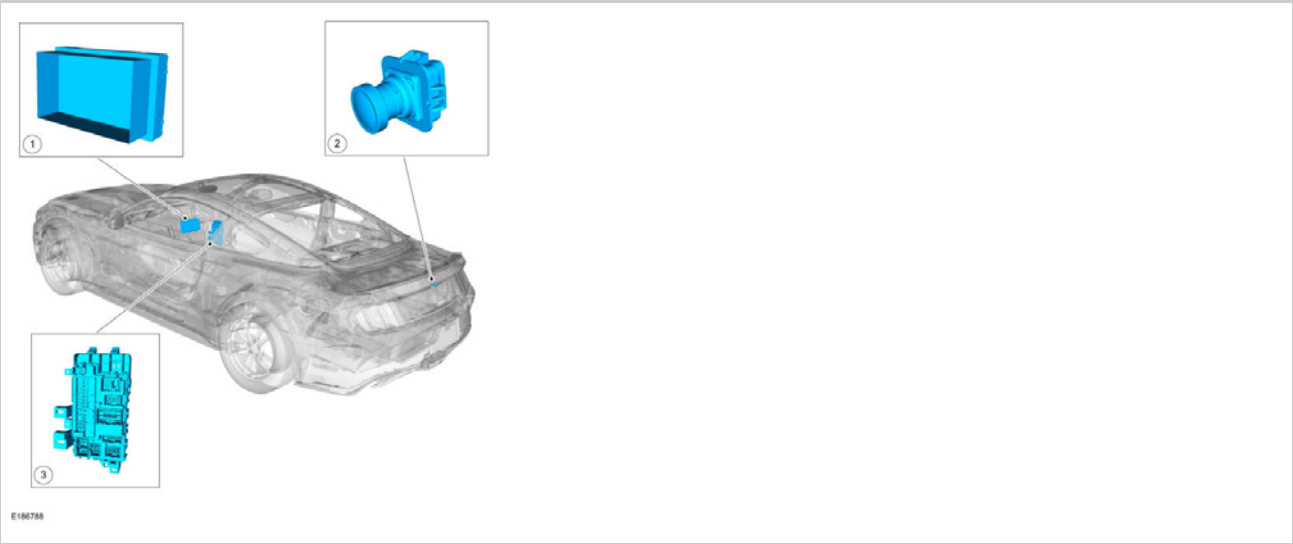
Remove the loadspace trim panel. Refer to: Loadspace Trim Panel - Convertible .

5.

Release the tabs and remove the RTM.

Disconnect the electrical connectors.

REMOVAL AND INSTALLATION > RADIO TRANSCEIVER MODULE (RTM) > INSTALLATION



1.

To install, reverse the removal procedure.

2.

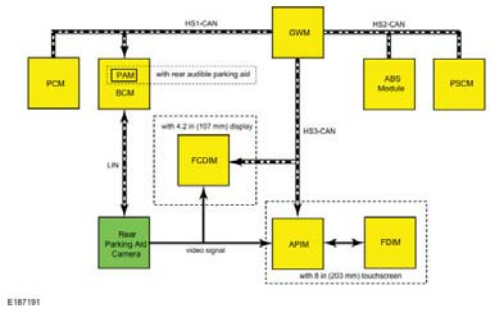
Using a diagnostic scan tool, complete the PMI process for the RTM following the on-screen instructions.

DESCRIPTION AND OPERATION > PARKING AID - COMPONENT LOCATION > REAR VIDEO CAMERA

Item	Description
1	Centerstack infotainment display (FDIM shown FCDIM similar)
2	Rear parking aid camera
3	BCM

DESCRIPTION AND OPERATION > PARKING AID - OVERVIEW > OVERVIEW

The rear parking aid camera system visually aids the driver while reversing or reverse parking the vehicle. When reverse gear is selected, the rear video camera image can be displayed on the 8 in (203 mm) touchscreen or 4.2 in (107 mm) centerstack infotainment display depending on vehicle equipment. This camera system has features that provide fixed and active guideline overlays on the video image to assist the driver in aligning the vehicle, a manual zoom and a visual alert function that works with the rear audible parking aid system to visually highlight a zone in the video image where an object has been detected. The rear parking aid camera communicates with the BCM through a LIN circuit.



DESCRIPTION AND OPERATION > PARKING AID - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > PARKING AID - SYSTEM OPERATION AND

COMPONENT DESCRIPTION > PARKING AID CAMERA

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Rear park aid camera commands	APIM	Used to command the visual park aid alert and zoom level on and off based on driver inputs through the FDIM.
Parking aid range to object	PAM	Used to generate the visual highlights in the zone where an object is detected by the parking aid system.
Steering angle	ABS Module	Used to generate the intended vehicle path for the active guideline feature.
Reverse gear state	PCM	Used to enable the active guidelines and visual park aid features when reverse gear is selected.
Vehicle speed	PCM	Used to support the rear parking aid camera stand by mode by enabling and disabeling the rear parking aid camera. Turns off the camera display when the vehicle speed is 10 mph (16 km/h) or greater or turn on the camera display when the vehicle speed is 8 mph (13 km/h) or lower.

ABS Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose

Steering angle sensor data	PSCM	The ABS module uses the steering angle sensor data to generate the steering angle message that is sent to the BCM to support the active guideline feature.

APIM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Rear park aid camera status	BCM	Used to display the current settings for the visual park aid alert and zoom level.
Parking aid range to object	PAM	Used to generate the visual highlights in the zone where an object is detected by the parking aid system.
Gear position	PCM	Used to enable and disable the video display when reverse gear is selected.
Vehicle speed	PCM	When the video delay feature is turned on, this message is used to turn the camera display off after the vehicle speed exceeds a preset threshold.

FCDIM Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Gear position	PCM	Used to enable and disable the video display when reverse gear is selected.
Parking aid range to object	PAM	Used to generate the visual highlights in the zone where an object is detected by the parking aid system.

Image Display - Vehicles Equipped With An 8 in (203 mm) Touchscreen

NOTE: The luggage compartment lid must remain closed for correct operation of the parking aid camera system.

The rear park aid camera image is displayed by the FDIM when the reverse gear is selected. To determine the selector lever (automatic transmission) or gearshift lever (manual transmission) position and enable the rear park aid camera display, the PCM sends the gear position message over the HS-CAN1 to the GWM. The GWM then sends the message to the APIM on the HS-CAN3.

The BCM provides power to the rear view camera when the ignition is in the ON position. The BCM rear parking aid camera stand by mode is used to turn off the camera video signal when the vehicle speed is 10 mph (16 km/h) or greater or turn on the camera video signal when the vehicle speed is 8 mph (13 km/h) or lower. The camera generates a video signal any time it's on regardless of the current configuration. If the camera is not configured properly, some features may be inoperative. When the rear parking aid camera is on, the image signal is sent from the camera on shielded twisted pair wires to the APIM, which displays the image on the FDIM.

The following parking aid camera system features are configured by the driver using the FDIM:

- Visual park aid alert - assists the driver to visually see the object causing the parking aid system to sound.
- Manual zoom - allows the driver to manually zoom the image.
- Video delay - allows the driver to see the image behind the vehicle after the vehicle is shifted out of reverse. The image is not displayed if the vehicle is shifted into park.

The following camera system feature are not driver selectable and always on:

- Fixed guidelines - assists the driver with aligning the vehicle with an object.
- Active guidelines - displays the intended path of the vehicle based upon steering angle input.

The FDIM settings menu is used to turn the visual park aid alert feature on and off. The visual park aid feature is initialized on and remains in the last mode based on the driver's setting. To turn the manual zoom feature on and off, the driver uses an on screen button located on the FDIM display while in reverse. The driver generated commands originate at the FDIM, which is hardwired to the APIM. The APIM sends the driver generated commands over the HS-CAN3 to the GWM. The GWM then sends the commands to the BCM on the HS-CAN1. The BCM then sends the command to the rear parking aid camera via the LIN circuit. The visual park aid alert feature is generated by the APIM and the manual zoom is generated by the rear parking aid camera.

The video delay feature is generated by the APIM and displayed on the FDIM. The FDIM settings menu is used to turn the video delay feature on and off. The video delay feature is initialized off and remains in the last mode based on the driver's setting.

The fixed and active guidelines are generated by the rear parking aid camera and are not selectable by the driver.

Image Display - Vehicles Equipped With An 4.2 in (107 mm) Display

> *NOTE: The luggage compartment lid must remain closed for correct operation of the rear parking aid camera system.*

The rear park aid camera image is displayed by the FCDIM when the reverse gear is selected. To determine the selector lever (automatic transmission) or gearshift lever (manual transmission) position and enable the rear park aid camera display, the PCM sends the gear position message over the HS-CAN1 to the GWM. The GWM then sends the message to the FCDIM on the HS-CAN3.

The BCM provides power to the rear parking aid camera when the ignition is in the ON position. The BCM rear parking aid camera stand by mode is used to turn off the camera video signal when the vehicle speed is 10 mph (16 km/h) or greater or turn on the camera video signal when the vehicle speed is 8 mph (13 km/h) or lower. The camera generates a video signal any time it's on regardless of the

current configuration. If the video camera is not configured properly, some features may be inoperative. When the rear parking aid camera is on, the image signal is sent from the camera on shielded twisted pair wires to the FCDIM.

The following parking aid camera system features are configured by the driver using the FCDIM:

- Visual park aid alert - assists the driver to visually see the object causing the parking aid system to sound.
- Manual zoom - allows the driver to manually zoom the image.
- Video delay - allows the driver to see the image behind the vehicle after the vehicle is shifted out of reverse. The image will not be displayed if the vehicle is shifted into park.

The following camera system feature are not driver selectable and always on:

- Fixed guidelines - assists the driver with aligning the vehicle with an object.
- Active guidelines - displays the intended path of the vehicle based upon steering angle input.

To turn the visual park aid alert and manual zoom features on and off, the driver generated commands originate from two different buttons on the FCDIM. The commands are sent by the FCDIM over the HS-CAN3 to the GWM. The GWM then sends the commands to the BCM on the HS-CAN1. The BCM sends the command to the rear parking aid camera via the LIN circuit. The visual park aid alert feature is generated by a combination of either the rear park aid camera or the FCDIM and the manual zoom is generated by the rear parking aid camera.

The video delay feature is generated by the FCDIM. The FCDIM settings menu is used to turn the video delay feature on and off. The video delay feature is initialized off and remains in the last mode based on the driver's setting.

The fixed and active guidelines are generated by the rear parking aid camera and are not selectable by the driver.

LIN Communication

The BCM and the rear parking aid camera communicate via a LIN circuit which is a dedicated single wire communication network.

The messages sent from the BCM to the rear parking aid camera are:

- Luggage compartment lid ajar status
- Camera configuration data
- Display manual zoom request
- Parking aid sensor distance to object data
- Steering angle

The messages sent from the rear parking aid camera to the BCM are:

- Camera status
- Display zoom status
- Camera part number data

- Visual park aid alert status
- Fixed guideline status
- Active guideline status

Visual Park Aid Alert

> *NOTE: The on-screen alert color transitions may not match changes in the audible parking aid alert tone frequency.*

The visual park aid alert feature displays red, yellow or green visual alerts that appear as highlights over the video image in the zone where an object has been detected by the rear parking aid system. This feature utilizes the parking aid sensor data from the PAM to generate the visual highlights over the video image. When the reverse gear is selected and an object is detected by a parking aid sensor, the parking aid sensor data message is sent from the PAM through the HS-CAN1 to the BCM, which sends the message to the rear parking aid camera via the LIN circuit.

Visual highlights color chart

> *NOTE: The on-screen alert color transitions may not match changes in the audible parking aid alert tone frequency.*

Distance Zone	Color
0 - 17 in (0 - 45 cm)	Red
18 - 41 in (46 - 105 cm)	Yellow
42 - 71 in (106 - 180 cm)	Green
72 + in (181 + cm)	No highlight

If the visual park aid alert feature is enabled, the feature is still operational even if the audible rear parking aid system has been disabled by the driver.

Fixed Guidelines

> *NOTE: The color-coded lines cannot indicate accurate or consistent distances between the rear of the vehicle and objects shown in the video image. This normal condition is due to variances in vehicle ride height, including, but not limited to, vehicle loading.*

The rear parking aid camera fixed guidelines feature displays guidelines on top of the video image as projection of the wheel tracks or vehicle corners to assist the driver with alignment of the vehicle. A black dashed line on the displayed image represents the center of the vehicle and 3 color-coded lines (red, yellow, green) identify different zones between the rear of the vehicle and objects. The color-coded lines match the distances with the visual park aid alert highlights.

The fixed guidelines are shown even when the vehicle is not in reverse (delay mode selected).

If the luggage compartment lid is open, the fixed guidelines are not shown.

Active Guidelines

> *NOTE: If the battery has been disconnected or discharged, or a module is disconnected or replaced, the active guidelines may be inoperative until the vehicle is driven on a flat and smooth road at 32 km/h (20 mph) or more, with hands placed loosely on the steering wheel and minimal steering correction for approximately 30 seconds.*

If the guidelines are remain inoperative, it may be necessary to disconnect the battery for 5 minutes with the driver's door open, then drive the vehicle for 5 miles in normal city driving before performing the procedure described above.

The rear parking aid camera active guidelines feature displays dynamic guidelines that correspond to the projected path of the vehicle travel based on the current steering angle. Several modules are involved in generating the steering angle data used to support the active guidelines. The PSCM monitors the current steering angle and sends the steering angle data message to the ABS module via the HS-CAN2. The ABS module uses this message from the PSCM to generate the steering angle message that is sent to the BCM via the HS-CAN1 and HS-CAN2, with the GWM acting as the gateway. The BCM then sends the steering angle data to the rear parking aid camera via the LIN circuit. The camera uses this data to generate the active guidelines over the video image.

If the luggage compartment lid is open or the steering wheel is in the straight-ahead position, the active guidelines are not shown.

Manual Zoom

The manual zoom feature is controlled by the rear parking aid video camera and has one level of zoom. If the manual zoom feature is on and the vehicle is shifted out of reverse gear, the manual zoom feature is disabled. The manual zoom feature must be re-enabled the next time reverse gear is selected.

When the manual zoom feature is turned on, only the centerline is present with no other guidelines even if the fixed and/or active guidelines are selected on.

When the driver turns the zoom on or off at the FDIM, the command is sent by the APIM over the HS-CAN3 to the GWM. The GWM then sends the command to the BCM on the HS-CAN1. The BCM sends the manual zoom request message to the parking aid camera via the LIN circuit. The camera then turns the zoom on or off.

When the driver turns the zoom on or off at the FCDIM, the command is sent by the FCDIM over the HS-CAN3 to the GWM. The GWM then sends the command to the BCM on the HS-CAN1. The BCM sends the manual zoom request message to the parking aid camera via the LIN circuit. The camera then turns the zoom on or off.

Video Delay

When the video delay is turned on, the APIM (vehicles with 8 in (203 mm) touchscreen display) or the FCDIM (vehicle with 4.2 in (107 mm) display) keeps the video display enabled after the transmission is shifted out of reverse gear, into any gear other than park, until the vehicle speed reaches 5 mph (8 km/h). With the delay off (default), the image displays until the transmission is shifted out of reverse gear.

Component Description

Rear Parking Aid Video Camera

The rear parking aid video camera is located on the luggage compartment lid. The camera provides a video signal any time it receives voltage and ground, regardless of configuration, but it must be configured using a diagnostic scan tool after replacement in order for all features to operate properly.

BCM

> *NOTE: The BCM settings and configuration have no influence over the video signal from the camera. The camera provides a video signal any time it receives voltage and ground.*

The BCM serves as a gateway module between the video camera and other modules on the HS-CAN1. It communicates with the video camera via the LIN and stores Diagnostic Trouble Codes (DTCs) for the camera and the LIN in the event of a concern.

Refer to: Module Controlled Functions - System Operation and Component Description .

Video Display

The rear park aid video camera image can be displayed on the 8 in (203 mm) touchscreen or 4.2 in (107 mm) display depending on vehicle equipment.

Vehicles With: AM/FM/CD/SYNC Refer to: Information and Entertainment System - System Operation and Component Description .

Vehicles With: Touchscreen Display Refer to: Information and Entertainment System - System Operation and Component Description .

DIAGNOSIS AND TESTING > PARKING AID > DTC CHART(S) > DTC CHART: BCM

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
B115E:01	Camera Module: General Electrical Failure	GO to Pinpoint Test A
B115E:02	Camera Module: General Signal Failure	GO to Pinpoint Test A
B115E:08	Camera Module: Bus Signal/Message Failure	GO to Pinpoint Test A
B115E:49	Camera Module: Internal Electronic Failure	Sets in continuous memory and on-demand in the BCM when an internal fault in the video camera is detected. CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC B115E:49 returns, INSTALL a new rear video camera. REFER

		to: Rear Parking Aid Camera .
B115E:55	Camera Module: Not Configured	Sets in continuous memory and on-demand in the BCM when the video camera is not configured. Using a diagnostic scan tool, PERFORM the video camera configuration.
B115E:9A	Camera Module: Component or System Operating Conditions	Sets as an on-demand DTC in the BCM when the prerequisite conditions are not met for the on-demand self test. INSPECT the luggage compartment lid to make sure it is fully closed and DIAGNOSE any other Diagnostic Trouble Codes (DTCs) present in the BCM. REFER to: Body Control Module (BCM) .
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > PARKING AID > DTC CHART(S) > DTC CHART: APIM

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
C1001:01	Vision System Camera: General Electrical Failure	GO to Pinpoint Test A

Parking Aid Camera

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Condition	Possible Sources	Actions
The rear video is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
The video display shows "REAR VIDEO CAMERA IS UNAVAILABLE" or "CAMERA IS UNAVAILABLE PLEASE CONTACT YOUR DEALERSHIP" and a black screen/no image	Refer to the Pinpoint Test	GO to Pinpoint Test A
Static/flashing/blinking/flickering /scrolling or rolling image/screen /scrolling horizontal lines	Refer to the Pinpoint Test	If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test B If the vehicle is equipped with a 4.2 in (107 mm) display, GO to Pinpoint Test B
Poor image quality (foggy/cloudy /fuzzy/blurry/hazy image or moisture/water in lens or black spots)	Refer to the Pinpoint Test	If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test B If the vehicle is equipped with a 4.2 in (107 mm) display, GO to Pinpoint Test B
Frozen screen or slow screen transitions (vehicles with 8 in [203 mm] touchscreen display)	APIM FDIM	PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, DIAGNOSE the APIM and the FDIM. REFER to: Information and Entertainment System .

Frozen screen or slow screen transitions (vehicles with 4.2 in [107 mm] display)	FCDIM	DIAGNOSE the FCDIM. REFER to: Information and Entertainment System .
Manual zoom function is inoperative	Refer to the Pinpoint Test	If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test F If the vehicle is equipped with a 4.2 in (107 mm) display, GO to Pinpoint Test F
Visual park aid alert is inoperative	Refer to the Pinpoint Test	If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test C If the vehicle is equipped with a 4.2 in (107 mm) display, GO to Pinpoint Test C
Active guidelines are not displayed on the rear video camera image	Refer to the Pinpoint Test	If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test D If the vehicle is equipped with a 4.2 in (107 mm) display, GO to Pinpoint Test D
Fixed guidelines are not displayed on the video image	Refer to the Pinpoint Test	If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test D If the vehicle is equipped with a 4.2 in (107 mm) display, GO to Pinpoint Test D
The video delay feature is inoperative (vehicles with 8 in [203 mm] touchscreen display)	Refer to the Pinpoint Test	PERFORM an APIM reset. REFER to: RESET THE SYNC MODULE [APIM] . If the concern is still present after the APIM reset, GO to Pinpoint Test E

The video delay feature is inoperative (vehicles with 4.2 in [107 mm] display)	Refer to the Pinpoint Test	GO to Pinpoint Test E
Video image is upside down	Internal parking aid camera failure Incorrect parking aid camera installed on vehicle	INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera .
All other image concerns	Refer to the Pinpoint Test	GO to Pinpoint Test A

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST A : THE REAR VIDEO IS INOPERATIVE

Refer to PARKING AID for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B115E:01	Camera Module: General Electrical Failure	A continuous and on-demand DTC that sets in the BCM when an internal electrical failure is detected from the video camera.
B115E:02	Camera Module: General Signal Failure	A continuous and on-demand DTC that sets in the BCM when invalid LIN data is received from the video camera.
B115E:08	Camera Module: Bus Signal/Message Failure	A continuous and on-demand DTC that sets in the BCM when there is a LIN communication fault from the video camera.

APIM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1001:01	Vision System Camera: General Electrical Failure	A continuous and on-demand DTC that sets in the APIM if no video signal is detected from the video camera when the vehicle is in REVERSE.

FCDIM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1001:01	Vision System Camera: General Electrical Failure	A continuous and on-demand DTC that sets in the FCDIM if no video signal is detected from the video camera when the vehicle is in REVERSE.

Possible Sources

- Wiring, terminals or connectors
- Fuse
- Rear parking aid camera
- TR input concern
- LIN concern
- FCDIM
- APIM (8 in [203 mm] touchscreen display)
- BCM

Visual Inspection and Diagnostic Pre-Checks

- BJB Fuse 66 (5A).
- Verify the luggage compartment lid is fully closed.
- If the rear video camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.

NOTE: Before disconnecting the camera, verify the connector is properly seated and latched.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST A : THE REAR VIDEO IS INOPERATIVE > PINPOINT TEST A : THE REAR VIDEO IS INOPERATIVE

A1 CHECK AND CLEAN THE REAR VIDEO CAMERA LENS

Clean and make sure the rear video camera lens is clear of any debris.

Ignition ON.

Test the video camera system and check the video camera image.

Is the video camera concern still present?

Yes	GO to A2

No	The system is operating correctly at this time. The concern was caused by a dirty video camera lens.

A2 CHECK FOR CORRECT GEAR INPUT

Apply the parking brake.

While monitoring the reversing lamps, move the selector lever (automatic transmission) or gearshift lever (manual Transmission) through the entire range.

Do the reversing lamps illuminate only in reverse?

Yes	GO to A3

No	REFER to: Reversing Lamps .

A3 PERFORM A NETWORK TEST

Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to A4

No	REFER to: MODULE COMMUNICATIONS NETWORK .

A4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using the diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For BCM Diagnostic Trouble Codes (DTCs) B115E:01, B115E:02 or B115E:08, GO to A9 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC chart .

No	For vehicles equipped with an 8 in (203 mm) touchscreen display, GO to A5 For vehicles equipped with a 4.2 in (107 mm) display, GO to A7

A5 PERFORM THE APIM (SYNC MODULE) RESET

Perform the APIM reset. REFER to: RESET THE SYNC MODULE [APIM] .

Test the system to determine if the concern is still present.

Is the concern still present?

Yes	GO to A6

No	The system is operating correctly at this time. The concern may have been caused by an intermittent APIM concern.

A6 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to A9 For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System .

No	GO to A8

A7 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCDIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to A9 For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System .

No	GO to A8

A8 CHECK THE VIDEO DISPLAY

Observe the FDIM (if equipped) or FCDIM (if equipped) while placing the vehicle in reverse.

Wait 30 seconds.

Does the display switch to video camera mode and display REAR VIDEO CAMERA IS UNAVAILABLE PLEASE CONTACT YOUR DEALERSHIP?

Yes	GO to A9

No	For vehicles equipped with an 8 in (203 mm) touchscreen display, DIAGNOSE the APIM. REFER to: Information and Entertainment System . For vehicles equipped with a 4.2 in (107 mm) display, DIAGNOSE the FCDIM. REFER to: Information and Entertainment System .

A9 CHECK THE VOLTAGE TO THE CAMERA

Ignition OFF.

Disconnect: Rear Parking Aid Camera C4357 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A10

No	INSPECT BJB fuse 66 (5A). If the fuse is OK, repair the circuit for high resistance. If the fuse is not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the short circuit.

A10 CHECK FOR GROUND TO THE CAMERA

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		C4357-5

Is the voltage greater than 11 volts?

Yes	GO to A11

No	REPAIR the circuit.

A11 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: APIM C2342 (with 8 in (203 mm) touchscreen display).

Disconnect: FCDIM C2123 (with 4.2 in (107 mm) display).

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3		Ground

C4357-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to A12

A12 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	Ground
C4357-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to A13

No	REPAIR the circuit in question.

A13 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VIDEO SHIELD

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C4357-5
C4357-4	Ω	C4357-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to A14

No	REPAIR the circuits in question.

A14 CHECK VIDEO SIGNAL CIRCUITS FOR AN OPEN

Measure:**with 8 in (203 mm) touchscreen display**

Positive Lead	Measurement / Action	Negative Lead

C4357-3	Ω	C2342-15
C4357-4	Ω	C2342-14

with 4.2 in (107 mm) display

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C2123-12
C4357-4	Ω	C2123-6

Are the resistances less than 3 ohms?

Yes	GO to A15

No	REPAIR the circuit in question.

A15 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: BCM C2280E .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to A16

A16 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-2	Ω	C2280E-37

Is the resistance less than 3 ohms ?

Yes	GO to A17

No	REPAIR the circuit.

A17 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A18

No	REPAIR the circuit.

A18 CHECK FOR CORRECT PARKING AID CAMERA OPERATION

Ignition OFF.

Disconnect and inspect the rear parking aid camera connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the rear parking aid camera connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera . TEST the system for normal operation. If the concern is still present, for vehicles equipped with a 4.2 in (107 mm) display, GO to A19 For vehicles equipped with an 8 in (203mm) touchscreen display, GO to A20

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A19 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE)

OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A20 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST B : POOR IMAGE QUALITY

Refer to PARKING AID for schematic and connector information.

Normal Operation and Fault Conditions

The video signal is transmitted from the camera to the APIM or FCDIM on shielded, twisted pair circuits. REFER to: Parking Aid - System Operation and Component Description .

Possible Sources

- Dirty or scratched camera lens
- Wiring, terminals or connectors
- Rear parking aid camera
- FCDIM
- APIM
- Interference from other sources

Visual Inspection and Diagnostic Pre-Checks

- Make sure the rear video camera lens is clear of any debris.
- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, PERFORM an APIM reset and reevaluate the concern prior to following this pinpoint test. REFER to: RESET THE SYNC MODULE [APIM] .

NOTE: Before disconnecting the camera, verify the connector is properly seated and latched.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST B : POOR IMAGE QUALITY > PINPOINT TEST B : POOR IMAGE QUALITY

B1 CHECK AND CLEAN THE CAMERA LENS

Clean and make sure the rear video camera lens is clear of any debris and scratches.

Test the rear video camera system while observing the video camera image.

Is the concern still present?

Yes	GO to B2

No	The system is operating correctly at this time. The concern may have been caused by dirt or debris on the camera lens or intermittent electromagnetic interference from an outside source.

B2 CHECK THE VOLTAGE TO THE CAMERA

Ignition OFF.

Disconnect: Rear Parking Aid Camera C4357 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3

No	INSPECT BJB fuse 66 (5A). If the fuse is OK, repair the circuit for high resistence. If the fuse is not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the short circuit.

B3 CHECK THE CAMERA GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		C4357-5

Is the voltage greater than 11 volts?

Yes	For vehicles equipped with an 8 in (203mm) touchscreen display, GO to B4 For vehicles equipped with a 4.2 in (107 mm) display, GO to B8

No	REPAIR the camera shield ground circuit.

B4 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: APIM C2342 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3		Ground
C4357-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to B5

B5 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	Ground
C4357-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to B6

No	REPAIR the circuit in question.

B6 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VIDEO SHIELD

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C4357-5
C4357-4	Ω	C4357-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuits in question.

B7 CHECK VIDEO SIGNAL CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C2342-15
C4357-4	Ω	C2342-14

Are the resistances less than 3 ohms?

Yes	GO to B12

No	REPAIR the circuit in question.

B8 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: FCDIM C2123 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	V	Ground
C4357-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to B9

B9 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	Ground
C4357-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to B10

No	REPAIR the circuit in question.

B10 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VIDEO SHIELD

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C4357-5
C4357-4	Ω	C4357-5

Are the resistances greater than 10, 000 ohms?

Yes	GO to B11

No	REPAIR the circuit in question.

B11 CHECK VIDEO SIGNAL CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C2123-12
C4357-4	Ω	C2123-6

Are the resistances less than 3 ohms?

Yes	GO to B12

No	REPAIR the circuit in question.

B12 CHECK FOR CORRECT PARKING AID CAMERA OPERATION

Ignition OFF.

Disconnect and inspect the rear parking aid camera connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the rear parking aid camera connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera . TEST the system for normal operation. If the concern is still present, for vehicles equipped with a 4.2 in (107 mm) display, GO to B13 For vehicles equipped with an 8 in (203mm) touchscreen display, GO to B14

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B13 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B14 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST C : THE VISUAL PARK AID ALERT IS INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

Possible Sources

- The feature is disable
- Audible parking aid system concern
- Rear parking aid camera (4.2 in [107 mm] display)
- BCM concern
- FCDIM
- APIM (8 in [203 mm] touchscreen display)

Visual Inspection and Diagnostic Pre-Checks

- If the rear video camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.
- Verify that the visual parking aid alert is enabled in the FCDIM (4.2 in [107 mm] display) using the display button or using the FDIM (8 in [203 mm] display) settings menu.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST C : THE VISUAL PARK AID ALERT IS INOPERATIVE > PINPOINT TEST C : THE VISUAL PARK AID ALERT IS INOPERATIVE

C1 VERIFY THE VISUAL PART AID ALERT IS ENABLED

Ignition ON.

Verify the visual park aid alert is enabled. Refer to the Owner's Literature.

Is the visual park aid alert enabled?

Yes	GO to C2

No	ENABLE the visual park aid alert.

C2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the PAM self-test.

Are any PAM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REPAIR all PAM Diagnostic Trouble Codes (DTCs) before continuing this test. REFER to: Parking Aid .

No	GO to C3

C3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to BCM DTC Chart .

No	For vehicles with 8 in (203 mm) touchscreen display, GO to C7 For vehicles with 4.2 in (107 mm) display, GO to C4

C4 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCDIM self-test.

Are any FCDIM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System .

No	GO to C5

C5 CHECK FOR CORRECT VIDEO CAMERA OPERATION

Ignition OFF.

Disconnect and inspect the rear video camera connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the rear video camera connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera . If the concern is still present after the rear parking aid camera replacement, GO to C6

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C6 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C7 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any APIM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System .

No	GO to C8

C8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST D : THE FIXED OR ACTIVE GUIDELINES ARE INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

Possible Sources

- Rear parking aid camera
- Luggage compartment lid position data concern
- LIN concern
- BCM
- ABS module concern
- PSCM concern (active guidelines only)

Visual Inspection and Diagnostic Pre-Checks

- Verify the luggage compartment lid is fully closed.
- Verify the inoperative feature is enabled in the settings menu. Refer to the Owner's Literature.
- For active guideline concerns, verify the concern was not caused by the steering wheel being in the straight ahead position. Active guidelines are not displayed unless the steering wheel is rotated.
- If the rear video camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.

NOTE: If the battery has been disconnected or discharged, or a module is disconnected or replaced, the active guidelines may be inoperative until the vehicle is driven on a flat and smooth road at 32 km/h (20 mph) or more, with hands placed loosely on the steering wheel and minimal steering correction for approximately 30 seconds.

If the guidelines are remain inoperative, it may be necessary to disconnect the battery for 5 minutes with the driver's door open, then drive the vehicle for 5 miles in normal city driving before performing the procedure described above.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST D : THE FIXED OR ACTIVE GUIDELINES ARE INOPERATIVE > PINPOINT TEST D : THE FIXED OR ACTIVE GUIDELINES ARE INOPERATIVE

D1 PERFORM A NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to D2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

D2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to the BCM DTC Chart .

No	For vehicles equipped with a 4.2 in (107 mm) display, GO to D3 For vehicles equipped with a 8 in (203 mm) touchscreen display, GO to D4

D3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCDIM self-test.

Are any FCDIM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Information and Entertainment System .

No	For an active guideline concern, GO to D5 For a fixed guideline concern, GO to D7

D4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System .

No	For an active guideline concern, GO to D5 For a fixed guideline concern, GO to D7

D5 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

Using a diagnostic scan tool, perform the ABS module self-test.

Are any ABS module Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control .

No	GO to D6

D6 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the PSCM self-test.

Are any PSCM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: POWER STEERING .

No	GO to D7

D7 CHECK THE LUGGAGE COMPARTMENT LID AJAR PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).

Monitor the DOOR_SW_LUGG PID while opening and closing the luggage compartment lid.

Does the PID consistently agree with the luggage compartment lid position?

Yes	GO to D8

No	REFER to: Locks, Latches and Entry Systems .

D8 CHECK FOR CORRECT PARKING AID CAMERA OPERATION

Ignition OFF.

Disconnect and inspect the rear parking aid camera connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the rear parking aid camera connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera . TEST the system for normal operation. If the concern is still present, GO to D9

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

D9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST E : THE VIDEO DELAY IS INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

Possible Sources

- Communication network concern
- Gear input concern
- FCDIM concern (vehicles with 4.2 in (107 mm) display)
- APIM concern (vehicles with 8 in (203 mm) touchscreen display)

Visual Inspection and Diagnostic Pre-Checks

- Verify the video delay feature is enabled in the settings menu. Refer to the Owner's Literature.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST E : THE VIDEO DELAY IS INOPERATIVE > PINPOINT TEST E : THE VIDEO DELAY IS INOPERATIVE

E1 PERFORM A NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to E2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

E2 CHECK FOR CORRECT GEAR INPUT

Apply the parking brake.

While monitoring the reversing lamps, move the selector lever (automatic transmission) or gearshift lever (manual Transmission) through the entire range.

Do the reversing lamps illuminate only in reverse?

Yes	For vehicles equipped with 4.2 in (107 mm) display, GO to E3 For vehicles equipped with 8 in (203 mm) touchscreen display, GO to E4

No	REFER to: Reversing Lamps .

E3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCDIM self-test.

Are any FCDIM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Information and Entertainment System .

No	GO to E5

E4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Information and Entertainment System .

No	GO to E6

E5 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

E6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connector.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connector. Make sure it seats and latches correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST F : THE MANUAL ZOOM IS INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

Possible Sources

- Network communication concern
- Rear parking aid camera
- LIN concern
- APIM concern (vehicles equipped 8 in (203 mm) touchscreen display)
- FCDIM concern (vehicles equipped with 4.2 in (107 mm) display)

Visual Inspection and Diagnostic Pre-Checks

- If the rear video camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST F : THE MANUAL ZOOM IS INOPERATIVE > PINPOINT TEST F : THE MANUAL ZOOM IS INOPERATIVE

F1 PERFORM A NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to F2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

F2 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC Chart .

No	For vehicles equipped with 8 in (203 mm) touchscreen display, GO to F3 For vehicles equipped with 4.2 in (107 mm) display, GO to F4

F3 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes present?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System .

No	GO to F5

F4 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCDIM self-test.

Are any Diagnostic Trouble Codes present?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System .

No	GO to F5

F5 CHECK FOR CORRECT VIDEO CAMERA OPERATION

Ignition OFF.

Disconnect and inspect the rear video camera connector.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

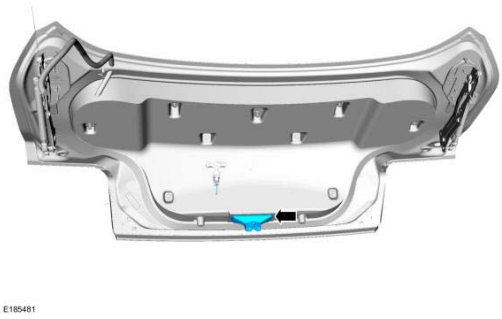
pushed-out pins - install new pins as necessary

Reconnect the rear video camera connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

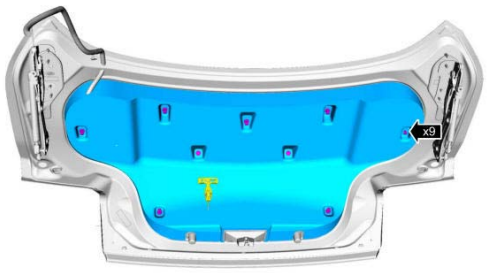
Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a Technical Service Bulletin (TSB) exists for this concern, DISCONTINUE this test and FOLLOW the Technical Service Bulletin (TSB) instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera .



No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

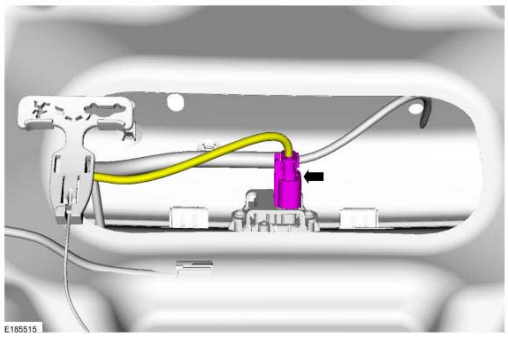
REMOVAL AND INSTALLATION > REAR PARKING AID CAMERA > REMOVAL

NOTE: Coupe shown, convertible similar.



1.

Remove the luggage compartment latch cover.



2.

Remove the push pins and remove the luggage compartment lid interior trim panel.

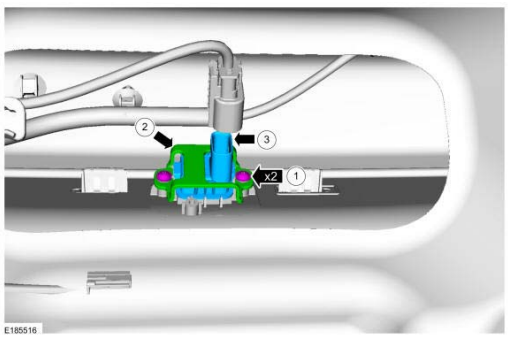
3.

Disconnect the rear view camera electrical connector.

4.

Remove the rear view camera.

1.



Remove the screws.

2.

Remove the rear view camera bracket.

3.

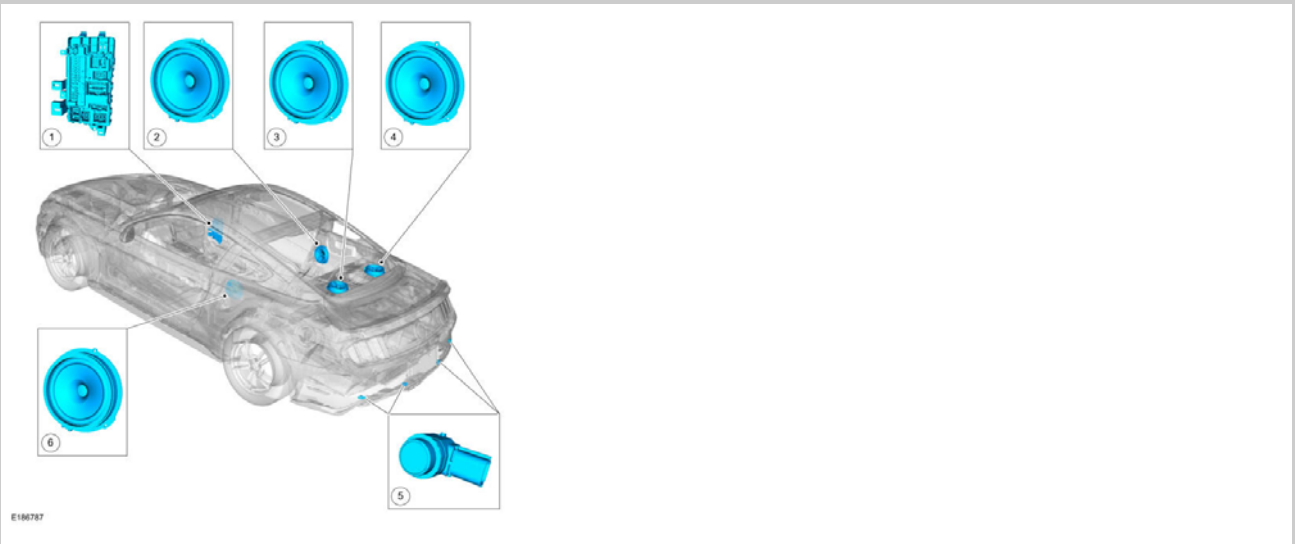
Remove the rear view camera.

REMOVAL AND INSTALLATION > REAR PARKING AID CAMERA > INSTALLATION

1.

To install, reverse the removal procedure.

2.



Configure the rear video camera following the instructions on the scan tool located using the following path: Electrical> Service Functions>LIN New Module Initialization.

SPECIFICATIONS > SPECIFICATIONS

General Specifications - Rear Parking Aid

Item	Specification
Test object position 1 (P1) and position 5 (P5), distance from rear bumper	25 cm (10 in)
Test object position 2 (P2) and position 4 (P4), distance from rear bumper	50 cm (20 in)
Test object position 3 (P3), distance from rear bumper	150 cm (59 in)

DESCRIPTION AND OPERATION > PARKING AID - COMPONENT LOCATION > COMPONENT LOCATION, PARKING AID - AUDIBLE

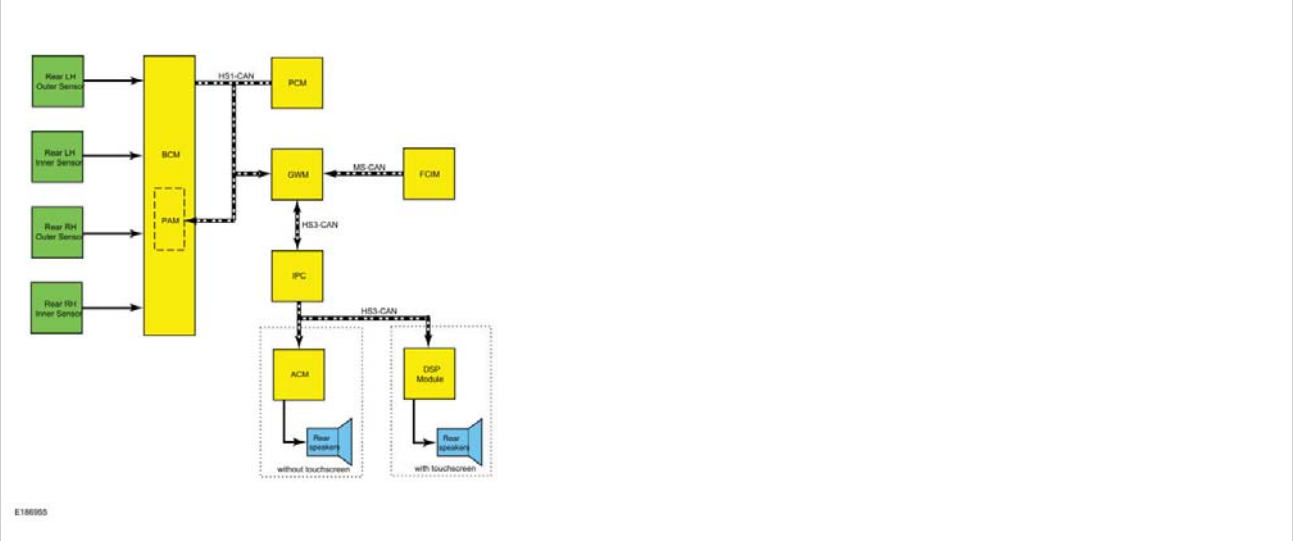
Item	Description
1	PAM (integral to the BCM)
2	RH rear convertible speaker (part of audio system)
3	LH rear sedan speaker (part of audio system)
4	RH rear sedan speaker (part of audio system)
5	Rear parking aid sensors
6	LH rear convertible speaker (part of audio system)

DESCRIPTION AND OPERATION > PARKING AID - OVERVIEW > PARKING AID - AUDIBLE

The rear parking aid system sounds a warning tone through the rear audio speakers to alert the driver of objects near the rear bumper while the transmission is in reverse. The rear parking aid system assists the driver in detecting certain objects while the vehicle is stationary or moves slowly. The rear parking aid system may not detect moving objects.

The rear parking aid system is disabled if a fault is detected in a parking aid sensor, the communications network or the PAM. This is indicated by a parking aid disabled warning message displayed in the message center.

The rear parking aid system is enabled and disabled through the message center, located in the IPC. Disabling lasts one key cycle.



If a MyKey ® restricted key is in use, the parking aid menu is not available in the message center and cannot be deactivated.

DESCRIPTION AND OPERATION > PARKING AID - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > PARKING AID - SYSTEM OPERATION AND COMPONENT DESCRIPTION > PARKING AID - AUDIBLE

System Diagram

Network Message Chart

PAM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition key type	BCM	Used to disable the parking aid menus if a MyKey ® is in use.
Ignition status	BCM	Used to communicate the ignition switch state.
Outside air temperature	FCIM	Used to temperature compensate the parking aid sensor data.
Parking aid enable/disable request	IPC	Used to enable or disable the parking aid based on driver input.
Gear position (automatic transmission)	PCM	Used to enable or disable the parking aid depending on the selector lever position.
Reverse gear (manual transmission)	PCM	Used to enable or disable the parking aid depending on the gearshift lever position.
Vehicle speed	PCM	Used to disable and enable the parking aid based on vehicle speed.

IPC Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Parking aid chime request	PAM	Used to command parking aid warning tones through the audio system speakers.
Parking aid fault status	PAM	Used to generate the parking aid warning message and chime in the event of a parking aid system concern.

ACM and DSP Network Input Messages

Broadcast Message	Originating Module	Message Purpose
IPC chime request	IPC	Input used to control the audio chime output. This message contains the parking aid chime request data.

Audible Parking Aid System Operation

The PAM calculates the distance to an object within a 170 degree semicircular area (azimuth) around the rear of the vehicle when the selector lever (automatic transmission) or gearshift lever (manual transmission) is in reverse. When the system is active and an object is detected within the rear parking aid azimuth around the rear of the vehicle, a variable rate warning tone is sounded through the rear audio system speakers.

The rear parking aid system calculates the distance to an object around the rear of the vehicle using 4 ultrasonic sensors. The rear outer parking aid sensors can detect objects approximately 24 in (60 cm) from the rear of the vehicle. The rear inner parking aid sensors can detect objects approximately 70 in (177 cm) from the rear of the vehicle. Objects that are approximately 14 in (35 cm) to the side of the rear bumper can also be detected by these sensors. Objects must be 12 in (30 cm) above the ground to be detected by the rear parking aid system. The PAM supplies voltage and ground to the rear ultrasonic sensors while monitoring a signal return circuit from each sensor. The 4 sensors share common voltage and ground circuits.

Only objects that reflect a sufficient amount of sound waves are detected by the rear parking aid sensors. The surface properties, size and composition of an object can affect the ability of the parking aid system to detect the object. Incorrect sensor alignment or installation, dirt or ice covered sensors, heavy rain and snow can also cause objects not to be detected.

The rear parking aid system can be disabled through the message center. The system remains disabled until enable through the message center or the ignition is turned off and back on. When a MyKey ® restricted key is in use, the rear parking aid can not be disabled.

Parking Aid Audible Alert

When the selector lever (automatic transmission) or gearshift lever (manual transmission) is in reverse and an object has been detected by the rear parking aid system, the IPC performs an arbitration function to prioritize the chime. The IPC built in logic determines when to mute the audio then sends a chime request message to the ACM (with 4.2 in (107 mm) display) or DSP (with 8 in (203 mm) touchscreen) to reduce the current audio volume and sound the parking aid chime through the rear audio system speakers. The alert tone frequency increases as the vehicle gets closer to an obstacle. When an object is detected within 12 in (30 cm) of the sensors, the alert tone becomes continuous. Objects detected outside the continuous tone area to the side of the vehicle generate a warning tone for 3 seconds. The warning tones are prioritized to the closest object.

The rear parking aid system standstill strategy provides audio warnings when the vehicle is stationary, with the transmission in reverse, and the detected obstacle is less than 12 in (30 cm) away from the rear bumper.

> *NOTE: Certain add-on devices can block the normal detection zone of the system and may create false audible alerts.*

Component Description

Parking Aid Sensors

The parking aid sensors are wide beam ultrasonic sensors. When the ignition is on, the sensors continuously send out ultrasonic signals to detect objects and communicate the information back to the PAM.

PAM

The PAM supplies voltage and ground to the rear ultrasonic sensors while monitoring a signal return circuit from each sensor. When an object is detected by the sensors and the rear parking aid system is active, the PAM calculates and reports, via audio system tones, the distance between the rear bumper of the vehicle and an object.

The PAM is integral to the BCM but communicates as a separate node on the HS-CAN1.

The BCM requires PMI when replaced.

DIAGNOSIS AND TESTING > PARKING AID > DTC CHART: PARKING AID MODULE (PAM)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

PAM DTC Chart

DTC	Description	Action
B1B44:12	Right Rear Outer Sensor: Circuit Short To Battery	GO to Pinpoint Test D

B1B50:96	Left Rear Inner Sensor: Component Internal Failure	GO to Pinpoint Test E
B1B58:11	Rear Sensors Power Circuit: Circuit Short To Ground	GO to Pinpoint Test B
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test F
U0101:00	Lost Communication with TCM: No Sub Type Information	GO to Pinpoint Test F

U0121:00	Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	GO to Pinpoint Test G
U0131:00	Lost Communication With Power Steering Control Module: No Sub Type Information	GO to Pinpoint Test H
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test I
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	GO to Pinpoint Test J
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test K
U0212:00	Lost Communication With Steering Column Control Module: No Sub Type Information	GO to Pinpoint Test L
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test M
U0256:00	Lost Communication With Front Controls Interface Module "A"	GO to Pinpoint Test N
U0257:00	Lost Communication With Front Controls/Display Interface Module: No Sub Type Information	GO to Pinpoint Test O
U0401:00	Invalid Data Received From ECM/PCM A: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the PCM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no PCM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0402:00	Invalid Data Received From TCM: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the PCM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no PCM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the

		observable symptom.
U0415:00	Invalid Data Received From Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the ABS module with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no ABS Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0420:00	Invalid Data Received From Power Steering Control Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the PSCM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no PSCM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the BCM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no BCM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the IPC with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no IPC Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0429:00	Invalid Data Received From Steering Column Control Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the SCCM with a faulted signal data input.

		RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no SCCM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0554:00	Invalid Data Received From Accessory Protocol Interface Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the APIM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no APIM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0557:00	Invalid Data Received From Front Controls Interface Module "A": No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the FCIM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no FCIM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U0558:00	Invalid Data Received From Front Controls/Display Interface Module: No Sub Type Information	This DTC sets in continuous memory when the PAM receives invalid network data from the FCDIM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no FCDIM Diagnostic Trouble Codes (DTCs) are present, DIAGNOSE the observable symptom.
U2024:41	Control Module Cal-Config Data: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the PAM self-test. If DTC U2024:41 is retrieved again, INSTALL As-Built data from Professional Technician Society (PTS), following the diagnostic scan tool instructions under Module Programming>As-Built. REFER to: MODULE COMMUNICATIONS NETWORK .

		REPEAT the self-test. If DTC U2024:41 is retrieved again, .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This DTC can set due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, INSTALL As-Built data from Professional Technician Society (PTS), following the diagnostic scan tool instructions under Module Programming>As-Built. REFER to: MODULE COMMUNICATIONS NETWORK . If there have been no recent service actions, .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This DTC can set due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, INSTALL As-Built data from Professional Technician Society (PTS), following the diagnostic scan tool instructions under Module Programming>As-Built. REFER to: MODULE COMMUNICATIONS NETWORK . If there have been no recent service actions, .
U3000:44	Control Module: Data Memory Failure	CLEAR the PAM Diagnostic Trouble Codes (DTCs) and PERFORM the PAM self-test. If DTC U3000:44 is retrieved again, .
U3000:45	Control Module: Program Memory Failure	CLEAR the PAM Diagnostic Trouble Codes (DTCs) and PERFORM the PAM self-test. If DTC U3000:45 is retrieved again, .
U3000:46	Control Module: Calibration/Parameter Memory Failure	CLEAR the PAM Diagnostic Trouble Codes (DTCs) and PERFORM the PAM self-test. If DTC U3000:46 is retrieved again, .
U3000:49	Control Module: Internal Electronic Failure	ADDRESS all other Diagnostic Trouble Codes (DTCs) first. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:49 is retrieved again, .

DIAGNOSIS AND TESTING > PARKING AID > SYMPTOM CHART(S)

Symptom Chart: Parking Aid - Audible

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: Parking Aid - Audible

Condition	Possible Sources	Actions
A module does not communicate with the diagnostic scan tool	Fuse Wiring, terminals or connectors Module	REFER to: MODULE COMMUNICATIONS NETWORK .
The audible parking aid is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
Continuous or intermittent tone when no obstacles or fault codes are present	Dirty or iced over parking aid sensor(s)	CLEAN the rear bumper and sensors with high-pressure water.
	Ice between parking aid sensor(s) and bezel(s)	ALLOW time for the ice between the parking aid sensor(s) and bezel(s) to melt.
	Parking aid sensor(s) locked into the rear bumper incorrectly	INSTALL the parking aid sensor(s) into the parking aid sensor bezel(s) correctly.
	Parking aid sensor(s) are not aligned correctly	CARRY OUT the elevation system check. REFER to: Elevation System Check .
	Parking aid sensor(s) isolator ring missing, damaged or misaligned	INSTALL a new parking aid sensor. REFER to: Rear Parking Aid Sensor .
The parking aid audio tones are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
The parking aid menu is not available in the message center and cannot be deactivated	A MyKey ® restricted key is in use	Normal operation.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST A : THE AUDIBLE PARKING AID IS INOPERATIVE

Refer to PARKING AID for schematic and connector information.

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

NOTE: If a MyKey ® restricted key is in use, the parking aid menu is not available in the message center and cannot be deactivated.

NOTE: Before disconnecting the PAM or any of the parking aid sensors, verify the connectors are properly seated and latched.

Possible Sources

- Parking aid system disabled
- Communication network concern
- IPC concern
- TR input concern
- PAM (integral to the BCM)

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST A : THE AUDIBLE PARKING AID IS INOPERATIVE > PINPOINT TEST A : THE AUDIBLE PARKING AID IS INOPERATIVE

A1 PERFORM A NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to A2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

A2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

Using the diagnostic scan tool, perform the PAM self-test.

Are any PAM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the PAM DTC Chart .

No	GO to A3

A3 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

Using the diagnostic scan tool, perform the IPC self-test.

Are any IPC Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes .

No	GO to A4

NOTE: If a MyKey ® restricted key is in use, the rear parking aid can not be enable/disabled.

A4 VERIFY THE PARKING AID IS ENABLED

Verify the parking system is enabled in the IPC message center. For additional information, refer to the Owner's Literature.

Is the parking aid system enabled?

Yes	GO to A5

No	ENABLE the parking aid system.

A5 CHECK FOR CORRECT GEAR INPUT

Apply the parking brake.

Select REVERSE.

Enter the following diagnostic mode on the diagnostic scan tool: PAM DataLogger.

Monitor the PAM transmission range PID (TRANSGR).

Does the PID indicate YES (transmission in reverse)?

Yes	GO to A6

No	For automatic transmission, REFER to: Diagnosis By Symptom . For manual transmission, REFER to: Manual Transmission .

A6 CHECK THE AUDIO CHIMES

Ignition OFF.

Open the driver door.

Place the headlamp switch in the ON position.

Does the warning chime operate through the audio system?

Yes	GO to A7

No	REFER to: Instrumentation, Message Center and Warning Chimes .

A7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related in line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related in line connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST B : DTC (DIAGNOSTIC TROUBLE CODE) B1B58:11

Refer to PARKING AID for schematic and connector information.

Normal Operation and Fault Conditions

The PAM supplies voltage to the parking aid sensors via a common circuit.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B58:11	Rear Sensors Power Circuit: Circuit Short To Ground	A continuous and on-demand DTC that sets when the rear sensor voltage supply circuit is shorted to ground or to the signal return circuit.

Possible Sources

- Wiring, terminals or connectors
- Parking aid sensor
- PAM (integral to the BCM)

NOTE: Before disconnecting the PAM or any of the parking aid sensors, verify the connectors are properly seated and latched.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST B : DTC (DIAGNOSTIC TROUBLE CODE) B1B58:11 > PINPOINT TEST B : DTC (DIAGNOSTIC TROUBLE CODE) B1B58:11

B1 CHECK THE BUMPER WIRING HARNESS

Ignition OFF.

Inspect the bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the bumper wiring harness OK?

Yes	GO to B2

No	REPAIR or INSTALL a new bumper wiring harness.

B2 CHECK THE LH (LEFT-HAND) REAR OUTER PARKING AID SENSOR FOR AN INTERNAL SHORT

Disconnect: LH Rear Outer Parking Aid Sensor C4009 .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 still present?

Yes	GO to B3

No	INSTALL a new LH rear outer parking aid sensor. REFER to: Rear Parking Aid Sensor .

B3 CHECK THE LH (LEFT-HAND) REAR INNER PARKING AID SENSOR FOR AN INTERNAL SHORT

Ignition OFF.

Disconnect: LH Rear Inner Parking Aid Sensor C4010 .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 still present?

Yes	GO to B4

No	INSTALL a new LH rear inner parking aid sensor. REFER to: Rear Parking Aid Sensor .

B4 CHECK THE RH (RIGHT-HAND) REAR INNER PARKING AID SENSOR FOR AN INTERNAL SHORT

Ignition OFF.

Disconnect: RH Rear Inner Parking Aid Sensor C4012 .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 still present?

Yes	GO to B5

No	INSTALL a new RH rear inner parking aid sensor. REFER to: Rear Parking Aid Sensor .

B5 CHECK THE RH (RIGHT-HAND) REAR OUTER PARKING AID SENSOR FOR AN INTERNAL SHORT

Ignition OFF.

Disconnect: RH Rear Outer Parking Aid Sensor C4011 .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the

PAM self-test.

Is DTC B1B58:11 still present?

Yes	GO to B6

No	INSTALL a new RH rear outer parking aid sensor. REFER to: Rear Parking Aid Sensor .

B6 CHECK THE PARKING AID SENSOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: BCM C2280D .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit.

B7 CHECK THE PARKING AID SENSOR VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	C2280D-27

Is the resistance greater than 10, 000 ohms?

Yes	GO to B8

No	REPAIR the circuits.

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST C : DTC (DIAGNOSTIC TROUBLE CODE) B1B44:14, B1B46:14, B1B48:14, B1B50:14

Refer to PARKING AID for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B44:14	Right Rear Outer Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the right rear outer parking aid sensor circuits are open or the sensor signal line is shorted to ground.
B1B46:14	Right Rear Inner Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the right rear inner parking aid sensor circuits are open or the sensor signal line is shorted to ground.
B1B48:14	Left Rear Outer Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the left rear outer parking aid sensor circuits are open or the sensor signal line is shorted to ground.
B1B50:14	Left Rear Inner Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the left rear inner parking aid sensor circuits

		are open or the sensor signal line is shorted to ground.

Possible Sources

- Wiring, terminals or connectors
- Parking aid sensor
- PAM (integral to the BCM)

NOTE: Before disconnecting the PAM or any of the parking aid sensors, verify the connectors are properly seated and latched.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST C : DTC (DIAGNOSTIC TROUBLE CODE) B1B44:14, B1B46:14, B1B48:14, B1B50:14 > PINPOINT TEST C : DTC (DIAGNOSTIC TROUBLE CODE) B1B44:14, B1B46:14, B1B48:14, B1B50:14

C1 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

Ignition ON.

Using a diagnostic scan tool, perform the PAM self-test.

Check the PAM Diagnostic Trouble Codes (DTCs).

Are multiple parking aid sensor Diagnostic Trouble Codes (DTCs) recorded?

Yes	GO to C2

No	For DTC B1B44:14, B1B46:14, B1B48:14 or B1B50:14, GO to C3 For all other Diagnostic Trouble Codes (DTCs), REFER to the PAM DTC Chart .

C2 CHECK THE REAR BUMPER WIRING HARNESS

Ignition OFF.

Inspect the rear bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the rear bumper wiring harness OK?

Yes	GO to C3

No	REPAIR or INSTALL a new rear bumper wiring harness.

C3 CHECK THE PARKING AID SENSOR CIRCUITRY FOR OPENS

Ignition OFF.

Disconnect: suspect parking aid sensor(s).

Disconnect: BCM C2280D .

Measure:

DTC B1B44:14

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	C4011-1
C2280D-7	Ω	C4011-2
C2280D-27	Ω	C4011-3

DTC B1B46:14

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	C4012-1
C2280D-8	Ω	C4012-2
C2280D-27	Ω	C4012-3

DTC B1B48:14

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	C4009-1
C2280D-23	Ω	C4009-2
C2280D-27	Ω	C4009-3

DTC B1B50:14

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	C4010-1
C2280D-24	Ω	C4010-2
C2280D-27	Ω	C4010-3

Are the resistances of the suspect sensor(s) circuits less than 3 ohms?

Yes	GO to C4

No	REPAIR the circuit in question.

C4 CHECK THE PARKING AID SENSOR CIRCUITRY FOR SHORTS TO GROUND

Measure:

DTC B1B44:14

Positive Lead	Measurement / Action	Negative Lead
C4011-2	Ω	Ground

DTC B1B46:14,

Positive Lead	Measurement / Action	Negative Lead
C4012-2	Ω	Ground

DTC B1B48:14,

Positive Lead	Measurement / Action	Negative Lead
C4009-2	Ω	Ground

DTC B1B50:14,

Positive Lead	Measurement / Action	Negative Lead
C4010-2	Ω	Ground

Is the resistance greater than 10, 000 ohms for the sensor circuit in question?

Yes	If all of the parking aid sensors recorded Diagnostic Trouble Codes (DTCs), GO to C5 If one or more (but not all) parking aid sensor(s) recorded Diagnostic Trouble Codes (DTCs), INSTALL a new sensor(s) for the one(s) in question. REFER to: Rear Parking Aid Sensor .

No	REPAIR the circuit in question.

C5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST D : DTC (DIAGNOSTIC TROUBLE CODE) B1B44:12, B1B46:12, B1B48:12, B1B50:12

Refer to PARKING AID for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B44:12	Right Rear Outer Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the right rear outer parking aid sensor signal circuit is shorted to battery voltage.
B1B46:12	Right Rear Inner Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the right rear inner parking aid sensor signal circuit is shorted to battery voltage.
B1B48:12	Left Rear Outer Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the left rear outer parking aid sensor signal circuit is shorted to battery voltage.
B1B50:12	Left Rear Inner Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the left rear inner parking aid sensor signal circuit is shorted to battery voltage.

Possible Sources

- Wiring, terminals or connectors
- Parking aid sensor

- PAM (integral to the BCM)

NOTE: Before disconnecting the PAM or any of the parking aid sensors, verify the connectors are properly seated and latched.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST D : DTC (DIAGNOSTIC TROUBLE CODE) B1B44:12, B1B46:12, B1B48:12, B1B50:12 > PINPOINT TEST D : DTC (DIAGNOSTIC TROUBLE CODE) B1B44:12, B1B46:12, B1B48:12, B1B50:12

D1 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

Ignition ON.

Using a diagnostic scan tool, perform the PAM self-test.

Check the PAM Diagnostic Trouble Codes (DTCs) from the self-test.

Are multiple parking aid sensor Diagnostic Trouble Codes (DTCs) recorded?

Yes	GO to D2

No	For Diagnostic Trouble Codes (DTCs) B1B44:12, B1B46:12, B1B48:12 or B1B50:12, GO to D3 For all other Diagnostic Trouble Codes (DTCs), REFER to the PAM DTC Chart .

D2 CHECK THE REAR BUMPER WIRING HARNESS

Ignition OFF.

Inspect the rear bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the rear bumper wiring harness OK?

Yes	GO to D3

No	REPAIR or INSTALL a new rear bumper wiring harness.

D3 CHECK THE PARKING AID SENSOR CIRCUITRY FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Suspect Parking Aid Sensor(s).

Disconnect: BCM C2280D .

Ignition ON.

Measure:

DTC B1B44:12

Positive Lead	Measurement / Action	Negative Lead
C4011-2		Ground

DTC B1B46:12

Positive Lead	Measurement / Action	Negative Lead
C4012-2		Ground

DTC B1B48:12

Positive Lead	Measurement / Action	Negative Lead
C4009-2		Ground

DTC B1B50:12

Positive Lead	Measurement / Action	Negative Lead
C4010-2		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to D4

D4 CHECK THE PARKING AID SENSOR CIRCUITRY FOR A SHORT TOGETHER

Measure:

DTC B1B44:12

Positive Lead	Measurement / Action	Negative Lead
C4011-2	Ω	C4011-1

DTC B1B46:12

Positive Lead	Measurement / Action	Negative Lead
C4012-2	Ω	C4012-1

DTC B1B48:12

Positive Lead	Measurement / Action	Negative Lead
C4009-2	Ω	C4009-1

DTC B1B50:12

Positive Lead	Measurement / Action	Negative Lead
C4010-2	Ω	C4010-1

Is the resistance greater than 10, 000 ohms?

Yes	If all the sensor Diagnostic Trouble Codes (DTCs) are set, GO to D5 If one or more (but not all) parking aid sensor(s) recorded Diagnostic Trouble Codes (DTCs), INSTALL a new sensor(s) for the one in question. REFER to: Rear Parking Aid Sensor .

No	REPAIR the circuit in question.

D5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST E

B1B48:96, B1B50:96

E1 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, perform the PAM self-test.

Check the PAM Diagnostic Trouble Codes (DTCs) from the self-test.

Are parking aid Diagnostic Trouble Codes (DTCs) other than B1B44:96, B1B46:96, B1B48:96 or B1B50:96 recorded?

Yes	For all other Diagnostic Trouble Codes (DTCs) REFER to the PAM DTC Chart .

No	GO to E2

NOTE: Make sure the area around the vehicle is clear of anything that can activate the parking aid system.

E2 CHECK THE PARKING AID SENSOR DISTANCE PARAMETER IDENTIFICATIONS (PIDS) WITH NO OBJECTS BEHIND THE VEHICLE

Clean the rear bumper and sensors with high-pressure water.

Make sure the suspect parking aid sensor(s) is flush-mounted in the bezel.

Ignition ON.

Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) (LRI_DIST, LRO_DIST, RRI_DIST, RRO_DIST). The PID reads 2, 540 mm (100 in) on a correctly functioning sensor.

Does the PID read 2, 540 mm (100 in)?

Yes	GO to E3

No	GO to E4

NOTE: Make sure the area around the vehicle is clear of anything that can activate the parking aid system.

E3 CHECK THE PARKING AID SENSOR DISTANCE PARAMETER IDENTIFICATIONS (PIDS) WITH A TEST OBJECT BEHIND THE VEHICLE

Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) (LRI_DIST, LRO_DIST, RRI_DIST, RRO_DIST).

While monitoring the Parameter Identifications (PIDs), move a test object into and out of the detection zone behind each sensor. For an example of a test object, REFER to: Azimuth

System Check .

Does the PID approximately match the distance from the test object to the rear bumper of the vehicle?

Yes	GO to E5

No	GO to E4

E4 CHECK THE PARKING AID SENSORS

Ignition OFF.

Install a known good sensor for the suspect parking aid sensor. REFER to: Rear Parking Aid Sensor .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Check the PAM Diagnostic Trouble Codes (DTCs).

Is the concern still present?

Yes	GO to E5

No	INSTALL a new rear parking aid sensor. REFER to: Rear Parking Aid Sensor .

E5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST F : DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 OR DTC (DIAGNOSTIC TROUBLE CODE) U0101:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the PCM on the HS-CAN1.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the PCM are missing for 5 seconds or more.
U0101:00	Lost Communication with TCM: No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the PCM are missing for 5 seconds or more.

Possible Sources

- Communication network concern
- PCM
- TCM (integral to the PCM)
- PAM (integral to the BCM)

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST F : DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 OR DTC (DIAGNOSTIC TROUBLE CODE) U0101:00 > PINPOINT TEST F : DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 OR DTC (DIAGNOSTIC TROUBLE CODE) U0101:00

F1 VERIFY THAT A VEHICLE SESSION CAN BE ESTABLISHED USING THE DIAGNOSTIC SCAN TOOL

Ignition ON.

Verify that a vehicle session can be established using a diagnostic scan tool.

Can a vehicle session be established?

Yes	GO to F2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

F2 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear the PAM Diagnostic Trouble Codes (DTCs).

Operate the system and test for normal operation.

Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 still present?

Yes	GO to F3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate article for the procedure.

No	GO to F4

F4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100 OR DTC (DIAGNOSTIC TROUBLE CODE) U0101 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100 or DTC U0101 set in any other module?

Yes	GO to F5

No	GO to F6

F5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all PCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

F6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and

latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST G : DTC (DIAGNOSTIC TROUBLE CODE) U0121:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the ABS module through the HS-CAN1, HS-CAN2 and the GWM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the ABS module are missing for 5 seconds or more.

Possible Sources

- Communication network concern
- ABS module
- GWM concern
- PAM (integral to the BCM)

G1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to G2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

G2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform the network test.

Do the ABS module and the GWM pass the network test?

Yes	GO to G3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

G3 PERFORM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

Using a diagnostic scan tool, perform the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control .

No	GO to G4

G4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to G5

G5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Operate the system and test for normal operation.

Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121:00 still present?

Yes	GO to G6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

G6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121 set in any other module?

Yes	GO to G7

No	GO to G8

G7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Ignition OFF.

Disconnect and inspect all ABS module connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the ABS module connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to:

	Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

G8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST H : DTC (DIAGNOSTIC TROUBLE CODE) U0131:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the PSCM through the HS-CAN1, HS-CAN2 and GWM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0131:00	Lost Communication with Power Steering Control Module: No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the PSCM are missing for 5 seconds or more.

Possible Sources

- Communication network concern
- PSCM (integral to the steering gear)
- GWM concern
- PAM (integral to the BCM)

Disconnect and inspect all SCCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

L8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST M : DTC (DIAGNOSTIC TROUBLE CODE) U0253:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the APIM through the HS-CAN1, HS-CAN3 and GWM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the APIM are missing for 5 seconds or more.

Possible Sources

- Communication network concern
- GWM concern
- APIM
- PAM (integral to the BCM)

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST M : DTC (DIAGNOSTIC TROUBLE CODE) U0253:00 > PINPOINT TEST M : DTC (DIAGNOSTIC TROUBLE CODE) U0253:00

M1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to M2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

M2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform the network test.

Does the APIM and the GWM pass the network test?

Yes	GO to M3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

M3 PERFORM THE APIM (SYNC MODULE) SELF-TEST

Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For vehicles with the touchscreen display, REFER to: Information and Entertainment System . For vehicles without the touchscreen display, REFER to: Information and Entertainment System .

No	GO to M4

M4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to M5

M5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Operate the system and test for normal operation.

Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:00 still present?

Yes	GO to M6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

M6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253 IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0253 set in any other module?

Yes	GO to M7

No	GO to M8

M7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the APIM connectors and related inline connectors.

Repair:

Corrosion (clean module pins or install new connectors or terminals)

Damaged or bent pins (install new terminals or pins)

Pushed-out pins (install new pins as necessary)

Reconnect the APIM connectors and related inline connectors. Make sure they seat and latch correctly.

Wait at least 2 minutes for the APIM to re-initialize.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, PERFORM the APIM Hardware Test. Refer to APIM HARDWARE TESTING .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST N : DTC (DIAGNOSTIC TROUBLE CODE) U0256:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the FCIM through the HS-CAN1, MS-CAN and GWM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module: No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the FCIM are missing for 5 seconds or more.

Possible Sources

- Communication network concern
- GWM concern
- FCIM
- PAM (integral to the BCM)

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST N : DTC (DIAGNOSTIC TROUBLE CODE) U0256:00 > PINPOINT TEST N : DTC (DIAGNOSTIC TROUBLE CODE) U0256:00

N1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to N2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

N2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform the network test.

Do the FCIM and the GWM pass the network test?

Yes	GO to N3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

N3 PERFORM THE FCIM (FRONT CONTROLS INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For vehicles with the touchscreen display, REFER to: Information and Entertainment System . For vehicles without the touchscreen display, REFER to: Information and Entertainment System .

No	GO to N4

N4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to N5

N5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Operate the system and test for normal operation.

Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:00 still present?

Yes	GO to N6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

N6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0256 set in any other module?

Yes	GO to N7

No	GO to N8

N7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all FCIM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. For vehicles with the touchscreen display, REFER to: Front Controls Interface Module (FCIM) . For vehicles without the touchscreen display, REFER to: Front Controls Interface Module (FCIM) .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

N8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.
