Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST O : DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the FCDIM through the HS-CAN1, HS-CAN3 and GWM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With Front Controls/Display Interface Module: No Sub Type Information	A continuous memory DTC that sets in the PAM if messages received from the FCDIM are missing for 5 seconds or more.

Possible Sources

- Communication network concern
- GWM concern
- FCDIM
- PAM (integral to the BCM)

DIAGNOSIS AND TESTING > PARKING AID > PINPOINT TEST(S) > PINPOINT TEST O : DTC (DIAGNOSTIC TROUBLE CODE) U0257:00 > PINPOINT TEST O : DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

O1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to O2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

O2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform the network test.

Do the FCDIM and the GWM pass the network test?

Yes	GO to O3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

O3 PERFORM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

Using a diagnostic scan tool, perform the FCIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System .

No	GO to O4

O4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to O5

O5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

Operate the system and test for normal operation.

Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0257:00 still present?

Yes	GO to O6

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0257 set in any other module?

Yes	GO to O7

No	GO to O8

O7 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect the FCDIM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCDIM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

O8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all BCM connectors and related inline connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and related inline connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

GENERAL PROCEDURES > AZIMUTH SYSTEM CHECK

Check

NOTE: Actual sensor arrangement may differ from the configuration shown.

NOTE: The following system check should be carried out with the vehicle on a level surface.

NOTE: The object used in this system check can be fabricated using a 9 cm diameter (3 in I.D.) pipe, 100 cm (39 in) in length (available as Polyvinyl Chloride (PVC) pipe, or similar from a hardware or plumbing supply.

1.
Distribute the test objects evenly across the bumper as shown below. Refer to the specifications in this article.

2.

Turn the ignition switch to the ON position, engine off.

3.

Apply the parking brake.

4.

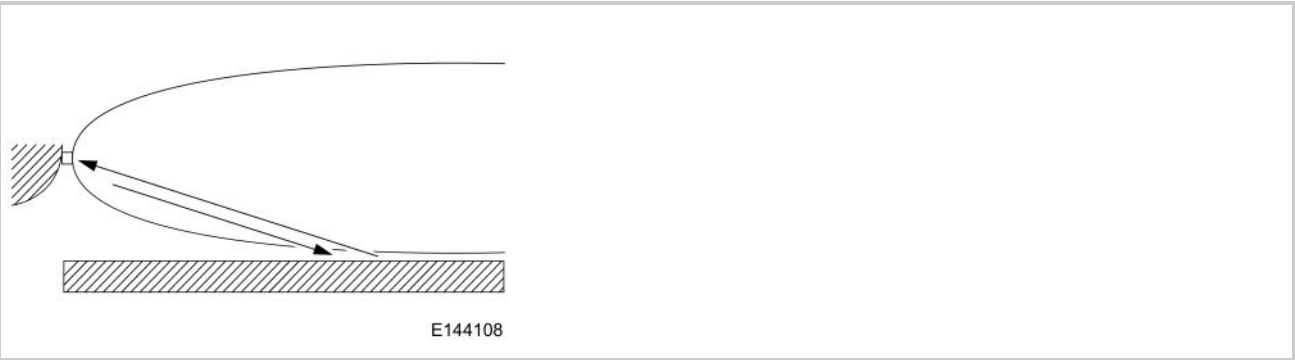
Select REVERSE (R) for rear parking aid.

5.

Select DRIVE (D) for front parking aid.

> *NOTE: If the PAM does not detect the object above, refer to Diagnosis and Testing .*

> *NOTE: The system provides audio warnings only when the vehicle is moving or when the vehicle is stationary and the detected obstacle is less than 12 in (30 cm) away from the bumper.*



6.
Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) to verify the PAM detects the objects when placed in the specified locations (P1, P2, P3, P4 and P5).

GENERAL PROCEDURES > ELEVATION SYSTEM CHECK

Check

1.

Turn the ignition ON, engine OFF.

2.

Set the parking brake.

3.

Place the gearshift in REVERSE (R) for rear parking aid sensors.

4.

Place the gearshift in DRIVE (D) for front parking aid sensors.

5.

Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) to verify the PAM detects no objects.

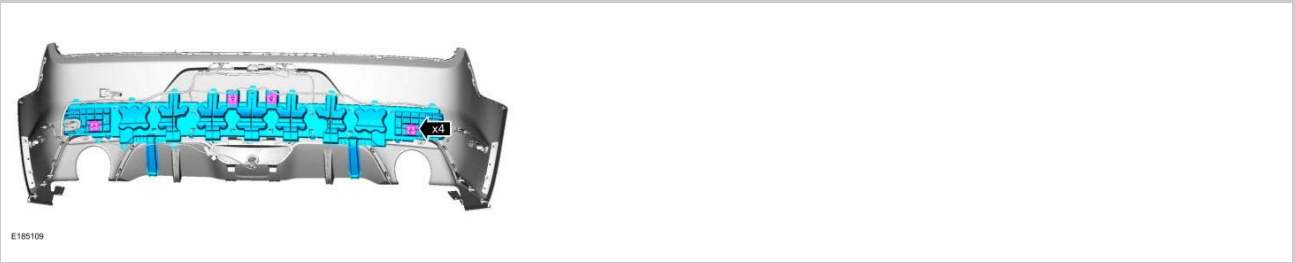
6.

If the audible warning is heard or if the Parameter Identifications (PIDs) indicate an object is detected, check to make sure the bumper is correctly installed and is not tilted downward so the sensor is pointing at the ground. Refer to Diagnosis and Testing .

REMOVAL AND INSTALLATION > REAR PARKING AID SENSOR > REMOVAL

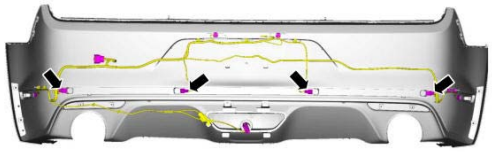
1.

Remove the rear bumper cover. Refer to: Rear Bumper Cover .



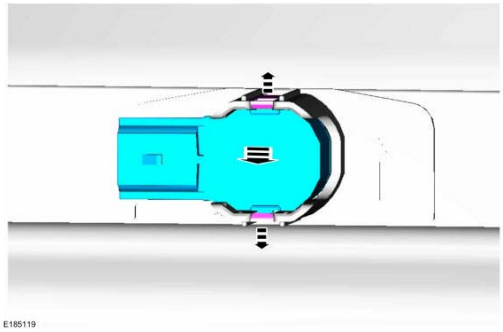
2.

Separate the wiring harness guides and position the harness aside.



3.

Release the clips and remove the rear bumper cover reinforcement.



4.

Disconnect the appropriate sensor electrical connector.

5.

Release the retaining clips and remove the park aid sensor.

REMOVAL AND INSTALLATION > REAR PARKING AID SENSOR > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Check the alignment of the park aid sensors. Refer to: Azimuth System Check . Refer to: Elevation System Check .

Service Manual: REMOTE CONVENIENCE

DESCRIPTION AND OPERATION > UNIVERSAL TRANSMITTER - OVERVIEW > OVERVIEW

The universal transmitter operates garage doors, gates and home or office lighting and security systems.

DESCRIPTION AND OPERATION > UNIVERSAL TRANSMITTER - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > UNIVERSAL TRANSMITTER - SYSTEM OPERATION AND COMPONENT DESCRIPTION > UNIVERSAL TRANSMITTER

The universal transmitter learns a hand-held transmitter radio frequency code and stores the code in memory. It consists of 3 buttons with an indicator lamp. Once the universal transmitter code is stored, the universal transmitter emits the radio frequency of the hand-held transmitter when the corresponding button is pressed. The universal transmitter can store 3 unique transmitter codes at a time. The universal transmitter and LH vanity mirror lamp are part of the LH sun visor and share the same power and ground circuits.

DIAGNOSIS AND TESTING > UNIVERSAL TRANSMITTER > SYMPTOM CHART(S)

Symptom Chart: Universal Home Transmitter

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Sources	Actions
The universal transmitter is inoperative	Interior lamps concern Universal transmitter (part of the LH sun visor)	GO to Pinpoint Test A

DIAGNOSIS AND TESTING > UNIVERSAL TRANSMITTER > PINPOINT TESTS

Universal Transmitter Is Inoperative

Normal Operation and Fault Conditions

REFER to: Universal Transmitter - Overview .

Visual Inspection and Diagnostic Pre-checks

- Inspect BCM Fuse 41 (10A).
- Inspect battery saver relay.

DIAGNOSIS AND TESTING > UNIVERSAL TRANSMITTER > PINPOINT TESTS > PINPOINT TEST A : UNIVERSAL TRANSMITTER IS INOPERATIVE > PINPOINT TEST A : UNIVERSAL TRANSMITTER IS INOPERATIVE

A1 CHECK FOR VOLTAGE TO THE UNIVERSAL TRANSMITTER

Check the illumination of the universal transmitter by pressing one of the buttons.

Does the indicator on the universal transmitter illuminate?

Yes	GO to A2

No	GO to A3

A2 PROGRAM A HAND-HELD TRANSMITTER TO THE UNIVERSAL TRANSMITTER

NOTE: The customer's hand-held transmitter is required when programming the universal transmitter.

Program the universal transmitter. Refer to the Owner's Literature.

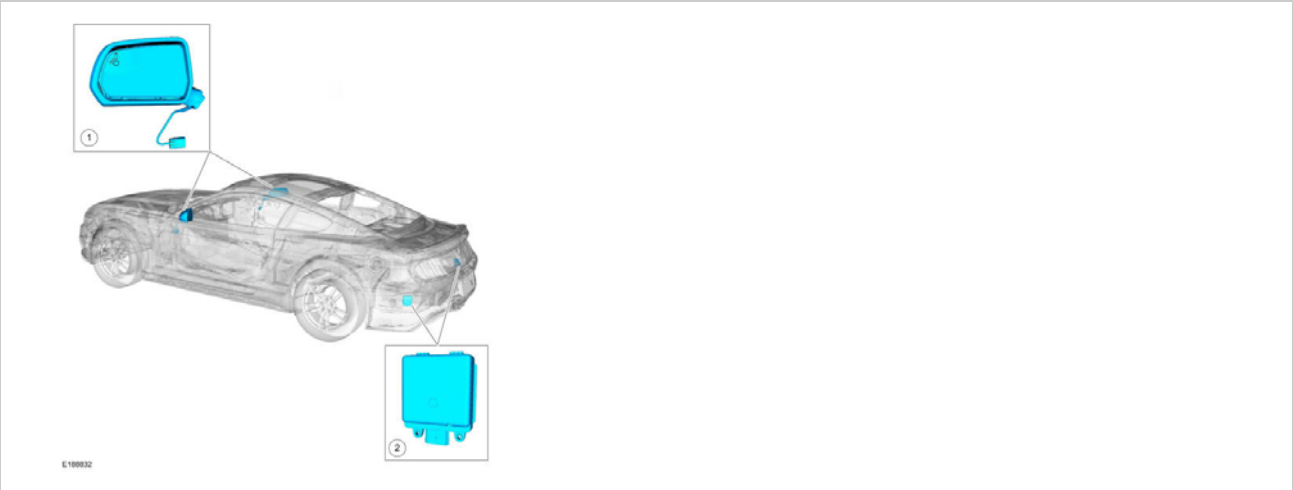
Does the universal transmitter program successfully?

Yes	The universal transmitter is OK. VERIFY the receiver unit operates correctly.

No	INSTALL a new LH sun visor.

A3 CHECK THE OPERATION OF THE LH (LEFT-HAND) VANITY MIRROR LAMP

Verify the operation of the LH vanity mirror lamp. REFER to: Interior Lighting .



Does the LH vanity mirror lamp operate correctly?

Yes	INSTALL a new LH sun visor.

No	Diagnose the lighting concern. REFER to: Interior Lighting .

Service Manual: SIDE AND REAR VISION

DESCRIPTION AND OPERATION > BLIND SPOT INFORMATION SYSTEM - COMPONENT LOCATION > COMPONENT LOCATION - BLIND SPOT MONITORING SYSTEM

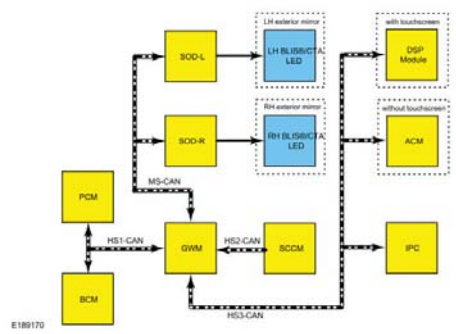
Item	Description
1	Exterior Mirrors
2	SODL and SODR

DESCRIPTION AND OPERATION > BLIND SPOT INFORMATION SYSTEM - OVERVIEW > BLIND SPOT MONITORING

The BLIS ® aids the driver in assessing whether another vehicle is present within a specific area (blind spot) to either side of the vehicle, extending rearward approximately 6 m (20 ft) beyond the rear bumper while driving on roads and highways. The system is not designed to prevent contact with other vehicles or objects. The BLIS ® uses the exterior mirror BLIS ® Light Emitting Diodes (LEDs) to alert the driver that a vehicle has been detected. The BLIS ® provides alerts when the vehicle is in forward gear and the vehicle speeds is greater than 10 km/h (6 mph).

DESCRIPTION AND OPERATION > BLIND SPOT INFORMATION SYSTEM - OVERVIEW > CTA

When the vehicle is in REVERSE (R), the CTA system alerts the driver of vehicles that are approaching from the side when backing out of a front-in parking space or backing towards the road. The system can detect a vehicle approaching from 14 m (45 ft) away at a speed up to 64 km/h (40 mph) from the left or right side of the vehicle. The CTA system uses the exterior mirror BLIS ® Light Emitting Diodes (LEDs), a warning chime from the audio speakers and a message in the IPC message center to notify the driver of approaching vehicles.



NOTE: If a MyKey ® restricted key is in use, the BLIS ® and CTA system cannot be turned off in the IPC.

DESCRIPTION AND OPERATION > BLIND SPOT INFORMATION SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION

DESCRIPTION AND OPERATION > BLIND SPOT INFORMATION SYSTEM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > BLIND SPOT INFORMATION SYSTEM (BLIS ®) AND CROSS TRAFFIC ALERT (CTA)

System Diagram

Network Message Chart

IPC Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Side obstacle sensor status - left	SODL	Used to communicate the operating status of the SODL and to command the Cross Traffic Alert (CTA) message center displays.
Side obstacle sensor status - right	SODR	Used to communicate the operating status of the SODR and to command the Cross Traffic Alert (CTA) message center displays.
Cross traffic alert left status	SODL	Used to command the Cross Traffic Alert (CTA) audio chime and the BLIS ® RTT.
Cross traffic alert right status	SODR	

ACM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Chime mode	IPC	Used to command the Cross Traffic Alert (CTA) audio chimes on without touchscreen.

DSP Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Chime mode	IPC	Used to command the Cross Traffic Alert (CTA) audio chimes on vehicles with touchscreen.

SODL Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) enable command	IPC	Used to enable/disable the Blind Spot Information System (BLIS ®) or Cross Traffic Alert (CTA) based on driver input.
Ignition key type	BCM	Used to disable the ability to turn OFF the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) when a MyKey restricted key is in use.
Gear lever position (automatic transmission vehicles only)	PCM	Used to turn the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system on and off depending the gear lever position.
Reverse gear (manual transmission vehicles only)	PCM	Used to turn the Cross Traffic Alert (CTA) system on and off when the transmission is shifted in to and out of REVERSE (R).
Vehicle speed	PCM	Used to activate the Blind Spot Information System (BLIS ®) after an ignition cycle and deactivate the Cross Traffic Alert (CTA) system when the vehicle speed exceeds preset thresholds.
Wiper status	SCCM	Used to determine ambient weather conditions for correct system operation.
Turn signal status	SCCM	Used to generate the secondary alert when a turn signal is activated.

VIN information	BCM	Contains VIN information.

SODR Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) enable command	IPC	Used to enable/disable the Blind Spot Information System (BLIS ®) or Cross Traffic Alert (CTA) based on driver input.
Gear lever position (automatic transmission vehicles only)	PCM	Used to turn the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system on and off depending the gear lever position.
Reverse gear (manual transmission vehicles only)	PCM	Used to turn the Cross Traffic Alert (CTA) system on and off when the transmission is shifted in to and out of REVERSE (R).
Ignition key type	BCM	Used to disable the ability to turn OFF the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) when a MyKey ® restricted key is in use.
Vehicle speed	PCM	Used to activate the Blind Spot Information System (BLIS ®) after an ignition cycle and deactivate the Cross Traffic Alert (CTA) system when the vehicle speed exceeds preset thresholds.
Wiper status	SCCM	Used to determine ambient weather conditions for correct system operation.
Turn signal status	SCCM	Used to generate the secondary alert when a turn signal is activated.
VIN information	BCM	Contains VIN information.

Blind Spot Information System (BLIS ®)

The Blind Spot Information System (BLIS ®) provides alerts to the driver when the vehicle is in a forward gear and the vehicle speeds is greater than 6 mph (10 km/h).

The Blind Spot Information System (BLIS ®) can trigger an alert for vehicles that enter the blind zone from the rear, front, or merge into the blind zone from the side. The exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED illuminates in the right and/or left exterior mirror when a target is present. For vehicles that pass through the blind zone quickly, typically less than 2 seconds, the Blind Spot Information System (BLIS ®) may not trigger an alert.

If a turn signal is active while Blind Spot Information System (BLIS ®) has detected a target in the blind zone, the Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED will flash rapidly. When the turn signal is off, the Blind Spot Information System (BLIS ®) target warnings will be a constant LED illumination.

> *NOTE: There should be no bumper stickers or body filler material used on the rear side bumper cover in the vicinity of the SODL or SODR.*

> *NOTE: The Blind Spot Information System (BLIS ®) is not intended to detect parked vehicles, pedestrians, or objects such as fences, guard rails or trees.*

Due to the nature of radar technology, false alerts may occur under certain circumstances. False alerts occur when the LED illuminates with no target present. False alerts up to 3% (3 out of 100 targets) is considered normal operation. False alerts are temporary and self-correcting. False alerts may be caused by sharp turns around a pole or building, jogging pedestrians or fast moving shopping carts.

Missed targets occur when a target is present and the LED does not illuminate. Missed targets up to 1% (1 out of 100 targets) is considered normal operation.

Circumstances that cause missed alerts are:

- Debris build-up or bumper stickers on the rear bumper sides
- Certain maneuvering of the vehicles entering and exiting the blind zone
- Vehicles passing through the blind zone at high rates of speed
- When several vehicles forming a convoy pass through the blind zone

The Blind Spot Information System (BLIS ®) may not detect an adjacent target immediately when the vehicle accelerates from a standing start with another vehicle alongside.

Cross Traffic Alert (CTA) System

> *NOTE: The Cross Traffic Alert (CTA) system is only active when reverse gear is selected.*

When the transmission is in reverse, the Cross Traffic Alert (CTA) system can detect a vehicle or a bicycle that is approaching at a speed between 5 mph and 40 mph (8 km/h and 64 km/h) and time to impact is between 1 and 2.5 seconds. The distance at which an alert is generated varies depending on the speed of the approaching vehicles or bicycles. The Cross Traffic Alert (CTA) system response time and performance can degrade if vehicles are approaching at speeds greater than 40 mph (64 km/h).

An adjacent parked vehicle or object can affect the systems ability to detect approaching vehicles or bicycles (refer to figure 1). Parking in at extreme angles can further affect the systems ability to detect approaching vehicles or bicycles (refer to figure 2).

Backing towards a curve road can also affect systems ability to detect approaching vehicles or bicycles (refer to figure 3).

Cross Traffic Alert (CTA) detection zones:

The Cross Traffic Alert (CTA) system is designed to detect any objects approaching the vehicle at a speed equal to or greater than 5 mph (8 km/h). This includes vehicles and bicycles. The Cross Traffic Alert (CTA) system has some detection limitations due to the nature of the radar technology used by the SODL and SODR. The system cannot normally detect stationary vehicles, humans, animals or objects such as fences, guard rails or trees.

Circumstances that may cause non-detection are:

- Debris build-up or bumper stickers on the rear bumper sides
- The rear quarter panel of the vehicle is obstructed or partially obstructed by an adjacently parked vehicle or object
- Vehicle approaching at speeds greater than 40 mph (64 km/h)
- Driving in reverse faster than 7.5 mph (12 km/h)
- Damage to sensor and/or sensor area

Due to the nature of radar technology, there may be certain instances when the Cross Traffic Alert (CTA) system alerts the operator, when no object or vehicle is present while backing up. This is known as a false alert. False alerts up to 3% of the time (3 times out of 100 reversals) are considered normal. A false alert may occur when backing out of a garage or backing into a parking space and objects or vehicles are very close to the radar sensors. False alerts are temporary and self-correcting.

Missed targets occur when a target is present and the LED does not illuminate. Missed targets up to 1% (1 out of 100 targets) is considered normal operation.

Circumstances that cause missed alerts are:

- Debris build-up or bumper stickers on the rear bumper sides
- Certain maneuvering of the vehicles entering and exiting the detection zone
- Vehicles passing through the detection zone at high rates of speed
- When several vehicles forming a convoy pass through the detection zone

Exterior Mirror Indication

When the Blind Spot Information System (BLIS ®) or Cross Traffic Alert (CTA) system is active and an object is detected by the SODL and/or SODR, the SODL and/or SODR supplies voltage to illuminate their respective exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED. The exterior mirrors provide ground to the Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs).

Each time the vehicle is started, the SODL and SODR command the exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) to illuminate for approximately 3 seconds, indicating the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system is operational.

If a Blind Spot Information System (BLIS ®) or Cross Traffic Alert (CTA) system fault is present, the exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) remains off, the IPC Blind Spot Information System (BLIS ®) RTT illuminates and a message center warning displays BLIND SPOT SYSTEM FAULT.

Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) Message Center Function

> *NOTE: Cross Traffic Alert (CTA) system faults may not be detected until the transmission is placed in reverse.*

> *NOTE: The BLIS ® and Cross Traffic Alert (CTA) system menus in the message center are not available when a MyKey ® restricted key is in use.*

The Blind Spot Information System (BLIS ®) can be turned off by using the blind spot on/off function in the message center. When the Blind Spot Information System (BLIS ®) has been turned off by the driver or if a system fault is present, the Blind Spot Information System (BLIS ®) RTT in the message center remains on. When turning the system on or off, the exterior mirror Light Emitting Diodes (LEDs) flash 2 times. When the Blind Spot Information System (BLIS ®) is turned off, the driver cannot receive any alerts. The system remains off until turned back on by the driver.

The Cross Traffic Alert (CTA) system can be turned off by selecting the Cross Traffic Alert (CTA) system on/off function in the message center. The system defaults to on with each ignition cycle.

There are some system faults that set Diagnostic Trouble Codes (DTCs) in the SODL or SODR. These Diagnostic Trouble Codes (DTCs) can set a message in the IPC message center that displays BLIND SPOT SYSTEM FAULT and/or CROSS TRAFFIC SYSTEM FAULT. There are also symptom based faults

that do not set a DTC.

Blocked Sensor

NOTE: Blockage sensing becomes active after the wipers are activated.

NOTE: A blocked state is not a system fault. A blocked state is a normal mode of operation under blocked conditions.

An excessive build-up of materials on the rear bumper sides, such as mud or snow, can cause the Blind Spot Information System (BLIS ®) or Cross Traffic Alert (CTA) system functionality to degrade. Heavy rain can have the same affect on the system. If a blocked state is detected, the SODL and SODR blockage sensing senses the performance degradation and enters the SODL and SODR into a blocked state. The performance degradation means alerting late on targets or additional missed targets. Upon entering a blocked state, the SODL and/or SODR send a status message over the MS-CAN to the GWM. The GWM then sends the message to the IPC on the HS-CAN3. The message center displays BLIND SPOT NOT AVAILABLE SENSOR BLOCKED or CROSS TRAFFIC NOT AVAILABLE SENSOR BLOCKED and the LH and RH exterior mirror Blind Spot Information System (BLIS ®)/ Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) illuminate.

The message center warning can be cleared by the driver, but the amber Blind Spot Information System (BLIS ®) RTT in the IPC remains illuminated. A blocked state will self clear when blockage sensing senses performance has returned to normal operation. The ignition can also be cycled off to clear the blocked state. However, if the blockage is still present after the ignition cycle, after some drive time the system detects again that it is blocked. The blocked sensor message is displayed again in the message center and the amber Blind Spot Information System (BLIS ®) RTT in the IPC is illuminated again.

Due to the nature of radar technology, it is possible to get a blocked sensor warning without the radar sensor being blocked. This is rare and is known as a false blockage warning. A false blocked condition either self-clears or clears after an ignition cycle.

Component Description

SODL / SODR

The SODL and SODR are radar based sensors that are located rearward of the rear wheel under the bumper cover. These sensors detect targets for the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system. The modules are capable of storing Diagnostic Trouble Codes (DTCs) for the Blind Spot Information System (BLIS ®) or Cross Traffic Alert (CTA) system when a concern exists. The SODL and SODR communicate through the MS-CAN.

Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED

The Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED is integral to the LH and RH exterior mirror glass.

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > DTC CHART(S)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic

practices. REFER to: Diagnostic Methods .

SODL and SODR DTC Chart

DTC	Description	Action
B11D6:11	Driver Display Alert LED: Circuit Short To Ground	GO to Pinpoint Test D
B11D6:15	Driver Display Alert LED: Circuit Short To Battery or Open	If the LH or RH Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED is inoperative, GO to Pinpoint Test D If the LH or RH Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED is always on, GO to Pinpoint Test C
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test G
U0101:00	Lost Communication with TCM: No Sub Type Information	GO to Pinpoint Test H
U0146:00	Lost Communication with Gateway "A": No Sub Type Information	GO to Pinpoint Test I
U0401:86	Invalid Data Received from ECM/PCM A: Signal Invalid	This DTC sets when the SODL or SODR receives invalid network data from the PCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no PCM Diagnostic Trouble Codes (DTCs) exist, DIAGNOSE the observable symptom.
U0402:86	Invalid Data Received from TCM: Signal Invalid	This DTC sets when the SODL or SODR receives invalid network data from the PCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the other modules on the network. If no PCM Diagnostic Trouble Codes (DTCs) exist, DIAGNOSE the observable symptom.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to this module. If there have been recent service

		actions with this module, INSTALL as-built data from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built. REFER to: MODULE CONFIGURATION If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data. REFER to: Side Obstacle Detection Control Module .
U2300:55	Central Configuration: Not Configured	This DTC sets when the SODL or SODR do not detect the VIN information on the MS-CAN. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in all other modules.
U3000:44	Control Module: Data Memory Failure	CLEAR the SODL or SODR Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC U3000:44 returns, INSTALL a new SODL or SODR. REFER to: Side Obstacle Detection Control Module .
U3000:45	Control Module: Program Memory Failure	CLEAR the SODL or SODR Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC U3000:45 returns, INSTALL a new SODL or SODR. REFER to: Side Obstacle Detection Control Module .
U3000:46	Control Module: Calibration/Parameter Memory Failure	CLEAR the SODL or SODR Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC U3000:46 returns, INSTALL a new SODL or SODR. REFER to: Side Obstacle Detection Control Module .
U3000:49	Control Module: Internal Electronic Failure	CLEAR the SODL or SODR Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC U3000:49 returns, INSTALL a new SODL or SODR. REFER to: Side Obstacle Detection Control Module .

U3002:62	Vehicle Identification Number: Signal Compare Failure	This DTC sets when the VIN stored in the SODL or SODR does not match the VIN that is broadcast on the network. CHECK the vehicle service history for recent service actions related to this module. If there have been recent service actions with this module, REPEAT the PMI procedure as directed by the diagnostic scan tool. REFER to: MODULE CONFIGURATION . If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data. REFER to: Side Obstacle Detection Control Module .

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST A : BLIND SPOT INFORMATION SYSTEM (BLIS ®) IS INOPERATIVE OR DOES NOT FUNCTION CORRECTLY > PINPOINT TEST A : BLIND SPOT INFORMATION SYSTEM (BLIS ®) IS INOPERATIVE OR DOES NOT FUNCTION CORRECTLY

A1 VERIFY THE LH (LEFT-HAND) AND RH (RIGHT-HAND) EXTERIOR MIRROR BLIND SPOT

INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) OPERATION

Ignition OFF.

Observe the LH and RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs).

Start the engine.

Do the LH and RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) illuminate and turn off after approximately 3 seconds?

Yes	GO to A2

No	If either LED is inoperative, GO to Pinpoint Test D If either LED is always on, GO to Pinpoint Test C

A2 VERIFY THE BLIND SPOT INFORMATION SYSTEM (BLIS ®) OPERATION

Verify the operation of the Blind Spot Information System (BLIS ®).

Does the Blind Spot Information System (BLIS ®) operate correctly?

Yes	The concern may have been caused by an intermittent condition such as poor weather conditions or the customer's perception of proper Blind Spot Information System (BLIS ®) operation. REVIEW the normal system operation with the customer. REFER to the Owner's Literature.

No	GO to A3

A3 CHECK FOR SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OBSTRUCTIONS

Ignition OFF.

Check the lower rear side bumper cover for a build up of mud, bumper stickers or any obstruction.

Are any obstructions present?

Yes	CLEAN and REMOVE all obstructions from the lower rear side bumper cover.

No	GO to A4

A4 INSPECT THE REAR BUMPER COVER, SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) FOR DAMAGE

Inspect the lower rear side bumper cover and the SODL and SODR mounting brackets for damage.

Is any damage present?

Yes	REPAIR or INSTALL new parts as necessary. REFER to: Rear Bumper Cover . REFER to: Side Obstacle Detection Control Module .

No	GO to A5

A5 VERIFY THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) PASS THE NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Do the SODL and SODR pass the network test?

Yes	GO to A6

No	REFER to: MODULE COMMUNICATIONS NETWORK .

A6 CHECK THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve the Diagnostic Trouble Codes (DTCs) from the SODL and SODR.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the SODL and SODR DTC chart .

No	GO to A7

A7 VERIFY THE MESSAGE CENTER FUNCTIONALITY

Verify the message center functions correctly.

Does the message center function correctly?

Yes	GO to A8

No	REFER to: Instrumentation, Message Center and Warning Chimes .

A8 VERIFY THE BLIND SPOT INFORMATION SYSTEM (BLIS ®) IS ENABLED IN THE MESSAGE CENTER

NOTE: Verify a MyKey ® is NOT in use.

Navigate to the Blind Spot Information System (BLIS ®) menu in the message center and verify the Blind Spot Information System (BLIS ®) is ON.

Is the Blind Spot Information System (BLIS ®) ON?

Yes	GO to A9

No	ACTIVATE the Blind Spot Information System (BLIS ®). If the system cannot be activated, GO to A10

A9 CHECK FOR CORRECT GEAR INPUT

Apply the parking brake.

While monitoring the reversing lamps, move the selector lever (automatic transmission) or gearshift lever (manual transmission) through the entire range.

Do the reversing lamps illuminate only in reverse?

Yes	GO to A10

No	REFER to: Reversing Lamps .

A10 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	Refer to the appropriate article for the procedure.

No	GO to A11

A11 CHECK THE GWM (GATEWAY MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to A12

A12 VERIFY THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) CONFIGURATION

Check the vehicle service history for recent service action related to the SODL and SODR.

Have there been any recent service actions related to the SODL or SODR?

Yes	INSTALL As-Built data into the SODL **and** SODR from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built.

No	For a SODL concern, GO to A13 For a SODR concern, GO to A14

A13 CHECK FOR CORRECT SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) OPERATION

Ignition OFF.

Disconnect and inspect the SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure the connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A14 CHECK FOR CORRECT SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OPERATION

Ignition OFF.

Disconnect and inspect the SODR connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connector and related in-line connectors. Make sure the connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST B : THE CROSS TRAFFIC ALERT (CTA) SYSTEM IS INOPERATIVE OR DOES NOT FUNCTION CORRECTLY

Refer to Vehicle Emergency Messaging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Blind Spot Information System - System Operation and Component Description .

Possible Sources

- Communication network concern
- Obstruction or damage to the rear bumper cover sides
- Configuration concern
- SODL
- SODR
- IPC concern
- PCM concern
- GWM concern

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST B : THE CROSS TRAFFIC ALERT (CTA) SYSTEM IS INOPERATIVE OR DOES NOT FUNCTION CORRECTLY > PINPOINT TEST B : THE CROSS TRAFFIC ALERT (CTA) SYSTEM IS INOPERATIVE OR DOES NOT FUNCTION CORRECTLY

B1 VERIFY THE LH (LEFT-HAND) AND RH (RIGHT-HAND) EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) OPERATION

Ignition OFF.

Observe the LH and RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs).

Start the engine.

Do the LH and RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) illuminate and turn off after approximately 3 seconds?

Yes	GO to B2

No	If either LED is inoperative, GO to Pinpoint Test D If either LED is always on, GO to Pinpoint Test C

B2 VERIFY THE CROSS TRAFFIC ALERT (CTA) SYSTEM OPERATION

Verify the operation of the Cross Traffic Alert (CTA) system.

Does the Cross Traffic Alert (CTA) operate correctly?

Yes	The concern may have been caused by an intermittent condition such as poor weather conditions or the customer's perception of proper Cross Traffic Alert (CTA) system operation. REVIEW proper system operation with the customer. REFER to the Owner's Literature.

No	GO to B3

B3 VERIFY THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) PASS THE NETWORK TEST

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Do the SODL and SODR pass the network test?

Yes	GO to B4

No	REFER to: MODULE COMMUNICATIONS NETWORK .

B4 CHECK THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs) from the SODL and SODR.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the SODL and SODR DTC chart .

No	GO to B5

B5 VERIFY THE MESSAGE CENTER FUNCTIONALITY

Verify the message center functions correctly.

Does the message center function correctly?

Yes	GO to B6

No	REFER to: Instrumentation, Message Center and Warning Chimes .

B6 VERIFY THE CROSS TRAFFIC ALERT (CTA) IS ENABLED IN THE MESSAGE CENTER

NOTE: Verify a MyKey ® is NOT in use.

Navigate to the Cross Traffic Alert (CTA) menu in the message center and verify the Cross Traffic Alert (CTA) system is ON.

Is the Cross Traffic Alert (CTA) system ON?

Yes	GO to B7

No	ACTIVATE the Cross Traffic Alert (CTA) system. If the system cannot be activated, GO to B8

B7 CHECK FOR CORRECT GEAR INPUT

Apply the parking brake.

While monitoring the reversing lamps, move the selector lever (automatic transmission) or gearshift lever (manual transmission) through the entire range.

Do the reversing lamps illuminate only in reverse?

Yes	GO to B8

No	REFER to: Reversing Lamps .

B8 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	Refer to the appropriate article for the procedure.

No	GO to B9

B9 CHECK THE GWM (GATEWAY MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to B10

B10 CHECK FOR SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OBSTRUCTIONS

Ignition OFF.

Inspect the lower rear side bumper cover for a build up of dirt, debris, bumper stickers or other obstructions.

Are any obstructions present?

Yes	CLEAN and REMOVE all obstructions from the lower rear side bumper cover.

No	GO to B11

B11 INSPECT THE REAR BUMPER COVER, SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) FOR DAMAGE

Inspect the lower rear side bumper cover and the SODL and SODR mounting brackets for damage.

Is any damage present?

Yes	REPAIR or INSTALL new components as necessary. REFER to: Side Obstacle Detection Control Module . REFER to: Rear Bumper Cover .

No	GO to B12

B12 VERIFY THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) CONFIGURATION

Check the vehicle service history for recent service action related to the SODL and SODR.

Have there been any recent service actions related to the SODL or SODR?

Yes	INSTALL As-Built data into the SODL **and** SODR from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built.

No	For a SODL concern, GO to B13 For a SODR concern, GO to B14

B13 CHECK FOR CORRECT SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) OPERATION

Ignition OFF.

Disconnect and inspect the SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure the connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B14 CHECK FOR CORRECT SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OPERATION

Ignition OFF.

Disconnect and inspect the SODR connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connector and related in-line connectors. Make sure the connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST C : AN EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) IS ALWAYS ON

Refer to Vehicle Emergency Messaging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Blind Spot Information System - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11D6:15	Driver Display Alert LED: Circuit Short To Battery or Open	This DTC sets in continuous memory and on-demand in the SODL or SODR when a lower than expected current draw (such as a short to voltage) is detected on the LH or RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED output circuit for 500 mili-seconds.

Possible Sources

- Wiring, terminals or connectors
- Exterior mirror
- Exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED (integral to the exterior mirror glass)
- SODL
- SODR

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST C : AN EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) IS ALWAYS ON > PINPOINT TEST C : AN EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) IS ALWAYS ON

C1 VERIFY THE EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) OPERATION

Start the engine.

Observe the exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) for 10 seconds.

Is the always on condition still present?

Yes	GO to C2

No	The system is operating correctly at this time. The concern may have been caused by an intermittent condition.

C2 CHECK THE EXTERIOR MIRROR BLIS ®/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: SODL C4369 . (LH LED concern).

Disconnect: SODR C4370 . (RH LED concern).

Ignition ON.

Measure:

SODL

Positive Lead	Measurement / Action	Negative Lead
C4369-4		Ground

SODR

Positive Lead	Measurement / Action	Negative Lead
C4370-4		Ground

Is any voltage present?

Yes	GO to C3

No	For a LH LED concern, GO to C5 For a RH LED concern, GO to C6

C3 CHECK THE EXTERIOR MIRROR FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: LH Exterior Mirror C520 . (LH LED concern).

Disconnect: RH Exterior Mirror C626 . (RH LED concern).

Ignition ON.

Measure:

SODL

Positive Lead	Measurement / Action	Negative Lead
C4369-4		Ground

SODR

Positive Lead	Measurement / Action	Negative Lead

C4370-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to C4

C4 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror motors for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror glass. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

C5 CHECK FOR CORRECT SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) OPERATION

Ignition OFF.

Disconnect and inspect the SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure the connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side

	Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C6 CHECK FOR CORRECT SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OPERATION

Ignition OFF.

Disconnect and inspect the SODR connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connector and related in-line connectors. Make sure the connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST D : AN EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) IS INOPERATIVE

Refer to Vehicle Emergency Messaging System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Blind Spot Information System - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

B11D6:11	Driver Display Alert LED: Circuit Short To Ground	This DTC sets in continuous memory and on-demand in the SODL or SODR when a higher than expected current draw (such as a short to ground) is detected on the LH or RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED output circuit for 2.5 seconds.
B11D6:15	Driver Display Alert LED: Circuit Short To Battery or Open	This DTC sets in continuous memory and on-demand in the SODL or SODR when an open circuit is detected on the LH or RH exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED output circuit for 2.5 seconds.

Possible Sources

- Wiring, terminals or connectors
- Communication network concern
- Exterior mirror
- SODL
- SODR
- Exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED (integral to the exterior mirror glass)

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST D : AN EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) IS INOPERATIVE > PINPOINT TEST D : AN EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) IS INOPERATIVE

D1 CHECK THE BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) OPERATION

Start the engine.

Observe the left and right exterior mirror Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs).

Do the left and right Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) Light Emitting Diodes (LEDs) illuminate and turn off after 3 seconds?

Yes	The system is operating correctly at this time. The concern may have been caused by an intermittent fault condition. VERIFY the operation of the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system.

No	GO to D2

D2 VERIFY THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) PASS THE NETWORK TEST

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do the SODL and SODR pass the network test?

Yes	GO to D3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

D3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) SELF-TESTS

Using a diagnostic scan tool, perform the SODL and SODR self-tests.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For DTC B11D6:11 or DTC B11D6:15, GO to D4 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC chart .

No	GO to D5

D4 CHECK THE EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: SODL C4369 (LH LED concern).

Disconnect: SODR C4370 (RH LED concern).

Measure:

SODL

Positive Lead	Measurement / Action	Negative Lead
C4369-4	Ω	Ground

SODR

Positive Lead	Measurement / Action	Negative Lead
C4370-4	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D5

No	REPAIR the circuit.

D5 CHECK THE SUSPECTED EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) FOR ILLUMINATION

Connect a fused jumper wire:

LH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C4369-5		C4369-4

RH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C4370-5		C4370-4

Ignition ON.

Does the LED in question illuminate?

Yes	REMOVE the fused jumper wire. For the LH LED, GO to D11 REMOVE the fused jumper wire. For the RH LED, GO to D12

No	REMOVE the fused jumper wire, GO to D6

D6 CHECK THE EXTERIOR MIRROR GLASS BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) FOR AN OPEN

Ignition OFF.

Disconnect: LH Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED C576

(LH LED concern).

Disconnect: RH Blind Spot Information System (BLIS ®)/Cross Traffic Alert (CTA) LED C676 (RH LED concern).

Measure:

LH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C576-1	Ω	C576-2

RH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C676-1	Ω	C676-2

Is the resistance less than 2000 ohms?

Yes	GO to D7

No	INSTALL a new exterior mirror glass for the mirror in question. REFER to: Exterior Mirror .

D7 CHECK THE EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) SUPPLY CIRCUIT FOR AN OPEN

Measure:

LH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C4369-4	Ω	C576-1

RH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C4370-4	Ω	C676-1

Is the resistance less than 3 ohms?

Yes	GO to D9

No	GO to D8

D8 CHECK THE EXTERIOR MIRROR FOR AN OPEN

Disconnect: LH Exterior Mirror C520 (LH LED concern).

Disconnect: RH Exterior Mirror C626 (RH LED concern).

Measure:

LH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C4369-4	Ω	C520-11

RH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C4370-4	Ω	C626-11

Is the resistance less than 3 ohms?

Yes	GO to D13

No	REPAIR the circuit.

D9 CHECK THE EXTERIOR MIRROR BLIND SPOT INFORMATION SYSTEM (BLIS ®)/CROSS TRAFFIC ALERT (CTA) LED (LIGHT EMITTING DIODE) GROUND CIRCUIT FOR AN OPEN

Measure:

LH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C576-2	Ω	Ground

RH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C676-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	For the LH LED, GO to D11 For the RH LED, GO to D12

No	GO to D10

D10 CHECK THE EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

Disconnect: LH Exterior Mirror C520 (LH LED concern).

Disconnect: RH Exterior Mirror C626 (RH LED concern).

Measure:

LH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C520-7	Ω	Ground

RH Exterior Mirror LED

Positive Lead	Measurement / Action	Negative Lead
C626-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D13

No	REPAIR the circuit.

D11 CHECK FOR CORRECT SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) OPERATION

Ignition OFF.

Disconnect and inspect all SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure all connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose

	or corroded connector. ADDRESS the root cause of any connector or pin issues.

D12 CHECK FOR CORRECT SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OPERATION

Ignition OFF.

Disconnect and inspect all SODR connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connector and related in-line connectors. Make sure all connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

D13 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror motors for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST E : THE IPC (INSTRUMENT PANEL CLUSTER) MESSAGE CENTER DISPLAYS A BLOCKED SENSOR MESSAGE

Normal Operation and Fault Conditions

The blocked sensor message indicates that there is an obstruction on the rear bumper cover near the SODL or SODR that is obscuring the radar used by the SODL and SODR.

Possible Sources

- Build-up of dirt or debris on the rear bumper cover sides
- Damaged rear bumper cover
- SODL
- SODR

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST E : THE IPC (INSTRUMENT PANEL CLUSTER) MESSAGE CENTER DISPLAYS A BLOCKED SENSOR MESSAGE > PINPOINT TEST E : THE IPC (INSTRUMENT PANEL CLUSTER) MESSAGE CENTER DISPLAYS A BLOCKED SENSOR MESSAGE

E1 INSPECT THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) FOR DEBRIS, MUD, SNOW OR ICE

Inspect the rear bumper cover, SODL and SODR for any debris, mud, snow or ice that may be present.

Is the rear bumper cover, SODL or SODR blocked due to debris, mud, snow or ice?

Yes	REMOVE and CLEAN the affected component(s). Once the repair is complete, PERFORM one key cycle and DRIVE the vehicle. The SODL and SODR needs to detect 2 good targets while the vehicle is being driven to clear the blocked condition.

No	GO to E2

E2 INSPECT THE REAR BUMPER COVER, SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) FOR DAMAGE

Thoroughly inspect the rear bumper cover, SODL, SODR and the SODL and SODR mounting brackets for damage.

Is any damage present?

Yes	REPAIR or INSTALL new parts as necessary. REFER to: Rear Bumper Cover . REFER to: Side Obstacle Detection Control Module .

No	For a SODL concern, GO to E3 For a SODR concern, GO to E4

E3 CHECK FOR CORRECT SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) OPERATION

Ignition OFF.

Disconnect and inspect all SODL connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODL connector and related in-line connectors. Make sure all connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODL. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

E4 CHECK FOR CORRECT SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) OPERATION

Ignition OFF.

Disconnect and inspect all SODR connector and related in-line connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SODR connector and related in-line connectors. Make sure all connectors seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SODR. REFER to: Side Obstacle Detection Control Module .

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST F : THE BLIND SPOT INFORMATION SYSTEM (BLIS ®) AND CROSS TRAFFIC ALERT (CTA) SYSTEM CANNOT BE TURNED OFF IN THE MESSAGE CENTER

Normal Operation and Fault Conditions

The Cross Traffic Alert (CTA) is turned off for one key cycle after being disabled in the IPC message center. When the Blind Spot Information System (BLIS ®) is turned off using the message center, it remains off until manually turned back on in the message center. The Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system menus in the message center are not available when a MyKey ® restricted key is in use.

Possible Sources

- MyKey ® in use
- Communication network concern
- Message center concern
- IPC concern
- SODR concern
- SODL concern

Visual Inspection and Diagnostic Pre-Checks

Verify if a MyKey ® restricted key is in use. If a restricted key is in use, the Blind Spot Information System (BLIS ®) or the Cross Traffic Alert (CTA) system cannot be turned off in the message center.

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST F : THE BLIND SPOT INFORMATION SYSTEM (BLIS ®) AND CROSS TRAFFIC ALERT (CTA) SYSTEM CANNOT BE TURNED OFF IN THE MESSAGE CENTER > PINPOINT TEST F : THE BLIND SPOT INFORMATION SYSTEM

(BLIS ®) AND CROSS TRAFFIC ALERT (CTA) SYSTEM CANNOT BE TURNED OFF IN THE MESSAGE CENTER

F1 VERIFY WHETHER A MYKEY ® RESTRICTED KEY IS IN USE

Verify whether a MyKey ® restricted key is in use.

Is a MyKey ® restricted key in use?

Yes	The system is operating correctly at this time. INFORM the customer of normal operation. REFER to the Owner's Literature.

No	GO to F2

F2 PERFORM A NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do the IPC, SODL and SODR pass the network test?

Yes	GO to F3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

F3 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SODL (SIDE OBSTACLE DETECTION CONTROL MODULE LH) AND SODR (SIDE OBSTACLE DETECTION CONTROL MODULE RH) SELF-TESTS

Using a diagnostic scan tool, perform the SODL and SODR self-tests.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC chart .

No	GO to F4

F4 CHECK THE MESSAGE CENTER FOR CORRECT OPERATION

Check the message center for correct operation while turning the Blind Spot Information System (BLIS ®) and Cross Traffic Alert (CTA) system on and off.

Does the message center function correctly?

Yes	The system is operating correctly at this time. The concern may have been caused by an intermittent fault condition.

No	REFER to: Instrumentation, Message Center and Warning Chimes .

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST G : DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The SODL and SODR communicate with the PCM through the GWM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	A continuous memory DTC that sets in the SODL and SODR when messages received from the PCM over the HS-CAN1 through the GWM are missing for 2 seconds or more.

Possible Sources

- Communication network concern
- PCM
- GWM concern

DIAGNOSIS AND TESTING > BLIND SPOT INFORMATION SYSTEM > PINPOINT TESTS > PINPOINT TEST G : DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 > PINPOINT TEST G : DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

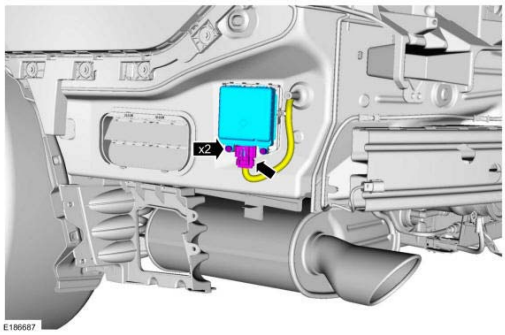
REMOVAL AND INSTALLATION > SIDE OBSTACLE DETECTION CONTROL MODULE > REMOVAL

Side obstacle detection control module

NOTE: This step is only necessary if the SODL or SODR is being replaced.

1.



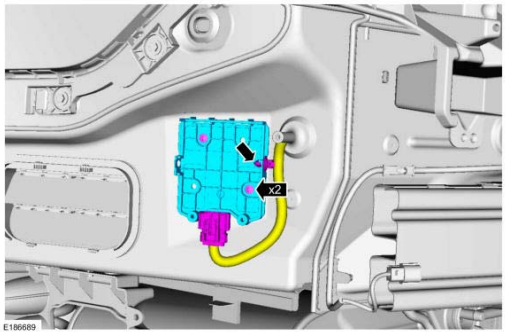
Using a diagnostic scan tool, begin the PMI process for the SODL or SODR following the on-screen instructions.

2.

Remove the rear bumper cover. Refer to: Rear Bumper Cover .

3.

Disconnect the electrical connector, remove the screws and the SODL or SODR.



Side obstacle detection control module bracket

4.

Remove the SODL or SODR.

5.

Disconnect the wiring harness guide, remove the screws and the side obstacle control module bracket.

REMOVAL AND INSTALLATION > SIDE OBSTACLE DETECTION CONTROL MODULE > INSTALLATION

1.

To install, reverse the removal procedure.

> *NOTE: Carry out this step only if a SODL or SODR is being replaced.*

2.
Using a diagnostic scan tool, complete the PMI process for the SODL or SODR following the on-screen instructions.

DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - OVERVIEW > STEERING COLUMN SWITCHES OVERVIEW

The steering column switches are located on and around the steering column. They enable the driver to control various vehicle functions while remaining focused on driving. The steering column switches consist of:

- Left multifunction switch - mounted on the left side of the SCCM and is used to control the turn signals, low/high beam selection and the flash-to-pass feature. Refer to: Exterior Lighting - System Operation and Component Description .
- Right multifunction switch - mounted on the right side of the SCCM and is used to control the windshield wipers and washer. Refer to: Wipers and Washers - System Operation and Component Description .
- Steering wheel switches - mounted on the front of the steering wheel and can be serviced separately from the steering wheel. These are used to access settings and controls displayed in the message center or for control of the cruise control system, the audio system and the SYNC ® system.
    - For the message center (left upper switch), Refer to: Message Center - System Operation and Component Description .
    - For the cruise control system (left lower switch), Refer to: Cruise Control - System Operation and Component Description . Refer to: Cruise Control - System Operation and Component Description .
    - For the audio system (right upper switch), Refer to the appropriate article for the procedure.
    - For the SYNC ® system (right lower switch), Refer to the appropriate article for the procedure.
- Paddle shifter switches - mounted on rear of the steering wheel and are used to control the transmission up and down shifts. Refer to: External Controls - System Operation and Component Description .

The steering column and steering wheel switches interface with other modules and components on the vehicle through the SCCM, which communicates on the High Speed Controller Area Network 2 (HS2-CAN).

DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - OVERVIEW > PUSH BUTTON START IGNITION SYSTEM OVERVIEW

The push button start ignition system is used to place the ignition in the ON or OFF mode and to start or shut off the vehicle powertrain. The push button ignition switch is integrated into the FCIM.

DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - OVERVIEW > STEERING COLUMN LOCK SYSTEM OVERVIEW

The steering column lock deters vehicle theft by locking the steering column and preventing the steering wheel from being used to turn the front wheels.

DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART - PUSH BUTTON IGNITION SWITCH

GWM Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	This message informs the GWM of the current ignition status; off, run, start, unknown or invalid.

PCM Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	This message informs the PCM of the current ignition status; off, run, start, unknown or invalid.

Push Button Ignition Switch

The push button ignition switch is used to control the ignition mode.

There are 2 circuits the BCM monitors from the ignition switch to change the ignition mode. One circuit is monitored for voltage and the other for a ground signal. When the START/STOP button is pressed, one circuit routes battery voltage to the BCM while a voltage signal from the BCM on the second circuit is routed to ground, indicating a request to change the ignition state. Changing the ignition state from the OFF mode works in conjunction with the PATS. The BCM must recognize a valid programmed key before it changes the ignition mode out of OFF. Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Refer to the following table for information about achieving the various ignition states.

Ignition Entry Condition	Desired Ignition Mode	Action To Take
Off	ON (engine off)	Press the START/STOP button without applying the brake pedal.
Off or on	START	Apply and the brake pedal (automatic transmission) or fully apply the clutch (manual transmission) and then press the START/STOP button.
On (engine off)	OFF	Press the START/STOP button.

On (engine running)	OFF	Press and hold the START/STOP button.

Ignition Mode LED Indicator

The ignition mode LED indicates the ignition mode of the vehicle. The BCM controls the voltage to the ignition mode LED indicator. Refer to the following table.

Ignition Mode	Ignition Mode LED Indicator
Off	Off
On (engine off)	Flashing
On (engine running)	On

OFF

The BCM controls the relays providing voltage to the vehicle electrical systems. When the ignition is in the ON mode, a single press and release of the START/STOP button changes the ignition to the OFF mode. No programmed key is required to change the ignition to the OFF mode when the vehicle is running.

If the vehicle is in motion, a momentary press of the START/STOP button does not shut the vehicle off. If the vehicle is moving at a speed greater than 15 km/h (9 mph), the START/STOP button must be pressed and held for longer than one second (or pressed 3 times within 2 seconds) to turn the ignition off.

When the BCM changes the ignition state to OFF, it communicates the ignition mode to the other modules by sending an ignition status message over the CAN.

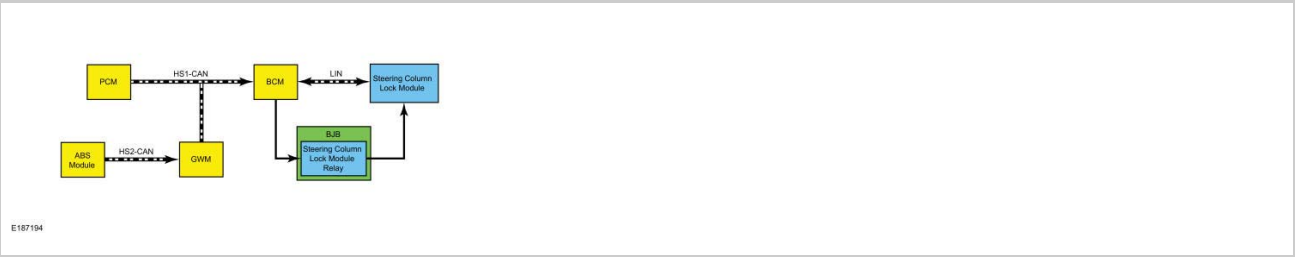
ON

The BCM must recognize a programmed key before it changes the ignition mode out of OFF. When the START/STOP button is pressed when the ignition is off, the BCM checks the vehicle for a valid programmed key as part of the PATS function. If no valid programmed key is detected, the ignition remains off. Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

When the ignition is in the ON mode, the BCM activates the run/start relay to provide voltage to the vehicle electrical systems and communicates the ignition mode to the other modules by sending an ignition status message over the CAN.

When the vehicle enters ON mode, multiple indicators in the IPC prove out and the IPC displays the gear selection and the vehicle mileage.

START



If the brake pedal is applied when the START/STOP button is pressed with the ignition in the off mode, the vehicle temporarily goes into the START mode so long as a valid programmed key is detected within the vehicle.

In addition to activating the run/start relay, the BCM communicates the ignition mode to the other modules by sending an ignition status message over the CAN.

Once the ignition has entered START mode, the ignition mode indicator in the ignition switch illuminates.

The engine can be started from any ignition mode.

System Diagram - Steering Column Lock

Network Message Chart - Steering Column Lock

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Engine RPM data	PCM	Provides the BCM with the engine speed to indicate if it is running or not.
Wheel rotation count	ABS module	Provides the BCM with the vehicle speed to indicate if it is moving or stationary.

Steering Column Lock

The steering column lock is used to deter vehicle theft by electronically locking the steering column. This prevents the steering wheel from being rotated to turn the front wheels.

The steering column unlocks when:

- the passive entry feature is used to open the driver door.
- the driver door is opened after unlocking the vehicle with a RKE transmitter.
- the START/STOP button is pressed and a valid programmed passive key is detected.
- the remote start feature is activated.

The steering column locks after:

- the ignition is turned off and 45 seconds have elapsed since the delayed accessory feature has turned off.
- 45 seconds have elapsed since the remote feature turns off the vehicle.

The BCM controls the voltage provided to the steering column lock module using a relay (located in the BJB) and communicates with it over a LIN. The BCM monitors input from various systems to determine when to send a command to lock or unlock the steering column. The steering column lock module locks and unlocks the steering column as directed by commands received from the BCM.

If the BCM detects a fault from the steering column lock module or the LIN, the BCM prevents the vehicle from starting.

The BCM does not provide power to the steering column lock module when the vehicle is moving or the engine is running.

Steering Column Lock Messages

The message center displays a message when the BCM detects a fault from the steering column lock

module.

The Steering Malfunction message displays when a fault with the electronic steering column lock system is present and must be diagnosed.

The Turn the wheel while starting message displays when the steering column lock module is unable to unlock the steering column because of a high amount of torque against the lock (such as when the wheels are against a curb when the vehicle is shut off). The torque against the steering column lock must be relieved for the steering column to unlock.

Turn the vehicle off, rotate and hold the steering wheel in one direction while turning the vehicle on. If the message displays again, turn the vehicle off, rotate and hold the steering wheel in the other direction while turning the vehicle on.

DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > PUSH BUTTON IGNITION SWITCH

The push button ignition switch is used to control the ignition mode.

There are 2 circuits the BCM monitors from the ignition switch to change the ignition mode. One circuit is monitored for voltage and the other for a ground signal. DESCRIPTION AND OPERATION > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION > STEERING COLUMN LOCK

The steering column lock is used to deter vehicle theft by electronically locking the steering column. This prevents the steering wheel from being rotated to turn the front wheels.

The steering column unlocks when:

- the passive entry feature is used to open the driver door.
- the driver door is opened after unlocking the vehicle with a RKE transmitter.
- the START/STOP button is pressed and a valid programmed passive key is detected.
- the remote start feature is activated.

The steering column locks after:

- the ignition is turned off and 45 seconds have elapsed since the delayed accessory feature has turned off.
- 45 seconds have elapsed since the remote feature turns off the vehicle.

The BCM controls the voltage provided to the steering column lock module using a relay (located in the BJB) and communicates with it over a LIN. The BCM monitors input from various systems to determine when to send a command to lock or unlock the steering column. The steering column lock module locks and unlocks the steering column as directed by commands received from the BCM.

If the BCM detects a fault from the steering column lock module or the LIN, the BCM prevents the vehicle from starting.

The BCM does not provide power to the steering column lock module when the vehicle is moving or the engine is running.

Steering Column Lock Messages

The message center displays a message when the BCM detects a fault from the steering column lock module.

The Steering Malfunction message displays when a fault with the electronic steering column lock system is present and must be diagnosed.

The Turn the wheel while starting message displays when the steering column lock module is unable to unlock the steering column because of a high amount of torque against the lock (such as when the wheels are against a curb when the vehicle is shut off). The torque against the steering column lock must be relieved for the steering column to unlock.

Turn the vehicle off, rotate and hold the steering wheel in one direction while turning the vehicle on. If the

message displays again, turn the vehicle off, rotate and hold the steering wheel in the other direction while turning the vehicle on.

Component Description

Push Button Ignition Switch

The push button ignition switch is a momentary dual contact switch that provides direct input to the BCM and PCM. Both sets of contacts are normally open. When the START/STOP button is pressed, one set of contacts provides a ground signal to the BCM and the other set of contacts supplies voltage to the BCM and the PCM.

The ignition mode LED indicator is located near the top of the START/STOP button and is controlled by the BCM.

The ignition switch is part of the FCIM and cannot be serviced separately.

Steering Column Lock Module

The steering column lock module locks and unlocks the steering column based on commands received from the BCM. The steering column lock module monitors the position of the steering column lock and, if a fault is detected, reports the failure to the BCM.

When the steering column lock module is replaced, the BCM must configured/trained to the new steering column lock module for the steering column lock module to operate correctly.

The BCM sets a DTC if a fault is detected with the steering column lock module. Additionally, if the BCM is not configured to the steering column lock module, the steering column module keeps the column locked, a programming and/or configuration DTC sets and the vehicle does not start. To configure the BCM to the steering column lock module, Refer to: Anti-Theft Security Access .

BCM

The BCM controls the run/start relays and sets the vehicle ignition mode based on inputs and communicates the ignition mode to other modules over the CAN. If a fault is detected in the ignition switch system, Diagnostic Trouble Codes (DTCs) are set in the BCM.

The BCM requires at least 2 keys to be programmed, and the PMI and parameter reset procedures carried out when replaced. Additionally, if equipped with a steering column lock module, the BCM to Electronic Steering Column Lock (ESCL) configuration must be carried out.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > DTC CHARTS > BCM DTC CHART

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
B1026:04	Steering Column Lock: System Internal Failure	DIAGNOSE all other Diagnostic Trouble Codes (DTCs) present. If no other Diagnostic Trouble Codes (DTCs) are present, INSTALL a new steering column lock module.

B1026:05	Steering Column Lock: System Programming Failure	CARRY OUT the BCM to Electronic Steering Column Lock (ESCL) configuration/training procedure. REFER to: Anti-Theft Security Access .
B1026:09	Steering Column Lock: Component Failure	INSTALL a new steering column lock module.
B1026:49	Steering Column Lock: Internal Electronic Failure	INSTALL a new steering column lock module.
B1026:51	Steering Column Lock: Not Programmed	CARRY OUT the BCM to Electronic Steering Column Lock (ESCL) configuration/training procedure. REFER to: Anti-Theft Security Access .
B1026:56	Steering Column Lock: Invalid / Incompatible Configuration	CARRY OUT the BCM to Electronic Steering Column Lock (ESCL) configuration/training procedure. REFER to: Anti-Theft Security Access .
B1026:77	Steering Column Lock: Commanded Position Not Reachable	INSTALL a new steering column lock module.
B1026:87	Steering Column Lock: Missing Message	GO to Pinpoint Test D
B1026:92	Steering Column Lock: Performance or Incorrect Operation	GO to Pinpoint Test D
B1026:93	Steering Column Lock: No Operation	DIAGNOSE all other Diagnostic Trouble Codes (DTCs) present. If no other Diagnostic Trouble Codes (DTCs) are present, INSTALL a new steering column lock module.
B1026:96	Steering Column Lock: Component Internal Failure	INSTALL a new steering column lock module.
B108A:01	Start Button: General Electrical Failure	GO to Pinpoint Test A
B108A:24	Start Button: Signal Stuck High	GO to Pinpoint Test A
B1142:29	Ignition Status 1: Signal Invalid	GO to Pinpoint Test A
B1184:11	Steering Column Lock Output: Circuit Short To Ground	GO to Pinpoint Test D
B1184:15	Steering Column Lock Output: Circuit Short To Battery or Open	GO to Pinpoint Test D
B1240:11	Start Button Mode Indicator: Circuit Short to Ground	GO to Pinpoint Test B
B1240:15	Start Button Mode Indicator: Circuit Short to Battery or Open	If the ignition mode indicator is inoperative, GO to Pinpoint Test B If the ignition mode indicator is always

		on, GO to Pinpoint Test C
B130F:12	Run Accessory Control: Circuit Short to Battery	REFER to: Wipers and Washers .
B130F:14	Run Accessory Control: Circuit Short to Ground or Open	REFER to: Wipers and Washers .
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > DTC CHARTS > SCCM DTC CHART

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
B1007:09	High-Beam Headlamp Switch: Component Failure	REFER to: Headlamps .
B1008:09	Wiper Mode Switch: Component Failure	REFER to: Wipers and Washers .
B1051:09	Front Washer Switch: Component Failure	REFER to: Wipers and Washers .
B10AD:02	Rain Sensor: General Signal Failure	REFER to: Wipers and Washers .
B10AD:08	Rain Sensor: Bus Signal/Message Failure	REFER to: Wipers and Washers .
B10AD:49	Rain Sensor: Internal Electronic Failure	REFER to: Wipers and Washers .
B10AD:55	Rain Sensor: Not Configured	REFER to: Wipers and Washers .
B1131:02	Wiper motor module: General Signal Failure	REFER to: Wipers and Washers .
B1131:08	Wiper motor module: Bus Signal/Message Failure	REFER to: Wipers and Washers .
B1131:11	Wiper motor module: Circuit Short To Ground	REFER to: Wipers and Washers .
B1131:49	Wiper motor module: Internal Electronic Failure	REFER to: Wipers and Washers .
B1131:55	Wiper motor module: Not Configured	REFER to: Wipers and Washers .
B1131:9A	Wiper motor module: Component or System Operating Conditions	REFER to: Wipers and Washers .
B11D9:16	Vehicle Battery: Circuit Voltage Below Threshold	GO to Pinpoint Test E

B11D9:17	Vehicle Battery: Circuit Voltage Above Threshold	GO to Pinpoint Test F
B12F7:09	Single Wipe Switch: Component Failure	REFER to: Wipers and Washers .
B137F:09	Steering Wheel Left Switch Pack: Component Failure	For a cruise control system concern, REFER to: Cruise Control . For a message center concern, REFER to: Instrumentation, Message Center and Warning Chimes .
B137F:11	Steering Wheel Left Switch Pack: Circuit Short to Ground	For a cruise control system concern, REFER to: Cruise Control . Vehicles With: Adaptive Cruise Control REFER to: Cruise Control . For a message center concern, REFER to: Instrumentation, Message Center and Warning Chimes .
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	For a cruise control system concern, REFER to: Cruise Control . Vehicles With: Adaptive Cruise Control REFER to: Cruise Control . For a message center concern, REFER to: Instrumentation, Message Center and Warning Chimes .
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Refer to the appropriate article for the procedure.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short to Ground	Refer to the appropriate article for the procedure.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Refer to the appropriate article for the procedure.
B1D36:09	Turn Indicator Switch: Component Failure	REFER to: Turn Signal and Hazard Lamps .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or improper PMI procedures. If there have been recent service actions with this module, REPEAT/CARRY OUT the PMI procedure as directed by the diagnostic scan tool. If there have been no recent service actions, INSTALL a new SCCM to correct the failure to retain configuration data. REFER to: Steering Column Control Module (SCCM) .

U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets if the steering wheel switches do not match the switch function configuration data in the SCCM. CHECK the parts catalog and CONFIRM that the correct SCCM and steering wheel control switches are installed in the vehicle. INSTALL the correct components, as necessary.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > DTC CHARTS > BCMB DTC CHART

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action
P2533:14	Ignition Switch Run/Start Position Circuit: Circuit Short to Ground or Open	GO to Pinpoint Test G
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module B (BCMB) .

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > SYMPTOM CHART

Symptom Chart: Steering Column Switches

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Causes	Actions
No power in ON	Refer to the Pinpoint Test	GO to Pinpoint Test A
Key not detected displays in the message center	Refer to the Pinpoint Test	REFER to: Passive Anti-Theft System (PATS) .
The ignition mode indicator is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
The ignition mode indicator is always on	Refer to the Pinpoint Test	GO to Pinpoint Test C
The steering column is always or never locked	Refer to the Pinpoint Test	GO to Pinpoint Test D

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST A : NO POWER IN ON

Refer to Power Distribution for schematic and connector information.

Refer to Starting System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

When in ON mode, the BCM activates the integral run/start relay which distributes fused voltage to various components.

The integral run/start relay in the BCM receives voltage from the BCM fuse 34 (30A).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108A:01	Start Button: General Electrical Failure	Sets continuous when the BCM detects a fault from one of the ignition switch input circuits.
B108A:24	Start Button: Signal Stuck High	Sets continuous when the BCM detects a short to voltage from one of the ignition switch input circuits.
B1142:29	Ignition Status 1: Signal Invalid	Sets during the on-demand self-test when the BCM detects a fault from one of the ignition switch input circuits.

Possible Causes

- Battery voltage concern
- Fuse
- Wiring, terminals or connectors
- PATS concern
- FCIM (includes the ignition switch)
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the battery and battery cables.
- Inspect BCM fuse 34 (30A).

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL

COMPONENTS > PINPOINT TESTS > PINPOINT TEST A : NO POWER IN ON > PINPOINT TEST A : NO POWER IN ON

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Make sure there are no charging system concerns or low voltage Diagnostic Trouble Codes (DTCs) before diagnosing the ignition switch or ignition mode concern.

A1 CHECK VEHICLE BATTERY

Carry out the Battery Condition Test. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK?

Yes	GO to A2

No	CORRECT the battery condition and VERIFY correct charging operation. Refer to the appropriate article for the procedure.

NOTE: If DTC B108A:01, B108A:24 or B1142:29 is present, go to step A4.

A2 CHECK FOR IGNITION ON MODE

Press and release the START/STOP button while monitoring the ignition mode indicator at the top of the button.

Does the ignition mode indicator flash on and off continuously?

Yes	GO to A16

No	GO to A3

A3 CHECK FOR A PATS (PASSIVE ANTI-THEFT SYSTEM) CONCERN

Press the START/STOP button while monitoring the message center.

Does No key detected display in the message center?

Yes	REFER to: Passive Anti-Theft System (PATS) .

No	GO to A4

A4 CHECK THE IGNITION SWITCH 1 (START_STOP_1) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the BCM Parameter Identification (PIDs).

Monitor the BCM PID START_STOP_1 while pressing and releasing the START/STOP button.

Does the PID change state when the START/STOP button is pressed and released?

Yes	GO to A11

No	GO to A5

A5 CHECK THE START/STOP 1 INPUT CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect BCM C2280B .

Disconnect FCIM C2402A .

Disconnect PCM C175B , C1551B or C1381B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-12		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to A6

A6 CHECK THE START/STOP 1 INPUT CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-12	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A7

No	REPAIR the circuit.

A7 BYPASS THE FCIM (FRONT CONTROLS INTERFACE MODULE) WHILE MONITORING THE IGNITION SWITCH 1 (START_STOP_1) PID (PARAMETER IDENTIFICATION)

Connect BCM C2280B .

Using a diagnostic scan tool, view the BCM Parameter Identification (PIDs).

Monitor the BCM PID START_STOP_1.

Connect:

Positive Lead	Measurement / Action	Negative Lead
C2402A-12		C2402A-26

Remove the fused jumper wire.

Does the PID indicate the START/STOP button is pressed with the jumper wire connected?

Yes	GO to A18

No	GO to A8

A8 CHECK FOR VOLTAGE TO THE IGNITION SWITCH

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26		Ground

Is the voltage greater than 11 volts?

Yes	GO to A10

No	VERIFY BCM fuse 12 (7.5A) is OK. If OK, GO to A9 If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible cause of the circuit short.

A9 CHECK THE IGNITION SWITCH VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Disconnect BCM C2280A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26	Ω	C2280A-10

Is the resistance less than 3 ohms?

Yes	GO to A19

No	REPAIR the circuit.

A10 CHECK THE BCM (BODY CONTROL MODULE) START/STOP 1 INPUT CIRCUIT FOR AN OPEN

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-12	Ω	C2280B-51

Is the resistance less than 3 ohms?

Yes	GO to A19

No	REPAIR the circuit.

A11 CHECK THE IGNITION SWITCH 2 (START_STOP_2) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the BCM Parameter Identification (PIDs).

Monitor the BCM PID START_STOP_2 while pressing the START/STOP button.

Does the PID change state when the START/STOP button is pressed and released?

Yes	GO to A19

No	GO to A12

A12 CHECK THE BCM (BODY CONTROL MODULE) START/STOP 2 INPUT CIRCUIT FOR A SHORT TO GROUND

Disconnect FCIM C2402A .

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-13	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A13

No	REPAIR the circuit.

A13 BYPASS THE FCIM (FRONT CONTROLS INTERFACE MODULE) WHILE MONITORING THE IGNITION SWITCH 2 (START_STOP_2) PID (PARAMETER IDENTIFICATION)

Connect BCM C2280B .

Using a diagnostic scan tool, view the BCM Parameter Identification (PIDs).

Monitor the BCM PID START_STOP_2.

Connect:

Positive Lead	Measurement / Action	Negative Lead
C2402A-13		Ground

Remove the fused jumper wire.

Does the PID indicate the START/STOP button is pressed with the jumper wire connected?

Yes	GO to A14

No	GO to A15

A14 CHECK THE IGNITION SWITCH GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26		C2402A-1

Is the voltage greater than 11 volts?

Yes	GO to A18

No	REPAIR the circuit.

A15 CHECK THE BCM (BODY CONTROL MODULE) START/STOP 2 INPUT CIRCUIT FOR AN OPEN

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-13	Ω	C2280B-5

Is the resistance less than 3 ohms?

Yes	GO to A19

No	REPAIR the circuit.

A16 CARRY OUT A NETWORK TEST

Using a diagnostic scan tool, carry out the network test.

Do the IPC and the BCM pass the network test?

Yes	VERIFY the BCM fuse 34 (30A) is OK. If OK, GO to A17 If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

No	REFER to: MODULE COMMUNICATIONS NETWORK .

A17 CHECK FOR AN INTERMITTENT COMMUNICATION CONCERN

Using a diagnostic scan tool, retrieve the Continuous Mode Diagnostic Trouble Codes (CMDTCs) from all modules.

Are multiple communication Diagnostic Trouble Codes (DTCs) set in multiple modules?

Yes	DIAGNOSE an intermittent network concern. REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to A19

A18 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Disconnect and inspect all FCIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A19 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST B : THE IGNITION MODE INDICATOR IS INOPERATIVE

The Ignition Mode Indicator Is Inoperative

Refer to Starting System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1240:11	Start Button Mode Indicator: Circuit Short to Ground	Sets when the BCM detects a short to ground from the ignition mode status indicator circuit.
B1240:15	Start Button Mode Indicator: Circuit Short to Battery or Open	Sets when the BCM detects an open from the ignition mode status indicator circuit.

Possible Causes

- Wiring, terminals or connectors
- FCIM (includes the ignition switch)
- BCM

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST B : THE IGNITION MODE INDICATOR IS INOPERATIVE > PINPOINT TEST B : THE IGNITION MODE INDICATOR IS INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK FOR VOLTAGE TO THE IGNITION MODE INDICATOR

Start the engine.

Disconnect FCIM C2402A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-5	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to B4

No	GO to B2

B2 CHECK THE IGNITION MODE INDICATOR CIRCUIT FOR A SHORT TO GROUND

Connect FCIM C2402A .

Ignition OFF.

Disconnect FCIM C2402A .

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-5	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B3

No	REPAIR the circuit.

B3 CHECK THE IGNITION MODE INDICATOR CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-5	Ω	C2280B-39

Is the resistance less than 3 ohms?

Yes	GO to B5

No	REPAIR the circuit.

B4 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all FCIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and all other previously disconnected connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST C : THE IGNITION MODE INDICATOR IS ALWAYS ON

Refer to Starting System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1240:15	Start Button Mode Indicator: Circuit Short to Battery or Open	Sets when the BCM detects a short to voltage from the ignition mode status indicator circuit.

Possible Causes

- Wiring, terminals or connectors
- FCIM (includes the ignition switch)
- BCM

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST C : THE IGNITION MODE INDICATOR IS ALWAYS ON > PINPOINT TEST C : THE IGNITION MODE INDICATOR IS ALWAYS ON

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the

correct probe adapter(s) may damage the connector.

C1 ISOLATE THE BCM (BODY CONTROL MODULE)

Ignition ON.

Disconnect BCM C2280B .

Observe the ignition mode indicator.

Does the ignition mode indicator continue to illuminate?

Yes	GO to C2

No	GO to C4

C2 CHECK THE IGNITION MODE INDICATOR CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect FCIM C2402A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-5		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to C3

C3 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Disconnect and inspect all FCIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service

	Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST D : THE STEERING COLUMN IS ALWAYS OR NEVER LOCKED

Refer to Passive Anti-Theft System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1026:87	Steering Column Lock: Missing Message	Sets when the BCM detects no messages from the steering column lock module.

B1026:92	Steering Column Lock: Performance or Incorrect Operation	Sets when the BCM detects messages from the steering column lock module when the BCM has not activated the steering column lock module relay.
B1184:11	Steering Column Lock Output: Circuit Short To Ground	Sets when the BCM detects a short to ground from the steering column lock module relay control circuit.
B1184:15	Steering Column Lock Output: Circuit Short To Battery or Open	Sets when the BCM detects a short to voltage or an open from the steering column lock module relay control circuit.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Steering column lock module relay
- Steering column lock module
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuse 19 (20A).

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST D : THE STEERING COLUMN IS ALWAYS OR NEVER LOCKED > PINPOINT TEST D : THE STEERING COLUMN IS ALWAYS OR NEVER LOCKED

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1184:11 OR B1184:14

Ignition ON.

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1184:11 or B1184:14 present?

Yes	GO to D2

No	GO to D7

D2 CHECK THE STEERING COLUMN LOCK MODULE RELAY (DTC (DIAGNOSTIC TROUBLE CODE) B1184:11 OR B1184:14

Ignition OFF.

Disconnect Steering Column Lock Module Relay.

Substitute a known good relay.

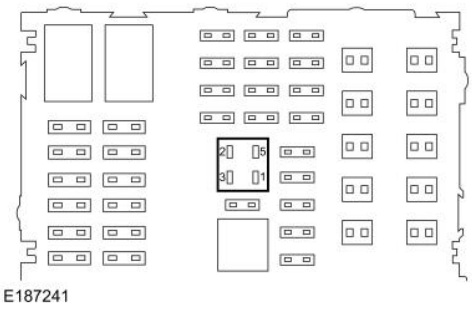
Ignition ON.

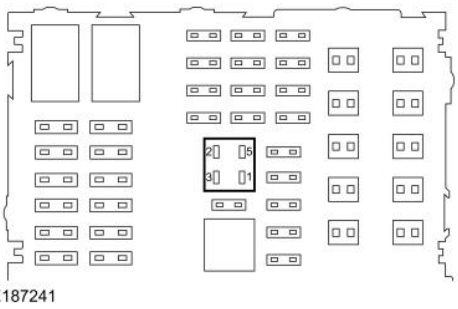
Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1184:11 or B1184:14 still present?

Yes	REMOVE the known good relay. GO to D3





No	REMOVE the known good relay. INSTALL a new steering column lock module relay.

D3 CHECK THE STEERING COLUMN LOCK MODULE RELAY COIL GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect Steering Column Lock Module Relay.

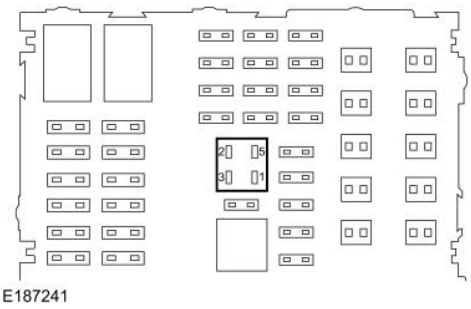
Connect:

Positive Lead	Measurement / Action	Negative Lead
 Steering column lock module relay, cavity 3		 Steering column lock module relay, cavity 2

Does the test lamp illuminate?

Yes	GO to D4

No	REPAIR the circuit.



D4 CHECK THE STEERING COLUMN LOCK MODULE RELAY COIL CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

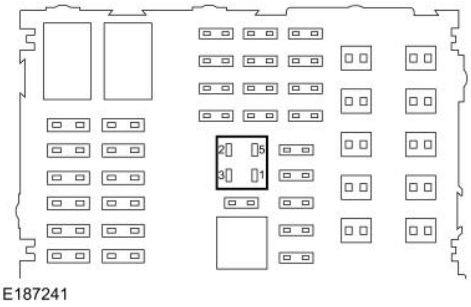
Disconnect BCM C2280F .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Steering column lock module relay, cavity 1	V	Ground

Is any voltage present?



Yes	REPAIR the circuit.

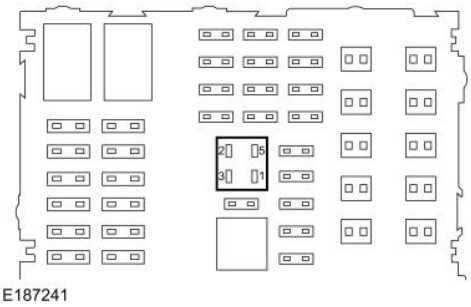
No	GO to D5

D5 CHECK THE STEERING COLUMN LOCK MODULE RELAY COIL CONTROL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Steering column lock module relay, cavity 1	Ω	Ground



Is the resistance greater than 10, 000 ohms?

Yes	GO to D6

No	REPAIR the circuit.

D6 CHECK THE STEERING COLUMN LOCK MODULE RELAY COIL CONTROL CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Steering column lock module relay, cavity 1	Ω	C2280F-9

Is the resistance less than 3 ohms?

Yes	GO to D15

No	REPAIR the circuit.

D7 CHECK THE STEERING COLUMN LOCK MODULE RELAY

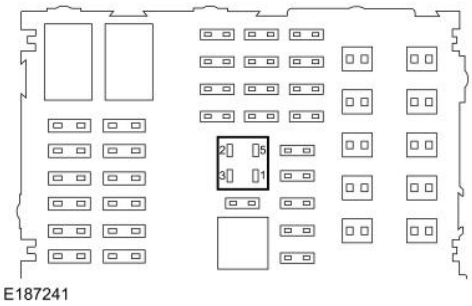
Ignition OFF.

Disconnect Steering Column Lock Module Relay.

Substitute a known good relay.

Check the operation of the electric steering column lock system. REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

Does the steering column lock and unlock correctly?



Yes	REMOVE the known good relay. INSTALL a new steering column lock module relay.

No	REMOVE the known good relay. GO to D8

D8 CHECK THE STEERING COLUMN LOCK MODULE RELAY VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

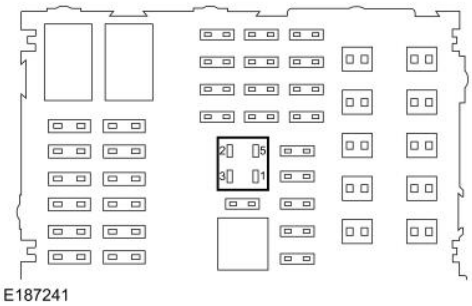
Measure:

Positive Lead	Measurement / Action	Negative Lead
 Steering column lock module relay, cavity 3		Ground

Is the voltage greater than 11 volts?

Yes	GO to D9

No	VERIFY the BJB fuse 19 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible cause of the circuit short.



D9 CHECK THE STEERING COLUMN LOCK MODULE VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect BCM C2280G .

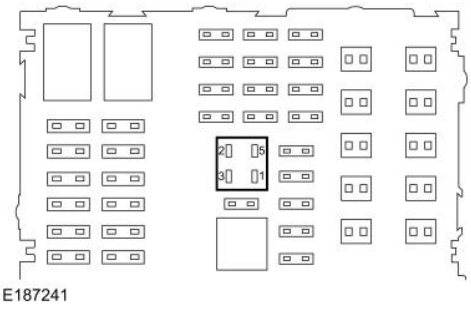
Disconnect Steering Column Lock Module C2434 .

Ignition ON.

Measure:

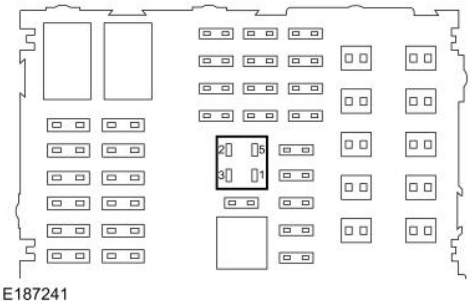
Positive Lead	Measurement / Action	Negative Lead
 Steering column lock module relay, cavity 5		Ground

Is any voltage present?



Yes	REPAIR the circuit.

No	GO to D10



D10 CHECK THE STEERING COLUMN LOCK MODULE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 E187241 Steering column lock module relay, cavity 5	Ω	C2280G-8

Measure:

Positive Lead	Measurement / Action	Negative Lead
 E187241 Steering column lock module relay, cavity 5	Ω	C2434-2

Are the resistances less than 3 ohms?

Yes	GO to D11

No	REPAIR the circuit in question.

D11 CHECK THE STEERING COLUMN LOCK MODULE GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C2434-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D12

No	REPAIR the circuit.

D12 CHECK THE STEERING COLUMN LOCK MODULE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Connect BCM C2280G .

Ignition ON.

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2434-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to D13

D13 CHECK THE STEERING COLUMN LOCK MODULE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Connect BCM C2280B .

Ignition OFF.

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2434-4	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D14

No	REPAIR the circuit.

D14 CHECK THE STEERING COLUMN LOCK MODULE LIN (LOCAL INTERCONNECT NETWORK)

CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2434-4	Ω	C2280B-25

Is the resistance less than 3 ohms?

Yes	INSTALL a new steering column lock module. TEST the system for normal operation. If the concern is still present, GO to D15

No	REPAIR the circuit.

D15 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST E : B11D9:16

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

The SCCM continuously monitors its voltage supply circuit. If voltage decreases below a predefined limit, the SCCM ceases functions. DTC B11D9:16 can set if the vehicle battery has been discharged. The vehicle battery may become discharged due to excessive load on the charging system from aftermarket accessories or if the vehicle has been left unattended with the accessories on.

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11D9:16	Vehicle Battery: Circuit Below Threshold	This DTC sets in continuous memory if the SCCM detects battery voltage below 8 volts from the battery voltage supply circuit.

Possible Causes

- Wiring, terminals or connectors
- Charging system concern
- High circuit resistance
- SCCM

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST E : B11D9:16 > PINPOINT TEST E : B11D9:16

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Failure to disconnect the battery when instructed may result in false resistance readings.

E1 RECHECK THE SCCM (STEERING COLUMN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using the diagnostic scan tool, clear the SCCM Diagnostic Trouble Codes (DTCs).

Using the diagnostic scan tool, carry out the SCCM self-test.

Is DTC B11D9:16 still present?

Yes	GO to E2

No	The system is operating normally at this time. The DTC may have been set due to a previous low battery voltage condition.

E2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

Using the diagnostic scan tool, carry out the PCM KOEO self-test.

Using the diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the PCM.

Are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	Refer to the appropriate article for the procedure.

No	GO to E3

E3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Ignition OFF.

Carry out the battery condition test. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK and fully charged?

Yes	GO to E4

No	Refer to the appropriate article for the procedure.

E4 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) VOLTAGE SUPPLY USING THE SYSTEM BATTERY VOLTAGE (VBAT_SCCM) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Measure and record:

Positive Lead	Measurement / Action	Negative Lead
		

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, monitor the SCCM PID VBAT_SCCM.

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to E7

No	GO to E5

E5 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) VOLTAGE SUPPLY FOR HIGH RESISTANCE

Ignition OFF.

Disconnect SCCM C226A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-7		Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to E6

No	REPAIR the SCCM voltage supply circuit for high resistance.

E6 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) GROUND CIRCUIT FOR HIGH RESISTANCE

Ignition OFF.

Disconnect the negative battery cable. REFER to: Battery Disconnect and Connect .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CONNECT the negative battery cable. GO to E7

No	REPAIR the SCCM ground circuit for high resistance.

E7 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all of the SCCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service

	Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST F : B11D9:17

Normal Operation and Fault Conditions

The SCCM continuously monitors the voltage supply circuit. If voltage increases above a predefined limit, the SCCM ceases functions. DTC B11D9:17 can set if the vehicle has been recently jump started or the vehicle battery has been recently charged.

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11D9:17	Vehicle Battery: Circuit Above Threshold	This DTC sets in continuous memory if the SCCM detects battery voltage above 19 volts from the battery voltage supply circuit.

Possible Causes

- Charging system
- SCCM

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST F : B11D9:17 > PINPOINT TEST F : B11D9:17

F1 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

Ignition ON.

Using the diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Are any high battery voltage and/or charging system Diagnostic Trouble Codes (DTCs) present in other modules?

Yes	Refer to the appropriate article for the procedure.

No	GO to F2

F2 CHECK THE BATTERY VOLTAGE

Turn off all interior/exterior lights and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 16.5 volts or higher?

Yes	DIAGNOSE the overcharging condition. Refer to the appropriate article for the procedure.

No	GO to F3

F3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B11D9:17

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, clear the SCCM Diagnostic Trouble Codes (DTCs) and repeat the self-test.

Using a diagnostic scan tool, carry out the SCCM self-test.

Is DTC B11D9:17 present?

Yes	INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST G : P2533:14

Refer to Power Distribution for schematic and connector information.

Normal Operation and Fault Conditions

The BCMB check for voltage from the RUN/START circuit when the self-test is commanded. If no voltage is detected, DTC P2533:14 sets.

BCMB DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P2533:14	Ignition Switch Run/Start Position Circuit: Circuit Short To Ground or	Sets during the on-demand self-test when the BCMB detects

	Open	no voltage from the RUN/START input circuit.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- BCM
- BCMB

DIAGNOSIS AND TESTING > STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS > PINPOINT TESTS > PINPOINT TEST G : P2533:14 > PINPOINT TEST G : P2533:14

G1 CHECK FOR VOLTAGE TO THE BCMB (BODY CONTROL MODULE B)

Ignition OFF.

Disconnect BCMB C4368A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-7	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to G3

No	GO to G2

G2 CHECK THE BCMB (BODY CONTROL MODULE B) RUN/START INPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-7	Ω	C2280C-8

Is the resistance less than 3 ohms?

Yes	GO to G4

No	REPAIR the circuit.

G3 CHECK FOR CORRECT BCMB (BODY CONTROL MODULE B) BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCMB connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCMB connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

REMOVAL AND INSTALLATION > STEERING COLUMN CONTROL MODULE (SCCM) > REMOVAL

NOTE: LHD shown, RHD similar.

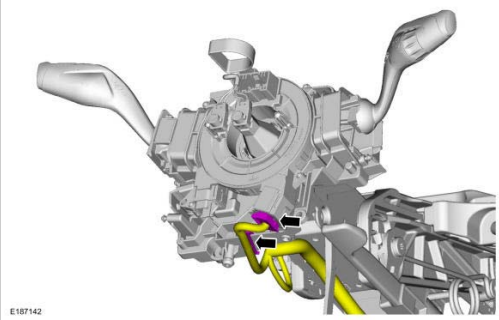
NOTE: Removal steps in this procedure may contain installation details.

NOTE: The PMI process must begin with the current SCCM installed. If the current SCCM does not respond to the diagnostic scan tool, the tool may prompt for As-Built Data as part of the repair.

NOTE: This step is only necessary when installing a new component.

1.
Using a diagnostic scan tool, begin the PMI process for the SCCM following the on-screen instructions.

2.



Remove the steering wheel. Refer to: Steering Wheel .

3.

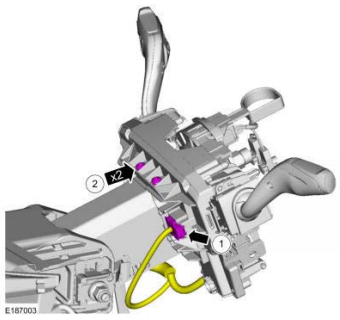
Remove the steering column shrouds. Refer to: Steering Column Shrouds .

4.

Detach the retainer and disconnect the clockspring electrical connector.

5.

1.



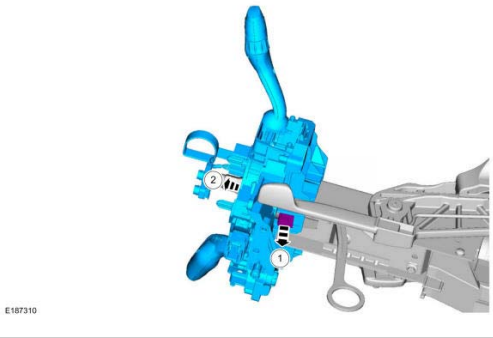
Disconnect the SCCM electrical connector.

2.

Remove the retainers.

Torque

: 27 lb.in (3 Nm)



6.

1.

Pull the SCCM retaining clip.

2.

Remove the SCCM from steering column.

REMOVAL AND INSTALLATION > STEERING COLUMN CONTROL MODULE (SCCM) > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only necessary when installing a new component.

2.
Using a diagnostic scan tool, complete the PMI process for the SCCM following the on-screen instructions.

REMOVAL AND INSTALLATION > STEERING COLUMN LOCK MODULE

Special Tool(s) / General Equipment

Center Punch

REMOVAL AND INSTALLATION > STEERING COLUMN LOCK MODULE > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: Prior to the removal of the steering column lock module, it is necessary to upload the BCM configuration information to the scan tool. This information must be downloaded back into the same BCM after installation of a new steering column lock module in order to establish the correct configuration of the BCM into the new steering column lock module.

NOTE: This step is only necessary when installing a new component.

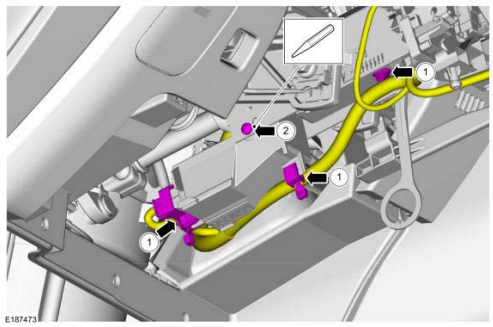
1.
Using a diagnostic scan tool, begin the PMI process for the BCM following the on-screen instructions.

2.

Remove the driver knee airbag. Refer to: Driver Knee Airbag .

3.

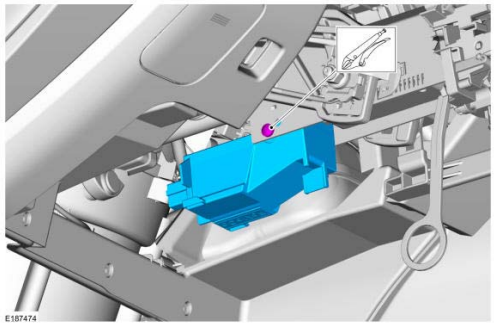
Remove the steering column shrouds. Refer to: Steering Column Shrouds .



4.

1.

Release the retainers and detach the steering column lock module electrical connectors.



2.

Using a center punch, partially push out the retainers on both sides. Use the General Equipment: Center Punch

5.

Remove the retainers from the both sides and the steering column lock module.

REMOVAL AND INSTALLATION > STEERING COLUMN LOCK MODULE > INSTALLATION

1.

To install, reverse the removal procedure.

NOTE: This step is only necessary when installing a new component.

2.
Using a diagnostic scan tool, complete the PMI process for the BCM following the on-screen instructions.

NOTE: This step is only necessary when installing a new component.

3.
Carry out the BCM to steering column lock module training procedure.

NOTE: This step is only necessary when installing a new component.

4.
Carry out the BCM self-test. Clear the Diagnostic Trouble Codes (DTCs) and then retrieve the Diagnostic Trouble Codes (DTCs) from the BCM to confirm all Diagnostic Trouble Codes (DTCs) have been cleared.

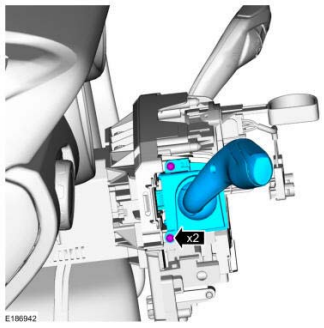
REMOVAL AND INSTALLATION > STEERING COLUMN MULTIFUNCTION SWITCH LH > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the steering column shrouds. Refer to: Steering Column Shrouds .



NOTE: Make sure the component terminals are not bent or damaged.

NOTE: The steering wheel is removed for clarity.

2.
Remove the retainers and the LH steering column multifunction switch.

Torque

: 9 lb.in (1 Nm)

REMOVAL AND INSTALLATION > STEERING COLUMN MULTIFUNCTION SWITCH LH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > STEERING COLUMN MULTIFUNCTION SWITCH RH > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the steering column shrouds. Refer to: Steering Column Shrouds .

NOTE: Make sure the component terminals are not bent or damaged.

NOTE: The steering wheel is removed for clarity.

2.
Remove the retainers and the RH steering column multifunction switch.

Torque

: 9 lb.in (1 Nm)

REMOVAL AND INSTALLATION > STEERING COLUMN MULTIFUNCTION SWITCH RH > INSTALLATION

1.

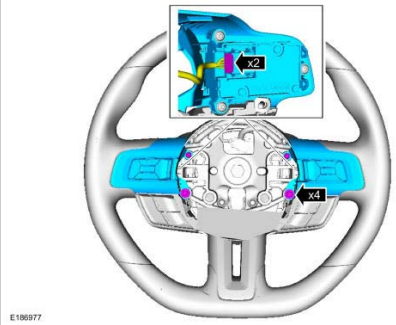
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > STEERING WHEEL MULTIFUNCTION SWITCH >

REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

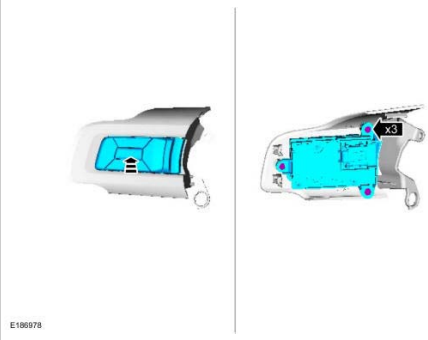
1.



Remove the driver airbag. Refer to: Driver Airbag .

2.

Remove the retainers, disconnect the electrical connectors and remove the switch and bezel assemblies.



Torque

: 44 lb.in (5 Nm)

NOTE: This step is only necessary when installing new upper steering wheel switches.

3.
On both sides. Remove the retainers and the upper steering wheel switch.

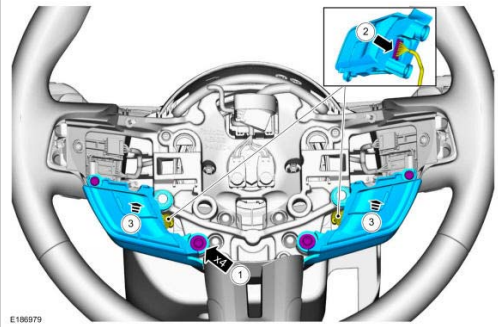
Lower steering wheel switch

4.

1.

Remove the retainers.

Torque



: 44 lb.in (5 Nm)

2.

Disconnect the electrical connectors.

3.

Remove the lower steering wheel switches.

REMOVAL AND INSTALLATION > STEERING WHEEL MULTIFUNCTION SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: WIPERS AND WASHERS

DESCRIPTION AND OPERATION > WIPERS AND WASHERS - OVERVIEW > OVERVIEW

The windshield wiper/washer system is activated by the wiper/washer switch. The following functions/features of the windshield wiper/washer system are:

- Mist wipe
- Windshield wash
- Courtesy wipe
- Windshield wipers (low/high speed)
- Intermittent wipers
- Speed dependent wipers
- Wiper activated exterior lamps
- Rain sensitive wipers (if equipped)

There are 6 intermittent/sensitivity settings to choose from for the intermittent/rain sensitive wipers.

DESCRIPTION AND OPERATION > WIPERS AND WASHERS - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > WIPERS AND WASHERS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

SCCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Vehicle speed	PCM	The SCCM uses vehicle speed information for the operation of the speed sensitive wiper function.
Message center feature configuration	IPC	The SCCM uses the message center feature configuration to enable/disable the courtesy wipe and the rain sensitive wiper features.

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Front wiper status	SCCM	The BCM uses the wiper status information for the operation of the wiper activated headlamps feature.

DESCRIPTION AND OPERATION > WIPERS AND WASHERS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > WINDSHIELD WIPERS

The wiper relay is energized when the ignition is on and provides voltage to the windshield wiper motor and the rain sensor.

The SCCM monitors the wiper/washer switch inputs and sends the wiper/washer switch data to the windshield wiper motor through a LIN circuit.

Based on the input, the windshield wiper motor activates the appropriate wash, low, high and intermittent or rain sense modes. The logic of the wiper operation is contained within the windshield wiper motor.

When the wiper/washer switch is in the high speed setting, the windshield wiper motor also receives a ground signal directly from the SCCM, bypassing the logic within the windshield wiper motor module. This fail-safe circuit makes sure the windshield wipers function in high speed mode in the event of a LIN communication failure.

Mist Wipe

When the mist wipe function is activated, the SCCM sends the request to the windshield wiper motor over the LIN to perform a single wipe of the windshield. The windshield wipers operate for as long as the mist wipe function is active.

Windshield Washer

When the windshield washer switch is activated, the SCCM sends the washer request to the windshield wiper motor over the LIN. The windshield wash relay is internal to the windshield wiper motor. When the windshield wiper motor activates the windshield wash relay, voltage is provided to the washer pump, directing washer solvent to the windshield. When the switch is released, the windshield wiper motor continues to activate for 3 additional wipes and then turn off.

Courtesy Wipe

When the windshield washer is requested, a few seconds after the windshield wash cycle has completed, an additional wipe of the windshield occurs to clear any washer solvent remaining on the windshield.

The courtesy wipe feature can be configured on/off using the message center.

Intermittent Wipers

When the wiper/washer switch is in an intermittent setting, the windshield wiper motor activates at timed intervals. The lower the setting, the longer the interval between wipes.

Speed Dependent Wipers

When the wiper/washer switch is in an intermittent setting, the speed dependent feature increases the frequency of wiping as the vehicle speed increases to compensate for the extra moisture that accumulates on the windshield.

The SCCM receives the vehicle speed from the PCM. The SCCM then sends the vehicle speed data to the windshield wiper motor through the LIN.

Rain Sensitive Wipers (if equipped)

When equipped, the rain sensitive wiper feature replaces the intermittent wiper feature. The rain sensitive feature is active when the wiper/washer switch is in any of the 6 auto/intermittent sensitivity settings. The setting closest to OFF is the least sensitive to moisture, the highest setting being the most sensitive to moisture.

The rain sensor sends data through the LIN to the windshield wiper motor. Based on the data received from the rain sensor and the auto/intermittent setting from the wiper/washer switch, the system automatically activates and adjusts the wiper speed and frequency when moisture is detected on the windshield.

If a fault is detected with the rain sensitive feature, the windshield wipers change to a default intermittent mode. The timing of the wipers correspond to a standard intermittent setting based on the auto/intermittent sensitivity setting on the wiper/washer switch.

Wiper Activated Exterior Lamps

When the headlamp switch is set to AUTO, the BCM turns the exterior lamps on within 10 seconds of the windshield wipers being activated by the wiper/washer switch. Approximately 60 seconds after the windshield wipers turn off, the BCM turns the exterior lamps off.

If the rain sensitive wipers are activated by moisture detected on the windshield when the headlamp switch is in the AUTO position, the BCM turns the exterior lamps on after a time delay. Shortly after the rain sensitive wipers are deactivated (moisture no longer detected on the windshield), the BCM turns the exterior lamps off after a time delay.

Component Description

Wiper/Washer Switch

The wiper/washer switch is mounted directly to the SCCM. The windshield wiper/washer inputs to the SCCM are:

- Mist wipe
- Windshield wash
- Off
- AUTO 1/INT 1
- AUTO 2/INT 2
- AUTO 3/INT 3
- AUTO 4/INT 4
- AUTO 5/INT 5

- AUTO 6/INT 6
- Low
- High

Windshield Wiper Motor

The windshield wiper motor contains a logic module, internal sensors to monitor the wiper arm position, and a multi-speed motor. The logic module from the windshield wiper motor continuously monitors the wiper/washer switch inputs from the SCCM and the rain sensor when the ignition is on. Depending on the input, the wiper motor activates to achieve the desired request.

The windshield wiper motor is mounted to the wiper and linkage assembly.

Washer Pump

The washer pump is controlled by the windshield wiper motor. The washer pump delivers washer solvent to the windshield when the windshield wiper motor activates the windshield washer relay (internal to the windshield wiper motor), which provides voltage to the washer pump. When activated, the washer pump delivers washer solvent to the windshield.

Rain Sensor

The rain sensor uses an infrared beam to optically sense moisture on the windshield. The intensity of the reflected beam is measured and compared to the intensity of the transmitted beam. If there is water on the surface of the windshield the beam distorts, reducing the intensity of the beam. If the beam is not reflected completely, it is interpreted as rain on the windshield and the windshield wipers are activated.

A gel-type lens is used as the interface between the rain sensor and the windshield. If the lens is missing or damaged, the rain sensing wipers can be inoperative. The rain sensor gel-type lens cannot be replaced separately on a rain sensor of this type.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > DTC CHART: BCM

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

BCM DTC Chart

DTC	Description	Action
B130F:12	Run Accessory Control: Circuit Short To Battery	GO to Pinpoint Test A
B130F:14	Run Accessory Control: Circuit Short To Ground or Open	If the windshield wipers are inoperative, GO to Pinpoint Test A If the windshield wipers operate with the ignition off, GO to Pinpoint Test D
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > DTC CHART: SCCM

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B130F:12	Run Accessory Control: Circuit Short To Battery	Sets when the BCM detects a short to voltage from the wiper relay control circuit.
B130F:14	Run Accessory Control: Circuit Short To Ground or Open	Sets when the BCM detects an open from the wiper relay control circuit.

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1131:02	Wiper motor module: General Signal Failure	Sets when the input to the windshield wiper motor from the fail-safe circuit does not match the requested input from the SCCM.

Possible Causes

- Fuse
- Wiring, terminals or connectors

- Wiper relay
- Windshield wiper motor
- SCCM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuse 26 (25A)

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST A : ALL WINDSHIELD WIPER MODES ARE INOPERATIVE > PINPOINT TEST A : ALL WINDSHIELD WIPER MODES ARE INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B130F:12, B130F:14 OR SCCM (STEERING COLUMN CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1131:02

Ignition ON.

Using a diagnostic scan tool, carry out the BCM self-test.

Using a diagnostic scan tool, carry out the SCCM self-test.

Is DTC B130F:12, B130F:14 or B1131:02 present?

Yes	For DTC B130F:12, GO to A2For DTC B130F:14, GO to A4For DTC B1131:02, GO to A12

No	GO to A7

A2 CHECK THE WIPER RELAY (DTC (DIAGNOSTIC TROUBLE CODE) B130F:12)

Ignition OFF.

Disconnect Wiper Relay.

Substitute a known good relay.

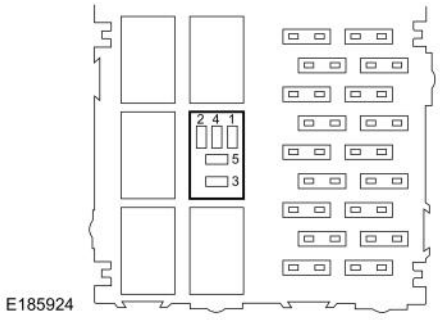
Ignition ON.

Using a diagnostic scan tool, clear the DTC and repeat the BCM self-test.

Is DTC B130F:12 still present?

Yes	REMOVE the known good relay. GO to A3

No	REMOVE the known good relay. INSTALL a new windshield wiper relay.



A3 CHECK THE WIPER RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect BCM C2280F .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Wiper relay, cavity 2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to A16

A4 CHECK THE WIPER RELAY (DTC (DIAGNOSTIC TROUBLE CODE) B130F:14)

Ignition OFF.

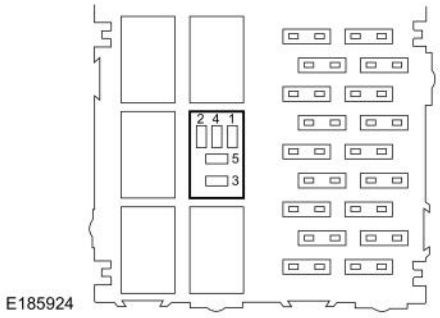
Disconnect Wiper Relay.

Substitute a known good relay.

Ignition ON.

Using a diagnostic scan tool, clear the DTC and repeat the BCM self-test.

Is DTC B130F:14 still present?



Yes	REMOVE the known good relay. GO to A5

No	REMOVE the known good relay. INSTALL a new windshield wiper relay.

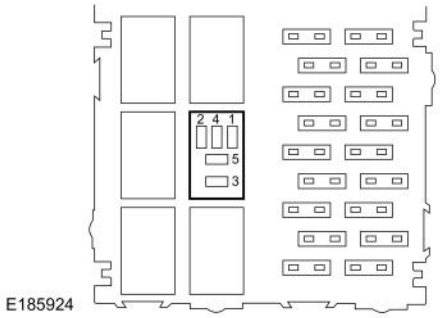
A5 CHECK THE WINDSHIELD WIPER RELAY COIL VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Wiper relay, cavity 1	V	Ground

Is the voltage greater than 11 volts?



Yes	GO to A6

No	VERIFY the BJB fuse 26 (25A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the SYSTEM WIRING DIAGRAMS article to identify the possible cause of the circuit short.

A6 CHECK THE WIPER RELAY CONTROL CIRCUIT FOR AN OPEN

Disconnect BCM C2280F .

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Wiper relay, cavity 2	Ω	C2280F-24

Is the resistance less than 3 ohms?

Yes	GO to A16

No	REPAIR the circuit.

A7 CHECK THE INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, view the following SCCM wiper/washer switch Parameter Identifications (PIDs):

WIPE_SINGLE

F_WASH_SW

F_WIP_INT_D1

F_WIP_INT_D2

F_WIP_INT_D3

F_WIP_INT_D4

F_WIP_INT_D5

F_WIP_INT_D6

F_WIP_SLO_SW

F_WIPE_FAST_SW

Cycle the wiper/washer switch from off to the high speed setting and then back to off.

Do the Parameter Identifications (PIDs) correspond correctly with each setting selection?

Yes	GO to A8

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

A8 CHECK FOR VOLTAGE TO THE WINDSHIELD WIPER MOTOR

Ignition OFF.

Disconnect Windshield Wiper Motor C1656 .

Ignition ON.

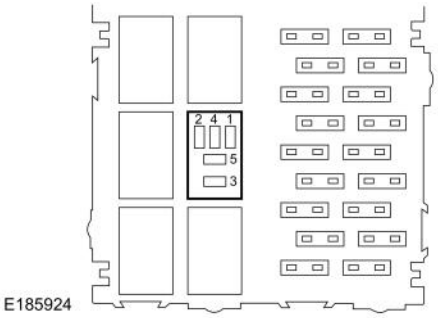
Measure:

Positive Lead	Measurement / Action	Negative Lead

C1656-8		Ground

Is the voltage greater than 11 volts?

Yes	GO to A11



No	GO to A9

A9 CHECK THE WIPER RELAY VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

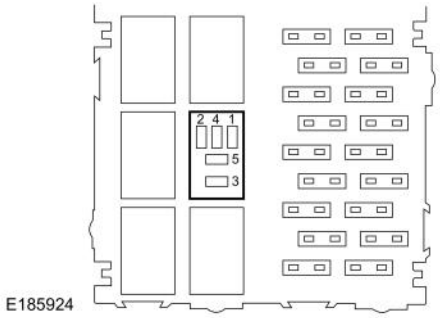
Ignition OFF.

Disconnect Wiper Relay.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Wiper relay, cavity 3		Ground

Is the voltage greater than 11 volts?



Yes	GO to A10

No	REPAIR the circuit.

A10 CHECK FOR THE WINDSHIELD WIPER MOTOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead

 Wiper relay, cavity 5	Ω	C1656-8

Is the resistance less than 3 ohms?

Yes	INSTALL a new wiper relay.

No	REPAIR the circuit.

A11 CHECK THE WINDSHIELD WIPER MOTOR GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-8	V	C1656-6

Is the voltage greater than 11 volts?

Yes	GO to A12

No	REPAIR the circuit.

NOTE: This pinpoint test step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

A12 CHECK THE FAIL-SAFE HIGH SPEED WIPER GROUND CIRCUIT CONTROL

Ignition OFF.

Disconnect Windshield Wiper Motor C1656 (if not previously disconnected).

Connect:

Positive Lead	Measurement / Action	Negative Lead

C1656-8		C1656-1

Ignition ON.

Place the wiper/washer switch to the high speed setting and then off.

Ignition OFF.

Does the test lamp illuminate when the wiper washer switch is in the high speed setting?

Yes	GO to A14

No	GO to A13

NOTE: If steps A2-A12 did not identify the cause of the concern, a double fault may be present. After the fail-safe ground is diagnosed and repaired, it is necessary to check all operation modes and diagnose any symptom still present.

A13 CHECK THE FAIL-SAFE HIGH SPEED WIPER GROUND CIRCUIT FOR AN OPEN

Disconnect SCCM C226A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-1	Ω	C226A-2

Is the resistance less than 3 ohms?

Yes	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, GO to A15

No	REPAIR the circuit.

A14 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION

Disconnect and inspect the windshield wiper motor connector.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the windshield wiper motor connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A15 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all the SCCM connectors:

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A16 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors:

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Is the concern still present?

Yes	

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST B : THE INTERMITTENT AND/OR LOW SPEED WINDSHIELD WIPERS ARE INOPERATIVE

The Intermittent And/Or Low Speed Windshield Wipers Are Inoperative

Refer to Wipers and Washers for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1131:08	Wiper motor module: Bus Signal / Message Failure	Sets when the SCCM detects a communication fault with the windshield wiper motor over the LIN.
B1131:11	Wiper motor module: Circuit Short to Ground	Sets when the SCCM detects a short to ground from the windshield wiper motor LIN circuit.

Possible Causes

- Wiring, terminals or connectors
- Wiper/washer switch
- Windshield wiper motor
- Rain sensor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST B : THE INTERMITTENT AND/OR LOW SPEED WINDSHIELD WIPERS ARE INOPERATIVE > PINPOINT TEST B : THE INTERMITTENT AND/OR LOW SPEED WINDSHIELD WIPERS ARE INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: It may be necessary to disconnect and then reconnect the battery after the repair to enable the wiper operation.

B1 CHECK THE HIGH SPEED WIPER OPERATION

Ignition ON.

Place the wiper/washer switch to the high speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the windshield wipers operate with the wiper/washer switch in the high speed setting?

Yes	GO to B2

No	GO to Pinpoint Test A

B2 CHECK THE LOW SPEED WIPER OPERATION

Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the windshield wipers operate with the wiper/washer switch in the low speed setting?

Yes	If not equipped with a rain sensor, GO to Pinpoint Test E . If equipped with a rain sensor, GO to Pinpoint Test F

No	GO to B3

B3 CHECK THE INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, view the SCCM F_WIP_SLO_SW PID.

Place the wiper/washer switch to the low speed setting.

Does the PID indicate the wiper/washer switch is in the low speed setting?

Yes	If equipped with a rain sensor, GO to B4. If not equipped with a rain sensor, GO to B5

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new

	SCCM. REFER to: Steering Column Control Module (SCCM) .

B4 ISOLATE THE RAIN SENSOR

Ignition OFF.

Disconnect Rain Sensor C914 .

Ignition ON.

Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the windshield wipers operate with the wiper/washer switch in the low speed setting?

Yes	INSTALL a new rain sensor. REFER to: Rain Sensor .

No	GO to B5

B5 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect Windshield Wiper Motor C1656 .

Disconnect SCCM C226A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B6

B6 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-4	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit.

B7 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-4	Ω	C226A-8

Is the resistance less than 3 ohms?

Yes	GO to B8

No	REPAIR the circuit.

B8 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION

Disconnect and inspect the windshield wiper motor connector.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the windshield wiper motor connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor . TEST the system for normal operation. If the concern is still present, GO to B9

No	The system is operating correctly at this time. The concern may have been caused by a

	loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B9 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all the SCCM connectors.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST C : THE HIGH SPEED WINDSHIELD WIPERS ARE INOPERATIVE

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

Possible Causes

- Windshield wiper motor
- Wiper/washer switch
- SCCM

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST C : THE HIGH SPEED WINDSHIELD WIPERS ARE INOPERATIVE > PINPOINT TEST C : THE HIGH SPEED WINDSHIELD WIPERS ARE INOPERATIVE

C1 CHECK THE INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, view the SCCM F_WIPE_FAST_SW PID.

Place the wiper/washer switch to the high speed setting.

Does the PID indicate the wiper/washer switch is in the high speed setting?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST D : THE WINDSHIELD WIPERS STAY ON CONTINUOUSLY

Refer to Wipers and Washers for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B130F:14	Run Accessory Control: Circuit Short To Ground or Open	Sets when the BCM detects a short to ground from the wiper relay control circuit.

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1131:02	Wiper Motor Module: General Signal Failure	Sets when the input to the windshield wiper motor from the fail-safe circuit does not match the requested input from the SCCM.

Possible Causes

- Wiring, terminals or connectors
- Wiper/washer switch
- Wiper relay

- Windshield wiper motor
- SCCM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST D : THE WINDSHIELD WIPERS STAY ON CONTINUOUSLY > PINPOINT TEST D : THE WINDSHIELD WIPERS STAY ON CONTINUOUSLY

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK THE WINDSHIELD WIPER OPERATION WITH THE IGNITION OFF

Ignition OFF.

Observe the windshield wiper operation.

Do the windshield wipers operate with the ignition off?

Yes	GO to D5
No	GO to D2

D2 CHECK THE WIPER/WASHER SWITCH INPUT

Ignition ON.

Make sure the wiper/washer switch is in the off setting.

Using a diagnostic scan tool, view the following SCCM wiper/washer switch Parameter Identifications (PIDs):

WIPE_SINGLE

F_WASH_SW

F_WIP_INT_D1

F_WIP_INT_D2

F_WIP_INT_D3

F_WIP_INT_D4

F_WIP_INT_D5

F_WIP_INT_D6

F_WIP_SLO_SW

F_WIPE_FAST_SW

Do all of the Parameter Identifications (PIDs) indicate the wipers should be off?

Yes	GO to D3

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

D3 CHECK THE WINDSHIELD WIPER OPERATION WITH THE SCCM (STEERING COLUMN CONTROL MODULE) DISCONNECTED

Ignition OFF.

Disconnect SCCM C226A .

Ignition ON.

Observe the windshield wiper operation.

Do the windshield wipers continue to operate?

Yes	GO to D4

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, GO to D9

D4 CHECK THE HIGH SPEED FAIL-SAFE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Windshield Wiper Motor C1656 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D8

No	REPAIR the circuit.

D5 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B130F:14

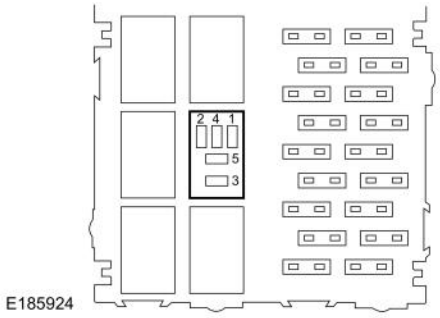
Ignition ON.

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B130F:14 present?

Yes	GO to D6

No	GO to D7



D6 CHECK THE WIPER RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect BCM C2280F .

Disconnect Wiper Relay.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 Wiper relay, cavity 2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D10

No	REPAIR the circuit.

D7 CHECK THE WINDSHIELD WIPER MOTOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect Wiper Relay.

Observe the windshield wiper operation.

Does the windshield wiper motor continue to operate?

Yes	REPAIR the circuit.

No	INSTALL a new wiper relay.

D8 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION

Disconnect and inspect the windshield wiper motor connector.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the windshield wiper motor connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

D9 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all the SCCM connectors.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

D10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST E : THE WINDSHIELD WIPERS DO NOT OPERATE CORRECTLY IN THE INTERMITTENT MODE

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description (501-16 Wipers and Washers, Description and Operation).

Possible Causes

- Wiper/washer switch
- Windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST E : THE WINDSHIELD WIPERS DO NOT OPERATE CORRECTLY IN THE INTERMITTENT MODE > PINPOINT TEST E : THE WINDSHIELD WIPERS DO NOT OPERATE CORRECTLY IN THE INTERMITTENT MODE

E1 VERIFY IF THE VEHICLE IS EQUIPPED WITH A RAIN SENSOR

Inspect the vehicle for a rain sensor.

Is the vehicle equipped with a rain sensor?

Yes	GO to E2

No	GO to E3

E2 VERIFY THE RAIN SENSITIVE WIPER FEATURE IS DISABLED IN THE VEHICLE MESSAGE CENTER

Ignition ON.

Access the vehicle settings in the message center using the steering wheel controls and check the rain sensitive feature setting.

Is the rain sensitive feature enabled?

Yes	DISABLE the rain sensitive feature. INFORM the customer how to disable the rain sensitive feature, activating the intermittent setting.

No	GO to E3

E3 CHECK THE LOW SPEED WIPER OPERATION

Ignition ON.

Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the low speed wipers operate when the low speed setting is selected?

Yes	GO to E4

No	GO to Pinpoint Test B

E4 CHECK THE INPUT FROM THE WIPER/WASHER SWITCH

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, view the following SCCM wiper/washer switch Parameter Identifications (PIDs):

F_WIP_INT_D1

F_WIP_INT_D2

F_WIP_INT_D3

F_WIP_INT_D4

F_WIP_INT_D5

F_WIP_INT_D6

Cycle the wiper/washer switch from off through each of the intermittent settings.

Do the Parameter Identifications (PIDs) correspond correctly with each setting selection?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST F : THE RAIN SENSITIVE WIPER FEATURE IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

The Rain Sensitive Wiper Feature Is Inoperative Or Does Not Operate Correctly

Refer to Wipers and Washers for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description (501-16 Wipers and Washers, Description and Operation).

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AD:02	Rain Sensor: General Signal Failure	Sets when the SCCM detects a communication fault with the rain sensor.
B10AD:08	Rain Sensor: Bus Signal / Message Failure	Sets when the SCCM detects a communication fault with the rain

		sensor.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Rain sensitive feature not enabled
- Foreign material on windshield, such as dirt, dust or bugs
- Wiper blades
- Windshield glass
- Wiper/washer switch
- Windshield wiper motor
- Rain sensor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the windshield for damage
- Inspect the rain sensor mounting for damage
- Inspect BJB fuse 72 (5A)

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST F : THE RAIN SENSITIVE WIPER FEATURE IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST F : THE RAIN SENSITIVE WIPER FEATURE IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

F1 CHECK THE LOW SPEED WIPER OPERATION

Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the low speed wipers operate when the low speed setting is selected?

Yes	GO to F2

No	GO to Pinpoint Test B

F2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B10AD:02 OR B10AD:08

Using a diagnostic scan tool, carry out the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC B10AD:02 or B10AD:08, GO to F11 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: SCCM .

No	GO to F3

F3 VERIFY THE RAIN SENSITIVE WIPER FEATURE IS ENABLED IN THE VEHICLE MESSAGE CENTER

Access the vehicle settings in the message center using the steering wheel controls. Check the rain sensitive feature setting.

Is the rain sensitive feature enabled?

Yes	GO to F4

No	ENABLE the rain sensitive feature. INFORM the customer how to enable/disable the rain sensitive feature.

F4 CHECK THE INPUT FROM THE WIPER/WASHER SWITCH

Using a diagnostic scan tool, monitor the following SCCM wiper/washer switch Parameter Identifications (PIDs):

F_WIP_INT_D1

F_WIP_INT_D2

F_WIP_INT_D3

F_WIP_INT_D4

F_WIP_INT_D5

F_WIP_INT_D6

Cycle the wiper/washer switch from off through each of the auto/intermittent sensitivity settings.

Do the Parameter Identifications (PIDs) correspond correctly with each setting selection?

Yes	GO to F5

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

F5 CHECK THE WINDSHIELD FOR DAMAGE

Ignition OFF.

Inspect the windshield glass for any cracks, pits or other visible damage around the area of the rain sensor.

Is any windshield damage present near the area of the rain sensor?

Yes	INSTALL a new windshield. REFER to: Fixed Glass .

No	GO to F6

F6 CHECK THE WINDSHIELD GLASS FOR STREAKING

Ignition ON.

Turn the wiper/washer switch to the low speed wiper setting and while applying water to the windshield surface. Observe the wipe quality, especially around the area of the rain sensor.

Is any streaking present on the windshield around the area of the rain sensor?

Yes	GO to F7

No	GO to F9

F7 CHECK THE WINDSHIELD WIPER BLADES FOR STREAKING

Ignition OFF.

Clean the windshield glass with glass cleaner.

Clean the wiper blades with isopropyl alcohol swabs. Wipe the entire length of the wiper blades.

Ignition ON.

Place the wiper/washer switch to the low speed wiper setting and while applying water to the windshield surface. Observe the wipe quality, especially around the area of the rain sensor.

Was there noticeable improvement in the wipe quality after cleaning the glass and the wiper blades?

Yes	GO to F8

No	INSTALL new wiper blades. GO to F8

F8 RECHECK THE RAIN SENSITIVE WIPERS OPERATION

Place the wiper/washer switch to the auto/intermittent 5 setting (most sensitive to moisture) while applying water on the windshield above the rain sensor.

Do the wipers operate when water is applied to the windshield surface?

Yes	The system is operating correctly at this time. The concern may have been caused by poor wipe quality on the windshield around the rain sensor.

No	GO to F9

F9 CHECK FOR THE PRESENCE OF THE LENS GEL

Ignition OFF.

Lightly press the rain sensor against the windshield and release the rain sensor clips.

Does the rain sensor remain adhered to the windshield?

Yes	ATTACH the retaining clips. GO to F10

No	The sensor gel-type lens is missing or damaged. INSTALL a new rain sensor. REFER to: Rain Sensor .

NOTE: The rain sensor gel-type lens can be damaged or contaminated during rain sensor removal, rain sensor bracket separation or incorrect installation.

F10 INSPECT THE RAIN SENSOR MOUNTING AREA

From the outside of the vehicle, inspect the area of the windshield glass where the rain sensor is mounted. The rain sensor contact area should appear black, with no bubbles, air pockets or contaminants between the windshield glass and the rain sensor.

Does the rain sensor contact area appear black, with no bubbles, air pockets or contaminants between the windshield glass and the rain sensor?

Yes	GO to F11

No	REMOVE the rain sensor. REFER to: Rain Sensor . CLEAN the mating surfaces between the windshield glass and the rain sensor. INSTALL the rain sensor correctly. TEST the system for normal operation. If the concern is still present, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

F11 CHECK THE RAIN SENSOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect Rain Sensor C914 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C914-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to F12

No	VERIFY the BJB fuse 72 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the SYSTEM WIRING DIAGRAMS article to identify the possible cause of the circuit short.

F12 CHECK THE RAIN SENSOR GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C914-1		C914-3

Is the voltage greater than 11 volts?

Yes	GO to F13

No	REPAIR the circuit.

F13 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect SCCM C226A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C914-2	Ω	C226A-8

Is the resistance less than 3 ohms?

Yes	GO to F14

No	REPAIR the circuit.

F14 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

Disconnect and inspect all the SCCM connectors.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all the SCCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST G : THE WINDSHIELD WIPERS DO NOT PARK AT THE CORRECT POSITION

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

Possible Causes

- Wiper mounting arm and pivot shaft
- Windshield wiper motor

Visual Inspection and Diagnostic Pre-checks

- Inspect the mounting arm and pivot shaft for damage

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST G : THE WINDSHIELD WIPERS DO NOT PARK AT THE CORRECT

POSITION > PINPOINT TEST G : THE WINDSHIELD WIPERS DO NOT PARK AT THE CORRECT POSITION

G1 CHECK THE WIPER MOUNTING ARM AND PIVOT SHAFT FOR DAMAGE

Ignition OFF.

Inspect the wiper mounting arm and pivot shaft for damage.

Is the wiper mounting arm and pivot shaft OK?

Yes	GO to G2

No	INSTALL a new wiper mounting arm and pivot shaft. REFER to: Windshield Wiper Pivot Arm .

G2 CHECK THE WINDSHIELD WIPER PARK RELAY OPERATION

Ignition ON.

Place the wiper/washer switch to the low speed setting. When the wiper blades are in the middle of a wipe, place the wiper/washer switch off.

Do the windshield wipers immediately stop when the wiper/washer switch is turned off?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

No	ADJUST the pivot arms as necessary.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST H : THE WINDSHIELD WASHER IS INOPERATIVE

Refer to Wipers and Washers for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

Possible Causes

- Wiring, terminals or connectors
- Windshield washer hose
- Windshield washer jet
- Washer pump
- Wiper/washer switch

- Windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST H : THE WINDSHIELD WASHER IS INOPERATIVE > PINPOINT TEST H : THE WINDSHIELD WASHER IS INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: This Pinpoint Test uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

H1 CHECK THE AMBIENT AIR TEMPERATURE

Check the ambient air temperature.

Is the ambient air temperature below freezing?

Yes	GO to H2
No	GO to H4

H2 CHECK THE WASHER SOLVENT

Check the washer solvent and make sure it is of the correct type to use for the temperature conditions present.

Is the correct type of washer solvent present?

Yes	GO to H3
No	ALLOW the vehicle to warm to room temperature. DRAIN and REFILL the windshield washer reservoir with the correct washer solvent type. INFORM the customer of the correct type of washer solvent to use for the temperature conditions present.

H3 CHECK FOR WASHER SOLVENT TO THE WASHER JETS

Disconnect the washer hoses from the windshield washer jets and place them in a container to capture fluid.

Ignition ON.

Momentarily activate the windshield washer function.

Is washer fluid emitted at the washer hoses?

Yes	INSTALL a new washer jet in question.

No	GO to H4

H4 CHECK FOR WASHER PUMP ACTIVATION

Ignition ON.

While listening for washer pump activation near the right front of the vehicle, have an assistant activate the windshield washer function.

Does the washer pump activate?

Yes	GO to H5

No	GO to H6

H5 CHECK FOR DAMAGED WASHER HOSES

Inspect the washer hoses for kinks or damage.

Are the washer hoses OK?

Yes	Install a new washer pump. REFER to: Windshield Washer Pump .

No	REPAIR the washer hoses as necessary.

H6 CHECK THE WIPER/WASHER SWITCH INPUT USING THE WASHER SWITCH (FRONT) (F_WASH_SW) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, view the SCCM F_WASH_SW PID.

Activate and release the wash function on the wiper/washer switch.

Does the PID indicate correctly when the switch is activated?

Yes	GO to H7

No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) .

H7 CHECK FOR VOLTAGE TO THE WASHER PUMP

Ignition OFF.

Disconnect Washer Pump C137 .

Connect:

Positive Lead	Measurement / Action	Negative Lead
C137-1		Ground

Ignition ON.

Use the wiper/washer switch to activate the windshield washer function.

Does the test lamp illuminate when the washer is activated?

Yes	GO to H8

No	GO to H9

H8 CHECK THE WASHER PUMP GROUND CIRCUIT FOR AN OPEN

Connect:

Positive Lead	Measurement / Action	Negative Lead
C137-1		C137-2

Use the wiper/washer switch to activate the windshield washer function.

Does the test lamp illuminate when the washer is activated?

Yes	INSTALL a new washer pump. REFER to: Windshield Washer Pump .

No	REPAIR the circuit.

H9 CHECK THE WASHER PUMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Windshield Wiper Motor C1656 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-7	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to H10

No	REPAIR the circuit.

H10 CHECK THE WASHER PUMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-7	Ω	C137-1

Is the resistance less than 3 ohms?

Yes	GO to H11

No	REPAIR the circuit.

H11 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION

Disconnect and inspect the windshield wiper motor connector.

Repair:

corrosion (install new connector or terminal - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the windshield wiper motor connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST I : THE WINDSHIELD WASHER IS ALWAYS ON

Refer to Wipers and Washers for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers - System Operation and Component Description .

Possible Causes

- Wiring, terminals or connectors
- Washer pump
- Wiper/washer switch
- Windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage

DIAGNOSIS AND TESTING > WIPERS AND WASHERS > PINPOINT TESTS > PINPOINT TEST I : THE WINDSHIELD WASHER IS ALWAYS ON > PINPOINT TEST I : THE WINDSHIELD WASHER IS ALWAYS ON

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

I1 CHECK THE WIPER/WASHER SWITCH INPUT USING THE WASHER SWITCH (FRONT) (F_WASH_SW) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, view the SCCM F_WASH_SW PID.

Does the PID indicate the switch is activated?

Yes	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH . TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM)

No	GO to I2

I2 CHECK THE WASHER PUMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect Windshield Wiper Motor C1656 .

Ignition ON.

Does the washer pump continue to operate?

Yes	REPAIR the circuit.

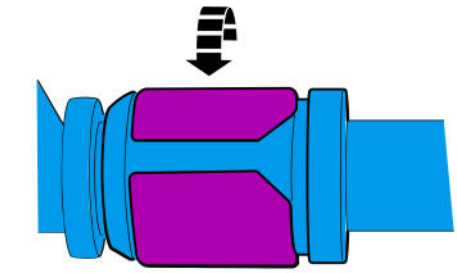
No	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor .

GENERAL PROCEDURES > WASHER HOSE COUPLING

Disconnect

1.

WARNING: Before beginning any service procedure in this service information, refer to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

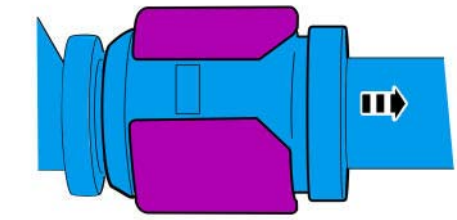


Refer to: Health and Safety Precautions .

NOTE: To prevent damage to the coupler, do not use hand tools to disconnect /connect the C-lock.

NOTE: Do not remove the lock ring from the C-lock coupler.

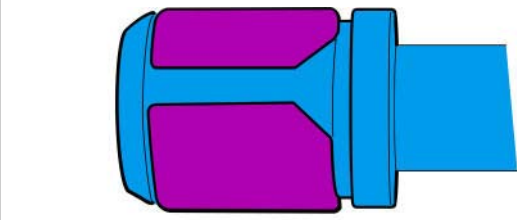
NOTE: Hold the female side of the coupler at the hose connection to prevent the coupler from rotating internally.



2.
Gently twist the lock ring until it has rotated approximately 90 degrees.

E143253

NOTE: The female side of the C-lock coupler contains an o-ring seal. Use care not to lose the o-ring.



3.
Slide the C-lock coupler apart from the component fitting.

E143271

NOTE: Do not leave the lock ring in the unlocked position. This will weaken the lock ring and prevent it from correctly locking in place when reassembled, resulting in a leak.

4.
Rotate the lock ring back to the original locked position.

E143255

5.

To connect, verify the C-lock coupler lock ring is in the locked position.

NOTE: The lock ring flexes open slightly to allow the male fitting to enter the

C-lock coupler.

NOTE: The lock ring can be heard as it snaps into the lock position.

6.
Insert the male fitting into the C-lock coupler.

7.

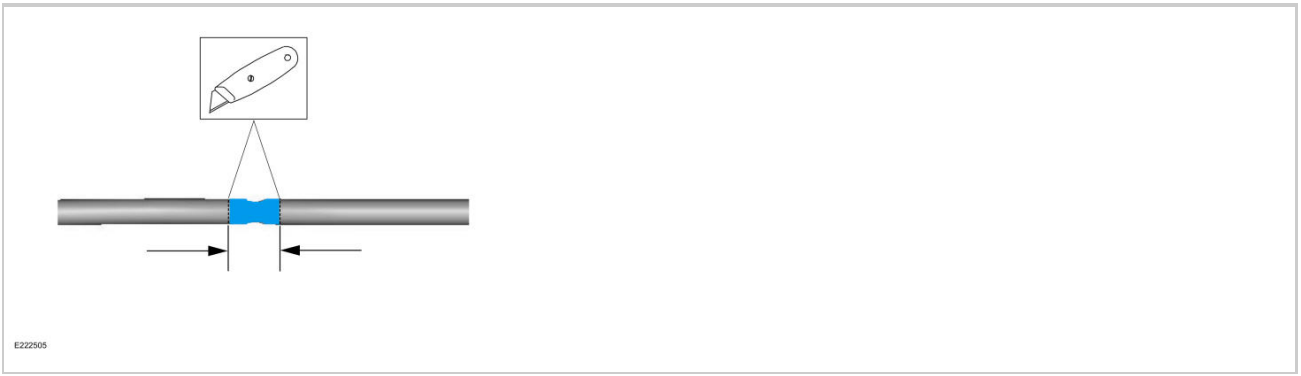
Gently pull on the C-lock coupler to verify it is seated correctly.

GENERAL PROCEDURES > WASHER HOSE REPAIR

Repair

NOTE: This procedure may be carried out on rubber hoses only. If a plastic washer hose is damaged, a new washer hose must be installed.

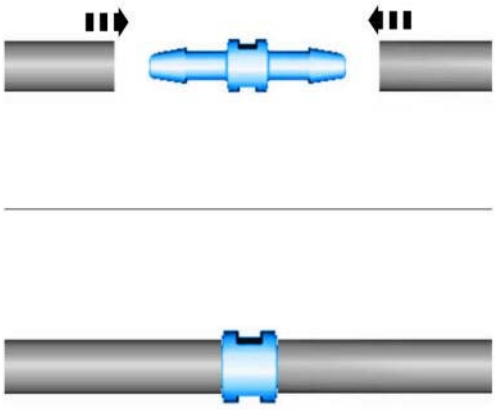
1.



Locate and verify the damaged washer hose.

2.

Cut the hose cleanly and remove the damaged portion of the washer hose.



Dimension

: 0.5000 in (12.7 mm)

3.

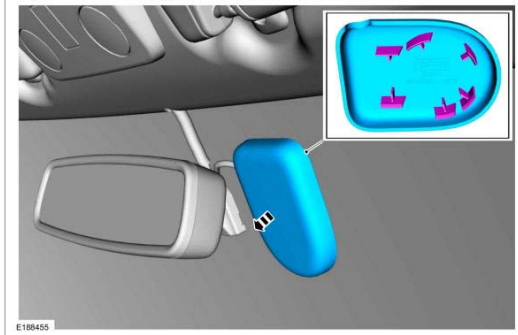
Install a windshield washer hose adapter between the cut ends of the hose.

NOTE: In difficult cases, clamping may be required.

4.
If necessary, install a segment of 6.4 mm (0.25 in) ID black rubber hose over the ends of the washer hose and clamp both ends of the rubber hose using spring clamps.

REMOVAL AND INSTALLATION > RAIN SENSOR

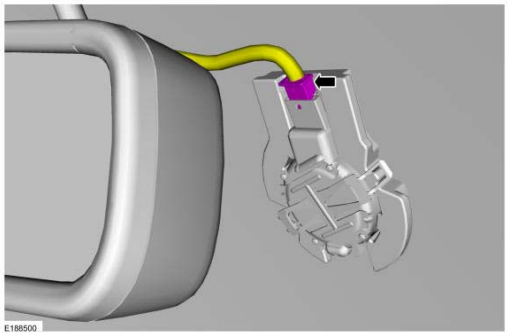
Materials



Name	Specification
Motorcraft® Ultra-Clear Spray Glass Cleaner (U.S.) ZC-23 (U.S.)	ESR-M14P5-A

REMOVAL AND INSTALLATION > RAIN SENSOR > REMOVAL

NOTE: LHD shown in illustration, RHD similar.



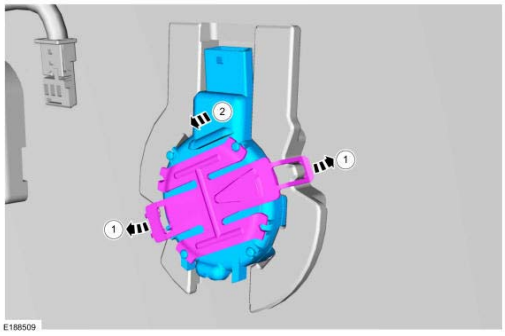
1.

Remove the rain sensor cover.

2.

Disconnect the rain sensor electrical connector.

3.



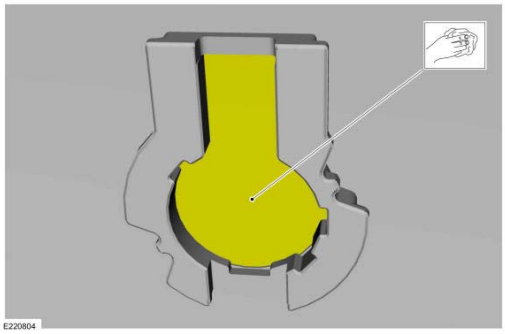
Remove the rain sensor.

1.

Release the rain sensor retaining clip tabs.

2.

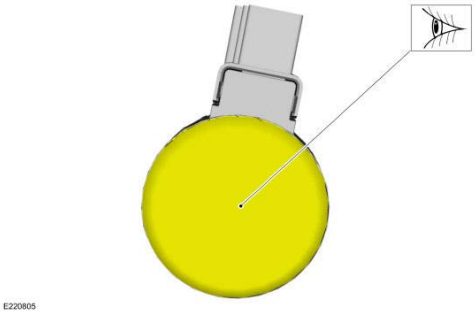
Remove the rain sensor from the mounting bracket.



REMOVAL AND INSTALLATION > RAIN SENSOR > INSTALLATION

1.

Clean the windshield glass area of foreign materials.



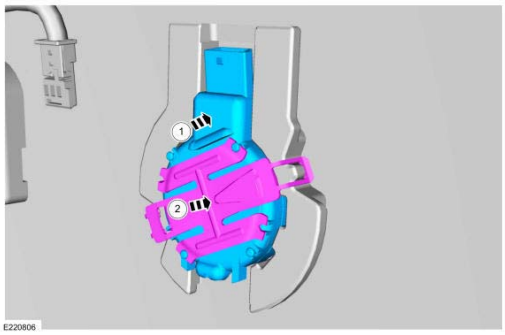
Material

: Motorcraft® Ultra-Clear Spray Glass Cleaner (U.S.) / ZC-23 (U.S.) (ESR-M14P5-A)

NOTE: If the rain sensor gel pack is damaged, install a new rain sensor.

2.
Inspect the rain sensor gel pack for damage.

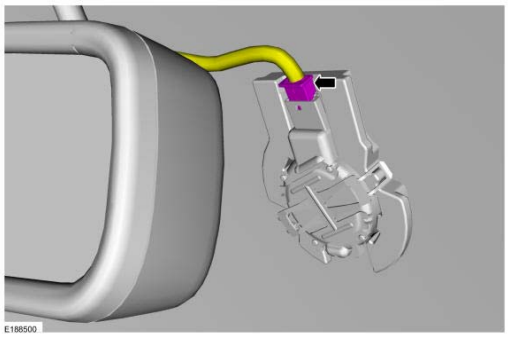
3.



Install the rain sensor.

1.

Place the rain sensor in the mounting bracket.



2.

Install the rain sensor retaining clip.

4.

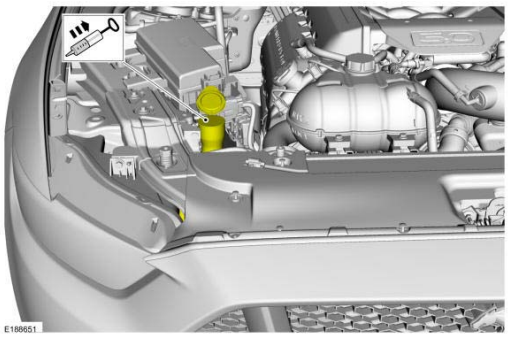
Connect the rain sensor electrical connector.

REMOVAL AND INSTALLATION > WINDSHIELD WASHER PUMP

Special Tool(s) / General Equipment

Fluid Suction Gun

Materials



Name	Specification
Motorcraft® Premium Windshield Wash Concentrate with Bitterant (U.S.) ZC-32-B2 (U.S.)	WSS-M14P19-A

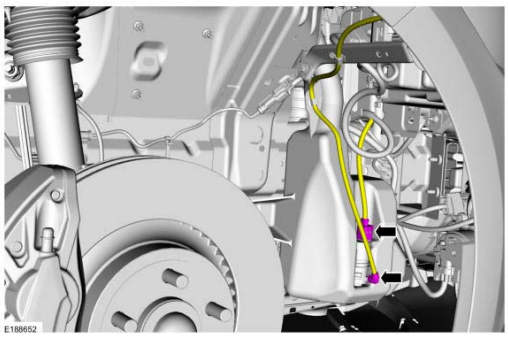
REMOVAL AND INSTALLATION > WINDSHIELD WASHER PUMP > REMOVAL

1.

Siphon out the windshield washer fluid.

Use the General Equipment: Fluid Suction Gun

2.



Remove the RH fender splash shield. Refer to: Fender Splash Shield .

NOTE: Be prepared to collect escaping fluid.

3.

Disconnect the windshield washer pump electrical connector.

Disconnect the washer hose coupling. Refer to: Washer Hose Coupling .

4.

Remove the windshield washer pump.

REMOVAL AND INSTALLATION > WINDSHIELD WASHER PUMP > INSTALLATION

NOTE: Do not operate the washer pump prior to filling the windshield washer reservoir. Failure to follow this instruction may result in premature pump failure.

1.

To install, reverse the removal procedure.

Material

: Motorcraft® Premium Windshield Wash Concentrate with Bitterant (U.S.) / ZC-32-B2 (U.S.) (WSS-M14P19-A)

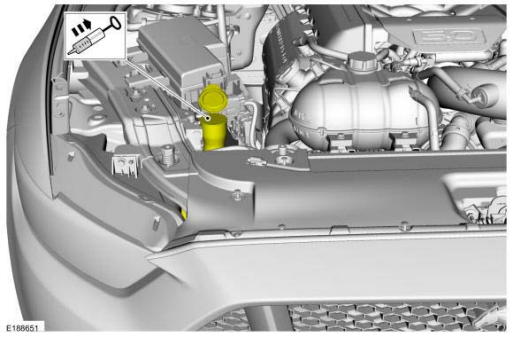
REMOVAL AND INSTALLATION > WINDSHIELD WASHER RESERVOIR

Special Tool(s) / General Equipment

Fluid Suction Gun

Materials

Name	Specification
Motorcraft® Premium Windshield Wash Concentrate with Bitterant (U.S.) ZC-32-B2 (U.S.)	WSS-M14P19-A



REMOVAL AND INSTALLATION > WINDSHIELD WASHER RESERVOIR > REMOVAL

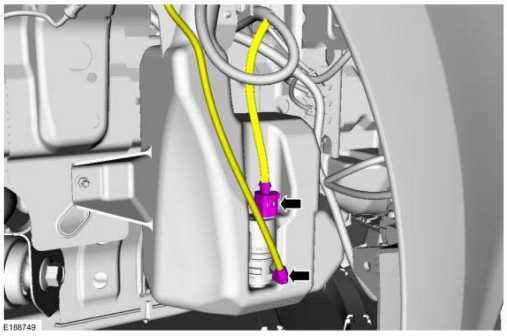
NOTE: Removal steps in this procedure may contain installation details.

1.

Siphon out the windshield washer fluid.

Use the General Equipment: Fluid Suction Gun

2.



Remove the RH fender splash shield. Refer to: Fender Splash Shield .

NOTE: Be prepared to collect escaping fluid.

3.

Disconnect the windshield washer pump electrical connector.

Disconnect the washer hose coupling. Refer to: Washer Hose Coupling .

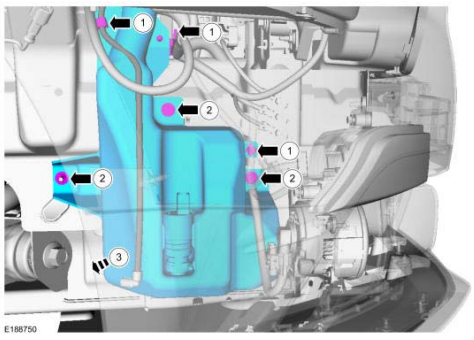
4.

Remove the windshield washer reservoir.

1.

Release the hose routing clips.

2.



Remove the mounting bolts and nut.

Torque

: 52 lb.in (5.9 Nm)

3.

Remove the windshield washer reservoir.

REMOVAL AND INSTALLATION > WINDSHIELD WASHER RESERVOIR > INSTALLATION

NOTE: Do not operate the washer pump prior to filling the windshield washer reservoir. Failure to follow this instruction may result in premature failure.

1.
To install, reverse the removal procedure.

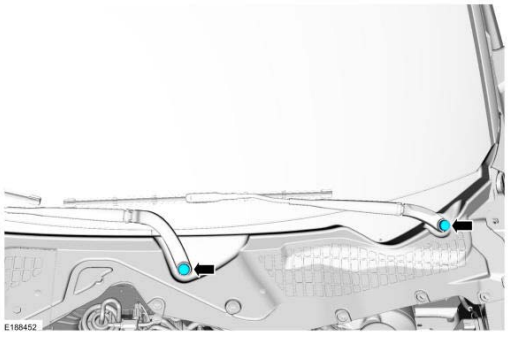
Material

: Motorcraft® Premium Windshield Wash Concentrate with Bitterant (U.S.) / ZC-32-B2 (U.S.) (WSS-M14P19-A)

REMOVAL AND INSTALLATION > WINDSHIELD WIPER PIVOT ARM

Special Tool(s) / General Equipment

Tow Leg Puller



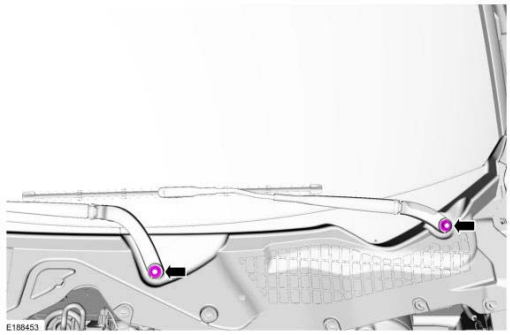
REMOVAL AND INSTALLATION > WINDSHIELD WIPER PIVOT ARM > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: The hood is removed in this procedure for clarity.

1.

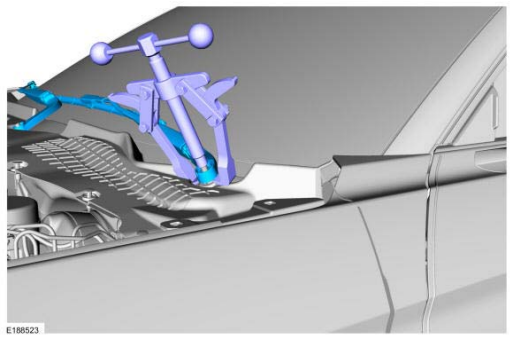
Remove the windshield wiper pivot arm nut covers.



2.

Remove the windshield wiper pivot arm nuts.

Torque



: 26 lb.ft (35 Nm)

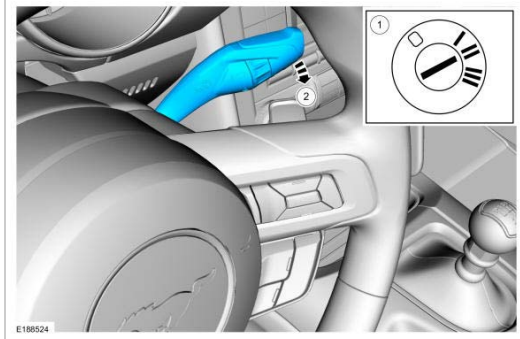
3.

Remove the windshield wiper pivot arms.

Use the General Equipment: Two Leg Puller

REMOVAL AND INSTALLATION > WINDSHIELD WIPER PIVOT ARM > INSTALLATION

1.



Verify the windshield wiper motor is in the PARK position.

1.

Set the ignition switch to the ON position.

2.

Set the windshield wiper switch to run the wipers one complete cycle.

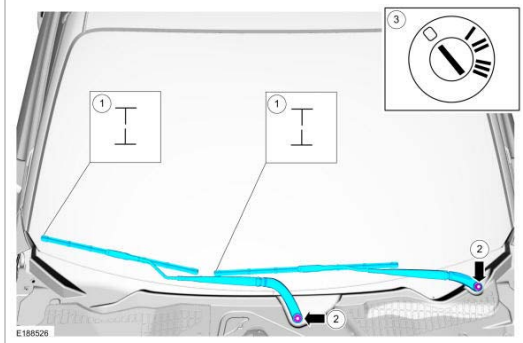
2.

Install the windshield wiper pivot arms.

1.

Align the windshield wiper blades inside the marks on the windshield.

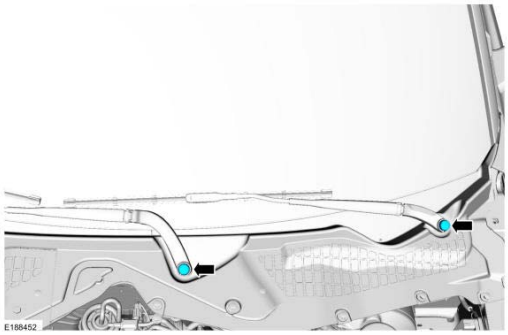
2.



Install the windshield wiper pivot arm nuts.

Torque

: 26 lb.ft (35 Nm)



3.

Turn the ignition switch off.

3.

Install the windshield wiper pivot arm nut covers.

REMOVAL AND INSTALLATION > WIPER LINKAGE ASSEMBLY > REMOVAL

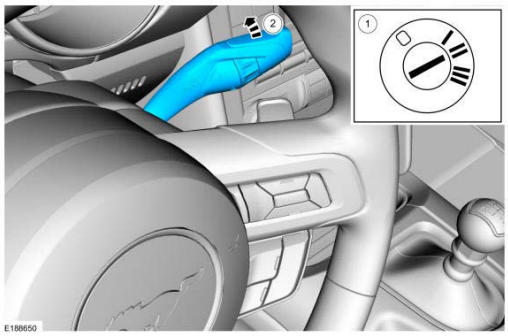
NOTE: Removal steps in this procedure may contain installation details.

NOTE: The hood is removed in this procedure for clarity.

1.

Remove the cowl panel grille. Refer to: Cowl Panel Grille .

2.



Activate the windshield wipers.

1.

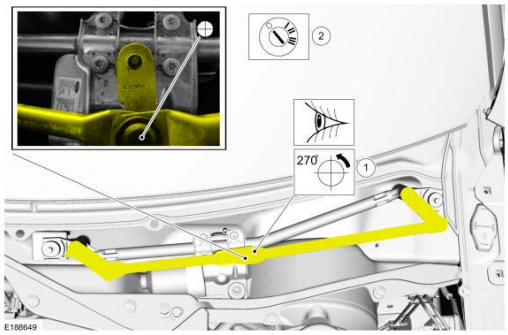
Set the ignition switch to the ON position.

2.

Set the windshield wiper switch to run the wipers continuously.

NOTE: The wiper motor crank must be positioned to the 270 degree down position.

NOTE: This step is necessary to access all the mounting bolts and remove the wiper linkage assembly from the wiper motor.



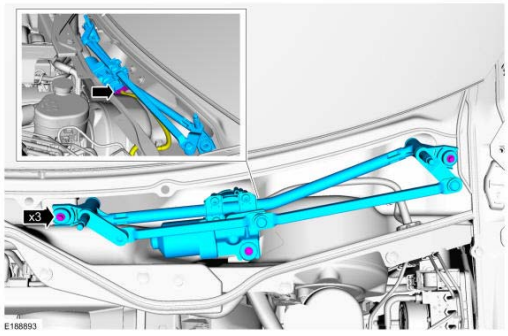
3.
Position the motor crank.

1.

Rotate the wiper motor crank 270 degrees.

2.

Set the ignition switch to the OFF position.



NOTE: Follow the unique instructions or graphic for this step in the installation.

4.
Remove the wiper linkage assembly mounting bolts, disconnect the windshield wiper motor electrical connector and remove the wiper linkage assembly.

Torque

: 80 lb.in (9 Nm)

NOTE: This step is only necessary when installing a new component.

5.

Remove the wiper linkage assembly links from the motor crank.

1.

Remove the left hand link.

2.

Remove the right hand link.

NOTE: This step is only necessary when installing a new component.

6.
Remove the windshield wiper motor bracket.

1.

Remove the mounting bolts.

Torque

: 115 lb.in (13 Nm)

2.

Slide the bracket out.

NOTE: This step is only necessary when installing a new component.

7.
Remove the wiper linkage assembly from the windshield wiper motor.

REMOVAL AND INSTALLATION > WIPER LINKAGE ASSEMBLY > INSTALLATION

NOTE: The windshield wiper motor must be returned to the PARK position before the wiper pivot arms can be installed. Failure to follow this instruction may result in wiper pivot arm damage.

1.

To install, reverse the removal procedure.

NOTE: Install all the bolts finger tight before final tightening.

2.
Install the wiper linkage assembly.

1.

Connect the windshield wiper motor electrical connector.

2.

Install the wiper linkage assembly mounting bolt.

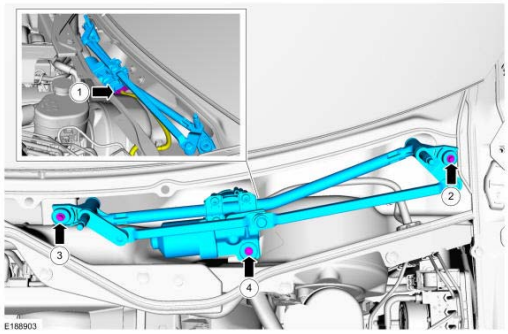
Torque

: 80 lb.in (9 Nm)

3.

Install the wiper linkage assembly mounting bolt.

Torque



: 80 lb.in (9 Nm)

4.

Install the wiper linkage assembly mounting bolt.

Torque

: 80 lb.in (9 Nm)

REMOVAL AND INSTALLATION > WINDSHIELD WIPER MOTOR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the wiper linkage assembly. Refer to: Wiper Linkage Assembly .

NOTE: Be careful not to damage the link seals during removal. Failure to follow this instruction may result in poor windshield wiper performance.

2.
Remove the wiper linkage assembly links from the motor crank.

1.

Remove the LH link.

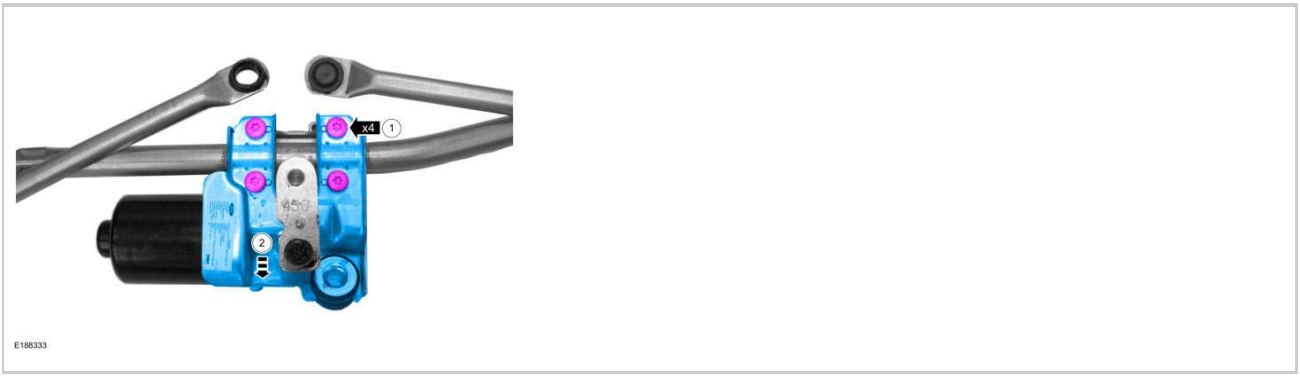
2.

Remove the RH link.

3.

Remove the windshield wiper motor bracket.

1.



Remove the mounting bolts.

Torque

: 115 lb.in (13 Nm)

2.

Slide the bracket out.

4.

Remove the windshield wiper motor from the wiper linkage assembly.

REMOVAL AND INSTALLATION > WINDSHIELD WIPER MOTOR > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: BODY CLOSURES

GENERAL PROCEDURES > FRONT DOOR ALIGNMENT

Inspection

NOTE: Coupe shown, convertible similar.

1.

Check front door to body dimensions. Refer to: Body and Frame .

Adjustment

All alignments

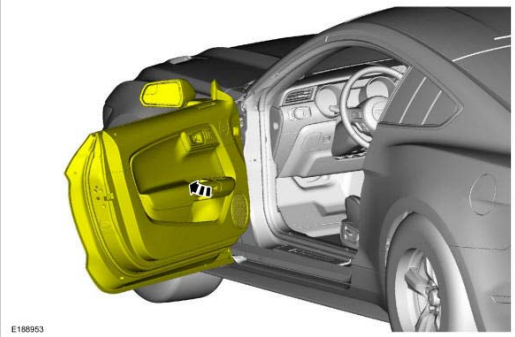
NOTE: Removal steps in this procedure may contain installation details.

NOTE: LH side shown, RH side similar.

1.

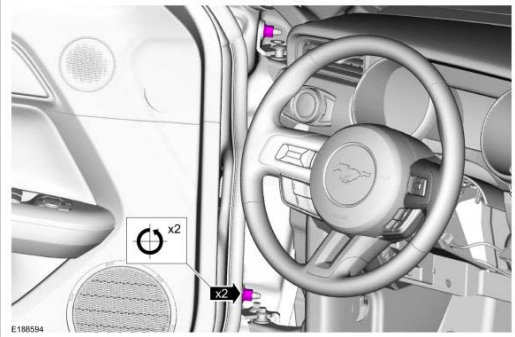
Remove the bolts and the striker assembly.

Torque



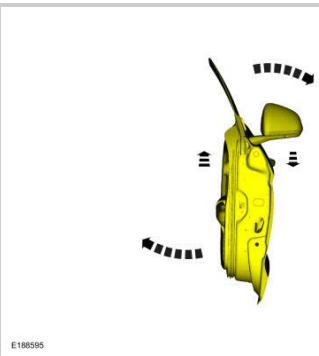
: 18 lb.ft (25 Nm)

Front door in and out, up and down alignment



2.

Open the door.

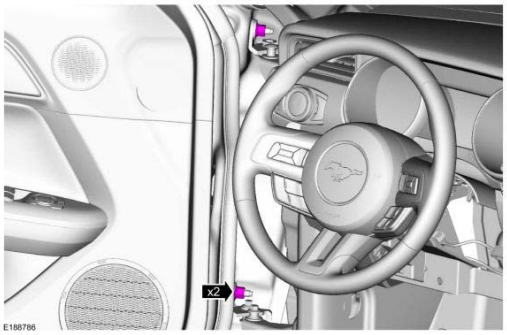


3.

Loosen the nuts to permit movement of the door. Loosen:: 2 turn(s)

4.

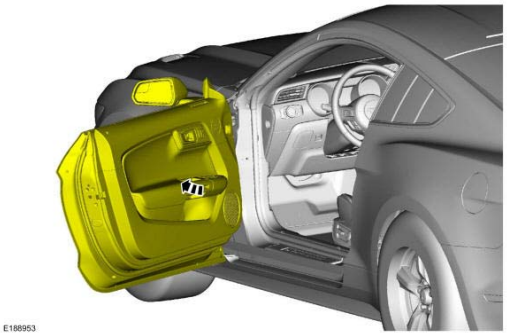
Adjust the door to specification. Refer to: Body and Frame .



5.

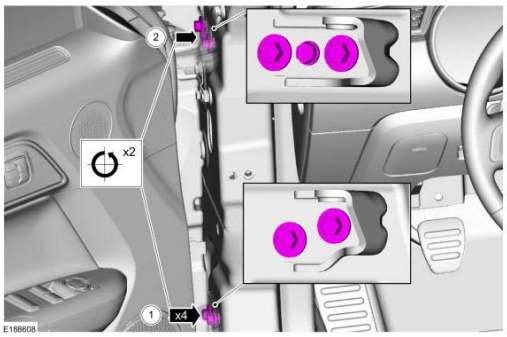
Tighten the nuts.

Torque



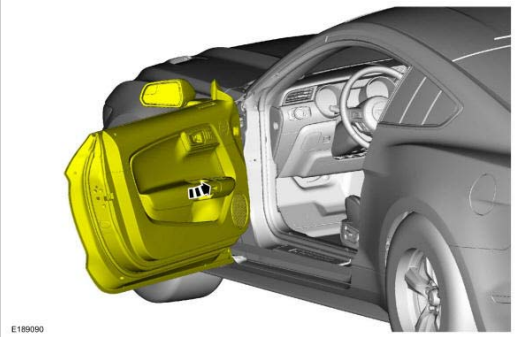
: 22 lb.ft (30 Nm)

Front door fore, aft and tilt alignment



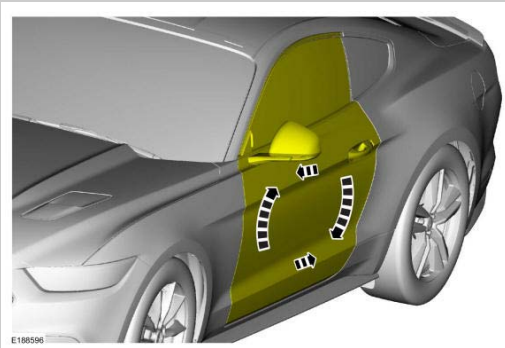
6.

Open the door.



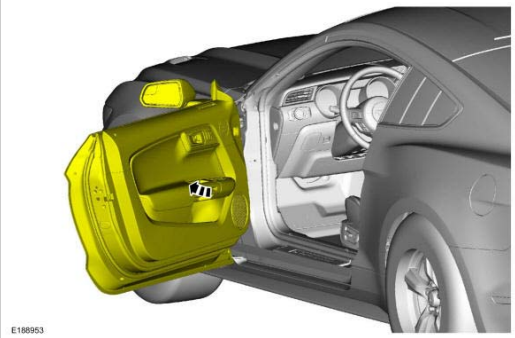
7.

Loosen the bolts to permit movement of the door. Loosen : 2 turn(s)



8.

Carefully close the door.

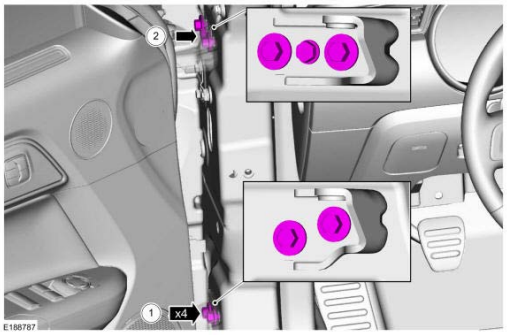


9.

Adjust the door to specification. Refer to: Body and Frame .

10.

Carefully open the door.



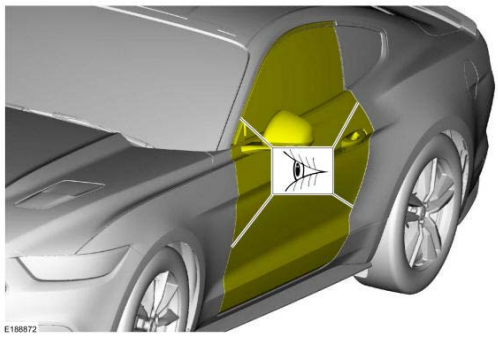
11.

Tighten the bolts.

Torque

: 1.: 22 lb.ft (30 Nm) 2.: 89 lb.in (10 Nm)

All alignments



12.

Loosen the bolts to permit movement of the striker assembly. Loosen: : 2 turn(s)

13.

Check body to front door dimensions. Refer to: Body and Frame .

14.

Check the front door glass alignment. Refer to: Door Window Glass Adjustment - Convertible . Refer to: Door Window Glass Adjustment - Coupe .

15.

Install the removed components.

GENERAL PROCEDURES > HOOD ALIGNMENT

Inspection

NOTE: Coupe shown, convertible similar.

1.

Check hood to body dimensions. Refer to: Body and Frame .

All alignments

NOTE: Removal steps in this procedure may contain installation details.

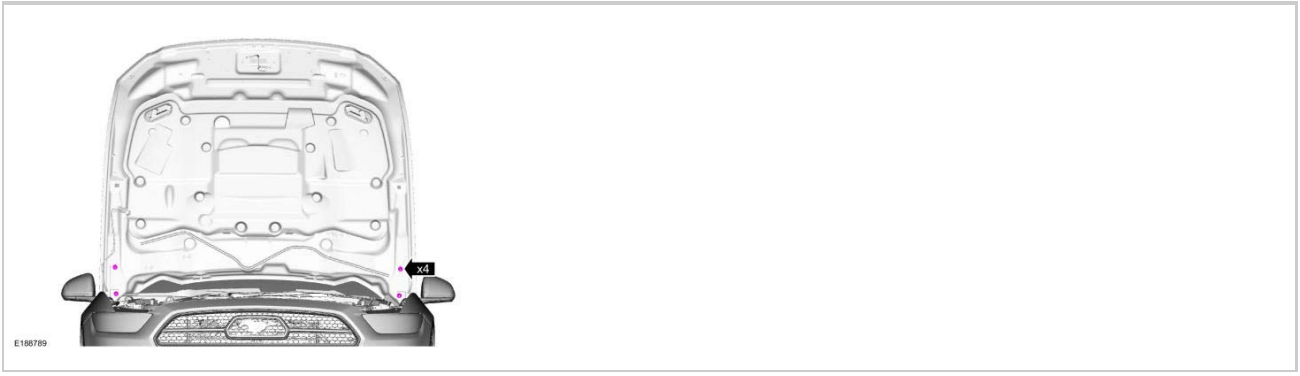
2.

Remove the hood latch. Refer to: Hood Latch .

Hood fore and aft, left and right alignments

3.

Loosen the bolts to permit movement of the hood and adjust to specification. Refer to: Body and Frame . Loosen : 2 turn(s)



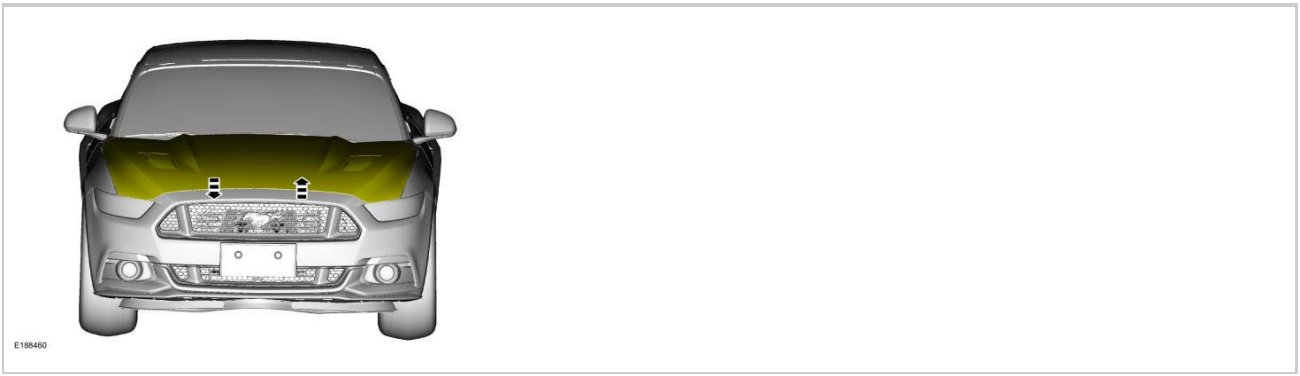
4.

Tighten the nuts.

Torque

: 17 lb.ft (23 Nm)

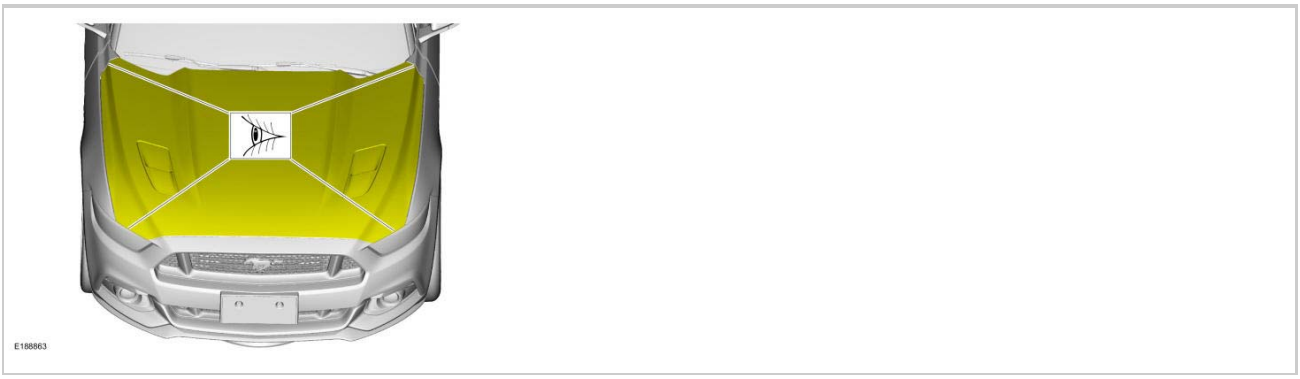
Hood front up and down alignments



5.

Adjust the bump stop rubbers.

6.



Adjust the hood to specification. Refer to: Body and Frame .

All alignments

7.

Check the body to hood dimensions. Refer to: Body and Frame .

8.

Install the removed components.

GENERAL PROCEDURES > LUGGAGE COMPARTMENT LID ALIGNMENT

Inspection

NOTE: Coupe shown, convertible similar.

1.

Check luggage compartment lid to body dimensions. Refer to: Body and Frame .

All alignments

NOTE: Removal steps in this procedure may contain installation details.

2.

Remove the luggage compartment lid latch. Refer to: Luggage Compartment Lid Latch - Coupe .

Luggage compartment lid fore and aft, left and right alignments

3.

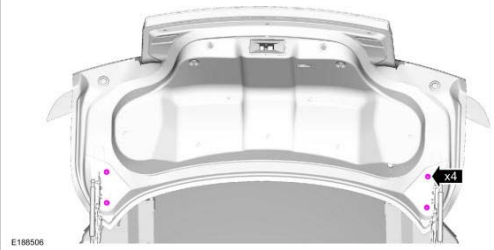
Loosen the bolts to permit movement of the luggage compartment lid. Loosen: : 2 turn(s)

4.

Adjust the luggage compartment lid to specifications. Refer to: Body and Frame .

5.

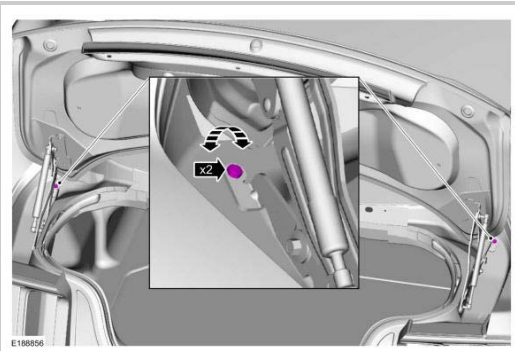
Carefully open luggage compartment lid.



6.

Tighten the nuts.

Torque



: 106 lb.in (12 Nm)

Luggage compartment lid up and down alignments

7.

Adjust the adjusting screws.

8.

Adjust the luggage compartment lid to specifications. Refer to: Body and Frame .

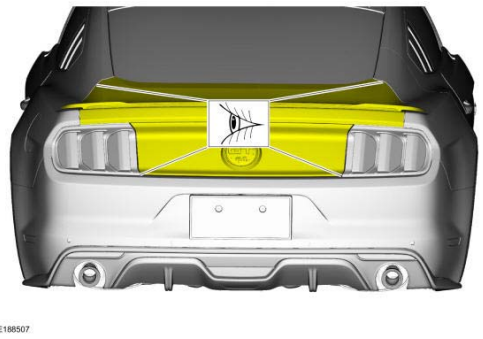
9.

Open the luggage compartment lid.

10.

Adjust the luggage compartment lid bump stop rubbers.

11.



Adjust the luggage compartment lid to specifications. Refer to: Body and Frame .

All alignments

12.

Check the body to luggage compartment lid dimensions. Refer to: Body and Frame .

13.

Install the removed components.

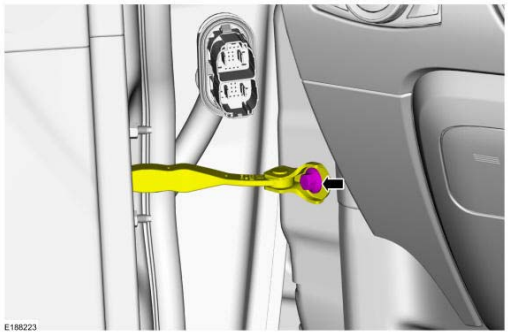
REMOVAL AND INSTALLATION > FRONT DOOR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: LH side shown, RH side similar.

1.

Disconnect the front door electrical connector.

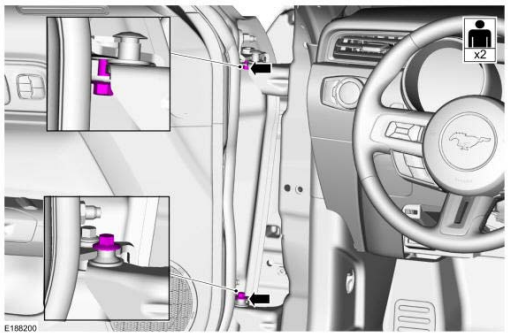


2.

Remove the check arm bolt.

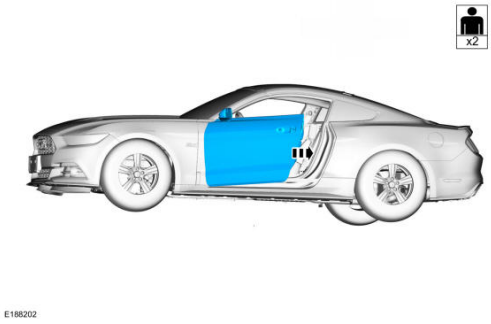
Torque

: 18 lb.ft (25 Nm)



NOTE: This step requires the aid of another technician.

3.
Remove the door hinge pivot bolts.



Torque

: 150 lb.in (17 Nm)

NOTE: This step requires the aid of another technician.

4.
Remove the door.

REMOVAL AND INSTALLATION > FRONT DOOR > INSTALLATION

1.

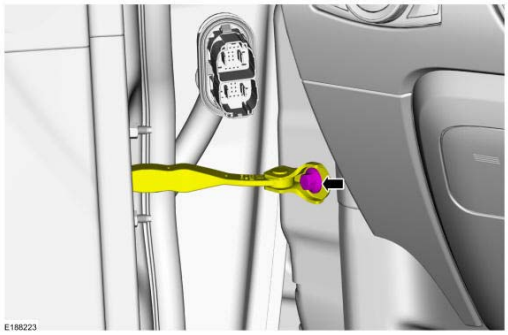
To install, reverse the removal procedure.

> *NOTE: This step is only necessary when installing a new component.*

2.
Check the door to body alignment. Align the door as necessary. Refer to: Front Door Alignment .

REMOVAL AND INSTALLATION > FRONT DOOR CHECK ARM > REMOVAL

> *NOTE: Removal steps in this procedure may contain installation details.*



> *NOTE: LH side shown, RH side similar.*

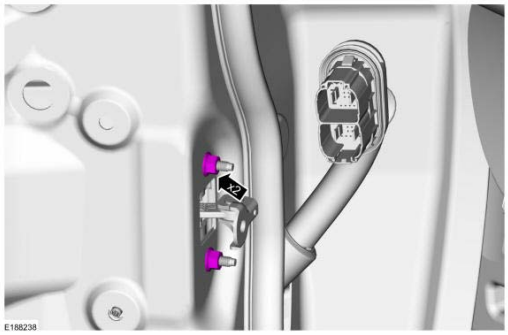
1.

Remove the check arm bolt.

Torque

: 18 lb.ft (25 Nm)

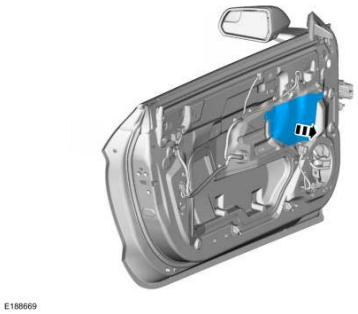
2.



Remove the front door trim panel. Refer to: Front Door Trim Panel .

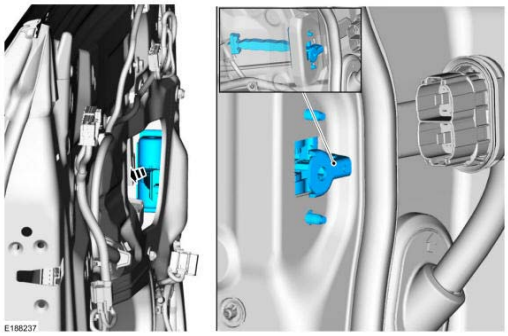
3.

Remove the nuts.



Torque

: 106 lb.in (12 Nm)



4.

Remove the front watershield.

5.

Remove the check arm assembly.

REMOVAL AND INSTALLATION > FRONT DOOR CHECK ARM > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FUEL FILLER DOOR > REMOVAL

1.

Open the fuel filler door.

2.

Using a screwdriver, pry the retaining tab back and slide the fuel filler door from the fuel filler door hinge.

REMOVAL AND INSTALLATION > FUEL FILLER DOOR > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FUEL FILLER DOOR ASSEMBLY > REMOVAL

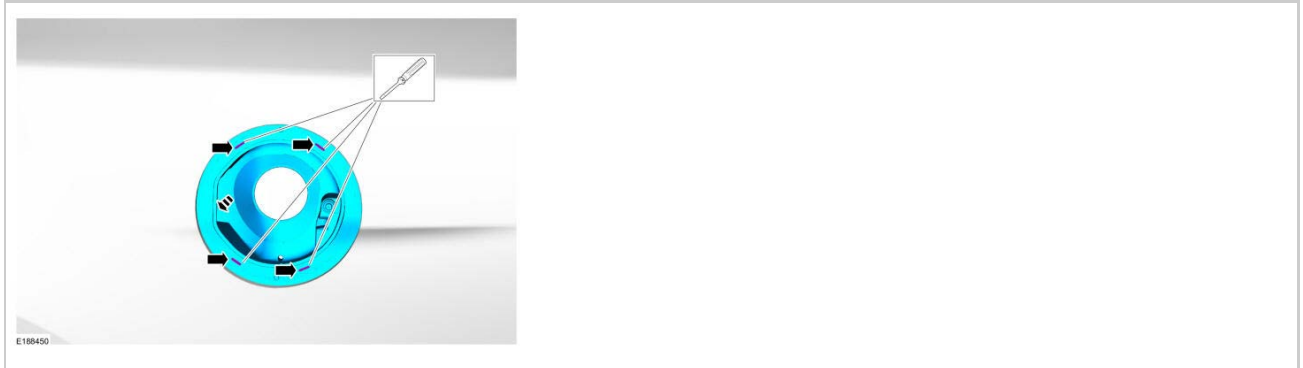
NOTE: The fuel filler door assembly is damaged during the removal process and requires a new fuel filler door assembly installed.

1.

Open the fuel filler door.

2.

Remove the fuel tank filler pipe. 2.3L Refer to: Fuel Tank Filler Pipe . 3.7L Refer to: Fuel Tank Filler Pipe . 5.0L Refer to: Fuel Tank Filler Pipe .



3.

Unseat the fuel filler door assembly boot from inside the wheel opening.

NOTE: Clearance is limited. When all four clips release you can rotate the housing out of the vehicle.

4.
Using a screwdriver, punch 4 holes at the indicated areas. Insert the screwdriver and release the clips while pulling the housing away from the vehicle.

REMOVAL AND INSTALLATION > FUEL FILLER DOOR ASSEMBLY > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FUEL FILLER DOOR SPRING > REMOVAL

1.

Open the fuel filler door.

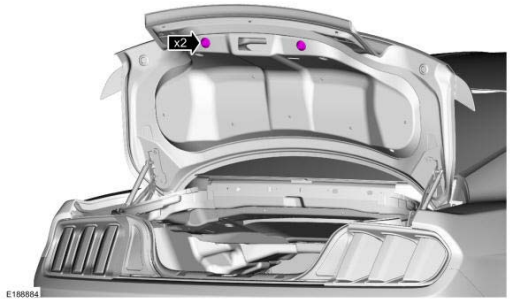
2.

Using a screwdriver, press the tab to release the fuel filler door spring from the fuel filler door assembly.

REMOVAL AND INSTALLATION > FUEL FILLER DOOR SPRING > INSTALLATION

1.

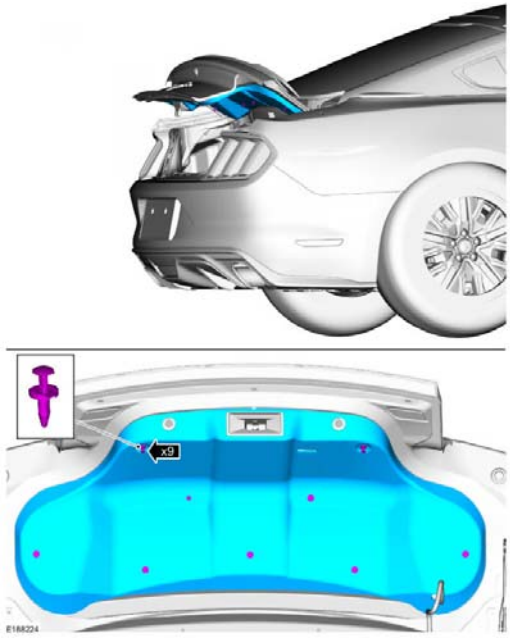
To install, reverse the removal procedure.



REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID > REMOVAL

All vehicles

NOTE: Removal steps in this procedure may contain installation details.



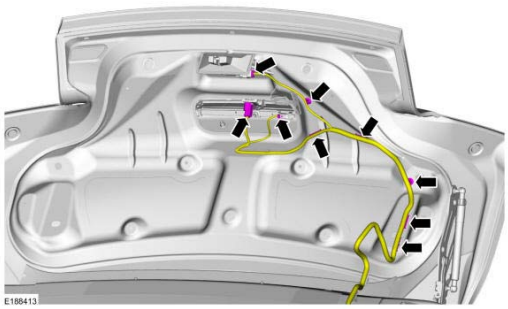
1.

Remove the bump stops.

2.

Remove the retainers and the luggage compartment lid trim panel.

NOTE: This step is only necessary when installing a new component.



3.
Remove the luggage compartment lid moulding. Refer to: Luggage Compartment Lid Moulding .

NOTE: This step is only necessary when installing a new component.

4.
If equipped, remove the rear spoiler. Refer to: Rear Spoiler .

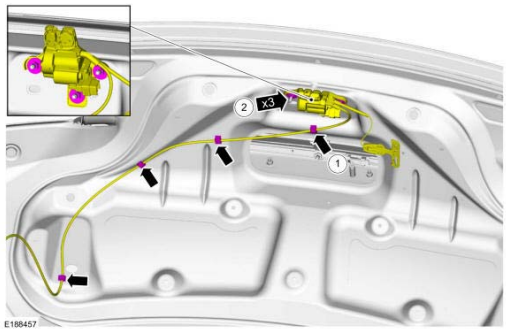
5.

Detach the wiring harness retainers and disconnect the luggage compartment lid electrical connectors.

Convertible

6.

1.

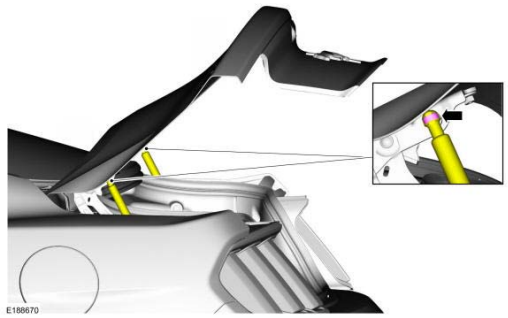


Detach the latch lock cable retainers.

2.

Remove the bolts and position aside the latch lock cable.

Torque

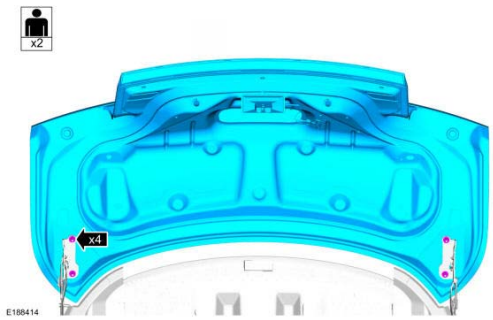


: 80 lb.in (9 Nm)

All vehicles

7.

On both sides, remove the strut.



NOTE: This step requires the aid of another technician.

8.
Remove the nuts and the luggage compartment lid.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Check the luggage compartment lid alignment. Align the luggage compartment lid as necessary.
Refer to: Luggage Compartment Lid Alignment .

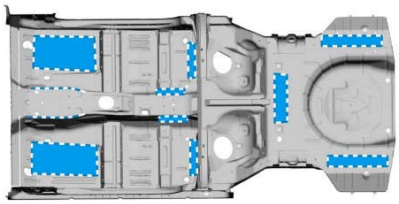
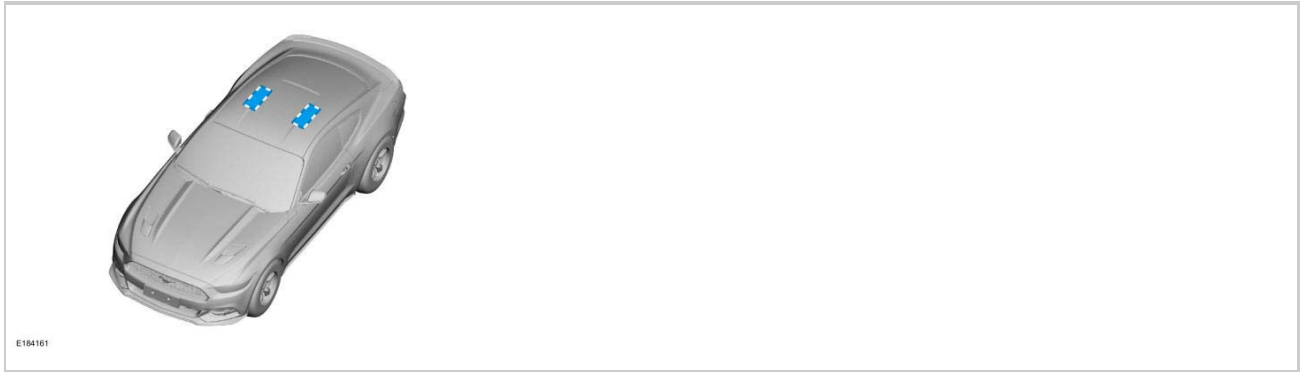
FOOTNOTE (a) Cold repairs can be performed if damage excludes kinks. May section only if approved procedure in service information. **FOOTNOTE (b)** Metal Inert Gas (MIG) braze allowed for non-structural applications only. **FOOTNOTE (c)** Dual phase steels DP 700 class, DP 900 class and DP 1, 000 class must be replaced at factory joints, no sectioning unless approved procedure in service information. **FOOTNOTE (d)** For DP 900, 1, 000 and Boron use Metal Inert Gas (MIG) plug welding only, no stitch welding. **FOOTNOTE (e)** Boron and Ultra High Strength Steel (UHSS)-Mortensite components must be replaced at factory joints, no sectioning allowed.



DESCRIPTION AND OPERATION > NOISE, VIBRATION AND HARSHNESS > SOUND DEADENERS AND INSULATORS

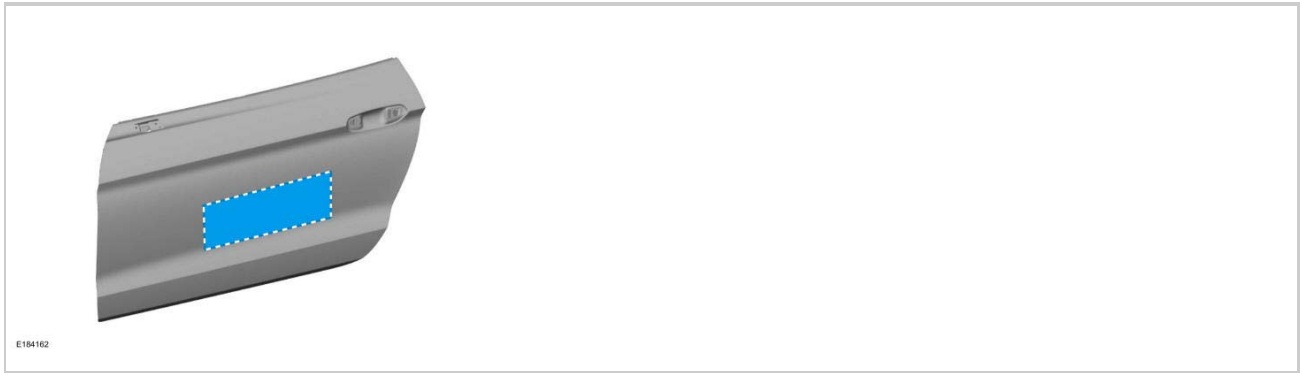
NOTE: Mastic is made of a combustible material and should be removed prior to carrying out welding procedures to the area. Heat zones from welding near mastic may cause the mastic material to burn.



NOTE: Corrosion protection must be restored to the area after the mastic material is applied. Corrosion protection products may be wax based and loss of adhesion may occur if applied prior to mastic installation.

The following serve as a reference to indicate mastic patch (butyl) locations. Additional insulators and sound deadeners are used beyond those indicated in the illustrations.

Floor Pan



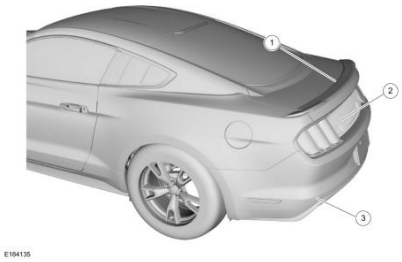
Roof Panel

Front Door

NOTE: LH side shown, RH side similar.

DESCRIPTION AND OPERATION > PLASTIC REPAIRS > PLASTIC COMPONENTS

The following illustration(s) are not all-inclusive of trim levels available. The actual trim level of the vehicle will determine the viability of carrying out a plastics repair. Typically components with moulded-in color or a textured finish are not considered repairable components.



Front Exterior Plastic Components

Item	Description	Material
1	Front bumper cover lower	Thermoplastic olefin (TPO)

2	Hood scoop insert	Acrylonitrile butadiene styrene (ABS)
3	Rocker panel moulding	Thermoplastic olefin (TPO)

Rear Exterior Plastic Components

Item	Description	Material
1	Rear spoiler	Polypropelyne (PP)
2	Luggage compartment lid moulding	Polypropelyne (PP)
3	Rear bumper cover	Thermoplastic olefin (TPO)

Repair Considerations

Several considerations will determine viability of plastic repair procedure(s):

- Is the damage cosmetic or structural?
- Can the repair be carried out on the vehicle?
- Is the part readily available?
- Is component repair the most cost effective method?
- Will the repair provide for the fastest, highest quality repair?

Several types of plastic are in use for automotive application. However, all plastics will fall into 2 primary categories of thermoplastic or thermosetting plastic.

Thermosetting Plastic

Generally, thermosetting plastics are made with 2-part thermosetting resins. When mixed together, heat is generated, producing a cure that is irreversible. Because of this, thermosetting plastics will require the use of a 2-part adhesive for repair.

Sheet-Molded Composite (SMC):

- Sheet-Molded Composite (SMC) is a type of thermosetting plastic that uses glass fibers or nylon fibers in combination with thermosetting polyester resins. When fully cured, Sheet-Molded Composite (SMC) is strong and rigid.
- Sheet-Molded Composite (SMC) is similar to, but not identical to fiberglass. Ford Motor Company uses Sheet-Molded Composite (SMC) in components such as fenders, hoods and liftgates.

Thermoplastic Compounds

Thermoplastic compounds are manufactured by a process that is reversible. Thermoplastics can be remolded repeatedly by reheating. This characteristic of thermoplastics makes plastic welding a possible repair alternative. A repair of thermoplastic compounds is still possible through the use of a 2-part adhesive and filler repair materials and reinforcements as needed. Thermoplastics are widely used in interior trim components, wheel flares, body side cladding and bumper covers.

Polyolefin

Polyolefins fall into the family of thermoplastics with one unique characteristic: an oily or waxy feel to the material when sanded or ground. Polyolefin lends itself very well to remolding through the use of heat. Because of this, components made of this material lend themselves well to the possibility of plastic welding. Most adhesive repair materials and paint will not bond to the surface of a polyolefin unless an adhesion promoter specially formulated for plastic is first applied to the exposed raw surface. Otherwise, polyolefins are repaired like most other thermoplastics. Polyolefins are used in bumper covers, fan shrouds and wheel housings.

Proper identification of the various types of plastic is necessary to select the appropriate repair method(s) to carry out high quality plastic repairs. For additional information, refer to: Plastic Repairs .

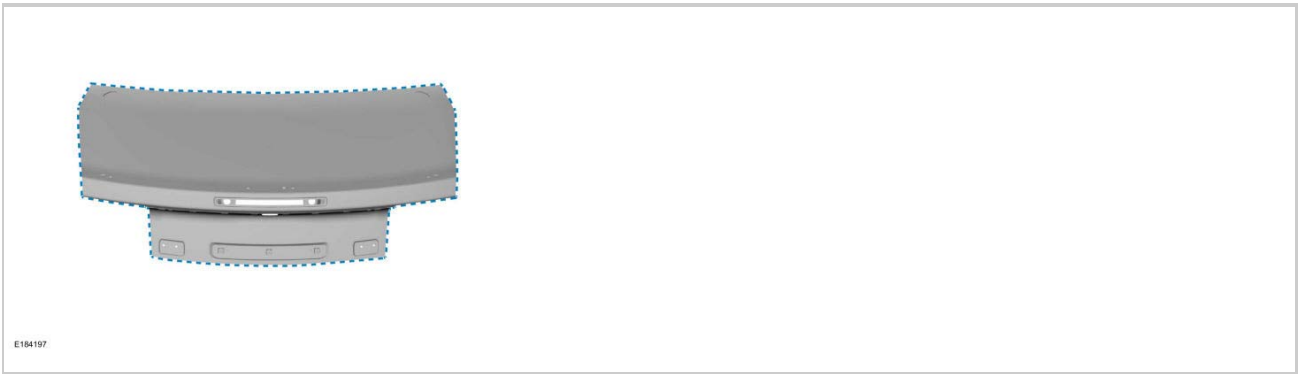
DESCRIPTION AND OPERATION > SEALER, UNDERBODY PROTECTION MATERIAL AND ADHESIVES > ADHESIVES

NOTE: The following illustrations are examples of structural adhesive application and are not all inclusive.

The correct adhesive bonding is essential to repairing the vehicle correctly. Adhesives are used in many areas of the body structure in place of welding. In addition to providing a structural bond between component, adhesives can also help prevent wind noise, water leaks, exhaust fumes and dust from entering the vehicle. They also provide anti-corrosion barriers.

Hood

NOTE: Adhesive applied between inner and outer panels prior to assembly.



Front Door

NOTE: Adhesive applied between inner and outer panels prior to assembly.

Luggage Compartment Lid

NOTE: Adhesive applied between inner and outer panels prior to assembly.

Bodyside

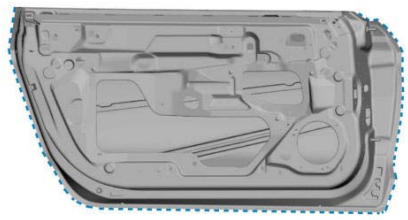
DESCRIPTION AND OPERATION > SEALER, UNDERBODY PROTECTION MATERIAL AND ADHESIVES > SEALERS

The correct sealing of joints is essential to repairing the vehicle correctly. Sealers are used to prevent wind noise, water leaks, exhaust fumes and dust from entering the vehicle. They also provide anti-corrosion barriers. Sealers are applied to areas such as door and rear compartment hem flanges,

wheelhouse, quarter outer, floor, cowl, roof and other panel-to-panel attaching points. The following joint sealers are recommended for use depending upon the application:

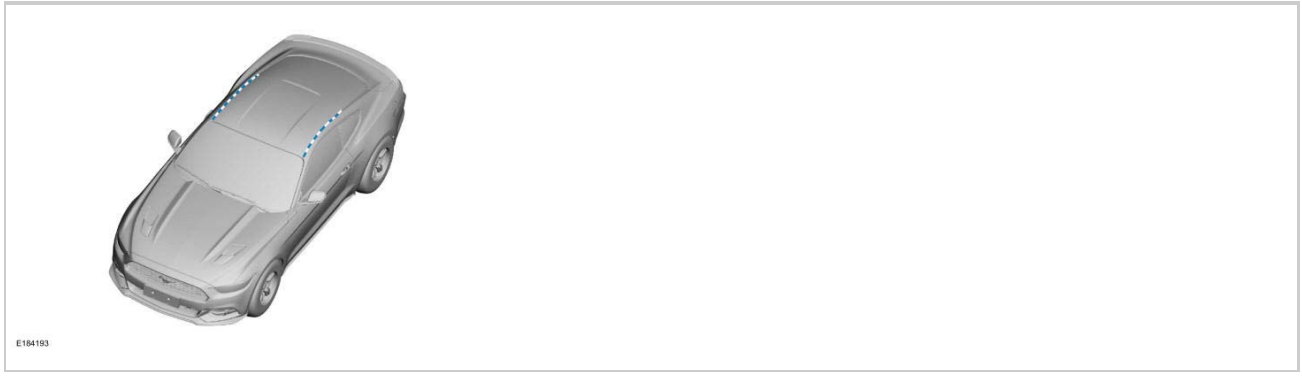
- Seam Sealer - Heavy-bodied, non-sag adhesive/sealer for use on standing cosmetic seams, truck bed seams, tooled door skin seams and floor pans.

Sealers should remain flexible after curing and must be paintable. Follow the manufacturer's directions for correct application of these materials.

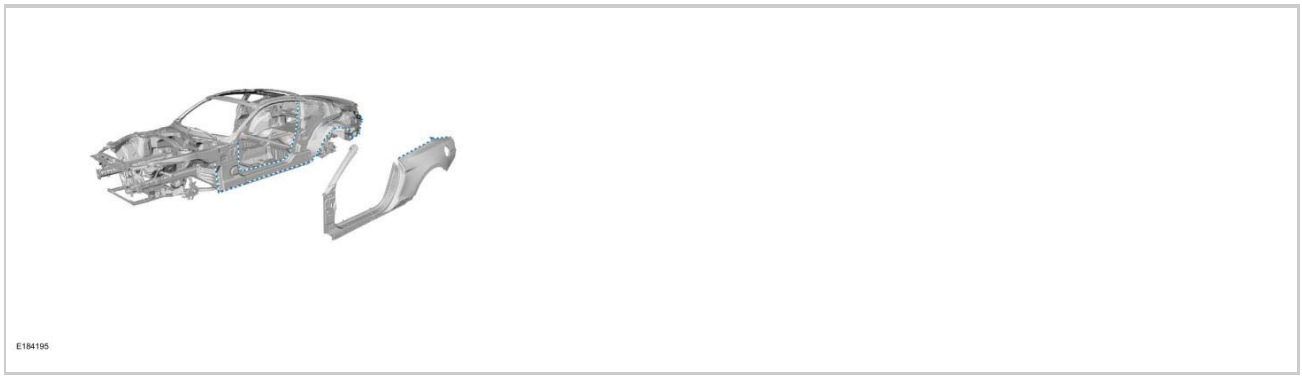


Any damage to originally sealed joints should be repaired by resealing. Along with attaching points of new panels, open joints that require bridging of sealer to close a gap should be sealed using a heavy-bodied sealer.

NOTE: The following illustrations are examples of sealer application and are not all inclusive.

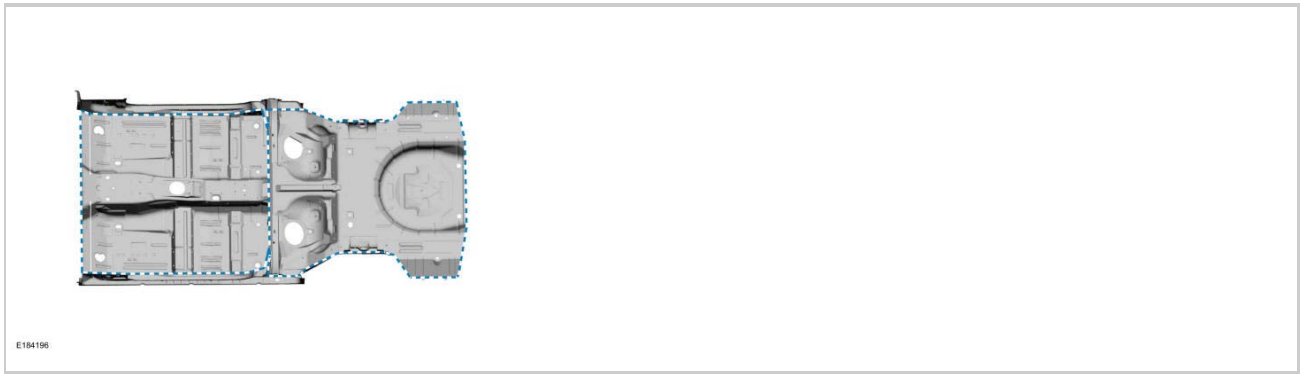


Hood



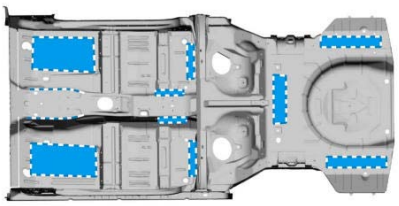
Front Door

Roof Panel



Bodyside

Luggage Compartment Lid



Underbody

DESCRIPTION AND OPERATION > SEALER, UNDERBODY PROTECTION MATERIAL

AND ADHESIVES > UNDERBODY PROTECTION MATERIAL

Underbody protection is necessary for permanent, elastic corrosion protection of vehicle underbodies. It is paintable, very durable and has good resistance to abrasion. This material may be applied in many manners. It may be sprayed, rolled or brushed on (obtain locally).

GENERAL PROCEDURES > CORROSION PREVENTION

Special Tool(s) / General Equipment

 ST3277-A	300-SAT12740 UBE Gun
 ST3278-A	300-SAT9795 HRS Rust Gun

Materials

Name	Specification
Motorcraft ® Metal Surface Prep ZC-31-A	-
ValuGard™ Premium Undercoating VG101, VG101A	-
ValuGard™ Rust InhibitorVG104, VG104A	-

Repair

NOTE: Undercoating

NOTE: The following illustrations are not vehicle specific and are intended for reference only.

1.

WARNING: Before beginning any service procedure in this article, REFER to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Body Repair Health and Safety and General Precautions .

2.

Wire brush the area and make sure the surfaces are free of oil, dirt and other foreign material. Carry out the undercoating process in the following sequence.

3.

Thoroughly clean and degrease metal surfaces to remove wax and grease.

Material

: Motorcraft ® Metal Surface Prep / ZC-31-A

4.

For best results, the vehicle should be at room temperature.

5.

Canister attaches directly to the dispensing gun. Attach the undercoating canister to the special tool. Use Special Service Tool: 300-SAT12740 UBE Gun.

Material

: ValuGard™ Premium Undercoating / VG101, VG101A

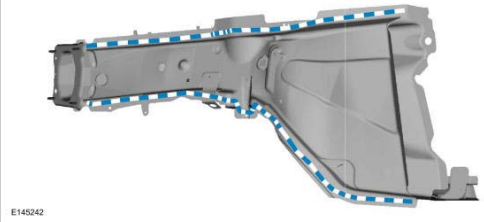
6.

Undercoating should be applied after the welding and refinishing process. Product cannot be welded through.

7.

Air pressure setting for applicator gun is 552 kPa (80.06 psi) - 621 kPa (90.07 psi).

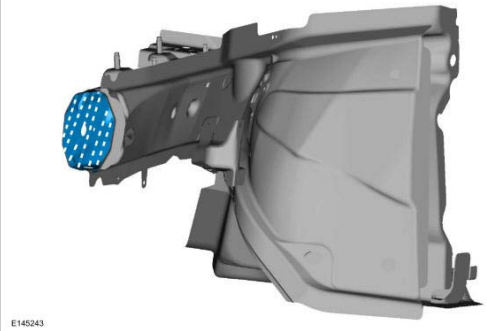
8.



Apply light mist coats, applicator sprays in fogging pattern. Material displaces moisture.

9.

Clean up any overspray with a mild solvent such as mineral spirits or bug and tar remover.



NOTE: Frame rail exterior spot-weld flange view.

10.
Apply Premium Undercoating material to the exterior exposed edges after carrying out the welding and refinishing process.

NOTE: Cross section view of typical unibody frame rail shown.

11.
Apply Rust Inhibitor to the inner surfaces of the rail after carrying out welding process. Depress trigger and wait 2-3 seconds and slowly pull the wand to make sure the area is completely fogged.

NOTE: Full frame vehicle, front rail-to-mid rail section repair shown.

12.
Apply Premium Undercoating to the exposed surfaces after carrying out the welding process. Make sure to completely cover any bare metal areas.

Repair

NOTE: Rust Inhibitor

1.

The surfaces must be free of oil, dirt and other foreign material. Carry out the process in the following sequence.

2.

Thoroughly clean and degrease metal surfaces to remove wax and grease.

Material

: Motorcraft ® Metal Surface Prep / ZC-31-A

3.

For best results, the vehicle should be at room temperature. Attach the rust inhibitor canister to the special tool. Use Special Service Tool: 300-SAT9795 HRS Rust Gun.

Material

: ValuGard™ Rust Inhibitor / VG104, VG104A

4.

Rust inhibitor should be applied after the welding and refinishing process. Product cannot be welded through.

5.

Air pressure setting for applicator gun is 448 kPa (64.97 psi) - 517 kPa (74.98 psi).

6.

Use the appropriate length wand when spraying enclosed areas. Insert the wand as far as possible into the access hole, pull the trigger and wait 2-3 seconds and slowly pull the wand out of the access hole. Apply the material in light mist coats. Material displaces moisture.

7.

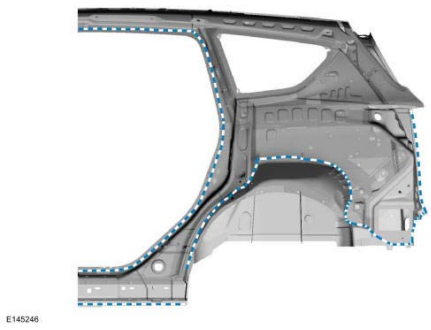
Clean up any overspray with a mild solvent such as mineral spirits or bug and tar remover.

NOTE: Door assembly lower view.

8.
Apply as shown to the inside of the door shell on all the interior metal surfaces using the most suitable applicator wand. Apply material to the exposed edges after carrying out the welding process. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion. Keep door drain holes clear to prevent moisture buildup.

Material

: ValuGard™ Rust Inhibitor / VG104, VG104A

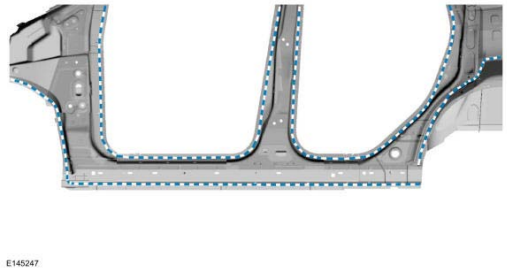


NOTE: Quarter panel inner view.

9.
Apply to the closed channel portion of the spot weld flange areas. Apply to the exposed edges after carrying out the welding process. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion.

Material

: ValuGard™ Rust Inhibitor / VG104, VG104A



NOTE: Door frame opening view.

10.
Apply to the closed channel portion of the spot weld flange areas. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion.

Material

: ValuGard™ Rust Inhibitor / VG104, VG104A

Repair

NOTE: Weld Bonding - Squeeze-Type Resistance Spot Welding (STRW) Method

1.

WARNING: Before beginning any service procedure in this article, REFER to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Body Repair Health and Safety and General Precautions .

2.

Verify the vehicle is dimensionally correct on a frame machine. Straighten if necessary.

3.

Remove damaged panels. Remove only large portions of the damaged panel. Avoid cutting into mating flanges or adjacent parts. Use the General Equipment: Air Body Saw Use the General Equipment: Plasma Cutter

4.

Drill out the spot welds and remove the remaining portions of the panel to be replaced. Use the General Equipment: Spot Weld Drill Bit

5.

Prepare any damaged flanges on the vehicle using hammer and dolly.

6.

Grind the mating surface of the original flanges no greater than 25 mm (0.9843 in) where the metal bonding adhesive will be applied.

7.

Be sure to remove galvanizing on metal. Metal should have a shiny appearance. Be careful not to damage the corners or thin the metal. The E-coat should also be removed on the opposite side of the flange only where the spot welds are to be placed. Clean surfaces with surface prep.

Material

: Motorcraft ® Metal Surface Prep / ZC-31-A

8.

Dry-fit and clamp the replacement service parts to verify a correct fit.

9.

Remove the service part after verifying correct fit and alignment.

10.

Prepare the adhesive. Dispense a small amount of adhesive from the cartridge to make sure of an even flow of both components. Attach the mixing tip and dispense a mixing tip length of adhesive to make sure of a correct mix ratio.

Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

> *NOTE: Refer to the product label for handling and preparation instructions.*

> *NOTE: Welding can be carried out anytime during the adhesive curing process, or after the adhesive is fully cured. Welder settings will vary when welding through wet adhesive versus welding through fully cured adhesive. Refer to welder manufacturer's recommended settings for welding through fully cured adhesive. It is recommended to place a shunt weld in an area with no adhesive to make sure of conductivity, particularly when welding through fully cured adhesive.*

11.
Create a test sample.

12.

Prepare the metal and adhesive as described. Apply a 6 mm (0.2362 in) - 9 mm (0.3543 in) bead of adhesive and weld the sample. Use the General Equipment: Resistance Spotwelding Equipment

13.

Place the welded sample in a vice and carry out destructive weld tests by peeling the scrap metal apart using large lock-type pliers. Measure the weld nugget to determine that the nugget meets Ford weld nugget requirements. If the weld nugget does not meet required size, adjust welder settings until the correct weld nugget size is achieved. Refer to: Specifications .

14.

Apply a 6 mm (0.2362 in) - 9 mm (0.3543 in) bead of adhesive to the vehicle prepared flange surface.

15.

Place the service part(s) in the correct position on the vehicle.

16.

When positioned, do not pull the component away from the vehicle. If repositioning is necessary, slide the service part(s). This will make sure of correct contact between the components and adhesive.

17.

Clamp evenly and tightly. The adhesive contains glass beads which will prevent over-clamping the component.

> *NOTE: Refer to the product label for cure times and handling instructions. Clamps may be removed immediately after the component is welded.*

18.
Wipe excess adhesive from the panel before it cures.

> *NOTE: The ends of welding clamps should be insulated on the ends using tape or similar material when welding is carried out.*

19.
Complete the spot welding process following Ford recommendations and welder manufacturer procedures and settings. Refer to: Specifications . Use the General Equipment: Resistance Spotwelding Equipment

20.

Finish any cosmetic section seams with fiber-filled body filler. Rough sand the filler, apply conventional body filler after the adhesive cures and block-sand the area.

21.

Mix and apply primer surfacer per Ford-approved paint recommendations.

22.

Seal wherever a cosmetic seam sealer is required.

Material

: Seam Sealer / TA-2-B

23.

Refinish using a Ford approved paint system.

24.

Refer to: Corrosion Prevention .

Material

: ValuGard™ Premium Undercoating / VG101, VG101A

Material

: ValuGard™ Rust Inhibitor / VG104, VG104A

Repair

NOTE: Weld Bonding - Metal Inert Gas (MIG) Welding Method

1.

WARNING: Before beginning any service procedure in this article, REFER to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Body Repair Health and Safety and General Precautions .

2.

Verify the vehicle is dimensionally correct on a frame machine. Straighten if necessary.

3.

Remove damaged panels. Remove only large portions of the damaged panel. Avoid cutting into mating flanges or adjacent parts. Use the General Equipment: Air Body Saw Use the General Equipment: Plasma Cutter

4.

Drill out the spot welds and remove the remaining portions of the panel to be replaced. Use the General Equipment: Spot Weld Drill Bit

5.

After removing the damaged sheet metal panel(s), repair any damaged flanges on the vehicle using a hammer and dolly.

6.

Using an appropriate grinder, carefully grind around the entire receiving flange area following the original welds. Be sure to remove all E-coat, paint or galvanized coating from the mating surfaces of the joint. Use the General Equipment: Grinder

7.

Be sure to remove galvanizing on metal. Metal should have a shiny appearance. Be careful not to damage the corners or thin the metal. The E-coat should also be removed on the opposite side of the flange only where the spot welds are to be placed. Clean the surface.

8.

Repeat the procedure on the mating surface of the replacement service part(s). Use the General Equipment: Grinder

9.

Prepare the new service panel for plug welds.

10.

Using the original panel as a reference, drill or punch holes in the exact number as the original spot welds. The holes should be positioned as close as possible to the original spot weld locations, without lining up exactly on top of an original spot weld site. To make sure of correct weld performance, grind the immediate perimeter of the plug weld hole. Grind only in the area of the plug weld; this will keep the potential of corrosion to a minimum. Use the General Equipment: 8 mm Drill Bit

11.

Clean all mating surfaces on both the vehicle and replacement panel.

Material

: Motorcraft ® Metal Surface Prep / ZC-31-A

12.

Dry-fit and clamp the replacement service parts to verify a correct fit and alignment.

13.

Remove the service part after verifying correct fit and alignment.

14.

The vehicle prepared flange areas where plug welds will be located must be kept free of adhesive. Apply 25 mm (0.9843 in) tape to the plug weld areas to prevent contamination from the adhesive.

15.

Prepare the adhesive. Dispense a small amount of adhesive from the cartridge to make sure of an even flow of both components. Attach the mixing tip and dispense a mixing tip length of adhesive to make sure of correct mix ratio.

Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

NOTE: Refer to the product label for cure times and handling instructions.

16.
Apply a 6 mm (0.2362 in)-9 mm (0.3543 in) wide bead of adhesive to the vehicle prepared flange surface. Remove the tape from the plug weld areas.

Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

17.

Place the service part(s) in the correct position on the vehicle.

18.

When positioned, do not pull the component away from the vehicle. If repositioning is necessary, slide the service part(s). This will make sure of correct contact between the components and adhesive.

19.

Clamp evenly and tightly. The adhesive contains glass beads which will prevent over-clamping the component.

> *NOTE: If welding will not be carried out immediately, refer to product label for cure times and handling instructions. Clamps may be removed immediately after the component is welded.*

> *NOTE: Welding can be carried out anytime during the adhesive curing process or after the adhesive is fully cured.*

20.
Wipe excess adhesive from the panel before it cures.

21.

Complete the plug-welding process following Ford recommendations. Refer to: Specifications .
Use the General Equipment: MIG/MAG Welding Equipment

22.

Finish any cosmetic section seams with fiber-filled body filler. Rough sand the filler, apply conventional body filler after the adhesive cures and block-sand the area.

23.

Mix and apply primer surfacer per Ford-approved paint recommendations.

24.

Seal wherever a cosmetic seam sealer is required.

Material

: Seam Sealer / TA-2-B

25.

Refinish using a Ford approved paint system.

26.

Refer to: Corrosion Prevention .

Material

: ValuGard™ Premium Undercoating / VG101, VG101A

Material

: ValuGard™ Rust Inhibitor / VG104, VG104A

GENERAL PROCEDURES > PLASTIC REPAIRS

Special Tool(s) / General Equipment

ALCV-200

Materials

Name	Specification
Plastic Bonding Adhesive TA-9	-

Inspection

NOTE: Plastics Identification

1.

WARNING: Before beginning any service procedure in this article, REFER to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

NOTE: In some instances, a code or material designation is moulded or stamped on the component indicating the plastic type.

2.
Thermoplastics are solvent reactive. Types of thermoplastics include Thermoplastic Olefin (TPO), Polyvinyl Chloride (PVC), Sheet-Molded Composite (SMC) and Acrylonitrile Butadiene Styrene (ABS). Polyolefins have an oily or waxy appearance. Examples include some bumper covers, stone shields, fender aprons and fan shrouds. Polyolefins require an adhesion promoter prior to carrying out any refinish procedure.

3.

To determine if the part is a polyolefin, grind the damaged area in an out-of-sight area. Grinding a polyolefin will melt and smear the plastic and leave a ragged edge. If the part is non-polyolefin, the area will grind or sand smoothly, producing a powdery dust.

4.

Polyolefin plastic can also be identified by placing a small sliver in a container of water, if the sample floats, it is a polyolefin plastic. A non-polyolefin will sink when placed in a container of water.

5.

Generally, thermosetting plastics are rigid or semi-rigid. Sheet-Molded Composite (SMC) is reinforced with glass and other fibers and are strong and rigid. Sheet-Molded Composite (SMC) is used for large panels such as hoods, liftgates, fenders and quarter panels.

6.

A burn test can be a reliable method to determine if a plastic is a thermosetting plastic. Extreme care must be exercised when using this method. Apply an open flame to the corner of the damaged component. If the material crystallizes and becomes hard, it is a thermosetting plastic.

7.

In deciding whether to repair or install a new component, follow these guidelines.

8.

Is a part readily available ? Can the damaged part be economically returned to its original strength and appearance, or will the labor cost exceed the cost of a new component? Will repair provide for the fastest, highest quality repair ?

NOTE: The following procedure applies to repair of structural cracks and large gouges. If damage is cosmetic, use of reinforcing cloth may not be necessary.

NOTE: Always refer to the manufacturer's label directions for the type of repair materials, fillers and bonding agents being used as they are material specific.

NOTE: When possible, it is recommended to carry out as much of the plastic repair as possible on the vehicle. Parts mounted on the vehicle are held in correct alignment throughout the repair. Attempting to repair the part off the vehicle may cause misalignment. This could lead to failure of the repair.

NOTE: During the repair of many plastics and particularly polyolefin plastics, an adhesion promoter must be applied to the substrate to allow repair materials and paint to bond correctly. Reapplication is required when grinding or sanding through the sealer or primered layers.

NOTE: Never apply solvents such as lacquer thinner or reducer at any stage of

plastic repair. Solvents, cleaners and water are absorbed by many types of plastics and by the glass fibers used for reinforcements. If this occurs, the plastic may swell in the area of repair and cause the repair to fail. Remove cleaners and water quickly and use air and heat to speed up drying.

9.
Panels to be repaired should be dry and at room temperature 18 C (64.4 F) to 24 C (75.2 F) prior to carrying out any repairs. Both sides of the panel must be thoroughly cleaned before sanding or grinding.

Repair

NOTE: Sheet-Molded Composite (SMC) Panel Repair

1.

Cover the break in the Sheet-Molded Composite (SMC) (front and back) with masking tape. This protects the damaged area from absorbing the prep cleaner and eliminates wicking of the cleaner through the fibers into the Sheet-Molded Composite (SMC).

2.

Remove all waxes, silicones, dirt and road oils from the area surrounding both sides of the damaged area with a plastics wax and grease remover.

3.

Remove the tape and sand the back of the repair area with an angle grinder, Dual Action (D/A) sander or by hand using 80-grit sandpaper. Remove all dust with a vacuum and tack cloth.Use Special Service Tool: ALCV-200.

4.

Create a reinforcing patch using a piece of scrap Sheet-Molded Composite (SMC) that conforms well to the back of the damaged area or form a patch from fiberglass cloth.

5.

Cut a section of cloth large enough to cover the repair, plus around the repair area. Cut a section of plastic film backing approximately larger than the cloth. Lay the plastic on a smooth, flat surface where it will be used to create a pyramid patch.

6.

Follow manufacturer's directions and apply adhesive to the plastic film backing and smooth with plastic spreader to recommended thickness. Place the pre-cut fiberglass cloth on the adhesive-coated plastic film. Cover the cloth with a coat of repair adhesive and spread to the recommended thickness.

Material

: Plastic Bonding Adhesive / TA-9

7.

Apply the prepared patch to the backside of the panel and compress. Follow manufacturer's instructions for adhesive cure. Remove plastic film after adhesive cures and sand as necessary to remove roughness.

8.

Remove masking tape from the front side of damaged area and grind down to the backing patch. Use an angle grinder with a 30 to 40-grit wheel. Make a gradual taper in the area, this will prevent bull's-eyes or read-through in the finished repair. Sand prepared area with a Dual Action (D/A) sander or hand-sand with 80-grit sandpaper. Use Special Service Tool: ALCV-200.

9.

Build a pyramid patch using fiberglass cloth or equivalent and adhesive. Following manufacturer's directions, apply patch to damaged area.

Material

: Plastic Bonding Adhesive / TA-9

10.

Rough-grind area to remove excess adhesive. Sand repair area with 80-grit sandpaper, making sure to cut slightly below the Sheet-Molded Composite (SMC) finished surface. This will allow for a finish coat of plastic repair filler material.

11.

Apply a finish coat of plastic repair filler material per manufacturer's directions.

12.

Finish-sand, prime and topcoat using Ford-approved paint systems.

Repair

NOTE: Thermoplastic Compounds Repair

1.

Select the correct repair method by identifying the type of plastic being repaired.

NOTE: Always refer to the manufacturer's label directions for the type of repair materials, fillers and bonding agents being used as they are material specific.

2.
Determine whether a reinforcement piece is needed as a backer on large repairs.

3.

Construct a reinforcement piece from a scrap piece of the type of plastic being repaired and follow manufacturer's label directions for the type of system being used.

> *NOTE: The following steps are to be used as a guideline. Depending on what brand of adhesives or patch materials are used, procedures may vary slightly.*

4.
Thoroughly clean the damaged area with wax and grease remover formulated for use with plastics.

5.

Hand sand the repair area with 80-grit sandpaper and remove any foreign material with compressed air.

6.

Apply a plastics adhesion promoter per label directions to the repair area.

7.

For small repairs, a adhesive filler can be applied to the damaged area. Follow manufacturer's directions and build layers to form a thickness above the damaged area. This will allow the area to be sanded smooth.

Material

: Plastic Bonding Adhesive / TA-9

8.

To repair large holes or cracks, measure and cut a piece of fiberglass cloth or equivalent 25.4 mm (1 in) larger than the crack or hole.

9.

Apply adhesive to the damaged area and immediately apply fiberglass cloth into plastic adhesive for reinforcement. Apply additional plastic repair adhesive for strength and shape as required.

Material

: Plastic Bonding Adhesive / TA-9

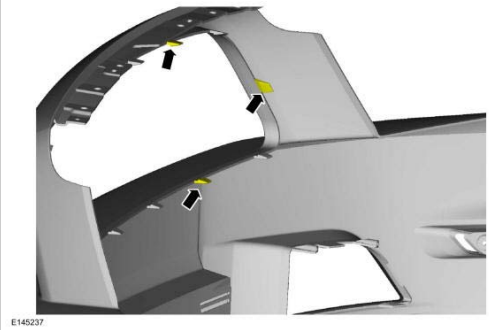
10.

Contour and sand to shape the repair as necessary. Avoid sanding through the repair. Use Special Service Tool: ALCV-200.

11.

Finish-sand the area and carry out any required paint operations using Ford-approved paint systems.

Repair



NOTE: Tab Repair

NOTE: The following steps are to be used as a guideline. Depending on what brand of adhesives or patch materials are used, procedures may vary slightly.

NOTE: Inspect the component to determine if part of it can be repaired to an acceptable level of quality of appearance, fit and durability. Will labor and material cost of the repair meet or exceed the cost of a new replacement bumper cover? If the bumper cover is determined to be repairable, proceed to the following steps.

NOTE: Illustration is not vehicle specific.

1.
Clean the broken tab(s) with a plastics wax and grease remover.

2.

Hand sand the repair area with 80-grit sandpaper and remove any foreign material with compressed air.

3.

Apply a plastics adhesion promoter per label directions to the repair area.

4.

Measure and cut a patch of fiberglass cloth or equivalent large enough to form the front of the tab, then slope back in a wedge shape approximately 51 mm (2 in) from original tab.

5.

Prepare the repair adhesive cloth patch per manufacturer's instructions and apply to the affected area.

6.

Immediately position the plastic repair material patch to form the tab shape.

7.

Allow appropriate cure time and shape the repair tab using a small angle sander. Use extreme care to not sand through the exterior surface.

8.

Carry out any required paint repair operations to the bumper cover using Ford-approved paint systems.

Repair

NOTE: Plastics Refinishing

NOTE: Care must be used if applying heat to parts. Thermoplastics soften and tend to lose their shape when heated.

1.
The first step for any repair or refinish procedure is to identify the type of plastic. Is it thermosetting or thermoplastic, grained or smooth? This will determine how it should be cleaned and prepared for refinishing.

2.

It is essential that the correct cleaner is used, depending on which painting system is employed, solvent-based or water-based. Clean part with warm water/mild detergent, then with plastic cleaner to remove wax, silicone and other contaminants. Do not allow parts to remain wet for extended periods. As a general rule, if water beads on the part, it requires additional cleaning as all the manufacturing release agents have not been removed.

3.

New parts may require baking in a spray booth or heating with heat lamps to release trapped solvents or mold release agents used in the manufacturing processes.

NOTE: Grained components may only be lightly sanded through use of a gray scuff pad. Failure to follow this direction may result in graining being flattened.

4.
After cleaning, lightly sand with 600-grit or finer sandpaper. Remove sanding residue with plastic cleaner and wipe dry.

5.

Apply a plastics adhesion promoter to any bare plastic part following manufacturer's recommendation. Throughout the refinish procedure, any time bare plastic is exposed for any reason, it is essential that adhesion promoter be reapplied to that area.

6.

A sealer may be required to prevent wrinkling and lifting of the topcoat prior to carrying out the refinish procedure.

7.

Flexible and non-flexible components should be refinished separately as a flex additive may be required when refinishing flexible parts (refer to the paint manufacturer's recommendation).

8.

It is recommended to carry out refinishing of exterior components on-vehicle (after cut-in) to control color match and blending to adjacent panels.

9.

Interior trim components may be refinished using Motorcraft ® Interior Spray Paint or any Ford-approved paint system procedures. Steps may vary between paint manufacturers.

10.

Proceed with the refinish process and follow the Ford-approved paint system procedures. Steps may vary between paint manufacturers.

GENERAL PROCEDURES > WELDING PRECAUTIONS

Check

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTE: SRS components should always be depowered and disconnected before beginning any welding procedure.

NOTE: Electronic modules and related wiring can be damaged when exposed to heat

from welding procedures. Carefully disconnect and remove, or position away from heat affected areas.

1.

A test weld should always be carried out on a test sample.

2.

The correct protective clothing should always be worn.

3.

Always work in a well ventilated area to avoid accumulation of noxious and oxygen displacing gases.

4.

Place protective covers around components and wiring harnesses to protect from welding spatter.

5.

Use grinding discs and wire brushes dedicated to the type of material being welded.

6.

Follow equipment manufacturer's prescribed procedures and equipment settings for the type of weld being used. ER70S-3 or ER70S-6 wire is typically used for MIG welding on steel.

7.

Disconnect and isolate battery ground cable.

8.

Components made of Boron, Martensitic, HSS (high-strength steel) and UHSS (ultra high-strength) steel should not be heated to straighten or repair. Severely bent or kinked components should be replaced with new ones.

9.

Factory welds may be substituted with either STRW (squeeze-type resistance welding) spot welds or MIG plug welds.

10.

MIG plug welds must equal factory welds in both location and quantity.

11.

MIG plug weld holes should equal 8 mm (0.31 in) diameter.

12.

Resistance spot welds must equal factory welds in quantity and be placed adjacent to original

weld location.

13.

Disconnect on-vehicle modules and protect them from possible heat damage and electrical currents when welding.

14.

Use of a weld-through primer is recommended where applicable.

15.

When welding, always place the ground clamp as close as possible to the weld area.

16.

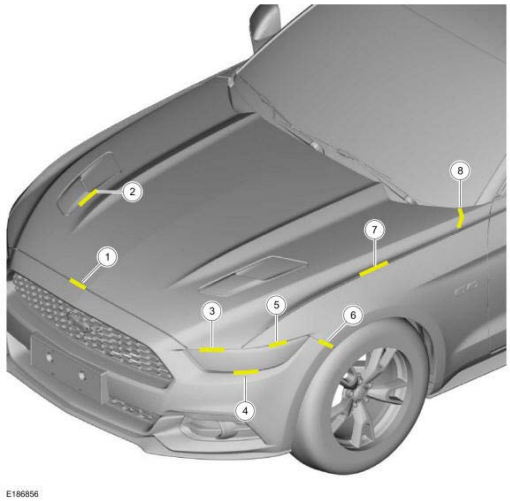
Never connect the welder ground clamp to the vehicle subframe.

17.

Never weld a vehicle subframe, steering or suspension component. Service is through replacement only.

DESCRIPTION AND OPERATION > BODY AND FRAME > BODY

The body consists of the following:



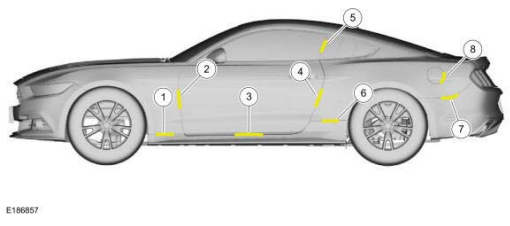
- High-Strength Low Alloy (HSLA), dual-phase (DP), Boron and mild steels
- Coupe and convertible body styles
- Aluminum hood
- Steel luggage compartment lid
- Body side outer panels constructed of mild steel
- Dual-phase steel (DP) in select body structure components
- Bolted, removable front fenders, hinged doors and hood
- Aluminum front fenders
- Ultra high-strength steel (UHSS) front and rear bumper beam
- Underbody components constructed of mild, boron and high-strength steels
- Mastic pads used on floor pan for sound deadening

Body Dimensions

Body Margins - Front Panels

NOTE: Unless otherwise indicated, margin dimensions apply to RH and LH side of vehicle.

NOTE: Dimensions apply to coupe and convertible.

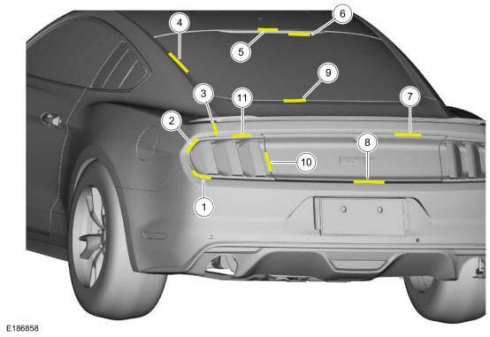


Item	Description	Margin Specification	Flushness Specification
1	Hood-to-fascia	4.0 mm ± 2.3 mm	-0.75 mm ± 2.3 mm
2	Hood scoop-to-hood	2.0 mm ± 1.0 mm	-0.5 mm ± 0.75 mm
3	Headlamp-to-hood	-	-
4	Headlamp-to-fascia	2.0 mm ± 1.5 mm	-
5	Headlamp-to-fender	2.0 mm ± 1.5 mm	-
6	Fascia-to-fender	0.0 mm ± 0.5 mm	0.75 mm ± 1.5 mm
7	Hood-to-fender	3.5 mm ± 1.7 mm	± 1.5 mm
8	Hood-to-cowl filler	3.5 mm ± 1.7 mm	0.0 mm ± 1.7 mm

Body Margins - Side Panels

NOTE: Unless otherwise indicated, margin dimensions apply to RH and LH side of vehicle.

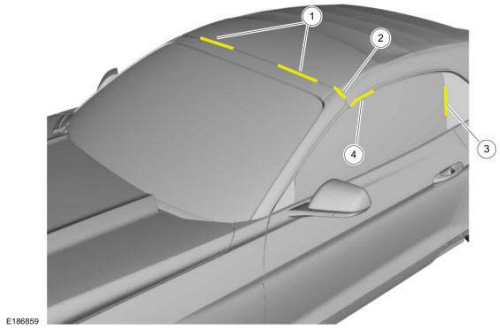
NOTE: Dimensions apply to coupe and convertible.



Item	Description	Margin Specification	Flushness

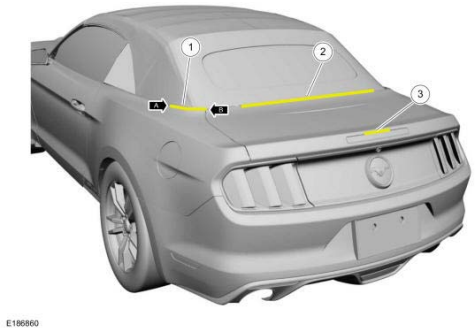
			Specification
1	Fender-to-rocker moulding	0.0 mm ± 1.1 mm	0.75 mm ± 1.1 mm
2	Door-to-fender	3.4 mm ± 1.5 mm	-0.75 mm ± 1.1 mm
3	Door-to-rocker moulding	5.0 mm ± 2.0 mm	-
4	Door-to-body side	3.4 mm ± 1.5 mm	0.0 mm ± 2.0 mm
5	Door glass-to-quarter glass	10.0 mm ± 1.5 mm	0.0 mm ± 2.0 mm
6	Body side-to-rocker moulding	0.0 mm ± 1.1 mm	0.75 mm ± 1.2 mm
7	Rear fascia-to-body side	0.0 mm + 0.5 mm ± 0.0 mm	-0.75 mm ± 1.7 mm
8	Fuel door-to-body side	2.2 mm ± 1.2 mm	-1.0 mm ± 1.2 mm

Body Margins - Rear Panels



NOTE: Unless otherwise indicated, margin dimensions apply to RH and LH side of vehicle.

Item	Description	Margin Specification	Flushness Specification
1	Tail lamp-to-fascia	2.0 mm ± 2.0 mm	-
2	Tail lamp-to-body side	2.0 mm ± 1.5 mm	1.5 mm ± 1.7 mm
3	Luggage compartment lid-to-body side	3.0 mm ± 1.5 mm	0.0 mm ± 2.0 mm
4	Rear window-to-body side	3.0 mm ± 1.7 mm	-3.0 mm ± 1.5 mm
5	CHMSL-to-roof	3.0 ± 1.0 mm	-1.5 mm ± 1.5 mm
6	CHMSL-to-rear window	2.5 mm ± 2.2 mm	-
7	Luggage compartment lid moulding-to-Luggage compartment lid	-	-2.0 mm + 1.4 mm ± 0.0 mm

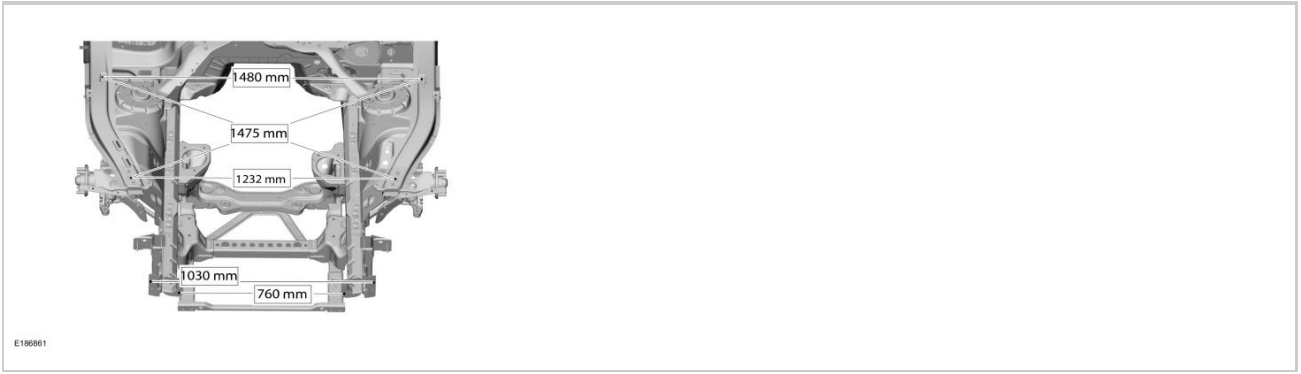


8	Luggage compartment lid moulding-to-fascia	6.0 mm ± 3.4 mm	-
9	Rear window-to-luggage compartment lid	3.0 mm ± 1.5 mm	-
10	Tail lamp-to-luggage compartment lid moulding	4.8 mm ± 3.0 mm	0.0 mm ± 3.0 mm
11	Luggage compartment lid-to-tail lamp	-	-

Body Margins - Convertible Front

Item	Description	Margin Specification	Flushness Specification
1	Convertible top-to-roof	9.25 mm ± 2.0 mm	1.5 mm ± 1.9 mm
2	Convertible top-to-A-pillar	8.8 mm ± 2.4 mm	1.5 mm ± 2.7 mm
3	Door glass-to-quarter window glass	8.0 mm ± 1.5 mm	0.0 mm ± 1.5 mm
4	Convertible top-to-seal retainer	8.5 mm ± 2.7 mm	1.5 mm ± 2.5 mm

Body Margins - Convertible Rear



Item	Description	Margin Specification	Flushness Specification

1	Convertible top moulding-to-body side	0.0 mm at point A to 5.0 mm at point B	-
2	Convertible top-to-luggage compartment lid	5.0 mm ± 4.7 mm (margin parallelism within 3.7 mm)	-
3	Luggage compartment lid-to-CHMSL	1.0 mm ± 0.8 mm	0.5 mm ± 0.8 mm

Under Hood Dimensions

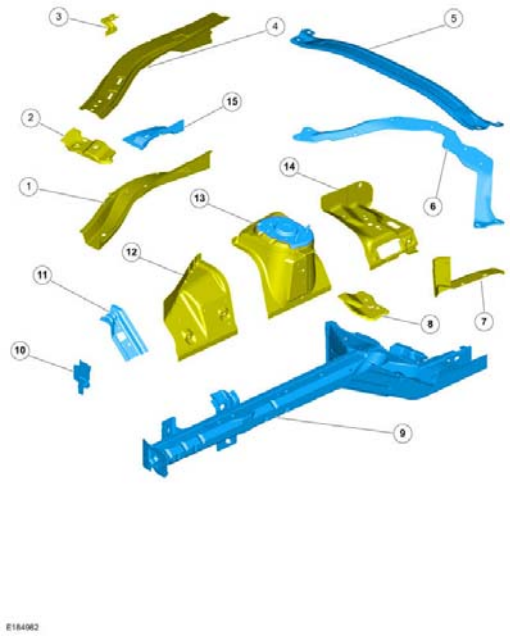
DESCRIPTION AND OPERATION > VEHICLE SPECIFIC BODY CONSTRUCTION

For recommended metal repair guidelines and recommendations, refer to the following illustrations and: For additional information, refer to: Specifications .

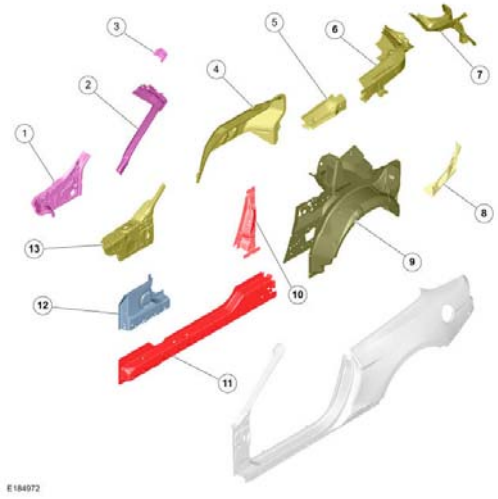
Steel Type Legend



E161715

Item	Steel Type	Color
1	Mild Steel	Yellow
2	Bake Hardened Steel (BH)	Light Blue
3	Solid Solution Strength	Pink
4	High Strength Low Alloy (HSLA)	Dark Blue
5	Dual Phase (DP) 500, 600 Class Steel	Green
6	Dual Phase (DP) 700, 800, 900, 1000 Class Steel	Fuchsia
7	Laminate Steel	Teal
8	Ultra High Strength Steel (UHSS) Martensitic, Boron	Red
9	Transformation Induced Plasticity Steel (TRIP)	Gold
10	Aluminum	Purple

Front Structure Components



NOTE: RH side shown, LH side similar.

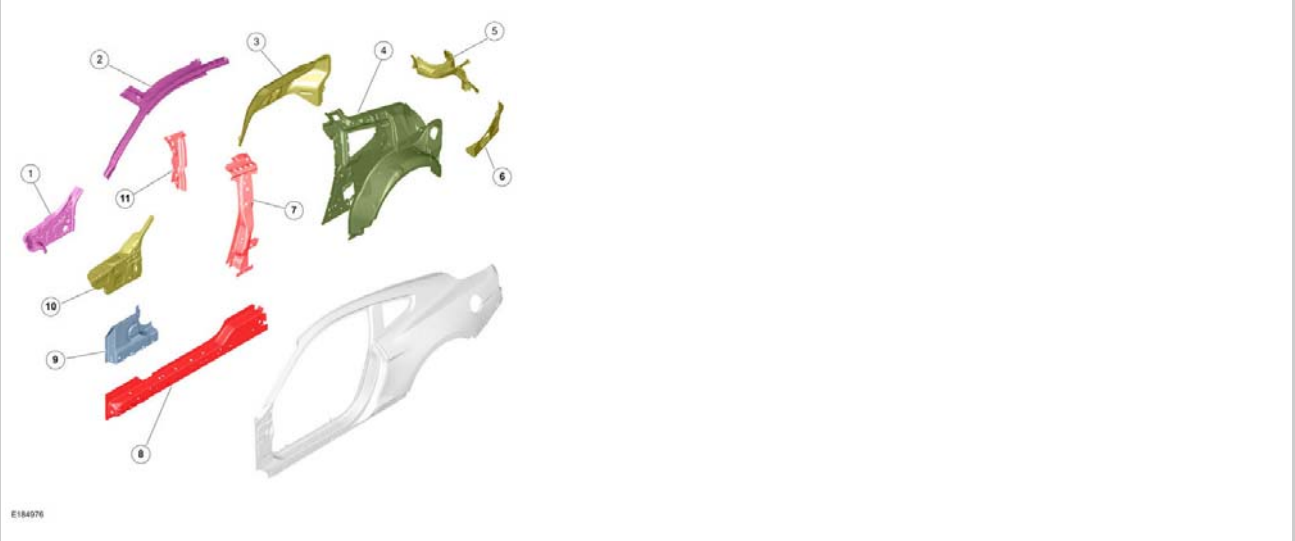
Item	Description	Steel Type
1	Fender reinforcement	Mild steel
2	Fender mounting bracket	Mild steel
3	Fender mounting bracket	Mild steel
4	Fender apron assembly	Mild steel
5	Fender mounting bracket	High-Strength Low Alloy (HSLA) 350 steel
6	Fender apron reinforcement	Bake Hardened Steel (BH)
7	Reinforcement	Mild steel
8	Battery tray RH side only	Mild steel
9	Front floor side member	High-Strength Low Alloy (HSLA) 350 steel
10	Radiator support	High-Strength Low Alloy (HSLA) 350 steel
11	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
12	Fender apron assembly	Mild steel
13	Housing	Mild and High-Strength Low Alloy (HSLA) 350 steel
14	Reinforcement (part of fender apron assembly)	Mild steel
15	Fender bracket	High-Strength Low Alloy (HSLA) 350 steel

Body Side Inner Panels-Convertible

NOTE: LH side shown, RH side similar.

Item	Description	Steel Type
1	A-pillar inner reinforcement	Dual Phase Steel (DP) 1000 steel
2	A-pillar bracket	Dual Phase Steel (DP) 1000 steel
3	Bracket	Dual Phase Steel (DP) 1000 steel
4	Inner wheelhouse panel	Mild steel
5	Quarter panel outer	Mild steel
6	C-pillar reinforcement	Mild steel
7	Filler panel	Mild steel
8	Quarter panel extension	Mild steel
9	Inner quarter panel and wheelhouse	Dual Phase Steel (DP) 500 steel
10	B-pillar inner assembly	Boron steel
11	Rocker panel reinforcement	Martensite 1100
12	A-pillar assembly	High-Strength Low Alloy (HSLA) 350 steel
13	Reinforcement	Mild steel

Body Side Outer Panels-Convertible

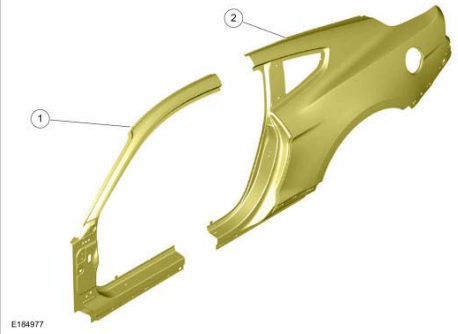


NOTE: LH side shown, RH side similar.

Item	Description	Steel Type
1	Door frame panel	Mild steel
2	Body side panel	Mild steel

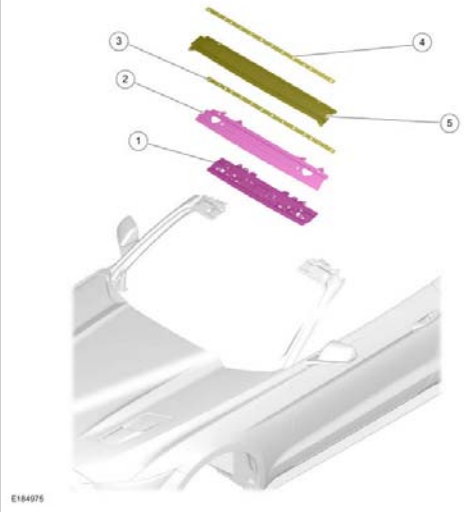
Body Side Inner Panels-Coupe

NOTE: LH side shown, RH side similar.



Item	Description	Steel Type
1	A-pillar inner reinforcement	Dual Phase Steel (DP) 1000 steel
2	A-pillar bracket	Dual Phase Steel (DP) 1000 steel
3	Inner wheelhouse panel	Mild steel
4	Inner quarter panel and wheelhouse	Dual Phase Steel (DP) 500 steel
5	Filler panel	Mild steel
6	Quarter panel extension	Mild steel
7	B-pillar inner assembly	Boron steel
8	Rocker panel reinforcement	Martensite 1100 steel

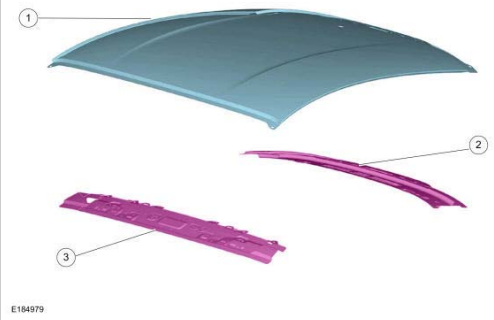
9	A-pillar assembly	High-Strength Low Alloy (HSLA) 350 steel
10	A-pillar reinforcement	Mild steel
11	B-pillar inner reinforcement	Boron steel



Body Side Outer Panels-Convertible

NOTE: LH side shown, RH side similar.

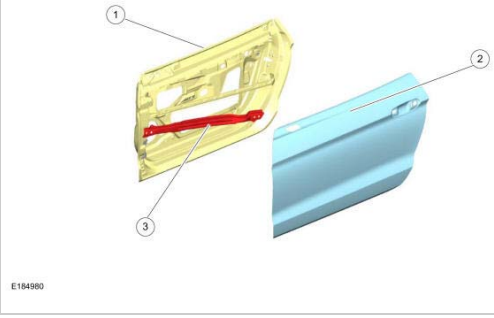
Item	Description	Steel Type
1	Door frame panel	Mild steel
2	Body side panel	Mild steel



Roof Panel-Convertible

Item	Description	Steel Type
1	Windshield header	Dual Phase Steel (DP) 1000 steel

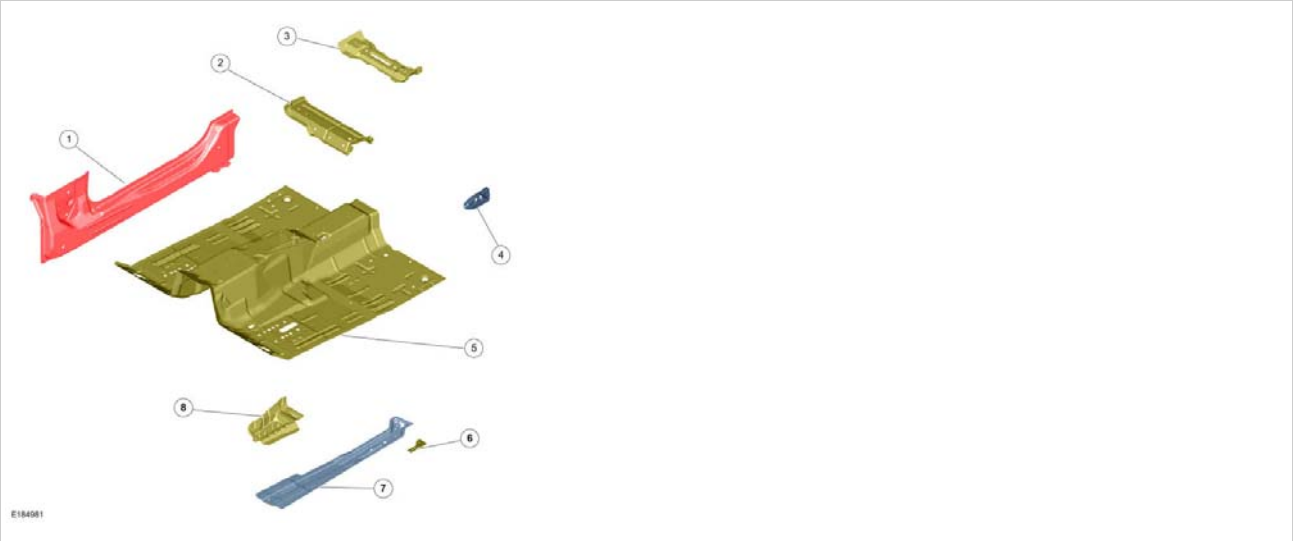
2	Windshield header reinforcement	Dual Phase Steel (DP) 1000 steel
3	Windshield reinforcement	Mild steel
4	Roof panel brace	Mild steel
5	Roof panel assembly	Mild steel



Roof Panel-Coupe

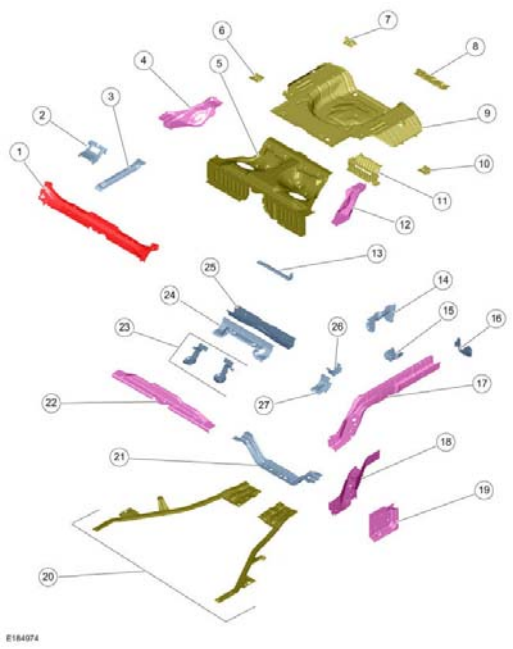
Item	Description	Steel Type
1	Roof panel	Bake Hardened (BH) 180 steel
2	Rear window frame	Dual Phase Steel (DP) 1000 steel
3	Windshield header reinforcement	Dual Phase Steel (DP) 1000 steel

Front Door



NOTE: LH side shown, RH side similar.

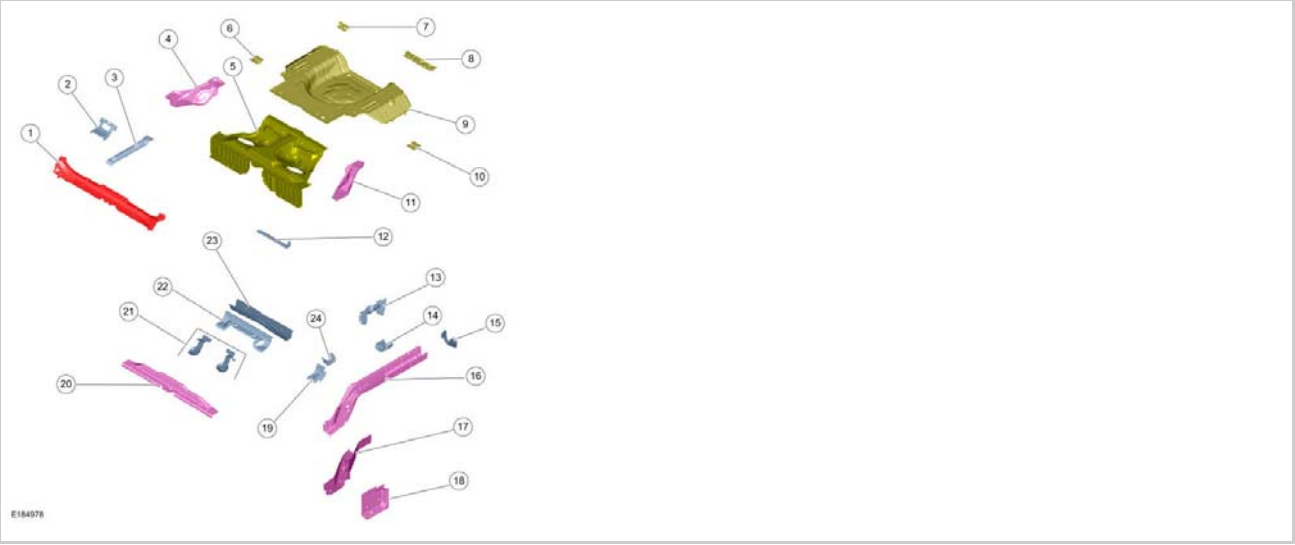
Item	Description	Steel Type
1	Door shell assembly	Mild steel
2	Door outer panel	Bake hardened (BH) 180 steel



3	Door intrusion beam	Boron steel

Front Floor Pan

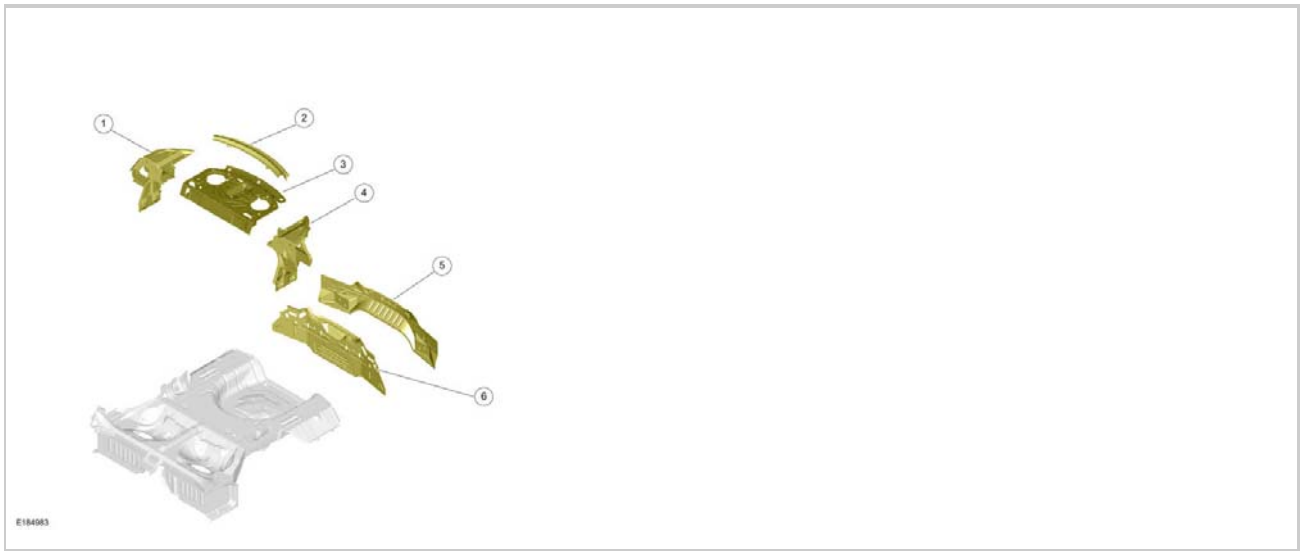
Item	Description	Steel Type
1	Floor side member	Boron steel
2	Crossmember	Mild steel
3	Crossmember	Mild steel
4	Support	High-Strength Low Alloy (HSLA) 350 steel
5	Floor panel	Mild steel
6	Bracket	Mild steel
7	Floor side member	High-Strength Low Alloy (HSLA) 350 steel
8	Reinforcement	Mild steel



Center and Rear Floor Pan-Convertible

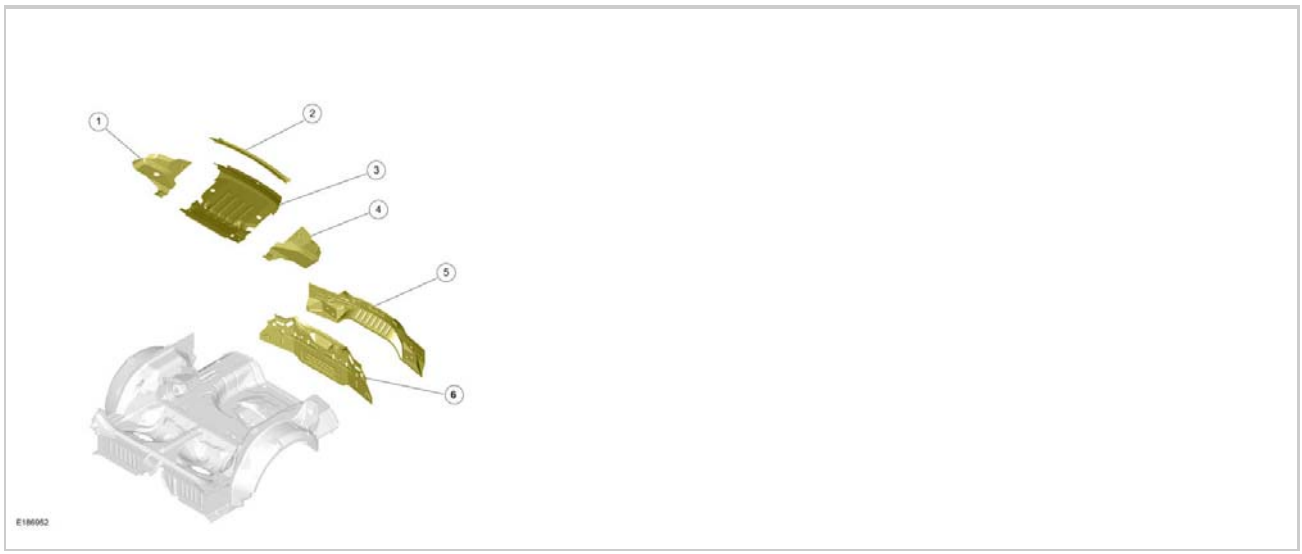
Item	Description	Steel Type
1	Crossmember	Boron steel
2	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
3	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
4	Reinforcement	Dual Phase Steel (DP) 800 steel
5	Center floor pan	Mild steel
6	Bracket	Mild steel
7	Bracket	Mild steel
8	Bracket	Mild steel
9	Rear floor pan	Mild steel
10	Bracket	Mild steel
11	Support	Mild steel
12	Reinforcement	Dual Phase Steel (DP) 800 steel
13	Bracket	High-Strength Low Alloy (HSLA) 350 steel
14	Floor side member reinforcement	High-Strength Low Alloy (HSLA) 350 steel
15	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
16	Bumper mounting bracket	High-Strength Low Alloy (HSLA) 350 steel

17	Floor side member	Dual Phase Steel (DP) 800 steel
18	Floor side member	Dual Phase Steel (DP) 800 steel
19	Reinforcement	Dual Phase Steel (DP) 800 steel
20	Brace	Mild steel
21	Brace	High-Strength Low Alloy (HSLA) 350 steel
22	Crossmember	High-Strength Low Alloy (HSLA) 350 steel
23	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
24	Crossmember	High-Strength Low Alloy (HSLA) 350 steel
25	Crossmember	High-Strength Low Alloy (HSLA) 350 steel
26	Bracket	High-Strength Low Alloy (HSLA) 350 steel
27	Bracket	High-Strength Low Alloy (HSLA) 350 steel



Center and Rear Floor Pan-Coupe

Item	Description	Steel Type
1	Crossmember	Boron steel
2	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
3	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel



4	Reinforcement	Dual Phase Steel (DP) 800 steel
5	Center floor pan	Mild steel

10	Bracket	Mild steel
11	Reinforcement	Dual Phase Steel (DP) 800 steel
12	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
13	Bracket	High-Strength Low Alloy (HSLA) 350 steel
14	Floor side member reinforcement	High-Strength Low Alloy (HSLA) 350 steel
15	Bumper mounting bracket	High-Strength Low Alloy (HSLA) 350 steel
16	Floor side member	Dual Phase Steel (DP) 800 steel
17	Floor side member	Dual Phase Steel (DP) 800 steel
18	Floor side member	Dual Phase Steel (DP) 800 steel
19	Brace	High-Strength Low Alloy (HSLA) 350 steel
20	Crossmember	Dual Phase Steel (DP) 800 steel
21	Reinforcement	High-Strength Low Alloy (HSLA) 350 steel
22	Crossmember	High-Strength Low Alloy (HSLA) 350 steel
23	Crossmember	High-Strength Low Alloy (HSLA) 350 steel
24	Bracket	High-Strength Low Alloy (HSLA) 350 steel

Rear Panels and Package Tray- Coupe

Item	Description	Steel Type
1	Strainer	Mild steel
2	Back panel	Mild steel
3	Package tray panel	Mild steel
4	Strainer	Mild steel
5	Back panel assembly	Mild steel
6	Back panel inner assembly	Mild steel

Rear Panels and Package Tray- Convertible

Item	Description	Steel Type
1	Quarter panel wheelhouse support	Mild steel
2	Back panel	Mild steel
3	Package tray panel	Mild steel

4	Quarter panel wheelhouse support	Mild steel
5	Back panel assembly	Mild steel
6	Back panel inner assembly	Mild steel

GENERAL PROCEDURES > BODY PANEL SECTIONING

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
Spherical Cutter
Plasma Cutter
Air Body Saw
MIG/MAG Welding Equipment
Spot Weld Drill Bit

Materials

Name	Specification
Seam Sealer TA-2-B	-

Repair

NOTE: Do not begin removal of the vehicle body side until the replacement panel is available for reference.

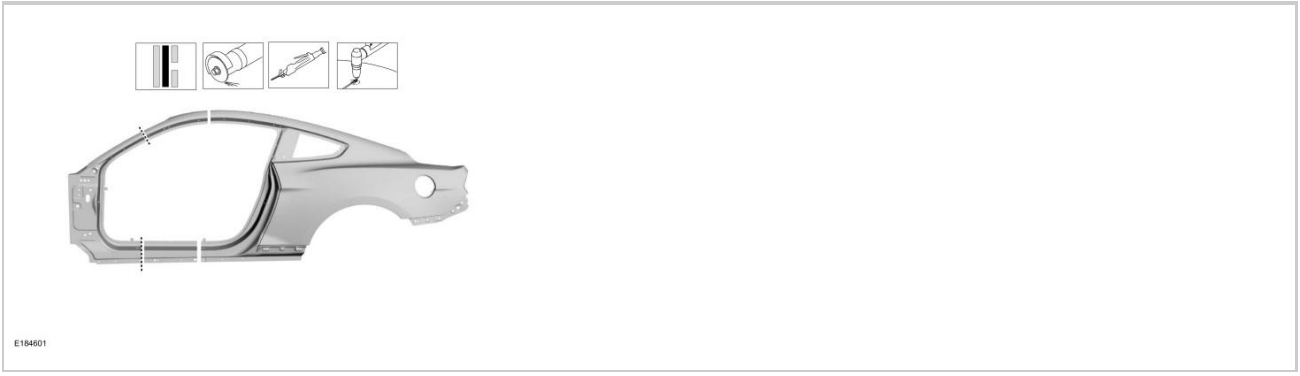
NOTE: Do not carry out body side sectioning repairs in areas of door hinge, safety belt or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision.

NOTE: Sectioning within the door hinge portion of the A-pillar, B-pillar or dog leg portion of the quarter panel is not approved by Ford Motor Company.

NOTE: LH side shown, RH side similar.

1.

Only remove as much of the **outer** body side panel material as necessary using available tools.



2.

Body side replacement panels are released as 2-part panels.

3.

As a general rule, sectioning cut points should be chosen to result in the smallest repair area possible. Use the General Equipment: Air Body Saw Use the General Equipment: Plasma Cutter Use the General Equipment: Spherical Cutter

4.

Detrim the vehicle as necessary and remove spot welds from the damaged area. Use the General Equipment: Spot Weld Drill Bit

NOTE: When welding overlapping surfaces or substrates, apply a high quality weld-through primer between the surfaces prior to welding.

NOTE: Use resistance spotwelding equipment where possible. This will produce a higher quality repair.

5.
Where possible, create a lap-joint backer plate using a portion of the old panel. This will create a stronger joint. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: MIG/MAG Welding Equipment

6.

Rough finish all sectioning joints with a fibre-based body filler, final finish sectioning joints and plug welds with a conventional body filler.

7.

Properly seal all horizontal joints to prevent moisture intrusion. Water and moisture migrate toward horizontal joints and corrosion tends to occur more rapidly in these areas.

Material

: Seam Sealer / TA-2-B

8.

Proceed with the refinishing process using a Ford approved paint system and manufacturers recommendations.

9.

Refer to: Corrosion Prevention .

10.

Reinstall vehicle trim as necessary.

Service Manual: BODY SYSTEM - GENERAL INFORMATION

SPECIFICATIONS > SPECIFICATIONS

Materials

Name	Specification
Seam Sealer TA-2-B	-
Silicone Spray Lubricant XL-6	ESR-M13P4-A
Permatex® Trim and Weatherstrip Adhesive 81850	-
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4

DESCRIPTION AND OPERATION > BODY - OVERVIEW > INSULATION

Insulation is used as a sound-deadener to reduce exterior road and powertrain noises from the interior of the vehicle. Mastic insulators are also used as insulation. Insulation is installed:

- under the roof.
- above and below the instrument panel.
- at the cowl side panels.
- over the front and rear floorpans.
- inside the B-, C- and D-pillar sections.
- on the wheelhouse/quarter panel.
- behind the rear quarter trim panel.

Other forms of insulation include:

- front tunnel stiffening pad.
- dash panel stiffener.
- rear wheelhouse mastic pads.

It has heat-bonded mastic deadeners for improved NVH characteristics.

It also has sound dampeners located inside the D-pillar and plug holes in the inner rear quarter.

DESCRIPTION AND OPERATION > BODY - OVERVIEW > BODY SEALER TYPES AND APPLICATIONS

Seam Sealer

- heavy-bodied, non-sag adhesive/sealer used on standing cosmetic seams, truck bed seams, tooled door skin seams and floorpans.
- can be used on water leaks and noise concerns.

Silicone Gasket and Sealant

- form-in-place gasket and multi-purpose adhesive/sealant.
- room temperature curing silicone rubber.

Silicone Spray Lubricant

- keeps the door and window weatherstrip pliable and soft.
- makes the door easier to close.
- retards weatherstrip squeaks.
- retards weatherstrip wear.
- helps retain door window alignment by reducing friction between the glass frame and the rubber weatherstrip.
- should not be used prior to painting.

Trim and Weatherstrip Adhesive

- quick drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

DIAGNOSIS AND TESTING > BODY SYSTEM > SYMPTOM CHART(S)

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Dust and Water Leaks

Most dust and water leaks occur due to missing or incorrectly installed body sealer or components. The source of the leak is detected by:

- pressurizing the vehicle and testing with soapy water.
    - Locate and tape off the body vents.
    - Turn the blower motor to HI.
    - Turn the air recirculation OFF.
    - Close the windows and doors.
    - Open the hood and spray soapy water along body seams and grommets. Make sure to test the areas around the A-pillar at the fender and the hood hinge area.
    - Check for bubbles.

- inspecting for a dust pattern or water path near and above the area in question.
- removing any trim or carpet in the general area of the leak.
- road testing or water-hose testing the vehicle.
- placing a bright light under the vehicle, removing any necessary trim or carpet and inspecting the interior of the body at joints and weld lines.

Wind noise

Most wind noise leaks occur at the corners of the windows or in the doors. Wind noise is detected by driving the vehicle at highway speeds or at speeds as specified by the customer. The vehicle should be driven in 4 different directions, with all the windows closed, the radio off and the A/C blower motor off.

Squeak and Rattle

Squeak and rattle noises are generally caused by loose parts, contact or relative movement between 2 surfaces or loose wires and connectors. The source of the noise can be detected by stopping movement of the suspect part by hand or by using dampening or low friction materials.

Symptom Chart: Body System - General Information

Condition	Possible Sources	Actions
Draft/wind noise and water leak around door perimeter	Loose fit seal	PINCH seal carrier to improve retention on seal flange.
	Seal installed incorrectly	REINSTALL the seal.
	Door misaligned	REALIGN the door. CHECK door gaps and fit in door opening and ADJUST as necessary. For door alignment, REFER to: Front Door Alignment .
	Scuff plate installed incorrectly	REINSTALL the scuff plate.
	Seal or seal pushpins damaged	INSTALL a new seal/pushpins.
	Sheet metal joints in door or door opening	SEAL leaks with seam sealer.
Draft/wind noise and water leak around glass run	Door glass misaligned	ADJUST door glass.
	Glass run installed incorrectly or not fully seated	REINSTALL glass run. To reinstall the glass run, REFER to: Front Door Glass Run and Bracket .
	Leak path behind glass run	INSTALL foam rope behind glass run.
	Glass run channel spread wide	PINCH glass run channel to reduce size of opening.
	Glass run damaged	INSTALL a new glass run. To install the glass run, REFER to: Front Door Glass Run and

		Bracket .
	Glass run overstuffed in corners creating pucker	REINSTALL glass run. INSTALL new part as necessary. To reinstall the glass run, REFER to: Front Door Glass Run and Bracket .
	Inner glass run reveal lip not contacting sheet metal	REINSTALL glass run. INSTALL new part as necessary. To reinstall the glass run, REFER to: Front Door Glass Run and Bracket .
	Inner belt overstuffed creating gap between glass and glass run	REINSTALL inner belt and INSTALL foam rope behind inner lip of glass run at belt. INSTALL new glass run as necessary.
Draft/wind noise and water leak at inner belt line	Belt line seal installed incorrectly on flange	ADJUST seal (do not bend the flange).
	No contact with side glass	ADJUST door glass.
	No contact with glass runs at both ends of belt line seal	ADJUST belt line seal or ADD foam at seal ends.
	Belt line seal damaged	INSTALL a new seal.
Draft/wind noise and water leak at outer belt line	Belt line seal installed incorrectly on flange (no glass contact)	ADJUST seal.
	Belt line seal does not contact the glass	ADJUST door glass.
	No contact with glass runs at both ends of belt line seal	ADJUST belt line seal or ADD foam at seal ends.
	Belt line seal damaged	INSTALL a new seal.
Draft/wind noise at inner door handle/speaker opening	Hole in weathershield	SEAL hole with suitable tape.
	Weathershield misaligned	REALIGN weathershield. INSTALL a new weathershield if pressure sensitive adhesive fails.
	Exterior door handle seal misaligned/damaged	REALIGN or INSTALL a new seal as necessary.
	Speaker or speaker seal missing or damaged	REPAIR speaker seal or INSTALL a new door speaker.
Draft/wind noise and water leaks at floor pan and grommets	Missing or damaged plugs/grommets	CHECK plugs/grommets for correct installation or damage. INSTALL new plugs/grommets if necessary.
Road noise	Missing mastic insulators	CHECK for missing mastic insulators.

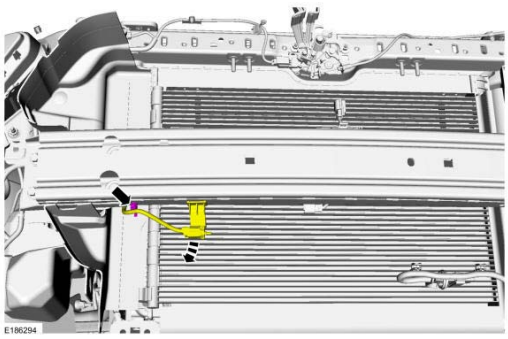
	Missing body insulators	CHECK for missing body insulators.
Rattles in body/doors and instrument panel	Loose wires/cables	CHECK that all wires/cables are correctly routed and inserted in correct retainers.
	Loose objects/components in door wells, pillars quarter trim panels	CHECK doors by carefully striking underside of doors with a rubber mallet while listening for rattles in doors and pillars. REMOVE or TIGHTEN loose objects/components.
	Buzz from instrument panel components	IDENTIFY which components of the instrument panel are buzzing. SECURE/FASTEN components as necessary, ADD foam or felt as needed if rattle persists.
Door drain holes collecting water	Holes clogged with mud or road tar	CLEAN drain holes of foreign material with a punch or screwdriver. CHECK drain holes regularly.
Wind noise from exterior rear view mirror	Exterior mirror housing misaligned	REALIGN with edges shingled to airflow, with no gaps.
	Mirror sail gasket folded/misaligned	REINSTALL with gasket unfolded and aligned correctly.
	Mirror housing trim cap installed incorrectly	REINSTALL with edges shingled to airflow.
	Inner sail trim installed incorrectly	REINSTALL sail trim. ADJUST door trim.
	Inner sail gasket/barrier installed incorrectly	REINSTALL trim cover with gasket/barrier aligned correctly.
	Air path through wiring bundle/fastener access holes	BLOCK air path(s) with foam/tape.
	Exposed fastener access hole on mirror housing/sail	INSTALL a new cap if missing.
	Mirror housing trim cap under-flush to housing causing whistle	INSTALL a new exterior mirror. To install new mirror, REFER to: Exterior Mirror .
Rattle/vibration from exterior rear view mirror	Mirror mounting nuts loose	TIGHTEN mirror mounting nuts. REFER to: Exterior Mirror .
	Aftermarket air deflector/stone shields	If possible, REMOVE aftermarket air deflector/stone shield, then ROAD TEST vehicle. If concern is no longer present, ADVISE the customer the aftermarket

		component was causing concern.
Draft/wind noise and water leak around perimeter of all fixed glass	Air traveling up windshield molding along A-pillar	INSTALL foam rope full length of the A-pillar.
	Gaps in sealant bead of windshield/rear glass	Install new windshield/rear glass. To install new windshield/rear glass, REFER to: Fixed Glass .
	Windshield/rear glass misaligned or not installed correctly	Install new windshield/rear glass. To install new windshield/rear glass, REFER to: Fixed Glass .
	Rear hood seal at base of windshield misaligned/damaged	REALIGN or INSTALL a new seal as necessary.
	High mounted stoplamp	CHECK high mounted stoplamp seal. REPAIR or INSTALL as necessary.
	A-pillar applique along windshield lifting	INSPECT attachment clips for damage and REINSTALL part. INSTALL new part as necessary.
Draft/wind noise and water leak around liftgate/luggage compartment perimeter	Loose fit seal	PINCH seal carrier to improve retention on seal flange or INSERT foam in carrier.
	Seal misaligned or installed incorrectly	REINSTALL seal.
	Liftgate/luggage compartment misaligned	REALIGN luggage compartment lid. CHECK luggage compartment lid fit in body opening and ADJUST as necessary. To realign luggage compartment lid, REFER to: Luggage Compartment Lid Alignment .
	Scuff plate misaligned	REINSTALL scuff plate.
	Seal or seal pushpins damaged	INSTALL a new seal or pushpins.
Wind noise created by airflow over or behind body panels	Fender splash shield misaligned	REALIGN fender splash shield.
	Body panel misaligned (exposed edge)	REALIGN appropriate body panel.
	Hood misaligned (front margin)	CHECK hood gaps and fit. ADJUST hood as necessary. To align hood, REFER to: Hood Alignment .
	Front grille edge noise	APPLY foam in hollow areas behind louvers.
Wind noise created by grille opening panel	Grille fit to leading edge on hood	If possible, ADJUST grille opening panel forward to eliminate wind

		noise.
	Sharp edges due to material imperfections	REMOVE sharp edges (no visible surface damage).
Wind noise from air extractor (body vent)	Air extractor housing seated incorrectly	REINSTALL air extractor housing.
	Air extractor housing or flaps damaged	INSTALL a new air extractor.
Wind noise from bug shield/exterior windshield sun visor	Turbulence created by location and shape	DETERMINE if the component is an Original Equipment Manufacturer (OEM) part or aftermarket. If aftermarket, ADVISE customer accordingly. If Original Equipment Manufacturer (OEM), VERIFY correctly installed. If noise is abnormal REPAIR or INSTALL new as required.
Wind noise from cowl panel (leaf screen)	Leaf screen rubber lip not touching windshield	REINSTALL part. If part still does not fit, CHECK for damaged attachment clips. INSTALL new part as necessary.

Service Manual: BUMPERS

REMOVAL AND INSTALLATION > FRONT BUMPER > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front bumper cover. Refer to: Front Bumper Cover .

2.

Position aside the ambient air temperature sensor bracket and wiring harness guide.

3.

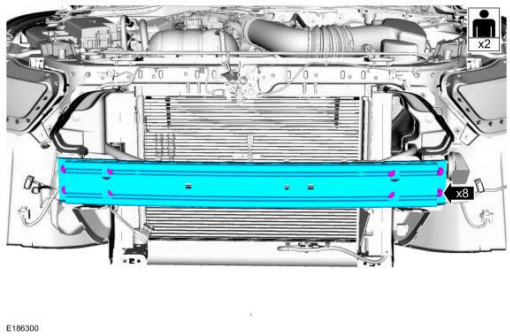
If equipped, remove the active grille shutter assembly. Refer to: Active Grille Shutter .

4.

If equipped, remove the CCM and bracket. Refer to: Cruise Control Module (CCM) - Vehicles With: Adaptive Cruise Control.

5.

Separate the wiring harness guides.



6.

Remove the bolts and the front bumper.

Torque

: 18 lb.ft (25 Nm)

REMOVAL AND INSTALLATION > FRONT BUMPER > INSTALLATION

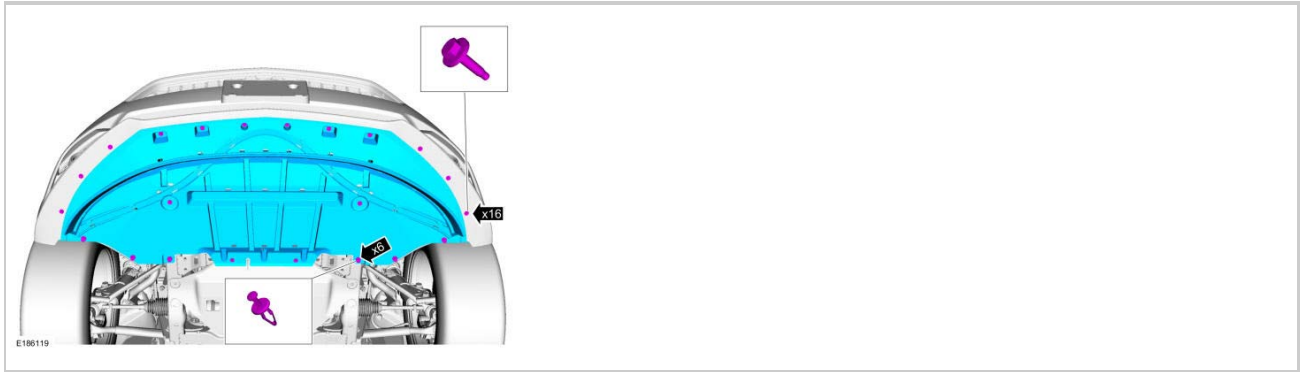
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT BUMPER COVER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the front wheels and tires. Refer to: Wheel and Tire .

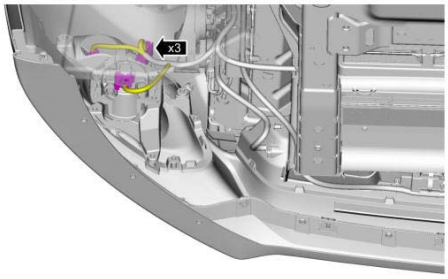
3.

Remove the push pins, screws and the lower air deflector.

NOTE: On both sides.

4.
Remove the push pins.

NOTE: On both sides.



5.
Remove the push pins and position the inner fender liner aside.

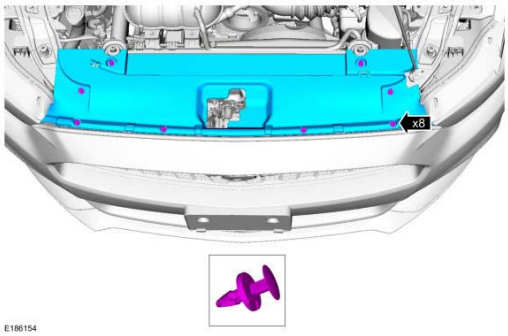
NOTE: Halogen fog lamp shown in illustration, LED fog lamp is similar.

NOTE: On both sides.

6.
Disconnect the electrical connectors.

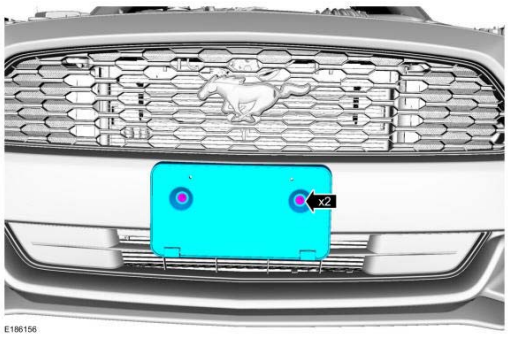
NOTE: On both sides.

7.
Remove the bolt and separate the front bumper cover from the fender bracket.



Torque

: 15 lb.in (1.7 Nm)

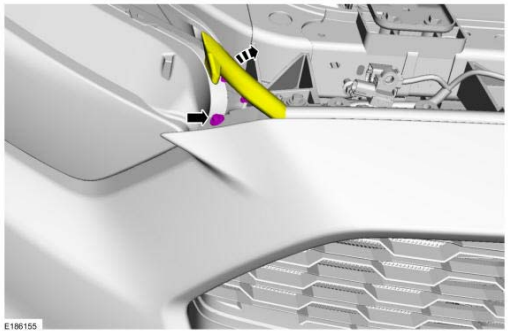


8.

Remove the push pins and the radiator sight shield.

9.

If equipped, remove the screws and the license plate bracket.



NOTE: On both sides.

10.
Position aside the outer edge of the hood seal and remove the bolt.

Torque

: 15 lb.in (1.7 Nm)

11.

Remove the front bumper cover.

1.

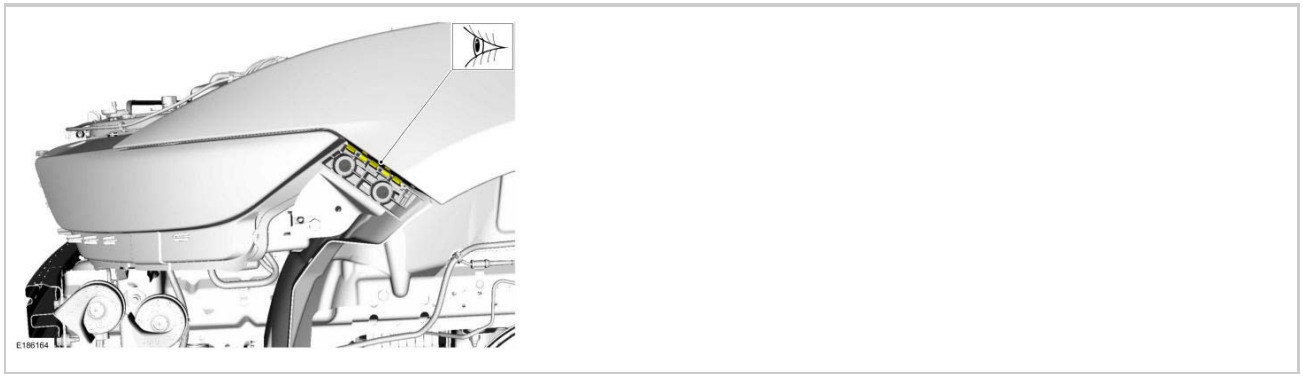
Remove the screws.

Torque

: 48 lb.in (5.4 Nm)

2.

Lift the front bumper cover up and off the alignment pins.

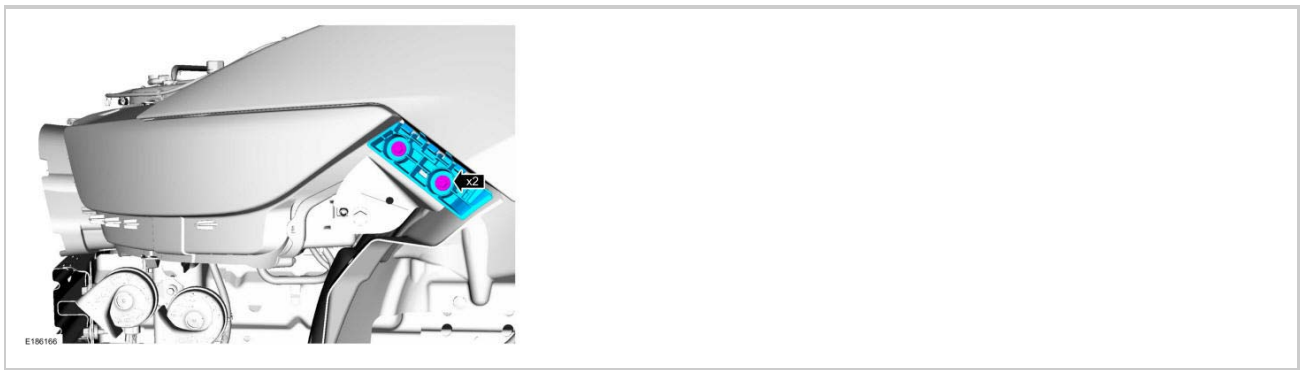


3.

Pull the front bumper cover forward and off the vehicle.

12.

Inspect the fender bracket teeth for damage.



13.

If required. Remove the bolts and the fender bracket.

Torque

: 13 lb.in (1.5 Nm)

REMOVAL AND INSTALLATION > FRONT BUMPER COVER > INSTALLATION

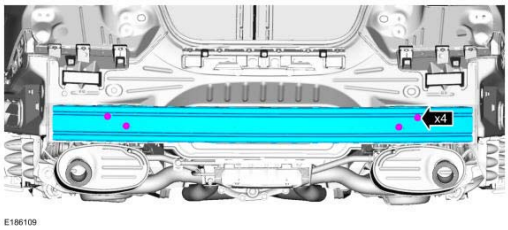
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR BUMPER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the rear bumper cover. Refer to: Rear Bumper Cover .

2.

Remove the bolts and the rear bumper.

Torque

: 18 lb.ft (25 Nm)

REMOVAL AND INSTALLATION > REAR BUMPER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR BUMPER COVER > REMOVAL

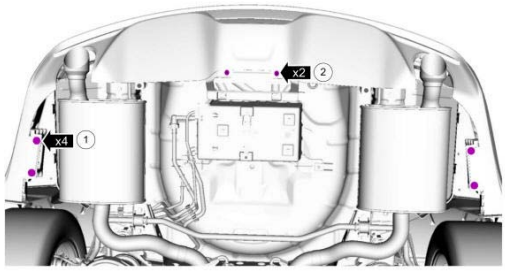
NOTE: Removal steps in this procedure may contain installation details.

1.

Raise the vehicle on a hoist. Refer to: Jacking and Lifting - Overview .

2.

1.

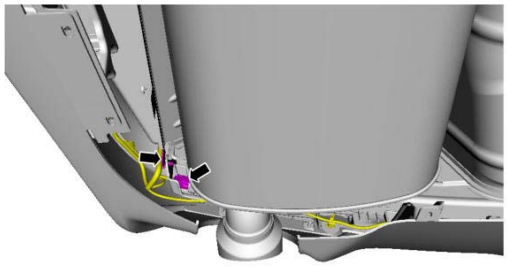


Remove the push pins.

2.

Remove the screws.

Torque



: 13 lb.in (1.5 Nm)

E186168

NOTE: On both sides.

3.
Disconnect the rear bumper harness electrical connector and separate the wiring harness guide.

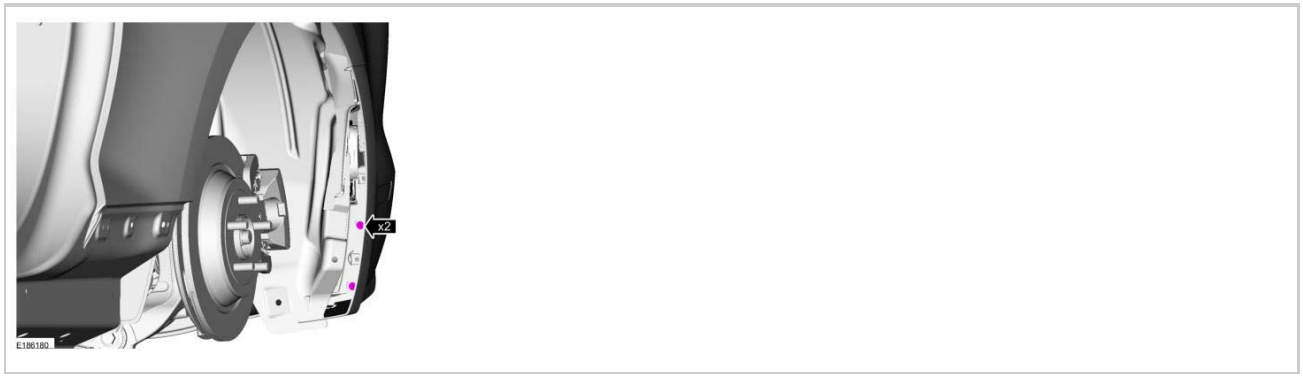
E186182

4.

Remove the rear wheels and tires. Refer to: Wheel and Tire .

NOTE: On both sides.

5.
Remove the screw and the pushpins.



6.

Remove the bumper cover to bracket screws.

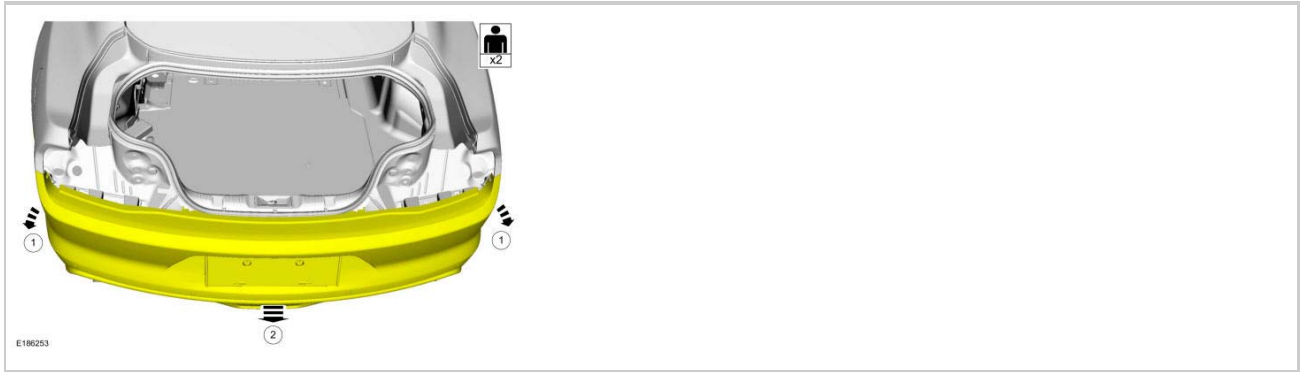
Torque

: 13 lb.in (1.5 Nm)

7.

Remove the rear lamp assemblies. Refer to: Rear Lamp Assembly .

8.



Position the rear bumper cover aside for access to electrical connector.

1.

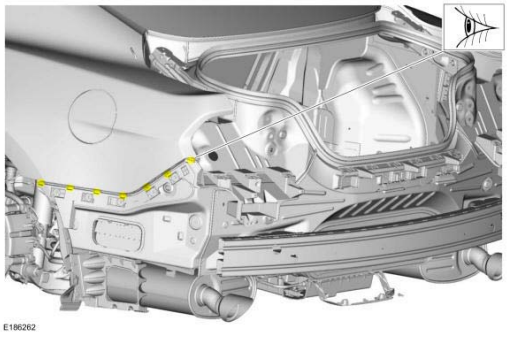
Release the sides of the rear bumper cover from the brackets.

2.

Release the center of the rear bumper cover from the rear brackets and position aside.

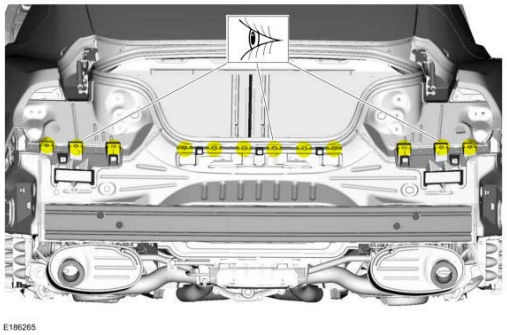
9.

Disconnect the rear bumper wiring harness electrical connector.



10.

Remove the rear bumper cover.

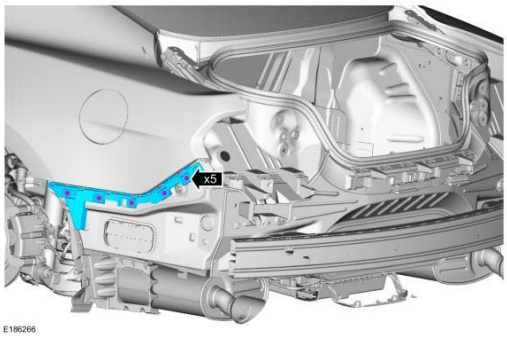


NOTE: On both sides.

11.
Inspect the side bracket for damage.

12.

Inspect the rear brackets for damage.

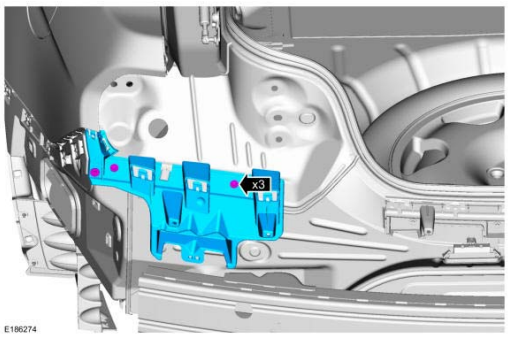


13.

If required, remove the screws and the side bracket.

Torque

: 13 lb.in (1.5 Nm)

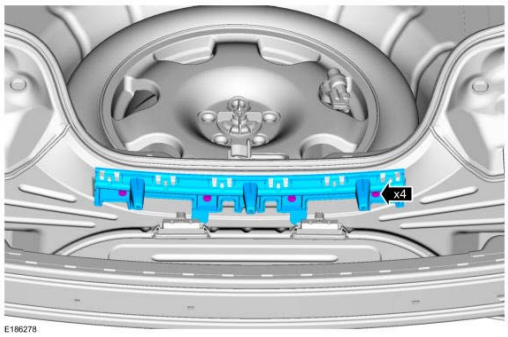


14.

If required, remove the screws and the outer rear bracket.

Torque

: 13 lb.in (1.5 Nm)



15.

If required, remove the screws and the center rear bracket.

Torque

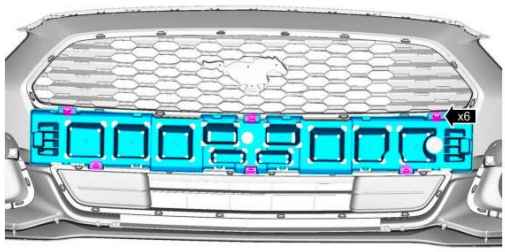
: 13 lb.in (1.5 Nm)

REMOVAL AND INSTALLATION > REAR BUMPER COVER > INSTALLATION

1.

To install, reverse the removal procedure.

DISASSEMBLY AND ASSEMBLY > FRONT BUMPER COVER > DISASSEMBLY



All vehicles

1.

Remove the front bumper cover. Refer to: Front Bumper Cover .

2.

Release the clips and remove the front bumper cover reinforcement.

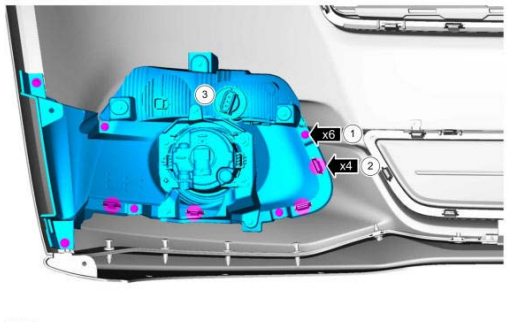
NOTE: LH shown in illustration, RH similar.

3.
Remove the fog lamp brackets.

1.

Remove the screws.

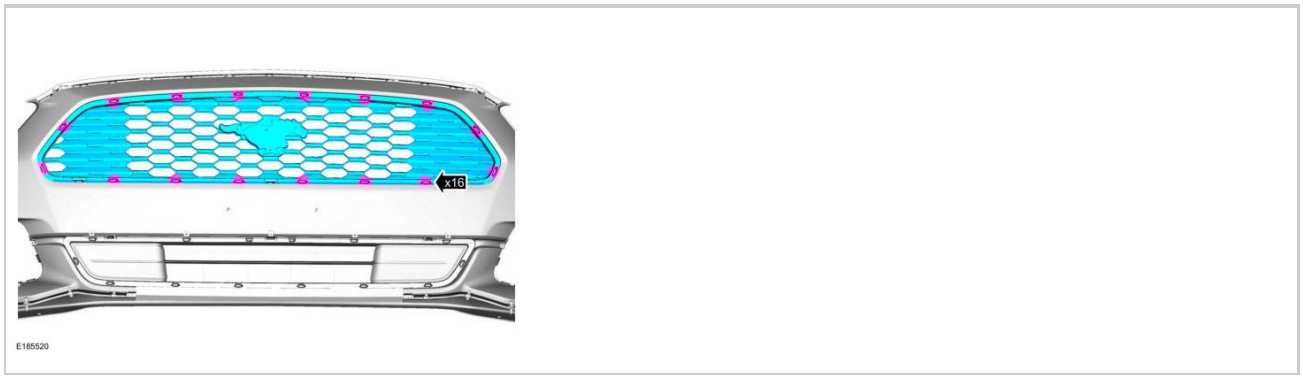
Torque



: 15 lb.in (1.7 Nm)

2.

Release the tabs.



3.

Remove the fog lamp bracket.

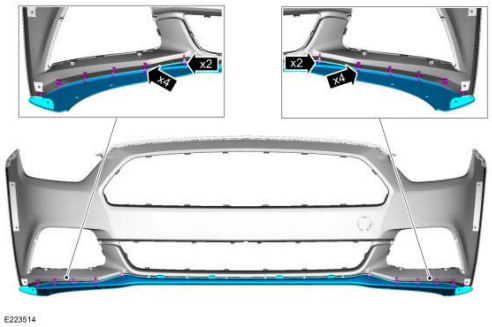
4.

Release the tabs and remove the upper radiator grille.

5.

Release the tabs and remove the lower radiator grill.

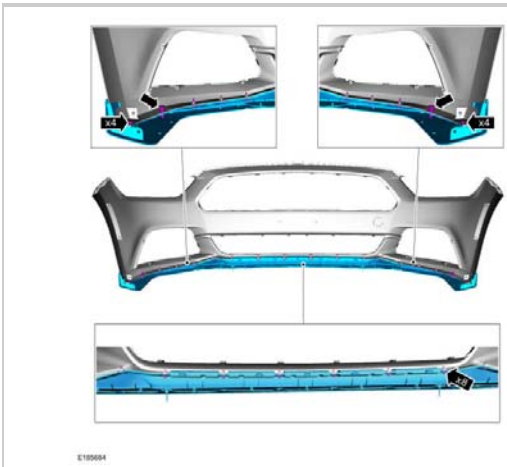
6.



Remove the hood seal.

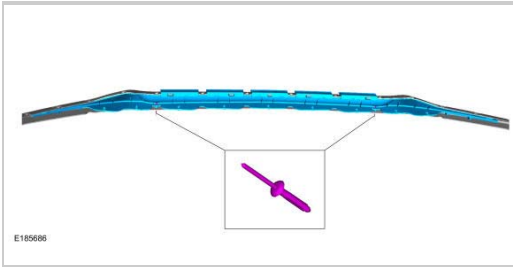
Vehicles equipped with base spoiler

7.



Remove the bolts, push pins and the lower spoiler.

Vehicles equipped with performance spoiler



8.

Remove the bolts, push pins and the lower spoiler.

9.

Remove the rivets and the spoiler reinforcement.

DISASSEMBLY AND ASSEMBLY > FRONT BUMPER COVER > ASSEMBLY

1.

To assemble, reverse the disassembly procedure.

DISASSEMBLY AND ASSEMBLY > REAR BUMPER COVER > DISASSEMBLY

All vehicles

1.

Remove the rear bumper cover. Refer to: Rear Bumper Cover .

2.

Separate the wiring harness guides from the rear bumper cover reinforcement.

3.

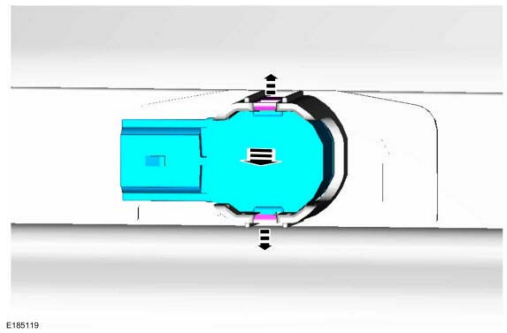
Release the tabs and remove the rear bumper cover reinforcement.

4.

Remove the rear bumper wiring harness.

1.

Disconnect the electrical connectors.

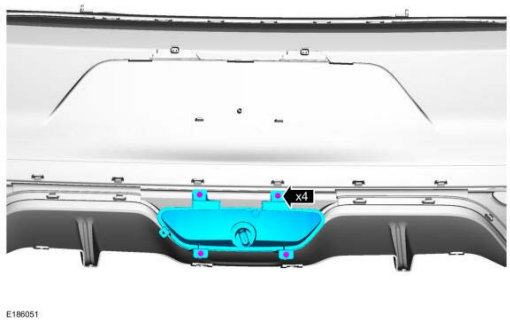


2.

Disconnect the wiring guides.

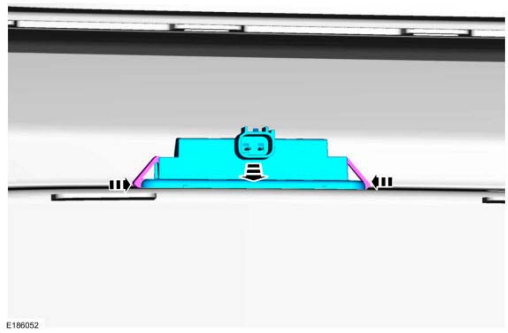
5.

Remove the rear park aid sensors.



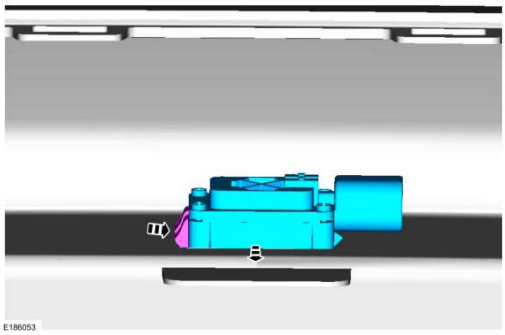
6.

Remove the screws and the reversing lamp.



Torque

: 15 lb.in (1.7 Nm)

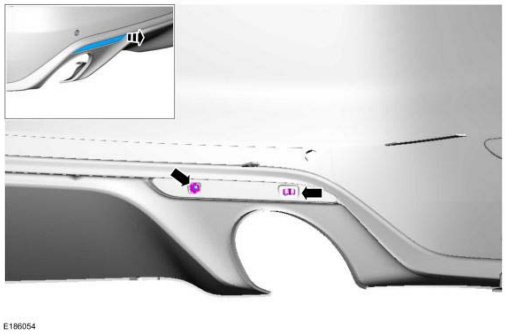


NOTE: On both sides.

7.
Press the tabs and remove the license plate lamp.

8.

Press the tabs and remove the deck lid release switch.



NOTE: On both sides.

9.
Remove the nut, release the tabs and remove the rear reflector.

Torque

: 13 lb.in (1.5 Nm)

NOTE: On both sides.

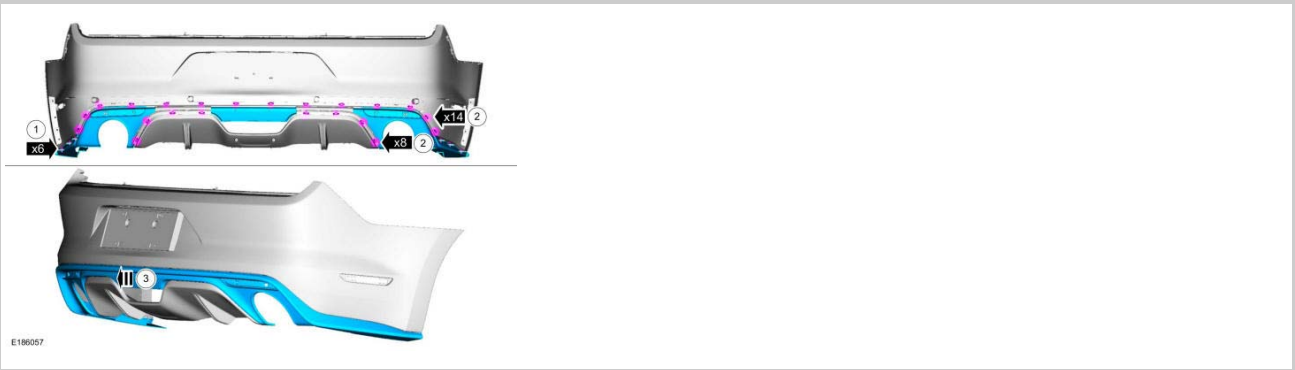
10.
Release the tab and remove the side marker lamp.

GT vehicles

11.

Remove the lower bumper cover.

1.



Remove the screws.

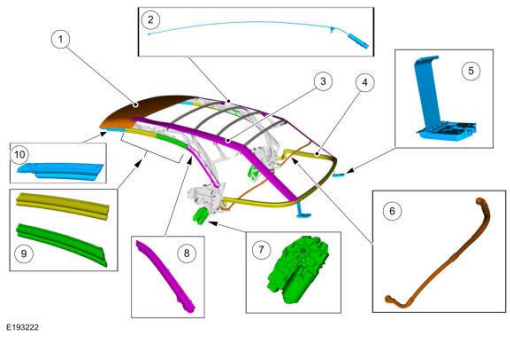
2.

Release the tabs.

3.

Remove the lower bumper cover.

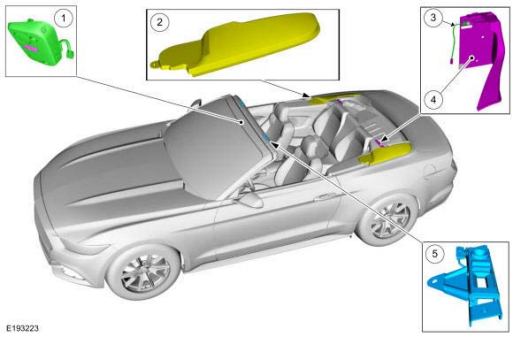
DISASSEMBLY AND ASSEMBLY > REAR BUMPER COVER > ASSEMBLY



1.

To assemble, reverse the disassembly procedure.

Service Manual: CONVERTIBLE TOP



DESCRIPTION AND OPERATION > CONVERTIBLE TOP - COMPONENT LOCATION

Frame Related Components

Item	Description
1	Convertible top front panel
2	Convertible top tension cable (routed through convertible top material)
3	Stay pad
4	Floating bow
5	Convertible top tension belt (located in the luggage compartment)
6	Rear glass tension rod
7	Convertible top motor (Moveable Roof Control Module (MRCM))
8	Convertible top rear panel lower seal
9	Convertible top center panel side weatherstrip (forward/rear)
10	Convertible top front panel side weatherstrip

Sensors And Switches

Item	Description
1	Overhead console (contains convertible top open/close switch)

2	Tonneau cover (includes magnet for tonneau cover sensor operation)
3	Tonneau cover sensor (PIA to D-tower cover)
4	D-tower cover
5	Convertible top front striker (LH side convertible top striker contains convertible top latch switch)

DESCRIPTION AND OPERATION > CONVERTIBLE TOP - OVERVIEW > OVERVIEW

The convertible top system is controlled by 2 smart electric motors called the Moveable Roof Control Module A (MRCMA) and the Moveable Roof Control Module B (MRCMB). The Moveable Roof Control Module A (MRCMA) is the primary module for the system and communicates with other modules and the Moveable Roof Control Module B (MRCMB) over the MS-CAN. The convertible top is raised and lowered using the convertible top switch, the switch must be held in position (up or down) while the roof is raised or lowered. The convertible top can only be operated when the following conditions are met:

Convertible Top Opening Conditions

- Accessory delay relay is active.
- Vehicle speed is less than 5 km/h (3 mph).
- Convertible top latch switch is open.

Convertible Top Closing Conditions

- Accessory delay relay is active.
- Vehicle speed is less than 5 km/h (3 mph).
- Tonneau covers (if equipped) are **not** in place.

DESCRIPTION AND OPERATION > CONVERTIBLE TOP - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > CONVERTIBLE TOP - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHARTS

Moveable Roof Control Module A (MRCMA) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Accessory delay status	BCM	This message is sent to the GWM and then to the Moveable Roof Control Module A (MRCMA). This message informs the Moveable

		Roof Control Module A (MRCMA) of the current accessory delay relay status; active or not active.
Convertible Top Request	Moveable Roof Control Module B (MRCMB)	This message informs the Moveable Roof Control Module A (MRCMA) the vehicle occupant has requested the convertible top to be raised.
Convertible Top Status	Moveable Roof Control Module B (MRCMB)	This message informs the Moveable Roof Control Module A (MRCMA) of the current Moveable Roof Control Module B (MRCMB) convertible top status; opened, closed, moving, stalled or faulted.
Ignition Status	BCM	This message is sent to the GWM and then to the Moveable Roof Control Module A (MRCMA). This message informs the Moveable Roof Control Module A (MRCMA) of the current ignition status; OFF, ACC, RUN, START or UNKNOWN.
LH rear window down status	BCMB	This message informs the Moveable Roof Control Module A (MRCMA) the LH rear window is in the full down position.
RH rear window down status	BCMB	This message informs the Moveable Roof Control Module A (MRCMA) the RH rear window is in the full down position.
Tonneau Cover Status	Moveable Roof Control Module B (MRCMB)	This message informs the Moveable Roof Control Module A (MRCMA) of the current Moveable Roof Control Module B (MRCMB) tonneau cover status; installed, not installed, not used or faulted.
Vehicle speed	PCM	This message is sent to the GWM and then to the Moveable Roof Control Module A (MRCMA). This message informs the Moveable Roof Control Module A (MRCMA) of the current vehicle speed.

Moveable Roof Control Module B (MRCMB) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Accessory delay status	BCM	This message is sent to the GWM and then to the Moveable Roof Control Module B (MRCMB). This message informs the Moveable Roof Control Module B (MRCMB) of the current accessory delay relay status; active or not active.
Convertible Top Request	Moveable Roof Control Module A (MRCMA)	This message informs the Moveable Roof Control Module B (MRCMB) the vehicle occupant has requested the convertible top to be lowered.
Convertible Top Status	Moveable Roof Control Module A (MRCMA)	This message informs the Moveable Roof Control Module B (MRCMB) of the current Moveable Roof Control Module A (MRCMA) convertible top status; opened, closed, moving, stalled or faulted.
Ignition Status	BCM	This message is sent to the GWM and then to the Moveable Roof Control Module B (MRCMB). This message informs the Moveable Roof Control Module B (MRCMB) of the current ignition status; OFF, ACC, RUN, START or UNKNOWN.
Tonneau Cover Status	Moveable Roof Control Module A (MRCMA)	This message informs the Moveable Roof Control Module B (MRCMB) of the current Moveable Roof Control Module A (MRCMA) tonneau cover status; installed, not installed, not used or faulted.

DESCRIPTION AND OPERATION > CONVERTIBLE TOP - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CONVERTIBLE TOP FUNCTION

The convertible top UP switch position is hard-wired to the Moveable Roof Control Module A (MRCMA) and the convertible top switch DOWN position is hard-wired to the Moveable Roof Control Module B (MRCMB). When the convertible top down function requirements have been met (accessory delay relay is active, vehicle speed is less than 5 km/h (3 mph) and the convertible top latch is released) and the convertible top DOWN switch is activated, a ground signal is sent to the Moveable Roof Control Module B (MRCMB). The Moveable Roof Control Module B (MRCMB) sends a convertible top down message over the MS-CAN to the Moveable Roof Control Module A (MRCMA). The Moveable Roof Control Module A (MRCMA) verifies all down function requirements have been met and then sends a window

down message over the MS-CAN to the BCMB to lower all 4 windows. The BCMB sends a signal on the global open circuit to the 4 window motors to activate a full down operation of all 4 windows. Once the windows are fully lowered, the full down sensor in each rear quarter window motor sends a signal to the BCMB indicating the windows are in the full DOWN position. The BCMB sends the rear window status message to the Moveable Roof Control Module A (MRCMA) over the MS-CAN. After receiving the rear window status message from the BCMB, the Moveable Roof Control Module A (MRCMA) sends a convertible top down message to the Moveable Roof Control Module B (MRCMB) and the convertible top is lowered.

When the convertible top up function requirements have been met (accessory delay relay is active, vehicle speed is less than 5 km/h (3 mph) and the 2 tonneau covers (if equipped) are not in place) and the convertible top switch UP is activated, a ground signal is sent to the Moveable Roof Control Module A (MRCMA). The Moveable Roof Control Module A (MRCMA) verifies all up function requirements have been met and then sends a window down message over the MS-CAN to the BCMB to lower all 4 windows. The BCMB sends a signal on the global open circuit to the 4 window motors to activate a full down operation of all 4 windows. Once the windows are fully lowered, the full down sensor in each rear quarter window motor sends a signal to the BCMB indicating the windows are in the full DOWN position. The BCMB sends the rear window status message to the Moveable Roof Control Module A (MRCMA) over the MS-CAN. After receiving the rear window status message from the BCMB, the Moveable Roof Control Module A (MRCMA) sends a convertible top up message to the Moveable Roof Control Module B (MRCMB) and the convertible top is raised.

If the convertible top cannot be raised or lowered, the Moveable Roof Control Module A (MRCMA), Moveable Roof Control Module B (MRCMB) or BCMB sets a DTC. There are no warning indicators associated with the convertible top system, but messages may be displayed in the message center.

Convertible Top Drop Window Function

When the convertible top switch is operated (to raise or lower the convertible top), the BCMB sends a signal on the global open circuit to the 4 window motors to activate a full down operation of all 4 windows. When the rear quarter windows reach the full DOWN position, the full down sensor in each rear quarter window motor sends a signal to the BCMB indicating the windows are in the full DOWN position. If the BCMB does not see the full down signal from both rear quarter window motors, the convertible top does not operate. The BCMB also disables the rear quarter window control switch from operating the rear quarter windows when the convertible top is not in the full UP or full DOWN position by sending a message (pulses) on the global open circuit (the front door window motors ignore this message). This function prevents an accidental opening of the convertible top with the windows in the UP position causing contact between the windows and convertible top which may result in damage to the convertible top or windows. For additional information on window operation, Refer to: Glass, Frames and Mechanisms - System Operation and Component Description .

Moveable Roof Control Module A (MRCMA) Message Center Messages

The Moveable Roof Control Module A (MRCMA) continually monitors the convertible top system operation and status using Hall-effect switches. The convertible top latch contains a magnet which activates a Hall-effect switch. The Hall-effect switch is hard-wired to the Moveable Roof Control Module A (MRCMA) so the module knows the roof is secured. The optional tonneau covers also each contain a magnet which activates a Hall-effect switch. One Hall-effect switch is hard-wired to the Moveable Roof Control Module A (MRCMA) and the other is hard-wired to the Moveable Roof Control Module B (MRCMB). When one or both tonneau covers are installed, the magnet activates the Hall-effect switch and prevents the convertible top from being raised. The Moveable Roof Control Module A (MRCMA) receives vehicle speed from the PCM over the HS-CAN1. If the vehicle speed exceeds 5 km/h (3 mph), the Hall-effect switches indicates one or more of the tonneau covers are installed or the convertible top latch is not fully engaged the Moveable Roof Control Module A (MRCMA) sends a message to the IPC

over the MS-CAN.

When the IPC receives a convertible top status message from the Moveable Roof Control Module A (MRCMA), one or more of the following messages is displayed in the message center:

- **TOP DISABLED - REMOVE COVERS** - Displays when the vehicle occupants attempt to raise the convertible top with the optional tonneau covers installed.
- **TOP DISABLED - REDUCE SPEED** - Displays when the vehicle occupants attempt to lower or raise the convertible top and vehicle speed is greater than 5 km/h (3 mph).
- **TOP NOT SECURE** - Displays when the vehicle occupants have raised convertible top, vehicle speed exceeds 5 km/h (3 mph) and the convertible top latch has not been fully engaged.

For additional information on the message center, Refer to: Message Center - System Operation and Component Description .

DESCRIPTION AND OPERATION > CONVERTIBLE TOP - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Convertible Top Latch Switch

The convertible top latch switch is a Hall-effect style switch, the switch is activated by a magnet in the convertible top. When the convertible top is closed and fully latched, the Hall-effect switch closes and sends a signal to the Moveable Roof Control Module A (MRCMA).

Convertible Top Switch

The convertible top switch is a 3-position (UP, DOWN, NEUTRAL), momentary contact, rocker style switch.

Moveable Roof Control Module A (MRCMA)

The Moveable Roof Control Module A (MRCMA) is the primary electronic control unit for the convertible top system and communicates with the Moveable Roof Control Module B (MRCMB) and other modules over the MS-CAN or HS-CAN1 through the GWM. The Moveable Roof Control Module A (MRCMA) monitors all sensor inputs and all CAN messages relating to the convertible top and directly controls the convertible top using a motor. The Moveable Roof Control Module A (MRCMA) also contains a Hall-effect switch to detect convertible top movement and position (open, closed, moving).

The Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) use their internal Hall-effect switches and the MS-CAN to synchronize motor speed and direction.

Moveable Roof Control Module B (MRCMB)

The Moveable Roof Control Module B (MRCMB) is the secondary electronic control unit for the convertible top system and communicates with the Moveable Roof Control Module A (MRCMA) over the MS-CAN and the BCM over the HS-CAN1 through the GWM. The Moveable Roof Control Module B (MRCMB) monitors one of the tonneau cover Hall-effect switches and MS-CAN messages from the Moveable Roof Control Module A (MRCMA) and directly controls the convertible top using a motor. The Moveable Roof Control Module B (MRCMB) also contains a Hall-effect switch to detect convertible top movement and position (open, closed, moving).

Tonneau Cover Switches

The tonneau cover switches are Hall-effect style switches, the switches are activated by a magnet located in each tonneau cover (1 magnet per cover). When the tonneau covers are installed, the Hall-effect switches close and send a signal to the Moveable Roof Control Module A (MRCMA) and the Moveable Roof Control Module B (MRCMB). One switch is hard-wired to each module.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > DIAGNOSTIC TROUBLE CODE (DTC) CHARTS > MOVEABLE ROOF CONTROL MODULE A (MRCMA) DTC CHART

REINSTALL the convertible top as necessary. LATCH the convertible top and TEST DRIVE the vehicle above 5 km/h (3 mph). If the message does not return, INFORM the customer of the correct latching procedure. RETRIEVE and RECORD all Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: Moveable Roof Control Module A (MRCMA).
The message center displays Top Disabled - Remove Covers	Tonneau covers are installed Tonneau cover sensor concern	VERIFY the covers **are not** installed. REMOVE the covers and CLOSE the convertible roof. INFORM the customer the tonneau covers must be removed before closing the convertible roof. RETRIEVE and RECORD all Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: Moveable Roof Control Module A (MRCMA) or the DTC Chart: Moveable Roof Control Module B (MRCMB).
The message center displays Top Disabled - Reduce Speed	Vehicle speed concern Network communication concern	RETRIEVE and RECORD all PCM Diagnostic Trouble Codes (DTCs). DIAGNOSE all vehicle speed related Diagnostic Trouble Codes (DTCs). 2.3L REFER to: Electronic Engine Controls . 3.7L REFER to: Electronic Engine Controls . 5.0L REFER to: Electronic Engine Controls . RETRIEVE and RECORD all Moveable Roof Control Module A (MRCMA), Moveable Roof Control Module B (MRCMB) and GWM Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: Moveable Roof Control Module A (MRCMA),

		the DTC Chart: Moveable Roof Control Module B (MRCMB) or REFER to: MODULE COMMUNICATIONS NETWORK .

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST A : THE CONVERTIBLE TOP IS INOPERATIVE

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

The convertible top is controlled through the use of a switch, the switch must be held in place during convertible top operation. Voltage for convertible top operation is supplied to the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) from the BJB. There are several requirements which must be met before the convertible top can be opened or closed, REFER to: Convertible Top - Overview . For additional convertible

Circuit faults, a convertible top switch failure, network communication errors, invalid network data or an internal failure of one or more modules listed below prevents the convertible top from operating.

Possible Sources

- Fuses
- Wiring, terminals or connectors
- Convertible top switch
- Tonneau covers installed
- Vehicle speed concern
- Network communication concern
- Rear window concern
- Moveable Roof Control Module A (MRCMA)
- Moveable Roof Control Module B (MRCMB)
- BCMB concern
- GWM concern
- BCM concern
- PCM concern

Visual Inspection and Diagnostic Pre-checks

- Make sure the tonneau covers are not installed.
- Make sure BJB fuses 15 (20A) and 17 (20A) are OK.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST A : THE CONVERTIBLE TOP IS INOPERATIVE > PINPOINT TEST A : THE CONVERTIBLE TOP IS INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

A1 VERIFY THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Do the Moveable Roof Control Module A (MRCMA), Moveable Roof Control Module B (MRCMB), BCMB, GWM, BCM and PCM all pass the Network Test?

Yes	GO to A2

No	DIAGNOSE no communication with the unresponsive module. REFER to: MODULE COMMUNICATIONS NETWORK .

A2 RETRIEVE ANY DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the self test for the following modules:

Moveable Roof Control Module A (MRCMA)

Moveable Roof Control Module B (MRCMB)

BCMB

GWM

BCM

PCM, KOEO

Are any Diagnostic Trouble Codes (DTCs) present in any of the modules listed above?

Yes	DIAGNOSE all Diagnostic Trouble Codes (DTCs) before continuing with this test. For Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: Moveable Roof Control Module A (MRCMA). For Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: Moveable Roof Control Module B . For BCMB Diagnostic Trouble Codes (DTCs), REFER to: Body Control Module B (BCMB) . For GWM Diagnostic Trouble Codes (DTCs), REFER to: MODULE COMMUNICATIONS NETWORK . For BCM Diagnostic Trouble Codes (DTCs), REFER to: Body Control Module (BCM) For PCM Diagnostic Trouble Codes (DTCs), 2.3L

	REFER to: Electronic Engine Controls . 3.7L REFER to: Electronic Engine Controls . 5.0L REFER to: Electronic Engine Controls .

No	GO to A3

A3 CHECK THE BCM (BODY CONTROL MODULE) DELAYED ACCESSORY POWER (ACC_DELAY) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the BCM ACC_DELAY PID.

Does the PID display Active?

Yes	GO to A5

No	DIAGNOSE the accessory delay relay. REFER to: Body Control Module (BCM) .

A4 CHECK THE CONVERTIBLE TOP ACTIVATION UP (TOP_UP_SW) AND DOWN (TOP_DWN_SW) SWITCH PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, view the Moveable Roof Control Module A (MRCMA) TOP_UP_SW PID while pressing the convertible top UP switch.

Using a diagnostic scan tool, view the Moveable Roof Control Module B (MRCMB) TOP_DWN_SW PID while pressing the convertible top DOWN switch.

Does the PID display Active when the switch is pressed and Inactive when the switch is released?

Yes	GO to A5

No	If the PID displays Active all the time, GO to Pinpoint Test E If the PID displays Inactive all the time, GO to A9

A5 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) VEHICLE SPEED (VSS) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the Moveable Roof Control Module A (MRCMA) VSS PID.

Does the PID display less than 5 km/h (3 mph) ?

Yes	GO to A6

No	DIAGNOSE the vehicle speed concern. 2.3L REFER to: Electronic Engine Controls . 3.7L REFER to: Electronic Engine Controls . 5.0L REFER to: Electronic Engine Controls .

A6 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) FRONT LATCH SENSOR (FRNT_LATCH_S) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the Moveable Roof Control Module A (MRCMA) FRNT_LATCH_S PID.

Does the PID display Inactive with the top open and Active with the top closed?

Yes	GO to A7

No	GO to Pinpoint Test C

A7 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) CONVERTIBLE TOP LATCH SENSOR VOLTAGE (LTCH_SNSR_V) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the Moveable Roof Control Module A (MRCMA) LTCH_SNSR_V PID.

Is the PID display equal to battery voltage?

Yes	If the vehicle is equipped with convertible top tonneau covers, GO to A8 If the vehicle is not equipped with convertible top tonneau covers, the system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT and INSPECT Moveable Roof Control Module A (MRCMA) C4830 , Moveable Roof Control Module B (MRCMB) C4831 , convertible top switch C9013 and convertible top latch switch C9111 for corrosion, damaged pins, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL NEW as necessary.

No	GO to Pinpoint Test D

A8 CHECK THE CONVERTIBLE TOP TONNEAU COVER SENSOR PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, view the Moveable Roof Control Module A (MRCMA) tonneau cover sensor PID with the tonneau covers installed and removed.

Using a diagnostic scan tool, view the Moveable Roof Control Module B (MRCMB) tonneau cover sensor PID with the tonneau covers installed and removed.

Do the Parameter Identifications (PIDs) display Active with the covers installed and Inactive with the covers removed?

Yes	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT and INSPECT Moveable Roof Control Module A (MRCMA) C4830 , Moveable Roof Control Module B (MRCMB) C4831 , convertible top switch C9013 , convertible top latch switch C9111 , LH tonneau cover sensor C4525 and RH tonneau cover sensor C4526 for corrosion, damaged pins, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL NEW as necessary.

No	GO to Pinpoint Test B

A9 CHECK THE CONVERTIBLE TOP ACTIVATION SWITCH CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect Moveable Roof Control Module B (MRCMB) C4831 .

Disconnect convertible top switch C9013 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-8	Ω	C9013-4

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-8	Ω	C9013-3

Is the resistance less than 3 ohms?

Yes	GO to A10

No	REPAIR the circuit.

A10 CHECK THE CONVERTIBLE TOP ACTIVATION SWITCH GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C9013-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new convertible top switch. REFER to: Convertible Top Switch .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST B : TONNEAU COVER SENSOR FAULTS

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

A tonneau cover sensor is hardwired to the Moveable Roof Control Module A (MRCMA) and a separate tonneau cover sensor is hardwired to the Moveable Roof Control Module B (MRCMB). Each module

sends out a 5 volt reference signal to the respective Hall-effect switch and receives a voltage signal input from the switch when the tonneau cover is installed. When a tonneau cover sensor or circuit is faulted, the convertible top may open, but does not close. Also, depending on the nature of the fault, the message center may display the TOP DISABLED - REMOVE COVERS.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1070:12	Tonneau Lid Piston Out Sensor: Circuit Short To Battery	This DTC sets if the tonneau cover sensor voltage signal sent to the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB) is shorted to battery voltage.
B1070:14	Tonneau Lid Piston Out Sensor: Circuit Short To Ground or Open	This DTC sets if the tonneau cover sensor voltage signal sent to the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB) is shorted to ground or open.
B1070:29	Tonneau Lid Piston Out Sensor: Signal Invalid	This DTC sets if the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB) or receives an implausible signal from the tonneau cover sensor.

Possible Sources

- Wiring, terminals or connectors
- LH tonneau cover sensor
- RH tonneau cover sensor
- Moveable Roof Control Module A (MRCMA)
- Moveable Roof Control Module B (MRCMB)

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST B : TONNEAU COVER SENSOR FAULTS > PINPOINT TEST B : TONNEAU COVER SENSOR FAULTS

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

B1 CHECK FOR RETURNING DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

With the convertible top in the open position, press and hold the convertible top UP switch for 2 seconds.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) self-tests.

Does the DTC return?

Yes	If DTC B1070:12 or B1070:29 is present, GO to B2 If DTC B1070:14 is present, GO to B3

No	The condition that caused the DTC to set is not present at this time. The concern may have been caused by a loose or corroded electrical connector or an intermittent concern. DISCONNECT and INSPECT the suspect tonneau cover sensor C4525 or C4526, and Moveable Roof Control Module A (MRCMA) C4830 or Moveable Roof Control Module B (MRCMB) C4831 for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL new components as necessary. For all other Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: Moveable Roof Control Module A (MRCMA) or DTC Chart: Moveable Roof Control Module B (MRCMB).

B2 CHECK THE TONNEAU COVER SENSOR SIGNAL CIRCUIT FOR A SHORT TO BATTERY VOLTAGE

Ignition OFF.

If Moveable Roof Control Module A (MRCMA) set the DTC:

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect LH tonneau cover sensor C4525.

If Moveable Roof Control Module B (MRCMB) set the DTC:

Moveable Roof Control Module B (MRCMB) C4831 .

Disconnect RH tonneau cover sensor C4526.

Ignition ON.

For Moveable Roof Control Module A (MRCMA) measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-2		Ground

For Moveable Roof Control Module B (MRCMB) measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	If DTC B1070:29 **is not** present, INSTALL a new tonneau cover sensor. REFER to: Tonneau Cover Sensor . If DTC B1070:29 **is** present, GO to B3

B3 CHECK THE TONNEAU COVER SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

If Moveable Roof Control Module A (MRCMA) set the DTC:

Disconnect Moveable Roof Control Module A (MRCMA) C4830 (if not previously disconnected).

Disconnect the LH tonneau cover sensor C4525 (if not previously disconnected).

If Moveable Roof Control Module B (MRCMB) set the DTC:

Moveable Roof Control Module B (MRCMB) C4831 (if not previously disconnected).

Disconnect the RH tonneau cover sensor C4526 (if not previously disconnected).

For Moveable Roof Control Module A (MRCMA) measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-2	Ω	Ground

For Moveable Roof Control Module B (MRCMB) measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	If DTC B1070:29 **is not** present, INSTALL a new tonneau cover sensor. REFER to: Tonneau Cover Sensor . If DTC B1070:29 **is** present, GO to B4

No	REPAIR the circuit.

B4 CHECK THE TONNEAU COVER SENSOR SIGNAL CIRCUIT FOR AN OPEN

For Moveable Roof Control Module A (MRCMA) measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-2	Ω	C4525-1

For Moveable Roof Control Module B (MRCMB) measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-2	Ω	C4526-1

Is the resistance less than 3 ohms?

Yes	GO to B5

No	REPAIR the circuit.

B5 CHECK THE TONNEAU COVER SENSOR SIGNAL CIRCUIT FOR A SHORT TOGETHER

For Moveable Roof Control Module A (MRCMA) measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-2	Ω	C4830-1

For Moveable Roof Control Module B (MRCMB) measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-2	Ω	C4831-1

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new tonneau cover sensor. REFER to: Tonneau Cover Sensor .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST C : B1078:12, B1078:14, B1078:29

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

The convertible top latch switch is hardwired to the Moveable Roof Control Module A (MRCMA). The Moveable Roof Control Module A (MRCMA) sends out a 5 volt reference signal to the Hall-effect switch and receives a voltage signal input back from the switch when the latch is open. When the latch switch

or circuit is faulted, the convertible top may close, but does not open. Also, depending on the nature of the fault, the message center may display the TOP NOT SECURE. The convertible top latch switch is part of the convertible roof latch and striker assembly.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1078:12	Convertible Top Latched Sensor: Circuit Short To Battery	This DTC sets if the convertible top latch switch voltage signal sent to the Moveable Roof Control Module A (MRCMA) is shorted to battery voltage.
B1078:14	Convertible Top Latched Sensor: Circuit Short To Ground or Open	This DTC sets if the convertible top latch switch voltage signal sent to the Moveable Roof Control Module A (MRCMA) is shorted to ground or open.
B1078:29	Convertible Top Latched Sensor: Signal Invalid	This DTC sets if the Moveable Roof Control Module A (MRCMA) receives an implausible signal from the convertible top latch switch.

Possible Sources

- Wiring, terminals or connectors
- Convertible top latch assembly
- Moveable Roof Control Module A (MRCMA)

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST C : B1078:12, B1078:14, B1078:29 > PINPOINT TEST C : B1078:12, B1078:14, B1078:29

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

C1 CHECK FOR RETURNING DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

With the convertible top in the closed position, press and hold the convertible top DOWN switch for 2 seconds.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) self-test.

Does the DTC return?

Yes	If DTC B1078:12 or B1078:29 is present, GO to C2 If DTC B1078:14 is present, GO to C3

No	The condition that caused the DTC to set is not present at this time. The concern may have been caused by a loose or corroded electrical connector or an intermittent concern. DISCONNECT and INSPECT convertible top latch switch C9111 and Moveable Roof Control Module A (MRCMA) C4830 for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL new components as necessary. For all other Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: Moveable Roof Control Module A (MRCMA).

C2 CHECK THE CONVERTIBLE LATCH SWITCH SIGNAL CIRCUIT FOR A SHORT TO BATTERY VOLTAGE

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect convertible top latch switch C9111 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-7		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	If DTC B1078:29 **is not** present, INSTALL a new convertible top latch switch. REFER to: Convertible Top Front Striker . If DTC B1078:29 **is** present, GO to C3

C3 CHECK THE CONVERTIBLE LATCH SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 (if not previously disconnected).

Disconnect convertible top latch switch C9111 (if not previously disconnected).

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-7	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	If DTC B1078:29 **is not** present, INSTALL a new convertible top latch switch. REFER to: Convertible Top Front Striker . DTC B1078:29 **is** present, GO to C4

No	REPAIR the circuit.

C4 CHECK THE CONVERTIBLE LATCH SWITCH SIGNAL CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-7	Ω	C9111-1

Is the resistance less than 3 ohms?

Yes	GO to C5

No	REPAIR the circuit.

C5 CHECK THE CONVERTIBLE LATCH SWITCH SIGNAL CIRCUIT FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-7	Ω	C4830-1

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new convertible top latch switch. REFER to: Convertible Top Front Striker .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST D : P1240:1C

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

The convertible top latch switch and the LH tonneau cover switch are hardwired to the Moveable Roof Control Module A (MRCMA). The Moveable Roof Control Module A (MRCMA) sends battery voltage to both Hall-effect switches and back to the Moveable Roof Control Module A (MRCMA) for fault detection purposes. When one of the switches or the volt reference circuit is faulted, the convertible top does not operate.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1240:1C	Sensor Power Supply: Circuit Voltage Out of Range	This DTC sets if the convertible top latch switch voltage signal sent to the Moveable Roof Control Module A (MRCMA) is below a predetermined limit.

Possible Sources

- Wiring, terminals or connectors
- Moveable Roof Control Module A (MRCMA)

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST D : P1240:1C > PINPOINT TEST D : P1240:1C

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

D1 CHECK FOR RETURNING DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) self-test.

Does DTC P1240:1C return?

Yes	GO to D1

No	The condition that caused the DTC to set is not present at this time. The concern may have been caused by a loose or corroded electrical connector or an intermittent concern. DISCONNECT and INSPECT LH tonneau cover sensor C4525, convertible top latch

	switch C9111 and Moveable Roof Control Module A (MRCMA) C4830 for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL new components as necessary. For all other Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: Moveable Roof Control Module A (MRCMA).

D2 CHECK THE SENSOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect convertible top latch switch C9111 .

Disconnect LH tonneau cover sensor C4525.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-1	Ω	C9111-2

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-1	Ω	LH Tonneau Cover Connector Pin-2

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-1	Ω	C4830-3

Are the resistances less than 3 ohms?

Yes	GO to D3

No	REPAIR the circuit.

D3 CHECK THE SENSOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-1	Ω	Ground
C4830-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D4

No	REPAIR the circuit.

D4 VERIFY ALL WIRING CONNECTIONS

Disconnect all Moveable Roof Control Module A (MRCMA) related in-line connectors. Refer to Convertible Top for schematic and connector information.

Using a good light source, inspect Moveable Roof Control Module A (MRCMA) C4830 and related in-line connectors for the following:

corrosion - install new connector or terminal and clean the module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to D5

No	REPAIR the affected connectors or terminals. Refer to OEM CONNECTOR REPAIR PROCEDURES for schematic and connector information.

D5 VERIFY SENSOR VOLTAGE SUPPLY

Connect Moveable Roof Control Module A (MRCMA) C4830 .

Connect convertible top latch switch C9111 .

Connect LH tonneau cover sensor C4525.

Connect all disconnected in-line connectors.

Make sure all connectors fully seat and latch correctly.

Ignition ON.

Measure and record the battery

Using a diagnostic scan tool, view the Moveable Roof Control Module A (MRCMA) convertible top latch sensor voltage (LTCH_SNSR_V) PID and the module supply voltage (VOLT_SUPPLY) PID.

Do both Parameter Identifications (PIDs) display greater than 9 volts?

Yes	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

No	If **both** Parameter Identifications (PIDs) display 9 volts or less, or **only** the VOLT_SUPPLY PID displays 9 volts or less, GO to D6 If the VOLT_SUPPLY PID displays **greater than** 9 volts and the LTCH_SNSR_V PID displays **9 volts or less** , CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Moveable Roof Control Module A (MRCMA). REFER to: Convertible Top Motor .

D6 CHECK THE MODULE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN OR EXCESSIVE RESISTANCE

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Remove BJB fuse 17 (20A).

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-6	Ω	BJB Fuse 17 (20A) Output Socket

Is the resistance less than 3 ohms?

Yes	DIAGNOSE the battery and charging system. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST E : B1267:24, B1268:24, U2013:64

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

The convertible top switch is a 3-position rocker switch, the UP circuit is hardwired to the Moveable Roof Control Module A (MRCMA) and the DOWN circuit is hardwired to the Moveable Roof Control Module B (MRCMB). When the switch is pressed, the applicable module receives a ground signal and roof operation is initiated. The switch is designed so that both circuits (UP and DOWN) cannot be activated at the same time. The modules share the convertible top switch status on the MS-CAN. When the switch or one of the circuits is faulted, the convertible top does not operate. The convertible top

switch is located in the overhead console and is serviced with the console assembly.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1267:24	Convertible / Folding Top Activation Up Switch: Circuit Stuck High	This DTC sets if the Moveable Roof Control Module A (MRCMA) detects a ground signal on the convertible roof switch for longer than 30 seconds.
B1268:24	Convertible / Folding Top Activation Down Switch: Circuit Stuck High	This DTC sets if the Moveable Roof Control Module B (MRCMB) detects a ground signal on the convertible roof switch for longer than 30 seconds.
U2013:64	Switch Pack: Signal Plausibility Failure	This DTC sets if both control modules detect a ground signal at the same time.

Possible Sources

- Wiring, terminals or connectors
- Convertible top switch

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST E : B1267:24, B1268:24, U2013:64 > PINPOINT TEST E : B1267:24, B1268:24, U2013:64

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

E1 CHECK FOR RETURNING DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Attempt to open and close the convertible top using the convertible top switch.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) self-tests.

Does DTC B1267:24, B1268:24 or U2013:64 return?

Yes	If DTC B1267:24 or U2013:64 is present, GO to E2 If DTC B1268:24 is present, GO to E3

No	The condition that caused the DTC to set is not present at this time. The concern may have been caused by a loose or corroded electrical connector or an intermittent concern. DISCONNECT and INSPECT convertible top switch C9013 , Moveable Roof Control Module A (MRCMA) C4830 and Moveable Roof Control Module B (MRCMB) C4831 for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL new components as necessary. For all other Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: Moveable Roof Control Module A (MRCMA) or DTC Chart: Moveable Roof Control Module B (MRCMB).

E2 CHECK THE CONVERTIBLE TOP SWITCH UP CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect convertible top switch C9013 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4830-8	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	If DTC U2013:64 **is not** present, INSTALL a new convertible top switch. REFER to: OVERHEAD CONSOLE . If DTC U2013:64 **is** present, GO to E3

No	REPAIR the circuit.

E3 CHECK THE CONVERTIBLE TOP SWITCH DOWN CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Moveable Roof Control Module B (MRCMB) C4831 .

Disconnect convertible top switch C9013 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4831-8	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new convertible top switch. REFER to: Overhead Console .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST F : U0140:00

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the BCM sends messages to the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) through the GWM over the HS-CAN1. If the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB) does not receive these messages within a certain time frame, the module sets a DTC. For information on the messages sent to the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) by the BCM, refer to the Network Message Chart. REFER to: Convertible Top - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	This DTC sets in the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) if the accessory delay status or ignition status message is missing from the BCM.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- GWM
- BCM

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST F : U0140:00 > PINPOINT TEST F : U0140:00

F1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Do both the BCM and the GWM pass the Network Test?

Yes	GO to F2

No	DIAGNOSE the no communication with the BCM or GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

F2 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) AND MOVEABLE ROOF CONTROL MODULE B (MRCMB) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) self-tests.

Retrieve and record all Diagnostic Trouble Codes (DTCs) from both modules.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from both modules.

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) self-tests.

Is DTC U0140:00 retrieved again?

Yes	GO to F3

No	GO to F6

F3 RETRIEVE ANY DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE GWM (GATEWAY MODULE A) SELF-TEST

Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE all GWM Diagnostic Trouble Codes (DTCs). REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to F4

F4 RETRIEVE ANY DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, carry out the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the BCM?

Yes	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) .

No	GO to F5

F5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:XX SET IN OTHER MODULES

Using the diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140:xx set in 1 or more modules in addition to the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB)?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	GO to F6

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

F6 CHECK THE ELECTRICAL CONNECTORS

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect Moveable Roof Control Module B (MRCMB) C4831 .

Disconnect GWM C2431 .

Disconnect BCM C2280G .

Using a good light source, inspect each connector for the following:

corrosion - install new connector or terminal and clean the module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

Using a suitable mating terminal, check the following connector terminals for deformed or enlarged contacts:

C4830-9

C4830-10

C4831-9

C4831-10

C2431-19

C2431-20

C2431-22

C2431-23

C2280G-9

C2280G-10

Are all the connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	The system is operating correctly at this time. The DTC may have been set due to high network traffic, a loose connector, a corroded connector or an intermittent fault condition. ADDRESS the root cause of any connector or pin issues.

No	REPAIR the affected connector. Refer to OEM CONNECTOR REPAIR PROCEDURES for schematic and connector information.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST G : U0142:00

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

When the convertible top is opened, the BCMB sends an "open" request to the rear window smart motors. Once the windows are open, the smart motors send a reply to the BCMB. The BCMB then sends a message to the Moveable Roof Control Module A (MRCMA) over the MS-CAN. If the Moveable Roof Control Module A (MRCMA) does not receive this message within a certain time frame, the module sets a DTC. For information on the messages sent to the Moveable Roof Control Module A (MRCMA) by the BCMB, refer to the Network Message Chart. REFER to: Convertible Top - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0142:00	Lost Communication With Body Control Module "B": No Sub Type Information	This DTC sets in the Moveable Roof Control Module A (MRCMA) if the rear window down status message is missing from the BCMB.

Possible Sources

- Wiring, terminals or connectors

- Network communication concern
- BCMB

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST G : U0142:00 > PINPOINT TEST G : U0142:00

G1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Does the BCMB pass the Network Test?

Yes	GO to G2

No	DIAGNOSE the no communication with the BCMB. REFER to: MODULE COMMUNICATIONS NETWORK .

G2 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) self-test.

Retrieve and record all Diagnostic Trouble Codes (DTCs) from the Moveable Roof Control Module A (MRCMA).

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the Moveable Roof Control Module A (MRCMA).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) self-test.

Is DTC U0142:00 retrieved again?

Yes	GO to G3

No	GO to G5

G3 RETRIEVE ANY DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCMB (BODY CONTROL MODULE B) SELF-TEST

Using a diagnostic scan tool, carry out the BCMB self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the BCMB?

Yes	DIAGNOSE all BCMB Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module B (BCMB) .

No	GO to G4

G4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0142:XX SET IN OTHER MODULES

Using the diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0142:xx set in 1 or more modules in addition to the Moveable Roof Control Module A (MRCMA)?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCMB. REFER to: Body Control Module B (BCMB) .

No	GO to G5

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

G5 CHECK THE ELECTRICAL CONNECTORS

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect BCMB C4368A .

Using a good light source, inspect each connector for the following:

corrosion - install new connector or terminal and clean the module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

Using a suitable mating terminal, check the following connector terminals for deformed or enlarged contacts:

C4830-9

C4830-10

C4368A-11

C4368A-23

Are both connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	The system is operating correctly at this time. The DTC may have been set due to high network traffic, a loose connector, a corroded connector or an intermittent fault condition. ADDRESS the root cause of any connector or pin issues.

No	REPAIR the affected connector. Refer to OEM CONNECTOR REPAIR PROCEDURES for schematic and connector information.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST H : U0294:00

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the PCM sends messages to the Moveable Roof Control Module A (MRCMA) through the GWM over the HS-CAN1. If the Moveable Roof Control Module A (MRCMA) does not receive these messages within a certain time frame, the module sets a DTC. For information on the messages sent to the Moveable Roof Control Module A (MRCMA) by the PCM, refer to the Network Message Chart. REFER to: Convertible Top - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0294:00	Lost Communication With Powertrain Control Monitor Module: No Sub Type Information	This DTC sets in the Moveable Roof Control Module A (MRCMA) if the vehicle speed message is missing from the PCM.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- PCM

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST H : U0294:00 > PINPOINT TEST H : U0294:00

H1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Do both the PCM and the GWM pass the Network Test?

Yes	GO to H2

No	DIAGNOSE the no communication with the PCM or GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

H2 CHECK THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) self-test.

Retrieve and record all Diagnostic Trouble Codes (DTCs) from the Moveable Roof Control Module A (MRCMA).

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the Moveable Roof Control Module A (MRCMA).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) self-test.

Is DTC U0140:00 retrieved again?

Yes	GO to H3

No	GO to H6

Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE all GWM Diagnostic Trouble Codes (DTCs). REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to H4

H4 RETRIEVE ANY DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

Using a diagnostic scan tool, carry out the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). 2.3L REFER to: Electronic Engine Controls . 3.7L REFER to: Electronic Engine Controls . 5.0L REFER to: Electronic Engine Controls .

No	GO to H5

H5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0294:XX SET IN OTHER MODULES

Using the diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0294:xx set in 1 or more modules in addition to the Moveable Roof Control Module A (MRCMA)?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. 2.3L REFER to: Powertrain Control Module (PCM) . 3.7L REFER to: Powertrain Control Module (PCM) . 5.0L REFER to: Powertrain Control Module (PCM) .

No	GO to H6

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

H6 CHECK THE ELECTRICAL CONNECTORS

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect GWM C2431 .

For 2.3L engine equipped vehicles, disconnect PCM C1551B .

For 3.7L engine equipped vehicles, disconnect PCM C1381B .

For 5.0L engine equipped vehicles, disconnect PCM C175B .

Using a good light source, inspect each connector for the following:

corrosion - install new connector or terminal and clean the module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

Using a suitable mating terminal, check the following connector terminals for deformed or enlarged contacts:

C4830-9

C4830-10

C2431-19

C2431-20

C2431-22

C2431-23

C1551B-75 ,

C1551B-76 ,

Are all the connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	The system is operating correctly at this time. The DTC may have been set due to high network traffic, a loose connector, a corroded connector or an intermittent fault condition. ADDRESS the root cause of any connector or pin issues.

No	REPAIR the affected connector. Refer to OEM CONNECTOR REPAIR PROCEDURES for schematic and connector information.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST I : U020A:00

Refer to Convertible Top for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the Moveable Roof Control Module B (MRCMB) sends messages to the Moveable Roof Control Module A (MRCMA) over the MS-CAN. If the Moveable Roof Control Module A (MRCMA) does not receive these messages within a certain time frame, the module sets a DTC. For information on the messages sent to the Moveable Roof Control Module A (MRCMA) by the Moveable Roof Control Module B (MRCMB), refer to the Network Message Chart. REFER to: Convertible Top - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U020A:00	Lost Communication With Moveable Roof Control Module "B" (MRCMB): No Sub Type Information	This DTC sets in the Moveable Roof Control Module A (MRCMA) if the convertible top status messages are missing from the Moveable Roof Control Module B

		(MRCMB).

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- Moveable Roof Control Module B (MRCMB)

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST I : U020A:00 > PINPOINT TEST I : U020A:00

I1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

J3 RETRIEVE ANY DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE MOVEABLE ROOF CONTROL MODULE A (MRCMA) SELF-TEST

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA)

self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the Moveable Roof Control Module A (MRCMA)?

Yes	DIAGNOSE all Moveable Roof Control Module A (MRCMA) Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: Moveable Roof Control Module A (MRCMA).

No	GO to J4

J4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0207:XX SET IN OTHER MODULES

Using the diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0207:xx set in 1 or more modules in addition to the Moveable Roof Control Module B (MRCMB)?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Moveable Roof Control Module A (MRCMA). REFER to: Convertible Top Motor .

No	GO to J5

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

J5 CHECK THE ELECTRICAL CONNECTORS

Ignition OFF.

Disconnect Moveable Roof Control Module A (MRCMA) C4830 .

Disconnect Moveable Roof Control Module B (MRCMB) C4831 .

Using a good light source, inspect each connector for the following:

corrosion - install new connector or terminal and clean the module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

Using a suitable mating terminal, check the following connector terminals for deformed or enlarged contacts:

C4830-9

C4830-10

C4831-9

C4831-10

Are both connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	The system is operating correctly at this time. The DTC may have been set due to high network traffic, a loose connector, a corroded connector or an intermittent fault condition. ADDRESS the root cause of any connector or pin issues.

No	REPAIR the affected connector. Refer to OEM CONNECTOR REPAIR PROCEDURES for schematic and connector information.

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST K : REAR WINDOW DOWN FEEDBACK SIGNAL FAULTS

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

After receiving a "window drop" message from the Moveable Roof Control Module A (MRCMA), the BCMB sends a global open request to the 4 window smart motors. Once the windows have fully lowered, the rear window smart motors send a ground signal to the BCMB indicating they are in the full down position. The BCMB then sends a "window down" message to the Moveable Roof Control Module A (MRCMA) and convertible top operation continues. When there is a fault on the circuit between the BCMB and the smart motors or when there is a failure of the BCMB or smart motors, the rear windows do not operate when the convertible top is open or closed which prevents convertible top operation. For additional information on window operation, REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B126E:23	Right Rear Window Fully Down Feedback: Signal Stuck Low	This DTC sets in the BCMB when the accessory delay relay is OFF and the right rear window fully down feedback signal is active (low, indicating a possible short to ground).
B126E:24	Right Rear Window Fully Down Feedback: Signal Stuck High	This DTC sets in the BCMB when the right rear window fully down feedback signal does not indicate "fully down" within 10 seconds of a "window drop" message from the Moveable Roof Control Module A (MRCMA) (indicating a

		possible open circuit).
B126F:23	Left Rear Window Fully Down Feedback: Signal Stuck Low	This DTC sets in the BCMB when the accessory delay relay is OFF and the left rear window fully down feedback signal is active (low, indicating a possible short to ground).
B126F:24	Left Rear Window Fully Down Feedback: Signal Stuck High	This DTC sets in the BCMB when the left rear window fully down feedback signal does not indicate "fully down" within 10 seconds of a "window drop" message from the Moveable Roof Control Module A (MRCMA) (indicating a possible open circuit).

Possible Sources

- Wiring, terminals or connectors
- LH rear window motor
- RH rear window motor
- BCMB

DIAGNOSIS AND TESTING > CONVERTIBLE TOP > PINPOINT TESTS > PINPOINT TEST K : REAR WINDOW DOWN FEEDBACK SIGNAL FAULTS > PINPOINT TEST K : REAR WINDOW DOWN FEEDBACK SIGNAL FAULTS

K1 CHECK FOR MOVEABLE ROOF CONTROL MODULE A (MRCMA) AND MOVEABLE ROOF CONTROL MODULE B (MRCMB) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, carry out the Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) self-tests.

Are any Diagnostic Trouble Codes (DTCs) present in the Moveable Roof Control Module A (MRCMA) or Moveable Roof Control Module B (MRCMB)?

Yes	DIAGNOSE any Moveable Roof Control Module A (MRCMA) and Moveable Roof Control Module B (MRCMB) Diagnostic Trouble Codes (DTCs), before diagnosing any BCMB Diagnostic Trouble Codes (DTCs). GO to DTC Chart: Moveable Roof Control Module A (MRCMA) or DTC Chart: Moveable Roof Control Module B (MRCMB).

No	GO to K2

K2 CHECK FOR RETURNING BCMB (BODY CONTROL MODULE B) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the BCMB Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using the convertible top switch, attempt to operate the convertible roof for a minimum of 10 seconds.

Using a diagnostic scan tool, carry out the BCMB self-test.

Does DTC B126E:23, B126E:24, B126F:23 or B126F:24 return?

Yes	GO to K3

No	The concern may have been caused by a loose or corroded connector causing an intermittent fault condition. DISCONNECT BCMB C4368B , LH rear power window motor C3118 and RH rear power window motor C3119 . INSPECT all 3 connectors for; corrosion, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL new as necessary. For all other BCMB Diagnostic Trouble Codes (DTCs), REFER to: Body Control Module B (BCMB) .

K3 VERIFY REAR WINDOW OPERATION

Using the master window control switch, operate the rear windows.

Do the rear windows operate correctly from the master window control switch?

Yes	For DTC B126E:23 or B126F:23, GO to K4 For DTC B126E:24 or B126F:24, GO to K5

No	DIAGNOSE the inoperative rear windows. REFER to: Glass, Frames and Mechanisms .

K4 CHECK THE REAR WINDOW DOWN FEEDBACK CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect BCMB C4368B .

If DTC B126E:23 is present, disconnect power window motor right rear C3119 .

If DTC B126F:23 is present, disconnect power window motor left rear C3118 .

If DTC B126E:23 is present, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-16	Ω	Ground

If DTC B126F:23 is present, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to K6

No	REPAIR the circuit.

K5 CHECK THE REAR WINDOW DOWN FEEDBACK CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect BCMB C4368B .

If DTC B126E:24 is present, disconnect power window motor right rear C3119 .

If DTC B126F:24 is present, disconnect power window motor left rear C3118 .

If DTC B126E:24 is present, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-16	Ω	C3119-7

If DTC B126F:24 is present, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368B-3	Ω	C3118-7

Is the resistance less than 3 ohms?

Yes	GO to K6

No	REPAIR the circuit.

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

K6 CHECK THE ELECTRICAL CONNECTORS

Ignition OFF.

Disconnect BCMB C4368B .

If DTC B126E:23 or B126E:24 is present, disconnect power window motor right rear C3119

.

If DTC B126F:23 or B126F:24 is present, disconnect power window motor left rear C3118 .

Using a good light source, inspect each connector for the following:

corrosion - install new connector or terminal and clean the module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

Using a suitable mating terminal, check the following connector terminals for deformed or enlarged contacts:

C4368B-3

C4368B-16

C3119-7

C3118-7

Are all connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	INSTALL a new right rear or left rear power window motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

No	REPAIR the affected connector. Refer to OEM CONNECTOR REPAIR PROCEDURES for schematic and connector information.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP ASSEMBLY > REMOVAL

NOTE: Make sure the body of the vehicle is fully covered with fender blankets or equivalent or damage to the finish may result.

NOTE: Removal steps in this procedure may contain installation details.

Many procedure views are with the convertible top in the fully closed position showing tension on the convertible top material.

1.

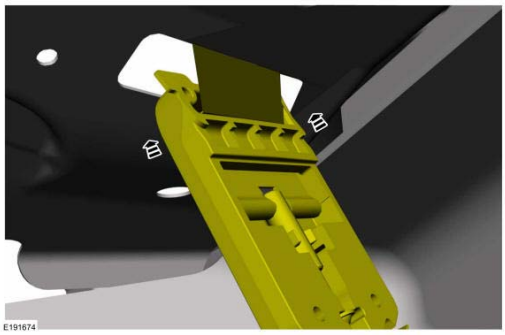
Open the convertible top approximately 50 percent.

NOTE: RH side shown, LH side similar.

2.
From the luggage compartment on both sides, disconnect the convertible top tension belt adjuster bracket from body.

1.

Push in on the rear of the convertible top tension belt adjuster to release the locking tabs.



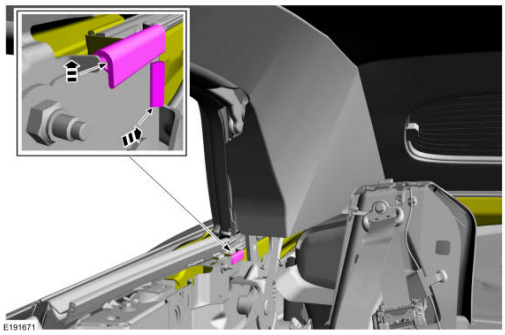
2.

Pull the rear of the convertible top tension belt adjuster down.

NOTE: RH side shown, LH side similar.

3.
On both sides, push convertible top tension belt adjuster bracket through body to interior.

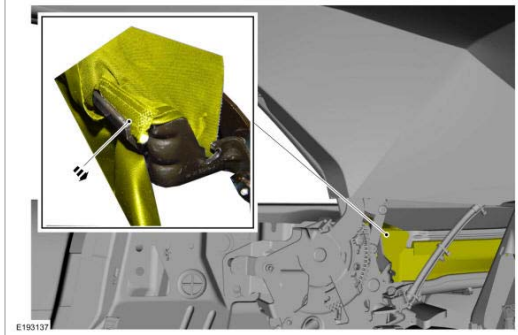
4.



On both sides, remove the rear quarter panel speakers. Vehicles With: Touchscreen Display Refer to: Rear Quarter Panel Speaker . Vehicles With: AM/FM/CD/SYNC Refer to: Rear Quarter Panel Speaker .

5.

Remove the parcel shelf. Refer to: Parcel Shelf - Convertible .



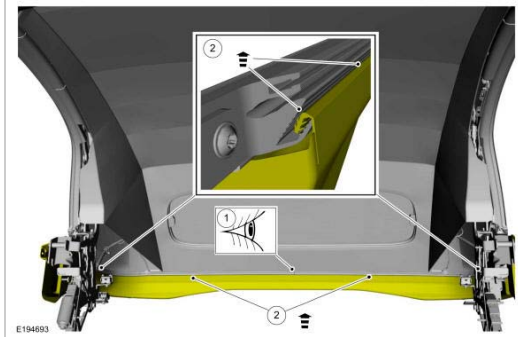
NOTE: RH side shown, LH side similar.

6.
During installation, make sure to position all trough assembly flexible material and convertible top material in the exact location it was removed from. On both sides, disconnect both trough hanging retainers (near the rear window belt moulding) from the body.

NOTE: RH side shown, LH side similar.

7.
During installation, make sure to position all trough assembly flexible material and convertible top material in the exact location it was removed from. On both sides, slide the water bag portion of the trough assembly out of the bracket and position aside.

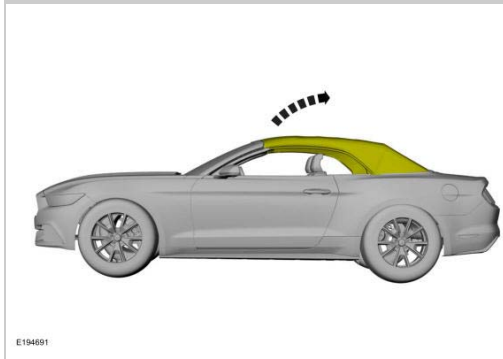
8.



From inside the vehicle, disconnect the trough assembly from the convertible top assembly.

1.

Locate the position of the notch on the floating bow and on the convertible top trough assembly for alignment reference during installation.



2.

Pull the convertible top trough assembly up and out of the floating bow track along the back and the sides.

9.

Fully open the convertible top.

10.

On the RH side only, position aside the RTM and bracket assembly.

1.

Disconnect the RTM wiring harness clips from the speaker bracket.

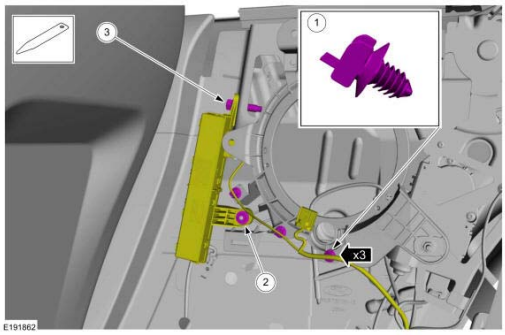
Torque

: 93 lb.in (10.5 Nm)

2.

Remove the RTM bracket nut.

Torque



: 71 lb.in (8 Nm)

3.

Remove the RTM bracket bolt and position the RTM and bracket assembly aside.

Torque

: 17 lb.in (1.9 Nm)

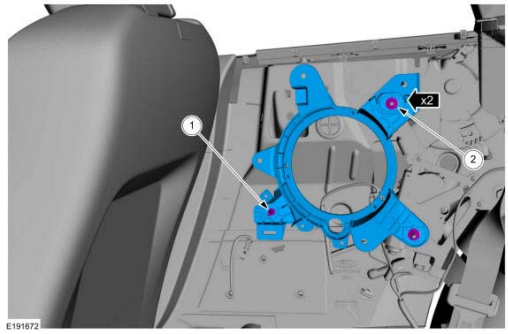
NOTE: RH side shown, LH side similar.

11.
On both sides, remove the rear quarter panel speaker brackets.

1.

On both sides, remove the speaker bracket stud.

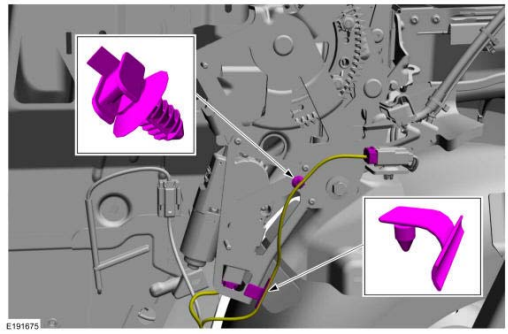
Torque



: 93 lb.in (10.5 Nm)

2.

On both sides, remove the speaker bracket nuts and the speaker bracket.

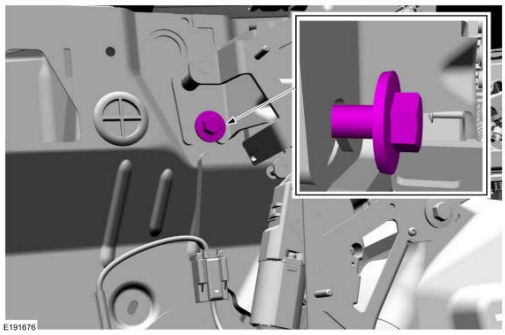


Torque

: 71 lb.in (8 Nm)

NOTE: RH side shown, LH side similar.

12.
On both sides, disconnect the convertible top harness routing clip retainers and connectors and position aside.



NOTE: RH side shown, LH side similar.

13.
Loosen the bolts approximately 13 mm (1/2 in.) for clearance of the guide pins when removing the convertible top assembly. On both sides, loosen the convertible top forward mounting bracket bolts.

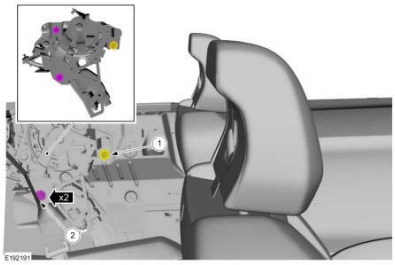
Torque

: 35 lb.ft (48 Nm)

NOTE: LH side shown, RH side similar.

14.
Remove the remaining convertible top assembly bolts.

1.



NOTE: This bolt remains to assist positioning the convertible top assembly during installation.

2.

On both sides, remove the remaining convertible top retaining bolts.

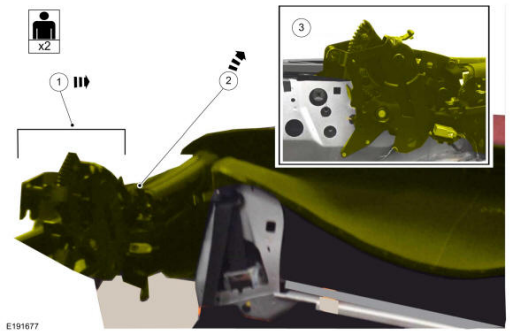
Torque

: 35 lb.ft (48 Nm)

NOTE: Make sure the body of the vehicle is fully covered with fender blankets or equivalent or damage to the finish may result.

15.
Position the convertible top assembly for removal.

1.



Grasping the assembly on both sides in the area of the gears/motors pull the sides together, releasing the guide pins from the body interior sheet metal.

2.

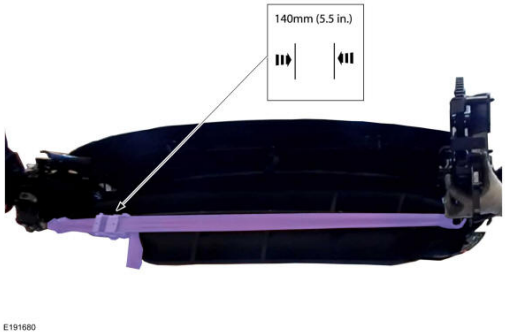
With the help of an assistant, lift/tilt the gears/motors area of the assembly up and rearward, resting the gears/motors area on top of the body interior sheet metal.

3.

Inset is the position off the convertible top gear assembly area after positioning in sub step 2.

16.

Measure the distance between the RH and LH sides of the frame assembly.



NOTE: LH side shown, RH side similar.

17.
On both sides, attach a retaining strap to the bottom of both floating bowl brackets as shown below.

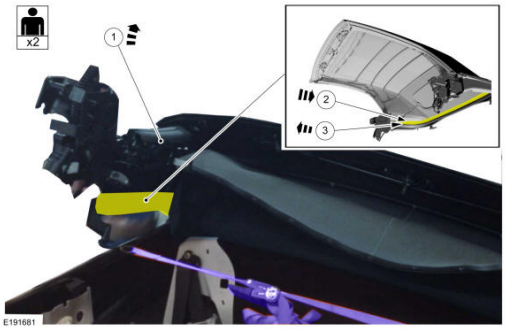
NOTE: Reducing the distance between the floating bow brackets by more than 165 mm (6.5 in.) may cause damage to the assembly.

18.
Tighten the retaining strap so the measurement between the floating bow brackets is reduced by a maximum of 140 mm (5.5 in.).

NOTE: The sub steps should be performed together as a single step.

19.
With the help of an assistant, lift the RH side of the convertible top assembly above the vehicle body.

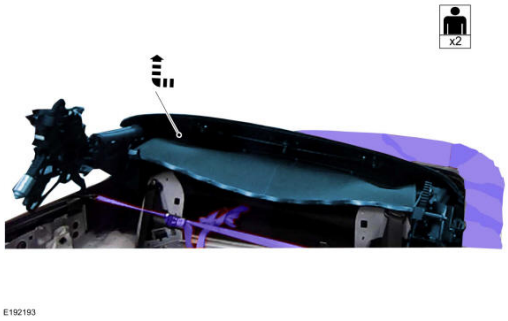
1.



Lift the RH side of the convertible top assembly.

2.

While the convertible top assembly is being raised, push the floating bow area of the convertible top assembly inward until the RH side of the convertible top assembly including the floating bow is fully above the vehicle body.



3.

Pull the floating bow part of the convertible top assembly outward for clearance to lift out the convertible top assembly in the next step.

NOTE: This step and the next step should be performed together as a single step.

20.
With the help of an assistant, move the convertible top assembly toward the RH side of the vehicle and lift the LH side above the vehicle body.

21.

With the help of an assistant, carefully remove the convertible top assembly the rear of the vehicle to a suitable workbench.

NOTE: If the convertible top assembly is being removed to service other convertible top components (not replacing the complete assembly) the motors must be removed to allow free convertible top position changes for access to remove components.

22.

Skip this step if the complete convertible top assembly is being replaced. If the convertible top assembly needs to be repositioned for access to other components when on the workbench, remove both convertible top motors. Refer to: Convertible Top Motor .

REMOVAL AND INSTALLATION > CONVERTIBLE TOP ASSEMBLY > INSTALLATION

1.

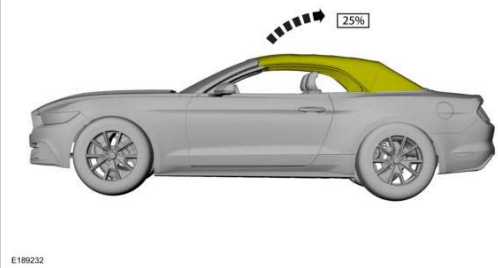
Transfer parts as necessary.

2.

To install, reverse the removal procedure.

3.

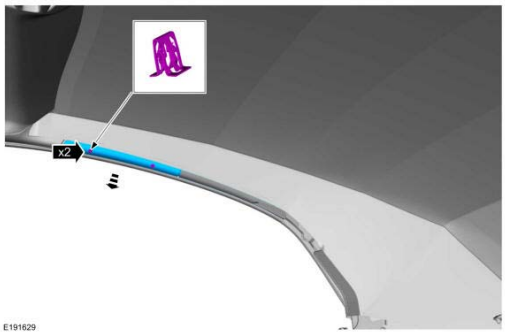
If the complete convertible top assembly was replaced, fully close and latch the convertible top and reopen to initialize the motors.



REMOVAL AND INSTALLATION > CONVERTIBLE TOP CENTER PANEL SIDE WEATHERSTRIP > REMOVAL

NOTE: Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

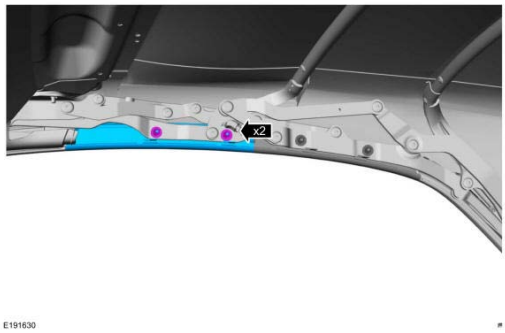
This procedure can be used for any of the 4 convertible top center panel side weatherstrips.



1.

Open the convertible top approximately 25 percent.

NOTE: RH side shown, LH side similar.

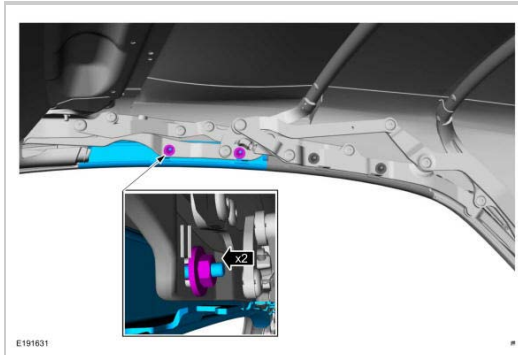


2.
Pull down to remove the convertible top center panel side weatherstrip trim.

NOTE: RH side shown, LH side similar.

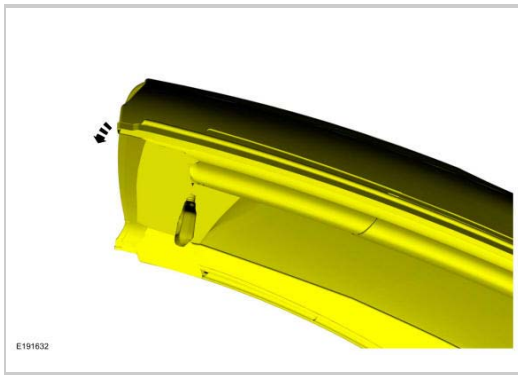
3.
Convertible top headliner removed for clarity.

If any shims are present, note the position for installation. Remove the convertible top center panel side weatherstrip nuts and the convertible top center panel side weatherstrip.



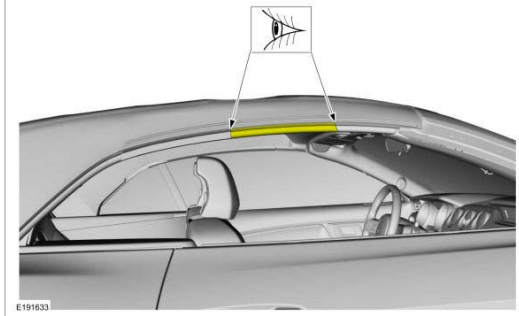
REMOVAL AND INSTALLATION > CONVERTIBLE TOP CENTER PANEL SIDE WEATHERSTRIP > INSTALLATION

NOTE: RH side shown, LH side similar.



1.
Convertible top headliner removed for clarity.

Install with shim if removed with shim. Loose install the convertible top center panel side weatherstrip.

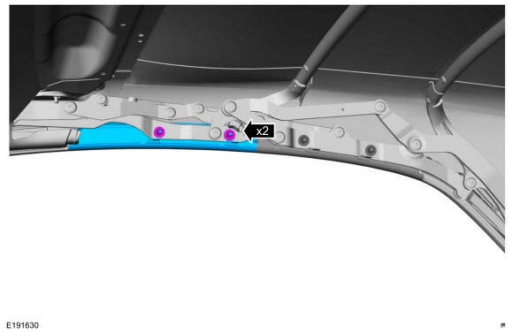


2.

Close the convertible top.

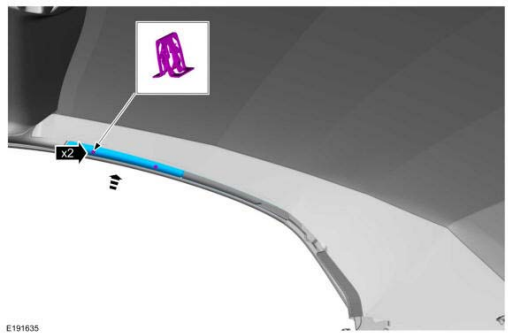
NOTE: RH side shown, LH side similar.

3.
Check for correct alignment of the convertible top center panel side weatherstrip and wiggle to seat properly if needed.



NOTE: Water test the convertible top to verify no water leak exists after repair.

4.
Tighten the convertible top center panel side weatherstrip nuts.



Torque

: 62 lb.in (7 Nm)

NOTE: RH side shown, LH side similar.

5.
Install the convertible top center panel side weatherstrip trim.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT PANEL

Special Tool(s) / General Equipment

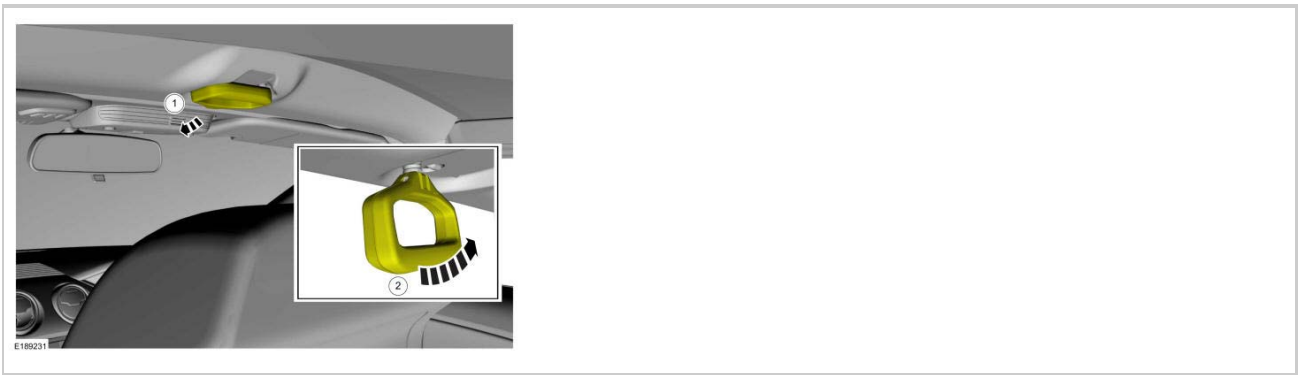
Rivet Gun
Electric Drill

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT PANEL > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.



Release the convertible top.

1.

Lower the convertible top latch handle.

2.

Twist the convertible top latch handle clockwise to release the convertible top.

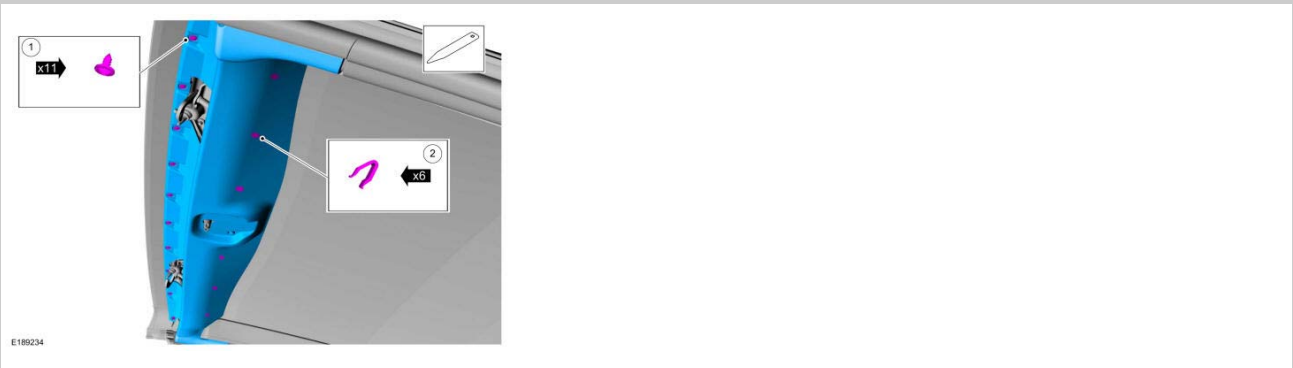
2.

Open the convertible top approximately 25 percent.

3.

Remove the convertible top latch handle.

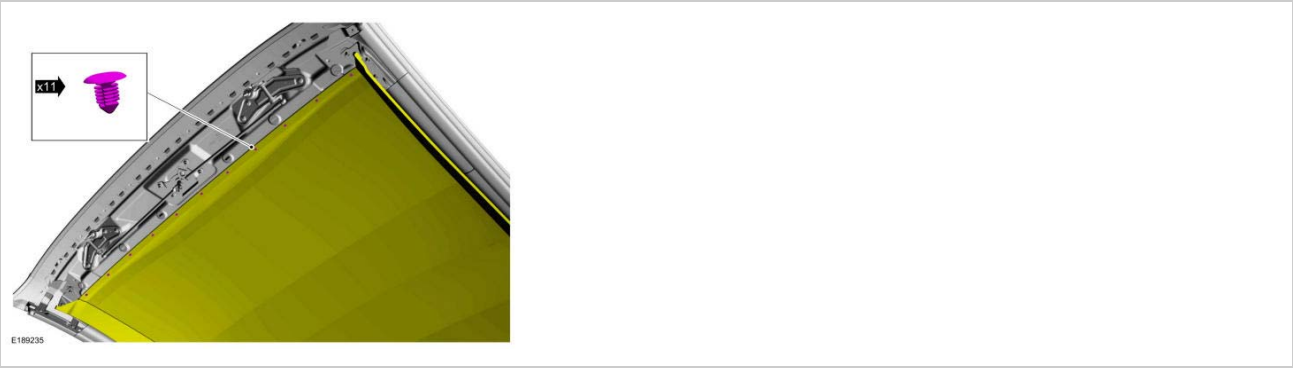
4.



Remove the convertible top front panel trim.

1.

Remove the convertible top front panel trim retainers on the front of the trim.



2.

Release the clips under the back of the convertible top front panel trim and remove the trim.

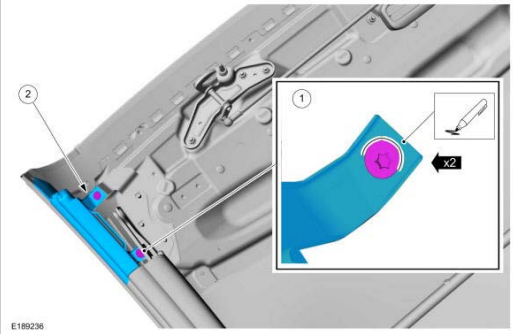
5.

Remove the headliner push pin retainers along the back of the convertible top front panel.

NOTE: LH side shown, RH side similar.

6.
The headliner tension brackets can remain on the convertible top headliner. On both sides.
Remove the headliner tension bracket retainers and brackets from the convertible top front panel.

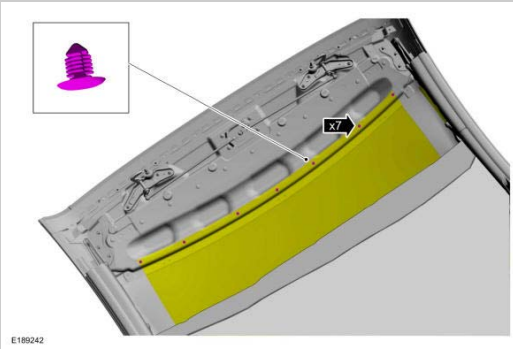
NOTE: RH side shown, LH side similar.



7.
If any shims are present, note the position for installation. On both sides. Remove the convertible top front panel side weatherstrip and bracket assembly.

1.

Mark the convertible top front panel side weatherstrip bracket assembly at the retainers for installation reference.



2.

Remove the convertible top front panel side weatherstrip and bracket assembly retainers and remove the weatherstrip/bracket assembly.

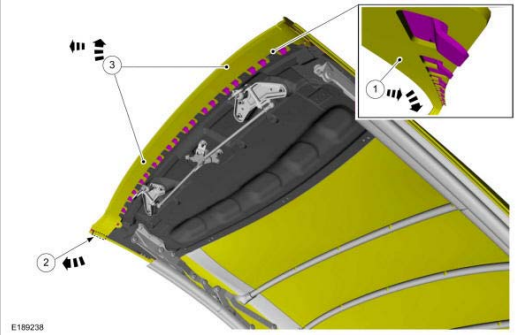
8.

Remove the convertible top material push pin retainers at the back of the convertible top front panel.

9.

Disconnect the convertible top material from the front underside of the convertible top front panel.

1.



Across the front, pull the convertible top material backward and down to release from the convertible top front panel clips.

NOTE: RH side shown, LH side similar.

2.
On both sides, pull the convertible top material from the double sided tape securing the material to the convertible top front panel.

3.

Roll the convertible top material forward and up over the convertible top front panel.

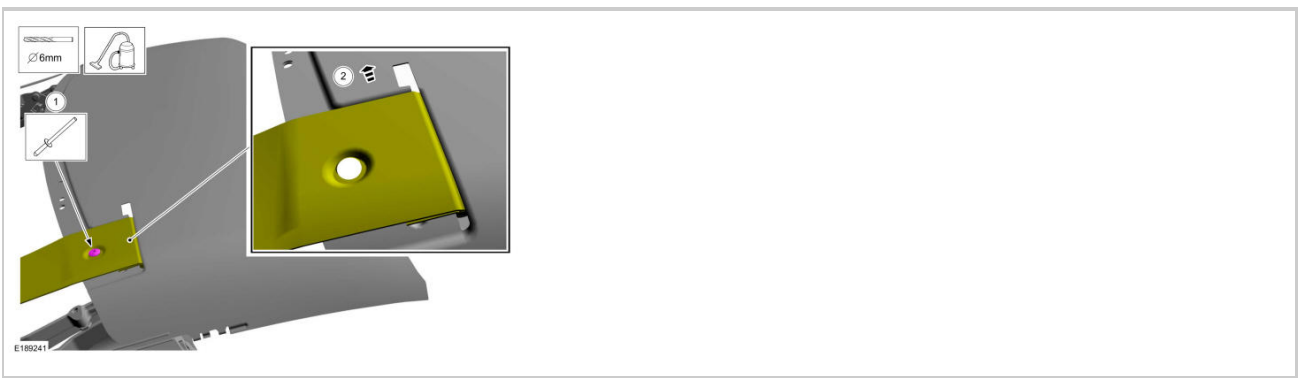
10.

Fold the front of the convertible top material back to the first crossbow to expose the convertible top tension cable end and stay pad rivets.

NOTE: RH side shown, LH side similar.

11.
On both sides.Disconnect the convertible top tension cable from the convertible top front panel.

NOTE: RH side shown, LH side similar.



12.
On both sides. Disconnect the stay pad from the convertible top front panel.

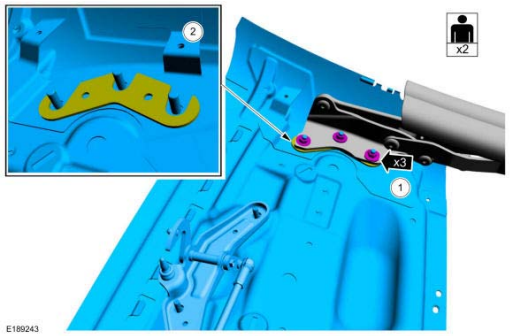
NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

1.
Drill the stay pad rivets from the convertible top front panel. Use the General Equipment: Electric Drill

2.

Slide the stay pad to the center of the convertible top front panel to disconnect the stay pad.

NOTE: LH side shown, RH side similar.



13.
On both sides. Remove the convertible top front panel.

1.

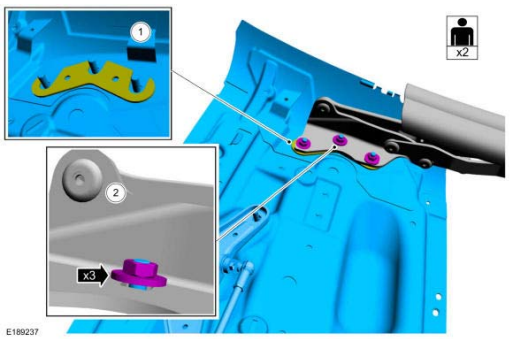
With the help of an assistant.Remove the frame to convertible top front panel retainers.

NOTE: If equipped, retain the shims for installation on both sides.

2.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT PANEL > INSTALLATION

NOTE: LH side shown, RH side similar.



1.
On both sides with the help of an assistant, loose install the convertible top front panel.

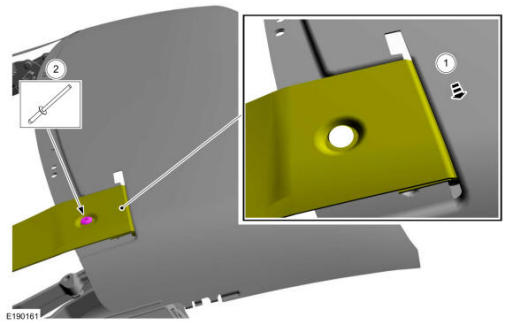
1.

Position the shims as removed.

NOTE: The convertible top front panel retainers are loose installed at this point so the alignment of the panel to frame can be set later in the procedure by closing and latching the convertible top.

2.
Position the convertible top front panel and loose install the retainers.

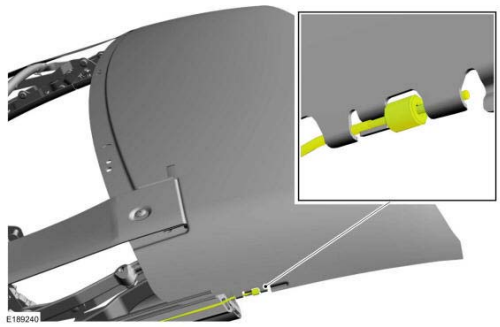
NOTE: RH side shown, LH side similar.



2.
On both sides. Attach the stay pad to the convertible top front panel.

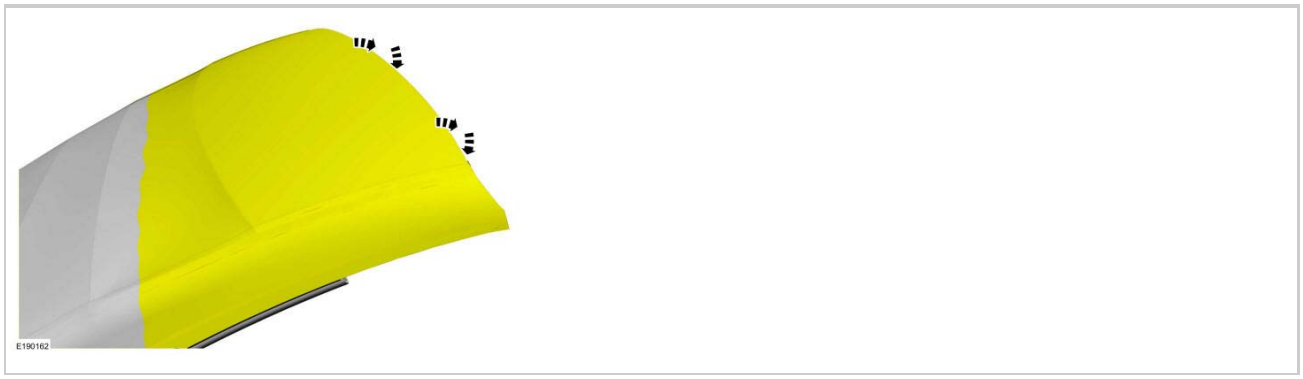
1.

Position the stay pad and slide outward to proper position for installing the rivet.



2.

Install the stay pad rivets attaching the stay pad to the convertible top front panel. Use the General Equipment: Rivet Gun



NOTE: RH side shown, LH side similar.

3.
On both sides. Connect the convertible top tension cable to the convertible top front panel.

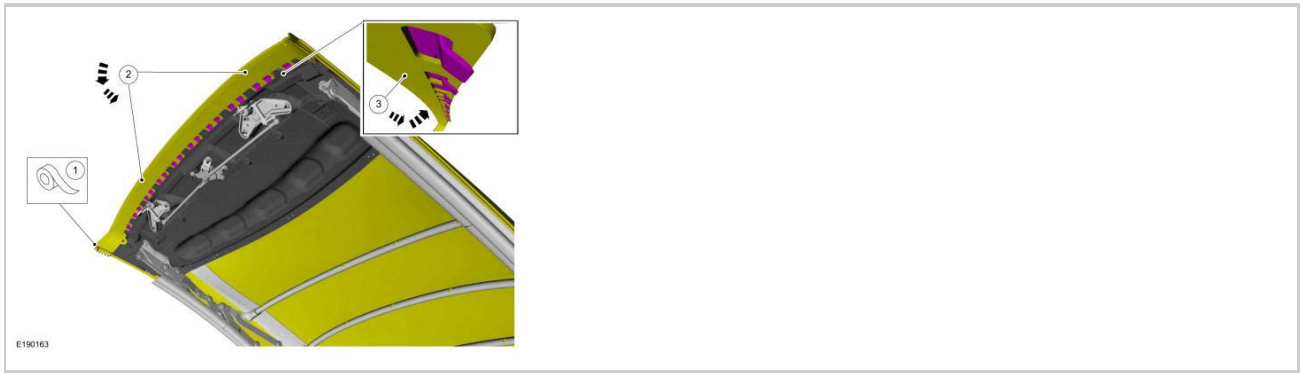
4.

Fold the front of the convertible top material over the front of the convertible top front panel.

5.

Connect the convertible top material to the front underside of the convertible top front panel.

> *NOTE: RH side shown, LH side similar.*



1.
On both sides, apply double sided tape to the convertible top front panel as positioned when removed.

> *NOTE: Sub steps 2 and 3 can be performed together along the front of the convertible top front panel.*

2.
Roll the convertible top material down and rearward over the convertible top front panel.

3.

Across the front, attach the convertible top material over the convertible top front panel clips.

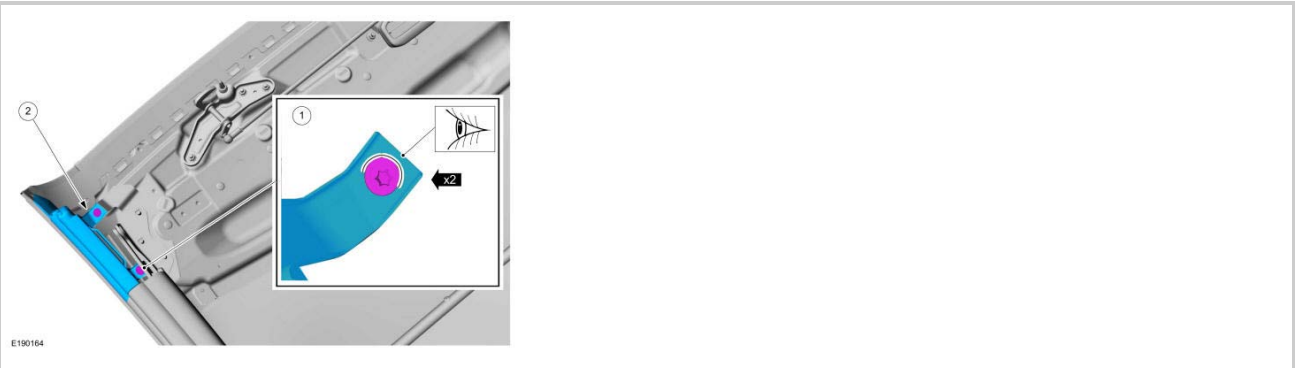
6.

Position the convertible top material and install the push pin retainers along the back of the convertible top front panel.

NOTE: RH side shown, LH side similar.

7.
On both sides. Install the front panel side weatherstrip and bracket assembly.

1.



Align the front panel side weatherstrip and bracket assembly using the marks applied during removal.

2.

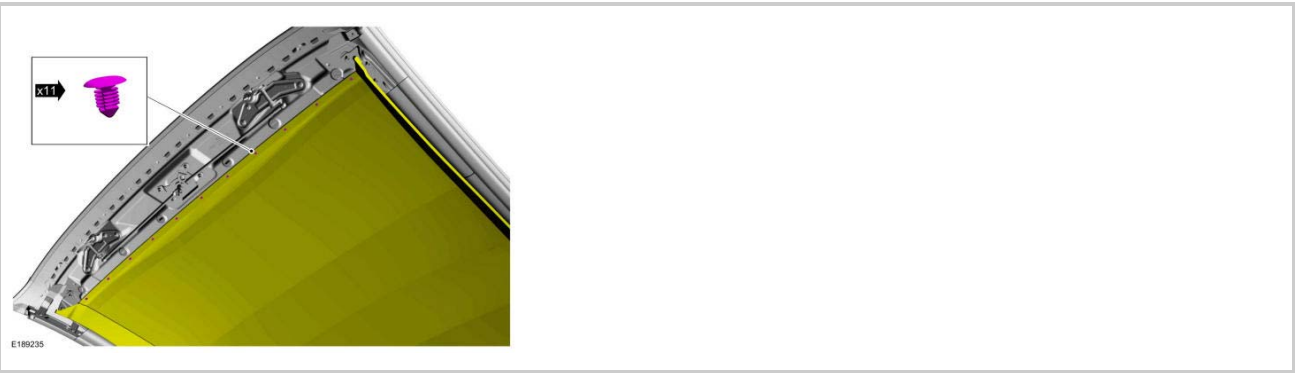
Tighten the front panel side weatherstrip and bracket assembly retainers.

Torque

: 62 lb.in (7 Nm)

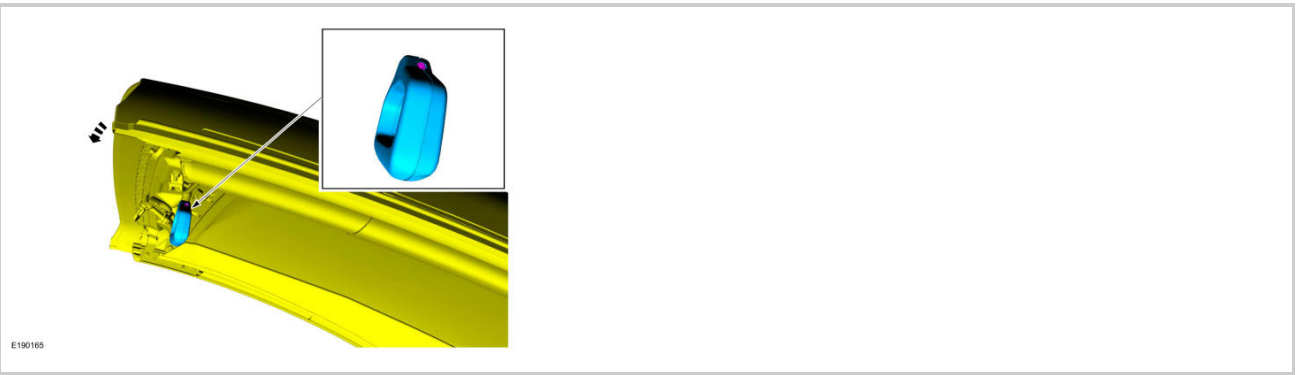
NOTE: Before tightening, make sure to properly align the bracket so that the headliner to back of front panel retainers are also aligned for the next step.

8.
RH side shown, LH side similar. On both sides. Install the headliner tension bracket to the convertible top front panel.



Torque

: 18 lb.in (2 Nm)



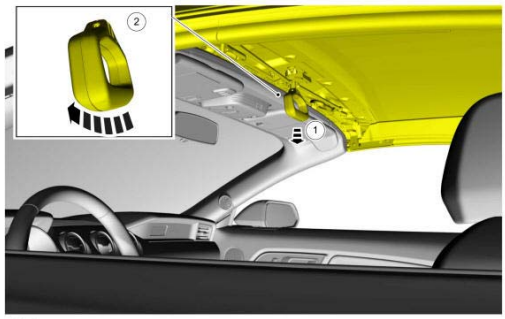
9.

Position the headliner and install the headliner push pin retainers along the back of the convertible top front panel.

NOTE: The retainer does not need to be tightened at this time.

10.
Close the convertible top and install the convertible top latch handle and retainer.

11.



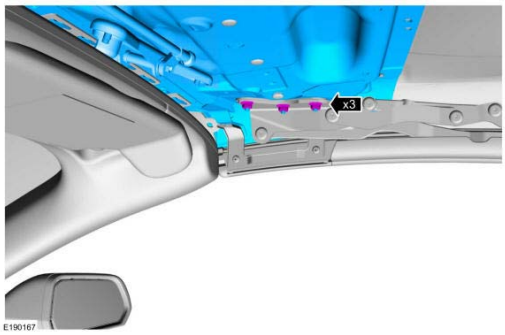
Secure the convertible top in the closed position.

1.

Pull down on the convertible top to position the latching mechanism properly.

2.

Twist the latch handle counter clockwise to fully secure the convertible top.



NOTE: RH side shown, LH side similar.

12.
On both sides. Tighten the convertible top front panel to frame bracket nuts.

Torque

: 106 lb.in (12 Nm)

13.

Twist the convertible top latch handle clockwise to release the convertible top.

14.

Open the convertible top approximately 25%.

15.

Remove the convertible top latch handle.

16.

Install the convertible top front panel trim.

1.

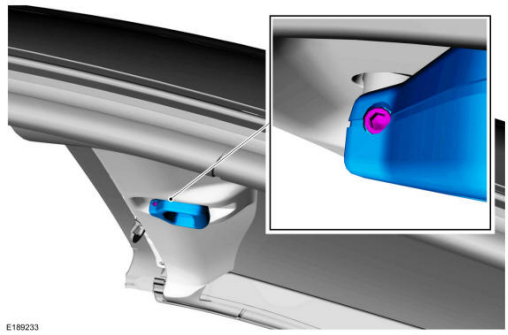
Position the convertible top front panel trim and attach the clips under the back of the convertible top front panel trim.

2.

Install the convertible top front panel trim retainers on the front of the trim.

Torque

: 25 lb.in (2.8 Nm)



17.

Install the convertible top latch handle.

Torque

: 31 lb.in (3.5 Nm)

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT PANEL SIDE WEATHERSTRIP

Special Tool(s) / General Equipment

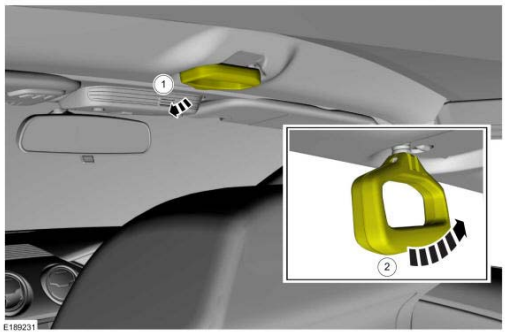
Rivet Gun
Electric Drill
Vise

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT PANEL SIDE WEATHERSTRIP > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

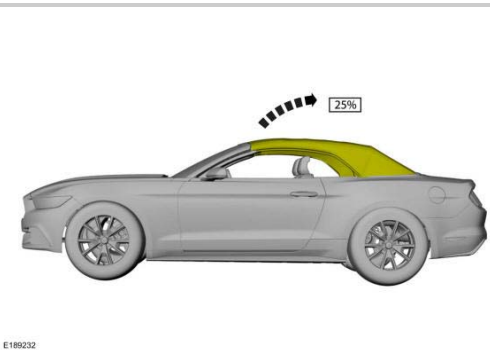
1.



Release the convertible top.

1.

Lower the convertible top latch handle.

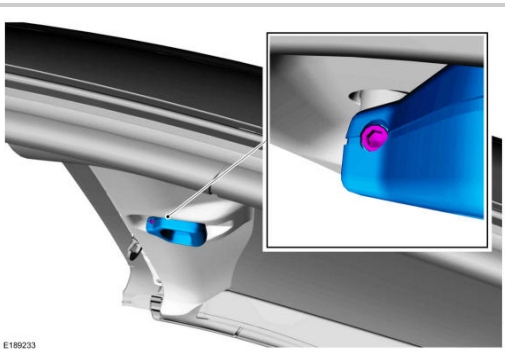


2.

Twist the convertible top latch handle clockwise to release the convertible top.

2.

Open the convertible top approximately 25%.



3.

Remove the convertible top latch handle.

Torque

: 31 lb.in (3.5 Nm)

4.

Remove the convertible top front panel trim.

1.

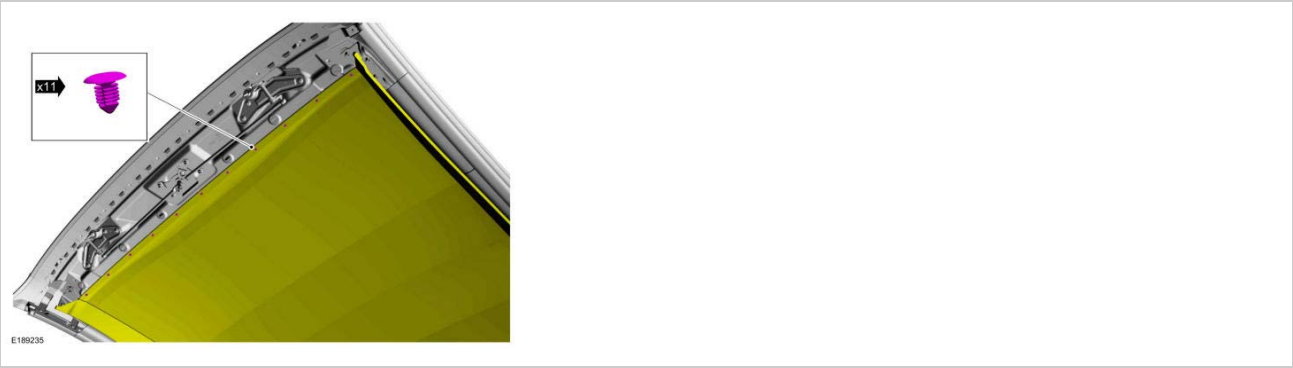
Remove the convertible top front panel trim retainers on the front of the trim.

Torque

: 25 lb.in (2.8 Nm)

2.

Release the clips under the back of the convertible top front panel trim and remove the trim.



5.

Remove the headliner push pin retainers along the back of the convertible top front panel.

Torque

: 25 lb.in (2.8 Nm)

NOTE: LH side shown, RH similar.

6.
Remove the headliner tension bracket retainers and bracket from the convertible top front panel.

Torque

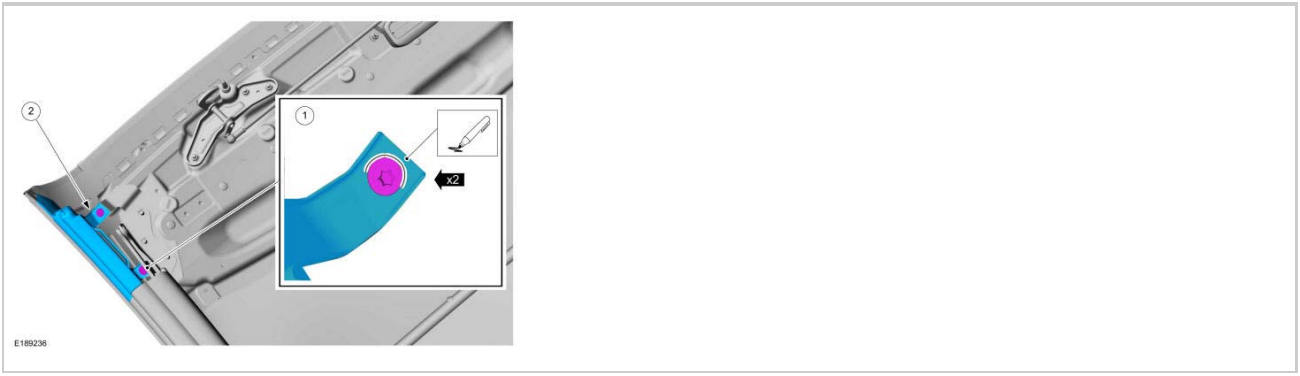
: 25 lb.in (2.8 Nm)

NOTE: Headliner removed for clarity.

7.
RH side shown, LH similar.

Remove the convertible top front panel side weatherstrip and bracket assembly.

NOTE: The reference marks must be used during installation because there is no adjustment for the convertible top front panel side weatherstrip.



1.
Mark the convertible top front panel side weatherstrip bracket assembly at the retainers for installation reference.

2.

Remove the convertible top front panel side weatherstrip and bracket assembly retainers and remove the weatherstrip/bracket assembly.

Torque

: 62 lb.in (7 Nm)

NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

8.

Make sure that the bracket does not bend when positioning in the bench vise or when drilling out the rivets. With the convertible top front panel side weatherstrip and bracket assembly secured in a bench vise. Drill out the retaining rivets. Use the General Equipment: ViseUse the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT PANEL SIDE WEATHERSTRIP > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT STRIKER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Open the convertible top approximately 50 percent.

2.

On both sides, remove the A-pillar trim panels. Refer to: A-Pillar Trim Panel - Convertible .

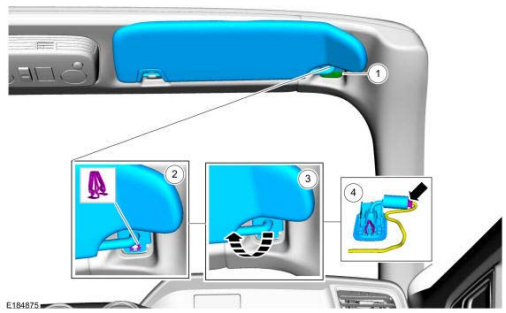
NOTE: RH side shown, LH side similar.

3.
On both sides. Remove the sun visors.

1.

Remove the sun visor cap.

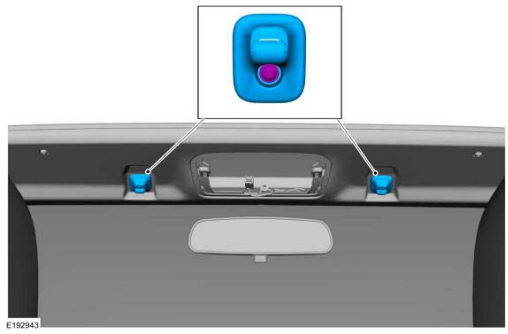
2.



Release the clip.

3.

Remove the sun visor.



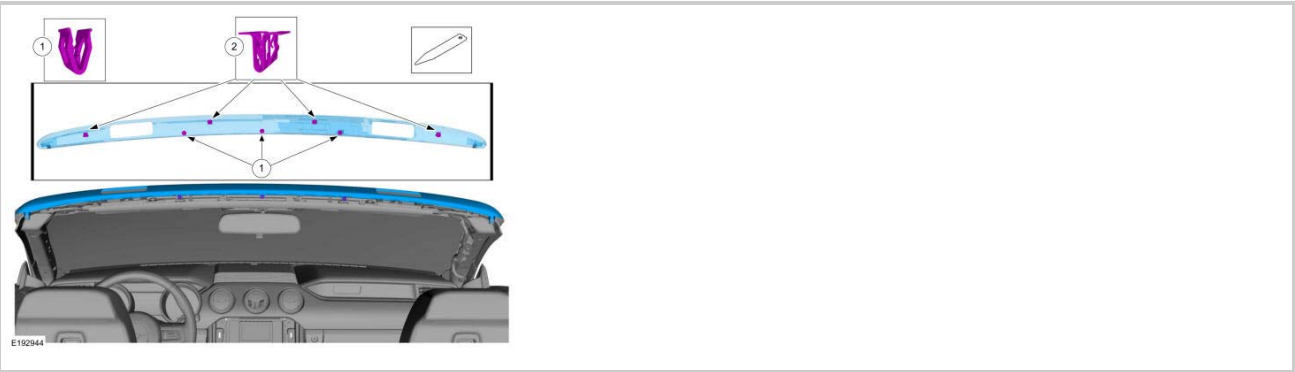
4.

If equipped. Disconnect the electrical connector.

4.

Remove the sun visor latch clips.

5.



Remove the windshield header upper trim panel.

1.

Release the 3 windshield header upper trim panel clips from the lower trim panel.

2.

Release the 4 windshield header upper trim panel clips from the windshield header and remove the upper header trim panel.

NOTE: Wiring harness and overhead console removed for clarity.

6.
Move the windshield header lower trim panel for access to the convertible top striker lower bolt.

1.

Release the 6 windshield header lower trim panel clips from the windshield header.

NOTE: Disconnect the wiring harness as necessary for clearance.

2.
Release the 2 windshield header lower trim panel clips (sun visor clips) from the windshield header and lower the windshield header lower trim panel.

NOTE: side shown, RH side similar.

7.
Remove the convertible top front striker lower bolt and on the LH side, disconnect the harness

connector.

1.

On the LH side only. Disconnect the convertible top latch switch harness connector.

> *NOTE: The convertible top front striker reference marks must be used during installation for proper alignment.*

2.
Mark the convertible top front striker to header panel for installation reference.

3.

Remove the convertible top front striker lower bolt.

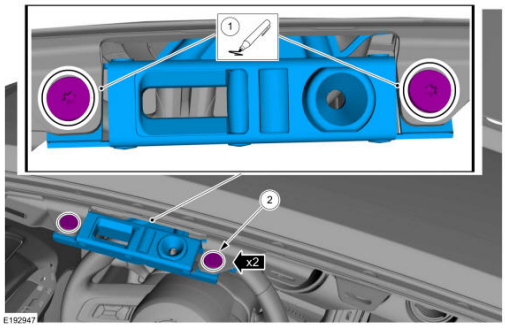
Torque

: 133 lb.in (15 Nm)

> *NOTE: LH side shown, RH side similar.*

8.
Remove the convertible top front striker.

> *NOTE: The convertible top front striker retainer reference marks must be used during installation.*



1.
Mark the convertible top header panel around the retainers for installation reference.

2.

Remove the convertible top front striker upper retainers and the striker.

Torque

: 93 lb.in (10.5 Nm)

REMOVAL AND INSTALLATION > CONVERTIBLE TOP FRONT STRIKER > INSTALLATION

1.

To install, reverse the removal procedure.

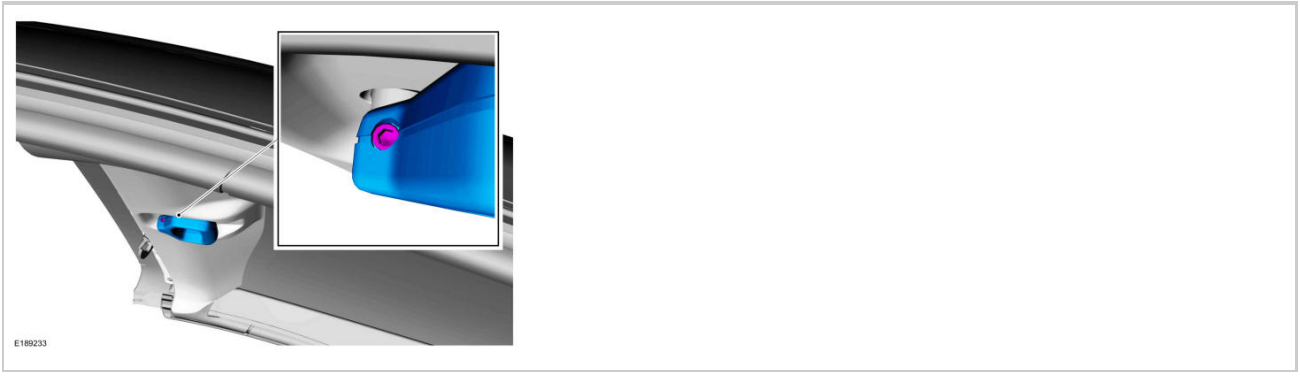
REMOVAL AND INSTALLATION > CONVERTIBLE TOP HEADLINER

Special Tool(s) / General Equipment

Rivet Gun
Electric Drill

REMOVAL AND INSTALLATION > CONVERTIBLE TOP HEADLINER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.



Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.

Remove the convertible top latch handle.

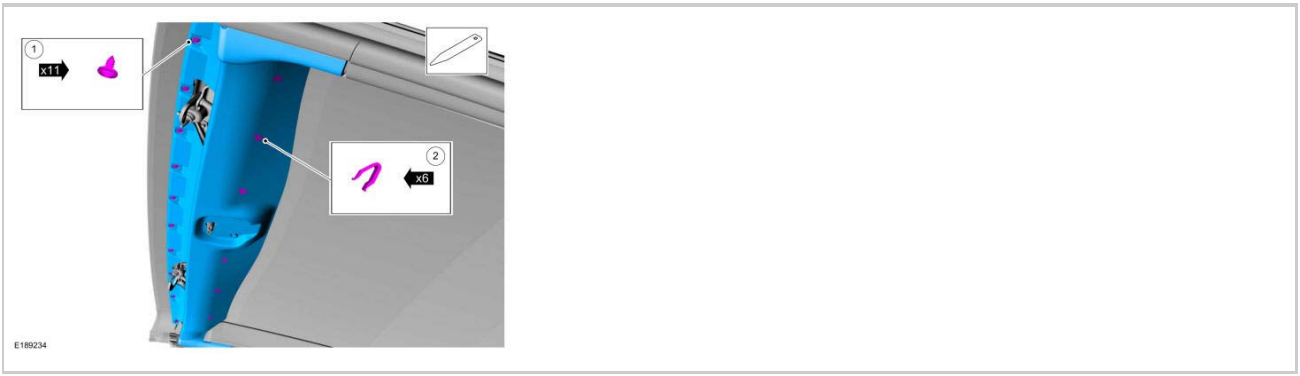
Torque

: 31 lb.in (3.5 Nm)

2.

Remove the convertible top front panel trim.

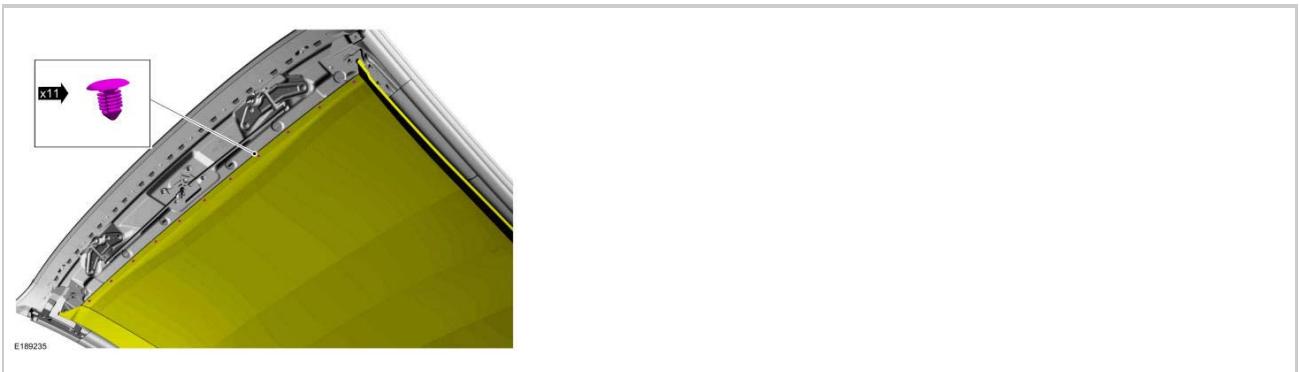
1.



Remove the convertible top front panel trim retainers on the front of the trim.

Torque

: 18 lb.in (2 Nm)

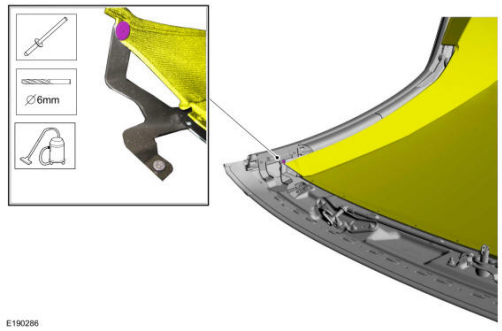


2.

Release the clips under the back of the convertible top front panel trim and remove the trim.

3.

Remove the convertible top headliner push pin type retainers along the back of the convertible top front panel.



NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

4.
LH side shown, RH side similar. On both sides, drill out the rivet to disconnect the convertible top headliner from the convertible top headliner tension bracket. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

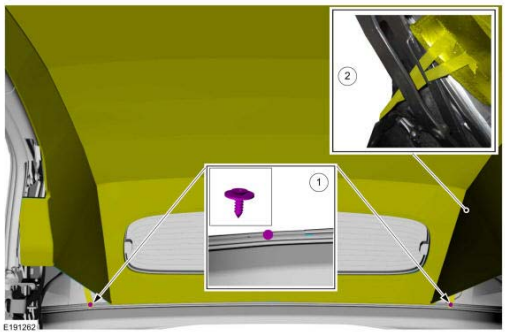
Torque

: 25 lb.in (2.8 Nm)

5.

Remove the convertible top headliner nylon fabric strap from the floating bow.

1.



Remove the convertible top headliner nylon fabric strap retainers from the floating bow.

Torque

: 62 lb.in (7 Nm)

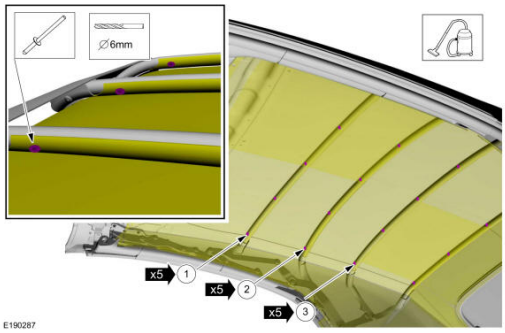
NOTE: During installation, route the nylon fabric strap through the frame as it was removed.

2.
LH side shown, RH side similar. On both sides, route the nylon fabric strap through the frame.

NOTE: Fold the convertible top headliner down between each cross bow after rivet removal to expose the next cross bow.

6.
All rivet shavings must be removed from the vehicle and convertible top assembly. Drill out the cross bow retaining rivets.

NOTE: Inset view is from above with convertible top material removed for clarity.



1.
Remove the rivets from cross bow 1. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

2.

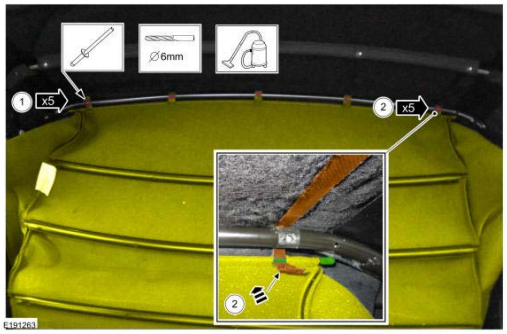
Remove the rivets from cross bow 2.

3.

Remove the rivets from cross bow 3.

7.

Remove the headliner from cross bow 4.



NOTE: All rivet shavings must be removed from the vehicle and convertible

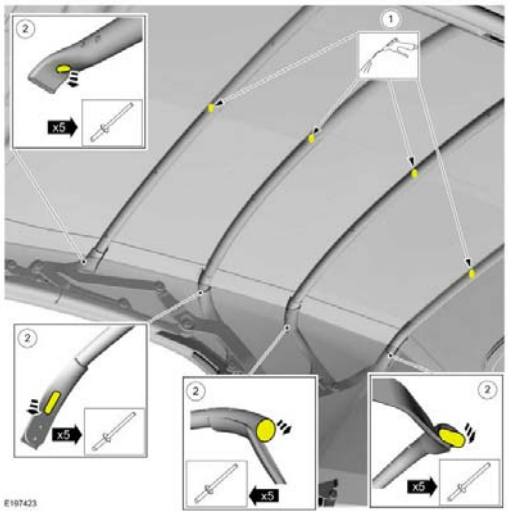
top assembly.

1.
Drill out the rivets from cross bow 4. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

NOTE: The nylon fabric strap has 2 sided tape holding it to cross bow 4 to aid in positioning during installation.

2.
The nylon fabric strap can remain routed over cross bow 4 after pushing through the convertible top headliner. Pull the end of the nylon fabric strap from the cross bar and push through the convertible top headliner to release the convertible top headliner from cross bow 4.

NOTE: All rivet, shavings or pieces must be removed from all cross bows and the vehicle interior. Rivet ends left in any cross bow may result in a rattle condition.



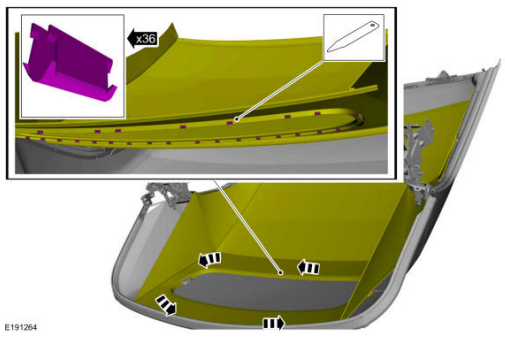
8.
Remove all rivet pieces from inside all of the cross bows.

NOTE: It may be necessary to force compressed air into multiple rivet holes in the cross bows to get all rivet pieces out of the cross bows.

1.
Using an air nozzle and compressed air, blow into each cross bow to force the rivet pieces to the outer ends of the cross bows for removal.

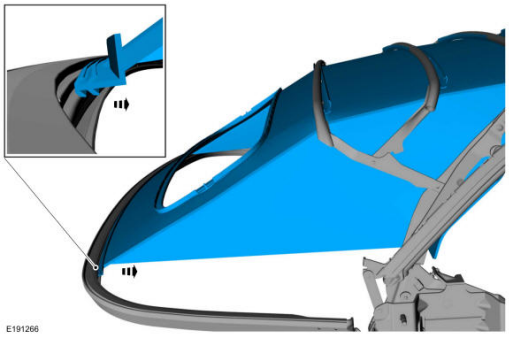
NOTE: Check both ends of each cross bow to make sure all rivet pieces are removed from the vehicle

2.
At the ends of the cross bows, collect all rivet pieces and verify that all rivet ends are accounted for.



NOTE: The convertible top headliner trim ring is permanently attached to the convertible top headliner, and the rear window glass frame is permanently attached to the convertible top material.

9.
Some retaining clips may stay on the rear window glass frame. Remove from the rear window glass frame and position all retaining clips on the convertible top headliner trim ring at the location where they were removed.



For installation, begin with the top 2 corners when attaching the convertible top headliner trim ring to the rear window glass frame. This ensures proper alignment as the convertible top headliner trim ring is attached around the rear window glass frame.

View shown is with the convertible top off vehicle for clarity. Carefully pry the convertible top headliner trim ring from the rear window glass frame.

NOTE: View is from outside the vehicle with the convertible top material removed for clarity.

10.
From inside the vehicle, pull the headliner straight out of the floating bow to remove.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP HEADLINER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP MATERIAL

Special Tool(s) / General Equipment

Rivet Gun
Electric Drill
Flat-Bladed Screwdriver

REMOVAL AND INSTALLATION > CONVERTIBLE TOP MATERIAL > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.

Refer to: Convertible Top Trough Assembly .

2.

Remove the convertible top latch handle.

3.

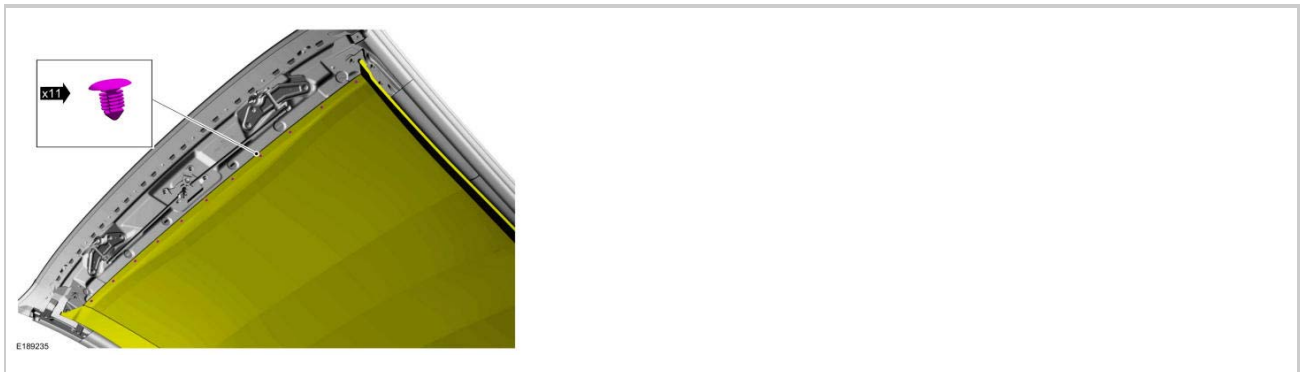
Remove the convertible top front panel trim.

1.

Remove the convertible top front panel trim retainers on the front of the trim.

Torque

: 18 lb.in (2 Nm)

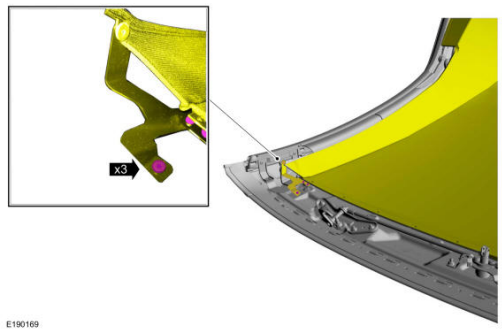


2.

Release the clips under the back of the convertible top front panel trim and remove the trim.

4.

Remove the convertible top headliner push pin retainers along the back of the convertible top front panel.



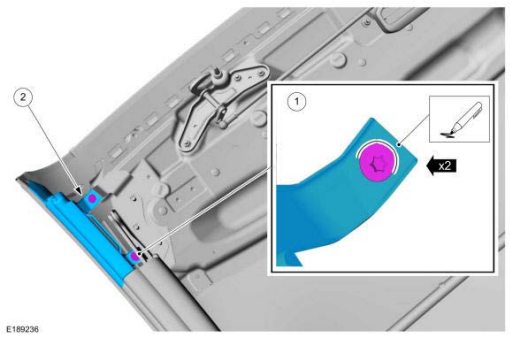
NOTE: The headliner tension bracket will still be attached to the headliner.

5.
LH side shown, RH side similar. On both sides, remove the headliner tension bracket retainers and bracket from the convertible top front panel.

Torque

: 18 lb.in (2 Nm)

NOTE: RH side shown, LH side similar.



6.
If any shims are present, note the position for installation. On both sides, remove the convertible top front panel side weatherstrip and bracket assembly.

1.

Mark the convertible top front panel side weatherstrip bracket assembly at the retainers for installation reference.

2.

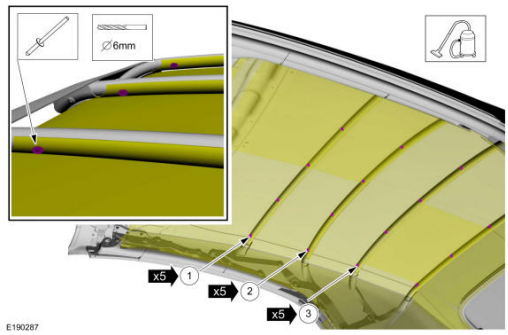
Remove the convertible top front panel side weatherstrip and bracket assembly retainers and remove the weatherstrip/bracket assembly.

NOTE: Fold the convertible top headliner down between each cross bow after rivet

removal to expose the next cross bow.

7.
All rivet shavings must be removed from the vehicle and convertible top assembly. Drill out the cross bow retaining rivets.

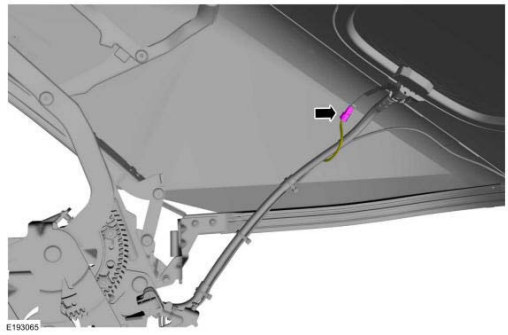
NOTE: Inset view is from above with convertible top material removed for clarity.



1.
Remove the rivets from cross bow 1. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

2.

Remove the rivets from cross bow 2.



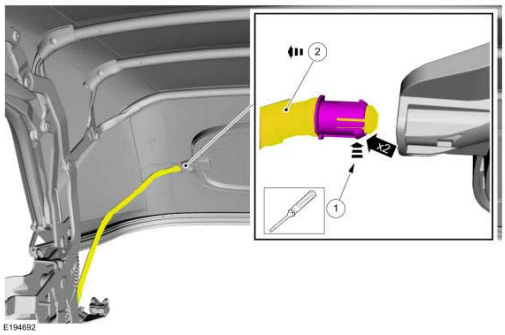
3.

Remove the rivets from cross bow 3.

NOTE: RH side shown, LH side similar.

8.
On both sides, disconnect the rear window defrost harness.

NOTE: RH side shown, LH side similar.



9.
Remove the rear glass tension rod.

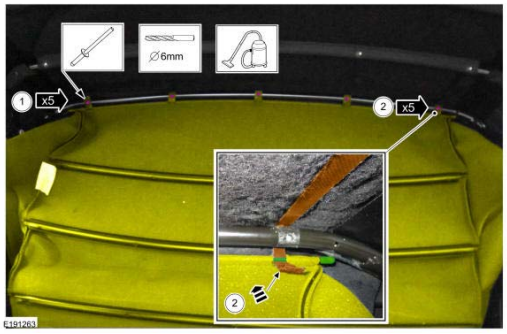
1.

Using a small flat-bladed screwdriver, press in on the retainer tabs to release the rear glass tension rod. Use the General Equipment: Flat-Bladed Screwdriver

2.

Pull out on the rear glass tension rod to remove from the rear glass frame.

10.



Remove the headliner from cross bow 4.

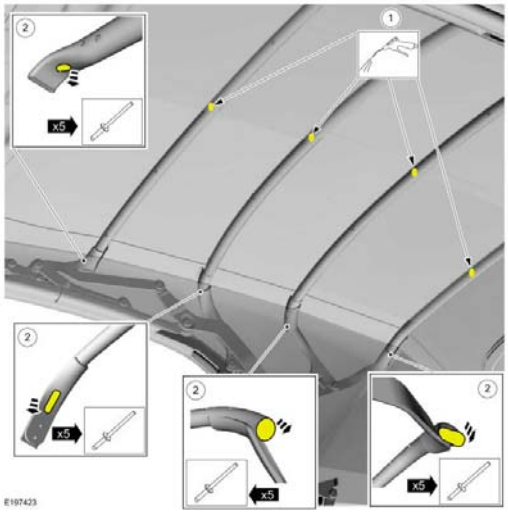
NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

1.
Drill out the rivets from cross bow 4. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

NOTE: The nylon fabric strap has 2 sided tape holding it to cross bow 4 to aid in positioning during installation.

2.
The nylon fabric strap can remain routed over cross bow 4 after pushing through the convertible top headliner. Pull the end of the nylon fabric strap from the cross bar and push through the convertible top headliner to release the convertible top headliner from cross bow 4.

NOTE: All rivet, shavings or pieces must be removed from all cross bows and the vehicle interior. Rivet ends left in any cross bow may result in a rattle condition.



11.
Remove all rivet pieces from inside all of the cross bows.

NOTE: It may be necessary to force compressed air into multiple rivet holes in the cross bows to get all rivet pieces out of the cross bows.

1.
Using an air nozzle and compressed air, blow into each cross bow to force the rivet pieces to the outer ends of the cross bows for removal.

NOTE: Check both ends of each cross bow to make sure all rivet pieces are removed from the vehicle

2.
At the ends of the cross bows, collect all rivet pieces and verify that all rivet ends are accounted for.

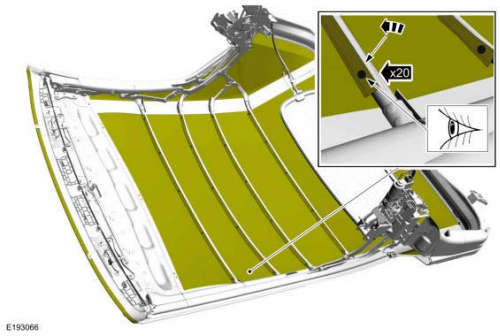
NOTE: The convertible top headliner trim ring is permanently attached to the convertible top headliner, and the rear window glass frame is permanently attached to the convertible top material.

12.
Some retaining clips may stay on the rear window glass frame. Remove from the rear window glass frame and position all retaining clips on the convertible top headliner trim ring at the location where they were removed.

For installation, begin with the top 2 corners when attaching the convertible top headliner trim ring to the rear window glass frame. This ensures proper alignment as the convertible top headliner trim ring is attached around the rear window glass frame.

View shown is with the convertible top off vehicle for clarity. Beginning on the top corners of the rear window glass frame, carefully pry the convertible top headliner trim ring from the rear window glass frame.

13.



Remove the convertible top material push pins at the back of the convertible top front panel.

NOTE: The convertible top material to crossbow retaining flaps are attached to the crossbows with 2 sided tape to align the holes for the same rivets that were removed for the headliner. During installation, make sure to line up the holes. A standard 2 sided tape can be used to ease alignment retention during installation.

14.
Pull the convertible top material to crossbow retaining flap from the 2 sided tape at each

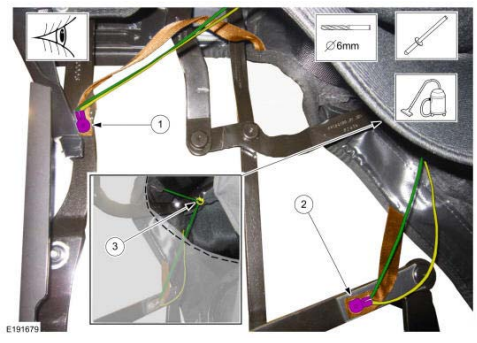
crossbow.

NOTE: During installation, route the convertible top tension cords and nylon fabric straps through the frame exactly as they were removed.

15.
All rivet shavings must be removed from the vehicle and convertible top assembly.

RH side shown, LH side similar. On both sides, disconnect the convertible top tension cords and nylon fabric straps from the frame assembly.

1.



Drill out the rivets to the front set of tension cords at the front side of the frame. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

2.

Drill out the rivets to the second set of tension cords at the center side of the frame.

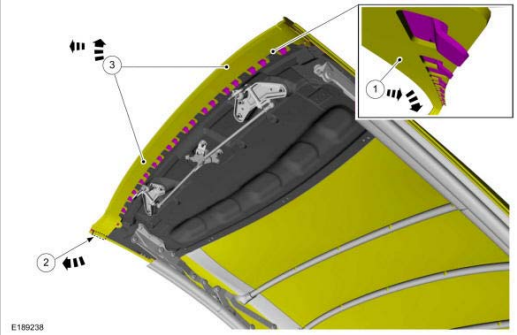
NOTE: Do not drill out the D-ring retaining rivet.

3.
Route the tension cord through the D-ring.

16.

Disconnect the convertible top material from the front underside of the convertible top front panel.

1.



Pull the convertible top material backward and down to release from the convertible top front panel clips.

2.

On both sides, pull the convertible top material from the double sided tape securing the material to the convertible top front panel.

3.

Roll the convertible top material forward and up over the convertible top front panel.

17.

Fold the front of the convertible top material back to the first crossbow to expose the convertible top tension cable ends at the convertible top front panel.

NOTE: RH side shown, LH side similar.

18.
If the convertible top material is to be reinstalled a draw string can be attached to the convertible top tension cable and left in the convertible top material for pulling the convertible top tension cable back into the convertible top material during installation. On both sides, disconnect the convertible top tension cable from the convertible top front panel.

19.

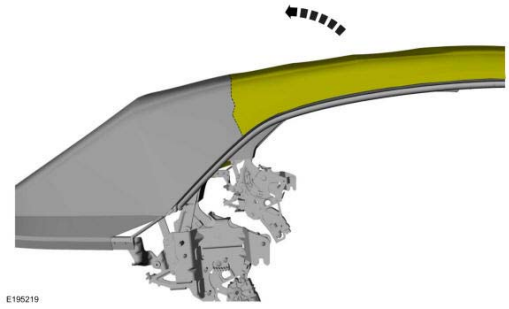
On both sides. Refer to: Convertible Top Rear Panel Lower Weatherstrip .

NOTE: RH side shown, LH side similar.

20.
On both sides, release the convertible top material from the frame under the removed convertible top rear panel lower weatherstrip.

1.

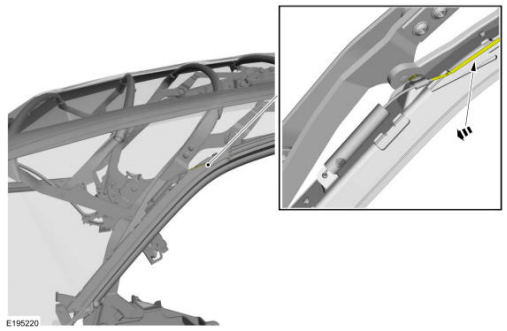
Release the convertible top material edge trim from the frame as indicated in all 5 locations under the removed convertible top rear panel lower weatherstrip.



2.

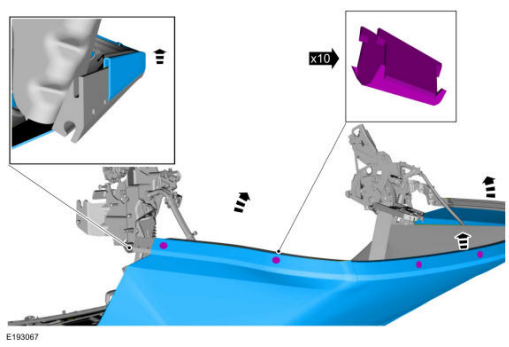
Pull the convertible top material out to fully release from the frame.

NOTE: RH side shown, LH side similar.



21.
On both sides, pull the convertible top material back to access the back of the convertible top tension cable.

NOTE: Make sure to note the routing of the tension cable through the convertible top material for installation.



NOTE: RH side shown, LH side similar.

22.
On both sides, leaving the convertible top tension cable attached to the frame, pull the front of the convertible top tension cable out of the convertible top material.

NOTE: Make sure to remove the convertible top material retaining clips from the floating bow. The convertible top material retaining clips must be placed on the convertible top material in the proper locations when installing.

23.
RH side shown, LH side similar. Pull the convertible top material out of the floating bow to remove.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP MATERIAL > INSTALLATION

1.

Transfer parts as necessary.

2.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP MOTOR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

On both sides, remove the rear quarter panel speakers. Vehicles With: Touchscreen Display Refer to: Rear Quarter Panel Speaker . Vehicles With: AM/FM/CD/SYNC Refer to: Rear Quarter Panel Speaker .

2.

On the RH side only. Position aside the RTM and bracket assembly.

1.

Disconnect the RTM wiring harness clips from the speaker bracket.

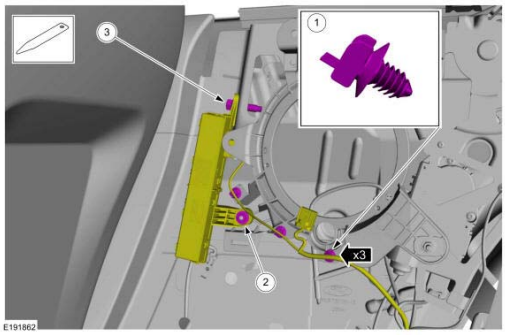
Torque

: 93 lb.in (10.5 Nm)

2.

Remove the RTM bracket nut.

Torque



: 71 lb.in (8 Nm)

3.

Remove the RTM bracket bolt and position the RTM and bracket assembly aside.

Torque

: 17 lb.in (1.9 Nm)

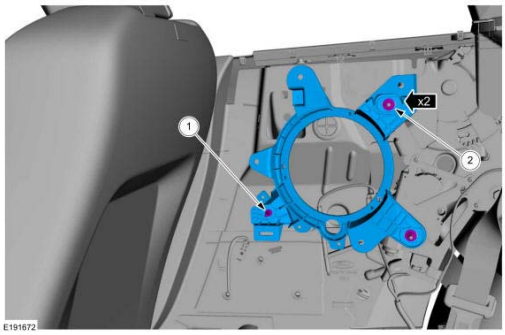
NOTE: RH side shown, LH side similar.

3.
On both sides. Remove the rear quarter panel speaker brackets.

1.

Remove the speaker bracket stud.

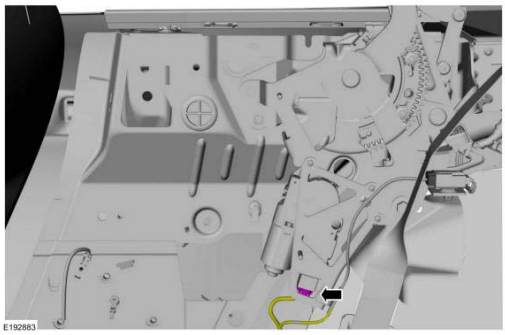
Torque



: 93 lb.in (10.5 Nm)

2.

Remove the speaker bracket nuts and the speaker bracket.

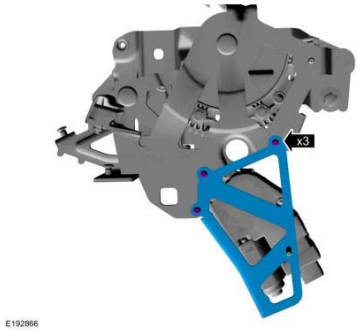


Torque

: 71 lb.in (8 Nm)

NOTE: RH side shown, LH side similar.

4.
Disconnect the harness connectors and position harness aside.

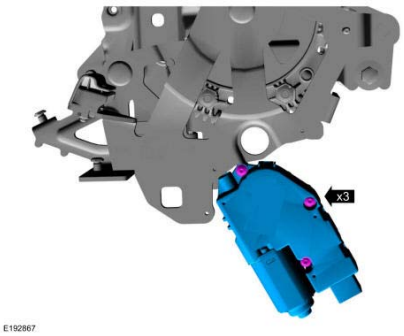


NOTE: LH side shown, RH side similar.

5.
Remove the motor guard bracket retainers and position aside.

Torque

: 25 lb.in (2.8 Nm)



NOTE: LH side shown, RH side similar.

6.
Remove the convertible top motor.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > CONVERTIBLE TOP MOTOR > INSTALLATION

1.

To install, reverse the removal procedure.

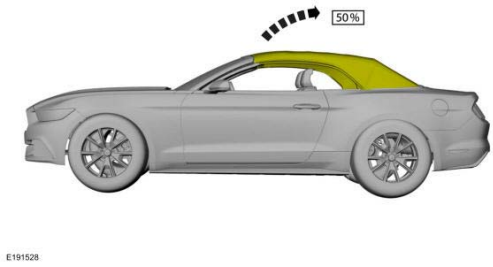
2.

To initialize the motors, fully close and latch the convertible top and reopen fully.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP REAR PANEL LOWER WEATHERSTRIP

Special Tool(s) / General Equipment

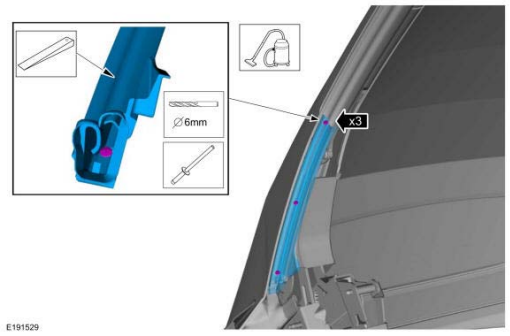
Electric Drill



REMOVAL AND INSTALLATION > CONVERTIBLE TOP REAR PANEL LOWER WEATHERSTRIP > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.



1.

Open the convertible top approximately 50 percent.

NOTE: RH side shown, LH side similar.

2.
All rivet shavings must be removed from the vehicle and convertible top assembly. Drill the rivets from the convertible top rear panel lower weatherstrip. Use the General Equipment: Electric Drill

REMOVAL AND INSTALLATION > CONVERTIBLE TOP REAR PANEL LOWER WEATHERSTRIP > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP SWITCH > REMOVAL

1.

The roof opening panel switch is replaced as an assembly with the overhead console. Refer to: Overhead Console .

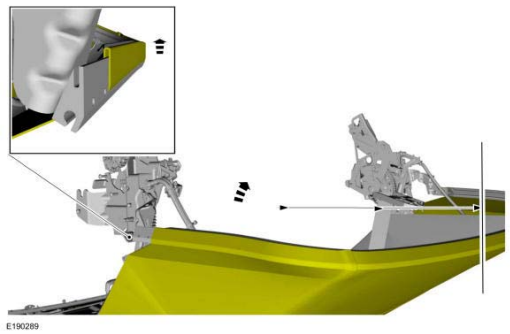
REMOVAL AND INSTALLATION > CONVERTIBLE TOP SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP TENSION BELT > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.



Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.

Remove the convertible top assembly. Refer to: Convertible Top Assembly .

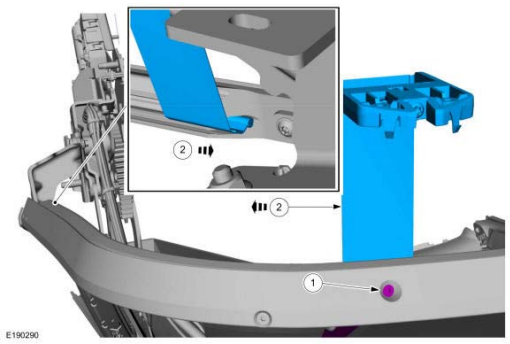
> *NOTE: Make sure to remove the convertible top material retaining clips from the floating bow. The convertible top material retaining clips must be placed on the convertible top material in the proper locations when installing.*

2.
RH side shown, LH side similar. Partially disconnect the convertible top material from the floating bow.

> *NOTE: RH side shown, LH side similar.*

3.
Remove the tension belt.

1.



Remove the tension belt retaining screw.

Torque

: 62 lb.in (7 Nm)

2.

Slide the tension belt out of the floating bow.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP TENSION BELT > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP TENSION CABLE

Special Tool(s) / General Equipment

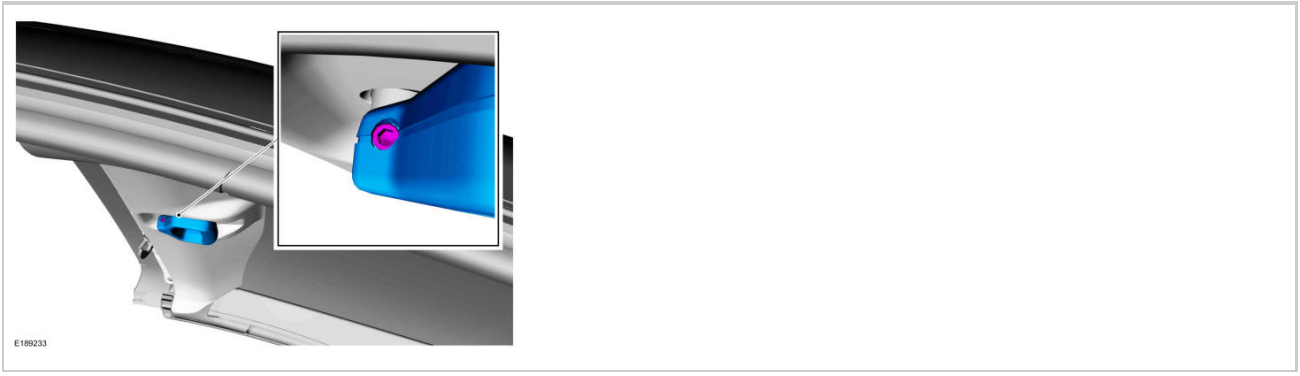
Rivet Gun
Electric Drill
Draw Cord

REMOVAL AND INSTALLATION > CONVERTIBLE TOP TENSION CABLE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.



On the side needing convertible top tension cable serviced. Refer to: Convertible Top Rear Panel Lower Weatherstrip .

2.

Remove the convertible top latch handle.

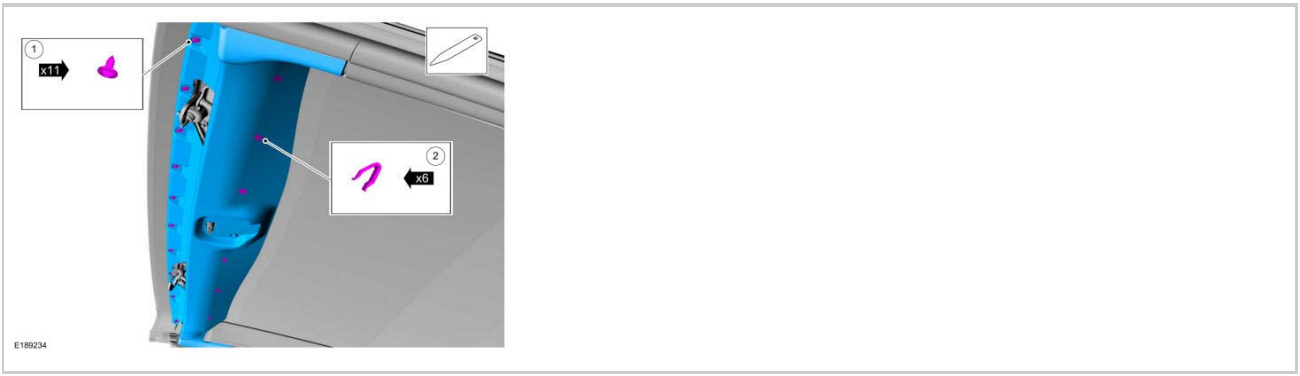
Torque

: 31 lb.in (3.5 Nm)

3.

Remove the convertible top front panel trim.

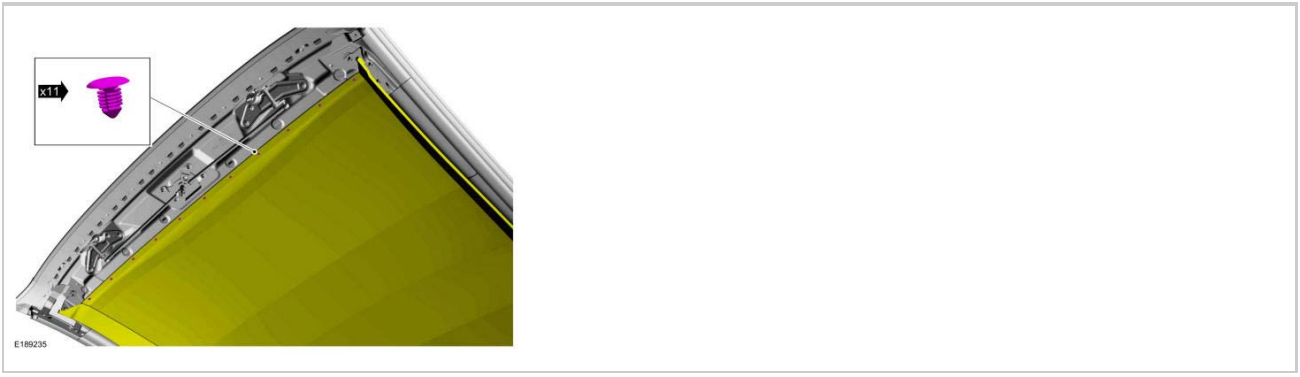
1.



Remove the convertible top front panel trim retainers on the front of the trim.

Torque

: 18 lb.in (2 Nm)

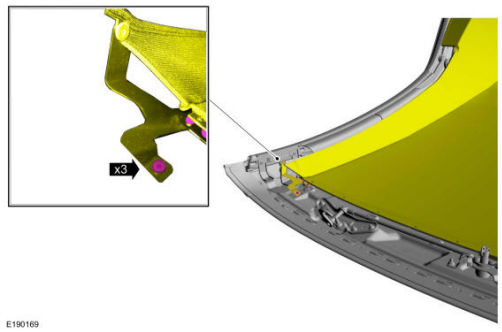


2.

Release the clips under the back of the convertible top front panel trim and remove the trim.

4.

Remove the headliner push pin retainers along the back of the convertible top front panel.



NOTE: LH side shown, RH side similar.

5.
On both sides, remove the headliner tension bracket retainers and bracket from the convertible top front panel.

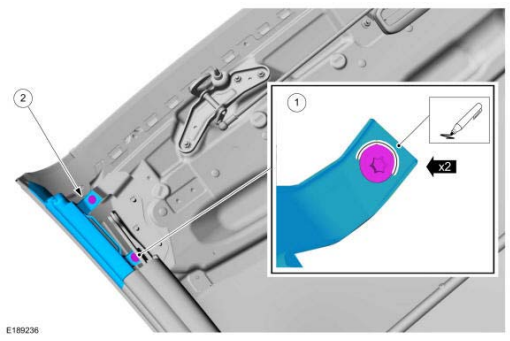
Torque

: 25 lb.in (2.8 Nm)

NOTE: RH side shown, LH side similar.

6.
If any shims are present, note the position for installation. On both sides, remove the convertible top front panel side weatherstrip and bracket assembly.

1.



Mark the convertible top front panel side weatherstrip bracket assembly at the retainers for installation reference.

Torque

: 62 lb.in (7 Nm)

2.

Remove the convertible top front panel side weatherstrip and bracket assembly retainers and remove the weatherstrip/bracket assembly.

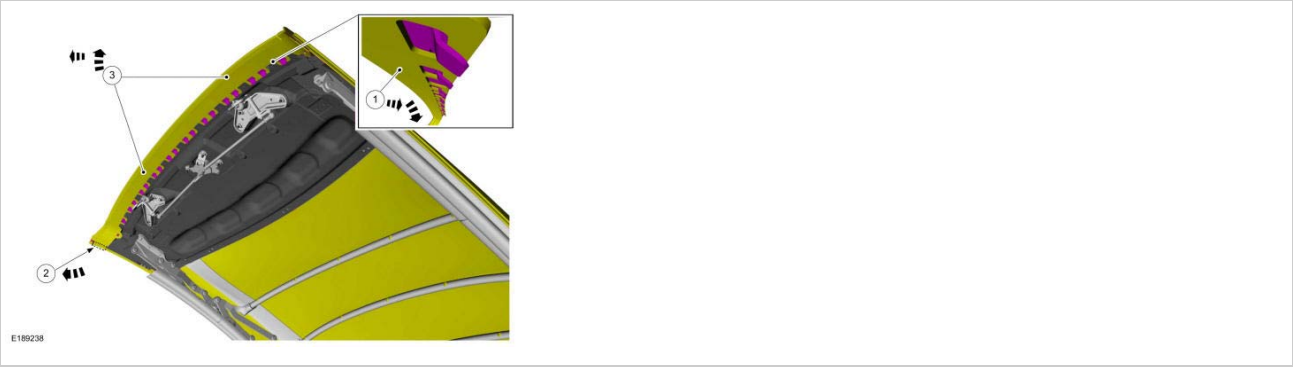
7.

Remove the convertible top material push pins at the back of the convertible top front panel.

8.

On both sides, disconnect the convertible top material from the front underside of the convertible top front panel.

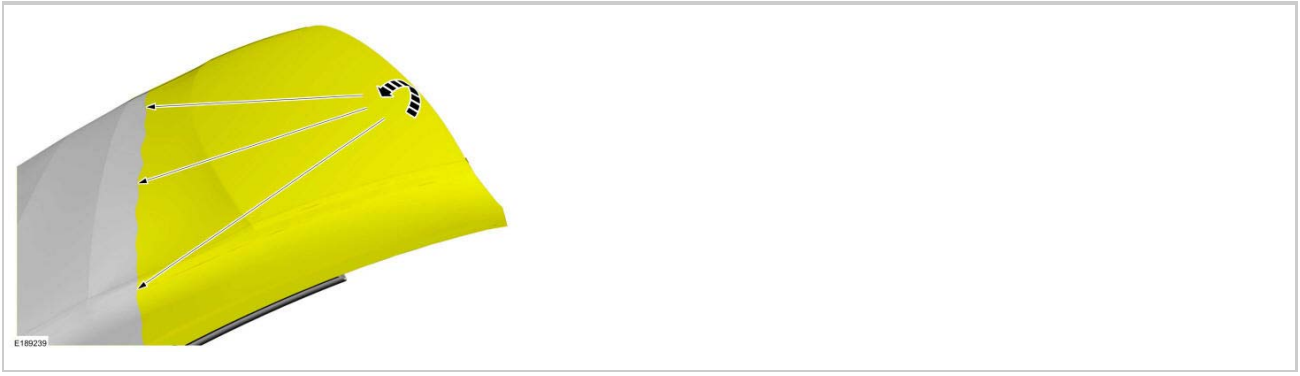
1.



Pull the convertible top material backward and down to release from the convertible top front panel clips.

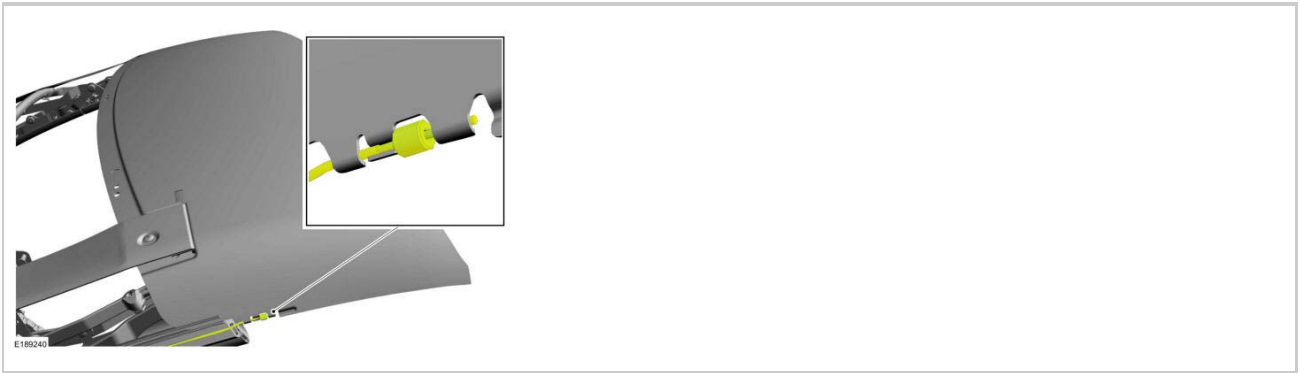
2.

Pull the convertible top material from the double sided tape securing the material to the convertible top front panel.



3.

Roll the convertible top material forward and up over the convertible top front panel.



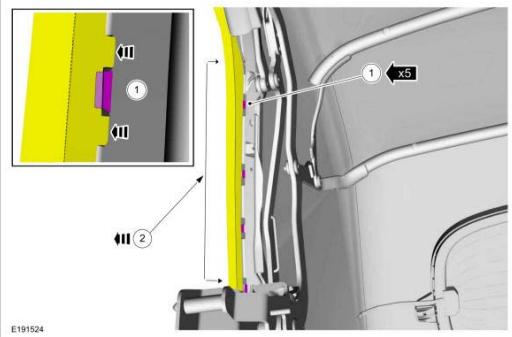
9.

Fold the front of the convertible top material back to the first crossbow to expose the tension cable end and stay pad rivets.

NOTE: RH side shown, LH side similar.

10.
Disconnect the convertible top tension cable from the convertible top front panel.

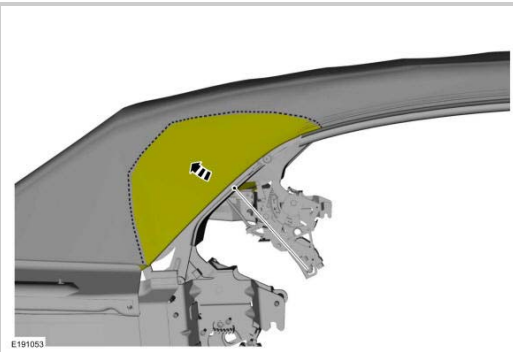
NOTE: RH side shown, LH side similar.



11.
Release the convertible top material from the frame under the removed convertible top rear panel lower weatherstrip.

1.

Release the convertible top material edge trim from the frame as indicated in all 5 locations under the removed convertible top rear panel lower weatherstrip.



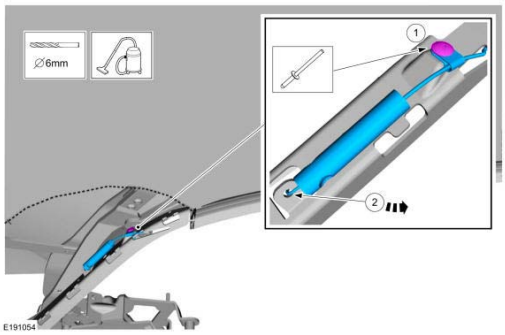
2.

Pull the convertible top material out to fully release from the frame.

NOTE: RH side shown, LH side similar.

12.
Position the convertible top material up in the area shown for access to remove the convertible top tension cable.

NOTE: RH side shown, LH side similar.



13.
Disconnect the convertible top tension cable from the convertible top frame.

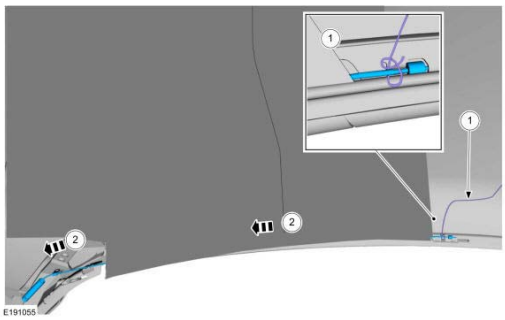
NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

1.
Drill out the convertible top tension cable rivet. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

2.

Disconnect the spring end of the convertible top tension cable from the frame.

NOTE: RH side shown, LH side similar.



14.
Remove the convertible top tension cable.

NOTE: The draw cord is attached to the wiring harness so the harness can be easily routed through the convertible top material during installation.

1.
Attach a draw cord to the convertible top tension cable. Use the General Equipment: Draw Cord

2.

Pull the convertible top tension cable from the convertible top material leaving the draw cord exposed on both sides of the convertible top material for installation.

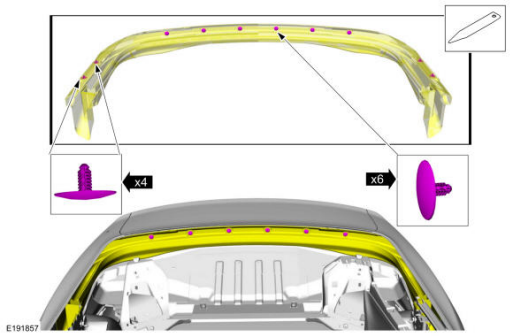
REMOVAL AND INSTALLATION > CONVERTIBLE TOP TENSION CABLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP TROUGH ASSEMBLY > REMOVAL

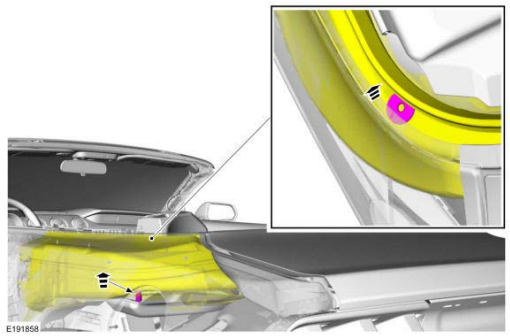
NOTE: Removal steps in this procedure may contain installation details.



Many procedure views are with the convertible top in the fully closed position showing tension on the convertible top material. Actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.

Remove the convertible top assembly. Refer to: Convertible Top Assembly .



2.

Remove the convertible top trough assembly to inner body panel push pin retainers.

NOTE: LH shown, RH side similar.

3.
The water drain fitting should not be removed from the flexible water bag portion of the convertible top trough assembly. On both sides, from inside the convertible top trough assembly.Carefully pull up on the flexible water bag portion of the convertible top trough assembly and the water drain fitting to release the water drain fitting from the inner body panel grommet/drain hose.

NOTE: Make sure the body of the vehicle is fully covered with fender blankets or

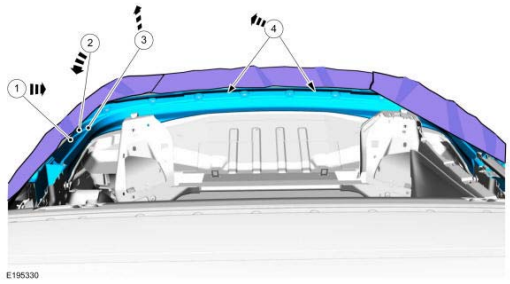
equivalent or damage to the finish may result.

4.
Remove the trough assembly from the vehicle.

NOTE: Sub steps 1, 2 and 3 should be performed together as a single step.

1.
Pull the RH side of the convertible top trough assembly inward for clearance of the body side panels.

2.



Roll the RH side of the convertible top trough assembly forward and slightly down for clearance of the rear body panels.

3.

Lift the RH rear of the convertible top trough assembly above the body panels.

4.

Remove the convertible top trough assembly toward the RH side of the vehicle.

REMOVAL AND INSTALLATION > CONVERTIBLE TOP TROUGH ASSEMBLY > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > STAY PAD

Special Tool(s) / General Equipment

Rivet Gun

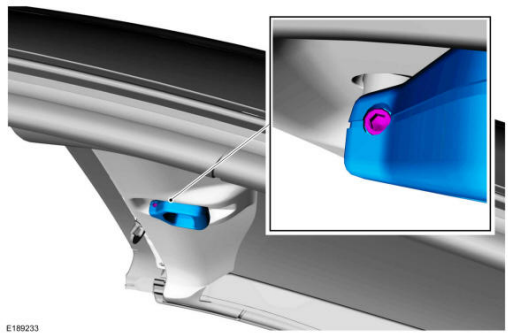
Electric Drill

REMOVAL AND INSTALLATION > STAY PAD > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

Procedure views are with the convertible top in the fully closed position showing tension on the convertible top material, actual position should be approximately 25-50 percent open allowing slack in the convertible top material and other components for serviceability.

1.



Refer to: Convertible Top Assembly .

2.

Remove the convertible top latch handle.

Torque

: 31 lb.in (3.5 Nm)

3.

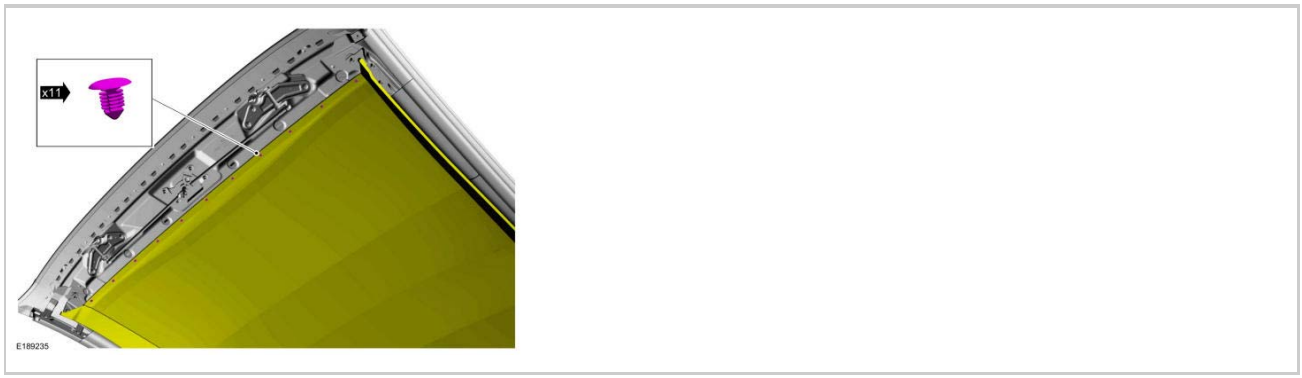
Remove the convertible top front panel trim.

1.

Remove the convertible top front panel trim retainers on the front of the trim.

Torque

: 18 lb.in (2 Nm)



2.

Release the clips under the back of the convertible top front panel trim and remove the trim.

4.

Remove the headliner push pin retainers along the back of the convertible top front panel.

NOTE: LH side shown, RH side similar.

5.
On both sides, remove the headliner tension bracket retainers and bracket from the convertible top front panel.

Torque

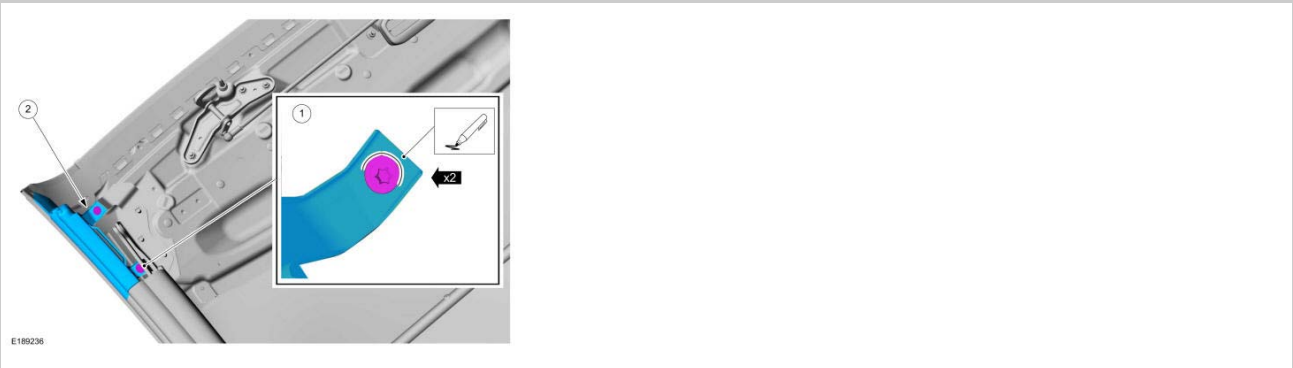
: 25 lb.in (2.8 Nm)

NOTE: RH side shown, LH side similar.

6.

If any shims are present, note the position for installation. On both sides, remove the convertible top front panel side weatherstrip and bracket assembly.

1.



Mark the convertible top front panel side weatherstrip bracket assembly at the retainers for installation reference.

Torque

: 62 lb.in (7 Nm)

2.

Remove the convertible top front panel side weatherstrip and bracket assembly retainers and remove the weatherstrip/bracket assembly.

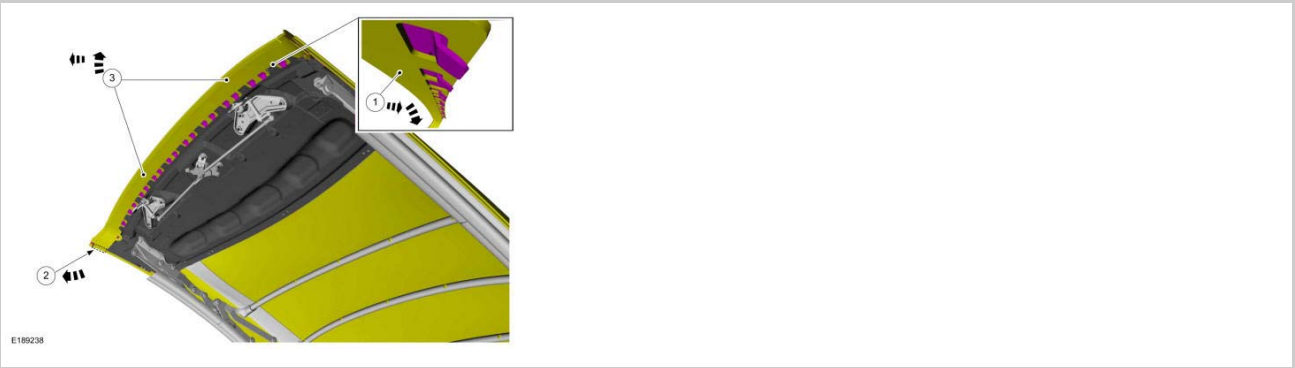
7.

Remove the convertible top material push pins at the back of the convertible top front panel.

8.

On both sides, disconnect the convertible top material from the front underside of the convertible top front panel.

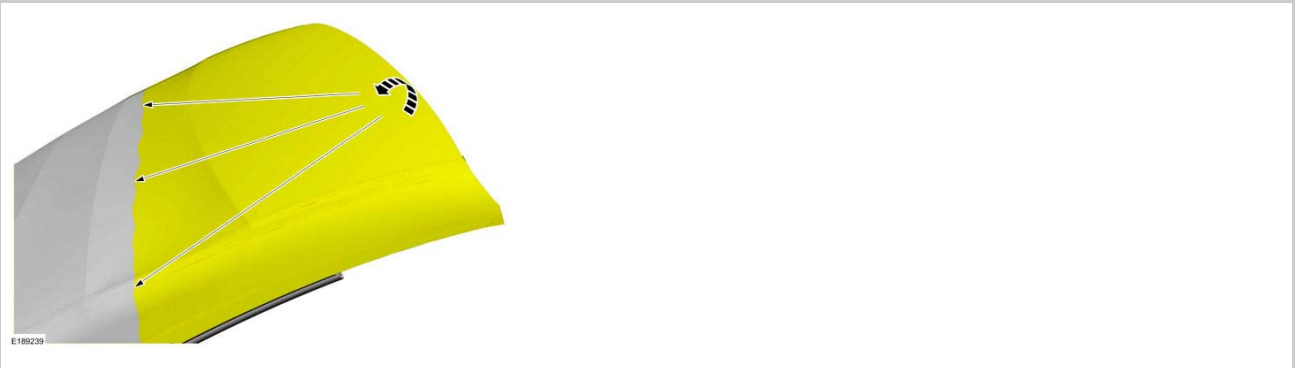
1.



Pull the convertible top material backward and down to release from the convertible top front panel clips.

2.

Pull the convertible top material from the double sided tape securing the material to the convertible top front panel.



3.

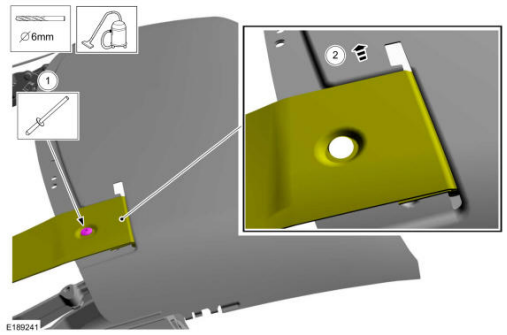
Roll the convertible top material forward and up over the convertible top front panel.

9.

Fold the front of the convertible top material back to the first crossbow to expose the tension cable end and stay pad rivets.

NOTE: RH side shown, LH side similar.

10.
Disconnect the stay pad from the convertible top front panel.



NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

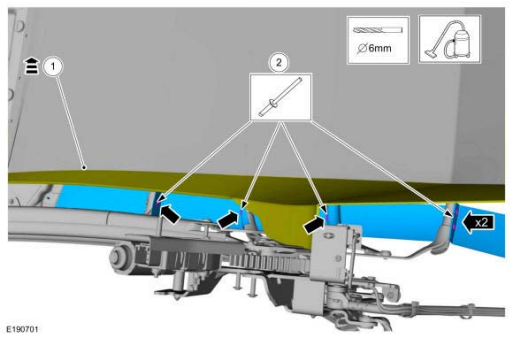
1.
Drill the stay pad rivets from the convertible top front panel. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

2.

Slide the stay pad to the center of the convertible top front panel to disconnect the stay

pad.

NOTE: Clean all rivet shavings from the vehicle after removing the rivets.



11.
RH side shown, LH side similar. Remove the stay pad to cross bow rivets.

1.

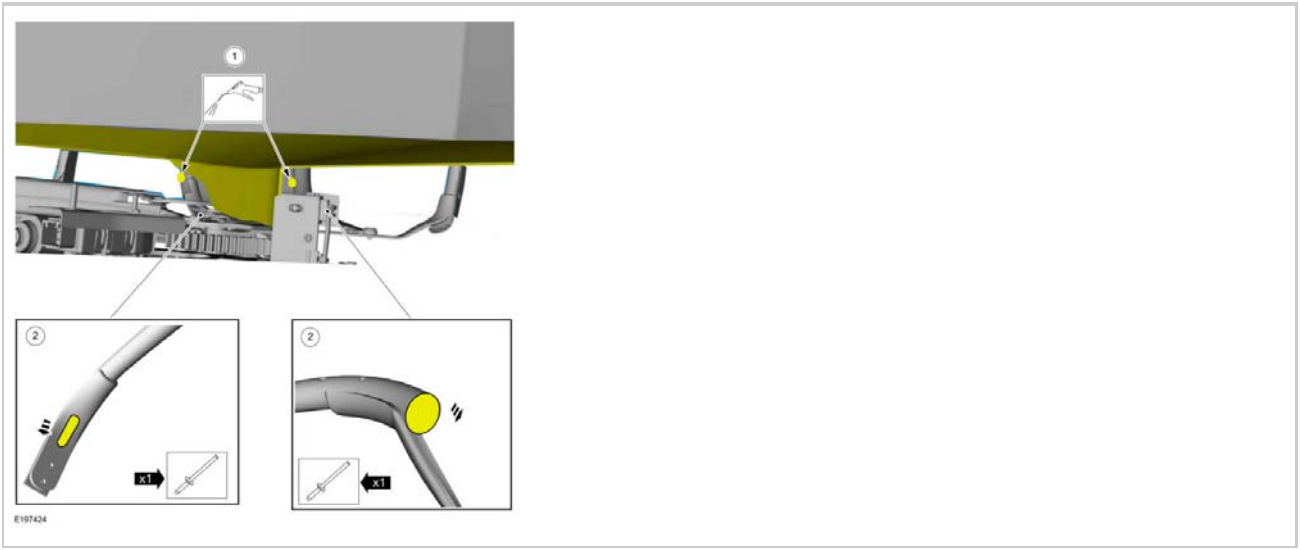
Pull the edge of the headliner inward to access the stay pad rivets.

NOTE: All rivet shavings must be removed from the vehicle and convertible top assembly.

2.
Drill out the stay pad rivets. Use the General Equipment: Electric Drill Use the General Equipment: Rivet Gun

NOTE: All rivet, shavings or pieces must be removed from all cross bows and the vehicle interior. Rivet ends left in any cross bow may result in a rattle condition.

12.
RH side shown, LH side similar. Remove all rivet pieces from inside two center cross bows.



NOTE: It may be necessary to force compressed air into multiple rivet holes

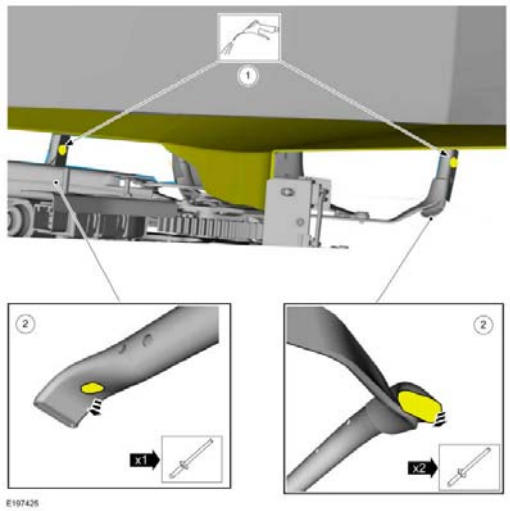
in the cross bows to get all rivet pieces out of the cross bows.

1.
Using an air nozzle and compressed air, blow the two center cross bow to force the rivet pieces to the outer ends of the cross bows for removal.

NOTE: Check both ends of each cross bow to make sure all rivet pieces are removed from the vehicle

2.
At the ends of the cross bows, collect all rivet pieces and verify that all rivet ends are accounted for.

NOTE: All rivet, shavings or pieces must be removed from the front and rear cross bows and the vehicle interior. Rivet ends left in any cross bow may result in a rattle condition.



13.
RH side shown, LH side similar. Remove all rivet pieces from inside the front and rear cross bows.

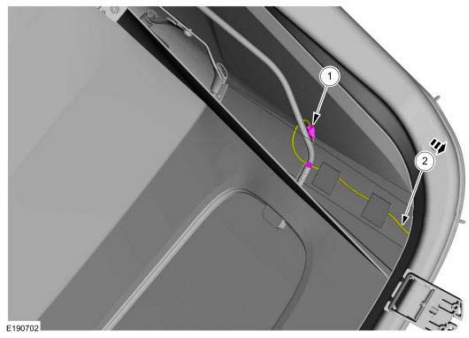
NOTE: It may be necessary to force compressed air into multiple rivet holes in the cross bows to get all rivet pieces out of the cross bows.

1.
Using an air nozzle and compressed air, blow into the front and rear cross bows to force the rivet pieces to the outer ends of the cross bows for removal.

NOTE: Check both ends of each cross bow to make sure all rivet pieces are removed from the vehicle

2.
At the ends of the cross bows, collect all rivet pieces and verify that all rivet ends are accounted for.

NOTE: RH side shown, LH side similar.

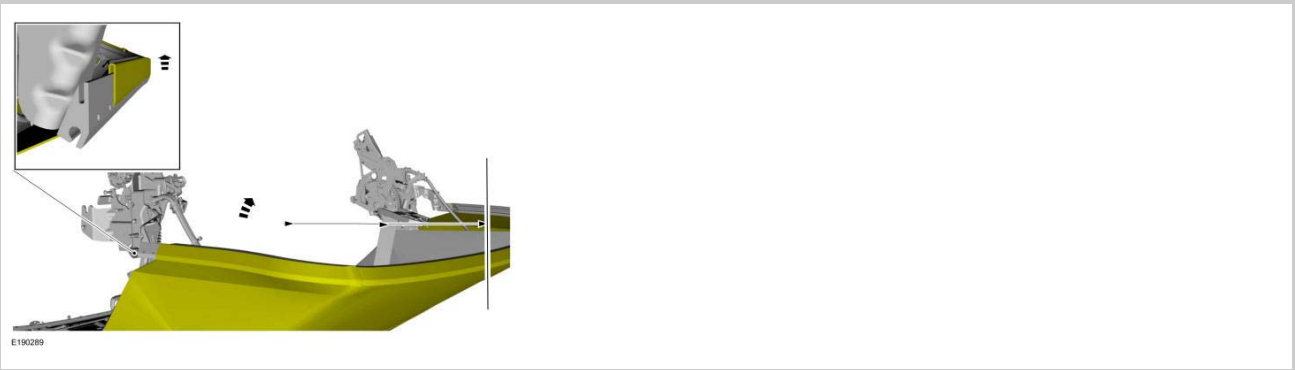


14.
Remove the wiring harness from the LH stay pad webbing.

1.

Disconnect the rear window wiring harness connector and routing connector, if equipped.

2.



Route the wiring harness through the stay pad webbing.

NOTE: Make sure to remove the convertible top material retaining clips from the floating bow. The convertible top material retaining clips must be placed on the convertible top material in the proper locations when installing.

15.
RH side shown, LH side similar. Partially disconnect the convertible top material from the floating

bow.

NOTE: RH side shown, LH side similar.

16.
Remove the stay pad.

1.

Remove the stay pad retaining screw.

Torque

: 62 lb.in (7 Nm)

2.

Slide the tension belt out of the floating bow.

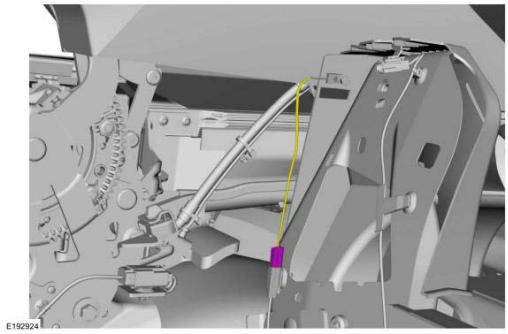
REMOVAL AND INSTALLATION > STAY PAD > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > TONNEAU COVER SENSOR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.



The tonneau cover sensor is part of the D-tower cover and must be replaced as an assembly.

1.

Remove the load space trim panel as necessary. Refer to: Loadspace Trim Panel - Convertible .

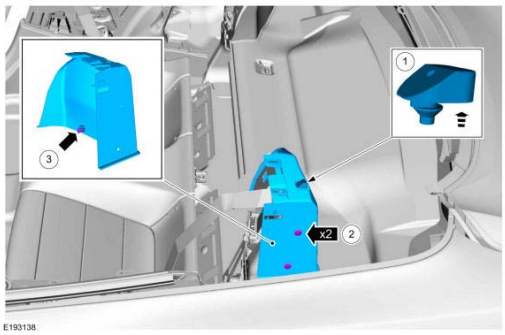
NOTE: RH side shown, LH side similar.

2.
Disconnect the harness connector.

NOTE: LH side shown, RH side similar.

3.
Remove the necessary D-tower cover.

1.



Remove the bumper stop.

2.

Remove the 2 pin-type retainers.

3.

Release the clip and remove the cover.

REMOVAL AND INSTALLATION > TONNEAU COVER SENSOR > INSTALLATION

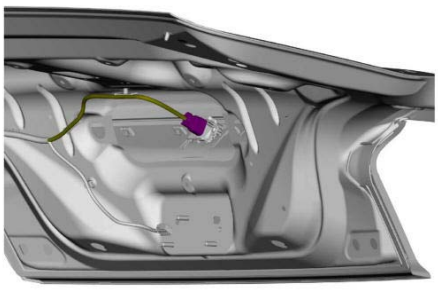
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID MOULDING > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the luggage compartment lid trim panel.

E184653

2.

Disconnect the rear parking aid camera electrical connector.

E184403

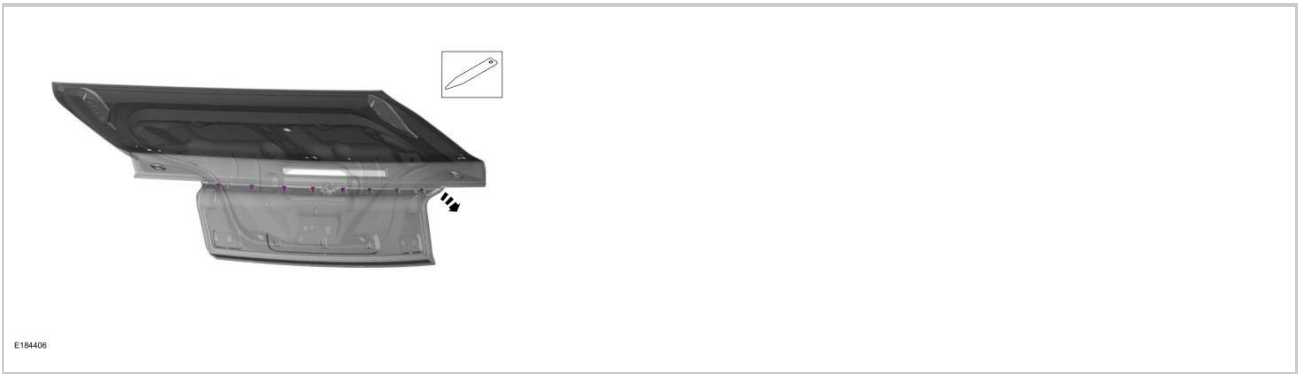
3.

Remove the screw covers.

4.

Remove the screws.

Torque



: 13 lb.in (1.5 Nm)

5.

Disengage the W-clips from the luggage compartment lid moulding using a non-marring trim removal tool.

Depress molded clips to disengage.

6.

Remove the luggage compartment lid moulding.

NOTE: If required, remove the attachment bracket.

7.
Remove the screws.

Torque

: 28 lb.in (3.2 Nm)

8.

Remove the luggage compartment lid moulding bracket.

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID MOULDING > INSTALLATION

NOTE: Ensure the moulding engages luggage compartment lid bracket before the w-clips engage.

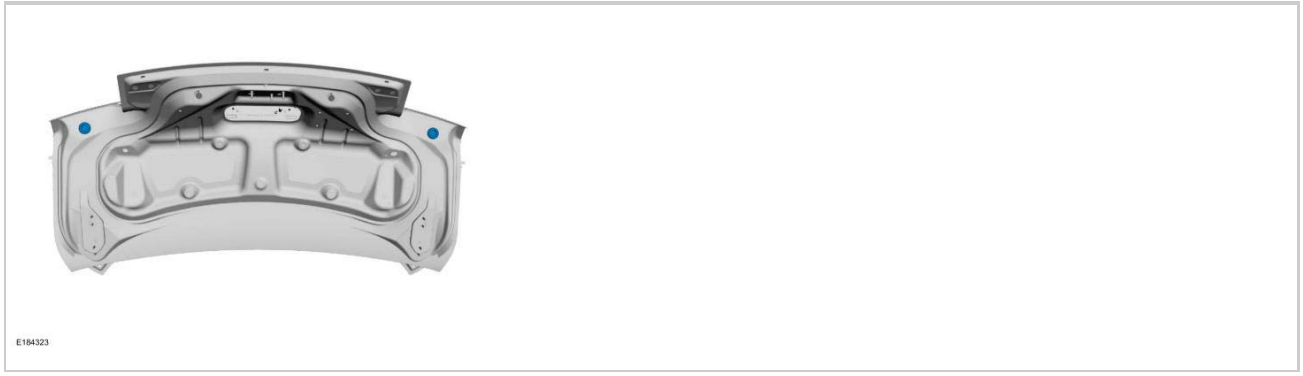
1.
To install, reverse the removal procedure.

2.

If installing a new moulding, configure the rear video camera following the instructions on the scan tool located using the following path: Electrical> Service Functions>LIN New Module Initialization.

REMOVAL AND INSTALLATION > REAR SPOILER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

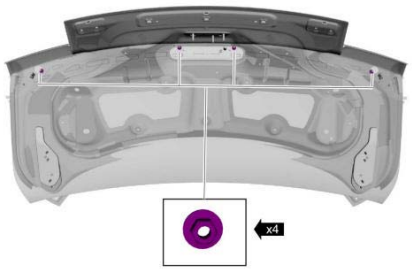


1.

Remove the luggage compartment lid trim panel.

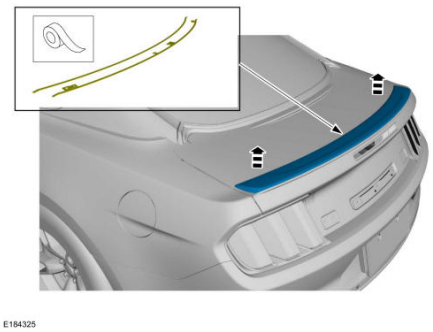
2.

Remover the rubber grommets.



3.

Remove the nuts.



Torque

: 48 lb.in (5.4 Nm)

NOTE: The rear spoiler uses two-side adhesive tape to fasten the spoiler to the luggage compartment lid.

4.
Lift the rear spoiler to detach from the luggage compartment lid.

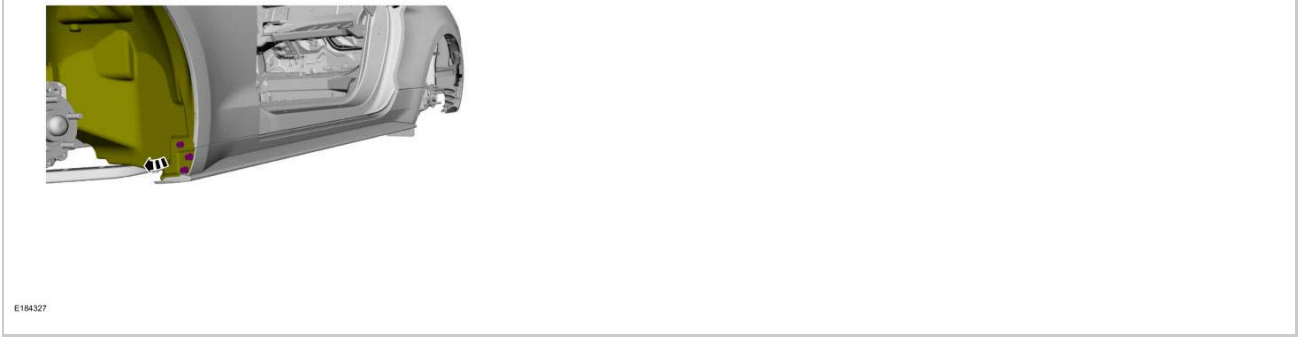
5.

Clean any residual adhesive and dirt from the luggage compartment lid surface.

REMOVAL AND INSTALLATION > REAR SPOILER > INSTALLATION

NOTE: When installing the spoiler, apply approximately 15 lbs. of pressure along the length of the spoiler to ensure adhesion of the two-side tape.

1.
To install, reverse the removal procedure.



REMOVAL AND INSTALLATION > ROCKER PANEL MOULDING > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

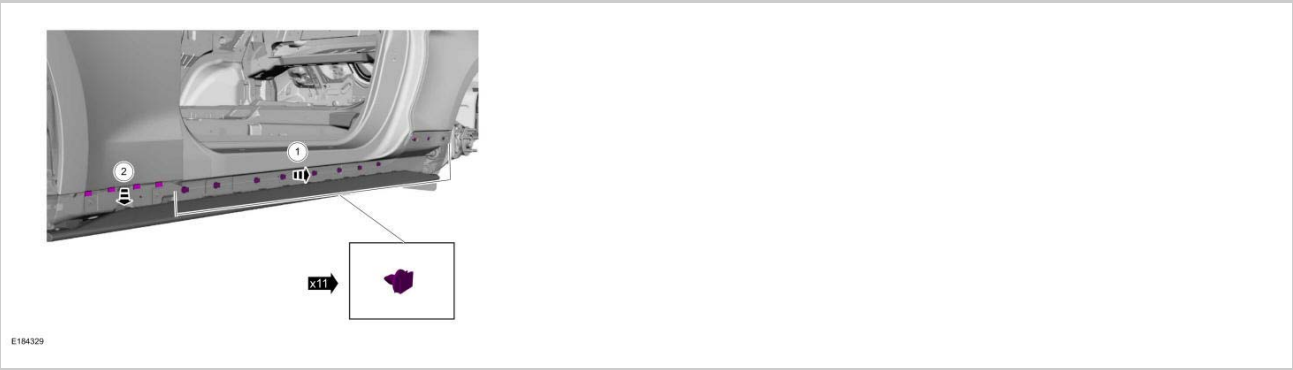
NOTE: LH side shown in illustration below, RH side similar.

1.

Remove the 3 pushpin type retainers and partially position aside the splash shield.

2.

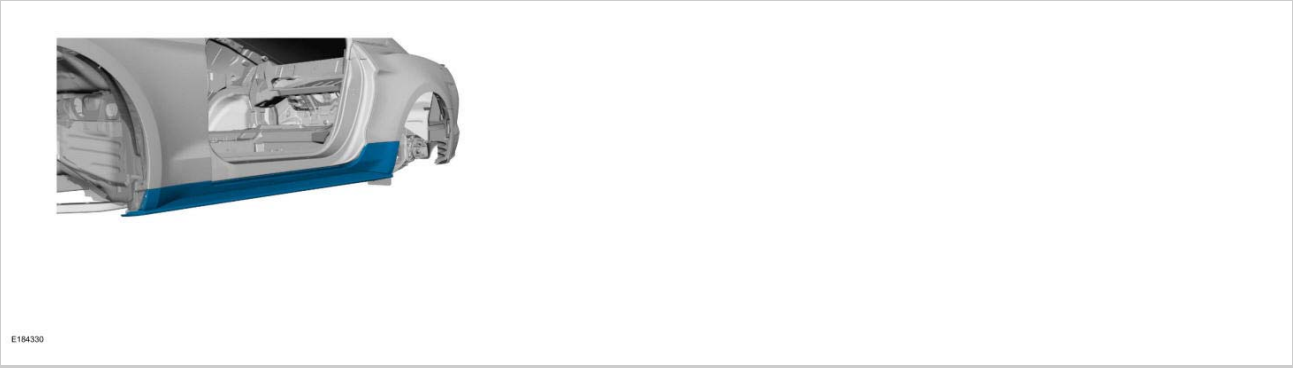
Remove the pushpin type retainers from the underside of the rocker panel moulding.



3.

1.

Starting at the rear of the rocker panel moulding, detach the retainers from the rocker panel.



2.

Disengage the four tab retainers at the fender.

4.

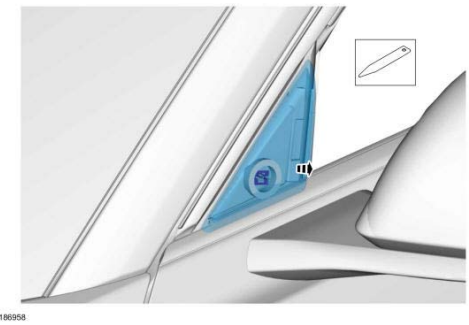
Remove the rocker panel moulding.

REMOVAL AND INSTALLATION > ROCKER PANEL MOULDING > INSTALLATION

1.

To install, reverse the removal procedure.

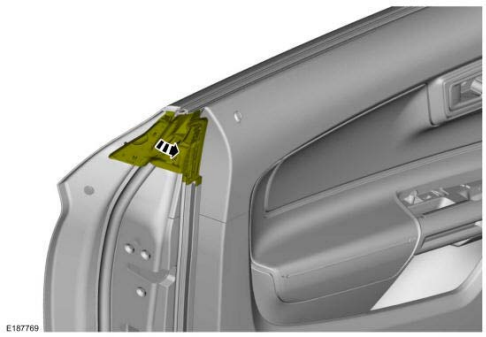
REMOVAL AND INSTALLATION > FRONT DOOR UPPER MOULDING > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

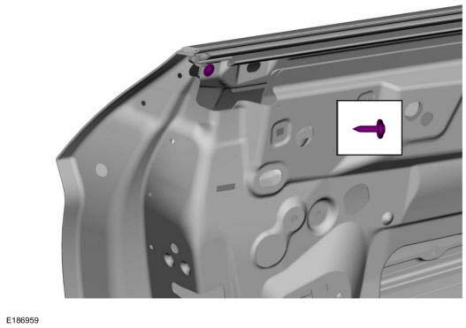
LH side shown in illustration below, RH side similar.

Door glass must be in down position.



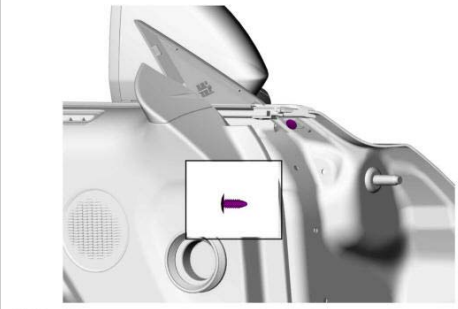
1.

Remove the door sail panel.



NOTE: Rear weatherstrip shown in illustration below, front is similar.

2.
Position aside the weatherstrip at the front and rear of door to access the fasteners.



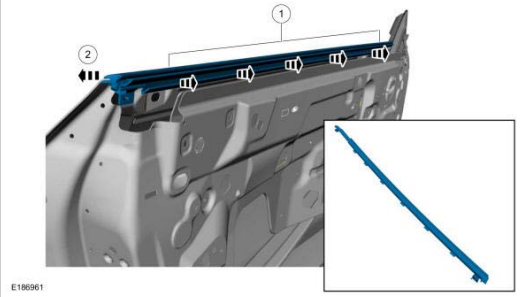
3.

Remove the screw at the rear of the upper door moulding.

4.

Remove the pin type retainer from the upper door moulding.

NOTE: Use care when disengaging the retainer tabs on the upper door moulding to avoid damage to the moulding.



5.

1.

Disengage the tabs on the upper door moulding from the door, along the length of the moulding.

2.

Slide the upper door moulding rearward past the door sail panel and remove the moulding.

REMOVAL AND INSTALLATION > FRONT DOOR UPPER MOULDING > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: FRONT END BODY PANELS

DESCRIPTION AND OPERATION > ACTIVE GRILLE SHUTTER - OVERVIEW > OVERVIEW

The active grille shutter system (when equipped) is comprised of the grille shutter assembly and the grille shutter actuator. The active grille shutter system is primarily used to maximize fuel economy by reducing aerodynamic drag on the vehicle. The active grille shutter system is also used to shorten engine warm-up time, increasing engine efficiency and providing heat to the vehicle occupants in a timely manner. The grille shutter actuator receives position commands from the PCM. The active grille shutter system carries out a calibration sequence whenever the engine is started, fully opening and closing the shutters before being positioned in the programmed position as requested by the PCM.

PCM inputs/outputs that may be used for controlling of grille shutters are the:

- ECT sensor
- IAT sensor
- A/C pressure transducer
- APP sensor
- ABS module (through the HS-CAN)
- AAT (ambient air temperature) sensor
- TCT (turbo charge temperature) sensor
- MCT (manifold charge temperature) sensor
- TOT (transmission oil temperature) sensor
- Engine cooling fan motor
- Engine oil temperature

DESCRIPTION AND OPERATION > ACTIVE GRILLE SHUTTER - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > ACTIVE GRILLE SHUTTER - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

PCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose

Vehicle speed	ABS module	Vehicle speed is used to determine positioning of the grille shutters.

DESCRIPTION AND OPERATION > ACTIVE GRILLE SHUTTER - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ACTIVE GRILLE SHUTTER

The grille shutter actuator positions the grille shutters based on commands from the PCM. The grille shutter moves 90 degrees from fully closed to fully open and, based on the position commanded by the PCM, is set in 1 of 16 positions (approximately 6 degrees between positions).

During normal operation, the grille shutter may be partially to fully open when the engine is off, depending on the ambient temperature. After an engine starting event, a calibration of the grille shutter system occurs, which typically takes 15-20 seconds. The grille shutter system performs the calibration sequence by detecting the end positions, open and closed. The calibration sequence can begin in either direction, open or closed, and continues until it is successful or a fault is sensed. A long pause may occur between the 2 portions (open/close) of the calibration sequence. If certain faults are present (shutter blocked or actuator error), a recalibration is initiated in an attempt to resolve the problem. If the problem is not resolved after a calibrated number of attempts (usually 3 or 4), a timer starts and sets a DTC when the timer reaches a predetermined limit. Other faults also trigger a recalibration request, but not until a grille shutter DTC is set in the PCM.

The PCM communicates the desired position (open or closed) of the grille shutter based on various PCM inputs (vehicle speed, coolant temperature, ambient temperature, A/C system pressure, etc.). The PCM communicates to the grille shutter actuator via a LIN. The LIN supports bi-directional communication between the grille shutter actuator and PCM, allowing the grille shutter actuator to communicate position and fault information to the PCM.

The PCM sets grille shutter Diagnostic Trouble Codes (DTCs) when the fault information is communicated by the grille shutter actuator for a predetermined amount of time. Any failures of the LIN for over 10 seconds continuously results in the grille shutter actuator positioning the grille shutter fully open. There is no indication to the driver of the vehicle when a fault with the grille shutter system is present or a grille shutter DTC is set in the PCM.

Component Description

Grille Shutter Actuator

The grille shutter actuator is a smart motor which receives position requests from the PCM via the LIN. One of the grille shutter blinds connects to the grille shutter actuator using a retainer. The grille shutter actuator can be serviced individually or as an entire assembly, which includes the grille shutter, grille shutter actuator, retainer, housing and jumper harness.

Grille Shutter

The grille shutter is comprised of shutter blinds which are linked to each other. One of the individual shutter blinds is fixed to the grille shutter actuator. When the grille shutter actuator moves, it moves the attached shutter which causes the other linked shutters to move. The grille shutter is serviced as an assembly (individual shutter blinds are not serviceable) or as an entire assembly, which includes the grille shutter, grille shutter actuator, retainer, housing and jumper harness.

DIAGNOSIS AND TESTING > ACTIVE GRILLE SHUTTER > DTC CHART: POWERTRAIN CONTROL MODULE (PCM)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Powertrain Control Module (PCM) DTC Chart

DTC	Description	Action
P059F	Active Grille Air Shutter "A" Performance / Stuck Off	GO to Pinpoint Test A
P05A1	Active Grille Air Shutter "A" Position Sensor Minimum / Maximum Stop Performance	GO to Pinpoint Test A
P05A2	Active Grille Air Shutter "A" Control Circuit / Open	INSTALL a new grille shutter actuator. REFER to: Active Grille Shutter Actuator .
P05A7	Active Grille Air Shutter Control Module "A" Supply Voltage Circuit Low	GO to Pinpoint Test A
P05C0	Active Grille Air Shutter Module "A" Over Temperature	INSTALL a new grille shutter actuator. REFER to: Active Grille Shutter Actuator .
U0046	Vehicle Communication Bus C	GO to Pinpoint Test A
U0284	Lost Communication With Active Grille Air Shutter Module "A"	GO to Pinpoint Test A
All other Diagnostic Trouble Codes (DTCs)	-	Refer to the appropriate article for the procedure.

DIAGNOSIS AND TESTING > ACTIVE GRILLE SHUTTER > SYMPTOM CHART(S)

Symptom Chart: Active Grille Shutter

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart

Condition	Possible Sources	Actions
The active grille shutter is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test A

DIAGNOSIS AND TESTING > ACTIVE GRILLE SHUTTER > PINPOINT TEST(S) > PINPOINT TEST A : THE ACTIVE GRILLE SHUTTER IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Refer to Cooling Fan for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Active Grille Shutter - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P059F	Active Grille Air Shutter "A" Performance / Stuck Off	When the grille shutter actuator senses it is unable to move the grille shutter, it sends a message to the PCM via the LIN. The PCM sets this DTC when the fault is communicated for a predetermined amount of time.
P05A1	Active Grille Air Shutter "A" Position Sensor Minimum / Maximum Stop Performance	When the grille shutter actuator senses it is unable to obtain a fully open or closed position of the grille shutter, it sends a message to the PCM via the LIN. The PCM then sets the DTC when the fault is communicated for a predetermined amount of time.
P05A7	Active Grille Air Shutter Control Module "A" Supply Voltage Circuit Low	When the grille shutter actuator senses low voltage, it sends a message to the PCM via the LIN. The PCM sets this DTC when the fault is communicated for a predetermined amount of time.
U0046	Vehicle Communication Bus C	This DTC sets when the PCM detects a short to voltage, ground or open in the LIN.
U0284	Lost Communication With Active Grille Air Shutter Module "A"	When the PCM does not receive communication from the grille shutter actuator for a predetermined amount of time, the PCM sets this DTC.

Possible Causes

- Fuse
- Wiring, terminals or connectors

- Grille shutter actuator
- Active grille shutter
- PCM

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 85 (15A) is OK.
- Make sure the grille opening does not have any debris or other obstructions that inhibit operation of the grille shutter.
- Make sure the grille shutter actuator electrical connector is not disconnected.

DIAGNOSIS AND TESTING > ACTIVE GRILLE SHUTTER > PINPOINT TEST(S) > PINPOINT TEST A : THE ACTIVE GRILLE SHUTTER IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY > PINPOINT TEST A : THE ACTIVE GRILLE SHUTTER IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

A1 RETRIEVE THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform PCM self-test.

Is DTC DTC P05A7, U0046 or U0284 present?

Yes	GO to A2

No	For DTC P059F or P05A1, GO to A7 For all other PCM Diagnostic Trouble Codes (DTCs), Refer to the appropriate article for the procedure.

A2 CHECK THE VOLTAGE SUPPLY TO THE GRILLE SHUTTER ACTUATOR

Ignition OFF.

Disconnect: Grille Shutter Actuator C1651 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1651-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to A3

No	VERIFY BJB fuse 85 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the cause of the circuit short.

A3 CHECK THE GRILLE SHUTTER ACTUATOR GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1651-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	For DTC U0046 or U0284, GO to A4 For DTC P05A7, GO to A9

No	REPAIR the circuit.

A4 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: PCM C1551B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1651-2	Ω	C1551B-50

Is the resistance less than 3 ohms?

Yes	GO to A5

No	REPAIR the circuit.

A5 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C1651-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to A6

A6 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1651-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	For DTC U0046 or U0248, GO to A10 For all other Diagnostic Trouble Codes (DTCs), GO to A9

No	REPAIR the circuit.

A7 VERIFY THE GRILLE SHUTTER OPERATION USING THE GRILLE SHUTTER A POSITION - COMMANDED (GRILL_A_CMD) PARAMETER IDENTIFICATION (PID)

Start the engine and allow it to idle for at least 30 seconds to allow for the grille shutter calibration to complete.

Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, select the PCM GRILL_A_CMD Parameter Identification (PID) and active command the grille shutter from 100% (open) to 0% (closed) while observing the grille shutter operation from the front of the vehicle.

Does the grille shutter fully open and close when commanded by the diagnostic scan tool?

Yes	The grille shutter system is operating correctly at this time. The concern may have been caused by debris/obstruction or the grille shutter actuator electrical connector. INSPECT the electrical connector and REPAIR or REPLACE as necessary.

No	GO to A8

A8 CHECK THE GRILLE SHUTTER FOR OBSTRUCTIONS AND/OR MECHANICAL BINDING CONCERNS

Ignition OFF.

Remove the grille shutter actuator.

Manually open and close the grille shutter, removing any obstructions which can inhibit operation of the grille shutter or linkage. The grille shutter should open and close easily with no binding.

Does the grille shutter operate freely with no binding or obstruction?

Yes	GO to A9

No	REPAIR the binding/obstruction, or if necessary, INSTALL a new grille shutter assembly. REFER to: Active Grille Shutter .

A9 CHECK FOR CORRECT GRILLE SHUTTER ACTUATOR OPERATION

Ignition OFF.

Disconnect: Grille Shutter Actuator C1651 (if not previously disconnected).

Inspect the grille shutter actuator electrical connector and jumper harness.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the grille shutter actuator connector, jumper harness and all previously disconnected system connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new grille shutter actuator. REFER to: Active Grille Shutter Actuator .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A10 CHECK FOR THE CORRECT GRILLE SHUTTER ACTUATOR OPERATION

Inspect the grille shutter actuator and PCM electrical connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the grille shutter actuator connector, jumper harness and all previously disconnected system connectors. Make sure they seat and latch correctly.

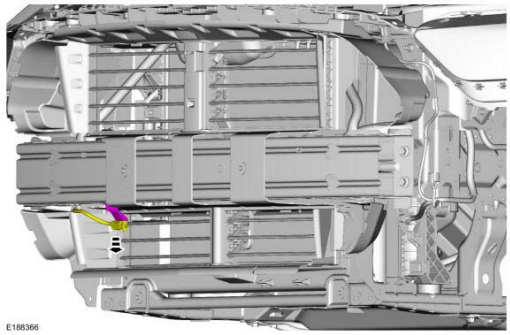
Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new grille shutter actuator. REFER to: Active Grille Shutter Actuator . CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If the concern is still present, INSTALL a new PCM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

REMOVAL AND INSTALLATION > ACTIVE GRILLE SHUTTER > REMOVAL



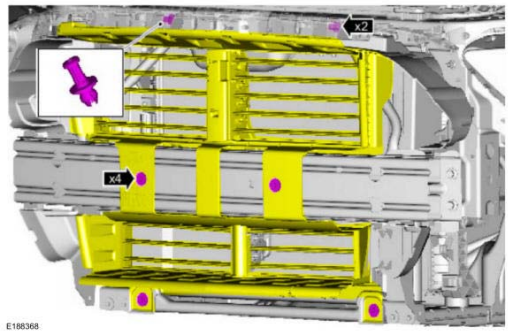
NOTE: Removal steps in this procedure may contain installation details.

1.

Refer to: Front Bumper Cover .

2.

Detach the ambient air temperature sensor.



3.

Remove the retainers and bolts and position the active grille shutter forward.

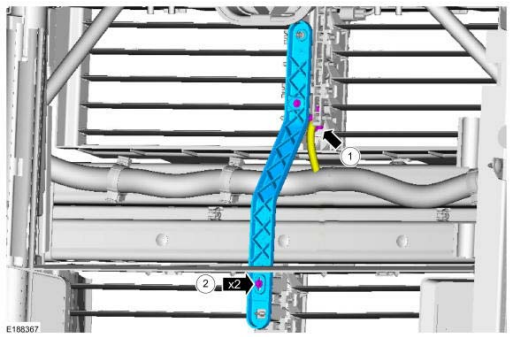
Torque

: 71 lb.in (8 Nm)

NOTE: Radiator and condenser removed for clarity.

4.

1.



Disconnect the active grille shutter actuator electrical connector.

2.

Remove the retainers and the bridge link.

Torque

: 27 lb.in (3 Nm)

5.

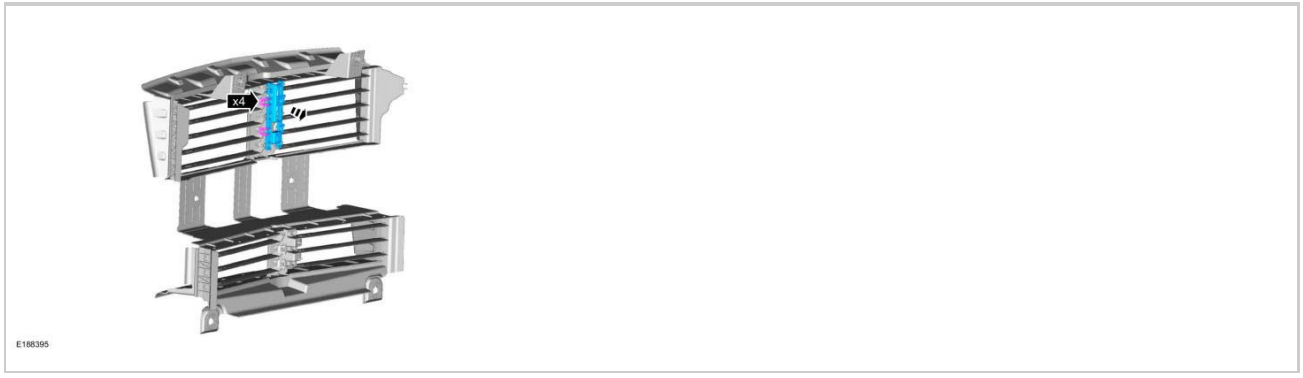
Remove the active grille shutter.

REMOVAL AND INSTALLATION > ACTIVE GRILLE SHUTTER > INSTALLATION

1.

To install, reverse the removal procedure.

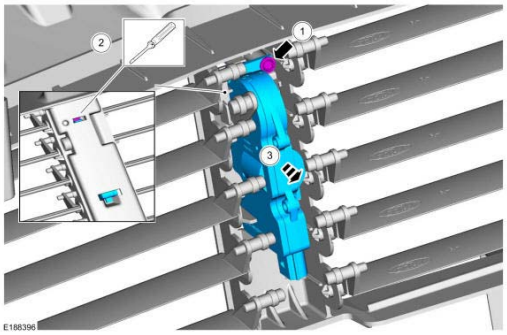
REMOVAL AND INSTALLATION > ACTIVE GRILLE SHUTTER ACTUATOR > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the active grille shutter assembly. Refer to: Active Grille Shutter .



2.

Remove the upper linkage.

3.

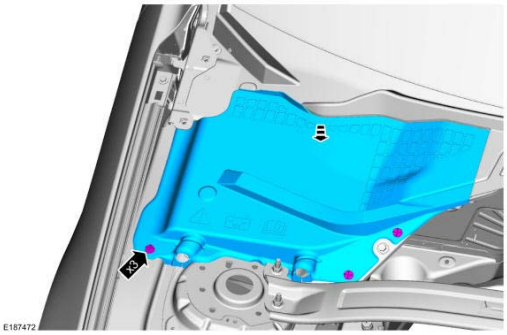
Remove the retainer. Using a screwdriver, push up on the clip and remove the active grille shutter actuator.

REMOVAL AND INSTALLATION > ACTIVE GRILLE SHUTTER ACTUATOR > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > COWL PANEL GRILLE > REMOVAL



NOTE: LHD shown, RHD similar.

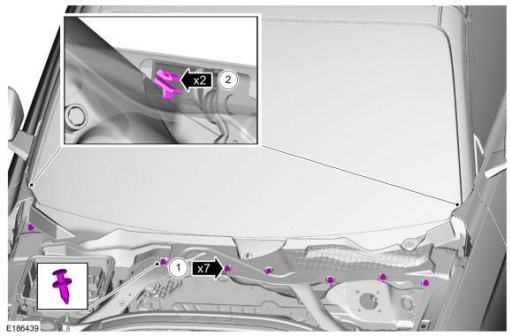
1.

Remove the wiper pivot arms. Refer to: Windshield Wiper Pivot Arm .

2.

Remove the retainers and the battery cover.

3.



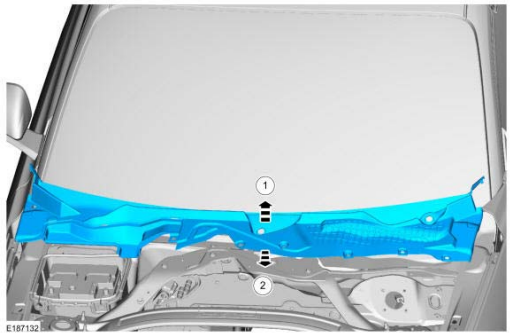
Remove the retainers and the clips.

1.

Remove the retainers.

2.

Depress and remove the clips.



4.

1.

Lift the cowl panel grille up.

2.

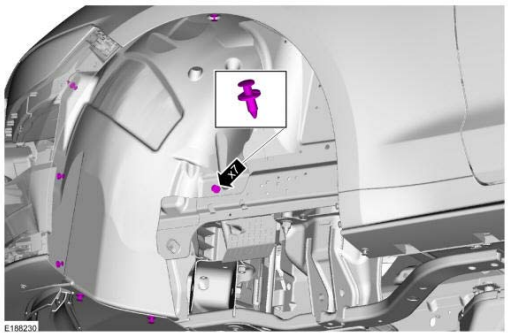
Pull the cowl panel grille out and remove.

REMOVAL AND INSTALLATION > COWL PANEL GRILLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FENDER SPLASH SHIELD > REMOVAL



NOTE: LH side shown, RH side similar.

1.

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FENDER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: LH side shown, RH side similar.

1.

Remove the fender splash shield. Refer to: Fender Splash Shield .

2.

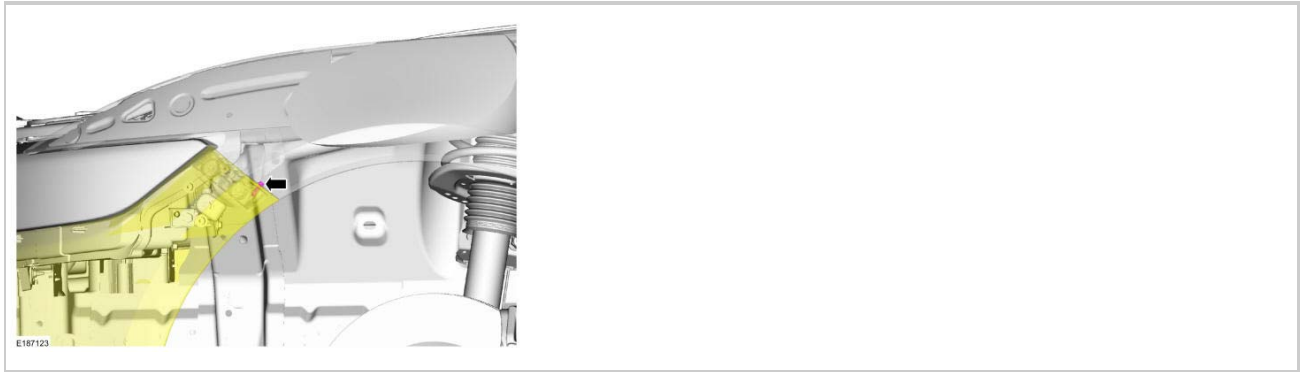
Remove the rocker panel moulding. Refer to: Rocker Panel Moulding .

3.

Remove the bolts.

Torque

: 106 lb.in (12 Nm)



4.

Remove the bolt and separate the front bumper cover from the fender bracket.

Torque

: 18 lb.in (2 Nm)

5.

1.

Remove the headlamp assembly bolt.

Torque

: 27 lb.in (3 Nm)

2.

Remove the fender bolt.

Torque

: 106 lb.in (12 Nm)

6.

Remove the cowl panel grille to fender clip.

7.

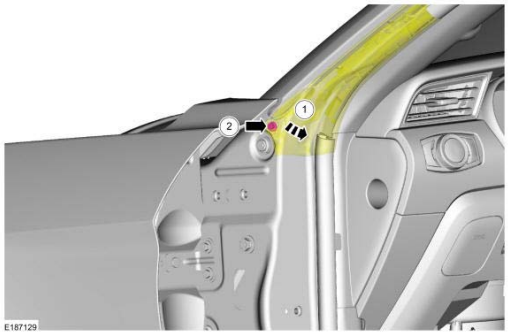
Remove the bolt.

Torque

: 80 lb.in (9 Nm)

8.

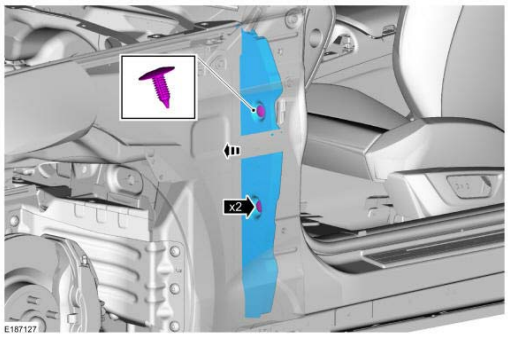
1.



Position aside the door weatherstrip.

2.

Remove the bolt.

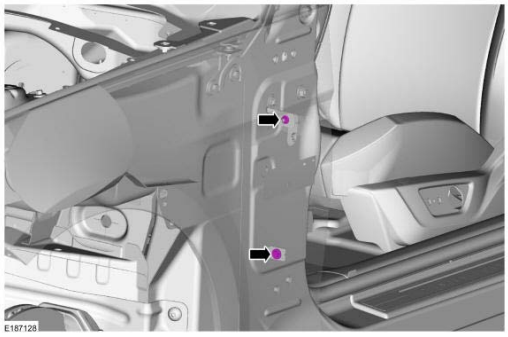


Torque

: 80 lb.in (9 Nm)

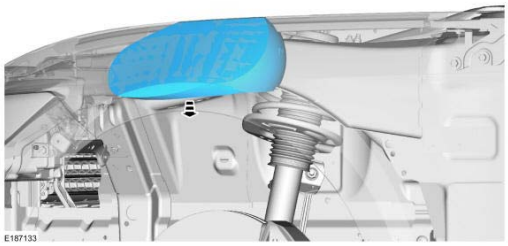
9.

Remove the retainers and sound insulation.



10.

Remove the bolt and nut.



Torque

: 106 lb.in (12 Nm)

11.

Remove the sound insulation.

12.

Remove the bolts and the fender.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > FENDER > INSTALLATION

Service Manual: FRONT SEATS

DESCRIPTION AND OPERATION > FRONT SEATS - OVERVIEW > OVERVIEW

Driver Power Seat - Without Memory

The seat control switch contains normally closed contacts which are grounded. An individual circuit is switched to voltage when a specific adjustment position is selected. The seat control switch is hard-wired directly to the applicable seat motors. The motor direction is determined by the polarity of voltage supplied from the seat control switch.

The driver power seat is equipped with the following motors:

- Front height motor (serviced with seat track assembly)
- Rear height motor (serviced with seat track assembly)
- Horizontal motor (serviced separately from the seat track assembly)
- Lumbar motor (serviced with power lumbar assembly)

Driver Power Seat - With Memory

The seat control switch provides a voltage signal to the DSM when a specific adjustment position is selected. The power driver seat is controlled by the DSM. The DSM is located on the driver seat track. PMI is required when a new DSM is installed. The DSM hard stop/soft stops must be set/reset any time a new DSM, driver seat track or horizontal motor is installed. This system allows automatic positioning of the driver seat to 1 of 3 programmable positions. For information on programming memory positions or recalling a stored memory position, refer to the Owner's Literature.

The driver power seat is equipped with the following motors:

- Front height motor (serviced with seat track assembly)
- Rear height motor (serviced with seat track assembly)
- Horizontal motor (serviced separately from the seat track assembly)
- Lumbar motor (serviced with power lumbar assembly)

Passenger Power Seat

The seat control switch contains normally closed contacts which are grounded. An individual circuit is switched to voltage when a specific adjustment position is selected. The seat control switch is hard-wired directly to the applicable seat motors. The motor direction is determined by the polarity of voltage supplied from the seat control switch.

The passenger power seat is equipped with the following motors:

- Front height motor (serviced with seat track assembly)
- Rear height motor (serviced with seat track assembly)
- Horizontal motor (serviced separately from the seat track assembly)
- Lumbar motor (serviced with power lumbar assembly)

Climate Controlled Seats

This system allows on-demand, independent, electrical heating/cooling of each front seat.

The climate controlled seat system consists of the following components:

- Blower motor, located within each front seat cushion and backrest
- Air filter integrated to each blower motor assembly (not serviceable)
- Climate controlled seat buttons, located on the FDIM (touchscreen)
- Climate controlled seat buttons, located on the FCIM
- SCME, mounted to the bottom of the front passenger seat
- Cushion and backrest manifolds
- Cushion and backrest foam pads
- Cushion and backrest trim covers

Remote Start Climate Operation

Different climate control modes/preferences can be selected when the vehicle is started using the remote start feature. This can be accessed through the message center. For additional information on how to set the remote start preferences, refer to the Owner's Literature. When the driver seat and/or passenger seat is set to AUTO mode, the driver/passenger heated/climate controlled seat activates in full heat mode when the outside temperature is less than 0 ° C (32 ° F) and full cool mode (climate controlled seats only) when outside temperature is greater than 27 ° C (80 ° F) any time the vehicle is started using the remote start feature. No heated/climate controlled seat adjustments are recognized during remote start operation. Once the ignition is cycled ON, the heated/climate controlled seat returns to the previous settings (last ignition ON cycle) and adjustments can be made normally. If the previous setting was off, the heated/climate controlled seat turns off.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART - MEMORY SEAT

DSM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Provides the ignition status. This input is used for the easy entry/exit feature.
Gear lever position	PCM	Provides the gear selector lever status. This input is used for the easy entry/exit and memory recall

		feature.
Personality recall	BCM	When the personality recall command is received from the BCM, the DSM stores or recalls the associated memory seat position (1, 2 or 3). If a RKE transmitter has been programmed to a memory position, this input is used to recall the associated memory seat position.
Memory seat switch status	DDM	When the memory set switch (1, 2 or 3) is activated, the DDM sends this message to the DSM, which then stores or recalls the associated memory seat position.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART - CLIMATE CONTROLLED SEATS

SCME Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Climate control seat settings request	FDIM	The climate control seat settings request message contains the climate controlled seat request information.
Climate control seat settings request	FCIM	The climate control seat settings request message contains the climate controlled seat request information.

FDIM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Climate control seat settings status	SCME	The SCME provides this message to the FDIM for the purpose of updating the displayed status of the climate controlled seat buttons on the FDIM (touchscreen).

FCIM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Climate control seat settings status	SCME	The SCME provides this message to the FCIM for the purpose of

		updating the displayed status of the climate controlled seat buttons on the FCIM.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > MEMORY SEAT OPERATION

The driver seat control switch provides a voltage signal to the DSM only when activated. This voltage signal causes the DSM to power the appropriate motor until the input is removed. The motor circuits are normally grounded through the DSM. The DSM internally switches the appropriate circuit from ground to voltage to operate the motors.

As the seat is adjusted, the DSM monitors the motor position sensors to record the current seat position. The DSM removes voltage from the motor upon termination of the seat control switch input or if the DSM does not detect movement from the motor while monitoring the position sensor during a memory recall operation.

If the DSM loses the signal from any of motor position sensors, the affected seat motor operates in jog mode. Jog mode allows limited operation of the affected seat motor using only the seat control switch. When the seat control switch is operated in jog mode, the seat moves in the desired direction for one second, then stops. The seat control switch must be released, then pressed again in order to move the seat for an additional second. Jog mode is an indication that there is a seat motor sensor fault. If the memory seat is operating in jog mode, a DTC sets in the DSM.

DSM Hard Stop/Soft Stop

The DSM has the ability for soft stops both at the upper and lower limits on all axes of the driver seat. When an axis reaches the hard stop and the switch is held for approximately one second, it then reverses direction 180 ms and establishes the soft stop for that axis in that direction. The DSM uses this back up strategy to check sensor integrity any time movement has stopped prematurely due to a sensor failure or obstruction.

A hard stop occurs when one of the memory seat track axes or backrest recline physically reach the end of travel and can go no further. A soft stop occurs when the seat stops before physically reaching the end of travel. The hard stop is set by seat design and cannot be changed or adjusted. The soft stop is set by the DSM. To prevent unnecessary stress on the seat and motors, the DSM sets soft stop positions, 2 for each moving axis. The DSM uses a preset distance from the hard stop to determine where the soft stop occurs. When an axis reaches the hard stop and the switch is held for approximately one second, the DSM establishes the soft stop for that axis in that direction.

Easy Entry/Exit

The easy entry/exit feature is a function of the DSM that moves the driver seat back approximately 50.8 mm (2 in) (unless seat is already positioned at or near the end of travel) when the ignition is turned off. The DSM receives ignition status over the MS-CAN and operates the driver seat rearward. The DSM cancels this operation if a valid input command is received from the driver seat control switch, memory set switch, exterior mirror control switch or if the function has been disabled.

The DSM records the current seat positions before operating the seat for an easy exit operation. During easy entry operation (when the ignition is turned on), the seat is returned to the recorded seat position previous to the easy exit operation. Easy entry operation is cancelled if a valid input command is received by the DSM. A memory position recall using the memory set switch also overrides the easy exit operation.

The easy entry/exit feature can be enabled/disabled on the message center. For information on

programming vehicle settings in the message center, refer to the Owner's Literature.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CLIMATE CONTROLLED SEAT OPERATION

The driver and passenger climate controlled seat buttons are selected from the FCIM or FDIM (touchscreen). The FDIM is mounted directly to the APIM. The climate controlled seat system functions independently of the vehicle's climate control system. When the climate controlled seat buttons are pressed on the touchscreen, the APIM sends the request to the GWM using the HS-CAN3. The GWM sends the message to the SCME over the MS-CAN.

When the climate controlled seat buttons are pressed on FCIM, the FCIM sends the request to the SCME using the MS-CAN.

The seat cushion and backrest are each equipped with a blower motor assembly. As cabin air is drawn through each blower motor, the blower motors heat or cool the air, which is then directed into the foam pad where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the SCME uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the commanded climate controlled seat settings.

The SCME monitors seat cushion temperature while it supplies voltage and ground to both blower motors. The SCME also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the blower motor housing. Heated or cooled air exits the blower motor and flows through the foam pad.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CLIMATE CONTROLLED SEAT HEATING CHARACTERISTICS

- In heat mode, the blower motor can add up to 40-60 ° C (72-108 ° F) to the ambient inlet air temperature.
- The system control settings are indicated next to each climate controlled seat heat button on the touchscreen. The first setting is HIGH (3 indicators), the second setting is MED (2 indicators) and the third is LOW (1 indicator), then OFF (no indicators).
- When heating, the SCME varies the speed of the blower motors and the duty cycle of the integral Thermo-Electric Device (TED) in order to reach and maintain the desired temperature determined by the system control settings.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CLIMATE CONTROLLED SEAT COOLING CHARACTERISTICS

- In cool mode, the blower motors can remove up to 8 ° C (14 ° F) from the ambient air temperature entering the system.
- The system control settings are based on the 3 indicators next to each climate controlled seat cool

button on the touchscreen. The first setting is HIGH (3 indicators), the second setting is MED (2 indicators) and the third is LOW (1 indicator), then OFF (no indicators).

- The SCME maintains a constant blower motor speed and a constant Thermo-Electric Device (TED) supply voltage (duty cycle is determined by the switch setting) in COOL mode.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CLIMATE CONTROLLED SEAT RECOVERY MODE

NOTE: The presence of overtemperature faults (Diagnostic Trouble Codes (DTCs) B2729, B2730, B272A and B272B) can be induced by incorrectly operating the climate controlled seat system after an initial heat setting has been attained. If a heat setting is repeatedly turned off and on in an attempt to increase the seat temperature or repeatedly toggled between heat and cool modes, an overtemperature condition can result and the Diagnostic Trouble Codes (DTCs) may be set.

If the temperature of one of the blower motors rises above 110 ° C (229.8 ° F) in the heat mode or 65 ° C (148.9 ° F) in the cool mode for more than 4 seconds, the SCME records an overtemperature DTC, removes voltage from the Thermo-Electric Devices (TEDs) (part of the blower motor assembly) and goes into recovery mode (blower only) for 30 seconds to cool down the blower motor. The same occurs if a temperature difference of 60 ° C (108 ° F) or greater is detected between the backrest and cushion blower motors on either front seat. The SCME continues to monitor the blower motors while in recovery mode. If the temperature of the Thermo-Electric Devices (TEDs) do not drop to 105 ° C (220.8 ° F) in the heat mode or 60 ° C (139.9 ° F) in the cool mode after 30 seconds, the system continues to cool the blower motors in recovery mode for up to 5 minutes. If the Thermo-Electric Devices (TEDs) cool down after 30 seconds, but before 5 minutes (checked at 4 second intervals), the system is operating normally. An overtemperature DTC is still recorded even if the system recovers and is operating normally. This is more likely to occur during extreme cabin temperatures with significant seat back sun load. If the system does not recover within 30 seconds in heat mode or within 5 minutes in cool mode, the SCME disables that seat (fault mode) and remains off until the ignition is cycled. Also, if the SCME detects a temperature differential fault twice during the same ignition cycle, the SCME disables the seat. When a fault causes a shutdown, the climate controlled seat indicators turn off and that seat is not operational until the next ignition cycle.

DESCRIPTION AND OPERATION > FRONT SEATS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Driver Seat Control Switch - With Memory

The seat control switch is hard-wired to the DSM, which controls seat operation. When a specific seat adjustment position is selected, an individual circuit is switched to voltage.

Seat Control Switch - Without Memory

The seat control switch contains normally closed contacts (which are grounded). When a specific adjustment position is selected, an individual circuit is switched to voltage.

DSM

The driver seat control switch and power memory seat motors are hard-wired to the DSM. The DSM controls the operation of the power memory seat. The DSM communicates on the Medium Speed Controller

Area Network (MS-CAN). PMI is required when a new DSM is installed. The DSM hard stop/soft stops must be set/reset any time a new DSM, driver seat track or horizontal motor is installed.

Memory Set Switch

The memory set switch contains 3 momentary contact switches. It is hard-wired to the DDM and is used to recall each memory position stored in the DSM.

Driver Seat Track - With Memory

There are 3 front seat track bi-directional motors present on power seat tracks. The horizontal (fore/aft) front seat track motor is the only seat track motor which can be serviced separately from the seat track assembly. All other seat track motors (front height, rear height) are serviced as part of the seat track assembly. Each seat track motor contains a Hall-effect sensor which provides seat track position information to the DSM for setting/obtaining desired preset seat memory positions. The seat track motors move the power seat forward/backward and up/down depending on the polarity of voltage supplied from the DSM.

Seat Track - Without Memory

There are 3 front seat track bi-directional motors present on power seat tracks. The horizontal (fore/aft) front seat track motor is the only seat track motor which can be serviced separately from the seat track assembly. All other seat track motors (front height, rear height) are serviced as part of the seat track assembly. The seat track motors move the power seat forward/backward and up/down depending on the polarity of voltage supplied from the seat control switch.

FDIM

If equipped with climate controlled seats, the FDIM (touchscreen) contains climate controlled seat control buttons.

FCIM

If equipped with climate controlled seats, the FCIM contains climate controlled seat buttons. PMI is required when a new FCIM is installed.

SCME

If equipped with climate controlled seats, The SCME controls the operation of the climate controlled seat system. PMI is required when a new SCME is installed.

Blower Motor

If equipped with climate controlled seats, the seat cushion and backrest are each equipped with a blower motor assembly that includes a seat blower (Thermo-Electric Device (TED) and fan motor, serviced as an assembly). There is also a temperature sensor (thermistor) in each blower motor which provides feedback to the SCME. The blower motor assembly is controlled by the SCME.

Front Seat Power Lumbar Assembly

The front seat power lumbar assembly is mounted to the backrest (serviced as an assembly).

DIAGNOSIS AND TESTING > FRONT SEATS

U2050	No Application Present	INSTALL a new DSM. REFER to: Driver Front Seat Module .

DIAGNOSIS AND TESTING > FRONT SEATS > SYMPTOM CHART(S)

Symptom Chart: Front Seats

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: GENERAL INFORMATION .

Symptom Chart

Condition	Possible Sources	Actions
No communication with the DSM	Refer to the Pinpoint Test	REFER to: MODULE COMMUNICATIONS NETWORK .

No communication with the DDM	Refer to the Pinpoint Test	REFER to: MODULE COMMUNICATIONS NETWORK .
No communication with the FCIM	Refer to the Pinpoint Test	REFER to: MODULE COMMUNICATIONS NETWORK .
No communication with the SCME	Refer to the Pinpoint Test	REFER to: MODULE COMMUNICATIONS NETWORK .
The power seat is inoperative or does not operate correctly - driver, without memory	Refer to the Pinpoint Test	GO to Pinpoint Test F
The power seat is inoperative or does not operate correctly - passenger	Refer to the Pinpoint Test	GO to Pinpoint Test A
The power lumbar is inoperative - driver	Refer to the Pinpoint Test	GO to Pinpoint Test B
The memory seat does not operate horizontally/vertically using the seat control switch	Refer to the Pinpoint Test	GO to Pinpoint Test C
The memory seat does not operate using the memory SET switch	Refer to the Pinpoint Test	GO to Pinpoint Test D
The memory seat moves in one-second intervals	Refer to the Pinpoint Test	CARRY OUT the DSM self-test and RETRIEVE the Diagnostic Trouble Codes (DTCs). REFER to the DSM DTC Chart .
The memory seat does not move to the correct memory position	Refer to the Pinpoint Test	CARRY OUT the DSM self-test and RETRIEVE the Diagnostic Trouble Codes (DTCs). REFER to the DSM DTC Chart .
The memory seat does not operate when using the RKE transmitter	Refer to the Pinpoint Test	VERIFY the RKE transmitter is operating correctly and is associated to a memory position. REFER to the Owner's Literature for information on associating a RKE transmitter. CARRY OUT the DSM self-test and REFER to the DSM DTC Chart to diagnose any Diagnostic Trouble Codes (DTCs) retrieved.
Easy entry/easy exit is inoperative/does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test E
One or both climate controlled seats are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test J
A single climate controlled seat does not operate correctly - exhibits poor airflow or performance	Excessive sunload or extreme cabin temperatures Incorrectly installed backrest or cushion blower motor	CARRY OUT the SCME self-test and retrieve any Diagnostic Trouble Codes (DTCs). If any Diagnostic Trouble Codes

	Airflow blockage Disconnected air duct	(DTCs) are present, REFER to the SCME DTC Chart . If no Diagnostic Trouble Codes (DTCs) are present, CHECK the affected seat cushion or backrest for correct installation of the climate controlled seat components (backrest or cushion blower motor, air duct and foam pad) and CHECK for airflow restrictions (backrest or cushion blower motor inlets and outlets, filters and ducts) and REPAIR as needed. RETEST the system for normal operation.

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST A : THE POWER SEAT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - PASSENGER

Refer to Power Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Seat control switch
- Horizontal motor
- Seat track

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 13 (30A) is OK.

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST A : THE POWER SEAT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - PASSENGER > PINPOINT TEST A : THE POWER SEAT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - PASSENGER

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious

personal injury from an accidental deployment.

A1 CHECK THE SEAT OPERATION

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Attempt to operate the seat in all directions.

Is the seat inoperative in all directions?

Yes	GO to A2

No	If only the horizontal motor is inoperative, GO to A4If only the front height motor is inoperative, GO to A6If only the rear height motor is inoperative, GO to A8

A2 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH

Disconnect: Passenger Seat Control Switch C3190 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3190-8	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A3

No	VERIFY BJB fuse 13 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. GO to A10

A3 CHECK THE SEAT CONTROL SWITCH GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3190-10	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new passenger seat control switch. REFER to: Front Seat Control Switch . GO to A10

No	REPAIR the circuit. GO to A10

A4 CHECK FOR VOLTAGE TO THE SEAT HORIZONTAL MOTOR

Disconnect: Passenger Seat Horizontal Motor C332 .

> *NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.*

While pushing the horizontal switch forward and rearward, measure:

Positive Lead	Measurement / Action	Negative Lead
C332-1	V	C332-3

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new horizontal motor. REFER to: Front Seat Track Motor . GO to A10

No	GO to A5

A5 CHECK THE SEAT HORIZONTAL MOTOR CIRCUIT FOR AN OPEN

Disconnect: Passenger Seat Control Switch C3190 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3190-1	Ω	C332-3
C3190-2	Ω	C332-1

Are the resistances less than 3 ohms?

Yes	INSTALL a new passenger seat control switch. REFER to: Front Seat Control Switch . GO to A10

No	REPAIR the circuit in question. GO to A10

A6 CHECK FOR VOLTAGE TO THE SEAT FRONT HEIGHT MOTOR

Disconnect: Passenger Seat Front Height Motor C3074 .

> *NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.*

While pushing the front height switch upward and downward, measure:

Positive Lead	Measurement / Action	Negative Lead
C3074-1		C3074-3

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new passenger seat track. REFER to: Front Seat Track . GO to A10

No	GO to A7

A7 CHECK THE SEAT FRONT HEIGHT MOTOR CIRCUIT FOR AN OPEN

Disconnect: Passenger Seat Control Switch C3190 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3190-6	Ω	C3074-3
C3190-5	Ω	C3074-1

Are the resistances less than 3 ohms?

Yes	INSTALL a new passenger seat control switch. REFER to: Front Seat Control Switch . GO to A10

No	REPAIR the circuit in question. GO to A10

A8 CHECK FOR VOLTAGE TO THE SEAT REAR HEIGHT MOTOR

Disconnect: Passenger Seat Rear Height Motor C3075 .

NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.

While pushing the rear height switch upward and downward, measure:

Positive Lead	Measurement / Action	Negative Lead
C3075-1		C3075-3

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new passenger seat track. REFER to: Front Seat Track . GO to A10

No	GO to A9

A9 CHECK THE SEAT REAR HEIGHT MOTOR CIRCUIT FOR AN OPEN

Disconnect: Passenger Seat Control Switch C3190 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3190-9	Ω	C3075-3
C3190-7	Ω	C3075-1

Are the resistances less than 3 ohms?

Yes	INSTALL a new passenger seat control switch. REFER to: Front Seat Control Switch . GO to A10

No	REPAIR the circuit in question. GO to A10

A10 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST B : THE POWER LUMBAR IS INOPERATIVE - DRIVER

Refer to Power Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats .

Possible Causes

- Wiring, terminals or connectors

- Seat control switch
- Front seat power lumbar assembly

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST B : THE POWER LUMBAR IS INOPERATIVE - DRIVER > PINPOINT TEST B : THE POWER LUMBAR IS INOPERATIVE - DRIVER

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

B1 CHECK FOR VOLTAGE TO THE SEAT LUMBAR MOTOR

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Driver Seat Lumbar Motor C3215 .

NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.

While pushing the lumbar switch in both directions, measure:

Positive Lead	Measurement / Action	Negative Lead
C3215-A	V	C3215-B

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new driver seat power lumbar assembly. REFER to: Front Seat Power Lumbar Assembly . GO to B3

No	GO to B2

B2 CHECK THE SEAT LUMBAR MOTOR CIRCUITS FOR AN OPEN

Disconnect: Driver Seat Control Switch C352 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-4	Ω	C3215-B

C352-3	Ω	C3215-A

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver seat control switch. REFER to: Front Seat Control Switch . GO to B3

No	REPAIR the circuit in question. GO to B3

B3 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST C : THE MEMORY SEAT DOES NOT OPERATE HORIZONTALLY/VERTICALLY USING THE SEAT CONTROL SWITCH

Refer to Memory Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1663	Seat Driver Front Up/Down Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.

B1664	Seat Driver Rear Up/Down Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
B1665	Seat Driver Forward/Backward Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
B1711	Seat Driver Front Up Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM self-test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1715	Seat Driver Front Down Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM self-test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1719	Seat Driver Forward Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM self-test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1723	Seat Driver Rearward Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM self-test, the DTC is set. If voltage

		is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1727	Seat Driver Rear Up Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM self-test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1731	Seat Driver Rear Down Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM self-test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Seat control switch
- Horizontal motor
- Seat track
- DSM

Visual Inspection and Diagnostic Pre-checks

- Verify BCM fuse 2 (7.5A) is OK.
- Verify BJB fuse 12 (30A) is OK.

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST C : THE MEMORY SEAT DOES NOT OPERATE HORIZONTALLY/VERTICALLY USING THE SEAT CONTROL SWITCH > PINPOINT TEST C : THE MEMORY SEAT DOES NOT OPERATE HORIZONTALLY/VERTICALLY USING THE SEAT CONTROL SWITCH

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious

personal injury from an accidental deployment.

C1 RETRIEVE THE DSM (DRIVER FRONT SEAT MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Ignition ON.

Activate the seat control switch in all directions.

Using a diagnostic scan tool, perform DSM self-test. If the diagnostic scan tool does not communicate with the DSM, REFER to: MODULE COMMUNICATIONS NETWORK .

Are any DSM Diagnostic Trouble Codes (DTCs) present?

Yes	If Diagnostic Trouble Codes (DTCs) B1663, B1664, and B1665 are all retrieved, GO to C10For DTC B1711, B1715, B1719, B1723, B1727 or B1731, GO to C3 For DTC B1663, GO to C18 For DTC B1664, GO to C21 For DTC B1665, GO to C24 For all other Diagnostic Trouble Codes (DTCs), REFER to the DSM DTC Chart . GO to C28

No	GO to C2

C2 CHECK THE DSM (DRIVER FRONT SEAT MODULE) SEAT CONTROL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

While operating the seat control switch in all positions, monitor the following DSM seat control switch Parameter Identifications (PIDs) using a diagnostic scan tool:

Driver Power Seat Front Up/Down Switch (SFNT_SW)

Driver Power Seat Forward/Backward Switch (SFWD_SW)

Driver Power Seat Rear Up/Down Switch (SREARSW)

Do the PID states agree with the switch positions?

Yes	GO to C9

No	VERIFY BJB fuse 12 (30A) is OK. If OK, GO to C3 If not OK or fails while operating the seat control switch, DISCONNECT the seat control switch C3387 and GO to C7

C3 CHECK THE SEAT CONTROL SWITCH

Ignition OFF.

Remove the driver seat control switch. REFER to: Front Seat Control Switch .

Carry out the seat control switch component test. Refer to Component Testing for schematic and connector information.

Is the seat control switch OK?

Yes	GO to C4

No	INSTALL a new driver seat control switch. REFER to: Front Seat Control Switch . GO to C28

C4 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-9	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to C5

No	REPAIR the circuit. GO to C28

C5 CHECK THE SEAT CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to C6

No	REPAIR the circuit. GO to C28

C6 CHECK THE CIRCUITS BETWEEN THE SEAT CONTROL SWITCH AND DSM (DRIVER FRONT SEAT MODULE) FOR A SHORT TO VOLTAGE

Disconnect: DSM C341B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-8	V	Ground
C352-1	V	Ground
C352-5	V	Ground

C352-2		Ground
C352-6		Ground
C352-10		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to C28

No	GO to C7

C7 CHECK THE CIRCUITS BETWEEN THE SEAT CONTROL SWITCH AND DSM (DRIVER FRONT SEAT MODULE) FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-8	Ω	Ground
C352-1	Ω	Ground
C352-5	Ω	Ground
C352-2	Ω	Ground
C352-6	Ω	Ground
C352-10	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to C8

No	REPAIR the circuit in question. GO to C28

C8 CHECK THE CIRCUITS BETWEEN THE SEAT CONTROL SWITCH AND DSM (DRIVER FRONT SEAT MODULE) FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-8	Ω	C341B-17
C352-1	Ω	C341B-18
C352-5	Ω	C341B-16
C352-2	Ω	C341B-6

C352-6	Ω	C341B-15
C352-10	Ω	C341B-5

Are the resistances less than 3 ohms?

Yes	GO to C27

No	REPAIR the circuit in question. GO to C28

C9 CHECK THE SEAT TRACK OPERATION USING DSM (DRIVER FRONT SEAT MODULE) ACTIVE COMMANDS AND PARAMETER IDENTIFICATIONS (PIDS)

Toggle the following DSM active commands ON and OFF using a diagnostic scan tool while monitoring the seat movement:

Front Motor Up (FRONT_UP)

Front Motor Down (FRONT_DWN)

Rear Motor Up (REAR_UP)

Rear motor down (REAR_DWN)

Horizontal Motor Forward (HORZ_FWD)

Horizontal Motor Backward (HORZ_BWD)

Does the driver seat operate correctly?

Yes	The condition may be intermittent. CHECK for causes of an intermittent concern, particularly the pins and terminals of electrical connectors that were disconnected. **Do not install any new components at this time. Components should only be installed when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found. GO to

No	If no seat movement, GO to C10If no front vertical seat movement, GO to C18If no rear vertical seat movement, GO to C21If no horizontal seat movement, GO to C24

C10 CHECK FOR VOLTAGE TO THE DSM (DRIVER FRONT SEAT MODULE)

Ignition OFF.

Disconnect: DSM C341A and C341B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341A-1		Ground

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-1		Ground

Are the voltages greater than 11 volts?

Yes	GO to C11

No	VERIFY BJB fuse 12 (30A) and BCM fuse 2 (7.5A) are OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. GO to C28

C11 CHECK THE DSM (DRIVER FRONT SEAT MODULE) GROUND CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341A-2	Ω	Ground

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-24	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to C12

No	REPAIR the circuit in question. GO to C28

C12 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-23	Ω	Ground
C341B-11	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to C14

No	GO to C13

C13 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND WITH THE

MOTOR DISCONNECTED

Disconnect: Driver Seat Front Height Motor C382 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-23	Ω	Ground
C341B-11	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to C28

No	REPAIR the circuit in question. GO to C28

C14 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-22	Ω	Ground
C341B-10	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to C16

No	GO to C15

C15 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND WITH THE MOTOR DISCONNECTED

Disconnect: Driver Seat Rear Height Motor C363 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-22	Ω	Ground
C341B-10	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to C28

No	REPAIR the circuit in question. GO to C28

C16 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-9	Ω	Ground
C341B-12	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to C27

No	GO to C17

C17 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR A SHORT TO GROUND WITH THE MOTOR DISCONNECTED

Disconnect: Driver Seat Horizontal Motor C362 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-9	Ω	Ground
C341B-12	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new horizontal motor. REFER to: Front Seat Track Motor . GO to C28

No	REPAIR the circuit in question. GO to C28

C18 CHECK THE FRONT HEIGHT MOTOR FOR CORRECT OPERATION USING ACTIVE COMMANDS

Ignition OFF.

Disconnect: Driver Seat Front Height Motor C382 .

Ignition ON.

Using a diagnostic scan tool, view the following DSM active command Parameter Identifications (PIDs):

Front Motor Up (FRONT_UP)

Front Motor Down (FRONT_DWN)

> *NOTE: During the following step, the voltage being measured changes polarity dependent upon which direction the seat control is activated.*

Using a diagnostic scan tool, toggle the active commands FRONT_UP and FRONT_DOWN on and off and measure:

Positive Lead	Measurement / Action	Negative Lead
C382-1	V	C382-3

Is the voltage greater than 11 volts when commanded ON in both directions and 0 volt when commanded OFF?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to C28

No	GO to C19

C19 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: DSM C341B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-23	V	Ground
C341B-11	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to C28

No	GO to C20

C20 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-23	Ω	C382-3

C341B-11	Ω	C382-1

Are the resistances less than 3 ohms?

Yes	GO to C27

No	REPAIR the circuit in question. GO to C28

C21 CHECK THE REAR HEIGHT MOTOR FOR CORRECT OPERATION USING ACTIVE COMMANDS

Ignition OFF.

Disconnect: Driver Seat Rear Height Motor C363 .

Ignition ON.

Using a diagnostic scan tool, view the following DSM active command Parameter Identifications (PIDs):

Rear Motor Up (REAR_UP)

Rear motor down (REAR_DWN)

NOTE: During the following step, the voltage being measured changes polarity dependent upon which direction the seat control is activated.

Using a diagnostic scan tool, toggle the active commands REAR_UP and REAR_DOWN on and off and measure:

Positive Lead	Measurement / Action	Negative Lead
C363-1	V	C363-3

Is the voltage greater than 11 volts when commanded ON in both directions and 0 volt when commanded OFF?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to C28

No	GO to C22

C22 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: DSM C341B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-22	V	Ground
C341B-10	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to C28

No	GO to C23

C23 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-22	Ω	C363-3
C341B-10	Ω	C363-1

Are the resistances less than 3 ohms?

Yes	GO to C27

No	REPAIR the circuit in question. GO to C28

C24 CHECK THE HORIZONTAL MOTOR FOR CORRECT OPERATION USING ACTIVE COMMANDS

Ignition OFF.

Disconnect: Driver Seat Horizontal Motor C362 .

Ignition ON.

Using a diagnostic scan tool, view the following DSM active command Parameter Identifications (PIDs):

Horizontal Motor Forward (HORZ_FWD)

Horizontal Motor Backward (HORZ_BWD)

> *NOTE: During the following step, the voltage being measured changes polarity dependent upon which direction the seat control is activated.*

Using a diagnostic scan tool, toggle the active commands HORZ_FWD and HORZ_BWD on and off and measure:

Positive Lead	Measurement / Action	Negative Lead
C362-1		C362-3

Is the voltage greater than 11 volts when commanded ON in both directions and 0 volt when commanded OFF?

Yes	INSTALL a new horizontal motor. REFER to: Front Seat Track Motor . GO to C28

No	GO to C25

C25 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: DSM C341B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-9		Ground
C341B-12		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to C28

No	GO to C26

C26 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341B-9	Ω	C362-3
C341B-12	Ω	C362-1

Are the resistances less than 3 ohms?

Yes	GO to C27

No	REPAIR the circuit in question. GO to C28

C27 CHECK THE DSM (DRIVER FRONT SEAT MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the DSM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the DSM connectors. Make sure they seat and latch correctly.

> *NOTE: Do not reconnect Driver Side Airbag In-line C345 at this time.*

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM. REFER to: Driver Front Seat Module . GO to C28

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to C28

C28 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST D : THE MEMORY SEAT DOES NOT OPERATE USING THE MEMORY SET SWITCH

Refer to Memory Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats

DSM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1663	Seat Driver Front Up/Down Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
B1664	Seat Driver Rear Up/Down Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
B1665	Seat Driver Forward/Backward Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
B1952	Seat Rear Up/Down Position Feedback Circuit Short to Battery	If a short to voltage or an open condition is present on the affected motor's position sensor

		(Hall-effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in one-second increments.
B1953	Seat Rear Up/Down Position Feedback Circuit Short to Ground	If a short to ground condition is present on the affected motor's position sensor (Hall-effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in one-second increments.
B1956	Seat Front Up/Down Position Feedback Circuit Short to Battery	If a short to voltage or an open condition is present on the affected motor's position sensor (Hall-effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in one-second increments.
B1957	Seat Front Up/Down Position Feedback Circuit Short to Ground	If a short to ground condition is present on the affected motor's position sensor (Hall-effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in one-second increments.
B1964	Seat Horizontal Forward/Rearward Position Feedback Circuit Short to Battery	If a short to voltage or an open condition is present on the affected motor's position sensor (Hall-effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in one-second increments.
B1965	Seat Horizontal Forward/Rearward Position Feedback Circuit Short to Ground	If a short to ground condition is present on the affected motor's position sensor (Hall-effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in one-second increments.

DDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1C03:23	Memory #1 Switch: Signal Stuck Low	If a short to ground is sensed on the switch input circuit during the DDM self-test, the DTC is set. If activity is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1C04:23	Memory #2 Switch: Signal Stuck Low	If a short to ground is sensed on the switch input circuit during the DDM self-test, the DTC is set. If activity is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
B1C05:23	Memory #3 Switch: Signal Stuck Low	If a short to ground is sensed on the switch input circuit during the DDM self-test, the DTC is set. If activity is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.

Possible Causes

- Wiring, terminals or connectors
- Memory SET switch
- Missing ignition status information
- Horizontal motor
- Seat track
- DSM

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST D : THE MEMORY SEAT DOES NOT OPERATE USING THE MEMORY SET SWITCH > PINPOINT TEST D : THE MEMORY SEAT DOES NOT OPERATE USING THE MEMORY SET SWITCH

WARNING: Incorrect repair techniques or actions can cause an accidental

Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

D1 CHECK THE DSM (DRIVER FRONT SEAT MODULE) IGNITION SWITCH STATUS PID (PARAMETER IDENTIFICATION) STATES

Ignition ON.

Using a diagnostic scan tool, monitor the DSM IGN_SW PID while operating the ignition.

Do the PID states agree?

Yes	GO to D2

No	To diagnose no power in run, REFER to: STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS .

D2 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Operate the memory seat in all directions through the full range of travel.

Place the memory seat in the middle of each range of travel.

Using a diagnostic scan tool, perform self-test on the DSM and DDM. If the diagnostic scan tool does not communicate to the DSM and/or DDM, REFER to: MODULE COMMUNICATIONS NETWORK .

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC B1C03:23, B1C04:23 or B1C05:23, GO to D4 If Diagnostic Trouble Codes (DTCs) B1952, B1956 and B1964 are all retrieved, GO to D9 If Diagnostic Trouble Codes (DTCs) B1953, B1957 and B1965 are all retrieved, GO to D9 For DTC B1663 or B1956, GO to D10 For DTC B1957, GO to D11 For DTC B1664 or B1952, GO to D13 For DTC B1953, GO to D14 For DTC B1665 or B1964, GO to D16 For DTC B1965, GO to D17 For all other Diagnostic Trouble Codes (DTCs), REFER to the DSM DTC Chart or DDM DTC Chart (s).

No	GO to D3

D3 MONITOR DSM (DRIVER FRONT SEAT MODULE) PARAMETER IDENTIFICATIONS (PIDS) AND CHECK FOR CORRECT MEMORY SET SWITCH INPUTS

While activating the memory recall 1, 2 and 3 buttons, monitor the following DSM memory recall switch status Parameter Identifications (PIDs) using a diagnostic scan tool:

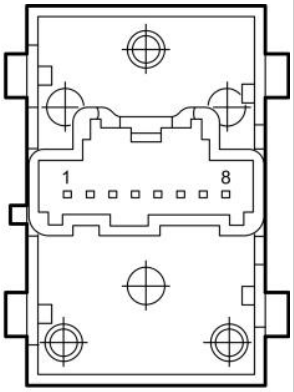
Memory 1 recall switch status (MEM_1).

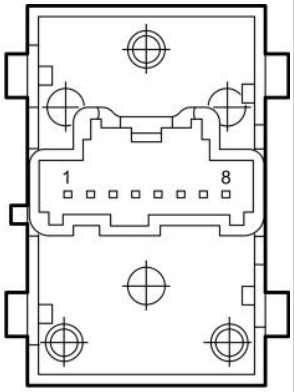
Memory 2 recall switch status (MEM_2).

Memory 3 recall switch status (MEM_3).

Do the PID values agree with the switch button positions?

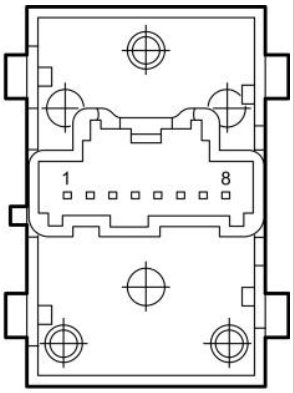
Yes	GO to D9

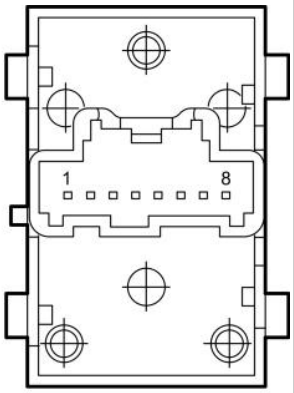




No	GO to D4

D4 CHECK THE MEMORY SET SWITCH

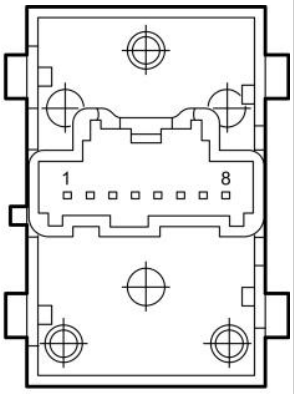


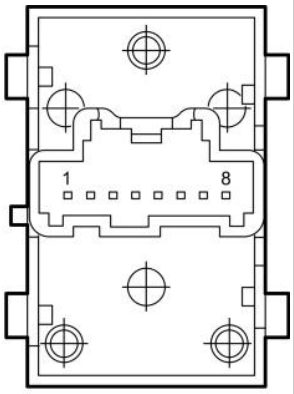


Ignition OFF.

Disconnect: Driver Door Lock Control Switch C541 .

While pressing and releasing the indicated memory recall button 1, measure the **component side resistance** of the driver door lock control switch using the following table:





Positive Lead	Measurement / Action	Negative Lead
 A0074536 C541, pin 5, Component Side	Ω	 A0074536 C541, pin 3, Component Side

While pressing and releasing the indicated memory recall button 2, measure the **component side resistance** of the driver door lock control switch using the following table:

Positive Lead	Measurement / Action	Negative Lead
 A0074536 C541, pin 6, Component Side	Ω	 A0074536 C541, pin 3, Component Side

While pressing and releasing the indicated memory recall button 3, measure the **component**

side resistance of the driver door lock control switch using the following table:

Positive Lead	Measurement / Action	Negative Lead
 A0074536 C541, pin 7, Component Side	Ω	 A0074536 C541, pin 3, Component Side

Are the resistances less than 20 ohms with the switch buttons pressed and greater than 10, 000 ohms with the switch buttons released?

Yes	GO to D5

No	INSTALL a new door lock control switch. REFER to: DOOR LOCK CONTROL SWITCH .

D5 CHECK THE MEMORY SET SWITCH GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C541-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D6

No	REPAIR the circuit.

D6 CHECK THE MEMORY SET CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C541-5		Ground
C541-6		Ground
C541-7		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to D7

D7 CHECK THE MEMORY SET SWITCH CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C541-5	Ω	Ground
C541-6	Ω	Ground
C541-7	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D8

No	REPAIR the circuit in question.

D8 CHECK THE MEMORY SET SWITCH CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C541-5	Ω	C501B-1
C541-6	Ω	C501B-3
C541-7	Ω	C501B-2

Are the resistances less than 3 ohms?

Yes	GO to D20

No	REPAIR the circuit in question.

D9 CHECK THE DSM (DRIVER FRONT SEAT MODULE) SENSOR PARAMETER IDENTIFICATIONS

(PIDS)

While operating the seat control switch in all positions, monitor the following DSM seat control switch Parameter Identifications (PIDs) using a diagnostic scan tool:

Driver Power Seat Front Up/Down Switch (SFNT_MT)

Driver Power Seat Forward/Backward Switch (SFWD_MT)

Driver Power Seat Rear Up/Down Switch (SREARMT)

Does each PID indicate the sensor is operational throughout each motor's full range of travel?

Yes	GO to D19

No	If the PID indicates driver seat front vertical position sensor is not present, GO to D10 If the PID indicates driver seat rear vertical position sensor is not present, GO to D13 If the PID indicates driver seat horizontal position sensor is not present, GO to D16

D10 CHECK THE FRONT HEIGHT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: DSM C341B .

Disconnect: Driver Seat Front Height Motor C382 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C382-2		Ground
C382-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to D21

No	GO to D11

D11 CHECK THE FRONT HEIGHT SENSOR CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C382-2	Ω	Ground
C382-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D12

No	REPAIR the circuit in question. GO to D21

D12 CHECK THE FRONT HEIGHT SENSOR CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C382-2	Ω	C341B-8
C382-4	Ω	C341B-4

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to D21

No	REPAIR the circuit in question. GO to D21

D13 CHECK THE REAR HEIGHT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: DSM C341B .

Disconnect: Driver Seat Rear Height Motor C363 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C363-2	V	Ground
C363-4	V	Ground

Is any voltage present on any circuits?

Yes	REPAIR the circuit in question. GO to D21

No	GO to D14

D14 CHECK THE REAR HEIGHT SENSOR CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C363-2	Ω	Ground
C363-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D15

No	REPAIR the circuit in question. GO to D21

D15 CHECK THE REAR HEIGHT SENSOR CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C363-2	Ω	C341B-3
C363-4	Ω	C341B-8

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to D21

No	REPAIR the circuit in question. GO to D21

D16 CHECK THE HORIZONTAL SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: DSM C341B .

Disconnect: Driver Seat Horizontal Motor C362 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C362-2	V	Ground

C362-4		Ground

Is any voltage present on any circuits?

Yes	REPAIR the circuit in question. GO to D21

No	GO to D17

D17 CHECK THE HORIZONTAL SENSOR CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C362-2	Ω	Ground
C362-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D18

No	REPAIR the circuit in question. GO to D21

D18 CHECK THE HORIZONTAL SENSOR CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C362-2	Ω	C341B-8
C362-4	Ω	C341B-14

Are the resistances less than 3 ohms?

Yes	INSTALL a new horizontal motor. REFER to: Front Seat Track Motor . GO to D21

No	REPAIR the circuit in question. GO to D21

D19 CHECK THE DSM (DRIVER FRONT SEAT MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the DSM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the DSM connectors. Make sure they seat and latch correctly.

> *NOTE: Do not reconnect Driver Side Airbag In-line C345 at this time.*

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM. REFER to: Driver Front Seat Module . GO to D21

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to D21

D20 CHECK THE DDM (DRIVER DOOR MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors. Make sure they seat and latch correctly.

Connect: Driver Door Lock Control Switch C541 .

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: DRIVER DOOR MODULE (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D21 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST E : EASY ENTRY/EASY EXIT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

Normal Operation and Fault Conditions

REFER to: Front Seats .

Possible Causes

- Easy entry/exit feature is not enabled
- Missing ignition status information - communication bus message
- DSM

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST E : EASY ENTRY/EASY EXIT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY > PINPOINT TEST E : EASY ENTRY/EASY EXIT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

E1 CHECK THE DRIVER POWER SEAT OPERATION

Ignition ON.

Check the message center to verify the easy entry/exit feature is turned on.

Using the seat control switch, verify the driver power seat operates fully forward and backward.

Using a diagnostic scan tool, perform the DSM self-test.

Are any Diagnostic Trouble Codes (DTCs) received?

Yes	REFER to the DSM DTC Chart .

No	If disabled, ENABLE the easy entry/exit feature through the message center. REFER to the Owner's Literature. TEST the system for normal operation. If OK, INSTRUCT the customer on correct system operation. Otherwise, GO to E2

E2 CHECK THE DSM (DRIVER FRONT SEAT MODULE) IGNITION SWITCH STATUS PID (PARAMETER IDENTIFICATION) STATES

Ignition ON.

Using a diagnostic scan tool, monitor the DSM IGN_SW PID while operating the ignition.

Do the PID states agree with ignition mode?

Yes	INSTALL a new DSM. REFER to: Driver Front Seat Module .

No	DIAGNOSE the ignition status concern. REFER to: STEERING WHEEL AND COLUMN ELECTRICAL COMPONENTS .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST F : THE POWER SEAT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - DRIVER, WITHOUT MEMORY

Refer to Power Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Seat control switch
- Horizontal motor
- Seat track

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 12 (30A) is OK.

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST F :

THE POWER SEAT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - DRIVER, WITHOUT MEMORY > PINPOINT TEST F : THE POWER SEAT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - DRIVER, WITHOUT MEMORY

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

F1 CHECK THE SEAT OPERATION

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Attempt to operate the seat in all directions.

Is the seat inoperative in all directions?

Yes	GO to F2

No	If only the horizontal motor is inoperative, GO to F4 If only the front height motor is inoperative, GO to F6 If only the rear height motor is inoperative, GO to F8

F2 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH

Disconnect: Driver Seat Control Switch C352 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-9		Ground

Is the voltage greater than 11 volts?

Yes	GO to F3

No	VERIFY BJB fuse 12 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. GO to F10

F3 CHECK THE SEAT CONTROL SWITCH GROUND CIRCUIT

Measure:

Positive Lead	Measurement / Action	Negative Lead

C352-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new driver seat control switch. REFER to: Front Seat Control Switch . GO to F10

No	REPAIR the circuit. GO to F10

F4 CHECK FOR VOLTAGE TO THE SEAT HORIZONTAL MOTOR

Disconnect: Driver Seat Horizontal Motor C362 .

NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.

While pushing the horizontal switch forward and rearward, measure:

Positive Lead	Measurement / Action	Negative Lead
C362-1	V	C362-3

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new horizontal motor. REFER to: Front Seat Track Motor . GO to F10

No	GO to F5

F5 CHECK THE SEAT HORIZONTAL MOTOR CIRCUIT FOR AN OPEN

Disconnect: Driver Seat Control Switch C352 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-6	Ω	C362-3
C352-5	Ω	C362-1

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver seat control switch. REFER to: Front Seat Control Switch . GO to F10

No	REPAIR the circuit in question. GO to F10

F6 CHECK FOR VOLTAGE TO THE SEAT FRONT HEIGHT MOTOR

Disconnect: Driver Seat Front Height Motor C382 .

> *NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.*

While pushing the front height switch upward and downward, measure:

Positive Lead	Measurement / Action	Negative Lead
C382-1	V	C382-3

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to F10

No	GO to F7

F7 CHECK THE SEAT FRONT HEIGHT MOTOR CIRCUIT FOR AN OPEN

Disconnect: Driver Seat Control Switch C352 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-1	Ω	C382-3
C352-2	Ω	C382-1

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver seat control switch. REFER to: Front Seat Control Switch . GO to F10

No	REPAIR the circuit in question. GO to F10

F8 CHECK FOR VOLTAGE TO THE SEAT REAR HEIGHT MOTOR

Disconnect: Driver Seat Rear Height Motor C363 .

> *NOTE: The voltage being measured changes polarity depending upon which direction the seat control switch is activated.*

While pushing the rear height switch upward and downward, measure:

Positive Lead	Measurement / Action	Negative Lead
C363-1	V	C363-3

Is the voltage greater than 11 volts when the seat control switch is operated in both directions?

Yes	INSTALL a new driver seat track. REFER to: Front Seat Track . GO to F10

No	GO to F9

F9 CHECK THE SEAT REAR HEIGHT MOTOR CIRCUIT FOR AN OPEN

Disconnect: Passenger Seat Control Switch C352 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C352-8	Ω	C363-3
C352-10	Ω	C363-1

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver seat control switch. REFER to: Front Seat Control Switch . GO to F10

No	REPAIR the circuit in question. GO to F10

F10 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST G : DTC: B1317

Refer to Memory Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1317	Battery Voltage High	*NOTE: DTC B1317 may be stored in the module memory due to previous battery charging or vehicle jump starting events.* The DSM continuously monitors the input voltage for correct operation. If the DSM detects input voltage above 15 volts, it stores DTC B1317 in memory. If DTC B1317 is set, the DSM disables the memory system outputs for the driver seat memory operation.

Possible Causes

- Wiring, terminals or connectors
- DSM

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST G : DTC: B1317 > PINPOINT TEST G : DTC: B1317

G1 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B1317, B1676 OR P0563 SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC B1317, B1676 or P0563 set in more than one module?

Yes	DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure.

No	GO to G2

G2 CHECK THE BATTERY VOLTAGE

Turn off all interior/exterior lights and accessories.

Start and run the engine at approximately 2, 000 RPM for 3 minutes while monitoring the battery voltage

Does the battery voltage rise to 15 volts or higher?

Yes	DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure.

No	GO to G3

G3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B1317

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, clear the Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Using a diagnostic scan tool, perform the DSM self-test.

Is DTC B1317 present?

Yes	INSTALL a new DSM. REFER to: Driver Front Seat Module .

No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST H : DTC: B1318

Refer to Memory Seats for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Front Seats .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1318	Battery Voltage Low	The DSM continuously monitors the input voltage for correct operation. If the DSM detects input voltage below 10 volts, it stores DTC B1318 in memory. If DTC B1318 is set, the DSM disables the memory system outputs for the driver seat memory operation.

Possible Causes

- Wiring, terminals or connectors
- DSM

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST H : DTC: B1318 > PINPOINT TEST H : DTC: B1318

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

H1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B1318

Ignition ON.

Using a diagnostic scan tool, clear the Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Using a diagnostic scan tool, repeat the DSM self-test.

Is DTC B1318 still present?

Yes	GO to H2

No	The system is operating normally at this time. The DTC may have been set previously due to a discharged battery condition.

H2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the PCM.

Are any charging system Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure.

No	GO to H3

H3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Ignition OFF.

Check the battery condition and verify the battery is fully charged. REFER to: BATTERY, MOUNTING AND CABLES .

Is the battery OK and fully charged?

Yes	GO to H4

No	DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure.

H4 CHECK THE DSM (DRIVER FRONT SEAT MODULE) VOLTAGE SUPPLY

Measure and record the voltage at the battery.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: DSM C341A and C341B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341A-1	V	Ground

Positive Lead	Measurement / Action	Negative Lead
C341B-1	V	Ground

Are the voltages greater than 11 volts?

Yes	GO to H5

No	REPAIR the circuit. CLEAR the DTC. GO to H7

H5 CHECK THE DSM (DRIVER FRONT SEAT MODULE) GROUND CIRCUIT

Ignition OFF.

Disconnect: Negative Battery Cable.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C341A-2	Ω	Ground

Positive Lead	Measurement / Action	Negative Lead
C341B-24	Ω	Ground

Are the resistances less than 3 ohms?

Yes	CONNECT the negative battery cable. GO to H6

No	REPAIR the circuit. CONNECT the negative battery cable. GO to H7

H6 CHECK THE DSM (DRIVER FRONT SEAT MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the DSM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the DSM connectors. Make sure they seat and latch correctly.

> *NOTE: Do not reconnect Driver Side Airbag In-line C345 at this time.*

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM. REFER to: Driver Front Seat Module . GO to H7

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to H7

H7 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST I : DTC: U0140

Refer to Module Communications Network for schematic and connector information.

Normal Operation and Fault Conditions

The DSM and the BCM communicate using the MS-CAN.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140	Lost Communication With Body Control Module (GEM)	Set by the DSM whenever it has lost communication to the BCM for 15 seconds or longer while DSM input is between 10 and 15 volts.

Possible Causes

- Module communication
- DSM
- BCM

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST I : DTC: U0140 > PINPOINT TEST I : DTC: U0140

I1 VERIFY CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to I2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or intermittent fault condition.

I2 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Does the DSM pass the network test?

Yes	GO to I3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

I3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SELF-TEST

Check for recorded DSM Diagnostic Trouble Codes (DTCs) from the self-test.

Is DTC B1317 or B1318 recorded?

Yes	For DTC B1317, GO to Pinpoint Test G For DTC B1318, GO to Pinpoint Test H

No	GO to I4

I4 RECHECK THE DSM (DRIVER FRONT SEAT MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been carried out.

Using a diagnostic scan tool, clear the Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Using a diagnostic scan tool, repeat the DSM self-test.

Is DTC U0140 still present?

Yes	GO to I5

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or intermittent fault condition.

I5 CHECK FOR DTC U0140/U0140:00 IN OTHER MODULES

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been carried out.

Using a diagnostic scan tool, clear the Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Ignition OFF.

Ignition ON.

Wait 10 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140/U0140:00 set in other modules?

Yes	

No	INSTALL a new DSM. REFER to: Driver Front Seat Module .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST J : ONE OR BOTH CLIMATE CONTROLLED SEATS ARE INOPERATIVE

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a diagnostic scan tool to bypass the climate controlled seat buttons on the touchscreen and FCIM. When commanding a heat or cool mode operation in this manner, it only operates in 15 second intervals.

Both voltage supply circuits are spliced together internal to the SCME, so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the SCME.

Possible Causes

- Wiring, terminals or connectors
- FDIM
- FCIM
- SCME

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 14 (30A) is OK.

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST J : ONE OR BOTH CLIMATE CONTROLLED SEATS ARE INOPERATIVE > PINPOINT TEST J : ONE OR BOTH CLIMATE CONTROLLED SEATS ARE INOPERATIVE

J1 CHECK FOR SCME (FRONT SEAT CLIMATE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the SCME self-test.

Were any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	GO to the SCME DTC Chart .

No	If the diagnostic scan tool did not communicate to the SCME, REFER to: MODULE COMMUNICATIONS NETWORK . Otherwise, GO to J2

J2 CHECK OPERATION OF THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) USING PARAMETER IDENTIFICATIONS (PIDS)

NOTE: This step verifies the SCME is able to receive and process inbound command messages from the network and demonstrates if the SCME is operational. If the SCME is functioning correctly, this indicates the FDIM or FCIM may not be sending the commands correctly.

Using a diagnostic scan tool, view the SCME Parameter Identifications (PIDs):

Driver Seat

Seat cushion thermal electric device temperature (CSHTEMP)

Seat back thermal electric device temperature (BKTMP)

Climate-controlled seat heat command (TED_HEAT_D)

Front Passenger Seat

Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP)

Passenger Back (TED) Temperature (PBKTMP)

Passenger (TED) Heat Mode (TED_HEAT_P)

NOTE: The SCME active commands TED_HEAT_D (driver seat) and TED_HEAT_P (passenger seat) are limited to 15 seconds in the ON state.

Operate the affected climate controlled seat using the active command while monitoring the appropriate Parameter Identifications (PIDs) for that seat.

When the command is in process, the blower motor temperature Parameter Identifications (PIDs) on the affected seat should momentarily increase. If no temperature increase is noted, remove the cushion blower filter and repeat the active command while physically monitoring the cushion blower for fan movement.

Do the PID states or cushion blower movement indicate climate controlled seat operation when using the active command?

Yes	GO to J3

No	INSTALL a new SCME. REFER to: Front Seat Climate Control Module .

J3 USE THE FCIM (FRONT CONTROLS INTERFACE MODULE) BUTTONS AND MONITOR THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) PID (PARAMETER IDENTIFICATION) FOR A RESPONSE

Using a diagnostic scan tool, view the SCME Parameter Identifications (PIDs):

Driver State Seat Mode (DCCSMOD) (driver seat)

Passenger State Seat Mode (PCCSMOD) (passenger seat)

Start the engine.

NOTE: Operation of the climate controlled seats repeatedly on and off or repeatedly switching between heat and cool modes may cause SCME Diagnostic Trouble Codes (DTCs) to set, disabling one or both seat system and may require Diagnostic Trouble Codes (DTCs) to be cleared before seat operation may continue. It is recommended to allow time between modes for seat temperatures to return toward ambient temperatures before continuing.

Attempt to operate the affected climate controlled seat in all modes using the appropriate buttons on the FCIM while monitoring the SCME PID DCCSMOD (driver seat) or PCCSMOD (passenger seat).

Do all the PID states match the climate controlled seat settings selected on the FCIM?

Yes	To diagnose the inoperative touchscreen button(s), REFER to: INFORMATION AND ENTERTAINMENT SYSTEM - GENERAL INFORMATION - VEHICLES WITH TOUCHSCREEN DISPLAY .

No	If only the climate seat functionality is inoperative, INSTALL a new FCIM. REFER to: FRONT CONTROLS INTERFACE MODULE (FCIM) . If other features of the FCIM are also inoperative, DIAGNOSE the FCIM concern. REFER to: CLIMATE CONTROL SYSTEM - GENERAL INFORMATION .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST K : DTC B2486

Refer to Climate Controlled Seats for schematic and connector information.

Refer to Memory Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors the input voltage for correct operation. If the SCME detects input voltage below 10 volts or above 15 volts, it stores DTC B2486 in memory. If DTC B2486 is set, the SCME enters a standby mode and suspends operation of both seats until system voltage between 10 and 15 volts is restored and a climate controlled seat switch button is selected on.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B2486	Climate Control Seat Module Voltage Out of Range	*NOTE: DTC B2486 can be*

		set if the vehicle has been recently jump started, the battery has been recently charged or the battery has been discharged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if the battery has been left unattended with the accessories on. If the SCME detects voltage below 10 volts or greater than 15 volts, the DTC is set.

Possible Causes

- Wiring, terminals or connectors
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST K : DTC B2486 > PINPOINT TEST K : DTC B2486

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

K1 RETRIEVE ALL CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS) IN ALL MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Are any charging system related Diagnostic Trouble Codes (DTCs) retrieved from the PCM?

Yes	DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure.

No	GO to K2

K2 CHECK BATTERY CONDITION

Ignition OFF.

Carry out the Battery Condition Test. REFER to: BATTERY, MOUNTING AND CABLES .

Did the battery pass the condition test?

Yes	If the battery passed the condition test but required a recharge, DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure. CLEAR all Diagnostic Trouble Codes (DTCs). TEST the system for normal operation. If the battery passed the condition test and did not require a recharge, GO to K3

No	INSTALL a new battery. REFER to: BATTERY, MOUNTING AND CABLES .

K3 CHECK CHARGING SYSTEM VOLTAGE

NOTE: Do not allow the engine speed to increase above 2, 000 RPM while performing this step or the generator may self-excite and result in default charging system output voltage. If engine speed goes above 2, 000 RPM, shut the vehicle OFF and restart the engine before performing this step.

Start the engine.

Measure the voltage of the battery with and without a load on the charging system as follows:

Turn off all accessories and run the engine at 1, 500 RPM for a minimum of 2 minutes while measuring battery voltage.

Turn on headlights and HVAC fan on high and run engine at 1, 500 RPM for a minimum of 2 minutes while measuring battery voltage.

Was the battery voltage between 13 and 15.2 volts?

Yes	GO to K4

No	DIAGNOSE the charging system concern. Refer to the appropriate article for the procedure.

K4 CHECK VOLTAGE AT THE SCME (FRONT SEAT CLIMATE CONTROL MODULE)

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-E		Ground
C3265A-F		Ground

Are the voltages greater than 11 volts?

Yes	GO to K5

No	REPAIR the circuit in question. GO to K7

K5 CHECK SCME (FRONT SEAT CLIMATE CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-M	Ω	Ground

Repeat this measurement while wiggling the harness.

Is the resistance less than 3 ohms?

Yes	GO to K6

No	REPAIR the circuit. GO to K7

K6 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service

	Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to K7

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to K7

K7 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST L : DTCS B103B AND B1111

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors the backrest and cushion blower motor circuits. If a short to ground or voltage on any of these circuits is detected, the Diagnostic Trouble Codes (DTCs) will be set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B103B	Thermoelectric Driver Overcurrent Low	If SCME outputs to the driver seat backrest or cushion blower motor (circuit pins G, H, J or K at the SCME connector) or any components within these circuit loops are shorted to ground or a blower motor resistance of less than 0.9 ohm is sensed, the SCME shuts down the driver seat system and sets this DTC.
B1111	Driver Thermal Electric Device Control Overtemperature Fault	If the SCME blower motor driver integrated circuit temperature exceeds 175 ° C (347 ° F), the SCME shuts down the driver seat

		system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Backrest blower motor
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST L : DTCS B103B AND B1111 > PINPOINT TEST L : DTCS B103B AND B1111

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

L1 CHECK BLOWER MOTOR CIRCUITS FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G	Ω	Ground
C3265A-H	Ω	Ground
C3265A-J	Ω	Ground
C3265A-K	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to L2

No	If the resistance of C3265A-G and C3265A-H to ground is **not** greater than 10, 000 ohms to ground, GO to L6. If the resistance of C3265A-J and C3265A-K to ground is not greater than 10, 000 ohms to ground, GO to L7.

L2 CHECK BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G		Ground
C3265A-H		Ground
C3265A-J		Ground
C3265A-K		Ground

Is any voltage present?

Yes	If voltage is present at C3265A-G and/or C3265A-H , GO to L8 If voltage is present at C3265A-J and/or C3265A-K , GO to L9

No	GO to L3

L3 CHECK THE RESISTANCE OF THE BLOWER MOTOR AND WIRING

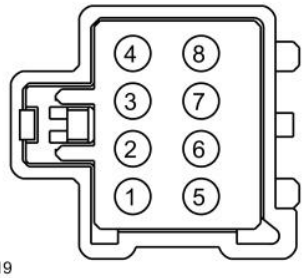
Ignition OFF.

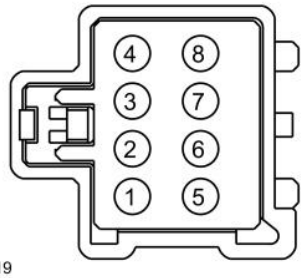
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G	Ω	C3265A-H
C3265A-J	Ω	C3265A-K

Are the resistances between 0.9 and 10 ohms?

Yes	GO to L10





No	If the resistance between C3265A-G and C3265A-H is **not** between 0.9 and 10 ohms, GO to is **not** between 0.9 and 10 ohms, GO to L5. If the resistance between C3265A-J and C3265A-K is not between 0.9 and 10 ohms, GO to L4

L4 CHECK BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE RESISTANCE

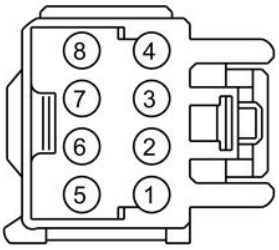
Disconnect: Driver Seat Backrest Blower Motor C3034 .

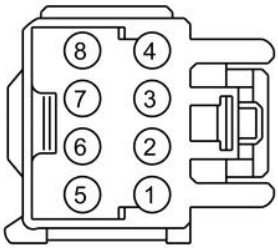
Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160219 C3034-1, Component Side	Ω	 E160219 C3034-2, Component Side

Is the resistance between 0.9 and 10 ohms?





Yes	REPAIR the circuit(s) in question. GO to L11

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to L11

L5 CHECK CUSHION BLOWER MOTOR RESISTANCE

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-1, Component Side	Ω	 E160218 C3035-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR the circuit(s) in question. GO to L11

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to L11

L6 CHECK THE CUSHION BLOWER MOTOR CIRCUITS FOR A SHORT TO GROUND

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G	Ω	Ground
C3265A-H	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to L11

No	REPAIR the circuit in question. GO to L11

L7 CHECK THE BACKREST BLOWER MOTOR CIRCUITS FOR A SHORT TO GROUND

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-J	Ω	Ground
C3265A-K	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to L11

No	REPAIR the circuit in question. GO to L11

L8 CHECK THE CUSHION BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G	V	Ground
C3265A-H	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to L11

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to

	L11

L9 CHECK THE BACKREST BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-J		Ground
C3265A-K		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to L11

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to L11

L10 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service

	Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to L11

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to L11

L11 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST M : DTC B103C

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors the backrest and cushion blower motor circuits. If an open on any of these circuits is detected, the DTC will be set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B103C	Thermoelectric Driver Open Load	If SCME outputs to the driver seat backrest or cushion blower motor (circuit pins G, H, J or K at the SCME connector) or any components within these circuit loops are open, disconnected or a blower motor resistance greater than 90, 000 ohms is sensed, the SCME continues normal operation and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Backrest blower motor
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST M : DTC B103C > PINPOINT TEST M : DTC B103C

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

M1 CHECK BLOWER MOTOR CIRCUITS FOR AN OPEN

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Disconnect: SCME C3265A .

Measure:

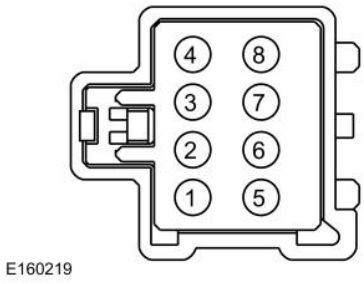
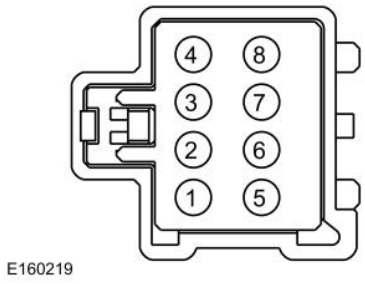
M2 CHECK BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G	V	Ground
C3265A-H	V	Ground
C3265A-J	V	Ground
C3265A-K	V	Ground

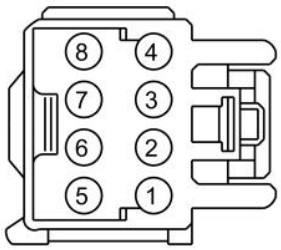


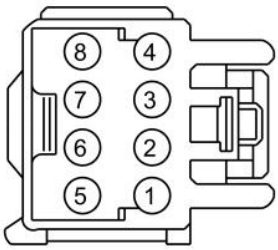


Is any voltage present?

Yes	REPAIR the circuit(s) in question. GO to M5

No	GO to M3





M3 CHECK BACKREST AND CUSHION BLOWER MOTOR RESISTANCES

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 C3034-1, Component Side	Ω	 C3034-2, Component Side

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160218 C3035-1, Component Side	Ω	 E160218 C3035-2, Component Side

Are the resistances between 0.9 and 10 ohms?

Yes	GO to M4

No	If the backrest blower motor resistance measurement failed, INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to M5 If the cushion blower motor resistance measurement failed, INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to M5

M4 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to M5

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to M5

M5 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST N : DTC B103D

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a diagnostic scan tool to bypass the climate controlled seat switches on the touchscreen and FCIM. When commanding a heat or cool mode operation in this manner, the climate controlled seat system only operates in 15 second intervals.

Both voltage supply circuits are spliced together internal to the SCME, so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the SCME.

Cabin air is drawn through and distributed to each of the blower motors located in the seat cushion and backrest. The blower motors then heat or cool the air. The air is then directed into the foam pad where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the SCME uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the commanded climate controlled seat settings.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B103D	Blower Driver Overtemperature	If the SCME outputs to the driver seat blower or any components within these circuit loops are

		shorted to ground or cause an excessive current draw, the SCME overheats, shuts down the driver seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Backrest blower motor
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST N : DTC B103D > PINPOINT TEST N : DTC B103D

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

N1 CHECK THE BLOWER MOTOR FEED CIRCUIT FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: Driver Seat Backrest Blower Motor C3034 .

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST O : DTC B1113 AND B111B

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors the backrest and cushion blower motor circuits. If a short to ground or voltage on any of these circuits is detected, the Diagnostic Trouble Codes (DTCs) will be set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1113	Passenger Thermal Electric Device Control Overtemperature Fault	If the SCME blower motor driver integrated circuit temperature exceeds 175 ° C (347 ° F), the SCME shuts down the driver seat system and sets this DTC.
B111B	Passenger Thermo-Electric Driver Overcurrent Low	If SCME outputs to the driver seat backrest or cushion blower motor (circuit pins A, B, C or D at the SCME connector) or any components within these circuit loops are shorted to ground or a blower motor resistance of less than 0.9 ohm is sensed, the SCME shuts down the driver seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Backrest blower motor
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST O : DTC B1113 AND B111B > PINPOINT TEST O : DTC B1113 AND B111B

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

O1 CHECK BLOWER MOTOR CIRCUITS FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	Ω	Ground
C3265A-B	Ω	Ground
C3265A-C	Ω	Ground
C3265A-D	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to O2

No	If the resistance of C3265A-A and C3265A-B to ground is **not** greater than 10, 000 ohms to ground, GO to O6. If the resistance of C3265A-C and C3265A-D to ground is not greater than 10, 000 ohms to ground, GO to O7.

O2 CHECK BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A		Ground
C3265A-B		Ground
C3265A-C		Ground
C3265A-D		Ground

Is any voltage present?

Yes	If voltage is present at C3265A-A and/or C3265A-B , GO to O8 If voltage is present at C3265A-C and/or C3265A-D , GO to O9

No	GO to O3

O3 CHECK THE RESISTANCE OF THE BLOWER MOTOR AND WIRING

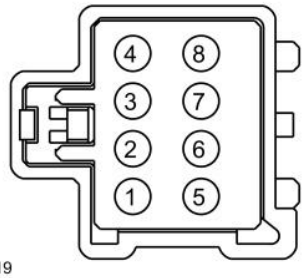
Ignition OFF.

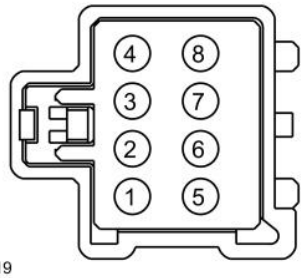
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	Ω	C3265A-B
C3265A-C	Ω	C3265A-D

Are the resistances between 0.9 and 10 ohms?

Yes	GO to O10





No	If the resistance between C3265A-A and C3265A-B is **not** between 0.9 and 10 ohms, GO to O5. If the resistance between C3265A-C and C3265A-D is not between 0.9 and 10 ohms, GO to O4

O4 CHECK BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE RESISTANCE

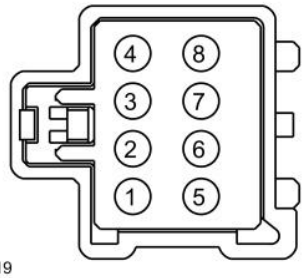
Disconnect: Passenger Seat Backrest Blower Motor C3039 .

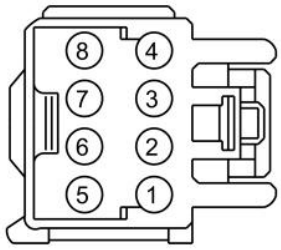
Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160219 C3039-1, Component Side	Ω	 E160219 C3039-2, Component Side

Is the resistance between 0.9 and 10 ohms?





Yes	REPAIR the circuit(s) in question. GO to O11

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to O11

O5 CHECK CUSHION BLOWER MOTOR RESISTANCE

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3040-1, Component Side	Ω	 E160218 C3040-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR the circuit(s) in question. GO to O11

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to O11

O6 CHECK THE CUSHION BLOWER MOTOR CIRCUITS FOR A SHORT TO GROUND

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	Ω	Ground
C3265A-B	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to O11

No	REPAIR the circuit in question. GO to O11

O7 CHECK THE BACKREST BLOWER MOTOR CIRCUITS FOR A SHORT TO GROUND

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-C	Ω	Ground
C3265A-D	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to O11

No	REPAIR the circuit in question. GO to O11

O8 CHECK THE CUSHION BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	V	Ground
C3265A-B	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to O11

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to

	O11

O9 CHECK THE BACKREST BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-C		Ground
C3265A-D		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to O11

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to O11

O10 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate

	Control Module . GO to O11

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to O11

O11 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

Is the resistance greater than 10, 000 ohms?

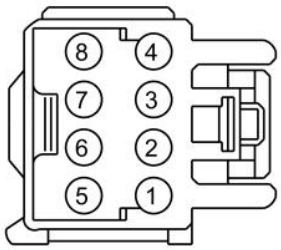
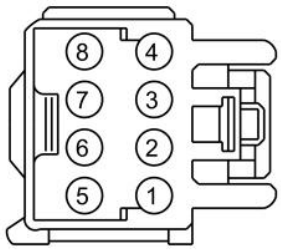
Yes	GO to R4





No	REPAIR the circuits. GO to R6

R4 CHECK CUSHION BLOWER MOTOR SPEED CONTROL AND BLOWER OUTPUT CIRCUITS FOR AN INTERNAL SHORT TOGETHER

Ignition OFF.

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-3, Component Side	Ω	 E160218 C3040-7, Component Side

Is the resistance greater than 2M ohms?

Yes	GO to R5

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to R6

R5 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to R6

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to R6

R6 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST S : DTC B19A2

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME supplies voltage and ground to the passenger seat backrest blower motor. The SCME also sends a speed control voltage signal to the blower motor to control blower speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B19A2	Passenger Seat Back Blower Speed Short to Battery	If the passenger seat backrest blower speed circuit is shorted to voltage, the SCME shuts down the passenger seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors

- Backrest blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST S : DTC B19A2 > PINPOINT TEST S : DTC B19A2

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

S1 CHECK BACKREST BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-4	V	Ground

Is any voltage present?

Yes	GO to S2

No	GO to S3

S2 CHECK BACKREST BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE WITH THE CIRCUIT ISOLATED

Ignition OFF.

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to S6

No	GO to S3

S3 CHECK BACKREST BLOWER MOTOR SPEED CONTROL AND BLOWER OUTPUT CIRCUITS FOR A SHORT TOGETHER

Ignition OFF.

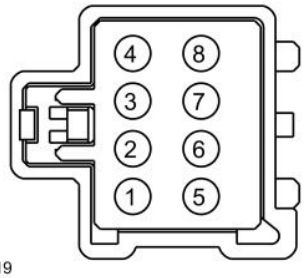
Disconnect: Passenger Seat Backrest Blower Motor C3039 .

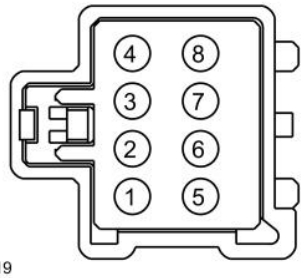
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-4	Ω	C3265C-8

Is the resistance greater than 10, 000 ohms?

Yes	GO to S4





No	REPAIR the circuits. GO to S6

S4 CHECK BACKREST BLOWER MOTOR SPEED CONTROL AND BLOWER OUTPUT CIRCUITS FOR AN INTERNAL SHORT TOGETHER

Ignition OFF.

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-3, Component Side	Ω	 E160219 C3039-7, Component Side

Is the resistance greater than 2M ohms?

Yes	GO to S5

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to S6

S5 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to S6

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to S6

S6 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST T : DTC B19A3

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME supplies voltage and ground to the driver seat cushion blower motor. The SCME also sends a speed control voltage signal to the blower motor to control blower speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B19A3	Driver Seat Cushion Blower Speed Short to Battery	If the driver seat cushion blower speed circuit is shorted to voltage, the SCME shuts down the driver seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST T : DTC B19A3 > PINPOINT TEST T : DTC B19A3

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

T1 CHECK CUSHION BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-11		Ground

Is any voltage present?

Yes	GO to T2

No	GO to T3

T2 CHECK CUSHION BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE WITH THE CIRCUIT ISOLATED

Ignition OFF.

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-11		Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to T6

No	GO to T3

T3 CHECK CUSHION BLOWER MOTOR SPEED CONTROL AND BLOWER OUTPUT CIRCUITS FOR A SHORT TOGETHER

Ignition OFF.

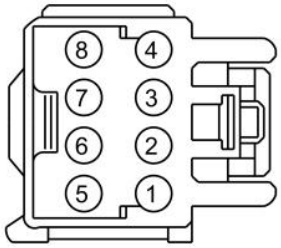
Disconnect: Driver Seat Cushion Blower Motor C3035 .

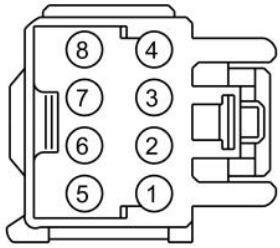
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-11	Ω	C3265C-16

Is the resistance greater than 10, 000 ohms?

Yes	GO to T4





No	REPAIR the circuits. GO to T6

T4 CHECK CUSHION BLOWER MOTOR SPEED CONTROL AND BLOWER OUTPUT CIRCUITS FOR AN INTERNAL SHORT TOGETHER

Ignition OFF.

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-3, Component Side	Ω	 E160218 C3035-7, Component side

Is the resistance greater than 2M ohms?

Yes	GO to T5

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to T6

T5 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to T6

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to T6

T6 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST U : DTC B19A4

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME supplies voltage and ground to the driver seat backrest blower motor. The SCME also sends a speed control voltage signal to the blower motor to control blower speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B19A4	Driver Seat Back Blower Speed Short to Battery	If the driver seat backrest blower speed circuit is shorted to voltage, the SCME shuts down the driver seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Backrest blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST U : DTC B19A4 > PINPOINT TEST U : DTC B19A4

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST Z : DTC B272A

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors seat cushion temperature while it supplies voltage and ground to both blower motors. The SCME also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the blower motor housing. Heated or cooled air exits the blower motor and flows through a duct to the foam pad.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B272A	Passenger Cushion Over-Temp Detected	If the passenger seat cushion blower motor temperature exceeds 70 ° C (158 ° F) in cool mode or 85 ° C (185 ° F) in heat mode for more than 4 seconds, the SCME shuts down the passenger seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Restricted blower motor filter
- Crushed or restricted cushion foam pad
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST Z : DTC B272A > PINPOINT TEST Z : DTC B272A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

Z1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

Start the vehicle and set the passenger seat to HIGH heat.

Using a diagnostic scan tool, perform the SCME self-test.

Was DTC B272A retrieved on-demand during the self-test?

Yes	GO to Z2
No	GO to Z5

Z2 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR THERMISTOR CIRCUITS FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-2	Ω	Ground
C3265B-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to Z3

No	REPAIR the circuit in question. GO to Z22

Z3 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR THERMISTOR AND WIRING

Connect: Passenger Seat Cushion Blower Motor C3040 .

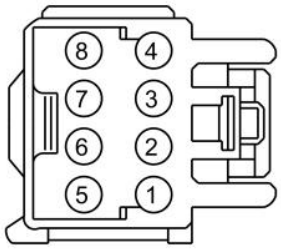
Measure:

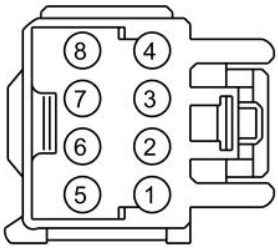
Positive Lead	Measurement / Action	Negative Lead
C3265B-2	Ω	C3265B-3

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to Z18

No	GO to Z4

Z4 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR THERMISTOR

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-5, Component Side	Ω	 E160218 C3040-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS27 (WH/OG) or RHS10 (BU/OG) for an open or high resistance. GO to Z22

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to Z22

Z5 CONFIRM THE FAULT WHILE MONITORING THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) SEAT BACK THERMO-ELECTRIC DEVICE TEMPERATURE (PBKTEMP) AND SEAT CUSHION THERMO-ELECTRIC DEVICE TEMPERATURE (PCSHTEMP) PARAMETER IDENTIFICATIONS (PIDS)

Set the passenger seat to OFF.

Using a diagnostic scan tool, clear the SCME Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, monitor the SCME PBKTEMP and PCSHTEMP Parameter Identifications (PIDs).

NOTE: A crushed seat cushion foam pad may be the cause of the fault, making it necessary to occupy the seat to recreate and identify the fault.

Attempt to recreate the fault. Start the vehicle and set the passenger seat to HIGH heat for at

least 15 minutes while occupying the seat.

Do the Parameter Identifications (PIDs) increase incrementally (gradually) and stay within 15 ° C (27 ° F) of each other?

Yes	Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature.

No	If the PCSHTEMP PID increases incrementally and is greater than 15 ° C (27 ° F) of the PBKTEMP PID, GO to Z6If the PCSHTEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15 ° C (27 ° F) of the PBKTEMP PID, GO to Z16

Z6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS

With the engine running, set both front seats to HIGH cool.

Note the airflow exhausting from the passenger seat cushion blower motor and compare it to the airflow exhausting from the driver seat cushion blower motor.

Carry out a wiggle test of the wire harnesses between the SCME and the passenger seat cushion blower motor while monitoring blower operation. The blower should operate consistently and not change speeds.

Is the airflow exhausting from the passenger seat cushion blower motor comparable to the airflow exhausting from the driver seat cushion blower motor with no change in operation when carrying out the wiggle test?

Yes	GO to Z7

No	If the airflow exhausting from the passenger seat cushion blower motor is not comparable to the airflow exhausting from the driver seat cushion blower motor, GO to Z8 If the passenger seat cushion blower motor operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault.

Z7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED

Note the airflow exhausting from the passenger seat cushion blower motor with the passenger seat occupied and compare it to the airflow exhausting from the driver seat cushion blower motor with the driver seat occupied.

Is the airflow exhausting from the passenger seat cushion blower motor comparable to the airflow exhausting from the driver seat cushion blower motor?

Yes	GO to Z16

No	INSTALL a new passenger seat cushion foam pad.

Z8 CHECK THE PASSENGER SEAT CUSHION BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER

Ignition OFF.

Inspect the blower of the passenger seat cushion blower motor assembly for an obstruction or for a restricted filter.

Is the blower obstructed or the filter restricted?

Yes	REMOVE the obstruction or INSTALL a passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor .

No	GO to Z9

Z9 CHECK THE PASSENGER SEAT CUSHION BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-3	Ω	C3040-7

Is the resistance less than 3 ohms?

Yes	GO to Z10

No	REPAIR the circuit. GO to Z22

Z10 CHECK THE PASSENGER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-7	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to Z22

No	GO to Z11

Z11 CHECK THE PASSENGER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to Z12

No	REPAIR the circuit. GO to Z22

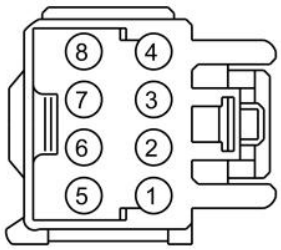
Z12 CHECK THE PASSENGER SEAT CUSHION BLOWER CIRCUITS FOR AN OPEN

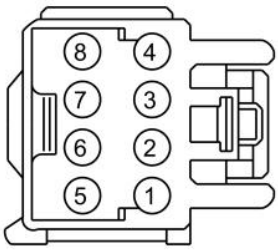
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	C3040-3
C3265C-7	Ω	C3040-4

Are the resistances less than 3 ohms?

Yes	GO to Z13





No	REPAIR the circuit in question. GO to Z22

Z13 CHECK THE PASSENGER SEAT CUSHION BLOWER RESISTANCE

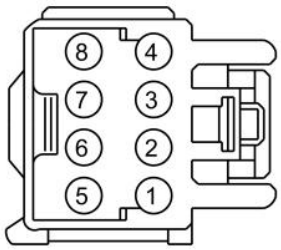
NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

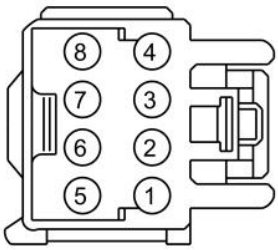
Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160218 C3040-3, Component Side	Ω	 E160218 C3040-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?





Yes	GO to Z14

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to Z22

Z14 CHECK THE PASSENGER SEAT CUSHION BLOWER SPEED CONTROL RESISTANCE

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-7, Component Side	Ω	 E160218 C3040-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	GO to Z15

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to Z22

Z15 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR INSTALLATION AND FOR

CRUSHED SEAT CUSHION

Ignition OFF.

Remove the passenger seat. REFER to: Front Seat .

Remove the passenger seat cushion cover. REFER to: Front Seat Cushion Cover .

Inspect the passenger seat cushion for the following:

Blower motor correctly installed

Cushion foam pad crushed or restricted

Is the passenger seat cushion blower motor correctly installed and are there no signs of damage to the foam pad?

Yes	INSTALL the passenger seat cushion cover and seat. GO to Z18

No	CORRECTLY install the passenger seat cushion blower motor or INSTALL a new passenger seat cushion foam pad. GO to Z22

Z16 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR THERMISTOR AND WIRING

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

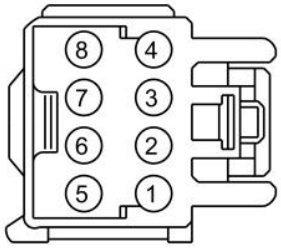
Measure:

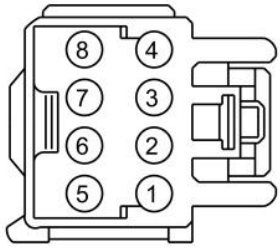
Positive Lead	Measurement / Action	Negative Lead
C3265B-2	Ω	C3265B-3

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to Z18

No	GO to Z17

Z17 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR THERMISTOR

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-5, Component Side	Ω	 E160218 C3040-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS27 (WH/OG) or RHS10 (BU/OG) for an open or high resistance. GO to Z22

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to Z22

Z18 CHECK THE PASSENGER SEAT CUSHION BLOWER MOTOR HEATING/COOLING CIRCUITRY CURRENT DRAW

Connect all SCME, blower motor and Body Harness-to-Seat Harness Connectors.

NOTE: It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care

must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.

NOTE: Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the VMM available for use with IDS. If these are unavailable, the inductive current probe feature from a battery tester may be substituted.

Place an inductive current probe around circuit CHS07 (GY/BU) near SCME C3265A-A and monitor the current draw.

Start the engine and set the passenger seat to HIGH heat.

Is the current draw less than 11 amps?

Yes	GO to Z19

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to Z22

Z19 CHECK RESISTANCE OF THE PASSENGER SEAT CUSHION BLOWER MOTOR AND WIRING

Ignition OFF.

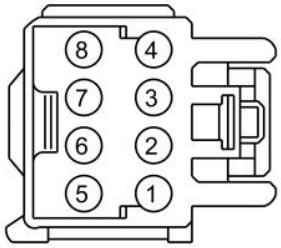
Disconnect: SCME C3265A .

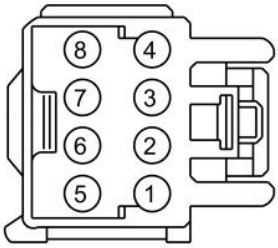
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	Ω	Ground
C3265A-B	Ω	Ground

Are the resistances between 0.9 and 10 ohms?

Yes	GO to Z21





No	GO to Z20

Z20 CHECK THE RESISTANCE OF THE PASSENGER SEAT CUSHION BLOWER MOTOR

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement	Negative Lead

	/ Action	
 E160218 C3040-1, Component Side	Ω	 E160218 C3040-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR circuit CHS07 (GY/BU) or RHS07 (BU) for an open or high resistance. GO to Z22

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to Z22

Z21 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to Z22

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to Z22

Z22 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AA : DTC B272B

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors seat backrest temperature while it supplies voltage and ground to both blower motors. The SCME also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the blower motor housing. Heated or cooled air exits the blower motor and flows through the foam pad.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B272B	Passenger Back Over-Temp Detected	If the passenger seat backrest blower motor temperature exceeds 70 ° C (158 ° F) in cool mode or 85 ° C (185 ° F) in heat mode for more than 4 seconds, the SCME shuts down the passenger seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Restricted blower motor filter
- Crushed or restricted backrest foam pad
- Backrest blower motor

- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AA : DTC B272B > PINPOINT TEST AA : DTC B272B

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

AA1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

Start the vehicle and set the passenger seat to HIGH heat.

Using a diagnostic scan tool, perform the SCME self-test.

Was DTC B272B retrieved on-demand during the self-test?

Yes	GO to AA2

No	GO to AA5

AA2 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR THERMISTOR CIRCUITS FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-4	Ω	Ground
C3265B-5	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AA3

No	REPAIR the circuit in question. GO to AA22

AA3 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR THERMISTOR AND WIRING

Connect: Passenger Seat Backrest Blower Motor C3039 .

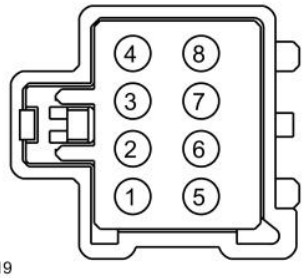
Measure:

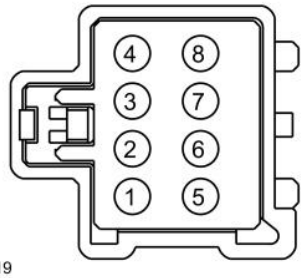
Positive Lead	Measurement / Action	Negative Lead
C3265B-4	Ω	C3265B-5

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AA18

No	GO to AA4

AA4 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR THERMISTOR

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-5, Component Side	Ω	 E160219 C3039-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance

0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS36 (YE/BU) or RHS20 (GN/BU) for an open or high resistance. GO to AA22

No	INSTALL a new passenger seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AA22

AA5 CONFIRM THE FAULT WHILE MONITORING THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) SEAT BACK THERMO-ELECTRIC DEVICE TEMPERATURE (PBKTEMP) AND SEAT CUSHION THERMO-ELECTRIC DEVICE TEMPERATURE (PCSHTEMP) PARAMETER IDENTIFICATIONS (PIDS)

Set the passenger seat to OFF.

Using a diagnostic scan tool, clear the SCME Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, monitor the SCME PBKTEMP and PCSHTEMP Parameter Identifications (PIDs).

NOTE: A crushed seat backrest foam pad may be the cause of the fault, making it necessary to occupy the seat to recreate and identify the fault.

Attempt to recreate the fault. Start the vehicle and set the passenger seat to HIGH heat for at least 15 minutes while occupying the seat.

Do the Parameter Identifications (PIDs) increase incrementally (gradually) and stay within 15 ° C (27 ° F) of each other?

Yes	Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature.

No	If the PBKTEMP PID increases incrementally and is greater than 15 ° C (27 ° F) of the PCSHTEMP PID, GO to AA6 If the PBKTEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15 ° C (27 ° F) of the PCSHTEMP PID, GO to AA16

AA6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS

With the engine running, set both front seats to HIGH cool.

Note the airflow exhausting from the passenger seat backrest blower motor and compare it to the airflow exhausting from the driver seat backrest blower motor.

Carry out a wiggle test of the wire harnesses between the SCME and the passenger seat backrest blower motor while monitoring blower operation. The blower should operate consistently and not change speeds.

Is the airflow exhausting from the passenger seat backrest blower motor comparable to the airflow exhausting from the driver seat backrest blower motor with no change in operation when carrying out the wiggle test?

Yes	GO to AA7

No	If the airflow exhausting from the passenger seat backrest blower motor is not comparable to the airflow exhausting from the driver seat backrest blower motor, GO to AA8 If the passenger seat backrest blower motor blower operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault.

AA7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED

Note the airflow exhausting from the passenger seat backrest blower motor with the passenger seat occupied and compare it to the airflow exhausting from the driver seat backrest blower motor with the driver seat occupied.

Is the airflow exhausting from the passenger seat backrest blower motor comparable to the airflow exhausting from the driver seat backrest blower motor?

Yes	GO to AA16

No	INSTALL a new passenger seat backrest foam pad.

AA8 CHECK THE PASSENGER SEAT BACKREST BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER

Ignition OFF.

Inspect the blower of the passenger seat backrest blower motor assembly for an obstruction or for a restricted filter.

Is the blower obstructed or the filter restricted?

Yes	REMOVE the obstruction or INSTALL a new passenger seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor .

No	GO to AA9

AA9 CHECK THE PASSENGER SEAT BACKREST BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-4	Ω	C3039-7

Is the resistance less than 3 ohms?

Yes	GO to AA10

No	REPAIR the circuit. GO to AA22

AA10 CHECK THE PASSENGER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-7	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AA22

No	GO to AA11

AA11 CHECK THE PASSENGER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AA12

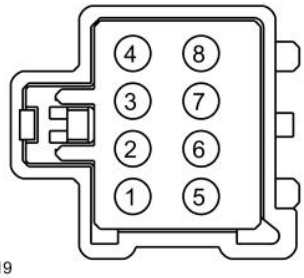
No	REPAIR the circuit. GO to AA22

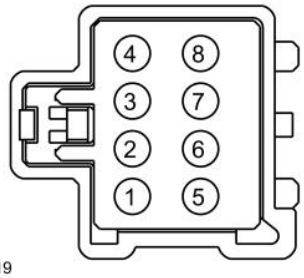
AA12 CHECK THE PASSENGER SEAT BACKREST BLOWER CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	C3039-3
C3265C-7	Ω	C3039-4

Are the resistances less than 3 ohms?





Yes	GO to AA13

No	REPAIR the circuit in question. GO to AA22

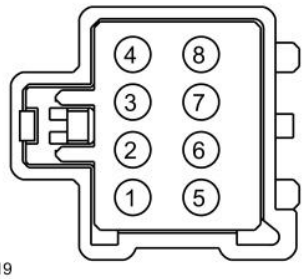
AA13 CHECK THE PASSENGER SEAT BACKREST BLOWER RESISTANCE

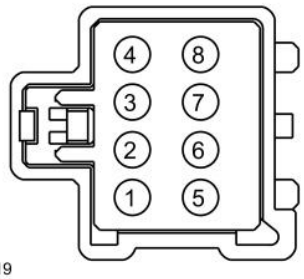
NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-3, Component Side	Ω	 E160219 C3039-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?





Yes	GO to AA14

No	INSTALL a new passenger seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AA22

AA14 CHECK THE PASSENGER SEAT BACKREST BLOWER SPEED CONTROL RESISTANCE

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-7, Component Side	Ω	 E160219 C3039-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	GO to AA15

No	INSTALL a new passenger seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AA22

AA15 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR INSTALLATION AND FOR CRUSHED SEAT BACKREST

Ignition OFF.

Remove the passenger seat. REFER to: Front Seat .

Remove the passenger seat backrest cover. REFER to: Front Seat Backrest Cover .

Inspect the passenger seat backrest for the following:

- Blower motor correctly installed
- Backrest foam pad crushed or restricted

Is the passenger seat backrest blower motor correctly installed and are there no signs of damage to the foam pad?

Yes	INSTALL the passenger seat backrest cover and seat. GO to AA18

No	CORRECTLY install the passenger seat backrest blower motor or INSTALL a new passenger seat backrest foam pad. GO to AA22

AA16 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR THERMISTOR AND WIRING

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

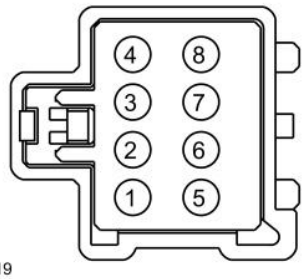
Measure:

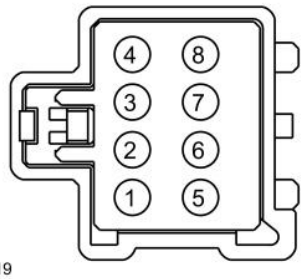
Positive Lead	Measurement / Action	Negative Lead
C3265B-4	Ω	C3265B-5

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AA18

No	GO to AA17

AA17 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR THERMISTOR

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-5, Component Side	Ω	 E160219 C3039-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS35 (VT/OG) or RHS15 (GY/BN) for an open or high resistance. GO to AA22

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AA22

AA18 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR HEATING/COOLING CIRCUITRY CURRENT DRAW

Connect all SCME, blower motor and Body Harness-to-Seat Harness Connectors.

NOTE: It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.

NOTE: Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the VMM available for use with IDS. If these are unavailable, the inductive current probe feature from a battery tester may be substituted.

Place an inductive current probe around circuit CHS06 (BU/BN) near SCME C3265A-C and monitor the current draw.

Start the engine and set the passenger seat to HIGH heat.

Is the current draw less than 11 amps?

Yes	GO to AA19

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AA22

AA19 CHECK RESISTANCE OF THE PASSENGER SEAT BACKREST BLOWER MOTOR AND WIRING

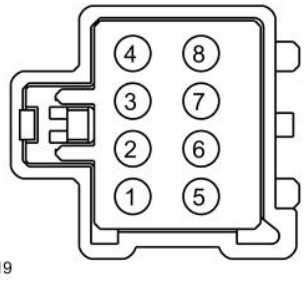
Ignition OFF.

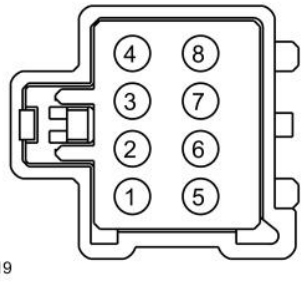
Disconnect: SCME C3265A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-C	Ω	Ground
C3265A-D	Ω	Ground

Are the resistances between 0.9 and 10 ohms?





Yes	GO to AA21

No	GO to AA20

AA20 CHECK THE RESISTANCE OF THE PASSENGER SEAT BACKREST BLOWER MOTOR

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-1, Component Side	Ω	 E160219 C3039-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR circuit CHS01 (GY/VT) or RHS01 (WH/VT) for an open or high resistance. GO to AA22

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AA22

AA21 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

> *NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.*

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to AA22

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AA22

AA22 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AB : DTC B272C

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a diagnostic scan tool to bypass the climate controlled seat buttons on the touchscreen and FCIM. When commanding a heat or cool mode operation in this manner, the climate controlled seat system only operates in 15 second intervals.

Both voltage supply circuits are spliced together internal to the SCME, so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the SCME.

Cabin air is drawn through and distributed to each of the blower motors located in the seat cushion and backrest. The blower motors then heat or cool the air. The air is then directed into the foam pad where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the SCME uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the commanded climate controlled seat settings.

A differential fault occurs when the cushion and backrest blower motors on an affected seat are reporting very different temperatures to the SCME. This may result from an airflow restriction or a circuit fault of either blower motor area. If a blower motor is clear of obstruction and is operational, check the other blower motor and circuitry on the seat. It is important to note that a blower motor with a higher temperature may be operating correctly and not the area of concern. The other blower motor may be indicating a much lower temperature, causing the DTC to set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B272C	Driver Differential Temperature Fault	If there is a temperature differential between the driver backrest and cushion blower motor of 60 ° C (108 ° F) or more for more than 4 seconds, or if the blower motor is disconnected or the duct is blocked, this DTC sets. When this happens for the first time in a key cycle, the SCME puts the driver seat system into recovery mode (see principles of operation). If the system is able to recover, it returns to normal function. If the system is able to recover and it occurs a second time in the same key cycle, the SCME shuts down the driver seat system.

Possible Causes

- Wiring, terminals or connectors
- Restricted blower motor filter
- Crushed or restricted backrest foam pad

- Cushion or backrest blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AB : DTC B272C > PINPOINT TEST AB : DTC B272C

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

AB1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the SCME self-test.

Was DTC B2729 or B2730, retrieved on-demand during the self-test?

Yes	For DTC B2729, GO to Pinpoint Test AF For DTC B2730, GO to Pinpoint Test AG

No	GO to AB2

AB2 MONITOR SCME (FRONT SEAT CLIMATE CONTROL MODULE) BLOWER MOTOR TEMPERATURE PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, monitor the following SCME Parameter Identifications (PIDs):

Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP)

Passenger Back (TED) Temperature (PBKTMP)

Seat cushion thermal electric device temperature (CSHTEMP)

Seat back thermal electric device temperature (BKTMP)

NOTE: Make sure the temperature of the climate controlled seats has stabilized before monitoring the Parameter Identifications (PIDs). Not allowing stabilization can cause incorrect readings and lead to incorrect identification of components that are not faulty.

Monitor blower motor temperature Parameter Identifications (PIDs) with the climate controlled seats OFF. Compare the PID values of the driver seat to those of the front passenger seat, this can help identify if there is a concern with the driver seat cushion or backrest PID value readings.

Are both driver seat blower motor temperature Parameter Identifications (PIDs) within 10 ° C (18 ° F) of the ambient temperature?

Yes	GO to AB3

No	If the driver seat cushion PID varies 10 ° C (18 ° F) or more from ambient temperature, GO to AB16 If the driver seat backrest PID varies 10 ° C (18 ° F) or more from ambient temperature, GO to AB32

AB3 CONFIRM THE FAULT IS IN THE SEAT CUSHION OR THE BACKREST

Ignition OFF.

Start the engine.

NOTE: A crushed seat cushion foam pad may be the cause of the fault. It may be necessary to sit on the seat or place something of reasonable size and weight on the seat to recreate the fault.

After cycling the ignition and with the engine running, set the driver seat to high heat. Allow the seat to heat for at least 15 minutes while monitoring the blower motor temperature Parameter Identifications (PIDs) of the driver seat.

Do the driver seat cushion blower motor and backrest blower motor Parameter Identifications (PIDs) vary more than 60 ° C (108 ° F) from each other?

Yes	If the driver seat cushion PID is 60 ° C (108 ° F) hotter than the backrest PID, GO to AB5 If the driver seat backrest PID is 60 ° C (108 ° F) hotter than the cushion PID, GO to AB20

No	GO to AB4

AB4 CHECK THE BLOWER MOTOR COOLING PERFORMANCE

Check the blower motors cooling performance on the affected seat. Refer to Component Test - Blower Motor Cooling Performance.

Did the blower motors pass the component test?

Yes	The DTC may have been set by extreme cabin temperatures or excessive sunload on the seat causing the system to enter recovery mode. Occupant size and weight characteristics can also be a factor. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. TEST the system for normal operation. If a concern cannot be found or duplicated, RETURN the vehicle to the customer.

No	CHECK the affected seat cushion or backrest for correct installation of the climate controlled seat components (blower motor, air ducts and foam pad). CHECK for airflow restrictions (blower motor inlets and outlets, filters and ducts) and REPAIR as needed. CHECK for an intermittent wiring fault. REPAIR as needed. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.

AB5 CHECK FOR CORRECT BLOWER MOTOR INSTALLATION AND FOR CRUSHED FOAM

Ignition OFF.

Remove the seat. REFER to: Front Seat .

Remove the seat cushion trim cover. REFER to: Front Seat Cushion Cover .

Inspect the driver seat cushion for the following:

Cushion blower obstructed

Blower filter restricted or plugged

Blower motor correctly installed

Seat cushion foam pad crushed or restricted

Is the blower motor correctly installed and the foam pad OK?

Yes	GO to AB6

No	Correctly INSTALL the cushion blower motor or INSTALL a new seat cushion foam pad.

AB6 CHECK BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Position the driver seat in the vehicle and connect the seat-to-floor connectors.

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-K		Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AB36

No	GO to AB7

AB7 CHECK BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-J	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AB8

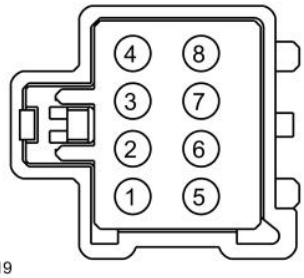
No	REPAIR the circuit. GO to AB36

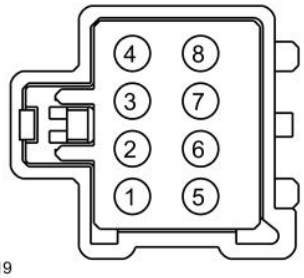
AB8 CHECK THE RESISTANCE OF THE BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE AND WIRING

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-J	Ω	Ground
C3265A-K	Ω	Ground

Are the resistances between 0.9 and 10 ohms?





Yes	GO to AB10

No	GO to AB9

AB9 CHECK THE RESISTANCE OF THE BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3034-1, Component Side	Ω	 E160219 C3034-2, Component Side

Is the resistance less than 3 ohms?

Yes	REPAIR circuit CHS01 (GY/VT) or RHS01 (WH/VT) for an open or high resistance. GO to AB36

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AB36

AB10 CHECK BLOWER CIRCUIT AND SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: SCME C3265C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	V	Ground
C3265C-11	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to AB36

No	GO to AB11

AB11 CHECK BLOWER AND SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	Ground
C3265C-11	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AB12

No	REPAIR the circuit in question. GO to AB36

AB12 CHECK THE BLOWER AND WIRING

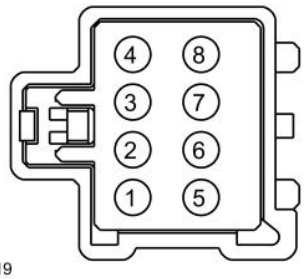
NOTE: The ohmmeter must be connected with the positive lead to pin 16 and the negative lead to pin 15 when measuring. Ohmmeter leads incorrectly connected will

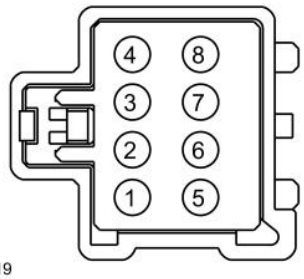
result in false readings and lead to incorrect identification of components that are not faulty.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	C3265C-15

Is the resistance between 4, 000 and 10, 000 ohms?





Yes	GO to AB14
No	GO to AB13

AB13 CHECK THE BLOWER RESISTANCE

Disconnect: Driver Seat Cushion Blower Motor C3035 .

NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3035-3, Component Side	Ω	 E160219 C3035-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?

Yes	REPAIR the circuit in question. GO to AB36
No	INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AB36

AB14 CHECK THE BLOWER SPEED CONTROL AND CIRCUIT RESISTANCE

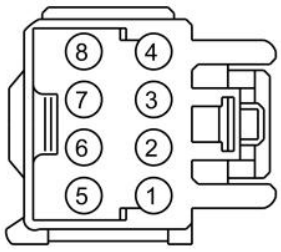
NOTE: The ohmmeter must be connected with the positive lead to pin 11 and the negative lead to pin 15 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

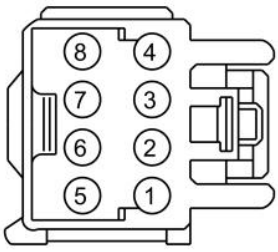
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-11	Ω	C3265C-15

Is the resistance between 240K and 400K ohms?

Yes	GO to AB16





No	GO to AB15

AB15 CHECK THE BLOWER SPEED CONTROL RESISTANCE

Disconnect: Driver Seat Cushion Blower Motor C3035 .

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-7, Component Side	Ω	 E160218 C3035-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	REPAIR the circuit in question. GO to AB36

No	INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AB36

AB16 CHECK THERMISTOR CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-7		Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AB36

No	GO to AB17

AB17 CHECK THERMISTOR CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-7	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AB18

No	REPAIR the circuit. GO to AB36

AB18 CHECK THE BLOWER MOTOR THERMISTOR AND WIRING RESISTANCE AT THE SCME (FRONT SEAT CLIMATE CONTROL MODULE)

Measure:

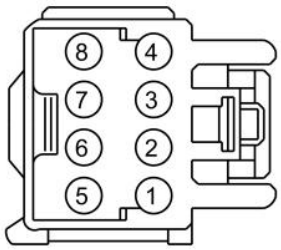
Positive Lead	Measurement / Action	Negative Lead
C3265B-7	Ω	C3265B-8

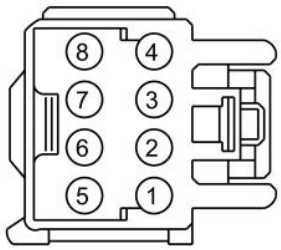
Compare the measured resistance value with the following table:

Ambient Temperature	Resistance

0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AB35

No	GO to AB19

AB19 CHECK THE BLOWER MOTOR THERMISTOR RESISTANCE

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-5, Component Side	Ω	 E160218 C3035-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR the circuit(s) in question. GO to AB36

No	INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AB36

AB20 CHECK FOR CORRECT BLOWER MOTOR INSTALLATION AND FOR CRUSHED FOAM

Ignition OFF.

Remove the driver seat. REFER to: Front Seat .

Remove the driver seat backrest cover. REFER to: Front Seat Backrest Cover .

Inspect the driver seat backrest for the following:

Backrest blower obstructed

Blower filter restricted or plugged

Blower motor correctly installed

Seat backrest foam pad crushed or restricted

Is the blower motor correctly installed and the foam pad OK?

Yes	GO to AB21

No	Correctly INSTALL the backrest blower motor or INSTALL a new seat backrest foam pad. INSTALL the seat. GO to AB36

AB21 CHECK CUSHION BLOWER MOTOR CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Position the driver seat in the vehicle and connect the seat-to-floor connectors.

Disconnect: Driver Side Airbag In-line C345.

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AB36

AB35 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to AB36

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AB36

AB36 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AC : DTC B272D

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a diagnostic scan tool to bypass the climate controlled seat buttons on the touchscreen and FCIM. When commanding a heat or cool mode operation in this manner, the climate controlled seat system only operates in 15 second intervals.

Both voltage supply circuits are spliced together internal to the SCME, so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the SCME.

Cabin air is drawn through and distributed to each of the blower motors located in the seat cushion and backrest. The blower motors then heat or cool the air. The air is then directed into the foam pad where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the SCME uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the commanded climate controlled seat settings.

A differential fault occurs when the cushion and backrest blower motors on an affected seat are reporting very different temperatures to the SCME. This may result from an airflow restriction or a circuit fault of either blower motor area. If a blower motor is clear of obstruction and is operational, check the other blower motor and circuitry on the seat. It is important to note that a blower motor with a higher temperature may be operating correctly and not the area of concern. The other blower motor may be indicating a much lower temperature, causing the DTC to set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B272D	Passenger Differential Temperature Fault	If there is a temperature differential between the passenger backrest and cushion blower motor of 60 ° C (108 ° F) or more for more than 4 seconds, or if the blower motor is disconnected or the duct is blocked, this DTC sets. When this happens for the first time in a key cycle, the SCME puts the passenger seat system into recovery mode (see principles of operation). If the system is able to recover, it returns

		to normal function. If the system is able to recover and it occurs a second time in the same key cycle, the SCME shuts down the passenger seat system.

Possible Causes

- Wiring, terminals or connectors
- Restricted blower motor filter
- Crushed or restricted backrest foam pad
- Cushion or backrest blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AC : DTC B272D > PINPOINT TEST AC : DTC B272D

> *WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.*

AC1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the SCME self-test.

Was DTC B272A or B272B, retrieved on-demand during the self-test?

Yes	For DTC B272A, GO to Pinpoint Test Z . For DTC B272B, GO to Pinpoint Test AA

No	GO to AC2

AC2 MONITOR SCME (FRONT SEAT CLIMATE CONTROL MODULE) BLOWER MOTOR TEMPERATURE PARAMETER IDENTIFICATIONS (PIDS)

Using a diagnostic scan tool, monitor the following SCME Parameter Identifications (PIDs):

Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP)

Passenger Back (TED) Temperature (PBKTMP)

Seat cushion thermal electric device temperature (CSHTEMP)

Seat back thermal electric device temperature (BKTMP)

NOTE: Make sure the temperature of the climate controlled seats has stabilized before monitoring the Parameter Identifications (PIDs). Not allowing stabilization can cause incorrect readings and lead to incorrect identification of components that are not faulty.

Monitor blower motor temperature Parameter Identifications (PIDs) with the climate controlled seats OFF. Compare the PID values of the driver seat to those of the front passenger seat, this can help identify if there is a concern with the passenger seat cushion or backrest PID value readings.

Are both passenger seat blower motor temperature Parameter Identifications (PIDs) within 10 ° C (18 ° F) of the ambient temperature?

Yes	GO to AC3

No	If the passenger seat cushion PID varies 10 ° C (18 ° F) or more from ambient temperature, GO to AC16 If the passenger seat backrest PID varies 10 ° C (18 ° F) or more from ambient temperature, GO to AC32

AC3 CONFIRM THE FAULT IS IN THE SEAT CUSHION OR THE BACKREST

Ignition OFF.

Start the engine.

NOTE: A crushed seat cushion foam pad may be the cause of the fault. It may be necessary to sit on the seat or place something of reasonable size and weight on the seat to recreate the fault.

After cycling the ignition and with the engine running, set the passenger seat to high heat. Allow the seat to heat for at least 15 minutes while monitoring the blower motor temperature Parameter Identifications (PIDs) of the passenger seat.

Do the passenger seat cushion blower motor and backrest blower motor Parameter Identifications (PIDs) vary more than 60 ° C (108 ° F) from each other?

Yes	If the passenger seat cushion PID is 60 ° C (108 ° F) hotter than the backrest PID, GO to AC5 If the passenger seat backrest PID is 60 ° C (108 ° F) hotter than the cushion PID, GO to AC20

No	GO to AC4

AC4 CHECK THE BLOWER MOTOR COOLING PERFORMANCE

Check the blower motor cooling performance on the affected seat. Refer to Component Test - Blower Motor Cooling Performance.

Did the blower motors pass the component test?

Yes	The DTC may have been set by extreme cabin temperatures or excessive sunload on the seat causing the system to enter recovery mode. Occupant size and weight characteristics can also be a factor. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. TEST the system for normal operation. If a concern cannot be found or duplicated, RETURN the vehicle to the customer.

No	CHECK the affected seat cushion or backrest for correct installation of the climate controlled seat components (blower motor, air ducts and foam pad). CHECK for airflow restrictions (blower motor inlets and outlets, filters and ducts) and REPAIR as needed. CHECK for an intermittent wiring fault. REPAIR as needed. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.

AC5 CHECK FOR CORRECT BLOWER MOTOR INSTALLATION AND FOR CRUSHED FOAM

Ignition OFF.

Remove the seat. REFER to: Front Seat .

Remove the seat cushion trim cover. REFER to: Front Seat Cushion Cover .

Inspect the seat cushion for the following:

Cushion blower obstructed

Blower filter restricted or plugged

Blower motor correctly installed

Seat cushion foam pad crushed or restricted

Is the blower motor correctly installed and the foam pad OK?

Yes	GO to AC6

No	Correctly INSTALL the cushion blower motor or INSTALL a new seat cushion foam pad.

AC6 CHECK BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Position the passenger seat in the vehicle and connect the seat-to-floor connectors.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C3265A-D		Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AC36

No	GO to AC7

AC7 CHECK BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-C	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AC8

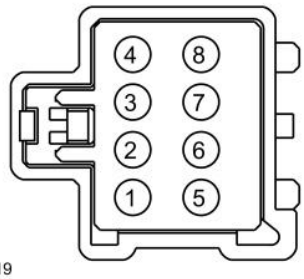
No	REPAIR the circuit. GO to AC36

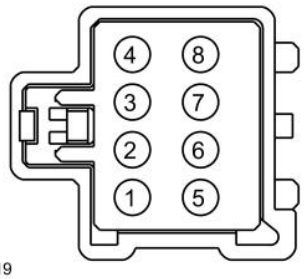
AC8 CHECK THE RESISTANCE OF THE BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE AND WIRING

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-C	Ω	Ground
C3265A-D	Ω	Ground

Are the resistances between 0.9 and 10 ohms?





Yes	GO to AC10

No	GO to AC9

AC9 CHECK THE RESISTANCE OF THE BACKREST BLOWER MOTOR THERMO ELECTRIC DEVICE

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-1, Component Side	Ω	 E160219 C3039-2, Component Side

Is the resistance less than 3 ohms?

Yes	REPAIR circuit CHS06 (BU/BN) or RHS06 (WH) for an open or high resistance. GO to AC36

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AC36

AC10 CHECK BLOWER CIRCUIT AND SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: SCME C3265C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	V	Ground
C3265C-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to AC36

No	GO to AC11

AC11 CHECK BLOWER AND SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	Ground

C3265C-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AC12

No	REPAIR the circuit in question. GO to AC36

AC12 CHECK THE BLOWER AND WIRING

> *NOTE: The ohmmeter must be connected with the positive lead to pin 8 and the negative lead to pin 7 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty.*

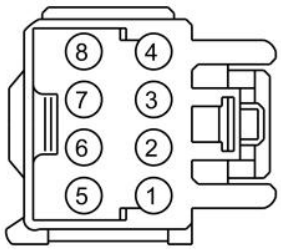
Measure:

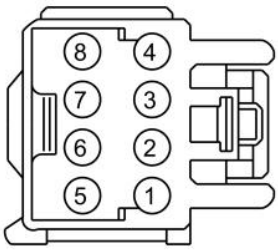
Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	C3265C-7

Is the resistance between 4, 000 and 10, 000 ohms?

Yes	GO to AC14

No	GO to AC13





AC13 CHECK THE BLOWER RESISTANCE

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

> *NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.*

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160218 C3040-3, Component Side	Ω	 E160218 C3040-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?

Yes	REPAIR the circuit in question. GO to AC36

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AC36

AC14 CHECK THE BLOWER SPEED CONTROL AND CIRCUIT RESISTANCE

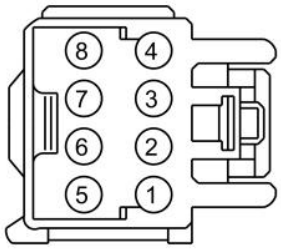
NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 7 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

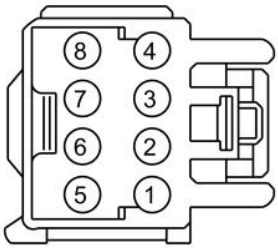
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-3	Ω	C3265C-7

Is the resistance between 240K and 400K ohms?

Yes	GO to AC16





No	GO to AC15

AC15 CHECK THE BLOWER SPEED CONTROL RESISTANCE

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-7, Component Side	Ω	 E160218 C3040-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	REPAIR the circuit in question. GO to AC36

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AC36

AC16 CHECK THERMISTOR CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-2	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AC36

No	GO to AC17

AC17 CHECK THERMISTOR CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AC18

No	REPAIR the circuit. GO to AC36

AC18 CHECK THE BLOWER MOTOR THERMISTOR AND WIRING RESISTANCE AT THE SCME (FRONT SEAT CLIMATE CONTROL MODULE)

Measure:

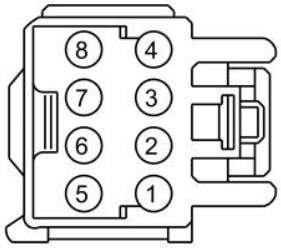
Positive Lead	Measurement / Action	Negative Lead
C3265B-2	Ω	C3265B-3

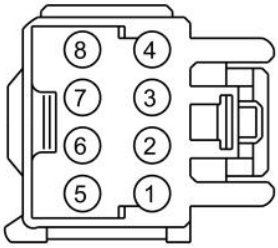
Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	GO to AC35





No	GO to AC19

AC19 CHECK THE BLOWER MOTOR THERMISTOR RESISTANCE

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160218 C3040-5, Component Side	Ω	 E160218 C3040-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR the circuit(s) in question. GO to AC36

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AC36

AC20 CHECK FOR CORRECT BLOWER MOTOR INSTALLATION AND FOR CRUSHED FOAM

Ignition OFF.

Remove the passenger seat. REFER to: Front Seat .

Remove the passenger seat backrest cover. REFER to: Front Seat Backrest Cover .

Inspect the passenger seat backrest for the following:

- Backrest blower obstructed
- Blower filter restricted or plugged
- Blower motor correctly installed
- Seat backrest foam pad crushed or restricted

Is the blower motor correctly installed and the foam pad OK?

Yes	GO to AC21

No	Correctly INSTALL the backrest blower motor or INSTALL a new seat backrest foam pad. INSTALL the seat. GO to AC36

AC21 CHECK CUSHION BLOWER MOTOR CIRCUIT FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Position the passenger seat in the vehicle and connect the seat-to-floor connectors.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265A .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-B		Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AC36

No	GO to AC22

AC22 CHECK CUSHION BLOWER MOTOR + CIRCUIT FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AC23

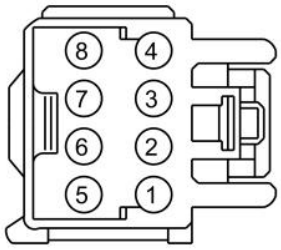
No	REPAIR the circuit. GO to AC36

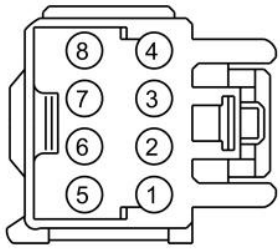
AC23 CHECK THE RESISTANCE OF THE CUSHION BLOWER MOTOR AND WIRING

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-A	Ω	C3265A-B

Is the resistance between 0.9 and 10 ohms?





Yes	GO to AC25

No	GO to AC24

AC24 CHECK THE CUSHION BLOWER MOTOR RESISTANCE

Disconnect: Passenger Seat Cushion Blower Motor C3040 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-1, Component Side	Ω	 E160218 C3040-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR the circuit(s) in question. GO to AC36

No	INSTALL a new passenger seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AC36

AC25 CHECK BLOWER CIRCUIT AND SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: SCME C3265C .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	V	Ground
C3265C-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to AC36

No	GO to AC26

AC26 CHECK BLOWER AND SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	Ground
C3265C-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AC27

No	REPAIR the circuit in question. GO to AC36

AC27 CHECK THE BLOWER AND WIRING RESISTANCE

NOTE: The ohmmeter must be connected with the positive lead to pin 8 and the negative lead to pin 7 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty.

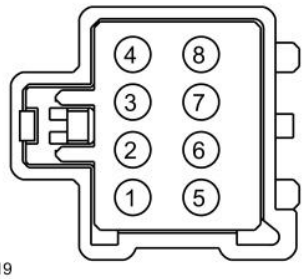
Measure:

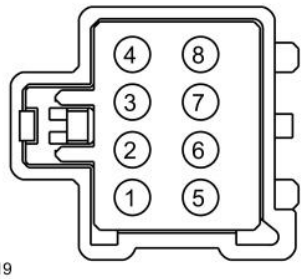
Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	C3265C-7

Is the resistance between 4, 000 and 10, 000 ohms?

Yes	GO to AC29

No	GO to AC28





AC28 CHECK THE BLOWER RESISTANCE

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not

damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-3, Component Side	Ω	 E160219 C3039-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?

Yes	REPAIR the circuit(s) in question. GO to AC36

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AC36

AC29 CHECK THE BLOWER SPEED CONTROL AND CIRCUIT RESISTANCE

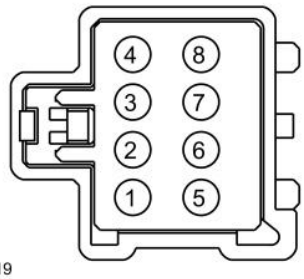
NOTE: The ohmmeter must be connected with the positive lead to pin 4 and the negative lead to pin 7 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

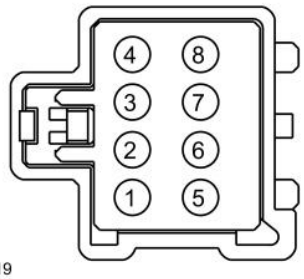
Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-4	Ω	C3265C-7

Is the resistance between 240K and 400K ohms?

Yes	GO to AC31





No	GO to AC30

AC30 CHECK THE BLOWER SPEED CONTROL RESISTANCE

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3039-7, Component Side	Ω	 E160219 C3039-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	REPAIR the circuit(s) in question. GO to AC36

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AC36

AC31 CHECK THERMISTOR CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: SCME C3265B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AC36

No	GO to AC32

AC32 CHECK THERMISTOR CIRCUIT FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-4	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AC33

No	REPAIR the circuit. GO to AC36

AC33 CHECK THE BLOWER MOTOR THERMISTOR AND WIRING RESISTANCE

Measure:

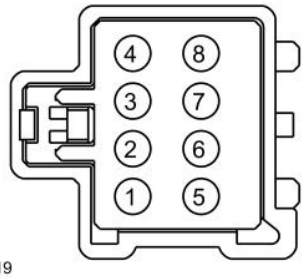
Positive Lead	Measurement / Action	Negative Lead
C3265B-4	Ω	C3265B-5

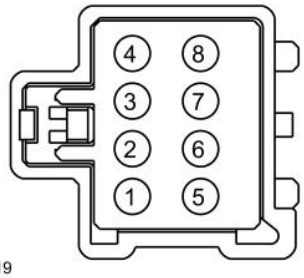
Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	GO to AC35





No	GO to AC34

AC34 CHECK THE BLOWER MOTOR THERMISTOR RESISTANCE

Disconnect: Passenger Seat Backrest Blower Motor C3039 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160219 C3039-5, Component Side	Ω	 E160219 C3039-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR the circuit(s) in question. GO to AC36

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AC36

AC35 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to AC36

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AC36

AC36 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AD : DTC B272E

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME supplies voltage and ground to the backrest and cushion blower motors. The blower motors are independently controlled by separate speed control circuits from the SCME.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B272E	Driver Ignition Run/Blower Circuit Short to Ground	If either the blower voltage supply or return circuits are open (to both cushion or backrest blowers) or shorted to voltage, the DTC is set and after 4-6 seconds the SCME disables outputs to the driver seat. The DTC also sets if the blower voltage supply or return circuit is open to only one blower when

		SCME supply voltage is less than 12 volts.

Possible Causes

- Wiring, terminals or connectors
- Cushion or backrest blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AD : DTC B272E > PINPOINT TEST AD : DTC B272E

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

AD1 CHECK THE BLOWER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	V	Ground
C3265C-15	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. GO to AD5

No	GO to AD2

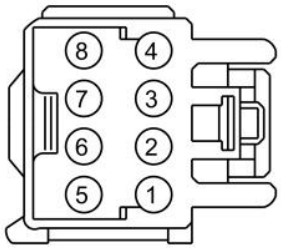
AD2 CHECK THE BLOWER MOTOR CIRCUITS FOR AN OPEN

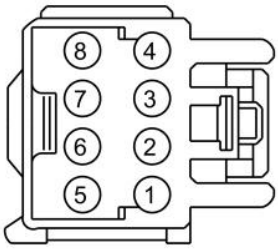
Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	C3035-3
C3265C-15	Ω	C3035-4

Are the resistances less than 3 ohms?



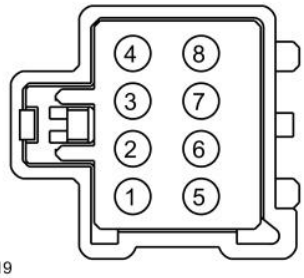


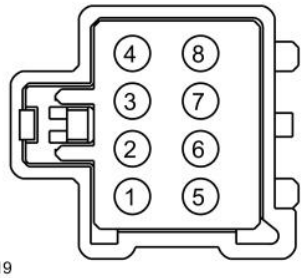
Yes	GO to AD3

No	REPAIR the circuit in question. GO to AD5

AD3 CHECK THE RESISTANCE OF THE CUSHION AND BACKREST BLOWER MOTORS

NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.





Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-3, Component Side	Ω	 E160218 C3035-4, Component Side

NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 C3034-3, Component Side	Ω	 C3034-4, Component Side

Are the resistances between 4, 000 and 10, 000 ohms?

Yes	GO to AD4

No	If the backrest blower motor resistance measurement failed, INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AD5 If the cushion blower motor resistance measurement failed, INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AD5

AD4 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to AD5

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AD5

AD5 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AE : DTC B272F

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME supplies voltage and ground to the backrest and cushion blower motors. The blower motors are independently controlled by separate speed control circuits from the SCME.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B272F	Passenger Ignition Run/Blower Circuit Short to Ground	If either the blower voltage supply or return circuits are open (to both cushion or backrest blowers) or shorted to voltage, the DTC is set and after 4-6 seconds the SCME disables outputs to the passenger seat. The DTC also sets if the blower voltage supply or return circuit is open to only one blower when SCME supply voltage is less than 12 volts.

Possible Causes

- Wiring, terminals or connectors
- Cushion or backrest blower motor

- SCME

Is any voltage present?

Yes	REPAIR the circuit in question. GO to AE5

No	GO to AE2

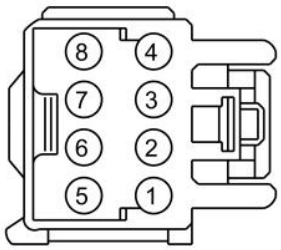
AE2 CHECK THE BLOWER MOTOR CIRCUITS FOR AN OPEN

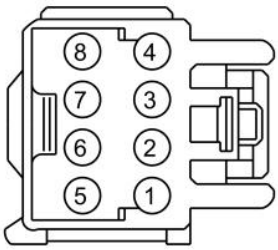
Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-8	Ω	C3040-3
C3265C-7	Ω	C3040-4

Are the resistances less than 3 ohms?

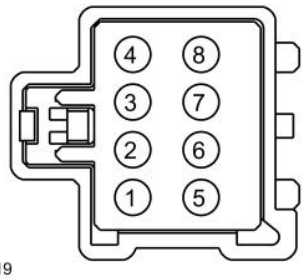


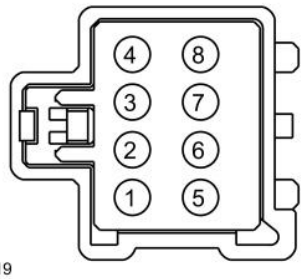


Yes	GO to AE3

No	REPAIR the circuit in question. GO to AE5

AE3 CHECK THE RESISTANCE OF THE CUSHION AND BACKREST BLOWER MOTORS





NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3040-3, Component Side	Ω	 E160218 C3040-4, Component Side

NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219	Ω	 E160219

C3039-3, Component Side		C3039-4, Component Side

Are the resistances between 4, 000 and 10, 000 ohms?

Yes	GO to AE4

No	If the backrest blower motor resistance measurement failed, INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AE5 If the cushion blower motor resistance measurement failed, INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AE5

AE4 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

NOTE: Do not reconnect Passenger Side Airbag In-line C219 at this time.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to AE5

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AE5

AE5 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AF : DTC B2729

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors seat cushion temperature while it supplies voltage and ground to both blower motors. The SCME also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the blower motor housing. Heated or cooled air exits the blower motor and flows through a duct to the foam pad.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B2729	Cushion Over-Temp Detected	If the driver seat cushion blower motor temperature exceeds 70 ° C (158 ° F) in cool mode or 85 ° C (185 ° F) in heat mode for more than 4 seconds, the SCME shuts down the driver seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Restricted blower motor filter
- Crushed or restricted cushion foam pad
- Cushion blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AF : DTC B2729 > PINPOINT TEST AF : DTC B2729

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from

these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

AF1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

Start the vehicle and set the driver seat to HIGH heat.

Using a diagnostic scan tool, perform the SCME self-test.

Was DTC B2729 retrieved on-demand during the self-test?

Yes	GO to AF2

No	GO to AF5

AF2 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR THERMISTOR CIRCUITS FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-7	Ω	Ground
C3265B-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AF3

No	REPAIR the circuit in question. GO to AF22

AF3 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR THERMISTOR AND WIRING

Connect: Driver Seat Cushion Blower Motor C3035 .

Measure:

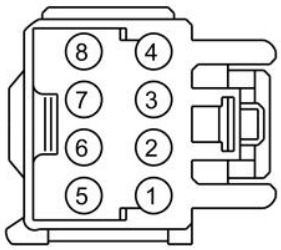
Positive Lead	Measurement / Action	Negative Lead

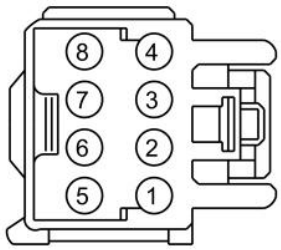
C3265B-7	Ω	C3265B-8

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AF18

No	GO to AF4

AF4 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR THERMISTOR

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-5, Component Side	Ω	 E160218 C3035-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS26 (VT) or RHS05 (YE/VT) for an open or high resistance. GO to AF22

No	INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AF22

AF5 CONFIRM THE FAULT WHILE MONITORING THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) SEAT BACK THERMAL ELECTRIC DEVICE TEMPERATURE (BKTMP) AND SEAT CUSHION THERMAL ELECTRIC DEVICE TEMPERATURE (CSHTEMP) PARAMETER IDENTIFICATIONS (PIDS)

Set the driver seat to OFF.

Using a diagnostic scan tool, clear the SCME Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, monitor the SCME BKTMP and CSHTEMP Parameter Identifications (PIDs).

NOTE: A crushed seat cushion foam pad may be the cause of the fault, making it necessary to occupy the seat to recreate and identify the fault.

Attempt to recreate the fault. Start the vehicle and set the driver seat to HIGH heat for at least 15 minutes while occupying the seat.

Do the Parameter Identifications (PIDs) increase incrementally (gradually) and stay within 15 ° C (27 ° F) of each other?

Yes	Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature.

No	If the CSHTEMP PID increases incrementally and is greater than 15 ° C (27 ° F) of the BKTMP PID, GO to AF6 If the CSHTEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15 ° C (27 ° F) of the BKTMP PID, GO to AF16

AF6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS

With the engine running, set both front seats to HIGH cool.

Note the airflow exhausting from the driver seat cushion blower motor and compare it to the airflow exhausting from the driver seat cushion blower motor.

Carry out a wiggle test of the wire harnesses between the SCME and the driver seat cushion blower motor while monitoring blower operation. The blower should operate consistently and not change speeds.

Is the airflow exhausting from the driver seat cushion blower motor comparable to the airflow exhausting from the driver seat cushion blower motor with no change in operation when carrying out the wiggle test?

Yes	GO to AF7

No	If the airflow exhausting from the driver seat cushion blower motor is not comparable to the airflow exhausting from the passenger seat cushion blower motor, GO to AF8 If the driver seat cushion blower motor blower operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault.

AF7 COMPARE OPERATION OF THE DRIVER AND DRIVER SEATS WHILE OCCUPIED

Note the airflow exhausting from the driver seat cushion blower motor with the driver seat occupied and compare it to the airflow exhausting from the passenger seat cushion blower motor with the passenger seat occupied.

Is the airflow exhausting from the driver seat cushion blower motor comparable to the airflow exhausting from the passenger seat cushion blower motor?

Yes	GO to AF16

No	INSTALL a new driver seat cushion foam pad.

AF8 CHECK THE DRIVER SEAT CUSHION BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER

Ignition OFF.

Inspect the driver seat cushion blower motor assembly for an obstruction or for a restricted filter.

Is the blower motor obstructed or the filter restricted?

Yes	REMOVE the obstruction or INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor .

No	GO to AF9

AF9 CHECK THE DRIVER SEAT CUSHION BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure:

Positive Lead	Measurement / Action	Negative Lead

C3265C-11	Ω	C3035-7

Is the resistance less than 3 ohms?

Yes	GO to AF10

No	REPAIR the circuit. GO to AF22

AF10 CHECK THE DRIVER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO VOLTAGE

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-15		Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to AF22

No	GO to AF11

AF11 CHECK THE DRIVER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AF12

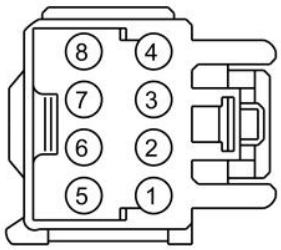
No	REPAIR the circuit. GO to AF22

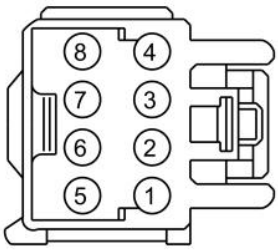
AF12 CHECK THE DRIVER SEAT CUSHION BLOWER CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	C3035-3
C3265C-15	Ω	C3035-4

Are the resistances less than 3 ohms?





Yes	GO to AF13

No	REPAIR the circuit in question. GO to AF22

AF13 CHECK THE DRIVER SEAT CUSHION BLOWER RESISTANCE

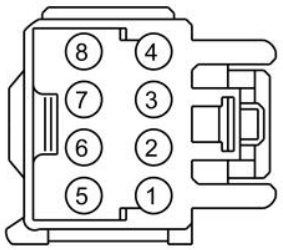
NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

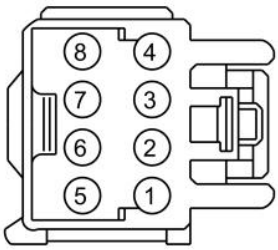
Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-3, Component Side	Ω	 E160218 C3035-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?

Yes	GO to AF14





No	INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AF22

AF14 CHECK THE DRIVER SEAT CUSHION BLOWER SPEED CONTROL RESISTANCE

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead

 E160218 C3035-7, Component Side	Ω	 E160218 C3035-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	GO to AF15

No	INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AF22

AF15 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR INSTALLATION AND FOR CRUSHED SEAT CUSHION

Ignition OFF.

Remove the driver seat. REFER to: Front Seat .

Remove the driver seat cushion cover. REFER to: Front Seat Cushion Cover .

Inspect the driver seat cushion for the following:

Blower motor correctly installed

Seat cushion foam pad crushed or restricted

Is the driver seat cushion blower motor correctly installed and are there no signs of damage to the foam pad?

Yes	INSTALL the driver seat cushion cover and seat. GO to AF18

No	CORRECTLY install the driver seat cushion blower motor or INSTALL a new driver seat cushion foam pad. GO to AF22

AF16 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR THERMISTOR AND WIRING

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

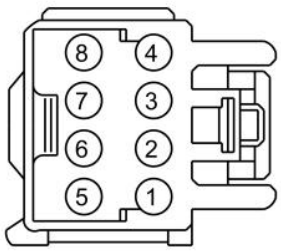
Measure:

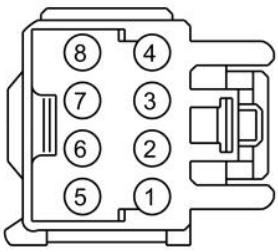
Positive Lead	Measurement / Action	Negative Lead
C3265B-7	Ω	C3265B-8

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AF18

No	GO to AF17

AF17 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR THERMISTOR

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-5, Component Side	Ω	 E160218 C3035-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms

30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS26 (VT) or RHS05 (YE/VT) for an open or high resistance. GO to AF22

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AF22

AF18 CHECK THE DRIVER SEAT CUSHION BLOWER MOTOR HEATING/COOLING CIRCUITRY CURRENT DRAW

Connect all SCME, blower motor and Body Harness-to-Seat Harness Connectors.

NOTE: It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.

NOTE: Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the VMM available for use with IDS. If these are unavailable, the inductive current probe feature from a battery tester may be substituted.

Place an inductive current probe around circuit CHS02 (YE/BU) near SCME C3265A-G and monitor the current draw.

Start the engine and set the driver seat to HIGH heat.

Is the current draw less than 11 amps?

Yes	GO to AF19

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AF22

AF19 CHECK RESISTANCE OF THE DRIVER SEAT CUSHION BLOWER MOTOR AND WIRING

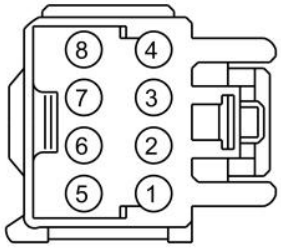
Ignition OFF.

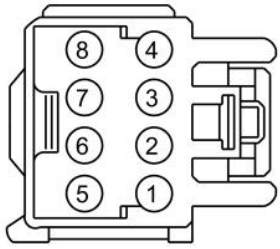
Disconnect: SCME C3265A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-G	Ω	Ground
C3265A-H	Ω	Ground

Are the resistances between 0.9 and 10 ohms?





Yes	GO to AF21

No	GO to AF20

AF20 CHECK THE RESISTANCE OF THE DRIVER SEAT CUSHION BLOWER MOTOR

Disconnect: Driver Seat Cushion Blower Motor C3035 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160218 C3035-1, Component Side	Ω	 E160218 C3035-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR circuit CHS02 (YE/BU) or RHS02 (BU/OG) for an open or high resistance. GO to AF22

No	INSTALL a new cushion blower motor. REFER to: Front Seat Cushion Blower Motor . GO to AF22

AF21 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

> *NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.*

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate Control Module . GO to AF22

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AF22

AF22 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AG : DTC B2730

Refer to Climate Controlled Seats for schematic and connector information.

Normal Operation and Fault Conditions

The SCME monitors seat backrest temperature while it supplies voltage and ground to both blower motors. The SCME also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower

through a filter attached to the blower motor housing. Heated or cooled air exits the blower motor and flows through the foam pad.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B2730	Back Over-Temp Detected	If the driver seat backrest blower motor temperature exceeds 70 ° C (158 ° F) in cool mode or 85 ° C (185 ° F) in heat mode for more than 4 seconds the SCME shuts down the driver seat system and sets this DTC.

Possible Causes

- Wiring, terminals or connectors
- Restricted blower motor filter
- Crushed or restricted backrest foam pad
- Backrest blower motor
- SCME

DIAGNOSIS AND TESTING > FRONT SEATS > PINPOINT TEST(S) > PINPOINT TEST AG : DTC B2730 > PINPOINT TEST AG : DTC B2730

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

AG1 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) FOR ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

Start the vehicle and set the driver seat to HIGH heat.

Using a diagnostic scan tool, perform the SCME self-test.

Was DTC B2730 retrieved on-demand during the self-test?

Yes	GO to AG2

No	GO to AG5

AG2 CHECK THE DRIVER SEAT BACKREST BLOWER MOTOR THERMISTOR CIRCUITS FOR A SHORT TO GROUND

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265B-9	Ω	Ground
C3265B-10	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to AG3

No	REPAIR the circuit in question. GO to AG22

AG3 CHECK THE DRIVER SEAT BACKREST BLOWER MOTOR THERMISTOR AND WIRING

Connect: Driver Seat Backrest Blower Motor C3034 .

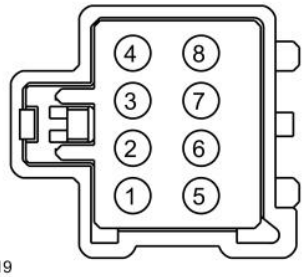
Measure:

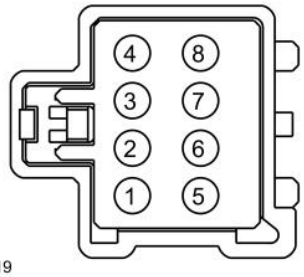
Positive Lead	Measurement / Action	Negative Lead
C3265B-9	Ω	C3265B-10

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AG18

No	GO to AG4

AG4 CHECK THE PASSENGER SEAT BACKREST BLOWER MOTOR THERMISTOR

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3034-5, Component Side	Ω	 E160219 C3034-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS35 (VT/OG) or RHS15 (GY/BN) for an open or high resistance. GO to AG22

No	INSTALL a new driver seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AG22

AG5 CONFIRM THE FAULT WHILE MONITORING THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) SEAT BACK THERMAL ELECTRIC DEVICE TEMPERATURE (BKTMP) AND SEAT CUSHION THERMAL ELECTRIC DEVICE TEMPERATURE (CSHTEMP) PARAMETER IDENTIFICATIONS (PIDS)

Set the passenger seat to OFF.

Using a diagnostic scan tool, clear the SCME Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, monitor the SCME BKTMP and CSHTEMP Parameter Identifications (PIDs).

NOTE: A crushed seat backrest foam pad may be the cause of the fault, making it necessary to occupy the seat to recreate and identify the fault.

Attempt to recreate the fault. Start the vehicle and set the driver seat to HIGH heat for at least 15 minutes while occupying the seat.

Do the Parameter Identifications (PIDs) increase incrementally (gradually) and stay within 15 ° C (27 ° F) of each other?

Yes	Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature.

No	If the BKTMP PID increases incrementally and is greater than 15 ° C (27 ° F) of the CSHTEMP PID, GO to AG6If the BKTMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15 ° C (27 ° F) of the CSHTEMP PID, GO to AG16

AG6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS

With the engine running, set both front seats to HIGH cool.

Note the airflow exhausting from the driver seat backrest blower motor and compare it to the airflow exhausting from the passenger seat backrest blower motor.

Carry out a wiggle test of the wire harnesses between the SCME and the driver seat backrest blower motor while monitoring blower operation. The blower should operate consistently and not change speeds.

Is the airflow exhausting from the driver seat backrest blower motor comparable to the airflow exhausting from the passenger seat backrest blower motor with no change in operation when carrying out the wiggle test?

Yes	GO to AG7

No	If the airflow exhausting from the driver seat backrest blower motor is not comparable to the airflow exhausting from the passenger seat backrest blower motor, GO to AG8 If the driver seat backrest blower motor operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault.

AG7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED

Note the airflow exhausting from the driver seat backrest blower motor with the driver seat occupied and compare it to the airflow exhausting from the passenger seat backrest blower motor with the passenger seat occupied.

Is the airflow exhausting from the driver seat backrest blower motor comparable to the airflow exhausting from the passenger seat backrest blower motor?

Yes	GO to AG16

No	INSTALL a new driver seat backrest foam pad.

AG8 CHECK THE DRIVER SEAT BACKREST BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER

Ignition OFF.

Inspect the blower of the driver seat backrest blower motor assembly for an obstruction or for a restricted filter.

Is the blower obstructed or the filter restricted?

Yes	REMOVE the obstruction or INSTALL a new driver seat cushion blower motor. REFER to: Front Seat Cushion Blower Motor .

No	GO to AG9

AG9 CHECK THE DRIVER SEAT BACKREST BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265C .

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-12	Ω	C3034-7

Is the resistance less than 3 ohms?

Yes	GO to AG10

No	REPAIR the circuit. GO to AG22

AG10 CHECK THE DRIVER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO VOLTAGE

Ignition ON.

Is any voltage present?

Yes	REPAIR the circuit. GO to AG22

No	GO to AG11

AG11 CHECK THE DRIVER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to AG12

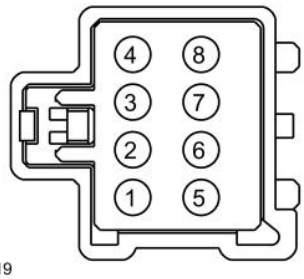
No	REPAIR the circuit. GO to AG22

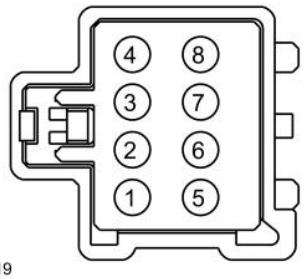
AG12 CHECK THE DRIVER SEAT BACKREST BLOWER CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265C-16	Ω	C3034-3
C3265C-15	Ω	C3034-4

Are the resistances less than 3 ohms?





Yes	GO to AG13

No	REPAIR the circuit in question. GO to AG22

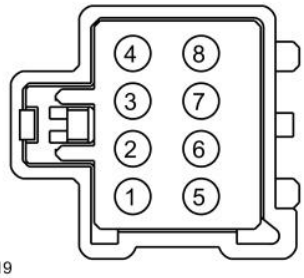
AG13 CHECK THE DRIVER SEAT BACKREST BLOWER RESISTANCE

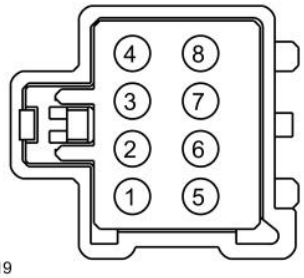
> *NOTE: The ohmmeter must be connected with the positive lead to pin 3 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.*

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3034-3, Component Side	Ω	 E160219 C3034-4, Component Side

Is the resistance between 4, 000 and 10, 000 ohms?





Yes	GO to AG14

No	INSTALL a new driver seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AG22

AG14 CHECK THE DRIVER SEAT BACKREST BLOWER SPEED CONTROL RESISTANCE

NOTE: The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3034-7, Component Side	Ω	 E160219 C3040-4, Component Side

Is the resistance between 240K and 400K ohms?

Yes	GO to AG15

No	INSTALL a new driver seat backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AG22

AG15 CHECK THE DRIVER SEAT BACKREST BLOWER MOTOR INSTALLATION AND FOR CRUSHED SEAT BACKREST

Ignition OFF.

Remove the driver seat. REFER to: Front Seat .

Remove the driver seat backrest cover. REFER to: Front Seat Backrest Cover .

Inspect the driver seat backrest for the following:

Blower motor correctly installed

Backrest foam pad crushed or restricted

Is the driver seat backrest blower motor correctly installed and are there no signs of damage to the foam pad?

Yes	INSTALL the driver seat backrest cover and seat. GO to AG18

No	CORRECTLY install the driver seat backrest blower motor or INSTALL a new driver seat backrest foam pad. GO to AG22

AG16 CHECK THE DRIVER SEAT BACKREST BLOWER MOTOR THERMISTOR AND WIRING

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Disconnect: Driver Side Airbag In-line C345.

Disconnect: Passenger Side Airbag In-line C219 .

Disconnect: SCME C3265B .

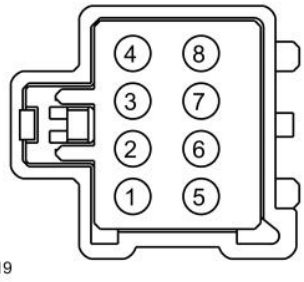
Measure:

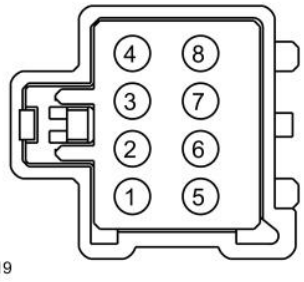
Positive Lead	Measurement / Action	Negative Lead
C3265B-9	Ω	C3265B-10

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?





Yes	GO to AG18

No	GO to AG17

AG17 CHECK THE DRIVER SEAT BACKREST BLOWER MOTOR THERMISTOR

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3034-5, Component Side	Ω	 E160219 C3034-8, Component Side

Compare the measured resistance value with the following table:

Ambient Temperature	Resistance
0-10 ° C (32-50 ° F)	2, 782-1, 663 ohms
10-20 ° C (50-68 ° F)	1, 837-1, 140 ohms
20-30 ° C (68-86 ° F)	1, 260-806 ohms
30-40 ° C (86-104 ° F)	893-570 ohms
40-50 ° C (104-122 ° F)	630-428 ohms

Is the resistance within the limits indicated?

Yes	REPAIR circuit VHS35 (VT/OG) or RHS15 (GY/BN) for an open or high resistance. GO to AG22

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AG22

AG18 CHECK THE DRIVER SEAT BACKREST BLOWER MOTOR HEATING/COOLING CIRCUITRY CURRENT DRAW

Connect all SCME, blower motor and Body Harness-to-Seat Harness Connectors.

NOTE: It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.

NOTE: Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the VMM available for use with IDS. If these are unavailable, the inductive current probe feature from a battery tester may be substituted.

Place an inductive current probe around circuit CHS01 (GY/VT) near SCME C3265A-J and monitor the current draw.

Start the engine and set the driver seat to HIGH heat.

Is the current draw less than 11 amps?

Yes	GO to AG19

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AG22

AG19 CHECK RESISTANCE OF THE DRIVER SEAT BACKREST BLOWER MOTOR AND WIRING

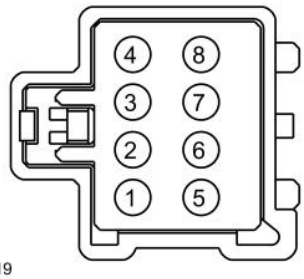
Ignition OFF.

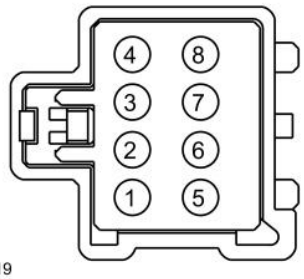
Disconnect: SCME C3265A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3265A-J	Ω	Ground
C3265A-K	Ω	Ground

Are the resistances between 0.9 and 10 ohms?





Yes	GO to AG21

No	GO to AG20

AG20 CHECK THE RESISTANCE OF THE DRIVER SEAT BACKREST BLOWER MOTOR

Disconnect: Driver Seat Backrest Blower Motor C3034 .

Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
 E160219 C3034-1, Component Side	Ω	 E160219 C3034-2, Component Side

Is the resistance between 0.9 and 10 ohms?

Yes	REPAIR circuit CHS01 (GY/VT) or RHS01 (WH/VT) for an open or high resistance. GO to AG22

No	INSTALL a new backrest blower motor. REFER to: Front Seat Backrest Blower Motor . GO to AG22

AG21 CHECK THE SCME (FRONT SEAT CLIMATE CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all of the SCME connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the SCME connectors. Make sure they seat and latch correctly.

> *NOTE: Do not reconnect Driver Side Airbag In-line C345 or Passenger Side Airbag In-line C219 at this time.*

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCME. REFER to: Front Seat Climate

	Control Module . GO to AG22

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to AG22

AG22 VERIFY THE SUPPLEMENTAL RESTRAINT SYSTEM (SRS) PROVES OUT SUCCESSFULLY

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) DEPOWERING .

Connect: Driver Side Airbag In-line C345.

Connect: Passenger Side Airbag In-line C219 .

Connect all previously disconnected connectors.

REFER to: SUPPLEMENTAL RESTRAINT SYSTEM (SRS) REPOWERING .

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.

No	REFER to: SUPPLEMENTAL RESTRAINT SYSTEM .

DIAGNOSIS AND TESTING > FRONT SEATS > COMPONENT TEST(S)

Blower Motor Cooling Performance

NOTE: This test is intended to check the cooling mode performance of an operational climate controlled seat backrest or cushion blower motor and verify it is cooling inlet air at the blower motor (ambient cabin air) between 6-8 ° C (10-14 ° F).

NOTE: Make sure the vehicle is out of direct sunlight and is in an area with a stable air temperature when testing the climate controlled seat system.

NOTE: For correct temperature measurements, the seat being tested should be occupied.

1.

Using a diagnostic scan tool, monitor the following SCME Parameter Identifications (PIDs):

Seat cushion thermal electric device temperature (CSHTEMP)

Seat back thermal electric device temperature (BKTMP)

Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP)

Passenger Back (TED) Temperature (PBKTMP)

Driver State Seat Mode (DCCSMOD)

Passenger State Seat Mode (PCCSMOD)

2.

Any initial PID value of greater than 205 ° C (401 ° F) or less than 2 ° C (36 ° F) indicates a system hardware failure. Do not proceed with this test. GO to Symptom Chart or SCME DTC Chart for diagnostic direction.

3.

Gain access to the seat cushion and backrest blower motors and use a suitable thermocouple temperature measuring device to monitor the air inlet temperature.

Place the temperature probe near each blower motor air filter.

4.

NOTE: The engine must be running to operate the climate controlled seat system and carry out this test.

Operate system in high cool mode and measure the temperature at the cushion blower motor filter using the thermocouple device.

Secure the temperature probe at the cushion blower motor and record the air inlet temperature.

5.

Use a diagnostic scan tool to measure the cushion blower motor PID temperature and record the value.

Monitor the MODE PID and verify the system is operating. If during testing, the PID value changes to Blower Only state, the system has entered into recovery mode and voltage to the blower motors are disabled. If this occurs, the seat has failed the test. Do not continue. Return to the diagnostic routine.

6.

Subtract the cushion blower motor PID temperature from the cushion air inlet temperature and record the temperature difference value.

7.

Continue to operate the system in high cool mode and use the thermocouple device to measure the temperature at the backrest blower motor filter.

Secure the temperature probe at the backrest blower motor and close the backrest trim cover before measuring and recording the air inlet temperature.

8.

Use a diagnostic scan tool to measure the backrest blower motor PID temperature and record the value.

Monitor the MODE PID and verify the system is operating. If during testing, the PID value changes to Blower Only state, the system has entered into recovery mode and voltage to the blower motors is disabled. If this occurs, the seat has failed the test. Do not continue. Return to the diagnostic routine.

9.

Subtract the backrest blower motor PID temperature from the backrest air inlet temperature and record the value.

10.

Compare the cushion and backrest calculated temperature values. The temperature difference should be between 6-8 ° C (10-14 ° F).

11.

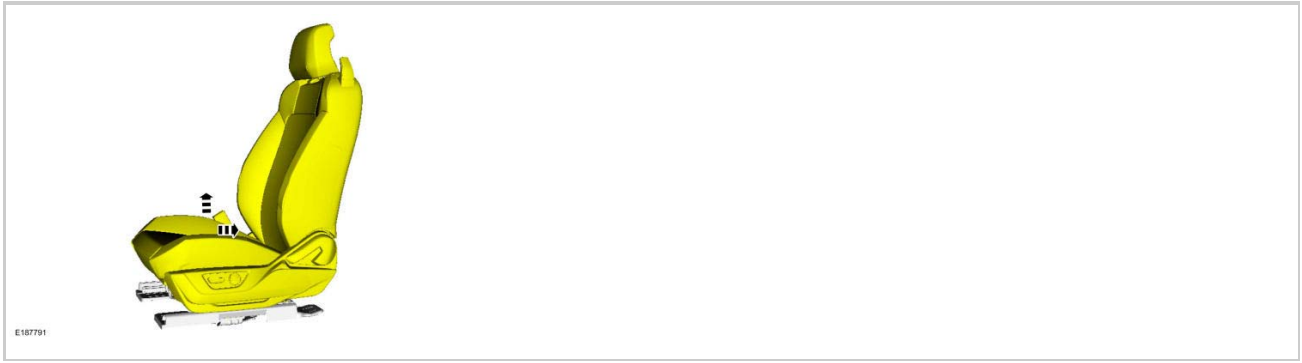
If the calculated temperature values are not within these specifications, check the climate controlled seat components for air duct or filter restrictions, blockages, duct or electrical disconnections and for incorrect assembly. Repair as needed. If OK, carry out the SCME self-test and if any Diagnostic Trouble Codes (DTCs) are retrieved, go to SCME DTC Chart for diagnostic direction. Return to the diagnostic routine.

REMOVAL AND INSTALLATION > DRIVER FRONT SEAT MODULE (DSM) > REMOVAL

NOTE: LHD driver seat shown, RHD driver seat similar.

NOTE: Removal steps in this procedure may contain installation details.

1.



NOTE: This step is only necessary when installing a new component.

NOTE: The PMI process must begin with the current DSM installed. If the current DSM does not respond to the diagnostic scan tool, the tool may prompt for As-Built Data as part of the repair.

Using a diagnostic scan tool, begin the PMI process for the DSM following the on-screen instructions.

2.

Position the driver front seat to the full rearward and full upward position.

3.

Disconnect the DSM electrical connectors.

4.

Remove the screws and the DSM.

Torque

: 18 lb.in (2 Nm)

REMOVAL AND INSTALLATION > DRIVER FRONT SEAT MODULE (DSM) > INSTALLATION

1.

To install, reverse the removal procedure.

2.

NOTE: This step is only necessary when installing a new component.

Using a diagnostic scan tool, complete the PMI process for the DSM following the on-screen instructions.

3.

NOTE: This step is only necessary when installing a new component.

Operate the seat in all directions through the full range of travel to set soft stops and avoid a premature stopping point occurrence after the vehicle is returned to the customer.

REMOVAL AND INSTALLATION > FRONT HEAD RESTRAINT GUIDE SLEEVE

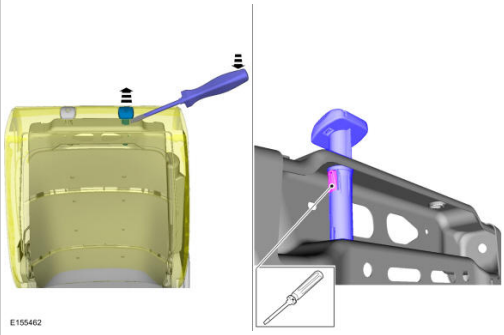
Special Tool(s) / General Equipment

Flat Headed Screw Driver

REMOVAL AND INSTALLATION > FRONT HEAD RESTRAINT GUIDE SLEEVE > REMOVAL

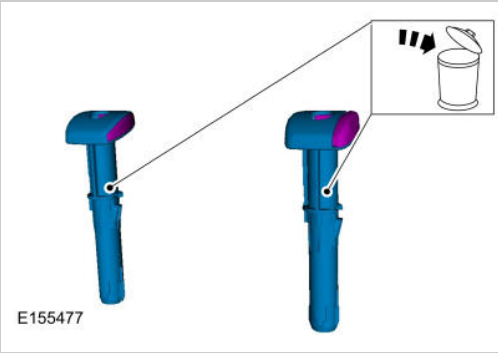
NOTE: Typical head restraint guide sleeve shown, others similar.

1.



Depress the locking tabs and remove the head restraint.

2.

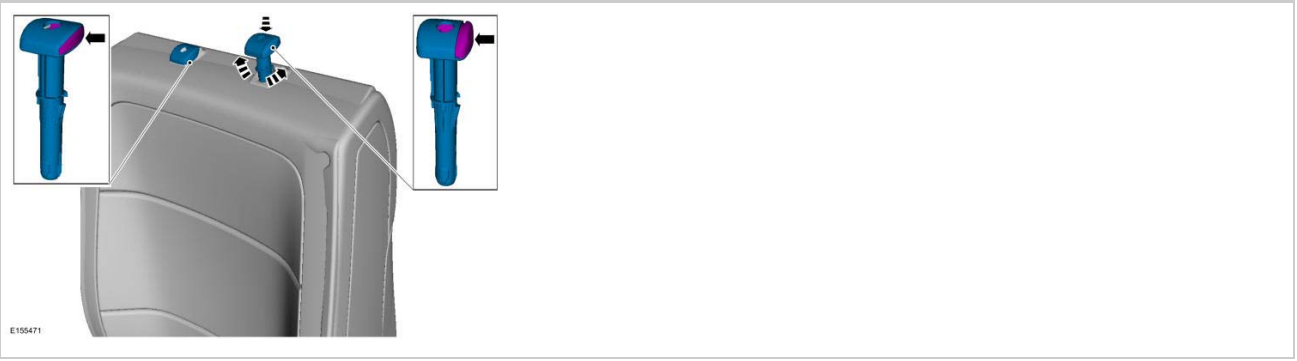


NOTE: Seat backrest cushion removed for clarity.

Remove the headrest restraint guide sleeves. Use the General Equipment: Flat Headed Screw Driver

3.

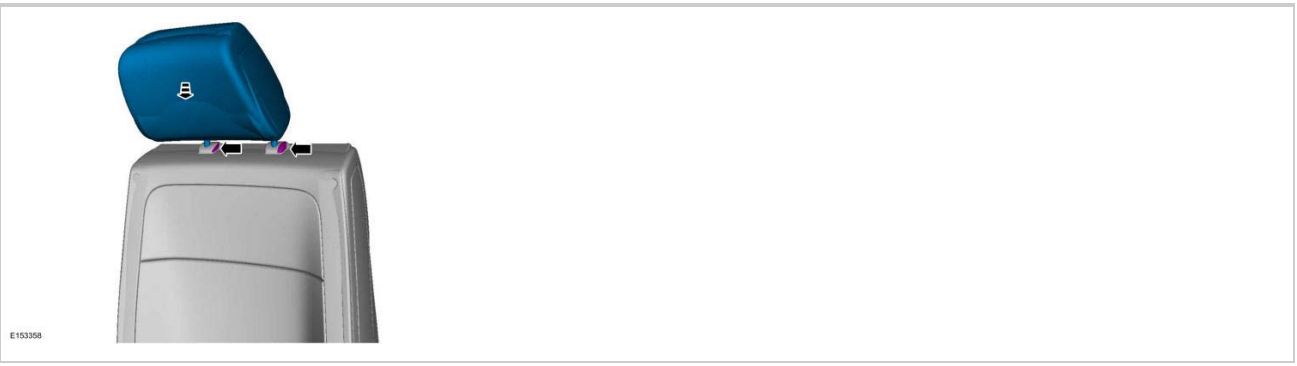
Discard the head restraint guide sleeves.



REMOVAL AND INSTALLATION > FRONT HEAD RESTRAINT GUIDE SLEEVE > INSTALLATION

NOTE: Always install new head restraint guide sleeves. Difficult adjustment of the head restraint may occur. Failure to follow these instructions may result in component failure.

NOTE: The head restraint guide sleeves are not interchangeable. Failure to install the correct head restraint guide sleeve at the correct position may result in component failure.

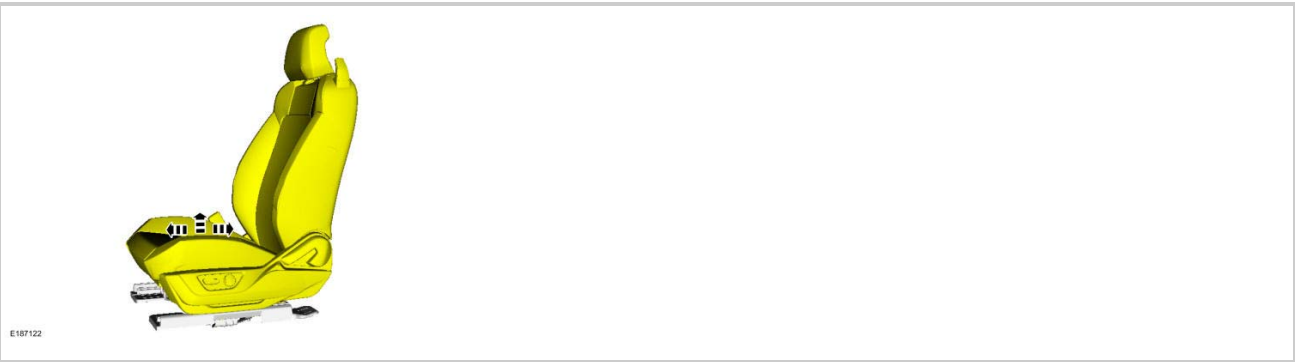


1.

Install the new head restraint guide sleeves.

2.

Depress the locking tabs and install the head restraint.



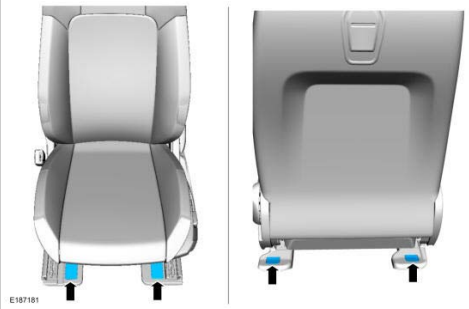
REMOVAL AND INSTALLATION > FRONT SEAT > REMOVAL

NOTE: LHD driver seat shown, all others similar.

1.

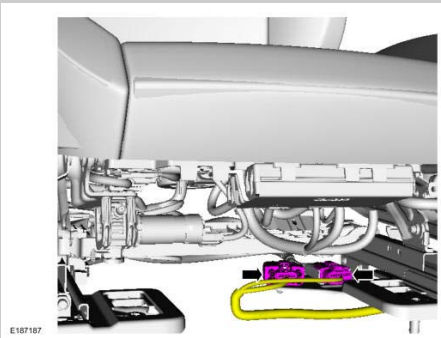
Position the seat to access the front seat bolts.

If a power seat cannot be positioned horizontally to access the front seat bolts, diagnose the inoperative horizontal seat track motor. Refer to: Front Seats .



2.

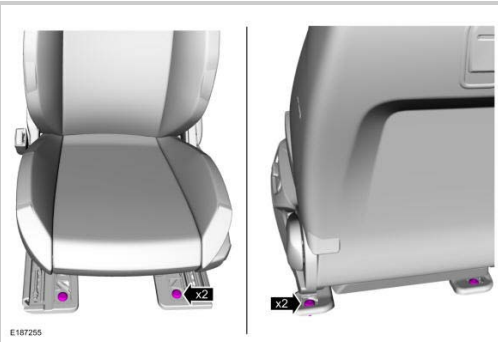
Depower the SRS. Refer to: Supplemental Restraint System (SRS) Depowering .



3.

Remove the front seat shield bolt caps.

4.



Disconnect the front seat electrical connector(s) and position the wire harness aside.

5.

NOTE: Follow the unique instructions or graphic for this step in the installation.

Remove the bolts and the front seat.

REMOVAL AND INSTALLATION > FRONT SEAT > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Install the front seat bolts in the following sequence.

1.

Install the front inboard bolt.

Torque

: 35 lb.ft (47 Nm)

2.

Install the front outboard bolt.

Torque

: 35 lb.ft (47 Nm)

3.

Install the rear inboard bolt.

Torque

: 35 lb.ft (47 Nm)

4.

Install the rear outboard bolt.

Torque

: 35 lb.ft (47 Nm)

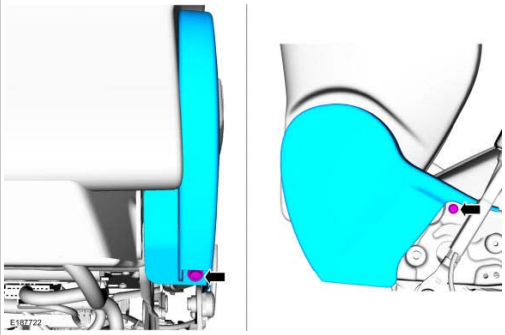
3.

Repower the SRS. Refer to: Supplemental Restraint System (SRS) Repowering .

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST > REMOVAL

NOTE: LHD driver seat shown, all others similar.

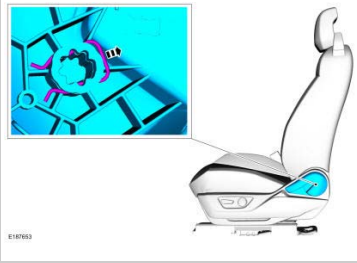
NOTE: Removal steps in this procedure may contain installation details.



All seats

1.

Remove the front seat. Refer to: Front Seat .



2.

Remove the screws and the recline cover.

3.

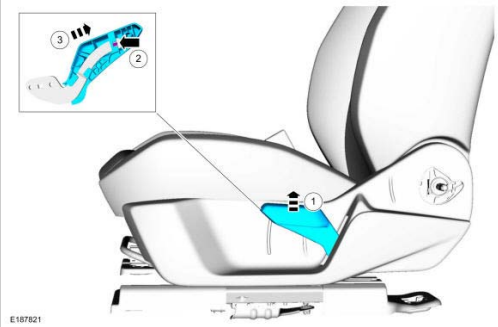
Release the retaining clip and remove the front seat recline handle.

Manual driver seat

4.

If equipped, remove the height adjusting handle.

1.

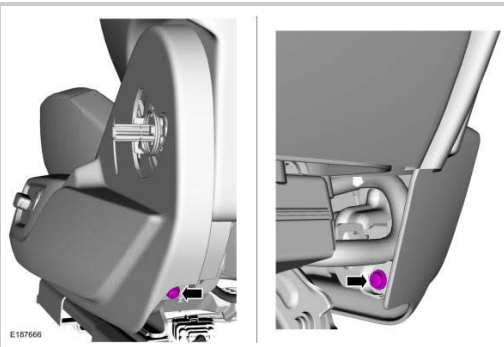


Raise the height adjusting handle.

2.

Release the locking tab.

3.



Slide the height adjusting handle forward.

Power seats and manual driver seat

5.

Remove the side shield screws.

6.

Remove the side shield.

1.

Lift up on the rear of the side shield and pull outward.

2.

Push the side shield forward.

3.

If equipped, disconnect the electrical connector.

Passenger manual seat

7.

Remove the side shield screws.

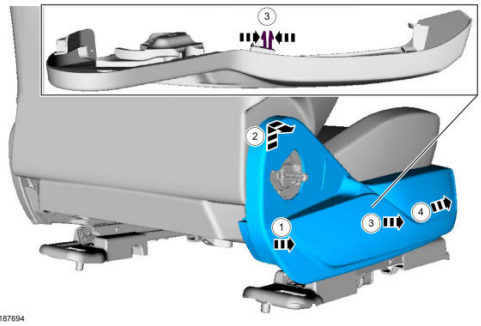
8.

Remove the side shield.

1.

Pull the rear of the side shield out.

2.



Firmly grasp the side shield, lift up and out, separating the side shield from the recliner bracket.

3.

From underneath, squeeze the retainers together and pull out on the side shield.

4.

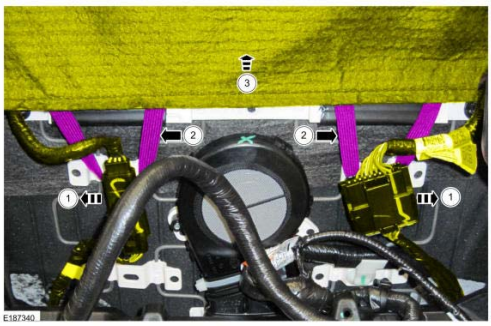
Slide the side shield forward.

All seats

9.

Position the front seat backrest cover.

1.



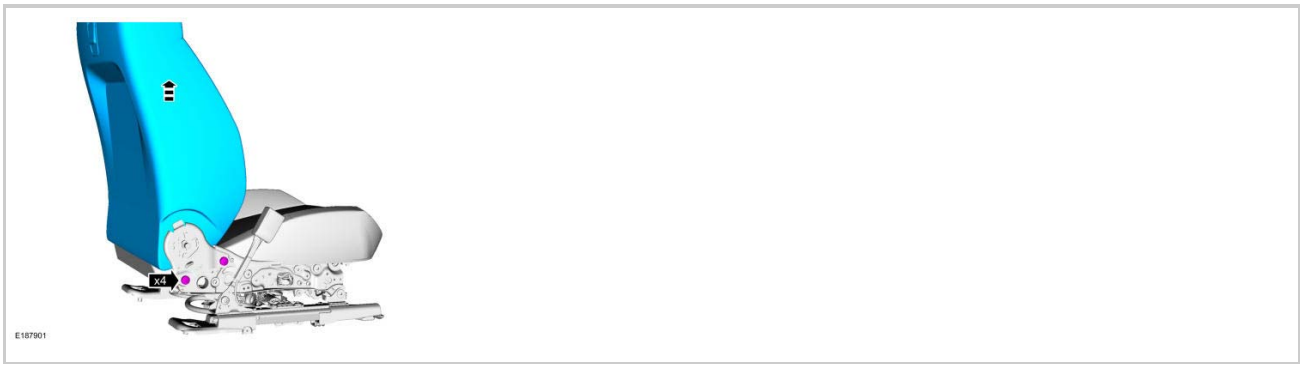
Release the wire harness electrical connector retainer(s).

2.

Detach the front seat backrest cover straps from the seat cushion frame.

3.

Position the front seat backrest cover aside.



10.

Remove the bolts and backrest.

Torque

: 33 lb.ft (45 Nm)

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST > INSTALLATION

1.

To install, reverse the removal procedure.

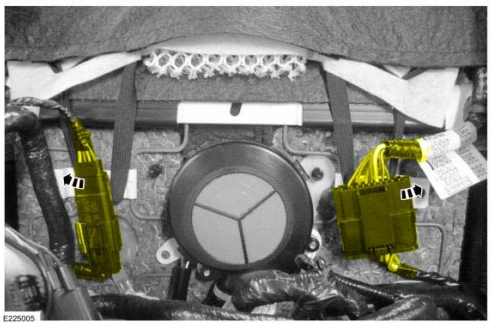
REMOVAL AND INSTALLATION > FRONT SEAT BACKREST BLOWER MOTOR > REMOVAL

NOTE: LHD driver seat shown, all others similar.

NOTE: Seat backrest blower motor without snorkel shown, unless otherwise called out.

NOTE: Removal steps in this procedure may contain installation details.

NOTE: Methods are common among all options unless otherwise specified.



1.

Remove the front seat. Refer to: Front Seat .

2.

NOTE: Seat backrest blower motor with snorkel shown.

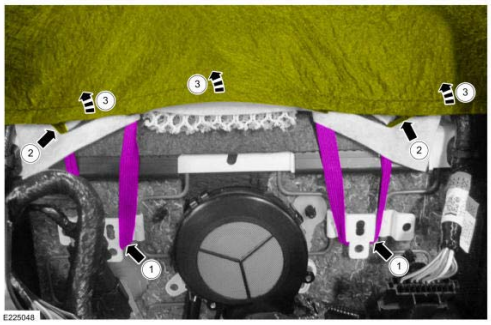
Release the electrical connector retainers and position the wire harnesses aside.

3.

NOTE: Seat backrest blower motor with snorkel shown.

Position the backrest cover.

1.



Detach the backrest cover straps.

2.

If equipped, route the backrest cover straps out through the backrest blower motor snorkel.

3.

Position the backrest cover aside.

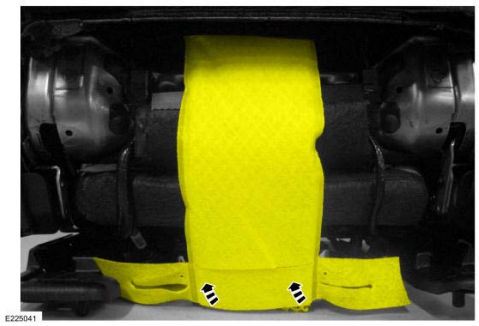
4.

Remove the backrest cover insert.

1.

Release the pin-type retainers.

2.



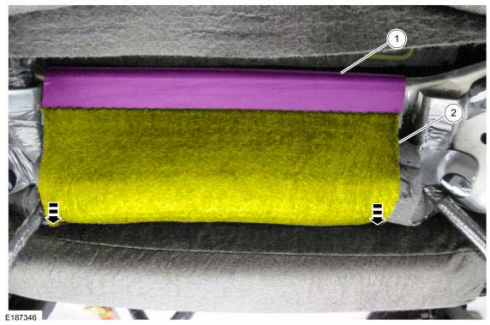
Position the backrest cover upwards.

5.

NOTE: Seat backrest blower motor with snorkel shown.

If equipped, position the backrest blower motor snorkel aside.

6.



Position the backrest cover.

1.

Release the J-clip.

2.

Position the backrest cover from between the seat cushion and backrest cushion.

7.

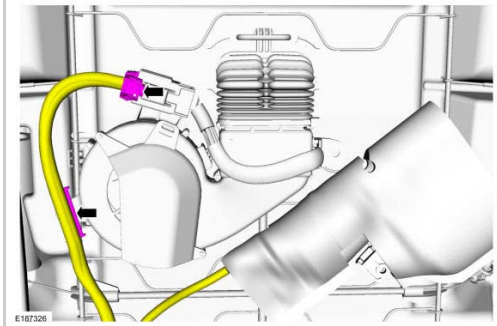
NOTE: Use care when separating the seat backrest trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat backrest foam pad.

Release the hook-and-loop strips and position the backrest cover upward.

8.

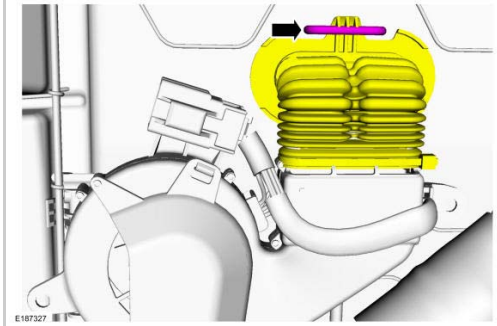
NOTE: Seat backrest blower motor with snorkel shown.

NOTE: New tie strap location should be used during all installations.



NOTE: Follow the unique instructions or graphics for this step in the installation.

Remove the tie strap.



9.

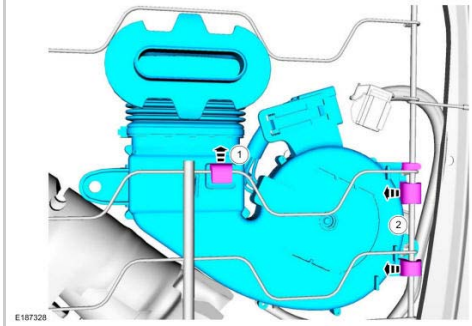
Release the wire harness retainer and disconnect the blower motor electrical connector.

10.

Disconnect the blower motor manifold from the backrest cushion.

11.

NOTE: The backrest foam has been removed for clarity.



Remove the blower motor.

1.

Release the blower motor horizontal retainer.

2.

Release the blower motor vertical retainers.

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST BLOWER MOTOR > INSTALLATION

1.

To install, reverse the removal procedure.

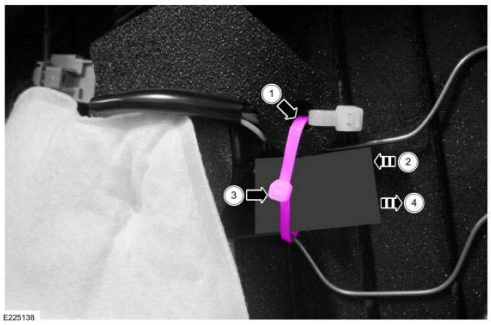
2.

NOTE: Seat backrest blower motor with snorkel shown.

1.

Install the tie strap.

2.



Insert a 1 in x 1/8 in section of flat metal stock in the tie strap opening.

3.

Tighten the tie strap

4.

Remove the flat stock.

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST COVER

Special Tool(s) / General Equipment

Hog Ring Plier

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST COVER > REMOVAL

WARNING: Front seat backrest trim covers installed on seats equipped with seat side

airbags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side airbag deploying incorrectly and increase the risk of serious personal injury or death in a crash.

NOTE: Removal steps in this procedure may contain installation details.

NOTE: LHD drive seat shown, all others similar.

1.

Remove the front seat. Refer to: Front Seat .

2.

Remove the front head restraint guide sleeves. Refer to: Front Head Restraint Guide Sleeve .

3.

If equipped, remove the inner safety belt guide.

4.

If equipped, remove the outer safety belt guide.

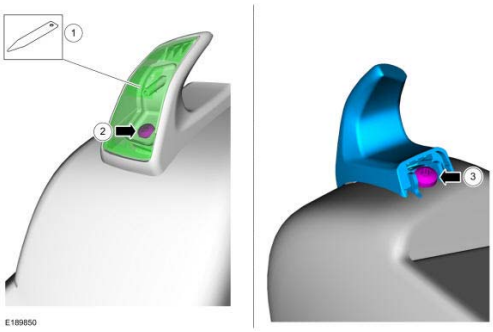
1.

Remove the cover.

2.

Remove the front bolt.

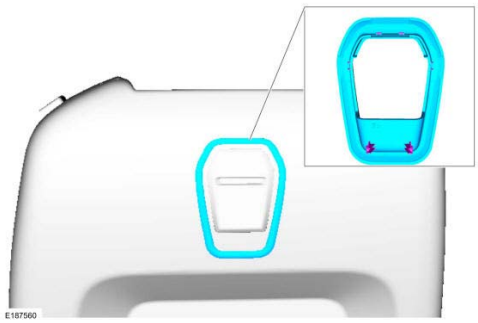
Torque



: 106 lb.in (12 Nm)

3.

Remove the rear bolt.



Torque

: 106 lb.in (12 Nm)

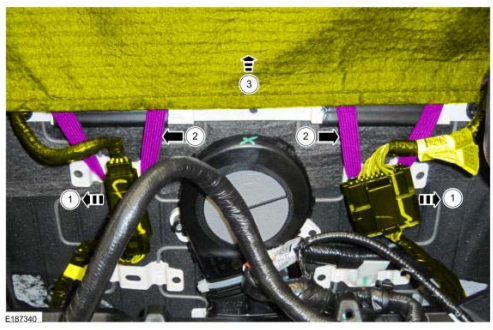
5.

Remove the seat release handle bezel.

6.

Position the front seat backrest cover.

1.



Releases the wire harness electrical connector retainer(s).

2.

Detach the front seat backrest cover straps.

3.

Position the front seat backrest cover aside.

7.

Remove the backrest cover insert.

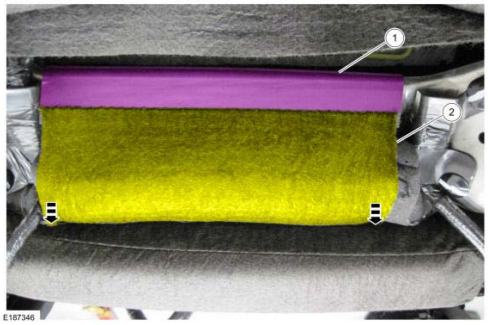
1.

Release the pin-type retainers.

2.

Position the backrest cover upwards.

8.



Position the front seat backrest cover.

1.

Release the J-clip.

2.

Position the backrest cover from between the seat cushion and backrest cushion.

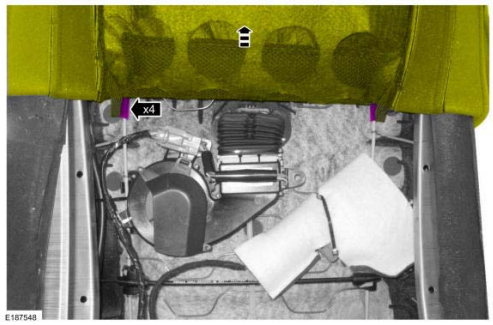
9.

NOTE: Use care when separating the seat backrest trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat backrest foam pad.

Release the hook-and-loop strips and position the backrest cover upward.

10.

Detach the side airbag deployment chute retainers and position aside.

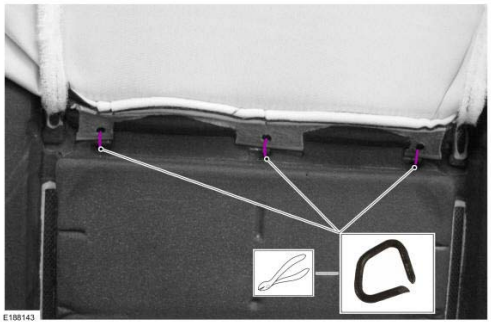


11.

Pull the side airbag deployment chute through the backrest foam.

12.

Release the backrest cover J-clips and position the backrest cover upward.



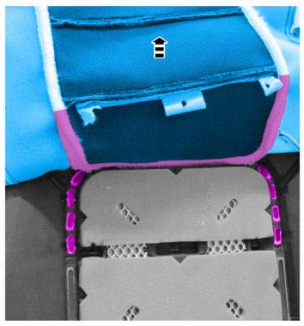
13.

Release the J-clip from the backrest frame.

14.

Remove the hog rings.

15.



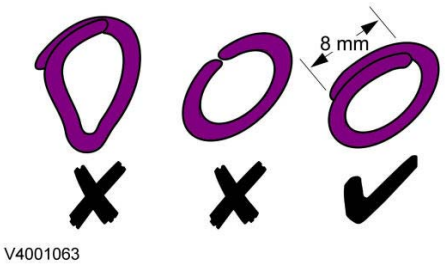
If equipped, position the safety belt strap as needed.

16.

NOTE: Use care when separating the seat backrest trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat backrest foam pad.

Release the hook-and-loop and remove the backrest cover.

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST COVER > INSTALLATION



WARNING: Inspect the seat side airbag, airbag cavity, mounting surface and deployment chute for damage or the presence of foreign material. Remove all foreign material. Install a new side airbag if it is damaged. Install a new deployment chute if the deployment chute is damaged. Failure to follow these instructions may result in the seat side airbag deploying incorrectly and increase the risk of serious personal injury or death in a crash.

1.

To install, reverse the procedure.

2.

Use the General Equipment: Hog Ring Plier

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST COVER - VEHICLES WITH: RECARO SEATS > REMOVAL

WARNING: Front seat backrest trim covers installed on seats equipped with seat side airbags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side airbag deploying incorrectly and increase the risk of serious personal injury or death in a crash.

NOTE: Removal steps in this procedure may contain installation details.

NOTE: LHD driver seat shown, all others similar.

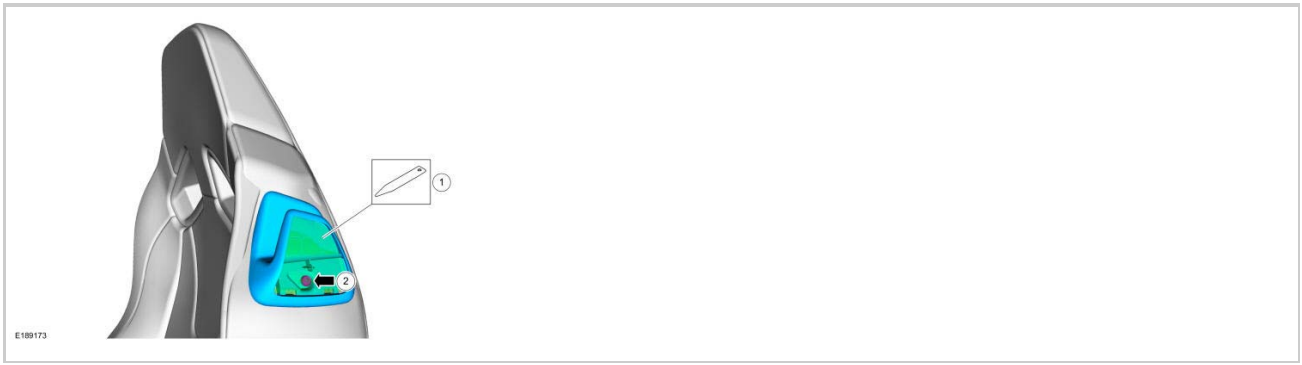
NOTE: Recaro seat shown, GT 350 Recaro seat similar.

All

1.

Remove the front seat. Refer to: Front Seat .

2.



If equipped. Remove the safety belt guide.

1.

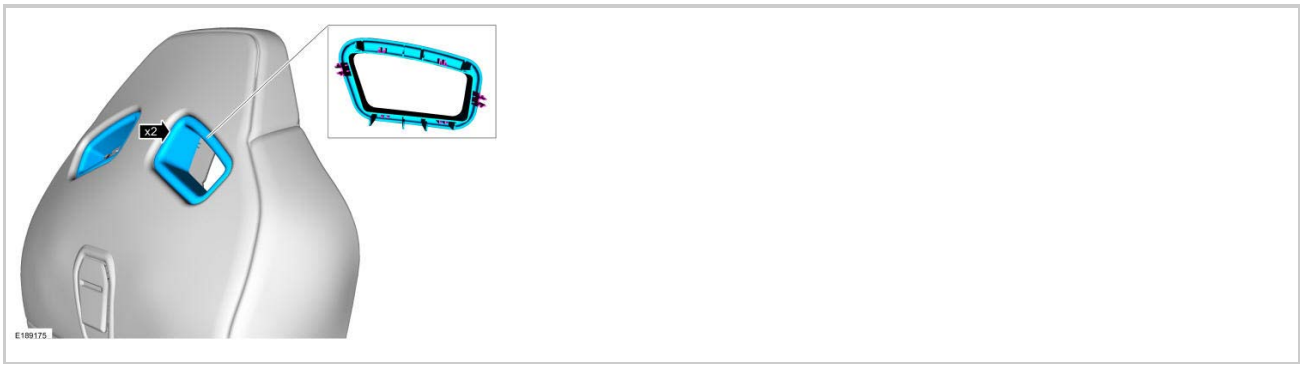
Remove the cover.

2.

Remove the bolt.

3.

NOTE: Inspect the pass-thru bezels for damage, replace as necessary.



Remove the front pass-thru bezels.

4.

NOTE: Inspect the pass-thru bezels for damage, replace as necessary.

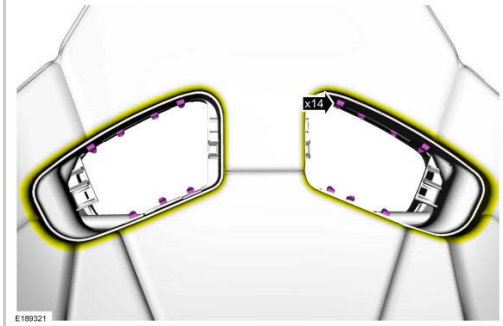
Remove the rear pass-thru bezels.

5.

Remove the backrest release handle bezel.

6.

Remove the side airbag. Refer to: Side Airbag .



7.

Detach the J-clip from the backrest frame.

8.

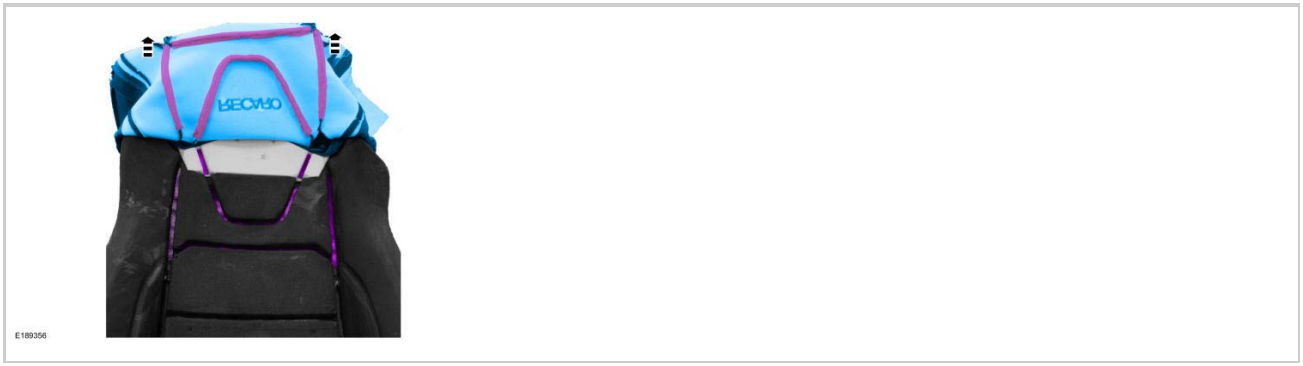
Release the backrest cover from the backrest carrier hooks.

9.

NOTE: Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.

NOTE: Use care when separating the backrest cover from the hook-and-arrows, or the hooks can be torn from the backrest foam pad.

Release the hook-and-loop strips, the hook-and-arrows and position the backrest cover up.

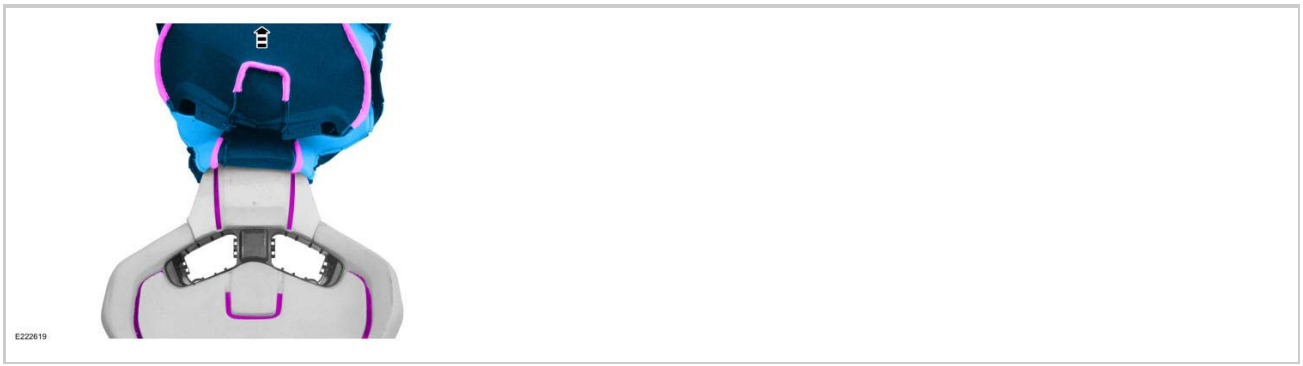


Recaro seat

10.

NOTE: Use care when separating the seat backrest trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat backrest foam pad.

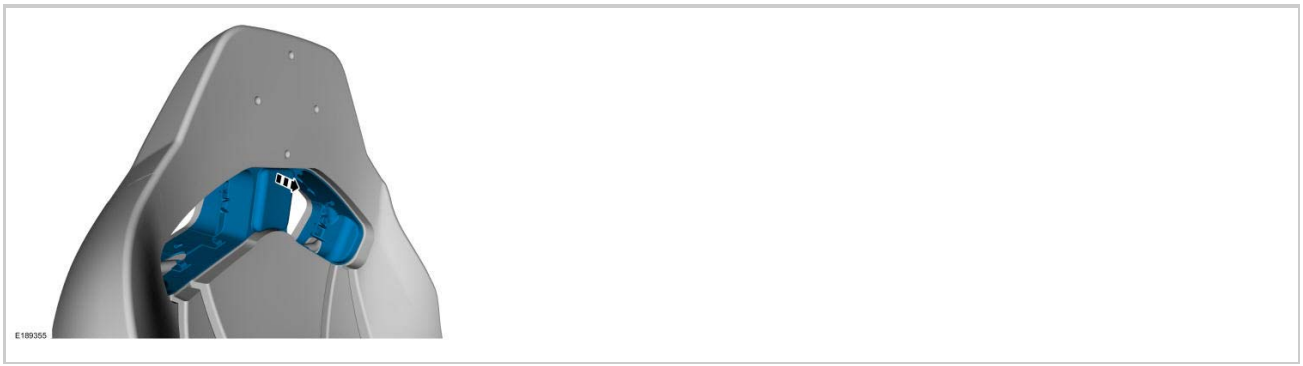
Release the hook-and-loop strips and remove the backrest cover.



GT 350 Recaro seat

11.

NOTE: Use care when separating the seat backrest trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat backrest foam pad.



Release the hook-and-loop strips and remove the backrest cover.

All

12.

If required. Remove the backrest carrier.

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST COVER - VEHICLES WITH: RECARO SEATS > INSTALLATION

WARNING: Inspect the seat side airbag, airbag cavity, mounting surface and deployment chute for damage or the presence of foreign material. Remove all foreign material. Install a new side airbag if it is damaged. Install a new deployment chute if the deployment chute is damaged. Failure to follow these instructions may result in the seat side airbag deploying incorrectly and increase the risk of serious personal injury or death in a crash.

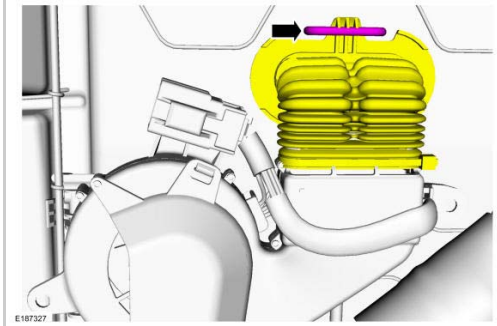
1.

To install, reverse the procedure.

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST RELEASE HANDLE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: LHD driver seat shown, all others similar.



NOTE: Power seat shown, all others similar.

1.

Remove the front seat backrest cover. Refer to: Front Seat Backrest Cover . Refer to: Front Seat Backrest Cover - Vehicles With: Recaro Seats .

2.

If equipped. Disconnect the backrest blower motor manifold from the backrest cushion.

3.

If equipped with a Recaro seat. Remove the upper backrest foam.

4.

If equipped with a GT 350 Recaro seat. Remove the upper backrest foam.

1.

Pull the upper backrest foam away from the release handle.

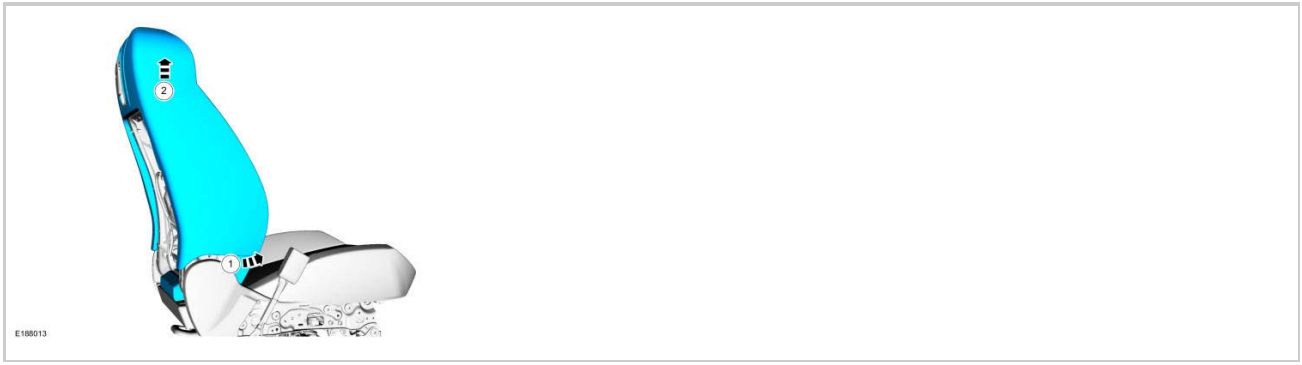
2.

Remove the upper backrest foam.

5.

NOTE: If equipped, make sure that the safety belt guide strap is in the same position

during installation.



Remove the seat backrest foam.

1.

Pull the backrest foam from the backrest.

2.

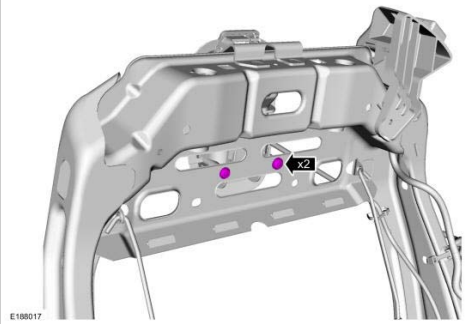
Lift the backrest foam from the backrest.

6.

Position the release handle cable.

1.

Detach the cable conduit.



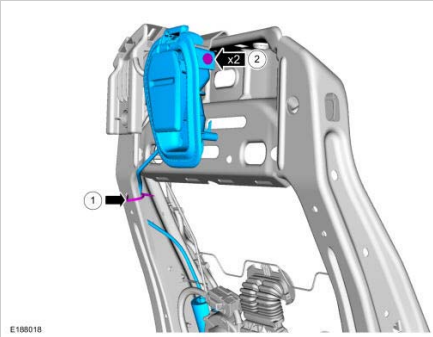
2.

Disconnect the cable from the recline mechanism.

7.

Remove the release handle front bolts.

8.



Remove the backrest release handle.

1.

Remove the cable mount tie strap.

2.

Remove the release handle side bolts.

REMOVAL AND INSTALLATION > FRONT SEAT BACKREST RELEASE HANDLE > INSTALLATION

1.

To install, reverse removal procedure.

REMOVAL AND INSTALLATION > FRONT SEAT CLIMATE CONTROL MODULE [SCME] > REMOVAL

NOTE: LHD passenger seat shown, RHD passenger seat similar.

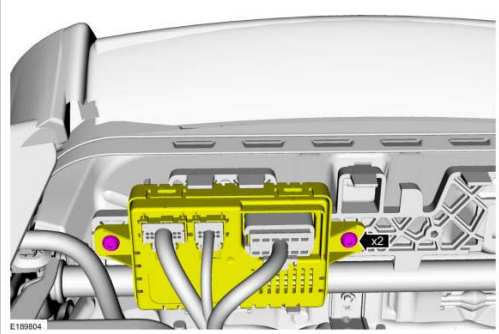
NOTE: Removal steps in this procedure may contain installation details.

1.

NOTE: This step is only necessary when installing a new component.

NOTE: The PMI process must begin with the current SCME installed. If the current SCME does not respond to the diagnostic scan tool, the tool may prompt for As-Built Data as part of the repair.

Using a diagnostic scan tool, begin the PMI process for the SCME following the on-screen instructions.



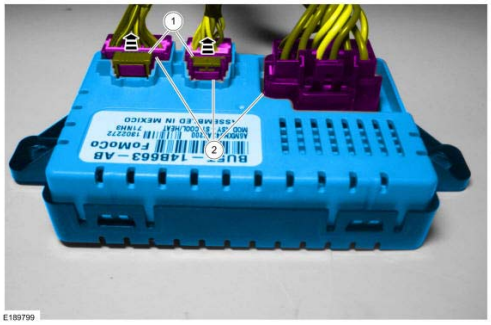
2.

Position the front passenger seat to the full upward and full rearward positions.

3.

Remove the screws and position the SCME aside.

4.



Remove the SCME.

1.

Release the locking wedges.

2.

Disconnect the electrical connectors.

REMOVAL AND INSTALLATION > FRONT SEAT CLIMATE CONTROL MODULE [SCME] > INSTALLATION

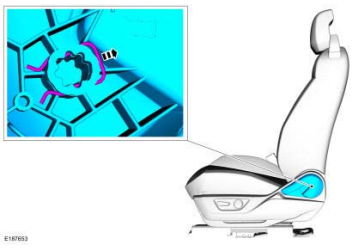
1.

To install, reverse the removal procedure.

2.

NOTE: This step is only necessary when installing a new component.

Using a diagnostic scan tool, complete the PMI process for the SCME following the on-screen instructions.



REMOVAL AND INSTALLATION > FRONT SEAT CONTROL SWITCH > REMOVAL

NOTE: LHD driver seat shown, all others similar.

NOTE: Removal steps in this procedure may contain installation details.

1.

Release the retaining clip and remove the front seat recline handle.

2.

Remove the side shield screws.

3.

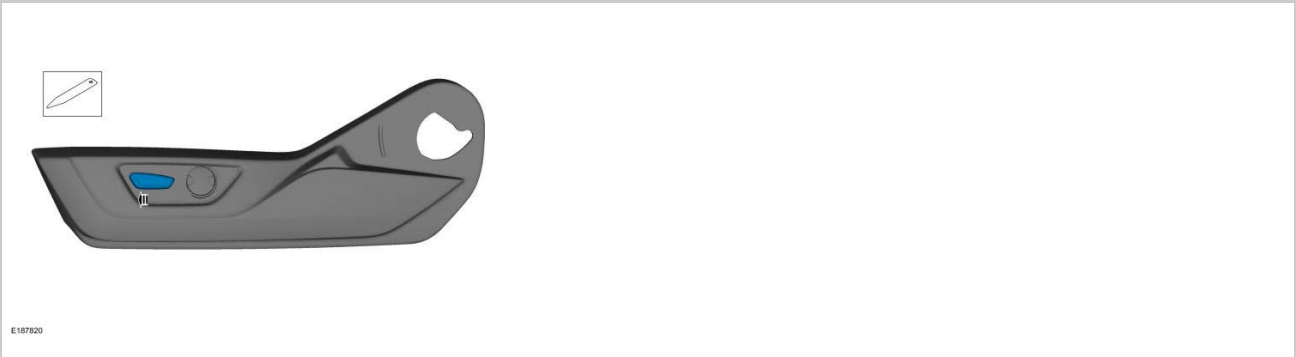
Remove the side shield.

1.

Lift up on the rear of the side shield and pull outward.

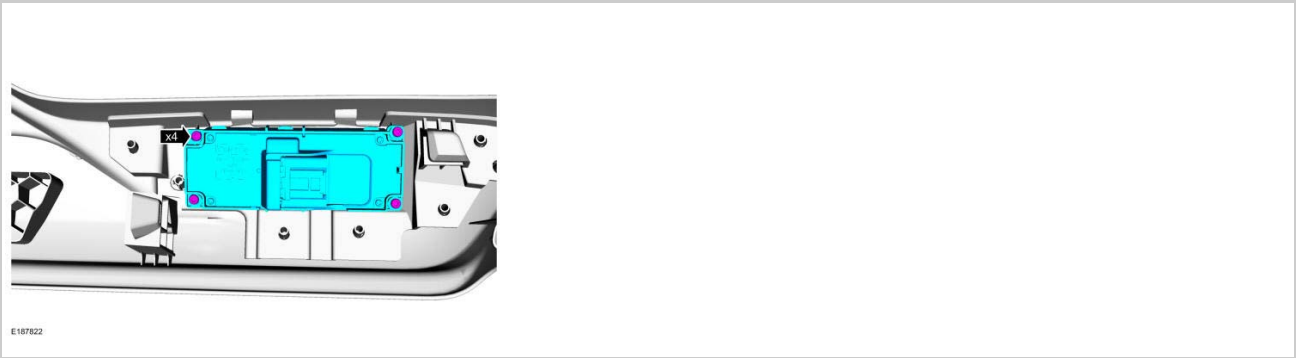
2.

Push the side shield forward.



3.

Disconnect the electrical connector.



4.

Remove the seat control switch knob.

5.

Remove the screws and the seat control switch.

REMOVAL AND INSTALLATION > FRONT SEAT CONTROL SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT SEAT CUSHION BLOWER MOTOR > REMOVAL

NOTE: LHD driver seat shown, all others similar.

NOTE: Removal steps in this procedure may contain installation details.

All seats

1.

Remove the front seat. Refer to: Front Seat .

2.

Release the retaining clip and remove the front seat recline handle.

3.

Remove the side shield screws.

4.

Remove the side shield.

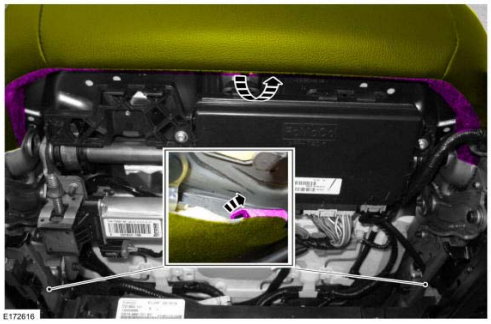
1.

Lift up on the rear of the side shield and pull outward.

2.

Push the side shield forward.

3.



Disconnect the electrical connector.

5.

NOTE: For passenger seats equipped with an OCS service kit, the OCS will be adhered to the bottom of the seat cushion foam.

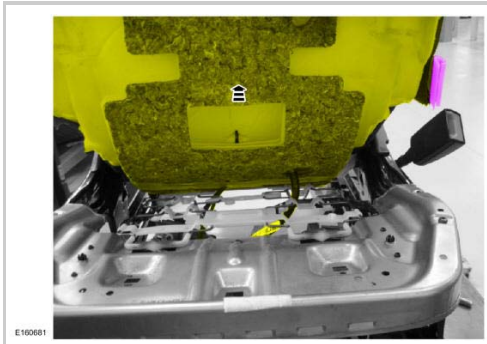
Release the J-clips and position the front of the seat cushion cover and foam assembly upwards.

Passenger seat

6.

NOTE: Original equipment (OE) OCS shown, service kit similar.

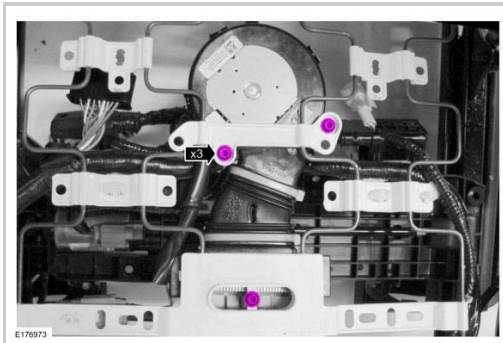
NOTE: If equipped with an OCS service kit, the OCS will be adhered to the bottom of the front seat cushion.



Remove the OCS pin-type retainers.

7.

NOTE: If equipped with an OCS service kit, the OCS is adhered to the bottom of the front seat cushion foam. This requires the cushion cover, foam and OCS to be positioned aside as an assembly.



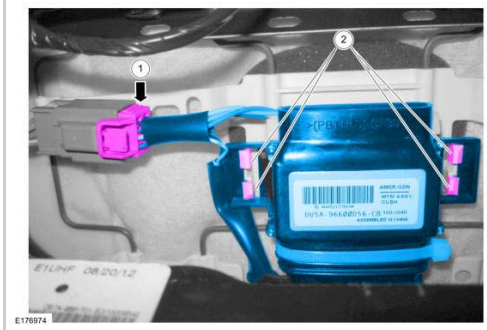
Position the front of the seat cushion cover, foam and OCS assembly upward.

All seats

8.

Remove the seat cushion blower motor screws.

9.



Remove the seat cushion blower motor.

1.

Disconnect the seat cushion blower motor electrical connector.

2.

Release the locking tabs.

REMOVAL AND INSTALLATION > FRONT SEAT CUSHION BLOWER MOTOR > INSTALLATION

All Seats

1.

To install, reverse the removal procedure.

2.

Install the seat.

If the passenger seat has been serviced, do not prove out the

SRS **at this time.**

Refer to: Front Seat .

Passenger seat

3.

WARNING: Occupant Classification System (OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.

WARNING: Make sure the front passenger seat repair is complete, the seat and all attached components (head restraint, seat side shield, etc.) are correctly assembled, and the seat is correctly installed to the vehicle before using System Reset to rezero the seat weight. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.

NOTE: To prevent system failure, take the following precautions before carrying out the OCS reset.

Make sure the voltage to the OCSM is greater than 8 volts and less than 18 volts.

Make sure the OCS is not below 6 ° C (42.8 ° F) or above 36 ° C (96.7 ° F) when initiating the OCS reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature between 6 ° C (42.8 ° F) to 36 ° C (96.7 ° F) for a minimum of 30 minutes.

Make sure nothing is present on the passenger seat before and during the OCS reset process.

Prior to carrying out the OCS reset, make sure a minimum of 8 seconds has elapsed after cycling the ignition switch on.

Using a diagnostic scan tool, carry out the OCS reset. Cycle the ignition switch after the OCS reset.

4.

If the first system reset attempt was successful, proceed to prove out the SRS.

5.

If the first system reset attempt was not successful, carry out a thorough visual inspection of the OCS connector and wiring for damage, pressure sensor hose for kinks and or damage, and seat-related wiring harness and body wiring harness terminals and connectors for damage. Repair any concerns found and proceed to the next step.

6.

Carry out a second OCS reset. Cycle the ignition switch after the OCS reset. If the second attempt is unsuccessful, install a new OCS service kit. Refer to: Occupant Classification System (OCS) Sensor .

7.

Prove out the SRS. Verify all airbags are installed and connected and the ignition is OFF. Wait 10 seconds then turn the ignition ON and monitor the airbag warning indicator. The airbag warning indicator illuminates continuously for approximately 6 seconds and turns off. Continue to monitor the airbag warning indicator for approximately 30 seconds, as this is the time required for the RCM to complete testing of the SRS.

If a SRS fault is present, the airbag warning indicator either fails to light, remains lit continuously or flashes. The flashing may not occur until approximately 30 seconds after the ignition has been turned from OFF to ON. If this occurs, diagnose and repair any SRS faults before proceeding with other repairs.

If, after the ignition has been turned on for 30 seconds, the airbag warning indicator remains unlit with no chime or SRS message displayed in the message center, no SRS fault is present.

If the airbag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps or a message displays in the message center. If this occurs, diagnose and repair the airbag warning indicator and any SRS faults before proceeding with other repairs.

8.

Using a scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

REMOVAL AND INSTALLATION > FRONT SEAT CUSHION COVER > REMOVAL

NOTE: LHD driver seat shown, all others similar.

NOTE: Removal steps in this procedure may contain installation details.

All seats

1.

Remove the front seat. Refer to: Front Seat .

2.

Release the retaining clip and remove the seat recline handle.

Manual driver seat

3.

Remove the height adjusting handle.

1.

Raise the height adjusting handle.

2.

Release the locking tab.

3.

Slide the height adjusting handle forward.

Power seats and manual driver seat

4.

Remove the side shield screws.

5.

Remove the side shield.

1.

Lift up on the rear of the side shield and pull outward.

2.

Push the side shield forward.

3.

If equipped, disconnect the electrical connector.

Passenger manual seat

6.

Remove the side shield screws.

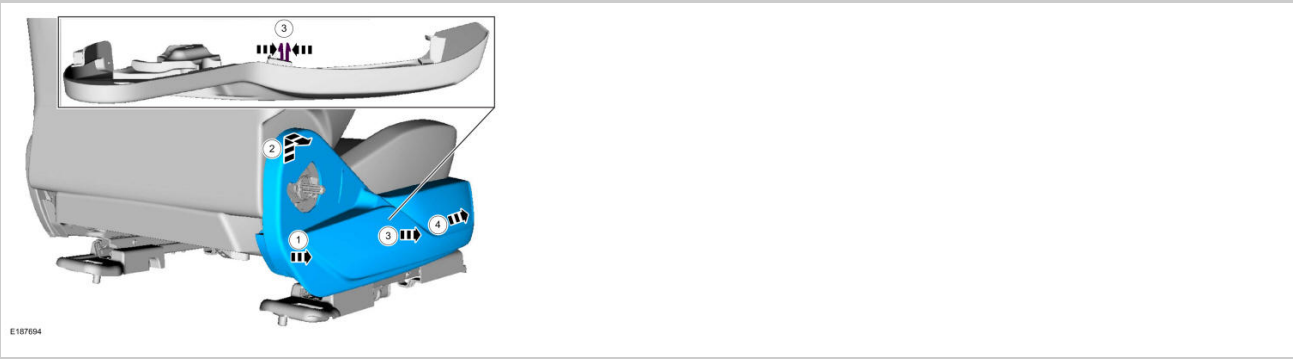
7.

Remove the side shield.

1.

Pull the rear of the side shield out.

2.



Firmly grasp the side shield, lift up and out, separating the side shield from the recliner bracket.

3.

From underneath, squeeze the retainers together and pull out on the side shield.

4.

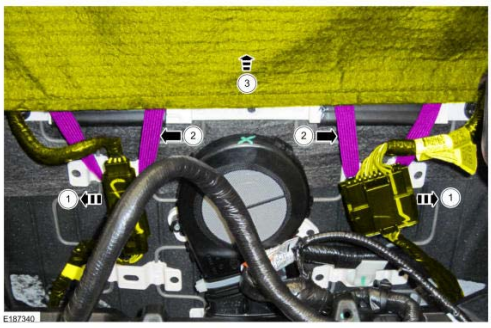
Slide the side shield forward.

All seats

8.

If equipped, position the front seat backrest cover.

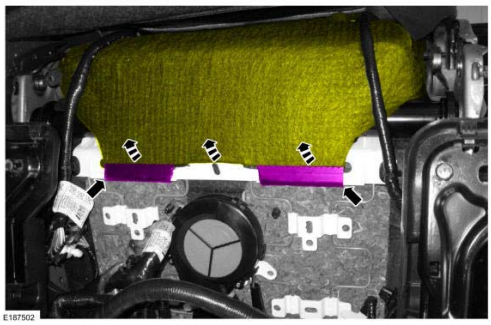
1.



Release the wire harness electrical connector retainer(s).

2.

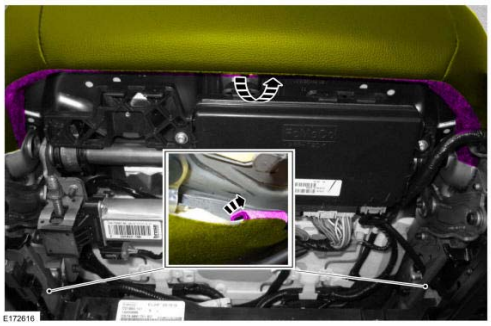
Detach the front seat backrest cover straps from the seat cushion frame.



3.

Position the front seat backrest cover aside.

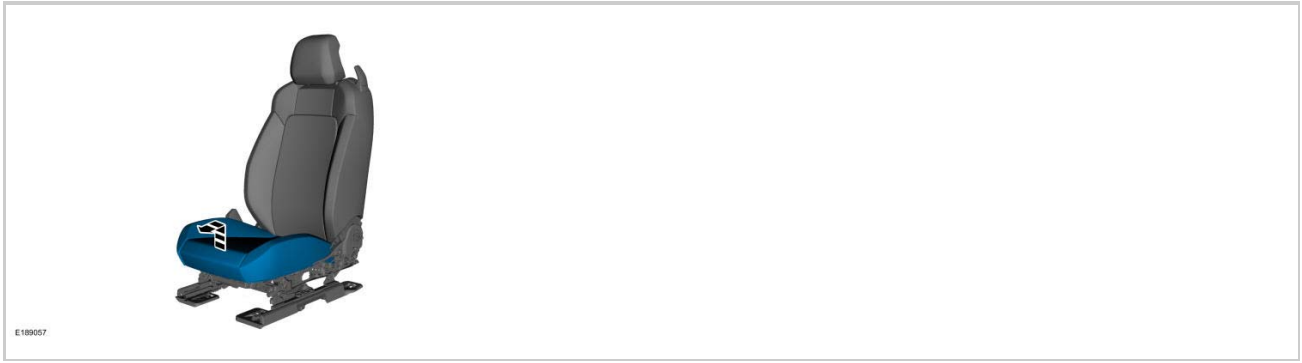
9.



Detach the J-clips and position the cushion cover aside.

10.

> *NOTE: For passenger seats equipped with an OCS service kit, the OCS will be adhered to the bottom of the seat cushion foam.*



Release the J-clips and position the front of the seat cushion cover and foam assembly upwards.

Driver seat and passenger seat with OEM (Original Equipment Manufacturer)

11.

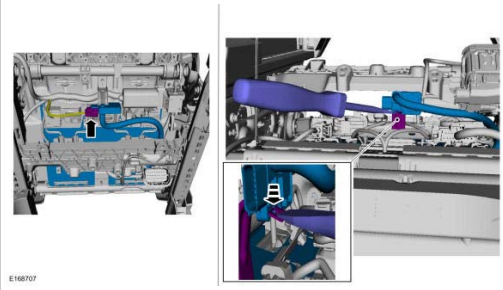
Remove the front seat cushion cover and foam as an assembly.

Passenger seat with service kit

12.

> *NOTE: When equipped with an OCS service kit, the OCS is adhered to the bottom of the front seat cushion foam. This requires the cushion cover, foam and OCS to be positioned aside as an assembly.*

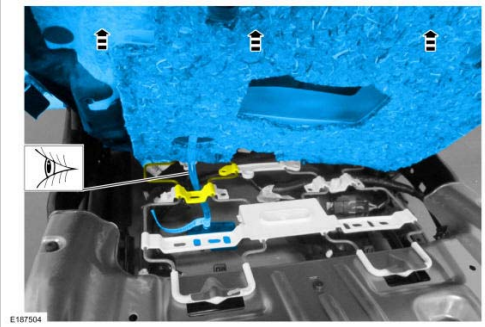
With the seat cushion cover, foam and OCS assembly positioned upward, remove the pin-type retainers.



13.

> *NOTE: Using excessive force when bending the bracket tab can damage the OCS sensor housing.*

> *NOTE: Follow the unique instructions or graphic for this step in the installation.*



Disconnect the electrical connector, bend the bracket tab away and slide the OCS sensor off the bracket.

14.

> *NOTE: Note the location of the OCS hose as it passes through the seat springs for proper installation.*

Route out the OCS hose and sensor from between the seat cushion support wires and remove the seat cushion cover, foam and OCS sensor as an assembly.

All seats

15.

> *NOTE: This step is only necessary when installing a new component.*

Position the rear portion of the seat cushion cover from the foam.

16.

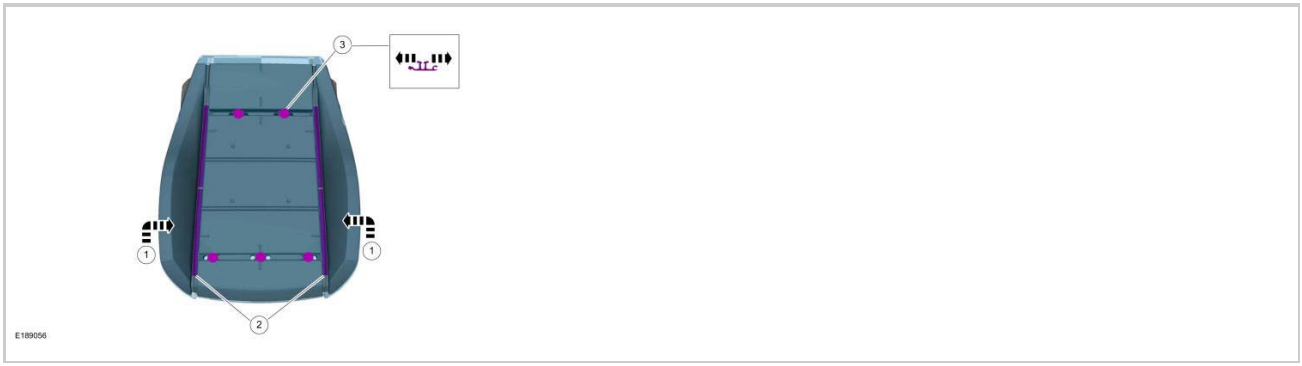
NOTE: Use care when separating the seat cushion from the hook-and-arrow or the hook may be torn from the seat cushion foam pad.

NOTE: Use care when separating the seat cushion trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat cushion foam pad.

NOTE: This step is only necessary when installing a new component.

Remove the seat cushion cover.

1.



Position the seat cushion cover.

2.

Release hook-and-loop strips.

3.

Release the hook-and-arrows.

REMOVAL AND INSTALLATION > FRONT SEAT CUSHION COVER > INSTALLATION

All Seats

1.

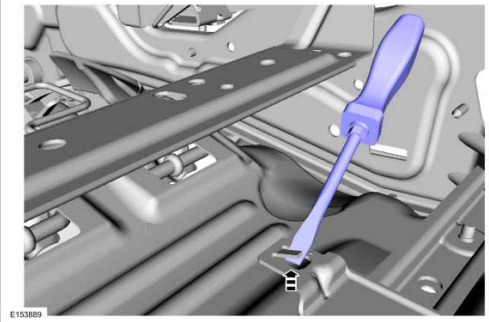
To install, reverse the removal procedure.

2.

Install the seat.

If the passenger seat has been serviced, do not prove out the

SRS **at this time.**



Refer to: Front Seat .

Passenger seat

3.

NOTE: This step is only necessary when an OCS service kit is installed

Bend the OCS sensor bracket tab back.

4.

WARNING: Occupant Classification System (OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.

WARNING: Make sure the front passenger seat repair is complete, the seat and all attached components (head restraint, seat side shield, etc.) are correctly assembled, and the seat is correctly installed to the vehicle before using System Reset to rezero the seat weight. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.

NOTE: To prevent system failure, take the following precautions before carrying out the OCS reset.

Make sure the voltage to the OCSM is greater than 8 volts and less than 18 volts.

Make sure the OCS is not below 6 ° C (42.8 ° F) or above 36 ° C (96.7 ° F) when initiating the OCS reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature between 6 ° C (42.8 ° F) to 36 ° C (96.7 ° F) for a minimum of 30 minutes.

Make sure nothing is present on the passenger seat before and during the OCS reset process.

Prior to carrying out the OCS reset, make sure a minimum of 8 seconds has elapsed after cycling the ignition switch on.

Using a diagnostic scan tool, carry out the OCS reset. Cycle the ignition switch after the OCS reset.

5.

If the first system reset attempt was successful, proceed to prove out the SRS.

6.

If the first system reset attempt was not successful, carry out a thorough visual inspection of the OCS connector and wiring for damage, pressure sensor hose for kinks and or damage, and seat-related wiring harness and body wiring harness terminals and connectors for damage. Repair any concerns found and proceed to the next step.

7.

Carry out a second OCS reset. Cycle the ignition switch after the OCS reset. If the second attempt is unsuccessful, install a new OCS service kit. Refer to: Occupant Classification System (OCS) Sensor .

8.

Prove out the SRS. Verify all airbags are installed and connected and the ignition is OFF. Wait 10 seconds then turn the ignition ON and monitor the airbag warning indicator. The airbag warning indicator illuminates continuously for approximately 6 seconds and turns off. Continue to monitor the airbag warning indicator for approximately 30 seconds, as this is the time required for the RCM to complete testing of the SRS.

If a SRS fault is present, the airbag warning indicator either fails to light, remains lit continuously or flashes. The flashing may not occur until approximately 30 seconds after the ignition has been turned from OFF to ON. If this occurs, diagnose and repair any SRS faults before proceeding with other repairs.

If, after the ignition has been turned on for 30 seconds, the airbag warning indicator remains unlit with no chime or SRS message displayed in the message center, no SRS fault is present.

If the airbag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps or a message displays in the message center. If this occurs, diagnose and repair the airbag warning indicator and any SRS faults before proceeding with other repairs.

9.

Using a scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

REMOVAL AND INSTALLATION > FRONT SEAT POWER LUMBAR ASSEMBLY > REMOVAL

NOTE: LHD driver seat shown, all others similar.

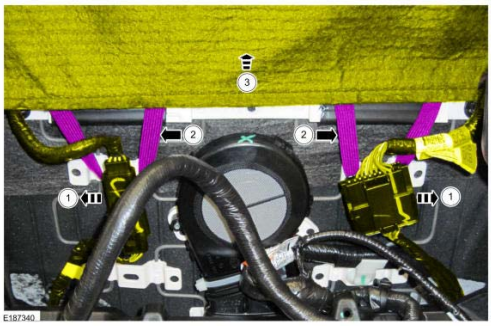
1.

Remove the front seat. Refer to: Front Seat .

2.

Position the front seat backrest cover.

1.



Release the wire harness electrical connector retainers.

2.

Detach the front seat backrest cove straps.

3.

Position the front seat backrest cover aside.

3.

Remove the backrest cover insert.

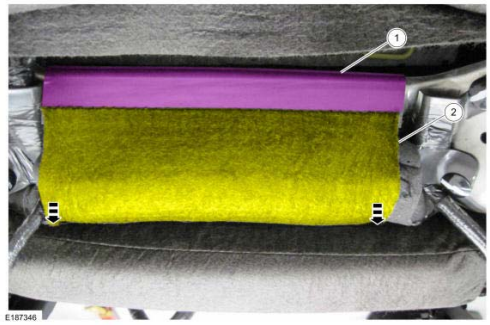
1.

Release the pin-type retainers.

2.

Position the backrest cover upwards.

4.



Position the front seat backrest cover.

1.

Release the J-clip.

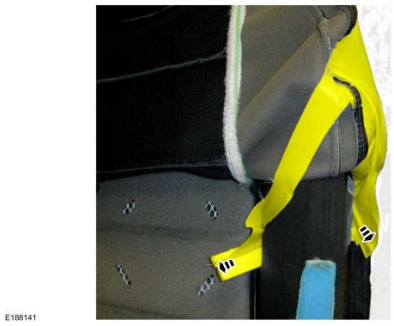
2.

Position the backrest cover from between the seat cushion and backrest cushion.

5.

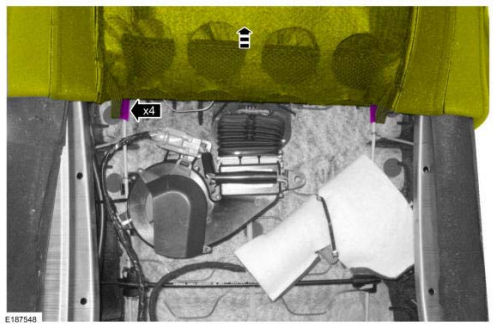
NOTE: Use care when separating the seat backrest trim cover from the hook-and-loop strips or the hook-and-loop strips may be torn from the seat backrest foam pad.

Release the hook-and-loop strips and position the backrest cover upward.



6.

Detach the side airbag deployment chute retainers and position aside.

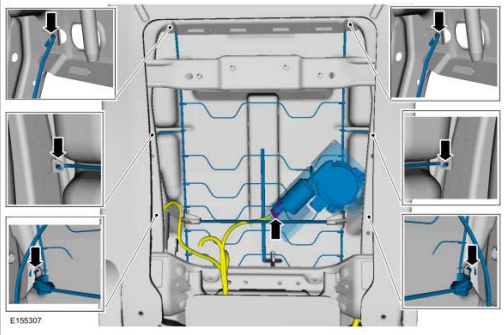


7.

Pull the side airbag deployment chute through the backrest foam.

8.

Release the backrest cover J-clips and position the backrest cover upward.



9.

If equipped, remove the backrest blower motor. Refer to: Front Seat Backrest Blower Motor .

10.

Disconnect the electrical connector, release the J-hooks and remove the lumbar assembly.

REMOVAL AND INSTALLATION > FRONT SEAT POWER LUMBAR ASSEMBLY > INSTALLATION

1.

WARNING: Inspect the seat side airbag, airbag cavity, mounting surface and deployment chute for damage or the presence of foreign material. Remove all foreign material. Install a new side airbag if it is damaged. Install a new deployment chute if the deployment chute is damaged. Failure to follow these instructions may result in the seat side airbag deploying incorrectly and increase the risk of serious personal injury or death in a crash.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT SEAT TRACK > REMOVAL

1.

Remove the front seat backrest. Refer to: Front Seat Backrest .

2.

Remove the front seat cushion cover and foam as an assembly. Refer to: Front Seat Cushion Cover .

3.

NOTE: This step is only necessary when the passenger seat is equipped with an original equipment (OE) OCS.

Remove the OCS. Refer to: Occupant Classification System (OCS) Sensor .

REMOVAL AND INSTALLATION > FRONT SEAT TRACK > INSTALLATION

1.

NOTE: Transfer components to the new seat track as necessary.

To install, reverse the removal procedure.

2.

NOTE: This step is only necessary when installing a new driver memory seat track.

Operate the seat in all directions through the full range of travel to set soft stops and avoid a

premature stopping point occurrence after the vehicle is returned to the customer.

REMOVAL AND INSTALLATION > FRONT SEAT TRACK MOTOR

Special Tool(s) / General Equipment

Electric Drill

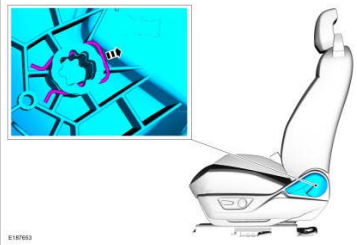
REMOVAL AND INSTALLATION > FRONT SEAT TRACK MOTOR > REMOVAL

NOTE: LHD driver seat shown, all others similar.

1.

NOTE: Positioning the seat fully upward provides access to service the seat track motor with the seat in the vehicle.

Position the front seat to the full upward position.



2.

Depower the SRS. Refer to: Supplemental Restraint System (SRS) Depowering .

3.

Release the retaining clip and remove the front seat recline handle.

4.

Remove the side shield screws.

5.

Remove the side shield.

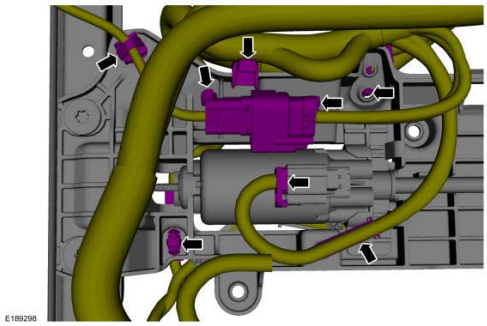
1.

Lift up on the rear of the side shield and pull outward.

2.

Push the side shield forward.

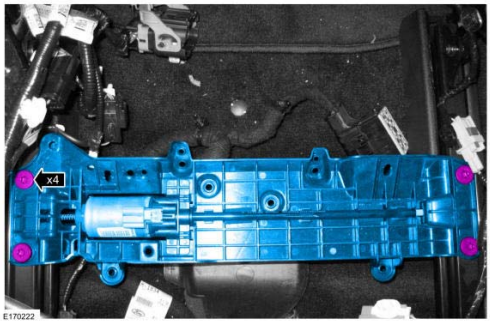
3.



Disconnect the electrical connector.

6.

NOTE: Seat track components are removed for clarity.



Disconnect the seat track motor electrical connector, release the wire harness retainers and position the wire harness aside.

7.

> *NOTE: Seat track components and wiring harness are removed for clarity.*

Remove the bolts and the seat track motor.

REMOVAL AND INSTALLATION > FRONT SEAT TRACK MOTOR > INSTALLATION

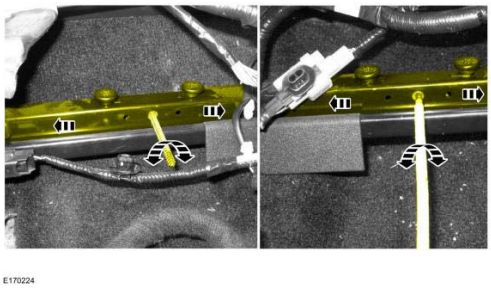
1.

> *NOTE: Use the bolts from the old seat track motor.*

Install the seat track motor bolts.

Torque

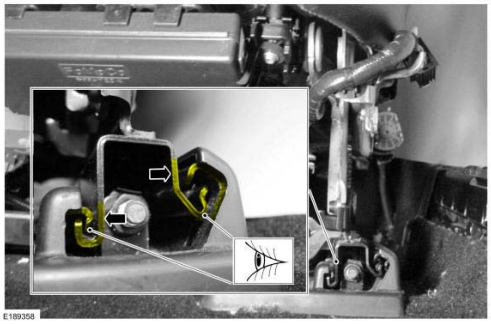
: 21 lb.ft (28 Nm)



2.

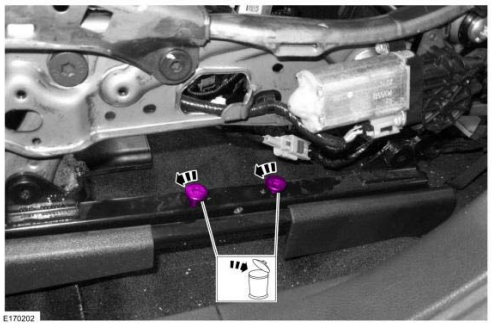
NOTE: When using a drill to move the seat track, do not move the seat track to its forward or rearward end of travel stops, otherwise a new seat track must be installed.

NOTE: Be sure to drive the seat track evenly or the track will bind during movement.



NOTE: Rotate the cables using 2 drills operating at similar speeds to most efficiently position the seat track.

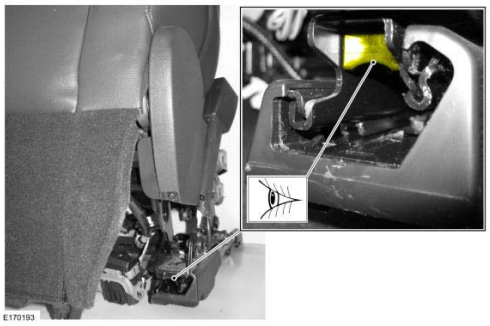
Insert the original seat track motor drive cables and drive the gearbox and seat track uniformly until the front edge of the upper and lower seat tracks are flush. Use the General Equipment: Electric Drill



3.

The front edges of the upper and lower seat track rails must align with each other **on both sides of the seat** .

4.

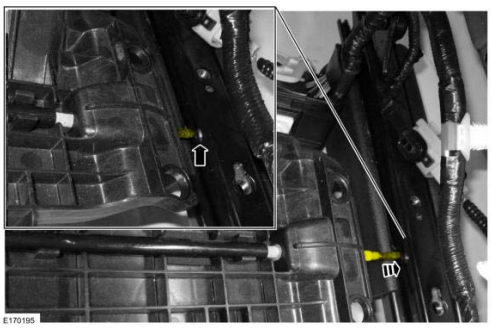


On both sides, remove the seat track motor bolts.

5.

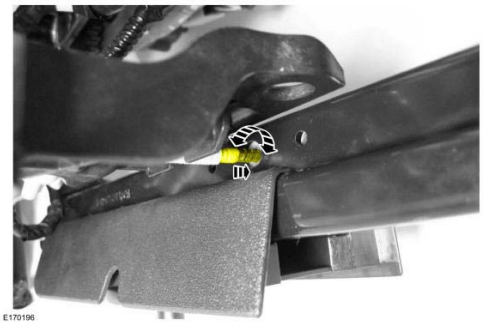
> *NOTE: Install a new seat track if the block is not in place.*

Verify the block is in place at the rear of the inboard seat track rail.



6.

To aid installation. Pull the long drive cable on the new motor assembly out of the sheathing.



7.

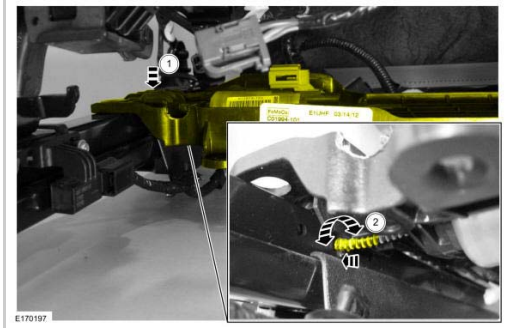
Insert the long drive cable into the seat track gearbox.

8.

Rotate the long drive cable to verify engagement to seat track gearbox.

9.

NOTE: Do not severely bend the short drive cable during installation or damage to the cable will occur.



Insert the short drive cable into the seat track gearbox.

1.

Position the seat track motor while inserting the short cable into the seat track gearbox.

2.

Rotate the short drive cable to verify engagement to seat track gearbox.

10.

NOTE: Do not cross-thread the bolts as they are load bearing. If the bolts are cross-threaded, a new seat track must be installed.

NOTE: Seat track components and wiring harness are removed for clarity.

Install the seat track motor and install the new bolts in the sequence shown below.

1.

Install the rear inboard bolt.

Torque

: 21 lb.ft (28 Nm)

2.

Install the front inboard bolt.

Torque

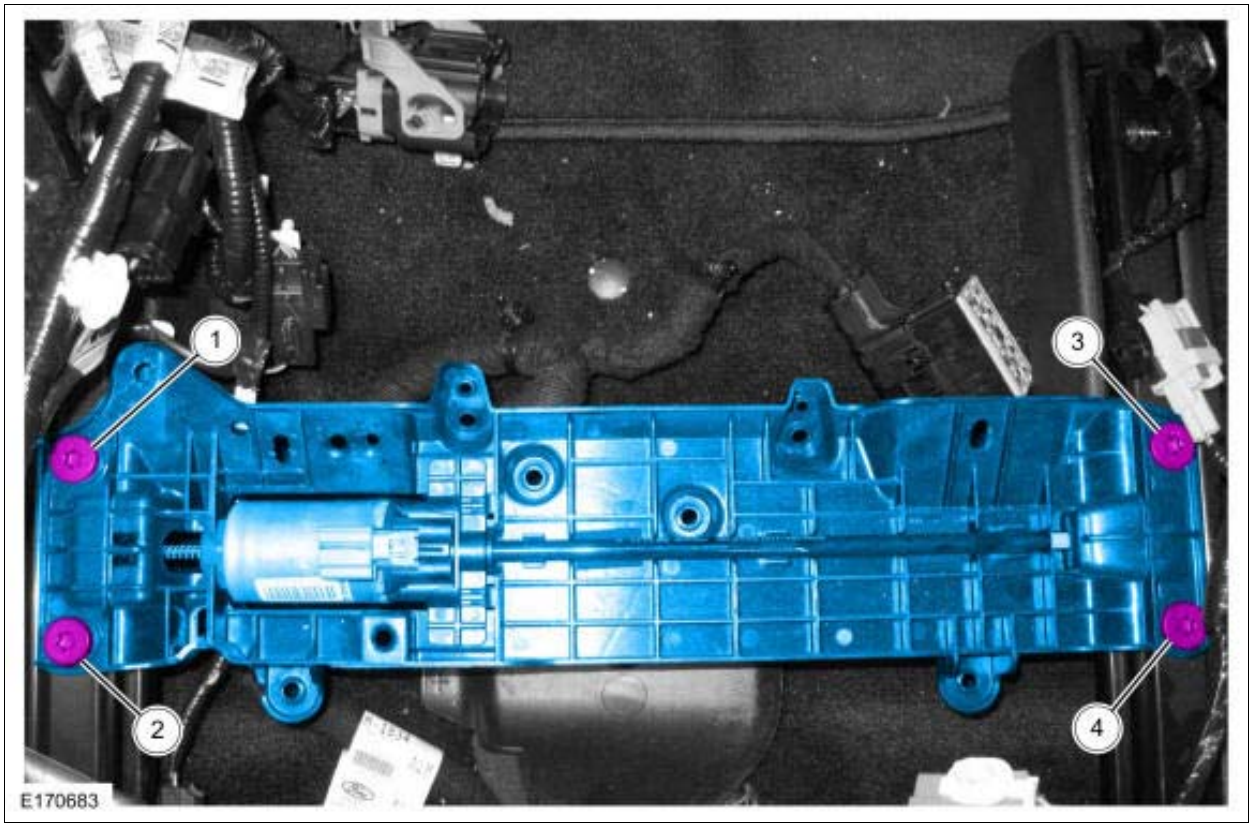
: 21 lb.ft (28 Nm)

3.

Install the rear outboard bolt.

Torque

: 21 lb.ft (28 Nm)



4.

Install the front outboard bolt.

Torque

: 21 lb.ft (28 Nm)

Fig 1: Front Seat Track Motor Bolts Tightening Sequence

Courtesy of FORD MOTOR CO.

11.

NOTE: Seat track components are removed for clarity.

Connect the seat track motor electrical connector and engage the wire harness retainers.

12.

Install the side shield.

1.

Connect the electrical connector.

2.

Position the side shield and push it rearward.

3.

Push the rear of the side shield inward.

4.

Push the rear of the side shield downward.

13.

Install the side shield screws.

14.

Install the retaining clip and the front seat recline handle.

15.

Repower the SRS. Refer to: Supplemental Restraint System (SRS) Repowering .

16.

On a driver seat with memory, operate the seat track horizontal motor in all directions through the full range of travel to set the soft stops and avoid a premature stopping point occurrence after the vehicle is returned to the customer.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - OVERVIEW > OVERVIEW

Power Windows

Standard power window features include one-touch up/down operation (door windows only) when the master window control switch (or passenger door window control switch) is momentarily pressed to the second detent and released.

The master window control switch may be used to raise or lower the driver or passenger door windows. The passenger door window can also be operated from the passenger door window control switch.

For convertible, the rear quarter windows can be raised or lowered from the master window control switch.

Rear Window Defrost

When the rear window defrost is activated, the rear window defrost grid is energized, warming/heating the glass to improve rearward visibility.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART - POWER WINDOWS (WITH MEMORY DRIVER SEAT)

Passenger Door Module (PDM) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Passenger window command	DDM	When activating the front passenger window from the master window control switch, the passenger window command is sent from the DDM to the PDM.

Body Control Module B (BCM-B) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Convertible top window drop command	Movable Roof Control Module A (MRCMA)	When the convertible top switch is activated, the Movable Roof Control Module A (MRCMA) sends a message to the Body Control Module B (BCM-B), which then sends a

		global open signal/command to fully open all windows.
Global open command	BCM	When the RKE transmitter is used to initiate a global open command, the BCM sends the message to the Body Control Module B (BCM-B) which then sends a global open signal/command to fully open all windows.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART - POWER WINDOWS (WITHOUT MEMORY DRIVER SEAT)

Body Control Module B (BCM-B) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Convertible top window drop command	Movable Roof Control Module A (MRCMA)	When the convertible top switch is activated, the Movable Roof Control Module A (MRCMA) sends a message to the Body Control Module B (BCM-B), which then sends a global open signal/command to fully open all windows.
Global open command	BCM	When the RKE transmitter is used to initiate a global open command, the BCM sends the message to the Body Control Module B (BCM-B) which then sends a global open signal/command to fully open all windows.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART - REAR WINDOW DEFROST

Front Controls Interface Module (FCIM) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Climate control requests	APIM (if equipped with touchscreen)	The climate control requests message contains the rear window defrost request information. When the rear window defrost function is requested using voice command or the button is selected on the

		touchscreen, this input activates the rear window defrost system.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > POWER WINDOW OPERATION

NOTE: If the vehicle battery is disconnected while the door window is moving, the one-touch up feature (and obstacle detection) is disabled. The convertible rear window motors do NOT need to be initialized as they do not have one-touch up or one-touch down functions.

Refer to: Power Door Window Initialization .

The power windows operate when the delayed accessory relay is active. The delayed accessory relay (non-serviceable) is located in the BCM. Both door windows are equipped with obstacle detection and one-touch up and one-touch down functionality. If an obstacle is detected as the window glass is moving upward, the window motor automatically reverses direction and moves the glass downward.

The window one-touch up/down feature is activated by pulling/pressing the window control switch to the up/down position (second detent). This allows the front door window glass to move upward/downward until it is fully closed/open. A momentary activation of the window control switch, while the window glass is moving upward or downward, stops the front door window glass.

If equipped with a memory driver seat, the master window control switch communicates to the DDM through a LIN. To operate the driver door window, the DDM supplies the applicable voltage signals to the driver door window regulator motor to operate the window in the desired direction. To operate the passenger door window from the master window control switch, the DDM communicates to the PDM through the Medium Speed Controller Area Network (MS-CAN), which then supplies the applicable voltage signals to the passenger door window regulator motor to operate the window in the desired direction. The passenger door window control switch provides ground input signals to the PDM, which then supplies the applicable voltage signals to the passenger door window regulator motor to operate the window in the desired direction.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > GLOBAL OPEN

NOTE: The global open feature may be enabled/disabled by the customer following a procedure listed in the Owner's Literature. For a complete list of available programmable parameters, refer to MODULE CONFIGURATION .

The global open feature can automatically open both door windows and rear quarter windows (convertible) using the RKE transmitter. The global open feature only activates when the ignition is off and the delayed accessory relay is not active. After unlocking the vehicle, pressing and holding the unlock button on the RKE transmitter causes the Body Control Module B (BCM-B) to send a global open signal to each power window regulator motor. When this signal is sent the windows begin to open. If the lock or unlock button on the RKE is pressed while the windows are moving, the window operations will stop.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SHORT DROP WINDOWS

When the window motor senses a door has been opened (by monitoring its door ajar switch), the window motor opens the window slightly to clear the grooved channel weatherstrip. After the door is closed, the window motor senses the closed door, and the window motor fully closes and seats the window glass into the grooved channel weatherstrip. This function is on both the coupe and the convertible.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > REAR QUARTER WINDOW OPERATION - CONVERTIBLE

NOTE: The convertible rear window motors do NOT need to be initialized as they do not have one-touch up or one-touch down functions.

Both rear quarter windows operate at the same time when activated by the master window control switch.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > CONVERTIBLE TOP DROP WINDOW FUNCTION

When the convertible top switch is operated (to raise or lower the convertible top), the Body Control Module B (BCM-B) sends a signal on the global open circuit to the 4 window motors to activate a full down operation of all 4 windows. When the rear quarter windows reach the full DOWN position, the full down sensor in each rear quarter window motor sends a signal to the BCM-B that the windows are in the full DOWN position. At this time, the BCM-B allows the convertible top to operate (up or down). If the BCM-B does not see the full down signal from both rear quarter window motors, the convertible top does not operate. The BCM-B also disables/inhibits the rear quarter window control switch from operating the rear quarter windows when the convertible top is not in the full UP or full DOWN position by sending a message (pulses) on the global open circuit (the front door window motors ignore this message). This function is to prevent an accidental opening of the convertible top with the windows in the UP position causing contact between the windows and convertible top which may result in damage to the convertible top or windows.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > REAR WINDOW DEFROST

When the rear window defrost switch (integral to the FCIM) is activated, the FCIM activates the rear window defrost relay located in the BJB. When activated, the rear window defrost relay supplies voltage to the rear window defrost grid.

If equipped, the rear window defrost can also be commanded on and off using voice commands or by touching the rear window defrost button located on the touchscreen (FDIM). For additional information on voice or touchscreen commanded features, refer to the Owner's Literature.

The FCIM deactivates the rear window defrost relay when one of these conditions is met:

- The rear window defrost switch is pressed when the feature is active.
- If equipped, the rear window defrost is commanded off using voice command or the touchscreen interface when the feature is active.
- Ignition state is changed from ON to OFF.
- A predetermined timer completes.
- Battery voltage has dropped below a specified threshold (load management strategy).

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > REMOTE START - REAR WINDOW DEFROST OPERATION

The customer can select different climate control modes/preferences when the vehicle is started using the remote start feature. This can be accessed through the message center. For additional information on setting the remote start preferences, refer to the Owner's Literature. When the rear defrost is set to AUTO mode, the rear window defrost activates when the outside temperature is less than 0 °C (32 °F) and the vehicle is started using the remote start feature. No climate control adjustments are recognized during remote start operation. Once the ignition is cycled to the ON mode, the climate control system returns to the previous settings (last ignition ON cycle) and adjustments can be made normally. If the previous setting was off, the climate control system turns off.

DESCRIPTION AND OPERATION > GLASS, FRAMES AND MECHANISMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Window Control Switches - Without Memory Driver Seat

The master window control switch (and passenger window control switch) sends 2 separate signals to the window motor: up and down. When the window control switch is pressed to the first detent position, a 12-volt signal is sent to the window motor to request an up or down operation. When auto up or auto down is requested (switch activated to the second detent position), the window control switch provides a 12-volt signal on both the up and down line simultaneously. During an auto up or auto down request, the window motor determines intended window direction by the signal first received. If the window control switch is activated too quickly to the second detent position (less than 5 milliseconds of time between first detent signal and second detent signal), the window motor is not able to determine the intended direction request and does not operate until the window control switch is released and activated again. The up and down contacts are floating within the window control switch when the switch is in the neutral position. The up and down feeds to the window motor are all low current.

For convertible, the master window control switch also operates the rear quarter windows. When the switch is activated, a 12-volt signal is sent to both rear quarter window motors to request an up or down operation.

Master Window Control Switch - With Memory Driver Seat

The master window control switch receives voltage whenever the delayed accessory relay is active. The master window control switch is grounded through the DDM. The master window control switch communicates to the DDM through a LIN.

Passenger Window Control Switch - With Memory Driver Seat

The PDM provides a return (ground) for the passenger door window control switch. The passenger window control switch sends 2 separate signals to the PDM: up and down. When the window control switch is pressed to the first detent position, a ground signal is sent to the PDM to request an up or down operation. When auto up or auto down is requested (switch activated to the second detent position), the window control switch provides a ground signal on both the up and down line simultaneously. During an auto up or auto down request, the PDM determines intended window direction by the signal first received

Door Window Regulator Motor

The door window regulator motor(s) are bi-directional. Window direction is determined by the low current voltage signal(s) being supplied to the motor from the window control switch or associated door module (if equipped with memory driver seat). The door window regulator motor contains integral electronics which control the one-touch up/down movements as well as the short drop window feature.

Rear Quarter Window Regulator Motor

The rear quarter window regulator motor(s) are bi-directional. Window direction is determined by the low current voltage signal(s) being supplied to the motor from the master window control switch or a command over the global open circuit.

Front Controls Interface Module (FCIM)

The FCIM contains the rear window defrost button and also controls the rear window defrost relay. PMI is required if installing a new module.

Front Display Interface Module (FDIM)

The FDIM contains a redundant rear window defrost button on the touchscreen display. The FDIM plugs directly into the APIM, and does not communicate directly on any network.

Driver Door Module (DDM)

For vehicles equipped with memory driver seat, the DDM receives power window commands from the master window control switch through a LIN. The DDM supplies the applicable voltage signals to the driver door window regulator motor to operate the window in the desired direction.

The DDM also communicates master window control switch requests to the PDM through the Medium Speed Controller Area Network (MS-CAN) to operate the passenger door window from the master window control switch. PMI is required if installing a new module.

Passenger Door Module (PDM)

The PDM receives power window commands from the passenger door window control switch or from the DDM through the Medium Speed Controller Area Network (MS-CAN). The PDM supplies the applicable voltage signals to the passenger door window regulator motor to operate the window in the desired direction. PMI is required if installing a new module.

Body Control Module B (BCM-B)

During a global open command or whenever the convertible top switch is operated (to raise or lower the convertible top if equipped), the Body Control Module B (BCM-B) sends a signal on a shared circuit to the window motors to activate a full down operation of all windows. PMI is required if installing a new module.

The RH front power window is inoperative/does not operate correctly - with memory driver seat	Refer to the Pinpoint Test	GO to Pinpoint Test D
Both rear quarter windows are inoperative from the window control switch	Refer to the Pinpoint Test	GO to Pinpoint Test E
The LH rear quarter window is inoperative/does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test F
The RH rear quarter window is inoperative/does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test G
The one-touch up/down feature is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test H
The global open function is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test I
The short drop window feature does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test J
The defrost system is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test K
The defrost system does not shut off automatically	Refer to the Pinpoint Test	GO to Pinpoint Test L
The defrost system does not respond to voice command only	Refer to the Pinpoint Test	VERIFY the rear window defrost operation using the instrument panel rear window defrost switch. If the rear window defrost is still inoperative, GO to Pinpoint Test K

		If the rear window defrost operates, Refer to the appropriate article for the procedure.
The defrost system does not respond to touchscreen command only	Refer to the Pinpoint Test	VERIFY the rear window defrost operation using the instrument panel rear window defrost switch. If the rear window defrost is still inoperative, GO to Pinpoint Test K If the rear window defrost operates, Refer to the appropriate article for the procedure.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST A : THE LH (LEFT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITHOUT MEMORY DRIVER SEAT

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Master window control switch
- Window regulator motor

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 11 (30A) is OK.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST A : THE LH (LEFT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITHOUT MEMORY DRIVER SEAT > PINPOINT TEST A : THE LH (LEFT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITHOUT MEMORY DRIVER SEAT

A1 CHECK THE POWER TO THE WINDOW MOTOR

Ignition OFF.

Disconnect: Driver Door Window Regulator Motor C518 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A2

No	VERIFY BJB fuse 11 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

A2 CHECK THE WINDOW MOTOR DELAYED ACCESSORY FEED

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to A3

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

A3 CHECK THE WINDOW MOTOR GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A4

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

A4 CHECK FOR A SHORT TO VOLTAGE IN THE WINDOW UP/DOWN CIRCUITS

Disconnect: Master Window Control Switch C504 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-5		Ground
C518-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

No	GO to A5

A5 CHECK THE WINDOW UP/DOWN CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-5	Ω	C504-20
C518-4	Ω	C504-19

Are the resistances less than 3 ohms?

Yes	GO to A6

No	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

A6 CHECK THE MASTER WINDOW CONTROL SWITCH

Carry out the master window control switch component test. Refer to Component Testing for schematic and connector information.

Did the master window control switch pass the component test?

Yes	INSTALL a new window regulator motor. REFER to: Front Door Window Regulator Motor .

No	INSTALL a new master window control switch. REFER to: Front Door Window Control Switch . DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST B : THE LH (LEFT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITH MEMORY DRIVER SEAT

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1088:83	LIN Bus "B": Value of Signal Protection Calculation Incorrect	This DTC sets when the DDM has received invalid data from the master window control switch.
B1088:87	LIN Bus "B": Missing Message	This DTC sets when the DDM has lost communication from the master window control switch.

Possible Causes

- Wiring, terminals or connectors
- Master window control switch
- Driver door window regulator motor
- DDM

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST B : THE LH (LEFT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITH MEMORY DRIVER SEAT > PINPOINT TEST B : THE LH (LEFT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITH MEMORY DRIVER SEAT

B1 CHECK FOR DDM (DRIVER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform DDM self-test.

Are any DDM Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC B1088:83 and B1088:87, GO to B2 For all other Diagnostic Trouble Codes (DTCs), REFER to the DDM DTC Chart .

No	GO to B8

B2 CHECK FOR VOLTAGE TO THE MASTER WINDOW CONTROL SWITCH

Ignition OFF.

Disconnect: Master Window Control Switch C535 (coupe) or C504 (convertible).

Ignition ON.

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C535-1		Ground

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-10		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3

No	REPAIR the circuit.

B3 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT

Ignition OFF.

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C535-4	Ω	Ground

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-11	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B5

No	GO to B4

B4 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN

Disconnect: DDM C501A .

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C535-4	Ω	C501A-17

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-11	Ω	C501A-17

Is the resistance less than 3 ohms?

Yes	GO to B16

No	REPAIR the circuit.

B5 CHECK THE MASTER WINDOW CONTROL SWITCH LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect: DDM C501A .

Ignition ON.

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C535-3	V	Ground

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-1	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B6

B6 CHECK THE MASTER WINDOW CONTROL SWITCH LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C535-3	Ω	Ground

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B7

No	REPAIR the circuit.

B7 CHECK THE MASTER WINDOW CONTROL SWITCH LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C535-3	Ω	C501A-5

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-1	Ω	C501A-5

Is the resistance less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Front Door Window Control Switch . RETEST the system. If the concern is still present, GO to B16

No	REPAIR the circuit.

B8 CHECK THE DRIVER'S FRONT WINDOW SWITCH - DRIVER'S DOOR (DF_WINDSW_DD) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view DDM Parameter Identifications (PIDs).

Monitor the DDM PID DF_WINDSW_DD while pressing and releasing the master window control switch in the up and down positions.

Does the PID status agree with the master window control switch as it is pressed and released?

Yes	GO to B9

No	INSTALL a new master window control switch. REFER to: Front Door Window Control Switch .

B9 CHECK THE BATTERY VOLTAGE TO THE WINDOW MOTOR

Ignition OFF.

Disconnect: Driver Door Window Regulator Motor C518 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B10

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

B10 CHECK THE WINDOW MOTOR DELAYED ACCESSORY FEED

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to B11

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

B11 CHECK THE WINDOW MOTOR GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C518-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B12

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

B12 CHECK FOR A SHORT TO VOLTAGE IN THE WINDOW UP/DOWN CIRCUITS

Disconnect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-5	V	Ground
C518-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

No	GO to B13

B13 CHECK FOR A SHORT TO GROUND IN THE WINDOW UP/DOWN CIRCUITS

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-5	Ω	Ground
C518-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to B14

No	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

B14 CHECK FOR AN OPEN IN THE WINDOW UP/DOWN CIRCUITS

Measure:

Positive Lead	Measurement / Action	Negative Lead
C518-5	Ω	C501B-10
C518-4	Ω	C501B-19

Are the resistances less than 3 ohms?

Yes	GO to B15

No	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

B15 CHECK THE DDM (DRIVER DOOR MODULE) OUTPUT

Connect: DDM C501B .

Ignition ON.

While pressing and holding the master window control switch in the UP position, measure:

Positive Lead	Measurement / Action	Negative Lead
C518-4		Ground

While pressing and holding the master window control switch in the DOWN position, measure:

Positive Lead	Measurement / Action	Negative Lead
C518-5		Ground

Are the voltages greater than 11 volts when the master window control switch is activated in both up and down positions?

Yes	INSTALL a new driver door window regulator motor. REFER to: Front Door Window Regulator Motor .

No	GO to B16

B16 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors. Make sure they seat and latch correctly.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST C : THE RH (RIGHT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITHOUT MEMORY DRIVER SEAT

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Window control switch
- Window regulator motor

Visual Inspection and Diagnostic Pre-checks

- Verify BCM fuse 26 (30A) is OK.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST C : THE RH (RIGHT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITHOUT MEMORY DRIVER SEAT > PINPOINT TEST C : THE RH (RIGHT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITHOUT MEMORY DRIVER SEAT

C1 CHECK THE WINDOW OPERATION FROM BOTH WINDOW CONTROL SWITCHES

Ignition ON.

Attempt to operate the RH door window from the master window control switch and also the passenger door window control switch.

Does the RH door window operate from at least one window control switch?

Yes	If the RH door window operates only from the passenger door window control switch, GO to C2 If the RH door window operates only from the master window control switch, GO to C3

No	GO to C5

C2 CHECK THE WINDOW CONTROL SWITCH UP/DOWN CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: Master Window Control Switch C504 and Passenger Door Window Control Switch C624 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C624-3	Ω	C504-15
C624-2	Ω	C504-16

Are the resistances less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Front Door Window Control Switch .

No	REPAIR the circuit in question.

C3 CHECK FOR VOLTAGE TO THE PASSENGER WINDOW CONTROL SWITCH

Ignition OFF.

Disconnect: Passenger Door Window Control Switch C624 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C624-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to C4

No	REPAIR the circuit.

C4 CHECK THE WINDOW CONTROL SWITCH CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: Master Window Control Switch C504 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C624-3	Ω	C504-15
C624-2	Ω	C504-16

Are the resistances less than 3 ohms?

Yes	INSTALL a new passenger door window control switch. REFER to: Front Door Window Control Switch .

No	REPAIR the circuit in question.

C5 CHECK FOR BATTERY VOLTAGE TO THE WINDOW MOTOR

Ignition OFF.

Disconnect: Passenger Door Window Regulator Motor C608 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to C6

No	VERIFY BCM fuse 26 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

C6 CHECK THE WINDOW MOTOR DELAYED ACCESSORY FEED

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-3	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to C7

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

C7 CHECK THE WINDOW MOTOR GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to C8

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

C8 CHECK FOR A SHORT TO VOLTAGE IN THE WINDOW UP/DOWN CIRCUITS

Disconnect: Master Window Control Switch C504 and Passenger Door Window Control Switch C624 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-5	V	Ground
C608-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

No	GO to C9

C9 CHECK THE WINDOW UP/DOWN CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-5	Ω	C624-3
C608-4	Ω	C624-2

Are the resistances less than 3 ohms?

Yes	INSTALL a new window regulator motor. REFER to: Front Door Window Regulator Motor .

No	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST D : THE RH (RIGHT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITH MEMORY DRIVER SEAT

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Wiring, terminals or connectors
- Master window control switch
- Passenger door window control switch
- Passenger door window regulator motor
- PDM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U2002:24	Switch: Signal Stuck High	This DTC sets when the PDM detects the window control switch is stuck in the UP or DOWN position or a short to ground is present on the input circuit for greater than 10 seconds.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST D : THE RH (RIGHT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITH MEMORY DRIVER SEAT > PINPOINT TEST D : THE RH (RIGHT-HAND) FRONT POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - WITH MEMORY DRIVER SEAT

D1 CHECK FOR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform PDM self-test.

Are any PDM Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC U2002:24, GO to D2 For all other Diagnostic Trouble Codes (DTCs), REFER to: Locks, Latches and Entry Systems .

No	GO to D4

D2 CHECK THE WINDOW CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: PDM C652A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C652A-8	Ω	Ground
C652A-9	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D16

No	GO to D3

D3 CHECK THE WINDOW CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND WITH THE WINDOW CONTROL SWITCH DISCONNECTED

Disconnect: Passenger Door Window Control Switch C624 .

Measure:

Positive Lead	Measurement / Action	Negative Lead

C652A-8	Ω	Ground
C652A-9	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new passenger door window control switch. REFER to: Front Door Window Control Switch .

No	REPAIR the circuit in question.

D4 CHECK THE WINDOW OPERATION FROM BOTH WINDOW CONTROL SWITCHES

Ignition ON.

Attempt to operate the RH door window from the master window control switch and also the passenger door window control switch.

Does the RH door window operate from at least one window control switch?

Yes	If the RH door window operates only from the passenger door window control switch, INSTALL a new master window control switch. REFER to: Front Door Window Control Switch . If the RH door window operates only from the master window control switch, GO to D5

No	GO to D9

D5 CHECK THE PASSENGER DOOR WINDOW CONTROL SWITCH RETURN CIRCUIT

Ignition OFF.

Disconnect: Passenger Door Window Control Switch C624 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C624-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D7

No	GO to D6

D6 CHECK THE PASSENGER DOOR WINDOW CONTROL SWITCH RETURN CIRCUIT FOR AN OPEN

Disconnect: PDM C652A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C624-1	Ω	C652A-17

Is the resistance less than 3 ohms?

Yes	GO to D16

No	REPAIR the circuit.

D7 CHECK THE WINDOW CONTROL SWITCH UP/DOWN CIRCUITS

Disconnect: PDM C652A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C624-3	Ω	C652A-9
C624-2	Ω	C652A-8

Are the resistances less than 3 ohms?

Yes	GO to D8

No	REPAIR the circuit in question.

D8 CHECK THE PASSENGER DOOR WINDOW CONTROL SWITCH

Carry out the passenger door window control switch component test. Refer to Component Testing for schematic and connector information.

Did the passenger door window control switch pass the component test?

Yes	GO to D16

No	INSTALL a new passenger door window control switch. REFER to: Front Door Window Control Switch .

D9 CHECK FOR BATTERY VOLTAGE TO THE WINDOW MOTOR

Ignition OFF.

Disconnect: Passenger Door Window Regulator Motor C608 .

Measure:

Positive Lead	Measurement / Action	Negative Lead

C608-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to D10

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

D10 CHECK THE WINDOW MOTOR DELAYED ACCESSORY FEED

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to D11

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

D11 CHECK THE WINDOW MOTOR GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D12

No	REPAIR the circuit. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

D12 CHECK FOR A SHORT TO VOLTAGE IN THE WINDOW UP/DOWN CIRCUITS

Disconnect: PDM C652B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-5		Ground
C608-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

No	GO to D13

D13 CHECK FOR A SHORT TO GROUND IN THE WINDOW UP/DOWN CIRCUITS

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-5	Ω	Ground
C608-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D14

No	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

D14 CHECK THE WINDOW UP/DOWN CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C608-5	Ω	C652B-10
C608-4	Ω	C652B-19

Are the resistances less than 3 ohms?

Yes	GO to D15

No	REPAIR the circuit in question. DE-INITIALIZE then INITIALIZE the window regulator motor. REFER to: Power Door Window Initialization .

D15 CHECK THE PDM (PASSENGER DOOR MODULE) OUTPUT

Connect: PDM C652B .

Ignition ON.

While pressing and holding the window control switch in the UP position, measure:

Positive Lead	Measurement / Action	Negative Lead
C608-4		Ground

While pressing and holding the window control switch in the DOWN position, measure:

Positive Lead	Measurement / Action	Negative Lead
C608-5		Ground

Are the voltages greater than 11 volts when the door window control switch is activated in both up and down positions?

Yes	INSTALL a new passenger door window regulator motor. REFER to: Front Door Window Regulator Motor .

No	GO to D16

D16 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors. Make sure they seat and latch correctly.

Reconnect all previously disconnected connectors.

Ignition ON.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST E : BOTH REAR QUARTER WINDOWS ARE INOPERATIVE FROM THE WINDOW CONTROL SWITCH

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Convertible top not in fully closed/latched or open position
- Wiring, terminals or connectors
- Master window control switch

Visual Inspection and Diagnostic Pre-checks

- The rear window operation from the switch is disabled when the convertible top is not fully open or fully closed. Verify the convertible top is in the fully open, or fully closed and latched position before carrying out this pinpoint test.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST E : BOTH REAR QUARTER WINDOWS ARE INOPERATIVE FROM THE WINDOW CONTROL SWITCH > PINPOINT TEST E : BOTH REAR QUARTER WINDOWS ARE INOPERATIVE FROM THE WINDOW CONTROL SWITCH

E1 CHECK FOR MRCMA (MOVABLE ROOF CONTROL MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform MRCMA (Movable Roof Control Module A) self-test.

Are any MRCMA (Movable Roof Control Module A) Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE any convertible top related Diagnostic Trouble Codes (DTCs) first. Refer to the appropriate article for the procedure.

No	GO to E2

E2 CHECK THE WINDOW UP/DOWN CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: Master Window Control Switch C504 .

Disconnect: Left Rear Power Window Motor C3118 .

If equipped with memory driver seat, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-13	Ω	C3118-4
C504-14	Ω	C3118-5

If not equipped with memory driver seat, measure:

Positive Lead	Measurement / Action	Negative Lead
C504-17	Ω	C3118-4
C504-18	Ω	C3118-5

Are the resistances less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Front Door Window Control Switch .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST F : THE LH (LEFT-HAND) REAR QUARTER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Master window control switch
- Rear window regulator motor

Visual Inspection and Diagnostic Pre-checks

- Verify BCM fuse 29 (30A) is OK.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST F : THE LH (LEFT-HAND) REAR QUARTER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY > PINPOINT TEST F : THE LH (LEFT-HAND) REAR QUARTER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

F1 CHECK THE WINDOW UP/DOWN CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: Master Window Control Switch C504 .

Disconnect: Left Rear Power Window Motor C3118 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C504-17	Ω	C3118-4
C504-18	Ω	C3118-5

Are the resistances less than 3 ohms?

Yes	GO to F2

No	REPAIR the circuit.

F2 CHECK THE POWER TO THE WINDOW MOTOR

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3118-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to F3

No	VERIFY BCM fuse 29 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

F3 CHECK THE WINDOW MOTOR DELAYED ACCESSORY FEED

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3118-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to F4

No	REPAIR the circuit.

F4 CHECK THE WINDOW MOTOR GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3118-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST G : THE RH (RIGHT-HAND) REAR QUARTER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

The RH Rear Quarter Window is Inoperative/Does Not Operate Correctly

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Master window control switch
- Rear window regulator motor

Visual Inspection and Diagnostic Pre-checks

- Verify BCM fuse 30 (30A) is OK.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST G : THE RH (RIGHT-HAND) REAR QUARTER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY > PINPOINT TEST G : THE RH (RIGHT-HAND) REAR QUARTER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

G1 CHECK THE WINDOW UP/DOWN CIRCUITS FOR AN OPEN

Ignition OFF.

Disconnect: Master Window Control Switch C504 .

Disconnect: Left Rear Power Window Motor C3119 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C504-17	Ω	C3119-4
C504-18	Ω	C3119-5

Are the resistances less than 3 ohms?

Yes	GO to G2

No	REPAIR the circuit.

G2 CHECK THE POWER TO THE WINDOW MOTOR

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3119-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to G3

No	VERIFY BCM fuse 30 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

G3 CHECK THE WINDOW MOTOR DELAYED ACCESSORY FEED

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3119-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to G4

No	REPAIR the circuit.

G4 CHECK THE WINDOW MOTOR GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3119-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST H : THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Window regulator motor not initialized
- Window control switch

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST H : THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

> PINPOINT TEST H : THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

H1 INITIALIZE THE SUSPECT POWER WINDOW

Carry out the initialization procedure on the suspect power window. REFER to: Power Door Window Initialization .

Is the one-touch up feature operating correctly?

Yes	The system is operating normally at this time. The window lost initialization.

No	If the LH front window one-touch up/down feature is inoperative, INSTALL a new master window control switch. REFER to: Front Door Window Control Switch . If the concern is still present, INSTALL a new window regulator motor. REFER to: Front Door Window Regulator Motor . If the RH front window one-touch up/down feature is inoperative from the passenger window control switch, INSTALL a new passenger window control switch. REFER to: Front Door Window Control Switch . If the concern is still present, INSTALL a new window regulator motor. REFER to: Front Door Window Regulator Motor . If the RH front window one-touch up/down feature is inoperative from the master window control switch, INSTALL a new master window control switch. REFER to: Front Door Window Control Switch . If the concern is still present, INSTALL a new window regulator motor. REFER to: Front Door Window Regulator Motor .

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST I : THE GLOBAL OPEN FUNCTION IS INOPERATIVE

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B127A:12	Global Window Control: Circuit Short To Battery	This DTC sets when the Body Control Module B (BCM-B) detects a short to voltage on the global open circuit.
B127A:14	Global Window Control: Circuit Short To Ground or Open	This DTC sets when the Body Control Module B (BCM-B) detects an open or short to ground on the global open circuit.

Possible Causes

- Global open not enabled in the message center
- RKE transmitter

- Door window regulator motor not initialized
- Wiring, terminals or connectors
- Body Control Module B (BCM-B)

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST I : THE GLOBAL OPEN FUNCTION IS INOPERATIVE > PINPOINT TEST I : THE GLOBAL OPEN FUNCTION IS INOPERATIVE

I1 CHECK FOR BODY CONTROL MODULE B (BCM-B) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform Body Control Module B (BCM-B) self-test.

Is Body Control Module B (BCM-B) DTC B127A:12 or B127A:14 present?

Yes	For B127A:12, GO to I2 For B127A:14, GO to I7

No	GO to I13

I2 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Body Control Module B (BCM-B) C4368A .

Ignition ON.

> *NOTE: The LH and RH side window(s) each have their own global open circuits, however both of these circuits are tied together within the Body Control Module B (BCM-B).*

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10 (LH window(s))		Ground
C4368A-22 (RH window(s))		Ground

Is any voltage present?

Yes	If voltage was present on the LH window circuit, GO to I3 If voltage was present on the RH window circuit, GO to I4

No	GO to I17

I3 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE WITH THE LH (LEFT-HAND) FRONT WINDOW MOTOR DISCONNECTED

Ignition OFF.

Disconnect: Driver Door Window Regulator Motor C518 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10		Ground

Is any voltage present?

Yes	For coupe, REPAIR the circuit. For convertible, GO to I5

No	INSTALL a new driver door window regulator motor. REFER to: Front Door Window Regulator Motor .

I4 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE WITH THE RH (RIGHT-HAND) FRONT WINDOW MOTOR DISCONNECTED

Ignition OFF.

Disconnect: Passenger Door Window Regulator Motor C608 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-22		Ground

Is any voltage present?

Yes	For coupe, REPAIR the circuit. For convertible, GO to I6

No	INSTALL a new passenger door window regulator motor. REFER to: Front Door Window Regulator Motor .

I5 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE WITH THE LH (LEFT-HAND) REAR WINDOW MOTOR DISCONNECTED

Ignition OFF.

Disconnect: Left Rear Power Window Motor C3118 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	INSTALL a new left rear quarter window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

I6 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE WITH THE RH (RIGHT-HAND) REAR WINDOW MOTOR DISCONNECTED

Ignition OFF.

Disconnect: Right Rear Power Window Motor C3119 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-22		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	INSTALL a new right rear quarter window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

I7 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: Body Control Module B (BCM-B) C4368A .

NOTE: The LH and RH side window(s) each have their own global open circuits, however both of these circuits are tied together within the Body Control Module B (BCM-B).

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10 (LH window(s))	Ω	Ground

C4368A-22 (RH window(s))	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to I12

No	If the LH window circuit resistance measurement was less than 10, 000 ohms, GO to I8 If the RH window circuit resistance measurement was less than 10, 000 ohms, GO to I9

I8 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO GROUND WITH THE LH (LEFT-HAND) FRONT WINDOW MOTOR DISCONNECTED

Disconnect: Driver Door Window Regulator Motor C518 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new driver door window regulator motor. REFER to: Front Door Window Regulator Motor .

No	For coupe, REPAIR the circuit. For convertible, GO to I10

I9 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO GROUND WITH THE RH (RIGHT-HAND) FRONT WINDOW MOTOR DISCONNECTED

Disconnect: Passenger Door Window Regulator Motor C608 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-22	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new passenger door window regulator motor. REFER to: Front Door Window Regulator Motor .

No	For coupe, REPAIR the circuit. For convertible, GO to I11

I10 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO GROUND WITH THE LH (LEFT-HAND) REAR WINDOW MOTOR DISCONNECTED

Disconnect: Left Rear Power Window Motor C3118 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new left rear quarter window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

No	REPAIR the circuit.

I11 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO GROUND WITH THE RH (RIGHT-HAND) REAR WINDOW MOTOR DISCONNECTED

Disconnect: Right Rear Power Window Motor C3119 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-22	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new right rear quarter window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

No	REPAIR the circuit.

I12 CHECK THE GLOBAL OPEN CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Body Control Module B (BCM-B) C4368A .

Disconnect: Driver Door Window Regulator Motor C518 .

Disconnect: Passenger Door Window Regulator Motor C608 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10	Ω	C518-6
C4368A-22	Ω	C608-6

Are the resistances less than 3 ohms?

Yes	GO to I17

No	REPAIR the circuit in question.

I13 CHECK THE GLOBAL OPEN OPERATION

Ignition OFF.

Open and close the driver door.

Attempt to carry out a global open operation using the RKE transmitter.

Does the global open function operate correctly with at least one window?

Yes	GO to I14

No	GO to I15

I14 CHECK FOR AN OPEN IN THE GLOBAL OPEN CIRCUIT TO THE SUSPECT WINDOW MOTOR

Disconnect: Body Control Module B (BCM-B) C4368A .

Disconnect the suspect window motor: Driver Door Window Regulator Motor C518 , Passenger Door Window Regulator Motor C608 , Left Rear Power Window Motor C3118 or Right Rear Power Window Motor C3119 .

For an inoperative LH door window, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10	Ω	C518-6

For an inoperative RH door window, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-22	Ω	C608-6

For an inoperative left rear window, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-10	Ω	C3118-6

For an inoperative right rear window, measure:

Positive Lead	Measurement / Action	Negative Lead
C4368A-22	Ω	C3119-6

Is the resistance less than 3 ohms?

Yes	For an inoperative LH or RH door window, INSTALL a new window regulator motor. REFER to:

	Front Door Window Regulator Motor . For an inoperative left or right rear window, INSTALL a new window regulator motor. REFER to: Rear Quarter Window Regulator Motor - Convertible .

No	REPAIR the circuit.

I15 VERIFY GLOBAL OPEN FEATURE IS ENABLED IN MESSAGE CENTER

Ignition ON.

Verify the global open feature (Remote Open) is enabled in the message center. REFER to the Owner's Literature.

Is the global open feature enabled in the message center?

Yes	GO to I16

No	The system is operating correctly at this time. INFORM the customer how to enable/disable the global open feature in the message center. REFER to the Owner's Literature.

I16 CHECK THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER OPERATION

Operate the RKE lock/unlock function using all of the RKE transmitters.

Does the RKE lock/unlock function operate correctly with at least one of the RKE transmitters?

Yes	GO to I17

No	To diagnose the RKE system, REFER to: Locks, Latches and Entry Systems .

I17 CHECK FOR CORRECT BODY CONTROL MODULE B (BCM-B) OPERATION

Ignition OFF.

Disconnect and inspect all the Body Control Module B (BCM-B) connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the Body Control Module B (BCM-B) connectors and all previously disconnected window system connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Body Control Module B (BCM-B). REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST J : THE SHORT DROP WINDOW FEATURE DOES NOT OPERATE CORRECTLY

Refer to Power Windows for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Door window regulator motor not initialized
- Wiring, terminals or connectors
- Door ajar switch
- Door window regulator motor

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST J : THE SHORT DROP WINDOW FEATURE DOES NOT OPERATE CORRECTLY > PINPOINT TEST J : THE SHORT DROP WINDOW FEATURE DOES NOT OPERATE CORRECTLY

J1 VERIFY THE DOOR AJAR SWITCH OPERATION

Open and close the driver door and view the interior lamps operation.

Open and close the passenger door and view the interior lamps operation.

Do the interior lamps operate correctly?

Yes	GO to J2

No	DIAGNOSE the interior lamps, REFER to: Interior Lighting .

J2 CARRY OUT THE WINDOW MOTOR INITIALIZATION

Ignition ON.

Carry out the initialization procedure on the suspect power window. REFER to: Power Door Window Initialization .

Open and close the suspect door to verify the short drop function operates.

Does the short drop window feature operate correctly?

Yes	The system is operating correctly at this time. The window lost initialization.

No	GO to J3

J3 CHECK THE DRIVER WINDOW MOTOR AJAR SWITCH INPUT CIRCUIT

Ignition OFF.

Disconnect: Inoperative Driver Door Window Regulator Motor C518 or Passenger Door Window Regulator Motor C608 .

Disconnect: Inoperative LH Front Door Latch C525 or RH Front Door Latch C609 .

For driver door, measure:

Positive Lead	Measurement / Action	Negative Lead
C518-7	Ω	C525-3

For passenger door, measure:

Positive Lead	Measurement / Action	Negative Lead
C608-7	Ω	C609-6

Is the resistance less than 3 ohms?

Yes	INSTALL a new window regulator motor. REFER to: Front Door Window Regulator Motor .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST K : THE DEFROST SYSTEM IS INOPERATIVE

Refer to Heated Window for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1C83:12	Rear Defog Relay: Circuit Short to Battery	This DTC sets when the FCIM detects a short to voltage on the rear window defrost relay control circuit.
B1C83:14	Rear Defog Relay: Circuit Short To Ground or Open	This DTC sets when the FCIM detects an open or short to ground on the rear window defrost relay control circuit.

Possible Causes

- Fuse
- Rear window defrost relay
- Wiring, terminals or connectors
- Rear window defrost grid
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuses 9 (40A) and 66 (5A) are OK.
- Inspect the rear window defrost grid and electrical connectors for damage.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST K : THE DEFROST SYSTEM IS INOPERATIVE > PINPOINT TEST K : THE DEFROST SYSTEM IS INOPERATIVE

K1 CHECK THE REAR WINDOW DEFROST GRID VOLTAGE

Ignition OFF.

Disconnect: Heated Rear Window Element C402A (coupe) or C402 (convertible).

Ignition ON.

Activate the rear window defrost switch.

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C402A-1		Ground

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead

C402-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to K2

No	GO to K3

K2 CHECK THE REAR WINDOW DEFROST GRID GROUND

Ignition OFF.

Disconnect: For coupe, heated Rear Window Element C402B.

For coupe, measure:

Positive Lead	Measurement / Action	Negative Lead
C402B-1	Ω	Ground

For convertible, measure:

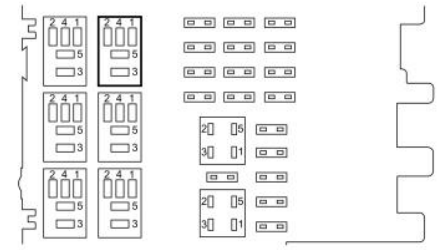
Positive Lead	Measurement / Action	Negative Lead
C402-2	Ω	Ground

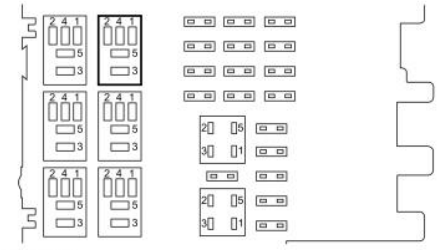
Is the resistance less than 3 ohms?

Yes	CARRY OUT the Grid Wire Test. REFER to Grid Wire Test . REPAIR the rear window defrost grid or INSTALL a new rear window glass. REFER to: Fixed Glass .

No	REPAIR the circuit.

K3 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR VOLTAGE





Ignition OFF.

Disconnect: Rear Window Defrost Relay.

Ignition ON.

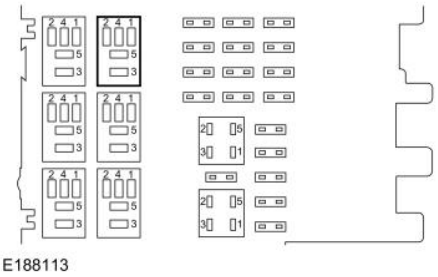
Measure:

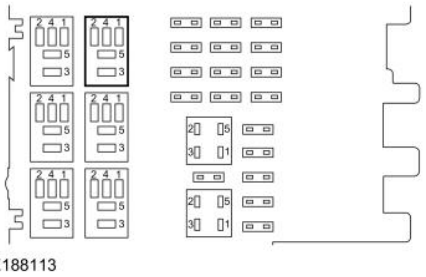
Positive Lead	Measurement / Action	Negative Lead

 E188113 Rear Window Defrost Relay, socket pin 1		Ground
 E188113 Rear Window Defrost Relay, socket pin 3		Ground

Are the voltages greater than 11 volts?

Yes	GO to K4





No	VERIFY the BJB fuses 9 (40A) and 66 (5A) are OK. If OK, REPAIR the circuit in question. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

K4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OUTPUT

Connect:

Positive Lead	Measurement / Action	Negative Lead

 E188113 Rear Window Defrost Relay, socket pin 1		 E188113 Rear Window Defrost Relay, socket pin 2

Activate the rear window defrost switch.

Does the test light illuminate?

Yes	GO to K5

No	GO to K6

K5 CHECK THE REAR WINDOW DEFROST RELAY

Ignition OFF.

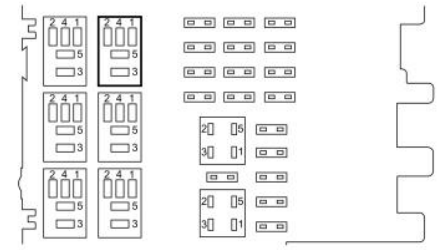
Carry out the rear window defrost relay component test. Refer to Component Testing for schematic and connector information.

Did the rear window defrost relay pass the component test?

Yes	REPAIR the open in the rear window defrost relay output circuit.

No	INSTALL a new rear window defrost relay.

K6 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE



Ignition OFF.

Disconnect: FCIM C2402A .

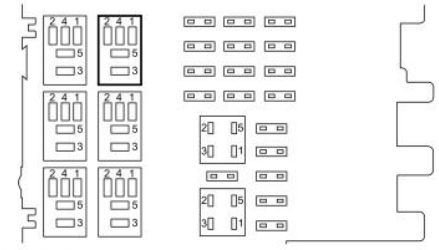
Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead

 E188113 Rear Window Defrost Relay, socket pin 2		Ground

Is any voltage present?



Yes	REPAIR the circuit.

No	GO to K7

K7 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
 E188113 Rear Window Defrost Relay, socket pin 2	Ω	C2402A-7

Is the resistance less than 3 ohms?

Yes	GO to K8

No	REPAIR the circuit.

K8 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Ignition OFF.

Disconnect and inspect all the FCIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors and all previously disconnected rear window defrost system connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST L : THE DEFROST SYSTEM DOES NOT SHUT OFF AUTOMATICALLY

Refer to Heated Window for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1C83:14	Rear Defog Relay: Circuit Short To Ground or Open	This DTC sets when the FCIM detects an open or short to ground on the rear window defrost relay control circuit.

Possible Causes

- Wiring, terminals or connectors
- Rear window defrost relay
- FCIM

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > PINPOINT TEST(S) > PINPOINT TEST L : THE DEFROST SYSTEM DOES NOT SHUT OFF AUTOMATICALLY > PINPOINT TEST L : THE DEFROST SYSTEM DOES NOT SHUT OFF AUTOMATICALLY

L1 CHECK THE REAR WINDOW DEFROST GRID VOLTAGE

Ignition OFF.

Disconnect: Rear Window Defrost Relay.

Disconnect: Heated Rear Window Element C402A (coupe) or C402 (convertible).

Ignition ON.

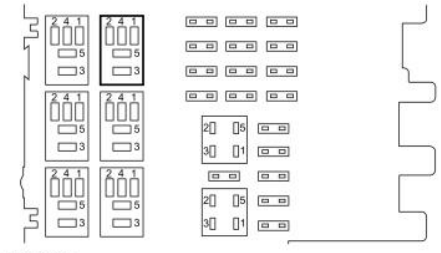
For coupe, measure:

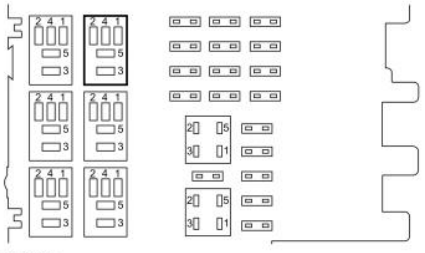
Positive Lead	Measurement / Action	Negative Lead
C402A-1		Ground

For convertible, measure:

Positive Lead	Measurement / Action	Negative Lead
C402-1		Ground

Is any voltage present?





Yes	REPAIR the circuit.

No	GO to L2

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

L2 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OUTPUT

Connect:

Positive Lead	Measurement / Action	Negative Lead
 E188113 Rear Window Defrost Relay, socket pin 1		 E188113 Rear Window Defrost Relay, socket pin 2

Does the test light illuminate?

Yes	GO to L3

No	INSTALL a new rear window defrost relay.

L3 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect: FCIM C2402A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
Rear Window Defrost Relay, socket pin 2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to L4

No	REPAIR the circuit.

L4 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

Disconnect and inspect all the FCIM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins as necessary

pushed-out pins - install new pins as necessary

Reconnect the FCIM connectors and all previously disconnected rear window defrost system connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate article for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > GLASS, FRAMES AND MECHANISMS > COMPONENT TEST- GRID WIRE TEST

1.

Using a bright lamp in the vehicle, inspect the grid wire from the exterior. A broken grid wire will appear as a brown spot.

2.

Run the engine at idle. Activate the rear window defrost switch. The indicator light should come on.

3.

Working in the vehicle with a voltmeter, contact the broad red-brown stripes of the rear glass window (positive lead to B+ side and the negative lead to ground side). The meter should read 10-13 volts. A lower voltage reading indicates a loose ground connection.

4.

Contact a good ground point with the negative lead of the meter. The voltage reading should not change.

5.

With the negative lead of the meter grounded, touch each grid line of the heated rear window glass at its midpoint with the positive lead. A reading of approximately 6 volts indicates the line is good. A reading of 0 volt indicates the line is broken between the midpoint and the B+ side of the grid line. A reading of 12 volts indicates the circuit is broken between the midpoint of the grid line and ground.

6.

Pinpointing the exact position of the break can be accomplished (if the voltmeter reads 0 volt when the midpoint of the grid line is touched with the positive lead of the voltmeter) by moving the positive lead of the voltmeter toward the B+ side of the grid line and touching the grid line until the voltmeter reads 12 volts. If the voltmeter reads 12 volts when the midpoint of the grid line is touched with the positive lead of the voltmeter, simply move the positive lead of the voltmeter toward the ground connection of the grid line and touch the grid line until the voltmeter reads 0 volt.

GENERAL PROCEDURES > HEATED WINDOW GRID WIRE REPAIR

Materials

Name	Specification
Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) ZC-23 (U.S.)	ESR-M14P5-A
Rear Window Defroster Repair PM-11	-
Motorcraft ® Lacquer Touch-Up Paint PMPC-19500-XXXXX, PMPM-19500-XXXXX, PMPP-19500-XXXXX	ESR-M2P100-C

Repair

> *NOTE: The antenna and heated window grid line material is not embedded into the glass, but is baked to the glass surface and consequently can be scraped off. An undamaged grid line has small ridges that project above the surface of the glass and can easily be felt when running a fingernail across them. Antenna and heated window grid lines that have been razor bladed will feel smooth when a fingernail is dragged across the affected area. Inoperative heated window grid lines may appear to the eye to be undamaged due to residue remaining on the glass and require diagnosis with a voltmeter or 12V test lamp.*

> *WARNING: Before beginning any service procedure in this article, refer to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

1.

Refer to: Health and Safety Precautions .

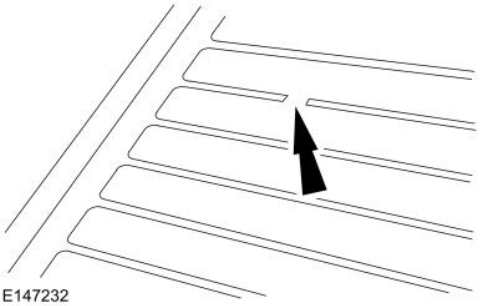
2.

Bring the vehicle up to a room temperature of at least 16 °C (60.8 °F) or above.

> *NOTE: Do not use scrapers, sharp instruments or abrasive window cleaners on the interior surface of the rear window glass as this may cause damage to the antenna and heated window grid lines.*

3.
Clean the entire antenna and heated window grid line repair area with glass cleaner and 0000 steel wool to remove all dirt, wax, grease, oil or other foreign material.

Material



: Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) / ZC-23 (U.S.) (ESR-M14P5-A)

4.

Mark the location of the antenna or heated window grid break on the exterior of the rear window glass.

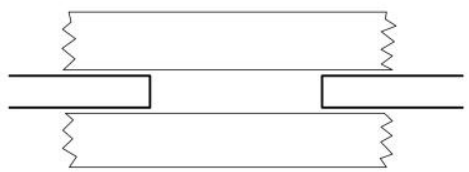
5.

Using a polypropylene film fine line tape, mask the area directly above and below the antenna or heated window grid break extending the tape 26 mm (1.0236 in) beyond the concern area in both directions. The break area should be at the center of the mask. Polypropylene Film Fine Line Tape (commercially available).

E147232

NOTE: Allow at least 5 minutes of drying time between applications for the touch-up paint or the silver repair coating. Applying fewer coats or not allowing adequate drying time between coats produces repaired resistance that is greater than Original Equipment Manufacturer (OEM) resistance, resulting in poor defrost performance and excessive localized heating.

NOTE: If the brown layer is not broken or missing, apply only the silver grid repair compound to the break. If both the brown and silver layers of the antenna or heated window grid are broken or missing, apply a coating of the lacquer touch-up paint across the break in the grid line prior to applying the rear window defroster repair compound. Do not overlap the silver grid line with the paint. Several applications may be necessary to achieve a color match.

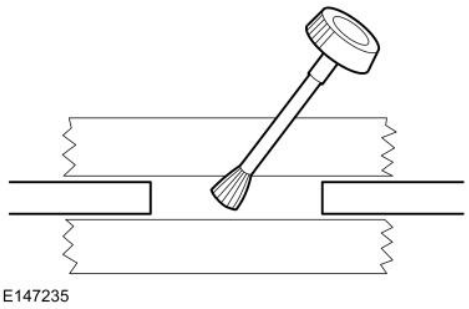


6.
Apply the repair coating to the antenna or heated window grid break area in several smooth, continuous strokes. Extend the silver repair coating at least 6.35 mm (0.25 in) on both sides of the break area. Apply a minimum of 6 applications of the grid repair compound. Polypropylene Film Fine Line Tape (commercially available)

Material

: Rear Window Defroster Repair / PM-11

Material



: Motorcraft ® Lacquer Touch-Up Paint / PMPC-19500-XXXXX, PMPM-19500-XXXXX, PMPP-19500-XXXXX (ESR-M2P100-C)

E147233

NOTE: The repair coating air dries in approximately one minute and can be

energized after 5 minutes. Optimum adhesion occurs after approximately 24 hours.

7.
Allow the repair area to dry completely and remove the mask.

NOTE: Be careful not to damage the antenna or heated window grid line with the razor blade. If this occurs, additional repair may be necessary.

8.
Remove any excess repair compound above or below the antenna or heated window grid line with a razor blade.

NOTE: The interior side of the antenna or heated grid lines are not painted, but due to the silver tarnishing tend to change the grid to a gold or brown color. The repair area will be bright silver and also tarnish over time to match the rest of the antenna or heated window grid.

9.
Test the system for normal operation.

GENERAL PROCEDURES > LEAD TERMINAL REPAIR

Materials

Name	Specification
Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) ZC-23 (U.S.)	ESR-M14P5-A

Repair

1.

Bring the vehicle up to at least the specified room temperature or above.

Temperature

: 60.8 °F (16 °C)

NOTE: The new terminal covers the original terminal location, but it must be placed so the terminal conductive areas will be placed on a good conductive base.

2.

Terminal Kit - Back Glass 4F1Z-14421-AA

Clean the bus bar in the area to be repaired with steel wool (000 to 0000 grade), and then with glass cleaner to remove all dirt, wax, grease, oil or other foreign material.

Material

: Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) / ZC-23 (U.S.) (ESR-M14P5-A)

NOTE: Depending on the original terminal location, and whether the terminal is covered by pillar trim, determines where to locate the new terminal. Some grid line bus bars may only allow the placement of the terminal above or below the original tab location due to space limitations. For most vehicle applications, the replacement tab location covers the original tab location, but still allows the replacement tab to attach to the bus bar on good conductive material.

NOTE: Do not use any type of flame torch or flame-heated soldering gun for this procedure. Use of these tools provide inadequate heat generation at the tip and the exhaust heat can cause damage to plastic trim parts in the area. Use only an electric soldering gun with 100 watts or more of power. Before using the soldering gun, be sure to melt a small amount of rosin core solder to the tip. The solder will assist in achieving better heat transfer from the soldering gun tip to the new terminal.

3.
Place the replacement terminal type A over the original tab location, making sure the conductive areas of the terminal will be on a good conductive area. Do not place the terminal tab foot on the original location, which does not have conductive material.

4.

Hold the terminal in place with an item such as a regular lead pencil at a 90 degree angle from the terminal (Holding at other than a 90 degree angle may allow the terminal to slip when the solder liquefies).

NOTE: The new terminal has pre-applied solder, flux and temperature-sensitive paint. The paint provides a visual indication when the terminal has reached the correct temperature to melt solder on the terminal. When the correct temperature is achieved, the temperature paint liquefies and changes color.

5.
Place the soldering gun tip on the top of the terminal, but not on the painted areas of the tab. Energize the soldering gun and watch for the painted area of the terminal to liquefy and change color. The paint should liquefy in approximately 25-45 seconds after heating. As soon as the paint color completely changes on either side of the terminal, de-energize the soldering gun and continue to hold

the terminal in place with the soldering gun and pencil for an additional 30 seconds.

6.

Remove the soldering gun and pencil from the terminal. Allow the terminal to cool for another 2 minutes before attaching the wiring lead to the terminal.

7.

Attach the electrical lead connection to this terminal, turn on the heated rear window and verify the operation.

GENERAL PROCEDURES > POWER DOOR WINDOW INITIALIZATION

Initialization

> *NOTE: This step is only necessary for an existing window regulator motor. If installing a new window regulator motor, proceed to Step 2.*

> *WARNING: Before beginning any service procedure in this article, refer to health and safety warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

1.

To initialize an existing window regulator motor, the motor must first be de-initialized. This can be accomplished by disconnecting the battery cable or window motor fuse while the window is operating. After the motor has been de-initialized, reconnect the battery cable or fuse before proceeding to the following step.

> *NOTE: The door MUST be closed during this procedure (for convertibles, the top and quarter glass must be in the CLOSED and UP position) in order for the door window motor to initialize.*

> *WARNING: Keep objects and body parts clear of the glass panel when carrying out the initialization procedure. During the initialization procedure, the glass panel closes with high force and cannot detect objects in its path. Failure to follow this instruction may result in serious personal injury.*

2.

With the door window in the fully OPEN position, press and hold the window control switch in the UP position at the second detent until the window glass stalls into the glass top run for at least 2 seconds. Release the switch.

3.

Press and hold the window control switch in the DOWN position at the second detent until the window glass stalls at the bottom of its travel for at least 2 seconds.

4.

Cycle the window glass up and down once more to set the window soft stop for the DOWN position.

5.

Test for correct window operation by carrying out the one-touch up and one-touch down features.

GENERAL PROCEDURES > FIXED GLASS

Special Tool(s) / General Equipment

Glass Cut-Out Wire
Power Caulk Gun
Power Fixed Glass Removal Tool
Cold Knife
Knife
Vacuum Cleaner

Materials

Name	Specification
Betaseal™ Express Dow Urethane Adhesive	-
Sika Tack ASAP Urethane Adhesive	-
Dow Urethane One Step Glass Primer Betaprime™ 5500/5500A/5500SA	-
Sika Urethane Metal and Glass Primer Sika 206 G+P	-
Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) ZC-23 (U.S.)	ESR-M14P5-A
Bare Metal Etch Primer BETAPRIME 5201	-
Body Primer BETASEAL™ 43538	-

Repair

NOTE: In some instances repair methods may be combined to achieve the best results.

NOTE: Some interior trim, exterior trim and/or components may require removal based on the tools and removal method used.

1.
Choose the best repair method for the type of glass being replaced.

1.

Cold knife method - uses the cold knife to cut the urethane from the outside of a vehicle provided the blade can reach the bead. Use the General Equipment: Cold Knife

2.

Power tool method - uses various power tools from inside the vehicle using a cutting or paddle type blade. Use the General Equipment: Power Fixed Glass Removal Tool

3.

Piano wire method - uses the piano wire to cut the urethane from inside and outside of a vehicle using an assistant. Use the General Equipment: Glass Cut-Out Wire

2.

When using the cold knife method, apply tape to protect the perimeter of the window opening from paint damage. Multiple layers of tape may be required.

NOTE: Fixed glass may have locating pins that vary in location. It may be necessary to cut these pins with a utility knife.

NOTE: Fixed glass must be discarded once removed. A new fixed glass is required.

NOTE: Take precautions to prevent damage to other components when cutting urethane.

NOTE: To avoid rust formation, use extreme care not to scratch the paint or primer or damage the pinch weld during glass removal.

NOTE: New fixed glass must be installed within 2 hours of cutting the urethane adhesive. Cut or scraped urethane becomes oxidized and inactive beyond 2 hours, reducing the effectiveness of the repair bond.

3.

Remove the fixed glass and discard. Use the General Equipment: Power Fixed Glass Removal Tool. Use the General Equipment: Cold Knife. Use the General Equipment: Knife

NOTE: Make sure the mating surfaces are clean and free of foreign material.

NOTE: Touching the adhesive surface impairs the rebonding.

NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions for the product being used. Use the same brand pinch weld primer, glass primer and urethane adhesive.

WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

4.

Prep the pinch weld area to install the new fixed glass.

1.

Trim the original urethane adhesive using a utility knife, leaving a 1 mm to 2 mm (0.04 in to 0.08 in) base on the pinch weld.

2.

Remove any foreign material or dirt from the pinch weld using a soft brush or vacuum. Use the General Equipment: Vacuum Cleaner

NOTE: Minimize applying bare metal primer over areas with remaining urethane adhesive and observe a minimum flash time of 30 minutes.

5.

If the paint layer was damaged on the pinch weld extending into bare metal, apply bare metal primer to those areas only.

Material

: Bare Metal Etch Primer / BETAPRIME 5201

NOTE: Minimize applying body primer over areas with remaining urethane adhesive and observe a minimum flash time of 30 minutes.

6.
Apply body primer as necessary.

1.

Apply body primer to those areas only previously primed with bare metal primer.

Material

: Bare Metal Etch Primer / BETAPRIME 5201

2.

If the clearcoat layer was damaged on the pinch weld but not extending into bare metal, apply body primer to those areas only.

Material

: Body Primer / BETASEAL™ 43538

7.

Clean the inside of the new fixed glass with glass cleaner.

Material

: Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) / ZC-23 (U.S.) (ESR-M14P5-A)

8.

Apply glass primer according to the manufacturer's instructions to the new fixed glass. Allow at least 6 minutes to dry.

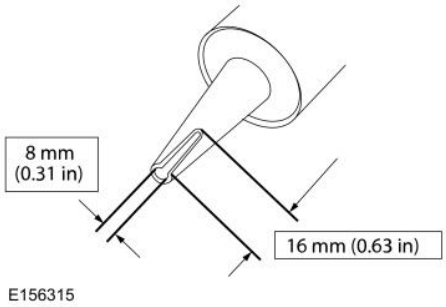
Material

: Dow Urethane One Step Glass Primer / Betaprime™ 5500/5500A/5500SA

Material

: Sika Urethane Metal and Glass Primer / Sika 206 G+P

9.



Cut the urethane adhesive applicator tip to specification.

Material

: Betaseal™ Express Dow Urethane Adhesive

Material

: Sika Tack ASAP Urethane Adhesive

NOTE: Use a power caulk gun that applies the urethane adhesive with less effort and a continuous bead.

NOTE: The fixed glass must be installed within 10 minutes of applying the urethane adhesive.

NOTE: Make sure the urethane bead is uniform to prevent air and water leaks.

10.

Apply a urethane adhesive bead.

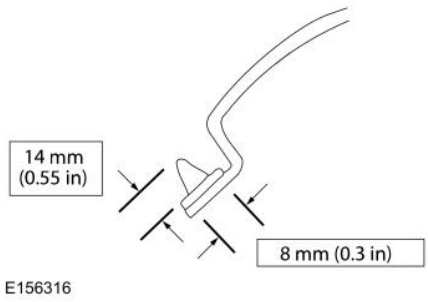
1.

Start and end at the original overlap points to prevent air and water leaks.

NOTE: Take care in applying urethane on vehicles without peripheral moldings as urethane expulsion could become an appearance issue.

2.
Apply a urethane adhesive bead 14 mm (0.551 in) high and 8 mm (0.314 in) wide on top of the existing trimmed urethane adhesive bead on the pinch weld. Use the General Equipment: Power Caulk Gun

Material



: Betaseal™ Express Dow Urethane Adhesive

Material

: Sika Tack ASAP Urethane Adhesive

3.

Make sure there are no gaps in the bead.

NOTE: The door windows must be left open during the adhesive curing time.

11.
Open the vehicle windows to prevent the air pressure of closing doors from compromising the urethane adhesive bond.

NOTE: If equipped, the adhesive strip backings must be removed from the A-pillar mouldings before installing the fixed glass.

WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

12.

Install the fixed glass to the vehicle.

1.

Install the fixed glass, pressing firmly by hand to ensure a good bond.

2.

Secure the fixed glass in the correct position with tape until the urethane adhesive has cured.

13.

If necessary, remove excess uncured urethane adhesive from the interior and exterior surface of the fixed glass.

Material

: Motorcraft ® Ultra-Clear Spray Glass Cleaner (U.S.) / ZC-23 (U.S.) (ESR-M14P5-A)

14.

Install any removed components as needed.

15.

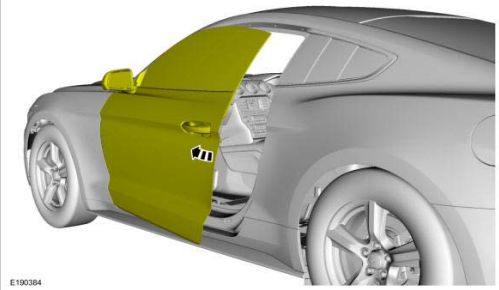
If equipped, carry out the IPMA camera alignment.

GENERAL PROCEDURES > DOOR WINDOW GLASS ADJUSTMENT - COUPE

Adjustment

NOTE: LH side shown, RH side similar.

NOTE: Removal steps in this procedure may contain installation details.



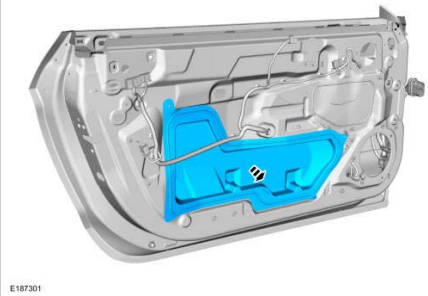
All adjustments

NOTE: The front door must be aligned correctly before adjusting the front door window glass.

1.
Check the front door alignment. Refer to: Front Door Alignment .

2.

Open the door.



3.

Remove the front door speaker. Refer to: Front Door Speaker RH . Refer to: Front Door Speaker LH .

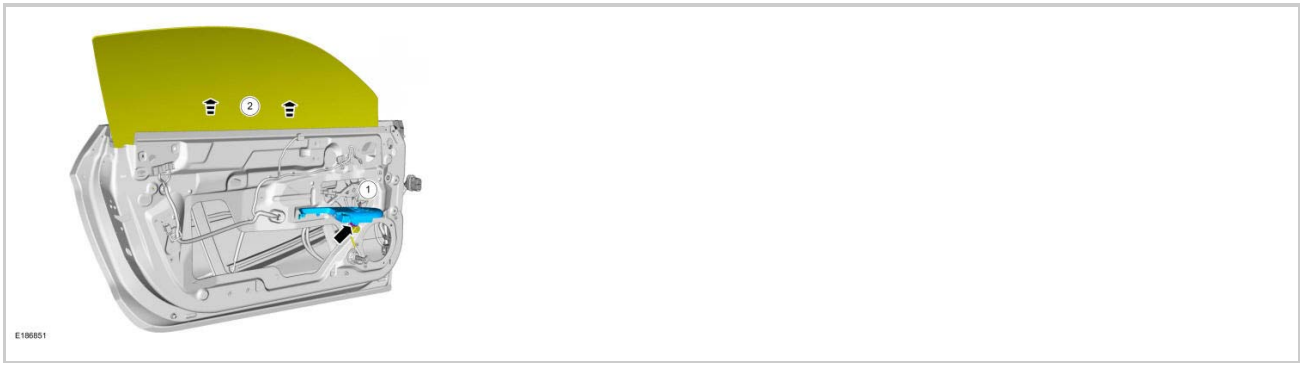
4.

Remove the front door lower watershield.

5.

Remove the grommets and the adhesive tapes.

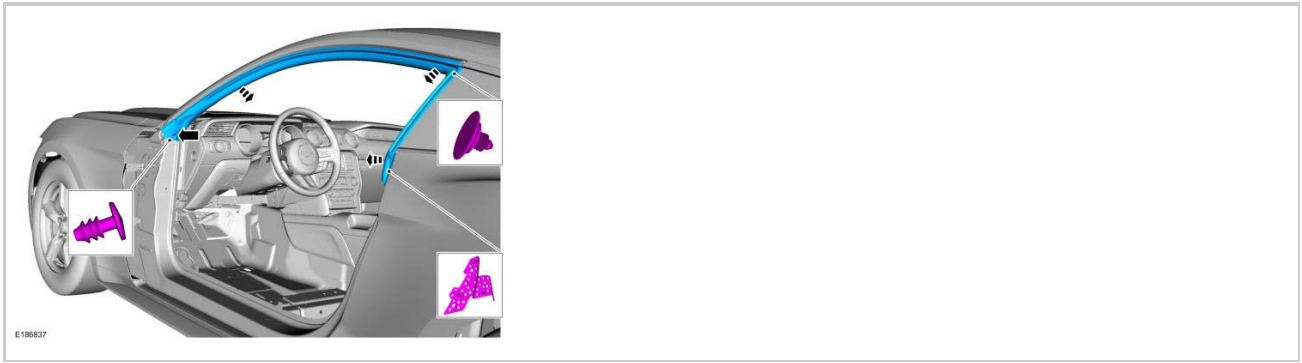
6.



Raise the front door window glass to the full up position.

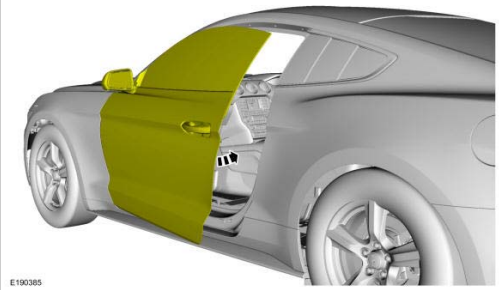
1.

Install the front door window control switch.



2.

Raise the front door window glass to the full up position.



7.

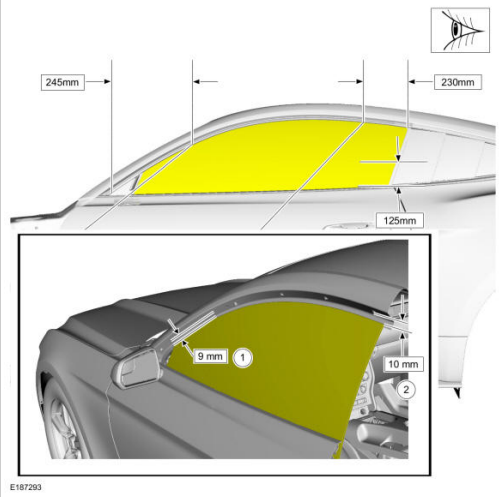
On coupe vehicles, remove the pin-type retainer and the door weatherstrip.

8.

Close the door.

Up/Down, Fore/Aft adjustment

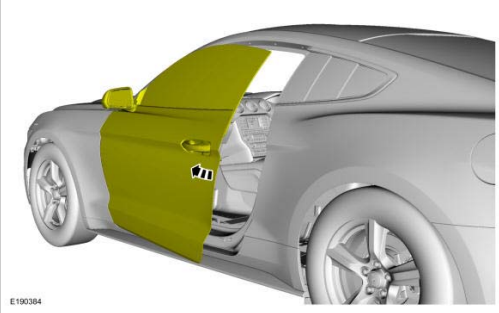
9.



Measure the gap between the top of the front door glass and the body at the specified locations.

1.

Measurement at A-pillar 9mm.

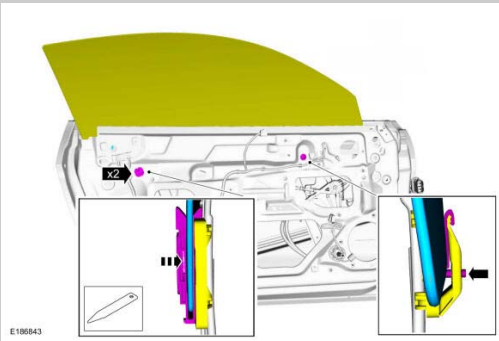


2.

Measurement at B-pillar 10mm.

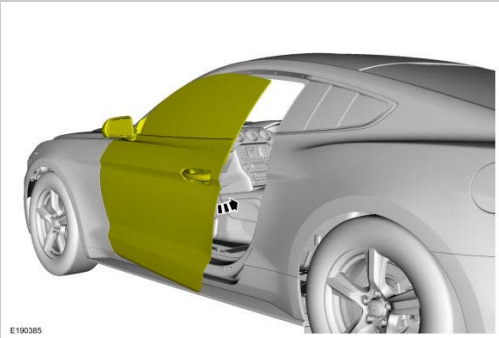
10.

Open the door.



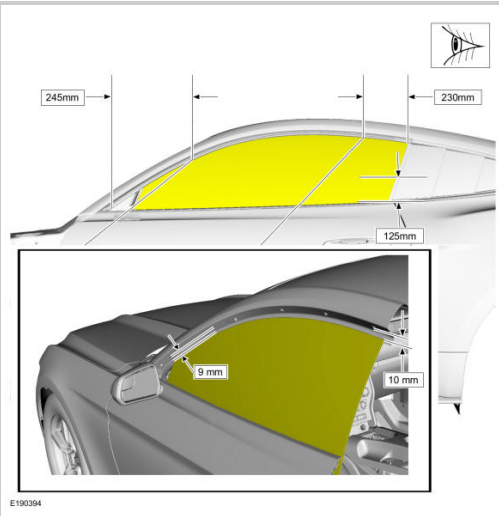
11.

Loosen both glass clamps, adjust the front door window glass as necessary and tighten the glass clamps.



Torque

: 80 lb.in (9 Nm)



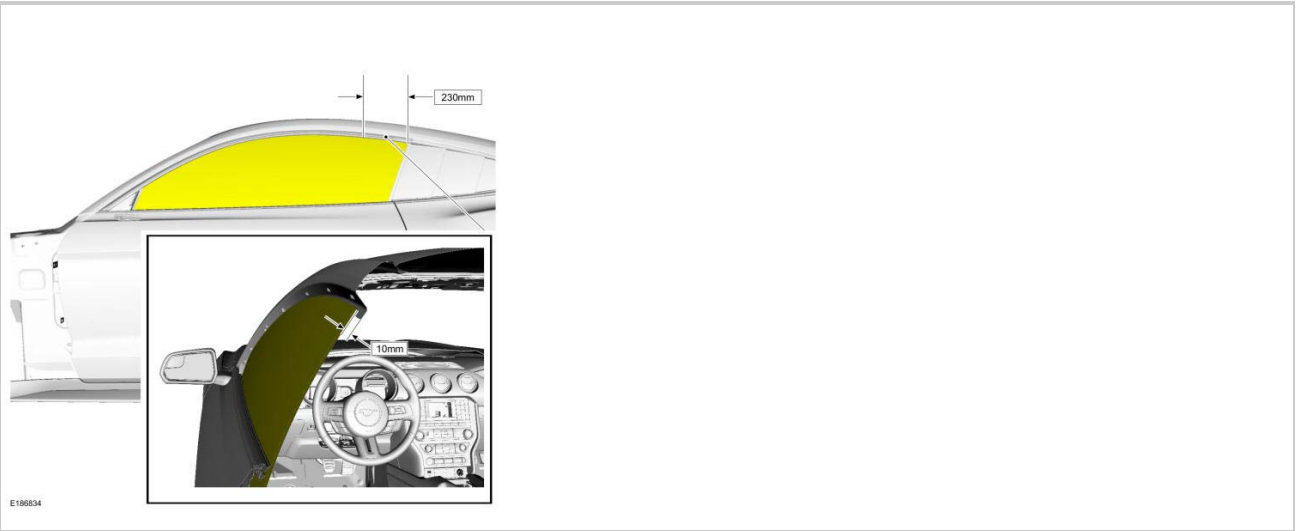
12.

Close the door.

13.

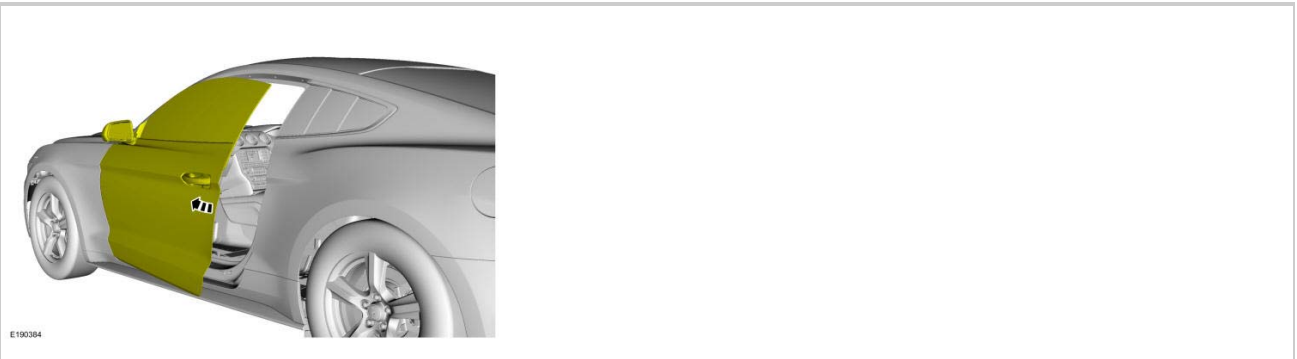
Check the door glass up/down, fore/aft to body dimensions.

In/Out adjustment



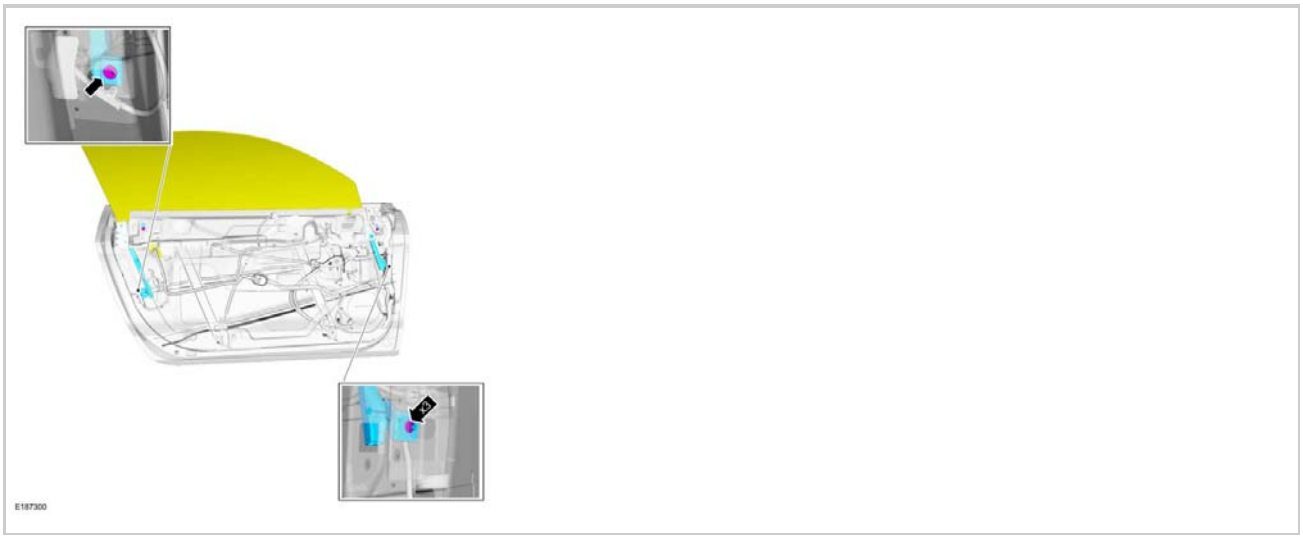
14.

Close the door.



15.

Measure the gap between the top of the front door glass and the body at the specified locations.



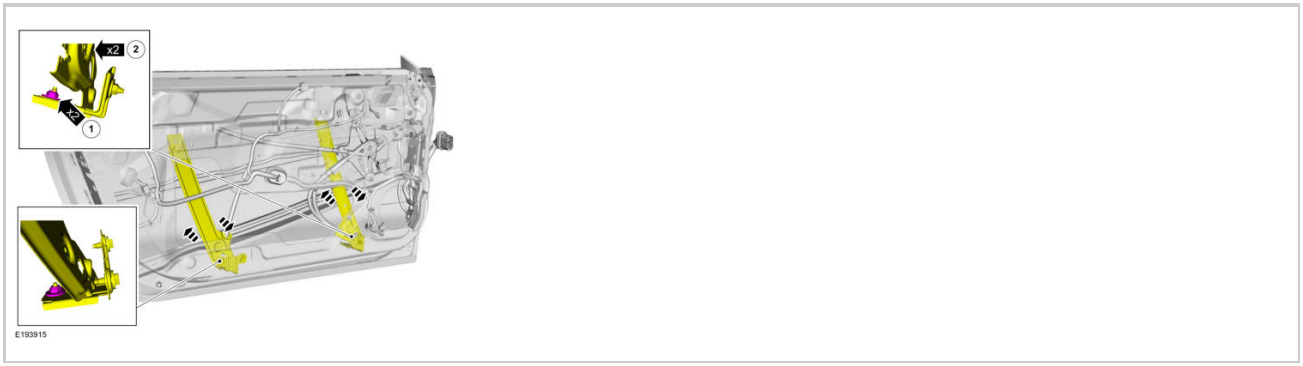
16.

Open the door.

17.

Loosen the nuts on the fore and aft front door glass runs.

18.



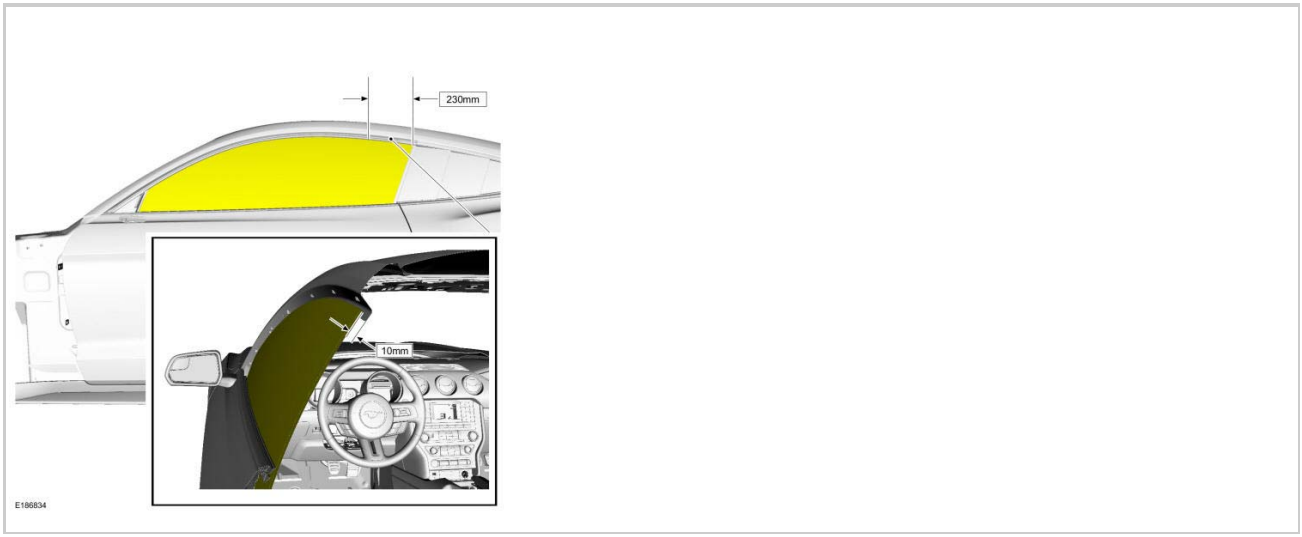
Adjust the regulator rails equally in and out to avoid binding.

1.

Loosen the lower window regulator nuts.

2.

Adjust the regulator rails equally in and out to avoid binding.



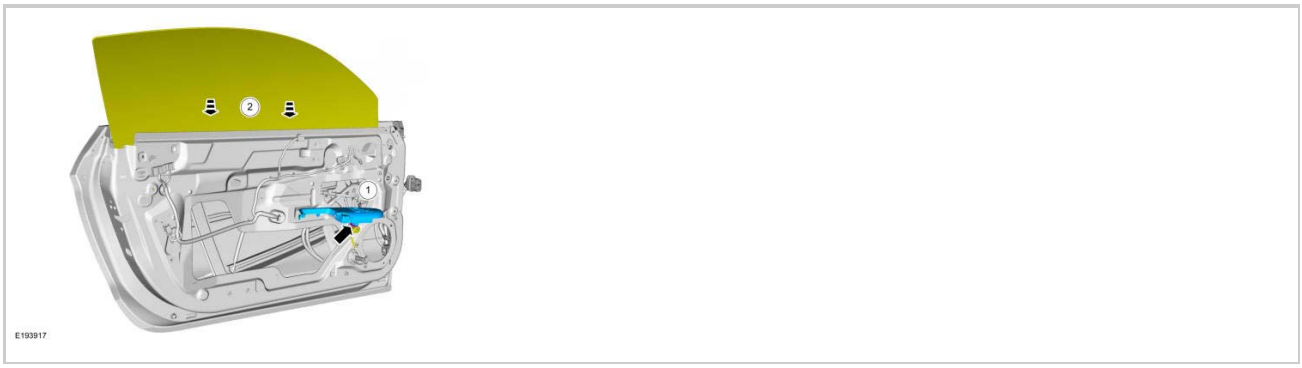
19.

Close the door.

20.

Check the door glass in/out to body dimensions and adjust the door glass runs and regulator rails relative to the door as necessary.

21.



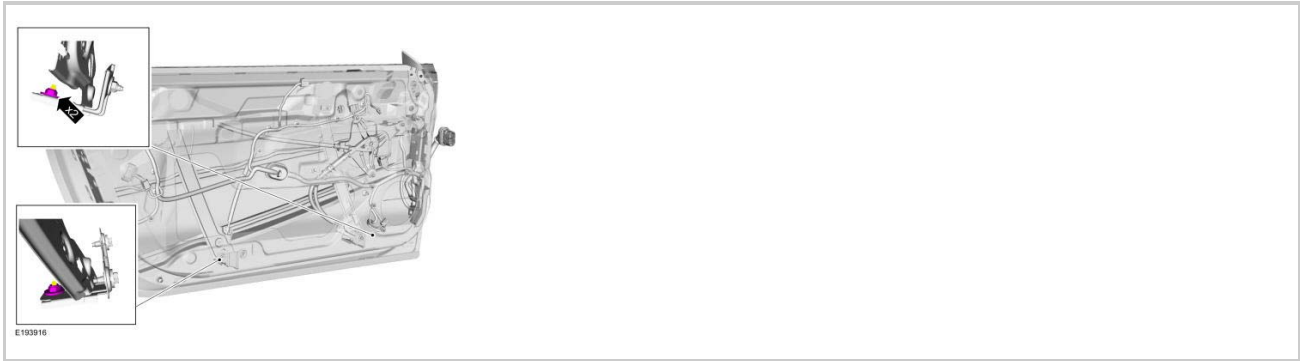
Lower the front door window glass.

1.

Install the front door window control switch.

2.

Lower the front door window glass.



22.

Tighten the front door glass regulator rail nuts.

Torque

: 97 lb.in (11 Nm)

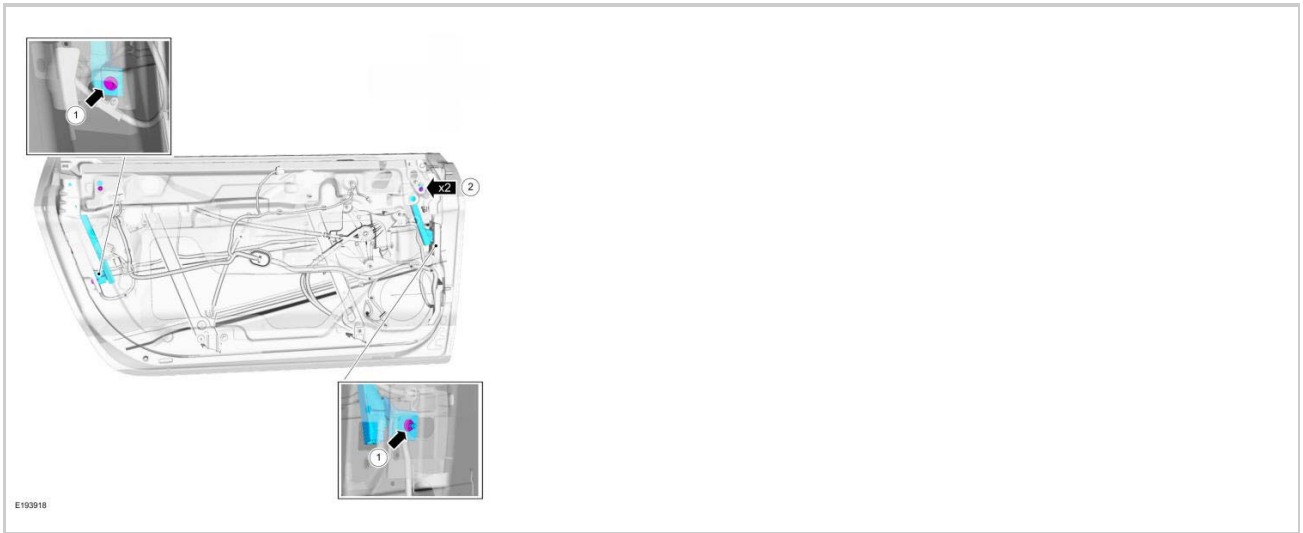
NOTE: Take care not to influence the position of the front door glass runs when tightening the nuts.

23.
Tighten the nuts on the fore and aft front door glass runs.

1.

Tighten the lower bolt and nuts on the fore and aft front door glass runs.

Torque



: 97 lb.in (11 Nm)

2.

Tighten the upper nuts on the fore and aft front door glass runs.

Torque

: 97 lb.in (11 Nm)

24.

Raise the front door window glass to the full up position.

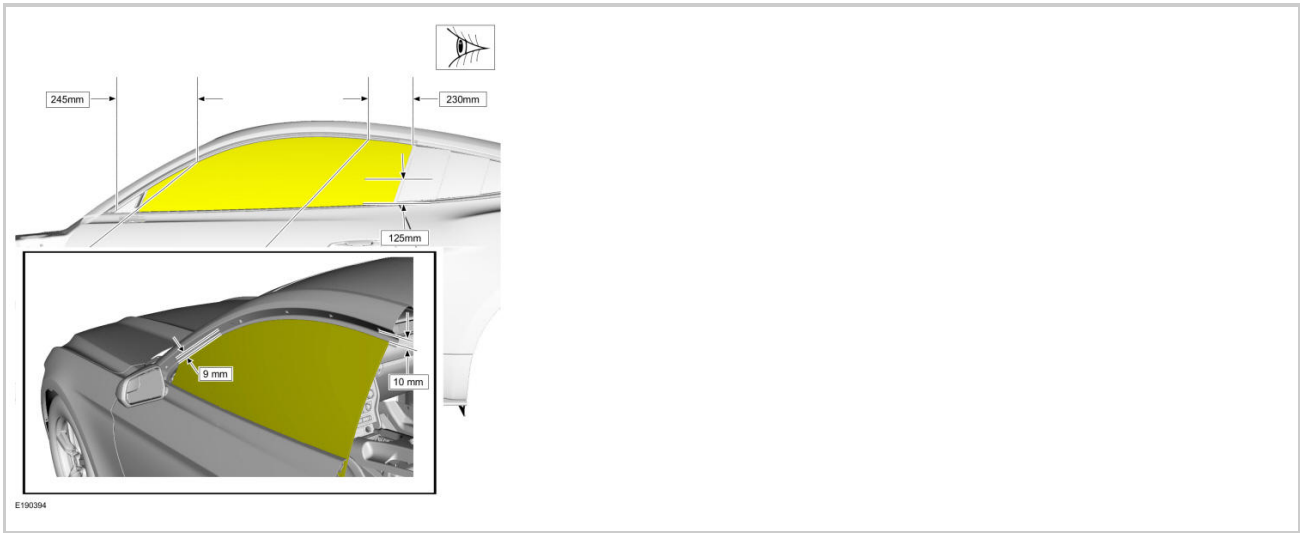
1.

Install the front door window control switch.

2.

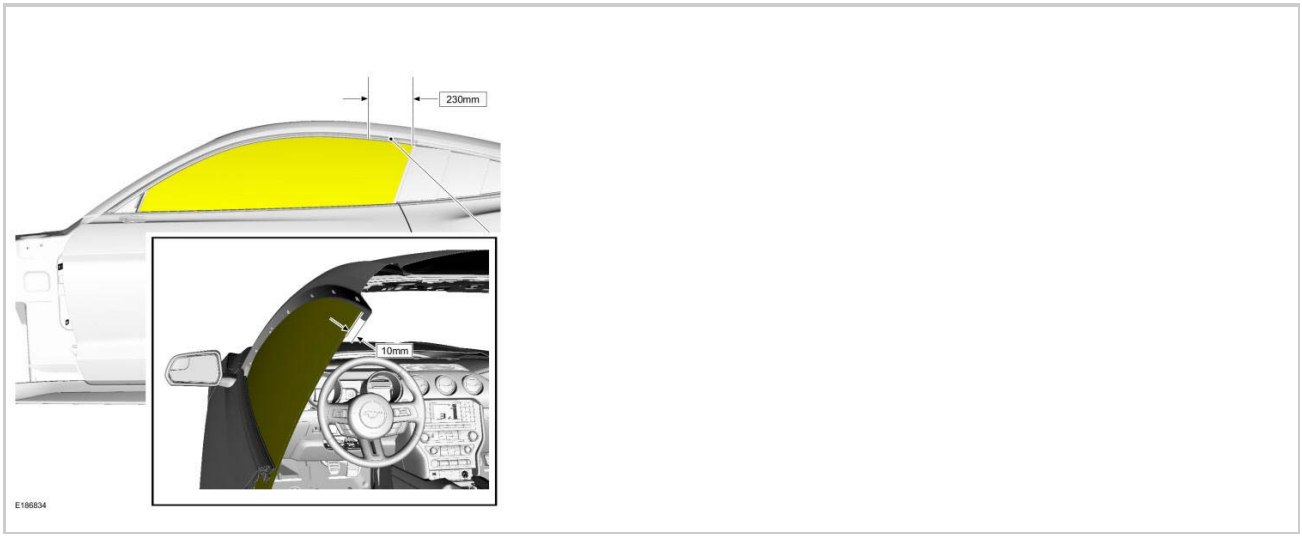
Raise the front door window glass to the full up position.

25.



Close the door.

All adjustments



26.

Recheck the front door glass up/down, fore/aft to body dimensions at the specified locations.

27.

Recheck the front door glass in/out to body dimensions at the specified locations.

28.

Install the removed components.

29.

Carry out the power door window initialization. Refer to: Power Door Window Initialization .

GENERAL PROCEDURES > DOOR WINDOW GLASS ADJUSTMENT - CONVERTIBLE

Adjustment

NOTE: RH side shown, LH side similar.

NOTE: Removal steps in this procedure may contain installation details.

NOTE: The rear quarter window glass must be aligned correctly before adjusting the front door window glass.

All adjustments

1.

Check the rear quarter window glass adjustment. Refer to: Rear Quarter Window Glass Adjustment - Convertible .

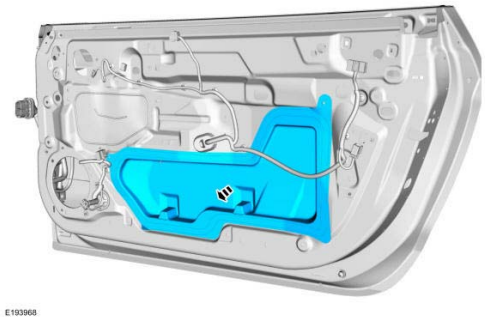
NOTE: The front door must be aligned correctly before adjusting the front door

window glass.

2.
Check the front door alignment. Refer to: Front Door Alignment .

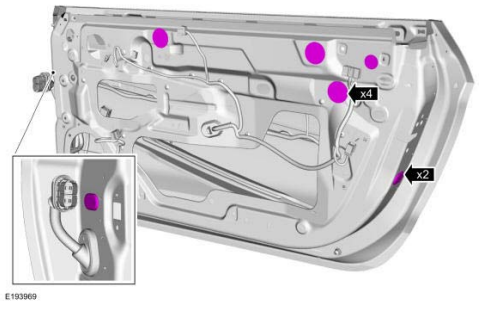
3.

Open the door.



4.

Remove the front door speaker. Refer to: Front Door Speaker RH . Refer to: Front Door Speaker LH .



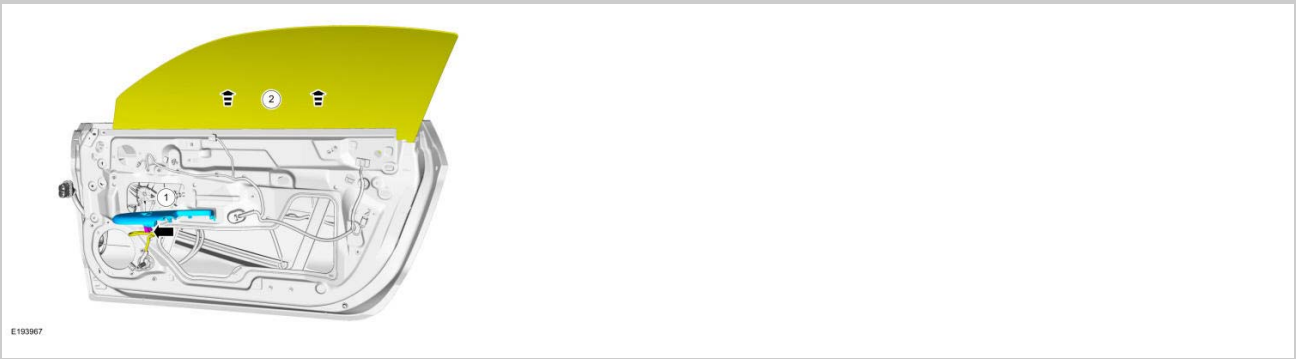
5.

Remove the front door lower watershield.

6.

Remove the grommets and the adhesive tapes.

7.



Raise the front door window glass to the full up position.

1.

Install the front door window control switch.

2.

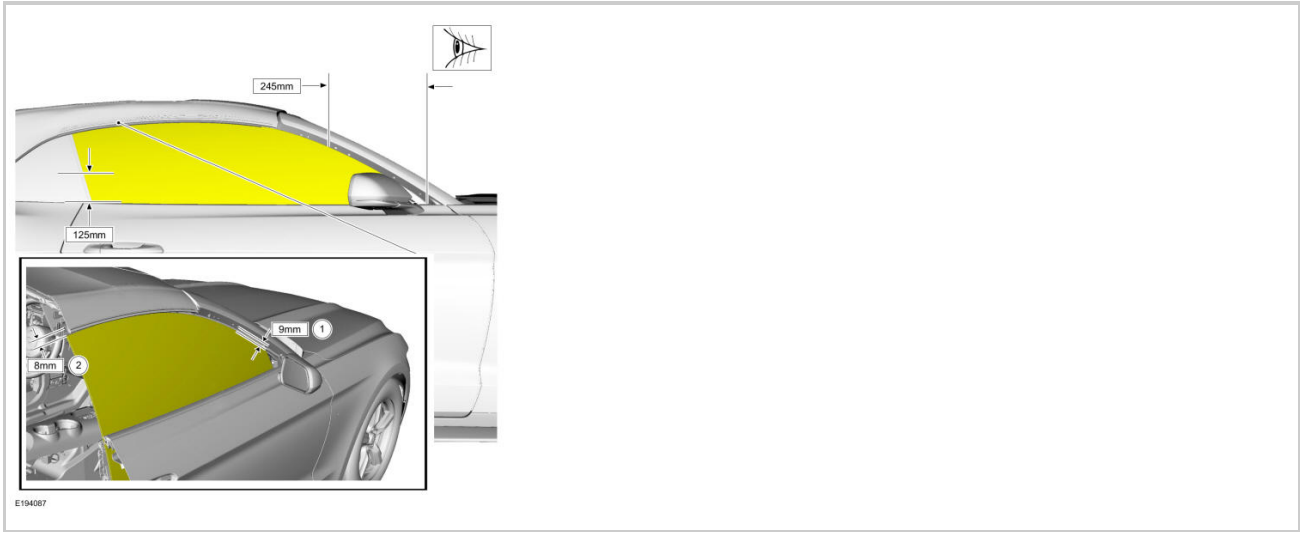
Raise the front door window glass to the full up position.

8.

Close the door.

Up/Down, Fore/Aft adjustment

9.



Measure the gap between the top of the front door glass and the body at the specified locations.

1.

Measurement at A-pillar 9mm.

2.

Measurement at B-pillar 8mm.

10.

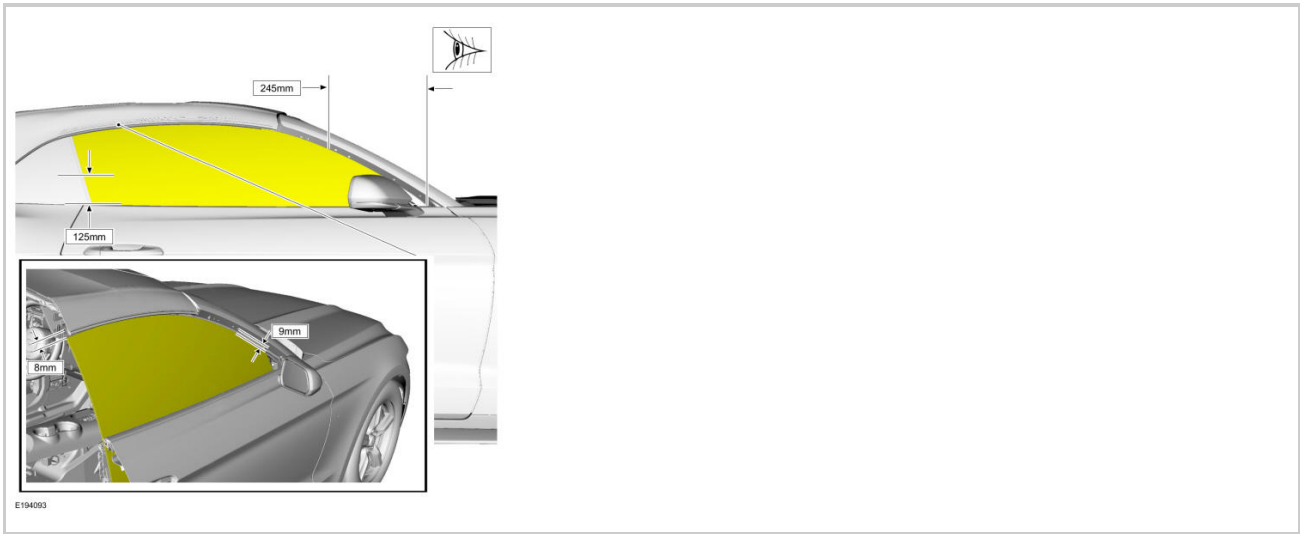
Open the door.

11.

Loosen both glass clamps, adjust the front door window glass as necessary and tighten the glass clamps.

Torque

: 80 lb.in (9 Nm)



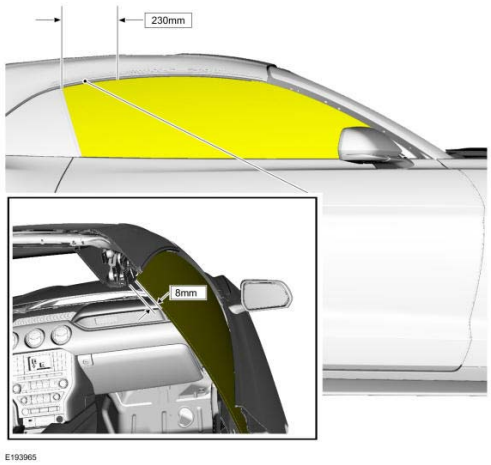
12.

Close the door.

13.

Check the door glass up/down, fore/aft to body dimensions.

In/Out adjustment

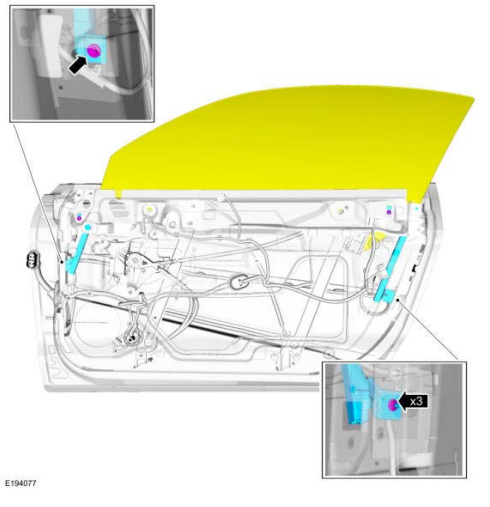


14.

Close the door.

15.

Measure the gap between the top of the front door glass and the body at the specified locations.



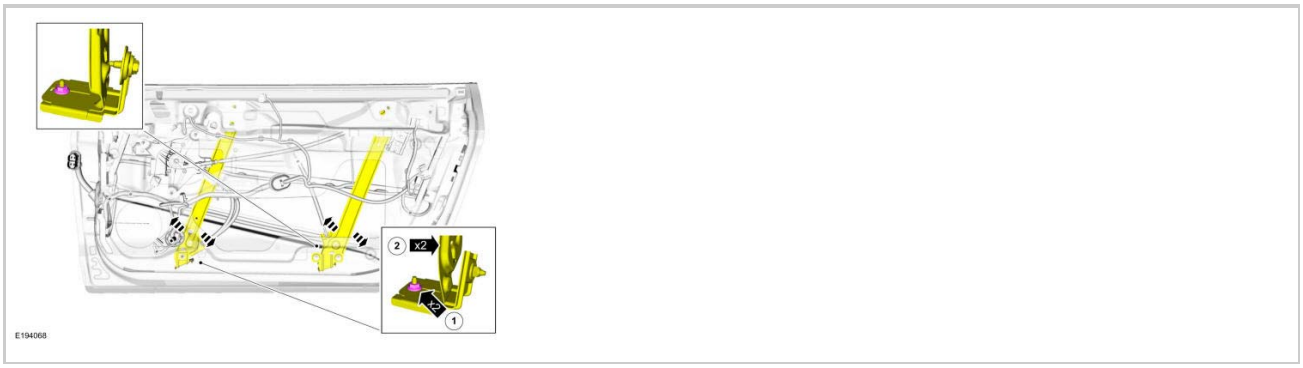
16.

Open the door.

17.

Loosen the nuts on the fore and aft front door glass runs.

18.



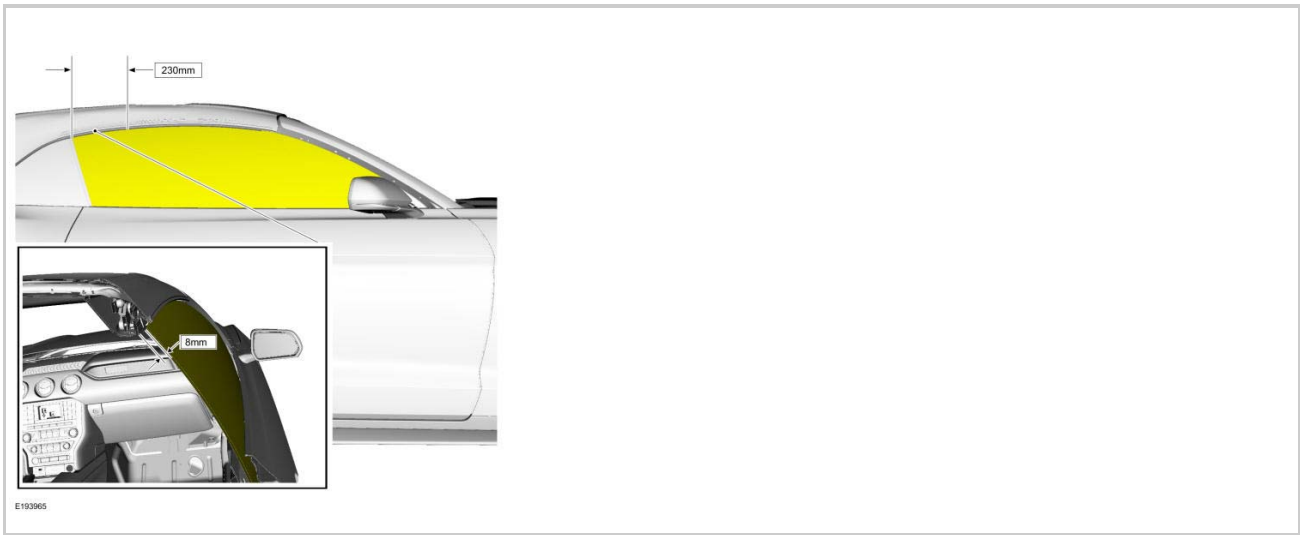
Adjust the regulator rails equally in and out to avoid binding.

1.

Loosen the lower window regulator nuts.

2.

Adjust the regulator rails equally in and out to avoid binding.



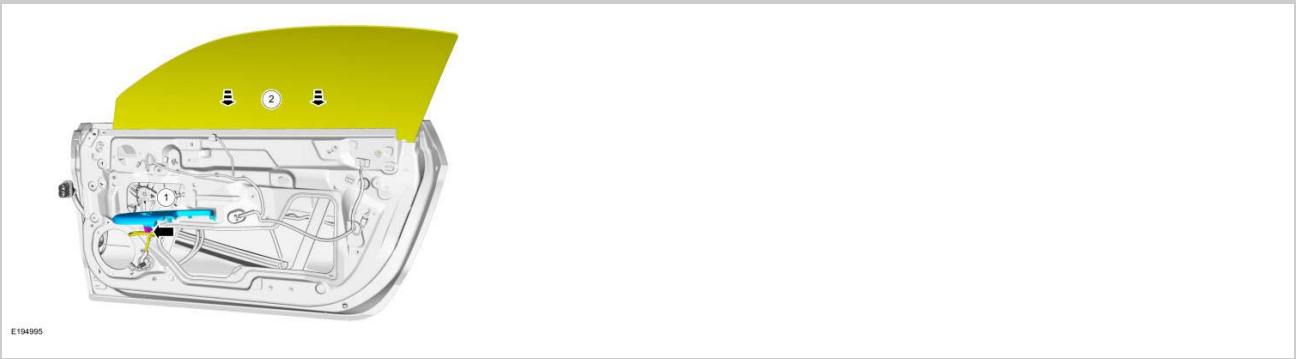
19.

Close the door.

20.

Check the door glass in/out to body dimensions and adjust the door glass runs and regulator rails relative to the door as necessary.

21.



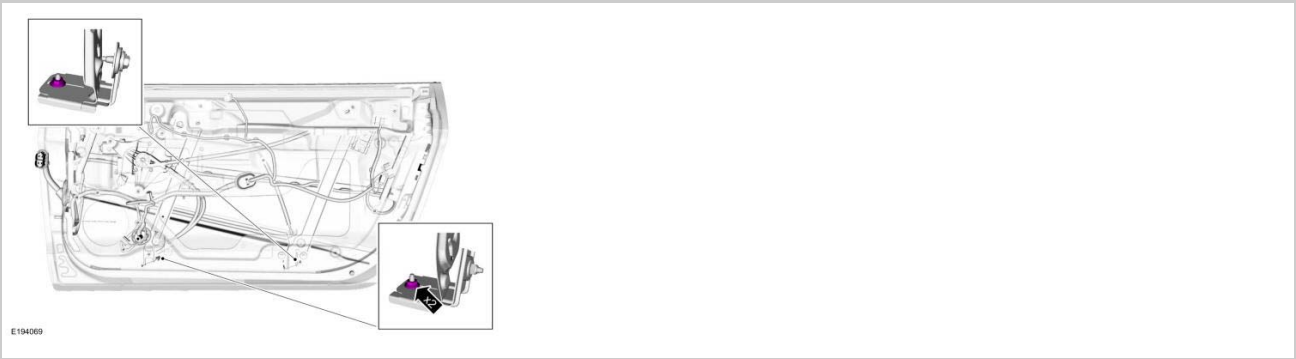
Lower the front door window glass.

1.

Install the front door window control switch.

2.

Lower the front door window glass.



22.

Tighten the front door glass regulator rail nuts.

Torque

: 97 lb.in (11 Nm)

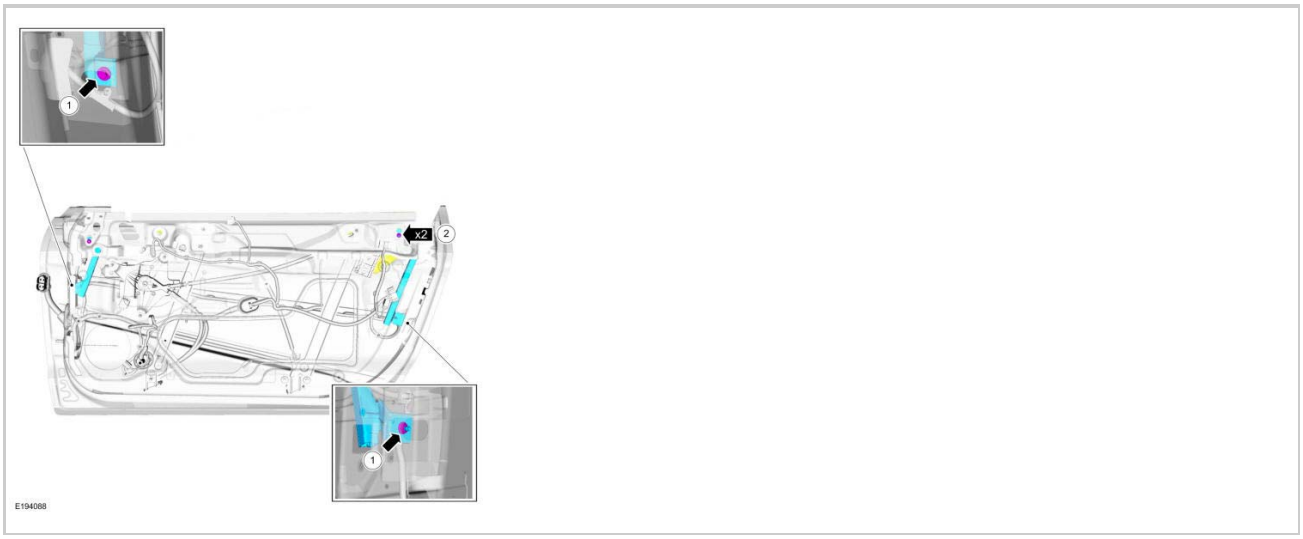
NOTE: Take care not to influence the position of the front door glass runs when tightening the nuts.

23.
Tighten the nuts on the fore and aft front door glass runs.

1.

Tighten the lower bolt and nuts on the fore and aft front door glass runs.

Torque



: 97 lb.in (11 Nm)

2.

Tighten the upper nuts on the fore and aft front door glass runs.

Torque

: 97 lb.in (11 Nm)

24.

Raise the front door window glass to the full up position.

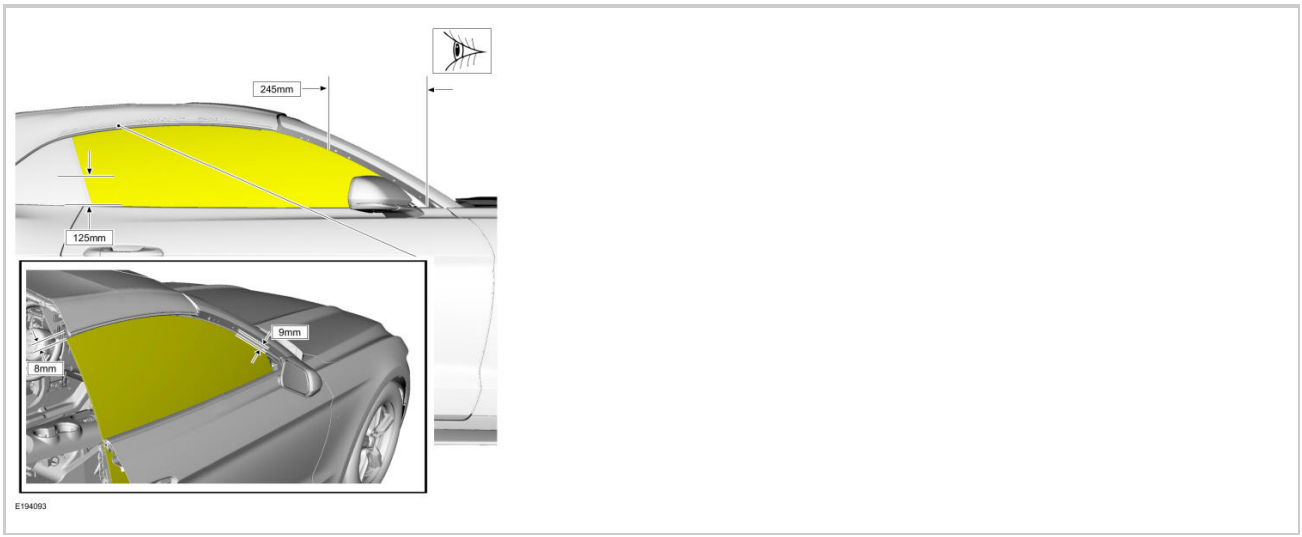
1.

Install the front door window control switch.

2.

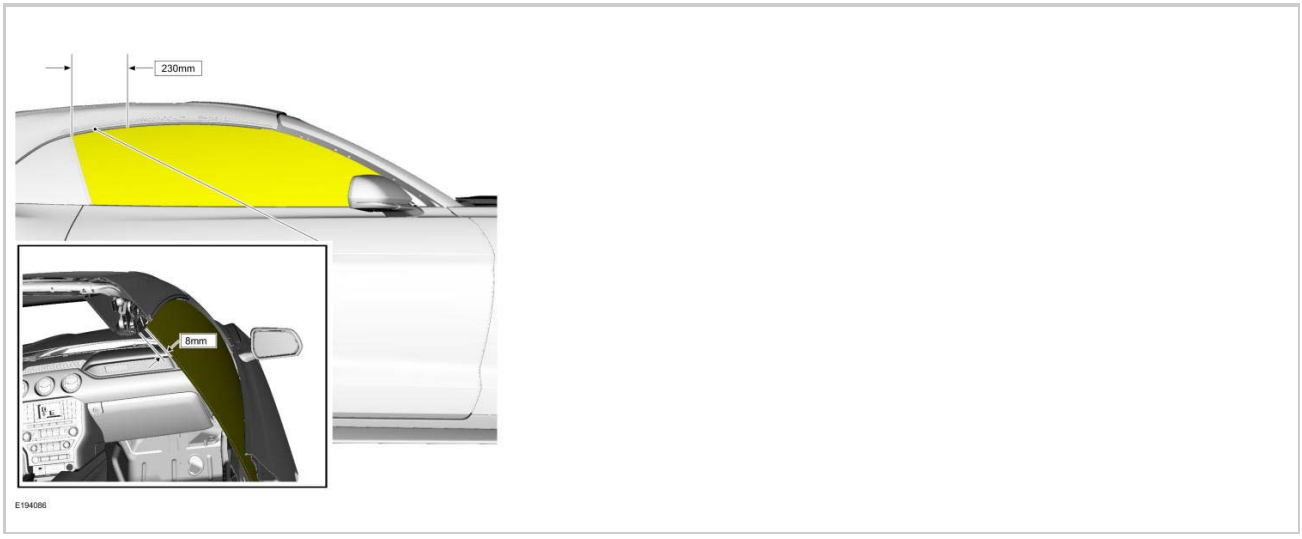
Raise the front door window glass to the full up position.

25.



Close the door.

All adjustments



26.

Recheck the front door glass up/down, fore/aft to body dimensions at the specified locations.

27.

Recheck the front door glass in/out to body dimensions at the specified locations.

28.

Install the removed components.

29.

Carry out the power door window initialization. Refer to: Power Door Window Initialization .

GENERAL PROCEDURES > REAR QUARTER WINDOW GLASS ADJUSTMENT - CONVERTIBLE

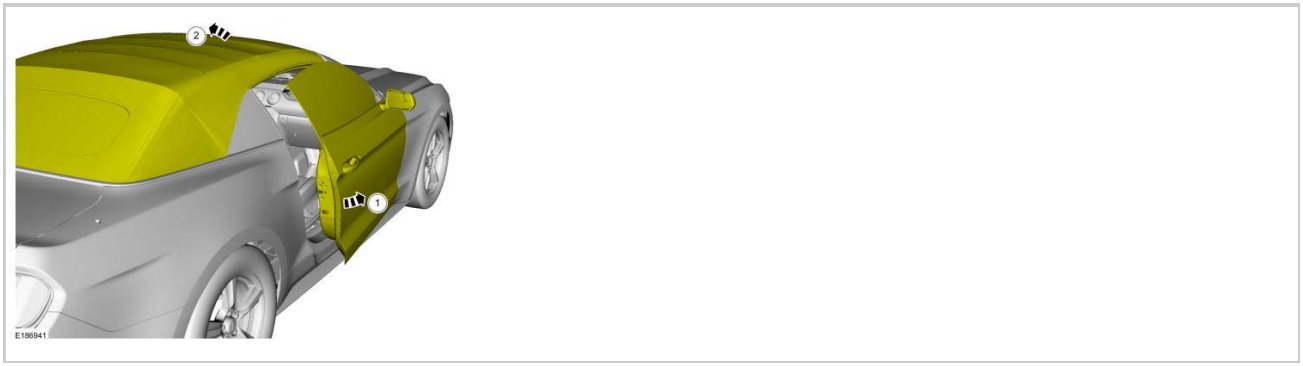
Adjustment

All adjustments

NOTE: RH side shown, LH side similar.

NOTE: Removal steps in this procedure may contain installation details.

1.



Open the door and lower the convertible top.

1.

Open the door.

2.

Lower the convertible top.

2.

If equipped, remove the RTM. Refer to: Radio Transceiver Module (RTM) .

3.

Remove the rear quarter panel speaker. Refer to: Rear Quarter Panel Speaker .

4.

Remove the rear quarter panel speaker bracket.

1.

Remove the nuts.

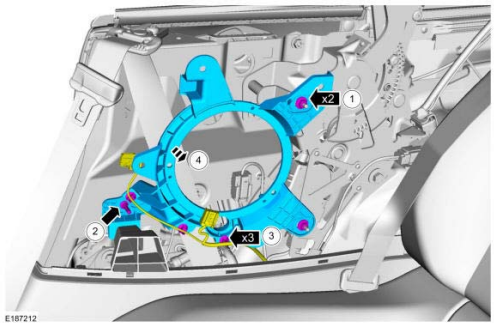
Torque

: 71 lb.in (8 Nm)

2.

Remove the stud bolt.

Torque



: 97 lb.in (11 Nm)

3.

Detach the retainers and position aside the wiring harness.

4.

Remove the rear quarter panel speaker bracket.

5.

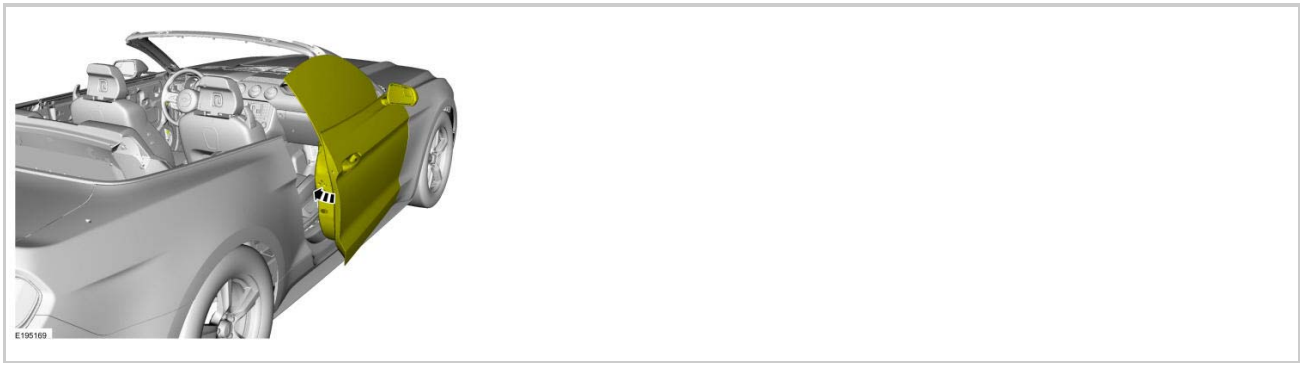
Remove the watershield.

1.

Disconnect the rear quarter window regulator motor electrical connector and position aside the wiring harness.

2.

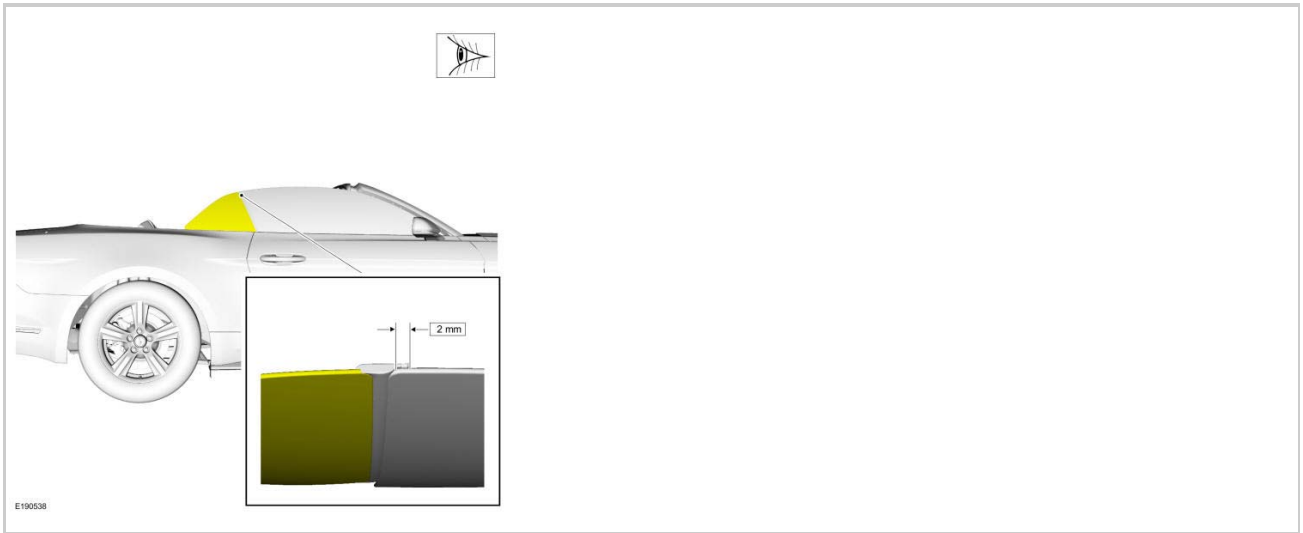
Detach the retainer and position aside the watershield.



3.

Detach the wiring harness retainer and remove the watershield.

6.

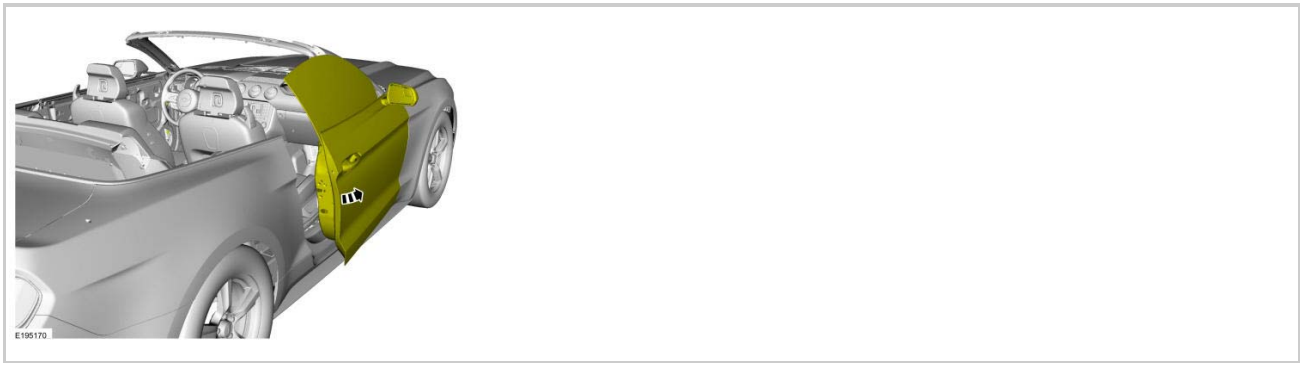


Close the door.

Up/Down, Fore/Aft adjustment

7.

Check the relative position of the rear quarter window glass to the body seals.



8.

Check the relative position of the rear quarter window glass to the door window glass.

9.

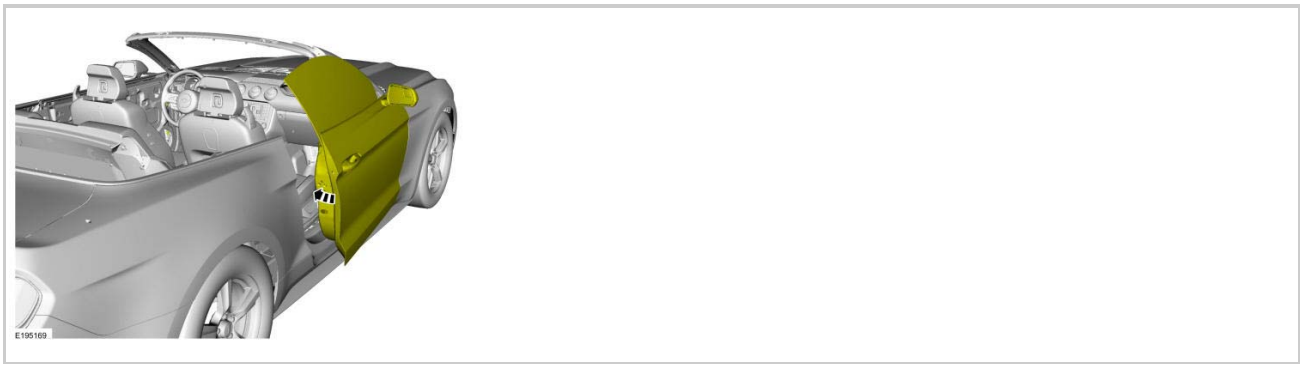
Open the door.

10.

Adjust the rear quarter window glass as necessary.

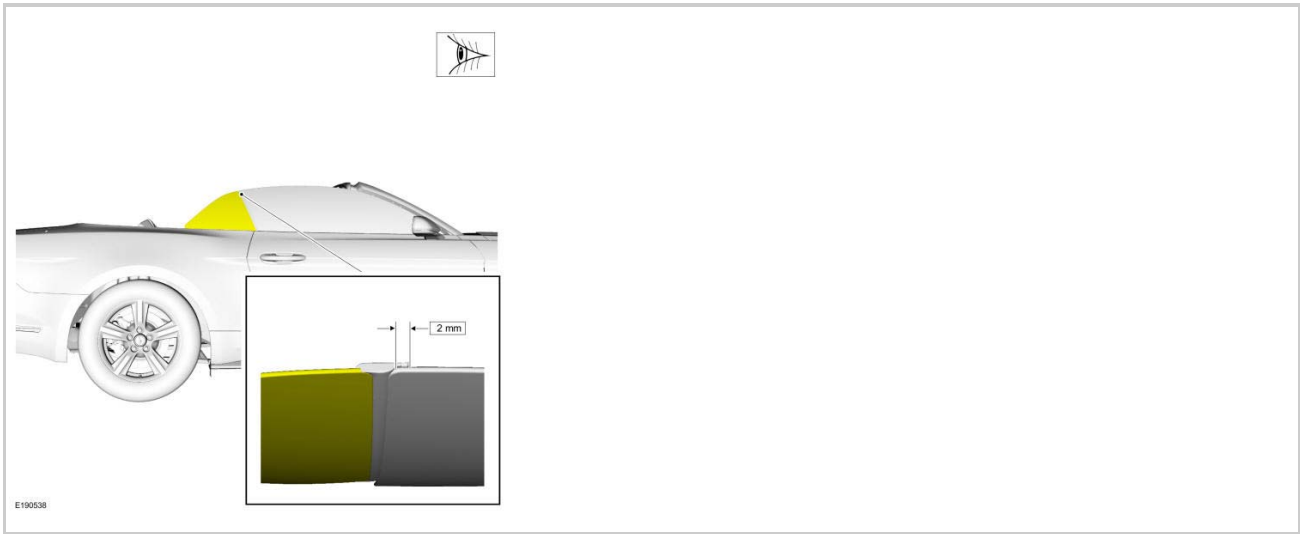
1.

Loosen the rear quarter window glass bolts.



2.

Adjust the rear quarter window glass as necessary.

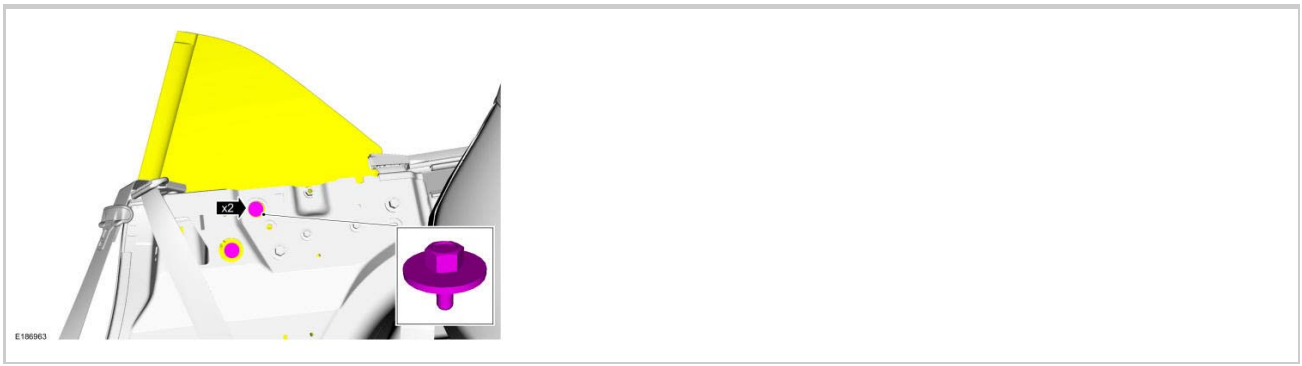


11.

Close the door.

12.

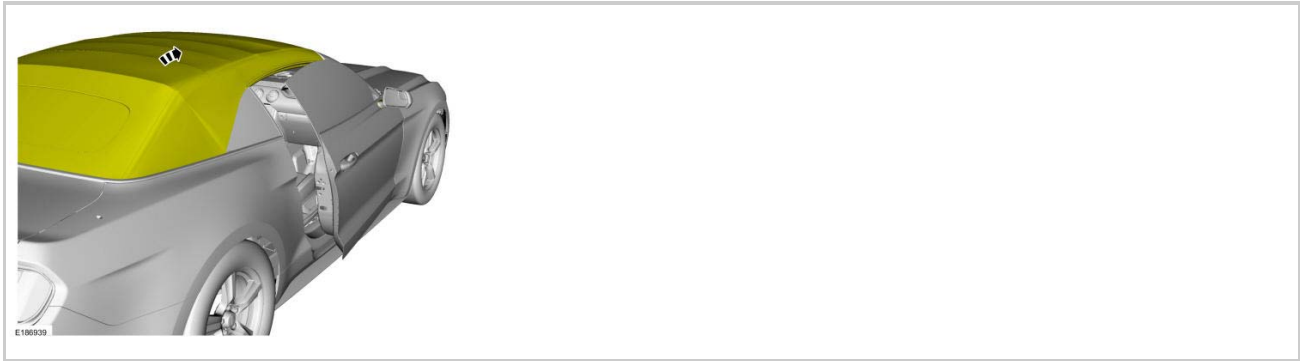
Check the quarter glass up/down, fore/aft to body dimensions.



13.

Tighten the rear quarter window glass bolts.

Torque



: 97 lb.in (11 Nm)

In/Out adjustment

14.

Close the convertible top.

15.

Close the door.

16.

Check the relative position of the rear quarter window glass to the body seals.

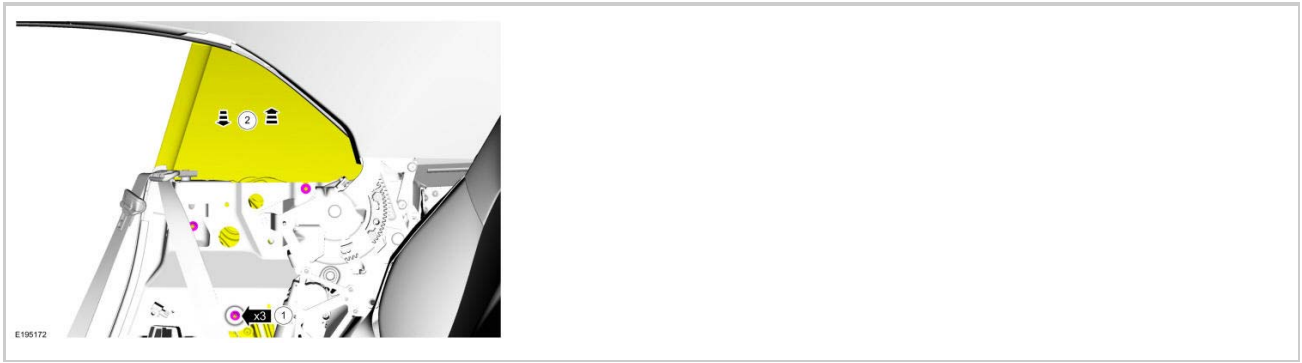
17.

Check the relative position of the rear quarter window glass to the door window glass. Make sure the division bar seal enters the convertible top seals completely when the quarter window glass is raised to full up position and engages the door glass without clipping.

18.

Open the door.

19.



Adjust the rear quarter window glass/regulator assembly as necessary.

1.

Loosen the rear quarter window glass/regulator assembly nuts.

2.

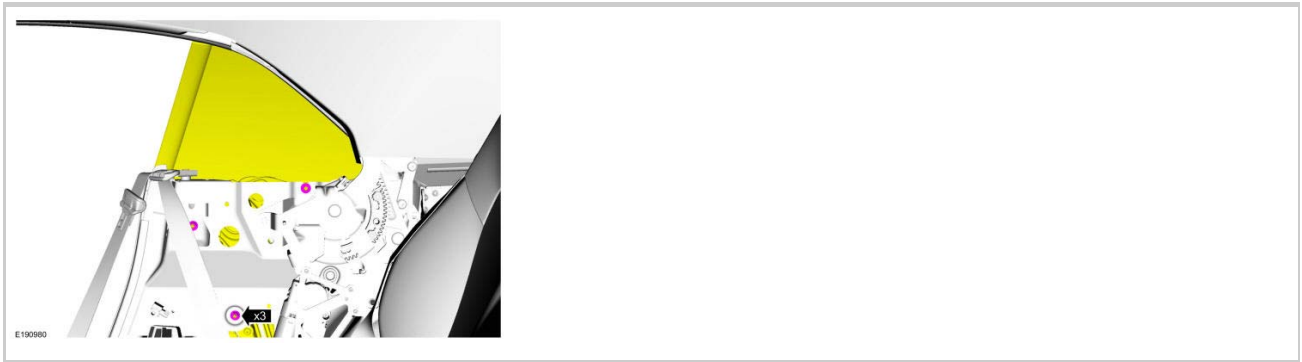
Adjust the rear quarter window glass/regulator assembly as necessary.

20.

Close the door.

21.

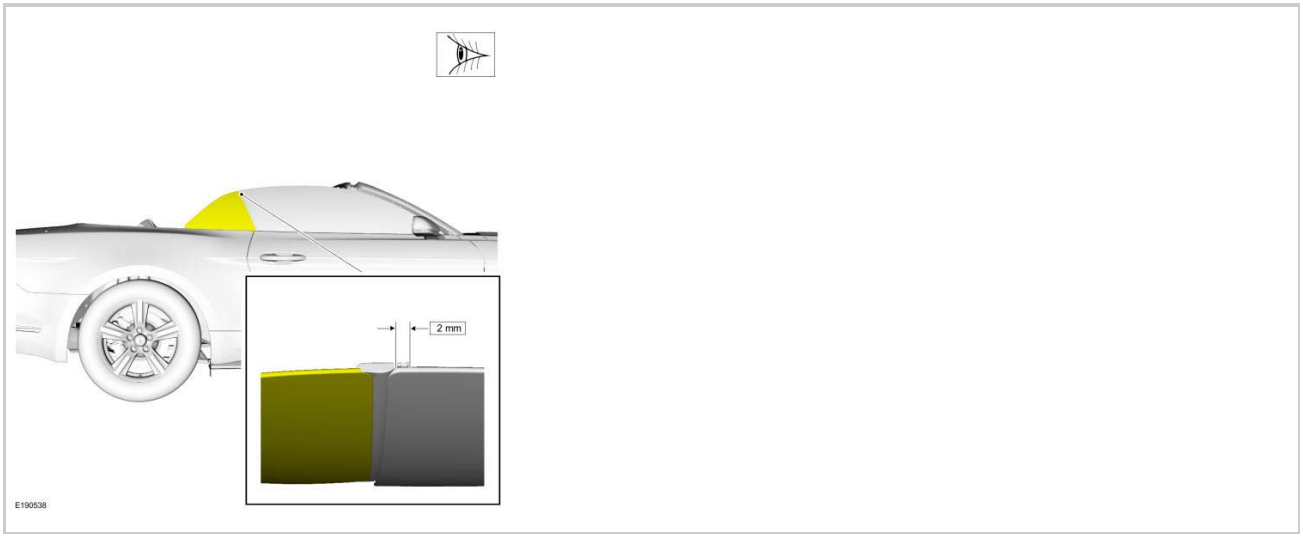
Check the rear quarter window glass in/out to seals and door glass.



22.

Tighten the rear quarter window glass/regulator assembly nuts.

Torque



: 177 lb.in (20 Nm)

All adjustments

NOTE: Convertible top removed for clarity.

23.
Check the relative position of the rear quarter window glass to the body seals and door glass.

24.

Check the relative position of the rear quarter window glass to the body seals.

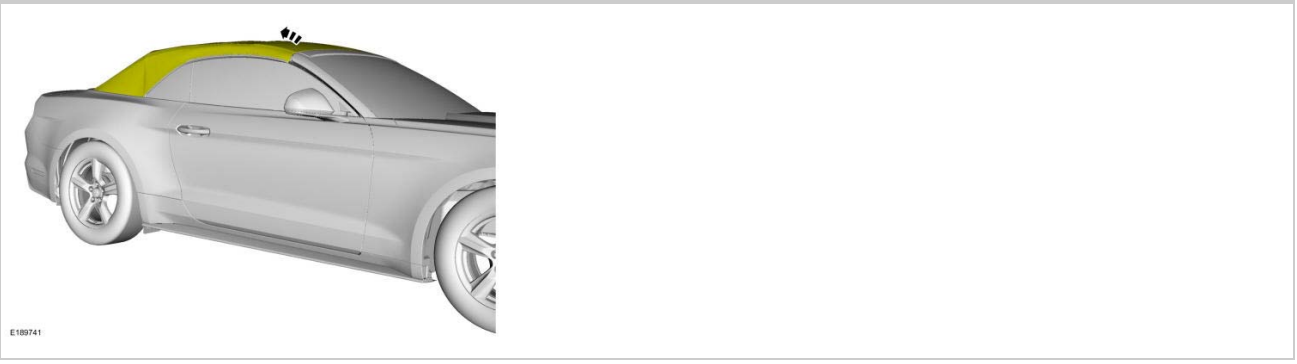
25.

Check the relative position of the rear quarter window glass to the door window glass.

26.

Install the removed components.

REMOVAL AND INSTALLATION > REAR QUARTER WINDOW GLASS - CONVERTIBLE > REMOVAL



NOTE: RH side shown, LH side similar.

NOTE: Removal steps in this procedure may contain installation details.

All vehicles

1.

Lower the convertible top.

Right hand side

2.

Remove the RTM. Refer to: Radio Transceiver Module (RTM) .

All vehicles

NOTE: The convertible top assembly removed for clarity.

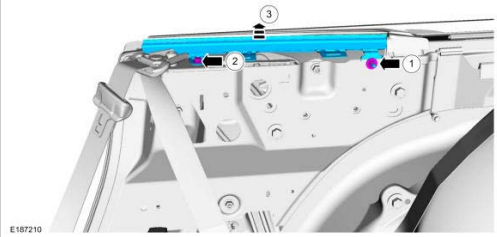
3.

Remove the rear quarter panel speaker. Refer to: Rear Quarter Panel Speaker .

4.

Remove the rear quarter window glass interior belt moulding.

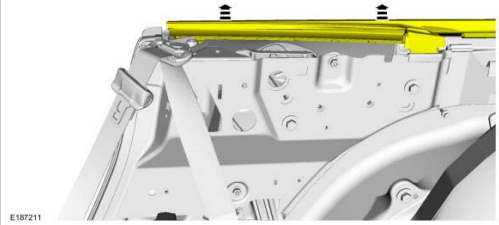
1.



Remove the nut.

2.

Remove the bolt.



3.

Remove the rear quarter window glass interior belt moulding.

5.

Position aside the rear quarter window glass exterior moulding.

NOTE: If the rear quarter window glass is inoperative the rear quarter window regulator motor will have to be removed to allow movement of the glass to gain access to the bolts.

NOTE: If the rear quarter window glass is not in full up position, the rear quarter window glass and rear quarter window regulator cannot be separated.

6.
Raise the rear quarter window glass to full up position.

7.

Remove the rear quarter panel speaker bracket.

1.

Remove the nuts.

Torque

: 71 lb.in (8 Nm)

2.

Remove the stud bolt.

Torque

: 97 lb.in (11 Nm)

3.

Detach the retainer and position aside the wiring harness.

4.

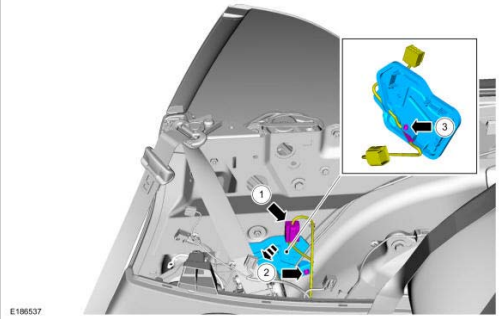
Remove the rear quarter panel speaker bracket.

8.

Remove the watershield.

1.

Disconnect the rear quarter window regulator motor electrical connector and position aside the



wiring harness.

2.

Detach the retainer and position aside the watershield.

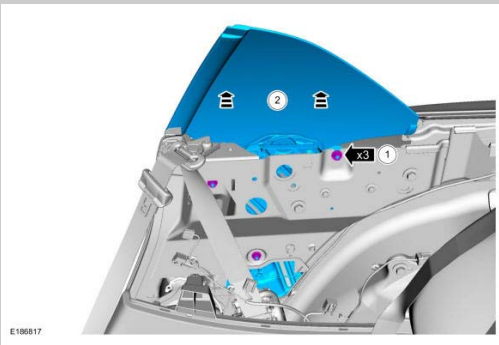
3.

Detach the wiring harness retainer and the watershield.

9.

Remove the rear quarter window glass/regulator assembly.

1.



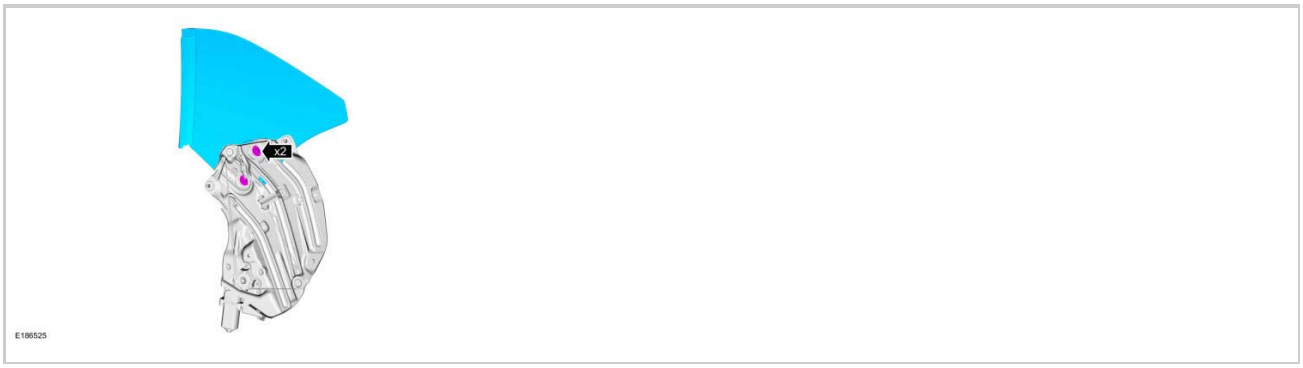
Remove the nuts.

Torque

: 177 lb.in (20 Nm)

2.

Remove the rear quarter window glass/regulator assembly.



NOTE: If the rear quarter window glass is inoperative the rear quarter window regulator motor will have to be removed to allow movement of the glass to gain access to the bolts.

NOTE: This step only necessary when installing a new rear quarter window glass.

10.
Remove the bolts and the rear quarter window glass.

Torque

: 97 lb.in (11 Nm)

REMOVAL AND INSTALLATION > REAR QUARTER WINDOW GLASS - CONVERTIBLE > INSTALLATION

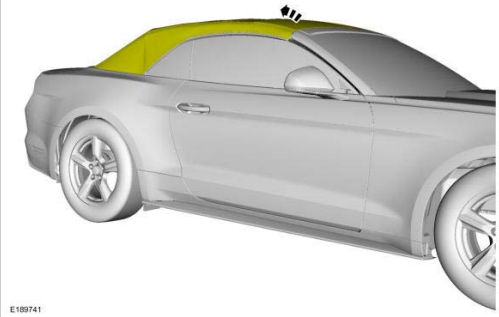
1.

To install, reverse the removal procedure.

2.

Carry out the rear quarter window glass adjustment. Refer to: Rear Quarter Window Glass Adjustment - Convertible .

REMOVAL AND INSTALLATION > REAR QUARTER WINDOW REGULATOR - CONVERTIBLE > REMOVAL



NOTE: RH side shown, LH side similar.

NOTE: Removal steps in this procedure may contain installation details.

All vehicles

1.

Lower the convertible top.

Right hand side

2.

Remove RTM. Refer to: Radio Transceiver Module (RTM) .

All vehicles

NOTE: The convertible top assembly removed for clarity.

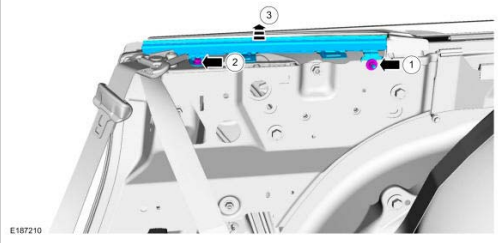
3.

Remove the rear quarter panel speaker. Refer to: Rear Quarter Panel Speaker .

4.

Remove the rear quarter window glass interior belt moulding.

1.



Remove the nut.

2.

Remove the bolt.

3.

Remove the rear quarter window glass interior belt moulding.

5.

Position aside the rear quarter window glass exterior moulding.

NOTE: If the rear quarter window glass is inoperative the rear quarter window regulator motor will have to be removed to allow movement of the glass to gain access to the bolts.

NOTE: If the rear quarter window glass is not in full up position, the rear quarter window glass and rear quarter window regulator cannot be separated.

6.
Raise the rear quarter window glass to full up position.

7.

Remove the rear quarter panel speaker bracket.

1.

Remove the nuts.

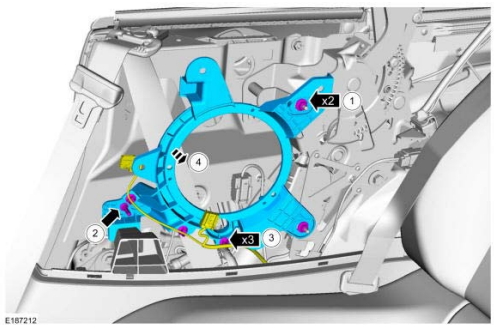
Torque

: 71 lb.in (8 Nm)

2.

Remove the stud bolt.

Torque



: 97 lb.in (11 Nm)

3.

Detach the retainer and position aside the wiring harness.

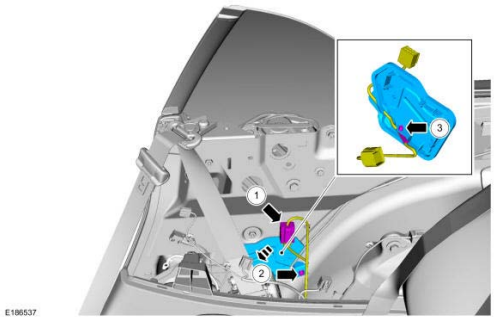
4.

Remove the rear quarter panel speaker bracket.

8.

Remove the watershield.

1.



Disconnect the rear quarter window regulator motor electrical connector and position aside the wiring harness.

2.

Detach the retainer and position aside the watershield.

3.

Detach the wiring harness retainer and the watershield.

9.

Remove the rear quarter window glass/regulator assembly.

1.

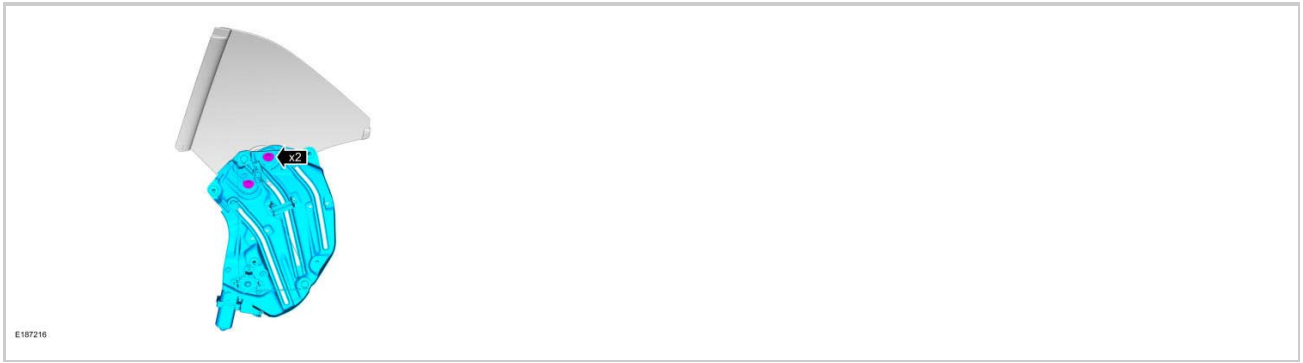
Remove the nuts.

Torque

: 177 lb.in (20 Nm)

2.

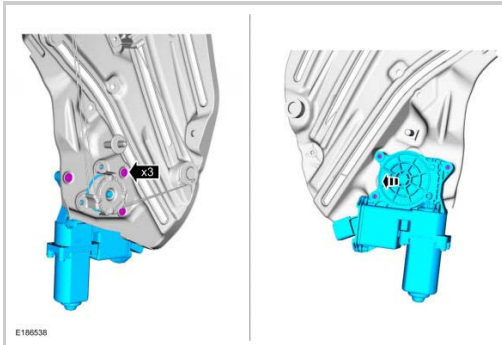
Remove the rear quarter window glass/regulator assembly.



NOTE: If the rear quarter window glass is inoperative the rear quarter window regulator motor will have to be removed to allow movement of the glass to gain access to the bolts.

NOTE: This step only necessary when installing a new rear quarter window regulator.

10.
Remove the bolts and the rear quarter window regulator.



Torque

: 97 lb.in (11 Nm)

NOTE: This step is only necessary when installing a new component.

11.
Remove the bolts and the rear quarter window regulator motor.

REMOVAL AND INSTALLATION > REAR QUARTER WINDOW REGULATOR - CONVERTIBLE > INSTALLATION

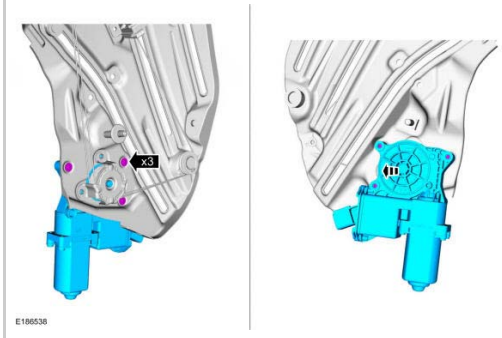
1.

To install, reverse the removal procedure.

2.

Carry out the rear quarter window glass adjustment. Refer to: Rear Quarter Window Glass Adjustment - Convertible .

REMOVAL AND INSTALLATION > REAR QUARTER WINDOW REGULATOR MOTOR - CONVERTIBLE > REMOVAL



NOTE: RH side shown, LH side similar.

1.

Remove the rear quarter window regulator. Refer to: Rear Quarter Window Regulator - Convertible .

2.

Remove the bolts and the rear quarter window regulator motor.

REMOVAL AND INSTALLATION > REAR QUARTER WINDOW REGULATOR MOTOR - CONVERTIBLE > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Carry out the rear quarter window glass adjustment. Refer to: Rear Quarter Window Glass Adjustment - Convertible .

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW CONTROL SWITCH > REMOVAL

NOTE: LHD shown, RHD similar.

Both doors

NOTE: LH side shown, RH side similar.

1.
Remove the front door window control switch.

1.

Remove the front door window control switch and the bezel assembly.

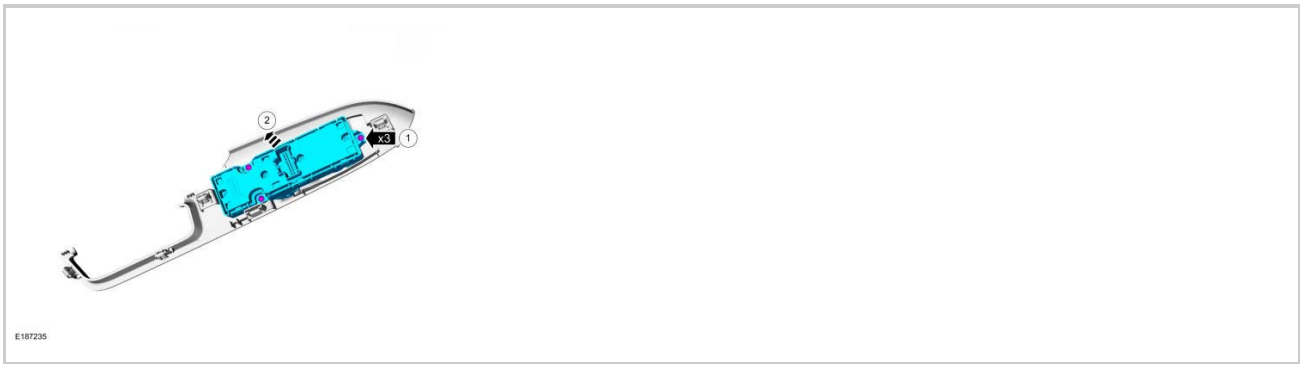
2.

Disconnect the front door window control switch electrical connector.

Driver side

NOTE: This step is only necessary when installing a new component.

2.



Remove the front door window control switch.

1.

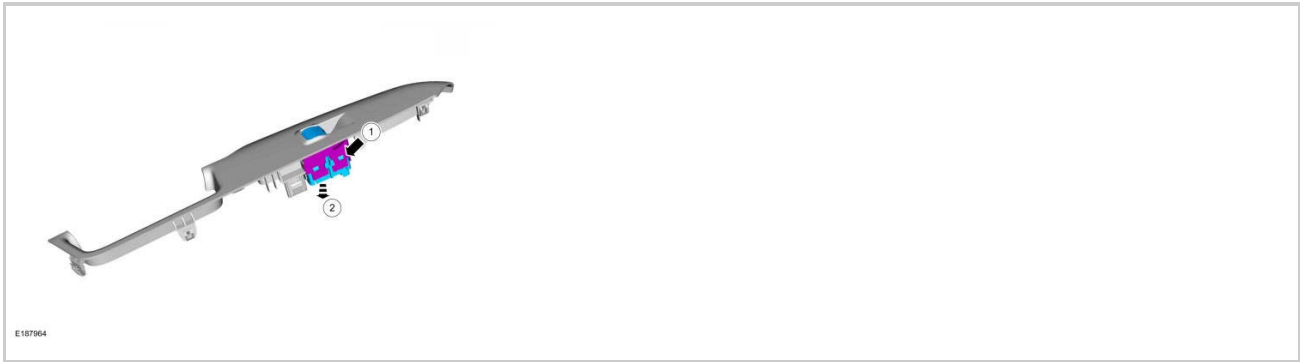
Remove the retainers.

2.

Remove the front door window control switch from the bezel.

Passenger side

> *NOTE: This step is only necessary when installing a new component.*



3.
Remove the front door window control switch.

1.

Release the retaining tab from the front door window control switch.

2.

Remove the front door window control switch from the bezel.

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW CONTROL SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW GLASS > REMOVAL

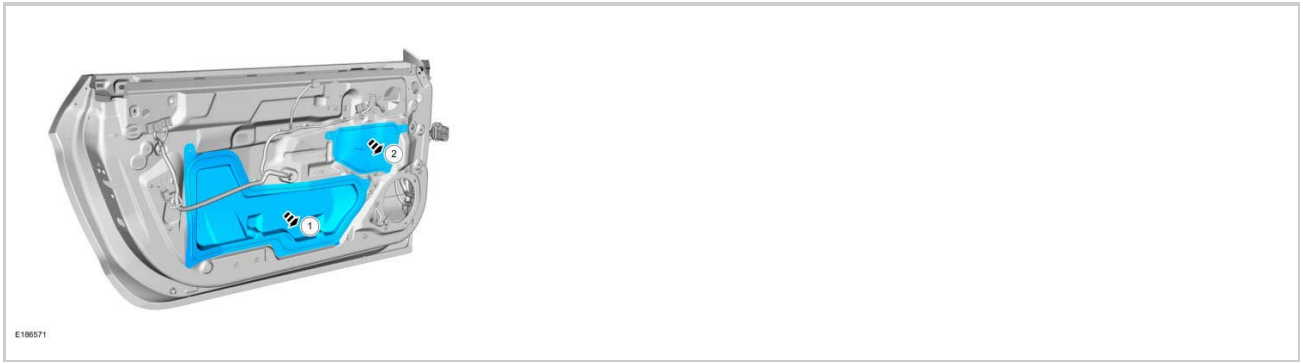
NOTE: LH side shown, RH side similar.

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door speaker. Refer to: Front Door Speaker LH . Refer to: Front Door Speaker RH .

2.



Remove the front door upper and the lower watershield.

1.

Remove the front door lower watershield.

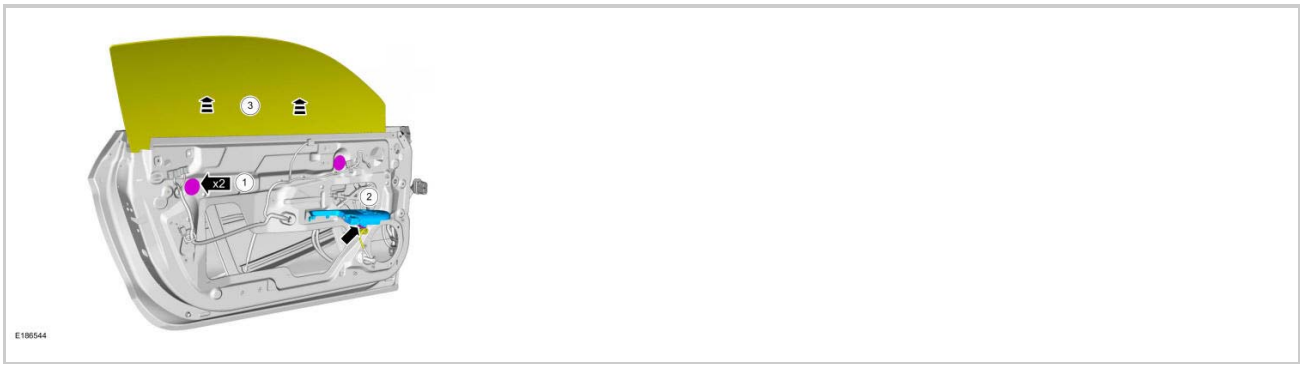
2.

Remove the front door upper watershield.

3.

Raise the front door window glass to full up position.

1.



Remove the adhesive covers.

2.

Install the front door window control switch.

3.

Raise the front door window glass to full up position.

4.

Remove the front door window glass.

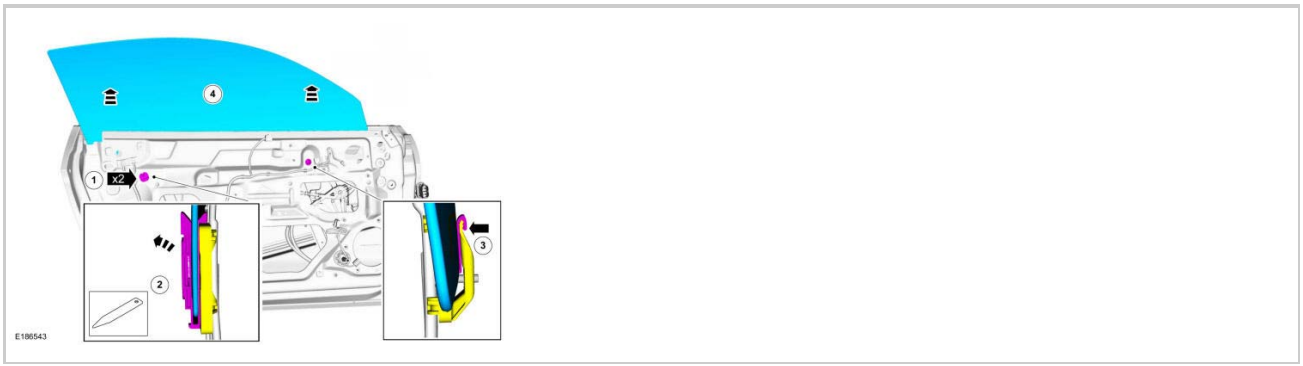
1.

Remove the bolts.

Torque

: 80 lb.in (9 Nm)

2.



Using a non-marring trim tool from the outboard side of the glass, pry the tang on each clip back, releasing the window glass.

3.

Release the clip.

4.

Remove the front window glass.

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW GLASS > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Carry out the door window glass adjustment. Refer to: Door Window Glass Adjustment - Coupe . Refer to: Door Window Glass Adjustment - Convertible .

3.

If the door is equipped with one-touch up the power window motor must be initialized. Carry out the power door window initialization. Refer to: Power Door Window Initialization .

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW REGULATOR > REMOVAL

NOTE: LH side shown, RH side similar.

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door window glass. Refer to: Front Door Window Glass .

2.

Mark the location and remove the front door window regulator nuts.

1.

Remove the adhesive tapes.

2.

Disconnect the front door window regulator electrical connector and position aside the wiring harness.

Torque

: 97 lb.in (11 Nm)

3.

Mark the location of the nuts for installation.

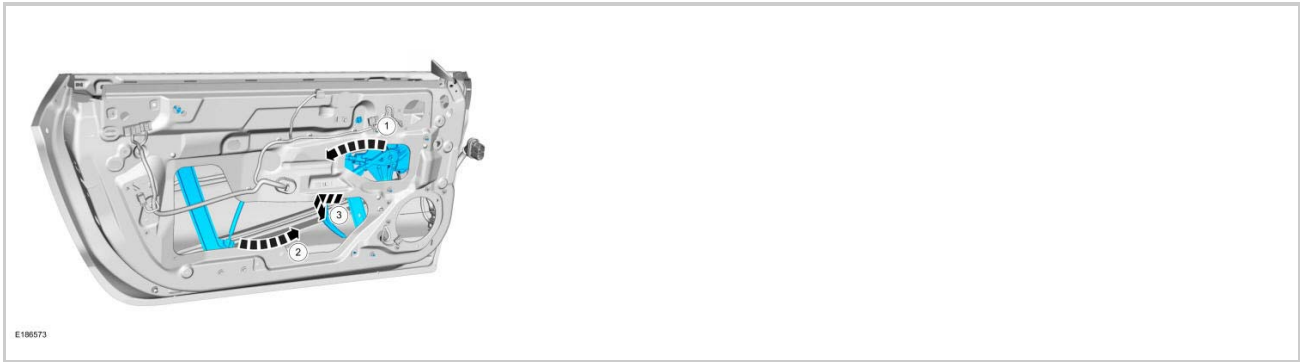
4.

Remove the nuts.

3.

Remove the front door window regulator.

1.



Rotate the front half of the window regulator rearward.

2.

Rotate the rear half of the window regulator forward.

3.

Remove the front door window regulator.

NOTE: This step is only necessary when installing a new component.

4.
Remove the front door window regulator motor. Refer to: Front Door Window Regulator Motor .

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW REGULATOR > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Align the front door window regulator to the marks made previous during removal.

3.

Carry out the door window glass adjustment. Refer to: Door Window Glass Adjustment - Coupe . Refer to: Door Window Glass Adjustment - Convertible .

4.

If the door is equipped with one-touch up the power window motor must be initialized. Carry out the power door window initialization. Refer to: Power Door Window Initialization .

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW REGULATOR MOTOR > REMOVAL

NOTE: LH side shown, RH side similar.

1.

Remove the front door window regulator. Refer to: Front Door Window Regulator .

2.

Remove the retainers and the front door window regulator motor.

REMOVAL AND INSTALLATION > FRONT DOOR WINDOW REGULATOR MOTOR > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Carry out the door window glass adjustment. Refer to: Door Window Glass Adjustment - Coupe . Refer to: Door Window Glass Adjustment - Convertible .

3.

If the door is equipped with one-touch up the power window motor must be initialized. Carry out the power door window initialization. Refer to: Power Door Window Initialization .

REMOVAL AND INSTALLATION > FRONT DOOR GLASS RUN AND BRACKET > REMOVAL

NOTE: LH side shown, RH side similar.

NOTE: Removal steps in this procedure may contain installation details.

Fore front door glass run

1.

Raise the front door window glass to full up position.

1.

Install the front door window control switch.

2.

Raise the front door window glass to full up position.

2.

Remove the front door speaker. Refer to: Front Door Speaker LH . Refer to: Front Door Speaker RH .

3.

Mark the location and remove the fore front door glass run.

1.

Mark the location of the retainers for installation.

2.

Loosen the top nut.

Torque

: 97 lb.in (11 Nm)

3.

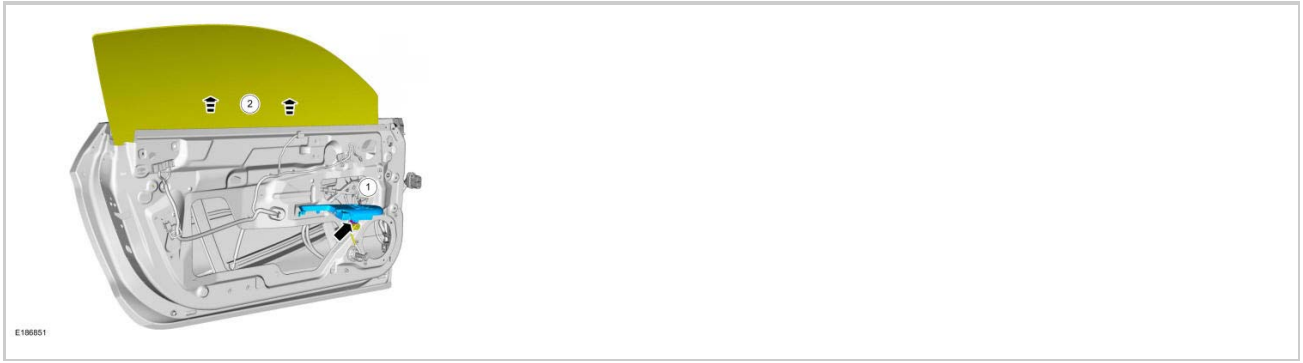
Remove the lower nut and the fore front door glass run.

Torque

: 97 lb.in (11 Nm)

Aft front door glass run

4.



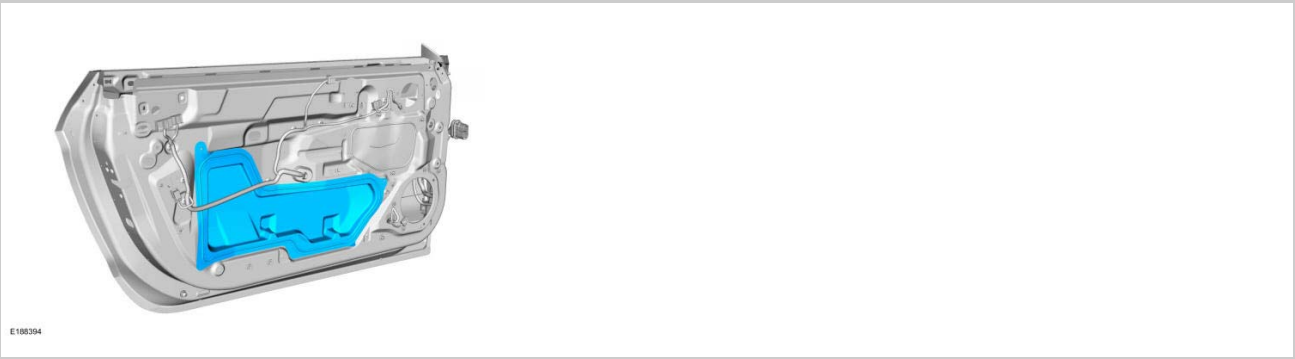
Raise the front door window glass to full up position.

1.

Install the front door window control switch.

2.

Raise the front door window glass to full up position.



5.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

6.

Remove the front door lower watershield.

7.

Mark the location and remove the aft front door glass run.

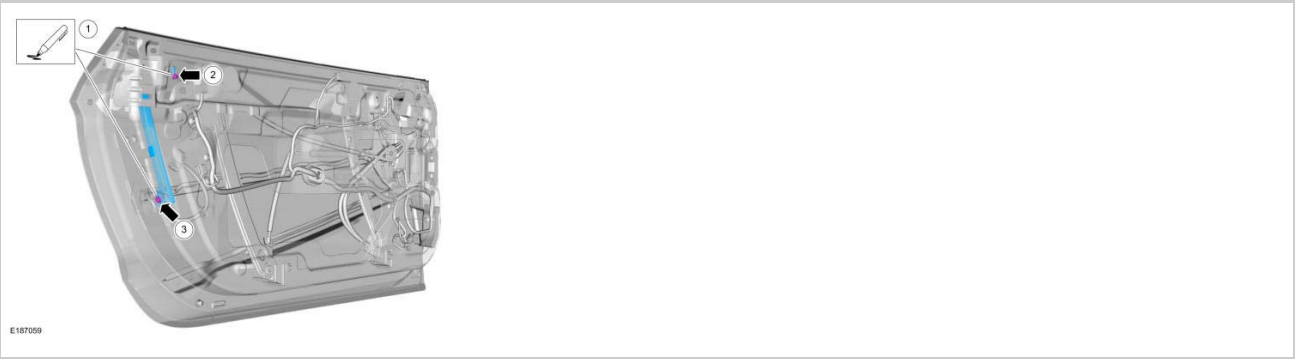
1.

Mark the location of the retainers for installation.

2.

Loosen the top nut.

Torque



: 97 lb.in (11 Nm)

3.

Remove the lower bolt and the aft front door glass run.

Torque

: 97 lb.in (11 Nm)

REMOVAL AND INSTALLATION > FRONT DOOR GLASS RUN AND BRACKET > INSTALLATION

1.

To install, reverse the removal procedure.

2.

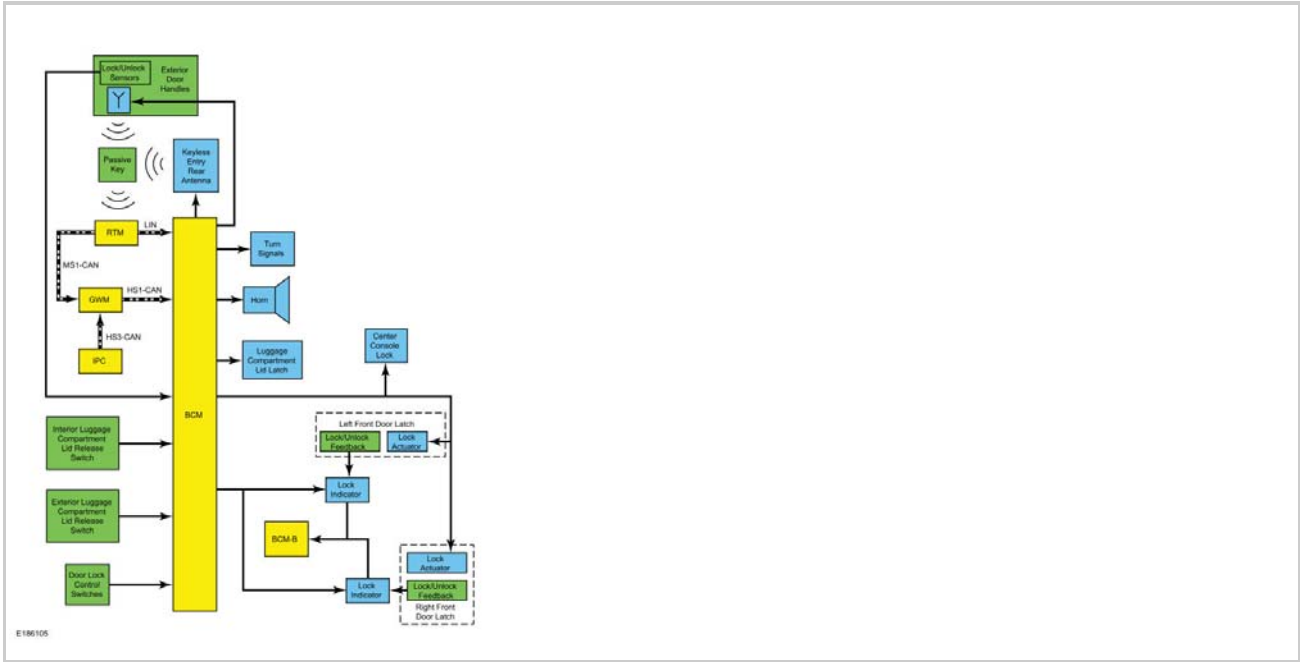
Carry out the door window glass adjustment. Refer to: Door Window Glass Adjustment - Coupe . Refer to: Door Window Glass Adjustment - Convertible .

3.

If the door is equipped with one-touch up the power window motor must be initialized. Carry out the power door window initialization. Refer to: Power Door Window Initialization .

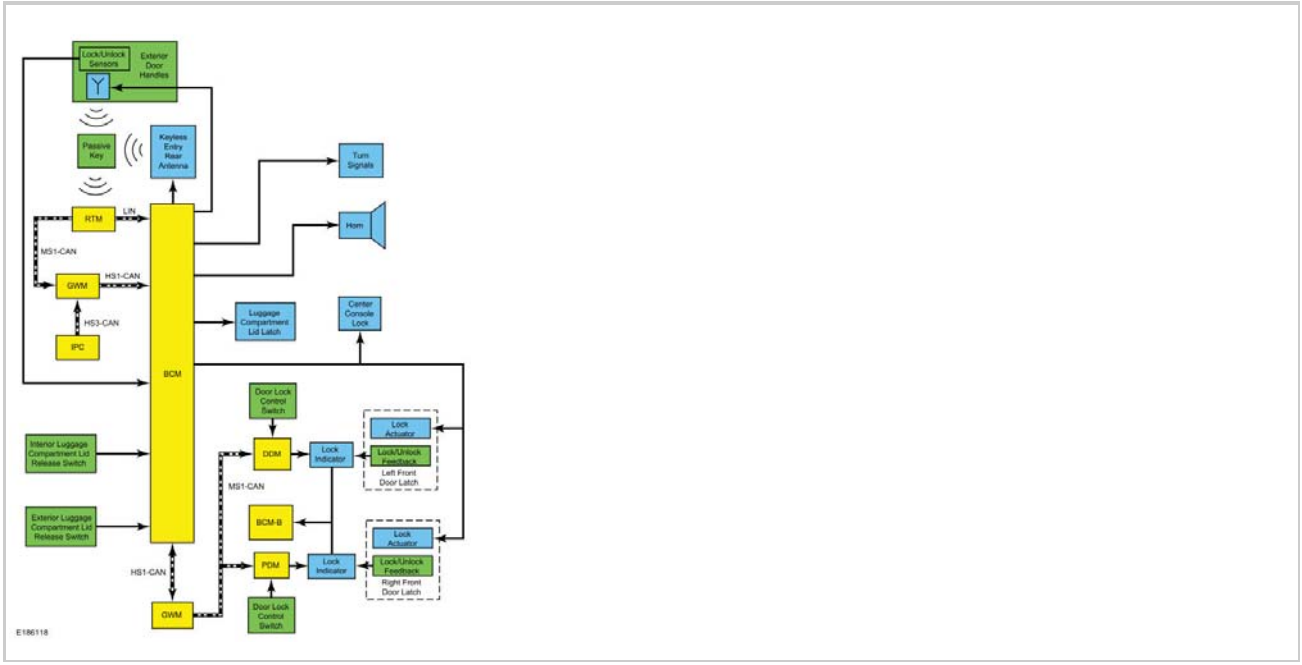
DESCRIPTION AND OPERATION > HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS - OVERVIEW > OVERVIEW

The power lock/unlock feature locks or unlocks the doors upon a customer request from a door lock control switch, the passive entry system or a RKE transmitter. The doors can also be locked by using a mechanical key in the driver door lock cylinder.



The passive entry feature automatically locks or unlocks the doors, or releases the luggage compartment lid latch.

DESCRIPTION AND OPERATION > HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION



System Operation

DESCRIPTION AND OPERATION > HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYSTEM DIAGRAM

Without Memory Seat

With Memory Seat

DESCRIPTION AND OPERATION > HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Vehicle speed	PCM	The BCM uses the vehicle speed data for the autolock and auto-unlock features.
RKE data	RTM	Provides the BCM with the lock/unlock status of the driver door latch. The lock/unlock status is used for the illumination of the door lock status indicator.
Door lock switch status	DDM	Provides the BCM with lock/unlock requests based on the input from the door lock control switch.

IPC Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Message center feature configuration	IPC	Provides the BCM configuration settings selected by the driver of the vehicle, such as autolock and auto-unlock settings.

Power Door Locks

The BCM controls the door locks using a series of integrated relays (driver door unlock/passenger doors unlock/all doors lock). When the relays are not energized, ground is provided on both circuits to the lock motors within the latches. When an unlock relay energizes, voltage is provided to one side of the lock motor to unlock the door(s). When the lock relay energizes, the polarity is reversed and the motors lock the doors.

For vehicles not equipped with a memory seat, the BCM sends voltage signals to the door lock control switches. When a door lock control switch is pressed, the voltage signal is routed to ground, indicating a request to lock/unlock the doors. When the BCM detects a lock or unlock request, the BCM energizes the appropriate relays to lock or unlock the doors.

For vehicles equipped with a memory seat, the DDM and PDM send voltage signals to the door lock control switches. When a door lock control switch is pressed, the voltage signal is routed to ground, indicating a request to lock/unlock the doors. When the DDM or PDM detects a lock or unlock request, a message is sent over the CAN to the BCM to lock or unlock the doors.

In the event of a power door lock failure, the doors can be individually locked using the manual door lock. The manual door lock is located on the rear edge of the door just above the door latch opening. For the left door, insert a key and turn clockwise to lock. For the right door, insert a key and turn counterclockwise to lock.

Based on input from the door lock control switches, the passive entry system and the RKE transmitter, the BCM unlocks the driver door, unlocks all the doors or locks all the doors.

LED Door Lock Indicators

Each door panel has a door lock indicator located on the window sill to indicate the lock or unlock status of that individual door. The door lock indicators are controlled by the lock/unlock feedback switch located within each door latch. When powered, they illuminate to indicate a door is locked and are off when a door is unlocked.

The Light Emitting Diodes (LEDs) are powered continuously if the ignition is on, or for 5 minutes after a lock request if the ignition is off.

The LED door lock indicators brightness level works in conjunction with the backlighting brightness level setting.

For vehicles not equipped with a memory seat, the BCM provides voltage to the door lock indicators.

For vehicles equipped with a memory seat, the DDM and PDM provide voltage to their respective door lock indicator.

The lock/unlock feedback switch provides a ground path to bypass the indicator. The switch is closed when the door is unlocked (indicator not illuminated) and open when locked (indicator illuminated). The Body Control Module B (BCM-B) provides ground for the door lock indicators to illuminate.

The LED door lock indicators are part of the electrical harness and cannot be replaced independently.

Switch Inhibit Feature

The switch inhibit feature prevents unauthorized access to the vehicle from the door lock control switches or the interior luggage compartment lid release switch. The BCM disables the function of both door lock control switches and the interior luggage compartment lid release switch 20 seconds after the vehicle is electronically locked. If any of these switches are activated while they are inhibited, a chime sounds and a message is displayed in the message center to indicate the switches are inhibited. The BCM enables the function of these switches when the vehicle is electronically unlocked.

This feature can be configured on/off using the message center.

Power Door Locking Feedback

The exterior lamps and horn provide visual and audible feedback when unlocking and locking the doors under certain circumstances. Refer to the following chart:

Action	Status of Door(s)	Status of Luggage Compartment Lid	Status of Hood	Visual/Audible Feedback
Press the lock button on the door lock control switch	Open	Closed	Closed	A short flash of the turn signals after all the doors are closed.
Press the unlock button on a RKE transmitter	Closed	Closed	Closed	A long flash of the turn signals.
Press the lock button on a RKE transmitter	Closed	Closed	Closed	A short flash of the turn signals.
Press the lock button on a RKE transmitter	Open	Closed	Closed	A short flash of the turn signals after all the doors are closed.
Press the lock button on a RKE transmitter	Closed	Open	Closed	A short flash of the turn signals after the luggage compartment lid is closed.
Press the lock button on a RKE transmitter	Closed	Closed	Open	A short flash of the turn signals after the hood is closed.
Press the lock button on a RKE transmitter twice within 3 seconds	Closed	Closed	Closed	The horn chirps twice and the turn signals flash twice.
Press the lock button on a RKE transmitter twice within 3 seconds	Open	Closed	Closed	The horn immediately chirps twice and the turn signals flash twice after all the doors are closed.
Press the lock button on a RKE transmitter twice within 3 seconds	Closed	Open	Closed	The horn immediately chirps twice and the turn signals flash twice after the luggage compartment lid is closed.
Press the lock button on a RKE transmitter twice within 3 seconds	Closed	Closed	Open	The horn immediately chirps twice and the turn signals flash twice after the hood is closed.

There is also feedback provided by the vehicle to the key for the remote start feature. For additional

information regarding the remote start feedback, refer to the Owner's Literature.

Center Console Storage Compartment Lock (if equipped)

The BCM controls the center console storage compartment solenoid. The center console storage compartment solenoid locks the storage compartment when the doors are electronically locked and unlocks when the driver door is electronically locked.

Luggage Compartment Lid Latch Release

The luggage compartment lid latch can be released using:

- the interior luggage compartment lid release switch.
- the exterior luggage compartment lid release switch.
- a valid programmed passive key.

The BCM sends voltage signals to the interior and exterior luggage compartment lid release switches. When a luggage compartment lid release switch is pressed, the voltage signal is routed to ground, indicating a request to release the luggage compartment lid latch. The BCM momentarily provides voltage to the luggage compartment lid latch to actuate the release motor.

When using the luggage compartment lid release switches, the BCM releases the luggage compartment lid only when the doors are electronically unlocked and the vehicle is in PARK.

When using a programmed RKE transmitter, press the luggage compartment lid release button twice within 3 seconds to release the luggage compartment lid latch. The luggage compartment lid latch releases if the vehicle speed is 5 km/h (3.1 mph) or less.

The luggage compartment lid latch can also be released using a programmed passive key. Refer to Luggage Compartment Lid Passive Entry in this information.

RKE

The RKE feature is controlled by the BCM. When a button is pressed, the Transmitter Identification Code (TIC) and RKE command is received by the RTM. The RTM interprets the information and sends a message to the BCM over a LIN circuit, and when the network is awake over the CAN. If the BCM detects a programmed key, it carries out the command by controlling the door locks, releasing the luggage compartment lid latch or activating the horn or turn signals as required.

The RKE system can be used to:

- unlock the driver door.
- unlock all doors.
- lock all doors.
- release the luggage compartment lid latch (luggage compartment lid release button must be pressed twice within 3 seconds).
- arm/disarm the perimeter alarm.
- activate/deactivate the panic alarm.
- global open the windows (press the unlock button and then within 10 seconds press and hold the unlock button for 3 seconds) (if equipped).

- global close the windows (press and hold the lock button for 2 seconds) (if equipped).
- remotely start the vehicle.
- configure the staged lock programming (2-stage unlock or global unlock).

The RKE transmitters have a normal operating range of 30 m (98 ft) in an open air, no obstruction environment.

The RKE transmitters and the BCM also utilize a rolling code to prevent the code from being captured by a code grabber. The system advances the counter in the RKE transmitter and the BCM every time a RKE transmitter button is pressed.

The message center displays Key Battery Low Replace Soon when the battery in the key needs to be replaced.

RKE Transmitter Unlock

The RKE feature provides a staged process for unlocking the doors. Upon receipt of the first request for unlocking the doors, the RKE feature unlocks only the driver door. If another unlock request is received within 3 seconds of the first, all the doors are unlocked. This feature can be disabled so that all the doors unlock on the first press of the unlock button (global unlock) using the message center settings.

Vehicles come from the factory set with the 2-stage unlock feature disabled (single press unlocks all doors).

RKE Transmitter Lock

The RKE feature requests all of the doors lock when the lock button is pressed.

RKE Transmitter Luggage Compartment Lid Latch Release

The RKE transmitter provides a luggage compartment lid release/power open function. The luggage compartment lid release button must be pressed twice within 3 seconds for the luggage compartment lid latch to release.

Global Open/Close (if equipped)

The global open feature is used to open all the windows using the RKE transmitter.

To global open the windows, press the unlock button and then within 10 seconds press and hold the unlock button for 3 seconds. The windows stop movement if the lock or unlock button is pressed on the RKE.

To global close the windows, press and hold the lock button for 2 seconds.

Panic Alarm (if equipped)

The panic alarm feature provides audible and visual alarms which are evident from the exterior of the vehicle. When the panic alarm button is initially pressed, the panic alarm feature requests the turn signals flash and the horn sounds for up to 3 minutes or until deactivation. The flashing of the outputs occurs simultaneously.

The panic alarm can only be activated when the ignition is off. This feature is disabled at all other times. Deactivation of an active panic alarm is accomplished when:

- a second press of the RKE transmitter panic button is detected.
- the ignition status changes from off.
- a period of 2 minutes and 45 seconds have elapsed since the initial activation.

Remote Start

> *NOTE: The remote start feature is not available for vehicles equipped with a manual transmission.*

The factory-installed remote start allows the vehicle to be remotely started from outside the vehicle. There is a 2- way communication between the passive key and the vehicle to provide the remote start status of the vehicle. The passive key contains a green and a red LED to indicate the remote start status.

LED	Status
Blinking green	Waiting for status update from vehicle
Blinking red	Remote start/stop failed
Solid green	Remote start or extension successful
Solid red	Remote stop successful (engine off)

To remotely start the vehicle, the buttons on the passive key must be pressed within 3 seconds of each other. Press the lock button once and then the remote start button twice. The vehicle should remotely start and the LED on the passive key should be lit solid green.

The vehicle does not remote start if any of the following conditions are present:

- The feature is disabled using the message center settings
- The hood is not closed
- The vehicle is not in PARK
- A powertrain system DTC is present, illuminating the service engine soon indicator
- The ignition is on
- The alarm system is triggered
- The vehicle battery voltage is low

For additional information regarding the remote start system, refer to the Owner's Literature.

Autolock

The autolock feature locks all of the doors after all of the following have occurred:

- All the doors are closed
- The ignition is on
- The vehicle is shifted into any gear to put the vehicle in motion
- The vehicle attains a speed greater than 20 km/h (12.4 mph)

The autolock feature activates again during the same ignition cycle when all of the following have occurred:

- The vehicle speed is reduced to less than 15 km/h (9.3 mph)
- A door is opened and then closed

- The vehicle attains a speed greater than 20 km/h (12.4 mph)

Auto-Unlock

> *NOTE: The doors do not auto-unlock if the vehicle has been electronically locked before the driver door is unlocked.*

The auto-unlock feature unlocks all of the doors when all of the following conditions have been met:

- All the doors are closed and locked
- The ignition was on
- The vehicle was shifted out of park and a speed greater than 20 km/h (12.4 mph) was achieved
- The vehicle has come to a stop
- The ignition transitions to accessory or off and, within 10 minutes, the driver door is opened

The auto-unlock feature can be enabled/disabled using the message center.

Smart Unlock

The smart unlock feature prevents the vehicle from electronically locking when a passive key is left inside the vehicle. When the doors are electronically locked while a door is ajar and then closed, the interior of the vehicle is scanned for a passive key. If a valid programmed passive key is detected inside the vehicle, the BCM unlocks the doors and chirps the horn twice.

The smart unlock feature also operates to prevent locking a passive key inside the luggage compartment area. When the luggage compartment lid is closed, the interior of the vehicle is scanned for a passive key. If a passive key is detected inside the luggage compartment area when the luggage compartment lid is closed, the BCM releases the luggage compartment lid latch and chirps the horn twice.

To override the smart unlock feature, lock the doors using the keyless entry keypad, the door lock cylinder or another programmed passive key.

Passive Entry

The passive entry feature unlocks or locks the doors or opens the luggage compartment lid without having to use a mechanical key blade or the RKE transmitter feature.

When the BCM detects a lock or unlock sensor is touched on an exterior door handle, or the exterior luggage compartment lid release button is pressed, it activates the low frequency antenna in the corresponding exterior door handle or inside the luggage compartment area. The low frequency antenna sends out a signal to activate the passive key. The passive key then responds by sending a high frequency signal back to the RTM. The RTM interprets the high frequency signal from the passive key and sends the information to the BCM. If the BCM detects a valid programmed passive key, the BCM either unlocks the driver door, unlocks or locks both doors, or releases the luggage compartment lid latch.

Door Passive Entry

With a programmed passive key within 1 m (3.28 ft) outside a door, touch the lock or unlock sensor on the exterior door handle. The doors lock or unlock depending upon which sensor was touched on the handle. The unlock sensor is located on the inside of the handle and the lock sensor is located on the outside face of the handle.

The driver front door passive entry feature either unlocks the driver door (if 2-stage unlock is enabled) or

both doors (if 2-staged unlock is disabled). The passive entry feature always locks both doors when the lock button is touched.

The passenger door passive entry feature always locks or unlocks both doors.

Luggage Compartment Lid Passive Entry

With a programmed passive key within 1 m (3.28 ft) outside the luggage compartment lid, press the exterior luggage compartment lid release button (above the license plate) at the rear of the vehicle to open the luggage compartment lid.

DESCRIPTION AND OPERATION > HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Door Lock Control Switches

The door lock control switches are dual pole, single throw momentary contact switches. The BCM (vehicles without memory seat) or the DDM and PDM (vehicles with memory seat) provide the voltage signals to the door lock control switches for the lock and unlock requests. When a switch is pressed to lock or unlock, the corresponding input circuit is routed to ground, indicating a request to lock or unlock the doors.

Door Latches

The door latches are sealed units and contain the door lock actuator, lock/unlock feedback switch, and the door ajar switch. The door lock actuators operate in 2 directions, depending on the polarity of the voltage. The door latches can be lubricated, if needed.

Interior Luggage Compartment Lid Release Switch

The interior luggage compartment lid release switch is a momentary contact switch that supplies a ground signal to the BCM. When the interior luggage compartment lid release switch is pressed, the signal is routed to ground indicating a request to the BCM to release the luggage compartment lid latch.

Exterior Luggage Compartment Lid Release Switch

The exterior luggage compartment lid release switch is a momentary contact switch that supplies a ground signal to the BCM. When the exterior luggage compartment lid release switch is pressed, the signal is routed to ground indicating a request to the BCM to release the luggage compartment lid latch.

Luggage Compartment Lid Latch

The luggage compartment lid latch contains the luggage compartment lid latch release motor and the luggage compartment lid ajar switch. The luggage compartment lid latch release motor is momentarily supplied voltage by the BCM when a valid request to open the luggage compartment lid is detected.

DDM or PDM

When equipped with a memory seat, the DDM and the PDM monitor the door lock control switches and control the operation of the power windows and the power mirrors. They communicate with each other and the BCM over the CAN.

The DDM and PDM require PMI when replaced.

Passive Key

The passive key incorporates both the PATS and RKE transmitter functions in a single device.

During key programming procedures, the PATS and RKE transmitter Identification (ID) of a passive key are both programmed. A maximum of 4 passive keys can be programmed.

The passive key also contains a removable key blade that unlocks the driver door in the event of an electrical failure (such as a drained battery). The passive key requires 2 batteries. They should always be replaced as a set. For battery replacement instructions, refer to the Owner's Manual.

To start the vehicle in the event of a passive key battery failure, place the passive key in the backup starting location. Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Exterior Door Handles

The exterior door handles contain a keyless entry antenna and capacitive touch sensor(s). The antennas and lock/unlock sensors are wired to the BCM. When activated, the antenna transmits a low frequency signal to activate a passive key.

Keyless Entry Rear Antenna

The keyless entry rear antenna is monitored and activated by the BCM. When activated, it transmits a low frequency signal to activate a passive key.

RTM

The RTM communicates all RKE and passive key information to the BCM over a LIN-based circuit whether or not the CAN is active. The RTM is a receiving antenna that receives the high frequency signals from passive keys.

The RTM requires PMI when replaced.

BCM

The BCM is the master module in control of the power door lock system. It is responsible for locking/unlocking the doors. The BCM receives inputs for the door lock control switches, passive keys and RKE commands over the CAN.

The BCM requires PMI when replaced. Additionally, at least 2 keys must be programmed and the parameter reset procedure carried out.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > DTC CHART: BCM

The interior door release handle sticks	Refer to the Pinpoint Test	GO to Pinpoint Test E
Squeak-rattle-chucking noise from door	Refer to the Pinpoint Test	GO to Pinpoint Test F
The manual door lock cylinder is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test G

Symptom Chart: Handles, Locks, Latches and Entry Systems - Electrical

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific

diagnostic practices. REFER to: Diagnostic Methods .

Condition	Possible Sources	Actions
All door locks are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test H
A single or more than one door lock is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test I
The door locks operate only one way	Refer to the Pinpoint Test	GO to Pinpoint Test J
All door locks are inoperative from one door lock control switch	Refer to the Pinpoint Test	GO to Pinpoint Test K
A door lock indicator is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test L
A door lock indicator is always on	Refer to the Pinpoint Test	GO to Pinpoint Test M
The luggage compartment lid latch release is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test N
The luggage compartment lid does not latch	Refer to the Pinpoint Test	DISCONNECT the luggage compartment lid latch electrical connector and CHECK the operation of the latch using a screwdriver. If the latch does not fully latch (2 clicks), INSTALL a new luggage compartment lid latch. If the latch fully latches (2 clicks), REFER to the OEM WIRING DIAGRAMS article to identify the possible cause of the circuit short in the luggage compartment lid latch release circuit.
The RKE transmitter is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test O
An individual button/feature is inoperative from the RKE transmitter	Refer to the Pinpoint Test	GO to Pinpoint Test P
The RKE transmitter has poor range performance	Refer to the Pinpoint Test	GO to Pinpoint Test Q
The remote start feature is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test R
The smart unlock is inoperative	Refer to the Pinpoint Test	DIAGNOSE the passive key not starting the vehicle from various areas within the interior of the vehicle. REFER to: Passive Anti-Theft System (PATS) .
The 2-stage door unlocking does not operate correctly	The 2-stage door unlocking is not programmed	PROGRAM the 2-step door unlocking. REFER to: Staged Unlock Programming .

A door passive entry feature is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test S
The luggage compartment lid passive entry feature is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test T

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS

Hard To Open Or Close a Door From Either Door Handle

Normal Operations and Fault Conditions

The door latch can be actuated from the interior or exterior door handle. When actuated, the door latch releases and allows the door to open. If the door latch or the door hinges have insufficient lubrication or if the striker or door are misaligned, it causes extra force to be used when opening or closing the door.

Possible Cause

- Door alignment
- Door hinges
- Striker adjustment
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST A : HARD TO OPEN OR CLOSE A DOOR FROM EITHER DOOR HANDLE > PINPOINT TEST A : HARD TO OPEN OR CLOSE A DOOR FROM EITHER DOOR HANDLE

A1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES

Open the door using both the interior and exterior door handles.

Does the door open normally from one of the door handles?

Yes	If the door is difficult/does not open from the exterior door handle, GO to Pinpoint Test B . If the door is difficult/does not open from the interior door handle, GO to Pinpoint Test C

No	GO to A2

A2 CHECK THE LATCH OPERATION

Open the door.

Using a screwdriver, fully close the latch (2 clicks).

Verify the latch releases easily while pulling on the interior/exterior door handle.

Does the latch release easily?

Yes	GO to A4

No	GO to A3

A3 CHECK THE LATCH OPERATION AFTER LUBRICATION

Lubricate the door latch. REFER to: Door Latch Lubrication .

Using a screwdriver, fully close the latch (2 clicks).

Verify the latch releases easily while pulling on the interior/exterior door handle.

Does the latch release easily?

Yes	The concern was caused by an insufficiently lubricated door latch.

No	INSTALL a new door latch. REFER to: Front Door Latch .

A4 CHECK THE STRIKER ADJUSTMENT

Check the adjustment of the striker.

Is the striker adjusted correctly?

Yes	GO to A5

No	ADJUST the striker as necessary.

A5 CHECK THE DOOR ALIGNMENT

Check the alignment of the door.

Is the door aligned correctly?

Yes	LUBRICATE the door hinges.

No	ADJUST the door as necessary. REFER to: Front Door Alignment .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST B : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE EXTERIOR DOOR HANDLE

Normal Operations and Fault Conditions

The exterior door handle is connected to the door latch with an actuating cable. When the exterior door handle is pulled, the actuating cable pulls on the latch lever. When the latch lever moves, the door latch releases, allowing the door to open.

Possible Cause

- Broken or binding linkage
- Exterior door handle reinforcement
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST B : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE EXTERIOR DOOR HANDLE > PINPOINT TEST B : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE EXTERIOR DOOR HANDLE

B1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES

Open and close the door using both the interior and exterior door handles.

Does the door open normally from one of the door handles?

Yes	If the door is difficult/does not open from only the exterior door handle, GO to B2 If the door is difficult/does not open from only the interior door handle, GO to Pinpoint Test C

No	GO to Pinpoint Test A

B2 CHECK THE EXTERIOR DOOR HANDLE AND CABLE OPERATION

Disconnect the exterior door handle actuating cable from the door latch.

Operate the exterior door handle while observing the linkage and cable.

Are any of the exterior door handle components or linkages binding or broken?

Yes	GO to B3

No	INSTALL a new door latch. REFER to: Front Door Latch .

B3 CHECK THE EXTERIOR DOOR HANDLE REINFORCEMENT

Disconnect the exterior door handle actuating cable from the exterior door handle reinforcement.

Pull and release the exterior door handle.

Does the exterior door handle operate correctly?

Yes	INSTALL a new exterior door handle cable.

No	INSTALL a new exterior door handle reinforcement. REFER to: Exterior Front Door Handle Reinforcement .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST C : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE INTERIOR DOOR HANDLE

Normal Operations and Fault Conditions

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled, the cable pulls on the latch lever. When the latch lever moves, the door latch releases, allowing the door to open.

Possible Cause

- Broken or binding cable/linkage
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST C : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE INTERIOR DOOR HANDLE > PINPOINT TEST C : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE INTERIOR DOOR HANDLE

C1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES

Open the door using both the interior and exterior door handles.

Does the door open normally from one of the door handles?

Yes	If the door is difficult/does not open from only the interior door handle, GO to C2 If the door is difficult/does not open from only the exterior door handle, GO to Pinpoint Test B

No	GO to Pinpoint Test A

C2 CHECK THE INTERIOR DOOR HANDLE AND CABLE/LINKAGE OPERATION

Remove the door trim panel.

Install the interior door handle back onto the release cable.

Operate the interior door handle while observing the cable/linkage.

Are any of the interior door handle components or cable/linkages binding or broken?

Yes	REPAIR as necessary.

No	INSTALL a new door latch. REFER to: Front Door Latch .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST D : THE EXTERIOR DOOR RELEASE HANDLE STICKS

Normal Operations and Fault Conditions

The exterior door handle is connected to the door latch with an actuating cable. When the exterior door handle is pulled, the actuating cable pulls on the latch lever. When the latch lever moves, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

Possible Cause

- Binding linkage
- Broken handle return spring
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST D : THE EXTERIOR DOOR RELEASE HANDLE STICKS > PINPOINT TEST D : THE EXTERIOR DOOR RELEASE HANDLE STICKS

D1 CHECK FOR A BROKEN RETURN SPRING

Remove the window regulator. REFER to: Front Door Window Regulator .

Install the exterior door handle strap back onto the exterior door handle reinforcement.

Disconnect the exterior door handle actuating rod from the door latch.

Pull and release the exterior door handle

Does the exterior door handle return to a closed position once released?

Yes	GO to D2

No	INSTALL a new exterior door handle reinforcement. REFER to: Exterior Front Door Handle Reinforcement .

D2 CHECK THE EXTERIOR DOOR HANDLE AND LINKAGE OPERATION

Operate the exterior door handle while observing the linkage.

Are any of the exterior door handle components or linkages binding?

Yes	REPAIR as necessary.

No	INSTALL a new door latch. REFER to: Front Door Latch .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST E : THE INTERIOR DOOR RELEASE HANDLE STICKS

Normal Operations and Fault Conditions

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled, the cable pulls on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

Possible Cause

- Binding cable
- Broken handle return spring
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST E : THE INTERIOR DOOR RELEASE HANDLE STICKS > PINPOINT TEST E : THE INTERIOR DOOR RELEASE HANDLE STICKS

E1 CHECK FOR A BROKEN RETURN SPRING

Remove the interior door handle. REFER to: Interior Front Door Handle .

Pull and release the interior door handle.

Does the interior door handle return to a closed position once released?

Yes	GO to E2

No	INSTALL a new interior door handle. REFER to: Interior Front Door Handle .

E2 CHECK THE INTERIOR DOOR HANDLE CABLE OPERATION

Remove the interior door latch release cable.

Observe the door latch release cable for any damage or binding.

Is the door latch release cable OK?

Yes	INSTALL a new door latch. REFER to: Front Door Latch .

No	INSTALL a new interior door handle cable.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST F : SQUEAK-RATTLE-CHUCKING NOISE FROM DOOR

Possible Cause

- Door alignment
- Striker adjustment
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST F : SQUEAK-RATTLE-CHUCKING NOISE FROM DOOR > PINPOINT TEST F : SQUEAK-RATTLE-CHUCKING NOISE FROM DOOR

F1 CHECK FOR ANY LOOSE COMPONENTS

Remove the door trim panel.

Inspect inside the door for any loose components.

Are there any loose components inside the door?

Yes	REPAIR as necessary.

No	GO to F2

F2 CHECK THE STRIKER ADJUSTMENT

Check the adjustment of the striker.

Is the striker adjusted correctly?

Yes	GO to F3

No	ADJUST the striker as necessary.

F3 CHECK THE DOOR ALIGNMENT

Check the alignment of the door.

Is the door aligned correctly?

Yes	GO to F4

No	ADJUST the door as necessary. REFER to: Front Door Alignment .

F4 CHECK THE LATCH OPERATION AFTER LUBRICATION

Lubricate the door latch. REFER to: Door Latch Lubrication .

Using a screwdriver, fully close the latch (2 clicks).

Operate the door latch and listen for the noise.

Is the original noise still present after the latch is lubricated?

Yes	INSTALL a new door latch. REFER to: Front Door Latch .

No	The concern was caused by an insufficiently lubricated door latch.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST G : THE MANUAL DOOR LOCK CYLINDER IS INOPERATIVE

Normal Operations and Fault Conditions

The door lock cylinder is connected to the door latch via a lock rod and can be used to manually lock/unlock the door.

Possible Cause

- Bent or binding lock rod and lever
- Door lock cylinder-to-latch rod disconnected
- Door lock cylinder
- Door latch

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST G : THE MANUAL DOOR LOCK CYLINDER IS INOPERATIVE > PINPOINT TEST G : THE MANUAL DOOR LOCK CYLINDER IS INOPERATIVE

G1 CHECK THE LOCK AND UNLOCK OPERATION

Insert a key into the lock cylinder and rotate the lock cylinder to the lock and unlock positions.

Does the door lock cylinder freely rotate without locking and unlocking the door?

Yes	GO to G2

No	GO to G5

G2 CHECK THE DOOR LOCK CYLINDER-TO-LATCH ROD CONNECTION

Remove the door trim panel.

Inspect the door lock cylinder-to-latch rod connections and make sure it is connected correctly.

Is the door lock cylinder-to-latch rod connected correctly?

Yes	GO to G3

No	CONNECT the cylinder-to-latch rod correctly to the door latch and the door lock cylinder

G3 CHECK THE DOOR LOCK CYLINDER (FREE-SPIN)

Remove the door lock cylinder. REFER to: Door Lock Cylinder .

Operate the door lock cylinder with the key while holding the lever on the lock cylinder.

Does the key in the door lock cylinder rotate freely while the lever is stationary?

Yes	INSTALL a new door lock cylinder. REFER to: Door Lock Cylinder .

No	GO to G4

G4 CHECK THE DOOR LOCK CYLINDER LINKAGE CONNECTION

Inspect the door lock cylinder linkage.

Is the door lock cylinder rod and lever disconnected?

Yes	CONNECT the door lock cylinder rod and lever.

No	INSTALL a new door latch. REFER to: Front Door Latch .

G5 CHECK THE LOCK CYLINDER OPERATION AFTER LUBRICATION

Spray a lock lubricant (such as Motorcraft® XL-1) into the lock cylinder opening for a couple of seconds.

Operate the door lock cylinder with the key.

Does the door lock and unlock using the door lock cylinder?

Yes	The concern was caused by an insufficiently lubricated lock cylinder. SPRAY a multi-purpose grease (such as Motorcraft® XL-5) into the lock cylinder for a couple seconds to provide long term lubrication.

No	GO to G6

G6 CHECK THE DOOR LOCK CYLINDER FOR BINDING

Remove the door lock cylinder. REFER to: Door Lock Cylinder .

Operate the door lock cylinder with the key.

Does the door lock cylinder rotate freely?

Yes	GO to G7

No	INSTALL a new door lock cylinder. REFER to: Door Lock Cylinder .

G7 CHECK THE DOOR LOCK CYLINDER LINKAGE

Operate the door lock using the door lock cylinder linkage.

Operate the door lock cylinder with the key.

Is the door lock cylinder rod and lever binding, damaged or disconnected?

Yes	REPAIR as necessary.

No	INSTALL a new door latch. REFER to: Front Door Latch .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST H : ALL DOOR LOCKS ARE INOPERATIVE

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

Possible Cause

- Wiring, terminals or connectors
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST H : ALL DOOR LOCKS ARE INOPERATIVE > PINPOINT TEST H : ALL DOOR LOCKS ARE INOPERATIVE

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

H1 CHECK FOR BCM (BODY CONTROL MODULE), DDM (DRIVER DOOR MODULE) AND PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the BCM self-test.

Using a diagnostic scan tool, perform the DDM self-test.

Using a diagnostic scan tool, perform the PDM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC Chart: BCM , the DTC Chart: DDM or DTC Chart: PDM chart(s).

No	GO to H2

H2 VERIFY THE OPERATION OF BOTH DOOR LOCK CONTROL SWITCHES

Press the lock and unlock buttons on both door lock control switches while observing the door lock operation.

Does any door lock operate?

Yes	GO to H3

No	GO to H4

H3 CHECK IF THE LOCKS OPERATE IN ONLY ONE DIRECTION

Press the lock and unlock buttons from the driver door lock control switch and then the passenger door lock control switch while observing the door locks.

Are all the door locks inoperative from both switch positions (lock and unlock) of either door lock control switch?

Yes	GO to Pinpoint Test K

No	GO to Pinpoint Test J

H4 CHECK THE BCM (BODY CONTROL MODULE) DOOR LOCK GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280C .

Measure

Positive Lead	Measurement / Action	Negative Lead

C2280C-10	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to H5

No	REPAIR the circuit.

H5 CHECK THE ALL DOOR LOCK CIRCUIT FOR AN OPEN

Disconnect Left Front Door Latch C525 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-35	Ω	C525-7

Is the resistance less than 3 ohms?

Yes	GO to H6

No	REPAIR the circuit.

H6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST I : A SINGLE OR MORE THAN ONE DOOR LOCK IS INOPERATIVE

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

Possible Cause

- Fuse
- Wiring, terminals or connectors
- Door latch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Check the BCM fuse 24 (30A)

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST I : A SINGLE OR MORE THAN ONE DOOR LOCK IS INOPERATIVE > PINPOINT TEST I : A SINGLE OR MORE THAN ONE DOOR LOCK IS INOPERATIVE

I1 CHECK THE DOOR LATCH FOR BINDING

Lock and unlock the inoperative door lock using the manual door lock located just above the door latch opening.

Does the door lock and unlock?

Yes	VERIFY the BCM fuse 24 (30A) is OK. If OK, GO to I2 If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the possible causes of the circuit short.

No	INSTALL a new door latch. REFER to: Front Door Latch .

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

I2 CHECK THE BCM (BODY CONTROL MODULE) ALL LOCK OUTPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect suspect door latch.

For the suspect door latch, connect:

Left Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
C525-7		Ground

Right Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
C609-2		Ground

NOTE: The BCM only supplies voltage to the actuator momentarily. It is important to monitor the test lamp while pressing the door lock control switch.

While pressing the door lock control switch in the lock position, monitor the test lamp.

Does the test lamp momentarily illuminate?

Yes	GO to I3

No	REPAIR the circuit.

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

I3 CHECK THE BCM (BODY CONTROL MODULE) UNLOCK OUTPUT

For the suspect door latch, connect:

Left Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
C525-8		Ground

Right Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
C609-1		Ground

NOTE: The BCM only supplies voltage to the actuator momentarily. It is important to monitor the test lamp while pressing the door lock control switch.

While pressing the door lock control switch in the unlock position, monitor the test lamp.

Does the test lamp momentarily illuminate?

Yes	INSTALL a new door latch. REFER to: Front Door Latch .

No	GO to I4

I4 CHECK THE BCM (BODY CONTROL MODULE) UNLOCK OUTPUT CIRCUIT FOR AN OPEN

Disconnect BCM C2280C .

For the suspect door latch, connect:

Left Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
C525-8	Ω	C2280C-27

Right Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
C609-1	Ω	C2280C-32

Is the resistance less than 3 ohms?

Yes	GO to I5

No	REPAIR the circuit.

I5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST J : THE DOOR LOCKS OPERATE ONLY ONE WAY

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B126A:01	Drivers Door Interior Lock Switch: General Electrical Failure	Sets during an on-demand self-test if the BCM detects a short to ground from one of the door lock control switch input circuits.

DDM/ PDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108F:23	Cabin Lock/Unlock Switch: Signal Stuck Low	Sets when the DDM/ PDM detects a short to ground from one of the door lock control switch input circuits.

Possible Cause

- Fuse
- Wiring, terminals or connectors
- Door lock control switch
- PDM
- DDM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Check the BCM fuse 3 (20A)

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST J : THE DOOR LOCKS OPERATE ONLY ONE WAY > PINPOINT TEST J : THE DOOR LOCKS OPERATE ONLY ONE WAY

J1 CHECK FOR AN INOPERATIVE DOOR LOCK

Operate the power door locks using both door lock control switches.

Is any door lock inoperative for both directions?

Yes	GO to Pinpoint Test I

No	GO to J2

J2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B108F:23 OR B126A:01

Ignition ON.

For vehicles not equipped with a memory seat, using a diagnostic scan tool, perform the BCM self-test.

For vehicles equipped with a memory seat, using a diagnostic scan tool, perform the DDM and the PDM self-tests.

Is DTC B108F:23 or B126A:01 present?

Yes	For vehicles not equipped with a memory seat, GO to J3 For vehicles equipped with a memory seat, GO to J5

No	VERIFY the BCM fuse 3 (20A) is OK. If OK, GO to J7 If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the possible causes of the circuit short.

J3 ISOLATE THE DRIVER DOOR LOCK CONTROL SWITCH

Ignition OFF.

Disconnect Driver Door Lock Control Switch C505 .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test.

Is DTC B126A:01 still present?

Yes	GO to J4

No	INSTALL a new driver door lock control switch. REFER to: Door Lock Control Switch .

J4 ISOLATE THE PASSENGER DOOR LOCK CONTROL SWITCH

Ignition OFF.

Disconnect Passenger Door Lock Control Switch C605 .

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test.

Is DTC B126A:01 still present?

Yes	GO to J6

No	INSTALL a new passenger door lock control switch. REFER to: Door Lock Control Switch .

J5 ISOLATE THE DOOR LOCK CONTROL SWITCH

Ignition OFF.

Disconnect Driver Door Lock Control Switch C541 (DTC set in DDM).

Disconnect Passenger Door Lock Control Switch C605 (DTC set in PDM).

Ignition ON.

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the DDM or the PDM self-test.

Is DTC B108F:23 still present?

Yes	GO to J6

No	INSTALL a new door lock control switch. REFER to: Door Lock Control Switch .

J6 CHECK THE DOOR LOCK CONTROL SWITCH INPUT CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Disconnect BCM C2280E (DTC set in BCM).

Disconnect DDM C501A (DTC set in DDM).

Disconnect PDM C652A (DTC set in PDM).

If the DTC set in the BCM, measure:

Positive Lead	Measurement / Action	Negative Lead

C2280E-4	Ω	Ground
C2280E-17	Ω	Ground

If the DTC set in the DDM, measure:

Positive Lead	Measurement / Action	Negative Lead
C501A-10	Ω	Ground
C501A-20	Ω	Ground

If the DTC set in the PDM, measure:

Positive Lead	Measurement / Action	Negative Lead
C652A-10	Ω	Ground
C652A-20	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	For the PDM, GO to J13 For the DDM, GO to J14 For the BCM, GO to J15

No	REPAIR the circuit in question.

J7 CHECK THE LOCK REQUEST INPUT CIRCUIT

Ignition OFF.

Disconnect suspect door lock control switch.

Connect:

Driver Door Lock Control Switch (without memory)

Positive Lead	Measurement / Action	Negative Lead
C505-4		C505-3

Driver Door Lock Control Switch (with memory)

Positive Lead	Measurement / Action	Negative Lead
C541-2		C541-3

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead

C605-1		C605-2

Remove the fused jumper wire.

Do the doors lock?

Yes	GO to J10

No	For vehicles not equipped with a memory seat, GO to J8 For vehicles equipped with a memory seat, GO to J9

J8 CHECK THE LOCK REQUEST INPUT CIRCUIT FOR AN OPEN (WITHOUT MEMORY SEAT)

Disconnect BCM C2280E .

Measure:

Driver Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C505-4	Ω	C2280E-17

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C605-1	Ω	C2280E-17

Is the resistance less than 3 ohms?

Yes	GO to J15

No	REPAIR the circuit.

J9 CHECK THE LOCK REQUEST INPUT CIRCUIT FOR AN OPEN (WITH MEMORY SEAT)

Disconnect DDM C501A (driver door lock control switch with memory).

Disconnect PDM C652A (passenger door lock control switch).

Measure:

Driver Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C541-2	Ω	C501A-20

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C605-1	Ω	C652A-20

Is the resistance less than 3 ohms?

Yes	For the concern with the passenger door lock control switch, GO to J13 For the concern with the driver door lock control switch, GO to J14

No	REPAIR the circuit.

J10 CHECK THE UNLOCK REQUEST INPUT CIRCUIT

Connect:

Driver Door Lock Control Switch (without memory)

Positive Lead	Measurement / Action	Negative Lead
C505-2		C505-3

Driver Door Lock Control Switch (with memory)

Positive Lead	Measurement / Action	Negative Lead
C541-1		C541-3

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C605-1		C605-2

For the passenger door lock control switch, momentarily connect:

Do the doors unlock?

Yes	INSTALL a new door lock control switch. REFER to: Door Lock Control Switch .

No	For vehicles not equipped with a memory seat, GO to J11 For vehicles equipped with a memory seat, GO to J12

J11 CHECK THE UNLOCK REQUEST INPUT CIRCUIT FOR AN OPEN (WITHOUT MEMORY SEAT)

Disconnect BCM C23280E.

Measure:

Driver Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C505-2	Ω	C2280E-4

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C605-3	Ω	C2280E-4

Is the resistance less than 3 ohms?

Yes	GO to J15

No	REPAIR the circuit.

J12 CHECK THE UNLOCK REQUEST INPUT CIRCUIT FOR AN OPEN (WITH MEMORY SEAT)

Disconnect DDM C501A (driver door lock control switch).

Disconnect PDM C652A (passenger door lock control switch).

For the driver door lock control switch, measure:

Driver Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C541-1	Ω	C501A-10

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C605-3	Ω	C652A-10

Is the resistance less than 3 ohms?

Yes	For the concern with the passenger door lock control switch, GO to J13 For the concern with the driver door lock control switch, GO to J14

No	REPAIR the circuit.

J13 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all the PDM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

J14 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all the DDM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

J15 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST K : ALL DOOR LOCKS ARE INOPERATIVE FROM ONE DOOR LOCK CONTROL SWITCH

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

Possible Cause

- Wiring, terminals or connectors
- Door lock control switch

Visual Inspection and Diagnostic Pre-checks

- Check the door lock control switch for damage

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST K : ALL DOOR LOCKS ARE INOPERATIVE FROM ONE DOOR LOCK CONTROL SWITCH > PINPOINT TEST K : ALL DOOR LOCKS ARE INOPERATIVE FROM ONE DOOR LOCK CONTROL SWITCH

NOTE: If the vehicle is not equipped with a memory seat, proceed to K2.

K1 CHECK FOR COMMUNICATION TO THE DDM (DRIVER DOOR MODULE) AND PDM (PASSENGER DOOR MODULE)

Ignition ON.

Using a diagnostic scan tool, perform the network test.

Do the DDM and PDM pass the network test?

Yes	GO to K2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

K2 CHECK THE DOOR LOCK CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect suspect door lock control switch.

Measure:

Driver Door Lock Control Switch (without memory)

Positive Lead	Measurement / Action	Negative Lead
C505-3	Ω	Ground

Driver Door Lock Control Switch (with memory)

Positive Lead	Measurement / Action	Negative Lead
C541-3	Ω	Ground

Passenger Door Lock Control Switch

Positive Lead	Measurement / Action	Negative Lead
C605-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new door lock control switch in question. REFER to: Door Lock Control Switch .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST L : A DOOR LOCK INDICATOR IS INOPERATIVE

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Refer to Interior Lamps for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1490:11	Lock Indicator LED Status Output: Circuit Short To Ground	Sets when the BCM detects a short to ground from the door lock indicator voltage supply circuit.
B1490:15	Lock Indicator LED Status Output: Circuit Short To Battery or Open	Sets when the BCM detects an open from the door lock indicator voltage supply circuit.

Possible Cause

- Wiring, terminals or connectors
- PDM
- DDM
- Body Control Module B (BCM-B)
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST L : A DOOR LOCK INDICATOR IS INOPERATIVE > PINPOINT TEST L : A DOOR LOCK INDICATOR IS INOPERATIVE

L1 CHECK THE DOOR LOCK OPERATION

Ignition OFF.

Check the operation of the door locks using the door lock control switches.

Do the door locks operate correctly?

Yes	GO to L2

No	REFER to the Symptom Chart: Handles, Locks, Latches and Entry Systems - Electrical in Symptom Charts .

L2 CHECK THE UNLOCK FEEDBACK CIRCUIT INPUT

Ignition OFF.

Disconnect suspect door lock indicator harness connector.

Lock the doors using a door lock control switch.

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-2	Ω	Ground

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C649-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to L4

No	GO to L3

L3 CHECK THE UNLOCK FEEDBACK CIRCUIT FOR A SHORT TO GROUND

Disconnect corresponding door latch.

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-2	Ω	Ground

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C649-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	INSTALL a new door latch. REFER to: Front Door Latch .

No	REPAIR the circuit.

L4 CHECK FOR VOLTAGE TO THE DOOR LOCK INDICATOR

Ignition ON.

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-6		Ground

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C649-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to L5

No	For vehicles without a memory seat, GO to L7 For vehicles with a memory seat, GO to L12

L5 CHECK THE DOOR LOCK INDICATOR GROUND CIRCUIT

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-6		C573-4

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C649-6		C649-4

Is the voltage greater than 11 volts?

Yes	INSTALL a new door lock indicator harness.

No	GO to L6

L6 CHECK THE DOOR LOCK INDICATOR GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect Body Control Module B (BCM-B) C4368A .

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead

C573-4	Ω	C4368A-24

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C649-4	Ω	C4368A-24

Is the resistance less than 3 ohms?

Yes	GO to L16

No	REPAIR the circuit.

L7 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1490:11

Ignition OFF.

Connect suspect door lock indicator harness connector.

Ignition ON.

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1490:11 present?

Yes	GO to L8

No	GO to L11

L8 CHECK THE LEFT DOOR LOCK INDICATOR FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Left Door Lock Indicator Harness C573 .

Ignition ON.

Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1490:11 still present?

Yes	GO to L9

No	REPAIR or REPLACE the door lock indicator harness.

L9 CHECK THE RIGHT DOOR LOCK INDICATOR FOR A SHORT TO GROUND

Ignition OFF.

Disconnect Right Door Lock Indicator Harness C649 .

Ignition ON.

Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1490:11 still present?

Yes	GO to L10

No	REPAIR or REPLACE the door lock indicator harness.

L10 CHECK THE DOOR LOCK INDICATOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND (WITHOUT MEMORY)

Ignition OFF.

Disconnect BCM C2280E .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-39	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to L17

No	REPAIR the circuit.

L11 CHECK THE DOOR LOCK INDICATOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN (WITHOUT MEMORY)

Ignition OFF.

Disconnect suspect door lock indicator harness connector.

Disconnect BCM C2280E .

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-6	Ω	C2280E-39

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C649-6	Ω	C2280E-39

Is the resistance less than 3 ohms?

Yes	GO to L17

No	REPAIR the circuit.

L12 CHECK THE DOOR LOCK INDICATOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND (WITH MEMORY)

Ignition OFF.

Disconnect DDM C501A (left front door indicator).

Disconnect PDM C652A (right front door indicator).

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C501A-3	Ω	Ground

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C652A-3	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to L13

No	REPAIR the circuit.

L13 CHECK THE DOOR LOCK INDICATOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C501A-3	Ω	C573-6

Right Front Door

Positive Lead	Measurement / Action	Negative Lead
C652A-3	Ω	C649-6

Is the resistance less than 3 ohms?

Yes	For a left front door indicator, GO to L15 For a right front door indicator, GO to L14

No	REPAIR the circuit.

L14 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all the PDM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L15 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all the DDM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L16 CHECK FOR CORRECT BODY CONTROL MODULE B (BCM-B) OPERATION

Disconnect and inspect the Body Control Module B (BCM-B) connector.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the Body Control Module B (BCM-B) connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new Body Control Module B (BCM-B). REFER to: Body Control Module B (BCMB) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L17 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this

	concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST M : A DOOR LOCK INDICATOR IS ALWAYS ON

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Refer to Interior Lamps for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1490:15	Lock Indicator LED Status Output: Circuit Short To Battery or Open	Sets when the BCM detects a short to voltage from the door lock indicator voltage supply circuit.

Possible Cause

- Wiring, terminals or connectors
- PDM
- DDM
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST M : A DOOR LOCK INDICATOR IS ALWAYS ON > PINPOINT TEST M : A DOOR LOCK INDICATOR IS ALWAYS ON

M1 CHECK THE COURTESY LAMP OPERATION

Check the operation of the courtesy lamps from each door.

Do the courtesy lamps operate correctly?

Yes	GO to M2

No	REFER to: Interior Lighting .

M2 CHECK THE UNLOCK FEEDBACK FOR CORRECT OPERATION

Ignition OFF.

Disconnect suspect door lock indicator harness connector.

Ignition ON.

Unlock the doors using the door lock control switch.

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-6		C573-2

Right Front

Positive Lead	Measurement / Action	Negative Lead
C649-6		C649-2

Is the voltage greater than 11 volts?

Yes	For vehicles not equipped with a memory seat, GO to M4 For vehicles equipped with a memory seat, GO to M5

No	GO to M3

M3 CHECK THE UNLOCK FEEDBACK CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect suspect door latch.

Measure:

Left Front Door

Positive Lead	Measurement / Action	Negative Lead
C573-2	Ω	C525-4

Right Front

Positive Lead	Measurement / Action	Negative Lead
C649-2	Ω	C609-5

Is the resistance less than 3 ohms?

Yes	INSTALL a new door latch. REFER to: Front Door Latch .

No	REPAIR the circuit.

M4 CHECK THE DOOR LOCK INDICATOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE (WITHOUT MEMORY)

Ignition OFF.

Connect suspect door lock indicator harness connector.

Disconnect BCM C2280E .

Lock the doors using the RKE transmitter.

Observe the door lock indicators.

Do the door lock indicators continue to illuminate?

Yes	REPAIR the circuit.

No	GO to M8

M5 CHECK THE DOOR LOCK INDICATOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE (WITH MEMORY)

Ignition OFF.

Connect suspect door lock indicator harness connector.

Disconnect DDM C501A (driver door indicator).

Disconnect PDM C652A (passenger door indicator).

Lock the doors using the RKE transmitter.

Observe the door lock indicator in question.

Does the door lock indicator continue to illuminate?

Yes	REPAIR the circuit.

No	For the passenger door lock indicator, GO to M6 For the driver door lock indicator, GO to M7

M6 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all the PDM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M7 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all the DDM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST N : THE LUGGAGE COMPARTMENT LID LATCH RELEASE IS INOPERATIVE

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1219:11	Interior Boot/Trunk Release Switch: Circuit Short To Ground	Sets when the BCM detects a short to ground from the interior luggage compartment lid release switch input circuit.
C1017:11	Boot/Trunk Primary Switch: Circuit Short To Ground	Sets when the BCM detects a short to ground from the exterior luggage compartment lid release switch input circuit.

Possible Cause

- Fuse
- Wiring, terminals or connectors
- Luggage compartment lid release switch
- Luggage compartment lid latch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Check the BCM fuse 16 (15A)
- Inspect the luggage compartment lid release switches for damage

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST N : THE LUGGAGE COMPARTMENT LID LATCH RELEASE IS INOPERATIVE > PINPOINT TEST N : THE LUGGAGE COMPARTMENT LID LATCH RELEASE IS INOPERATIVE

N1 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1219:11 AND C1017:11

Ignition ON.

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1219:11 or C1017:11 present?

Yes	GO to N2

No	GO to N4

N2 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SWITCH

Ignition OFF.

Disconnect Interior Luggage Compartment Lid Release Switch C2610 (DTC B1219:11).

Disconnect Exterior Luggage Compartment Lid Release Switch C4333 (DTC C1017:11).

Ignition ON.

Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).

Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1219:11 or C1017:11 still present?

Yes	GO to N3

No	INSTALL a new luggage compartment lid release switch in question.

N3 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect BCM C2280B (DTC B1219:11).

Disconnect BCM C2280E (DTC C1017:11).

Measure:

DTC B1219:11

Positive Lead	Measurement / Action	Negative Lead
C2280B-1	Ω	Ground

DTC C1017:11

Positive Lead	Measurement / Action	Negative Lead
C2280E-14	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to N11

No	REPAIR the circuit.

N4 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT USING THE DECKLID / LIFTGLASS RELEASE OUTPUT STATUS (DL_LFTGLS_RLS) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).

Command the BCM PID DL_LFTGLS_RLS on and then off.

Does the luggage compartment lid latch release?

Yes	GO to N5

No	VERIFY the BCM fuse 16 (15A) is OK. If OK, GO to N8 If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the possible cause of the circuit short.

N5 CHECK THE SUSPECT LUGGAGE COMPARTMENT LID RELEASE SWITCH

Ignition OFF.

Disconnect Suspect luggage compartment lid release switch.

Unlock the doors using a door lock control switch.

Connect:

Interior Luggage Compartment Lid Release Switch

Positive Lead	Measurement / Action	Negative Lead
C2610-6		C2610-2

Exterior Luggage Compartment Lid Release Switch

Positive Lead	Measurement / Action	Negative Lead
C4333-1		C4333-2

Remove the fused jumper wire.

Does the luggage compartment lid latch release?

Yes	INSTALL a new luggage compartment lid release switch in question.

No	GO to N6

N6 CHECK THE SUSPECT LUGGAGE COMPARTMENT LID RELEASE SWITCH GROUND CIRCUIT FOR AN OPEN

Unlock the doors using a door lock control switch.

Connect:

Interior Luggage Compartment Lid Release Switch

Positive Lead	Measurement / Action	Negative Lead
C2610-6		Ground

Exterior Luggage Compartment Lid Release Switch

Positive Lead	Measurement / Action	Negative Lead
C4333-1		Ground

Remove the fused jumper wire.

Does the luggage compartment lid latch release?

Yes	REPAIR the circuit.

No	GO to N7

N7 CHECK THE SUSPECT LUGGAGE COMPARTMENT LID RELEASE SWITCH INPUT CIRCUIT FOR AN OPEN

Disconnect BCM C2280B (interior luggage compartment lid release switch).

Disconnect BCM C2280E (exterior luggage compartment lid release switch).

Measure:

Interior Luggage Compartment Lid Release Switch

Positive Lead	Measurement / Action	Negative Lead
C2610-6	Ω	C2280B-1

Exterior Luggage Compartment Lid Release Switch

Positive Lead	Measurement / Action	Negative Lead
C4333-1	Ω	C2280E-14

Is the resistance less than 3 ohms?

Yes	GO to N11

No	REPAIR the circuit.

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

N8 CHECK THE LUGGAGE COMPARTMENT LID LATCH

Ignition OFF.

Disconnect Luggage Compartment Lid Latch C4339 .

Connect:

Positive Lead	Measurement / Action	Negative Lead
C4339-3		C4339-4

Ignition ON.

Unlock the doors using a door lock control switch.

NOTE: The BCM only supplies voltage to the latch momentarily. It is important to monitor the test lamp while pressing the luggage compartment lid release switch.

Press and release the exterior luggage compartment lid release switch while observing the test lamp.

Does the test lamp momentarily illuminate?

Yes	INSTALL a new luggage compartment lid latch.

No	GO to N9

N9 CHECK THE LUGGAGE COMPARTMENT LID LATCH GROUND CIRCUIT FOR AN OPEN

Connect:

Positive Lead	Measurement / Action	Negative Lead
C4339-3		Ground

NOTE: The BCM only supplies voltage to the latch momentarily. It is important to monitor the test lamp while pressing the luggage compartment lid release switch.

Press and release the exterior luggage compartment lid release switch while observing the test lamp.

Does the test lamp momentarily illuminate?

Yes	REPAIR the circuit.

No	GO to N10

N10 CHECK THE BCM (BODY CONTROL MODULE) LUGGAGE COMPARTMENT LID LATCH OUTPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4339-3	Ω	C2280C-33

Is the resistance less than 3 ohms?

Yes	GO to N11

No	REPAIR the circuit.

N11 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST O : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER IS INOPERATIVE

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

A loss of synchronization of a RKE transmitter is caused when the button(s) on that RKE transmitter is pressed repeatedly on a continuous basis when the RKE transmitter is out of range from the vehicle it is programmed to. If a RKE transmitter becomes out of sync, the BCM ignores commands from that RKE transmitter.

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AB:00	Remote Keyless Entry Synchronization: No Sub Type Information	Sets when the BCM detects the rolling counter received from a RKE transmitter is out of synchronization with the rolling counter stored in the module.
B1218:00	Transmitter Identification Code: No Sub Type Information	Sets when the BCM detects and invalid Transmitter Identification Code (TIC).

Possible Cause

- Key battery
- Key
- Key button pressed a substantial amount of times while outside the range of the vehicle
- Key programming
- Network concern

Visual Inspection and Diagnostic Pre-checks

- Inspect the key for damage.
- Check for aftermarket keys.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST O : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER IS INOPERATIVE > PINPOINT TEST O : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER IS INOPERATIVE

NOTE: All customer keys need to be present when diagnosing the RKE system.

O1 CHECK FOR THE CORRECT KEYS

Verify all keys present are the correct type for the vehicle.

Are the correct keys present?

Yes	GO to O2

No	The system cannot be tested without the correct keys. INFORM the customer that all of the correct keys must be present to proceed with diagnosis of the system.

NOTE: Make sure the vehicle is in an open area with no other large metal objects near, such as other vehicles or steel buildings.

O2 CHECK FOR REDUCED RANGE

Check all keys for normal range performance (approximately 50m (165 ft)).

Do the keys experience poor range?

Yes	GO to Pinpoint Test Q

No	GO to O3

O3 CHECK THE RKE (REMOTE KEYLESS ENTRY) FUNCTIONALITY OF THE KEYS

Press each RKE button on a key. Repeat this step on a second key.

Are all the RKE functions inoperative from both keys?

Yes	GO to O11

No	GO to O4

O4 CHECK THE RKE (REMOTE KEYLESS ENTRY) FUNCTIONALITY OF THE SUSPECT KEY

Press each RKE button (twice for the luggage compartment lid latch release) on the suspect key.

Does any RKE function operate?

Yes	GO to Pinpoint Test P

No	GO to O5

O5 CHECK THE NO (TIC) OUT OF SYNC (TIC-NONE_OOS) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, monitor the BCM PID TIC-NONE_OOS.

Does the PID indicate On?

Yes	GO to O8

No	GO to O6

O6 RESYNCHRONIZE THE INOPERATIVE PASSIVE KEY

Ignition OFF.

Place the suspect key in the backup starting location. REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Ignition ON.

Wait 10 seconds.

Ignition OFF.

Within 30 seconds, press any button on the suspect key.

Does the suspect key operate correctly now?

Yes	The system is OK. The concern was caused by a key out of synchronization.

No	GO to O7

O7 RESYNCHRONIZE THE INOPERATIVE KEY USING THE SECOND KEY

Press any button on the operational key.

Within 30 seconds, press any button on the suspect key.

Check the suspect key for correct operation.

Does the suspect key operate correctly now?

Yes	The system is OK. The concern was caused by a key out of synchronization.

No	GO to O10

O8 CHECK THE (RKE) REMOTE BATTERY LOW (RKE_BATT_LOW) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, monitor the BCM PID RKE_BATT_LOW.

Does the PID indicate Off?

Yes	GO to O10

No	GO to O9

NOTE: Do not clean off any grease from the battery terminals on the back surface of the circuit board.

O9 CHECK THE KEY BATTERIES

Remove the passive key batteries. Refer to the Owner Guide for battery removal instructions.

Verify the correct batteries are used (CR2025).

Remove both key batteries and measure the voltage.

Are the voltages greater than 2.5 volts?

Yes	GO to O10

No	REPLACE both key batteries (make sure the batteries are seated correctly). DO NOT reprogram the key (damaged or dead batteries do not erase keys from memory).

O10 PROGRAM THE SUSPECT KEY

Program the suspect key. REFER to: Anti-Theft Security Access .

Check the RKE functionality of the suspect key.

Does the RKE functionality operate?

Yes	The system is OK. The concern was caused by an unprogrammed key.

No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access .

O11 CHECK FOR COMMUNICATION WITH THE BCM (BODY CONTROL MODULE) AND THE RTM (RADIO TRANSCEIVER MODULE)

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Does the BCM and the RTM pass the network test?

Yes	GO to O12

No	REFER to: MODULE COMMUNICATIONS NETWORK .

O12 CHECK FOR LOW VOLTAGE AND CHARGING SYSTEM-RELATED DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Are any low voltage or charging system-related Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the low voltage or charging system as necessary. Refer to the appropriate Battery and Charging System article for the procedure.

No	GO to O13

O13 CHECK FOR A NETWORK CONCERN

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Are multiple lost communication Diagnostic Trouble Codes (DTCs) for multiple modules present in more than one module?

Yes	DIAGNOSE a network concern. REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to O14

O14 CHECK FOR RTM (RADIO TRANSCEIVER MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform a RTM module self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC Chart: RTM .

No	GO to O15

O15 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform a BCM module self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC Chart: BCM .

No	GO to Pinpoint Test V

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST P : AN INDIVIDUAL BUTTON/FEATURE IS INOPERATIVE FROM THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

Possible Cause

- Door lock system concern
- Luggage compartment lid latch release system concern
- Horn system concern
- Turn signal system concern
- Remote start system concern
- Key

Visual Inspection and Diagnostic Pre-checks

- Inspect the key for damage

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST P : AN INDIVIDUAL BUTTON/FEATURE IS INOPERATIVE FROM THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER > PINPOINT TEST P : AN INDIVIDUAL BUTTON/FEATURE IS INOPERATIVE FROM THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER

P1 VERIFY THE DOOR LOCK OPERATION

Press the lock and unlock button on the door lock control switch while observing the door lock operation.

Do the door locks operate?

Yes	GO to P2

No	GO to Pinpoint Test H

P2 VERIFY THE HORN OPERATION USING THE BCM (BODY CONTROL MODULE) PID (PARAMETER IDENTIFICATION) (HORN_RELAY)

Ignition ON.

Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).

Select the BCM horn PID (HORN_RELAY) and active command the horn on then off.

Does the horn sound when commanded on?

Yes	GO to P3

No	REFER to: Horn .

P3 VERIFY THE HAZARD LAMP OPERATION

Activate the hazard lamp function.

Do the hazard lamps operate correctly?

Yes	GO to P4

No	REFER to: Turn Signal and Hazard Lamps .

P4 VERIFY THE LUGGAGE COMPARTMENT LID LATCH RELEASE OPERATION

Ignition OFF.

Unlock the doors using the door lock control switch.

Press the luggage compartment lid release switch.

Does the luggage compartment lid latch release?

Yes	GO to P5

No	GO to Pinpoint Test N

P5 CHECK THE LOCK AND UNLOCK BUTTONS

Press the lock and then unlock button on the suspect passive key.

Do the doors lock and unlock?

Yes	GO to P6

No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access .

P6 CHECK THE LUGGAGE COMPARTMENT LID RELEASE BUTTON

Press the luggage compartment lid release button twice on the suspect passive key.

Does the luggage compartment lid latch release?

Yes	GO to P7

No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access .

P7 VERIFY THE REMOTE START OPERATION

Close all the doors, the hood and the luggage compartment lid.

NOTE: Each button press must be done within 3 seconds of each other.

From outside the vehicle using a passive key:

Press the door lock button.

Press the remote start button twice.

Does the vehicle remotely start?

Yes	The RKE transmitter is operating correctly. INFORM the customer of the RKE transmitter operation.

No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST Q : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER HAS POOR RANGE PERFORMANCE

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

Possible Cause

- Key
- Key batteries
- Aftermarket system

- Consumer electronic device
- High power devices
- TV/radio transmission towers
- RTM

Visual Inspection and Diagnostic Pre-checks

- Inspect the key for damage
- Inspect the key batteries
- Inspect for aftermarket RKE systems

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST Q : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER HAS POOR RANGE PERFORMANCE > PINPOINT TEST Q : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER HAS POOR RANGE PERFORMANCE

NOTE: At least 2 programmed keys must be present to begin diagnosis of the RKE system.

Q1 CHECK FOR THE CORRECT KEYS

Check that the correct keys are used with the vehicle.

Are the correct keys present?

Yes	GO to Q2

No	The system cannot be tested without the correct keys. INFORM the customer the correct keys must be present to proceed with diagnosis of the system.

NOTE: Make sure the vehicle is in an open area with no other large metal objects near, such as other vehicles or steel buildings.

Q2 CHECK ALL KEYS FOR POOR RANGE PERFORMANCE

Check all keys for normal range performance (approximately 50m (165 ft.).

Do all keys experience poor range?

Yes	GO to Q4

No	GO to Q3

NOTE: Do not clean off any grease from the battery terminals on the back surface of the circuit board.

Q3 CHECK THE KEY BATTERIES

Remove the passive key batteries. Refer to the Owner Guide for battery removal instructions.

Verify the correct batteries are used (CR2025).

Measure the key batteries voltage.

Are the voltages greater than 2.5 volts?

Yes	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access .

No	REPLACE both key batteries (make sure the batteries are seated correctly). DO NOT reprogram the key (weak or dead batteries do not erase keys from memory).

Q4 CHECK THE LOCATION OF THE VEHICLE AND THE APPROACH ANGLES AROUND THE VEHICLE

Make sure the poor performance is consistent in nature and is not from one approaching angle.

The RKE transmitter range performance may be degraded in certain locations. For example, if the vehicle or RKE transmitter is within range of high-power devices, radio/TV towers, 2-way radios, cell phone charger or other radio communication device, the operating distance of the keys may be reduced.

Is the poor range performance consistent around the vehicle?

Yes	INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) .

No	The system is operating correctly at this time. The range may have been affected by environmental interference such as high-power devices or other radio communication device.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST R : THE REMOTE START FEATURE IS INOPERATIVE

Refer to Power Distribution for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

Possible Cause

- Wiring, terminals or connectors
- Remote start feature not enabled

- Passive key
- Hood ajar switch input concern
- Door ajar switch input concern
- TR input concern
- Powertrain concern
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the passive key for damage

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST R : THE REMOTE START FEATURE IS INOPERATIVE > PINPOINT TEST R : THE REMOTE START FEATURE IS INOPERATIVE

NOTE: This pinpoint test does not diagnose dealer installed remote start systems.

R1 CHECK THE REMOTE START FEATURE ENABLE/DISABLE SETTING

Ignition ON.

Using the steering wheel control switch, check the remote start feature setting in the message center.

Is the remote start feature enabled?

Yes	GO to R2

No	ENABLE the remote start feature.

R2 CHECK THE PARK DETECT SWITCH INPUT

Ignition ON.

Verify the PRNDL displays correctly in the IPC. When the vehicle is in PARK, the P should be highlighted or displayed prominently.

Does the PRNDL display correctly?

Yes	GO to R3

No	DIAGNOSE the PRNDL display. REFER to: Instrumentation, Message Center and Warning Chimes .

R3 CHECK FOR POWERTRAIN DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the PCM KOEO and KOER self-tests.

Are any PCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC Chart: PCM .

No	GO to R4

R4 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC Chart: BCM .

No	GO to R5

R5 CHECK THE RKE (REMOTE KEYLESS ENTRY) FUNCTIONALITY

Ignition OFF.

Using the RKE function of the passive key, press the luggage compartment lid release button twice, the lock button and then the unlock button.

Do all the functions tested of the RKE transmitter operate (lock, unlock and luggage compartment lid latch release)?

Yes	GO to R6

No	If all of the functions are inoperative, GO to Pinpoint Test O If an individual function is inoperative, GO to Pinpoint Test P

R6 CHECK THE WAKE-UP CIRCUIT FOR VOLTAGE AT THE PCM (POWERTRAIN CONTROL MODULE) USING THE BCM (BODY CONTROL MODULE) PID (PARAMETER IDENTIFICATION) (PCM) WAKE-UP OUTPUT CONTROL (PCM_WKUP_CTRL)

Disconnect PCM B connector.

Ignition ON.

Using a diagnostic scan tool, command the BCM PID PCM_WKUP_CTRL on.

Measure:

2.3L GTDI

Positive Lead	Measurement / Action	Negative Lead
C1551B-28		Ground

3.7L Duratec

Positive Lead	Measurement / Action	Negative Lead
C1381B-65		Ground

5.0L TIVCT

Positive Lead	Measurement / Action	Negative Lead
C175B-65		Ground

Is the voltage greater than 11 volts?

Yes	GO to R8

No	GO to R7

R7 CHECK THE WAKE-UP CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280F .

Measure:

2.3L GTDI

Positive Lead	Measurement / Action	Negative Lead
C1551B-28	Ω	C2280F-18

3.7L Duratec

Positive Lead	Measurement / Action	Negative Lead
C1381B-65	Ω	C2280F-18

5.0L TIVCT

Positive Lead	Measurement / Action	Negative Lead
C175B-65	Ω	C2280F-18

Is the resistance less than 3 ohms?

Yes	GO to R9

No	REPAIR the circuit.

R8 VERIFY THE REMOTE START FUNCTION IS INOPERATIVE

Ignition OFF.

Connect PCM B connector.

Close all the doors, the hood and the liftgate.

NOTE: Each button press must be done within three seconds of each other.

Using the key:

Press the door lock button.

Press the remote start button twice.

Does the vehicle remotely start?

Yes	The system is operating correctly. INFORM the customer of the correct vehicle remote start operation.

No	REPLACE the passive key in question. PROGRAM the new passive key. REFER to: Anti-Theft Security Access .

R9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST S : A DOOR PASSIVE ENTRY FEATURE IS INOPERATIVE

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11C6:01	Passenger Door External Antenna: General Electrical Failure	Sets when the BCM detects a fault from one of the circuits to the passenger side keyless entry antenna (internal to the front passenger exterior door handle).
B11CA:01	Driver Door External Antenna: General Electrical Failure	Sets when the BCM detects a fault from one of the circuits to the driver side keyless entry antenna (internal to the front driver exterior door handle).
B1381:11	Left Front Door Handle Proximity Sensor: Circuit Short To Ground	Sets when the BCM detects a fault from one of the circuits to the left front exterior door handle.
B1381:15	Left Front Door Handle Proximity Sensor: Circuit Short To Battery or Open	Sets when the BCM detects a fault from one of the circuits to the left front exterior door handle.
B1381:29	Left Front Door Handle Proximity Sensor: Signal Invalid	Set when the BCM detects an activated touch sensor for more than 5 minutes.
B1382:11	Right Front Door Handle Proximity Sensor: Circuit Short To Ground	Sets when the BCM detects a fault from one of the circuits to the right exterior door handle.
B1382:15	Right Front Door Handle Proximity Sensor: Circuit Short To Battery or Open	Sets when the BCM detects a fault from one of the circuits to the right exterior door handle.
B1382:29	Right Front Door Handle Proximity Sensor: Signal Invalid	Set when the BCM detects an activated touch sensor for more than 5 minutes.

Possible Cause

- Wiring, terminals or connectors

- Door lock system concern
- RKE system concern
- Exterior door handle
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the exterior door handles for damage

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST S : A DOOR PASSIVE ENTRY FEATURE IS INOPERATIVE > PINPOINT TEST S : A DOOR PASSIVE ENTRY FEATURE IS INOPERATIVE

S1 CHECK THE DOOR LOCK OPERATION

Lock and unlock the doors using a door lock control switch.

Do the doors lock and unlock?

Yes	GO to S2

No	GO to Pinpoint Test H

S2 CHECK THE RKE (REMOTE KEYLESS ENTRY) OPERATION

Press the lock and unlock buttons on a key.

Do the doors lock and unlock?

Yes	GO to S3

No	GO to Pinpoint Test O

S3 CHECK THE PASSIVE ENTRY OPERATION FROM ALL DOORS

Operate the passive entry feature from the left door.

Operate the passive entry feature from the right door.

Is the passive entry feature inoperative from all the doors?

Yes	GO to S4

No	GO to S7

S4 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect BCM C2280D .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-20		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to S5

S5 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-20	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to S6

No	REPAIR the circuit.

S6 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR AN OPEN (ALL DOORS PASSIVE ENTRY INOPERATIVE)

Disconnect Left Front Exterior Door Handle C543 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C543-4	Ω	C2280D-20

Is the resistance less than 3 ohms?

Yes	GO to S16

No	REPAIR the circuit.

S7 CHECK FOR VOLTAGE TO THE EXTERIOR DOOR HANDLE

Ignition OFF.

Disconnect suspect exterior door handle.

Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-1		Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to S10

No	GO to S8

S8 CHECK THE EXTERIOR DOOR HANDLE VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

Disconnect BCM C2280D .

Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-1	Ω	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to S9

No	REPAIR the circuit.

S9 CHECK THE EXTERIOR DOOR HANDLE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-1	Ω	C2280D-21

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-1	Ω	C2280D-5

Is the resistance less than 3 ohms?

Yes	GO to S16

No	REPAIR the circuit.

S10 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR AN OPEN

Disconnect BCM C2280D .

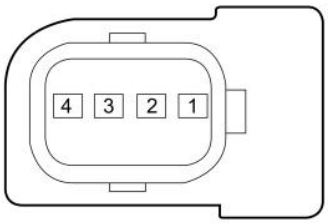
Measure:

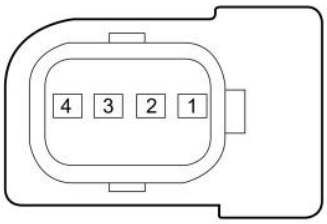
Left Front

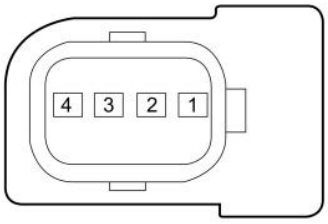
Positive Lead	Measurement / Action	Negative Lead
C543-4	Ω	C2280D-20

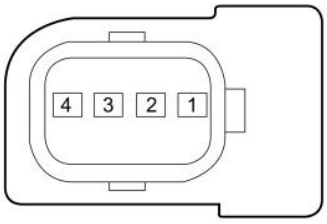
Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-4	Ω	C2280D-20









Is the resistance less than 3 ohms?

Yes	GO to S11

No	REPAIR the circuit.

S11 CHECK THE EXTERIOR DOOR HANDLE INTERNAL ANTENNA

Measure:

Positive Lead	Measurement / Action	Negative Lead
 E158730 C543, pin 2, component side	Ω	 E158730 C543, pin 3, component side
 E158730 C634, pin 2, component side	Ω	 E158730 C634, pin 3, component side

Is the resistance between 1 and 3 ohms?

Yes	GO to S12

No	INSTALL a new front exterior handle. REFER to: Exterior Front Door Handle .

S12 CHECK THE EXTERIOR DOOR HANDLE

Remove the opposite side exterior door handle. REFER to: Exterior Front Door Handle .

Transfer the exterior door handle from the opposite side of the vehicle to the suspect exterior door. For example, if the left front exterior door handle is suspect, transfer the right front exterior door handle to the left front door.

Connect BCM C2280D .

Operate the keyless entry feature from the suspect door.

Does the keyless entry feature operate from the suspect door?

Yes	INSTALL a new exterior handle. REFER to: Exterior Front Door Handle .

No	GO to S13

S13 CHECK THE EXTERIOR DOOR HANDLE ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect BCM C2280D .

Ignition ON.

Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-2	V	Ground
C543-3	V	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-2	V	Ground
C634-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to S14

S14 CHECK THE EXTERIOR DOOR HANDLE ANTENNA CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-2	Ω	Ground
C543-3	Ω	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-2	Ω	Ground
C634-3	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to S15

No	REPAIR the circuit in question.

S15 CHECK THE EXTERIOR DOOR HANDLE ANTENNA CIRCUITS FOR AN OPEN

Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-2	Ω	C2280D-13
C543-3	Ω	C2280D-28

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-2	Ω	C2280D-12
C634-3	Ω	C2280D-29

Are the resistances less than 3 ohms?

Yes	GO to S16

No	REPAIR the circuit in question.

S16 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST T : THE LUGGAGE COMPARTMENT LID PASSIVE ENTRY FEATURE IS INOPERATIVE

The Luggage Compartment Lid Passive Entry Feature Is Inoperative

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10C7:01	Interior Trunk Antenna: General Electrical Failure	Sets when the BCM detects a fault from the keyless entry rear antenna input.

Possible Cause

- Wiring, terminals or connectors
- Keyless entry rear antenna
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST T : THE LUGGAGE COMPARTMENT LID PASSIVE ENTRY FEATURE IS INOPERATIVE > PINPOINT TEST T : THE LUGGAGE COMPARTMENT LID PASSIVE ENTRY FEATURE IS INOPERATIVE

T1 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SWITCH INPUT

Close the luggage compartment lid.

Ignition ON.

Unlock the doors using the door lock control switch.

Press the luggage compartment lid release button.

Does the luggage compartment lid latch release?

Yes	GO to T2

No	GO to Pinpoint Test N

T2 CHECK THE RKE (REMOTE KEYLESS ENTRY) OPERATION

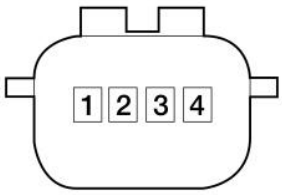
Ignition OFF.

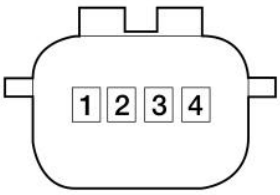
Close the luggage compartment lid.

Press the luggage compartment lid release button twice on a valid programmed key.

Does the luggage compartment lid latch release?

Yes	GO to T3





No	GO to Pinpoint Test O

T3 CHECK THE KEYLESS ENTRY REAR ANTENNA

Ignition OFF.

Disconnect Keyless Entry Rear Antenna C4378 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
 E157911 C4378, pin 1, component side	Ω	 E157911 C4378, pin 2, component side

Is the resistance between 1 and 3 ohms?

Yes	GO to T4

No	INSTALL a new keyless entry rear antenna. REFER to: Keyless Entry Rear Antenna .

T4 CHECK THE KEYLESS ENTRY REAR ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect BCM C2280D .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4378-1		Ground
C4378-2		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to T5

T5 CHECK THE KEYLESS ENTRY REAR ANTENNA CIRCUITS FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4378-1	Ω	Ground
C4378-2	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to T6

No	REPAIR the circuit in question.

T6 CHECK THE KEYLESS ENTRY REAR ANTENNA CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4378-1	Ω	C2280E-16
C4378-2	Ω	C2280E-15

Are the resistances less than 3 ohms?

Yes	GO to T7

No	REPAIR the circuit in question.

T7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST U : U0146:00

Normal Operations and Fault Conditions

The RTM communicates with the GWM over the CAN. If the RTM does not receive messages from the GWM, features such as the keyless entry can be inoperative.

RTM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	Sets when the RTM detects data messages are missing from the GWM over the CAN.

Possible Cause

- Network communication concern
- RTM
- GWM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST U : U0146:00 > PINPOINT TEST U : U0146:00

U1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to U2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

U2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the GWM pass the network test?

Yes	GO to U3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

U3 CHECK FOR CHARGING SYSTEM RELATED DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any battery voltage or charging system related Diagnostic Trouble Codes (DTCs) retrieved?

Yes	DIAGNOSE the charging system. Refer to the appropriate Battery and Charging System article.

No	GO to U4

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been performed.

U4 RECHECK THE RTM (RADIO TRANSCEIVER MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the RTM self-test.

Is DTC U0146:00 still present?

Yes	GO to U5

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

U5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0146 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 30 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0146 set in other modules?

Yes	INSTALL a new GWM. REFER to: Gateway Module A (GWM) .

No	INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST V : U0258:87 OR U1A00:00

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation and Fault Conditions

The RTM communicates with the BCM over a LIN circuit and, when the network is awake, over the CAN.

RTM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U1A00:00	Private Communication Network: No Sub Type Information	Sets when the RTM detects a fault with the LIN circuit to the BCM.

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0258:87	Lost Communication With Radio Transceiver: Missing Message	Sets when the BCM detects a communication fault with the RTM over the LIN circuit.

Possible Cause

- Wiring, terminals or connectors
- RTM
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST V : U0258:87 OR U1A00:00 > PINPOINT TEST V : U0258:87 OR U1A00:00

V1 CHECK IF THE RTM (RADIO TRANSCEIVER MODULE) AND THE BCM (BODY CONTROL MODULE) PASS THE NETWORK TEST

Ignition ON.

Using a diagnostic tool, perform the network test.

Does the RTM and the BCM pass the network test?

Yes	GO to V2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

V2 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect RTM C4458 .

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4458-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to V3

V3 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Connect BCM C2280B .

Ignition OFF.

Disconnect BCM C2280B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4458-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to V4

No	REPAIR the circuit.

V4 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4458-2	Ω	C2280B-26

Is the resistance less than 3 ohms?

Yes	GO to V5

No	REPAIR the circuit.

V5 CHECK FOR CORRECT RTM (RADIO TRANSCEIVER MODULE) OPERATION

Disconnect and inspect the RTM connector.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the RTM connector and make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RTM.REFER to: Radio Transceiver Module (RTM) . TEST the system for normal operation. If the concern is still present, GO to V6

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

V6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST W : U0140:00

Normal Operation and Fault Conditions

The DDM/ PDM communicates with the BCM over the CAN. If the DDM/ PDM does not receive messages from the BCM, features such as the puddle lamps, exterior mirror turn signal and door switch illumination can be inoperative.

DDM/ PDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub-Type Information	Sets when the DDM/ PDM detects data messages are missing from the BCM.

Possible Cause

- Network communication concern
- DDM/ PDM
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST W : U0140:00 > PINPOINT TEST W : U0140:00

W1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to W2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the BCM pass the network test?

Yes	GO to W3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

W3 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the BCM self-test.

Are any voltage related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Body Control Module (BCM) .

No	GO to W4

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been performed.

W4 RECHECK THE DDM (DRIVER DOOR MODULE) OR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the DDM/ PDM self-test.

Is DTC U0140:00 still present?

Yes	GO to W5

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 30 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140 set in other modules?

Yes	

No	INSTALL a new DDM or PDM. REFER to: Driver Door Module (DDM) . REFER to: Passenger Door Module (PDM) .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST X : U0208:00

Normal Operation and Fault Conditions

The DDM/ PDM communicate with the DSM over the CAN. If the DDM/ PDM does not receive messages from the DSM, features such as the memory mirror position can be inoperative.

DDM/ PDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0208:00	Lost Communication With "Seat Control Module A": No Sub-Type Information	Sets when the DDM/ PDM detects data messages are missing from the DSM.

Possible Cause

- Network communication concern
- DDM/ PDM
- DSM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST X : U0208:00 > PINPOINT TEST X : U0208:00

X1 VERIFY THE CUSTOMER CONCERN

Ignition ON.

Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to X2

No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

X2 CHECK THE COMMUNICATION NETWORK

Using a diagnostic scan tool, perform a network test.

Does the DSM pass the network test?

Yes	GO to X3

No	REFER to: MODULE COMMUNICATIONS NETWORK .

X3 CHECK FOR DSM (DRIVER FRONT SEAT MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the DSM self-test.

Are any voltage related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: FRONT SEATS .

No	GO to X4

NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been performed.

X4 RECHECK THE DDM (DRIVER DOOR MODULE) OR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the DDM/ PDM self-test.

Is DTC U0208:00 still present?

Yes	GO to X5

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

X5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0208 SET IN OTHER MODULES

Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Wait 30 seconds.

Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0208 set in other modules?

Yes	INSTALL a new DSM. REFER to: Driver Front Seat Module (DSM) .

No	INSTALL a new DDM or PDM. REFER to: Driver Door Module (DDM) . REFER to: Passenger Door Module (PDM) .

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST Y : P1594 OR P1595

Normal Operation and Fault Conditions

When the BCM receives a request to remote start the vehicle, it first checks to make sure conditions exist to allow it to start (for example, the hood and doors closed, vehicle in PARK, no powertrain concerns). If the required conditions are correct, the BCM starts the vehicle and allows it to run for a predetermined amount of time, determined by the setting selected from the message center.

PCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1594	Forced Engine Shutdown - Remote Start System Fault, No Unattended Vehicle Timeout	Sets when the PCM detects the remote start has been active for more than 30 minutes continuously.
P1595	Forced Engine Shutdown - Remote Start System Fault, Transmission Range Not In Park Position	Sets when the PCM detects the remote start is active with the transmission not in PARK.

Possible Cause

- Network communication concern
- Powertrain concern
- BCM

DIAGNOSIS AND TESTING > LOCKS, LATCHES AND ENTRY SYSTEMS > PINPOINT TESTS > PINPOINT TEST Y : P1594 OR P1595 > PINPOINT TEST Y : P1594 OR P1595

Y1 CHECK FOR OTHER PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Review the results from the PCM self-test.

Are any other PCM Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE all other PCM Diagnostic Trouble Codes (DTCs) first. Refer to the appropriate Engine article for the procedure.

No	GO to Y2

Y2 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the DTC Chart: BCM .

No	GO to Y3

Y3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connectors or terminals - clean module pins)

damaged or bent pins - install new terminals pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

GENERAL PROCEDURES > DOOR LATCH LUBRICATION

Special Tool(s) / General Equipment

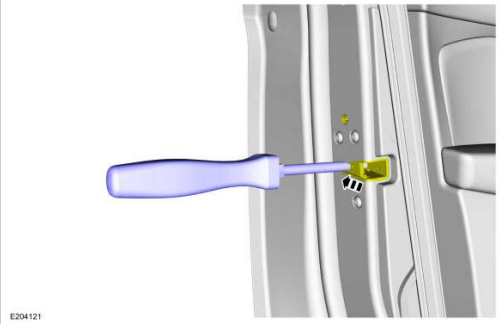
Flat-Bladed Screwdriver

Materials

Name	Specification
Motorcraft® Multi-Purpose Grease SprayXL-5-A	ESB-M1C93-B

Activation

NOTE: Typical left front door shown in illustration, others similar.

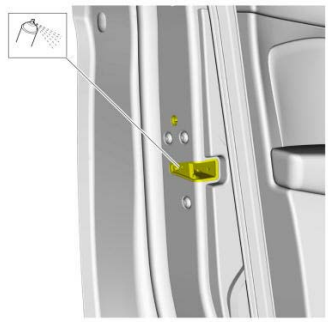


1.

Open the door.

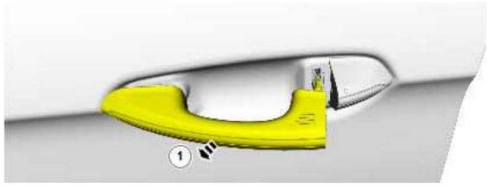
2.

Using a flat blade screwdriver, fully close the latch (2 clicks). Use the General Equipment: Flat-Bladed Screwdriver



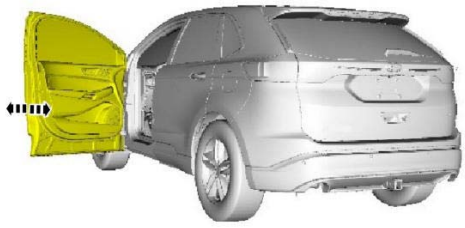
NOTE: Do not over-lubricate the latch. Using excessive grease may damage the internal lock motor.

3.
Spray the multi-purpose grease into the opening on the door latch for approximately 5 seconds.



Material

: Motorcraft® Multi-Purpose Grease Spray / XL-5-A (ESB-M1C93-B)



4.

Open the latch using the exterior door handle.

5.

Open and close the door several times to circulate the lubricant inside the latch.

6.

Open the door.

7.

Wipe off any excess grease.

GENERAL PROCEDURES > STAGED UNLOCK PROGRAMMING

Programming

1.

> *WARNING: Before beginning any service procedure in this service information, refer to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.*

Refer to: Health and Safety Precautions .

2.

With the ignition in OFF, press the lock and unlock buttons on the RKE transmitter simultaneously for 4 seconds.

3.

The turn signals flash twice to indicate the mode change.

4.

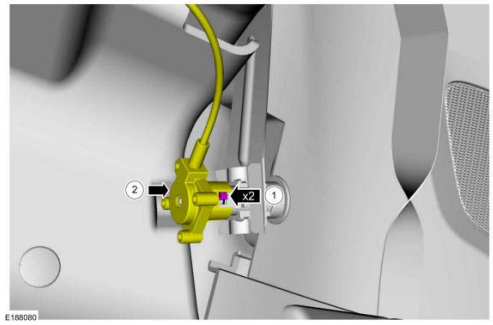
Repeat Step 2 to enable/disable the staged unlocking feature.

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID LOCK CYLINDER - CONVERTIBLE > REMOVAL

1.

Remove the rear seat backrest. Refer to: Rear Seat Backrest - Convertible .

2.



Detach the luggage compartment lid latch cable.

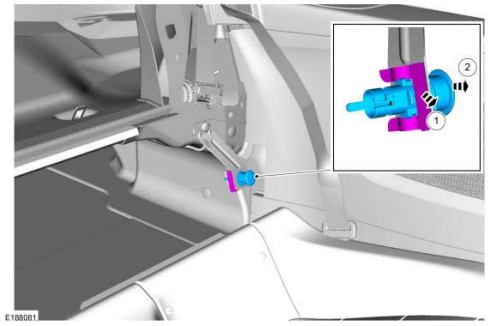
1.

Release the luggage compartment lid lock cylinder retaining tabs.

2.

Detach the luggage compartment lid latch cable.

3.



Remove the luggage compartment lid lock cylinder.

1.

Remove the luggage compartment lid lock cylinder retaining clip.

2.

Remove the luggage compartment lid lock cylinder.

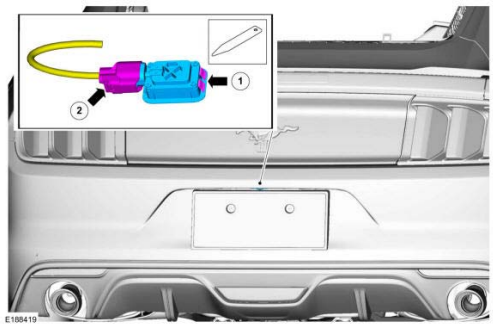
REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID LOCK CYLINDER - CONVERTIBLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID RELEASE SWITCH > REMOVAL

1.



Remove the luggage compartment lid release switch.

1.

Release the luggage compartment lid release switch from the bumper cover.

2.

Disconnect the electrical connector and remove the luggage compartment lid release switch.

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID RELEASE SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > DOOR LOCK CONTROL SWITCH > REMOVAL

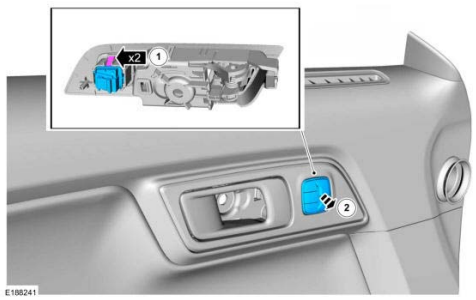
NOTE: LHD shown in illustration, RHD similar.

NOTE: LH side shown in illustration, RH side similar.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

2.



Remove the door lock control switch.

1.

Release the retaining clips.

2.

Remove the door lock control switch.

REMOVAL AND INSTALLATION > DOOR LOCK CONTROL SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > DOOR LOCK CYLINDER > REMOVAL

NOTE: LHD shown in illustration, RHD similar.

NOTE: Removal steps in this procedure may contain installation details.

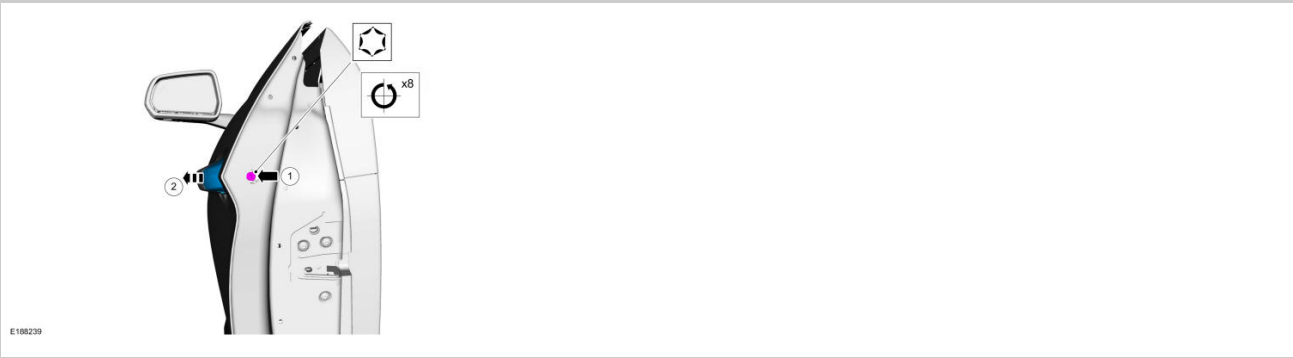
1.

Remove the grommet.

2.

Remove the lock cylinder door handle cover.

1.



Turn the release screw 8 turns. The handle will release around 6 to 6.5 turns. You must continue to the full 8 revolutions for installation.

Torque

: 62 lb.in (7 Nm)

2.

Remove the lock cylinder and the door handle cover assembly from the front door.

3.

Remove the door lock cylinder.

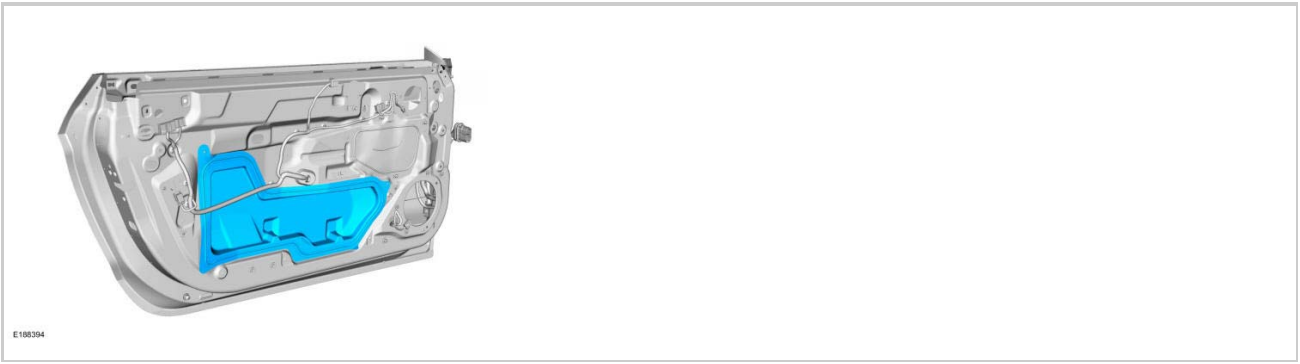
REMOVAL AND INSTALLATION > DOOR LOCK CYLINDER > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > EXTERIOR FRONT DOOR HANDLE > REMOVAL

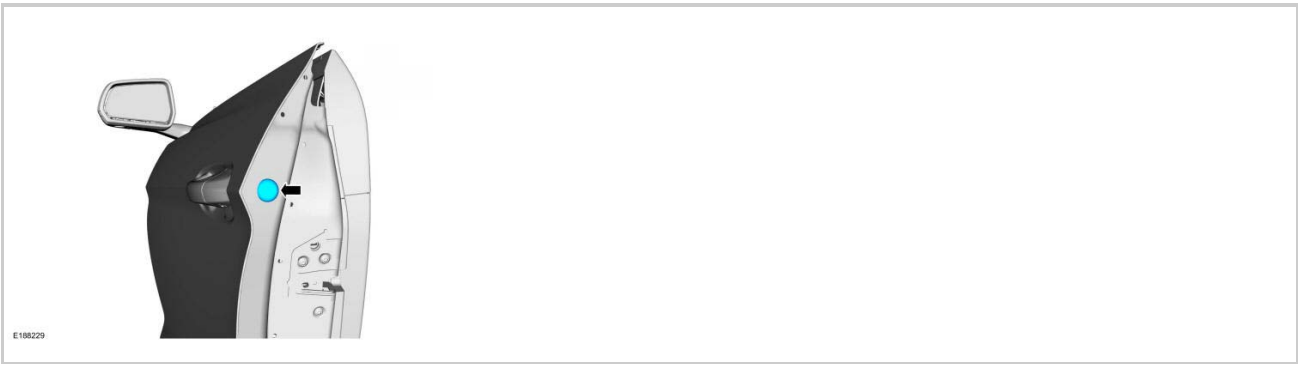
NOTE: LHD shown in illustration, RHD similar.



NOTE: LH side shown in illustration, RH side similar.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .



2.

Remove the front door lower watershield.

3.

Remove the grommet.

4.

Remove the lock cylinder door handle cover.

1.

Hold the front door handle open.

2.

Turn the release screw 8 turns. The handle will release around 6 to 6.5 turns. You must continue to the full 8 revolutions for installation.

3.

Remove the lock cylinder and door handle cover assembly from front door.

NOTE: Do not pull the door handle out of the door too far without disconnecting the handle from the connector. Damage to the harness will occur.

5.
Disconnect the exterior front door handle connector from the handle from inside the door and remove the exterior front door handle.

REMOVAL AND INSTALLATION > EXTERIOR FRONT DOOR HANDLE > INSTALLATION

1.

Connect the exterior front door handle connector to the handle from inside the door and partially install the front door handle in the front door opening.

2.

Install the lock cylinder door handle cover.

1.

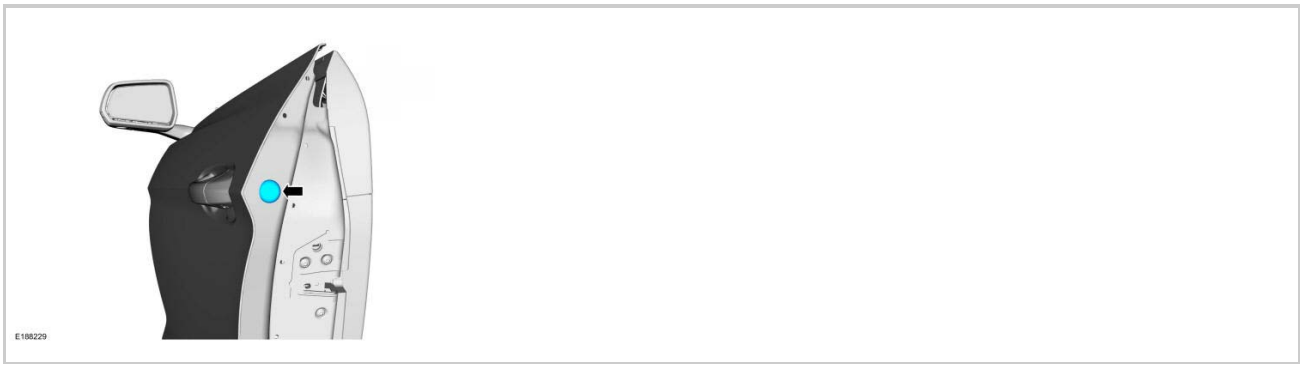
Install the lock cylinder and door handle cover assembly to the front door.

2.

Release the front door handle.

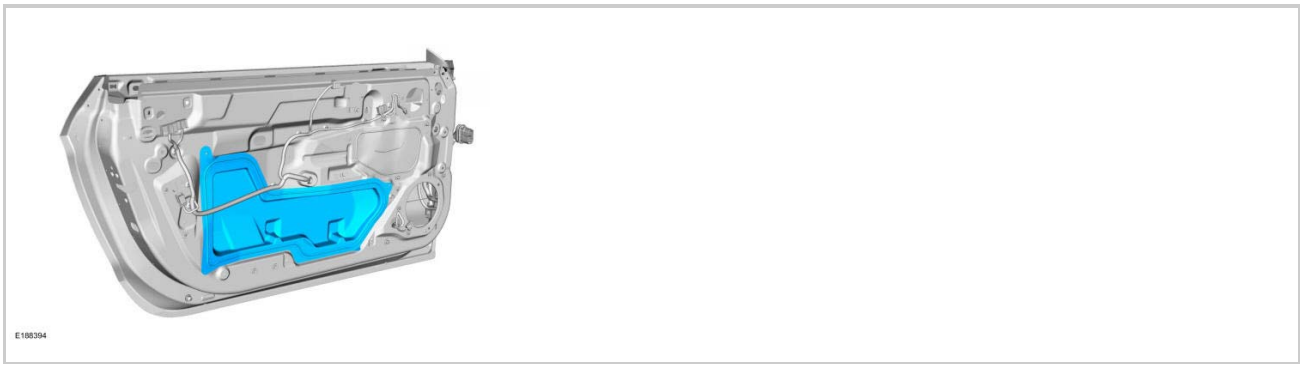
3.

Apply light pressure to the front door handle while turning the release screw 8 turns. The handle will engage and go in around 6 to 6.5 turns. You must continue to the full 8 revolutions for installation then torque to the specified value.



Torque

: 62 lb.in (7 Nm)



3.

Install the grommet.

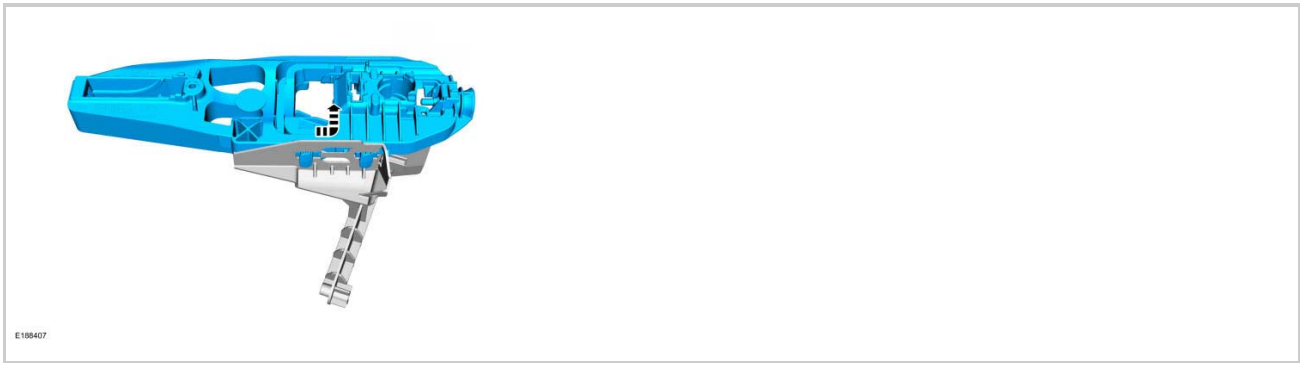
4.

Install the front door lower watershield.

5.

Install the front door trim panel. Refer to: Front Door Trim Panel .

REMOVAL AND INSTALLATION > EXTERIOR FRONT DOOR HANDLE REINFORCEMENT > REMOVAL



NOTE: LH side shown in illustration, RH side similar.

1.

Remove the front door latch. Refer to: Front Door Latch .

NOTE: This step only necessary when installing a new component.

2.
Remove the exterior front door handle reinforcement.

REMOVAL AND INSTALLATION > EXTERIOR FRONT DOOR HANDLE REINFORCEMENT > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT DOOR LATCH > REMOVAL

NOTE: LH side shown in illustration, RH side similar.

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the front door window glass. Refer to: Front Door Window Glass .

2.

Remove the exterior front door handle. Refer to: Exterior Front Door Handle .

3.

Remove the aft front door glass run. Refer to: Front Door Glass Run and Bracket (501-11 Glass, Frames and Mechanisms, Removal and Installation).

4.

Position aside the front door window regulator.

1.

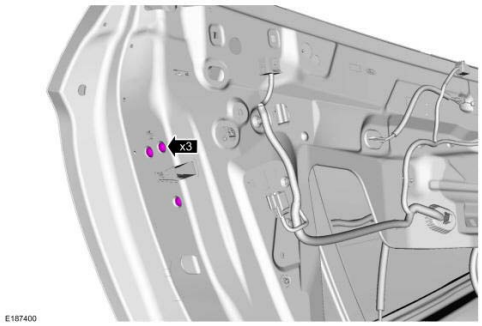
Remove the retainers.

2.

Position aside the rear portion of the front door window regulator.

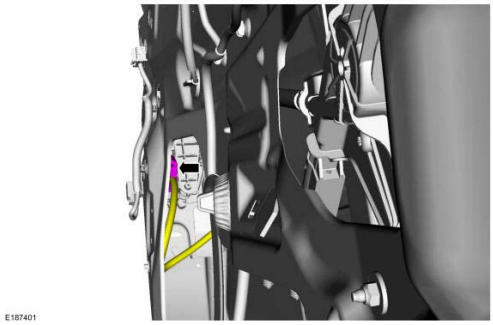
5.

Remove the exterior door handle reinforcement screw.



6.

Remove the front door latch bolts.



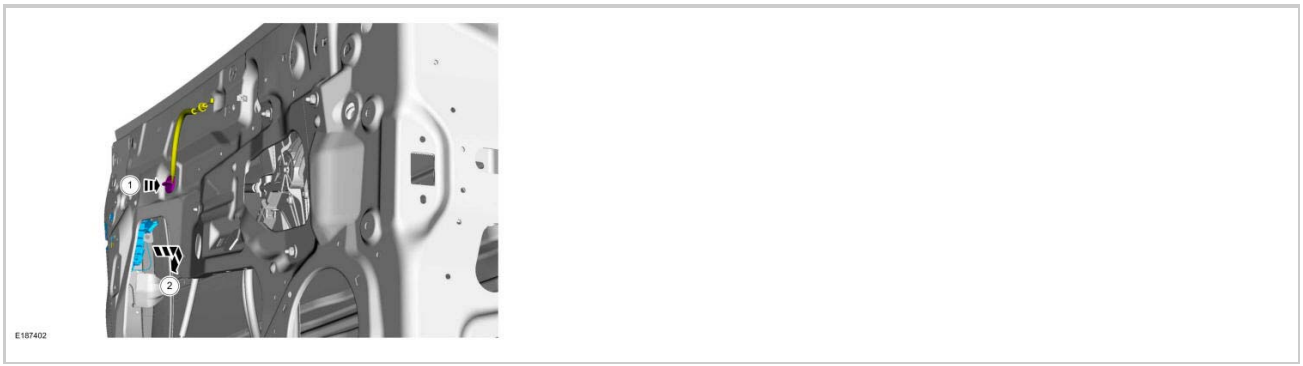
Torque

: 71 lb.in (8 Nm)

7.

Disconnect the electrical connector.

8.



Remove the front door latch.

1.

Route the interior front door handle cable through the door.

2.

Remove the front door latch.

NOTE: This step is only necessary when installing a new component.

9.
Remove the interior front door handle cable from the front door latch.

NOTE: This step is only necessary when installing a new component.

10.
Remove the exterior front door handle reinforcement.

1.

Tighten the screw releasing the tension on the cable.

2.

Detach and position aside the cable from the exterior front door handle reinforcement.

NOTE: This step is only necessary when installing a new component.

11.
Remove the front door latch.

1.

Remove the screws.

2.

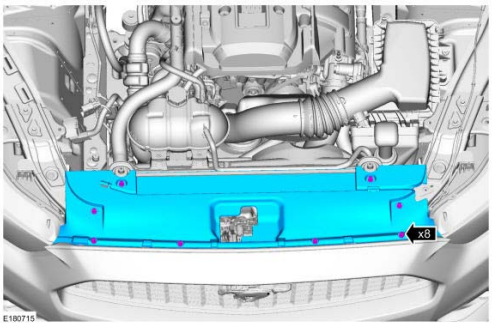
Detach and position aside the cable from the front door latch.

3.

Detach the rod and remove the front door latch.

REMOVAL AND INSTALLATION > FRONT DOOR LATCH > INSTALLATION

1.



To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HOOD LATCH > REMOVAL

NOTE: LHD shown in illustration, RHD similar.

1.

Remove the retainers and the radiator sight shield.

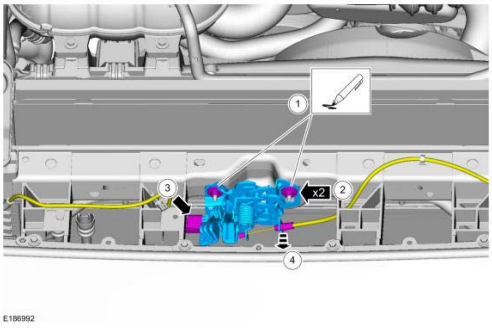
2.

Remove the hood latch.

1.

Mark the hood latch nuts for reference.

2.



Remove the hood latch nuts.

3.

Disconnect the hood ajar switch electrical connector.

4.

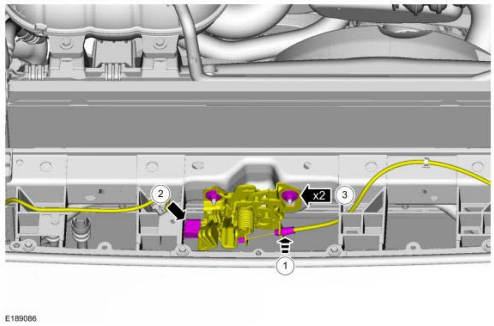
Disconnect the hood latch release cable from the hood latch and remove the hood latch.

REMOVAL AND INSTALLATION > HOOD LATCH > INSTALLATION

1.

Install the hood latch.

1.



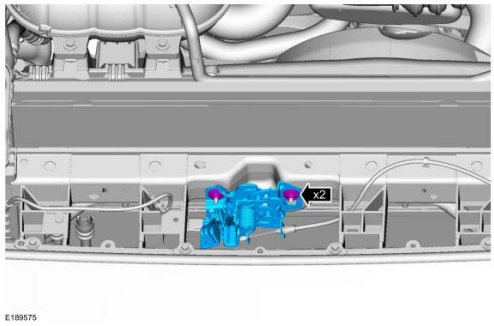
Install the hood latch and connect the hood latch release cable.

2.

Connect the hood ajar switch electrical connector.

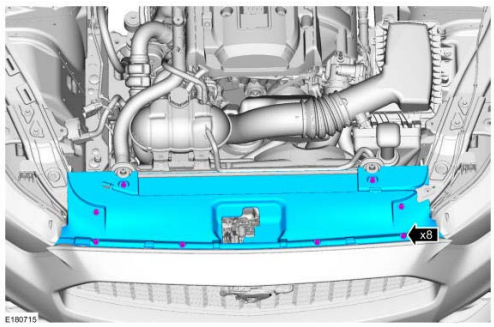
3.

Finger tighten the nuts at this stage.



2.

Position the hood latch to the marked reference points and tighten the hood latch nuts.



Torque

: 80 lb.in (9 Nm)

3.

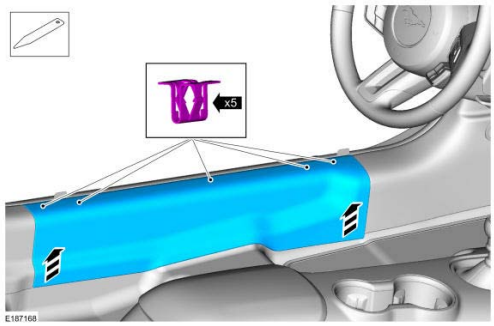
Install the radiator sight shield and the retainers.

REMOVAL AND INSTALLATION > HOOD LATCH RELEASE CABLE

Special Tool(s) / General Equipment

Interior Trim Remover

REMOVAL AND INSTALLATION > HOOD LATCH RELEASE CABLE > REMOVAL



NOTE: LHD shown in illustration, RHD similar.

1.

If equipped, remove DSP. Refer to: Audio Digital Signal Processing (DSP) Module .

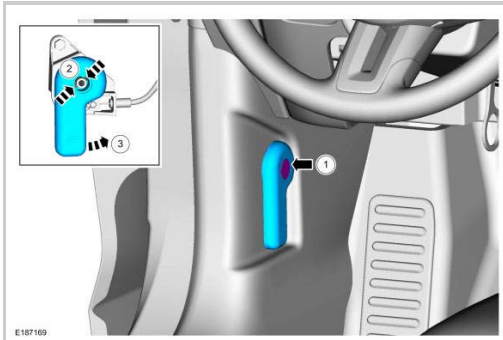
2.

Remove the driver door scuff plate. Use the General Equipment: Interior Trim Remover

NOTE: Insert a 10mm 1/4 inch drive socket to release the clips.

3.
Remove the hood latch release handle.

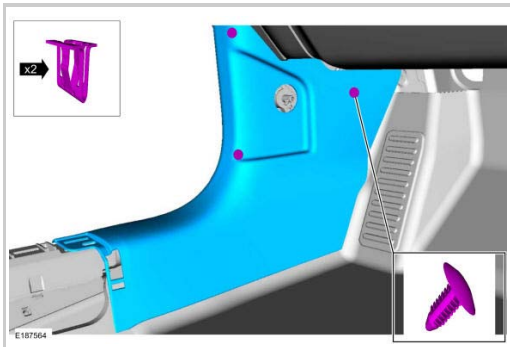
1.



Remove the hood latch release handle access cover.

2.

Release the clips releasing the hood latch release handle.



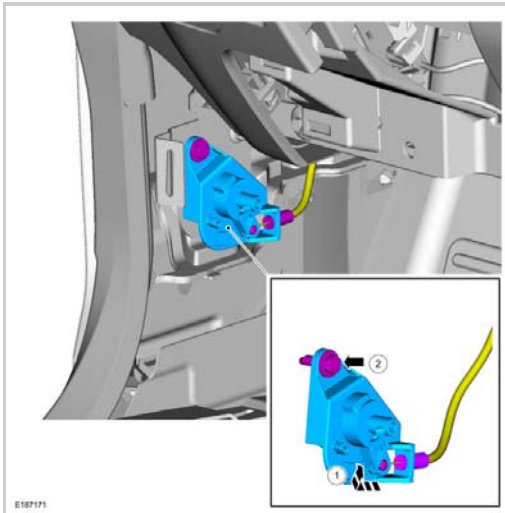
3.

Remove the hood latch release handle.

4.

Release the clips and remove the LH cowl trim panel.

5.



Remove the hood latch release.

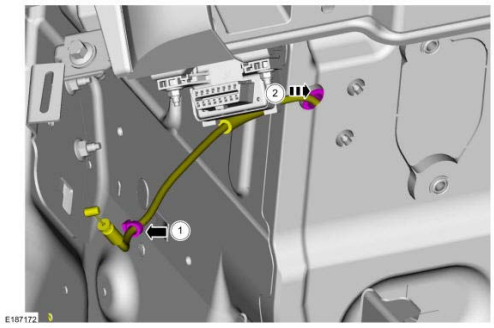
1.

Disconnect the hood latch release cable.

2.

Remove the bolts and the hood latch release.

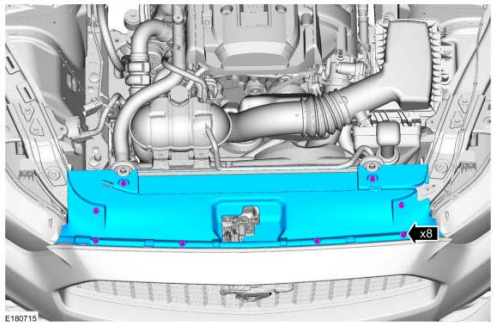
6.



Route the hood latch release cable through the cowl.

1.

Release the routing cable clips.



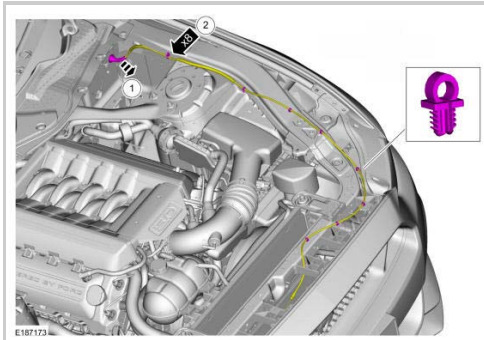
2.

Route the hood latch release cable through the cowl.

7.

Remove the retainers and the radiator sight shield.

8.



Remove the hood latch release cable.

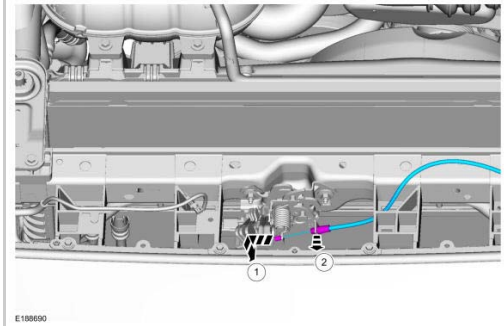
1.

Remove the grommet.

2.

Remove the clips and position aside the hood latch release cable.

9.



Remove the hood latch release cable.

1.

Release the hood latch release cable from the routing bracket.

2.

Disconnect the cable end and remove the hood latch release cable.

REMOVAL AND INSTALLATION > HOOD LATCH RELEASE CABLE > INSTALLATION

1.

To install, reverse the removal procedure.

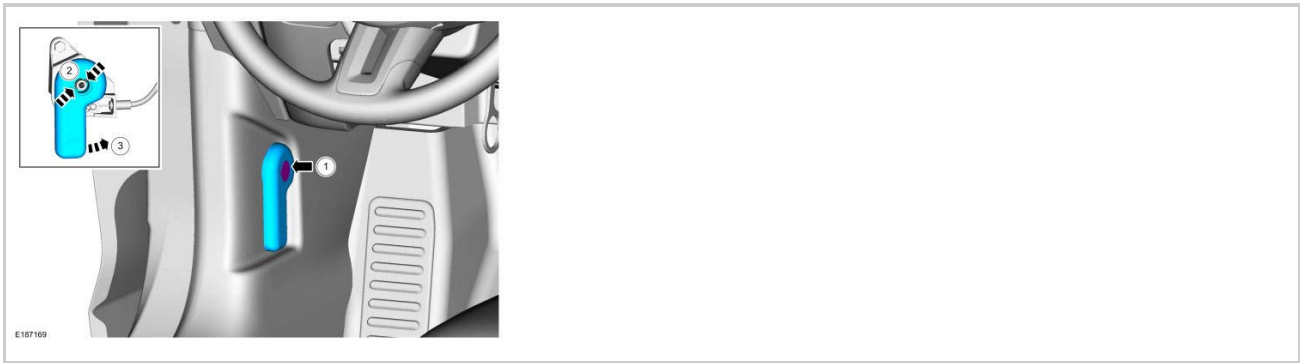
REMOVAL AND INSTALLATION > HOOD LATCH RELEASE HANDLE > REMOVAL

NOTE: LHD shown in illustration, RHD similar.

NOTE: Insert a 10 mm 1/4 inch drive socket to release the clips.

1.
Remove the hood latch release handle.

1.



Remove the hood latch release handle access cover.

2.

Release the clips releasing the hood latch release handle.

3.

Remove the hood latch release handle.

REMOVAL AND INSTALLATION > HOOD LATCH RELEASE HANDLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > INTERIOR FRONT DOOR HANDLE > REMOVAL

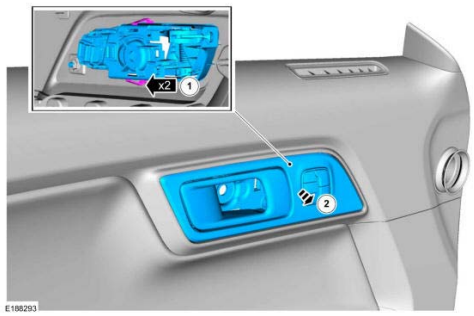
NOTE: LHD shown in illustration, RHD similar.

NOTE: LH side shown in illustration, RH side similar.

1.

Remove the front door trim panel. Refer to: Front Door Trim Panel .

2.



Remove the interior front door handle.

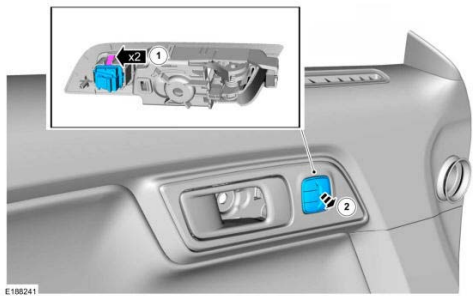
1.

Release the retaining clips.

2.

Remove the interior front door handle.

NOTE: This step is only necessary when installing a new component.



3.
Remove the door lock control switch.

1.

Release the retaining clips.

2.

Remove the door lock control switch.

REMOVAL AND INSTALLATION > INTERIOR FRONT DOOR HANDLE > INSTALLATION

1.

To install, reverse the removal procedure.

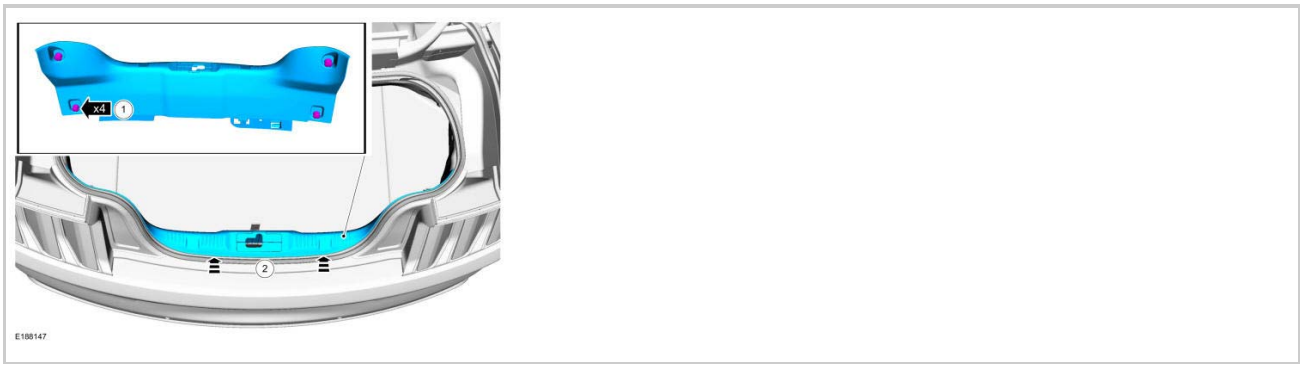
REMOVAL AND INSTALLATION > KEYLESS ENTRY REAR ANTENNA > REMOVAL

NOTE: Coupe shown in illustration, convertible similar.

1.

Open the luggage compartment lid.

2.



Remove the luggage compartment scuff plate.

1.

Remove the thumb nut type retainers.

2.

Remove the luggage compartment scuff plate.

NOTE: Luggage compartment lid removed for clarity.

3.
Remove the keyless entry rear antenna.

1.

Disconnect the keyless entry rear antenna electrical connector.

2.

Remove the retainers and the keyless entry rear antenna.

REMOVAL AND INSTALLATION > KEYLESS ENTRY REAR ANTENNA > INSTALLATION

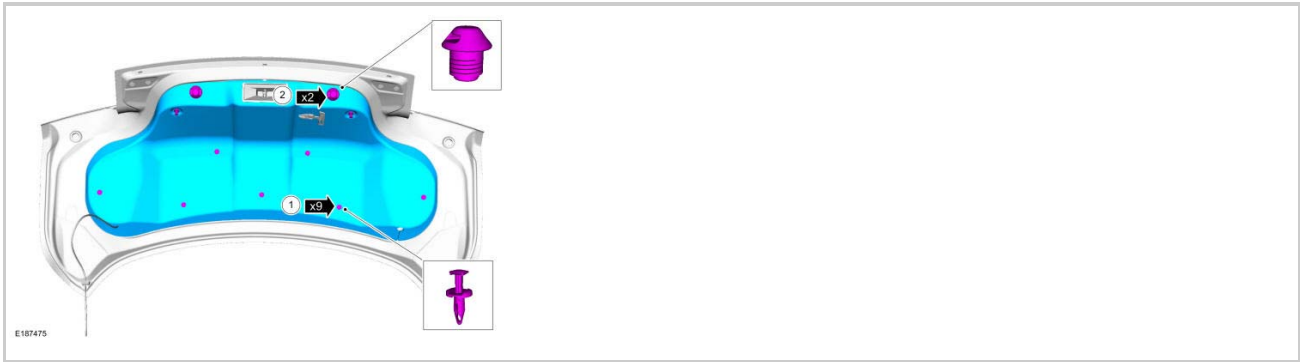
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID LATCH - COUPE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the luggage compartment lid trim panel.

1.

Remove the retainers.

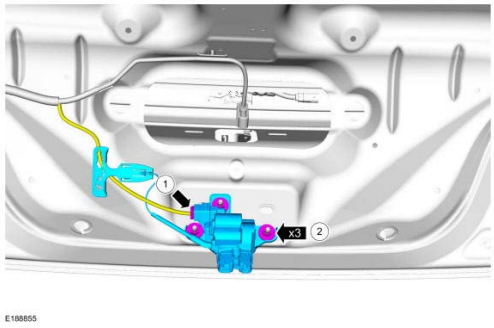
2.

Remove the bump stops and the luggage compartment lid trim panel.

2.

Remove the luggage compartment lid latch.

1.



Disconnect the electrical connector and position aside the wiring harness.

2.

Remove the nuts and the luggage compartment lid latch.

Torque

: 62 lb.in (7 Nm)

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID LATCH - COUPE > INSTALLATION

1.

To install, reverse the removal procedure.

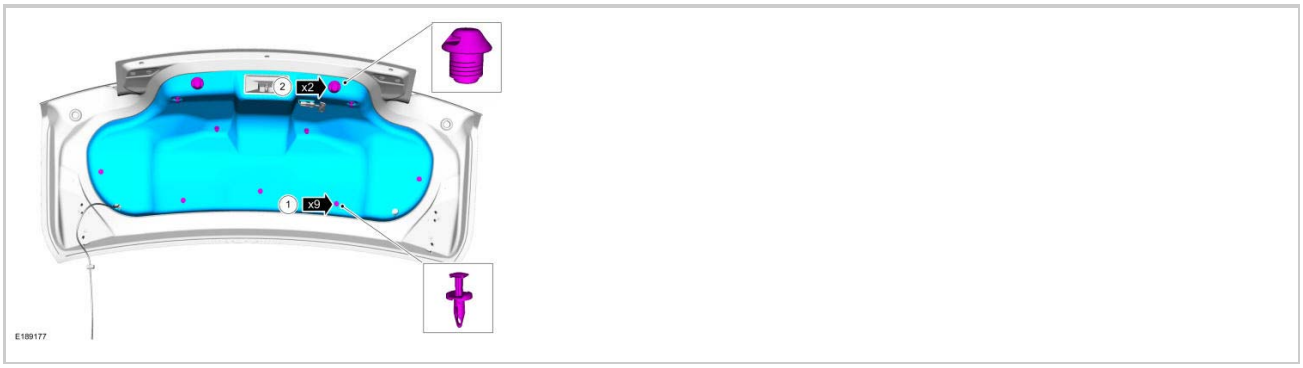
REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID LATCH - CONVERTIBLE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the luggage compartment lid lock cylinder. Refer to: Luggage Compartment Lid Lock Cylinder - Convertible .

2.



Remove the luggage compartment lid trim panel.

1.

Remove the retainers.

2.

Remove the bump stops and the luggage compartment lid trim panel.

3.

Route the luggage compartment lid latch cable.

1.

Remove the retainer.

2.

Position aside the load compartment trim panel.

3.

Remove the retainers.

4.

Route the luggage compartment lid latch cable through the load compartment trim panel.

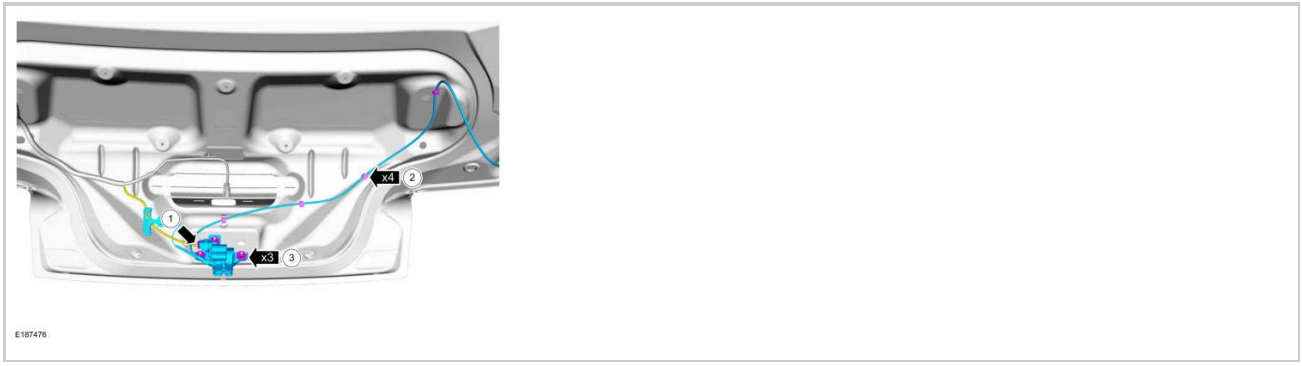
4.

Remove the luggage compartment lid latch.

1.

Disconnect the electrical connector and position aside the wiring harness.

2.



Unlock the luggage compartment lid latch cable from the clips.

3.

Remove the nuts and the luggage compartment lid latch.

Torque

: 62 lb.in (7 Nm)

REMOVAL AND INSTALLATION > LUGGAGE COMPARTMENT LID LATCH - CONVERTIBLE > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: INTERIOR TRIM AND ORNAMENTATION

REMOVAL AND INSTALLATION > A-PILLAR TRIM PANEL - CONVERTIBLE > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: RH side shown, LH side similar.

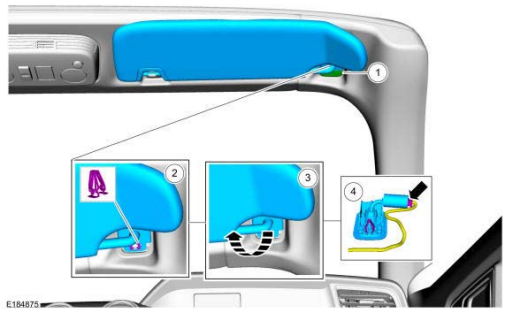
1.

Remove the sun visor.

1.

Remove the sun visor cap.

2.



Release the clip.

3.

Remove the sun visor.

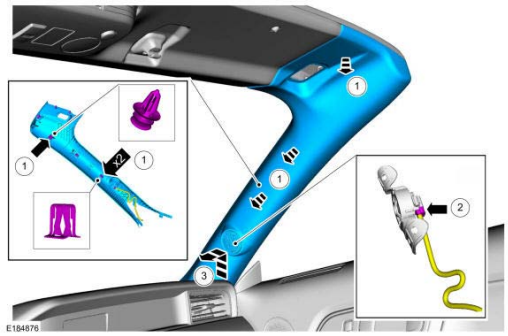
4.

If equipped. Disconnect the electrical connector.

2.

Remove the A-pillar trim panel.

1.



Release the retainers.

2.

If equipped. Disconnect the speaker electrical connector.

3.

Release the clips and remove the A-pillar trim panel.

REMOVAL AND INSTALLATION > A-PILLAR TRIM PANEL - CONVERTIBLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > A-PILLAR TRIM PANEL - COUPE > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: RH side shown, LH side similar.

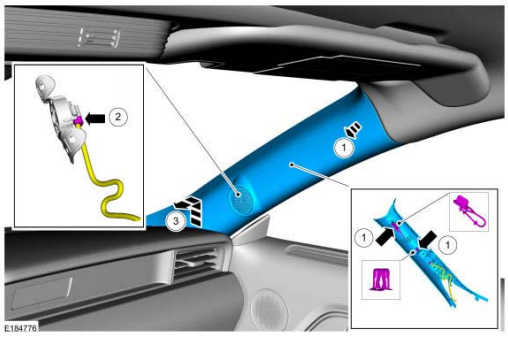
1.

Remove the pin-type retainer and position aside the door weatherstrip.

2.

Remove the A-pillar trim panel.

1.



Release the clips and disconnect the tether anchor.

2.

If equipped Disconnect the speaker electrical connector.

3.

Release the clips and remove the A-pillar trim panel.

REMOVAL AND INSTALLATION > A-PILLAR TRIM PANEL - COUPE > INSTALLATION

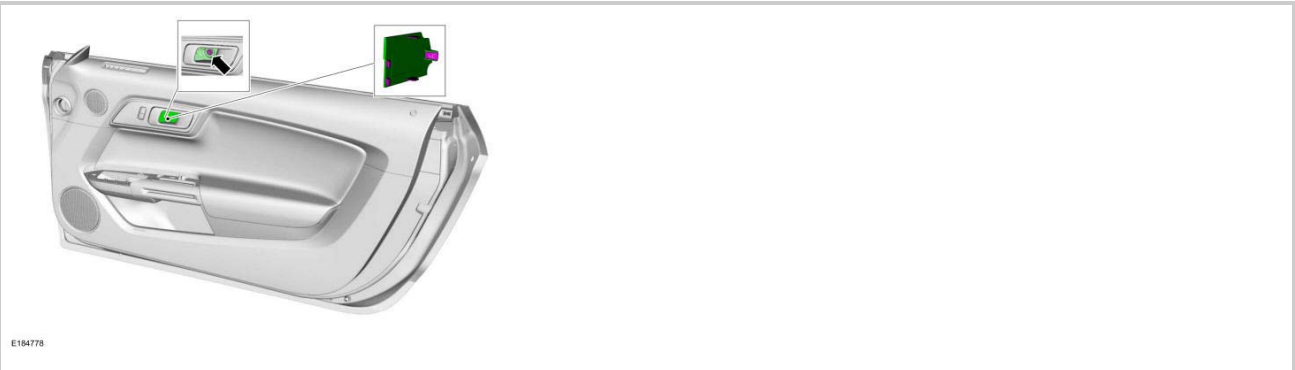
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > FRONT DOOR TRIM PANEL > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: Removal steps in this procedure may contain installation details.



NOTE: RH side shown, LH side similar.

1.

Remove the cover and the upper trim panel bolt.

Torque

: 48 lb.in (5.4 Nm)

2.

Remove the front door window control switch. Refer to: Front Door Window Control Switch .

3.

Remove the front door trim panel center bolt.

Torque

: 48 lb.in (5.4 Nm)

4.

Remove the front door trim panel lower retainers.

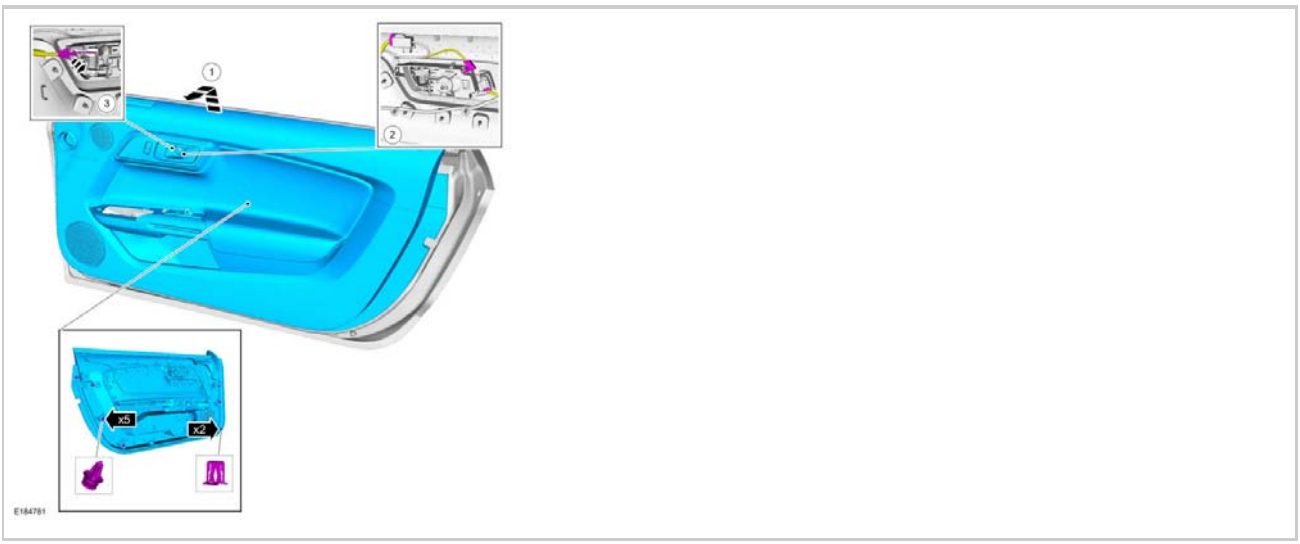
Torque

: 13 lb.in (1.5 Nm)

5.

Remove the front door trim panel.

1.



Release the clips.

2.

If equipped. Disconnect the electrical connectors.

3.

Release the latch cable and remove the front door trim panel.

REMOVAL AND INSTALLATION > FRONT DOOR TRIM PANEL > INSTALLATION

NOTE: Transfer parts as necessary.

1.
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HEADLINER

REMOVAL AND INSTALLATION > HEADLINER > REMOVAL

NOTE: LHD shown, RHD similar.

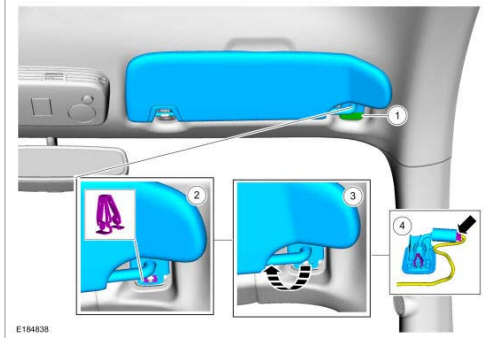
NOTE: RH side shown, LH side similar.

1.
On both sides. Remove the sun visors.

1.

Remove the retainer cap.

2.



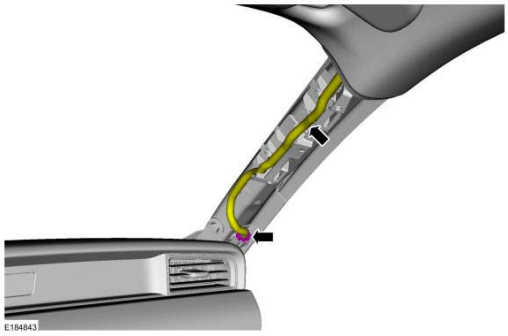
Release the retainer.

3.

Remove the sun visor.

4.

If equipped.Disconnect the electrical connector.

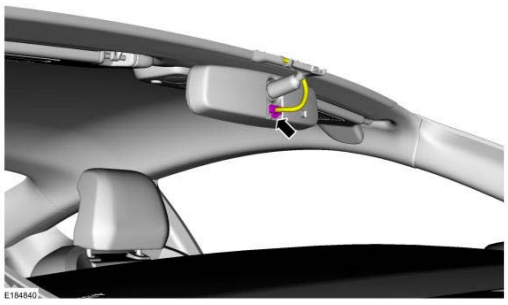


2.

On both sides, remove the A-pillar trim panels. Refer to: A-Pillar Trim Panel - Coupe .

3.

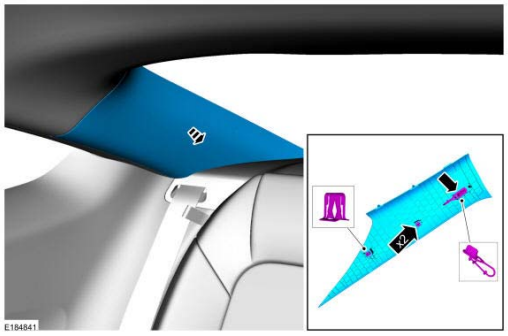
Detach the wire harness and electrical connector retainers and disconnect the electrical connector.



NOTE: RH side shown, LH side similar.

4.
On both sides. Remove the retainer and the sun visor clip.

5.



If equipped. Disconnect the rear view mirror electrical connector.

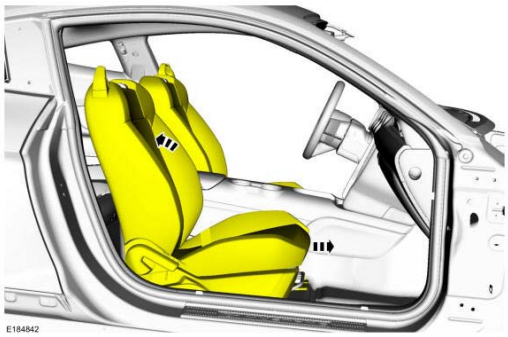
NOTE: RH side shown, LH side similar.

6.

On both sides. Release the clips, disconnect the tether clip and remove the D-pillar trim panel.

7.

On both sides, remove the rear quarter trim panels. Refer to: Rear Quarter Trim Panel .



8.

On both sides. Remove the head restraints.

9.

Position both front seats in the full forward and full reclined position.

10.

Remove the headliner.

REMOVAL AND INSTALLATION > HEADLINER > INSTALLATION

NOTE: Obtain the specified adhesive commercially. Depending on the headliner and optional wire harness(es), the purchase of multiple tubes is suggested.

NOTE: These steps are only necessary when installing a new component.

1.

1.

Using tape, mark the wire at the exit points for proper length from headliner-to-body/ roof connectors.

2.

Carefully remove the wire harness from the original headliner.

3.

Using a marking tool, mark the new headliner with the routing and exit points of the wire harness from the original headliner.

NOTE: Make sure not to damage the wire harness when cutting the excess adhesive from the wire harness.

4.
Cut and remove any excess adhesive from the wire harness.

5.

Position the wire harness onto the new headliner, making sure the harness has enough length to be connected to the body/roof connectors at the tape location(s) applied earlier. Apply tape to temporarily hold the wire harness in position on the headliner.

6.

Apply the adhesive in the same location as the factory installed adhesive along the full length of the wire harness-to-headliner to avoid any NVH concern(s).

Material

: 3M™ Super-Fast Repair Adhesive / 04747

NOTE: Transfer parts as necessary.

2.
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > HEADLINER - LOWERING

NOTE: RH side shown, LH side similar.

1.
On both sides. Remove the sun visors.

1.

Remove the retainer cap.

2.

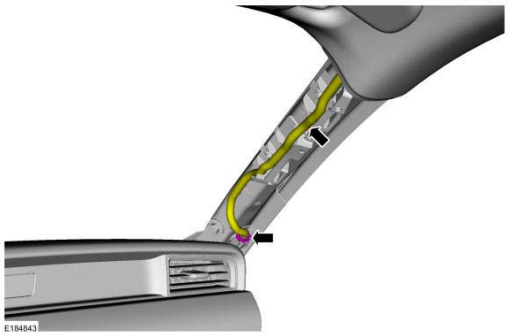
Release the retainer.

3.

Remove the sun visor.

4.

If equipped. Disconnect the electrical connector.

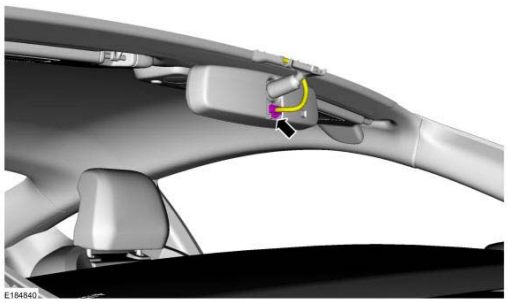


2.

On both sides, remove the A-pillar trim panels. Refer to: A-Pillar Trim Panel - Coupe .

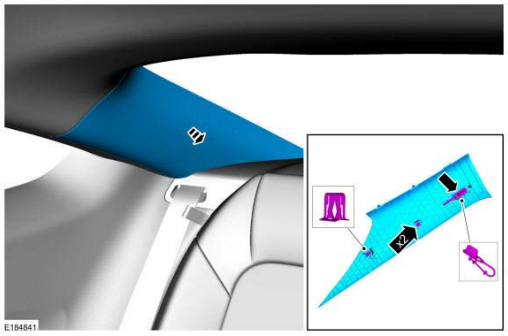
3.

Detach the wire harness and electrical connector retainers and disconnect the electrical connector.



NOTE: RH side shown, LH side similar.

4.
On both sides. Remove the retainer and the sun visor clip.

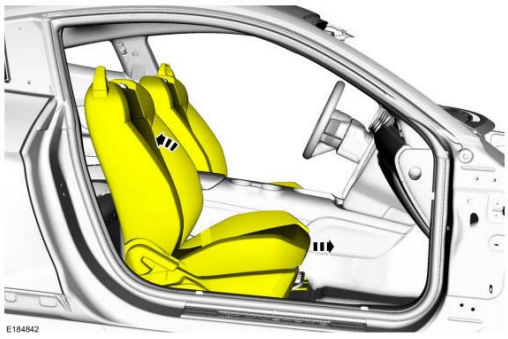


5.

If equipped. Disconnect the rear view mirror electrical connector.

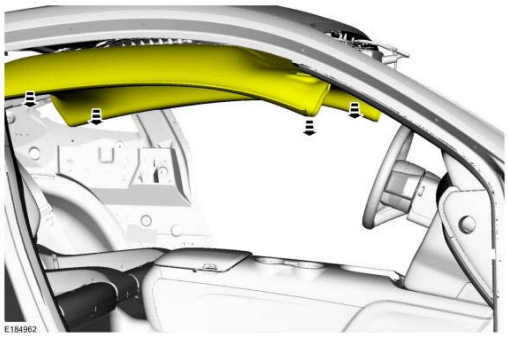
NOTE: RH side shown, LH side similar.

6.
On both sides. Release the clips, disconnect the tether clip and remove the D-pillar trim panel.



7.

On both sides, remove the rear quarter trim panels. Refer to: Rear Quarter Trim Panel .



8.

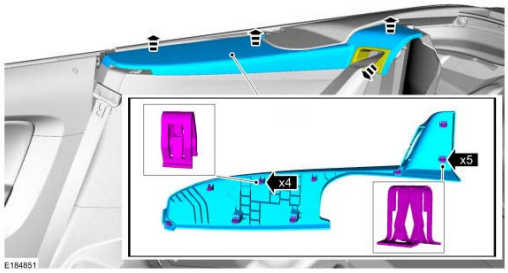
Position both front seats in the full forward and full reclined position.

9.

Lower the headliner.

REMOVAL AND INSTALLATION > LOADSPACE TRIM PANEL - CONVERTIBLE > REMOVAL

NOTE: LHD shown, RHD similar.



NOTE: RH side shown, LH side similar.

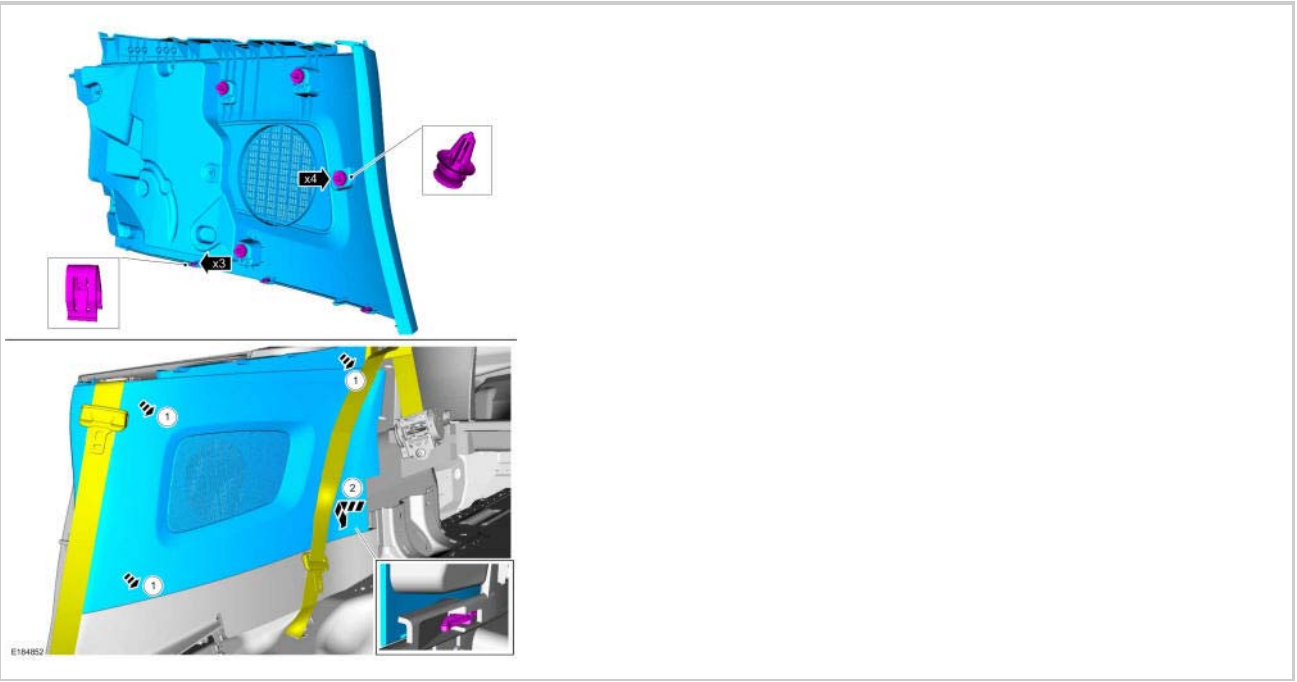
1.

Remove the rear seat backrest. Refer to: Rear Seat Backrest - Convertible .

2.

Position the safety belt guide aside, release the clips and remove the upper loadspace trim panel.

3.



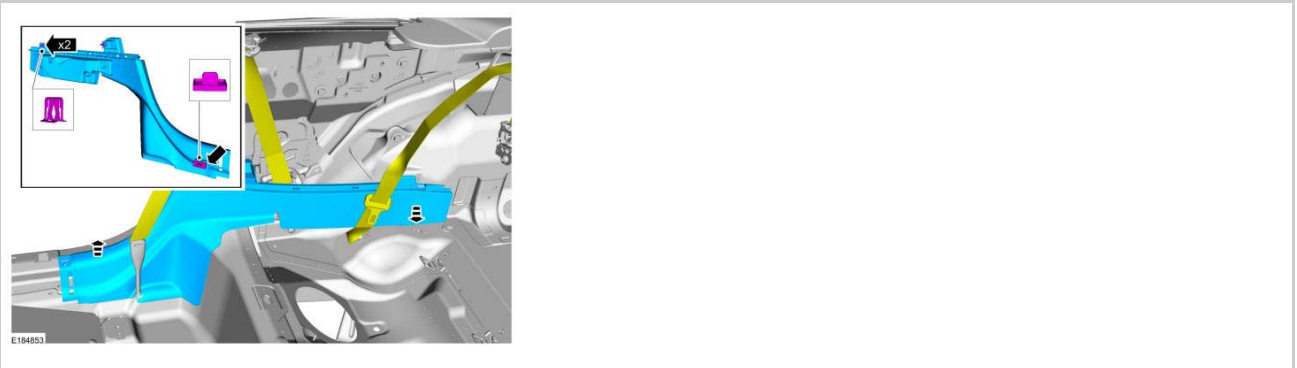
Remove the middle loadspace trim panel.

1.

Release the clips.

2.

Pull forward and outward to release the rear tab, position the front and rear safety belts aside and remove the middle loadspace trim panel.



4.

Release the clips and remove the scuff plate trim panel.

5.

Release the clips and remove the lower loadspace trim panel.

REMOVAL AND INSTALLATION > LOADSPACE TRIM PANEL - CONVERTIBLE >

INSTALLATION

NOTE: During installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

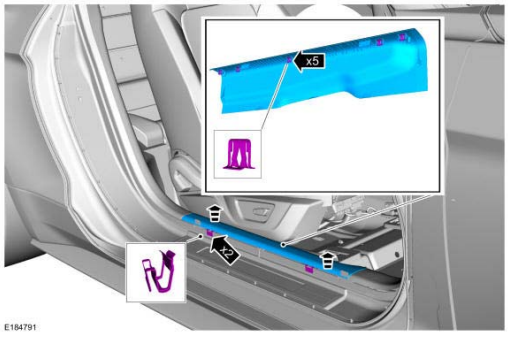
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > LOADSPACE TRIM PANEL - COUPE > REMOVAL

NOTE: LHD shown, RHD similar.

NOTE: RH side shown, LH side similar.



1.

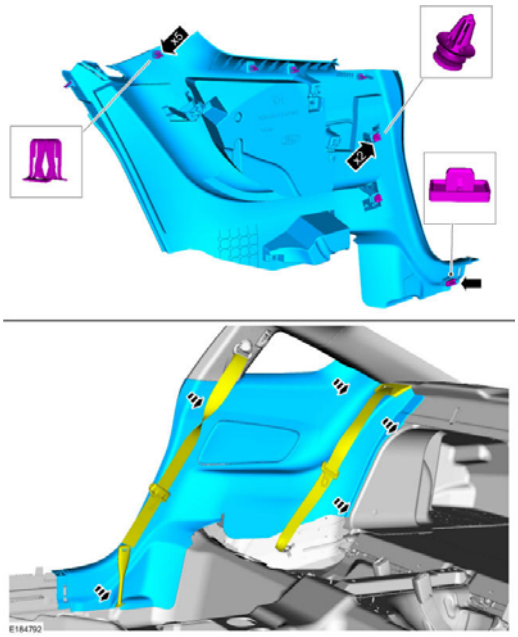
Position aside the door weatherstrip.

2.

Release the clips and remove the scuff plate trim panel.

3.

Remove the rear seat cushion. Refer to: Rear Seat Cushion .



4.

Release the latch and position the seat backrest down.

5.

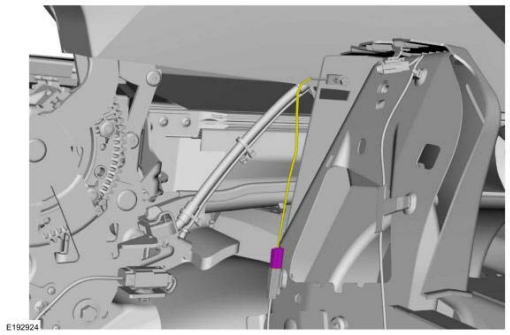
Position aside the safety belt guide, release the clips and remove the loadspace trim panel.

REMOVAL AND INSTALLATION > LOADSPACE TRIM PANEL - COUPE > INSTALLATION

NOTE: During installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

1.

To install, reverse the removal procedure.



REMOVAL AND INSTALLATION > PARCEL SHELF - CONVERTIBLE > REMOVAL

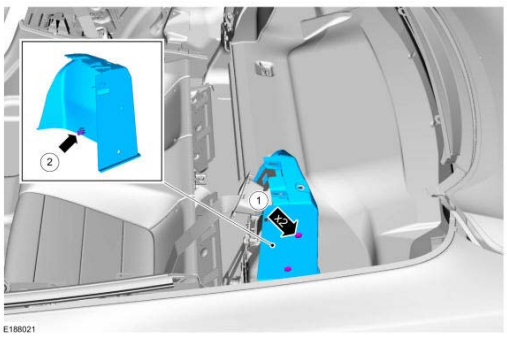
1.

On both sides, remove the loadspace trim panels. Refer to: Loadspace Trim Panel - Convertible .

> *NOTE: LH side shown, RH side similar.*

2.
On both sides. Disconnect the tonneau cover sensor electrical connectors.

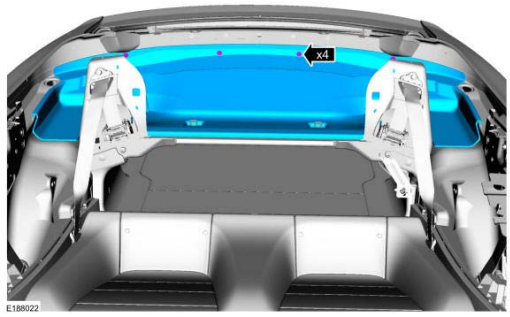
> *NOTE: LH side shown, RH side similar.*



3.
On both sides. Remove the D-tower covers.

1.

Remove the pin-type retainers.



2.

Release the clip and remove the cover.

4.

Remove the pin-type retainers and the parcel shelf.

REMOVAL AND INSTALLATION > PARCEL SHELF - CONVERTIBLE > INSTALLATION

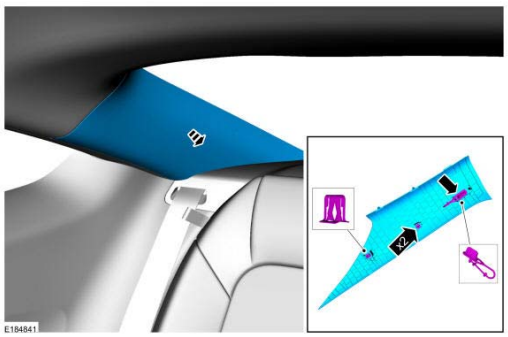
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > PARCEL SHELF - COUPE > REMOVAL

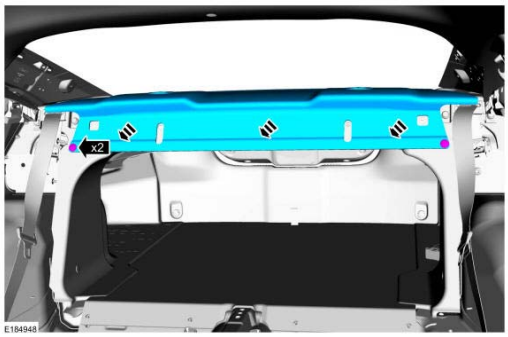
1.

Release the second row seat base floor backrest latch and position the seat backrest in the full flat position.



2.

On both sides, remove the loadspace trim panels. Refer to: Loadspace Trim Panel - Coupe .



NOTE: RH side shown, LH side similar.

3.
On both sides. Release the clips, disconnect the tether clip and remove the D-pillar trim panel.

4.

Remove the pin-type retainers and the parcel shelf.

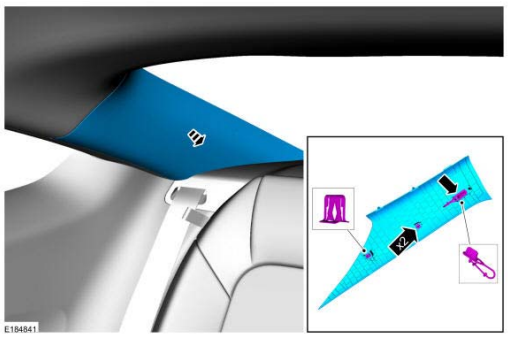
REMOVAL AND INSTALLATION > PARCEL SHELF - COUPE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR QUARTER TRIM PANEL > REMOVAL

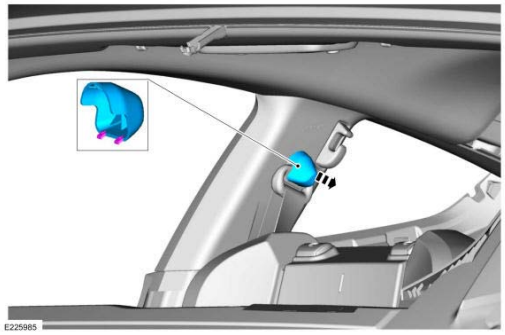
NOTE: LHD shown, RHD similar.



NOTE: RH side shown, LH side similar.

1.

Remove the load space trim panel. Refer to: Loadspace Trim Panel - Coupe .



2.

Release the clips, disconnect the tether clip and remove the C-pillar trim panel.

3.

Release the tabs and remove the D-ring retainer cover.

4.

Remove the D-ring bolt and position aside the seatbelt.

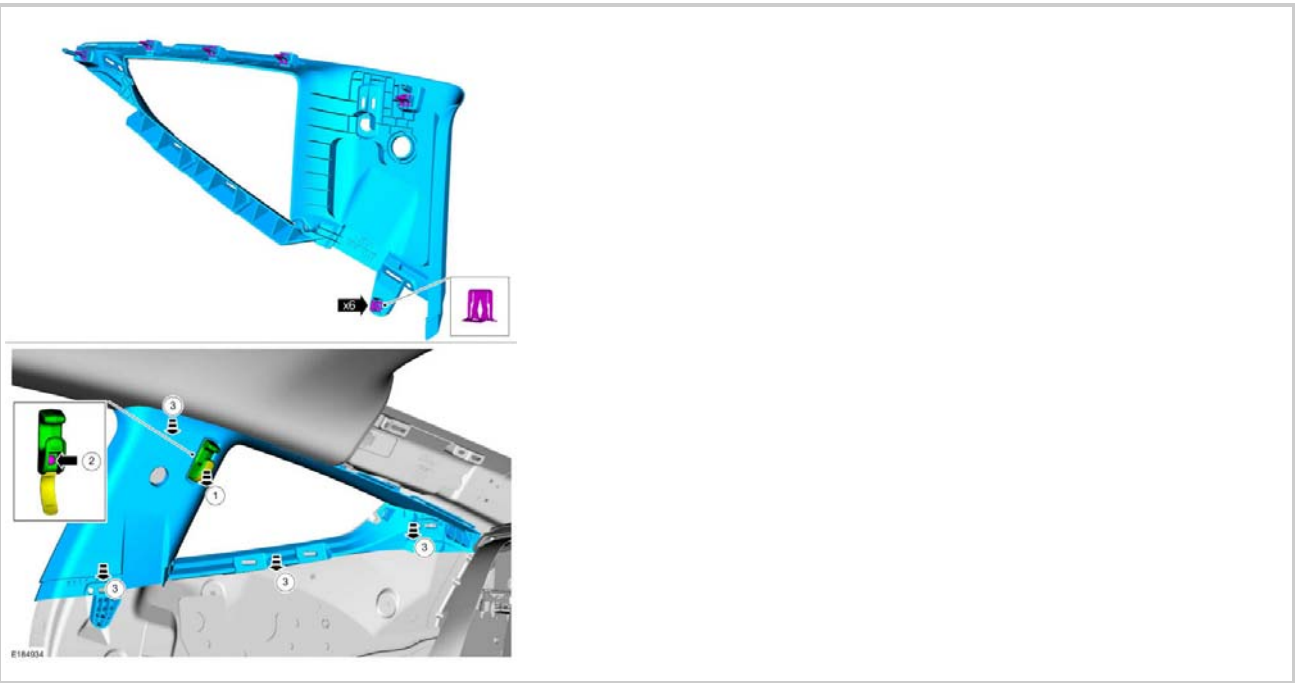
Torque

: 30 lb.ft (40 Nm)

5.

Remove the rear quarter trim panel.

1.



Open the garment hook retainer cover.

2.

Remove the retainer and the garment hook.

3.

Release the clips and remove the rear quarter trim panel.

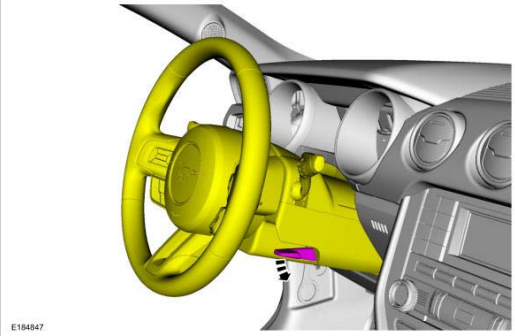
REMOVAL AND INSTALLATION > REAR QUARTER TRIM PANEL > INSTALLATION

NOTE: During installation, make sure the seatbelt webbing is not twisted and the seatbelts and buckles are accessible to the occupants.

1.
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > STEERING COLUMN SHROUDS

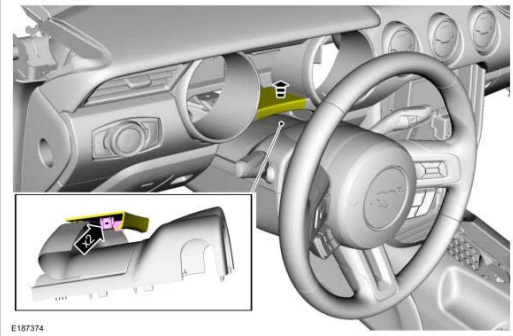
Special Tool(s) / General Equipment



Flat Headed Screw Driver

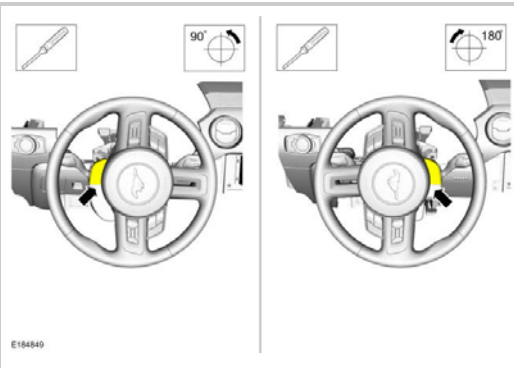
REMOVAL AND INSTALLATION > STEERING COLUMN SHROUDS > REMOVAL

NOTE: LHD shown, RHD similar.



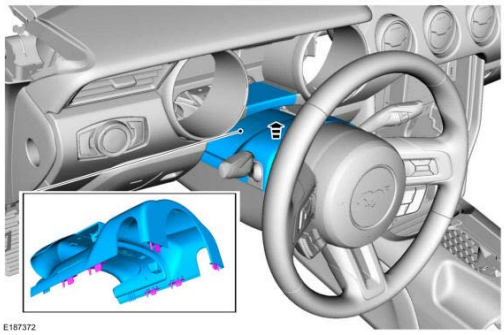
1.

Fully extend and lower the steering column.



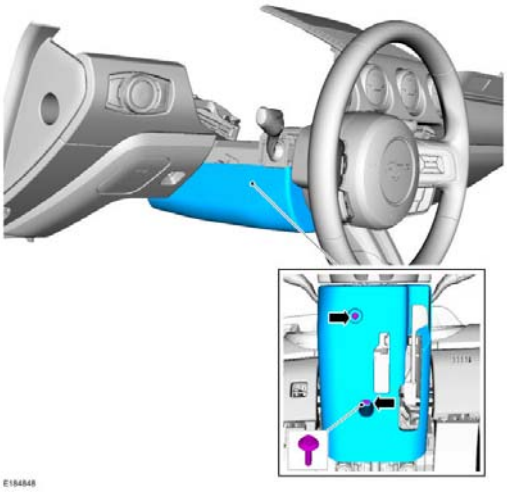
2.

Release the upper gap hider from the IPC and position aside.



3.

Rotate the steering wheel 90 degrees to the left and release the LH retainer, rotate the steering wheel 180 degrees right and release the RH retainer. Use the General Equipment: Flat Headed Screw Driver



4.

Release the outer clips on each side and remove the upper steering column shroud.

5.

Remove the lower steering column shroud screws and the lower steering column shroud.

REMOVAL AND INSTALLATION > STEERING COLUMN SHROUDS > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: PAINT - GENERAL INFORMATION

GENERAL PROCEDURES > PAINTWORK DEFECTS AND DAMAGE

Materials

Name	Specification
Motorcraft® Acid Neutralizer ZC-1-A	-
Motorcraft® Alkaline Neutralizer ZC-2-A	-

Repair

NOTE: Refinishing - Environmental Damage

1.

WARNING: Before beginning any service procedure in this service information, refer to health and safety warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Body Repair Health and Safety and General Precautions .

NOTE: Never paint over iron particles as rust spots will reoccur. Use only the recommended decontamination procedure detailed below.

2.
Rinse any dust, dirt and foreign material from the vehicle body with cold water. Flush liberally.

3.

Prepare the acid neutralizer by mixing 8 parts of water to 1 part neutralizer in a bucket.

Material

: Motorcraft® Acid Neutralizer / ZC-1-A

NOTE: Use a separate clean twisted lambs wool wash mitt for each product applied to the vehicle. Rinse frequently to remove any particles trapped in the fibers.

NOTE: To avoid paint failure, do not allow the product to dry on the vehicle.

4.

Working quickly and beginning at the top of the vehicle and working to the sides, apply the neutralizer mix to the entire vehicle. Keep the vehicle wet with the solution and lightly agitate for 5 to 7 minutes. Continue around the vehicle 4 to 5 times. For severe conditions, work the product for up to 8 minutes.

5.

Rinse the vehicle completely with cold water to remove the product.

6.

Dry only the horizontal surfaces of the vehicle, do not dry the glass at this time.

> *NOTE: Alkaline neutralizer is a ready-to-use product. Do not mix with water.*

> *NOTE: Use a separate clean twisted lambs wool wash mitt for each product applied to the vehicle. Rinse frequently to remove any particles trapped in the fibers.*

> *NOTE: To avoid damage to the paint surface, do not apply the alkaline neutralizer directly to the vehicle plastic trim.*

7.
Pour the alkaline neutralizer into a squirt bottle and apply the solution to a clean closed-loop wash mitt.

Material

: Motorcraft® Alkaline Neutralizer / ZC-2-A

> *NOTE: To avoid paint failure, do not allow the alkaline neutralizer to dry on the vehicle.*

8.
Apply the product to the vehicle keeping the solution wet and lightly agitate for 5 to 7 minutes. For severe conditions, work the product for up to 8 minutes.

9.

Rinse the vehicle completely with cold water to remove the product.

10.

Using a clean closed-loop wash mitt and locally available car wash soap, shampoo the entire vehicle exterior and rinse with cold water. Dry the vehicle completely.

11.

Visually inspect the paint surface for any remaining evidence of ferrous metal particles. Repeat

procedure as necessary.

NOTE: Always follow the manufacturer's product usage sequence. Use the appropriate buffing or polishing pad at the recommended buffing speed as specified by the product manufacturer.

NOTE: Do not intermix buffing products. Use only one manufacturer's product.

NOTE: Acid rain discoloring or etching may require color sanding in addition to buffing and polishing. In extreme cases, refinishing may be required if the following procedure does not restore the vehicle finish.

NOTE: When attempting to affect a repair by buffing, polishing or color sanding, do not remove an excess of 0.3 mil of paint film or refinishing will be required.

12.
Apply rubbing compound to the vehicle surface as recommended by the product manufacturer.

13.

Apply machine glaze to the vehicle surface as recommended by the product manufacturer.

14.

Use an alcohol and water mixture (1 to 1) to clean the buffed and polished areas. Verify removal of scratches and swirls before the application of the final polish.

15.

Apply a final polish material by hand, with a dual-action sander and foam pad, or with an orbital polisher and appropriate polishing bonnet.

16.

Using a locally available car wash soap, wash and dry the vehicle.

Repair

NOTE: Refinishing - Manufacturing Damage

1.

WARNING: Before beginning any service procedure in this service information,

refer to health and safety warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Body Repair Health and Safety and General Precautions .

2.

Wash the repair area with pH-neutral soap and water.

3.

Remove any trim, emblems and hardware from the area to be repaired.

NOTE: All delamination must be removed.

4.
Sand or media blast the damaged surface, keeping the repair area as minimal as possible.

5.

Treat any bare metal surface to prevent flash corrosion, and prime and block sand as necessary prior to refinishing.

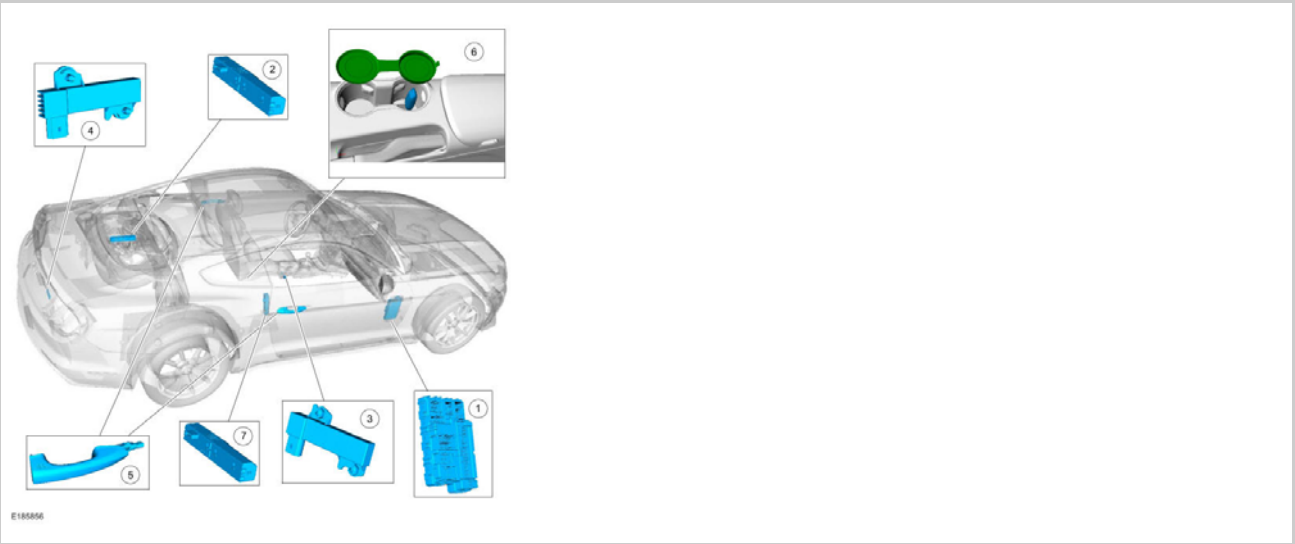
6.

Mask the adjacent panels to protect from overspray.

7.

Spot repair the base coat as necessary, following the paint manufacturer's prescribed procedures.

8.



Following the paint manufacturer's prescribed procedure, apply clear coat to the entire panel.

9.

Reapply any trim, emblems and hardware previously removed from the repair area.

Service Manual: PASSIVE ANTI-THEFT SYSTEM (PATS)

DESCRIPTION AND OPERATION > PASSIVE ANTI-THEFT SYSTEM (PATS) - COMPONENT LOCATION

Item	Description
1	BCM
2	RTM (coupe)
3	PATS front antenna
4	Keyless entry rear antenna
5	Door handle antennas (exterior front door handles)
6	Passive key backup starting location
7	RTM (convertible)

DESCRIPTION AND OPERATION > PASSIVE ANTI-THEFT SYSTEM (PATS) - OVERVIEW > OVERVIEW

The PATS deters the vehicle from theft by preventing the vehicle from starting unless a valid programmed key is detected inside the vehicle when the START/STOP button is pressed.

The PATS does not disable an already running vehicle.

DESCRIPTION AND OPERATION > PASSIVE ANTI-THEFT SYSTEM (PATS) - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > PASSIVE ANTI-THEFT SYSTEM (PATS) - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
RKE data	RTM	The RTM sends the BCM programmed passive key information.
PATS start request target command	PCM	The PCM sends the BCM a challenge request for a valid ID.

IPC Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Vehicle mode	BCM	Used by the IPC to display No Key Detected when the START/STOP button is pressed and no programmed key is detected within the vehicle.
Ignition status	BCM	Used by the IPC to power up when the START/STOP button is pressed and a programmed key is detected within the vehicle or to power down when the request is to turn the vehicle off.

PCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
PATS control command	BCM	The response from the BCM supplying the PCM challenge ID. If the BCM ID response is incorrect, then PATS prevents the vehicle from starting.

PATS

The PATS function is controlled by the BCM and the PCM.

When the START/STOP button is pressed, a voltage signal is sent to the BCM. When the BCM detects the START/STOP button is pressed, it begins the key initialization sequence by activating the PATS front antenna, the keyless entry rear antenna and both exterior door handle keyless entry antennas. Each antenna transmits a low frequency signal with an approximate range of 1 m (3 ft). The passive key activates if it is within range of the antennas. The BCM is able to determine the passive key location (inside or outside the vehicle) based on the input from the antennas.

When the passive key activates, it sends the PATS identification code to the RTM via a high frequency signal. The RTM interprets the high frequency signal from the passive key and sends the information to the BCM over the LIN-based circuit.

If a valid programmed passive key is detected inside the vehicle, the BCM transitions the ignition out of off.

When the ignition transitions out of off and the modules initialize, the PCM sends a challenge request to the BCM. The BCM replies and if the correct identification is received, the PATS disables and allows the vehicle to start. If the PATS prevents the vehicle from starting, a DTC sets in one of the modules.

The PATS and the RKE system share operation of several components including the passive keys, the BCM and the RTM.

If there is a concern with any of these components, the PATS and the RKE system are both affected.

In the event of a no start, place a programmed passive key in the backup location to allow the vehicle to start. The PATS front antenna activates the passive key when the START/STOP button is pressed in the event the batteries are depleted within the passive key.

> *NOTE: The passive start feature is a programmable parameter and can be enabled/disabled with a scan tool. If the feature is disabled, the features to passively enter and start the vehicle are inoperative. To start the vehicle, the passive key must be placed in the backup starting location.*

The BCM controls the ignition modes and, in conjunction with the PCM, control the PATS.

For information on ignition states, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description .

PATS Parameter Identifications (PIDs)

In conjunction with Diagnostic Trouble Codes (DTCs), the PATS Parameter Identifications (PIDs) are a useful tool when diagnosing PATS concerns.

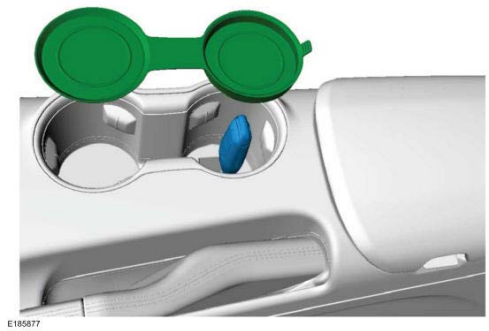
BCM PID Chart

Acronym	Name	Description
KEYS_PROGMD	Number of ignition key codes supported	Displays the number of keys currently programmed into the BCM.
MIN_KEYS_RQD	Minimum number of keys required	Minimum number of programmed keys required. This PID always reads 2.

PCM PID Chart

Acronym	Name	Description
PATSENABL	Vehicle enable status	Indicates if PATS allows the vehicle to be driven. Must read

		enabled for the vehicle to be driven.



Backup Starting

> *NOTE: There are certain areas within the vehicle where the passive key may not be detected and the message center displays No Key Detected. If the passive key is in the far outside edges of the interior (such as in a door map pocket or above a sun visor), it may not be detected. Move the passive key to a different location and try to turn the ignition on.*

When the vehicle experiences a PATS condition, the No Key Detected message displays in the message center when the START/STOP button is pressed.

In the event of one of these failures, place a programmed passive key in the backup location to allow the vehicle to start. When the START/STOP button is pressed, the PATS front antenna activates the passive key and the identification code is sent to the BCM. The passive key must be oriented correctly in the backup starting location.

Passive Key Backup Starting Location (floor console rear cup holder)

No Key Detected Message

> *NOTE: Some brands/types of mobile phone or laptop computer chargers may cause interference that could lead to a PATS concern if the passive key is within close proximity of the charger. If a concern is observed, move the passive key away from the charger and attempt to turn the ignition on.*

There are 2 scenarios in which the No Key Detected message displays in the message center.

The first is when the ignition is off, the START/STOP button is pressed and a programmed passive key is not detected inside the vehicle. If a component failure (such as a dead passive key battery) is causing the No Key Detected message to display, the backup starting method can be used.

The second scenario is when the vehicle ignition is on, the driver exits the vehicle with the programmed passive key and closes the door.

The BCM activates the PATS front antenna, the keyless entry rear antenna and both exterior door handle keyless entry antennas to search the inside of the vehicle for a passive key any time a door is opened and then closed with the ignition on and the first time each drive cycle the vehicle speed exceeds 15 km/h (9 mph). The No Key Detected message displays in the message center and the horn

chirps twice when the ignition is on and a passive key is no longer detected inside the vehicle.

This strategy deters the passive key from being separated from an already running vehicle. If a passive key is no longer in the vehicle, the ignition remains on and the vehicle continues to operate. When the START/STOP button is pressed to turn the ignition off, the ignition can be restarted without a passive key present inside the vehicle for approximately 20 seconds. After 20 seconds have elapsed, a passive key must be present to transition the ignition out of off.

Component Description

Passive Key

The passive key incorporates both the PATS and the RKE transmitter functions in a single device. The passive key must be located inside the vehicle for the ignition to transition out of off and on the outside for keyless entry features. During key programming procedures, the PATS and the RKE transmitter of the passive key are both programmed into the BCM. Passive keys are programmed into the BCM using the passive key backup starting location. The vehicle accepts programming of up to 4 passive keys.

The passive key receives the low frequency signals from the PATS front antenna and the keyless entry rear antenna. When the passive key is activated by one of the low frequency signals, it sends out a high frequency signal that is received by the RTM. The passive key also contains a removable key blade that unlocks the driver door in the event of an electrical failure (such as a drained battery).

PATS Front Antenna

> *NOTE: Some brands/types of mobile phone or laptop computer chargers may cause interference that could lead to a PATS concern if the passive key is within a few inches of the charger and the No Key Detected message displays in the message center. If a concern is observed, move the passive key away from the charger and attempt to transition the ignition on.*

The PATS front antenna is wired to the BCM. When activated by the BCM, it transmits a low frequency signal that activates a passive key. This antenna serves a dual purpose in that it can detect a passive key in the backup starting location. The backup starting location is used to program passive keys and to detect a programmed passive key in the event the battery in the programmed passive key has failed.

When activated, the PATS front antenna sends out a low frequency signal with an approximate range of 1 m (3 ft). A valid programmed passive key must be within range for the PATS to recognize the key and allow the ignition to transition out of off.

If a passive key is placed in the far outside edges of the interior, such as above a sun visor or in a door map pocket, the vehicle can experience a PATS concern. If the passive key is located in one of these areas and there is a PATS concern, move the passive key out of the area and attempt to transition the ignition on. If the key is outside the range of the PATS front antenna and the keyless entry rear antenna when the START/STOP button is pressed, the No Key Detected message displays in the message center.

Keyless Entry Rear Antenna

> *NOTE: Some brands/types of mobile phone or laptop computer chargers may cause interference that could lead to a PATS concern if the passive key is within a few inches of the charger and the No Key Detected message displays in the message center. If a concern*

is observed, move the passive key away from the charger and attempt to transition the ignition on.

The keyless entry rear antenna is wired to the BCM. When activated by the BCM, it transmits a low frequency signal that activates a passive key.

When activated, the keyless entry rear antenna sends out a low frequency signal with an approximate range of 1 m (3 ft). A programmed passive key must be within range for the PATS to recognize the key and allow the ignition to transition out of off.

If a passive key is placed in the far outside edges of the interior, such as the far corners of the luggage compartment area, the vehicle can experience a PATS concern. If the passive key is located in one of these areas and there is a PATS concern, move the passive key out of the area and attempt to transition the ignition on. If the key is outside the range of the keyless entry rear antenna and the PATS front antenna when the START/STOP button is pressed, the No Key Detected message displays in the message center.

Exterior Front Door Handles

Each of the exterior front door handles contain a keyless entry antenna. The antennas are wired to the BCM. When activated by the BCM, the antenna transmits a low frequency signal with an approximate range of 1 m (3 ft) to activate a passive key.

If a passive key is placed in the far outside edges of the interior, such as the far corners of the luggage compartment area, the vehicle can experience a PATS concern. If the passive key is located in one of these areas and there is a PATS concern, move the passive key out of the area and attempt to transition the ignition on. If the key is determined by the BCM to be outside the vehicle or is outside the range of the antennas within the exterior front door handles, the keyless entry rear antenna and the PATS front antenna when the START/STOP button is pressed, the No Key Detected message displays in the message center.

BCM

If the BCM is replaced, program at least 2 keys and perform the parameter reset procedure.

PMI is required when the BCM is replaced.

PCM

When the PCM is replaced, perform the parameter reset procedure. There is no need to program keys if the PCM is replaced.

PMI is required when the PCM is replaced.

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > BCM DTC CHART

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action

B10C7:01	Interior Trunk Antenna: General Electrical Failure	GO to Pinpoint Test A
B10C9:01	Interior Front Antenna: General Electrical Failure	GO to Pinpoint Test A
B10D7:05	PATS Key: System Programming Failure	DIAGNOSE all other Diagnostic Trouble codes (DTCs) first. If no other Diagnostic Trouble codes (DTCs) are present, PROGRAM the suspect passive key again. If key programming fails, REPLACE the suspect passive key. PROGRAM the new passive key. REFER to: Anti-Theft Security Access .
B10D7:55	PATS Key: Not Configured	The Configurable Engine Immobilizer (CEI) was not completed during the PMI procedure. CARRY OUT the Configurable Engine Immobilizer (CEI) as part of the PMI procedure.
B10D8:00	PATS Key Less Than Minimum Programmed: No Sub Type Information	Less than 2 keys are programmed (minimum of 2 keys must be programmed). PROGRAM the customer's second key. REFER to: Anti-Theft Security Access .
B10DA:51	PATS Target Identifier: Not Programmed	There is no PCM ID stored in the BCM memory. PERFORM a parameter reset. REFER to: Anti-Theft Security Access .
B11C6:01	Passenger Door External Antenna: General Electrical Failure	GO to Pinpoint Test A
B11CA:01	Driver Door External Antenna: General Electrical Failure	GO to Pinpoint Test A
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) .

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PCM DTC CHART

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

DTC	Description	Action

P161A	Incorrect Response from Immobilizer Control Module	The BCM ID received by the PCM does not match the ID stored in the PCM memory. PERFORM a parameter reset. REFER to: Anti-Theft Security Access .
All other Diagnostic Trouble Codes (DTCs)	-	REFER to the appropriate Electronic Engine Controls article.

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > SYMPTOM CHART

Symptom Chart: PATS

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Condition	Possible Sources	Actions
The vehicle does not start with the passive key in certain areas within the vehicle but starts using the passive key backup location	Refer to the Pinpoint Test	GO to Pinpoint Test A
Unable to turn the ignition on	Refer to the Pinpoint Test	GO to Pinpoint Test B
No Key Detected displays in the message center	Refer to the Pinpoint Test	GO to Pinpoint Test C
Unable to program keys	Refer to the Pinpoint Test	GO to Pinpoint Test D

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS

The Vehicle Does Not Start With The Passive Key In Certain Areas Within The Vehicle But Starts Using The Passive Key Backup Location

Refer to Passive Anti-Theft System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

The PATS does not disable an already running vehicle.

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

B10C7:01	Interior Trunk Antenna: General Electrical Failure	Sets when the BCM detects a fault with the keyless entry rear antenna or associated circuitry.
B10C9:01	Interior Front Antenna: General Electrical Failure	Sets when the BCM detects a fault with the PATS front antenna or associated circuitry.
B11C6:01	Passenger Door External Antenna: General Electrical Failure	Sets when the BCM detects a fault with the passenger door keyless entry antenna or associated circuitry.
B11CA:01	Driver Door External Antenna: General Electrical Failure	Sets when the BCM detects a fault with the driver door keyless entry antenna or associated circuitry.

Possible Causes

- Environmental interference
- Wiring, terminals or connectors
- PATS front antenna
- Keyless entry rear antenna
- Driver exterior door handle
- Passenger exterior door handle
- BCM

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST A : THE VEHICLE DOES NOT START WITH THE PASSIVE KEY IN CERTAIN AREAS WITHIN THE VEHICLE BUT STARTS USING THE PASSIVE KEY BACKUP LOCATION > PINPOINT TEST A : THE VEHICLE DOES NOT START WITH THE PASSIVE KEY IN CERTAIN AREAS WITHIN THE VEHICLE BUT STARTS USING THE PASSIVE KEY BACKUP LOCATION

A1 CHECK FOR BCM (BODY CONTROL MODULE) ANTENNA DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the BCM self-test. Record the DTC.

Ignition OFF.

Is BCM DTC B10C7:01, B10C9:01, B11C6:01 or B11CA:01 present?

Yes	GO to A6

No	GO to A2

A2 CHECK THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER OPERATION

Press the lock and unlock RKE transmitter buttons on the suspect passive key.

Do the doors lock and unlock?

Yes	GO to A3

No	REFER to: Locks, Latches and Entry Systems .

A3 CHECK THE PASSIVE KEY LOCATION

Check the location of the passive key. If it is placed in the far corners of the interior of the vehicle, move the passive key out of these areas and attempt to start the vehicle.

Does the vehicle start?

Yes	The system is OK. INFORM the customer of the normal vehicle operation.

No	GO to A4

A4 CHECK FOR ENVIRONMENTAL INTERFERENCE

Check for the use of a charger or other wireless device that can cause interference with the passive key. If any device is found, remove the device and attempt to start the vehicle.

Does the vehicle start?

Yes	INFORM the customer of the cause of the concern and the normal operation of the vehicle.

No	GO to A5

A5 CHECK WITH THE SUSPECT PASSIVE KEY IN THE BACKUP STARTING LOCATION

Place the passive key in the backup location. REFER to: Passive Anti-Theft System (PATS) - Component Location .

Press the START/STOP button.

Does the ignition turn on?

Yes	GO to A6

No	GO to Pinpoint Test D

NOTE: If no Diagnostic Trouble Codes (DTCs) are present, follow the diagnostics for the PATS front antenna.

A6 CHECK THE SUSPECT ANTENNA

Disconnect suspect antenna.

Measure:

PATS Front Antenna

Positive Lead	Measurement / Action	Negative Lead
C3513, pin 1, component side	Ω	C3513, pin 2, component side

Keyless Entry Rear Antenna

Positive Lead	Measurement / Action	Negative Lead
C4378, pin 1, component side	Ω	C4378, pin 2, component side

Driver Exterior Front Door Handle

Positive Lead	Measurement / Action	Negative Lead
C543, pin 2, component side	Ω	C543, pin 3, component side

Passenger Exterior Front Door Handle

Positive Lead	Measurement / Action	Negative Lead
C634, pin 2, component side	Ω	C634, pin 3, component side

Is the resistance between 1 and 3 ohms?

Yes	GO to A7

No	INSTALL a new antenna in question. REFER to: Passive Anti-Theft System (PATS) Front Antenna . REFER to: Exterior Front Door Handle . REFER to: Keyless Entry Rear Antenna .

A7 CHECK THE SUSPECT ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect BCM C2280D .

Measure:

PATS Front Antenna

Positive Lead	Measurement / Action	Negative Lead
C3513-1		Ground

C4378-2	Ω	C2280D-15

Driver Exterior Front Door Handle

Positive Lead	Measurement / Action	Negative Lead
C543-2	Ω	C2280D-13
C543-3	Ω	C2280D-28

Passenger Exterior Front Door Handle

Positive Lead	Measurement / Action	Negative Lead
C634-2	Ω	C2280D-12
C634-3	Ω	C2280D-29

Are the resistances less than 3 ohms?

Yes	INSTALL a new antenna in question. REFER to: Passive Anti-Theft System (PATS) Front Antenna . REFER to: Exterior Front Door Handle . REFER to: Keyless Entry Rear Antenna . TEST the system for normal operation. If the concern is still present, GO to A10

No	REPAIR the circuit in question.

A10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all of the BCM connectors.

Repair:

corrosion (install new connectors or terminals, clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by

	module connections. Address the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST B : UNABLE TO TURN THE IGNITION ON

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Possible Causes

- Battery voltage concern
- Driveability system concern
- Starting system concern
- PATS concern

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST B : UNABLE TO TURN THE IGNITION ON > PINPOINT TEST B : UNABLE TO TURN THE IGNITION ON

B1 CHECK VEHICLE BATTERY

Carry out the Battery Condition Test. REFER to: BATTERY .

Is the battery OK?

Yes	GO to B2

No	CORRECT the battery condition and VERIFY correct charging operation. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

B2 CHECK FOR THE NO KEY DETECTED MESSAGE

Press and release the START/STOP button while monitoring the message center.

Is the No Key Detected message displayed in the message center?

Yes	GO to Pinpoint Test C

No	GO to B3

B3 CHECK FOR IGNITION ON MODE

Press and release the START/STOP button while monitoring the ignition mode indicator at the top of the button.

Does the ignition mode indicator flash on and off continuously?

Yes	The condition is not PATS-related. DIAGNOSE no power in ON. REFER to: Steering Wheel and Column Electrical Components .

No	GO to B4

B4 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Follow the procedure to establish a diagnostic scan tool session with the vehicle. REFER to: Diagnostic Methods .

Using a diagnostic scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC Chart .

No	The condition is not PATS-related. DIAGNOSE no power in ON. REFER to: Steering Wheel and Column Electrical Components .

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST C : NO KEY DETECTED DISPLAYS IN THE MESSAGE CENTER

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Possible Causes

- Environmental interference
- Passive key

Visual Inspection and Diagnostic Pre-Checks

- Inspect the passive key for damage.

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST C : NO KEY DETECTED DISPLAYS IN THE MESSAGE CENTER > PINPOINT TEST C : NO KEY DETECTED DISPLAYS IN THE MESSAGE

CENTER

C1 CHECK THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER OPERATION

Press the lock and unlock RKE transmitter buttons on the suspect passive key.

Do the doors lock and unlock?

Yes	GO to C2

No	REFER to: Locks, Latches and Entry Systems .

C2 CHECK FOR ENVIRONMENTAL INTERFERENCE

Check for the use of a charger or other wireless device that can cause interference with the passive key. If any device is found, remove the device and attempt to start the vehicle.

Does the vehicle start?

Yes	INFORM the customer of the cause of the concern and the normal operation of the vehicle.

No	GO to C3

C3 CHECK THE PASSIVE KEY OPERATION FROM MULTIPLE AREAS

Place the passive key in several locations within the vehicle and press the START/STOP button each time.

Does the ignition turn on with the passive key in certain areas only?

Yes	GO to Pinpoint Test A

No	GO to C4

C4 VERIFY THE PASSIVE FEATURE IS ENABLED

Using a diagnostic scan tool, check the BCM passive start programmable parameter.

Is the BCM passive start programmable parameter enabled?

Yes	GO to C5

No	ENABLE the passive start programmable parameter.

C5 CHECK THE PASSIVE KEY OPERATION FROM THE BACKUP STARTING LOCATION

Place the passive key in the backup location. REFER to: Passive Anti-Theft System (PATS) - Component Location .

Press the START/STOP button.

Does the ignition turn on?

Yes	GO to Pinpoint Test A
No	GO to Pinpoint Test D

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST D : UNABLE TO PROGRAM KEYS

Refer to Passive Anti-Theft System for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

When programming keys or using a key in the backup starting location, the PATS front antenna operates similar to a standard PATS transceiver.

The PATS sends a signal to the PATS front antenna to read the key transponder ID. The PATS front antenna sends the key ID to the BCM.

The BCM either compares the key ID against what is already programmed (backup starting) or programs that key ID into memory (key programming). A maximum of 4 passive keys can be programmed into the BCM memory.

Possible Causes

- Wiring, terminals or connectors
- Passive key
- PATS front antenna
- BCM

DIAGNOSIS AND TESTING > PASSIVE ANTI-THEFT SYSTEM (PATS) > PINPOINT TESTS > PINPOINT TEST D : UNABLE TO PROGRAM KEYS > PINPOINT TEST D : UNABLE TO PROGRAM KEYS

D1 CHECK FOR THE CORRECT KEYS

Verify the keys present are the correct type for the vehicle.

Are the correct keys present?

Yes	GO to D2

No	The system cannot be tested without the correct keys. INFORM the customer the correct keys must be present to proceed with diagnosis of the system.

D2 CHECK FOR OTHER VALID PROGRAMMED KEYS

Check for other valid programmed keys.

Is a valid programmed key present?

Yes	GO to D4

No	GO to D3

NOTE: This step requires 2 passive keys to be programmed into the BCM. Any previous programmed passive keys are erased from memory.

D3 VERIFY THE KEY PLACEMENT FOR KEY PROGRAMMING

Verify the key is correctly placed in the backup starting location. REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Using a diagnostic scan tool, erase and program the new passive keys. REFER to: Anti-Theft Security Access .

Do the keys program to the vehicle?

Yes	The vehicle is operating correctly. The concern was caused by an improperly placed passive key.

No	GO to D6

D4 HECK THE BACKUP STARTING METHOD USING THE VALID PROGRAMMED KEY

Ignition OFF.

Disconnect BCM Fuse 32 (10A).

Place the **valid** programmed key in the backup starting location. REFER to: DESCRIPTION AND OPERATION .

Press the START/STOP button.

Does the ignition transition out of OFF?

Yes	INSTALL the BCM fuse 32 (10A). REMOVE the valid key from the backup starting location. Place the **suspect** in the backup starting location and PROGRAM the key again. REFER

	to: GENERAL PROCEDURES . If the key does not program, DISCARD the suspect key and PROGRAM a new key.

No	INSTALL the BCM fuse 32 (10A). GO to D5

D5 VERIFY THE KEY PLACEMENT

Verify the key is correctly placed in the backup starting location. REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

Press the START/STOP button.

Does the ignition transition out of OFF?

Yes	The vehicle is operating correctly. The concern was caused by an improperly placed passive key.

No	GO to D6

NOTE: For a concern with key programming or if unable to start the vehicle with the passive key in the backup starting location, follow the diagnostics for the PATS front antenna.

D6 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) FRONT ANTENNA

Disconnect PATS Front Antenna.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3513, pin 1, component side	Ω	C3513, pin 2, component side

Is the resistance between 1 and 3 ohms?

Yes	GO to D7

No	INSTALL a new PATS front antenna. REFER to: Passive Anti-Theft System (PATS) Front Antenna .

D7 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) FRONT ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE

Disconnect BCM C2280D .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3513-1		Ground
C3513-2		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.

No	GO to D8

D8 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) FRONT ANTENNA CIRCUITS FOR A SHORT TO GROUND

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3513-1	Ω	Ground
C3513-2	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D9

No	REPAIR the circuit in question.

D9 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) FRONT ANTENNA CIRCUITS FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3513-1	Ω	C2280D-31
C3513-2	Ω	C2280D-14

Are the resistances less than 3 ohms?

Yes	INSTALL a new PATS front antenna. REFER to: Passive Anti-Theft System (PATS) Front Antenna . TEST the system for normal operation. If the concern is still present, GO to D10

No	REPAIR the circuit in question.

D10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all of the BCM connectors.

Repair:

corrosion (install new connectors or terminals, clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all the BCM connectors and make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

GENERAL PROCEDURES > ANTI-THEFT SECURITY ACCESS

Programming

*NOTE: In order to gain module security access, the diagnostic scan tool **must** have an active connection to the internet. A hardwired internet connection is strongly recommended.*

NOTE: When programming keys, the RKE transmitter and the PATS portion of the key are programmed at the same time.

NOTE: Common anti-theft security access choices are:

- **Program Additional Key**
- **Erase and Program Keys**
- **Parameter Reset**
- **Customer Spare Key Programming Enable/Disable**
- **Unlimited Key Mode ON/OFF (vehicles with Integrated Keyhead Transmitter (IKT) only)**
- **Program Unlimited Key Code (vehicles with Integrated Keyhead Transmitter (IKT) only)**

NOTE: If no valid programmed keys are available and the perimeter alarm activates when the scan tool is connected, carry out the following steps.

1.

A. Wait 10 minutes after triggering the alarm. A single horn chirp sounds to indicate a 1 minute data link access time period begins.

B. Connect the scan tool to the DLC and begin a scan tool session.

C. Access the PATS Functions to gain security access. Once security access is obtained, the 1 minute data link access time period extends indefinitely.

D. Follow the procedure to erase and program keys.

Follow the procedure to establish a session with the vehicle. Refer to: Diagnostic Methods .

2.

From the diagnostic scan tool, enter TOOLBOX. Select Body>Security> PATS Functions.

3.

Select Yes when Gaining Security Access displays.

4.

Select either Dealer or Aftermarket and enter a valid username and password when prompted.

5.

Return to the diagnostic scan tool window.

NOTE: If programming a passive key, refer to the Owner's Literature for the backup starting passive key location. The passive key must be placed in this location for the passive key to successfully program.

6.
Select the appropriate procedure and follow the on-screen instructions.

GENERAL PROCEDURES > KEY PROGRAMMING USING TWO PROGRAMMED KEYS

Programming

NOTE: This procedure works only if the spare key programming is enabled.

NOTE: Two previously programmed keys are required to perform this procedure. All the

steps must be completed within 30 seconds.

NOTE: Make sure all the doors are closed prior to beginning this procedure and that they remain closed until the procedure is complete.

1.

Locate the passive key backup starting location. Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description .

2.

Place the first programmed passive key in the backup starting location. Press the START/STOP button.

3.

Wait 5 seconds and then press the START/STOP button.

4.

Remove the first programmed passive key.

5.

Within 10 seconds, place the second programmed passive key in the backup starting location and press the START/STOP button.

6.

Wait 5 seconds and press the START/STOP button.

7.

Remove the second programmed passive key.

NOTE: A maximum of 4 keys can be programmed into the vehicle.

8.
Wait 5 seconds and then place the unprogrammed passive key in the backup starting location and press the START/STOP button.

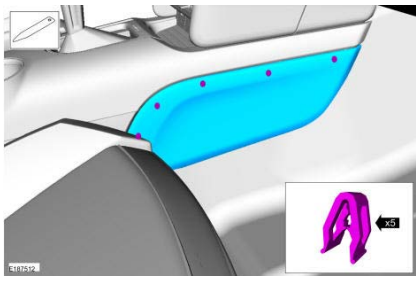
NOTE: If the key does not successfully program, wait at least 10 seconds before attempting to repeat the procedure.

9.
Verify the RKE transmitter operates and the vehicle starts using the new passive key.

REMOVAL AND INSTALLATION > PASSIVE ANTI-THEFT SYSTEM (PATS) FRONT ANTENNA

Special Tool(s) / General Equipment

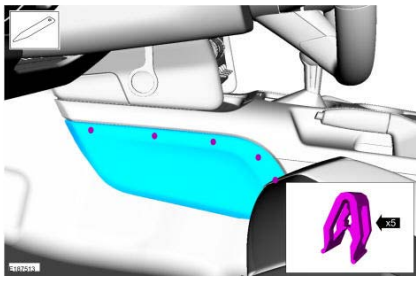
Interior Trim Remover



REMOVAL AND INSTALLATION > PASSIVE ANTI-THEFT SYSTEM (PATS) FRONT ANTENNA > REMOVAL

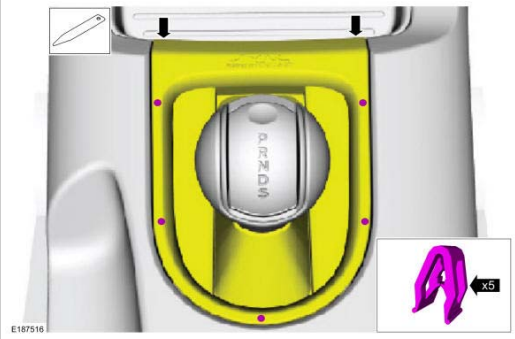
NOTE: Automatic transmission shown in illustration, manual transmission similar.

NOTE: Removal steps in this procedure may contain installation details.



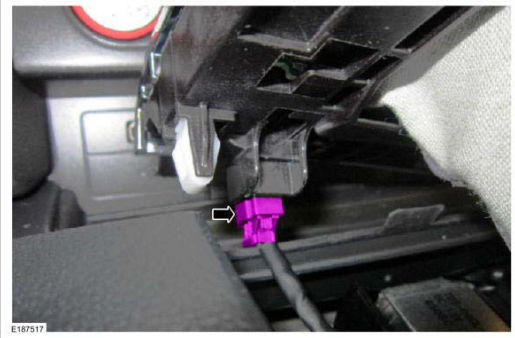
1.

Release the clips and remove the floor console RH side trim panel. Use the General Equipment: Interior Trim Remover



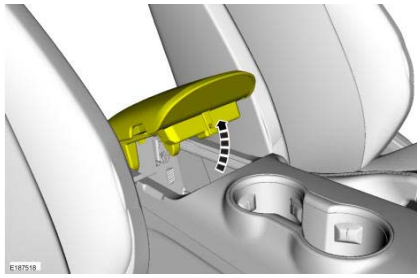
2.

Release the clips and the floor console LH side trim panel. Use the General Equipment: Interior Trim Remover



3.

Remove the selector lever bezel. Use the General Equipment: Interior Trim Remover

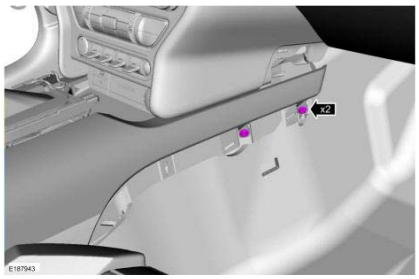


4.

Disconnect the electrical connector and position aside the selector lever boot.

5.

Open the floor console lid.

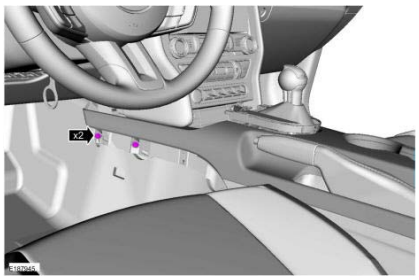


6.

Remove the RH side front retainers.

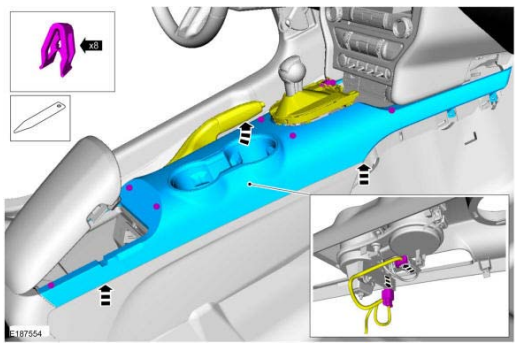
Torque

: 18 lb.in (2 Nm)



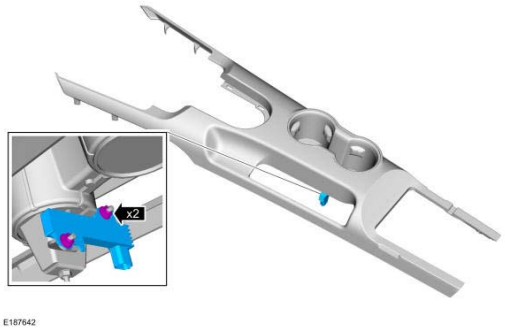
7.

Remove the LH side front retainers.



Torque

: 18 lb.in (2 Nm)



8.

Release the clips, position the selector lever boot, disconnect the electrical connectors and remove the floor console upper trim panel. Use the General Equipment: Interior Trim Remover

9.

Remove the retainers and the PATS front antenna.

REMOVAL AND INSTALLATION > PASSIVE ANTI-THEFT SYSTEM (PATS) FRONT ANTENNA > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: PERIMETER ANTI-THEFT ALARM

DESCRIPTION AND OPERATION > PERIMETER ANTI-THEFT ALARM - OVERVIEW > OVERVIEW

The perimeter alarm system deters unauthorized entry into the vehicle by sounding the traffic horn and/or the anti-theft alarm horn and flashing all the turn signals and interior courtesy lamps. When an unauthorized entry occurs or the intrusion sensor detects motion inside the vehicle when the alarm is armed, the horn(s) and lamps activate for 30 seconds. After 30 seconds, the horn(s) stops sounding, but the lamps continue to flash for up to 5 minutes.

The panic alarm operates similar to the perimeter alarm, but only activates using the panic button on the RKE transmitter.

DESCRIPTION AND OPERATION > PERIMETER ANTI-THEFT ALARM - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > PERIMETER ANTI-THEFT ALARM - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

IPC Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Perimeter alarm chime request	BCM	Used by the IPC to sound the perimeter alarm chime during the 12-second delay.

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
RKE data	RTM	Used by the BCM to arm/disarm the perimeter alarm or to activate/deactivate the panic alarm.
Driver door lock switch status	DDM	Used by the BCM to arm the perimeter alarm (vehicles with memory seats).
Passenger door lock switch status	PDM	Used by the BCM to arm the perimeter alarm (vehicles with memory seats).

Perimeter Alarm

The BCM controls the operation of the perimeter alarm. It monitors inputs from the RKE system, the passive entry system, the power door lock system, the PATS and the ignition status to determine when to arm the perimeter alarm.

The BCM monitors all of the door ajar switches, the luggage compartment lid ajar input, the hood ajar switch, the intrusion sensor, the CAN and the ignition status to determine when to activate the perimeter alarm. When the BCM detects an input indicating an unauthorized entry into the vehicle, the BCM activates the perimeter alarm by sounding the traffic horn and/or the anti-theft alarm horn and flashing all the turn signals and interior courtesy lamps at regular intervals.

The BCM monitors the RKE system, the passive entry system, and the PATS to determine when to disarm the perimeter alarm.

A switch inhibit feature temporarily disables the door lock control switches and the interior luggage compartment lid release switch 20 seconds after the vehicle is electronically locked. For detailed information of the switch inhibit feature, Refer to: Handles, Locks, Latches and Entry Systems - Overview .

Additionally, there is a door lock LED indicator located on each door window sill. The indicators provide lock/unlock indication for each door. They illuminate when the door is locked and are off when the door is unlocked. For detailed information of the door lock LED indicators, Refer to: Handles, Locks, Latches and Entry Systems - Overview .

Visual and audible feedback is also provided when locking or unlocking the vehicle. For detailed information of the vehicle locking and unlocking feedback, Refer to: Handles, Locks, Latches and Entry Systems - Overview .

Arming The Perimeter Alarm

The perimeter alarm is ready to arm any time the ignition is off. The perimeter alarm pre-arms when any of the following occur:

- Pressing the lock button on a RKE transmitter
- Pressing the door lock control switch to the lock position with a front door open, and then closing the door
- Locking the vehicle with the passive entry feature

Once the system is pre-armed, there is a 20-second countdown before the perimeter alarm is armed. Each entry point to the vehicle (hood, door and luggage compartment lid) is armed separately and must be closed before that entry point begins the 20-second countdown to become armed. If all entry points are closed, the turn signals flash upon locking indicating that all entry points are entering the 20-second countdown.

Perimeter Alarm Activation

The perimeter alarm has a 12-second delay when the driver front door is opened without using a valid programmed RKE transmitter or a passive key to unlock the vehicle. During the delay, a chime sounds. If the perimeter alarm is not disarmed within the 12-second delay, the alarm activates.

The perimeter alarm activates when:

- the driver front door is opened without first receiving an unlock command from the passive entry feature or a valid programmed RKE transmitter, and the 12-second delay has expired.

- any other door, the luggage compartment lid or the hood is opened without first receiving an electronic unlock command from the passive entry feature or a valid programmed RKE transmitter.
- the ignition transitions to RUN without a valid PATS key read received.
- the BCM detects an attempt by a diagnostic scan tool to establish communication on the CAN.

The perimeter alarm only activates 10 times per arming cycle. After that, the alarm does not activate. To enable the perimeter alarm again, disarm the perimeter alarm and then arm it again.

Disarming The Perimeter Alarm

The perimeter alarm disarms when:

- pressing the unlock button on a door lock control switch within the 20-second pre-arm.
- the smart unlock feature activates within the initial 20-second pre-arm.
- pressing the unlock button on a valid programmed RKE transmitter.
- pressing the luggage compartment lid release button on a programmed RKE transmitter (this only disarms the luggage compartment lid entry point with the rest of the vehicle remaining armed).
- using a valid programmed key to change the ignition to RUN.
- unlocking a front door or opening the luggage compartment lid using the passive entry feature.

CAN Protection Strategy

When the perimeter alarm is armed, the BCM monitors the CAN. If a scan tool is connected to the DLC, and an attempt is made to establish a session with the BCM, it activates the perimeter alarm.

Every time the BCM detects an unauthorized access (alarm activates), all BCM programming, PID monitoring and self-test sessions are blocked for 10 minutes. At the end of the 10 minute time period, the traffic horn chirps to indicate the 1 minute of opportunity to communicate with the BCM and program keys if none are available.

Refer to: Anti-Theft Security Access .

Component Description

Door Latch

The door ajar switch, the lock/unlock solenoid and the lock/unlock status input switch are part of the door latch and not serviceable separately.

The door ajar switch is monitored by the BCM and the primary function is for the courtesy lamps system. Refer to: Interior Lighting - System Operation and Component Description .

The lock/unlock solenoid is controlled by the BCM for locking and unlocking the door. Refer to: Handles, Locks, Latches and Entry Systems - Overview .

The lock/unlock status input switch is used to illuminate the door lock status indicator. Refer to: Handles, Locks, Latches and Entry Systems - Overview .

Hood Ajar Switch

The hood ajar switch is a single pole switch (integrated into the hood latch) that is normally closed when

the hood is closed. When the hood is opened, the hood ajar switch opens to indicate an open hood.

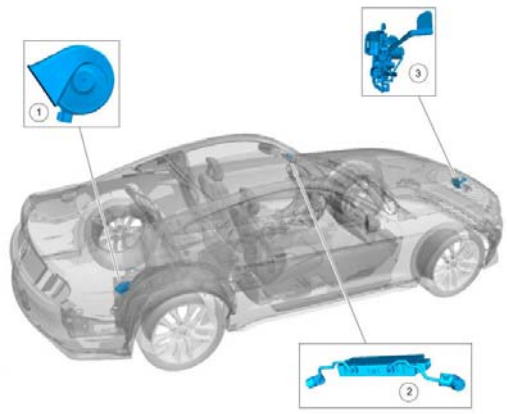
The BCM sends a signal to the hood ajar switch, and based on the input, the BCM determines if the hood is open or closed.

Intrusion Sensor

The intrusion sensor is powered at all times and is monitored by the BCM. When the perimeter alarm is armed, the intrusion sensor monitors the passenger compartment for movement and, if movement is detected, it sends a signal to the BCM.

When the intrusion sensor is replaced, the BCM configuration must first be uploaded into a diagnostic scan tool, a new intrusion sensor installed, and then the BCM configuration downloaded back into the BCM for the new intrusion sensor to operate correctly.

Anti-Theft Alarm Horn



The anti-theft alarm horn is located behind the right rear quarter trim panel and is controlled by the BCM. When the perimeter alarm activates, the BCM energizes an internal relay to provide voltage to the anti-theft alarm horn. The anti-theft alarm horn is similar in design to a traffic horn.

BCM

The BCM controls the operation of the perimeter alarm. Based on input, the BCM arms, disarms, activates or deactivates the perimeter alarm.

The BCM requires PMI when replaced. Additionally, at least 2 keys must be programmed and the parameter reset procedure carried out.

DESCRIPTION AND OPERATION > PERIMETER ANTI-THEFT ALARM - COMPONENT LOCATION

Item	Description

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS

The Alarm System Does Not Activate from an Unauthorized Entry at the Hood

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description .

Possible Causes

- Wiring, terminals or connectors
- Hood latch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the hood latch for damage.

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST A : THE ALARM SYSTEM DOES NOT ACTIVATE FROM AN UNAUTHORIZED ENTRY AT THE HOOD > PINPOINT TEST A : THE ALARM SYSTEM DOES NOT ACTIVATE FROM AN UNAUTHORIZED ENTRY AT THE HOOD

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 MONITOR THE BCM (BODY CONTROL MODULE) HOOD AJAR SWITCH (HOOD_SW) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, monitor the BCM HOOD_SW PID.

Disconnect Hood Ajar Switch C127 .

Does the PID read AJAR when the switch is disconnected?

Yes	INSTALL a new hood latch. REFER to: Hood Latch .

No	GO to A2

A2 CHECK THE HOOD AJAR SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Disconnect BCM C2280F .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C127-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to A3

No	REPAIR the circuit.

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST B : THE ALARM SYSTEM DOES NOT ACTIVATE FROM THE INTRUSION SENSOR

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B109F:01	Intrusion Sensor Module: General Electrical Failure	Sets when the BCM detects a short to ground from the intrusion sensor LIN circuit.
B109F:02	Intrusion Sensor Module: General Signal Failure	Sets when the BCM detects a communication fault with the intrusion sensor.
B109F:08	Intrusion Sensor Module: Bus Signal / Message Failure	Sets when the BCM detects a communication fault with the intrusion sensor.
B109F:97	Intrusion Sensor Module: Component or System Operation Obstructed or Blocked	Sets when the intrusion sensor communicates to the BCM that it detects the motion sensor is blocked.
B109F:9A	Intrusion Sensor Module: Component or System Operating Conditions	Sets when the BCM detects a communication fault with the intrusion sensor.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Intrusion sensor
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the BCM fuse 18 (5A)

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST B : THE ALARM SYSTEM DOES NOT ACTIVATE FROM THE INTRUSION SENSOR > PINPOINT TEST B : THE ALARM SYSTEM DOES NOT ACTIVATE FROM THE INTRUSION SENSOR

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK FOR VOLTAGE TO THE INTRUSION SENSOR

Ignition OFF.

Disconnect Overhead Console C930 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3

No	VERIFY the BCM fuse 18 (5A) is OK. If OK, GO to B2 If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the possible cause of the circuit short.

B2 CHECK THE INTRUSION SENSOR VOLTAGE SUPPLY CIRCUIT FOR A OPEN

Disconnect BCM C2280A .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-1	Ω	C2280A-12

Is the resistance less than 3 ohms?

Yes	GO to B8

No	REPAIR the circuit.

B3 CHECK THE INTRUSION SENSOR GROUND CIRCUIT FOR A OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-1		C930-5

Is the voltage greater than 11 volts?

Yes	GO to B4

No	REPAIR the circuit.

B4 CHECK THE INTRUSION SENSOR LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

Disconnect BCM C2280E .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-2		C930-5

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B5

B5 CHECK THE INTRUSION SENSOR LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B6

No	REPAIR the circuit.

B6 CHECK THE INTRUSION SENSOR LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-2	Ω	C2280E-36

Is the resistance less than 3 ohms?

Yes	GO to B7

No	REPAIR the circuit.

B7 CHECK THE OVERHEAD CONSOLE HARNESS

Inspect the overhead console harness for opens and shorts.

Is the overhead console harness OK?

Yes	INSTALL a new intrusion sensor. TEST the system for normal operation. If the concern is still present, GO to B8

No	REPAIR the overhead console harness or INSTALL a new overhead console as necessary. REFER to: Overhead Console .

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect all BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST C : THE ALARM SYSTEM DOES NOT ARM OR NO TURN SIGNALS FLASH CONFIRMATION

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description .

Possible Causes

- Door ajar input
- Hood switch input

- Luggage compartment lid ajar input
- Turn signal output
- Keyless entry keypad concern
- RKE transmitter concern
- BCM

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST C : THE ALARM SYSTEM DOES NOT ARM OR NO TURN SIGNALS FLASH CONFIRMATION > PINPOINT TEST C : THE ALARM SYSTEM DOES NOT ARM OR NO TURN SIGNALS FLASH CONFIRMATION

NOTE: DTC B1305:01 sets if the hood is open. Make sure the hood is closed prior to running the self-test.

C1 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

Ignition ON.

Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC Chart .

No	GO to C2

C2 CHECK THE DOOR AJAR SWITCH INPUT

Close all the doors.

Observe the IPC.

Does the IPC indicate a door is ajar?

Yes	DIAGNOSE the courtesy lamps staying on continuously. REFER to: Interior Lighting .

No	GO to C3

C3 MONITOR THE LUGGAGE COMPARTMENT LID AJAR SWITCH INPUT

Close the luggage compartment lid.

Observe the IPC.

Does the IPC indicate the luggage compartment lid is ajar?

Yes	DIAGNOSE the incorrect luggage compartment lid ajar indication. REFER to: Instrumentation, Message Center and Warning Chimes .

No	GO to C4

C4 VERIFY THE HAZARD FLASHER LAMP OPERATION

Ignition OFF.

Activate the hazard flasher lamp function and observe the turn signals.

Do all the turn signals flash on and off?

Yes	GO to C5

No	DIAGNOSE the inoperative turn signals. REFER to: Turn Signal and Hazard Lamps .

C5 CHECK THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER FUNCTION

Using the RKE transmitter, lock and unlock the doors.

Do the doors lock and unlock?

Yes	GO to C6

No	DIAGNOSE the inoperative RKE transmitter. REFER to: Locks, Latches and Entry Systems .

C6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

- corrosion (install new connector or terminals - clean module pins)
- damaged or bent pins - install new terminals/pins
- pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST D : NO ANTI-THEFT ALARM HORN OUTPUT DURING ALARM ACTIVATION

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Anti-theft alarm horn
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the BCM fuse 8 (10A)

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST D : NO ANTI-THEFT ALARM HORN OUTPUT DURING ALARM ACTIVATION > PINPOINT TEST D : NO ANTI-THEFT ALARM HORN OUTPUT DURING ALARM ACTIVATION

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

D1 CHECK FOR VOLTAGE TO THE ANTI-THEFT SECURITY HORN USING THE BCM (BODY CONTROL MODULE) PID (PARAMETER IDENTIFICATION)

Ignition OFF.

Disconnect Anti-Theft Security Horn C4380.

Connect:

Positive Lead	Measurement / Action	Negative Lead
C4380-2		Ground

Ignition ON.

Using a diagnostic scan tool, monitor the BCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, command the BCM anti-theft alarm horn PID on and then off.

Does the test lamp illuminate when the PID is commanded on?

Yes	GO to D2

No	VERIFY the BCM fuse 8 (10A) is OK. If OK, GO to D3 If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the possible cause of the circuit short.

NOTE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

D2 CHECK THE ANTI-THEFT SECURITY HORN GROUND CIRCUIT FOR AN OPEN USING THE BCM (BODY CONTROL MODULE) PID (PARAMETER IDENTIFICATION)

Connect:

Positive Lead	Measurement / Action	Negative Lead
C4380-2		Ground

Using a diagnostic scan tool, monitor the BCM Parameter Identifications (PIDs).

Using a diagnostic scan tool, command the BCM anti-theft alarm horn PID on and then off.

Does the test lamp illuminate when the PID is commanded on?

Yes	INSTALL a new anti-theft alarm horn. REFER to: Anti-Theft Alarm Horn .

No	REPAIR the circuit.

D3 CHECK THE ANTI-THEFT SECURITY HORN VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280C .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C4380-2	Ω	C2280C-34

Is the resistance less than 3 ohms?

Yes	GO to D4

No	REPAIR the circuit.

D4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST E : THE ANTI-THEFT ALARM HORN SOUNDS CONTINUOUSLY

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description .

Possible Causes

- Wiring, terminals or connectors
- BCM

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST E : THE ANTI-THEFT ALARM HORN SOUNDS CONTINUOUSLY > PINPOINT TEST E : THE ANTI-THEFT ALARM HORN SOUNDS CONTINUOUSLY

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

E1 CHECK THE ANTI-THEFT SECURITY HORN VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect BCM C2280C .

Ignition ON.

Does the anti-theft alarm horn continue to sound?

Yes	REPAIR the circuit.

No	GO to E2

E2 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST F : B1305:01

Refer to Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description .

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1305:01	Hood Switch: General Electrical Failure	Sets when the BCM detects an open from the hood ajar switch input during a self-test.

Possible Causes

- Wiring, terminals or connectors
- Hood latch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the hood latch for damage

DIAGNOSIS AND TESTING > PERIMETER ANTI-THEFT ALARM > PINPOINT TESTS > PINPOINT TEST F : B1305:01 > PINPOINT TEST F : B1305:01

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

F1 CHECK THE HOOD AJAR SWITCH

Disconnect Hood Ajar Switch C127 .

Ignition ON.

Connect:

Positive Lead	Measurement / Action	Negative Lead
C127-2		C127-1

Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1305:01 still present?

Yes	REMOVE the fused jumper wire. GO to F2

No	REMOVE the fused jumper wire. INSTALL a new hood latch. REFER to: Hood Latch .

F2 CHECK THE HOOD AJAR SWITCH GROUND CIRCUIT FOR AN OPEN

Connect:

Positive Lead	Measurement / Action	Negative Lead
C127-2		Ground

Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1305:01 still present?

Yes	REMOVE the fused jumper wire. GO to F3

No	REMOVE the fused jumper wire. REPAIR the circuit.

F3 CHECK THE HOOD AJAR SWITCH INPUT CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect BCM C2280F .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C127-2	Ω	C2280F-14

Is the resistance less than 3 ohms?

Yes	GO to F4

No	REPAIR the circuit.

F4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

Disconnect and inspect all the BCM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

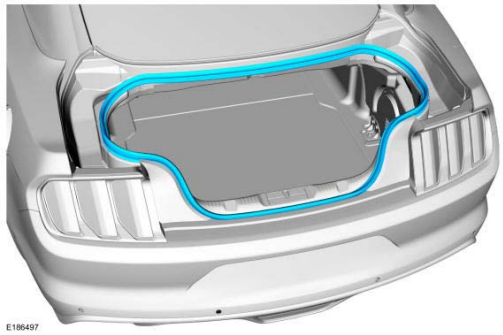
damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the BCM connectors. Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

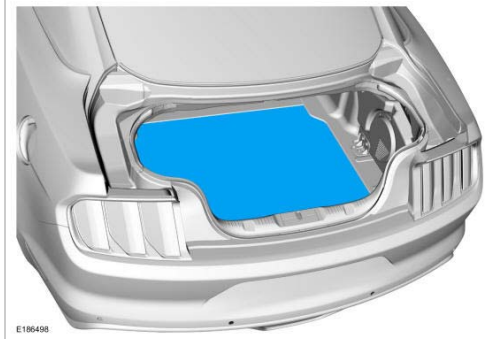
Is the concern still present?



Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

REMOVAL AND INSTALLATION > ANTI-THEFT ALARM HORN > REMOVAL



1.

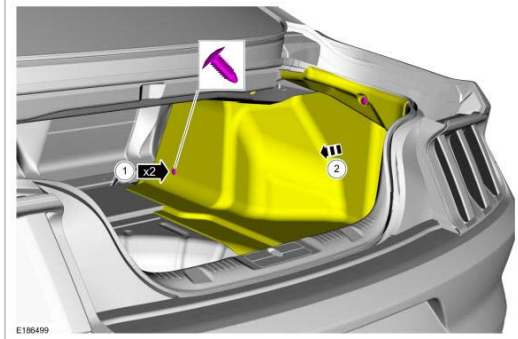
Remove the luggage compartment weatherstrip.

2.

Remove the spare tire cover.

3.

If equipped, remove the subwoofer and amplifier unit. Refer to: Subwoofer and Amplifier Unit .



4.

1.

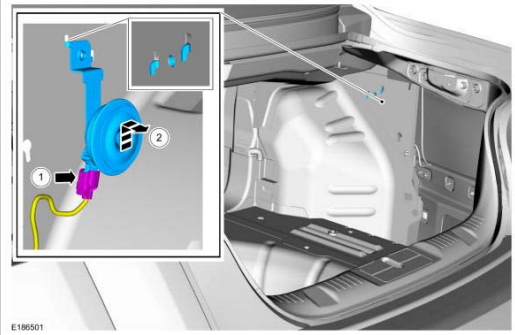
Remove the pin-type retainers.

2.

Position aside the RH luggage compartment side trim panel.

5.

Remove the anti-theft horn bolt.



6.

1.

Disconnect the electrical connector.

2.

Remove the anti-theft horn.

REMOVAL AND INSTALLATION > ANTI-THEFT ALARM HORN > INSTALLATION

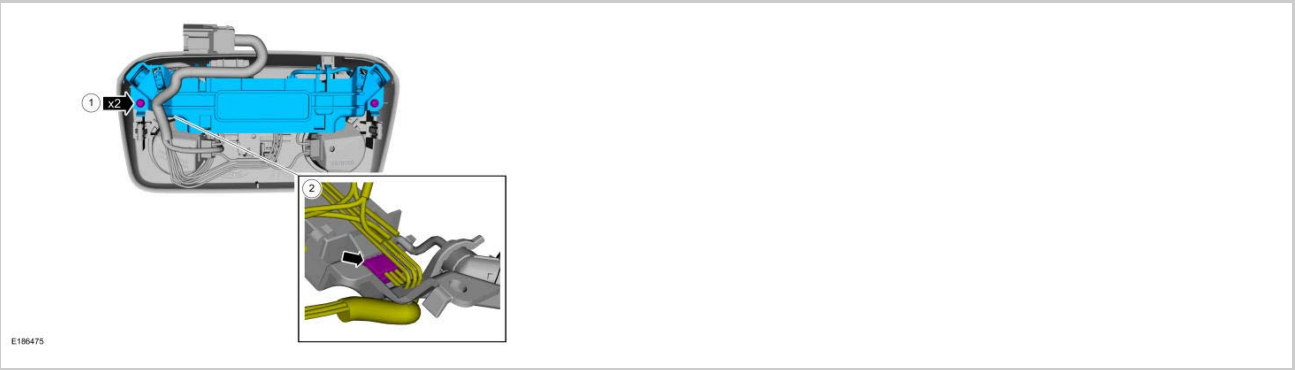
1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > INTRUSION SENSOR > REMOVAL

1.

Remove the overhead console. Refer to: Overhead Console .



2.

1.

Remove the screws.

2.

Disconnect the electrical connector and remove the bracket and sensor assembly.

3.

1.

Release the clips and position the sensors aside.

2.

Release the clips.

3.

Remove the intrusion sensor.

REMOVAL AND INSTALLATION > INTRUSION SENSOR > INSTALLATION

1.

To install, reverse the removal procedure.

> *NOTE: This step is only necessary when installing a new component.*

2.
Using a diagnostic scan tool, carry out the LIN New Module Initialization procedure (Toolbox>Electrical>Service Functions>LIN New Module Initialization).

NOTE: This step is only necessary when installing a new component.

3.
Carry out the BCM self-test. Clear the Diagnostic Trouble Codes (DTCs) and then retrieve the Diagnostic Trouble Codes (DTCs) from the BCM to confirm all Diagnostic Trouble Codes (DTCs) have been cleared.

Service Manual: REAR END SHEET METAL REPAIRS

REMOVAL AND INSTALLATION > BACK PANEL AND REINFORCEMENT

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
Hot Air Gun
8 mm Drill Bit
MIG/MAG Welding Equipment
Spot Weld Drill Bit
Locking Pliers

Materials

Name	Specification
Metal Bonding Adhesive TA-1, 3M™ 08115, Fusor ® 108B	-
Seam Sealer TA-2-B	-

REMOVAL AND INSTALLATION > BACK PANEL AND REINFORCEMENT > REMOVAL

1.

If required, dimensionally restore the vehicle to pre-accident condition. Refer to: Body and Frame .

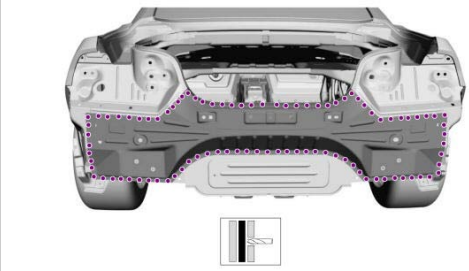
2.

Remove the following items:

Refer to: Rear Bumper .

Refer to: Rear Lamp Assembly .

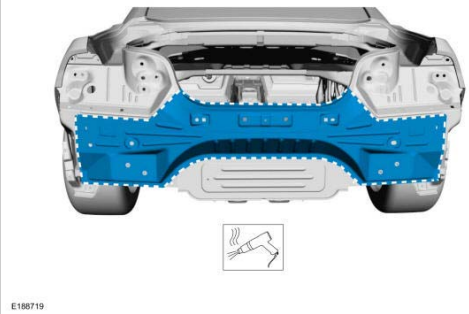
3.



Reposition the carpeting and the wiring harness away from the working area.

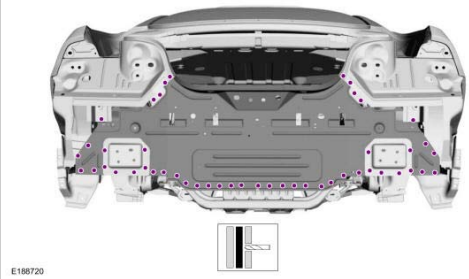
4.

Refer to: Joining Techniques .



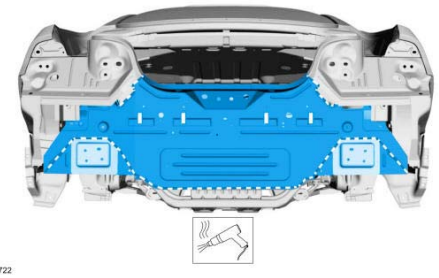
5.

Drill out the spot welds from the back panel. Use the General Equipment: Spot Weld Drill Bit



NOTE: Heat may be applied, not to exceed 170 °C to aid in softening the adhesive.

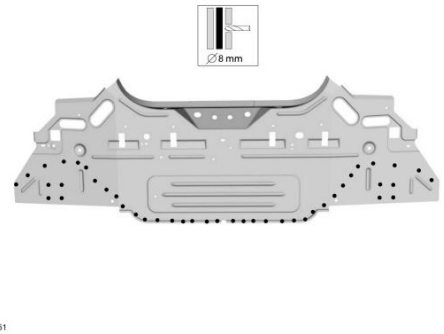
6.
Remove the back panel assembly. Use the General Equipment: Hot Air Gun



7.

Drill out the spot welds from the back panel reinforcement. Use the General Equipment: Spot Weld Drill Bit

NOTE: Heat may be applied, not to exceed 170 °C to aid in softening the adhesive.

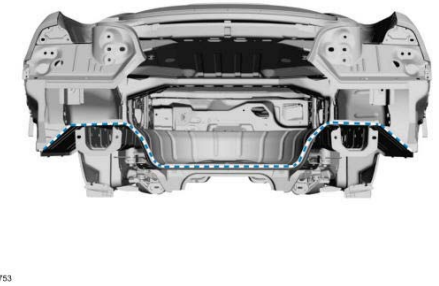


8.
Remove the back panel reinforcement. Use the General Equipment: Hot Air Gun

REMOVAL AND INSTALLATION > BACK PANEL AND REINFORCEMENT > INSTALLATION

1.

Drill holes in the replacement back panel reinforcement for plug welding. Use the General Equipment: 8 mm Drill Bit



NOTE: Make sure the surface is clean and free of foreign material.

2.
Apply metal bonding adhesive to the floor pan flange.

Material

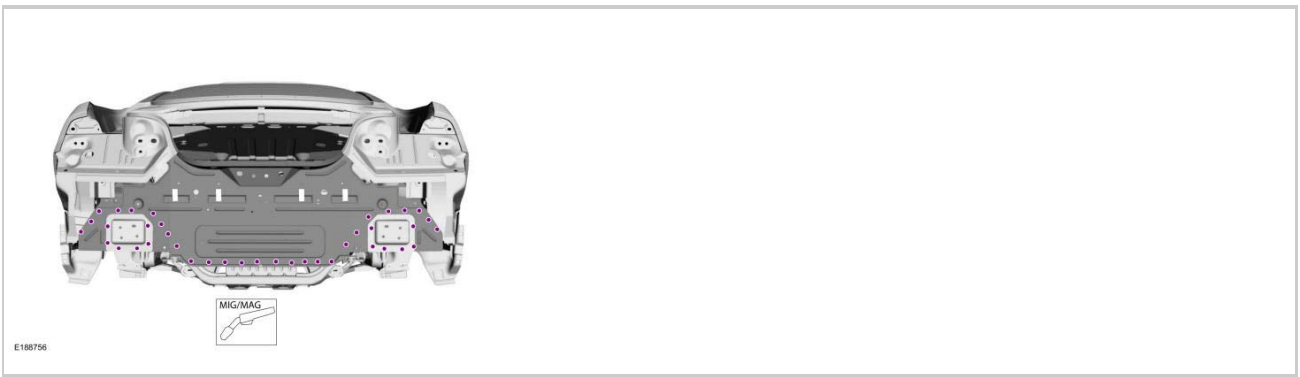
: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

NOTE: Make sure that the component is clean and free of foreign material and lubricant.

3.
Apply metal bonding adhesive to the back panel reinforcement upper flanges.

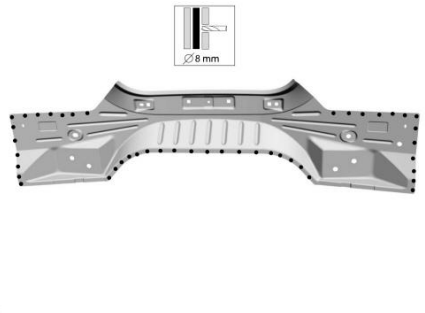
Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B



4.

Install the back panel reinforcement and spot weld. Use the General Equipment: Locking Pliers
Use the General Equipment: Resistance Spotwelding Equipment

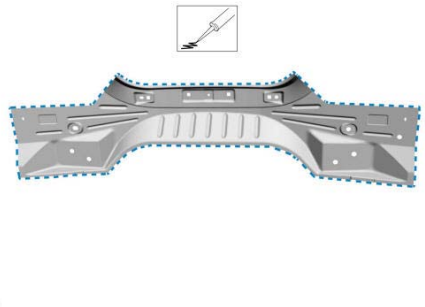


5.

MIG weld the panel. Use the General Equipment: MIG/MAG Welding Equipment

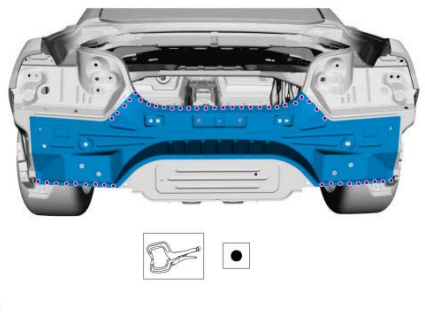
6.

Drill holes in the back panel for plug welding. Use the General Equipment: 8 mm Drill Bit



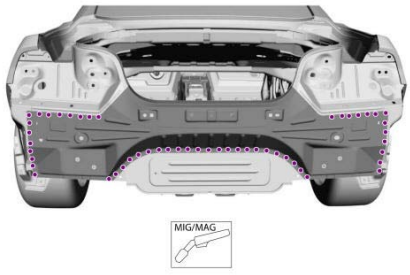
NOTE: Make sure that the component is clean, free of foreign material and lubricant.

7.
Apply metal bonding adhesive to the back panel.



Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B



8.

Install the back panel and spot weld. Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment

9.

MIG weld the panel. Use the General Equipment: MIG/MAG Welding Equipment

10.

Metal finish the repair area using typical metal finishing procedures.

11.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

12.

Refer to: Corrosion Prevention .

13.

Refinish using a Ford approved paint system.

14.

Reposition the wiring harness and carpet.

15.

Install the following items:

Refer to: Rear Bumper .

Refer to: Rear Lamp Assembly .

REMOVAL AND INSTALLATION > QUARTER PANEL - COUPE

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment

Hot Air Gun
Air Body Saw
8 mm Drill Bit
MIG/MAG Welding Equipment
Spot Weld Drill Bit
Locking Pliers

Materials

Name	Specification
Metal Bonding Adhesive TA-1, 3M™ 08115, Fusor ® 108B	-
Seam Sealer TA-2-B	-
Fusor ® Flexible Foam Repair 3M™ 08463, Fusor ® 121	-

REMOVAL AND INSTALLATION > QUARTER PANEL - COUPE > REMOVAL

1.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: Body and Frame .

2.

Remove the following items:

Refer to: Roof Panel .

Refer to: FRONT DOOR .

Refer to: Luggage Compartment Lid .

LH side Refer to: Fuel Filler Door Assembly .

LH side as equipped. 2.3L Refer to: Fuel Tank Filler Pipe . 3.7L Refer to: Fuel Tank Filler Pipe . 5.0L Refer to: Fuel Tank Filler Pipe .

Refer to: Rocker Panel Moulding .

Refer to: Fixed Glass .

Refer to: Loadspace Trim Panel - Coupe .

Refer to: Rear Quarter Trim Panel .

Refer to: Rear Bumper .

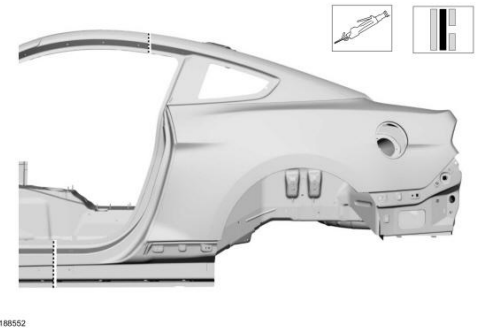
Refer to: Rear Lamp Assembly .

3.

Remove the door striker from the affected side.

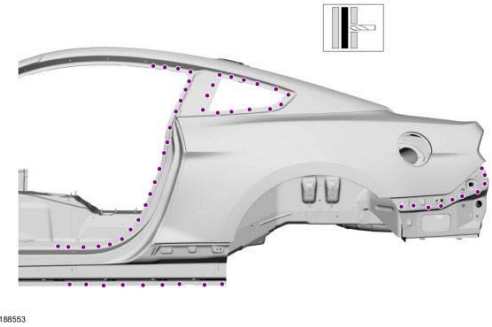
4.

Position aside the carpet and wiring harness.



5.

Available service part.



NOTE: Cut through outer panel only.

6.
Cut the quarter panel flange at the rocker and roof rail. Use the General Equipment: Air Body Saw

7.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

8.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

9.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

NOTE: Heat may be applied, not to exceed 170 °C to aid in softening the adhesive and NVH foam.

10.
Remove the quarter panel assembly. Use the General Equipment: Hot Air Gun

REMOVAL AND INSTALLATION > QUARTER PANEL - COUPE > INSTALLATION

1.

Drill holes in the replacement panel for plug welding. Use the General Equipment: 8 mm Drill Bit

2.

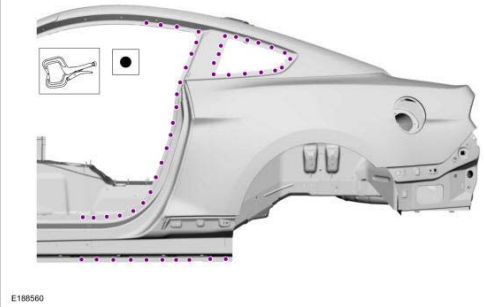
Apply NVH expanding foam and metal bonding adhesive to indicated areas.

Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121

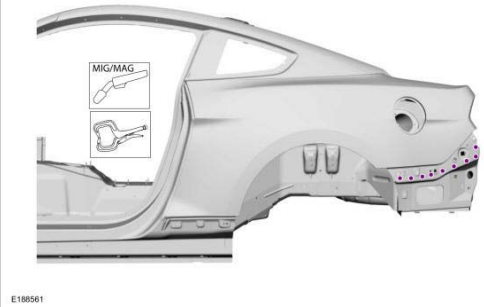
Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B



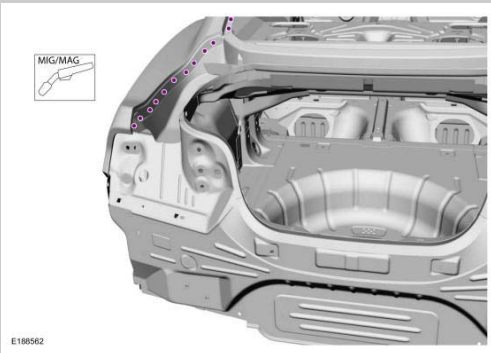
3.

Install the quarter panel and seam weld. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment



4.

Resistance spot weld the panel. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: Locking Pliers



5.

MIG weld the panel. Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Locking Pliers

6.

MIG weld the panel. Use the General Equipment: MIG/MAG Welding Equipment

7.

Resistance spot weld the panel along the roof rail. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: Locking Pliers

8.

Metal finish the repair area(s) using typical metal finishing techniques.

9.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

10.

Refinish using a Ford approved paint system.

11.

Restore corrosion protection. Refer to: Corrosion Prevention .

12.

Reposition the carpet and wiring harness.

13.

Install the door striker.

14.

Install the following items:

Refer to: Roof Panel .

Refer to: FRONT DOOR .

Refer to: Luggage Compartment Lid .

LH side Refer to: Fuel Filler Door Assembly .

LH side as equipped. 2.3L Refer to: Fuel Tank Filler Pipe . 3.7L Refer to: Fuel Tank Filler Pipe . 5.0L Refer to: Fuel Tank Filler Pipe .

Refer to: Rocker Panel Moulding .

Refer to: Fixed Glass .

Refer to: Loadspace Trim Panel - Coupe .

Refer to: Rear Quarter Trim Panel .

Refer to: Rear Bumper .

Refer to: Rear Lamp Assembly .

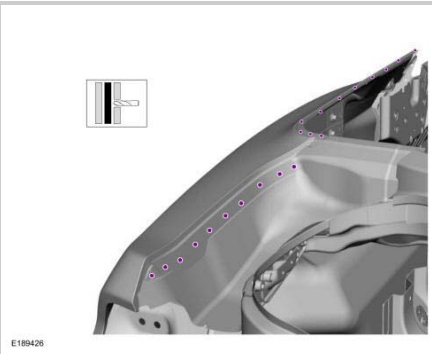
5.

Available service part.

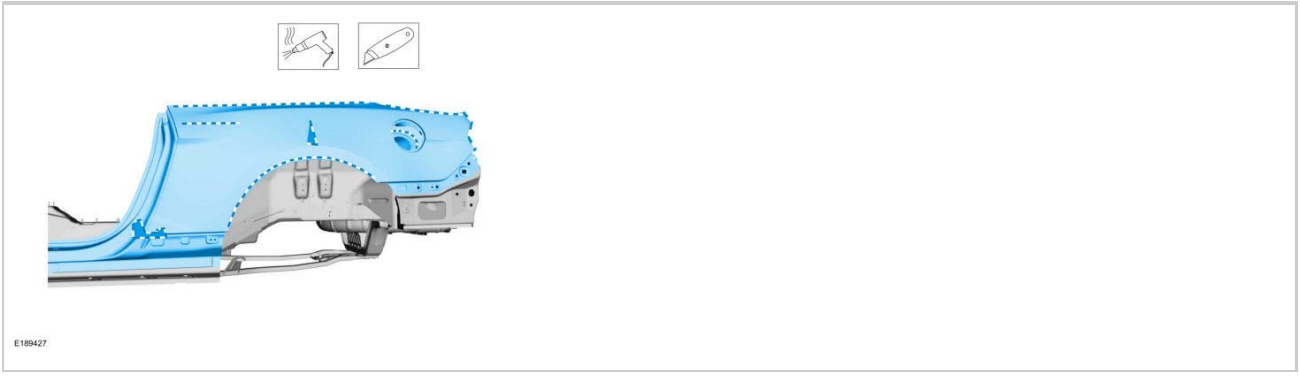
NOTE: Cut through outer panel only.

6.
Cut the quarter panel flange and drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit Use the General Equipment: Air Body Saw



7.

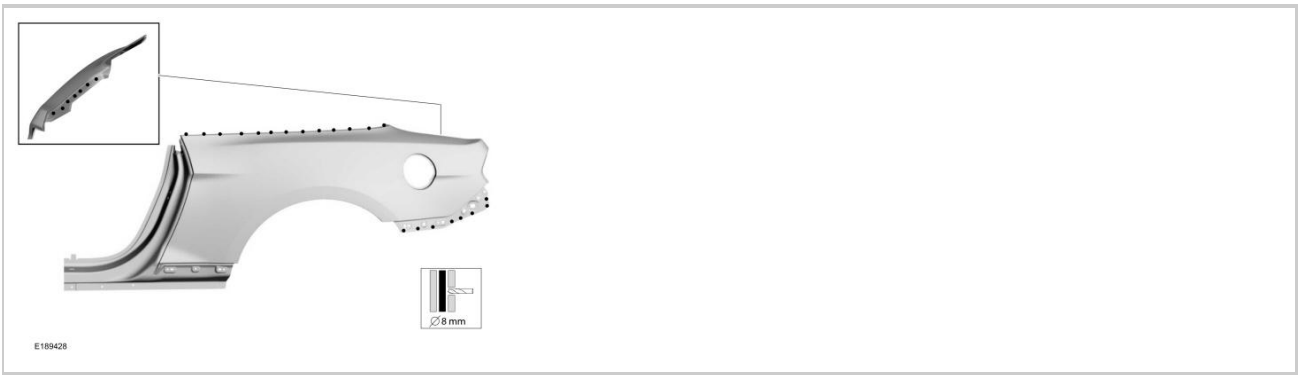
Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit



8.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

NOTE: Heat may be applied, not to exceed 170 °C to aid in softening the adhesive and NVH foam.



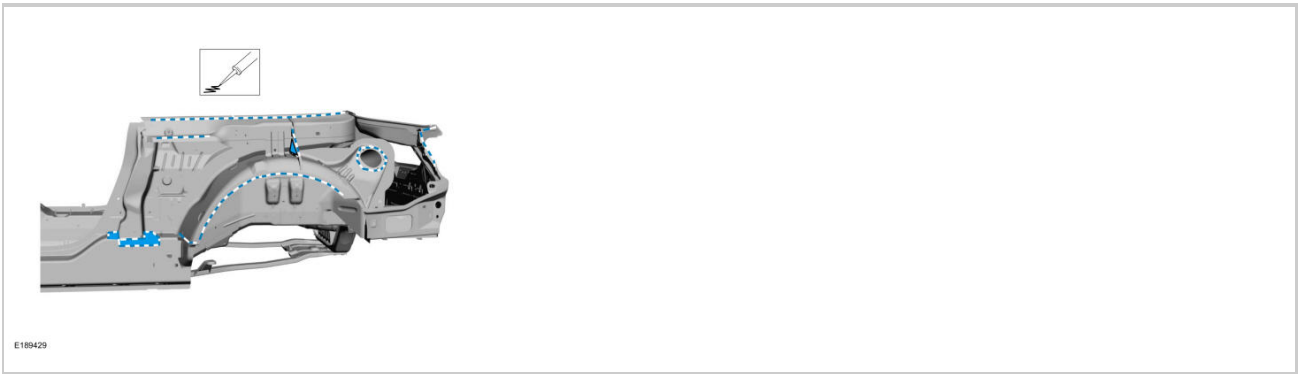
9.
Remove the quarter panel assembly. Use the General Equipment: Knife Use the General Equipment: Hot Air Gun

REMOVAL AND INSTALLATION > QUARTER PANEL - CONVERTIBLE > INSTALLATION

1.

Drill holes in the replacement panel for plug welding. Use the General Equipment: 8 mm Drill Bit

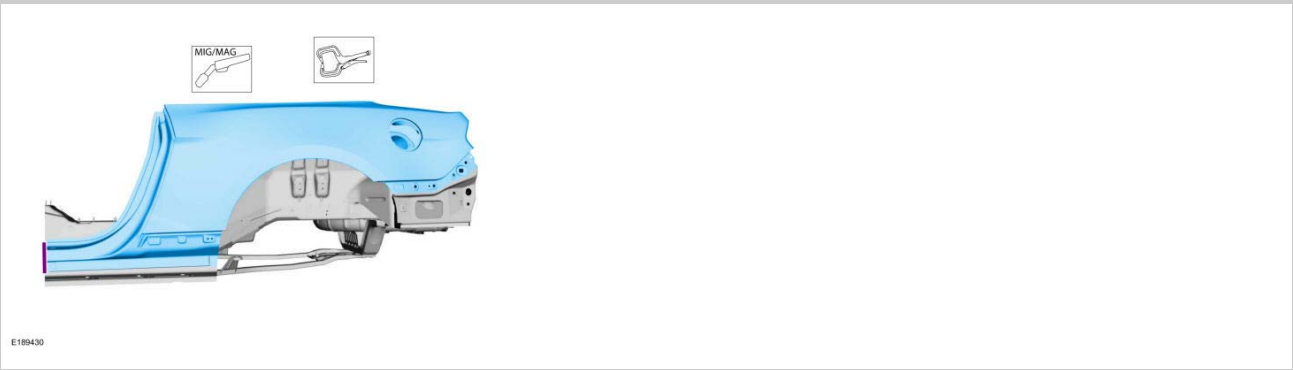
2.



Apply NVH expanding foam and metal bonding adhesive to indicated areas.

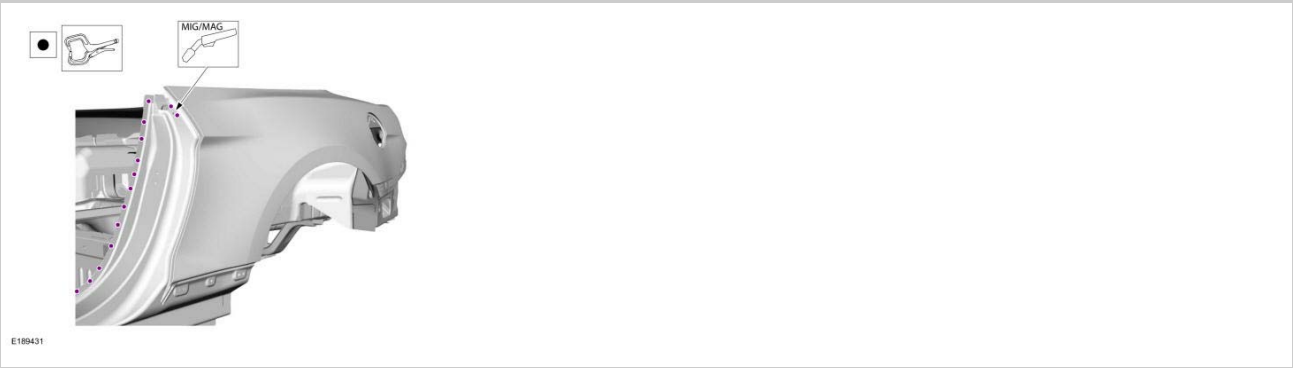
Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B



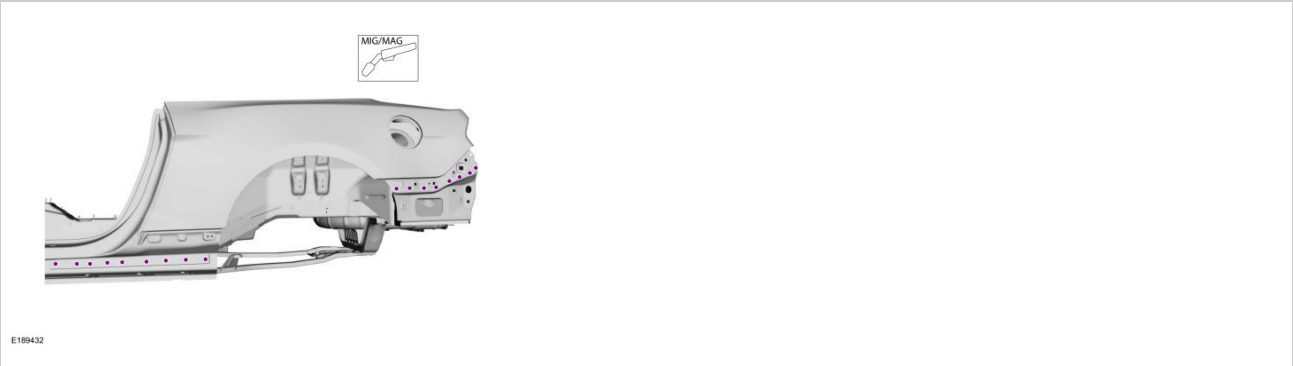
Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121



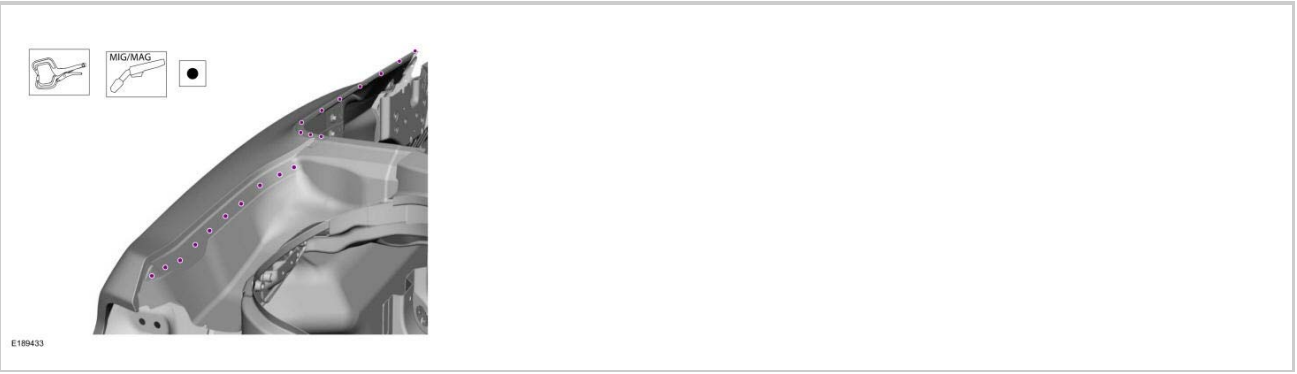
3.

Install the quarter panel and seam weld. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment



4.

Weld the panel at the door opening. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Resistance Spotwelding Equipment



5.

MIG weld the panel along flange areas. Use the General Equipment: MIG/MAG Welding Equipment

6.

Weld the panel along upper flange areas. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Resistance Spotwelding Equipment

7.

Metal finish the repair area(s) using typical metal finishing techniques.

8.

Sealing work: All areas must be sealed to production level

Material

: Seam Sealer / TA-2-B

9.

Refinish using a Ford approved paint system.

10.

Restore corrosion protection. Refer to: Corrosion Prevention .

11.

Reposition the carpet and wiring harness.

12.

Install the door striker.

13.

Install the following items:

Refer to: Convertible Top Assembly .

Refer to: FRONT DOOR .

Refer to: Luggage Compartment Lid .

LH side Refer to: Fuel Filler Door Assembly .

LH side as equipped. 2.3L Refer to: Fuel Tank Filler Pipe . 3.7L Refer to: Fuel Tank Filler Pipe . 5.0L Refer to: Fuel Tank Filler Pipe .

REMOVAL AND INSTALLATION > REAR FLOOR PANEL > REMOVAL

1.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: DESCRIPTION AND OPERATION .

2.

Position the carpeting and the wiring harness away from the working area.

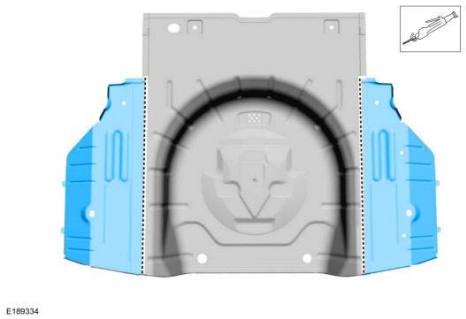
3.

Remove the following items:

As equipped 2.3L Refer to: EVAPORATIVE EMISSION CANISTER . 3.7L Refer to: EVAPORATIVE EMISSION CANISTER . 5.0L Refer to: EVAPORATIVE EMISSION CANISTER .

As equipped 2.3L Refer to: FUEL TANK . 3.7L Refer to: FUEL TANK . 5.0L Refer to: FUEL TANK .

Refer to: REAR SUBFRAME .

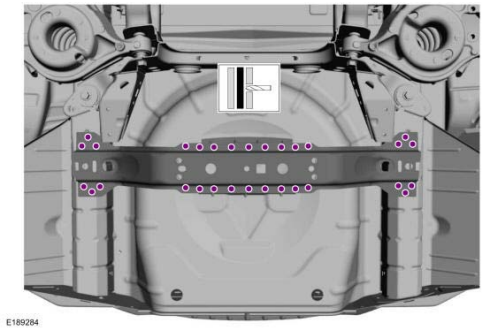


As equipped 2.3L Refer to: MUFFLER AND TAILPIPE . 3.7L Refer to: MUFFLER AND TAILPIPE . 5.0L Refer to: MUFFLER AND TAILPIPE .

Refer to: Back Panel and Reinforcement .

Refer to: WHEEL AND TIRE .

4.



Possible **sectioning** cut points depending on extent of damage.

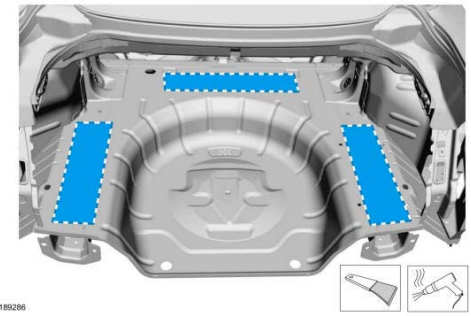
NOTE: ***Convertible only.***

5.

Drill out the spot welds on the crossmember. Use the General Equipment: Spot Weld Drill Bit

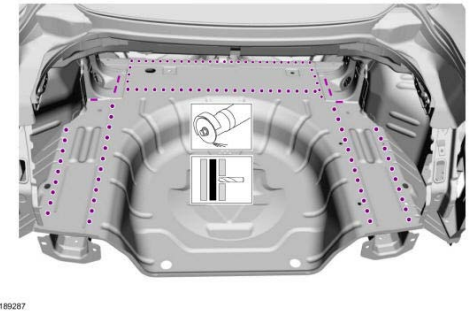
NOTE: ***Convertible only.***

6.



Remove the crossmember.

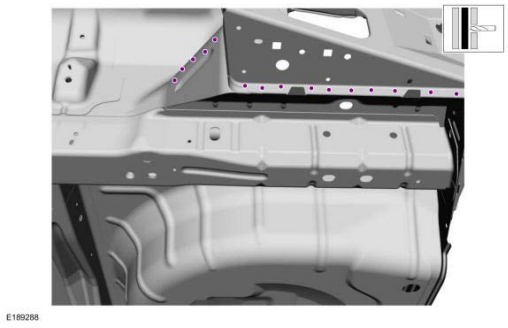
NOTE: Heat may be applied, not to exceed 170 °C to aid in softening the NVH (noise, vibration and harshness) mastic material.



7.

Remove the NVH mastic material. Use the General Equipment: Hot Air Gun Use the General Equipment: Scraper for Straight Edges

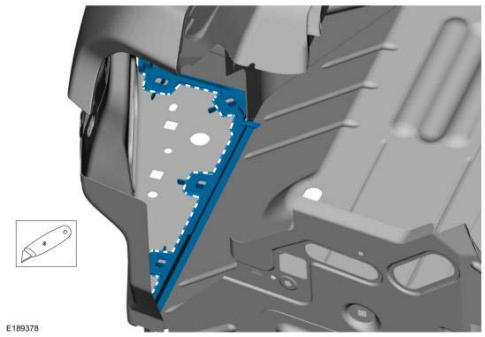
8.



Drill out the spot welds and grind off the brazed material at the floor panel seams. Use the General Equipment: Spot Weld Drill Bit

NOTE: On both sides.

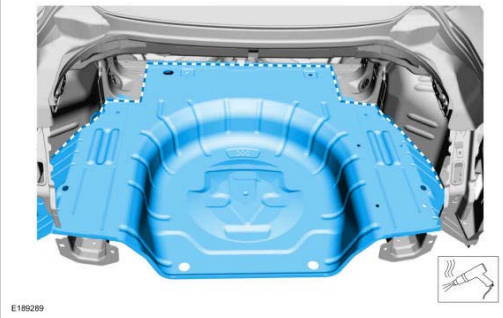
9.



Drill out the spot welds on the lower extension of the quarter panel. Use the General Equipment: Spot Weld Drill Bit

NOTE: On both sides.

10.

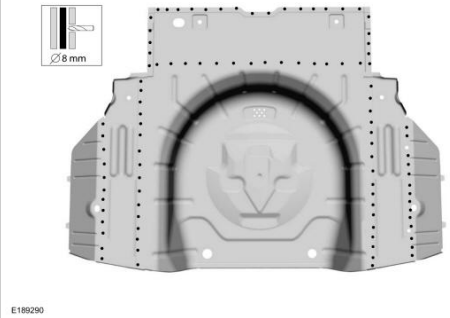


Remove the foam carrier strip between the floor panel and quarter panel extension. Use the General Equipment: Knife

NOTE: Heat may be applied, not to exceed 170 °C to aid in softening the adhesive.

11.

Remove the floor pan assembly. Use the General Equipment: Hot Air Gun



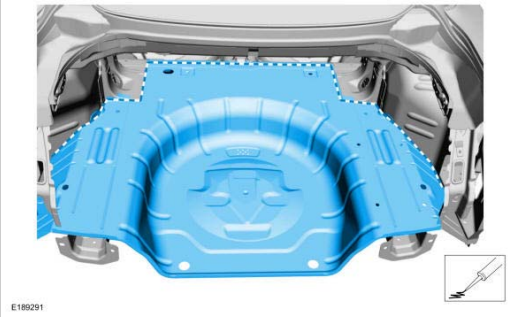
REMOVAL AND INSTALLATION > REAR FLOOR PANEL > INSTALLATION

1.

Refer to: JOINING TECHNIQUES .

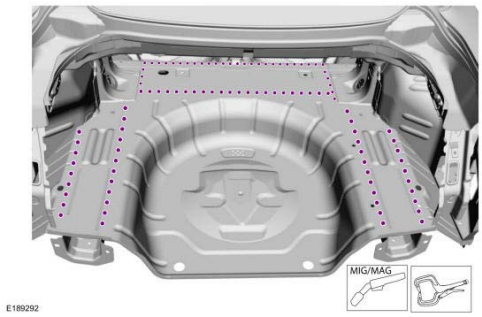
2.

Drill holes in the replacement panel for plug welding. Use the General Equipment: 8 mm Drill Bit



3.

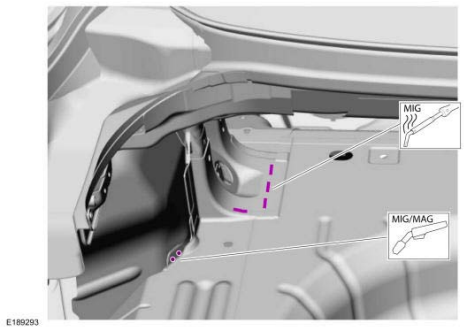
Apply adhesive to the floor panel seams and flanges and install the floor panel assembly.



Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

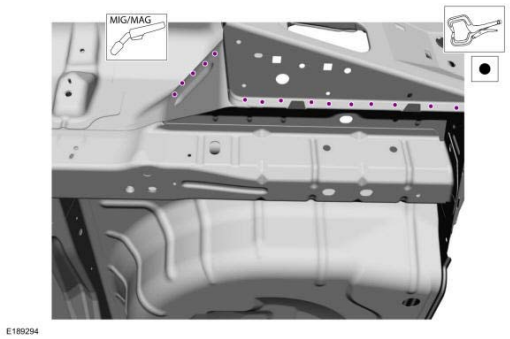
4.



MIG weld the floor panel to the reinforcements. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment

NOTE: On both sides.

5.



MIG braze the floor panel seams and plug weld the floor panel extension. Use the General Equipment: MIG/MAG Welding Equipment

NOTE: On both sides.

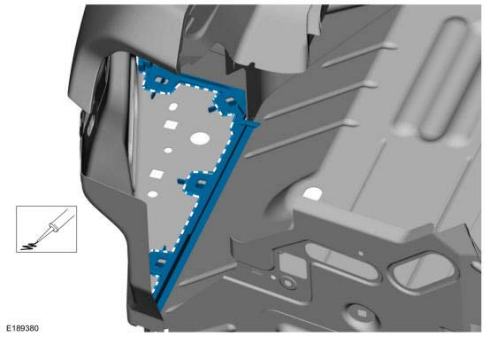
6.

Weld the floor panel to the quarter panel extension. Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment

NOTE: Convertible only.

7.

Install and weld the underbody crossmember. Use the General Equipment: MIG/MAG Welding Equipment



NOTE: On both sides.

8.

Apply NVH expanding foam to the foam carrier strip and install.

Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121

9.

Finish the repair area using typical metal finishing techniques.

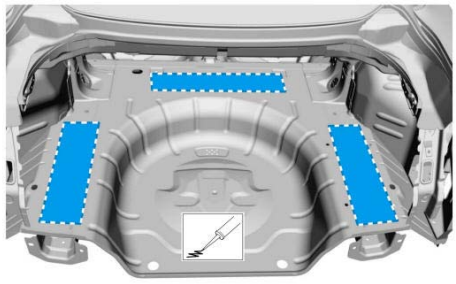
10.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

11.



Refinish using a Ford approved paint system.

12.

Refer to: CORROSION PREVENTION .

13.

Apply NVH material (obtain locally) in original locations.

14.

Install the following items:

As equipped 2.3L Refer to: EVAPORATIVE EMISSION CANISTER . 3.7L Refer to: EVAPORATIVE EMISSION CANISTER . 5.0L Refer to: EVAPORATIVE EMISSION CANISTER

Service Manual: REAR SEATS

REMOVAL AND INSTALLATION > REAR SEAT BACKREST - CONVERTIBLE > REMOVAL

1.

Remove the rear seat cushion. Refer to: Rear Seat Cushion .

2.

Release the fasteners attaching the seat backrest to the floor.

Torque

: 35 lb.ft (47.5 Nm)

3.

Release the backrest locking clips. Remove the backrest.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST - CONVERTIBLE > INSTALLATION

NOTE: During installation make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupant.

1.
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST - COUPE > REMOVAL

1.

Remove the rear seat cushion. Refer to: Rear Seat Cushion .

NOTE: LH seat shown in illustration, RH seat similar.

2.

Release the fastener attaching the seat backrest to the floor.

Torque

: 35 lb.ft (47.5 Nm)

3.

Remove the backrest.

1.

Release the backrest hinge from the pivot hinge.

2.

Move the safety belt aside. Rotate the backrest toward the outboard side of the vehicle.

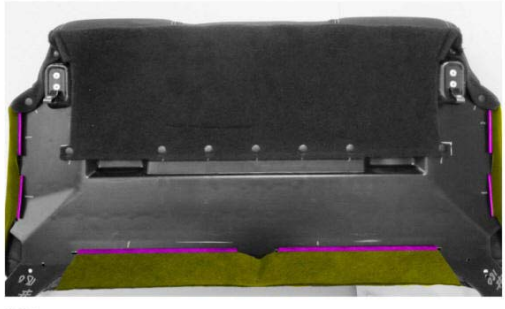
3.

Lift the backrest to release it from the floor stud. Remove the backrest.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST - COUPE > INSTALLATION

NOTE: During installation make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupant.

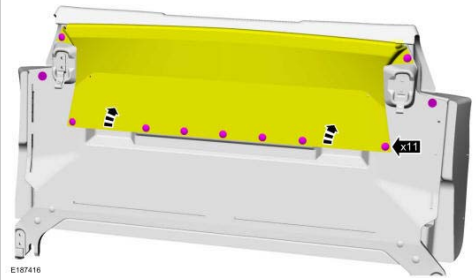
1.
To install, reverse the removal procedure.



REMOVAL AND INSTALLATION > REAR SEAT BACKREST COVER - CONVERTIBLE > REMOVAL

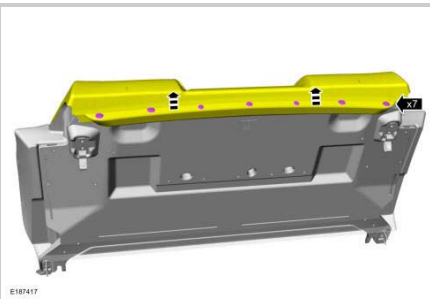
1.

Remove the backrest. Refer to: Rear Seat Backrest - Convertible .



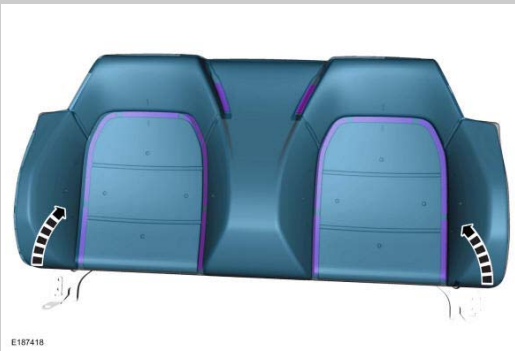
2.

Release the backrest cover J-clips from the backrest frame.



3.

Release the backrest cover carpet pin-type retainers from the backrest frame. Fold the carpet forward.



4.

Release the backrest cover pin-type retainers from the top of the backrest frame.

NOTE: Use care when separating the seat backrest cover from the hook-and-loop strips, or the hook-and-loop strips may be torn from the seat backrest foam pad.

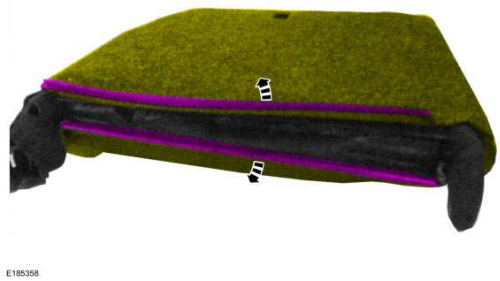
5.
Separate the backrest cover hook-and-loop strips from the backrest foam. Remove the backrest cover.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST COVER - CONVERTIBLE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST COVER - COUPE > REMOVAL



1.

Remove the rear seat backrest. Refer to: Rear Seat Backrest - Coupe .

NOTE: LH seat shown in illustration, RH seat similar.

2.

Release the backrest lower J-clip.

NOTE: Use care when separating the seat backrest cover from the hook-and-loop strips, or the hook-and-loop strips may be torn from the seat backrest foam pad.

3.
Separate the backrest cover hook-and-loop strips from the backrest foam. Position the backrest latch strap through the backrest cover. Remove the backrest cover.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST COVER - COUPE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR SEAT BACKREST LATCH

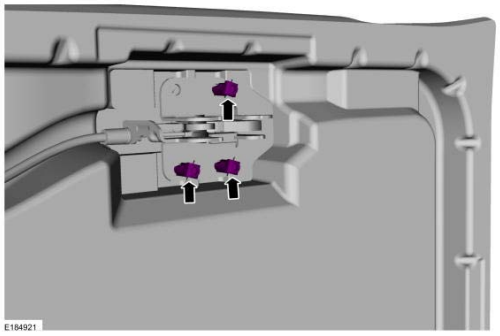
Electric Drill

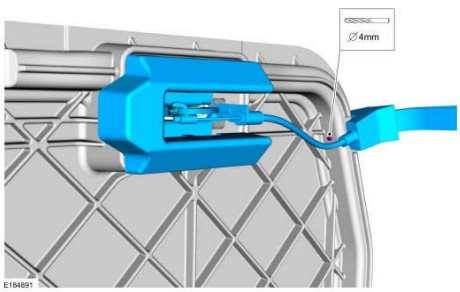
REMOVAL AND INSTALLATION > REAR SEAT BACKREST LATCH > REMOVAL



NOTE: LH seat shown in illustration, RH seat similar.

1.

Remove the rear seat backrest cover. Refer to: Rear Seat Backrest Cover - Coupe .



2.

Release the latch fasteners from the rear of the backrest frame.

3.

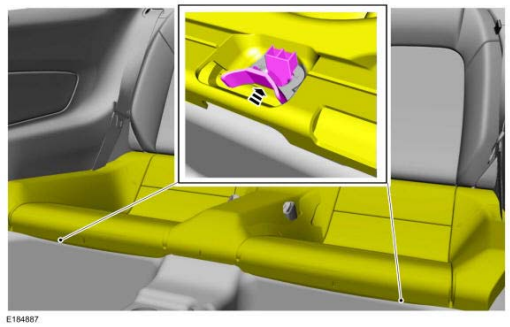
Using an electric drill, remove the rivet. Remove the seat latch assembly. Use the General Equipment: Electric Drill

REMOVAL AND INSTALLATION > REAR SEAT BACKREST LATCH > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR SEAT CUSHION > REMOVAL



1.

On both sides. Move the front seat to the full forward position.

NOTE: The seat cushion tabs must be pressed in to release them from the floor. If the locking tabs are not pressed in, it may result in damage to the tabs.

2.
Located at the front of the seat cushion, press in on the locking tabs to release the seat cushion from the floor.

3.

Lift and release the seat cushion. Remove the seat cushion.

REMOVAL AND INSTALLATION > REAR SEAT CUSHION > INSTALLATION

NOTE: During installation make sure the seatbelt webbing is not twisted and the seatbelts and buckles are accessible to the occupant.

1.
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > REAR SEAT CUSHION COVER > REMOVAL

1.

Remove the rear seat cushion. Refer to: Rear Seat Cushion .

2.

Release the cushion cover J-clips and pin-type retainers from bottom of the seat cushion frame. Position the J-clip attaching straps through the openings in the seat cushion foam.

NOTE: Use care when separating the seat cushion cover from the hook-and-loop strips, or the hook-and-loop strips may be torn from the seat cushion foam pad.

3.
Separate the seat cushion cover from the hook-and-loop strips. Remove the cushion cover.

REMOVAL AND INSTALLATION > REAR SEAT CUSHION COVER > INSTALLATION

1.

To install, reverse the removal procedure.

Service Manual: REAR VIEW MIRRORS

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, POWER

The power mirror system allows the LH and RH exterior mirror glass to be positioned electronically. The movement of the exterior mirror glass is controlled by the exterior mirror control switch and the LH or RH mirror selection buttons determine which exterior mirror glass is controlled. The exterior mirror control switch and the mirror selection buttons are integral to the LH front window control switch.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, MEMORY

The memory mirror feature allows the driver to recall or save the preferred positioning of the LH and RH exterior mirror glass. The preferred positioning of the driver seat and exterior mirrors can be associated with a numbered memory preset button or passive key.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, HEATED

The exterior mirrors are available with heated mirror glass, which heats the mirror glass to remove frost, snow, ice and condensation. The rear window defrost switch controls operation of the heated exterior mirror glass. The heated exterior mirror glass only operates when the rear window defrost system is active.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, POWER FOLDING

The power folding mirror feature allows the exterior mirrors to be electronically folded and unfolded by pressing the exterior mirror fold switch (integral to the LH front window control switch).

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, TURN SIGNAL LAMPS

The LH and RH exterior mirrors may be equipped with a mirror-mounted turn signal lamps. For repair procedures and information on the mirror-mounted turn signal lamps, Refer to: Turn Signal and Hazard Lamps .

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, PONY PROJECTION LAMPS

The LH and RH exterior mirrors may be equipped with pony projection lamps. For repair procedures and information on the mirror-mounted pony projection lamps, Refer to: Interior Lighting .

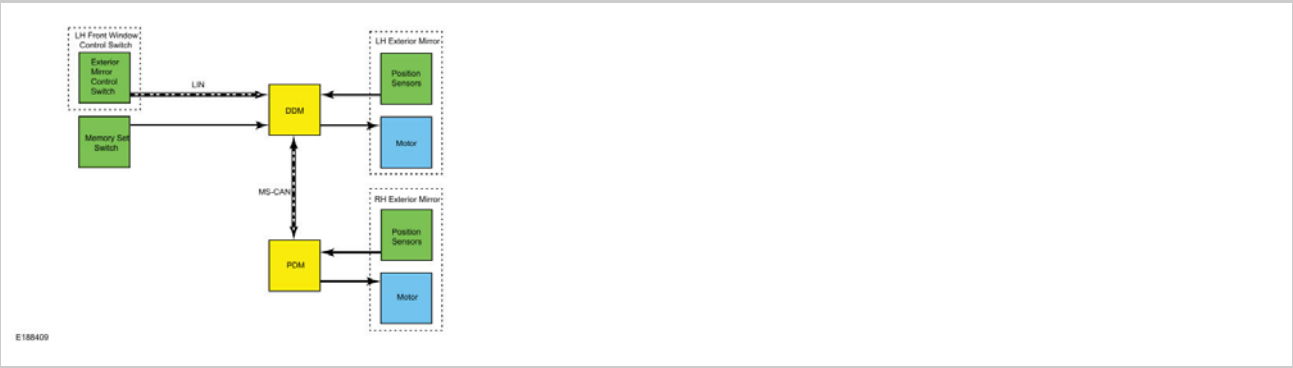
DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - EXTERIOR, BLIS ® LIGHT EMITTING DIODES (LEDS)

The LH and RH exterior mirrors may be equipped with BLIS ® LED. For repair procedures and information on the mirror-mounted BLIS ® Light Emitting Diodes (LEDs), Refer to: Blind Spot Information System .

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - OVERVIEW > OVERVIEW - INTERIOR

This vehicle may be equipped with a manual or auto-dimming interior rear view mirror. The manual dimming interior mirror has a lever at the bottom of the mirror assembly that must be pushed forward or pulled rearward to change the reflectance of the interior mirror glass. During nighttime conditions, the auto-dimming interior mirror automatically darkens the mirror glass when headlamps are detected from behind the vehicle to reduce unwanted glare. The auto-dimming feature is active any time the ignition is ON.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION



System Operation

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYSTEM OPERATION - EXTERIOR, POWER, WITHOUT MEMORY

The LH, RH, up or down exterior mirror glass movement is controlled by the exterior mirror control switch, which supplies voltage and ground to the LH and RH exterior mirror motors. The exterior mirror control switch receives voltage from the BCM fuse 23 (10A) any time the ignition is on. When the exterior mirror selection switch is in the LH or RH position and the exterior mirror control switch is pressed left, right, up or down, the switch supplies voltage and ground to the appropriate exterior mirror motor.

Each exterior mirror shares a common ground circuit for left, right, up and down movement.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYSTEM DIAGRAM - EXTERIOR, POWER, WITH MEMORY

Network Message Chart

Module Network Input Messages - PDM

Broadcast Message	Originating Module	Message Purpose
Mirror command	DDM	Commands the PDM to initiate the RH exterior mirror glass moments, memory save or recall and also used to abort a memory recall that is in progress.

System Operation - Exterior, Power, With Memory

When a memory recall or save is initiated, the DDM sends the memory command message to the PDM through the MS-CAN. Based on this message, the DDM and PDM recall the requested memory preset mirror position from internal memory or save the current mirror position to correspond with the requested preset. During a memory recall, the DDM and PDM supply voltage and ground to the appropriate exterior mirror motors to achieve the desired memory positions that are stored in memory based on feedback from the mirror motor sensors. If the exterior mirror control switch is activated in any direction during a memory recall, the DDM sends the manual mirror override message to the PDM. After this message is received, the DDM and PDM abort the memory recall. After the recall is aborted, the DDM or PDM respond to the exterior mirror control switch inputs. A memory recall is also aborted if the driver seat control switch is activated in any direction during a memory recall.

The LH exterior mirror glass position memory presets are stored in the DDM and the RH exterior mirror glass position memory presets are stored in the PDM.

A memory recall or memory save can be initiated by the memory set switch, RKE transmitter or Intelligent Access (IA) key (if equipped) or the keyless entry keypad. For additional information on memory recall or memory save, refer to the Owner's Literature.

For additional information on the memory feature, Refer to: Front Seats - System Operation and Component Description .

System Diagram - Exterior, Heated, Without Memory

System Operation - Exterior, Heated, Without Memory

The rear window defrost system controls operation of the heated exterior mirror glass. The heated exterior mirror glass only operates when the rear window defrost system is active. The heated exterior rear view mirror glass deactivates when the rear window defrost deactivates.

The heated mirror glass receives voltage from the rear window defrost relay located inside the BJB. The LH and RH heated mirror glass does not share the same ground.

System Diagram - Exterior, Heated, With Memory

Network Message Chart

Module Network Input Messages - DDM and PDM

Broadcast Message	Originating Module	Message Purpose

Mirror heat request	FCIM	Used to command the heated exterior mirror glass on and off

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYSTEM OPERATION - EXTERIOR, HEATED, WITH MEMORY

The rear window defrost system controls operation of the heated exterior mirror glass. The heated exterior mirror glass only operates when the rear window defrost system is active. The heated exterior rear view mirror glass deactivates when the rear window defrost deactivates.

Based on the mirror heat request message received from the FCIM through the MS-CAN, the DDM controls the operation of the LH heated exterior mirror glass and the PDM controls the operation of the RH heated exterior mirror glass.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYSTEM OPERATION - EXTERIOR, POWER FOLD

The power folding exterior mirror feature allows both power exterior rear view mirrors to be folded or unfolded by pressing the exterior mirror fold switch (integral to the LH front window control switch). The power folding exterior mirrors are controlled by the power folding mirror relay. When the ignition is on and a mirror fold is initiated by pressing the exterior mirror fold switch, the exterior mirror control switch sends a ground signal to the power folding mirror relay. The power folding mirror relay activate the power folding mirrors in the opposite direction of the last activation. The power folding mirror relay controls movement by reversing the polarity of the voltage and ground it supplies to the power folding mirror motors. The RH and LH power folding mirrors fold or unfold at the same time and cannot be controlled independently. The power folding mirrors contain a drive motor that is not replaceable. If a power folding mirror drive motor is found to be inoperative, a new power folding exterior rear view mirror assembly must be installed.

NOTE: If the power folding mirrors are folded or unfolded several times continuously, the power lockout feature disables the system for approximately 3-10 minutes to prevent damage to the power fold motors. After 3-10 minutes have elapsed, normal operation resumes.

NOTE: The power folding mirrors may need to be synchronized when the LH, RH or both power folding mirrors are partially folded in toward the door manually, and then folded inward using the power folding mirror control switch. Refer to Power Folding Mirrors Synchronization.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION

AND COMPONENT DESCRIPTION > SYSTEM OPERATION- INTERIOR MANUAL-DIMMING

The manual interior rear view mirror can be adjusted from a day position to a night position to reduce unwanted glare caused by headlamps from behind the vehicle. Adjusting the interior mirror is accomplished by using the day/night tab, located on the bottom of the interior mirror. Pulling the tab rearward, towards the driver, adjusts the mirror to the night position. Pushing the tap forward, away from the driver, adjusts the mirror to the day position.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SYSTEM OPERATION- INTERIOR AUTO-DIMMING

The interior auto-dimming mirror uses 2 integral photoelectric sensors to detect exterior lighting conditions. When the forward facing sensor detects daytime conditions, the rearward facing sensor is inactive and the mirror glass stays in a high reflectance mode. When the forward facing sensor detects nighttime conditions, the rearward facing sensor is active. When bright lights (glare) are detected by the rearward facing sensor, the mirror glass is electronically darkened. To provide increased visibility when backing up, the interior rear view mirror automatically returns to a high reflectance mode any time reverse gear is selected, regardless of exterior lighting conditions.

DESCRIPTION AND OPERATION > REAR VIEW MIRRORS - SYSTEM OPERATION AND COMPONENT DESCRIPTION > COMPONENT DESCRIPTION

Exterior Mirror Control Switch

The exterior mirror control switch is a momentary contact switch, integral to the LH front window control switch, that provides the driver with the controls to move the LH and RH exterior rear view mirrors left, right, up or down. The LED on each exterior mirror selection button illuminates to indicate which exterior mirror is selected for adjustment.

On vehicles equipped with the memory mirror feature, the exterior mirror control switch is connected to the DDM through a LIN circuit.

On vehicles without the memory mirror feature, the exterior mirror control switch provides voltage and ground to the selected exterior mirror motor to move the exterior mirror glass to the desired position.

Exterior Mirror Fold Switch

The exterior mirror fold switch is a momentary contact switch, integral to the LH front window control switch, that sends a ground signal to the power folding mirror relay to fold or unfold the exterior rear view mirrors to the desired position.

Memory Set Switch

The memory set switch contains 3 momentary contact switches. It is hard-wired to the DDM and is used to recall 1 of 3 memory positions stored in the DSM. For more information on the memory set switch, Refer to: Front Seats - System Operation and Component Description .

Exterior Mirror

Each exterior mirror has 2 bi-directional motors that are used to control the position of the exterior mirror glass. The sensors used to monitor the mirror glass position are integral to the motors.

If equipped with heated mirrors, the heated exterior mirrors use heating elements that are integral to the exterior mirror glass.

If equipped with power folding mirrors, each exterior mirror has an integral, bi-directional folding motor that is used to fold and unfold the exterior mirror.

If equipped with exterior mirrors that include turn signal indicators and/or puddle lamps, Refer to: Exterior Lighting - System Operation and Component Description .

If equipped with exterior mirrors that include blind spot monitoring (BLIS), Refer to: Blind Spot Information System - System Operation and Component Description .

The exterior mirrors use a jumper harness between the vehicle wiring harness, the exterior mirror motors and the heated mirror glass. The exterior mirror jumper harness is integral to the exterior mirror. Before replacing an exterior mirror or motor, inspect the jumper harness for opens, shorted circuits or damaged and pushed-out pins. If a concern with the exterior mirror jumper harness exists, attempt to repair the jumper harness.

DDM

On vehicles equipped with the memory mirrors feature, the DDM monitors the exterior mirror control switch through a LIN circuit. The DDM is responsible for supplying voltage and ground to the LH exterior mirror motors, LH exterior mirror motor sensors and LH exterior mirror glass heating element.

The DDM sends the RH exterior mirror movement request to the PDM through the MS-CAN.

PDM

On vehicles equipped with the memory mirrors feature, the PDM is responsible for supplying voltage and ground to the RH exterior mirror motors, RH exterior mirror motor sensors and RH exterior mirror glass heating element.

Interior Rear View Mirror - Manual-Dimming

The manual dimming interior rear view mirror has a lever at the back of the mirror that must be pulled forward or pushed rearward by the driver to activate the manual dimming function. Manual dimming is completely controlled by the driver.

Interior Rear View Mirror - Auto-Dimming

The auto-dimming rear view mirror has 2 photoelectric sensors, one on the front of the mirror (facing the windshield) and one on the rear of the mirror (at the top of the mirror glass). Based on inputs from these sensors, the automatic dimming feature adjusts the reflectance level of the interior rear view mirror glass to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rear glare in relation to ambient light conditions in front of the interior mirror.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > SYMPTOM CHART(S) > SYMPTOM CHART: REAR VIEW MIRRORS - EXTERIOR

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

NOTE: Clean the entire mirror assembly and glass to assist in verification of the customer concern and/or impact damage. Do not clean any mirror glass or housing with an ice scraper, razor blade, abrasive pad, harsh chemicals or petroleum based cleaning products, as these may damage the mirror glass and/or housing.

Condition	Possible Causes	Action
The exterior mirror(s) fold inward	Power folding mirrors are not	For vehicles equipped with power

due to wind pressure	synchronized (vehicles equipped with folding mirrors only) Mirror structural bracket is damaged	folding mirror, SYNCHRONIZE the power folding mirrors. If the concern is still present after the power folding mirrors synchronization procedure was performed, INSPECT the mirror for structural damage. If necessary, INSTALL a new mirror. REFER to: Exterior Mirror . For vehicles not equipped with power folding mirror, INSPECT the mirror for structural damage. If necessary, INSTALL a new mirror. REFER to: Exterior Mirror .
The LH or RH exterior mirror selection switch LED is inoperative (exterior mirror selection switch functions normally)	Exterior mirror selection switch	INSTALL a new front door window control switch. REFER to: Front Door Window Control Switch .
A single mirror is inoperative (without memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test A
A single mirror does not function correctly in all directions (without memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test B
Both exterior mirrors are inoperative (without memory mirrors)	Wiring, terminals or connectors Power window concern Exterior mirror control switch (integral to the front door window control switch)	VERIFY that all power windows can be operated normally from the LH front door window control switch. If all power windows operate normally from the LH front door window control switch, INSTALL a new LH front door window control switch. REFER to: Front Door Window Control Switch . If all power window do not operate normally from the LH front door window control switch, DIAGNOSE the power windows before continuing diagnostics of the exterior mirrors. REFER to: Glass, Frames and Mechanisms .
Both exterior mirrors are inoperative (with memory mirrors)	Wiring, terminals or connectors Power window concern Exterior mirror control switch (integral to the front door window control switch) DDM	VERIFY that all power windows can be operated normally from the LH front door window control switch. If all power windows operate normally from the LH front door window control switch, INSTALL a new LH front door window control

		switch. REFER to: Front Door Window Control Switch . If the concern is the same after installing a new LH front door window control switch, INSTALL a new DDM. REFER to: Driver Door Module (DDM) . If all power window do not operate normally from the LH front door window control switch, DIAGNOSE the power windows before continuing diagnostics of the exterior mirrors. REFER to: Glass, Frames and Mechanisms .
The LH exterior mirror is inoperative (with memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test C
The LH exterior mirror does not operate correctly in all directions (with memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test C
The RH exterior mirror is inoperative (with memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test D
The RH exterior mirror does not operate correctly in all directions (with memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test D
The LH or RH heated exterior mirror is inoperative or always on (with memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test E
One or both heated exterior mirrors are inoperative (without memory mirrors)	Refer to the Pinpoint Test	GO to Pinpoint Test F
Both heated exterior mirrors are always on (without memory mirrors)	Refer to the Pinpoint Test	DIAGNOSE the rear window defrost system. REFER to: Glass, Frames and Mechanisms .
The LH and RH heated exterior mirrors do not defrost at the same rate	Normal operation of the heated exterior mirror	No action required, the system is operating correctly at this time.
The LH and/or RH power folding mirror is inoperative/does not operate correctly (if equipped)	Refer to the Pinpoint Test	GO to Pinpoint Test G
The RH and LH power folding mirror do not fold and/or unfold at the same rate of speed (if equipped)	Normal operation of the power folding mirror	No action required, the system is operating correctly at this time.
The projector lamp is inoperative or always on	Wiring, terminals or connectors Projector lamp BCM	REFER to: Interior Lighting .

The exterior mirror turn indicator is inoperative or always on	Wiring, terminals or connectors Communication concern (vehicles with memory mirrors) Turn indicator Door module (vehicles with memory mirrors) BCM	REFER to: Turn Signal and Hazard Lamps .
The Blind Spot Information System (BLIS ®) indicator is inoperative or always on	Wiring, terminals or connectors Exterior mirror glass Side obstacle detection control module	REFER to: Blind Spot Information System .

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > SYMPTOM CHART(S) > SYMPTOM CHART: REAR VIEW MIRRORS - INTERIOR

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

NOTE: Clean the entire mirror assembly and glass to assist in verification of the customer concern and/or impact damage. Do not clean any mirror glass or housing with an ice scraper, razor blade, abrasive pad, harsh chemicals or petroleum based cleaning products, as these may damage the mirror glass and/or housing.

Condition	Possible Causes	Action
The interior mirror is blemished	Interior mirror glass/housing is dirty	CLEAN the affected interior mirror surface.
The interior mirror vibrates or is loose	Interior mirror mounting loose	If the mirror is still on the windshield, **do not remove** . ATTEMPT to fully seat the mirror first. If the mirror is still loose or vibrates, REMOVE and REINSTALL the mirror. If the condition still exists, INSTALL a new interior mirror. REFER to: Interior Rear View Mirror .
The interior auto-dimming mirror does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test H

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > SYMPTOM CHART(S) > SYMPTOM CHART: REAR VIEW MIRRORS - EXTERIOR NVH

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

NOTE: Clean the entire mirror assembly and glass to assist in verification of the customer concern and/or impact damage. Do not clean any mirror glass or housing with an ice scraper, razor blade, abrasive pad, harsh chemicals or petroleum based cleaning products, as these may damage the mirror glass and/or housing.

Condition	Possible Causes	Action
Exterior mirror housing vibrates or is loose	Power folding mirrors are not synchronized (if equipped)	SYNCHRONIZE the power folding mirrors.
	Exterior mirror mounting nuts loose	TIGHTEN the exterior mirror mounting nuts. REFER to: Exterior Mirror .
	Aftermarket air deflector/stone shields	If possible, REMOVE the aftermarket parts and ROAD TEST the vehicle. If the concern is no longer present, ADVISE the customer that the aftermarket components were causing the undesired vibration.
Exterior mirror glass vibrates or is loose	Exterior mirror motor mounting screws loose Exterior mirror glass loose	PRESS the center of the exterior mirror glass up, down, left and right to make sure the exterior mirror glass is seated correctly. If the exterior mirror glass is still loose, REMOVE the exterior mirror glass. INSPECT the exterior mirror backing plate for damage. INSPECT the exterior mirror motor mounting screws and TIGHTEN if necessary. If the exterior mirror backing plate is damaged, INSTALL a new exterior mirror glass. REFER to: Exterior Mirror .
Wind noise	Foam gasket between exterior mirror housing and door is misaligned or damaged	VERIFY the gasket is in good condition. If necessary, REPOSITION the gasket between the exterior mirror housing and the door. The foam gasket is not serviceable and if it cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .
	Exterior mirror is not correctly fitted to the door	VERIFY there are no gaps between the exterior mirror and the door. If necessary, LOOSEN the exterior mirror nuts and REPOSITION the exterior mirror as necessary. REFER to: Exterior

		Mirror .
	Exterior mirror impact damage	INSPECT the exterior mirror to ensure that there is no damage to the housing or glass.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST A : A SINGLE MIRROR IS INOPERATIVE (WITHOUT MEMORY MIRRORS)

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The exterior mirror control switch supplies voltage and ground to the exterior mirror motors based on switch inputs. Each exterior mirror shares a common circuit for both up/down and left/right movement.

Possible Causes

- Wiring, terminals or connectors
- Exterior mirror control switch (integral to the front door window control switch)
- Exterior mirror

Visual Inspection and Diagnostic Pre-Checks

Inspect the suspect exterior mirror for damage or obstructions.

NOTE: Clean the entire mirror assembly and glass to assist in verification of the customer concern and/or impact damage. Do not clean any mirror glass or housing with an ice scraper, razor blade, abrasive pad, harsh chemicals or petroleum based cleaning products, as these may damage the mirror glass and/or housing.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST A : A SINGLE MIRROR IS INOPERATIVE (WITHOUT MEMORY MIRRORS) > PINPOINT TEST A : A SINGLE MIRROR IS INOPERATIVE (WITHOUT MEMORY MIRRORS)

NOTE: The following step uses a test lamp to simulate normal circuit loads. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

A1 CHECK THE EXTERIOR MIRROR

Ignition OFF.

Disconnect: inoperative exterior mirror C520 (LH exterior mirror) or C626 (RH exterior mirror).

Ignition ON.

Select the inoperative exterior mirror by pressing the appropriate exterior mirror selection switch.

Connect:

LH exterior mirror

Lead 1	Measurement / Action	Lead 2
C520-1		C520-2

RH exterior mirror

Lead 1	Measurement / Action	Lead 2
C626-1		C626-2

Observe the test light while holding the exterior mirror control switch in the up position.

Did the test light illuminate?

Yes	CHECK the inoperative exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

No	GO to A2

A2 CHECK THE EXTERIOR MIRROR MOTOR COMMON CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect: Front Door Window Control Switch C504 .

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-2	Ω	C504-12

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead

C626-2	Ω	C504-12

Is the resistance less than 3 ohms?

Yes	INSTALL a new exterior mirror control switch (integral to the front door window control switch). REFER to: Front Door Window Control Switch .

No	REPAIR the circuit.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST B : A SINGLE MIRROR DOES NOT FUNCTION CORRECTLY IN ALL DIRECTIONS (WITHOUT MEMORY MIRRORS)

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The exterior mirror control switch supplies voltage and ground to the appropriate exterior mirror motors based on switch inputs. Each exterior mirror shares a common circuit for both up/down and left/right movement.

Possible Causes

- Wiring, terminals or connectors
- Exterior mirror control switch (integral to the front door window control switch)
- Exterior mirror motor
- Exterior mirror

Visual Inspection and Diagnostic Pre-Checks

- Inspect the exterior mirror control switch.
- Inspect the suspect exterior mirror for damage or obstructions.

NOTE: Clean the entire mirror assembly and glass to assist in verification of the customer concern and/or impact damage. Do not clean any mirror glass or housing with an ice scraper, razor blade, abrasive pad, harsh chemicals or petroleum based cleaning products, as these may damage the mirror glass and/or housing.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST B : A SINGLE MIRROR DOES NOT FUNCTION CORRECTLY IN ALL DIRECTIONS (WITHOUT MEMORY MIRRORS) > PINPOINT TEST B : A SINGLE MIRROR DOES NOT FUNCTION CORRECTLY IN ALL DIRECTIONS (WITHOUT

MEMORY MIRRORS)

NOTE: The following step uses a test lamp to simulate normal circuit loads. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

B1 CHECK THE EXTERIOR MIRROR LEFT AND RIGHT MOVEMENT

Ignition ON.

Operate the LH and RH exterior mirrors in the left and right direction using the exterior mirror control switch.

Do both exterior mirrors move left and right?

Yes	GO to B2

No	GO to B6

B2 CHECK THE EXTERIOR MIRROR UP/DOWN MOTOR

Ignition OFF.

Disconnect: incorrectly operating C520 (LH exterior mirror) or C626 (RH exterior mirror).

Ignition ON.

Select the incorrectly operating mirror on the exterior mirror control switch.

Connect:

LH exterior mirror

Lead 1	Measurement / Action	Lead 2
C520-1		C520-2

RH exterior mirror

Lead 1	Measurement / Action	Lead 2
C626-1		C626-2

Observe the test light while using the exterior mirror control switch in the up, down and released positions.

Did the test light illuminate in the up and down position and not illuminate in the released position?

Yes	GO to B10

No	GO to B3

B3 CHECK THE EXTERIOR MIRROR UP/DOWN CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Front Door Window Control Switch C504 .

Ignition ON.

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-1		Ground

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B4

B4 CHECK THE EXTERIOR MIRROR UP/DOWN CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-1	Ω	Ground

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B5

No	REPAIR the circuit.

B5 CHECK THE EXTERIOR MIRROR UP/DOWN CIRCUIT FOR AN OPEN

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-1	Ω	C504-9

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-1	Ω	C504-7

Is the resistance less than 3 ohms?

Yes	INSTALL a new exterior mirror control switch (integral to the front door window control switch). REFER to: Front Door Window Control Switch .

No	REPAIR the circuit.

B6 CHECK THE EXTERIOR MIRROR LEFT/RIGHT MOTOR

Ignition OFF.

Disconnect: incorrectly operating C520 (LH exterior mirror) or C626 (RH exterior mirror).

Ignition ON.

Select the incorrectly operating mirror on the exterior mirror control switch.

Connect:

LH exterior mirror

Lead 1	Measurement / Action	Lead 2
C520-4		C520-2

RH exterior mirror

Lead 1	Measurement / Action	Lead 2
C626-4		C626-2

Observe the test light while using the exterior mirror control switch in the left, right and released positions.

Did the test light illuminate in the right and left position and not illuminate in the released position?

Yes	GO to B10

No	GO to B7

B7 CHECK THE EXTERIOR MIRROR LEFT/RIGHT CIRCUIT FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: Front Door Window Control Switch C504 .

Ignition ON.

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-4		Ground

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to B8

B8 CHECK THE EXTERIOR MIRROR LEFT/RIGHT CIRCUIT FOR A SHORT TO GROUND

Ignition OFF.

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-4	Ω	Ground

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-4	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to B9

No	REPAIR the circuit.

B9 CHECK THE EXTERIOR MIRROR LEFT/RIGHT CIRCUIT FOR AN OPEN

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-4	Ω	C504-8

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-4	Ω	C504-6

Is the resistance less than 3 ohms?

Yes	INSTALL a new exterior mirror control switch (integral to the front door window control switch). REFER to: Front Door Window Control Switch .

No	REPAIR the circuit.

B10 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror motor. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST C : THE LH (LEFT-HAND) EXTERIOR MIRROR IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY IN ONE OR MORE DIRECTION(S) (WITH MEMORY MIRRORS)

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The DDM supplies voltage and ground to the LH exterior mirror motors based on input provided by the exterior mirror control switch. To support the memory function, the DDM supplies a 5 volt reference and ground to the mirror motor sensors. The DDM monitors the feedback voltage from the horizontal and vertical sensors to determine the position of the LH mirror glass. The DDM is capable of storing Diagnostic Trouble Codes (DTCs) for the LH exterior mirror motor drive and mirror position feedback circuits when a concern exists.

DTC	Description	Fault Trigger Conditions
B1C09:11	Driver Left/Right Mirror Motor: Circuit Short To Ground	This continuous and on-demand DTC sets if the DDM detects a higher than expected current draw when voltage is applied to the horizontal mirror motor circuit.
B1C09:15	Driver Left/Right Mirror Motor: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the DDM detects a lower than expected current draw when voltage is applied to the horizontal mirror motor circuit.
B1C10:11	Driver Up/Down Mirror Motor: Circuit Short To Ground	This continuous and on-demand DTC sets if the DDM detects a higher than expected current draw when voltage is applied to the vertical mirror motor circuit.
B1C10:15	Driver Up/Down Mirror Motor: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the DDM detects a lower than expected current draw when voltage is applied to the vertical mirror motor circuit.
B1C13:11	Driver Up/Down Mirror Motor Feedback: Circuit Short To Ground	This continuous and on-demand DTC sets if the DDM detects a short to ground on the vertical

		position feedback circuit.
B1C13:15	Driver Up/Down Mirror Motor Feedback: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the DDM detects a short to voltage or open on the vertical position feedback circuit.
B1C14:11	Driver Left/Right Mirror Motor Feedback: Circuit Short To Ground	This continuous and on-demand DTC sets if the DDM detects a short to ground on the horizontal position feedback circuit.
B1C14:15	Driver Left/Right Mirror Motor Feedback: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the DDM detects a short to voltage or open on the horizontal position feedback circuit.
C1B15:11	Sensor Supply Voltage B: Circuit Short To Ground	This continuous and on-demand DTC sets if the DDM detects a short to ground on the LH exterior mirror position sensor voltage supply circuit.
C1B15:15	Sensor Supply Voltage B: Circuit Short To Battery or Open	This continuous and on-demand DTC sets if the DDM detects a short to voltage or open on the LH exterior mirror position sensor voltage supply circuit.

Possible Causes

- Wiring, terminals or connectors
- Exterior mirror control switch (integral to the front door window control switch)
- Exterior mirror
- DDM

Visual Inspection and Diagnostic Pre-Checks

Inspect BJB fuse 11 (30A).

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST C : THE LH (LEFT-HAND) EXTERIOR MIRROR IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY IN ONE OR MORE DIRECTION(S) (WITH MEMORY MIRRORS) > PINPOINT TEST C : THE LH (LEFT-HAND) EXTERIOR MIRROR IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY IN ONE OR MORE DIRECTION(S) (WITH MEMORY MIRRORS)

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex Probes (NUD105-R025D)

NOTE: The following step uses a test lamp to simulate normal circuit loads. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

C1 CHECK THE DDM (DRIVER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the DDM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For Diagnostic Trouble Codes (DTCs) B1C09:11 or B1C09:15, GO to C15 For Diagnostic Trouble Codes (DTCs) B1C10:11 or B1C10:15, GO to C19 For Diagnostic Trouble Codes (DTCs) B1C13:11, B1C13:15, B1C14:11, B1C14:15, C1B15:11, or C1B15:15, GO to C8 For all other DDM Diagnostic Trouble Codes (DTCs), REFER to: Locks, Latches and Entry Systems .

No	GO to C2

C2 CHECK THE EXTERIOR MIRROR SELECTION SWITCH

Using a diagnostic scan tool, monitor the MIR_SEL DDM Parameter Identification (PID).

Operate the exterior mirror selection buttons to select the LH and then RH exterior mirrors.

Does the MIR_SEL DDM Parameter Identification (PID) match the selector switch in both positions?

Yes	GO to C3

No	INSTALL a new front door window control switch. REFER to: Front Door Window Control Switch .

C3 CHECK THE EXTERIOR MIRROR CONTROL SWITCH

Using a diagnostic scan tool, monitor the MIR_SW_DN, MIR_SW_UP, MIR_SW_L, and MIR_SW_R DDM Parameter Identifications (PIDs).

Press the exterior mirror control switch in the left, right, up and down directions.

Do the DDM Parameter Identifications (PIDs) match the control switch in all directions?

Yes	GO to C4

No	INSTALL a new front door window control switch. REFER to: Front Door Window Control Switch .

C4 CHECK THE LH (LEFT-HAND) MIRROR COMMON CIRCUIT FOR VOLTAGE AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: LH Exterior Mirror C520 .

Connect:

Lead 1	Measurement / Action	Lead 2
C520-2		Ground

Ignition ON.

Select the LH mirror with the exterior mirror selection switch.

Monitor the test light while pressing the exterior mirror control switch in the left and down directions.

Does the test light illuminate only when the exterior mirror control switch is pressed in the left and down directions?

Yes	GO to C24

No	If the test light is illuminated when the exterior mirror control switch is not pressed in any direction, GO to C5 If the test light does not illuminate when the exterior mirror control switch is pressed in the left and down directions, GO to C6

C5 CHECK THE COMMON CIRCUIT FOR A SHORT TO VOLTAGE AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to C23

C6 CHECK THE COMMON CIRCUIT FOR AN OPEN BETWEEN THE LH (LEFT-HAND) EXTERIOR MIRROR AND THE DDM (DRIVER DOOR MODULE)

Ignition OFF.

Disconnect: DDM C501B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-2	Ω	C501B-17

Is the resistance less than 3 ohms?

Yes	GO to C7

No	REPAIR the circuit.

C7 CHECK THE COMMON CIRCUIT FOR A SHORT TO GROUND AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C23

No	REPAIR the circuit.

C8 CHECK THE POSITION SENSOR CIRCUITS FOR A SHORT TO VOLTAGE AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: LH Exterior Mirror C520 .

Disconnect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-12		Ground
C520-10		Ground
C520-9		Ground
C520-8		Ground

Is any voltage present?

Yes	REPAIR the affected circuit.

No	GO to C9

C9 CHECK THE POSITION SENSOR CIRCUITS FOR A SHORT TO GROUND AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-10	Ω	Ground
C520-9	Ω	Ground
C520-8	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to C10

No	REPAIR the affected circuit.

C10 CHECK THE POSITION SENSOR CIRCUITS FOR AN OPEN BETWEEN THE LH (LEFT-HAND) EXTERIOR MIRROR AND THE DDM (DRIVER DOOR MODULE)

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-12	Ω	C501B-15
C520-10	Ω	C501B-6
C520-9	Ω	C501B-5

C520-8	Ω	C501B-16

Are the resistances less than 3 ohms?

Yes	GO to C11

No	REPAIR the affected circuit.

C11 CHECK THE MIRROR POSITION SENSOR REFERENCE VOLTAGE AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Connect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-9		C520-12

Is the voltage approximately 5 volts?

Yes	GO to C12

No	GO to C23

C12 CHECK THE DDM (DRIVER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE LH (LEFT-HAND) EXTERIOR MIRROR DISCONNECTED

Using a diagnostic scan tool, clear the DDM Diagnostic Trouble Codes (DTCs).

Perform the DDM self-test.

Is DTC B1C13:15 or B1C14:15 present?

Yes	GO to C13

No	GO to C23

C13 CHECK THE DDM (DRIVER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE HORIZONTAL POSITION SENSOR FEEDBACK CIRCUIT SHORTED TO GROUND

Ignition OFF.

Connect:

Lead 1	Measurement / Action	Lead 2

C520-10		C520-12

Ignition ON.

Using a diagnostic scan tool, clear the DDM Diagnostic Trouble Codes (DTCs).

Perform the DDM self-test.

Is DTC B1C14:11 present?

Yes	REMOVE the jumper wire. GO to C14

No	REMOVE the jumper wire. GO to C23

C14 CHECK THE DDM (DRIVER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE VERTICAL POSITION SENSOR FEEDBACK CIRCUIT SHORTED TO GROUND

Ignition OFF.

Connect:

Lead 1	Measurement / Action	Lead 2
C520-8		C520-12

Ignition ON.

Using a diagnostic scan tool, clear the DDM Diagnostic Trouble Codes (DTCs).

Perform the DDM self-test.

Is DTC B1C13:11 present?

Yes	REMOVE the jumper wire. GO to C24

No	REMOVE the jumper wire. GO to C23

C15 CHECK FOR VOLTAGE TO THE HORIZONTAL MOTOR CIRCUIT AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: LH Exterior Mirror C520 .

Connect:

Lead 1	Measurement / Action	Lead 2
C520-4		Ground

Ignition ON.

Select the LH mirror on the exterior mirror selection switch.

Monitor the test light while pressing the exterior mirror control switch in the right direction.

Does the test light illuminate only when the exterior mirror control switch is pressed in the right direction?

Yes	GO to C24

No	If the test light is illuminated when the exterior mirror control switch is not pressed in any direction, GO to C16 If the test light does not illuminate when the exterior mirror control switch is pressed in the right direction, GO to C17

C16 CHECK THE HORIZONTAL MIRROR CIRCUIT FOR A SHORT TO VOLTAGE AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to C23

C17 CHECK THE HORIZONTAL MOTOR CIRCUIT FOR A SHORT TO GROUND AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-4	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C18

No	REPAIR the circuit.

C18 CHECK THE HORIZONTAL MOTOR CIRCUIT FOR AN OPEN BETWEEN THE LH (LEFT-HAND) EXTERIOR MIRROR AND THE DDM (DRIVER DOOR MODULE)

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-4	Ω	C501B-8

Is the resistance less than 3 ohms?

Yes	GO to C23

No	REPAIR the circuit.

C19 CHECK FOR VOLTAGE TO THE VERTICAL MOTOR CIRCUIT AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: LH Exterior Mirror C520 .

Connect:

Lead 1	Measurement / Action	Lead 2
C520-1		Ground

Ignition ON.

Select the LH mirror on the exterior mirror selection switch.

Monitor the test light while pressing the exterior mirror control switch in the up direction.

Does the test light illuminate only when the exterior mirror control switch is pressed in the up direction?

Yes	GO to C24

No	If the test light is illuminated when the exterior mirror control switch is not pressed in any direction, GO to C20 If the test light does not illuminate when the exterior mirror control switch is pressed in the up direction, GO to C21

C20 CHECK THE VERTICAL MIRROR CIRCUIT FOR A SHORT TO VOLTAGE AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to C23

C21 CHECK THE VERTICAL MOTOR CIRCUIT FOR A SHORT TO GROUND AT THE LH (LEFT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-1	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to C22

No	REPAIR the circuit.

C22 CHECK THE VERTICAL MOTOR CIRCUIT FOR AN OPEN BETWEEN THE LH (LEFT-HAND) EXTERIOR MIRROR AND THE DDM (DRIVER DOOR MODULE)

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-1	Ω	C501B-7

Is the resistance less than 3 ohms?

Yes	GO to C23

No	REPAIR the circuit.

C23 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and all previously disconnected exterior mirror system connectors. Make sure they seat and latch correctly.

Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C24 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror motors for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror motor. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST D : THE RH (RIGHT-HAND) EXTERIOR MIRROR IS INOPERATIVE OR DOES NOT OPERATE IN ONE OR MORE DIRECTION(S) (WITH MEMORY MIRRORS)

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The PDM supplies voltage and ground to the RH exterior mirror motors based on input provided by the exterior mirror control switch. To support the memory function, the PDM supplies a 5 volt reference and ground to the mirror motor sensors. The PDM monitors the feedback voltage from the horizontal and vertical sensors to determine the position of the RH mirror glass. The PDM is capable of storing Diagnostic Trouble Codes (DTCs) for the RH exterior mirror motor drive and mirror position feedback circuits when a problem exists.

DTC	Description	Fault Trigger Conditions
B1C11:11	Passenger Left/Right Mirror Motor: Circuit Short To Ground	This continuous and on-demand DTC sets if the PDM detects a higher than expected current draw when voltage is applied to the horizontal mirror motor circuit.
B1C11:15	Passenger Left/Right Mirror Motor: Circuit Short To Battery Or Open	This continuous memory DTC sets if the PDM detects a lower than expected current draw when voltage is applied to the horizontal mirror motor circuit.
B1C12:11	Passenger Up/Down Mirror Motor: Circuit Short To Ground	This continuous memory DTC sets if the PDM detects a higher than expected current draw when voltage is applied to the vertical mirror motor circuit.
B1C12:15	Passenger Up/Down Mirror Motor: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the PDM detects a lower than expected current draw when voltage is applied to the vertical mirror motor circuit.
B1C15:11	Passenger Up/Down Mirror Motor Feedback: Circuit Short To Ground	This continuous and on-demand DTC sets if the PDM detects a short to ground on the vertical position feedback circuit.
B1C15:15	Passenger Up/Down Mirror Motor Feedback: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the PDM detects a short to voltage or open on the vertical position feedback circuit.
B1C16:11	Passenger Left/Right Mirror Motor Feedback: Circuit Short To Ground	This continuous and on-demand DTC sets if the PDM detects a short to ground on the horizontal

		position feedback circuit.
B1C16:15	Passenger Left/Right Mirror Motor Feedback: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the PDM detects a short to voltage or open on the horizontal position feedback circuit.
C1B15:11	Sensor Supply Voltage B: Circuit Short To Ground	This continuous and on-demand DTC sets if the PDM detects a short to ground on the RH exterior mirror position sensor voltage supply circuit.
C1B15:15	Sensor Supply Voltage B: Circuit Short To Battery or Open	This continuous and on-demand DTC sets if the PDM detects a short to voltage or open on the RH exterior mirror position sensor voltage supply circuit.

Possible Causes

- Wiring, terminals or connectors
- Exterior mirror control switch (integral to the front door window control switch)
- Exterior mirror
- PDM

Visual Inspection and Diagnostic Pre-Checks

Inspect BCM fuse 26 (30A).

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST D : THE RH (RIGHT-HAND) EXTERIOR MIRROR IS INOPERATIVE OR DOES NOT OPERATE IN ONE OR MORE DIRECTION(S) (WITH MEMORY MIRRORS) > PINPOINT TEST D : THE RH (RIGHT-HAND) EXTERIOR MIRROR IS INOPERATIVE OR DOES NOT OPERATE IN ONE OR MORE DIRECTION(S) (WITH MEMORY MIRRORS)

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex Probes (NUD105-R025D)

NOTE: The following step uses a test lamp to simulate normal circuit loads. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

D1 PERFORM A NETWORK TEST

Ignition ON.

Using a diagnostic scan tool, perform a network test.

Do the DDM and PDM pass the network test?

Yes	GO to D2

No	REFER to: MODULE COMMUNICATIONS NETWORK .

D2 CHECK THE PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, perform the PDM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For Diagnostic Trouble Codes (DTCs) B1C11:11 or B1C11:15, GO to D16 For Diagnostic Trouble Codes (DTCs) B1C12:11 or B1C12:15, GO to D20 For Diagnostic Trouble Codes (DTCs) B1C15:11, B1C15:15, B1C16:11, B1C16:15, C1B15:11, or C1B15:15, GO to D9 For all other PDM Diagnostic Trouble Codes (DTCs), REFER to: Locks, Latches and Entry Systems .

No	GO to D3

D3 CHECK THE EXTERIOR MIRROR SELECTION SWITCH

Using a diagnostic scan tool, monitor the MIR_SEL DDM Parameter Identification (PID).

Operate the exterior mirror selection buttons to select the LH and then RH exterior mirrors.

Does the MIR_SEL DDM Parameter Identification (PID) match the selector switch in both positions?

Yes	GO to D4

No	INSTALL a new front door window control switch. REFER to: Front Door Window Control Switch .

D4 CHECK THE EXTERIOR MIRROR CONTROL SWITCH

Select the RH mirror with the exterior mirror selection switch.

Using a diagnostic scan tool, monitor the MIR_SW_DN, MIR_SW_UP, MIR_SW_L, and MIR_SW_R DDM Parameter Identifications (PIDs).

Press the exterior mirror control switch in the left, right, up and down directions.

Do the MIR_SW_DN, MIR_SW_UP, MIR_SW_L, and MIR_SW_R DDM Parameter Identifications (PIDs) match the control switch in all directions?

Yes	GO to D5

No	INSTALL a new front door window control switch. REFER to: Front Door Window Control Switch .

D5 CHECK THE RH (RIGHT-HAND) MIRROR COMMON CIRCUIT FOR VOLTAGE AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: RH Exterior Mirror C626 .

Connect:

Lead 1	Measurement / Action	Lead 2
C626-2		Ground

Ignition ON.

Select the RH mirror with the exterior mirror selection switch.

While pressing the exterior mirror control switch in the left and down directions, monitor the test light.

Does the test light illuminate only when the exterior mirror control switch is pressed in the left and down directions?

Yes	GO to D25

No	If the test light is illuminated when the exterior mirror control switch is not pressed in any direction, GO to D6 If the test light does not illuminate when the exterior mirror control switch is pressed in the left and down directions, GO to D7

D6 CHECK THE COMMON CIRCUIT FOR A SHORT TO VOLTAGE AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: PDM C652B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to D24

D7 CHECK THE COMMON CIRCUIT FOR AN OPEN BETWEEN THE RH (RIGHT-HAND) EXTERIOR MIRROR AND THE PDM (PASSENGER DOOR MODULE)

Ignition OFF.

Disconnect: PDM C652B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-2	Ω	C652B-17

Is the resistance less than 3 ohms?

Yes	GO to D8

No	REPAIR the circuit.

D8 CHECK THE COMMON CIRCUIT FOR A SHORT TO GROUND AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D24

No	REPAIR the circuit.

D9 CHECK THE MIRROR MOTOR FEEDBACK CIRCUITS FOR A SHORT TO VOLTAGE AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: RH Exterior Mirror C626 .

Disconnect: PDM C652B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-8		Ground
C626-9		Ground
C626-10		Ground
C626-12		Ground

Is any voltage present?

Yes	REPAIR the affected circuit.

No	GO to D10

D10 CHECK THE MIRROR MOTOR FEEDBACK CIRCUITS FOR A SHORT TO GROUND AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-8	Ω	Ground
C626-9	Ω	Ground
C626-10	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to D11

No	REPAIR the affected circuit.

D11 CHECK THE MIRROR MOTOR FEEDBACK CIRCUITS FOR AN OPEN BETWEEN THE RH (RIGHT-HAND) EXTERIOR MIRROR AND THE PDM (PASSENGER DOOR MODULE)

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-8	Ω	C652B-16
C626-9	Ω	C652B-5

C626-10	Ω	C652B-6
C626-12	Ω	C652B-15

Are the resistances less than 3 ohms?

Yes	GO to D12

No	REPAIR the affected circuit.

D12 CHECK THE MIRROR MOTOR FEEDBACK REFERENCE VOLTAGE AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Connect: PDM C652B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-9	V	C626-12

Is the voltage approximately 5 volts?

Yes	GO to D13

No	GO to D24

D13 CHECK THE PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE RH (RIGHT-HAND) EXTERIOR MIRROR DISCONNECTED

Using a diagnostic scan tool, clear the PDM Diagnostic Trouble Codes (DTCs).

Perform the PDM self-test.

Is DTC B1C15:15 or B1C16:15 present?

Yes	GO to D14

No	GO to D24

D14 CHECK THE PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE HORIZONTAL POSITION SENSOR FEEDBACK CIRCUIT SHORTED TO GROUND

Ignition OFF.

Connect:

Lead 1	Measurement / Action	Lead 2
C626-10		C626-12

Ignition ON.

Using a diagnostic scan tool, clear the PDM Diagnostic Trouble Codes (DTCs).

Perform the PDM self-test.

Is DTC B1C16:11 present?

Yes	REMOVE the jumper wire. GO to D15

No	REMOVE the jumper wire. GO to D24

D15 CHECK THE PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE VERTICAL POSITION SENSOR FEEDBACK CIRCUIT SHORTED TO GROUND

Ignition OFF.

Connect:

Lead 1	Measurement / Action	Lead 2
C626-8		C626-12

Ignition ON.

Using a diagnostic scan tool, clear the PDM Diagnostic Trouble Codes (DTCs).

Perform the PDM self-test.

Is DTC B1C15:11 present?

Yes	REMOVE the jumper wire. GO to D25

No	REMOVE the jumper wire. GO to D24

D16 CHECK FOR VOLTAGE TO THE HORIZONTAL MOTOR CIRCUIT AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: RH Exterior Mirror C626 .

Connect:

Lead 1	Measurement / Action	Lead 2

C626-10		Ground

Ignition ON.

Select the RH mirror with the exterior mirror selection switch.

While pressing the exterior mirror control switch in the right direction, monitor the test light.

Does the test light illuminate only when the exterior mirror control switch is pressed in the right direction?

Yes	GO to D25

No	If the test light is illuminated when the exterior mirror control switch is not pressed in any direction, GO to D17 If the test light does not illuminate when the exterior mirror control switch is pressed in the right direction, GO to D18

D17 CHECK THE HORIZONTAL MIRROR CIRCUIT FOR A SHORT TO VOLTAGE AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: PDM C652B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-10		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to D24

D18 CHECK THE HORIZONTAL MOTOR CIRCUIT FOR A SHORT TO GROUND AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: PDM C652B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-10	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D19

No	REPAIR the circuit.

D19 CHECK THE HORIZONTAL MOTOR CIRCUIT FOR AN OPEN BETWEEN THE RH (RIGHT-HAND) EXTERIOR MIRROR AND THE PDM (PASSENGER DOOR MODULE)

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-10	Ω	C652B-6

Is the resistance less than 3 ohms?

Yes	GO to D24

No	REPAIR the circuit.

D20 CHECK FOR VOLTAGE TO THE VERTICAL MOTOR CIRCUIT AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: RH Exterior Mirror C626 .

Connect:

Positive Lead	Measurement / Action	Negative Lead
C626-8		Ground

Ignition ON.

Select the RH mirror with the exterior mirror selection switch.

While pressing the exterior mirror control switch in the up direction, monitor the test light.

Does the test light illuminate only when the exterior mirror control switch is pressed in the up direction?

Yes	GO to D25

No	If the test light is illuminated when the exterior mirror control switch is not pressed in any direction, GO to D21 If the test light does not illuminate when the exterior mirror control switch is pressed in the up direction, GO to D22

D21 CHECK THE VERTICAL MIRROR CIRCUIT FOR A SHORT TO VOLTAGE AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: PDM C652B .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-8		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to D24

D22 CHECK THE VERTICAL MOTOR CIRCUIT FOR A SHORT TO GROUND AT THE RH (RIGHT-HAND) EXTERIOR MIRROR

Ignition OFF.

Disconnect: PDM C652B .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-8	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to D23

No	REPAIR the circuit.

D23 CHECK THE VERTICAL MOTOR CIRCUIT FOR AN OPEN BETWEEN THE RH (RIGHT-HAND) EXTERIOR MIRROR AND THE PDM (PASSENGER DOOR MODULE)

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-8	Ω	C652B-16

Is the resistance less than 3 ohms?

Yes	GO to D24

No	REPAIR the circuit.

D24 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and all previously disconnected exterior mirror system connectors. Make sure they seat and latch correctly.

Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D25 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror motors for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror motor. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST E : ONE OR BOTH HEATED EXTERIOR MIRRORS IS INOPERATIVE OR ALWAYS ON (WITH MEMORY MIRRORS)

Refer to Power Mirrors for schematic and connector information.

DTC	Description	Fault Trigger Conditions
B1163:11	Left Mirror Heater Output: Circuit Short To Ground	This continuous and on-demand DTC sets if the DDM detects a higher than expected current draw when voltage is applied to the LH exterior mirror heater circuit.
B1163:15	Left Mirror Heater Output: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the DDM detects a lower than expected current draw when voltage is applied to the LH exterior mirror heater circuit.
B1164:11	Right Mirror Heater Output: Circuit Short To Ground	This continuous and on-demand DTC sets if the PDM detects a higher than expected current draw when voltage is applied to the RH exterior mirror heater circuit.
B1164:15	Right Mirror Heater Output: Circuit Short To Battery Or Open	This continuous and on-demand DTC sets if the PDM detects a lower than expected current draw when voltage is applied to the RH exterior mirror heater circuit.

Possible Causes

- Wiring, terminals or connectors
- Exterior mirror
- Door module

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST E : ONE OR BOTH HEATED EXTERIOR MIRRORS IS INOPERATIVE OR ALWAYS ON (WITH MEMORY MIRRORS) > PINPOINT TEST E : ONE OR BOTH HEATED EXTERIOR MIRRORS IS INOPERATIVE OR ALWAYS ON (WITH MEMORY MIRRORS)

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex

Probes (NUD105-R025D)

NOTE: The following step uses a test lamp to simulate normal circuit loads. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

E1 CHECK THE DDM (DRIVER DOOR MODULE) OR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, perform the DDM (LH heated exterior mirror inoperative or always on) or PDM (RH heated exterior mirror is inoperative or always on) self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For DDM DTC B1163:11 or PDM DTC B1164:11, GO to E7 For DDM DTC B1163:15 or PDM DTC B1164:15, GO to E3 For all other DDM or PDM Diagnostic Trouble Codes (DTCs), REFER to: Locks, Latches and Entry Systems .

No	GO to E2

E2 VERIFY THE OPERATION OF THE REAR WINDOW DEFROST SYSTEM

Start the engine.

With the engine running, activate the rear window defrost.

Using an infrared temperature gun or equivalent, measure the temperature of the rear window for approximately 30 seconds, noting changes in temperature.

Did the temperature of the rear window glass rise?

Yes	GO to E3

No	DIAGNOSE the rear window defrost system prior to continuing diagnostics for the heated exterior mirrors. REFER to: Glass, Frames and Mechanisms .

E3 CHECK THE EXTERIOR MIRROR HEATER OUTPUT VOLTAGE AT THE INOPERATIVE EXTERIOR MIRROR

Ignition OFF.

Disconnect: Inoperative Exterior Mirror C520 or C626 .

Start the engine.

Connect:

LH Exterior Mirror

Lead 1	Measurement / Action	Lead 2
C520-6		C520-7

RH Exterior Mirror

Lead 1	Measurement / Action	Lead 2
C626-6		C626-7

With the engine running, activate the rear window defrost.

Does the test light illuminate only when the rear window defrost is activated?

Yes	GO to E11

No	If the test light is illuminated at all times, GO to E4 If the test light does not illuminate, GO to E5

E4 CHECK THE HEATER CIRCUIT FOR A SHORT TO VOLTAGE AT THE EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B or PDM C652B .

Ignition ON.

Measure:

LH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C520-6		Ground

RH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C626-6		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	For the LH mirror, GO to E10 For the RH mirror, GO to E9

E5 CHECK FOR VOLTAGE TO THE HEATER CIRCUIT AT THE EXTERIOR MIRROR

Turn the rear window defrost off.

Connect:

LH Exterior Mirror

Lead 1	Measurement / Action	Lead 2
C520-6		Ground

RH Exterior Mirror

Lead 1	Measurement / Action	Lead 2
C626-6		Ground

With the engine running, activate the rear window defrost.

Does the test light illuminate?

Yes	REPAIR the ground circuit.

No	GO to E6

E6 CHECK FOR AN OPEN IN THE HEATER CIRCUIT BETWEEN THE MIRROR AND THE DOOR MODULE

Ignition OFF.

Disconnect: DDM C501B or PDM C652B .

Measure:

LH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C520-6	Ω	C501B-20

RH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C626-6	Ω	C652B-20

Is the resistance less than 3 ohms?

Yes	For the LH mirror, GO to E10 For the RH mirror, GO to E9

No	REPAIR the affected circuit.

E7 CHECK THE HEATER CIRCUIT FOR A SHORT TO GROUND AT THE EXTERIOR MIRROR

Ignition OFF.

Disconnect: DDM C501B or PDM C652B .

Disconnect: Inoperative Exterior Mirror C520 or C626 .

Measure:

LH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C520-6	Ω	Ground

RH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C626-6	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to E8

No	REPAIR the circuit.

E8 CHECK THE DOOR MODULE DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE EXTERIOR MIRROR DISCONNECTED

Connect: DDM C501B or PDM C652B .

Ignition ON.

Using a diagnostic scan tool, clear the DDM or PDM Diagnostic Trouble Codes (DTCs).

Is DDM DTC B1163:15 or PDM DTC B1164:15 present?

Yes	GO to E11

No	For the LH exterior mirror, GO to E10 For the RH exterior mirror, GO to E9

E9 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

Disconnect and inspect all PDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the PDM connectors and all previously disconnected exterior mirror system connectors. Make sure they seat and latch correctly.

Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

E10 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

Disconnect and inspect all DDM connectors.

Repair:

corrosion (install new connector or terminals - clean module pins)

damaged or bent pins - install new terminals/pins

pushed-out pins - install new pins as necessary

Reconnect the DDM connectors and all previously disconnected exterior mirror system connectors. Make sure they seat and latch correctly.

Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) .

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

E11 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror glass for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror glass. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST F : ONE OR BOTH HEATED EXTERIOR MIRRORS ARE INOPERATIVE (WITHOUT MEMORY MIRRORS)

Refer to Heated Window for schematic and connector information.

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

The heated exterior mirrors receive voltage from the rear window defrost system. The heated exterior mirrors only operate when the rear window defrost is on. REFER to: Glass, Frames and Mechanisms - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Rear window defrost system concern
- Exterior mirror

Visual Inspection and Diagnostic Pre-Checks

Inspect the suspect exterior mirror housing and glass for damage.

NOTE: Clean the entire mirror assembly and glass to assist in verification of the customer concern and/or impact damage. Do not clean any mirror glass or housing with an ice scraper, razor blade, abrasive pad, harsh chemicals or petroleum based cleaning products, as these may damage the mirror glass and/or housing.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST F : ONE OR BOTH HEATED EXTERIOR MIRRORS ARE INOPERATIVE (WITHOUT MEMORY MIRRORS) > PINPOINT TEST F : ONE OR BOTH HEATED EXTERIOR MIRRORS ARE INOPERATIVE (WITHOUT MEMORY MIRRORS)

F1 CHECK THE OPERATION OF THE REAR WINDOW DEFROST SYSTEM

Start the engine.

With the engine running, activate the rear window defrost.

Using an infrared temperature gun or equivalent, measure the temperature of the rear window glass for approximately 30 seconds, noting changes in temperature.

Does the temperature of the rear window glass rise?

Yes	GO to F2

No	DIAGNOSE the rear window defrost system. REFER to: Glass, Frames and Mechanisms .

F2 CHECK THE OPERATION OF THE HEATED EXTERIOR MIRRORS

With the rear window defrost ON, using an infrared temperature gun or equivalent, measure the temperature of the LH and RH exterior mirror glass for approximately 30 seconds, noting changes in temperature.

Does the temperature of at least one exterior mirror glass rise?

Yes	For inoperative LH heated mirror glass, GO to F3 For inoperative RH heated mirror glass, GO to F5

No	VERIFY that BJB fuse 11 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

F3 CHECK THE VOLTAGE TO THE LH (LEFT-HAND) HEATED EXTERIOR MIRROR GLASS

Ignition OFF.

Disconnect: LH Exterior Mirror C520 .

Start the engine.

With the engine running, activate the rear window defrost.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to F4

No	REPAIR the circuit.

F4 CHECK THE LH (LEFT-HAND) EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C520-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to F7

No	REPAIR the circuit

F5 CHECK THE VOLTAGE TO THE RH (RIGHT-HAND) HEATED EXTERIOR MIRROR GLASS

Ignition OFF.

Disconnect: RH Exterior Mirror C626 .

Start the engine.

With the engine running, activate the rear window defrost.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to F6

No	REPAIR the circuit.

F6 CHECK THE RH (RIGHT-HAND) EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C626-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to F7

No	REPAIR the circuit.

F7 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror motors for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror glass. REFER to: Exterior Mirror .

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror .

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST G : THE LH (LEFT-HAND) AND/OR RH (RIGHT-HAND) POWER FOLDING MIRROR IS INOPERATIVE/ DO NOT OPERATE CORRECTLY (IF EQUIPPED)

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Rear View Mirrors - System Operation and Component Description .

Possible Causes

- Binding or obstructed power folding mirror
- Power folding mirrors are not synchronized

- Power folding mirror motor lockout feature is active
- Wiring, terminals or connectors
- Power folding mirror
- Power folding mirror relay
- Exterior mirror fold switch (integral to the front door window control switch)

Visual Inspection and Diagnostic Pre-Checks

- If the power folding mirrors are folded or unfolded several times continuously, the power lockout feature disables the system for approximately 3-10 minutes to prevent damage to the power fold motors. After 3-10 minutes have elapsed, normal operation resumes.
- The power folding mirrors may need to be synchronized when the LH, RH or both power folding mirrors are partially folded in toward the door manually, and then folded inward using the power folding mirror control switch.
- Verify that the power folding mirrors are not binding or obstructed.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST G : THE LH (LEFT-HAND) AND/OR RH (RIGHT-HAND) POWER FOLDING MIRROR IS INOPERATIVE/ DO NOT OPERATE CORRECTLY (IF EQUIPPED) > PINPOINT TEST G : THE LH (LEFT-HAND) AND/OR RH (RIGHT-HAND) POWER FOLDING MIRROR IS INOPERATIVE/ DO NOT OPERATE CORRECTLY (IF EQUIPPED)

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex Probes (NUD105-R025D)

G1 CHECK POWER FOLDING MIRROR OPERATION

Ignition ON.

Press the exterior mirror folding switch to activate the power folding mirrors.

Are both power folding mirrors inoperative or do not operate correctly?

Yes	GO to G2

No	GO to G10

G2 CHECK THE EXTERIOR FOLDING MIRROR CONTROL SWITCH

Ignition OFF.

Disconnect: Front Door Window Control Switch C504 .

Perform the appropriate component test. Refer to Component Testing for schematic and connector information.

Did the exterior folding mirror control switch pass the component test?

Yes	GO to G3

No	INSTALL a new exterior folding mirror control switch (integral to the front door window control switch). REFER to: Front Door Window Control Switch .

G3 CHECK THE FOLDING MIRROR CONTROL CIRCUIT FOR A SHORT TO GROUND

Disconnect: Power Folding Mirror Relay C3276 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C504-2	Ω	Ground

Is the resistance greater than 10, 000 ohms?

Yes	GO to G4

No	REPAIR the circuit. SYNCHRONIZE the power folding mirrors.

G4 CHECK THE FOLDING MIRROR CONTROL CIRCUIT FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C504-2	Ω	C3276-4

Is the resistance less than 3 ohms?

Yes	GO to G5

No	REPAIR the circuit. SYNCHRONIZE the power folding mirrors.

G5 CHECK FOR VOLTAGE TO THE POWER MIRROR FOLD RELAY

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3276-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to G6

No	VERIFY that BCM fuse 2 (7.5A) is OK. If OK, REPAIR the circuit for an open. If not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

G6 CHECK FOR GROUND TO THE POWER MIRROR FOLD RELAY

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C3276-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to G7

No	REPAIR the circuit. SYNCHRONIZE the power folding mirrors.

G7 CHECK THE POWER FOLDING MIRROR RELAY FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect: LH Exterior Mirror C520 .

Disconnect: RH Exterior Mirror C626 .

Ignition ON.

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-10		Ground
C520-12		Ground

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-10		Ground
C626-12		Ground

Is any voltage present?

Yes	REPAIR the affected circuit.

No	GO to G8

G8 CHECK THE POWER FOLDING MIRROR RELAY OUTPUT CIRCUITS FOR AN OPEN

Ignition OFF.

Measure:

LH concern

Positive Lead	Measurement / Action	Negative Lead
C3276-2	Ω	C520-10
C3276-5	Ω	C520-12

Are the resistances less than 3 ohms?

Yes	GO to G9

No	REPAIR the circuit(s).

G9 CHECK THE POWER FOLDING MIRROR RELAY FOR A SHORT TO GROUND

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C520-10	Ω	Ground
C520-12	Ω	Ground

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C626-10	Ω	Ground

C626-12	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	INSTALL a new power folding mirror relay. SYNCHRONIZE the power folding mirrors.

No	REPAIR the circuit(s). SYNCHRONIZE the power folding mirrors.

G10 CHECK THE POWER FOLDING MIRROR RELAY OUTPUT CIRCUITS FOR AN OPEN

Disconnect: Power Folding Mirror Relay C3276 .

Measure:

LH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C3276-2	Ω	C520-10
C3276-5	Ω	C520-12

RH exterior mirror

Positive Lead	Measurement / Action	Negative Lead
C3276-2	Ω	C626-10
C3276-5	Ω	C626-12

Are the resistances less than 3 ohms?

Yes	INSTALL a new power folding mirror relay. SYNCHRONIZE the power folding mirrors.

No	REPAIR the circuit(s). SYNCHRONIZE the power folding mirrors.

G11 CHECK THE EXTERIOR MIRROR JUMPER HARNESS

Inspect the exterior mirror jumper harness between the vehicle harness and the mirror motors for:

Open or short circuits

Damaged or pushed out pins

Corrosion

Is the harness OK?

Yes	INSTALL a new exterior mirror. REFER to: Exterior Mirror . SYNCHRONIZE the power

	folding mirrors.

No	REPAIR the harness as necessary. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror . SYNCHRONIZE the power folding mirrors.

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST H : THE INTERIOR AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY

Refer to Power Mirrors for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Rear View Mirrors - System Operation and Component Description .

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Obstructed forward or rearward sensors
- Gear input concern
- Reverse lamp concern
- Interior auto-dimming mirror

Visual Inspection and Diagnostic Pre-Checks

- Inspect the interior mirror forward and rearward facing sensors for damage, debris or obstructions
- Inspect BCM fuse 23 (10A).

DIAGNOSIS AND TESTING > REAR VIEW MIRRORS > PINPOINT TESTS > PINPOINT TEST H : THE INTERIOR AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY > PINPOINT TEST H : THE INTERIOR AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY

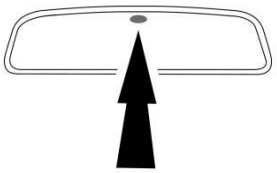
NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex Probes (NUD105-R025D)

H1 VERIFY THE OPERATION OF THE REVERSE LAMPS

Ignition ON.

Apply the parking brake.

While observing the reversing lamps, select each gear in the entire range.



Do the reverse lamps illuminate ONLY in REVERSE?

Yes	Select PARK. GO to H2

No	Select PARK. DIAGNOSE the reverse lamps. REFER to: Reversing Lamps .

H2 INSPECT THE MIRROR FOR PROPER INSTALLATION

Inspect the interior auto-dimming mirror to make sure the rearward facing sensor is at the top of the mirror glass.

E149165

Is the rearward facing sensor at the top of the interior auto-dimming mirror glass?

Yes	GO to H3

No	INSTALL the interior auto-dimming mirror as per the removal and installation procedure. REFER to: Interior Rear View Mirror .

H3 VERIFY THE FORWARD AND REARWARD FACING SENSORS ARE NOT BLOCKED

Visually verify the forward and rearward facing sensors are not blocked or obstructed. Sources of obstruction can include:

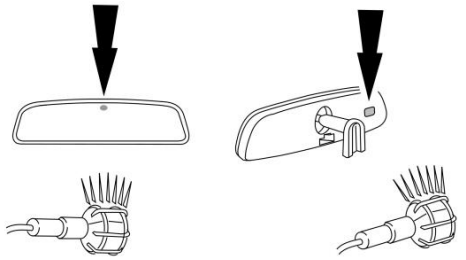
Stickers, window decals or tags.

Fold-down screens for TVs or DVD players.

Non-OEM window tinting.

Dirt and debris

Are either of the sensors blocked?



Yes	If possible, REMOVE the obstruction. If it is not possible to remove the obstruction, ADVISE

	the customer the blockage will affect the operation of the auto-dimming mirror.

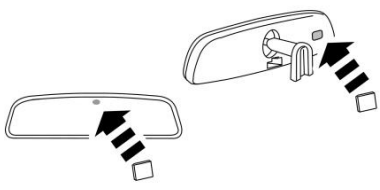
No	GO to H4

H4 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - DAYLIGHT CONDITIONS

Simulate daylight conditions by using a bright lamp to illuminate the forward and rearward facing sensors. The mirror should adjust to a high reflectance state (mirror will be clear).

E149159

Did the mirror adjust to a high reflectance (clear) state?



Yes	GO to H5

No	INSTALL a new interior auto-dimming mirror. REFER to: Interior Rear View Mirror .

H5 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS WITHOUT GLARE

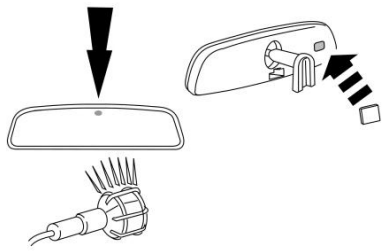
NOTE: Covering the sensor(s) with a finger or hand is not adequate for this step.

Simulate nighttime conditions without glare by using black electrical tape or other dark material to cover the forward and rearward facing sensors. The mirror should adjust to a high reflectance state (mirror will be clear).

E149155

Did the mirror adjust to a high reflectance (clear) state?

Yes	GO to H6



No	INSTALL a new interior auto-dimming mirror. REFER to: Interior Rear View Mirror .

H6 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS WITH GLARE

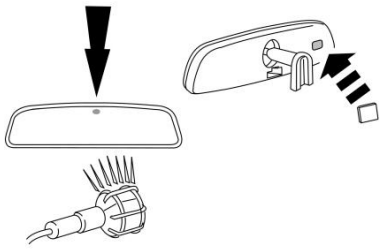
NOTE: Covering the sensor(s) with a finger or hand is not adequate for this step.

Remove the black electrical tape or other dark material from the rearward facing sensor.

Simulate nighttime conditions with glare by using black electrical tape or other dark material to cover the forward facing sensor while illuminating the rearward facing sensor using a bright light. The mirror should adjust to a low reflectance state (mirror will be darkened).

E149156

Did the mirror adjust to a low reflectance (darkened) state?



Yes	GO to H7

No	GO to H8

H7 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - VEHICLE IN REVERSE AND NIGHTTIME CONDITIONS WITH GLARE

NOTE: Covering the sensor(s) with a finger or hand is not adequate for this step.

Continue to illuminate the rearward facing sensor with the forward facing sensor covered.

E149156

Select REVERSE.

Did the mirror adjust to a high reflectance (clear) state after reverse was selected?

Yes	Select PARK. The system is operating correctly at this time. REVIEW the operation of the interior auto-dimming mirror feature with the customer.

No	GO to H10

H8 CHECK FOR VOLTAGE TO THE INTERIOR AUTO-DIMMING MIRROR

Ignition OFF.

Disconnect: Interior Auto-Dimming Mirror C911 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C911-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to H9

No	Verify BCM fuse 23 (10A) is OK. If the fuse is OK, REPAIR the circuit. If the fuse is not OK, REFER to the OEM ELECTRICAL WIRING DIAGRAM INTRODUCTION to identify the possible causes of the circuit short.

H9 CHECK FOR GROUND AT THE INTERIOR AUTO-DIMMING MIRROR

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead

C911-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to H10

No	REPAIR the circuit.

H10 CHECK FOR VOLTAGE TO THE INTERIOR AUTO-DIMMING MIRROR REVERSE INHIBIT CIRCUIT

Ignition OFF.

Disconnect: Interior Auto-Dimming Mirror C911 if not previously disconnected.

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C911-9	V	Ground

Select REVERSE.

Select PARK.

Is the voltage greater than 11 volts when reverse gear is selected and no voltage present when reverse gear is not selected?

Yes	INSTALL a new interior auto-dimming mirror. REFER to: Interior Rear View Mirror .

No	REPAIR the circuit.

REMOVAL AND INSTALLATION > EXTERIOR MIRROR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: The power folding mirrors may need to be synchronized anytime the mirrors are folded or unfolded without using the exterior mirror control switch, or if a new power folding mirror is installed.

Exterior mirror assembly

1.

Operate window to full up position.

2.

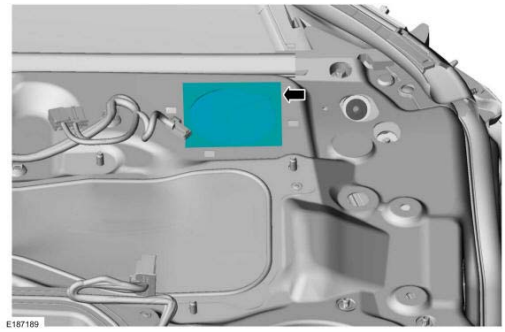
Remove the front door trim panel. Refer to: Front Door Trim Panel .

3.

Remove the front door speaker. Refer to: Front Door Speaker LH . Refer to: Front Door Speaker RH .

4.

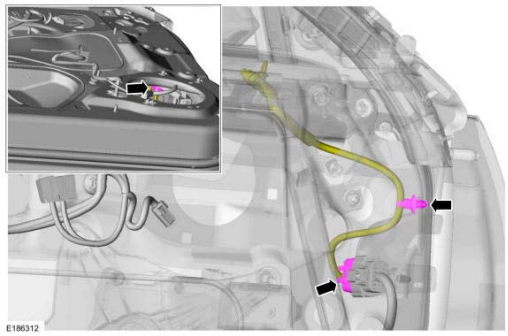
For vehicles equipped with door mounted tweeters, remove the tweeter. Refer to: Front Door Speaker LH . Refer to: Front Door Speaker RH .



5.

Remove the rectangular tape cover.

E186310

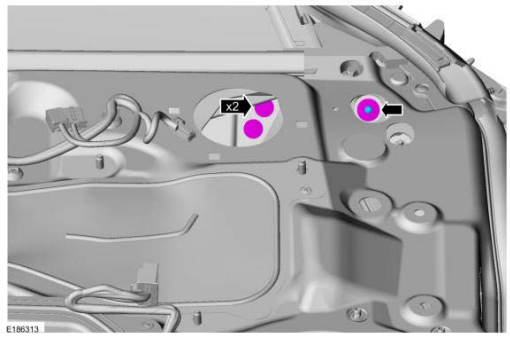


6.

For vehicles not equipped with door mounted tweeters, remove the tape cover.

NOTE: The mirror wiring is accessed through the lower speaker port.

7.
Disconnect the mirror electrical and separate the wiring harness guide.



NOTE: Reconnect the window switch.

8.
Operate door glass to the full down position.

NOTE: Support the exterior mirror during fastener removal to prevent damage to the mirror or door surface.

9.
Remove the exterior mirror mounting nut and bolts.

10.

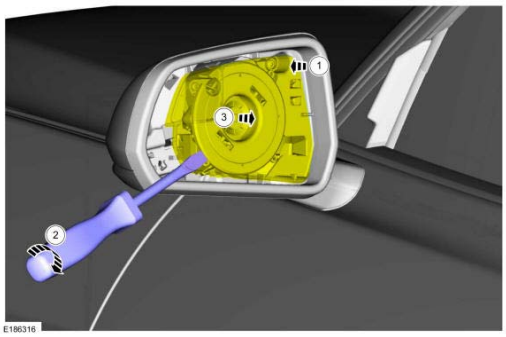
Remove the exterior mirror.

Mirror glass

11.

Position aside the mirror glass.

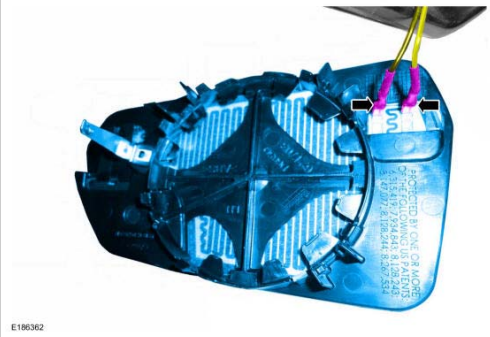
1.



Position the mirror glass fully in and up.

2.

Using a flat blade screwdriver, insert the blade between the mirror glass and motor. Twist and release the mirror glass.



3.

Position aside the mirror glass.

NOTE: The number and location of the electrical connectors will vary due to option content.

12.
Disconnect the mirror glass electrical connectors.

Mirror Motor

13.

Remove the mirror glass.

14.

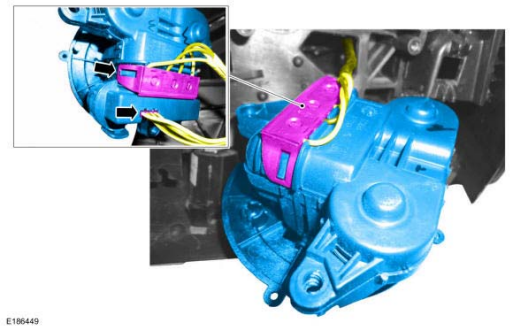
Remove the mirror bezel.

1.

Remove the screws

2.

Release the tabs.

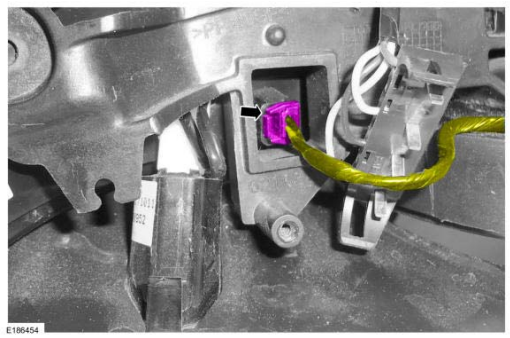


15.

Remove the screws and position the motor aside.

16.

Disconnect the electrical connectors and remove the mirror motor.



Mirror cover

17.

Remove the mirror motor.

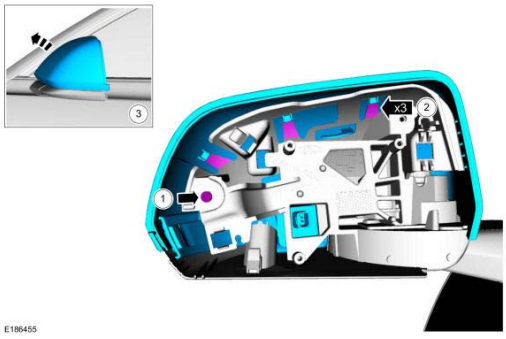
18.

If equipped, disconnect the mirror mounted side turn signal.

19.

Remove the mirror cover.

1.



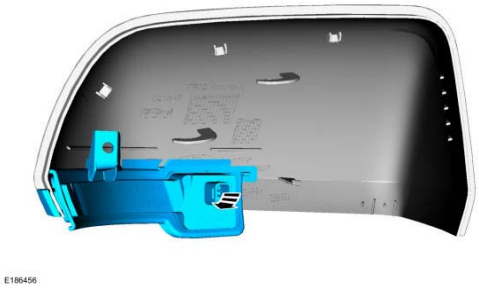
Remove the screw.

2.

Release the tabs.

3.

Remove the mirror cover.



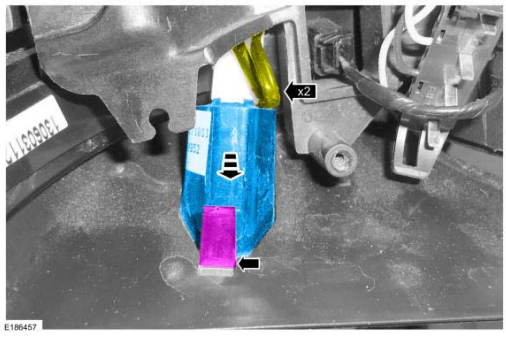
Mirror mounted turn signal

20.

Remove the mirror cover.

21.

Remove the mirror mounted turn signal.



Puddle lamp

22.

Remove the mirror glass.

23.

Press the tab, lower the puddle lamp and disconnect the electrical connectors.

REMOVAL AND INSTALLATION > EXTERIOR MIRROR > INSTALLATION

1.

To install, reverse the removal procedure.

2.

If equipped, synchronize the power folding mirrors.

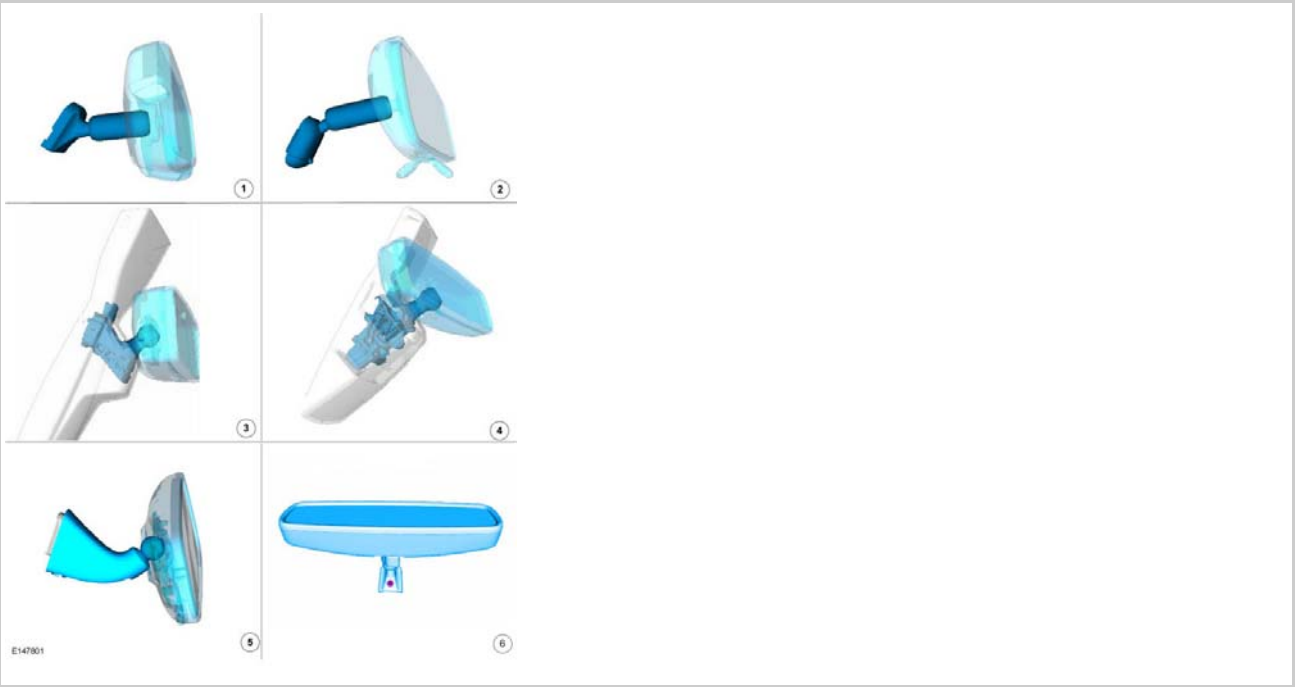
REMOVAL AND INSTALLATION > INTERIOR REAR VIEW MIRROR

Special Tool(s) / General Equipment

 E161639	501-025 Installer, Rear View Mirror
 E161640	501-D118A (501-D118) Mirror Remover

REMOVAL AND INSTALLATION > INTERIOR REAR VIEW MIRROR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.



1.

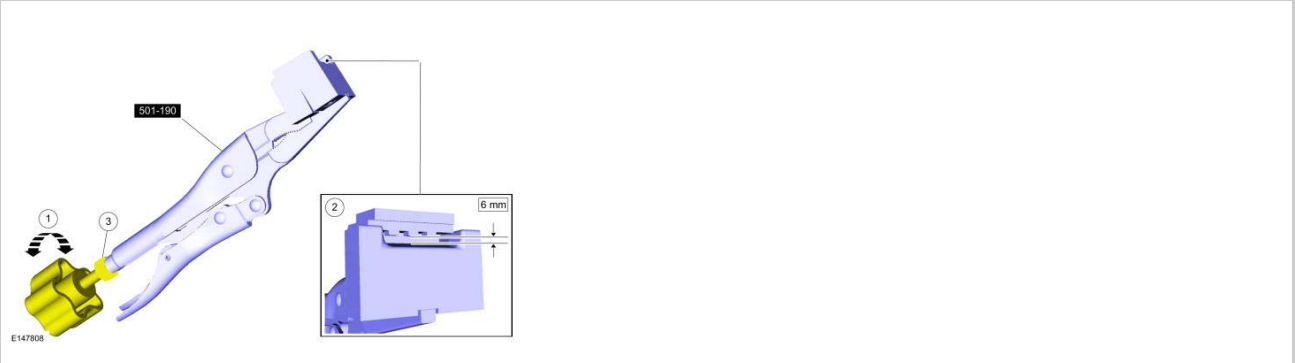
WARNING: Before beginning any service procedure in this article, refer to Safety Warnings in GENERAL INFORMATION . Failure to follow this instruction may result in serious personal injury.

Refer to: Health and Safety Precautions .

2.

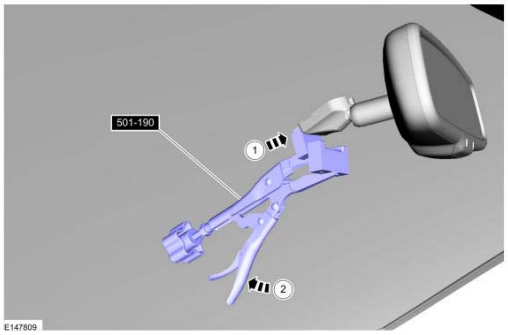
Mirror Types

Mirror type 1



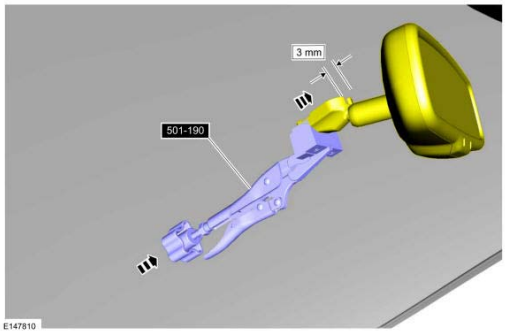
3.

If equipped, disconnect the interior mirror electrical connector.



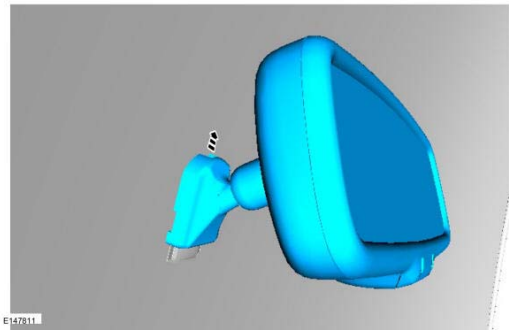
4.

Adjust the jaws on the interior mirror remover.



NOTE: Make sure the interior mirror remover is fully inserted into the rear view mirror mount access hole. Otherwise, damage to the windshield glass may occur.

5.
Using the interior mirror remover, release the locking tab.



6.

Using a closed hand, bump the adjustment handle of the interior mirror remover to slide the mirror upward on the mirror mount.

7.

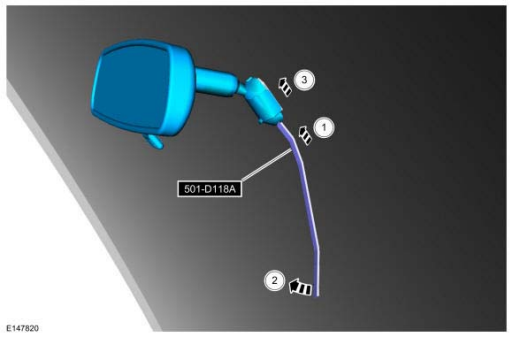
Slide the interior mirror off the interior mirror mount.

Mirror type 2

8.

Remove the interior mirror.

1.

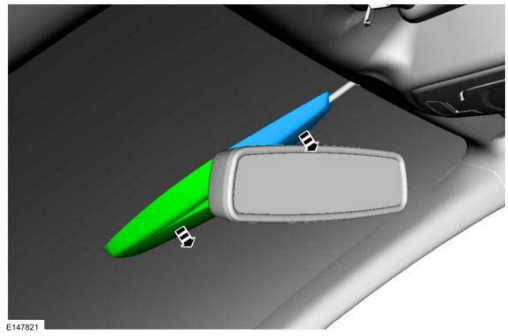


Insert the interior mirror remover into the release tab. Use Special Service Tool: 501-D118A (501-D118) Mirror Remover.

2.

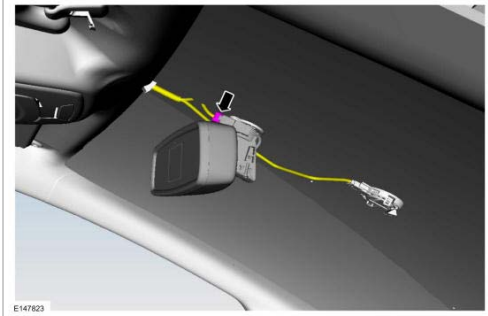
Pull the lower edge of the interior mirror remover away from the windshield.

3.



Slide the interior mirror off the mirror mount.

Mirror type 3



9.

Remove the rain sensor covers.

10.

Disconnect the interior mirror electrical connector.

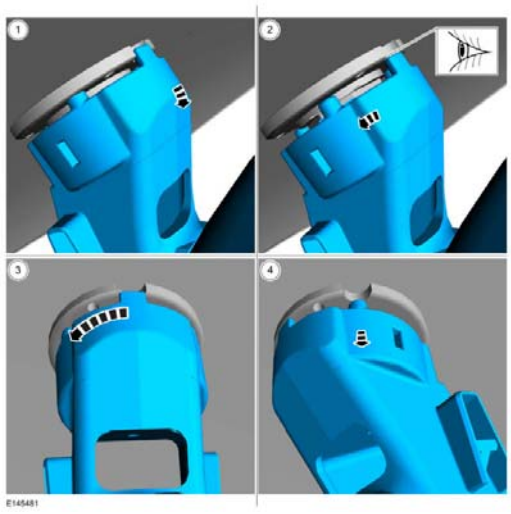
11.

Remove the interior mirror.

1.

Position the interior mirror assembly to release the indexing tab.

2.



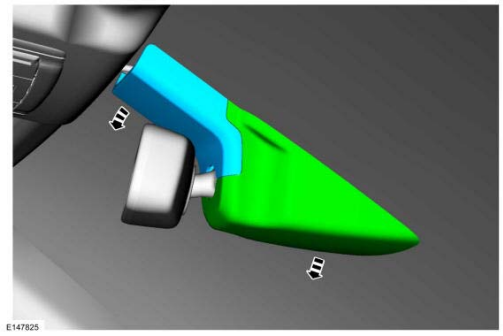
Inspect the indexing tab and turn the interior mirror slightly counter clock-wise.

3.

Turn the interior mirror 45 degrees counter clock-wise.

4.

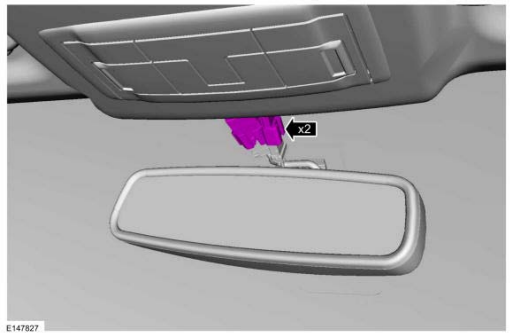
Pull the interior mirror off the mirror mount.



Mirror type 4

12.

If a new mirror is being installed, use a diagnostic scan tool, begin the PMI process for the IPMA following the on-screen instructions.



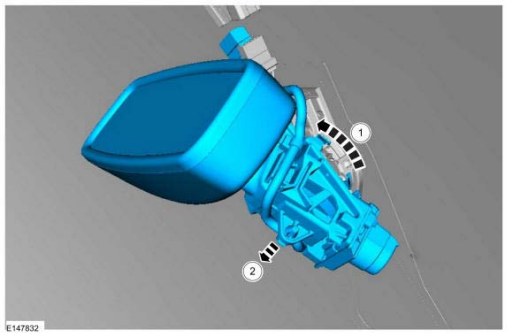
13.

Remove the rain sensor covers.

14.

Disconnect the interior mirror electrical connector.

15.



Remove the interior mirror.

1.

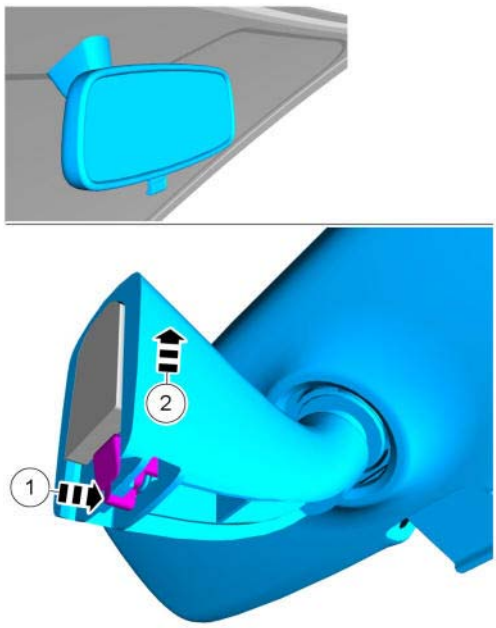
Turn the interior mirror assembly counter clock-wise.

2.

Remove the interior mirror off the mirror mount.

Mirror type 5

16.



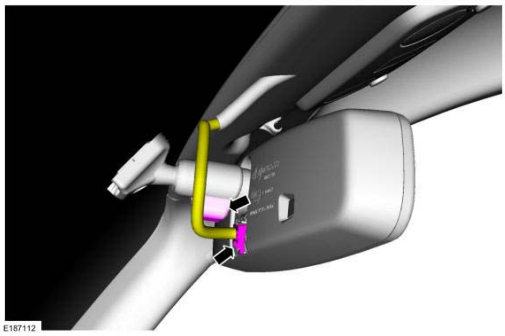
Remove the interior mirror.

1.

Release the locking tab.

2.

Slide the interior mirror off the mirror mount.



E103429

Mirror type 6

17.

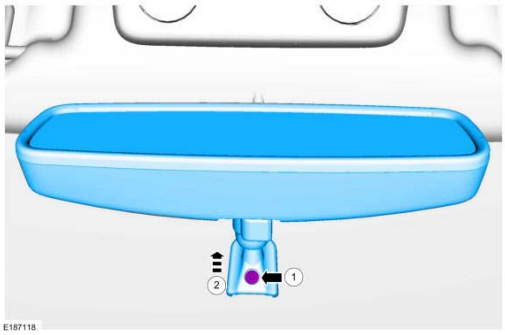
Disconnect the electrical connector and unclip the wiring harness.

E187112

18.

Remove the interior mirror.

1.



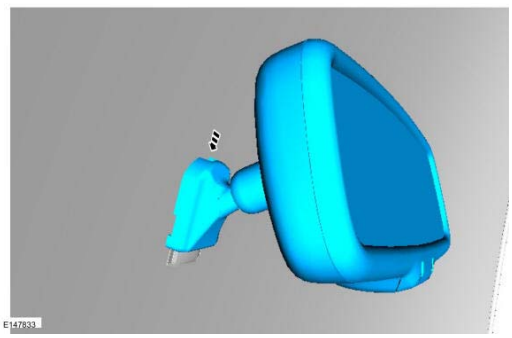
Loosen the set screw.

Torque

: 16 lb.in (1.8 Nm)

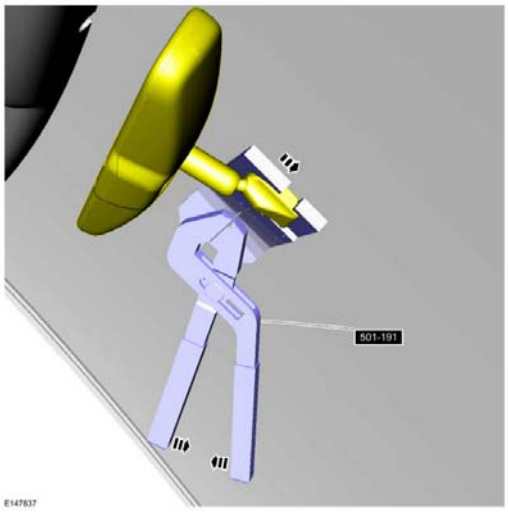
2.

Slide the interior mirror upward.



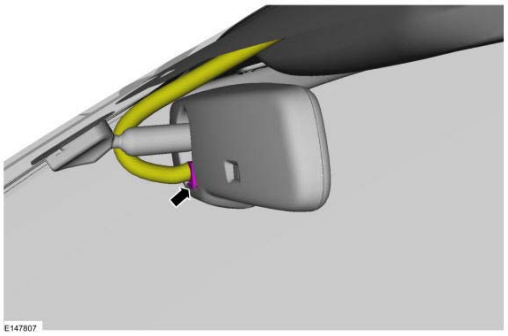
REMOVAL AND INSTALLATION > INTERIOR REAR VIEW MIRROR > INSTALLATION

Mirror type 1



1.

Slide the interior rear view mirror over the windshield bracket from the top.

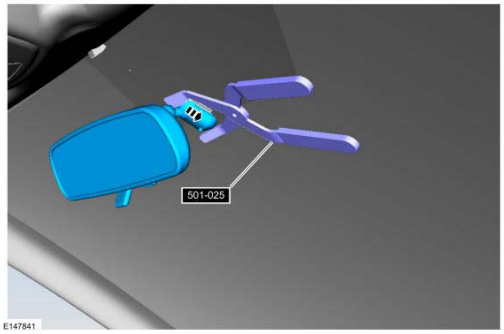


NOTE: An audible click will be heard as the mirror fully seats.

2.
Using the interior mirror installer, fully seat the interior mirror.

3.

If equipped, connect the electrical connector.



4.

If equipped with a compass module which requires calibration, check the compass zone and calibration.

Mirror type 2

5.

Using the interior mirror installer, fully seat the interior mirror. Use Special Service Tool: 501-025 Installer, Rear View Mirror.

6.

If equipped with a compass module which requires calibration, check the compass zone and calibration.

Mirror type 3

7.

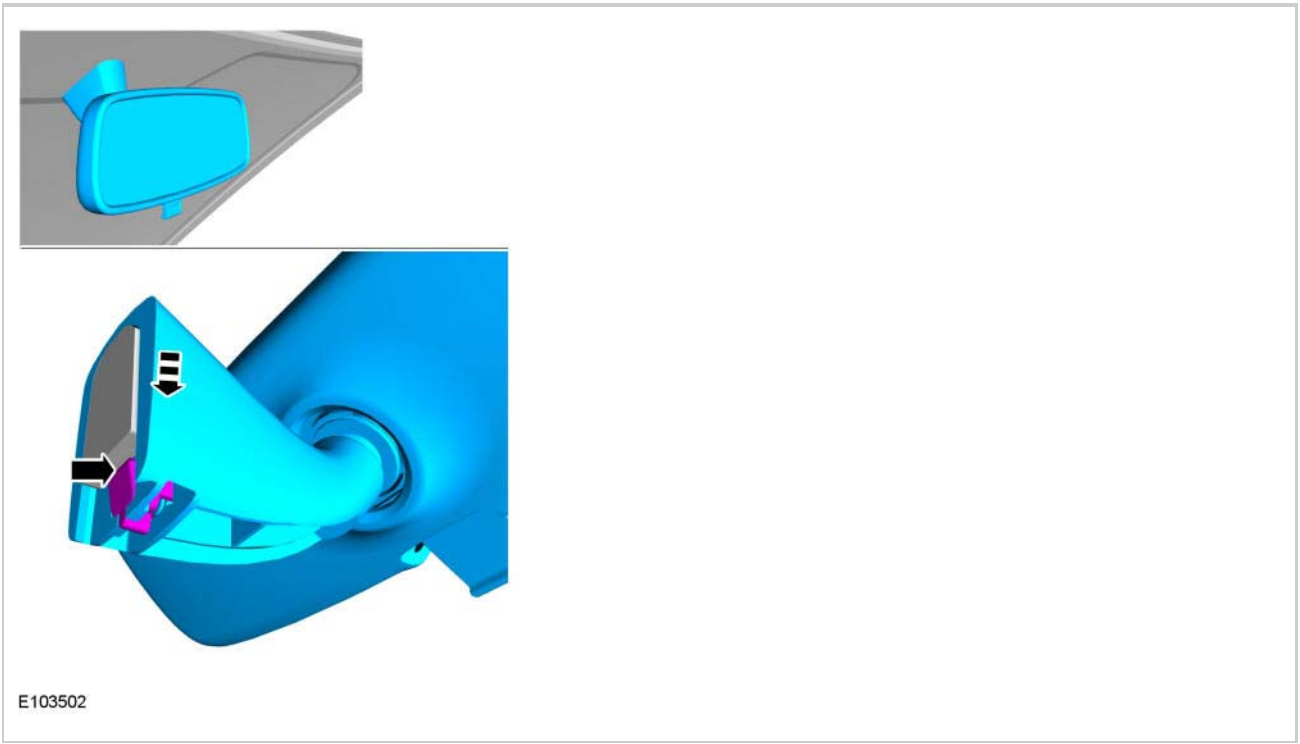
To install, reverse the removal procedure.

Mirror type 4

8.

To install, reverse the removal procedure.

9.



If a new mirror has been installed, use a diagnostic scan tool, complete the PMI process for the IPMA following the on-screen instructions.

If a new mirror has been installed, carry out the camera alignment using a scan tool.

Mirror type 5

10.

Slide the interior mirror onto the mirror mount until the locking tab is engaged.

Mirror type 6

11.

To install, reverse the removal procedure.

Service Manual: ROOF SHEET METAL REPAIRS

REMOVAL AND INSTALLATION > ROOF PANEL

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
Sherical Cutter
Grinder
Knife
Spot Weld Drill Bit
Locking Pliers

Materials

Name	Specification
Metal Bonding Adhesive TA-1, 3M™ 08115, Fusor® 108B	-
Seam Sealer TA-2-B	-
Roof Ditch Sealer 3M™ 08307, Fusor® 122EZ	-
Fusor® Flexible Foam Repair 3M™ 08463, Fusor® 121	-

REMOVAL AND INSTALLATION > ROOF PANEL > REMOVAL

NOTE: Adequately protect all glass, exterior finish and interior trim during entire repair procedure.

1.

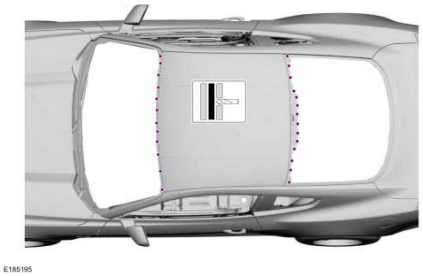
Remove the following items:

Refer to: Fixed Glass .

Refer to: High Mounted Stoplamp - Coupe .

Refer to: Headliner .

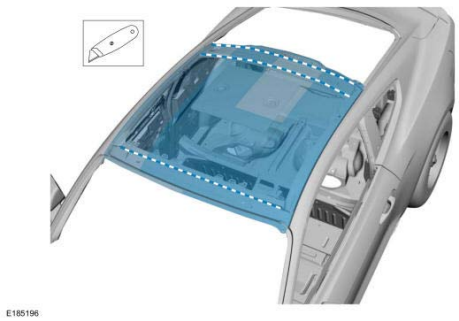
Refer to: Audio Unit Antenna - Vehicles With: AM/FM/CD/SYNC.



Refer to: Side Curtain Airbag .

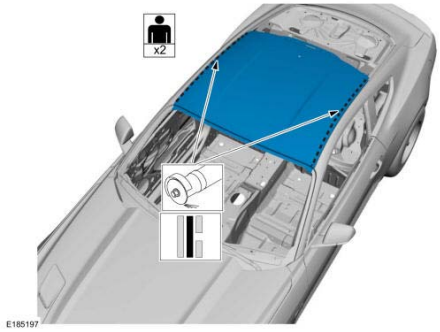
2.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: Body and Frame .



3.

Drill out the spot welds from the front and rear roof panel flanges.Use the General Equipment: Spot Weld Drill Bit



NOTE: Leave as much NVH foam intact on the roof reinforcements as possible.

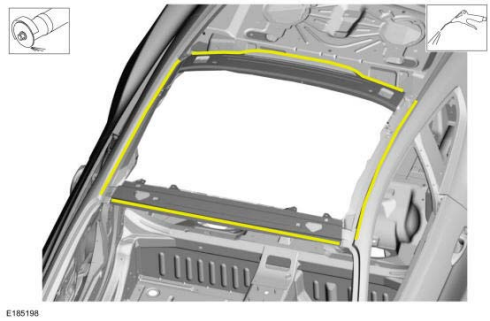
4.
Cut the NVH foam between the front and rear roof reinforcements and the roof panel. Use the General Equipment: Knife

5.

Using a spherical cutter or equivalent, cut the roof panel along the edge near the roof ditch flange and remove the roof panel. Use the General Equipment: Spherical Cutter

REMOVAL AND INSTALLATION > ROOF PANEL > INSTALLATION

NOTE: Adequately protect all glass, exterior finish and interior trim during entire repair procedure.



1.

1.

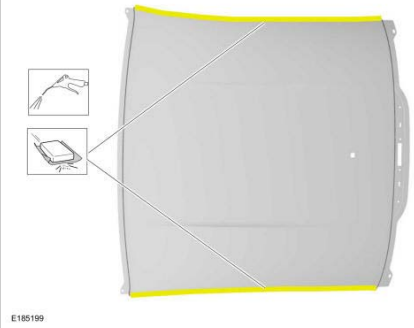
Remove any remaining roof flange material and level the weld nuggets. Use the General Equipment: Grinder

2.

Clean the area and remove any remaining residue.

2.

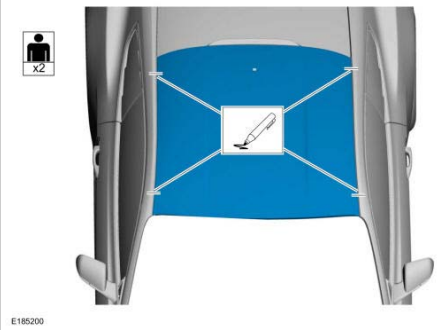
1.



Abrade the flange area of the replacement roof panel.

Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor® 108B

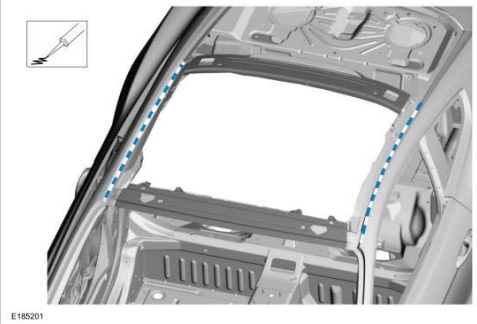


2.

Clean the area and remove any remaining residue.

3.

Locate and reference mark the replacement roof panel. Remove the roof panel after marking.

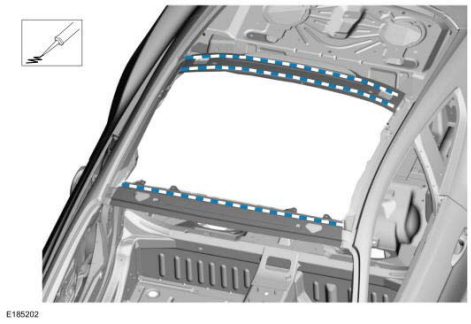


4.

Apply a bead of adhesive to the roof rail flange.

Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor® 108B



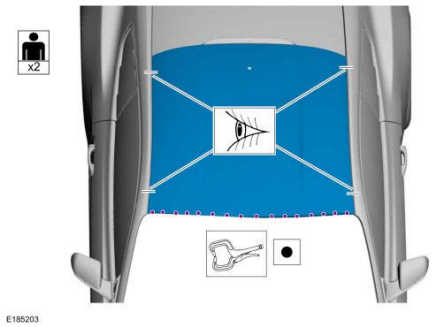
5.

Apply NVH foam to the front and rear roof reinforcements.

Material

: Fusor® Flexible Foam Repair / 3M™ 08463, Fusor® 121

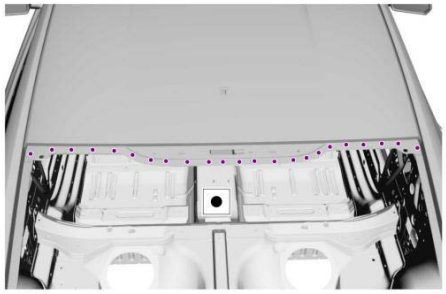
NOTE: Do not lift the panel from the body once installed. If the panel requires repositioning, slide the panel to correct alignment location.



NOTE: To assure complete bonding, check all locations for full adhesive contact. Add additional adhesive as necessary.

NOTE: Inspect the roof panel-to-roof reinforcement contact points for full contact. Fill any voids with additional NVH foam.

6.
Install the roof panel, locate the roof panel to the reference marks and spot weld.



Use the General Equipment: Resistance Spotwelding Equipment

Use the General Equipment: Locking Pliers

7.

Spot weld the rear roof panel flange.Use the General Equipment: Resistance Spotwelding Equipment

E185204

8.

Metal finish the repair area using typical metal finishing procedures.

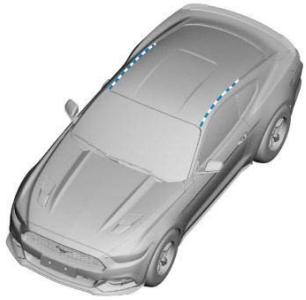
9.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

10.



Sand and prime the entire repair area with a Ford approved paint system.

11.

Apply sealant to the roof ditch.

Material

: Roof Ditch Sealer / 3M™ 08307, Fusor® 122EZ

E184193

12.

Refinish using a Ford approved paint system.

13.

Install the following items:

Refer to: Fixed Glass .

Refer to: High Mounted Stoplamp - Coupe .

Refer to: Headliner .

Refer to: Audio Unit Antenna - Vehicles With: AM/FM/CD/SYNC

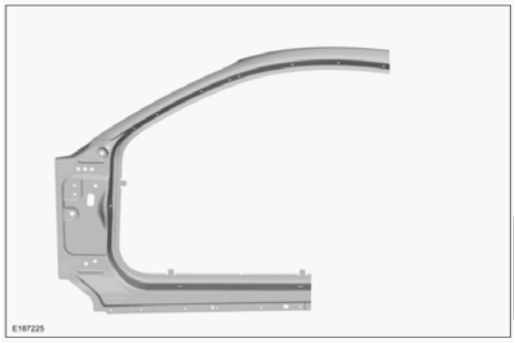
Refer to: Side Curtain Airbag .

Service Manual: SIDE PANEL SHEET METAL REPAIRS

REMOVAL AND INSTALLATION > A-PILLAR OUTER PANEL

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
Hot Air Gun
Air Body Saw
8 mm Drill Bit
MIG/MAG Welding Equipment
Spot Weld Drill Bit
Locking Pliers



Materials

Name	Specification
Seam Sealer TA-2-B	-
Fusor ® Flexible Foam Repair3M™ 08463, Fusor ® 121	-

REMOVAL AND INSTALLATION > A-PILLAR OUTER PANEL > REMOVAL

1.

Available service part-Coupe.

2.

Available service part-Convertible.

3.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: Body and Frame .

4.

Remove the following items:

Refer to: A-Pillar Trim Panel - Coupe . Refer to: A-Pillar Trim Panel - Convertible .

Refer to: Fender .

Refer to: Hood .

Refer to: FRONT DOOR .

Refer to: Rocker Panel Moulding .

NOTE: Coupe only.

Refer to: Roof Panel .

5.

Position the carpet and wiring harness away from the repair area.

6.

Remove the front door hinges at the A-pillar.

NOTE: Coupe shown, convertible similar.

7.
Carefully cut the **outer** body panel only. Use the General Equipment: Air Body Saw

8.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

NOTE: Do not heat the area above 170 ° C.

9.
Using a hot air gun, heat the area to aid in softening the NVH foam. Use the General Equipment: Hot Air Gun

10.

Remove the A-pillar panel.

REMOVAL AND INSTALLATION > A-PILLAR OUTER PANEL > INSTALLATION

1.

Drill holes for plug welds in the replacement panel. Use the General Equipment: 8 mm Drill Bit

2.

Apply NVH expanding foam to the inner reinforcement in the indicated area.

Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121

3.

Install and seam weld the replacement A-pillar outer panel. Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Locking Pliers

4.

Spot weld the flange areas. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: Locking Pliers

5.

MIG weld the remaining portion of the A-pillar panel. Use the General Equipment: MIG/MAG Welding Equipment

6.

Metal finish the repair area using typical metal finishing techniques.

7.

Apply a Ford approved primer to the repair area.

NOTE: Apply seam sealer after priming the area.

8.
Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

9.

Refinish using a Ford approved paint system.

10.

Restore corrosion protection. Refer to: Corrosion Prevention .

11.

Install the front door hinges to the A-pillar.

12.

Reposition the carpet and wiring harness.

13.

Install the following items:

Refer to: A-Pillar Trim Panel - Coupe . Refer to: A-Pillar Trim Panel - Convertible .

Refer to: Fender .

Refer to: FRONT DOOR .

Refer to: Rocker Panel Moulding .

NOTE: Coupe only.

Refer to: Roof Panel .

Refer to: Hood .

14.

Align the hood as necessary. Refer to: Body and Frame .

REMOVAL AND INSTALLATION > A-PILLAR OUTER PANEL SECTION AND REINFORCEMENT

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
Grinder
Hot Air Gun
Knife
Air Body Saw
8 mm Drill Bit

Available service part-Convertible.

3.

Remove the following items:

Refer to: Fixed Glass .

Refer to: Fender .

Refer to: Hood .

Refer to: FRONT DOOR .

Refer to: Rocker Panel Moulding .

Refer to: A-Pillar Trim Panel - Coupe . Refer to: A-Pillar Trim Panel - Convertible .

4.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: Body and Frame .

5.

Position the carpet and wiring harness away from the repair area.

6.

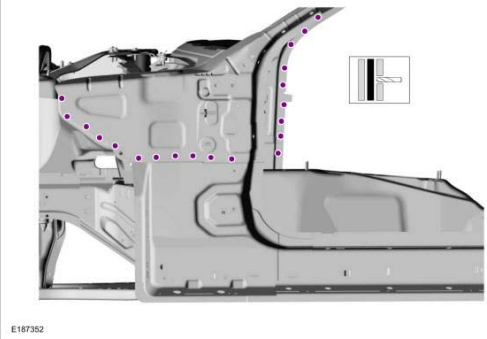
Remove the front door hinges at the A-pillar.

NOTE: Due to construction and design of the A-pillar reinforcements, no sectioning can be performed on these components. The inner reinforcements must be replaced at the factory seams.

7.
Coupe shown, convertible similar. Carefully cut the **outer** body panel only.

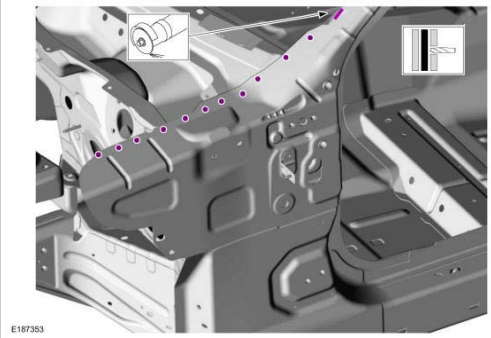
8.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit



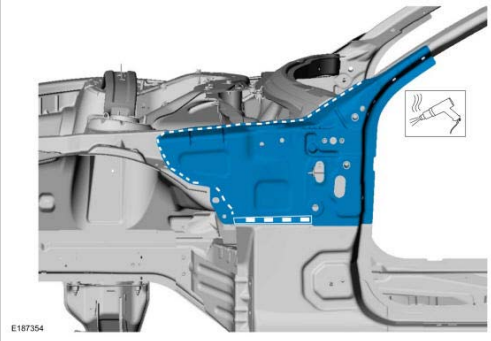
NOTE: Do not heat the area above 170 ° C.

9.
Using a hot air gun, heat the area to aid in softening the NVH foam and remove the panel. Use the General Equipment: Hot Air Gun



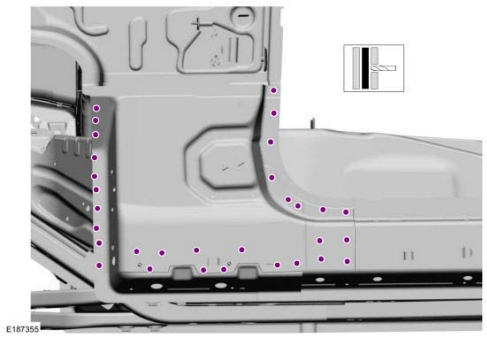
10.

Drill out the spot welds from the upper A-pillar reinforcement. Use the General Equipment: Spot Weld Drill Bit



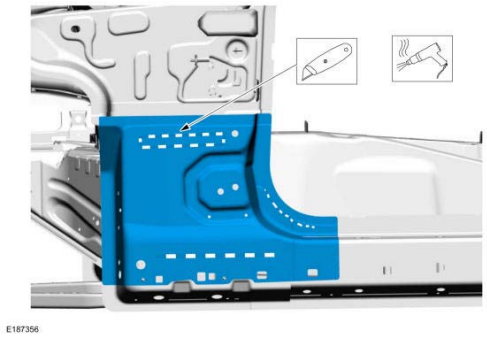
11.

Drill out the spot welds and grind the seam welds. Use the General Equipment: Spot Weld Drill Bit Use the General Equipment: Grinder



NOTE: Do not heat the area above 170 ° C.

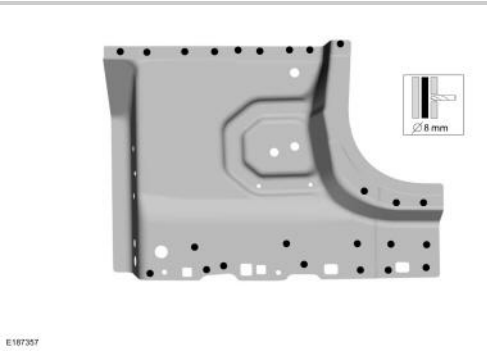
12.
Using a hot air gun, heat the area to aid in softening the NVH foam and remove the upper A-pillar reinforcement. Use the General Equipment: Hot Air Gun



13.

Drill out the welds on lower A-pillar reinforcement. Use the General Equipment: Spot Weld Drill Bit

NOTE: Do not heat the area above 170 ° C.



14.
Using a hot air gun, heat the area to aid in softening the NVH foam and remove the lower A-pillar reinforcement. Use the General Equipment: Hot Air Gun Use the General Equipment: Knife

REMOVAL AND INSTALLATION > A-PILLAR OUTER PANEL SECTION AND REINFORCEMENT > INSTALLATION

1.

Drill plug weld holes in the replacement A-pillar lower reinforcement. Use the General Equipment: 8 mm Drill Bit

2.

Apply adhesive and NVH expanding foam as indicated.

Material

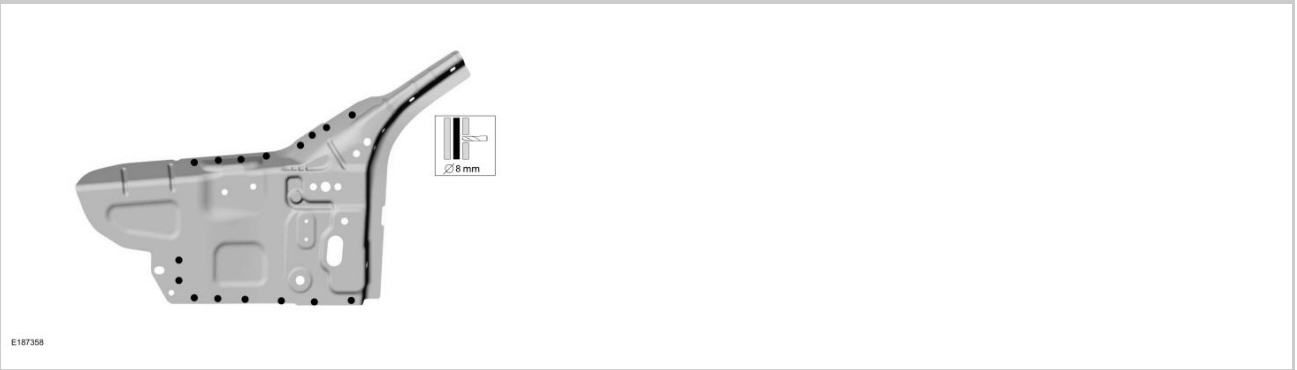
: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121

3.

Install and spot weld the A-pillar lower reinforcement. Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment

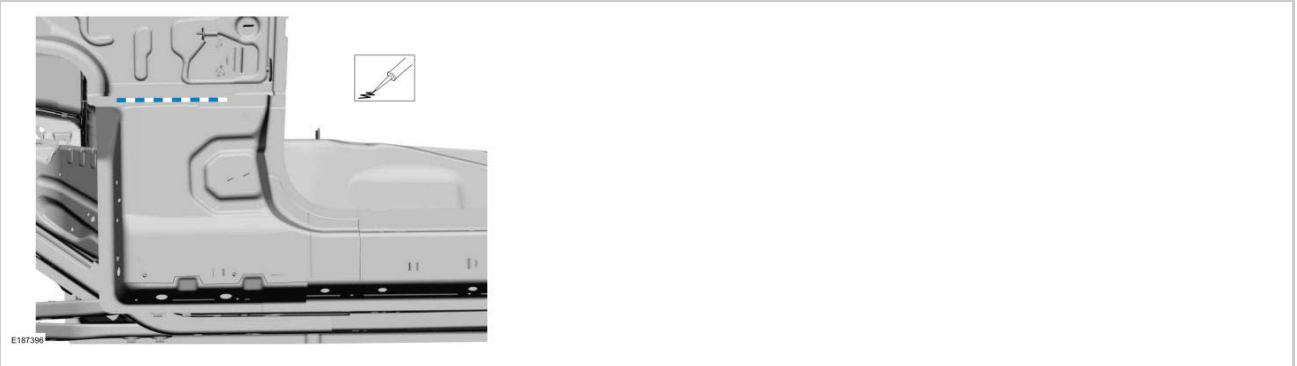


4.

Plug weld the A-pillar lower reinforcement. Use the General Equipment: MIG/MAG Welding Equipment

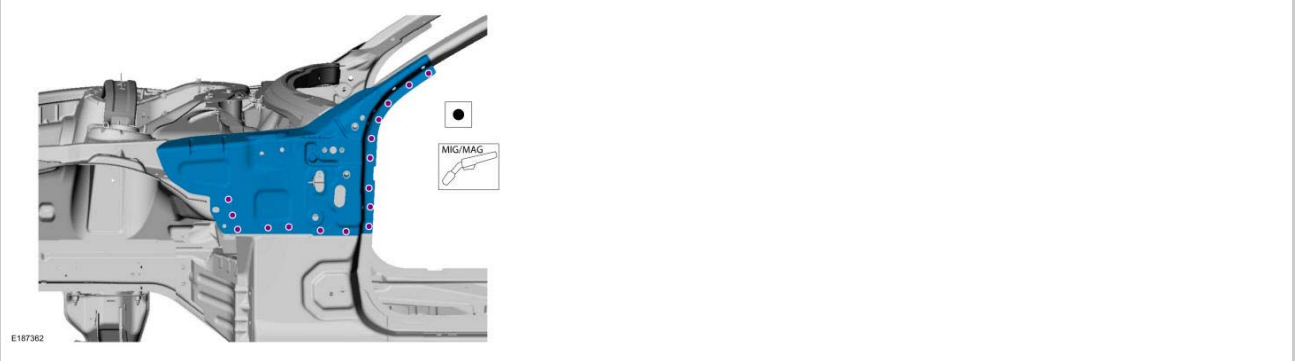
5.

Drill plug weld holes in the replacement A-pillar upper reinforcement.



6.

Apply adhesive to the upper flange of the A-pillar lower reinforcement.



Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

7.

Install and weld the A-pillar upper reinforcement. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: MIG/MAG Welding Equipment

8.

Complete welding the A-pillar upper reinforcement. Use the General Equipment: MIG/MAG Welding Equipment

9.

Cut a section from the replacement panel and drill holes for plug welding. Use the General Equipment: 8 mm Drill Bit Use the General Equipment: Air Body Saw

10.

Install the replacement panel and weld. Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Locking Pliers

11.

Spot weld the A-pillar panel. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: Locking Pliers

12.

MIG plug weld the A-pillar panel. Use the General Equipment: MIG/MAG Welding Equipment

13.

Metal finish the repair areas using typical metal finishing techniques.

14.

Apply a Ford approved primer to the repair area.

15.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

16.

Refinish using a Ford approved paint system.

17.

Restore corrosion protection. Refer to: Corrosion Prevention .

18.

Install the front door hinges to the A-pillar.

19.

Reposition the carpet and wiring harness.

20.

Install the following items:

Refer to: Fixed Glass .

Refer to: Fender .

Refer to: Hood .

Refer to: FRONT DOOR .

Refer to: Rocker Panel Moulding .

21.

Align the hood as necessary. Refer to: Body and Frame .

REMOVAL AND INSTALLATION > B-PILLAR AND REINFORCEMENT - COUPE

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
8 mm Drill Bit
MIG/MAG Welding Equipment
Spot Weld Drill Bit
Locking Pliers

Materials

Name	Specification
Seam Sealer TA-2-B	-
Fusor ® Flexible Foam Repair 3M™ 08463, Fusor ® 121	-

REMOVAL AND INSTALLATION > B-PILLAR AND REINFORCEMENT - COUPE > REMOVAL

NOTE: LH side shown, RH side similar.

1.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: Body and Frame .

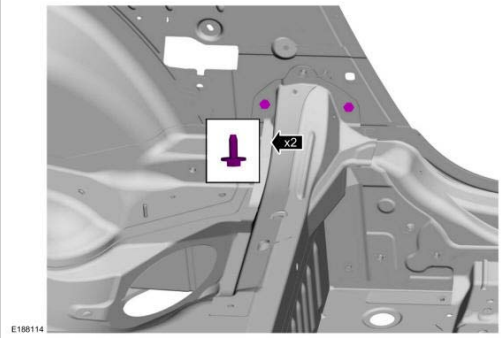
2.

Remove the following items:

Refer to: Roof Panel .

Refer to: QUARTER PANEL - COUPE .

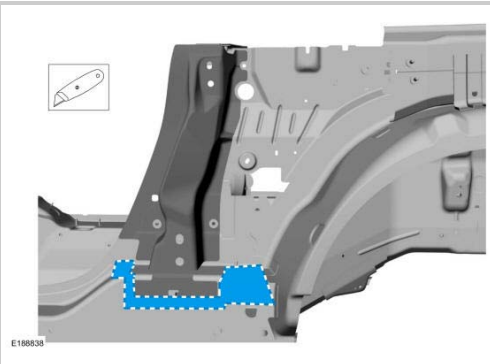
Refer to: Rear Seat Cushion .



NOTE: B-pillar reinforcement components are constructed of Boron steel and can not be sectioned. Replacement must be done at factory joints.

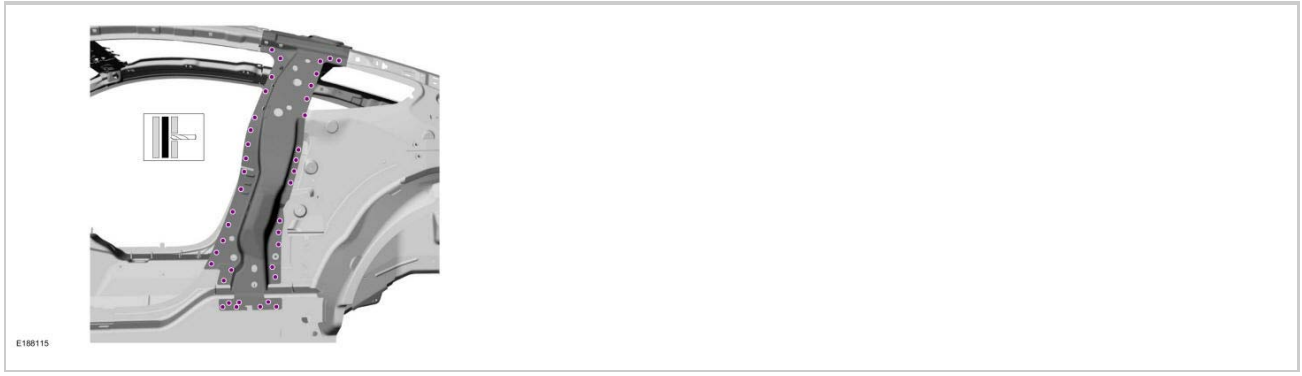
3.

Position aside the carpet and wiring harness from the repair area.



4.

Remove the bolts from the rear floor crossmember to B-pillar.



5.

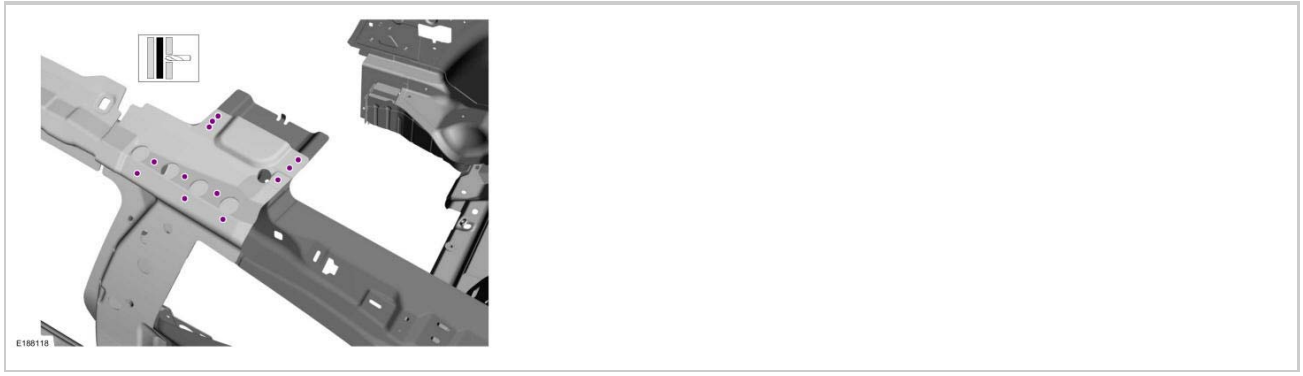
Remove the NVH foam at the base of the B-pillar.

6.

Drill out the spot welds on the B-pillar panel. Use the General Equipment: Spot Weld Drill Bit

7.

Drill out the spot welds from the rear roof reinforcement on both sides. Use the General Equipment: Spot Weld Drill Bit



8.

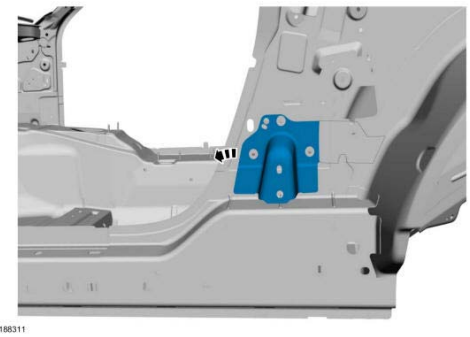
Remove the rear roof reinforcement assembly.

9.

Drill out the spot welds on the B-pillar panel at the rear roof reinforcement flange. Use the General Equipment: Spot Weld Drill Bit

10.

Remove the B-pillar assembly.

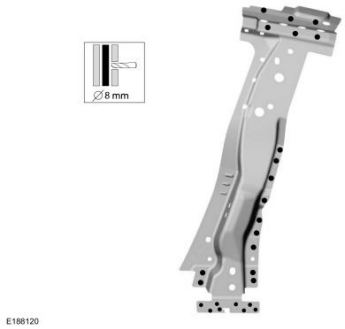


11.

Drill out the spot welds.

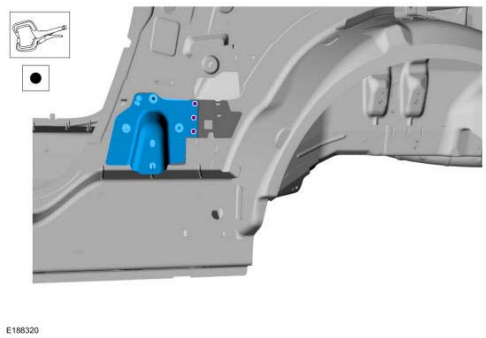
12.

Remove the inner reinforcement.



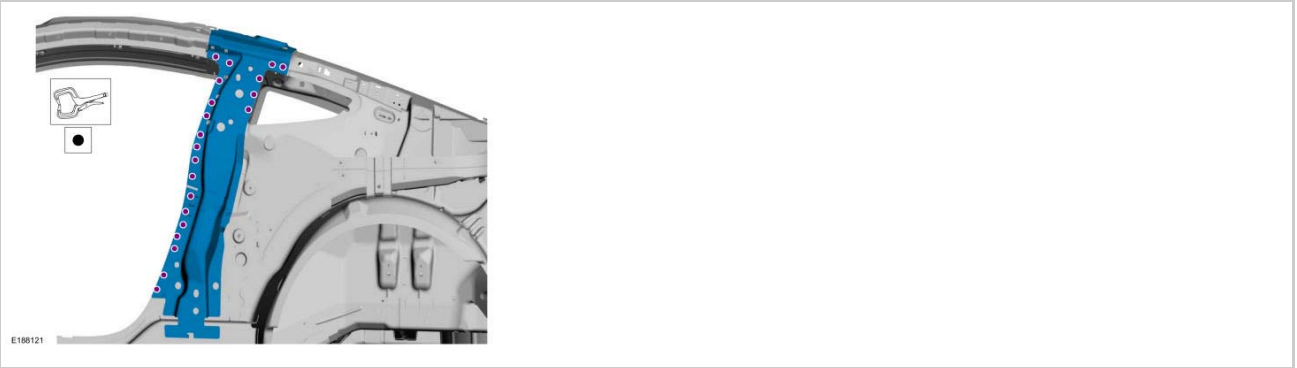
REMOVAL AND INSTALLATION > B-PILLAR AND REINFORCEMENT - COUPE > INSTALLATION

NOTE: LH side shown, RH side similar.



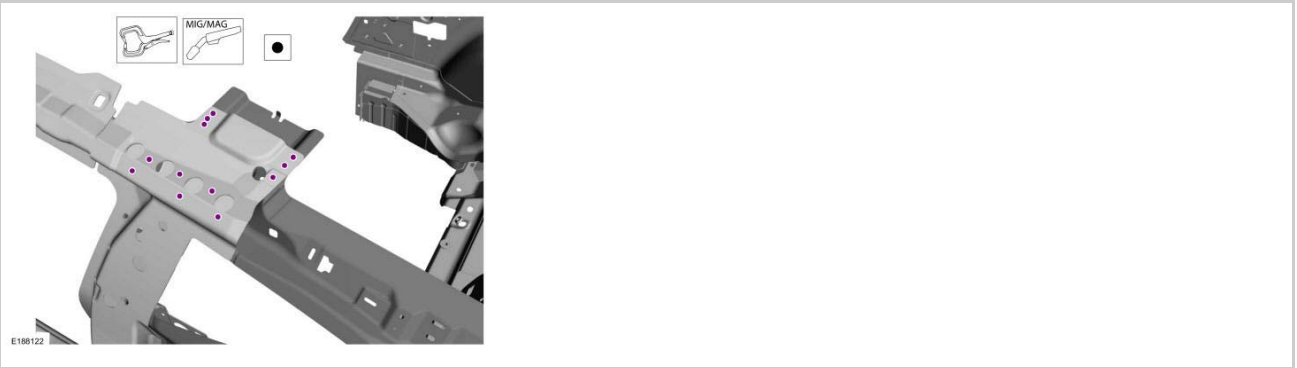
1.

Drill holes for plug welding in the replacement panel. Use the General Equipment: 8 mm Drill Bit



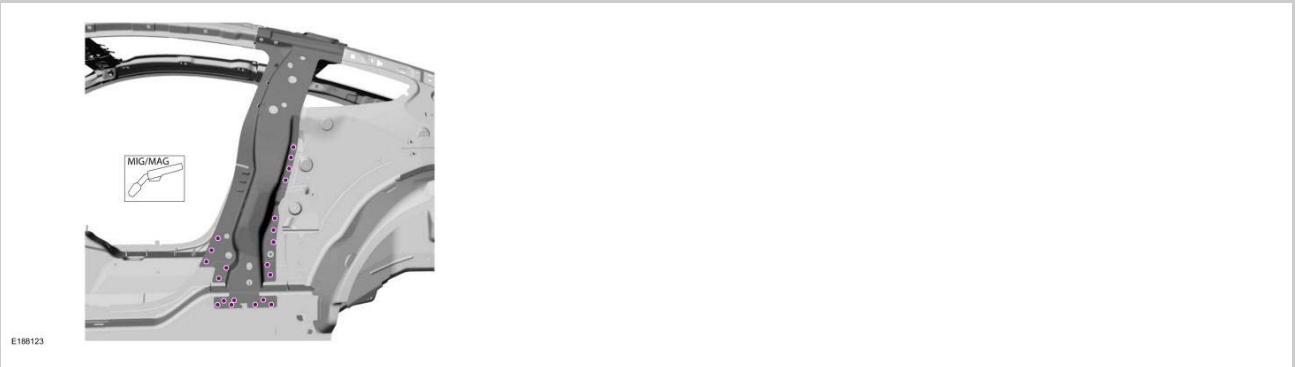
2.

Install the inner reinforcement and spot weld. Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment



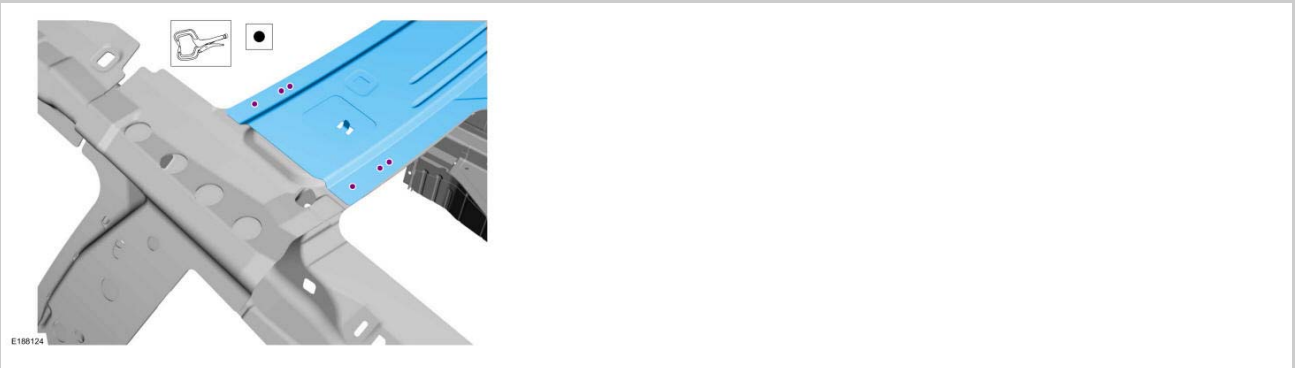
3.

Install the B-pillar assembly and spot weld. Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment



4.

Weld the B-pillar at the rear roof reinforcement flange. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment Use the General Equipment: Resistance Spotwelding Equipment



5.

MIG weld the B-pillar panel. Use the General Equipment: MIG/MAG Welding Equipment

6.

Install the rear roof reinforcement panel and weld on both sides. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: Locking Pliers

7.

Apply NVH expanding foam.

Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121

8.

Install the rear floor crossmember bolts.

Torque

: 22 lb.ft (30 Nm)

9.

Metal finish the repair area using typical metal finishing techniques.

10.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

11.

Restore the corrosion protection. Refer to: Corrosion Prevention .

12.

Reposition the carpet and wiring harness.

13.

Install the following items:

Refer to: Roof Panel .

Refer to: QUARTER PANEL - COUPE .

Refer to: Rear Seat Cushion .

REMOVAL AND INSTALLATION > B-PILLAR AND REINFORCEMENT - CONVERTIBLE

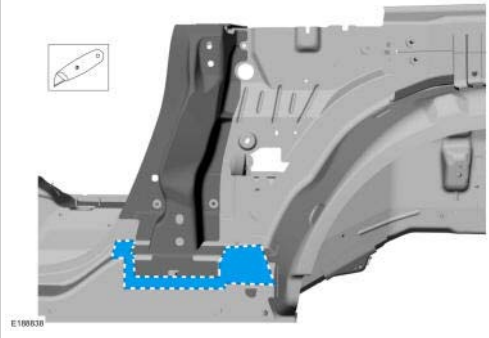
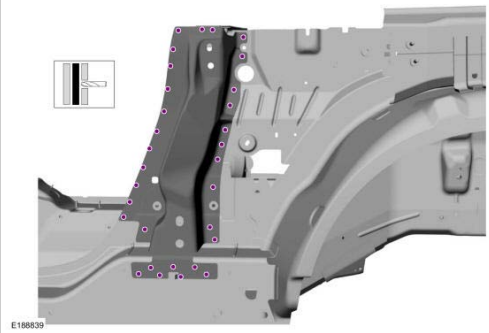
3.

Position aside the carpet and wiring harness from the repair area.



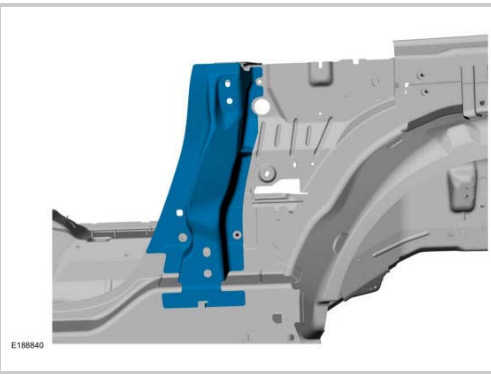
4.

Remove the bolts from the rear floor crossmember to B-pillar.



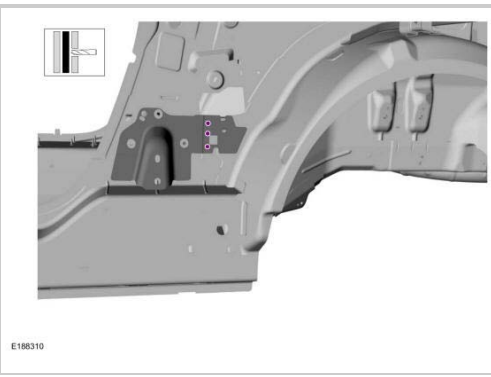
5.

Remove the NVH foam at the base of the B-pillar. Use the General Equipment: Air Body Saw



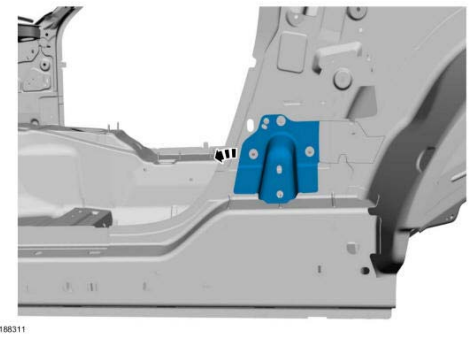
6.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit



7.

Remove the B-pillar assembly.

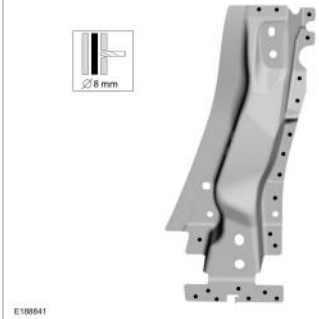


8.

Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

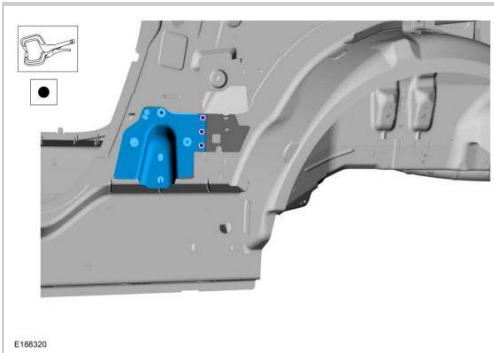
9.

Remove the inner reinforcement.



REMOVAL AND INSTALLATION > B-PILLAR AND REINFORCEMENT - CONVERTIBLE > INSTALLATION

NOTE: LH side shown, RH side similar.



1.

Drill holes for plug welding in the replacement panel. Use the General Equipment: 8 mm Drill Bit

2.

Install the inner reinforcement and resistance spot weld. Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment

3.

Install the B-pillar assembly and resistance spot weld. Use the General Equipment: Resistance Spotwelding Equipment Use the General Equipment: Locking Pliers

4.

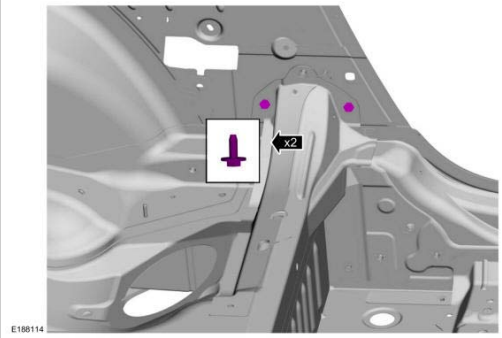
MIG weld the B-pillar panel. Use the General Equipment: MIG/MAG Welding Equipment

5.

Apply NVH expanding foam.

Material

: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121



6.

Install the rear floor crossmember bolts.

Torque

: 22 lb.ft (30 Nm)

7.

Metal finish the repair area using typical metal finishing techniques.

8.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

9.

Restore corrosion protection. Refer to: Corrosion Prevention .

10.

Reposition carpeting and wiring harness.

11.

Install the following items:

Refer to: Rear Seat Cushion .

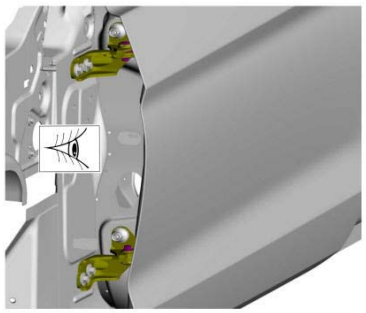
Refer to: QUARTER PANEL - CONVERTIBLE .

REMOVAL AND INSTALLATION > FRONT DOOR SKIN PANEL

Special Tool(s) / General Equipment

Grinder
Hot Air Gun
Knife
MIG/MAG Welding Equipment
Locking Pliers

Materials



Name	Specification
Metal Bonding Adhesive TA-1, 3M™ 08115, Fusor ® 108B	-
Seam Sealer TA-2-B	-
Fusor ® Flexible Foam Repair 3M™ 08463, Fusor ® 121	-

REMOVAL AND INSTALLATION > FRONT DOOR SKIN PANEL > REMOVAL

NOTE: LH side shown, RH side similar.

1.

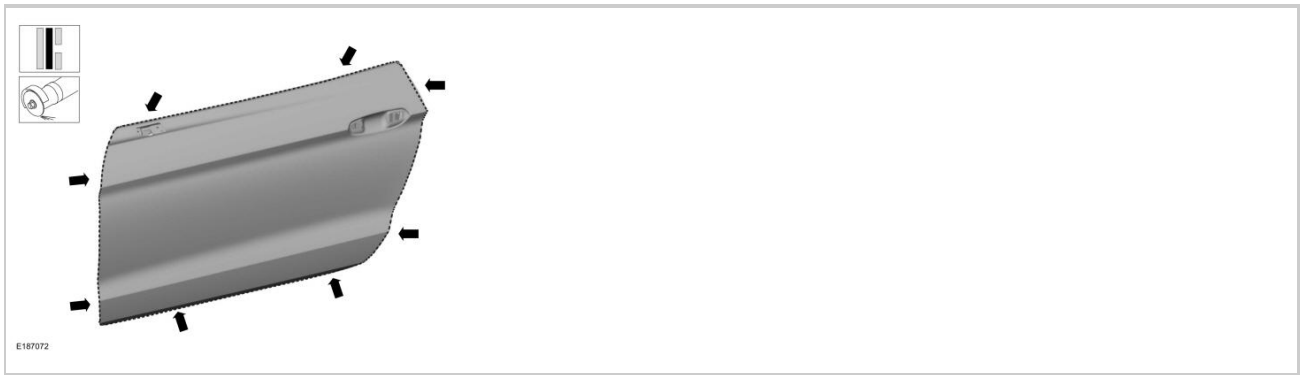
Inspect the upper and lower door hinges for wear or damage, install new or rebuild as necessary.

2.

Remove the following items:

Refer to: Front Door Window Glass .

Refer to: FRONT DOOR .



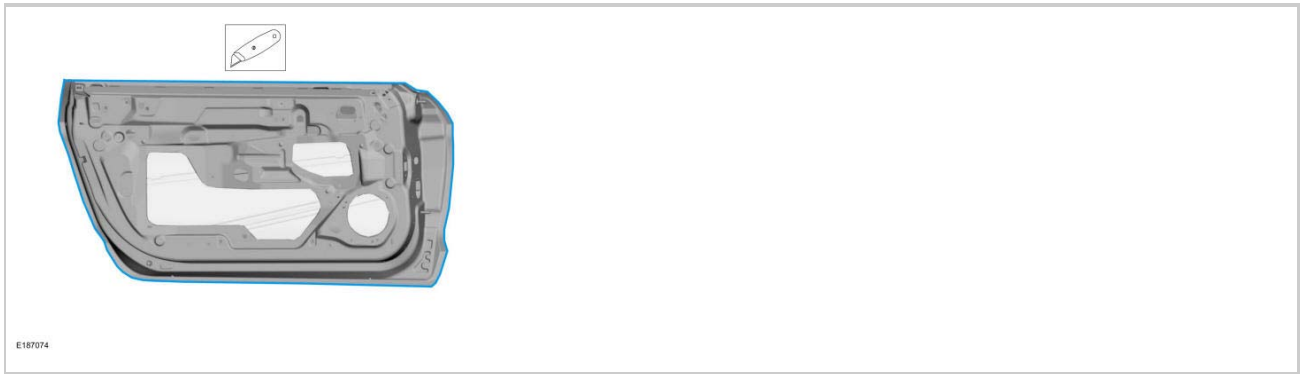
Refer to: Exterior Mirror .

Refer to: Exterior Front Door Handle .

Refer to: Front Door Upper Moulding .

3.

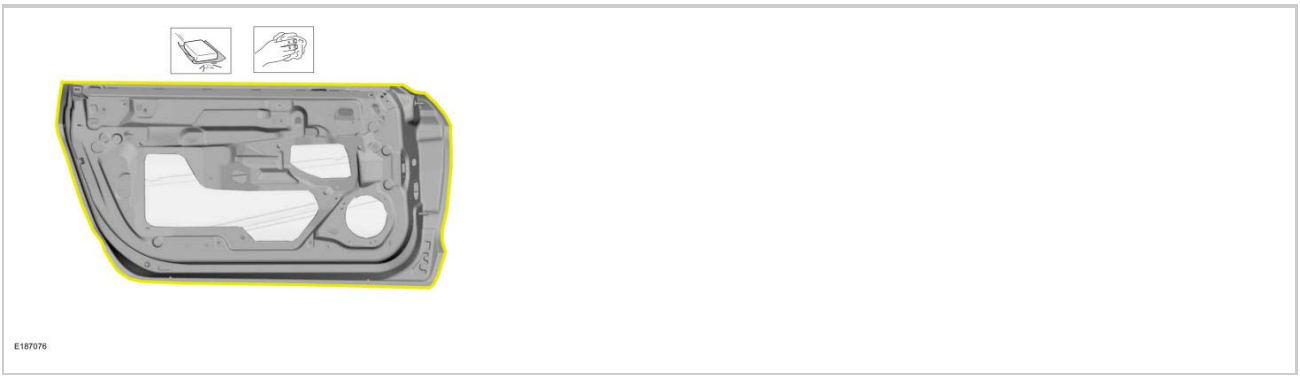
Carefully cut through the **outer** panel only. Use the General Equipment: Grinder



4.

Remove the outer door panel.

5.

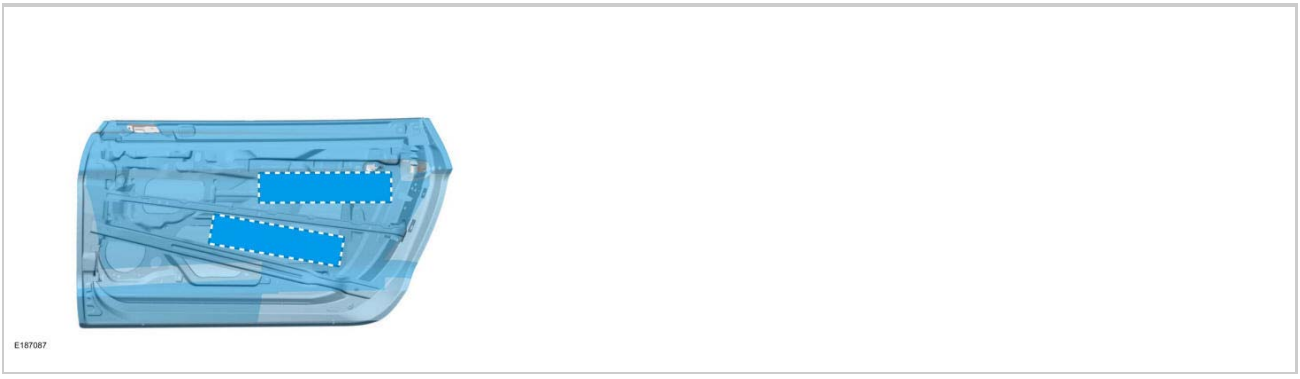


Remove the remaining portion of the front door panel hem flange. Use the General Equipment: Knife Use the General Equipment: Hot Air Gun

REMOVAL AND INSTALLATION > FRONT DOOR SKIN PANEL > INSTALLATION

1.

Remove all adhesive and foreign materials from the door shell to outer door panel mating surfaces.



2.

Remove the e-coat from the mating surface.

3.

Install NVH mastic pads to the replacement door panel as required.

4.

Apply adhesive to the door shell mating surface.

Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B

5.

Apply anti-flutter NVH expanding foam as indicated.

Material

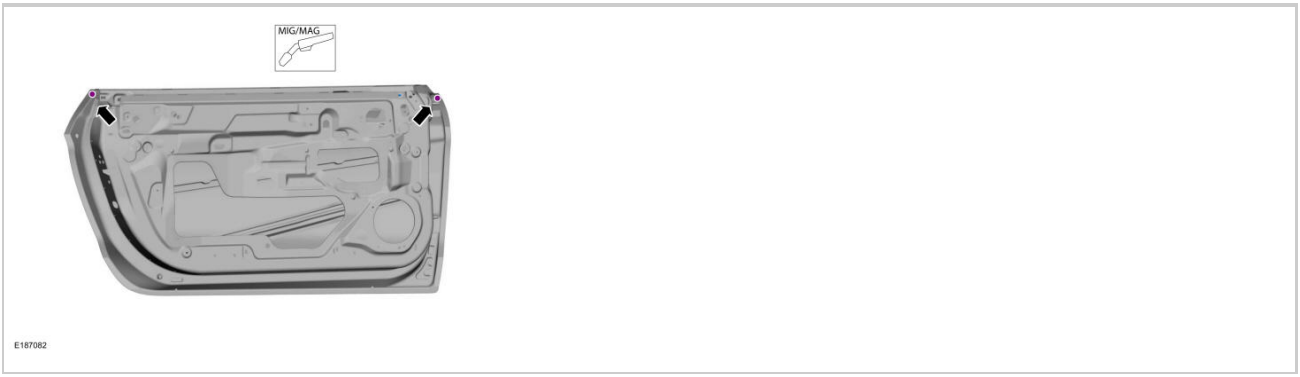
: Fusor ® Flexible Foam Repair / 3M™ 08463, Fusor ® 121

6.

Install the outer door panel and partially crimp the flange. Use the General Equipment: Locking Pliers

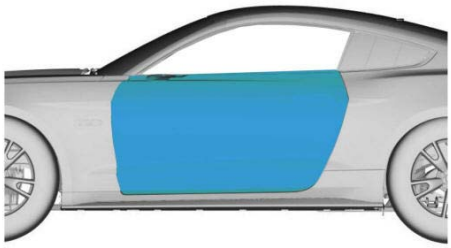
7.

Temporarily install the door on the vehicle.



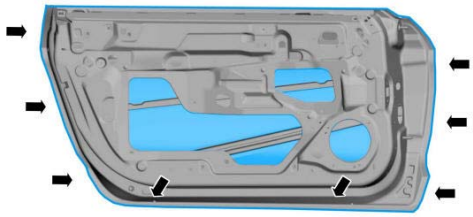
8.

Check for proper alignment and adjust as necessary.



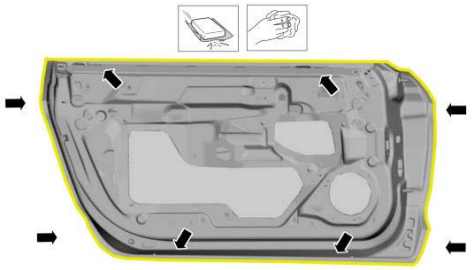
9.

Carefully open the door and tack weld to lock panel in place. Use the General Equipment: MIG/MAG Welding Equipment



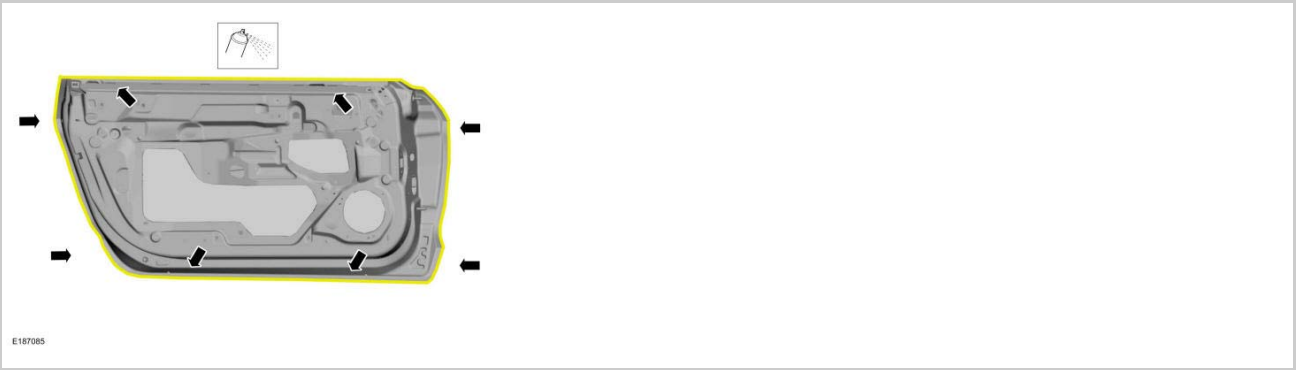
10.

Remove the door from the vehicle.



NOTE: Smooth any residual adhesive squeeze-out in to the seam to act as a sealer.

11.
Complete the flanging process.

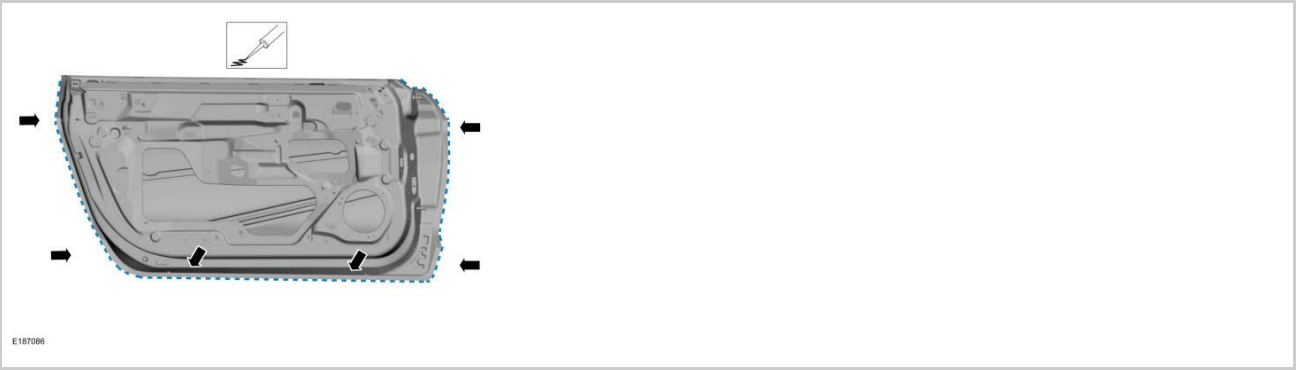


12.

Remove all foreign material.

13.

Apply a Ford approved primer to the flange area.



14.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

15.

Refinish the door shell flange using a Ford approved paint system.

16.

Install the door. Refer to: FRONT DOOR .

17.

Sand and refinish the exterior repair area using a Ford approved paint system.

18.

Restore corrosion protection. Refer to: Corrosion Prevention .

19.

Install the following items:

Refer to: Front Door Window Glass .

Refer to: Exterior Mirror .

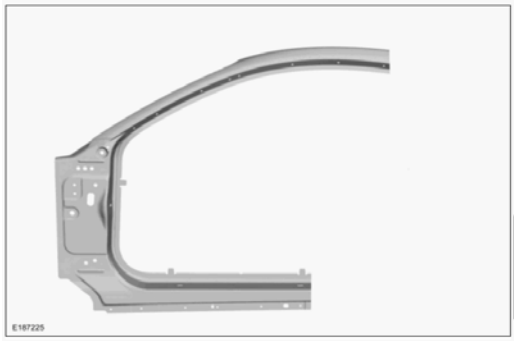
Refer to: Exterior Front Door Handle .

Refer to: Front Door Upper Moulding .

REMOVAL AND INSTALLATION > ROCKER PANEL

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment
Air Body Saw
MIG/MAG Welding Equipment
Spot Weld Drill Bit



Materials

Name	Specification
Seam Sealer TA-2-B	-

REMOVAL AND INSTALLATION > ROCKER PANEL > REMOVAL

1.

Available service part-Coupe.

2.

Available service part-Convertible.

3.

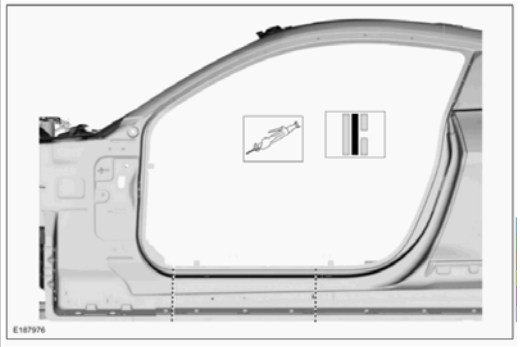
Remove the following items:

Refer to: FRONT DOOR .

Refer to: ROCKER PANEL MOULDING .

Refer to: FRONT SEATBELT RETRACTOR AND PRETENSIONER .

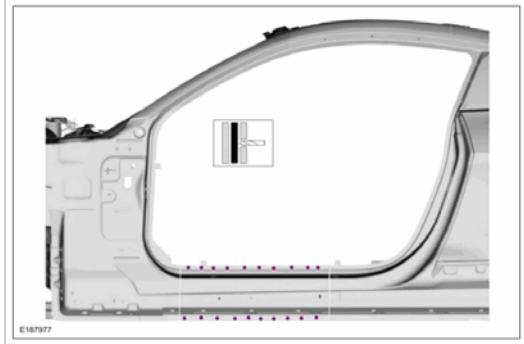
4.



Position aside the carpet and wiring harness in the repair area.

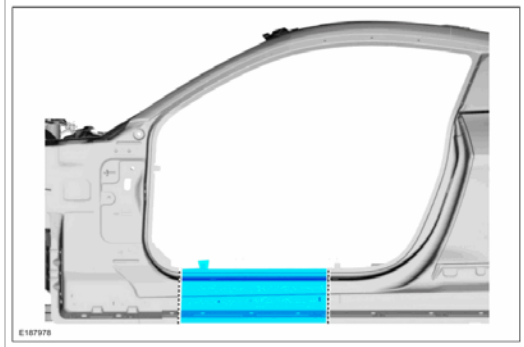
NOTE: Coupe shown, convertible is similar.

5.



NOTE: ***Partial replacement*** *due to damage* ***for the outer panel only.***

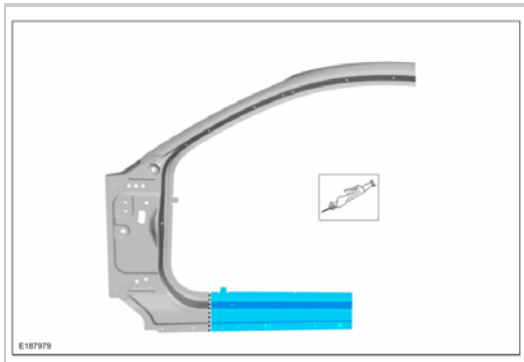
Carefully cut the **outer** panel only. Use the General Equipment: Air Body Saw



6.

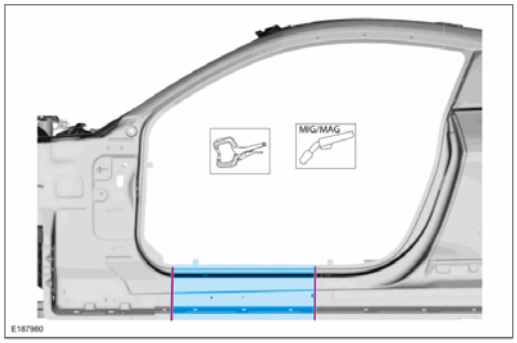
Drill out the spot welds. Use the General Equipment: Spot Weld Drill Bit

7.



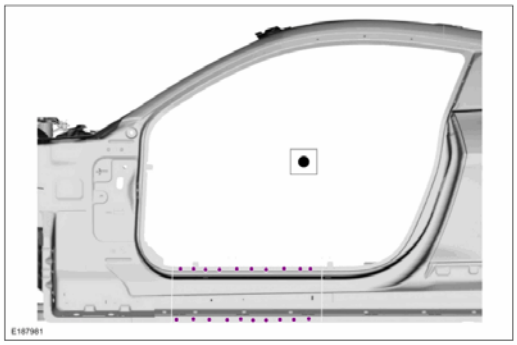
Remove the rocker panel section.

REMOVAL AND INSTALLATION > ROCKER PANEL > INSTALLATION



1.

Cut section from the replacement part. Use the General Equipment: Air Body Saw



2.

Install and seam weld the rocker panel section. Use the General Equipment: MIG/MAG Welding Equipment

3.

Resistance spot weld the panel. Use the General Equipment: Resistance Spotwelding Equipment

4.

Finish the repair area using typical metal finishing techniques.

5.

Prime the repair area using a Ford approved paint system.

6.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

7.

Refinish using a Ford approved paint system.

8.

Restore corrosion protection. Refer to: CORROSION PREVENTION .

9.

Position the wiring harness and carpet to original position.

10.

Install the following items:

Refer to: FRONT DOOR .

Refer to: ROCKER PANEL MOULDING .

Refer to: FRONT SEATBELT RETRACTOR AND PRETENSIONER .

REMOVAL AND INSTALLATION > ROCKER PANEL INNER REINFORCEMENT

Special Tool(s) / General Equipment

Resistance Spotwelding Equipment

REMOVAL AND INSTALLATION > ROCKER PANEL INNER REINFORCEMENT > REMOVAL

1.

If required, dimensionally restore vehicle to pre-accident condition. Refer to: Body and Frame .

NOTE: The rocker panel inner reinforcement is made of martensitic steel and cannot be sectioned. It must be replaced at factory seams.

Coupe shown, convertible is similar.

NOTE: LH side shown, RH side similar.

2.

Available service part.

E188314

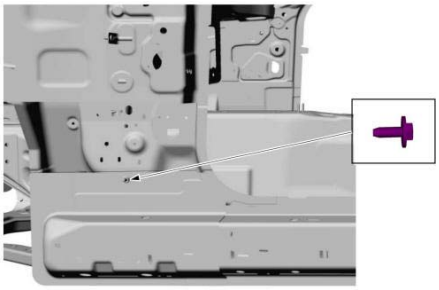
3.

Remove the following items:

Refer to: QUARTER PANEL - COUPE . Refer to: QUARTER PANEL - CONVERTIBLE .

Refer to: B-Pillar and Reinforcement - Coupe . Refer to: B-Pillar and Reinforcement - Convertible .

Refer to: A-Pillar Trim Panel - Coupe . Refer to: A-Pillar Trim Panel - Convertible .

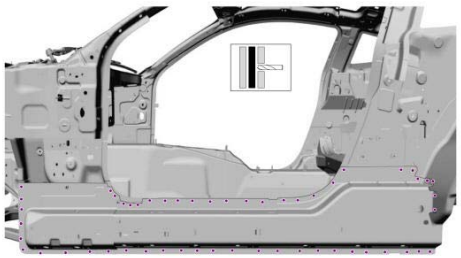


Refer to: A-Pillar Outer Panel Section and Reinforcement .

4.

Position the carpet and wiring harness away from the repair area.

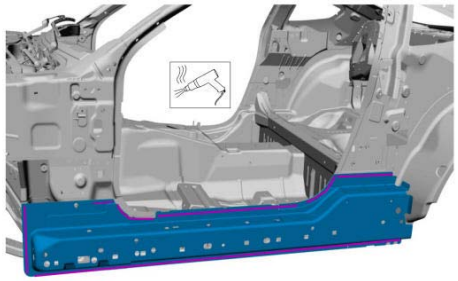
5.



Remove the bolt from the inner rocker panel reinforcement.

E188309

6.



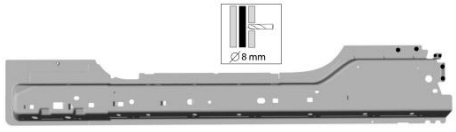
Remove the spot welds from the rocker panel. Use the General Equipment: Spot Weld Drill Bit

E188312

7.

Remove the rocker panel assembly. Use the General Equipment: Hot Air Gun

E188313



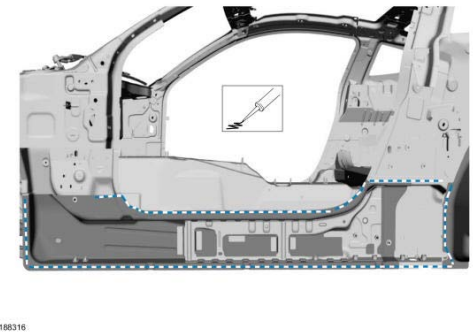
REMOVAL AND INSTALLATION > ROCKER PANEL INNER REINFORCEMENT > INSTALLATION

NOTE: The rocker panel inner reinforcement is made of martensitic steel and cannot be sectioned. It must be replaced at factory seams.

NOTE: LH side shown, RH side similar.

1.

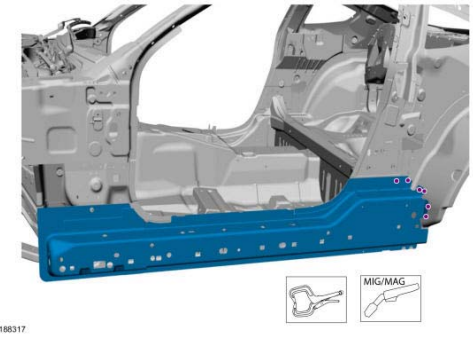
Drill holes for plug welding in the replacement rocker panel. Use the General Equipment: 8 mm Drill Bit



E188315

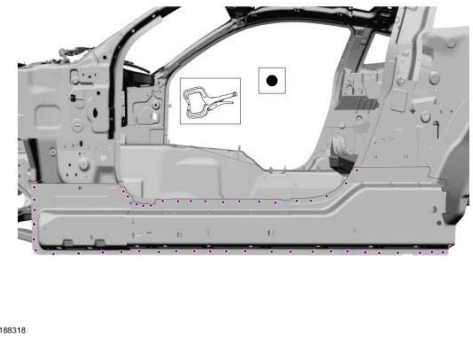
2.

Apply adhesive to the flange area of the inner reinforcement structure.



Material

: Metal Bonding Adhesive / TA-1, 3M™ 08115, Fusor ® 108B



3.

Install the rocker panel assembly and MIG weld. Use the General Equipment: Locking Pliers Use the General Equipment: MIG/MAG Welding Equipment

4.

Resistance spot weld the rocker panel. Use the General Equipment: Locking Pliers Use the General Equipment: Resistance Spotwelding Equipment

5.

Install the bolt in the rocker panel reinforcement.

Torque

: 22 lb.ft (30 Nm)

6.

Metal finish the repair area using typical metal finishing techniques.

7.

Prime the repair area using a Ford approved paint system.

8.

Sealing work: All areas must be sealed to production level.

Material

: Seam Sealer / TA-2-B

9.

Restore corrosion protection. Refer to: Corrosion Prevention .

10.

Install the following items:

Refer to: QUARTER PANEL - COUPE . Refer to: QUARTER PANEL - CONVERTIBLE .

Refer to: B-Pillar and Reinforcement - Coupe . Refer to: B-Pillar and Reinforcement - Convertible .

Refer to: A-Pillar Trim Panel - Coupe . Refer to: A-Pillar Trim Panel - Convertible .

Refer to: A-Pillar Outer Panel Section and Reinforcement .

DESCRIPTION AND OPERATION > FRAME ASSEMBLY - OVERVIEW > OVERVIEW

Underbody misalignment can affect front and rear wheel alignment, the operation of the suspension parts and drivetrain operation. Window glass cracks, door and window opening concerns, and air or water leaks at the doors are often caused by improperly tightened bolts and body misalignment.

Every structural member and outer panel is designed to offer the maximum protection in the event of a collision.

The front subframe is bolted to the body and is used to:

- aid in structural support
- provide mounting surfaces for the front suspension control arms
- provide a mounting point for the engine isolators
- provide a mounting surface for the steering gear

The front crossmember is bolted to the body and is used to:

- aid in structural support
- provide a mounting surface for the front stabilizer bar
- support the radiator, cooling fan and evaporator

The crossmember brace is bolted to the front subframe and front crossmember. It is used to aid in structural support.

The rear subframe is bolted to the body and is used to:

- aid in structural support
- provide mounting surfaces for the rear suspension lower arms and upper arms

The transmission crossmember is bolted to the body and is used to:

- aid in structural support
- provide a mounting surface for the transmission support insulator
- support the transmission

For body dimension specifications, Refer to: Body and Frame .

REMOVAL AND INSTALLATION > FRONT SUBFRAME - 2.3L ECOBOOST (201KW 273PS)

Special Tool(s) / General Equipment

	204-592 Separator, Lower Arm Ball Joint TKIT-2006C-FFMFLM TKIT-2006C-LM TKIT-2006C-ROW
	300-OTC1585AE Powertrain Lift
	303-050 (T70P-6000) Lifting Bracket, Engine
	303-F072 Support Bar, Engine
Tie Rod End Remover	

REMOVAL AND INSTALLATION > FRONT SUBFRAME - 2.3L ECOBOOST (201KW 273PS) > REMOVAL

NOTE: Suspension fasteners are critical parts that affect the performance of vital components and systems. Failure of these fasteners may result in major service expense. Use the same or equivalent parts if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Tighten fasteners as specified.

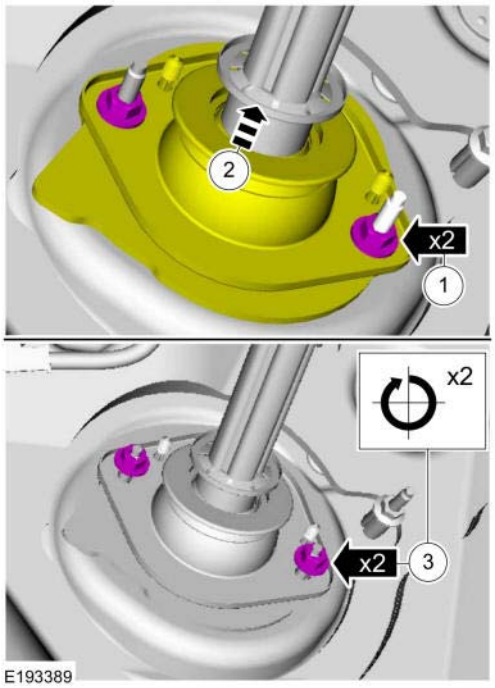
NOTE: Disconnect the battery ground cable anytime the steering gear is being serviced or damage to the steering gear internal power relay may occur resulting in steering gear replacement.

1.
Disconnect the battery ground cable. Refer to: Battery Disconnect and Connect .

NOTE: Make sure to minimize damage to sealer foam and avoid pulling apart dash seal brackets from retainer pins. Excessive damage may allow engine noise, fumes, air or water to enter the passenger compartment.

2.

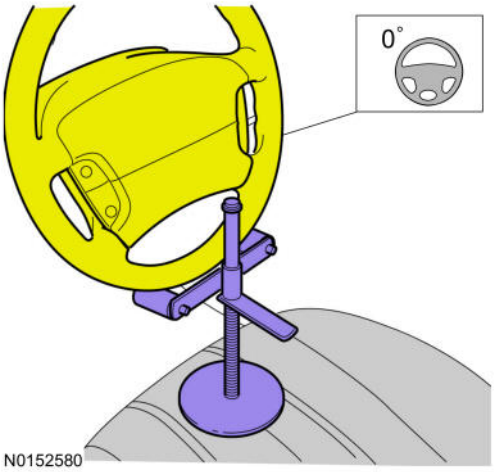
1.



Remove the steering column dash seal nuts.

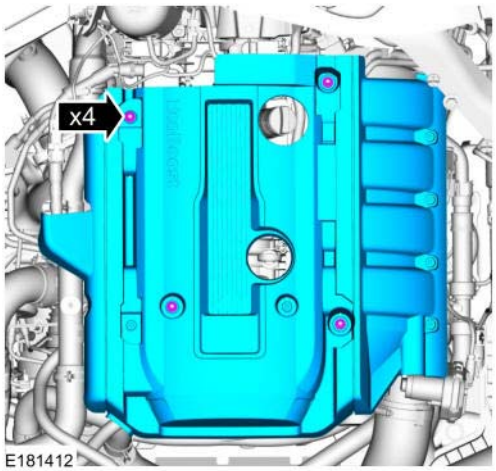
2.

Loosen the dash seal.



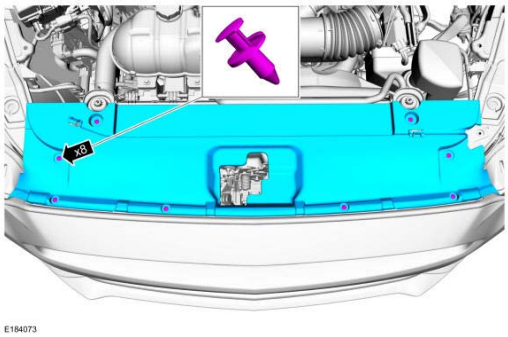
3.

Hand start the dash seal nuts.



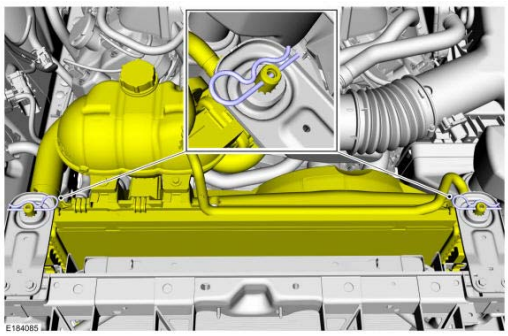
3.

Using a holding device, hold the steering wheel in the straight-ahead position.



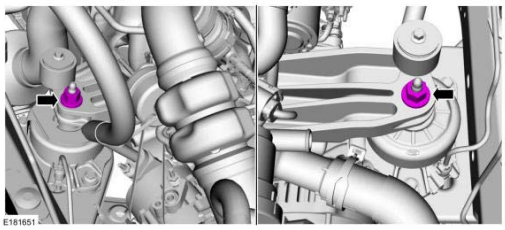
4.

Remove the 4 nuts and the engine appearance cover.



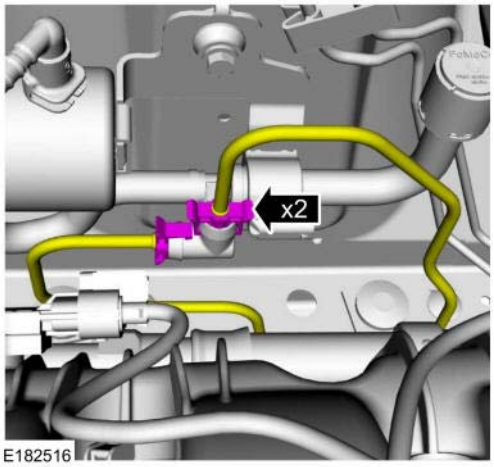
5.

Remove the 8 push pins and the upper radiator shield.



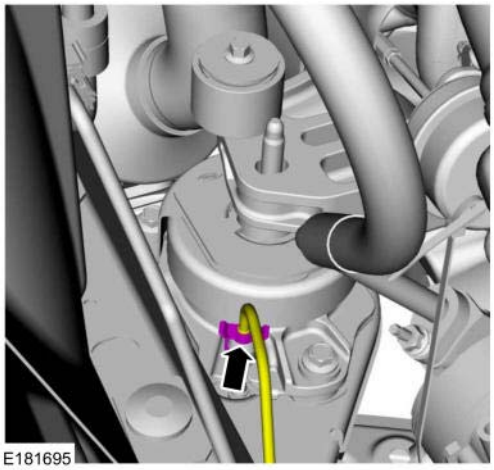
6.

Install clips to support the cooling module.



7.

Remove the LH and RH engine mount nuts.

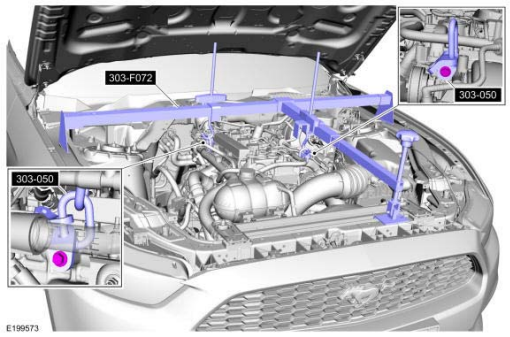


8.

Disconnect the 2 vacuum tubes from the engine mount control vacuum reservoir.

9.

Disconnect the vacuum tube from the RH engine mount.

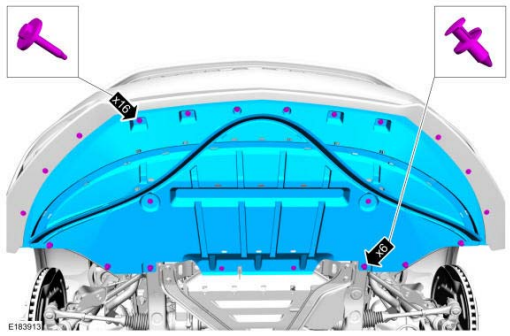


NOTE: The engine does not need to be lifted, only supported in normal position.

NOTE: Do not position the legs of the Engine Support Bar on the fenders. Instead,

position the legs on the body structure near the suspension strut tower. Failure to follow these instructions may result in body damage.

10.
Using the special tools, support the engine. Use Special Service Tool: 303-050 (T70P-6000)Lifting Bracket, Engine., 303-F072 Support Bar, Engine.



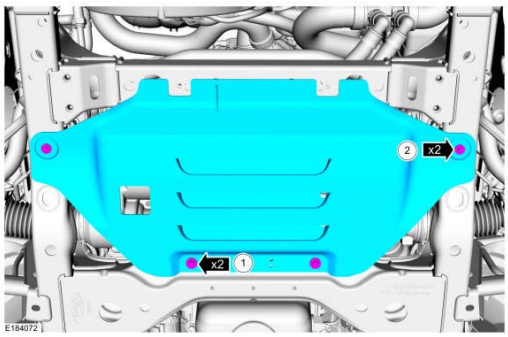
11.

Remove the wheels and tires. Refer to: Wheel and Tire .

12.

Remove the 6 push pins and the 16 screws and remove the under body shield.

NOTE: If equipped.



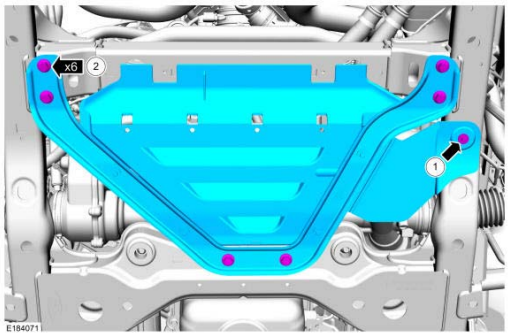
13.

1.

Remove the 2 rearward underbody shield bolts.

2.

Remove the 2 remaining underbody shield bolts and remove the underbody shield.



14.

NOTE: If equipped.

1.
Remove the underbody shield bolt.

NOTE: It is not necessary to separate the underbody shield from the V-brace.

2.
Remove the 6 V-brace bolts and remove the V-brace and underbody shield.

NOTE: DO NOT attempt to remove or install the steering column lower coupler at the steering gear without first loosening the steering column dash seal and fasteners. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

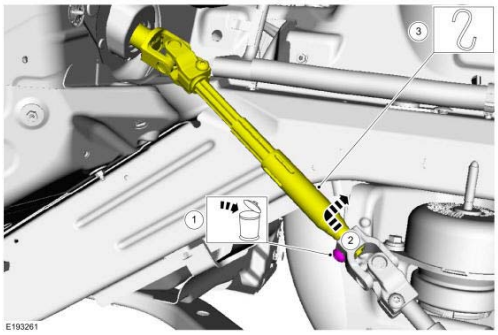
NOTE: DO NOT hammer, pry or force steering column and column shafts during installation or removal. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

WARNING: Do not reuse steering column shaft bolts. This may result in fastener failure and steering column shaft detachment or loss of steering control. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

15.

Detach the steering column lower shaft from the lower coupler.

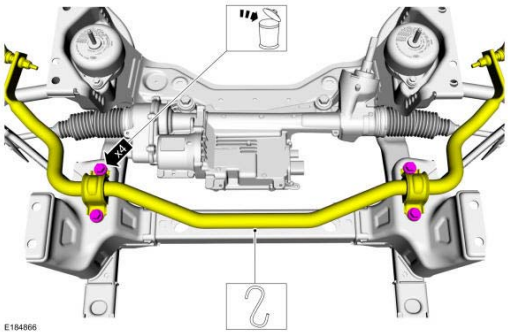
1.



Remove and discard the steering column shaft bolt.

2.

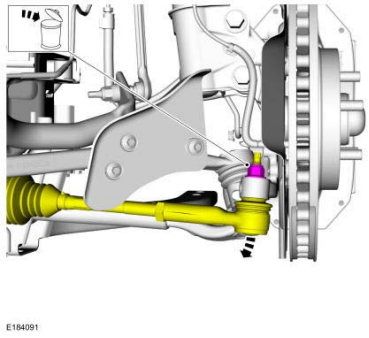
Pull apart the steering column shaft from the coupler.



3.

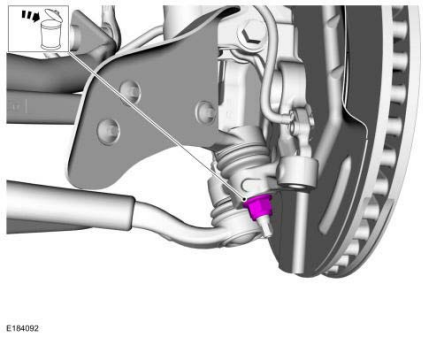
Secure the lower shaft to the frame rail to avoid damaging it during subframe removal.

16.



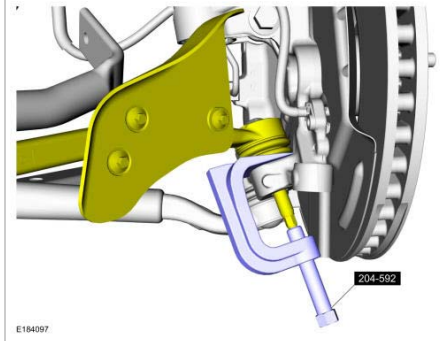
Remove and discard the 4 stabilizer bar bracket bolts and support the stabilizer bar.

NOTE: Use care when installing the tie rod separator or damage to the outer tie-rod end boot may occur.



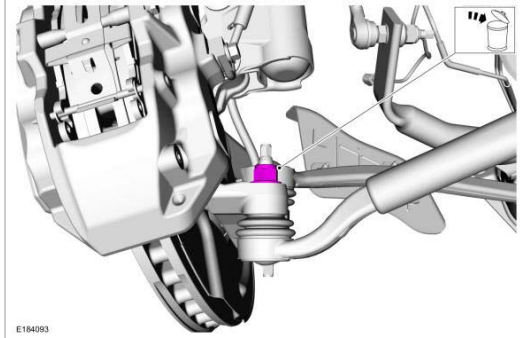
NOTE: Do not use a hammer to separate the outer tie-rod end from the wheel knuckle or damage to the wheel knuckle may result.

17.
On both sides. Remove and discard the tie rod end nut and separate the tie rod end from the wheel knuckle. Use the General Equipment: Tie Rod End Remover



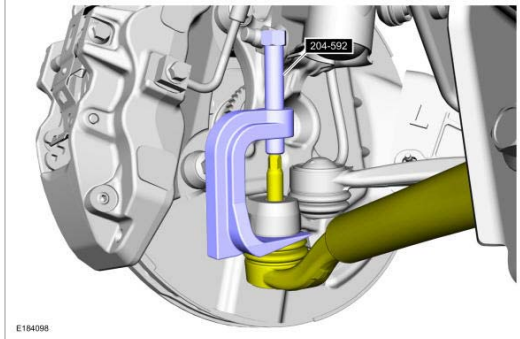
18.

On both sides. Remove and discard the front lower arm ball joint nut.



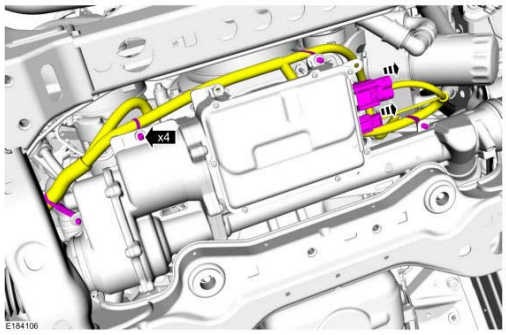
NOTE: Once pressure is applied to the ball joint with the Ball Joint Separator and Adapter, it may be necessary to tap the wheel knuckle at the ball joint area to separate the ball joint from the wheel knuckle.

19.
On both sides. Using the special tool, separate the front lower arm ball joint from the wheel knuckle. Use Special Service Tool: 204-592 Separator, Lower Arm Ball Joint.



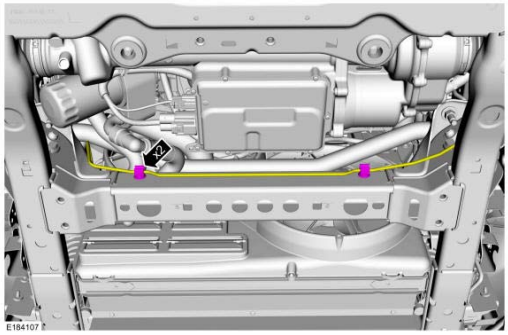
20.

On both sides. Remove and discard the rear lower arm ball joint nut.



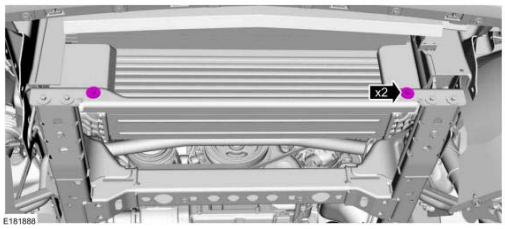
NOTE: Once pressure is applied to the ball joint with the Ball Joint Separator and Adapter, it may be necessary to tap the wheel knuckle at the ball joint area to separate the ball joint from the wheel knuckle.

21.
On both sides. Using the special tool, separate the rear lower arm ball joint from the wheel knuckle. Use Special Service Tool: 204-592 Separator, Lower Arm Ball Joint.



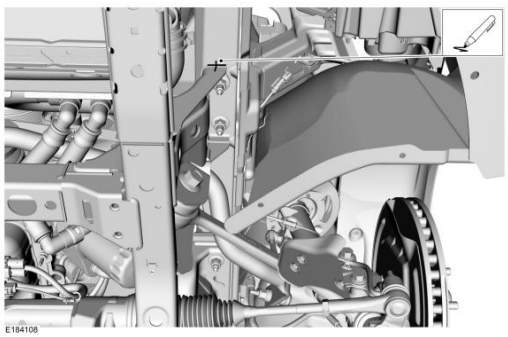
22.

Disconnect the 2 EPAS gear electrical connectors and unclip the 4 wiring fasteners and position the wiring harness aside.



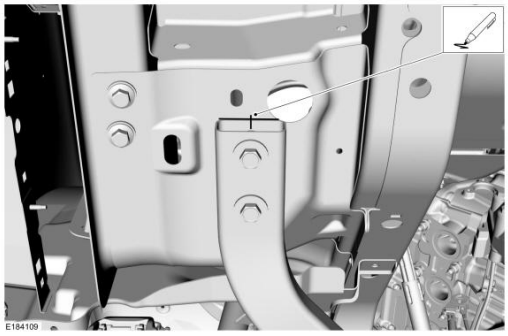
23.

Unclip the crossover brake line from the 2 frame clips.



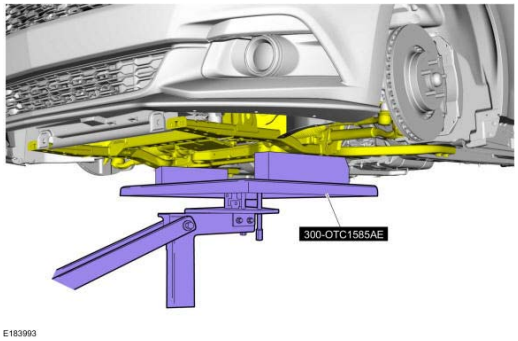
24.

Remove the 2 bolts from the support bar on the front of the subframe.



25.

Mark the position of the front subframe for reference during installation.

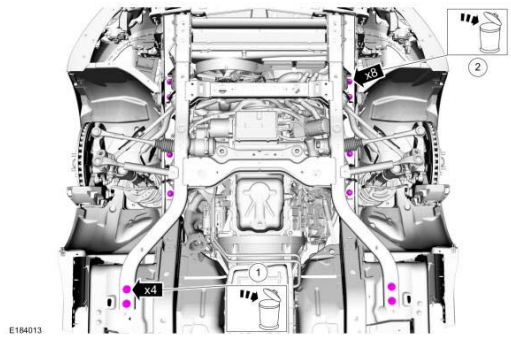


26.

Mark the position of the front subframe for reference during installation.

27.

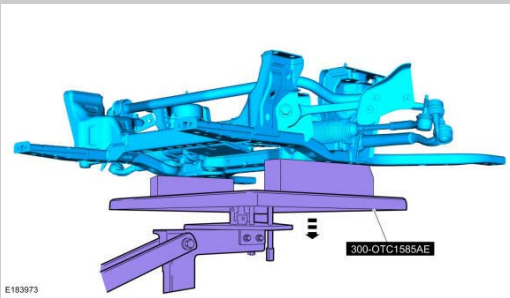
Position the special tool under the front subframe assembly. Use Special Service Tool: 300-OTC1585AEPowertrain Lift.



28.

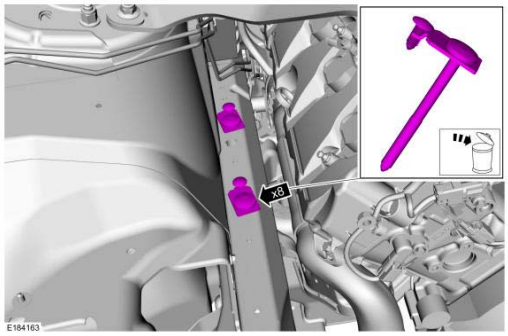
1.

Remove and discard the 4 rearward front subframe bolts.



2.

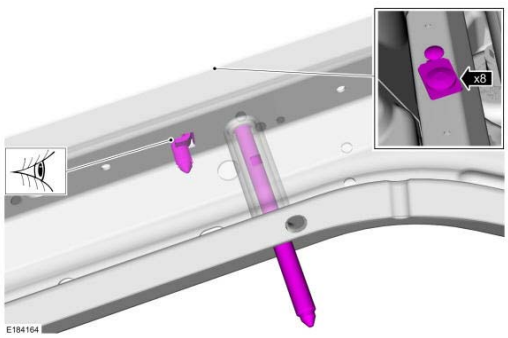
Remove and discard the 8 forward front subframe nuts.



29.

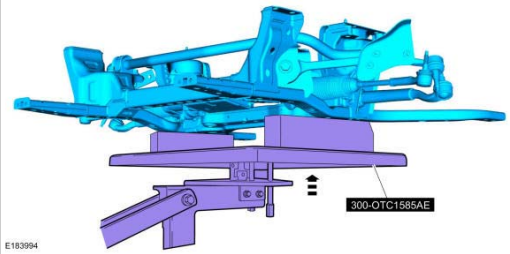
Using the special tool, lower the front subframe assembly from the vehicle. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.

30.



Remove and discard the 8 forward front subframe bolts.

REMOVAL AND INSTALLATION > FRONT SUBFRAME - 2.3L ECOBOOST (201KW 273PS) > INSTALLATION



NOTE: Make sure that the tab is engaged to the body rail.

1.
Install 8 new forward front subframe bolts.

2.

Using the special tool, position the front subframe assembly in the vehicle. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.

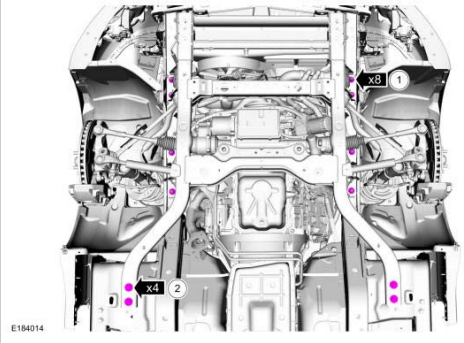
NOTE: Align the reference marks made during removal before tightening the subframe nuts and bolts.

3.

1.

Install the 8 new forward front subframe nuts.

Torque



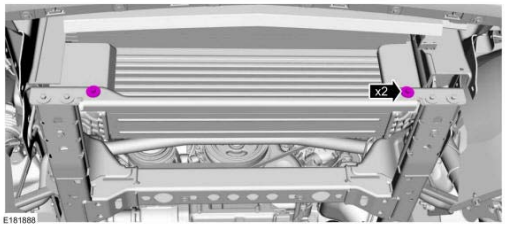
: 85 lb.ft (115 Nm)

2.

Install the 4 new rearward front subframe bolts.

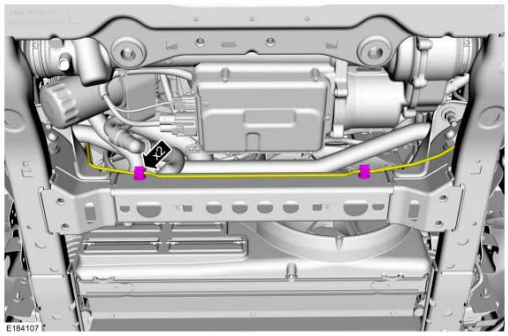
Torque

: 85 lb.ft (115 Nm)



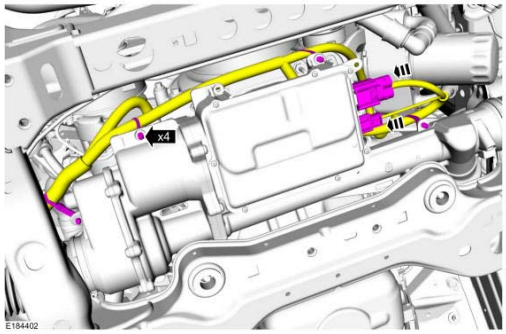
4.

Install the 2 bolts from the support bar on the front of the subframe.



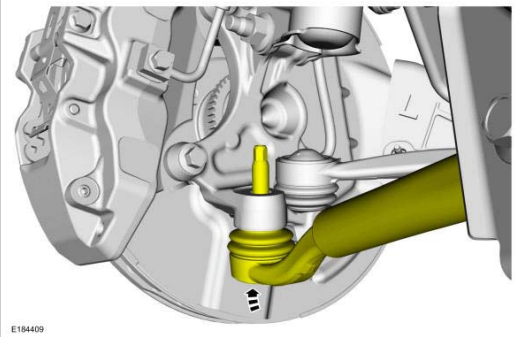
Torque

: 89 lb.in (10 Nm)



5.

Clip the crossover brake line into the 2 frame clips.

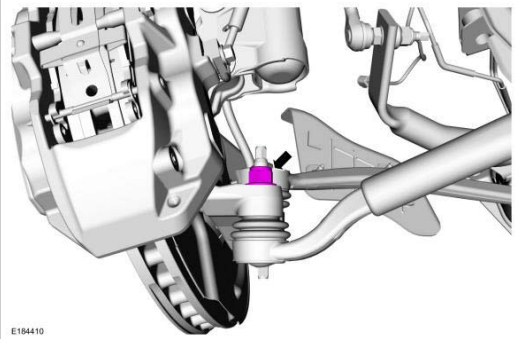


6.

Position the EPAS gear wiring harness, clip the 4 wiring fasteners and connect the 2 electrical connectors.

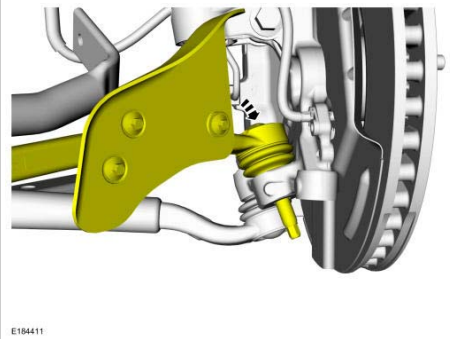
7.

On both sides. Connect the rear lower arm ball joint to the wheel knuckle.



8.

On both sides. Install the new rear lower arm ball joint nut.

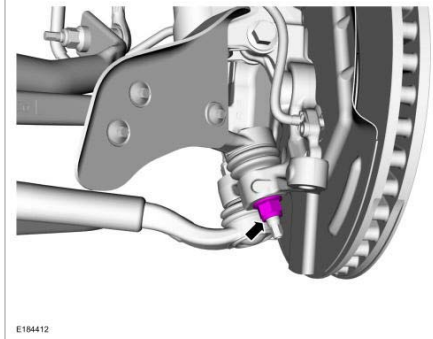


Torque

: 85 lb.ft (115 Nm)

9.

On both sides. Connect the forward lower arm ball joint to the wheel knuckle.



10.

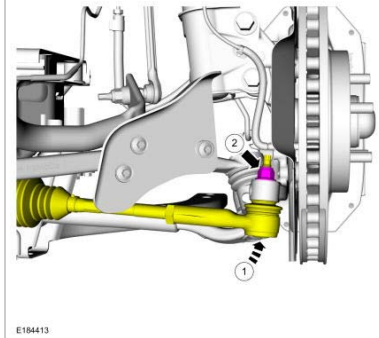
On both sides. Install the new forward lower arm ball joint nut.

Torque

: 85 lb.ft (115 Nm)

11.

1.



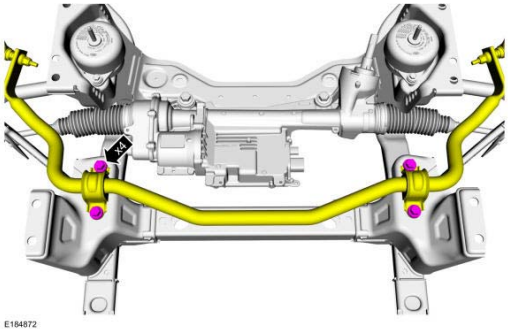
On both sides. Connect the tie rod end to the wheel knuckle.

2.

On both sides. Install the new tie rod end nut.

Torque

: 59 lb.ft (80 Nm)



12.

Position the stabilizer bar and install the 4 new stabilizer bar bracket bolts.

Torque

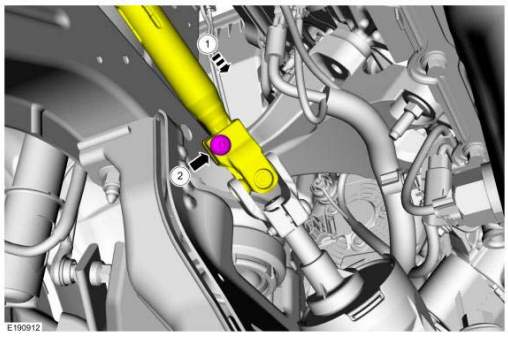
: 76 lb.ft (103 Nm)

NOTE: DO NOT attempt to remove or install the steering column lower coupler at the steering gear without first loosening the steering column dash seal and fasteners. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

NOTE: DO NOT hammer, pry or force steering column and column shafts during installation or removal. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

13.

1.



Connect the steering column shaft to the steering gear universal joint.

2.

Install the new steering column shaft bolt.

Torque

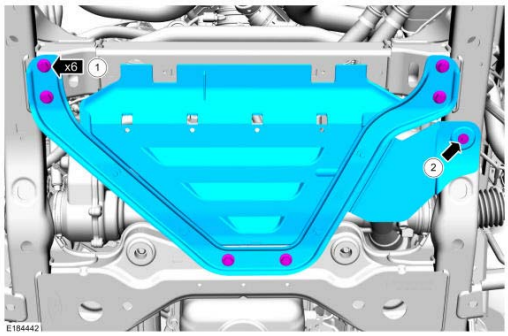
: 22 lb.ft (30 Nm)

14.

Inspect the steering column lower shaft. Refer to: Steering Column Collapsed Check .

15.

> *NOTE: If equipped.*



1.
Position the V-brace and underbody shield and install the 6 V-brace bolts.

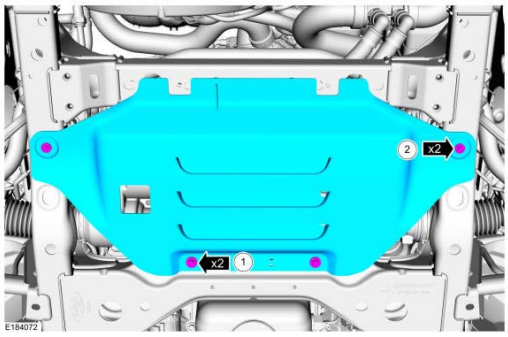
Torque

: 46 lb.ft (63 Nm)

2.

Install the underbody shield bolt.

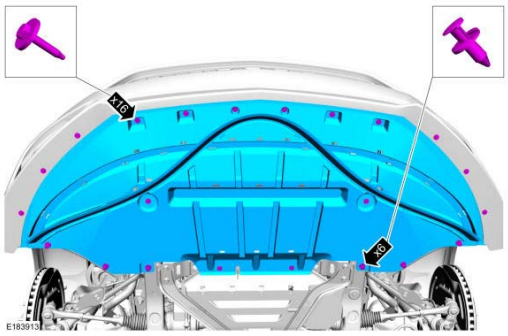
> *NOTE: If equipped.*



16.

1.

Position the underbody shield and install the 2 rearward underbody shield bolts.

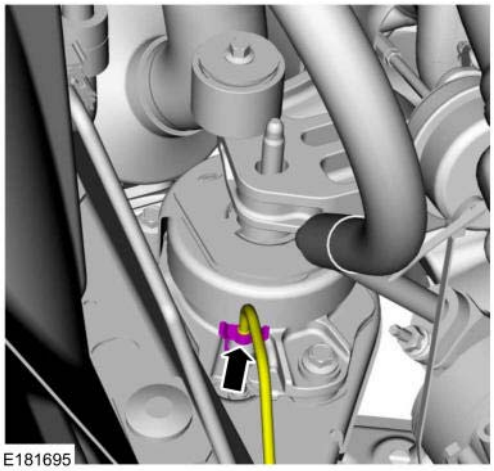


2.

Install the 2 remaining underbody shield bolts.

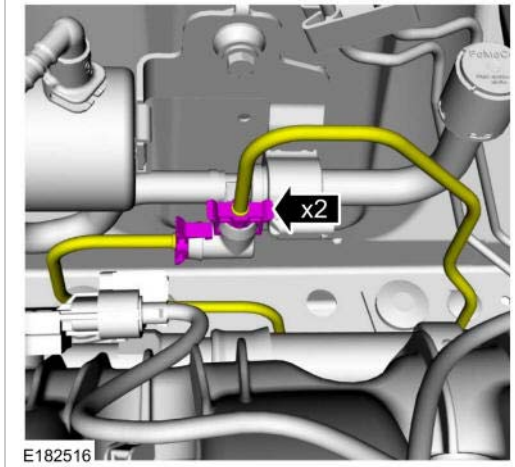
17.

Position the under body shield and install the 16 screws and the 6 push pins.



18.

Install the wheels and tires. Refer to: Wheel and Tire .

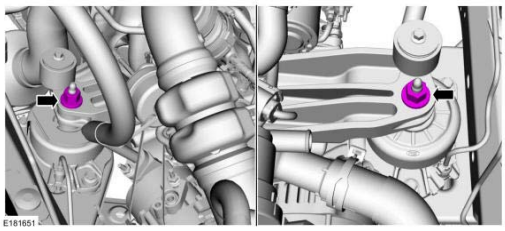


19.

Connect the vacuum tube to the RH engine mount.

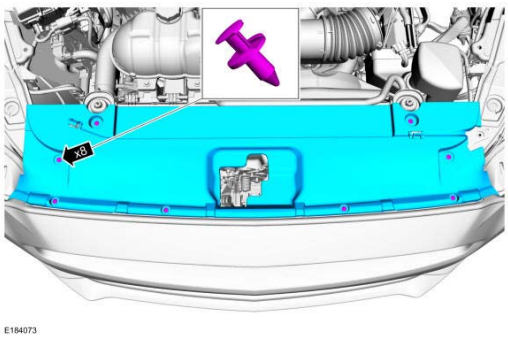
20.

Connect the 2 vacuum tubes to the engine mount control vacuum reservoir.



21.

Install the LH and RH engine mount nuts.

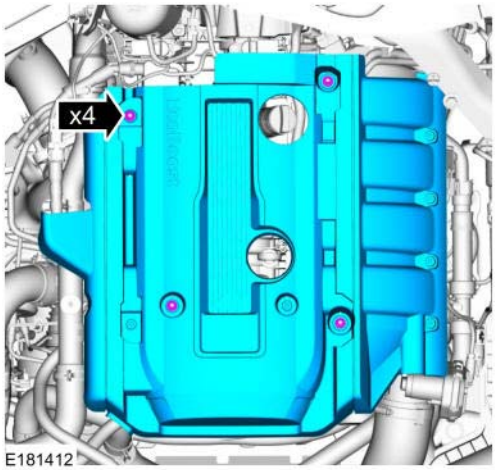


Torque

: 92 lb.ft (125 Nm)

22.

Position the upper radiator shield and install the 8 push pins.



23.

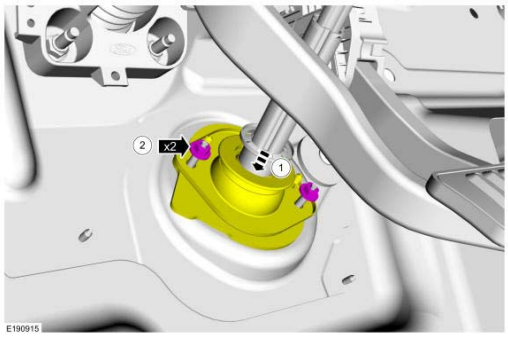
Install the engine appearance cover and the 4 nuts.

Torque

: 80 lb.in (9 Nm)

24.

1.



Position the steering column dash seal.

2.

Tighten the steering column dash seal nuts.

Torque

: 80 lb.in (9 Nm)

25.

Connect the battery ground cable. Refer to: Battery Disconnect and Connect .

26.

Check and if necessary, adjust front toe. Refer to: Front Toe Adjustment .

REMOVAL AND INSTALLATION > REAR SUBFRAME

Special Tool(s) / General Equipment

 ST1293-A	300-OTC1585AE Powertrain Lift

REMOVAL AND INSTALLATION > REAR SUBFRAME > REMOVAL

NOTE: Suspension fasteners are critical parts that affect the performance of vital components and systems. Failure of these fasteners may result in major service expense. Use the same or equivalent parts if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Tighten fasteners as specified.

1.

Remove both rear halfshafts. Refer to: Rear Halfshaft .

2.

Remove both toe links. Refer to: Toe Link .

3.

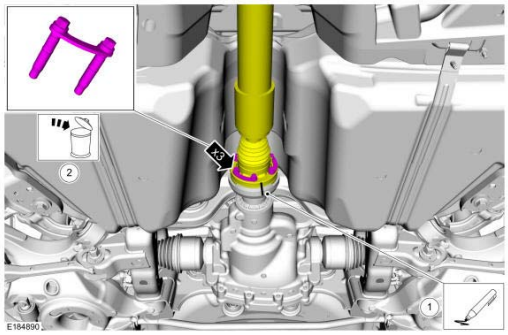
Remove both rear springs. Refer to: Spring .

4.

Remove the rear stabilizer bar. Refer to: Rear Stabilizer Bar .

NOTE: If equipped with dynamic suspension.

5.
Remove both rear ride height sensors. Refer to: Rear Suspension Height Sensor .



6.

1.

Index mark the driveshaft and the pinion flange for reference during installation.

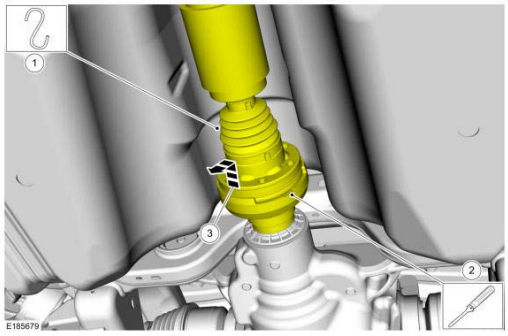
2.

Remove and discard the driveshaft-to-pinion flange bolts.

NOTE: Do not remove driveshaft from the pinion flange by pulling on the driveshaft tube. Damage to the CV-joint can result.

7.

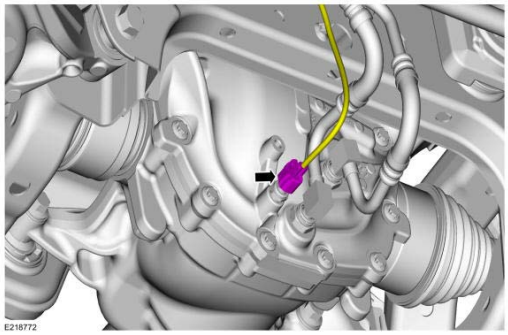
1.



Support the driveshaft.

2.

Using a screwdriver inserted into the slot on the pinion flange, pry the driveshaft from the pinion flange.



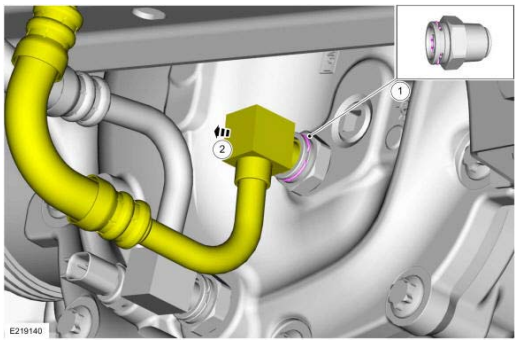
3.

Separate the driveshaft from the pinion flange.

8.

If equipped. Disconnect the differential fluid temperature sensor electrical connector.

9.



If equipped.

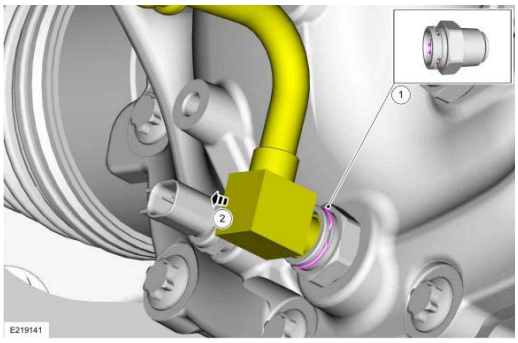
1.

Remove the differential cooling return line retaining clip.

2.

Remove the differential cooling return line and position aside.

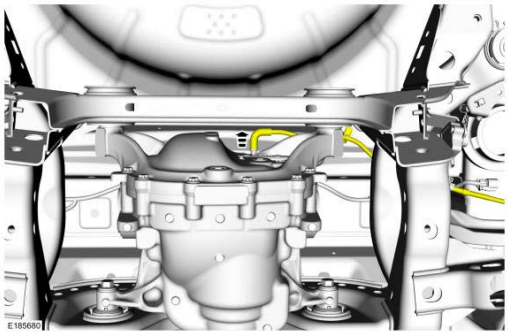
10.



If equipped.

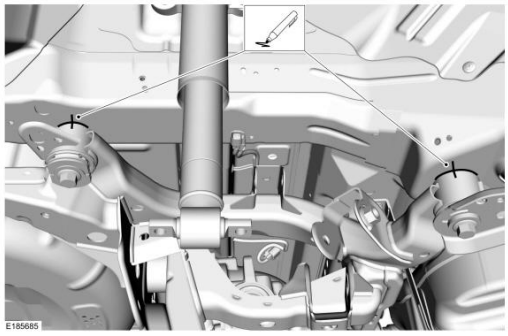
1.

Remove the differential cooling supply line retaining clip.



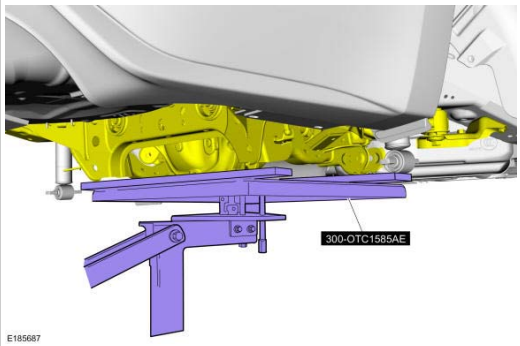
2.

Remove the differential cooling supply line and position aside.



11.

Disconnect the differential vent tube.

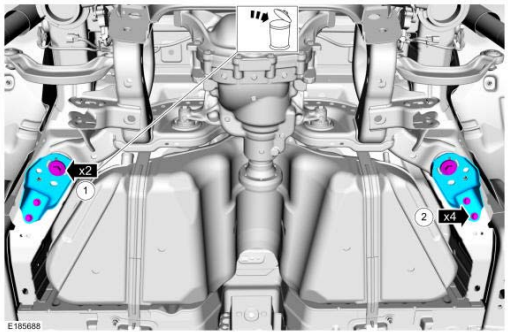


12.

On both sides. Index mark the rear subframe for reference during installation.

13.

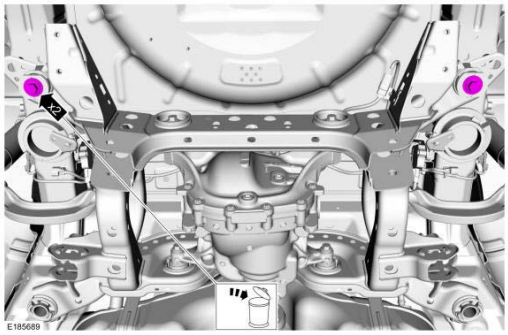
Position the powertrain lift under the rear subframe. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.



14.

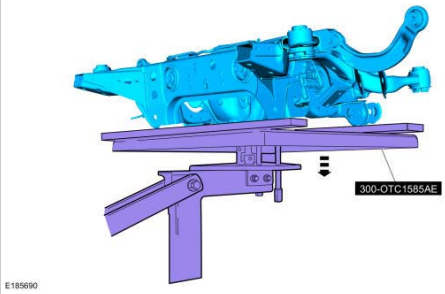
1.

Remove and discard the 2 rear subframe forward bolts.



2.

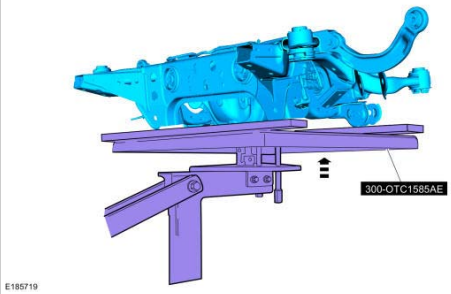
Remove the 4 rear subframe bracket bolts and remove the brackets.



15.

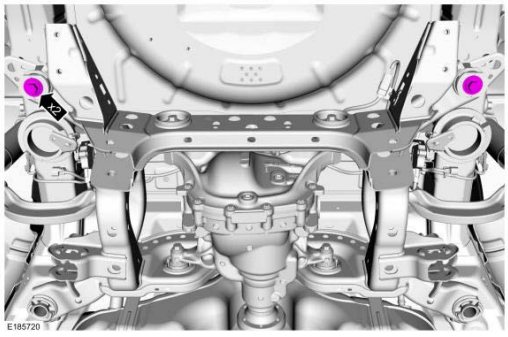
Remove and discard the 2 rear subframe rearward bolts.

16.



Using the powertrain lift, lower the rear subframe from the vehicle. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.

REMOVAL AND INSTALLATION > REAR SUBFRAME > INSTALLATION

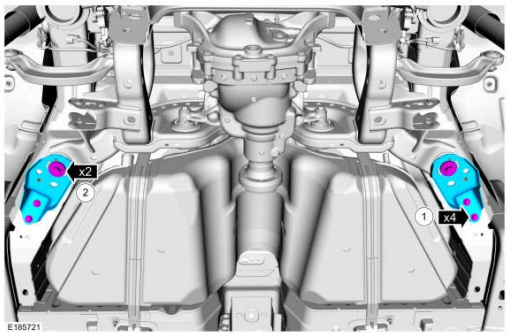


1.

Using the powertrain lift, raise the rear subframe to the vehicle. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.

NOTE: Only tighten the bolts finger tight at this stage.

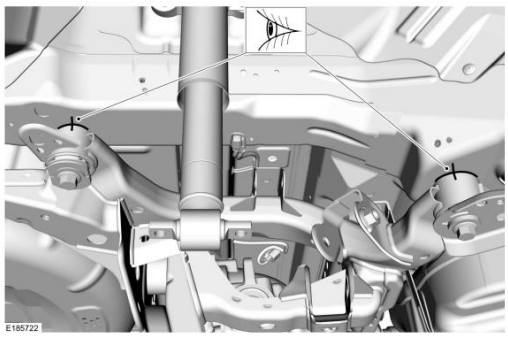
2.
Install the 2 new rear subframe rearward bolts.



3.

NOTE: Only tighten the bolts finger tight at this stage.

1.
Position the brackets and install the 4 rear subframe bracket bolts.



2.

Install the 2 new rear subframe forward bolts.

4.

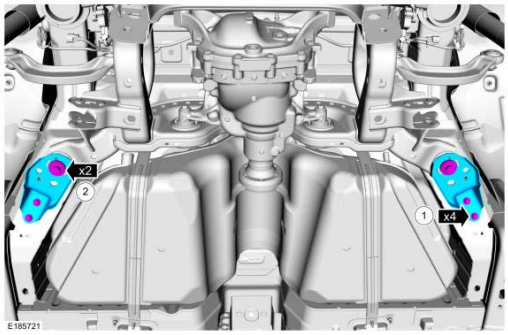
On both sides. Align the index marks made during removal.

5.

1.

Tighten the 4 rear subframe bracket bolts.

Torque



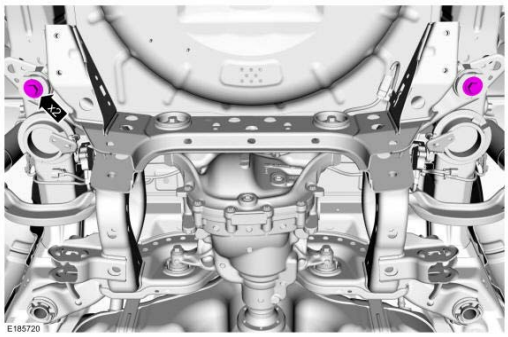
: 41 lb.ft (55 Nm)

2.

Tighten the 2 new rear subframe forward bolts.

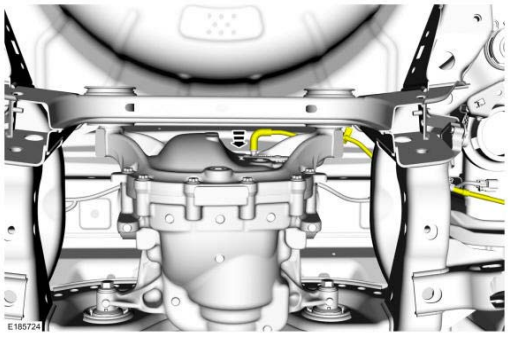
Torque

: 129 lb.ft (175 Nm)



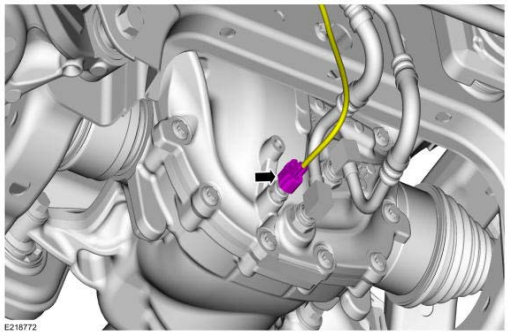
6.

Tighten the 2 new rear subframe rearward bolts.



Torque

: 129 lb.ft (175 Nm)



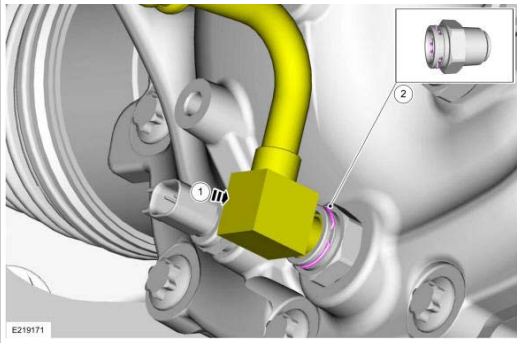
7.

Connect the differential vent tube.

8.

If equipped.Connect the differential fluid temperature sensor electrical connector.

9.



If equipped.

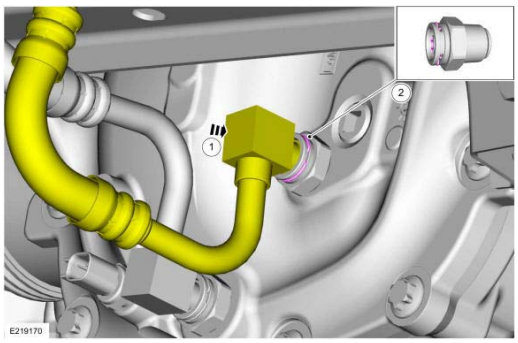
1.

Install the differential cooling supply line.

2.

Install the differential cooling supply line retaining clip.

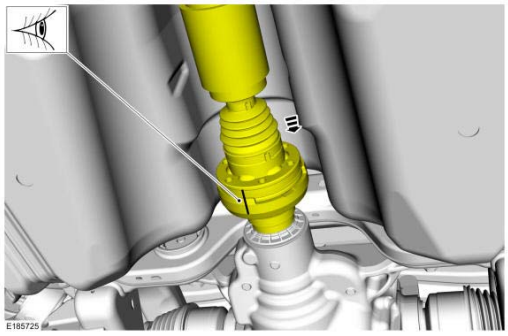
10.



If equipped.

1.

Install the differential cooling return line.

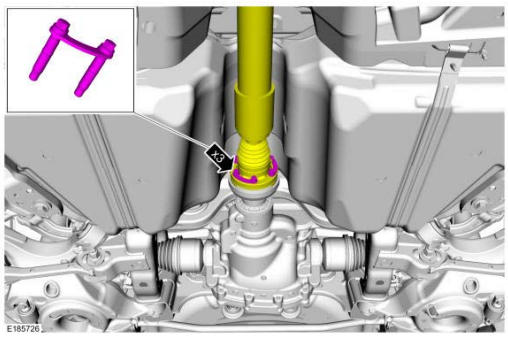


2.

Install the differential cooling return line retaining clip.

11.

Position the driveshaft to the pinion flange and align the index mark made during removal.



12.

Install the driveshaft-to-pinion flange bolts.

Torque

: 41 lb.ft (55 Nm)

NOTE: If equipped with dynamic suspension.

13.
Install both rear ride height sensors. Refer to: Rear Suspension Height Sensor .

14.

Install the rear stabilizer bar. Refer to: Rear Stabilizer Bar .

15.

Install both rear springs. Refer to: Spring .

16.

Install both toe links. Refer to: Toe Link .

17.

Install both rear halfshafts. Refer to: Rear Halfshaft .

18.

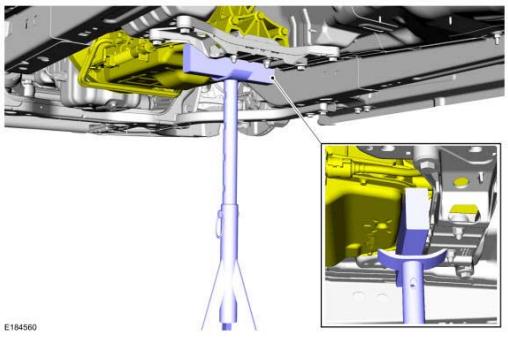
Check the differential fluid level. Refer to: Differential Fluid Level Check .

REMOVAL AND INSTALLATION > TRANSMISSION SUPPORT CROSSMEMBER

Special Tool(s) / General Equipment

Vehicle/Axle Stands
Wooden Block

REMOVAL AND INSTALLATION > TRANSMISSION SUPPORT CROSSMEMBER > REMOVAL



NOTE: The transmission crossmember must be installed in the same orientation as it was removed. An incorrectly installed crossmember will change the driveline angle and cause a shudder when accelerating from a stop or above average engine presence.

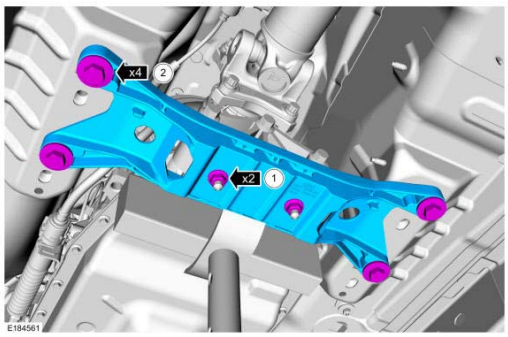
1.

With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

NOTE: Automatic transmission shown, manual transmission similar.

2.
Using a jackstand and a wooden block, support the transmission. Use the General Equipment: Vehicle/Axle Stands Use the General Equipment: Wooden Block

NOTE: Note the position of the components before removal.

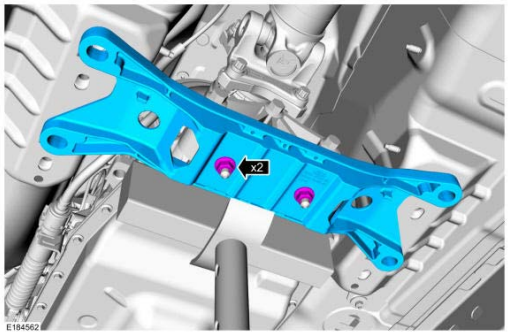


3.

1.

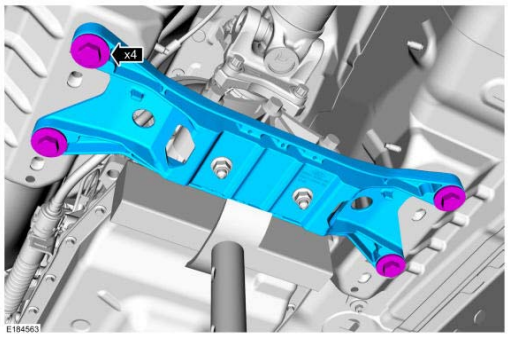
Remove the 2 transmission support insulator-to-transmission support crossmember nuts.

2.



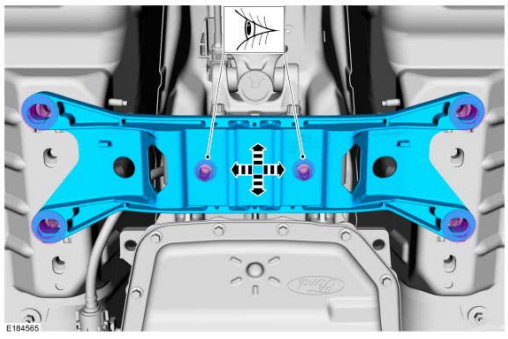
Remove the 4 transmission support crossmember bolts and the transmission support crossmember.

REMOVAL AND INSTALLATION > TRANSMISSION SUPPORT CROSSMEMBER > INSTALLATION



1.

With the same orientation as removed, position the transmission support crossmember and loosely install the 2 transmission support insulator-to-transmission support crossmember nuts.

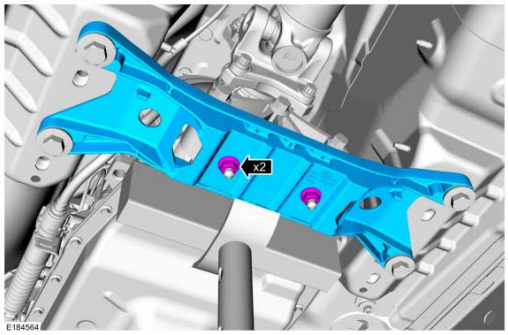


2.

Loosely install the 4 transmission support crossmember bolts.

NOTE: The transmission crossmember must be neutralized.

3.
Slide the transmission support crossmember forward, rearward and side-to-side until the gaps between the transmission support insulator studs and the transmission support crossmember are equal.

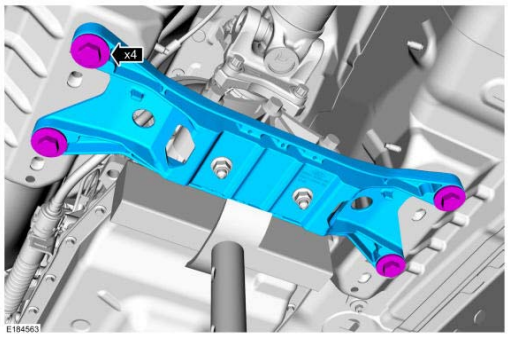


4.

With the transmission support crossmember neutralized, tighten the 2 transmission support insulator-to-transmission support crossmember nuts.

Torque

: 59 lb.ft (80 Nm)



5.

With the transmission support crossmember neutralized, tighten the 4 transmission support crossmember bolts.

Torque

: 46 lb.ft (63 Nm)

All vehicles

NOTE: Suspension fasteners are critical parts that affect the performance of vital components and systems. Failure of these fasteners may result in major service expense. Use the same or equivalent parts if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Tighten fasteners as specified.

NOTE: Disconnect the battery ground cable anytime the steering gear is being serviced or damage to the steering gear internal power relay may occur resulting in steering gear replacement.

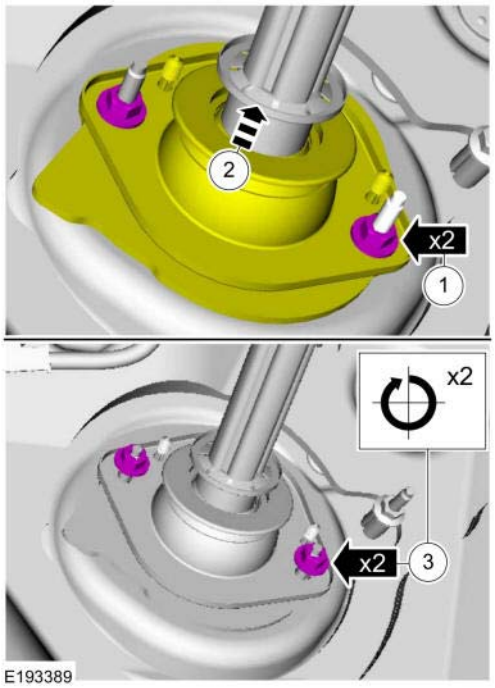
1.
Disconnect the battery ground cable. Refer to: Battery Disconnect and Connect .

NOTE: Make sure to minimize damage to the sealer foam and avoid pulling apart

dash seal brackets from retainer pins. Excessive damage may allow engine noise, fumes, air or water to enter the passenger compartment.

2.

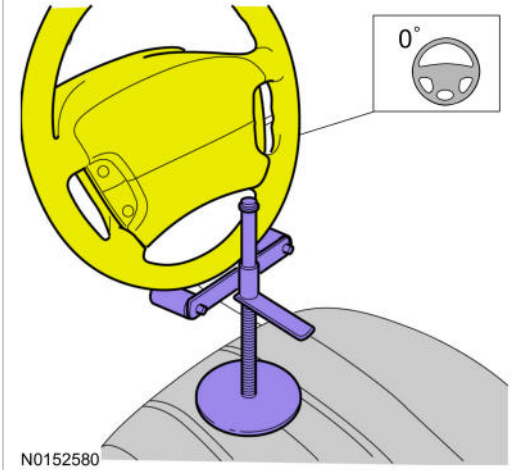
1.



Remove the steering column dash seal nuts.

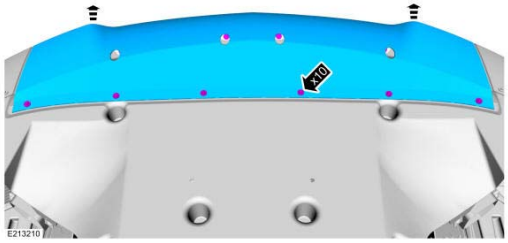
2.

Loosen the dash seal.



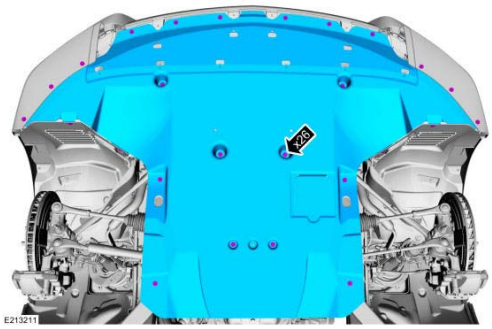
3.

Hand start the dash seal nuts.



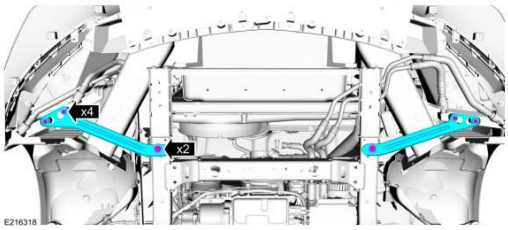
3.

Using a holding device, hold the steering wheel in the straight-ahead position.



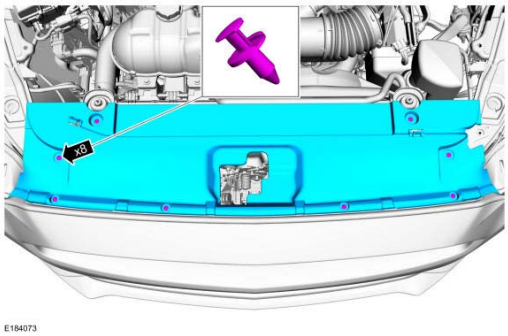
NOTE: If equipped.

4.
Remove the bolts and the underbody shield.



NOTE: If equipped.

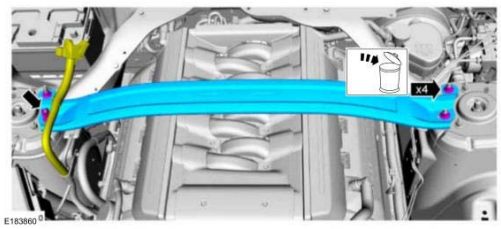
5.
Remove the bolts and the underbody shield.



NOTE: If equipped.

6.
Remove the bolts and the support brackets.

7.



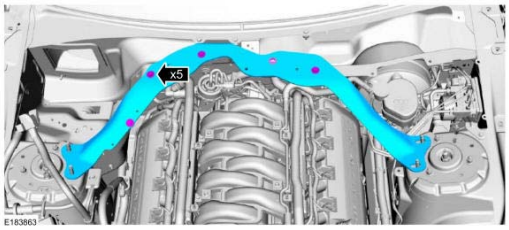
Remove the 8 push pins and the upper radiator shield.

5.0L 32V Ti-VCT

8.

Position aside the battery positive cable. Remove the 4 cross brace nuts and remove the cross brace.

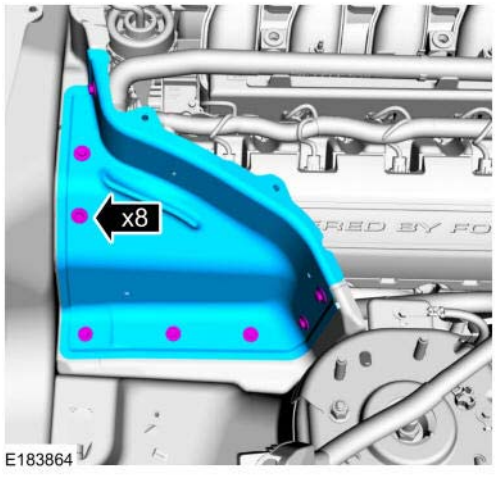
9.



Remove the battery tray. Refer to: Battery Tray .

10.

Remove the cowl panel grille. Refer to: Cowl Panel Grille .

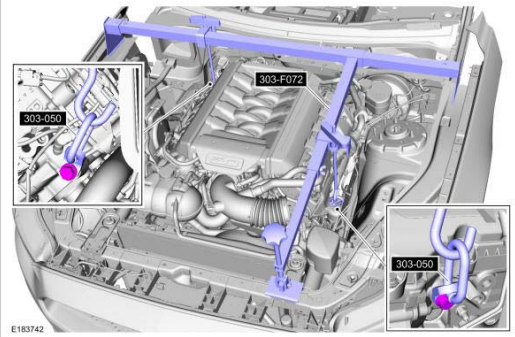


11.

Remove the 4 bolts and remove the cowl extension.

12.

Remove the 8 screws and the battery heat shield.



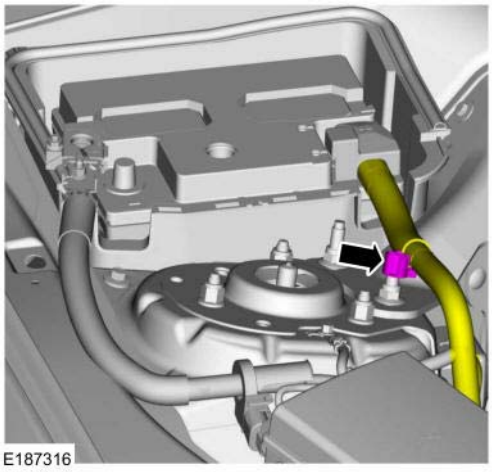
13.

Remove the air cleaner housing. Refer to: Air Cleaner .

NOTE: The engine does not need to be lifted, only supported in normal position.

NOTE: Do not position the legs of the Engine Support Bar on the fenders. Instead, position the legs on the body structure near the suspension strut tower. Failure to follow these instructions may result in body damage.

14.
Using the special tools, support the engine. Install Special Service Tool: 303-050 (T70P-6000) Lifting Bracket, Engine., 303-F072 Support Bar, Engine.



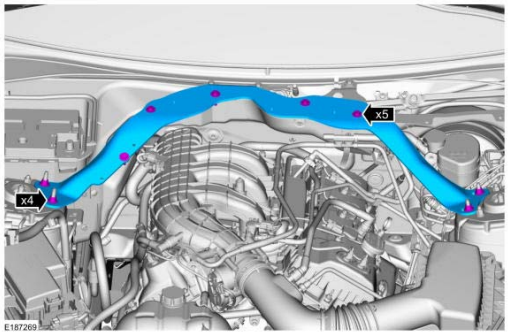
3.7L Duratec (227kW/301PS)

NOTE: If equipped with cowl extension.

15.
Remove the cowl panel grille. Refer to: Cowl Panel Grille .

NOTE: If equipped with cowl extension.

16.
Unclip and disconnect the battery positive cable.

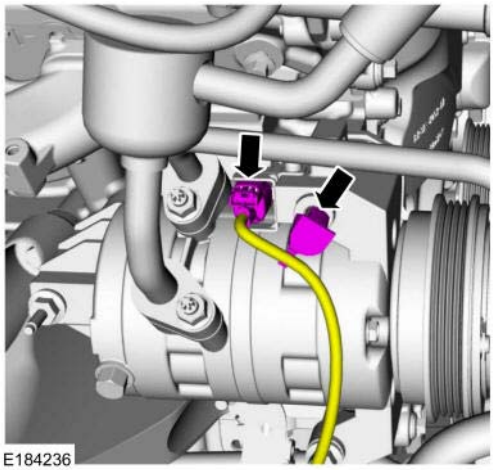


NOTE: If equipped.

17.

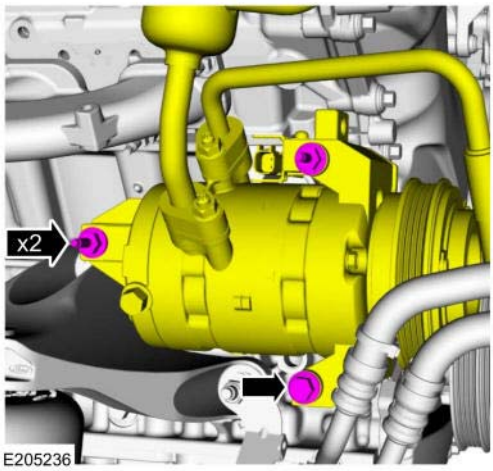
Remove the 4 cowl extension-to-strut tower nuts.

Remove the 5 cowl extension-to-cowl bolts and remove the cowl extension.



18.

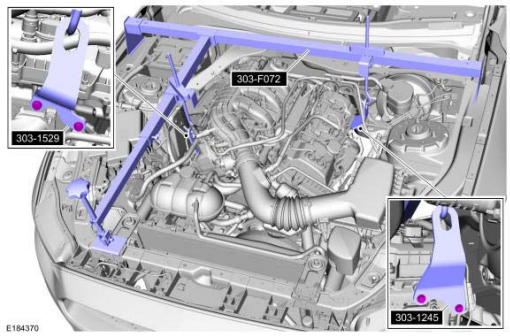
Position aside the A/C compressor belt. Refer to: Air Conditioning (A/C) Compressor Belt .



19.

Disconnect the A/C compressor electrical connector and the wire harness retainer.

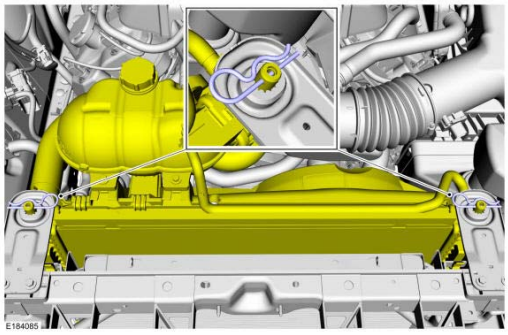
NOTE: The stud bolts and bolt will stay with the A/C compressor.



20.
Loosen the bolt and stud bolts and position the A/C compressor aside.

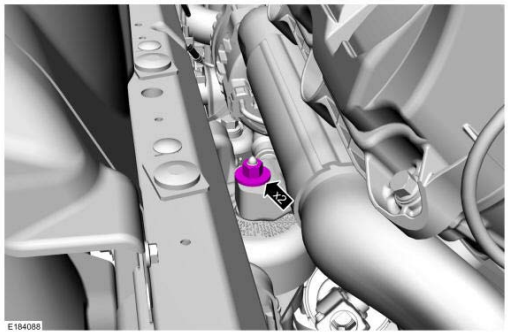
NOTE: The engine does not need to be lifted, only supported in normal position.

NOTE: Do not position the legs of the Engine Support Bar on the fenders. Instead, position the legs on the body structure near the suspension strut tower. Failure to follow these instructions may result in body damage.



21.
Using the special tools, support the engine. Use Special Service Tool: 303-1529 Lift Eye, Engine., 303-1245 Engine Lift Eye., 303-F072 Support Bar, Engine.

All vehicles

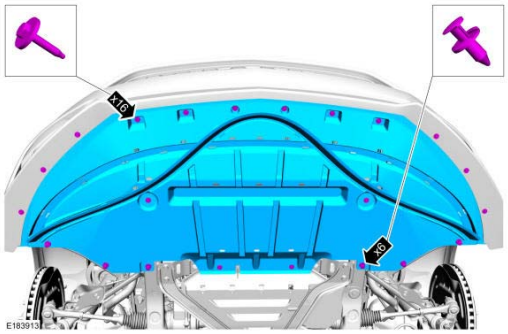


22.

Install clips to support the cooling module.

NOTE: LH shown RH similar.

23.
Remove the LH and RH engine mount nuts.



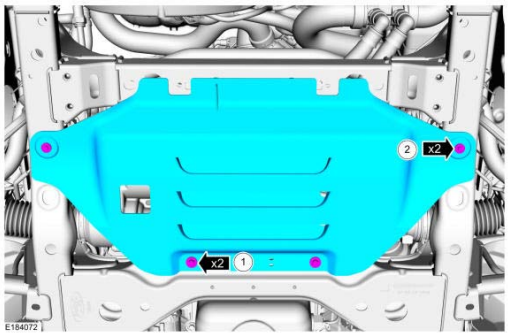
24.

Remove the wheels and tires. Refer to: Wheel and Tire .

25.

Remove the 6 push pins and the 16 screws and remove the under body shield.

NOTE: If equipped.



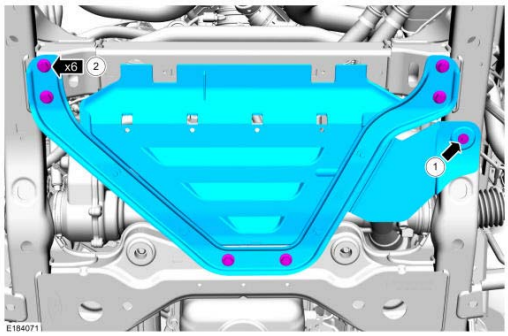
26.

1.

Remove the 2 rearward underbody shield bolts.

2.

Remove the 2 remaining underbody shield bolts and remove the underbody shield.



27.

NOTE: If equipped.

1.
Remove the underbody shield bolt.

NOTE: It is not necessary to separate the underbody shield from the V-brace.

2.
Remove the 6 V-brace bolts and remove the V-brace and underbody shield.

NOTE: DO NOT attempt to remove or install the steering column lower coupler at the steering gear without first loosening the steering column dash seal and fasteners. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious

personal injury or death.

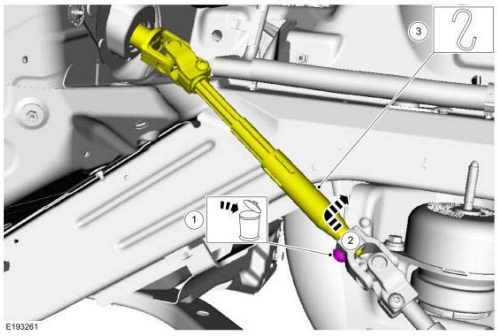
NOTE: DO NOT hammer, pry or force steering column and column shafts during installation or removal. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

WARNING: Do not reuse steering column shaft bolts. This may result in fastener failure and steering column shaft detachment or loss of steering control. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

28.

Detach the steering column lower shaft from the lower coupler.

1.



Remove and discard the steering column shaft bolt.

2.

Pull apart the steering column shaft from the coupler.

3.

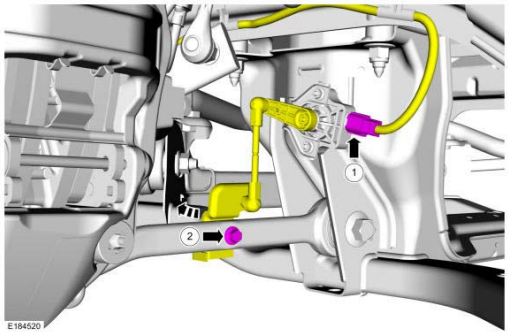
Secure the lower shaft to the frame rail to avoid damaging it during subframe removal.

NOTE: LH front ride height sensor shown, RH similar.

NOTE: If equipped with dynamic suspension.

NOTE: The front suspension height sensor must be disconnected from the lower control arm prior to servicing suspension components or damage to the suspension

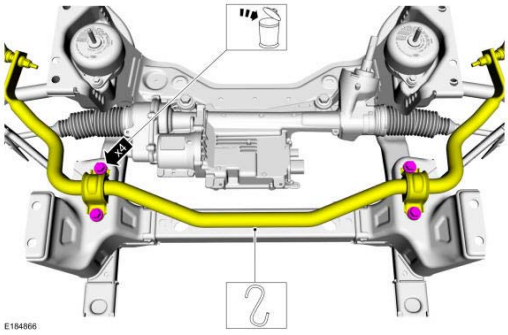
height sensor and/or the vehicle dynamic suspension system may occur. The sensor will need to be recalibrated after reassembly.



29.

1.

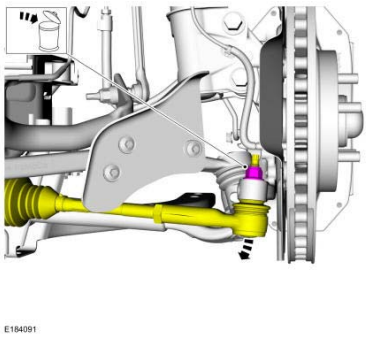
On both sides. Disconnect the front ride height sensor electrical connector.



2.

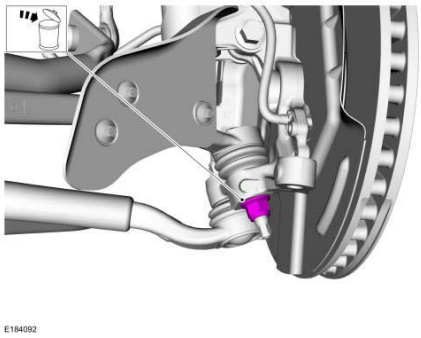
On both sides. Remove the bolt and disconnect the front ride height sensor arm bracket from the reward lower control arm.

30.



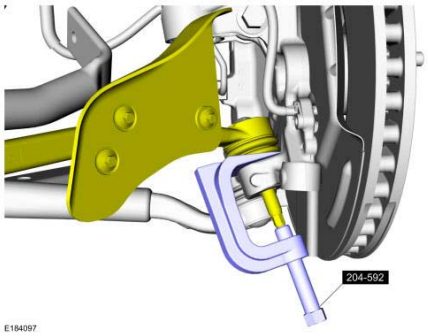
Remove and discard the 4 stabilizer bar bracket bolts and support the stabilizer bar.

NOTE: Use care when installing the tie rod separator or damage to the outer tie-rod end boot may occur.



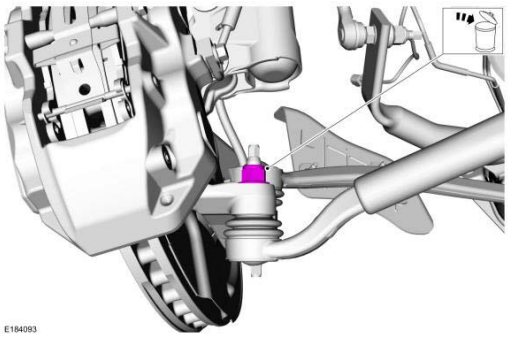
NOTE: Do not use a hammer to separate the outer tie-rod end from the wheel knuckle or damage to the wheel knuckle may result.

31.
On both sides. Remove and discard the tie rod end nut and separate the tie rod end from the wheel knuckle. Use the General Equipment: Tie Rod End Remover



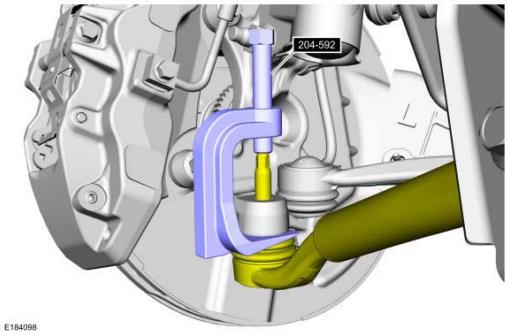
32.

On both sides. Remove and discard the front lower arm ball joint nut.



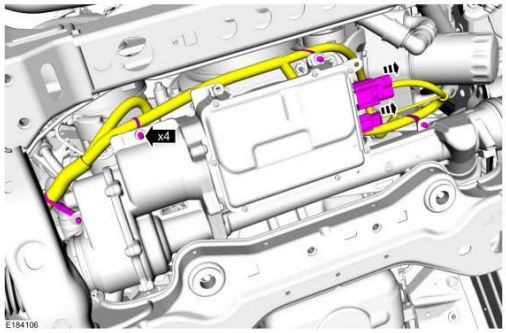
NOTE: Once pressure is applied to the ball joint with the Ball Joint Separator and Adapter, it may be necessary to tap the wheel knuckle at the ball joint area to separate the ball joint from the wheel knuckle.

33.
On both sides. Using the special tool, separate the front lower arm ball joint from the wheel knuckle. Use Special Service Tool: 204-592 Separator, Lower Arm Ball Joint.



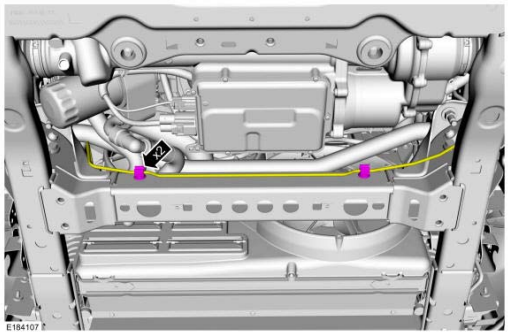
34.

On both sides. Remove and discard the rear lower arm ball joint nut.



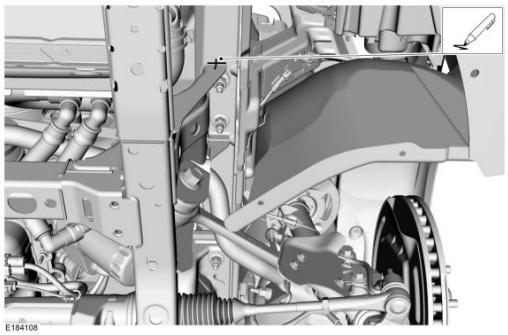
NOTE: Once pressure is applied to the ball joint with the Ball Joint Separator and Adapter, it may be necessary to tap the wheel knuckle at the ball joint area to separate the ball joint from the wheel knuckle.

35.
On both sides. Using the special tool, separate the rear lower arm ball joint from the wheel knuckle. Use Special Service Tool: 204-592 Separator, Lower Arm Ball Joint.



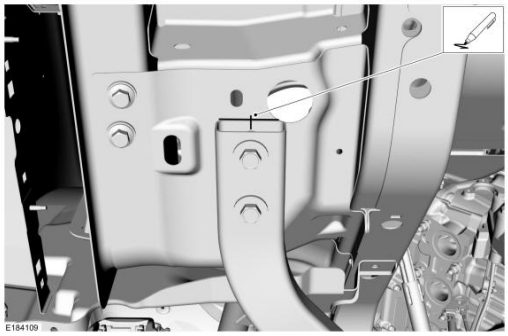
36.

Disconnect the 2 EPAS gear electrical connectors and unclip the 4 wiring fasteners and position the wiring harness aside.



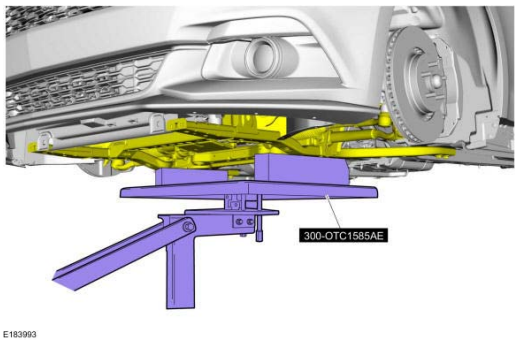
37.

Unclip the crossover brake line from the 2 frame clips.



38.

Mark the position of the front subframe for reference during installation.

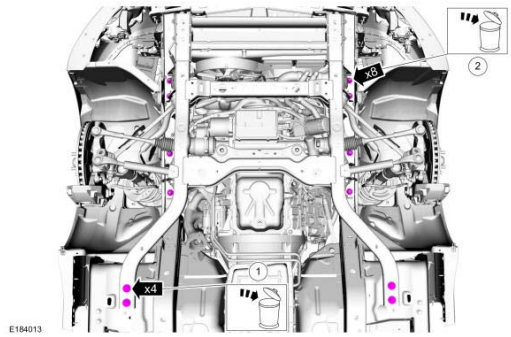


39.

Mark the position of the front subframe for reference during installation.

40.

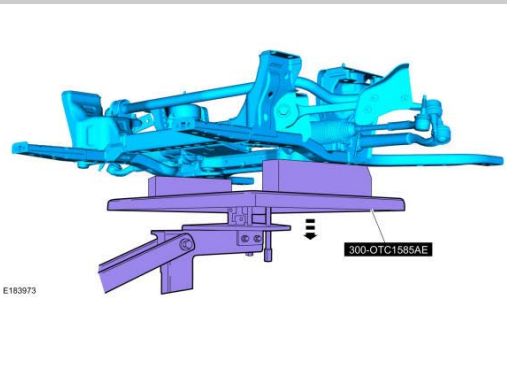
Position the special tool under the front subframe assembly. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.



41.

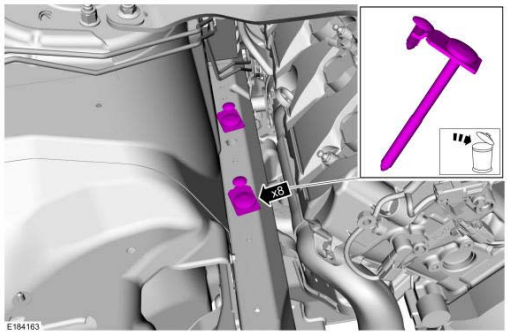
1.

Remove and discard the 4 rearward front subframe bolts.



2.

Remove and discard the 8 forward front subframe nuts.

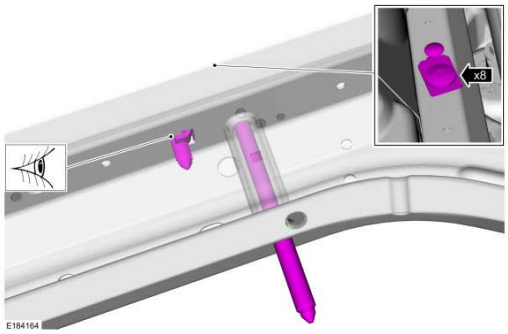


42.

Using the special tool, lower the front subframe assembly from the vehicle. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.

43.

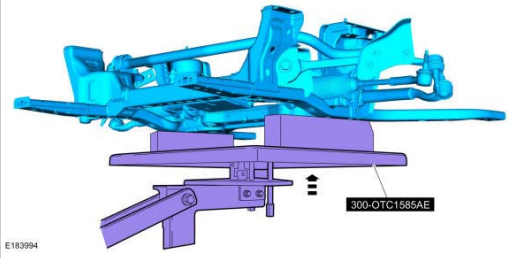
Remove and discard the 8 forward front subframe bolts.



REMOVAL AND INSTALLATION > FRONT SUBFRAME - 3.7L DURATEC (227KW 301PS) 5.0L 32V TI-VCT 5.2L 32V TI-VCT > INSTALLATION

All vehicles

NOTE: Make sure that the tab is engaged to the body rail.



1.
Install 8 new forward front subframe bolts.

5.0L 32V Ti-VCT

2.

Using the special tool, position the front subframe assembly in the vehicle. Use Special Service Tool: 300-OTC1585AE Powertrain Lift.

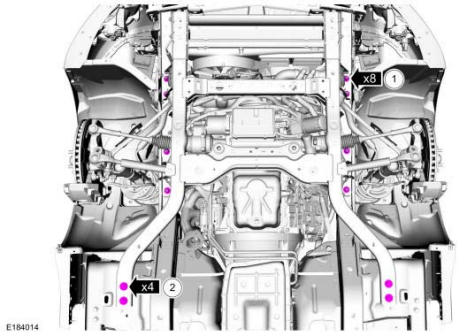
NOTE: Align the reference marks made during removal before tightening the subframe nuts and bolts.

3.

1.

Install the 8 new forward front subframe nuts.

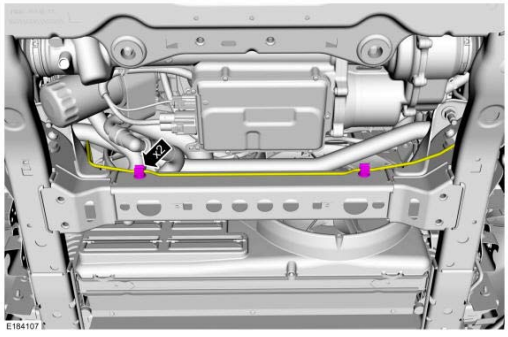
Torque



: 85 lb.ft (115 Nm)

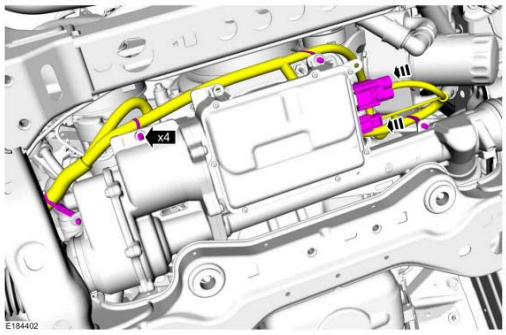
2.

Install the 4 new rearward front subframe bolts.



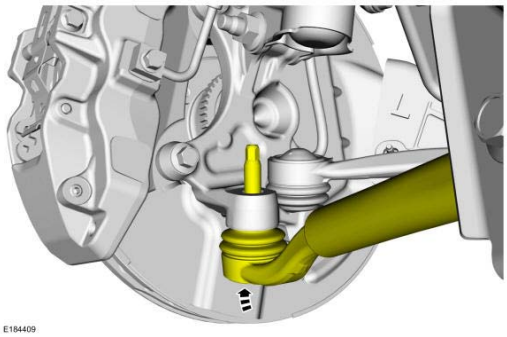
Torque

: 85 lb.ft (115 Nm)



4.

Clip the crossover brake line into the 2 frame clips.

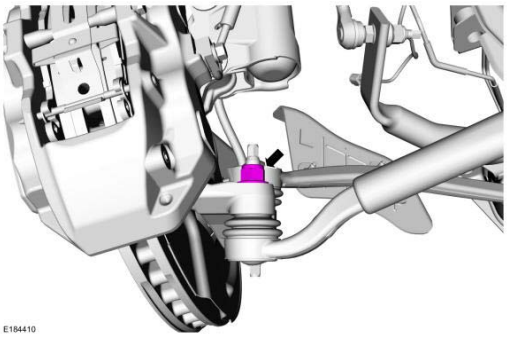


5.

Position the EPAS gear wiring harness, clip the 4 wiring fasteners and connect the 2 electrical connectors.

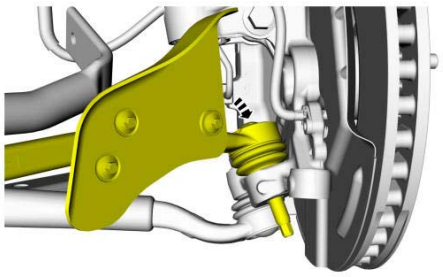
6.

On both sides. Connect the rear lower arm ball joint to the wheel knuckle.



7.

On both sides. Install the new rear lower arm ball joint nut.

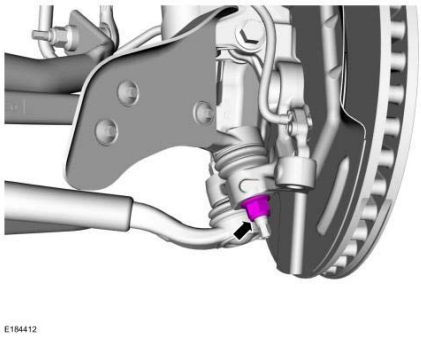


Torque

: Non SVT: 85 lb.ft (115 Nm) SVT: 76 lb.ft (103 Nm)

8.

On both sides. Connect the forward lower arm ball joint to the wheel knuckle.



9.

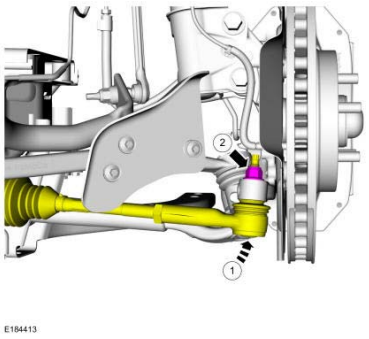
On both sides. Install the new forward lower arm ball joint nut.

Torque

:Non SVT: 85 lb.ft (115 Nm)SVT: 76 lb.ft (103 Nm)

10.

1.



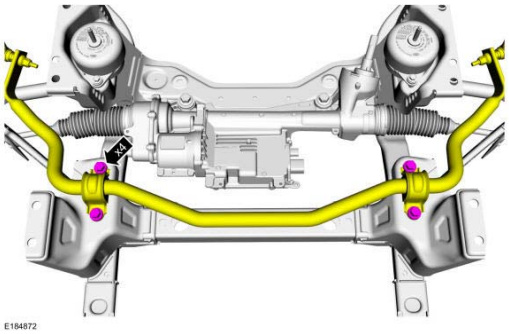
On both sides. Connect the tie rod end to the wheel knuckle.

2.

On both sides. Install the new tie rod end nut.

Torque

: Non SVT: 59 lb.ft (80 Nm) SVT: 30 lb.ft (40 Nm)



11.

Position the stabilizer bar and install the 4 new stabilizer bar bracket bolts.

Torque

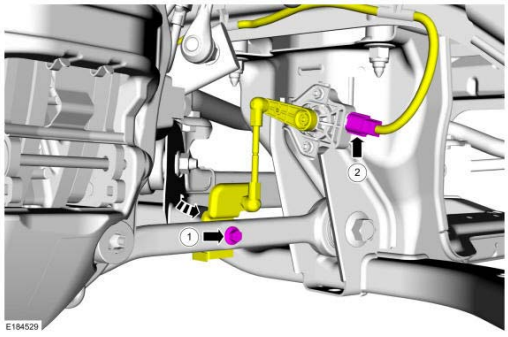
: 76 lb.ft (103 Nm)

NOTE: LH front ride height sensor shown, RH similar.

NOTE: If equipped with dynamic suspension.

12.

1.



On both sides. Position the front ride height sensor arm bracket and install the bolt.

Torque

: 177 lb.in (20 Nm)

2.

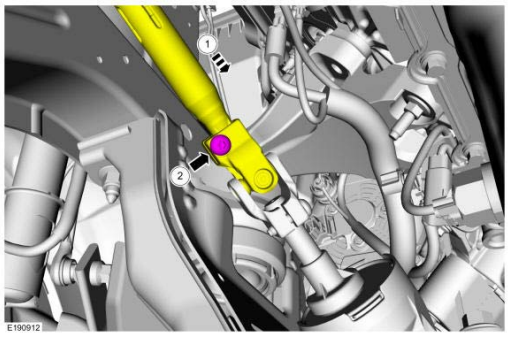
On both sides. Connect the front ride height sensor electrical connector.

NOTE: DO NOT attempt to remove or install the steering column lower coupler at the steering gear without first loosening the steering column dash seal and fasteners. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

NOTE: DO NOT hammer, pry or force steering column and column shafts during installation or removal. Failure to follow this instruction may cause damage to steering components that could lead to loss of steering control during vehicle operation and could result in serious personal injury or death.

13.

1.



Connect the steering column shaft to the steering gear universal joint.

2.

Install the new steering column shaft bolt.

Torque

: 22 lb.ft (30 Nm)

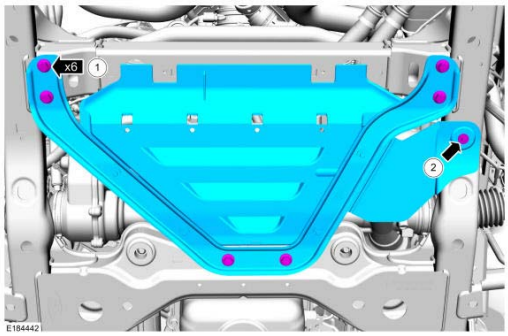
14.

Inspect the steering column lower shaft. Refer to: Steering Column Collapsed Check .

15.

If equipped.

1.



Position the V-brace and underbody shield and install the 6 V-brace bolts.

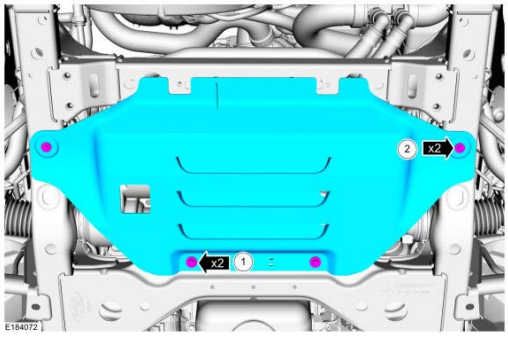
Torque

: 46 lb.ft (63 Nm)

2.

Install the underbody shield bolt.

16.



If equipped.

1.

Position the underbody shield and install the 2 rearward underbody shield bolts.

2.

Install the 2 remaining underbody shield bolts.

17.

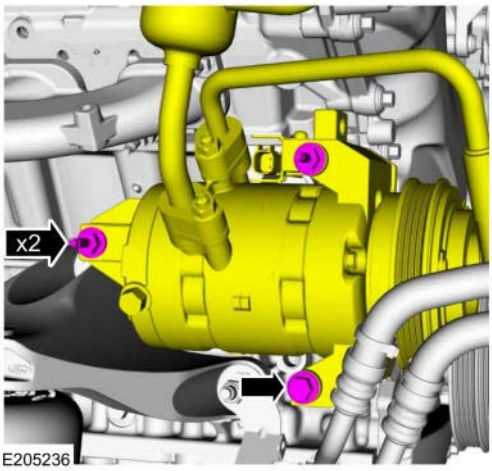
Position the under body shield and install the 16 screws and the 6 push pins.

NOTE: LH shown RH similar.

18.
Install the LH and RH engine mount nuts.

Torque

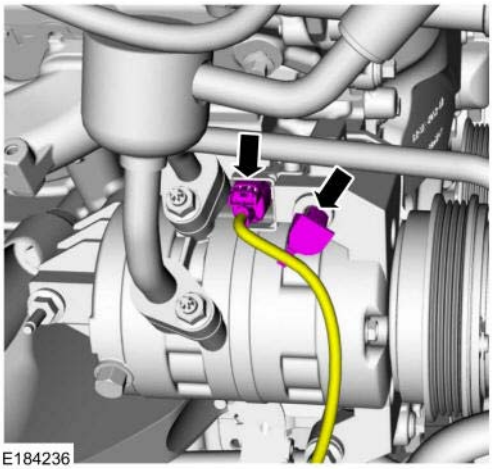
: 46 lb.ft (63 Nm)



3.7L Duratec (227kW/301PS)

19.

Position the A/C compressor and install the bolt and stud bolts.



Torque

: 18 lb.ft (25 Nm)

20.

Connect the A/C compressor electrical connector and the wire harness retainer.

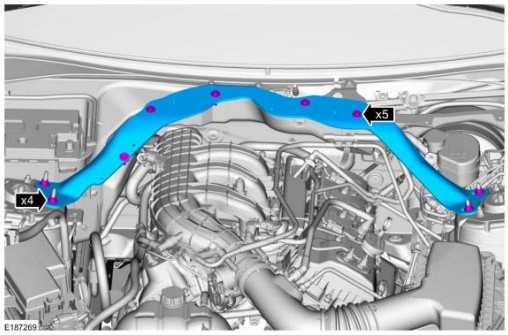
21.

Install the A/C compressor belt. Refer to: Air Conditioning (A/C) Compressor Belt .

22.

If equipped.

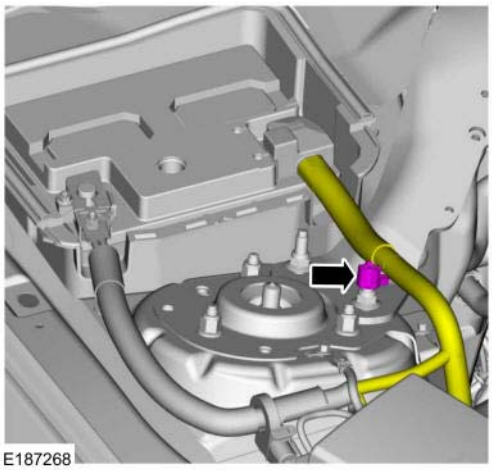
Position the cowl extension and install the 5 cowl extension-to-cowl bolts.



Torque

: 26 lb.ft (35 Nm)

Install the 4 cowl extension-to-strut tower nuts.



Torque

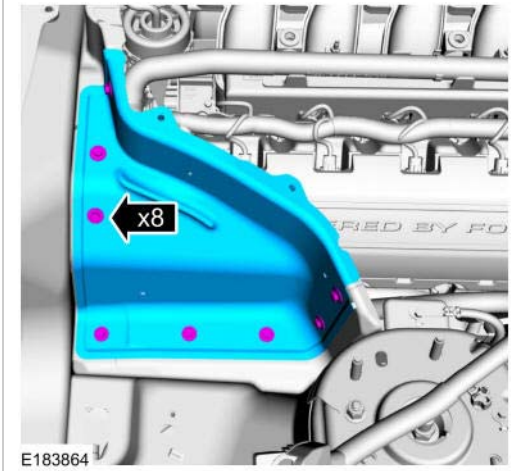
: 41 lb.ft (55 Nm)

NOTE: If equipped with cowl extension.

23.
Clip the battery cable.

NOTE: If equipped with cowl extension.

24.
Install the cowl panel grille. Refer to: Cowl Panel Grille .



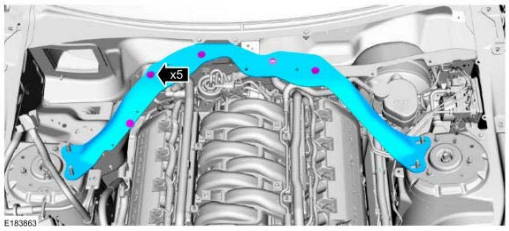
5.0L 32V Ti-VCT

25.

Position the battery heat shield and install the 8 screws.

Torque

: 80 lb.in (9 Nm)



26.

Position the cowl extension and install the 4 bolts.

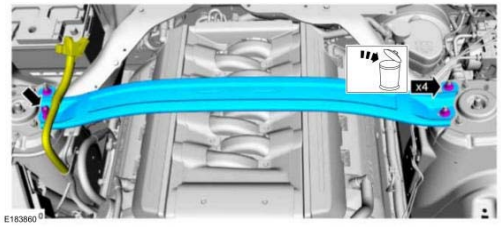
Torque

: 26 lb.ft (35 Nm)

27.

Install the cowl panel grille. Refer to: Cowl Panel Grille .

28.



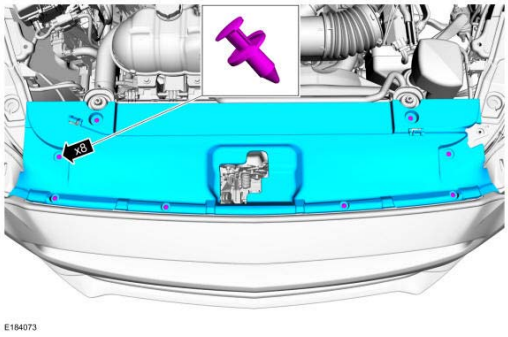
Install the battery tray. Refer to: Battery Tray .

29.

Position the cross brace and install the 4 cross brace nuts. Position the battery positive cable.

Torque

: 41 lb.ft (55 Nm)



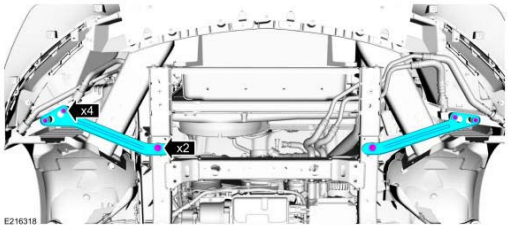
30.

Install the air cleaner housing. Refer to: Air Cleaner .

All vehicles

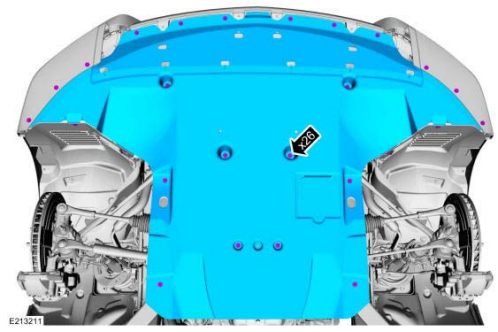
31.

Position the upper radiator shield and install the 8 push pins.



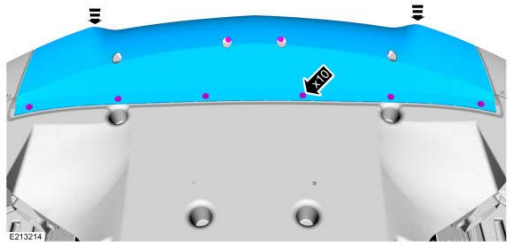
NOTE: If equipped.

32.
Install the 2 support brackets and the bolts.



Torque

: Bracket to subframe bolts.: 22 lb.ft (30 Nm) Bracket to cooler bolts.: 93 lb.in (10.5 Nm)



NOTE: If equipped.

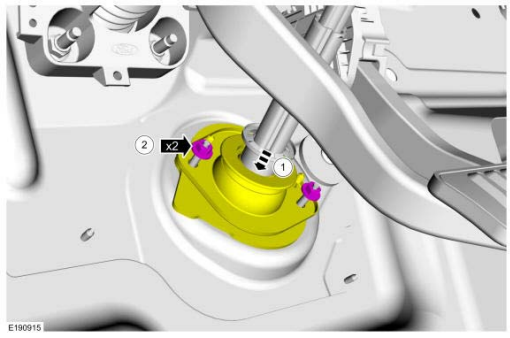
33.
Position the underbody shield and install the bolts.

NOTE: If equipped.

34.
Position the underbody shield and install the bolts.

35.

1.



Position the steering column dash seal.

2.

Tighten the steering column dash seal nuts.

Torque

: 80 lb.in (9 Nm)

36.

Connect the battery ground cable. Refer to: Battery Disconnect and Connect .

37.

Check and if necessary, adjust front toe. Refer to: Front Toe Adjustment .

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - OVERVIEW > OVERVIEW

The ABS and stability control systems are comprised of the following subsystems and features which assist the driver in maintaining control of the vehicle:

- Anti-lock braking
- EBD
- Electronic Stability Control (ESC)
- Hill start assist
- Launch control
- Line lock
- Selectable drive mode
- Supplemental braking assist
- Supports adaptive cruise control
- Supports collision avoidance
- Traction control

Anti-lock braking helps maintain steering control by preventing the wheels from locking up during hard braking.

The EBD system helps maintain vehicle control by keeping a balanced braking condition between the front and rear wheels.

The Electronic Stability Control (ESC) system helps prevent skids or lateral slides by modulating brake fluid to the brake calipers and reducing engine torque.

The hill start assist system is designed to assist the driver during hill starts. Using the ABS, the hill start assist system holds the vehicle on an incline for a short time, allowing the driver to release the brake pedal and press the accelerator pedal without needing to use the parking brake.

The launch control feature works in conjunction with the ABS and the PCM to maximize traction from a standing start acceleration in a straight line. Launch control enables a unique "drag start" traction control calibration designed for high grip surfaces.

The line lock feature allows the rear wheels to spin freely while the front brakes are applied. This allows the rear tires to be "conditioned" to allow maximum traction. This feature is intended for use at race tracks only and should not be used on public roads.

The selectable drive mode system helps maintain vehicle traction by adapting the responses of the engine, transmission, EPAS and stability control system to the demands of the current selected driving mode; normal, snow-wet, sport and track.

The supplemental braking assist feature uses the hydraulic pump motor and HCU to provide additional braking assist in the event of severe vacuum loss at the brake booster or during a severe braking event.

The ABS supports the adaptive cruise control system by applying the brakes as necessary to maintain the distance gap set by the driver. For information on the adaptive cruise control system, Refer to: Cruise Control - System Operation and Component Description .

The ABS supports the collision avoidance system by monitoring information and precharging the brake system allowing the vehicle to stop in the shortest distance possible. For information on the collision avoidance system, Refer to: Collision Warning and Collision Avoidance System - System Operation and Component Description .

The traction control system helps prevent loss of traction by reducing drive wheel spin during acceleration.

Some noise from the system and pulsations in the brake pedal are normal conditions during most ABS and stability control events. Also, longer than normal brake pedal travel may be experienced immediately following an ABS or stability control activation.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION

System Operation

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > NETWORK MESSAGE CHART

Module Network Input Messages - ABS Module

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	This message is sent to the GWM and then to the ABS module. The ABS module uses accelerator pedal position information for correct operation of the traction control, ESC and hill start assist features.
Ambient air temperature	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current ambient air temperature. The ABS module uses this information for calculations in determining the operational status of the various stability control systems and

		features.
Adaptive cruise control braking cancel	CCM	This messages informs the ABS module the adaptive cruise control system no longer requires vehicle braking.
Adaptive cruise control deceleration	CCM	This message is used to request vehicle deceleration by the ABS module for the adaptive cruise control system, including how much brake force is required and if precharging of the brake system is necessary.
Battery low state of charge	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of a low state of charge in the vehicle 12-volt battery.
Cruise control system status	PCM	This message is sent to the GWM and then to the ABS module. The ABS module uses cruise control system status for adaptive cruise control deceleration and braking.
Brake pedal applied	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has pressed the brake pedal. This message is also used by the ABS module to check the brake pressure sensor located inside the HCU.
Clutch pedal position	PCM	This message is sent to the GWM and then to the ABS module. This message is used by the ABS module for the hill start assist feature, launch control feature and line lock feature.
Collision mitigation by braking deceleration	CCM	This message is used to request vehicle deceleration by the ABS module for the collision avoidance system, including how much brake force is required and how much precharging of the brake system is necessary.

Door ajar status	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current door ajar status. There is a separate message for each door. The ABS module resets the parameters used for ESC when a door is opened and closed.
Driver seat belt buckle status	RCM	The ABS module resets the parameters used for the ESC function when the driver seat belt is buckled or unbuckled.
Engine disable status	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the engine is currently disabled or enabled due to the stop-start feature.
Engine RPM	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current engine RPM. This message is used by the ABS module for the hill start assist feature and launch control feature.
Engine torque output	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current engine torque output. This information is used for the hill start assist feature and launch control feature.
Gear lever position	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current transmission gear lever position. This message is used for operation of the hill start assist feature and the ESC feature. The hill start assist feature operates in forward and reverse gears but the ESC feature does not operate when the transmission is in REVERSE.

Hill start assist mode	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current, driver selected mode for the hill start assist feature; off, auto or manual.
Ignition key type	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current ignition key type; MyKey® admin key, MyKey® restricted key, key not programmed - read failure, unknown key type or invalid key type. The ABS module uses the ignition key type for activation and deactivation of certain stability control features.
Ignition status	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current ignition status; off, accessory, run, start, unknown or invalid.
Launch control request	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has requested launch control feature activation.
Launch control system status	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the launch control system status as selected by the driver.
Line lock request	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has requested line lock feature activation.
Park brake status	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current parking brake status; applied or released. The ABS module uses

		this information for the hill start assist feature.
Power pack status	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current engine operation status; Off - torque not available, On - torque not available, On - torque available or Start in Progress - torque not available. This information is used for the activation and operation of the stability control features.
RCM serial number	RCM	The ABS module stores the RCM serial number and verifies the serial number when the vehicle is started or the ignition is set to RUN or ACC. Over time, the ABS module learns the offset of the sensors inside the RCM. When a new serial number is found and the IVD Initialization procedure is carried out using a diagnostic scan tool, the ABS module resets the offset number learned for ESC.
Reverse gear selected	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has requested REVERSE gear and the current status of REVERSE gear; active, inactive or faulted. This message is used for operation of the hill start assist feature and the ESC feature. The hill start assist feature operates in forward and reverse gears but the ESC feature does not operate when the transmission is in REVERSE.
Selectable drive mode	FCIM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current, driver selected vehicle mode; Normal, Sport, Snow-Wet or Track. The ABS module adjusts the thresholds for anti-lock

		braking and stability control system intervention depending on the mode selected.
Stability-traction control mode	FCIM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current, driver selected mode for the traction control and stability control features; on, off or sport.
Steering angle sensor data	PSCM	Several steering angle messages are sent to the ABS module from the PSCM. These messages include steering angle sensor status, steering wheel angle and steering wheel rotation count. The ABS module uses the steering angle sensor data for ESC feature operation.
Transmission in reverse	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module when the transmission is in REVERSE, this is used for the hill start assist feature and the ESC feature. The hill start assist feature operates in forward and reverse gears. The ESC feature does not operate when the transmission is in REVERSE.
Vehicle configuration data	BCM	This message is sent to the GWM and then to the ABS module. This message provides the ABS module with the current optional and configured items such as tire size, axle ratio, manual or automatic transaxle, keyless entry and VIN.
Vehicle lateral acceleration data	RCM	This message provides the ABS module with the current vehicle lateral acceleration data and notifies the ABS module if the data is valid or invalid. The ABS module uses the lateral acceleration data for ESC feature operation.

Vehicle longitudinal acceleration data	RCM	This message provides the ABS module with the current vehicle longitudinal acceleration data and notifies the ABS module if the data is valid or invalid. The ABS module uses the longitudinal acceleration data for ESC feature operation.
Vehicle yaw rate data	RCM	This message provides the ABS module with the current vehicle yaw rate data and notifies the ABS module if the data is valid or invalid. The ABS module uses the yaw rate data for ESC feature operation.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ANTI-LOCK BRAKING

The ABS module continuously monitors brake pedal input, longitudinal vehicle motion and the rotational speed of each wheel. The ABS module receives the brake pedal input from the PCM and the longitudinal acceleration sensor information from the RCM. The PCM sends the brake pedal input message to the GWM over the HS-CAN1, the GWM relays the message to the ABS module over the HS-CAN2. The RCM sends the longitudinal acceleration sensor message directly to the ABS module over the HS-CAN2. Wheel speed information is received by the ABS module using 4 wheel speed sensors. When the ABS module detects an impending wheel lock during a braking event, the ABS module modulates brake pressure to the appropriate brake caliper by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. Once the affected wheel returns to the desired speed, the ABS module returns the solenoid valves in the HCU to their normal position and deactivates the hydraulic pump motor.

When the ABS module is initialized (ignition ON), a preliminary electrical check of the wheel speed and brake booster vacuum sensors is carried out, and the hydraulic pump motor is activated for approximately one-half second. During this time, a buzzing or humming noise may be heard and a vibration may be felt in the brake pedal, this is a normal condition. During the module initialized self-test, the pump motor check is carried out at approximately 10 km/h (6.2 mph). Any malfunction detected in the system causes the ABS module to set a DTC, disable the ABS function and send a message to the IPC to illuminate the ABS warning indicator. The base hydraulic power assist braking system functions normally.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > ELECTRONIC BRAKE FORCE DISTRIBUTION (EBD)

On initial application of the brake pedal, full pressure is applied to the rear brakes. The ABS module then uses wheel speed sensor inputs to evaluate rear wheel slip. Once the rear wheel slip exceeds a

predetermined threshold, the ABS module commands the HCU to close the appropriate isolation valves to hold the rear brake pressure constant while allowing the front brake pressure to build. This creates a balanced braking condition between the front and rear wheels. If the rear wheel slip continues and exceeds a second predetermined threshold, the ABS module commands the HCU to open the dump valves to decrease the rear brake pressure and allow the rear wheels to recover. A slight bump sensation may be felt in the brake pedal when EBD is active.

If the ABS is disabled due to a DTC being present in the ABS module, EBD continues to function unless the DTC is for wheel speed sensors or the HCU. When EBD is disabled, the ABS warning indicator, the red brake warning indicator and stability-traction control indicator (sliding car icon) illuminate.

AdvanceTrac

The AdvanceTrac feature is comprised of the traction control and ESC features.

Traction Control

The ABS module continuously monitors and compares the rotational speed of the drive wheels in relation to the non-driven wheels. When the drive wheels begin to spin faster than the non-driven wheels, the ABS module modulates brake pressure to the appropriate brake caliper(s) by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time, the ABS module calculates how much engine torque reduction is required to eliminate the wheel slip and sends this torque reduction message along with a traction event message to the GWM over the HS-CAN2. The GWM sends the engine torque reduction message to the PCM over the HS-CAN1 and the traction event message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives the traction event message it flashes the stability-traction control indicator (sliding car icon). Once the driven wheel speed returns to the desired speed, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the traction event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon).

Traction control can be disabled through the use of the stability-traction control switch in the center of the instrument panel. This is independent of the ABS which cannot be disabled by the driver. When the driver disables traction control, the FCIM communicates traction control status to the GWM over the MS-CAN. The GWM sends the message to the ABS module over the HS-CAN2. The ABS module takes no further action in regards to traction control until the driver activates the function or until the ignition is cycled from OFF to ON.

Traction control is disabled if there is a wheel speed sensor or solenoid valve DTC present in the ABS module. Traction control is also disabled if there is a communication error between the ABS module and the GWM. When traction control is disabled, the ABS module sends a message to the GWM over the HS-CAN2 which relays the message to the IPC over the HS-CAN3 to illuminate the stability-traction control OFF indicator (sliding car OFF icon).

Electronic Stability Control (ESC)

The ABS module continuously monitors the vehicle motion relative to the intended course. This is done by using sensors to compare the steering wheel sensor messages and the yaw rate sensor messages with the actual vehicle motion. The ABS module receives the steering wheel sensor messages from the PSCM and the yaw rate sensor messages from the RCM, both messages are sent over the HS-CAN2. If the ABS module determines from the inputs the vehicle is unable to travel in the intended direction, it modulates the brake pressure to the appropriate brake caliper(s) by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time the ABS

module calculates how much engine torque reduction is required to reduce vehicle speed to help stabilize the vehicle and sends this torque reduction message, along with an ESC event message, to the GWM over the HS-CAN2. The GWM sends the torque reduction message to the PCM over the HS-CAN1 and the ESC event message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives this message, it flashes the stability-traction control indicator (sliding car icon). Once the vehicle instability has been corrected, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the traction event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon).

ESC does not operate with the transmission in REVERSE. ESC is disabled if there is a wheel speed sensor, RCM stability sensor or steering angle sensor DTC present in the ABS module. ESC is also disabled if there is a communication error between the ABS module and the PSCM or the ABS module and the RCM. When ESC is disabled, the ABS module sends a message to the GWM over the HS-CAN2 which relays the message to the IPC over the HS-CAN3 to illuminate the stability-traction control OFF indicator (sliding car OFF icon).

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > DISABLING ADVANCETRAC

The AdvanceTrac feature is comprised of the traction control and ESC features.

Traction Control

The ABS module continuously monitors and compares the rotational speed of the drive wheels in relation to the non-driven wheels. When the drive wheels begin to spin faster than the non-driven wheels, the ABS module modulates brake pressure to the appropriate brake caliper(s) by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time, the ABS module calculates how much engine torque reduction is required to eliminate the wheel slip and sends this torque reduction message along with a traction event message to the GWM over the HS-CAN2. The GWM sends the engine torque reduction message to the PCM over the HS-CAN1 and the traction event message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives the traction event message it flashes the stability-traction control indicator (sliding car icon). Once the driven wheel speed returns to the desired speed, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the traction event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon).

Traction control can be disabled through the use of the stability-traction control switch in the center of the instrument panel. This is independent of the ABS which cannot be disabled by the driver. When the driver disables traction control, the FCIM communicates traction control status to the GWM over the MS-CAN. The GWM sends the message to the ABS module over the HS-CAN2. The ABS module takes no further action in regards to traction control until the driver activates the function or until the ignition is cycled from OFF to ON.

Traction control is disabled if there is a wheel speed sensor or solenoid valve DTC present in the ABS module. Traction control is also disabled if there is a communication error between the ABS module and

the GWM. When traction control is disabled, the ABS module sends a message to the GWM over the HS-CAN2 which relays the message to the IPC over the HS-CAN3 to illuminate the stability-traction control OFF indicator (sliding car OFF icon).

Electronic Stability Control (ESC)

The ABS module continuously monitors the vehicle motion relative to the intended course. This is done by using sensors to compare the steering wheel sensor messages and the yaw rate sensor messages with the actual vehicle motion. The ABS module receives the steering wheel sensor messages from the PSCM and the yaw rate sensor messages from the RCM, both messages are sent over the HS-CAN2. If the ABS module determines from the inputs the vehicle is unable to travel in the intended direction, it modulates the brake pressure to the appropriate brake caliper(s) by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time the ABS module calculates how much engine torque reduction is required to reduce vehicle speed to help stabilize the vehicle and sends this torque reduction message, along with an ESC event message, to the GWM over the HS-CAN2. The GWM sends the torque reduction message to the PCM over the HS-CAN1 and the ESC event message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives this message, it flashes the stability-traction control indicator (sliding car icon). Once the vehicle instability has been corrected, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the traction event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon).

ESC does not operate with the transmission in REVERSE. ESC is disabled if there is a wheel speed sensor, RCM stability sensor or steering angle sensor DTC present in the ABS module. ESC is also disabled if there is a communication error between the ABS module and the PSCM or the ABS module and the RCM. When ESC is disabled, the ABS module sends a message to the GWM over the HS-CAN2 which relays the message to the IPC over the HS-CAN3 to illuminate the stability-traction control OFF indicator (sliding car OFF icon).

Disabling AdvanceTrac

The traction control feature can be disabled through the use of the stability-traction control switch, on some models the ESC feature can also be disabled. The ESC feature is disabled when REVERSE gear is selected or when the stability-traction control switch is pressed in the following manner:

- **Button pressed momentarily**

  : traction control is disabled, ESC is enabled.

- **Button pressed twice rapidly**

  : Sport mode is enabled (if equipped), traction control and ESC are enabled with modified intervention thresholds. Sport Mode is not available on vehicles equipped with Selectable Driving Modes.

- **Button pressed and held for more than 5 seconds**

  : AdvanceTrac off mode, traction control and ESC are both disabled.

- **Button pressed again after deactivation**

  : traction control and ESC are both enabled.

Regardless of the driver selected state of the AdvanceTrac feature, when the ignition is cycled from ON

to OFF and back to ON, both the traction control and the ESC are reset to enabled.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > HILL START ASSIST

When the vehicle is stopped on an incline the ABS module holds the brake pressure for approximately 2 seconds while the driver transitions from the brake pedal to the accelerator pedal. This is accomplished by monitoring several HS-CAN messages and several sensors to determine if the vehicle is stopped and not parked, and if the vehicle is on an appropriate incline. The brake pedal message sent by the PCM and the wheel speed sensor inputs allow the ABS module to determine the vehicle has come to a complete stop. The transmission selector lever message sent by the PCM informs the ABS module the vehicle is not parked. The stability sensor messages sent by the RCM enable the ABS module to determine if the vehicle is on an appropriate incline. Once the above conditions have been met, the hill start assist feature automatically engages. As the driver releases the brake pedal, the ABS module commands the HCU to close the isolation valves which maintain the current brake system pressure, preventing the vehicle from rolling down the incline. Once the driver presses the accelerator pedal and the torque produced by the engine reaches a specific level, the ABS module gradually releases the brake pressure to make sure the vehicle is neither rolling back nor driving off until there is sufficient driving torque to move the vehicle forward (or backward if reversing up the incline). For vehicles with an automatic transmission the incline must be greater than 3.5 degrees (approximately a 6% grade), for vehicles with a manual transmission the incline must be greater than 1.5 degrees (approximately a 3% grade). On vehicles with a manual transmission the hill start assist feature can be disabled through the message center. On vehicles with an automatic transmission the hill start assist feature cannot be disabled by the driver.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SUPPLEMENTAL BRAKING ASSIST

The ABS module uses the HCU and hydraulic pump motor to help bring the vehicle to a safe, controlled stop in the event of severe vacuum loss in the brake booster. The ABS module continually monitors the vacuum in the brake booster through the use of a vacuum sensor. When the vacuum sensor indicates vacuum is below a predetermined level, a DTC is set in the ABS module. The ABS module sends a message to the GWM over the HS-CAN2 to illuminate the red brake warning indicator, the GWM relays this message to the IPC over the HS-CAN3. If a low vacuum condition occurs during a braking event or if the driver attempts to stop the vehicle with a low vacuum condition in the brake booster, the ABS module activates the hydraulic pump motor in the HCU to assist with vehicle braking.

On vehicles equipped with adaptive cruise control, the CCM monitors the area forward of the vehicle. When an object enters this area and closes the distance gap set by the driver, the CCM sends either an adaptive cruise control deceleration request or a collision avoidance deceleration request to the ABS module over the HS-CAN2. When the deceleration request message is received, the ABS module activates the hydraulic pump motor and solenoid valves in the HCU to slow the vehicle down to maintain the distance gap set by the driver. Once the distance gap set by the driver is achieved, the CCM stops sending the deceleration request message and the ABS module deactivates the hydraulic pump motor and solenoid valves in the HCU. If the CCM determines the amount of braking provided by the ABS module is insufficient, the CCM sends a forward collision avoidance braking request message to the

ABS module and warns the driver, both audibly and visually, through the use of the HUD. After receiving the braking request message, the ABS module waits for brake pedal input and at that time applies maximum braking assist using the hydraulic pump motor and the HCU.

Refer to: Cruise Control - System Operation and Component Description . Refer to: Collision Warning and Collision Avoidance System - System Operation and Component Description .

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > MYKEY® INTERACTION

Through the MyKey® feature, traction control and ESC can be configured to be always on or allow the driver to select traction control and ESC on or off. When MyKey® traction control feature is configured to be always on and a MyKey® restricted key is in use, the ABS module ignores any requests made by the driver to disable traction control or ESC. In addition, when MyKey® traction control feature is configured to be always on and a MyKey® restricted key is in use, Sport mode and AdvanceTrac Off mode are not available. Refer to Disabling AdvanceTrac for information on Sport mode and AdvanceTrac Off mode. Refer to the Owner's Literature for additional information on the MyKey® feature and settings.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > STABILITY-TRACTION CONTROL INDICATOR (SLIDING CAR ICON)

Refer to: Instrument Panel Cluster (IPC) - System Operation and Component Description

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > STABILITY-TRACTION CONTROL DISABLED INDICATOR (SLIDING CAR OFF ICON)

Refer to: Instrument Panel Cluster (IPC) - System Operation and Component Description .

One or both of the stability-traction control indicators may illuminate as a result of momentary sensor disturbances due to environmental or driving conditions (including severe vehicle maneuvers or extreme off road usage). Once Illuminated, the indicator remains illuminated until the environmental or driving condition is no longer present and the ignition is cycled from ON to OFF and then back to ON again. If there are no other customer concerns, symptoms, indicators or Diagnostic Trouble Codes (DTCs), the stability-traction control indicator may have been illuminated due to these environmental or driving conditions.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > SELECTABLE DRIVING MODES

The MODE switch in the center of the instrument panel allows the driver to change between 4 driving modes. These driving modes alter the throttle response, shift patterns, EPAS feel and stability control intervention thresholds. Toggling the switch causes the FCIM to send messages to the PCM, PSCM, ABS module and IPC message center. The IPC message center displays the current selected mode. The PCM, PSCM and ABS module respond to the message by modifying their operation according to a preprogrammed set of instructions.

- **Normal**

  : delivers a balanced combination of comfort, control and handling.

- **Snow-Wet**

  : provides increased handling, braking and control during poor weather conditions.

- **Sport**

  : provides increased steering, throttle and shift responses.

- **Track**

  : provides increased steering, throttle and shift responses as well as modifying the threshold for AdvanceTrac intervention.

One or more of the selectable drive modes is disabled if Diagnostic Trouble Codes (DTCs) are present in the PCM, PSCM or ABS module. If the selectable drive modes are disabled, the IPC message center displays Drive Mode Selection Not Available when the switch is toggled.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > LAUNCH CONTROL

The launch control feature works in conjunction with the stability control system and PCM to maximize traction from a standing start acceleration in a straight line. Launch control enables a unique "drag start" traction control calibration designed for high grip surfaces. The system allows the driver to set and hold a desired launch RPM depending on tire temperature, surface condition or weather.

The driver activates and configures the launch control feature through the message center, see the Owner's Literature for specific information. The launch control system can only be activated when the stability control system is fully enabled. Once activated, the launch control feature remains ON until the driver deactivates it, the system does not reset when the ignition is cycled.

DESCRIPTION AND OPERATION > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL - SYSTEM OPERATION AND COMPONENT DESCRIPTION > LINE LOCK

The line lock feature works in conjunction with the stability control system to "lock" the front brakes and allow the rear wheels to spin freely during throttle application to achieve maximum traction prior to use at a race track. The line lock feature is intended for use at race tracks only and should not be used on public roadways.

The driver initializes the line lock feature through the message center, see the Owner's Literature for specific information. Once initialized, the line lock feature **is not** activated and the vehicle brakes function normally. Line lock remains initialized up to 40 km/h (25 mph), once vehicle speed exceeds 40 km/h (25 mph) the line lock feature is automatically cancelled. Following initialization the line lock feature can be engaged, once engaged the ABS module closes isolation valves in the HCU to maintain the brake pressure in the front brake calipers while allowing the rear wheels to spin freely and a count-down timer begins. If the line lock feature is not used within this time limit or a vehicle condition requires the line lock feature to deactivate, the line lock feature is deactivated. Pressing the brake pedal while the line lock feature is activated automatically deactivates the line lock feature and normal brake function resumes.

Component Description

Anti-Lock Brake System (ABS) Module

The ABS module is attached directly to the HCU and is the electronic control unit for all of the ABS and stability control systems. The ABS module monitors all sensor inputs and all CAN messages relating to ABS and stability control, then directly controls the solenoid valves and the hydraulic pump motor in the HCU. The ABS module is available separately for service.

When a new ABS module is installed, it must be programmed with the vehicle configuration information and programmed with the latest level of module software. Refer to: MODULE CONFIGURATION .

When an ABS or stability control system fault has been corrected or a new component has been installed, the ABS module must be calibrated. The calibration procedure (IVD Initialization) is carried out using a diagnostic scan tool and is required for the stability control sensors to learn the zero-position of the vehicle. The calibration procedure requires the vehicle to be on a level surface and not moving.

Brake Booster Vacuum Sensor

The brake booster vacuum sensor is a piezoelectric device used by the ABS module to monitor the vacuum in the brake booster. The sensor is hardwired to the ABS module by 3 circuits. One circuit is for the 5 volt sensor supply, one circuit is for sensor ground and one circuit is for sensor output. The sensor output ranges from 0.2 volt to 4.9 volts, depending on the amount of vacuum in the booster.

Hydraulic Control Unit (HCU)

The HCU contains the solenoid valves, the hydraulic pump motor and the pressure sensor used by the ABS module for the various stability control systems. The ABS module and the HCU are attached directly together. The HCU is available separately for service.

Selectable Driving Modes Switch

The selectable driving modes switch is a momentary-contact, toggle style switch and is part of the FCIM. If a new switch is required, then a new FCIM must be installed.

Stability Control Sensors

The stability control sensors for the vehicle dynamic system consist of the yaw rate sensor, lateral accelerometer and longitudinal accelerometer. The sensors are housed in the RCM which sends sensor information to the ABS module over the HS-CAN2. If any of the sensors are defective, a new RCM must be installed.

- The yaw rate sensor measures the yaw angle which is the difference between the direction the vehicle is pointing when cornering and the direction the vehicle is actually moving.
- The longitudinal accelerometer measures the acceleration and deceleration of the vehicle as it

moves forward and backward.

- The lateral accelerometer measures the force created when a vehicle corners that tends to push a vehicle sideways.

Lateral acceleration has 2 forms. The first is the centrifugal acceleration generated when the vehicle travels around in a circle. The second is the acceleration due to gravity. On level ground there is no lateral acceleration due to gravity. However, if the vehicle is parked sideways on a bank or incline, the sensor measures some lateral acceleration due to gravity, even though the vehicle is not moving.

Stability-Traction Control OFF Switch

The stability-traction control OFF switch is either a momentary-contact, push-button style switch or a momentary-contact, toggle style switch depending on optional vehicle features. Regardless of switch type, the stability-traction control switch is part of the FCIM and if a new switch is required, then a new FCIM must be installed.

Steering Wheel Rotation Sensor

The steering wheel rotation sensor is part of the EPAS gear assembly. The steering wheel rotation speed, angle and direction of travel is calculated by the PSCM and is sent to the ABS module over the HS-CAN2.

Wheel Speed Sensors

All 4 wheel speed sensors are active (magneto resistive) sensors operating on the Hall-effect principle to generate a square wave signal proportional to the rotational speed of the wheel. Because these are active sensors, receiving voltage from the ABS module and sending a varying voltage back to the ABS module, they are able to detect much lower rotational speeds than passive (magnetic inductive) sensors. Each wheel speed sensor is connected to the ABS module by 2 circuits. One circuit provides voltage for sensor operation and the other circuit provides sensor input to the ABS module.

Wheel Speed Sensor Encoders

The front wheel speed senor encoders are non-magnetized, toothed rings pressed into the front wheel hub. The rear wheel speed sensor encoders are magnetized, toothed rings pressed onto the rear wheel hub. As the wheel hub rotates the wheel speed sensor is exposed to magnetic fields or alternating strength. The encoders are part of the wheel hubs and are serviced with the hubs.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > DIAGNOSTIC TROUBLE CODE (DTC) CHARTS

DTC Charts

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

ABS Module DTC Chart

DTC	Description	Action
B10DF:46	Master Cylinder Isolation Valve: Calibration / Parameter Memory	This DTC sets due to an internal failure of the ABS module or a

	Failure	calibration failure between the HCU and the ABS module. Using a diagnostic scan tool, CARRY OUT the Inlet Valve Calibration and then the Master Cylinder Isolation Calibration. CLEAR the DTC and REPEAT the self-test. If the DTC returns, REPEAT the 2 calibration routines making sure to FOLLOW the diagnostic scan tool directions. CLEAR the DTC and REPEAT the self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
C0001:01	TCS Control Channel "A" Valve 1: General Electrical Failure	This DTC indicates part of the ABS module has failed internally. CLEAR the DTC. REPEAT the self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
C0002:01	TCS Control Channel "A" Valve 2: General Electrical Failure	This DTC indicates part of the ABS module has failed internally. CLEAR the DTC. REPEAT the self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

REPEAT the self-test. If DTC C0044:51 returns, VERIFY all ABS module-to- HCU fasteners are tightened to their correct torque specifications. If all fasteners are tightened to their correct torque specifications, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
C0044:64	Brake Pressure Sensor "A": Signal Plausibility Failure	DIAGNOSE DTC C0040:64 before diagnosing this DTC. If DTC C0040:64 is not present, CLEAR the DTC. CYCLE the ignition from ON to OFF and back to ON. REPEAT the self-test. If DTC C0044:64 returns, VERIFY all ABS module-to- HCU fasteners

		are tightened to their correct torque specifications. If all fasteners are tightened to their correct torque specifications, INSPECT the brake tubes and connections for damage and leaks. REPAIR or INSTALL new brake tubes as necessary. If brake tubes and connections are OK and there are no brake fluid leaks, BLEED the brake system. REFER to: Brake System Pressure Bleeding . CYCLE the ignition from ON to OFF and back to ON. CARRY OUT the ABS module self-test. If this DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
C0044:8F	Brake Pressure Sensor "A": Erratic	DIAGNOSE DTC C0040:64 before diagnosing this DTC. If DTC C0040:64 is not present, CLEAR the DTC. CYCLE the ignition from ON to OFF and back to ON. REPEAT the self-test. If DTC C0044:8F returns, VERIFY all ABS module-to- HCU fasteners are tightened to their correct torque specifications. If all fasteners are tightened to their correct torque specifications, INSTALL a new ABS module and HCU assembly. REFER to: Hydraulic Control Unit (HCU) .
C0047:01	Brake Booster Pressure Sensor: General Electric Failure	GO to Pinpoint Test M
C0047:26	Brake Booster Pressure Sensor: Signal Rate of Change Below Threshold	GO to Pinpoint Test M
C0047:27	Brake Booster Pressure Sensor: Signal Rate of Change Above Threshold	GO to Pinpoint Test M
C0051:62	Steering Wheel Position Sensor: Signal Compare Failure	GO to Pinpoint Test J
C0051:64	Steering Wheel Position Sensor: Signal Plausibility Failure	GO to Pinpoint Test J
C0051:67	Steering Wheel Position Sensor: Signal Incorrect After Event	GO to Pinpoint Test J

C0051:85	Steering Wheel Position Sensor: Signal Above Allowable Range	GO to Pinpoint Test J
C0061:28	Lateral Acceleration Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	GO to Pinpoint Test G
C0061:2F	Lateral Acceleration Sensor: Signal Erratic	GO to Pinpoint Test G
C0061:64	Lateral Acceleration Sensor: Signal Plausibility Failure	GO to Pinpoint Test G
C0062:28	Longitudinal Acceleration Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	GO to Pinpoint Test G
C0062:54	Longitudinal Acceleration Sensor: Missing Calibration	This DTC sets if the stability sensors in the RCM have not been calibrated or the calibration has been lost. CARRY OUT the IVD Initialization routine, FOLLOW the diagnostic scan tool instructions. If the module fails the initialization routine, VERIFY the RCM is installed correctly and the fasteners are tightened to specifications. REINSTALL the RCM or INSTALL a new RCM as necessary. REFER to: Restraints Control Module (RCM) . If the RCM is OK, CARRY OUT the RCM self-test. RETRIEVE and RECORD any Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS)). If the module passes the calibration routine, CLEAR the DTC. CYCLE the ignition from ON to OFF and back to ON. CARRY OUT the ABS module self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
C0062:64	Longitudinal Acceleration Sensor: Signal Plausibility Failure	GO to Pinpoint Test G
C0062:76	Longitudinal Acceleration Sensor: Wrong Mounting Position	Due to the nature of the longitudinal acceleration sensor, the RCM must be installed in the correct orientation to the centerline of the vehicle. This

		DTC sets if the RCM has been installed in the wrong position. VERIFY the RCM is installed correctly and the fasteners are tightened to specifications. REINSTALL the RCM or INSTALL a new RCM as necessary. REFER to: Restraints Control Module (RCM) . If the RCM is OK, CARRY OUT the RCM self-test. RETRIEVE and RECORD any Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) .
C0063:28	Yaw Rate Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	GO to Pinpoint Test G
C0063:2F	Yaw Rate Sensor: Signal Erratic	GO to Pinpoint Test G
C0063:64	Yaw Rate Sensor: Signal Plausibility Failure	GO to Pinpoint Test G
C0064:28	Roll Rate Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	GO to Pinpoint Test G
C0064:64	Roll Rate Sensor: Signal Plausibility Failure	GO to Pinpoint Test G
C006B:00	Stability System Active Too Long: No Sub Type Information	GO to Pinpoint Test O
C0072:68	Brake Temperature Too High: Event Information	This DTC is set due to HS-CAN concerns, CCM concerns or a hard reset of the ABS module (battery disconnected or ignition ON with ABS module electrical connector disconnected). When this DTC is set, the ABS module disables adaptive cruise control until the temperature is returned to normal. The DTC **does not** illuminate any warning indicators but the message center displays ADAPTIVE CRUISE CONTROL NOT AVAILABLE. RETRIEVE and DIAGNOSE all CAN Diagnostic Trouble Codes (DTCs) in the ABS module and the CCM. REFER to DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts or REFER to:

		Cruise Control - Vehicles With: Adaptive Cruise Control. If there are no CAN Diagnostic Trouble Codes (DTCs) present, RETRIEVE and DIAGNOSE all CCM Diagnostic Trouble Codes (DTCs) **other than** C0072:00. REFER to: Cruise Control - Vehicles With: Adaptive Cruise Control. If DTC C0072:00 is the only DTC present in the CCM or if DTC C0072:68 is the only DTC present in the ABS module, ALLOW the vehicle to cool down for 30 minutes. CLEAR all ABS module Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If ABS module DTC C0072:68 returns, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) - Vehicles With: Adaptive Cruise Control.
C1015:08	Vacuum Supply: Bus Signal / Message Failure	GO to Pinpoint Test M
C1015:7A	Vacuum Supply: Fluid Leak or Seal Failure	GO to Pinpoint Test R
C1015:7B	Vacuum Supply: Low Fluid Level	GO to Pinpoint Test R
C1020:00	Brake System Fill Not Complete: No Sub-Type Information	This DTC is pre-set in a new ABS module and HCU assembly and can only be cleared when the Brake System Service Bleed is successfully carried out. CARRY OUT the Brake System Service Bleed. REFER to: Brake System Pressure Bleeding .
C1109:64	Vehicle Dynamics Control Switch: Signal Plausibility Failure	This DTC sets in continuous memory and on-demand when the information in the stability-traction control switch message from the FCIM is implausible (does not match other sensor inputs or messages). This indicates a concern with the MS-CAN, HS-CAN2, the GWM or the FCIM. RETRIEVE and DIAGNOSE all GWM and FCIM Diagnostic Trouble Codes (DTCs). For GWM Diagnostic Trouble

		Codes (DTCs), Refer to: MODULE COMMUNICATIONS NETWORK . For FCIM Diagnostic Trouble Codes (DTCs), Refer to: INFORMATION AND ENTERTAINMENT SYSTEM - Vehicles With: AM/FM/CD/SYNC. REFER to:INFORMATION AND ENTERTAINMENT SYSTEM - Vehicles With Touchscreen Display.
C1137:64	Reverse Gear Switch: Signal Plausibility Failure	This DTC sets when the reverse gear message sent from the PCM indicates the transmission is in REVERSE when other stability control inputs received by the ABS module indicate the vehicle is moving forward. VERIFY the reverse lamps operate correctly. If the lamps do not operate correctly, Refer to: Reversing Lamps (417-01 Exterior Lighting, Diagnosis and Testing). If the reverse lamps operate correctly, RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the PCM. REFER to: ELECTRONIC ENGINE CONTROLS - 2.3L ECOBOOST (231KW/314PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 3.7L DURATEC (227KW/301PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS.
C1A08:1C	Pressure Sensor Supply: Circuit Voltage Out of Range	The brake system pressure sensor is supplied voltage by the ABS module. The ABS module monitors this output and sets this DTC when the voltage is out of range. DIAGNOSE DTC U3003:16 or U3003:17, before diagnosing C1A08:1C. If DTC U3003:16 or U3003:17 is not present, make sure all ABS module-to- HCU fasteners are

		tightened to their correct torque specifications. If all fasteners are tightened to their correct torque specifications, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
C1B14:11	Sensor Supply Voltage "A": Circuit Short to Ground	GO to Pinpoint Test M
C1B14:12	Sensor Supply Voltage "A": Circuit Short to Battery	GO to Pinpoint Test M
C1B15:1C	Sensor Supply Voltage "B": Circuit Voltage Out of Range	GO to Pinpoint Test M
P0942:46	Hydraulic Pressure Unit: Calibration / Parameter Memory Failure	The ABS module and HCU should not be swapped between different vehicles. This DTC sets when the identification data stored in the ABS module does not match the identification data from the HCU. Using a diagnostic scan tool, CARRY OUT the Inlet Valve Calibration routine and then the Master Cylinder Isolation Calibration routine. CLEAR the DTC and REPEAT the self-test. If the DTC returns, INSTALL a new ABS module and HCU assembly. REFER to: Hydraulic Control Unit (HCU) .
P0942:49	Hydraulic Pressure Unit: Internal Electronic Failure	The ABS module and HCU should not be swapped between different vehicles. This DTC sets when the identification data stored in the ABS module does not match the identification data from the HCU. Using a diagnostic scan tool, CARRY OUT the Inlet Valve Calibration routine and then the Master Cylinder Isolation Calibration routine. CLEAR the DTC and REPEAT the self-test. If the DTC returns, INSTALL a new ABS module and HCU assembly. REFER to: Hydraulic Control Unit (HCU) .
P193B:86	Throttle / Pedal Signal: Signal Invalid	This DTC sets in continuous memory and on-demand when the information in the accelerator pedal position message from the

		PCM is "faulted" instead of "OK". This indicates a concern with the accelerator pedal sensor, wiring or PCM. If ABS module Diagnostic Trouble Codes (DTCs) U0100:00 or U0401:00 are **also** present, DIAGNOSE those Diagnostic Trouble Codes (DTCs) before diagnosing DTC P193B:86. If ABS module Diagnostic Trouble Codes (DTCs) U0100:00 or U0401:00 are **not** present, RETRIEVE and RECORD all PCM Diagnostic Trouble Codes (DTCs). REFER to: ELECTRONIC ENGINE CONTROLS - 2.3L ECOBOOST (231KW/314PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 3.7L DURATEC (227KW/301PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS.
U0001:88	High Speed CAN Communication Bus: Bus Off	A HS-CAN fault was present at a point in time. The fault is not currently present since the module is communicating with the diagnostic scan tool. CLEAR the DTC. REPEAT the Network Test with the diagnostic scan tool. VERIFY the integrity of the connectors and wiring. Refer to MODULE COMMUNICATIONS NETWORK for schematic and connector information.
U0100:00	Lost Communication With ECM / PCM "A": No Sub Type Information	GO to Pinpoint Test I
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	GO to Pinpoint Test P
U0131:00	Lost Communication With Power Steering Control Module: No Sub Type Information	GO to Pinpoint Test Q
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test D

U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test S
U0300:51	Internal Control Module Software Incompatibility: Not Programmed	CHECK vehicle service history for recent service actions related to the ABS module. This DTC sets due to incomplete or improper flash programming procedures. If there have been recent service actions with the ABS module, REPEAT the programming procedure as directed by the diagnostic scan tool.
U0401:00	Invalid Data Received From ECM / PCM "A": No Sub Type Information	GO to Pinpoint Test I
U0405:41	Invalid Data Received From Cruise Control Module: General Checksum Failure	GO to Pinpoint Test P
U0405:82	Invalid Data Received From Cruise Control Module: Alive / Sequence Counter Incorrect / Not Updated	GO to Pinpoint Test P
U0420:41	Invalid Data Received From PSCM: General Checksum Failure	GO to Pinpoint Test Q
U0420:82	Invalid Data Received From PSCM: Alive / Sequence Counter Incorrect / Not Updated	GO to Pinpoint Test Q
U0420:86	Invalid Data Received From PSCM: Signal Invalid	GO to Pinpoint Test Q
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	GO to Pinpoint Test D
U0452:41	Invalid Data Received From Restraints Control Module: General Checksum Failure	The ABS module uses other module messages and sensor input to calculate the yaw rate, lateral acceleration and longitudinal acceleration to verify the RCM messages. If the yaw rate, lateral acceleration and longitudinal acceleration data received from the RCM do not match the calculated values more than 2 times, this DTC is set. If ABS module Diagnostic Trouble Codes (DTCs) C0061:xx,

		C0062:xx, C0063:xx or C0064:xx are present, DIAGNOSE them before diagnosing U0452:41. Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) . If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. SET the ignition to OFF. WAIT one minutes, then DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0452:86	Invalid Data Received From Restraints Control Module: Signal Invalid	Along with the yaw rate, lateral acceleration and longitudinal acceleration data the RCM also sends a rolling counter message the ABS module uses to validate the RCM messages. If the rolling counter indicates an invalid signal more than 4 times, this DTC is set. If ABS module Diagnostic Trouble Codes (DTCs) C0061:xx, C0062:xx, C0063:xx or C0064:xx are present, DIAGNOSE them before diagnosing U0452:86. Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) . If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. SET the ignition to OFF. WAIT one minutes, then DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.

U2007:46	Valve(s): Calibration / Parameter Memory Failure	This DTC sets due to an internal failure of the ABS module or due to a calibration failure between the HCU and the ABS module. Using a diagnostic scan tool, CARRY OUT the Inlet Valve Calibration routine and then the Master Cylinder Isolation Calibration routine. CLEAR the DTC and REPEAT the self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
U2007:62	Valve(s): Signal Compare Failure	This DTC sets due to an internal failure of the ABS module or due to a calibration failure between the HCU and the ABS module. CLEAR the DTC and REPEAT the self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
U2024:51	Control Module Cal-Config Data: Not Programmed	This DTC is only present when a new ABS module is installed, the ABS module is flashed or the ABS module is reconfigured. Using a diagnostic scan tool, CONFIGURE the ABS module, FOLLOW all diagnostic scan tool instructions. REFER to: MODULE CONFIGURATION . Using a diagnostic scan tool, CARRY OUT the ABS module self-test to clear the DTC.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC is pre-set in a new ABS module and clears automatically when the ABS module is configured correctly. CHECK the service history for recent service actions related to the ABS module. This DTC sets due to incomplete or improper PMI procedures. If there have been recent service actions with the ABS module, REPEAT the PMI procedure as directed by the diagnostic scan tool. If there have been no recent

		service actions, INSTALL a new ABS module to correct the failure to retain the configuration data. REFER to: Anti-Lock Brake System (ABS) Module .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK the service history for recent service actions related to the ABS module. This DTC sets due to incomplete or improper PMI procedures. If there have been recent service actions with the ABS module, REPEAT the PMI procedure as directed by the diagnostic scan tool. If there have been no recent service actions, INSTALL a new ABS module to correct the failure to retain the configuration data. REFER to: Anti-Lock Brake System (ABS) Module .
U2107:00	Collision Mitigation By Braking: No Sub Type Information	This DTC sets when the collision deceleration message from the CCM is sent too often or the duration of the message is too long. This is most likely caused by a network communication concern or an internal failure of the CCM. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM. REFER to: Cruise Control .
U2107:68	Collision Mitigation By Braking: Event Information	This DTC sets when the vehicle deceleration detected is implausibly high when compared to the vehicle deceleration requested by the CCM. This is most likely caused by an abrupt stop of the vehicle due to a collision, an extreme driving situation, a mechanical or electrical failure of the cruise control system or an internal failure of the ABS module. RETRIEVE and REPAIR all other ABS module Diagnostic Trouble Codes (DTCs) before diagnosing DTC U2107:68. If there are no other ABS module Diagnostic Trouble Codes (DTCs)

		present, RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM. REFER to: Cruise Control . If there are no Diagnostic Trouble Codes (DTCs) in the CCM, INSPECT the vehicle braking system for a dragging condition or another condition that may cause rapid vehicle deceleration.
U2108:00	Adaptive Cruise Control: No Sub Type Information	In order to detect errors in the CCM, the cruise control system is momentarily shut off during a driver braking event. This DTC sets when the ABS module detects cruise control system activation during a driver braking event. This is most likely caused by a network communication concern or an internal failure of the CCM. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM. REFER to: Cruise Control .
U2108:68	Adaptive Cruise Control: Event Information	The ABS module monitors vehicle deceleration during adaptive cruise control braking events to prevent an over-braking situation. This DTC sets when vehicle deceleration is greater than 3.2 meters per second FOOTNOTE(2). This is most likely caused by an abrupt stop of the vehicle due to a collision, an extreme driving situation, a mechanical or electrical failure of the adaptive cruise control system or an internal failure of the ABS module. RETRIEVE and REPAIR all other ABS module Diagnostic Trouble Codes (DTCs) before diagnosing DTC U2108:68. If there are no other ABS module Diagnostic Trouble Codes (DTCs) present, RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM. REFER to: Cruise Control . If there are no Diagnostic Trouble

		Codes (DTCs) in the CCM, INSPECT the vehicle braking system for a dragging condition or another condition that may cause rapid vehicle deceleration.
U2200:00	Control Module Configuration Memory Corrupt: No Sub Type Information	CHECK the service history for recent service actions related to the ABS module. This DTC sets due to incomplete or improper PMI procedures. If there have been recent service actions with the ABS module, REPEAT the PMI procedure as directed by the diagnostic scan tool. If there have been no recent service actions, INSTALL a new ABS module to correct the failure to retain the configuration data. REFER to: Anti-Lock Brake System (ABS) Module .
U3000:49	Control Module: Internal Electronic Failure	CLEAR the Diagnostic Trouble Codes (DTCs). CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .
U3002:62	Vehicle Identification Number: Signal Compare Failure	GO to Pinpoint Test N
U3003:08	Battery Voltage: Bus Signal / Message Failure	GO to Pinpoint Test A
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test F
U300A:29	Ignition Switch: Signal Invalid	GO to Pinpoint Test A

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

PCM DTC Chart

DTC	Description	Action
P0555	Brake Booster Pressure Sensor Circuit	This DTC sets if the information in the brake booster vacuum sensor

		message is outside of the programmed set of parameters. This is most likely due to vacuum sensor concerns, wiring harness concerns or vehicle communication concerns. Using a diagnostic scan tool, CARRY OUT the ABS module self-test. DIAGNOSE any ABS module Diagnostic Trouble Codes (DTCs).
P0556	Brake Booster Pressure Sensor Circuit Range / Performance	This DTC sets if the information in the brake booster vacuum sensor message is outside of the programmed set of parameters. This is most likely due to vacuum sensor concerns, wiring harness concerns or vehicle communication concerns. Using a diagnostic scan tool, CARRY OUT the ABS module self-test. DIAGNOSE any ABS module Diagnostic Trouble Codes (DTCs).
P0557	Brake Booster Pressure Sensor Circuit Low	This DTC sets if the information in the brake booster vacuum sensor message contains a value lower than allowed by the programmed set of parameters. This is most likely due to vacuum sensor concerns, wiring harness concerns or vehicle communication concerns. Using a diagnostic scan tool, CARRY OUT the ABS module self-test. DIAGNOSE any ABS module Diagnostic Trouble Codes (DTCs).
P0558	Brake Booster Pressure Sensor Circuit High	This DTC sets if the information in the brake booster vacuum sensor message contains a value higher than allowed by the programmed set of parameters. This is most likely due to vacuum sensor concerns, wiring harness concerns or vehicle communication concerns. Using a diagnostic scan tool, CARRY OUT the ABS module self-test. DIAGNOSE any ABS module Diagnostic Trouble Codes (DTCs).
P0559	Brake Booster Pressure Sensor Circuit Intermittent	This DTC sets if the information in the brake booster vacuum sensor message is outside of the programmed set of parameters. This is most likely due to vacuum sensor concerns, wiring harness concerns

		or vehicle communication concerns. Using a diagnostic scan tool, CARRY OUT the ABS module self-test. DIAGNOSE any ABS module Diagnostic Trouble Codes (DTCs).
P1501	Vehicle Speed Sensor Out of Self Test Range	This DTC sets if the information in the wheel speed sensor message is outside of the programmed set of parameters. This is most likely due to wheel speed sensor concerns, wiring harness concerns, wheel speed sensor encoder concerns or vehicle communication concerns. Using a diagnostic scan tool, CARRY OUT the ABS module self-test. DIAGNOSE any ABS module Diagnostic Trouble Codes (DTCs).
-	All Other PCM Diagnostic Trouble Codes (DTCs)	REFER to: ELECTRONIC ENGINE CONTROLS - 2.3L ECOBOOST (231KW/314PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 3.7L DURATEC (227KW/301PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS.

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	Fuse Wiring, terminals or connectors ABS module concern	REFER to: MODULE COMMUNICATIONS NETWORK .

The brake warning indicator is always or never on	Parking brake applied Low brake fluid level Brake fluid level sensor Parking brake switch Brake booster vacuum sensor IPC concern ABS concern	RETRIEVE all ABS module Diagnostic Trouble Codes (DTCs) and GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts . If there are no Diagnostic Trouble Codes (DTCs) present in the ABS module, DIAGNOSE the warning indicator. REFER to: Instrumentation, Message Center and Warning Chimes .
The ABS warning indicator is always or never on	IPC concern ABS or stability control concern	RETRIEVE all ABS module Diagnostic Trouble Codes (DTCs) and GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts . If there are no Diagnostic Trouble Codes (DTCs) present in the ABS module, DIAGNOSE the warning indicator. REFER to: Instrumentation, Message Center and Warning Chimes .
The stability-traction control indicator (sliding-car icon) is never or always on	IPC concern ABS or stability control concern	RETRIEVE all ABS module Diagnostic Trouble Codes (DTCs) and GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts . If there are no Diagnostic Trouble Codes (DTCs) present in the ABS module, DIAGNOSE the warning indicator. REFER to: Instrumentation, Message Center and Warning Chimes .
ABS false activation, ABS too sensitive, ABS activates on normal stop	Front or rear suspension concern	ELIMINATE the front and rear suspension as the cause of the problem. REFER to: Suspension System .
	RCM mounting	CONFIRM the RCM is mounted correctly. REFER to: Restraints Control Module (RCM) .
	Loose wheel speed sensor or excessive air gap	INSPECT wheel speed sensor for looseness or excessive air gap. TIGHTEN or INSTALL new as necessary. REFER to: Front Wheel Speed Sensor . REFER to: Rear Wheel Speed Sensor .
	Parking brake out of adjustment (dragging)	REFER to: Parking Brake .

The traction control system cannot be disabled	Refer to the Pinpoint Test	GO to Pinpoint Test E
The Line Lock feature cannot be selected from the track application menu (grayed out)	Vehicle is on an incline Engine is not running Selectable driving mode is set to Snow-Wet Vehicle is traveling faster than 40-48 km/h (25-30 mph) Diagnostic Trouble Codes (DTCs) present in the ABS module	The vehicle must be on a flat surface for Line Lock feature use. MOVE vehicle to a flat surface and ATTEMPT to select the Line Lock feature. START the engine and ATTEMPT to select the Line Lock feature. The Line Lock feature cannot be used with Snow-Wet drive mode selected. SELECT Track drive mode and ATTEMPT to select the Line Lock feature. The vehicle cannot be moving when selecting the Line Lock feature. STOP the vehicle and ATTEMPT to select the Line Lock feature. Using a diagnostic scan tool, RETRIEVE all ABS module Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .
The Line Lock feature cannot be initialized	Vehicle is on an incline Engine is not running Selectable driving mode is set to Snow-Wet Vehicle is traveling faster than 40-48 km/h (25-30 mph) Diagnostic Trouble Codes (DTCs) present in the ABS module	The vehicle must be on a flat surface for Line Lock feature use. MOVE vehicle to a flat surface and ATTEMPT to initialize the Line Lock feature. START the engine and ATTEMPT to initialize the Line Lock feature. The Line Lock feature cannot be used with Snow-Wet drive mode selected. SELECT Track drive mode and ATTEMPT to initialize the Line Lock feature. The vehicle cannot be moving when initializing the Line Lock feature. STOP the vehicle and ATTEMPT to initialize the Line Lock feature. Using a diagnostic scan tool, RETRIEVE all ABS module Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts
The Line Lock feature cannot be engaged	Spare tire is installed Driver or passenger door is open	REPAIR and INSTALL the road wheel and ATTEMPT to engage

	Transmission is in PARK or REVERSE Parking brake is applied Steering wheel is not in the straight-ahead position Vehicle is on an incline Engine is not running Driver applied brake pressure is not high enough OK button not pressed while applying the brake pedal to the required force Selectable driving mode is set to Snow-Wet Vehicle speed exceeded 40-48 km/h (25-30 mph) after the feature was initialized Diagnostic Trouble Codes (DTCs) present in the ABS module	the Line Lock feature. CLOSE the open door and ATTEMPT to engage the Line Lock feature. The transmission must be in a forward gear for the Line Lock feature to engage. PLACE the transmission in DRIVE or FIRST GEAR and ATTEMPT to engage the Line Lock feature. RELEASE the parking brake and ATTEMPT to engage the Line Lock feature TURN the steering wheel to the straight-ahead position and ATTEMPT to engage the Line Lock feature. The vehicle must be on a flat surface for Line Lock feature use. MOVE vehicle to a flat surface and ATTEMPT to engage the Line Lock feature. START the engine and ATTEMPT to engage the Line Lock feature. The brake pressure meter in the message center must be completely filled before the Line Lock feature engages. REFER to the Owner's Literature for Line Lock feature operation. FOLLOW all instructions in the Owner's Literature and in the message center. The OK button must be pressed once the brake pressure meter in the message center to engage the Line Lock feature. REFER to the Owner's Literature for Line Lock feature operation. FOLLOW all instructions in the Owner's Literature and in the message center. The Line Lock feature cannot be used with Snow-Wet drive mode selected. SELECT Track drive mode and ATTEMPT to engage the Line Lock feature. The vehicle cannot be moving when selecting the Line Lock feature. STOP the vehicle and ATTEMPT to engage the Line Lock feature.

		Using a diagnostic scan tool, RETRIEVE all ABS module Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS

U3003:16, U300A:29

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module, hydraulic pump and solenoid valves require an operating voltage between 10 and 17 volts. The parking brake system requires an operating voltage of 9 volts or higher. The ABS module receives this voltage from the BJB. The ABS module uses a single ground circuit. The ABS module sets this DTC if there is excessive resistance or an open in one or more of these circuits, a discharged battery or an inoperative charging system.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	This DTC sets in continuous memory and on-demand if the voltage supplied to the ABS module falls below 10 volts.
U300A:29	Ignition Switch: Signal Invalid	This DTC sets in continuous memory and on-demand if the ABS module receives the power mode or ignition status message from the PCM and BCM, but does not receive the hard-wired ignition switch input.

Possible Causes

- Fuses
- Wiring, terminals or connectors
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the vehicle battery terminals and cables are free of any corrosion and other contaminants.
- Make sure the vehicle battery terminals are tightened to their correct torque specifications.

- Make sure BJB fuses 5 (50A), 28 (30A) and 62 (5A) are OK.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST A : U3003:16, U300A:29 > PINPOINT TEST A : U3003:16, U300A:29

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

A1 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC U3003:16 or U300A:29 still present?

Yes	GO to A2

No	The system is operating correctly at this time. The DTC may have set due to a previous low battery voltage condition.

A2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE POWERTRAIN CONTROL MODULE (PCM)

Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC B1317, B1318, B1676, U3003:16 or U3003:17 present in one or more modules AND are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE the vehicle charging concern. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to A3

A3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

Carry out the Battery Condition Test. REFER to: BATTERY .

Did the battery pass the condition test?

Yes	If the battery passed the condition test but required a recharge, DIAGNOSE the charging system. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT . If the battery passed the condition test and did not require a recharge, GO to A4

No	INSTALL a new battery. REFER to: Battery .

A4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE VOLTAGE (VPWR_ABS) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Measure and record the voltage at the battery.

Using a diagnostic scan tool, monitor the VPWR_ABS PID.

Is the PID display within 0.2 volt of the recorded battery voltage?

Yes	GO to A7

No	GO to A5

A5 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE VOLTAGE SUPPLY

Ignition OFF.

Disconnect ABS module C135 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1		Ground
C135-30		Ground
C135-35		Ground

Is each voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to A6

No	DISCONNECT and INSPECT C126 for corrosion, pushed-out pins, bent pins and spread terminals. REPAIR as necessary. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information. If C126 is OK, VERIFY BJB fuses 5 (50A), 28 (30A) and 62 (5A) are OK.If OK, REPAIR the affected circuit for high resistance or an

	open. If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the cause of the circuit short.

A6 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect the battery negative cable. REFER to: Battery Disconnect and Connect .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-14	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A7

No	REPAIR the circuit.

A7 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 and related in-line connectors (if not previously disconnected).

Disconnect C126 .

Using a good light source, inspect ABS module C135 , C126 and related in-line connectors for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to A8

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

A8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.

Connect C126 . Make sure it seats and latches correctly.

Connect the battery negative cable. REFER to: Battery Disconnect and Connect .

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST B : WHEEL SPEED SENSOR ERRATIC SIGNAL FAULTS

Normal Operation and Fault Conditions

The wheel speed sensor and encoder (tone wheel) generate a square wave signal proportional to wheel speed and sends this information to the ABS module. The wheel bearing, encoder and wheel speed sensor must be undamaged and free from contamination to produce a clean signal for use by the ABS module. Also, all 4 tires and wheels must be of the same manufacturer recommended size for the wheel speed sensor to generate an accurate wheel speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0030:07, C0033:07, C0036:07, C0039:07	Tone Wheel: Mechanical Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is damage to the wheel speed sensor encoder, damage to the wheel bearing, or contamination or deformation of the wheel bearing seal.
C0031:07, C0034:07, C0037:07, C003A:07	Wheel Speed Sensor: Mechanical Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the wheel speed sensor, encoder or wheel bearing is damaged, or if the wheel bearing

		is not installed correctly. These Diagnostic Trouble Codes (DTCs) also set if an incorrectly sized tire is installed on the vehicle or if an excessive air gap exists between the wheel speed sensor and the encoder due to an incorrect component being installed.
C0031:29, C0034:29, C0037:29, C003A:29	Wheel Speed Sensor: Signal Invalid	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the wheel speed sensor is damaged, if the encoder is missing or damaged, if there is an excessive gap between the sensor and encoder, if the wrong sensor is installed (bi-directional versus uni-directional) or if the tire size is incorrect for the vehicle.
C0031:2F, C0034:2F, C0037:2F, C003A:2F	Wheel Speed Sensor: Signal Erratic	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the wheel speed sensor is damaged, if the encoder is missing or damaged, if there is an excessive gap between the sensor and encoder or high frequency interference.
C0031:64, C0034:64, C0037:64, C003A:64	Wheel Speed Sensor: Signal Plausibility Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the wheel speed sensor is damaged, if the encoder is missing or damaged, if there is an excessive gap between the sensor and encoder, if the wrong sensor is installed (bi-directional versus uni-directional) or if the tire size is incorrect for the vehicle.

Possible Causes

- Wiring, terminals or connectors
- Tire size
- Tire pressure
- Wheel speed sensor
- Wheel speed sensor encoder
- Wheel bearing
- ABS module

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST B : WHEEL SPEED SENSOR ERRATIC SIGNAL FAULTS > PINPOINT TEST B : WHEEL SPEED SENSOR ERRATIC SIGNAL FAULTS

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

B1 CHECK FOR ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Is DTC C003x:29 or C003x:64 present?

Yes	GO to B2

No	If DTC C0031:07, C0034:07, C0037:07 or C0039:0A is present, GO to B3If DTC C0031:2F, C0034:2F, C0037:2F or C0039:2F is present, GO to B3. If DTC C0030:07, C0033:07, C0036:07 or C0039:07 is present, GO to B6 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

B2 CHECK THE TIRE SIZE AND PRESSURE

Ignition OFF.

Verify all the tires and wheels are the same size and the tire size and inflation pressures are correct as indicated on the VC label.

Are the tires and wheels OK?

Yes	GO to B3

No	INSTALL the correct size tire or wheel or ADJUST tire pressure as necessary.

B3 CHECK THE WHEEL SPEED SENSOR MOUNTING

With the transmission in NEUTRAL, position the vehicle on a hoist. REFER to: Jacking and Lifting - Overview .

Inspect the wheel speed sensor for correct installation and the fastener for looseness.

Is the wheel speed sensor installed correctly and the fastener tightened to specifications?

Yes	GO to B5

No	REINSTALL the wheel speed sensor and tighten the fastener to specifications. REFER to: Front Wheel Speed Sensor . REFER to: Rear Wheel Speed Sensor . GO to B4

B4 CHECK THE WHEEL SPEED SENSOR PARAMETER IDENTIFICATIONS (PIDS)

Ignition ON.

Using a diagnostic scan tool, access the ABS module Parameter Identifications (PIDs).

Drive the vehicle at a speed greater than 20 km/h (12 mph) while monitoring the following Parameter Identifications (PIDs):

Left front wheel speed sensor (LF_WSPD)

Right front wheel speed sensor (RF_WSPD)

Left rear wheel speed sensor (LR_WSPD)

Right rear wheel speed sensor (RR_WSPD)

Are the wheel speed Parameter Identifications (PIDs) within 5 km/h (3 mph) of each other and the vehicle speed as indicated on the speedometer?

Yes	The system is operating correctly at this time. The concern may have been caused by a loose or incorrectly installed wheel speed sensor.

No	GO to B5

B5 CHECK THE WHEEL SPEED SENSOR FOR DAMAGE

Ignition OFF.

With the transmission in NEUTRAL, position the vehicle on a hoist. REFER to: Jacking and Lifting - Overview .

Disconnect the suspect wheel speed sensor electrical connector.

Inspect the wheel speed sensor and harness for abrasions, broken connector tabs or water intrusion.

Is the wheel speed sensor and harness OK?

Yes	GO to B6

No	INSTALL a new wheel speed sensor. REFER to: Front Wheel Speed Sensor . REFER to:

	Rear Wheel Speed Sensor .

B6 CHECK WHEEL SPEED SENSOR ENCODER FOR DAMAGE

Remove the suspect wheel speed sensor. REFER to: Front Wheel Speed Sensor . REFER to: Rear Wheel Speed Sensor .

Inspect the wheel speed sensor encoder for abnormal wear, deformation or contamination.

Is the wheel speed sensor encoder OK?

Yes	GO to B7

No	INSTALL a new wheel hub as necessary. REFER to: Front Wheel Bearing and Wheel Hub . REFER to: Wheel Bearing and Wheel Hub .

NOTE: Use a meter with a min-max feature or recording capabilities to obtain accurate measurements. The ABS module disables the voltage output immediately if the wheel speed sensor is not present.

NOTE: Make sure all test connections are made at the wheel speed sensor ***before*** *the ignition is set to ON.*

B7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

Disconnect the suspect wheel speed sensor electrical connector.

Connect the meter to the suspect wheel speed sensor electrical connector, harness side.

Set the meter to measure DC voltage.

Set the meter range to greater than 15 volts.

Enable the min-max or recording feature on the meter.

Ignition ON.

For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C150-1		C150-2

For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C160-1		C160-2

For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C440-1		C440-2

For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C426-1		C426-2

Check the maximum recorded voltage on the meter.

Is the voltage greater than 10 volts?

Yes	INSTALL a new wheel speed sensor. REFER to: Front Wheel Speed Sensor . REFER to: Rear Wheel Speed Sensor .

No	GO to B8

B8 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 .

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Yes	GO to B9

No

B9 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Connect the suspect wheel speed sensor. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST C : C0040:64

Refer to CRUISE CONTROL for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module receives BPP switch (stoplamp switch) input from the PCM through the GWM over the HS-CAN2. The ABS module compares this information against the internal pressure sensor in the HCU. An incorrectly installed BPP switch can cause a signal plausibility concern. An implausible signal can also be created if the driver is resting one foot on the brake pedal while using the other foot to press the accelerator.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0040:64	Brake Pedal Switch "A": Signal Plausibility Failure	This DTC sets in continuous memory if the master cylinder pressure signal exceeds 15 bar and the BPP switch message from the PCM is inactive for longer than 1 second.

Possible Causes

- Wiring, terminals or connectors.
- BPP switch
- Network communication concern
- PCM

Visual Inspection and Diagnostic Pre-checks

- Make sure the brake pedal switch electrical connector is connected and free of corrosion and other contaminants.
- Make sure the brake pedal switch is installed correctly.
- Make sure the brake pedal switch is operating correctly.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST C : C0040:64 > PINPOINT TEST C : C0040:64

C1 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0100:00, U0401:00 present?

Yes	DIAGNOSE DTC U0100:00 or U0401:00 before diagnosing DTC C0040:64. GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

No	GO to C2

C2 CHECK THE STOPLAMP SWITCH AND BRAKE PEDAL ASSEMBLY INSTALLATION

Inspect the stoplamp switch and brake pedal assembly, verify there is no brake pedal pressure unintentionally applied due to incorrect stoplamp switch or brake pedal installation. REFER to: Stoplamp Switch . REFER to: Brake Pedal and Bracket - 6-Speed Manual Transmission - 3160/6-Speed Manual Transmission - MT82 . REFER to: Brake Pedal and Bracket - 6-Speed Automatic Transmission - 6R80 .

Are the stoplamp switch and brake pedal assembly installed correctly?

Yes	GO to C3

No	REINSTALL the stoplamp switch or brake pedal assembly. REFER to: Stoplamp Switch . REFER to: Brake Pedal and Bracket - 6-Speed Manual Transmission - 3160/6-Speed Manual Transmission - MT82 . REFER to: Brake Pedal and Bracket - 6-Speed Automatic Transmission - 6R80 .

C3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) BPP (BRAKE PEDAL POSITION) (BOO1) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Using a diagnostic scan tool, monitor the PCM BOO1 PID while pressing and releasing the brake pedal.

Does the PID reflect the brake pedal movement?

Yes	GO to C4

No	DIAGNOSE the BPP switch. REFER to: Stoplamps .

C4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE BRAKE ON / OFF (BOO_ABS) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, monitor the ABS module BOO_ABS PID while pressing and releasing the brake pedal.

Does the PID reflect the brake pedal movement?

Yes	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

No	GO to C5

C5 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Retrieve and record all PCM Diagnostic Trouble Codes (DTCs).

Are any PCM Diagnostic Trouble Codes (DTCs) present?

Yes	GO to the DTC Chart: PCM. REFER to: ELECTRONIC ENGINE CONTROLS - 2.3L ECOBOOST (231KW/314PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 3.7L DURATEC (227KW/301PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS.

No	GO to C6

C6 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE TO HCU (HYDRAULIC CONTROL UNIT) FASTENER TORQUE VALUES

Verify all ABS module-to- HCU fasteners are tightened to their correct torque specifications.

Are the ABS module-to- HCU fasteners tightened correctly

Yes	GO to C8

No	TIGHTEN all ABS module-to- HCU fasteners to their specified torque value. GO to C7

C7 CHECK FOR RETURNING ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0040:64 present?

Yes	GO to C8

No	The condition that caused the concern has been repaired. RETURN the vehicle to the customer.

C8 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 .

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to C9

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

C9 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a

	loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST D : U0140:00, U0422:00

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the BCM sends messages to the ABS module through the GWM over the HS-CAN1. If the ABS module does not receive these messages within a certain time frame, the module sets Diagnostic Trouble Codes (DTCs). For information on the messages sent to the ABS module by the BCM, refer to the Network Message Chart. REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	This DTC sets in continuous memory and on-demand when any of the messages from the BCM are missing. This can be due to a GWM failure, BCM failure, a circuit failure or excessive load on the HS-CAN1 or HS-CAN2.
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	This DTC sets in continuous memory and on-demand if the ABS module receives "fault" or "unknown" in any one of the following BCM messages instead of valid message data; battery low state of charge, door ajar status, ignition key type, ignition status, park brake status or vehicle configuration data.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- GWM
- BCM

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST D : U0140:00, U0422:00 > PINPOINT TEST D : U0140:00, U0422:00

D1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Do both the BCM and the GWM pass the Network Test?

Yes	GO to D2

No	DIAGNOSE the no communication with the BCM or GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

D2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Repeat the ABS module self-test.

Is DTC U0140:00 or U0422:00 retrieved again?

Yes	GO to D3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D3 REVIEW THE RECORDED ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST DIAGNOSTIC TROUBLE CODES (DTCS)

Check the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Was DTC U3003:16 or U3003:17 recorded in the ABS module?

Yes	For DTC U3003:16, GO to Pinpoint Test A , For DTC U3003:17, GO to Pinpoint Test F

No	GO to D4

D4 RETRIEVE ALL DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE GWM (GATEWAY MODULE A)

Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to D5

D5 RETRIEVE ALL DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE)

Using a diagnostic scan tool, carry out the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the BCM?

Yes	DIAGNOSE the BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) .

No	GO to D6

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:XX OR U0422:XX SET IN OTHER MODULES

Using a diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140:xx or U0422:xx set in 1 or more modules in addition to the ABS module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,

No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern and DTC U0140:00 was set by the ABS module, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST E : THE TRACTION CONTROL SYSTEM CANNOT BE DISABLED

Refer to INSTRUMENT CLUSTER for schematic and connector information.

NOTE: This test requires the use of at least 2 keys programmed to the vehicle, one admin key and one restricted key.

Normal Operation and Fault Conditions

The stability-traction control disabled indicator (sliding car OFF icon) in the IPC provides traction control system status to the driver. When the driver deactivates the traction control, the IPC sends a message to the GWM over the HS-CAN3 indicating the driver has requested the traction control to be disabled. The GWM relays this message to the ABS module over the HS-CAN2. The ABS module continues to monitor for excessive wheel spin, but no longer takes any action when a traction event is detected.

The ABS module then sends a message to the GWM over the HS-CAN2 to illuminate the stability-traction control disabled indicator (sliding car OFF icon). The GWM relays this message to the IPC over the HS-CAN3. The IPC responds by illuminating the stability-traction control disabled indicator (sliding car OFF icon). The traction control system remains deactivated until the driver changes the traction control state in the message center or until the ignition is cycled.

If equipped, MyKey® allows users to configure traction control to be either always on or selectable. If a MyKey® restricted key is in use with the AdvanceTrac® always on feature configured to "on", the traction control system cannot be disabled. An admin key must be used to enable and disable the traction control system.

Possible Causes

- MyKey® restricted key in use
- Network communication concern
- IPC concern
- GWM concern
- Message center concern

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST E : THE TRACTION CONTROL SYSTEM CANNOT BE DISABLED > PINPOINT TEST E : THE TRACTION CONTROL SYSTEM CANNOT BE DISABLED

E1 VERIFY THE KEY IN USE IS NOT RESTRICTED

Place 1 key inside the vehicle and all other keys at least 1 meter (3 feet) away from the vehicle.

Turn the ignition to the ON mode.

Monitor the message center.

Does the message center display MYKEY ACTIVE DRIVE SAFELY?

Yes	The current key is a restricted key and is functioning correctly. REPEAT the test using different keys until the message center **does not** display MYKEY ACTIVE DRIVE SAFELY. GO to E2

No	GO to E2

E2 VERIFY THE MYKEY® TRACTION CONTROL SETTING IN THE MYKEY® MENU

Using the message center, verify the MyKey® traction control setting. Refer to the Owner's Literature for information on setting the MyKey® functions.

Is the MyKey® traction control setting configured to "always on"?

Yes	GO to E3

No	GO to E4

E3 VERIFY THE TRACTION CONTROL FUNCTION CAN BE DISABLED USING THE ADMIN KEY IN THE DRIVER ASSIST MENU

Using the message center, verify the traction control function can be enabled and disabled using the admin key. Refer to the Owner's Literature for information on enabling and disabling the traction control function.

Can the traction control function can be enabled and disabled using the admin key?

Yes	The system is operating correctly at this time. The concern was most likely caused by the use of a restricted key.INFORM the customer the traction control function can only be disabled using an admin key when the MyKey® traction control setting is configured to "always on".

No	GO to E4

E4 CHECK FOR ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the ABS self-test.

Retrieve and record all ABS Diagnostic Trouble Codes (DTCs).

Are there any ABS Diagnostic Trouble Codes (DTCs) present?

Yes	GO to the DTC Chart: Anti-Lock Brake System (ABS) Module in Diagnostic Trouble Code (DTC) Charts .

No	GO to E5

E5 CHECK FOR GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the GWM self-test.

Retrieve and record all GWM Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	GO to the DTC Chart: GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to E6

E6 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the IPC self-test.

Retrieve and record all IPC Diagnostic Trouble Codes (DTCs).

Are there any IPC Diagnostic Trouble Codes (DTCs) present?

Yes	GO to the DTC Chart: Instrument Panel Cluster (IPC). REFER to: Instrumentation, Message Center and Warning Chimes .

No	The system is operating correctly at this time. The concern may have been caused due to high network traffic or an intermittent fault condition.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST F : U3003:17

Normal Operation and Fault Conditions

The ABS module, hydraulic pump and solenoid valves require an operating voltage between 10 and 17 volts. The ABS module receives this voltage from the BJB and has a single ground circuit. An overcharging condition in the charging system results in the ABS module setting a DTC. This DTC may also set in the ABS module due to battery charging or vehicle jump starting events.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	This DTC sets in continuous memory and on-demand if the voltage supplied to the ABS module is above 17 volts.

Possible Causes

- Charging system concern
- ABS module

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST F : U3003:17 > PINPOINT TEST F : U3003:17

F1 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

Ignition ON.

Using a diagnostic scan tool, retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC B1317, B1318, B1676, U3003:16 or U3003:17 present in one or more modules AND are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE the overcharging condition. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS)). REFER to: Charging System - 5.0L 32V Ti-VCT .

No	GO to F2

F2 CHECK THE BATTERY VOLTAGE

Turn off all interior lights, exterior lights and accessories.

Start and run the engine at approximately 1, 500 RPM for 3 minutes while monitoring the battery voltage.

Is the battery voltage between 13 and 15.2 volts ?

Yes	GO to F3

No	DIAGNOSE the overcharging condition. REFER to: Charging System - 2.3L EcoBoost (201kW/273PS) . REFER to: Charging System - 3.7L Duratec (227kW/301PS) . REFER to: Charging System - 5.0L 32V Ti-VCT .

F3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

Turn the engine off.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Repeat the ABS module self-test.

Is DTC U3003:17 still present?

Yes	GO to F4

No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

F4 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect and inspect ABS module C135 (if not previously disconnected).

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to F5

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

F5 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST G : STABILITY CONTROL SENSOR SIGNAL FAULTS

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module receives vehicle yaw rate, lateral acceleration, longitudinal acceleration and roll rate from RCM over the HS-CAN2. The yaw rate sensor, lateral accelerometer and longitudinal accelerometer are contained in the RCM. A failure of the HS-CAN2, an incorrectly installed RCM, an internal failure of the RCM or the internal sensors causes the ABS to set one or more Diagnostic Trouble Codes (DTCs).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0061:28, C0062:28, C0063:28, C0064:28	Lateral Acceleration Sensor, Longitudinal Acceleration Sensor, Yaw Rate Sensor, Roll Rate Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the sensor signal is greater than the programmed maximum plausible sensor signal.
C0061:2F, C0063:2F	Lateral Acceleration Sensor, Yaw Rate Sensor: Signal Erratic	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the lateral acceleration sensor signal is out of range when the vehicle is standing still.
C0061:64, C0062:64, C0063:64, C0064:64	Lateral Acceleration Sensor, Longitudinal Acceleration Sensor, Yaw Rate Sensor, Roll Rate Sensor: Signal Plausibility Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if the sensor signal does not match the other stability sensor signals.

Possible Causes

- Underinflated tires
- Incorrect or mismatched tires
- Network communication concern
- Incorrect or incomplete ABS module IVD Initialization
- Incorrectly installed RCM

- RCM

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST G : STABILITY CONTROL SENSOR SIGNAL FAULTS > PINPOINT TEST G : STABILITY CONTROL SENSOR SIGNAL FAULTS

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

G1 CHECK FOR RETURNING ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	If any of the Diagnostic Trouble Codes (DTCs) listed in the DTC Fault Trigger Conditions table are present, GO to G2 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

No	The fault is not present and cannot be recreated at this time. CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSPECT all in-line connectors and the wire harness between the RCM and the ABS module for corrosion, loose terminals, spread terminals, loose wire connections, frayed wire connections, pinched wire harnesses and cut or pierced wire harnesses. REPAIR as necessary.

G2 CHECK THE WHEELS AND TIRES

Inspect the wheels and tires for any damage or excessive wear.

Verify all wheels and tires are the same size and match the size indicated on the VC label.

Verify the inflation pressure of all 4 tires is correct as indicated on the VC label.

Are the wheels and tires OK?

Yes	GO to G3

No	INSTALL the correct size wheel or tire as necessary. ADJUST tire pressure as necessary. REFER to: Wheel and Tire .

G3 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Does the RCM pass the Network Test?

Yes	GO to G4

No	DIAGNOSE the RCM does not communicate with the diagnostic scan tool. REFER to: MODULE COMMUNICATIONS NETWORK .

G4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	If any of the Diagnostic Trouble Codes (DTCs) listed in the DTC Fault Trigger Conditions table are present, GO to G5 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

No	GO to G6

G5 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, carry out the RCM self-test.

Are there any Diagnostic Trouble Codes (DTCs) present in the RCM?

Yes	DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) .

No	GO to G6

NOTE: The vehicle must be on level ground and at a complete standstill during IVD initialization. Any vehicle movement results in false values for this test.

G6 VERIFY STABILITY CONTROL SENSOR CALIBRATION

Using the diagnostic scan tool, carry out the IVD Initialization routine. Follow the diagnostic scan tool directions.

Ignition OFF.

Ignition ON.

Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.

Is the Advance Trac® warning indicator illuminated?

Yes	Using a diagnostic scan tool, CARRY OUT the ABS module self-test. If any of the Diagnostic Trouble Codes (DTCs) listed in the DTC Fault Trigger Conditions table are present, GO to G7 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

No	The condition which caused the concern is no longer present. The concern was most likely due to an incomplete calibration or a failed calibration of the stability control sensors.

NOTE: The vehicle must be on level ground and at a complete standstill during this step. Any vehicle movement results in false values for this test.

G7 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE PID (PARAMETER IDENTIFICATION) VALUES

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, monitor the following ABS module Parameter Identifications (PIDs):

Yaw rate (YAW_RATE)

Lateral accelerometer (LAT_ACCL)

Longitudinal accelerometer (LONG_ACCL)

Roll rate (ROLL_RATE)

Is the YAW_RATE PID value between -0.05 and 0.05, the LAT_ACCL PID value between -0.4 and 0.4, the LONG_ACCL PID value between -0.4 and 0.4, and the ROLL_RATE PID value between -0.05 and 0.05?

Yes	GO to G9

No	GO to G8

G8 CHECK THE RCM (RESTRAINTS CONTROL MODULE) INSTALLATION AND MOUNTING SURFACE

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Wait one minute then disconnect RCM C310A and C310B .

Inspect the RCM installation and make sure the fasteners are fully seated and tightened to specifications. REFER to: Restraints Control Module (RCM) .

Inspect the RCM mounting surface for damage, corrosion or dirt.

Is the RCM installed correctly and is the mounting surface clean and free from damage?

Yes	GO to G9

No	CLEAN or REPAIR the mounting surface or correctly REINSTALL the RCM as necessary. REFER to: Restraints Control Module (RCM) .

G9 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

Ignition OFF.

Disconnect ABS module C135 and related in-line electrical connectors.

Inspect the ABS module, RCM and related in-line electrical connectors for:

corrosion

loose or spread terminals

loose or frayed wire connections at terminals

pushed-out or bent pins

damage, pinched, cut or pierced wires

Repair any electrical connector concerns found, Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

Ignition OFF.

Wait one minute then connect RCM C310A and C310B . Make sure the connectors seat and latch correctly.

Connect ABS module C135 and related in-line electrical connectors. Make sure the connectors seat and latch correctly.

Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.

Is the Advance Trac® warning indicator illuminated?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, DIAGNOSE the RCM concern. REFER to: Airbag Supplemental Restraint System (SRS) .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST H : ABS (ANTI-LOCK BRAKE SYSTEM) PUMP MOTOR FAULTS

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module uses an internal solid state switch to operate the hydraulic pump motor. The ABS module tests the hydraulic pump motor by activating it for 30 milliseconds. The ABS module monitors the voltage drop across the hydraulic pump motor while the pump motor is being activated. After 30 milliseconds have passed, the ABS module stops applying voltage to the pump motor and monitors the voltage the spinning hydraulic pump motor is generating and the voltage drop across the hydraulic pump motor solid state switch. If the monitored voltages are not within the specifications, the ABS module sets one or more Diagnostic Trouble Codes (DTCs).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0020:11	ABS Pump Motor Control: Circuit Short To Ground	This DTC sets in continuous memory and on-demand if the voltage drop across the solid state switch is too high when the

		pump motor is activated. This can be due to a shorted switch, a shorted motor or a locked motor
C0020:12	ABS Pump Motor Control: Circuit Short To Battery	This DTC sets in continuous memory and on-demand if the pump motor supply voltage is greater than 0.93 volt for longer than 3 seconds when the pump motor is deactivated.
C0020:13	ABS Pump Motor Control: Circuit Open	This DTC sets in continuous memory and on-demand if the pump motor supply voltage is less than 6 volts for longer than 2 seconds when the pump motor is deactivated. This DTC also sets if the pump motor supply voltage is less than 7.3 volts for more than 2 seconds when the pump motor is activated.
C0020:71	ABS Pump Motor Control: Actuator Stuck	If insufficient voltage is generated by the pump motor immediately following a pump motor deactivation, a second pump motor test is carried out. If insufficient voltage is again generated by the pump motor, this DTC sets.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- HCU
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the vehicle battery terminals and cables are free of any corrosion and other contaminants.
- Make sure the vehicle battery terminals are tightened to their correct torque specifications.
- Make sure BJB fuse 5 (50A) and the fuse socket are OK.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST H : ABS (ANTI-LOCK BRAKE SYSTEM) PUMP MOTOR FAULTS > PINPOINT TEST H : ABS (ANTI-LOCK BRAKE

SYSTEM) PUMP MOTOR FAULTS

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

H1 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 .

Using a good light source, inspect each connector terminal for any corrosion.

Inspect the connector for any pushed-out terminals.

Using a suitable mating terminal, check each connector terminal for deformed or enlarged contacts by comparing the mating terminal's fit between each of the following pins:

C135-1

C135-14

Is the connector free of terminal corrosion, pushed-out terminals and spread terminals?

Yes	GO to H2

No	REPAIR the affected terminal. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

H2 CHECK PUMP MOTOR OPERATION

Connect ABS module C135 .

Ignition ON.

Using a diagnostic scan tool, activate the ABS pump motor (PMP_MTR) active command.

Listen for the ABS pump motor noise.

Does the ABS pump motor run for approximately 2 seconds?

Yes	GO to H3

No	GO to H4

H3 CHECK FOR FAULT REPEATABILITY

Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Test drive the vehicle at speeds greater than 20 km/h (12 mph) and carry out at least 1 ABS stop.

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Are any ABS module Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C0020:12, C0020:13 and C0020:71, GO to H6 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

No	The concern that caused the DTC is not present at this time. DISCONNECT and INSPECT ABS module C135 . CLEAR or REPAIR the connector as necessary. ADDRESS the root cause of any connector or pin issues.

H4 CHECK THE PUMP MOTOR VOLTAGE SUPPLY TO THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE

Ignition OFF.

Disconnect ABS module C135 .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to H5

No	VERIFY BJB fuse 5 (50A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the OEM WIRING DIAGRAMS article to identify the cause of the circuit short.

H5 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE GROUND CIRCUIT FOR AN OPEN

Ignition OFF.

Disconnect the battery negative cable. REFER to: Battery Disconnect and Connect .

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-14	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to H6

No	REPAIR the circuit.

H6 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 (if not previously disconnected).

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to H7

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

H7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Connect the battery negative cable. REFER to: Battery Disconnect and Connect .

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module and HCU assembly. REFER to: Hydraulic Control Unit (HCU) .

No	The system is operating correctly at this time. The concern may have been caused by a

	loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST I : U0100:00, U0401:00

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the PCM sends messages to the ABS module through the GWM over the HS-CAN1. If the ABS module does not receive these messages within a certain time frame, the ABS module sets Diagnostic Trouble Codes (DTCs). For information on the messages sent to the ABS module by the PCM, refer to the Network Message Chart. REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM / PCM "A": No Sub Type Information	This DTC sets in continuous memory and on-demand when any of the messages from the PCM are missing. This can be due to a GWM failure, PCM failure, a circuit failure or excessive load on the HS-CAN1 or HS-CAN2.
U0401:00	Invalid Data Received From ECM / PCM "A": No Sub Type Information	This DTC sets in continuous memory and on-demand if the ABS module receives "fault" or "unknown" messages from the PCM instead of valid accelerator pedal position, ambient air temperature, cruise control system status, brake pedal applied, clutch pedal position, engine RPM, engine torque output, gear lever position, launch control system status, power pack status, reverse gear selected or transmission in reverse messages.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- GWM

- PCM

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST I : U0100:00, U0401:00 > PINPOINT TEST I : U0100:00, U0401:00

I1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Do both the PCM and the GWM pass the Network Test?

Yes	GO to I2

No	DIAGNOSE the no communication with the PCM or GWM. REFER to: MODULE COMMUNICATIONS NETWORK .

I2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Clear the Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0100:00 or U0401:00 retrieved again?

Yes	GO to I3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I3 REVIEW THE RECORDED ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST DIAGNOSTIC TROUBLE CODES (DTCS)

Check the recorded Diagnostic Trouble Codes (DTCs) from the ABS self-test.

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test F

No	GO to I4

I4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE GWM (GATEWAY MODULE A)

Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: MODULE COMMUNICATIONS NETWORK .

No	GO to I5

I5 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Is DTC P0562 or P0563 present?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). REFER to: ELECTRONIC ENGINE CONTROLS - 2.3L ECOBOOST (231KW/314PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 3.7L DURATEC (227KW/301PS) . REFER to: ELECTRONIC ENGINE CONTROLS - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS.

No	GO to I6

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:XX OR U0401:XX SET IN OTHER MODULES

Using a diagnostic scan tool, carry out the self-test for all modules.

Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100:xx OR U0401:xx set in 1 or more modules in addition to the ABS module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: POWERTRAIN CONTROL MODULE (PCM) - 2.3L EcoBoost (231kW/314PS). REFER to: POWERTRAIN CONTROL MODULE (PCM) - 3.7L Duratec (227kW/301PS. REFER to: POWERTRAIN CONTROL MODULE (PCM) - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS).

No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST J : STEERING WHEEL POSITION SENSOR SIGNAL FAULTS

Normal Operation and Fault Conditions

The PSCM monitors steering wheel rotation speed, angle and direction of rotation and sends the information to the ABS module over the HS-CAN2. A failure of the HS-CAN2, PSCM or the internal sensors causes the ABS to set one or more Diagnostic Trouble Codes (DTCs).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0051:62	Steering Wheel Position Sensor: Signal Compare Failure	This DTC sets in continuous memory and on-demand if the difference between the steering wheel angle signal and the calculated reference signal is too high.
C0051:64	Steering Wheel Position Sensor: Signal Plausibility Failure	This DTC sets in continuous memory and on-demand if the difference between the steering wheel angle signal and the calculated reference signal is too high or if the steering wheel angle sensor does not match other stability control sensor inputs (yaw rate, lateral acceleration, longitudinal acceleration, roll rate).
C0051:67	Steering Wheel Position Sensor: Signal Incorrect After Event	This DTC sets in continuous memory and on-demand if the center position of the steering wheel cannot be determined after 30 seconds of driving at a speed between 12 km/h (7 mph) and 50 km/h (31 mph).
C0051:85	Steering Wheel Position Sensor: Signal Above Allowable Range	This DTC sets in continuous memory and on-demand if the absolute value of the calculated steering wheel angle is greater than a predetermined threshold.

Possible Causes

- Incorrectly mounted RCM
- Network communication concern
- Incomplete or incorrect stability control sensor calibration
- Wheels and tires
- Front suspension components
- Steering system components
- PSCM

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST J : STEERING WHEEL POSITION SENSOR SIGNAL FAULTS > PINPOINT TEST J : STEERING WHEEL POSITION SENSOR SIGNAL FAULTS

J1 CHECK THE WHEELS AND TIRES

Inspect the wheels and tires for any damage or excessive wear.

Verify all wheels and tires are the same size and match the size indicated on the VC label.

Verify the inflation pressure of all 4 tires is correct as indicated on the VC label.

Are the wheels and tires OK?

Yes	GO to J2

No	INSTALL the correct size wheel or tire as necessary. REFER to: Wheel and Tire . ADJUST tire pressure as necessary.

J2 CHECK THE FRONT SUSPENSION AND STEERING COMPONENTS

With the transmission in NEUTRAL, position the vehicle on a hoist. REFER to: Jacking and Lifting - Overview .

Inspect the front suspension and steering components for any obvious signs of damage or missing components.

Are the front suspension and steering components OK?

Yes	GO to J3

No	REPAIR or INSTALL new components as necessary.

J3 CHECK FOR PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, carry out the PSCM self-test.

Are there any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing any ABS C0051:xx codes. REFER to: POWER STEERING .

No	GO to J4

J4 CHECK FOR ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Are any of the following Diagnostic Trouble Codes (DTCs) present in the ABS module; wheel speed sensor, stability control sensor, lost communication with the PSCM or invalid data received from the PSCM?

Yes	DIAGNOSE those ABS module Diagnostic Trouble Codes (DTCs) before diagnosing any C0051:xx codes, beginning with any lost communication or invalid data received from the PSCM, followed by any stability control sensor (yaw rate, lateral acceleration and longitudinal acceleration) Diagnostic Trouble Codes (DTCs) and finally any wheel speed sensor Diagnostic Trouble Codes (DTCs). GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

No	GO to J5

J5 VERIFY STABILITY CONTROL SENSOR CALIBRATION

Using a diagnostic scan tool, carry out the IVD Initialization routine. Follow the diagnostic scan tool directions.

Ignition OFF.

Ignition ON.

Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.

Using a diagnostic scan tool, carry out the ABS module self-test.

Are any C0051:xx Diagnostic Trouble Codes (DTCs) present?

Yes	GO to J6

No	The condition that caused the concern is no longer present. The concern was most likely due to an incomplete calibration or a failed calibration of the stability control sensors.

NOTE: The vehicle must be on level ground and at a complete standstill. Any vehicle movement results in false values for this test.

J6 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE YAW RATE VALUE (YAW_RATE) PID (PARAMETER IDENTIFICATION)

Ignition ON.

Using a diagnostic scan tool, monitor the ABS module YAW_RATE PID.

Is the YAW_RATE PID value between -0.05 and 0.05?

Yes	GO to J7

No	GO to J9

NOTE: The vehicle must be on level ground and at a complete standstill. Any vehicle movement results in false values for this test.

J7 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE LATERAL ACCELERATION (LAT_ACCL) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, monitor the ABS module LAT_ACCL PID.

Is the LAT_ACCL PID value between -0.4 and 0.4?

Yes	GO to J8

No	GO to J9

NOTE: The vehicle must be on level ground and at a complete standstill. Any vehicle movement results in false values for this test.

J8 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE LONGITUDINAL ACCELERATION (LONG_ACCL) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, monitor the ABS module LONG_ACCL PID.

Is the LONG_ACCL PID value between -0.4 and 0.4?

Yes	GO to J10

No	GO to J9

J9 CHECK THE RCM (RESTRAINTS CONTROL MODULE) INSTALLATION AND MOUNTING SURFACE

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Wait one minute then disconnect RCM C310A and C310B .

Inspect the RCM installation and make sure the fasteners are fully seated and tightened to specifications. REFER to: Restraints Control Module (RCM) .

Inspect the RCM mounting surface for damage, corrosion or dirt.

Is the RCM installed correctly and is the mounting surface clean and free from damage?

Yes	GO to J10

No	CLEAN or REPAIR the mounting surface or correctly REINSTALL the RCM as necessary. REFER to: Restraints Control Module (RCM) .

NOTE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

J10 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect PSCM C1463A and C1463B (if not previously disconnected).

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to J11

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

J11 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

Connect PSCM C1463A and C1463B . Make sure they seat and latch correctly.

Connect RCM C310A and C310B (if previously disconnected). Make sure they seat and latch correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS symptom chart or DTC chart.

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST K : WHEEL SPEED SENSOR ELECTRICAL FAULTS - FRONT

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

Active wheel speed sensors generate a square wave signal proportional to wheel speed which is sent to the ABS module. Each wheel speed sensor is connected to the ABS module through 2 wires and a connector at each wheel speed sensor. One wire is for sensor voltage supply from the ABS module and the other wire is for the signal return to the ABS module. With the ignition ON, the ABS module carries out a self-test by sending a reference voltage through the wheel speed sensors and their circuitry.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0031:11	Left Front Wheel Speed Sensor: Circuit Short to Ground	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to ground in the sensor signal return circuit or if the sensor has an internal short to ground.
C0034:11	Right Front Wheel Speed Sensor: Circuit Short to Ground	

C0031:15	Left Front Wheel Speed Sensor: Circuit Short to Battery or Open	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to battery voltage or an open in the sensor signal return circuit. A short to battery voltage may be due to the sensor signal return circuit and the sensor voltage supply circuit shorted together. These Diagnostic Trouble Codes (DTCs) also set if the sensor has an internal short to battery voltage or an open circuit.
C0034:15	Right Front Wheel Speed Sensor: Circuit Short to Battery or Open	

Possible Causes

- Wiring, terminals or connectors
- Wheel speed sensors
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the wheel speed sensor harness is routed correctly and is undamaged.
- Make sure the wheel speed sensor electrical connector is free from any corrosion or other contaminants.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST K : WHEEL SPEED SENSOR ELECTRICAL FAULTS - FRONT > PINPOINT TEST K : WHEEL SPEED SENSOR ELECTRICAL FAULTS - FRONT

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

K1 CHECK FOR FAULT REPEATABILITY

Ignition ON.

Using a diagnostic scan tool, clear all ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Test drive the vehicle above 20 km/h (12 mph) and carry out at least 1 ABS stop.

Bring the vehicle to a safe stop.

Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0031:11, C0031:15, C0034:11 or C0034:15 present?

Yes	If the Rotunda Active Wheel Speed Sensor Tester **is** available, GO to K2 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0031:15 or C0034:15 is present, GO to K5 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0031:11 or C0034:11 is present, GO to K7

No	The system is operating correctly at this time. INSPECT both front wheel speed sensor electrical connectors and the ABS module electrical connector. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.

K2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT USING THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

Ignition OFF.

Disconnect the suspect wheel speed sensor electrical connector.

Connect the Rotunda Active Wheel Speed Sensor Tester to the wheel speed sensor connectors.

Ignition ON.

Select the correct system polarity on the Rotunda Active Wheel Speed Sensor Tester and turn the power switch to the ON position.

Is the tester output LED illuminated?

Yes	GO to K3

No	GO to K5

K3 CHECK THE WHEEL SPEED SENSOR FOR A SHORT TO VOLTAGE WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

Observe the current overload LED on the Rotunda Active Wheel Speed Sensor Tester.

Is the current overload LED illuminated?

Yes	REPAIR the suspect wheel speed sensor circuit for a short to voltage.

No	GO to K4

K4 CHECK THE WHEEL SPEED SENSOR OUTPUT WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

Raise the suspect wheel until it can spin freely. REFER to: Jacking and Lifting - Overview .

While monitoring the Rotunda Active Wheel Speed Sensor Tester, slowly spin the suspect wheel.

Do the sensor output Light-emitting Diodes (LEDs) illuminate and flash?

Yes	The system is operating correctly at this time. INSPECT all wheel speed sensor electrical connectors and the ABS module electrical connectors. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.

No	INSTALL a new wheel speed sensor. REFER to: Front Wheel Speed Sensor .

K5 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO BATTERY VOLTAGE

Ignition OFF.

Disconnect ABS module C135 .

Disconnect the suspect wheel speed sensor electrical connector.

Ignition ON.

For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-9		Ground
C135-8		Ground

For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5		Ground
C135-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to K6

K6 CHECK THE WHEEL SPEED CIRCUITS FOR AN OPEN

Ignition OFF.

For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-9	Ω	C150-1
C135-8	Ω	C150-2

For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	Ω	C160-1
C135-4	Ω	C160-2

Are the resistances less than 3 ohms?

Yes	GO to K7

No	REPAIR the circuit.

K7 CHECK FOR SHORTED WHEEL SPEED SENSOR CIRCUITS

Ignition OFF.

Disconnect ABS module C135 (if not previously disconnected).

Disconnect the suspect wheel speed sensor electrical connector (if not previously disconnected).

For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C150-1	Ω	C150-2

For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C160-1	Ω	C160-2

Is the resistance greater 10, 000 ohms?

Yes	If DTC C0031:11 or C0034:11 is present, GO to K8If DTC C0031:15 or C0034:15 is present, GO to K9

No	REPAIR the circuit.

K8 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO GROUND

For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-9	Ω	Ground
C135-8	Ω	Ground

For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	Ω	Ground
C135-4	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to K9

No	REPAIR the circuit.

NOTE: Make sure all test connections are made at the wheel speed sensor ***before*** *the ignition is set to ON.*

NOTE: Use a meter with a min-max feature or recording capabilities to obtain accurate measurements. The ABS module immediately disables the voltage output if the wheel speed sensor is not present.

K9 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

Ignition OFF.

Connect ABS module C135 .

Connect the meter to the suspect wheel speed sensor electrical connector, harness side.

Set the meter to measure DC voltage.

Set the meter range to greater than 15 volts.

Enable the min-max or recording feature on the meter.

Ignition ON.

For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead

C150-1		C150-2

For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C160-1		C160-2

Check the maximum recorded voltage on the meter.

Is the voltage greater 10 volts?

Yes	INSTALL a new wheel speed sensor. REFER to: Front Wheel Speed Sensor .

No	GO to K10

K10 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 (if not previously disconnected).

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to K11

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

K11 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Connect the suspect wheel speed sensor electrical connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST L : WHEEL SPEED SENSOR ELECTRICAL FAULTS - REAR

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

Active wheel speed sensors generate a square wave signal proportional to wheel speed which is sent to the ABS module. Each wheel speed sensor is connected to the ABS module through 2 wires and a connector at each wheel speed sensor. One wire is for sensor voltage supply from the ABS and the other wire is for the signal return to the ABS. With the ignition ON, the ABS module carries out a self-test by sending a reference voltage through the wheel speed sensors and their circuitry.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0037:11	Left Rear Wheel Speed Sensor: Circuit Short to Ground	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to ground in the sensor signal return circuit or if the sensor has an internal short to ground.
C003A:11	Right Rear Wheel Speed Sensor: Circuit Short to Ground	
C0037:15	Left Rear Wheel Speed Sensor: Circuit Short to Battery or Open	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to battery voltage or an open in the sensor signal return circuit. A short to battery voltage may be due to the sensor signal return circuit and the sensor voltage supply circuit shorted together. These Diagnostic Trouble Codes (DTCs) also set if the sensor has an internal short to battery voltage or an open circuit.
C003A:15	Right Rear Wheel Speed Sensor: Circuit Short to Battery or Open	

Possible Causes

- Wiring, terminals or connectors

- Wheel speed sensors
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the wheel speed sensor harness is routed correctly and is undamaged.
- Make sure the wheel speed sensor electrical connector is free from any corrosion or other contaminants.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST L : WHEEL SPEED SENSOR ELECTRICAL FAULTS - REAR > PINPOINT TEST L : WHEEL SPEED SENSOR ELECTRICAL FAULTS - REAR

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

L1 CHECK FOR FAULT REPEATABILITY

Ignition ON.

Using a diagnostic scan tool, clear all ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Test drive the vehicle above 20 km/h (12 mph) and carry out at least 1 ABS stop.

Bring the vehicle to a safe stop.

Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0037:11, C0037:15, C003A:11 or C003A:15 present?

Yes	If the Rotunda Active Wheel Speed Sensor Tester **is** available, GO to L2 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0037:15 or C003A:15 is present, GO to L5 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0037:11 or C003A:11 is present, GO to L7

No	The system is operating correctly at this time. INSPECT both rear wheel speed sensor electrical connectors and the ABS module electrical connector. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.

L2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT USING THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

Ignition OFF.

Disconnect the suspect wheel speed sensor electrical connector.

Connect the Rotunda Active Wheel Speed Sensor Tester to the wheel speed sensor connectors.

Ignition ON.

Select the correct system polarity on the Rotunda Active Wheel Speed Sensor Tester and turn the power switch to the ON position.

Is the tester output LED illuminated?

Yes	GO to L3

No	GO to L5

L3 CHECK THE WHEEL SPEED SENSOR FOR A SHORT TO VOLTAGE WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

Observe the current overload LED on the Rotunda Active Wheel Speed Sensor Tester.

Is the current overload LED illuminated?

Yes	REPAIR the suspect wheel speed sensor circuit for a short to voltage.

No	GO to L4

L4 CHECK THE WHEEL SPEED SENSOR OUTPUT WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

Raise the suspect wheel until it can spin freely. REFER to: Jacking and Lifting - Overview .

While monitoring the Rotunda Active Wheel Speed Sensor Tester, slowly spin the suspect wheel.

Do the sensor output Light-emitting Diodes (LEDs) illuminate and flash?

Yes	The system is operating correctly at this time. INSPECT all wheel speed sensor electrical connectors and the ABS module electrical connectors. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.

No	INSTALL a new wheel speed sensor. REFER to: Rear Wheel Speed Sensor .

L5 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO BATTERY VOLTAGE

Ignition OFF.

Disconnect ABS module C135 .

Disconnect the suspect wheel speed sensor electrical connector.

Ignition ON.

For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-6	V	Ground
C135-7	V	Ground

For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-10	V	Ground
C135-11	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to L6

L6 CHECK THE WHEEL SPEED CIRCUITS FOR AN OPEN

Ignition OFF.

For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-6	Ω	C440-2
C135-7	Ω	C440-1

For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-10	Ω	C426-2
C135-11	Ω	C426-1

Are the resistances less than 3 ohms?

Yes	GO to L7

No	REPAIR the circuit.

L7 CHECK FOR SHORTED WHEEL SPEED SENSOR CIRCUITS

Ignition OFF.

Disconnect ABS module C135 (if not previously disconnected)

Disconnect the suspect wheel speed sensor electrical connector (if not previously disconnected).

For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C440-1	Ω	C440-2

For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C426-1	Ω	C426-2

Is the resistance greater 10, 000 ohms?

Yes	If DTC C0037:11 or C003A:11 are present, GO to L8. If DTC C0037:15 or C003A:15 are present, GO to L9

No	REPAIR the circuit.

L8 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO GROUND

For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-6	Ω	Ground
C135-7	Ω	Ground

For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-10	Ω	Ground
C135-11	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to L9

No	REPAIR the circuit.

NOTE: Use a meter with a min-max feature or recording capabilities to obtain accurate measurements. The ABS module immediately disables the voltage output if the wheel speed sensor is not present.

*NOTE: Make sure all test connections are made at the wheel speed sensor **before** the ignition is set to ON.*

L9 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

Ignition OFF.

Connect ABS module C135 .

Connect the meter to the suspect wheel speed sensor electrical connector, harness side.

Set the meter to measure DC voltage.

Set the meter range to greater than 15 volts.

Enable the min-max or recording feature on the meter.

Ignition ON.

For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C440-1		C440-2

For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C426-1		C426-2

Check the maximum recorded voltage on the meter.

Is the voltage greater 10 volts?

Yes	INSTALL a new wheel speed sensor. REFER to: Rear Wheel Speed Sensor .

No	GO to L10

L10 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 (if not previously disconnected).

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to L11

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

L11 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Connect the suspect wheel speed sensor electrical connector. Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST M : BRAKE BOOSTER VACUUM SENSOR FAULTS

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

The brake booster vacuum pressure sensor receives a sensor supply voltage of 5 volts from the ABS

module. The sensor is also grounded through the ABS module. The sensor uses the pressure differential between the atmosphere and the brake booster vacuum chamber to produce a return voltage signal to the ABS module between 0.2 volt and 4.9 volts. The ABS module uses other sensor inputs such as wheel speed, brake pedal and stability sensors to determine if the vehicle is stopping and at what rate of deceleration. This information is compared against the vacuum pressure sensor to determine the validity of the sensor signal and the working condition of the sensor itself.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0047:01	Brake Booster Pressure Sensor: General Electrical Failure	This DTC sets when the signal returned by the sensor is above or below a predetermined limit. This is usually caused by a short to voltage, an open or an internal failure of the sensor.
C0047:26	Brake Booster Pressure Sensor: Signal Rate of Change Below Threshold	This DTC sets when the rate of change in the signal transmitted by the vacuum sensor does not match a predetermined threshold depending on the brake system pressure, or if a characteristic oscillation in the vacuum signal is not detected. A signal failure is reported when 3 valid braking cycles, within the same ignition cycle, have met the above criteria. This is usually caused by a failure in the sensor circuits, a vacuum leak in the brake booster, a mechanical failure of the brake booster or an internal failure of the vacuum sensor.
C0047:27	Brake Booster Pressure Sensor: Signal Rate of Change Above Threshold	This DTC sets when the rate of change in the signal transmitted by the vacuum sensor increases beyond a predetermined level when the brakes are not being applied. When this condition is detected, the ABS module starts a counter and monitors the rate of change, if the rate of change increases beyond the limit 3 times during this time period, this DTC sets. This is usually caused by a failure in the sensor circuits or an internal failure of the sensor.
C1015:08	Vacuum Supply: Bus Signal / Message Failure	This DTC sets in continuous memory and on-demand if the ABS module does not receive any data

		from the vacuum sensor or the ABS module receives invalid data from the vacuum sensor.
C1B14:11	Sensor Supply Voltage "A": Circuit Short to Ground	The ABS module supplies 5 volts to the brake booster vacuum sensor. The ABS module monitors this output and sets this DTC when the module detects a short to ground on the voltage supply circuit.
C1B14:12	Sensor Supply Voltage "A": Circuit Short to Battery	The ABS module supplies 5 volts to the brake booster vacuum sensor. The ABS module monitors this output and sets this DTC when the module detects a short to battery voltage on the voltage supply circuit.
C1B15:1C	Sensor Supply Voltage "B": Circuit Voltage Out of Range	The ABS module supplies 5 volts to the brake booster vacuum sensor. The ABS module monitors this output and sets this DTC once the module determines the output voltage is either above or below the specified voltage for a predetermined amount of time.

Possible Causes

- Wiring, terminals or connectors
- Vacuum leak
- Brake booster vacuum sensor
- Brake booster
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Inspect the brake booster for vacuum leaks.
- Inspect the brake booster for any obvious signs of damage.
- Inspect the brake booster vacuum sensor harness and connector of any obvious signs of damage.
- Make sure the brake booster vacuum sensor electrical connector is free from any corrosion or other contaminants.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST M : BRAKE BOOSTER VACUUM

SENSOR FAULTS > PINPOINT TEST M : BRAKE BOOSTER VACUUM SENSOR FAULTS

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

M1 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 .

Disconnect brake booster vacuum sensor C1609 .

Using a good light source, inspect each connector terminal for any corrosion.

Inspect both connectors for any pushed-out pins. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

Using a suitable mating terminal, check each female terminal for deformed or enlarged contacts by comparing the mating terminal's fit between each of the following pins:

C135-36

C135-44

C135-45

C1609-1

C1609-2

C1609-3

Are both connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	GO to M2

No	REPAIR the affected terminal.

M2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Connect ABS module C135 .

Connect brake booster vacuum sensor C1609 .

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0047:26 present?

Yes	GO to M3

No	For DTC C0047:01, C0047:27, C1B14:11, C1015:08, C1B14:12 or C1B15:1C, GO to M4 For all other ABS module codes, GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

M3 CHECK THE BRAKE BOOSTER AND VACUUM HOSES FOR LEAKS

Inspect the vacuum hoses, brake booster and brake booster seals for leaks or evidence of leaks.

Are any leaks or evidence of leaks found?

Yes	REPAIR or INSTALL new components as necessary.

No	GO to M4

M4 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TO VOLTAGE

Ignition OFF.

Disconnect ABS module C135 .

Disconnect brake booster vacuum sensor C1609 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-36		Ground
C135-44		Ground
C135-45		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to M5

M5 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TO GROUND

Ignition OFF.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-36	Ω	Ground
C135-44	Ω	Ground
C135-45	Ω	Ground

Are the resistances greater than 10, 000 ohms?

Yes	GO to M6

No	REPAIR the circuit.

M6 CHECK THE VACUUM SENSOR WIRING FOR AN OPEN

Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-36	Ω	C1609-1
C135-44	Ω	C1609-3
C135-45	Ω	C1609-2

Are the resistances less than 3 ohms?

Yes	GO to M7

No	REPAIR the circuit.

M7 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TOGETHER

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1609-1	Ω	C1609-2
C1609-1	Ω	C1609-3
C1609-2	Ω	C1609-3

Are the resistances greater than 10, 000 ohms?

Yes	GO to M8

No	REPAIR the circuit.

M8 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

Connect ABS module C135 .

Ignition ON.

Measure:

Positive Lead	Measurement / Action	Negative Lead
C1609-3		Ground

Is the approximately 4.7 volts?

Yes	INSTALL a new brake booster vacuum sensor. REFER to: Brake Vacuum Sensor .

No	GO to M9

M9 VERIFY ALL WIRING CONNECTIONS

Ignition OFF.

Disconnect ABS module C135 .

Using a good light source, inspect ABS module C135 for the following:

corrosion - install a new connector or terminal and clean module pins

damaged or bent pins - install new terminals or pins

pushed-out pins - install new pins as necessary

spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to M10

No	REPAIR the affected connectors or terminals. Refer to CONNECTOR REPAIR PROCEDURES for schematic and connector information.

M10 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

Connect ABS module C135 . Make sure it seats and latches correctly.

Connect brake booster vacuum sensor C1609 . Make sure it seats and latches correctly.

Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST N : U3002:62

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

When the ignition is in RUN, the ABS module and the PCM share VIN information through the GWM over the HS-CAN1 and the HS-CAN2.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3002:62	Vehicle Identification Number: Signal Compare Failure	This DTC indicates the VIN message sent by the PCM over the HS-CAN1 does not match the VIN stored in the ABS module.

Possible Causes

- Module configuration (ABS and PCM)
- ABS module

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST N : U3002:62 > PINPOINT TEST N : U3002:62

N1 VERIFY THE PCM (POWERTRAIN CONTROL MODULE) VIN (VEHICLE IDENTIFICATION NUMBER)

Ignition ON.

Using a diagnostic scan tool, compare the VIN in the PCM to the VIN plate on the vehicle.

Does the VIN in the PCM match the VIN plate?

Yes	GO to N2

No	RECONFIGURE the PCM. FOLLOW the instructions on the diagnostic scan tool.

N2 VERIFY THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE PART NUMBER

Using a diagnostic scan tool, retrieve and record the ABS module part number.

Compare the part number retrieved to the part number in the parts catalog or equivalent.

Is the correct ABS module installed in the vehicle?

Yes	CONFIGURE the ABS module. REFER to: MODULE CONFIGURATION

No	INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST O : C006B:00

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module uses information from the wheel speed sensors, RCM and PSCM to determine when an ESC intervention is necessary to help stabilize the vehicle. The ABS module uses the HCU to modulate the brake fluid pressure to the brake calipers and continues to monitor the sensor and module input until the instability event has been corrected. Once the sensors and modules indicate the instability event has been corrected, the ABS module deactivates the HCU. Underinflated tires, wheels and tires not matching VC label specifications, suspension and steering damage, or one or more wheel speed sensor failures contribute to the ABS module setting this DTC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C006B:00	Stability System Active Too Long: No Sub Type Information	This DTC indicates the ESC function has been active for longer than the various sensors indicate is necessary.

Possible Causes

- Tire pressure
- Wheel and tire size
- Chassis damage

- Steering damage or alignment
- Wheel speed sensor
- Wheel speed sensor encoders
- PSCM
- RCM sensors

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST O : C006B:00 > PINPOINT TEST O : C006B:00

O1 VERIFY ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C006B:00 the only DTC present in the ABS module?

Yes	GO to O2

No	DIAGNOSE all other ABS module Diagnostic Trouble Codes (DTCs) before diagnosing DTC C006B:00. GO to the DTC Chart: ABS Module in Diagnostic Trouble Code (DTC) Charts .

O2 VERIFY THE TIRE PRESSURE

Verify all tire inflation pressures are correct as indicated on the VC label.

Are the tires inflated to the correct pressure as indicated on the VC label?

Yes	GO to O3

No	ADJUST the tire pressure as necessary.

O3 VERIFY WHEEL AND TIRE SIZE

Verify all the tires and wheels are the same size and the size is correct as indicated on the VC label.

Are all 4 wheels and tires the correct size as indicated on the VC label?

Yes	GO to O4

No	INSTALL new wheels or tires as necessary. REFER to: Wheel and Tire .

O4 VERIFY SUSPENSION AND STEERING ALIGNMENT

Verify the suspension and steering alignment is correct. REFER to: Suspension System .

Are the suspension and steering alignment correct?

Yes	GO to O5

No	CORRECT the suspension or steering alignment. REFER to: Suspension System .

NOTE: The vehicle must be on level ground and at a complete standstill. Any vehicle movement results in false values for this test.

O5 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE YAW RATE (YAW_RATE) PID (PARAMETER IDENTIFICATION)

Using a diagnostic scan tool, monitor the YAW_RATE PID

Is the YAW_RATE PID value between -0.05 and 0.05?

Yes	GO to O6

No	GO to O9

NOTE: The vehicle must be on level ground and at a complete standstill. Any vehicle movement results in false values for this test.

O6 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE LATERAL ACCELEROMETER (LAT_ACCL) PID (PARAMETER IDENTIFICATION)

Monitor the LAT_ACCL PID

Is the LAT_ACCL PID value between -0.4 and 0.4?

Yes	GO to O7

No	GO to O9

O7 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE LONGITUDINAL ACCELEROMETER SENSOR INPUT (LONG_ACCL) PID (PARAMETER IDENTIFICATION)

Monitor the LONG_ACCL PID

Is the LONG_ACCL PID value between -0.4 and 0.4?

Yes	GO to O8

No	GO to O9

O8 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE STEERING WHEEL ANGLE SENSOR (STEER_ANGL) PID (PARAMETER IDENTIFICATION)

Monitor the STEER_ANGL PID while slowing rotating the steering wheel one complete revolution to the left and then one complete revolution to the right.

Does the PID change in intervals of 4.5 degrees and show a 360-degree increase for each complete revolution of the steering wheel?

Yes	GO to O9

No	GO to Pinpoint Test J

O9 CHECK THE RCM (RESTRAINTS CONTROL MODULE) INSTALLATION AND MOUNTING SURFACE

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

Ignition OFF.

Wait one minute then disconnect RCM C310A and C310B .

Inspect the RCM installation and verify all fasteners are tightened to specifications.

Inspect the RCM mounting surface for damage, corrosion, dirt and other irregularities.

Is the RCM installed correctly and the mounting surface clean and free from damage?

Yes	GO to Pinpoint Test G

No	CLEAR or REPAIR the RCM mounting surface as necessary. TIGHTEN the fasteners to the correct toque specification.

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST P : U0104:00, U0405:41, U0405:82

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the CCM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within a certain time frame, the ABS module sets a DTC. For information on the messages sent to the ABS module by the CCM, refer to the Network Message Chart. REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	This DTC sets in continuous memory and on-demand when any of the messages from the CCM are missing. This can be due to a CCM failure, a circuit failure or excessive load on the HS-CAN2.
U0405:41	Invalid Data Received From Cruise Control Module: General Checksum Failure	This DTC sets in continuous memory and on-demand if the ABS module receives "fault" or "unknown" information in the collision mitigation by braking messages from the CCM instead of valid checksum information.
U0405:82	Invalid Data Received From Cruise Control Module: Alive / Sequence Counter Incorrect / Not Updated	The CCM sends a rolling counter value to the ABS module. This DTC sets in continuous memory and on-demand if the rolling counter value does not increase past 1.

Possible Causes

- Network communication concern
- CCM
- ABS module

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST P : U0104:00, U0405:41, U0405:82 > PINPOINT TEST P : U0104:00, U0405:41, U0405:82

P1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Does the CCM pass the Network Test?

Yes	GO to P2

No	DIAGNOSE the no communication with the CCM concern. REFER to: MODULE COMMUNICATIONS NETWORK .

P2 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0104:00 retrieved again?

Yes	GO to P3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

P3 REVIEW THE RECORDED ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Review the previously recorded ABS module Diagnostic Trouble Codes (DTCs).

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A . For DTC U3003:17, GO to Pinpoint Test F

No	GO to P4

P4 CHECK THE CCM (CRUISE CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the CCM self-test.

Are any battery voltage Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control .

No	GO to P5

P5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0104:00 OR U0405:XX SET IN OTHER MODULES

Using a diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0104:00 or U0405:xx set in 1 or more modules in addition to the ABS module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) .

No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST Q : U0131:00, U0420:41, U0420:82, U0420:86

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the PSCM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within a certain time frame, the ABS module sets a DTC. For information on the messages sent to the ABS module by the PSCM, refer to the Network Message Chart. REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0131:00	Lost Communication With Power Steering Control Module: No Sub Type Information	This DTC sets in continuous memory and on-demand when any of the messages from the PSCM are missing. This can be due to a PSCM failure, a circuit failure or excessive load on the HS-CAN2.

U0420:41	Invalid Data Received From Power Steering Control Module: General Checksum Failure	This DTC sets in continuous memory and on-demand if the checksum information in the steering angle sensor messages sent from the PSCM does not match the checksum information calculated by the ABS module.
U0420:82	Invalid Data Received From Power Steering Control Module: Alive / Sequence Counter Incorrect / Not Updated	The PSCM sends a rolling counter value to the ABS module. This DTC sets in continuous memory and on-demand if the rolling counter value does not increase past 1. Also, if the steering wheel angle sensor message number does not increase with each message sent, this DTC sets.
U0420:86	Invalid Data Received From Power Steering Control Module: Signal Invalid	This DTC sets in continuous memory and on-demand if the ABS module receives "fault" or "unknown" information in the steering wheel angle sensor messages from the PSCM instead of valid steering wheel angle sensor information.

Possible Causes

- Network communication concern
- PSCM
- ABS module

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST Q : U0131:00, U0420:41, U0420:82, U0420:86 > PINPOINT TEST Q : U0131:00, U0420:41, U0420:82, U0420:86

Q1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Does the PSCM pass the Network Test?

Yes	GO to Q2

No	DIAGNOSE the no communication with the PSCM concern. REFER to: MODULE COMMUNICATIONS NETWORK .

Q2 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0131:00 or U0420:xx retrieved again?

Yes	GO to Q3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q3 REVIEW THE RECORDED ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Review the previously recorded ABS module Diagnostic Trouble Codes (DTCs).

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A . For DTC U3003:17, GO to Pinpoint Test F

No	GO to Q4

Q4 CHECK THE PSCM (POWER STEERING CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the PSCM self-test.

Are any battery voltage Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE the PSCM Diagnostic Trouble Codes (DTCs). REFER to: POWER STEERING .

No	GO to Q5

Q5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0131:00 OR U0420:XX SET IN OTHER MODULES

Using a diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0131:00 or U0420:xx set in 1 or more modules in addition to the ABS module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS symptom chart or DTC chart.

No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST R : C1015:7A, C1015:7B

C1015:7A, C1015:7B

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module uses the brake booster vacuum sensor to monitor the brake booster vacuum. On vehicles equipped with a 2.3L EcoBoost engine, a gear driven vacuum pump supplies the necessary vacuum to the brake booster. The vacuum pump is expected to produce at least 600 mBar (18 In-Hg). On vehicles equipped with all other engines, the engine supplies the necessary vacuum to the brake booster. A leak in a vacuum hose, brake booster, brake booster seal or vacuum pump (if equipped) prevents the brake booster from maintaining the required amount of vacuum. Damage or an internal failure prevents the vacuum pump from operating at peak capacity.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1015:7A	Vacuum Supply: Fluid Leak or Seal Failure	This DTC sets when the ABS module detects a decrease in brake booster vacuum without brake system activation.
C1015:7B	Vacuum Supply: Low Fluid Level	This DTC sets when the brake vacuum pump or engine is unable to produce the vacuum necessary for brake system operation.

Possible Causes

- Vacuum leak
- Vacuum hose obstruction
- Vacuum pump (if equipped)
- Brake booster

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST R : C1015:7A, C1015:7B > PINPOINT TEST R : C1015:7A, C1015:7B

R1 CHECK FOR VACUUM LEAKS

Start the engine.

For vehicles equipped with a 2.3L EcoBoost engine, inspect the vacuum hose and each hose connection from the vacuum pump to the brake booster for leaks.

For vehicles equipped with all other engines, inspect the vacuum hose and each hose connection from the engine to the brake booster for leaks.

Are any vacuum leaks found?

Yes	REPAIR the vacuum leak or INSTALL new components as necessary.

No	If the vehicle is equipped with a 2.3L EcoBoost engine, GO to R2. If the vehicle is equipped with any other engine, INSTALL a new brake booster. REFER to: Brake Booster - 3.7L Duratec (227kW/301PS) . REFER to: Brake Booster - 5.0L 32V Ti-VCT .

R2 CHECK THE VACUUM PUMP OUTPUT

Ignition OFF.

Disconnect the vacuum hose from the brake booster.

Connect a vacuum gauge to the vacuum hose.

Start the engine.

Monitor the vacuum gauge.

Does the vacuum gauge display greater than 600 mBar (18 In-Hg)?

Yes	INSTALL a new brake booster. REFER to: Brake Booster - 2.3L EcoBoost (201kW/273PS) .

No	INSTALL a new vacuum pump. REFER to: Brake Vacuum Pump - 2.3L EcoBoost (201kW/273PS) .

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST S : U0151:00

Refer to VEHICLE DYNAMIC SYSTEMS for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the RCM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within a certain time frame, the module sets Diagnostic Trouble Codes (DTCs). For information on the messages sent to the ABS module by the RCM, refer to the Network Message Chart. REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	This DTC sets in continuous memory and on-demand when any of the messages from the RCM are missing. This can be due to a RCM failure, a circuit failure or excessive load on the HS-CAN2.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- RCM

DIAGNOSIS AND TESTING > ANTI-LOCK BRAKE SYSTEM (ABS) AND STABILITY CONTROL > PINPOINT TESTS > PINPOINT TEST S : U0151:00 > PINPOINT TEST S : U0151:00

S1 CHECK THE COMMUNICATION NETWORK

Ignition ON.

Using a diagnostic scan tool, carry out the Network Test.

Does the RCM pass the Network Test?

Yes	GO to S2

No	DIAGNOSE the no communication with the RCM. REFER to: MODULE

	COMMUNICATIONS NETWORK .

S2 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the ABS module self-test.

Clear the ABS module Diagnostic Trouble Codes (DTCs).

Ignition OFF.

Ignition ON.

Using a diagnostic scan tool, carry out the ABS module self-test.

Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0151:00 retrieved again?

Yes	GO to S3

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

S3 REVIEW THE RECORDED ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

Review the previously recorded ABS module Diagnostic Trouble Codes (DTCs).

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A . For DTC U3003:17, GO to Pinpoint Test F

No	GO to S4

S4 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

Using a diagnostic scan tool, carry out the RCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the RCM?

Yes	DIAGNOSE the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) .

No	GO to S5

S5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:XX SET IN OTHER MODULES

Using a diagnostic scan tool, carry out the self-test for all modules.

Retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:xx set in 1 or more modules in addition to the ABS module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, DIAGNOSE the RCM concern. REFER to: Airbag Supplemental Restraint System (SRS) .

No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module .

REMOVAL AND INSTALLATION > ANTI-LOCK BRAKE SYSTEM (ABS) MODULE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

NOTE: The PMI process must begin with the current ABS module installed. If the current ABS module does not respond to the diagnostic scan tool, the tool may prompt for As-Built Data as part of the repair.

NOTE: This step is necessary when installing a new HCU or ABS module.

1.
Using a diagnostic scan tool, begin the PMI process for the ABS module following the on-screen instructions.

2.

Remove the HCU. REFER to: Hydraulic Control Unit (HCU) .

3.

NOTE: Make sure the HCU and ABS module are clean and free of any brake fluid or foreign material before separating the components. Do not allow any brake fluid or foreign material to enter the mating side of the ABS module or component damage can occur.

4.

Remove the 3 retainers and ABS. Discard the retainers.

Torque

: 44 lb.in (5 Nm)

REMOVAL AND INSTALLATION > ANTI-LOCK BRAKE SYSTEM (ABS) MODULE > INSTALLATION

1.

To install, reverse the removal procedure.

> *NOTE: This step is necessary when installing a new HCU or ABS module.*

2.
Using a diagnostic scan tool, begin the PMI process for the ABS module following the on-screen instructions.

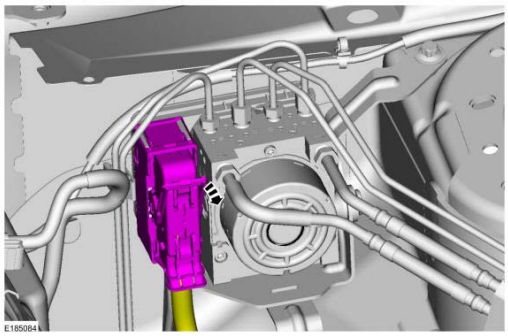
3.

If a new HCU/ ABS module was installed, carryout the IVD initialization using the scan tool and following the diagnostic scan tool on-screen instructions.

REMOVAL AND INSTALLATION > HYDRAULIC CONTROL UNIT (HCU) > REMOVAL

> *NOTE: Removal steps in this procedure may contain installation details.*

> *NOTE: This step is necessary when installing a new HCU or ABS module.*



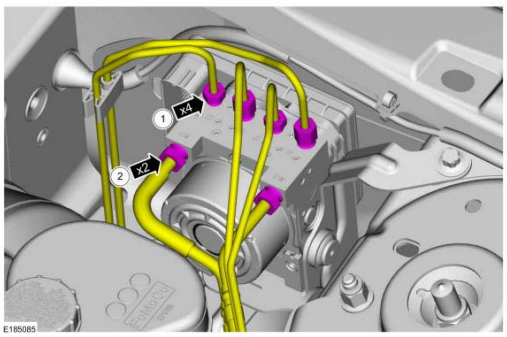
> *NOTE: The PMI process must begin with the current ABS module installed. If the current ABS module does not respond to the diagnostic scan tool, the tool may prompt*

for As-Built Data as part of the repair.

1.
Using a diagnostic scan tool, begin the PMI process for the ABS module following the on-screen instructions.

2.

Disconnect the ABS module electrical connector.



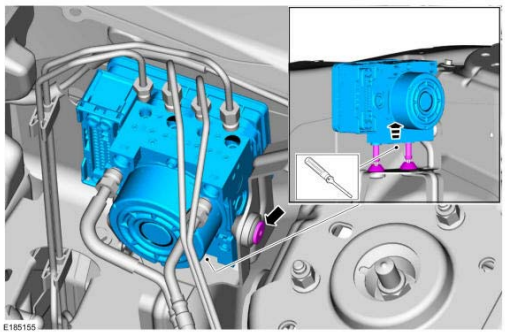
NOTE: Make sure that all openings are sealed.

3.
Disconnect the 6 brake tube fittings.

Torque:

1.: 155 lb.in (17.5 Nm)

2.: 20 lb.ft (27.5 Nm)



4.

Remove the bolt and separate the HCU from the bracket.

Torque

: 80 lb.in (9 Nm)

REMOVAL AND INSTALLATION > HYDRAULIC CONTROL UNIT (HCU) > INSTALLATION

1.

To install, reverse the removal procedure.

> *NOTE: The following steps are necessary if a new HCU or ABS module was installed.*

2.

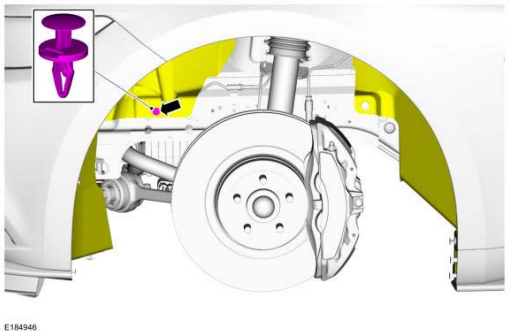
Using a diagnostic scan tool, complete the PMI process for the ABS module following the on-screen instructions.

Carry out the IVD initialization using the scan tool and following the diagnostic scan tool on-screen instructions.

3.

Bleed the brake system. REFER to: Brake System Pressure Bleeding .

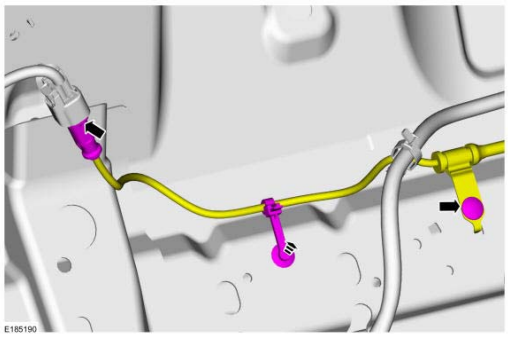
REMOVAL AND INSTALLATION > FRONT WHEEL SPEED SENSOR > REMOVAL



> *NOTE: Removal steps in this procedure may contain installation details.*

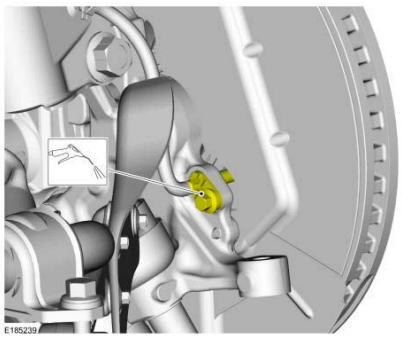
1.

Remove the wheel and tire. REFER to: Wheel and Tire .



2.

Remove the retainer and position aside the fender splash shield.



3.

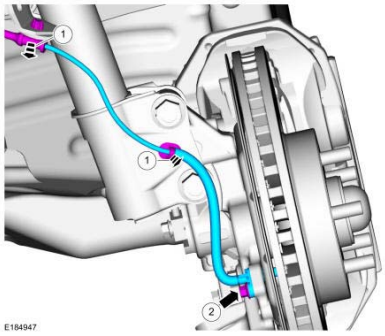
Disconnect the front wheel speed sensor electrical connector and detach the 2 harness retainers.

4.

Using compressed air, clean the area surrounding the front wheel speed sensor.

5.

1.



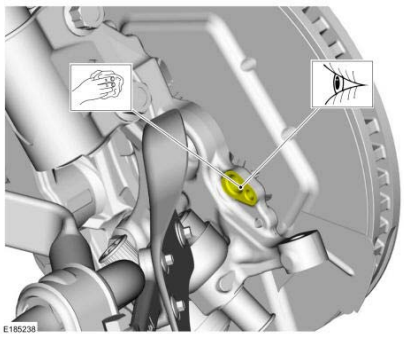
Detach the 2 sensor harness retainers.

2.

Remove the bolt and the front wheel speed sensor.

Torque

: 133 lb.in (15 Nm)



REMOVAL AND INSTALLATION > FRONT WHEEL SPEED SENSOR > INSTALLATION

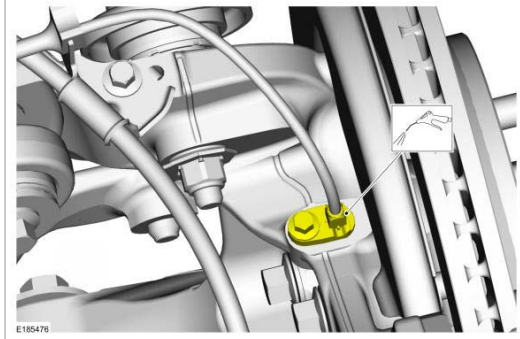
1.

To install, reverse the removal procedure.

2.

Before installing a new sensor, inspect the sensor housing to make sure the sensor cavity is clean and free of foreign material.

REMOVAL AND INSTALLATION > REAR WHEEL SPEED SENSOR > REMOVAL



NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the wheel and tire. REFER to: Wheel and Tire .

2.

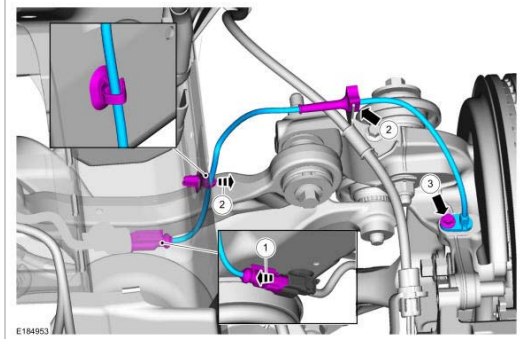
Using compressed air, clean the area surrounding the rear wheel speed sensor.

3.

1.

Disconnect the rear wheel speed sensor from electrical connector.

2.



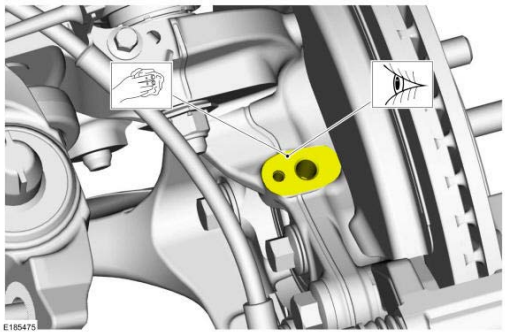
Detach the 2 sensor harness retainers.

3.

Remove the bolt and the rear wheel speed sensor.

Torque

: 80 lb.in (9 Nm)



REMOVAL AND INSTALLATION > REAR WHEEL SPEED SENSOR > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Before installing a new sensor, inspect the sensor housing to make sure the sensor cavity is clean and free of foreign material.

REMOVAL AND INSTALLATION > STABILITY ASSIST TRACTION CONTROL SWITCH > REMOVAL

NOTE: The stability/traction control switch is part of the Front Controls Interface Module (FCIM).

1.

Remove the FCIM. REFER to: FRONT CONTROLS INTERFACE MODULE (FCIM) - Vehicles With: AM/FM/CD/SYNC. Refer to: FRONT CONTROLS INTERFACE MODULE (FCIM) - Vehicles With Touchscreen Display.

REMOVAL AND INSTALLATION > STABILITY ASSIST TRACTION CONTROL SWITCH > INSTALLATION

1.

To install, reverse the removal procedure.

	ABS	REFER to: Anti-Lock Brake System (ABS) and Stability Control .
Brake drag	Parking brake component	INSPECT the parking brake system. INSTALL new components as necessary.

	Brake caliper and/or guide pins Brake flexible hose Brake booster	INSPECT the brake system components. INSTALL new components as necessary.
	Brake master cylinder	CARRY OUT the Component Test- Brake Master Cylinder - Compensator Port .
	Hydraulic Control Unit (HCU)	REFER to: Anti-Lock Brake System (ABS) and Stability Control .
	Stoplamp switch	VERIFY correct installation of the stoplamp switch. REFER to: Stoplamp Switch .
Excessive brake pedal effort	Insufficient vacuum for brake booster operation Brake booster manifold vacuum hose Brake booster Brake booster check valve Brake booster vacuum pump	CARRY OUT the Component Test- Brake Booster .
	Brake pads	INSPECT the brake pads. INSTALL new components as necessary. REFER to: Brake Pads - Vehicles With: 2-Piston Brake Caliper . REFER to: Brake Pads - Vehicles With: 4-Piston Brake Caliper . REFER to: Brake Pads - Vehicles With: 6-Piston Brake Caliper . REFER to: Brake Pads .

Symptom Chart: NVH

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Condition	Possible Sources	Actions
Vibration when the brakes are applied	Brake disc(s)/ Suspension components	GO to Pinpoint Test A
Brake vibration/shudder - occurs when the brake pedal is released	Brake drag	REFER to Symptom Chart: Brake System in Symptom Chart(s)
Rattling noise	Caliper guide pins or guide pin bolts Missing or damaged anti-rattle clips or springs Loose brake disc shield	INSPECT the caliper guide pins and guide pin bolts. INSTALL new components as necessary. INSPECT the brake pads for missing clips or broken springs. INSTALL new components as necessary. TIGHTEN the brake disc shield

		bolts to specification. REFER to: Brake Pads - Vehicles With: 2-Piston Brake Caliper . REFER to: Brake Pads - Vehicles With: 4-Piston Brake Caliper . REFER to: Brake Pads - Vehicles With: 6-Piston Brake Caliper . REFER to: Brake Pads .
Squealing noise - occurs on first (morning) brake application	Brake pads	Acceptable condition. Caused by humidity and low brake pad temperature.
Squealing noise - a continuous squeal	Brake pads	INSPECT the brake pads. INSTALL new components as necessary. REFER to: Brake Pads - Vehicles With: 2-Piston Brake Caliper . REFER to: Brake Pads - Vehicles With: 4-Piston Brake Caliper . REFER to: Brake Pads - Vehicles With: 6-Piston Brake Caliper . REFER to: Brake Pads .
Squealing noise - an intermittent squeal	Brake pads	Acceptable condition. Caused by cold, heat, water, mud or snow.
Groaning noise - occurs at low speeds with brake lightly applied (creeping)	Brake pads	Acceptable condition.
Grinding/moaning noise - continuous	Brake pads Brake disc	INSPECT the brake pads, brake discs and attaching hardware for damage. VERIFY brake components are within specifications. INSTALL new components as necessary.

DIAGNOSIS AND TESTING > BRAKE SYSTEM > PINPOINT TESTS

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Vibration When Brakes Are Applied

Normal Operation and Fault Conditions

During moderate to heavy braking, noise from the HCU and pulsation in the brake pedal can be observed. Pedal pulsation coupled with noise during heavy braking or on loose gravel, bumps, wet or snowy surfaces is acceptable and indicates correct functioning of the ABS. Pedal pulsation or steering wheel nibble when the brakes are applied (frequency is proportioned to the vehicle speed) indicates a concern with a brake or suspension component.

DIAGNOSIS AND TESTING > BRAKE SYSTEM > PINPOINT TESTS > PINPOINT TEST A : VIBRATION WHEN BRAKES ARE APPLIED > PINPOINT TEST A : VIBRATION WHEN BRAKES ARE APPLIED

A1 ROAD TEST THE VEHICLE -LIGHT BRAKING

Road test the vehicle. Warm the brakes by slowing the vehicle from 80 to 32 km/h (50 to 20 mph) using light brake force. At highway speeds of 89-97 km/h (55-60 mph), apply the brake using light pedal force.

Is there a vibration/shudder felt in the steering wheel, seat or brake pedal?

Yes	GO to A4

No	GO to A2

A2 ROAD TEST THE VEHICLE -MODERATE TO HEAVY BRAKING

Road test the vehicle. At highway speeds of 89-97 km/h (55-60 mph), apply the brake using a moderate to heavy pedal force.

Is there a vibration/shudder?

Yes	GO to A3

No	The concern is not present at this time.

NOTE: During moderate to heavy braking, noise from the Hydraulic Control Unit (HCU) and pulsation in the brake pedal can be observed. Pedal pulsation coupled with noise during heavy braking or on loose gravel, bumps, wet or snowy surfaces is acceptable and indicates correct operation of the ABS. Pedal pulsation or steering wheel nibble with the frequency proportional to vehicle speed indicates a concern with a brake or suspension component.

A3 CHECK ABS (ANTI-LOCK BRAKE SYSTEM) OPERATION

Road test the vehicle and apply the brakes on a dry, firm surface, then apply the brakes on a wet, snowy or loose surface (such as gravel).

Is the vibration/shudder only present on a wet, snowy or loose surface?

Yes	This is a normal operating condition of the ABS.

No	GO to A5

NOTE: This test step is not applicable to vehicles with drum-in-hat type or electronic parking brakes. For vehicles with drum-in-hat or electronic parking brakes, proceed to the next test step. For all other vehicles, apply the parking brake to identify if the problem is in the front or rear brake.

A4 ISOLATE BRAKE VIBRATION

Apply the parking brake to identify if the problem is in the front or rear brake. At highway speeds of 89-97 km/h (55-60 mph), lightly apply the parking brake until the vehicle slows down. Release the parking brake immediately after the test.

Is there a vibration/shudder?

Yes	GO to A7

No	GO to A5

A5 CHECK THE FRONT SUSPENSION

Check the front suspension.

Are all the suspension components in satisfactory condition?

Yes	GO to A6

No	REPAIR or INSTALL new components as necessary. TEST the system for normal operation.

A6 CHECK THE FRONT BRAKE DISCS

Inspect the front brake discs. MACHINE or INSTALL new brake discs as necessary. REFER to: Brake Disc Machining . REFER to: Brake Disc - Front Disc Brake. REFER to: Brake Disc - Rear Disc Brake.

Road test the vehicle.

Is the vibration/shudder present?

Yes	GO to A7

No	The concern has been repaired.

A7 CHECK THE REAR SUSPENSION

Check the rear suspension.

Are all the suspension components in satisfactory condition?

Yes	INSPECT the rear brake discs. MACHINE or INSTALL new brake discs as necessary. REFER to: Brake Disc Machining . REFER to: Brake Disc - Front Disc Brake. REFER to: Brake Disc - Rear Disc Brake.

No	REPAIR or INSTALL new components as necessary. TEST the system for normal operation.

DIAGNOSIS AND TESTING > BRAKE SYSTEM > COMPONENT TEST- BRAKE BOOSTER

1.

Disconnect the brake booster vacuum sensor/check valve from the brake booster and connect a suitable vacuum/pressure tester to the booster side of the vacuum sensor/check valve.

2.

Apply the parking brake, start the engine and place the transmission in NEUTRAL.

Allow the engine to reach normal operating temperature.

3.

Verify that vacuum is available at the vacuum sensor/check valve with engine running at normal idle speed.

The vacuum gauge should read between 51-74 kPa (15-22 in-Hg).

If specified vacuum is available, stop the engine, connect the vacuum sensor/check valve and continue with Step 5.

If specified vacuum is not available, continue with Step 4.

4.

Disconnect the vacuum sensor/check valve from the vacuum hose and verify that the specified vacuum is available at the hose with the engine at idle speed and the transmission in NEUTRAL.

If specified vacuum is available, stop the engine, install a new check valve and continue with Step 5.

For vehicles equipped with a brake vacuum pump, if specified vacuum is not available, inspect the vacuum hose and install new as necessary. If the vacuum hose is ok, install a new vacuum pump.

For vehicles not equipped with a brake vacuum pump, if specified vacuum is not available, stop the engine, connect the vacuum hose to the check valve and diagnose the no/low vacuum condition. REFER to: ENGINE SYSTEM - GENERAL INFORMATION .

5.

Apply the brake pedal several times to exhaust all vacuum from the system.

6.

Apply the brake pedal and hold it in the applied position. Start the engine and verify that the brake pedal moves downward after the engine starts.

If the brake pedal moves, the brake booster is operating correctly.

If the brake pedal does not move, install a new brake booster. REFER to: Brake Booster - 2.3L EcoBoost (201kW/273PS) . REFER to: Brake Booster - 3.7L Duratec (227kW/301PS) . REFER to: Brake Booster - 5.0L 32V Ti-VCT .

7.

Operate the engine a minimum of 20 seconds at idle. Stop the engine and let the vehicle stand for 10 minutes, then apply the brake pedal. The brake pedal feel should be the same as that noted with the engine operating.

If the brake pedal feels hard (no power assist), install a new brake booster vacuum sensor/check valve and retest.

If condition still exists, install a new brake booster. REFER to: Brake Booster - 2.3L EcoBoost (201kW/273PS) . REFER to: Brake Booster - 3.7L Duratec (227kW/301PS) . REFER to: Brake Booster - 5.0L 32V Ti-VCT .

If the brake pedal feels the same as noted with the engine operating, the vacuum sensor/check valve is functioning properly.

DIAGNOSIS AND TESTING > BRAKE SYSTEM > COMPONENT TEST- BRAKE MASTER CYLINDER - BYPASS CONDITION

1.

Inspect the master cylinder.

2.

Disconnect the brake tubes from the master cylinder.

NOTE: Make sure the outlet port plugs do not show signs of leakage.

3.
Plug the outlet ports of the master cylinder.

4.

Lightly apply the brakes and hold for 10 seconds. Release the brakes and then reapply with heavy force. If brake pedal height cannot be maintained, the brake master cylinder has an internal leak and a new brake master cylinder must be installed.

- If brake pedal height is maintained, reinstall brake tubes and tighten to specification. REFER to: Brake Master Cylinder . After installation, bleed the brake system. REFER to: Brake System Pressure Bleeding .

DIAGNOSIS AND TESTING > BRAKE SYSTEM > COMPONENT TEST- BRAKE MASTER CYLINDER - COMPENSATOR PORT

1.

Inspect the master cylinder.

2.

REFER to: Jacking and Lifting - Overview .

3.

Apply and release the brakes.

4.

With the brakes released, attempt to rotate each wheel and check for any brake drag.

- If an excessive amount of brake drag exists at multiple wheels, continue to Step 5.
- If an excessive amount of brake drag exists at only one wheel, it indicates a possible seized brake caliper, brake wheel cylinder or parking brake component. Repair or install new components as necessary.

5.

Check the brake stoplamp switch and the brake pedal free play to verify the brake pedal is not partially applied.

6.

Loosen the brake master cylinder nuts and position the brake master cylinder away from the brake booster.

7.

With the brakes released, attempt to rotate each wheel and check for any brake drag.

- If the brake drag is no longer present, install a new brake booster. REFER to: Brake Booster - 2.3L EcoBoost (201kW/273PS) . REFER to: Brake Booster - 3.7L Duratec (227kW/301PS) . REFER to: Brake Booster - 5.0L 32V Ti-VCT .
- If the brake drag is still present, install a new master cylinder. REFER to: Brake Master Cylinder .

	A multimedia supplement to the instructions contained in this article is available. To view the multimedia example of the condition described go to; **http://www.youtube.com/user/Mitchell1Tips** **then type, "A00673934.Vid6" into the "Search Channel" box.**

Repair

NOTE: ***On-Vehicle Brake Disc Machining***

NOTE: Do not use a bench lathe to machine the brake discs. Use an on-vehicle brake lathe only. Read the entire operating manual and/or view the video shipped with the lathe before installing, operating or repairing the lathe.

NOTE: Lateral runout and disc thickness variation measurements are not required because correct adjustment of the on-vehicle brake lathe will make sure that these dimensions are within specification.

1.

Refer to: Wheel and Tire .

NOTE: It is not necessary to disconnect the brake hose from the brake caliper.

NOTE: Do not allow the caliper to hang from the brake hose or damage to the hose may occur.

2.
Remove the bolts and position the brake caliper or brake caliper and anchor plate assembly aside, as required. Support the brake caliper using mechanic's wire.

NOTE: On some vehicle applications the axle on the opposing side may rotate during the machining process. On these applications the brake disc must be secured or damage may occur.

3.
If necessary, secure the opposing brake disc by installing 2 wheel nuts finger tight.

4.

Install the hub adapter using four wheel nuts on a 4, 7 or 8-stud wheel hub.

Install the hub adapter using five wheel nuts on a 5 or 10-stud wheel hub.

Install the hub adapter using six wheel nuts on a 6-stud wheel hub.

5.

Install the cutting lathe.

NOTE: An on-vehicle brake lathe with an automatic runout adjustment feature is preferred. However, if the lathe is not self adjusting, the lathe oscillation must be adjusted using a dial indicator. The total indicated runout target is 0.000 mm (0.000 in). The maximum indicated runout should be no more than 0.050 mm (0.002 in). If the runout adjustment (automatic or manual) is carried out correctly prior to machining, then the final brake disc runout will be within specification and a runout measurement is not necessary after machining.

6.
If the lathe is not self-adjusting, adjust the lathe oscillation using a dial indicator.

7.

Center the cutting head, adjust the cutting bits and install the chip deflector/silencer.

NOTE: The depth of the cut should be between 0.10 and 0.40 mm (0.004 and 0.015 in). Lighter cuts will cause the bit to heat up and wear faster. Heavier cuts will cause poor brake disc surface finish.

8.
Machine the brake disc.

9.

Remove the lathe and the silencer.

10.

Remove the wheel nuts and hub adapter.

11.

Remove the metal shavings.

12.

Measure the brake disc thickness. If the measurement is below the minimum specification, install a new brake disc.

> *NOTE: It is not required to install new brake pads if friction material is within specifications.*

13.
Position the brake caliper or brake caliper and anchor plate assembly and install the bolts. Refer to: Brake Caliper Anchor Plate . Refer to: Brake Caliper Anchor Plate .

14.

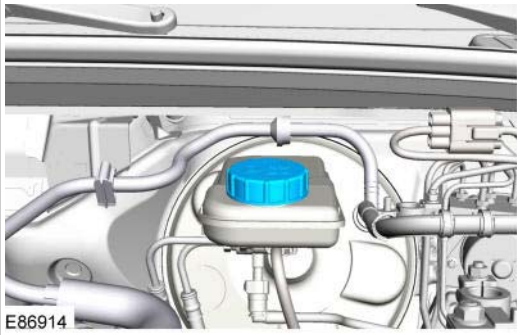
Refer to: Wheel and Tire .

GENERAL PROCEDURES > BRAKE SYSTEM PRESSURE BLEEDING

Special Tool(s) / General Equipment

Brake/Clutch System Pressure Bleeder/Filler
Fluid Container

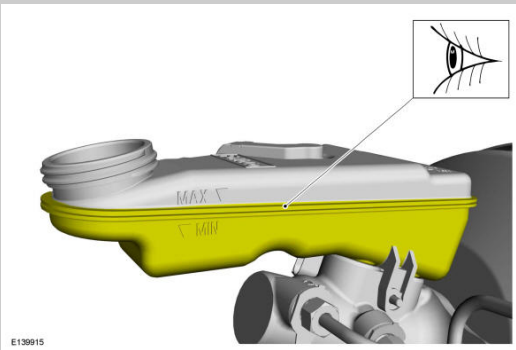
Bleeding



All vehicles

> *NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.*

> *NOTE: The HCU bleeding procedure and a second brake system pressure bleed must be carried out if a new HCU has been installed.*



NOTE: Make sure the area around the master cylinder cap is clean and free of foreign material.

1.
Remove the brake fluid reservoir cap.

2.

Make sure the fluid reservoir is filled with clean specified brake fluid. Refer to: Specifications .

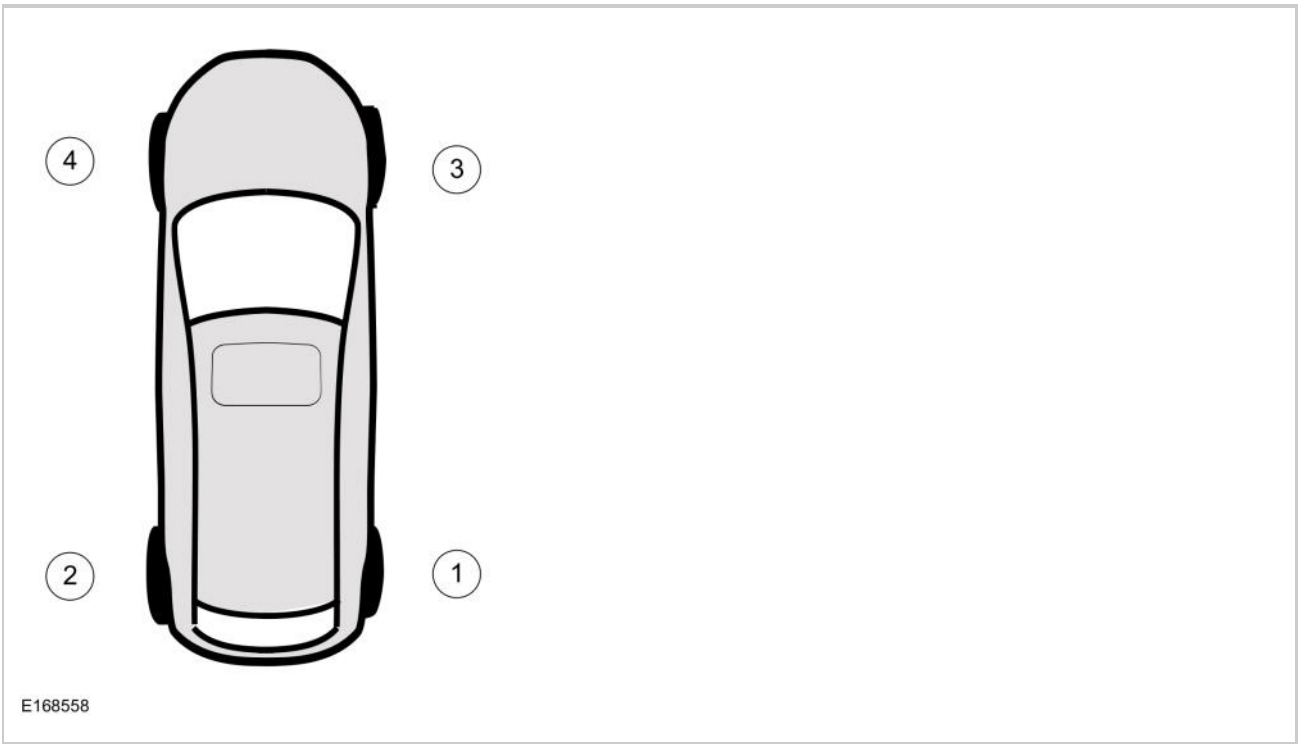
3.

NOTE: Master cylinder pressure bleeder adapter tools are available from various manufacturers of pressure bleeding equipment. Follow the instructions of the manufacturer when installing the adapter.

1.
Install the bleeder adapter to the brake master cylinder reservoir and attach the bleeder tank hose to the fitting on the adapter. Use the General Equipment: Brake/Clutch System Pressure Bleeder/Filler

NOTE: Make sure the bleeder tank contains enough clean, specified brake fluid to complete the bleeding operation.

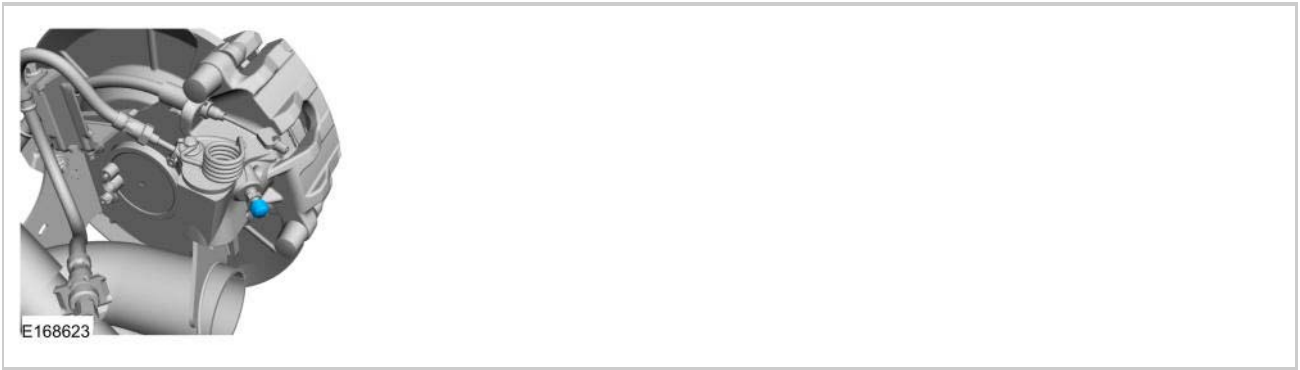
2.



Open the valve on the bleeder tank and apply 207-345 kPa (30-50 psi) to the brake system.

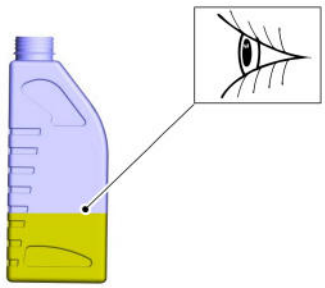
4.

With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .



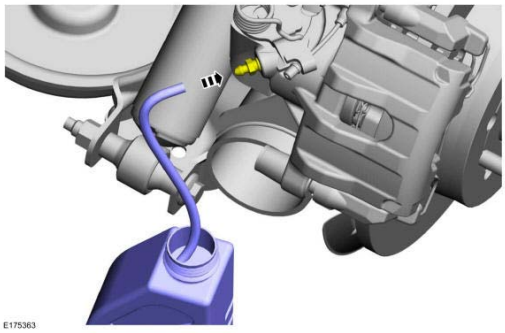
5.

Bleeding steps must be followed in the order indicated in the graphic. For vehicles equipped with 4 or 6 piston brake calipers, bleed the inner bleeder screw first, followed by the outer bleeder screw.



6.

If equipped, remove the bleeder screw cap.

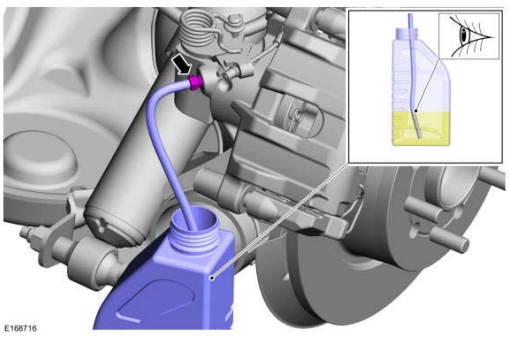


7.

Partially fill a clean brake fluid container with clean specified brake fluid. Refer to: Specifications . Use the General Equipment: Fluid Container

8.

Submerge a hose into the brake fluid in the container and connect the hose to bleeder screw.



9.

1.

Loosen the bleeder screw. Loosen: 180°

2.

Leave open until clear, bubble-free brake fluid flows, then tighten the bleeder screw.

Vehicles with rear integral parking brake calipers

NOTE: Due to the complexity of the fluid path within the rear integral parking brake calipers, it is necessary to apply and release the parking brake during the bleed

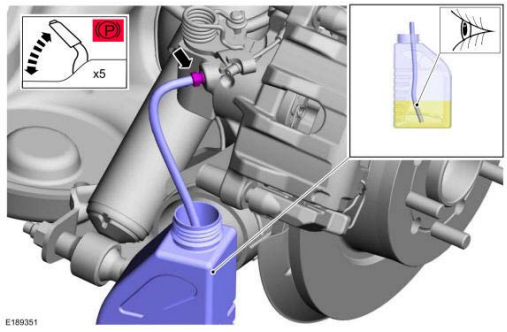
procedure.

10.

1.

Apply and release the parking brake 5 times.

2.



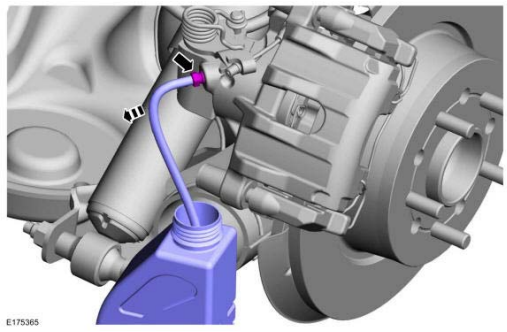
Loosen the bleeder screw. Loosen: 180°

3.

Leave open until clear, bubble-free fluid flows and then tighten the bleeder screw.

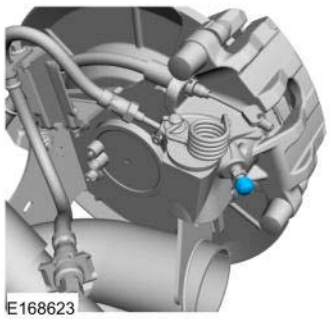
4.

Repeat as necessary.



All vehicles

11.



1.

Tighten the bleeder screw to specification and remove the hose and brake fluid container. Refer to: Specifications .

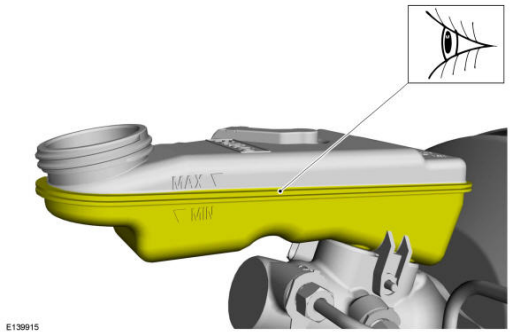
12.

If equipped, install the bleeder screw cap.

NOTE: For vehicles equipped with 4 or 6 piston brake calipers, bleed the inner bleeder screw first, followed by the outer bleeder screw.

13.
Repeat steps 5-12 at the remaining wheel ends.

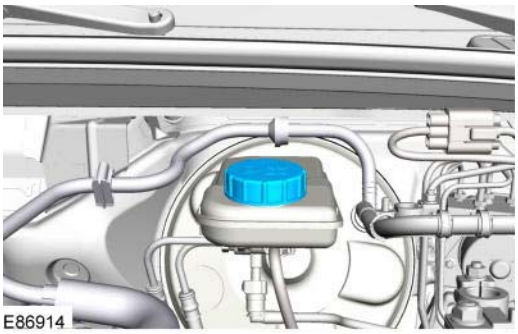
14.



Lower the vehicle.

15.

Close the bleeder tank valve and release the pressure. Remove the General Equipment: Brake/Clutch System Pressure Bleeder/Filler



16.

Fill the reservoir with clean, specified brake fluid. Refer to: Specifications .

17.

Install the brake fluid reservoir cap.

Vehicles with new hydraulic control unit (HCU) installed

NOTE: The HCU bleeding procedure and a second brake system pressure bleed must be carried out if a new HCU has been installed.

18.

Using the diagnostic scan tool, follow the ABS Service Bleed instructions.

19.

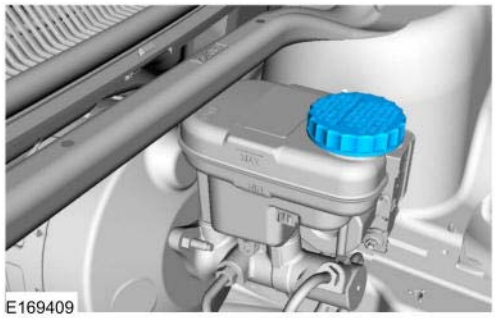
Repeat brake system pressure bleeding steps.

GENERAL PROCEDURES > COMPONENT BLEEDING

Special Tool(s) / General Equipment

Master Cylinder Bleeding Set

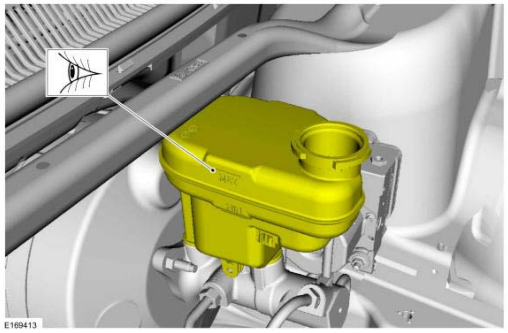
Bleeding



NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

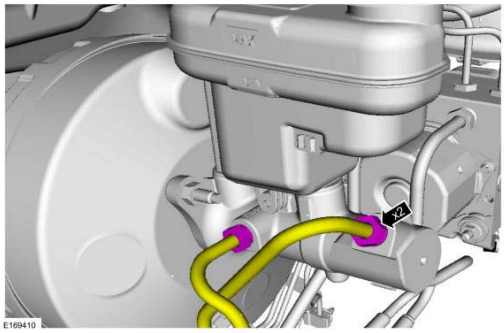
Master Cylinder

NOTE: When a new brake master cylinder has been installed, it should be primed to prevent air from entering the system.



NOTE: Make sure the area around the master cylinder cap is clean and free of foreign material.

1.
Remove the brake fluid reservoir cap.

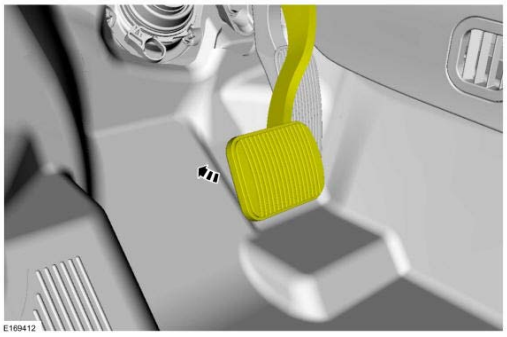


2.

Fill the reservoir with clean, specified brake fluid. Refer to: Specifications .

3.

Loosen and remove the brake tube fittings.

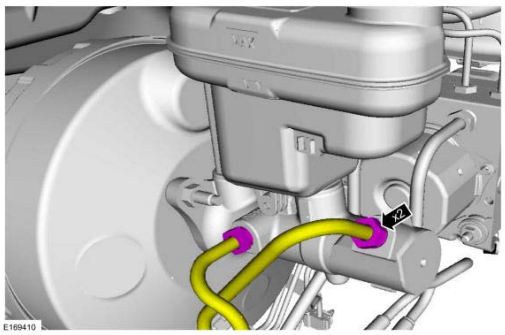


4.

Install the master cylinder bleeding set. Use the General Equipment: Master Cylinder Bleeding Set

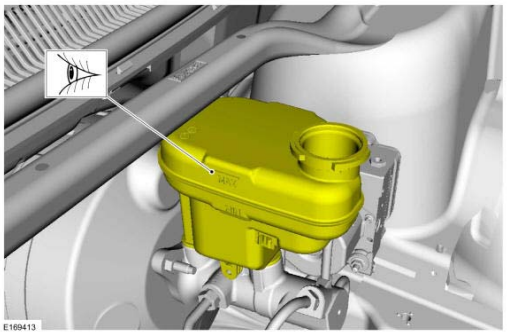
5.

Have an assistant pump the brake pedal slowly until clear bubble free fluid flows from the brake tubes.



6.

Remove the master cylinder bleeding set. Use the General Equipment: Master Cylinder Bleeding Set



7.

Tighten the brake tube fittings. Refer to: Specifications .

8.

Fill the reservoir with clean, specified brake fluid. Refer to: Specifications .

9.

Refer to: Brake System Pressure Bleeding .

Brake Caliper, Wheel Cylinder, Brake Hose or Brake Tube

NOTE: Pressure bleeding the brake system is required anytime a hydraulic brake system component has been disconnected.

10.
Refer to: Brake System Pressure Bleeding .

Service Manual: FRONT DISC BRAKE

DIAGNOSIS AND TESTING > FRONT DISC BRAKE

REFER to: Brake System .

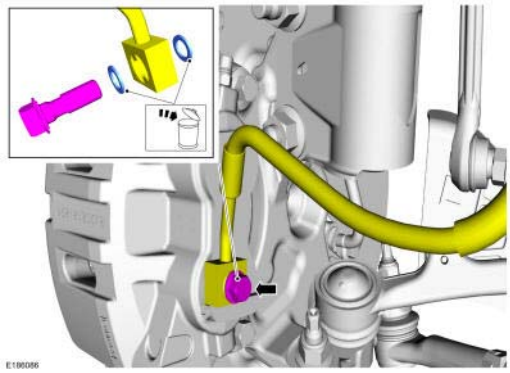
REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: 2-PISTON BRAKE CALIPER > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

1.



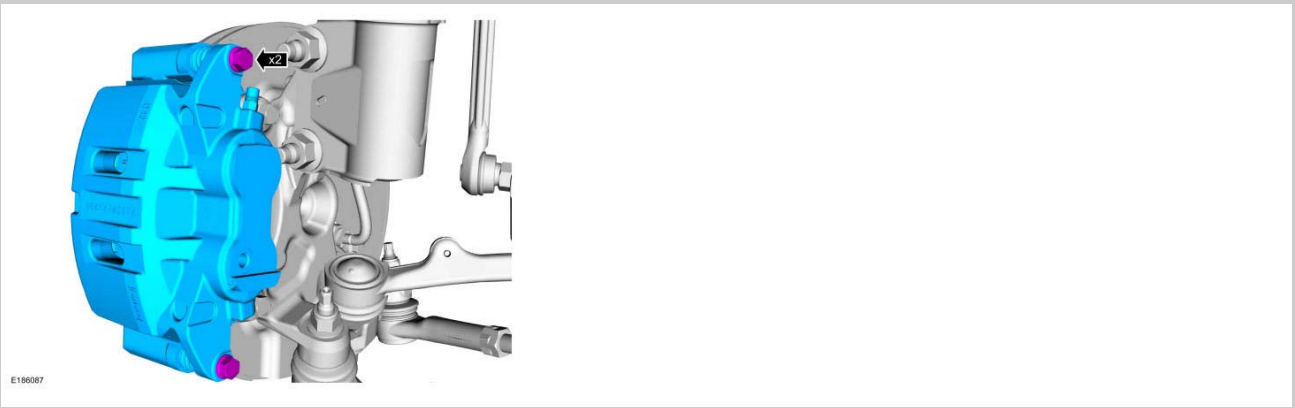
Remove the wheel and tire. Refer to: Wheel and Tire .

2.

Remove the brake caliper flow bolt and disconnect the brake hose. Discard the washers.

Torque

: 30 lb.ft (40 Nm)



3.

Remove the 2 guide pin bolts and the brake caliper.

Torque

: 24 lb.ft (32 Nm)

REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: 2-PISTON BRAKE CALIPER > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

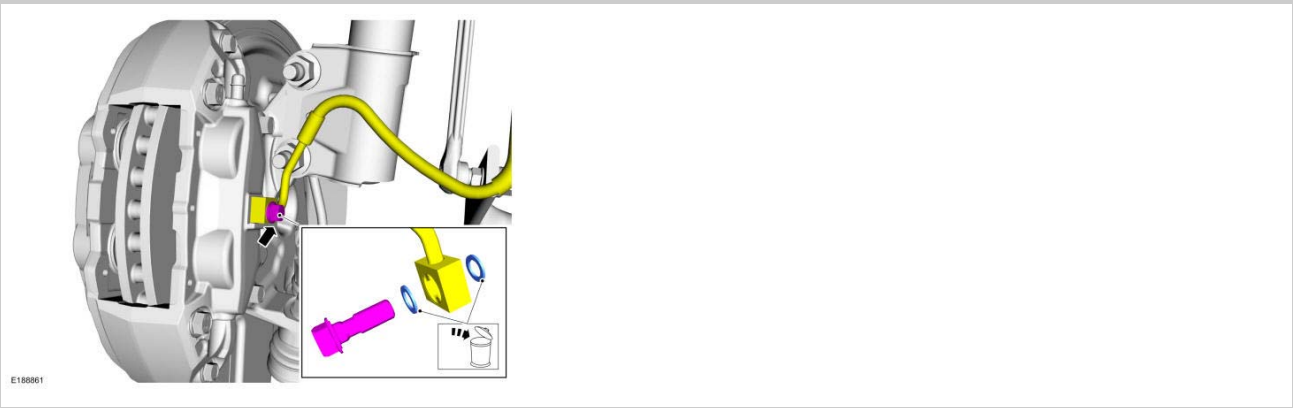
REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: 4-PISTON BRAKE CALIPER > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

1.



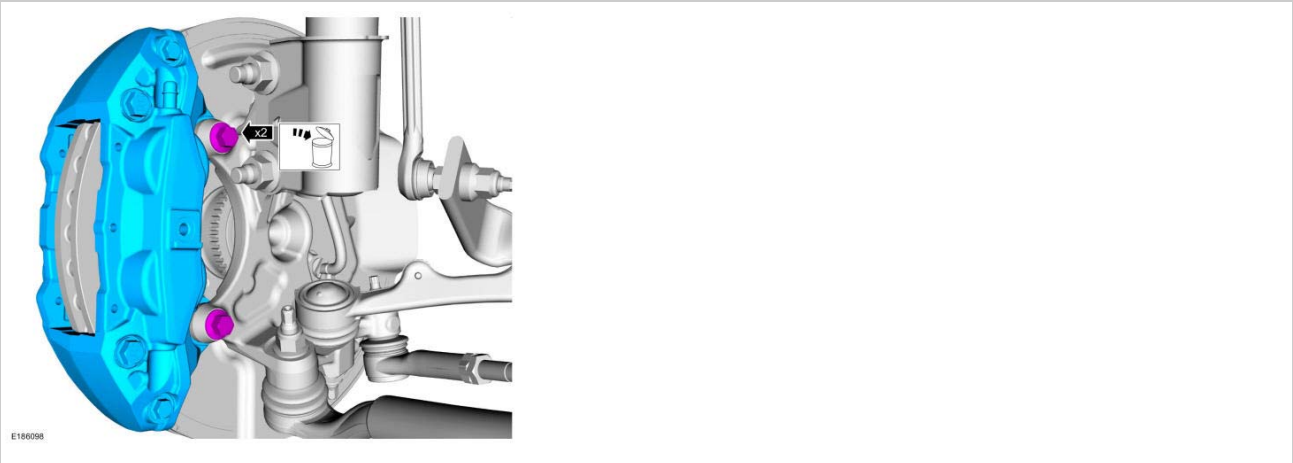
Remove the brake pads. Refer to: Brake Pads - Vehicles With: 4-Piston Brake Caliper .

2.

Remove the brake caliper flow bolt and disconnect the brake hose. Discard the washers.

Torque

: 30 lb.ft (40 Nm)



3.

Remove the 2 bolts and the brake caliper. Discard the bolts.

Torque

: 85 lb.ft (115 Nm)

REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: 4-PISTON BRAKE CALIPER > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

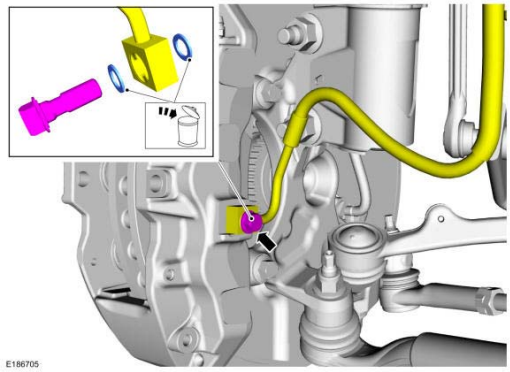
REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: 6-PISTON BRAKE CALIPER > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

1.



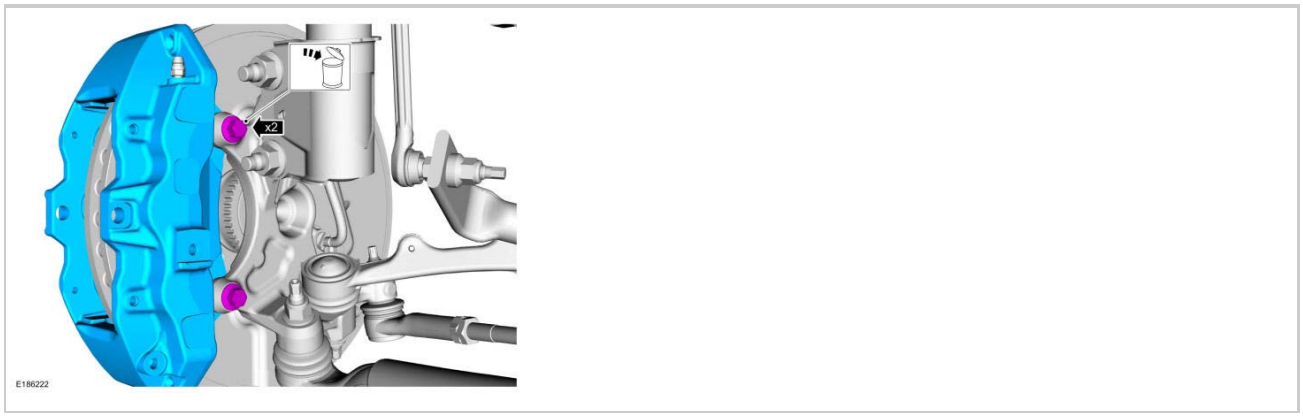
Remove the brake pads. Refer to: Brake Pads - Vehicles With: 6-Piston Brake Caliper .

2.

Remove the brake caliper flow bolt and disconnect the brake hose. Discard the washers.

Torque

: 30 lb.ft (40 Nm)



3.

Remove the 2 bolts and the brake caliper. Discard the bolts.

Torque

: 85 lb.ft (115 Nm)

REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: 6-PISTON BRAKE CALIPER > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

REMOVAL AND INSTALLATION > BRAKE CALIPER ANCHOR PLATE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the brake pads. Refer to: Brake Pads - Vehicles With: 2-Piston Brake Caliper .

2.

Remove the 2 bolts and the anchor plate. Discard the bolts.

Torque

: 85 lb.ft (115 Nm)

REMOVAL AND INSTALLATION > BRAKE CALIPER ANCHOR PLATE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > BRAKE DISC

Materials

Name	Specification
Metal Brake Parts Cleaner (U.S.) PM-4-A, PM-4-B (U.S.)	-

REMOVAL AND INSTALLATION > BRAKE DISC > REMOVAL

NOTE: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose may occur.

NOTE: Removal steps in this procedure may contain installation details.

All brake calipers

1.

Remove the wheel and Tire. Refer to: Wheel and Tire .

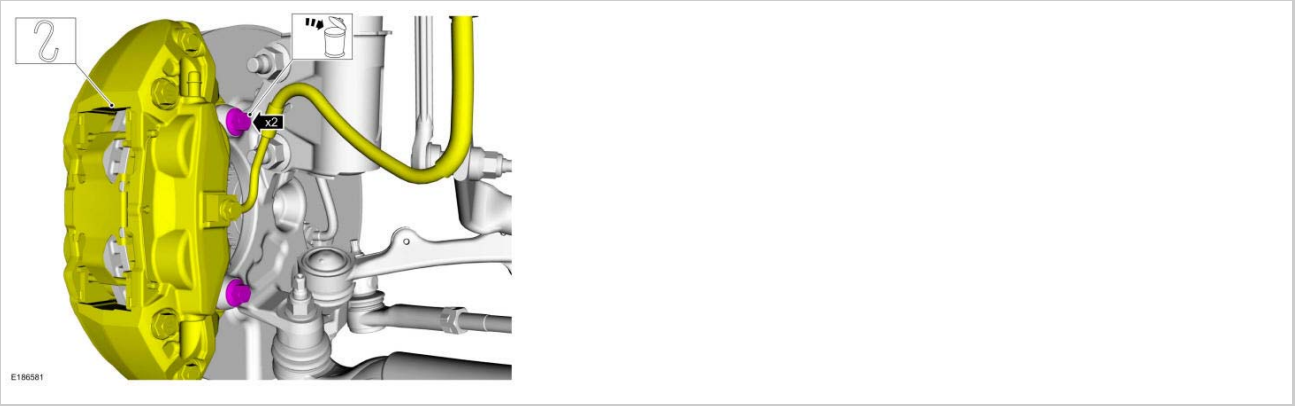
2-piston brake caliper

2.

Remove the 2 bolts and position the brake caliper and brake pads aside.

Torque

: 85 lb.ft (115 Nm)



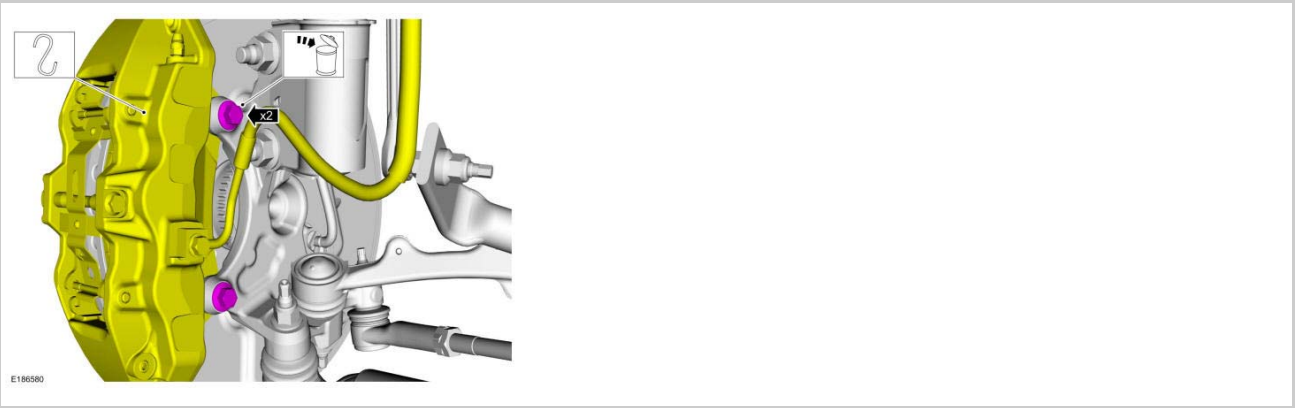
4-piston brake caliper

3.

Remove the 2 bolts and position the brake caliper and brake pads aside. Discard the bolts.

Torque

: 85 lb.ft (115 Nm)

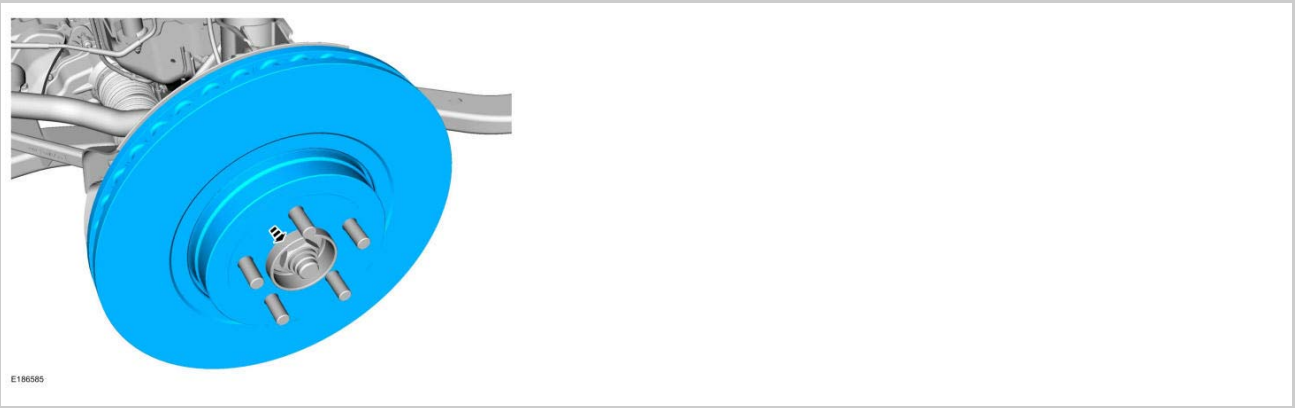


6-piston brake caliper

4.

Remove the 2 bolts and position the brake caliper and brake pads aside. Discard the bolts.

Torque



: 85 lb.ft (115 Nm)

All brake calipers

5.

Remove the brake disc.

REMOVAL AND INSTALLATION > BRAKE DISC > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Clean the brake disc mating surfaces using a wire brush and the specified material.

Material

: Metal Brake Parts Cleaner (U.S.) / PM-4-A, PM-4-B (U.S.)

3.

Apply the brake pedal several times to verify correct brake system operation.

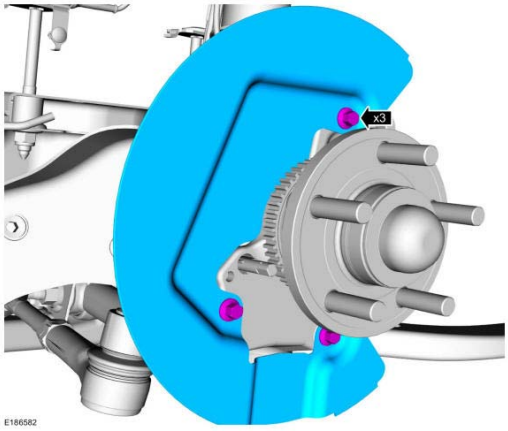
REMOVAL AND INSTALLATION > BRAKE DISC SHIELD > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

All brake calipers

1.

Remove the brake disc. Refer to: Brake Disc .



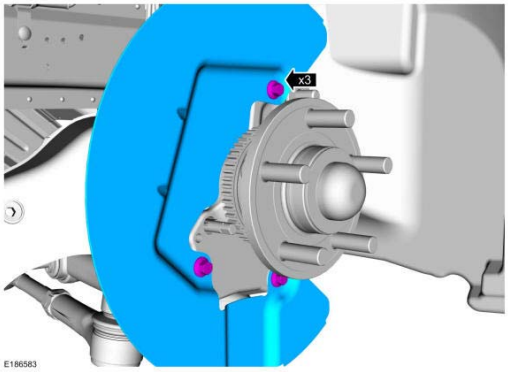
2-piston brake caliper

2.

Remove the 3 bolts and the brake disc shield.

Torque

: 177 lb.in (20 Nm)



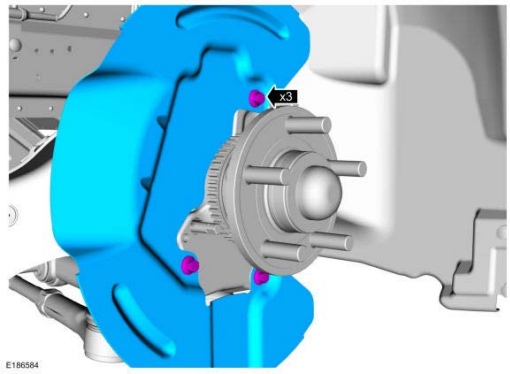
4-piston brake caliper

3.

Remove the 3 bolts and the brake disc shield.

Torque

: 177 lb.in (20 Nm)



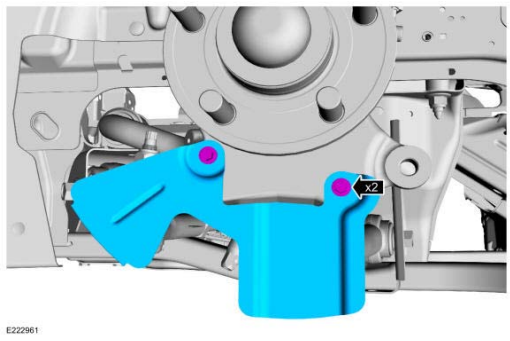
6-piston brake caliper-automatic transmission and convertible

4.

Remove the 3 bolts and the brake disc shield.

Torque

: 177 lb.in (20 Nm)



6-piston brake caliper-manual transmission

5.

Remove the 2 bolts and the brake disc shield.

Torque

: 177 lb.in (20 Nm)

REMOVAL AND INSTALLATION > BRAKE DISC SHIELD > INSTALLATION

1.

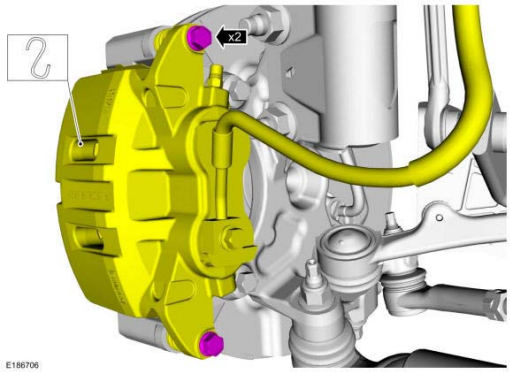
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: 2-PISTON BRAKE

CALIPER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

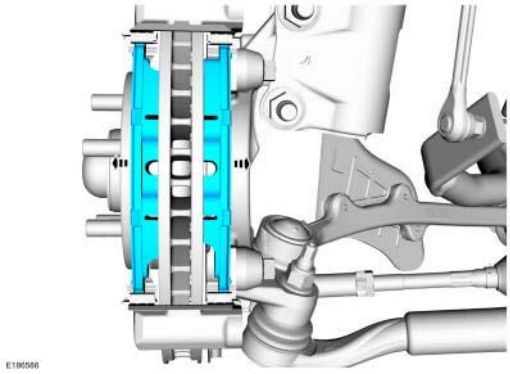
1.



Remove wheel and tire. Refer to: Wheel and Tire .

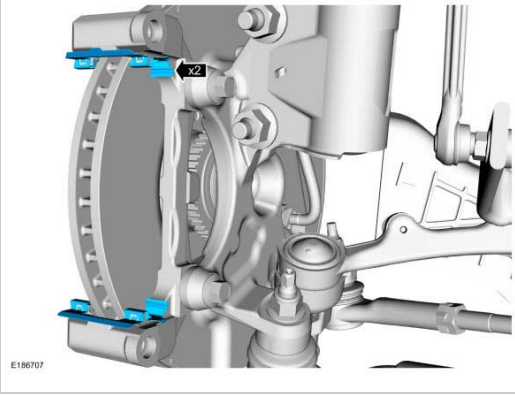
NOTE: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose may occur.

2.
Remove the 2 brake caliper guide pin bolts and position the brake caliper aside.



Torque

: 24 lb.ft (32 Nm)



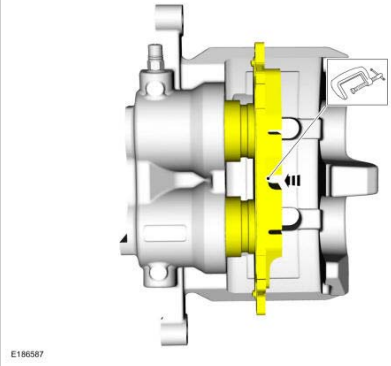
NOTE: Note the position of the components before removal.

3.
Remove the brake pads.

NOTE: There are two different brake pad clips. The brake pad clip with the tab must be installed at the top position on the anchor plate.

4.
Remove the top and bottom brake pad clips.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: 2-PISTON BRAKE CALIPER > INSTALLATION



NOTE: If installing new brake pads, make sure to install all new hardware and lubricant supplied with the brake pad kit. Refer to the brake pad instruction sheet when applying lubricant.

1.

To install, reverse the removal procedure.

2.

If installing new brake pads. Use a C-clamp and a worn brake pad to compress the brake caliper pistons into the brake caliper bore.

3.

Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid. Refer to: Specifications .

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: 4-PISTON BRAKE CALIPER > REMOVAL

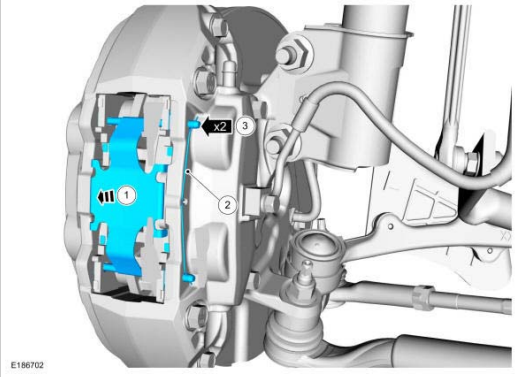
NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the wheel and tire. Refer to: Wheel and Tire .

2.

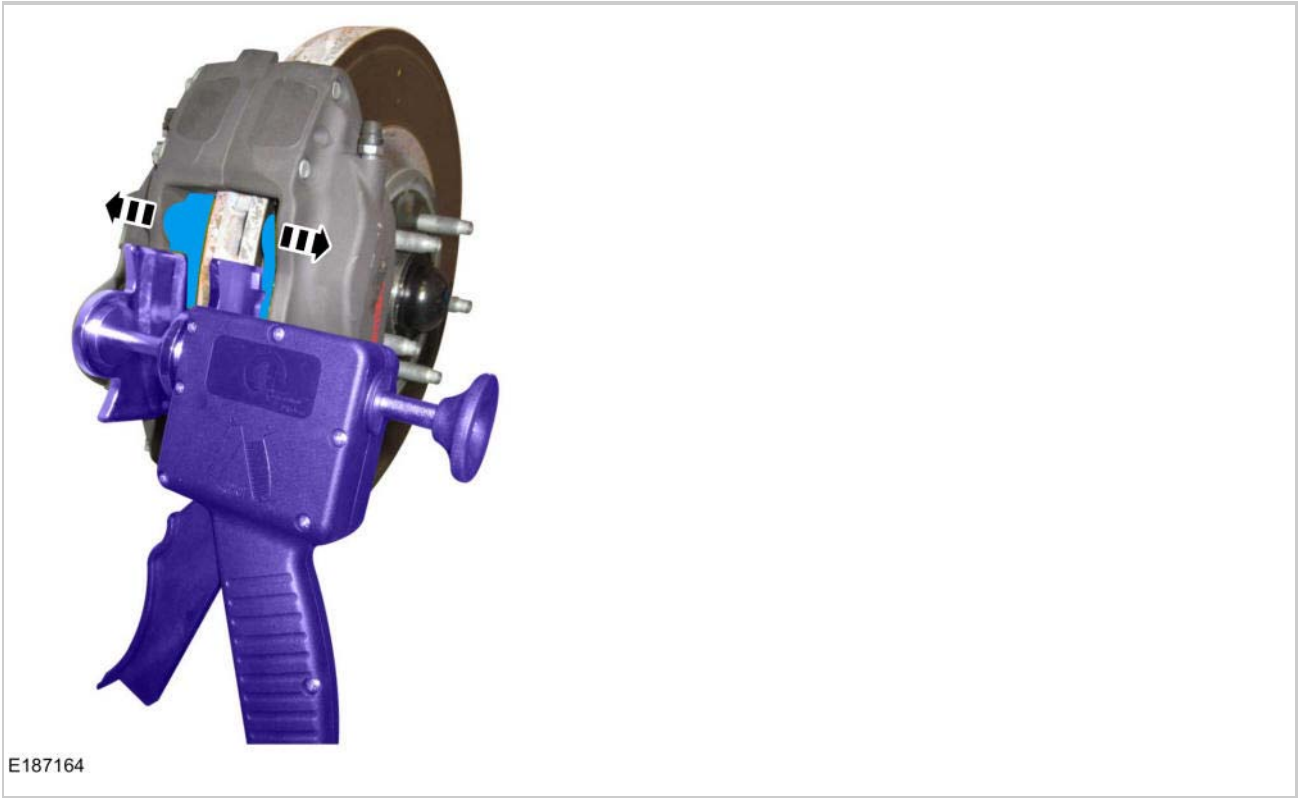
1.



Remove brake pad spring.

2.

Remove the brake pad pin clip.



3.

Remove the 2 brake pad pins.

3.

Compress the brake caliper pistons using a brake pad spreader tool and remove the brake pads.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: 4-PISTON BRAKE CALIPER > INSTALLATION

NOTE: If installing new brake pads, make sure to install all new hardware and lubricant supplied with the brake pad kit. Refer to the brake pad instruction sheet when applying lubricant.

1.

To install, reverse the removal procedure.

2.

Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid. Refer to: Specifications .

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: 6-PISTON BRAKE CALIPER > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

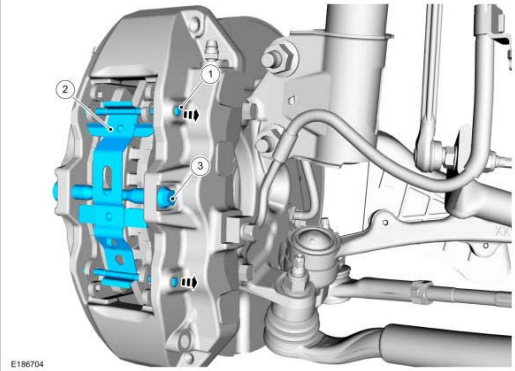
Remove the wheel and tire. Refer to: Wheel and Tire .

2.

1.

Remove the 2 brake pad pins.

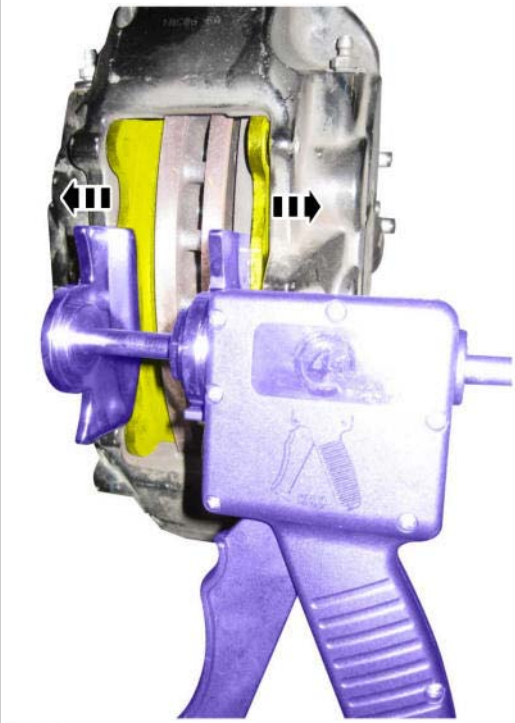
2.



Remove the brake pad spring retainer clip.

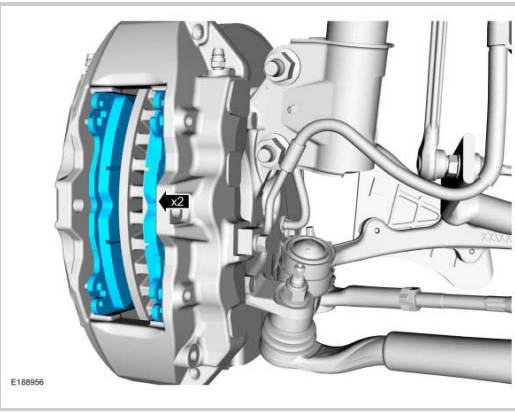
3.

Remove the brake caliper pin bolt.



Torque

: 22 lb.ft (30 Nm)



3.

Compress the brake caliper pistons using a brake pad spreader tool.

4.

Remove the brake pads.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: 6-PISTON BRAKE CALIPER > INSTALLATION

NOTE: If installing new brake pads, make sure to install all new hardware and lubricant supplied with the brake pad kit. Refer to the brake pad instruction sheet when applying lubricant.

1.
To install, reverse the removal procedure.

2.

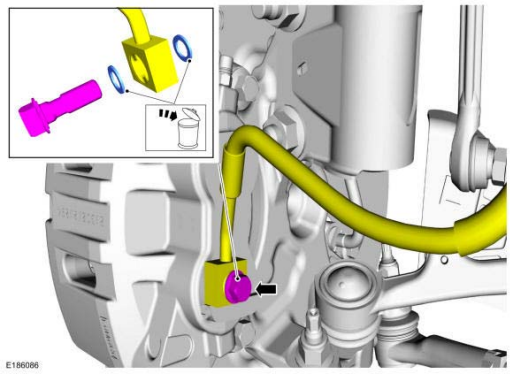
Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid. Refer to: Specifications .

REMOVAL AND INSTALLATION > FRONT BRAKE FLEXIBLE HOSE > REMOVAL

NOTE: Make sure all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.



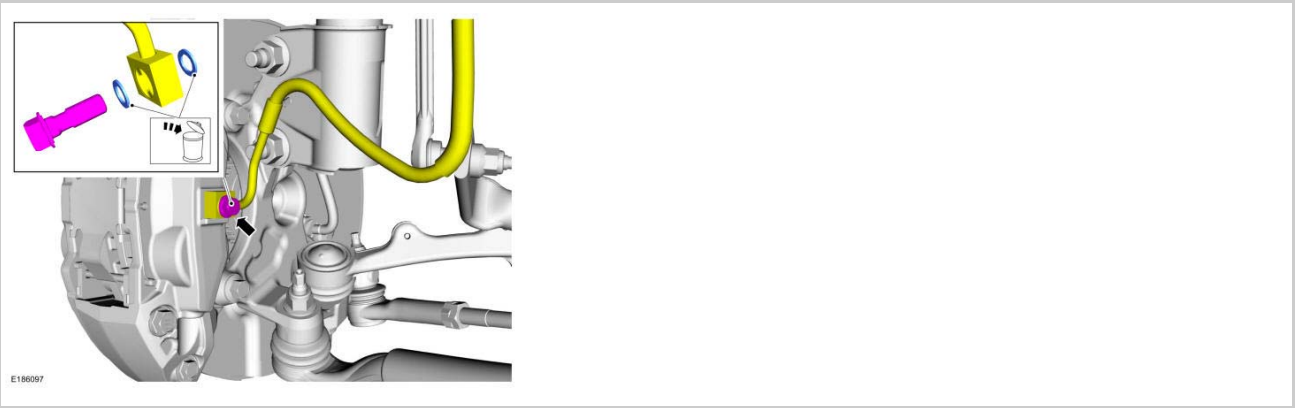
2-piston brake caliper

1.

Remove the brake caliper flow bolt and detach the front brake flexible hose.

Torque

: 30 lb.ft (40 Nm)



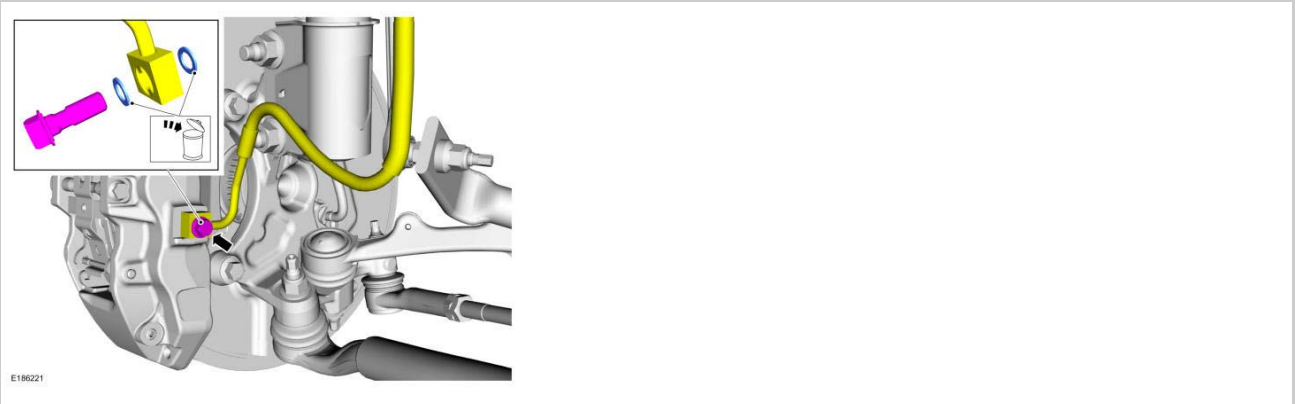
4-piston brake caliper

2.

Remove the brake caliper flow bolt and detach the front brake flexible hose.

Torque

: 30 lb.ft (40 Nm)



6-piston brake caliper

3.

Remove the brake caliper flow bolt and detach the front brake flexible hose.

Torque

: 30 lb.ft (40 Nm)

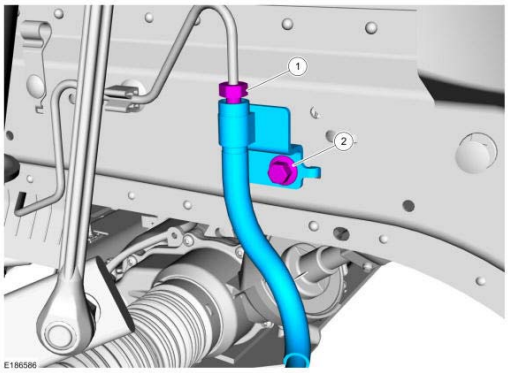
All brake calipers

4.

1.

Disconnect the brake tube fitting.

Torque



: 155 lb.in (17.5 Nm)

2.

Remove the bolt and the front brake flexible hose.

Torque

: 18 lb.ft (25 Nm)

REMOVAL AND INSTALLATION > FRONT BRAKE FLEXIBLE HOSE > INSTALLATION

1.

To install, reverse the removal procedure.

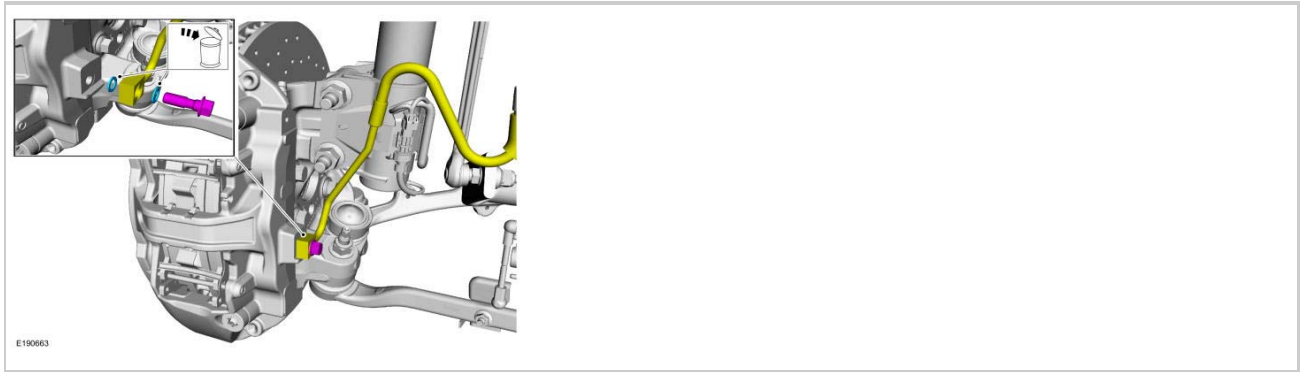
2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding (206-00 Brake System - General Information, General Procedures).

REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.



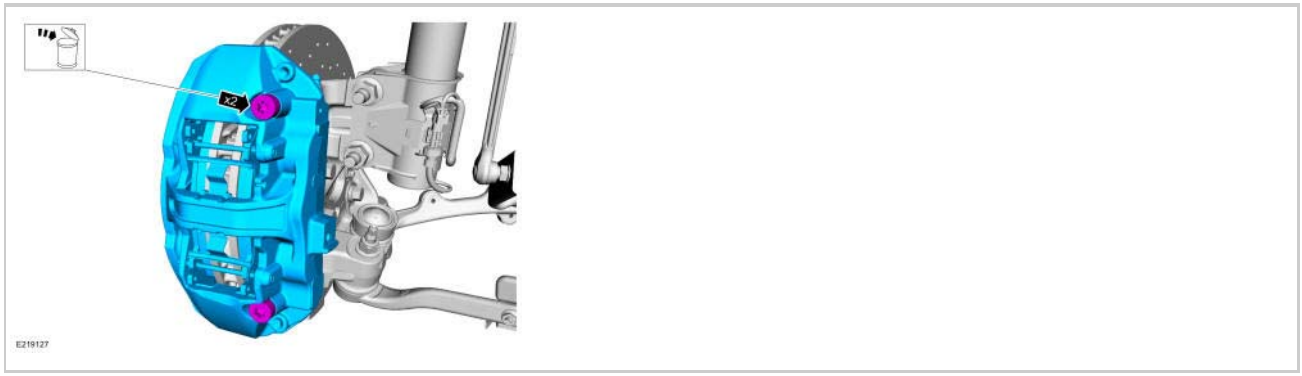
NOTE: Remove the brake caliper flow bolt and disconnect the brake hose. Discard the washers.

1.

Remove the brake caliper flow bolt and disconnect the brake hose. Discard the washers.

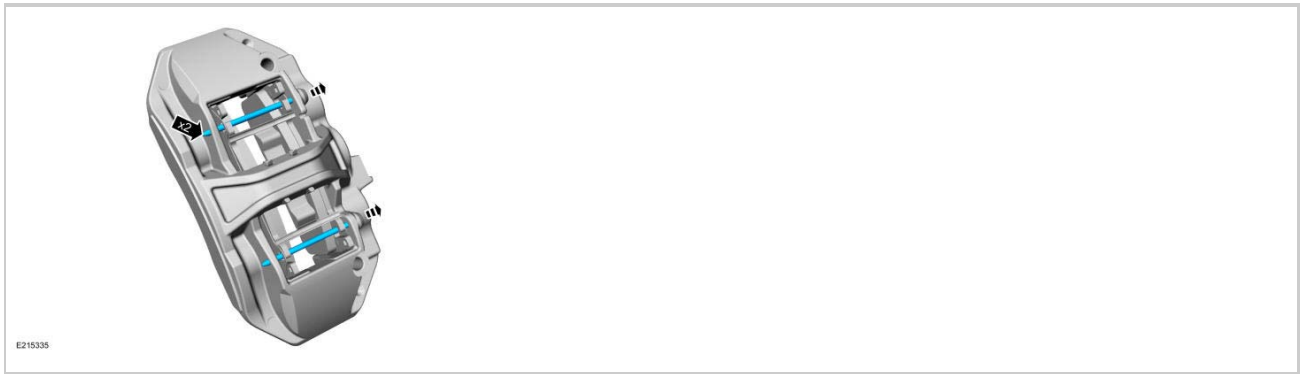
Torque

: 35 lb.ft (48 Nm)



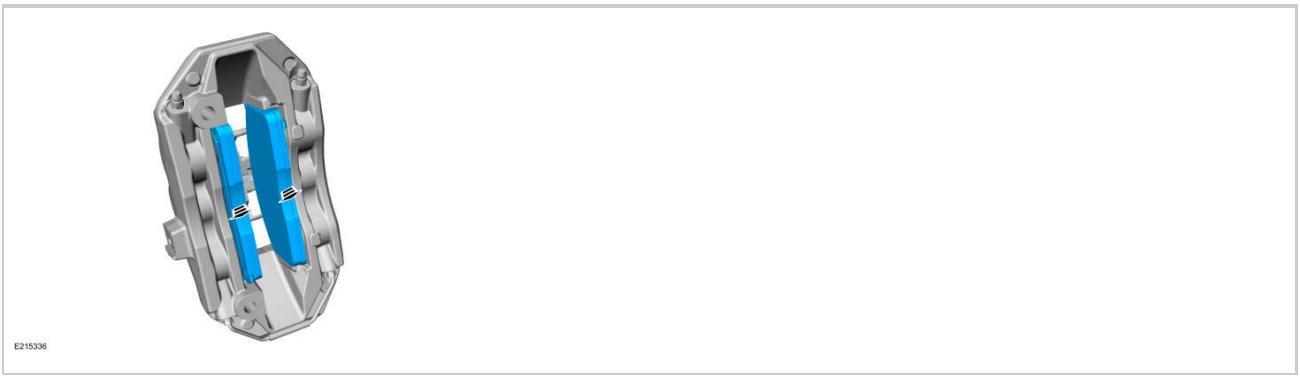
2.

Remove the bolts and the brake caliper. Discard the bolts.



Torque

: 136 lb.ft (185 Nm)



3.

Remove the brake pad pins.

4.

Remove the brake pads.

5.

Remove the brake pad spring retainer clip.

REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

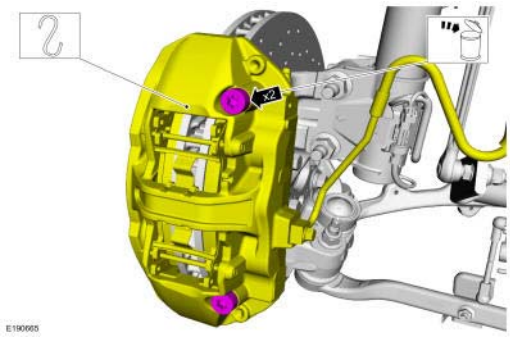
2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

REMOVAL AND INSTALLATION > BRAKE DISC - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

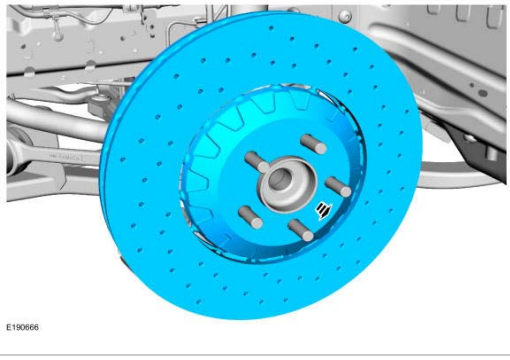
1.



Remove wheel and tire. Refer to: Wheel and Tire .

NOTE: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose may occur.

2.
Remove the bolts and position the brake caliper and brake pads aside. Discard the bolts.



Torque

: 136 lb.ft (185 Nm)

NOTE: Use care when handling the brake disc.

3.
Remove the brake disc.

REMOVAL AND INSTALLATION > BRAKE DISC - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

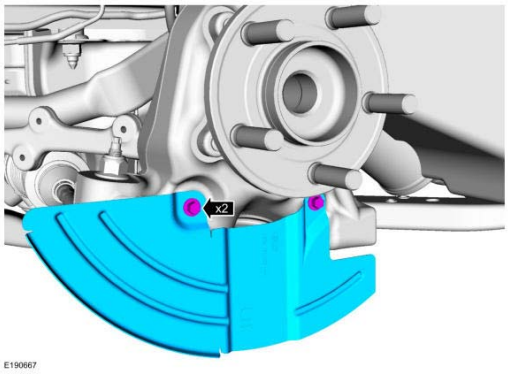
2.

Apply the brake pedal several times to verify correct brake system operation.

REMOVAL AND INSTALLATION > BRAKE DISC SHIELD - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the brake disc. Refer to: Brake Disc - Vehicles With: SVT Performance Package .

2.

Remove the bolts and the brake disc shield.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > BRAKE DISC SHIELD - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

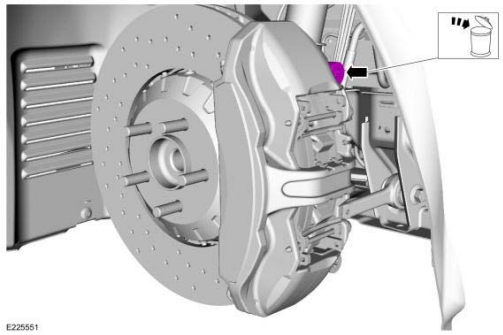
REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Do not pry in the caliper sight hole to retract the pistons as this can damage the pistons and boots.

NOTE: Do not allow the brake caliper to hang from the brake hose or damage to the hose can occur.

NOTE: Removal steps in this procedure may contain installation details.

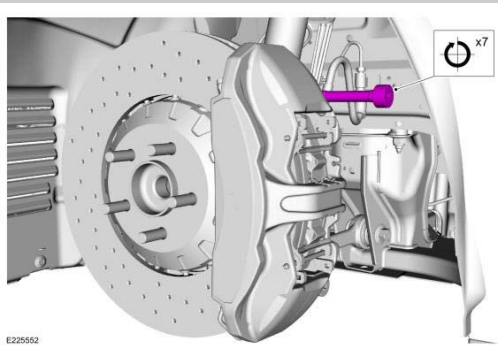
1.



Remove the wheel and tire. Refer to: Wheel and Tire .

2.

Remove and discard the upper brake caliper bolt.

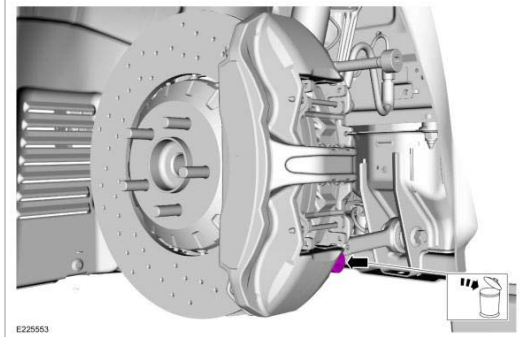


Torque

: 136 lb.ft (185 Nm)

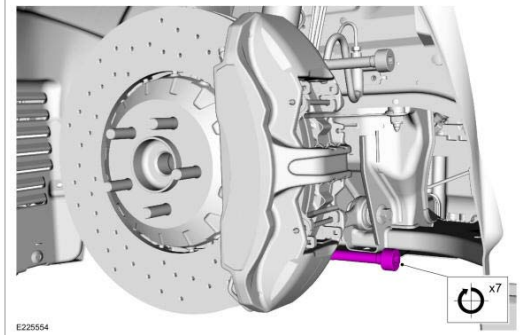
3.

Loosely install a larger bolt (M14 x 180) turning 7 full turns.



4.

Remove and discard the lower brake caliper bolt.

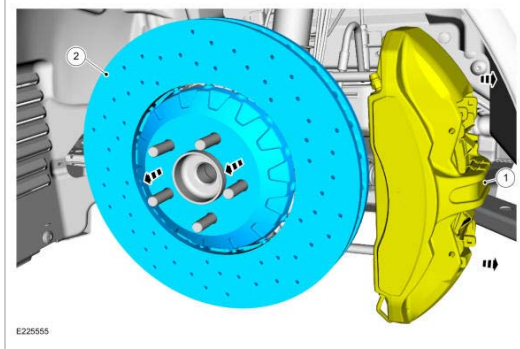


Torque

: 136 lb.ft (185 Nm)

5.

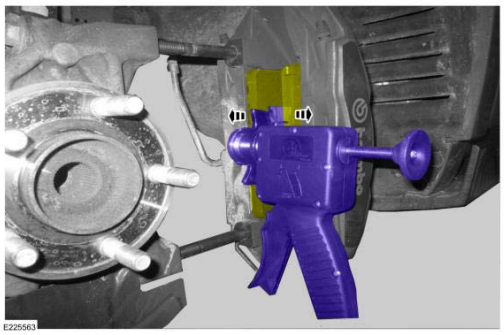
Loosely install a larger bolt (M14 x 180) turning 7 full turns.



6.

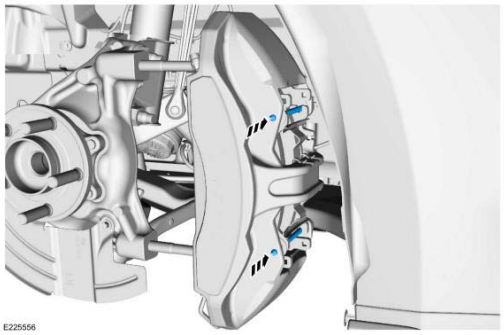
> *NOTE: Make sure the wheels are in the straight-ahead position before moving the brake caliper or damage to the brake hose may occur.*

1.
Slide the brake caliper back on the longer bolts.



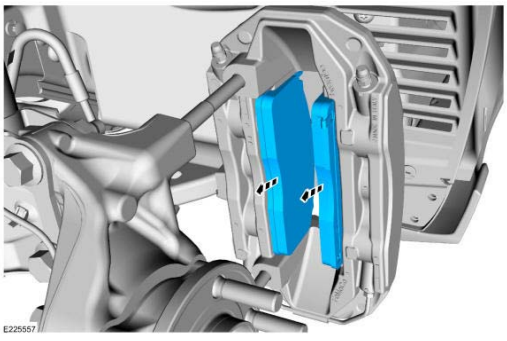
> *NOTE: Use care when handling the brake disc.*

2.
Remove the brake disc.



7.

Compress the brake caliper pistons using the brake pad spreader tool.



8.

Remove the brake pad pins.

9.

Remove the brake pads.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

NOTE: If installing new brake pads, make sure to install all new hardware and lubricant

supplied with the brake pad kit. Refer to the brake pad instruction sheet when applying lubricant.

1.

To install, reverse the removal procedure.

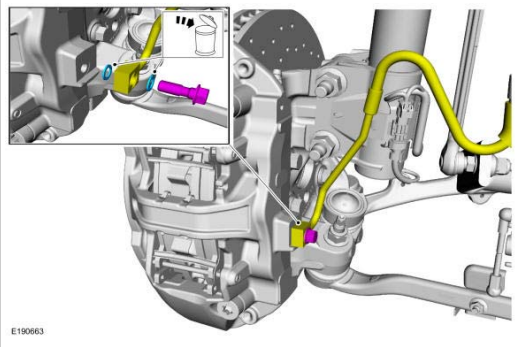
2.

Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid. Refer to: Specifications .

REMOVAL AND INSTALLATION > FRONT BRAKE FLEXIBLE HOSE - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Make sure all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.



NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the brake caliper flow bolt and disconnect the front brake flexible hose. Discard the washers.

Torque

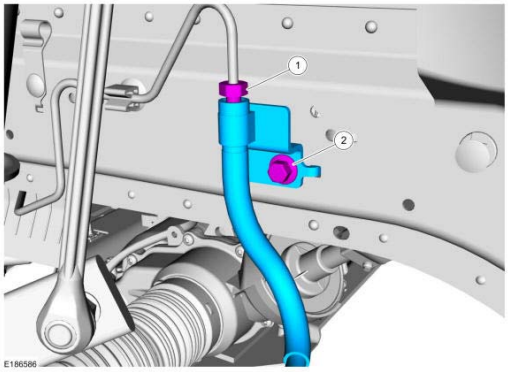
: 35 lb.ft (48 Nm)

2.

1.

Disconnect the brake tube fitting.

Torque



: 159 lb.in (18 Nm)

2.

Remove the bolt and the front brake flexible hose.

Torque

: 18 lb.ft (25 Nm)

REMOVAL AND INSTALLATION > FRONT BRAKE FLEXIBLE HOSE - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

2.

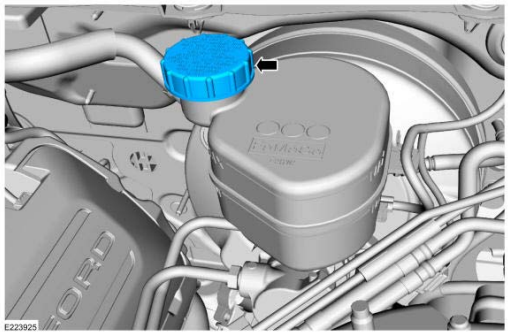
Bleed the brake system. Refer to: Brake System Pressure Bleeding .

Service Manual: HYDRAULIC BRAKE ACTUATION

DIAGNOSIS AND TESTING > HYDRAULIC BRAKE ACTUATION

REFER to: Brake System .

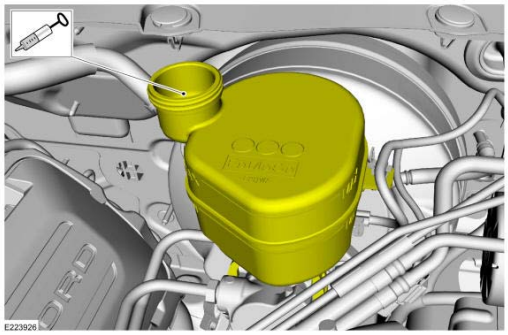
REMOVAL AND INSTALLATION > BRAKE MASTER CYLINDER > REMOVAL



NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

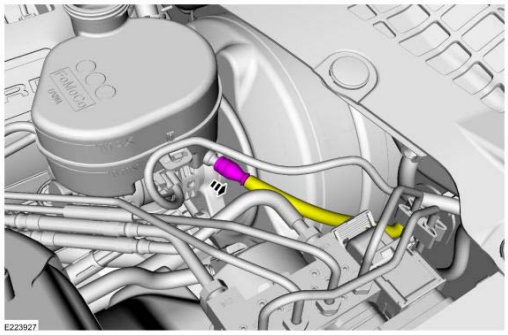
NOTE: Removal steps in this procedure may contain installation details.

Vehicles with manual transmission



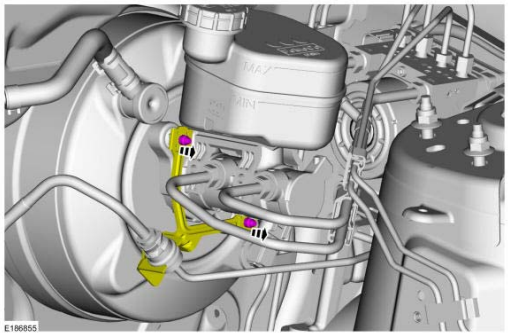
1.

Remove the brake fluid reservoir cap.



2.

Using a suitable suction device, syphon the brake fluid from the brake fluid reservoir.



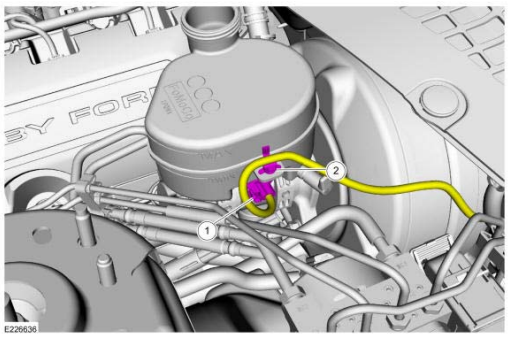
3.

Disconnect the clutch master cylinder tube.

4.

Detach the clutch master cylinder tube bracket from the master cylinder studs.

All vehicles



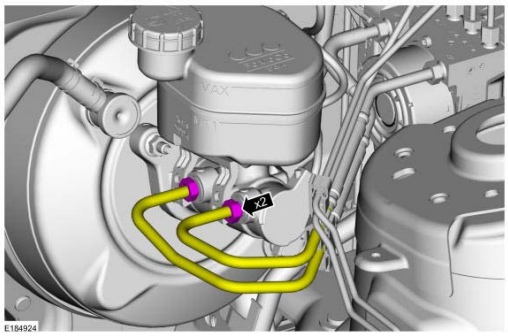
5.

1.

Disconnect the brake fluid level sensor electrical connector.

2.

Detach the wiring harness retainer from the brake fluid reservoir.

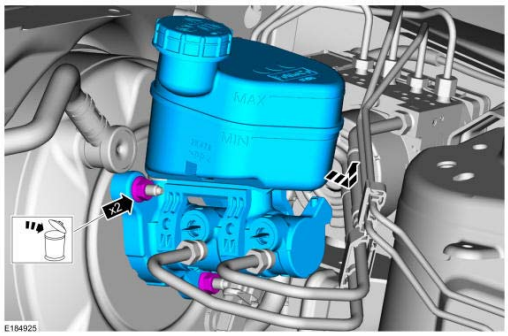


NOTE: Make sure that all openings are sealed.

6.
Disconnect the 2 brake tube fittings.

Torque

: 20 lb.ft (27.5 Nm)



7.

Remove the 2 nuts and the brake master cylinder. Discard the nuts.

Torque

: 17 lb.ft (23 Nm)

REMOVAL AND INSTALLATION > BRAKE MASTER CYLINDER > INSTALLATION

1.

To install, reverse the removal procedure.

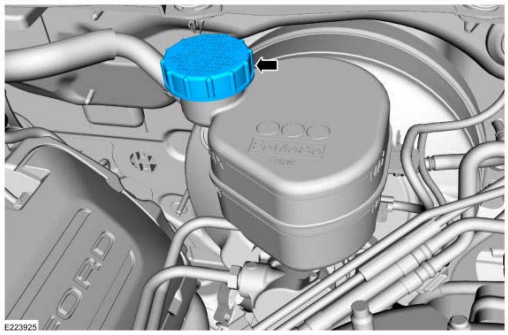
2.

If installing a new brake master cylinder, bleed the master cylinder. Refer to: Component Bleeding .

If the brake master cylinder was removed to access other components, bleed the brake system. Refer to: Brake System Pressure Bleeding .

3.

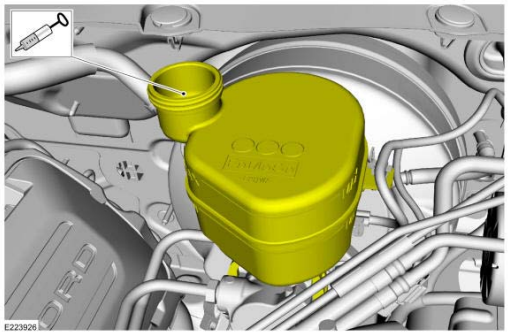
If equipped with a manual transmission, bleed the clutch. Refer to: Clutch System Bleeding .



REMOVAL AND INSTALLATION > BRAKE PEDAL AND BRACKET - 6-SPEED MANUAL TRANSMISSION - 3160 6-SPEED MANUAL TRANSMISSION - MT82 > REMOVAL

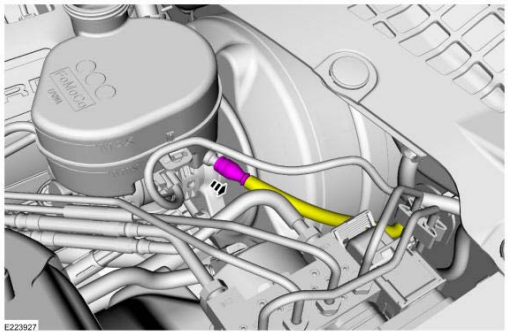
NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.



1.

Remove the brake fluid reservoir cap.

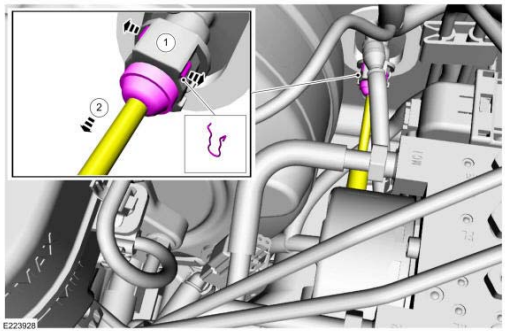


2.

Using a suitable suction device, syphon the brake fluid from the brake fluid reservoir.

3.

Disconnect the clutch master cylinder supply tube from the brake fluid reservoir.



4.

1.

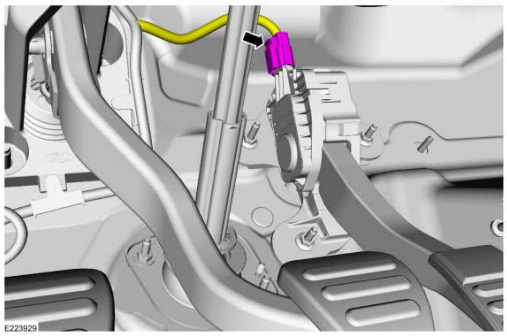
Spread the clip and push the clip downward into the released position.

2.

Disconnect the clutch master cylinder tube.

NOTE: Do not service the brake pedal or brake booster without first removing the stoplamp switch. This switch must be removed with the brake pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

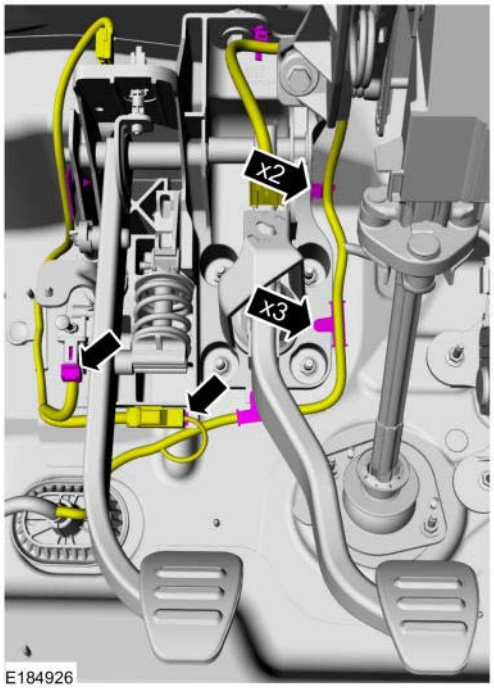
5.
Remove the stoplamp switch. Refer to: Stoplamp Switch .



NOTE: Do not service the brake pedal or brake booster without first removing the cruise control deactivator switch. This switch must be removed with the clutch pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

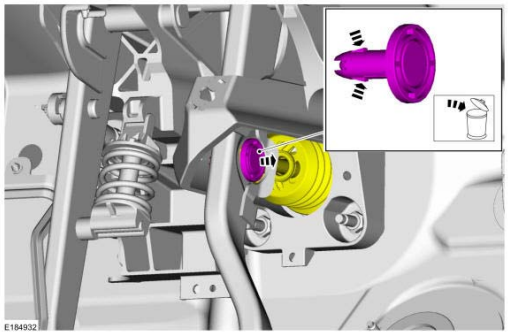
6.

Remove the cruise control deactivator switch. Refer to: Cruise Control Deactivator Switch .



7.

Disconnect the accelerator pedal electrical connector.

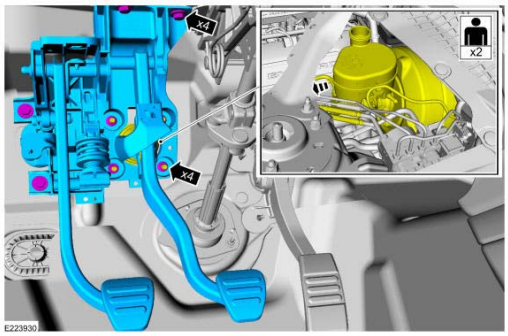


8.

Disconnect the starter inhibitor switch electrical connector and detach the 6 wiring harness retainers. Position the wiring harness aside.

NOTE: The booster push rod clevis-locking pin is a one-time use only part. Any time the booster push rod clevis-locking pin is removed, a new booster push rod clevis-locking pin should be used.

9.
Remove and discard the booster push rod clevis-locking pin and position aside the booster push rod.



NOTE: Do not pry on the brake booster or damage to the brake booster may occur.

10.
Have an assistant pull the brake booster and master cylinder assembly away from the dash panel. Remove the 4 bolts, 4 nuts and remove the brake pedal/clutch pedal assembly.

Torque

: 17 lb.ft (23 Nm)

REMOVAL AND INSTALLATION > BRAKE PEDAL AND BRACKET - 6-SPEED MANUAL TRANSMISSION - 3160 6-SPEED MANUAL TRANSMISSION - MT82 > INSTALLATION

NOTE: Do not press, pull or otherwise move the brake pedal while installing the stoplamp switch. The switch must be installed with the booster push rod attached to the brake pedal and with the brake pedal in the at-rest position. Installing the switch with the brake pedal in any other position will result in incorrect adjustment and may damage the switch.

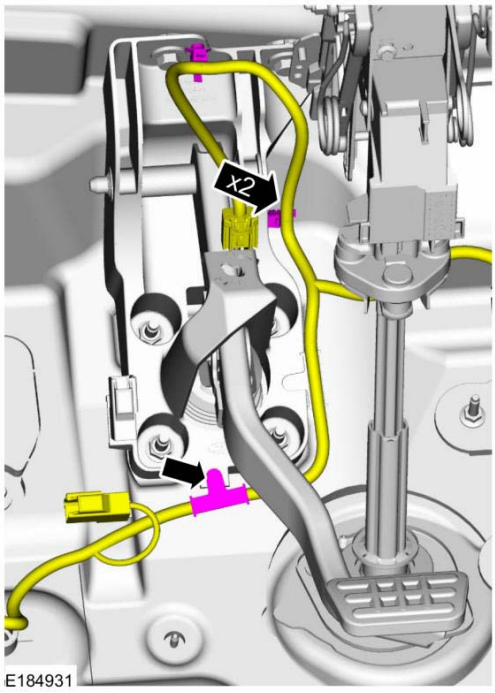
1.
To install, reverse the removal procedure.

2.

Bleed the clutch. Refer to: Clutch System Bleeding .

REMOVAL AND INSTALLATION > BRAKE PEDAL AND BRACKET - 6-SPEED AUTOMATIC TRANSMISSION - 6R80 > REMOVAL

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

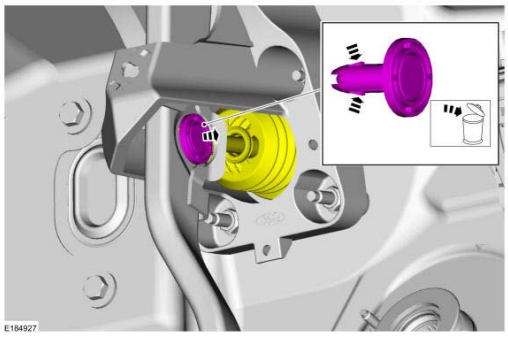


NOTE: Removal steps in this procedure may contain installation details.

NOTE: Do not service the brake pedal or brake booster without first removing the stoplamp switch. The switch must be removed with the brake pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

1.
Remove the stoplamp switch. Refer to: Stoplamp Switch .

2.

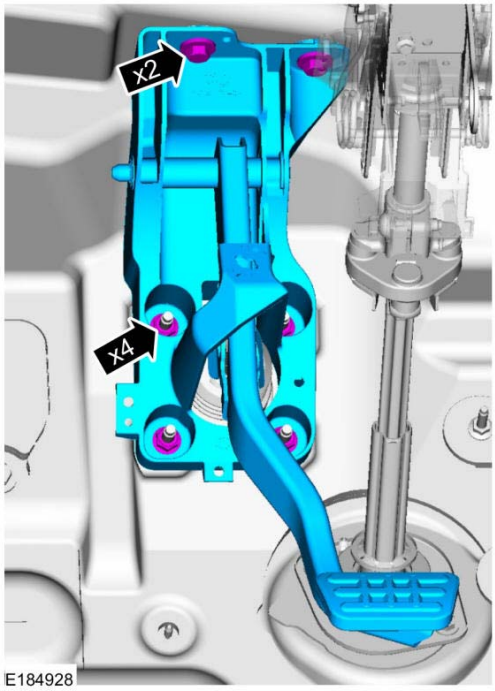


Detach the 3 wiring harness retainers.

NOTE: The booster push rod clevis-locking pin is a one-time use only part. Any

time the booster push rod clevis-locking pin is removed, a new booster push rod clevis-locking pin should be used.

3.
Remove and discard the booster push rod clevis-locking pin and position aside the booster push rod.



4.

Remove the 2 bolts, 4 nuts and remove the brake pedal and bracket.

Torque

: 17 lb.ft (22.5 Nm)

REMOVAL AND INSTALLATION > BRAKE PEDAL AND BRACKET - 6-SPEED AUTOMATIC TRANSMISSION - 6R80 > INSTALLATION

NOTE: Do not press, pull or otherwise move the brake pedal while installing the stoplamp switch. The switch must be installed with the booster push rod attached to the brake pedal and with the brake pedal in the at-rest position. Installing the switch with the brake pedal in any other position will result in incorrect adjustment and may damage the switch.

1.
To install, reverse the removal procedure.

Service Manual: PARKING BRAKE AND ACTUATION

DIAGNOSIS AND TESTING > PARKING BRAKE > SYMPTOM CHART(S)

Symptom Chart: Parking Brake and Actuation

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Preliminary Inspection

The first indication that something may be wrong in the parking brake system is a change in the feeling through the parking brake control. The parking brake not holding on an incline or dragging after being released are also indicators of system concerns. Check the operation of the parking brake system with the vehicle on a hoist and the parking brake control fully released.

- Verify the customer concern.
- Visually inspect for obvious signs of mechanical damage.
- If an obvious cause for an observed or reported concern is found, correct the cause.
- If the cause is not visually evident, verify the symptom and go to the Symptom Chart below.

Condition	Possible Sources	Actions
The red brake warning indicator is always illuminated	Parking brake not fully released Low brake fluid level Wiring, terminals or connectors Brake master cylinder inoperative	DIAGNOSE the red brake warning indicator. REFER to: Instrumentation, Message Center and Warning Chimes .
The parking brake does not apply/hold vehicle	Refer to the Pinpoint Test	GO to Pinpoint Test A
The parking brake will not release	Refer to the Pinpoint Test	GO to Pinpoint Test B

DIAGNOSIS AND TESTING > PARKING BRAKE > PINPOINT TESTS

The Parking Brake Does Not Apply Or Does Not Hold Vehicle

Normal Operation and Fault Conditions

When the parking brake control is pulled, the parking brake equalizer pulls on both rear parking brake cables, which are attached to the parking brake actuators, and applies the brake shoes/pads.

Possible Sources

- Parking brake cable(s)
- Parking brake control

- Rear brake caliper(s)
- Parking brake cable equalizer

DIAGNOSIS AND TESTING > PARKING BRAKE > PINPOINT TESTS > PINPOINT TEST A : THE PARKING BRAKE DOES NOT APPLY OR DOES NOT HOLD VEHICLE > PINPOINT TEST A : THE PARKING BRAKE DOES NOT APPLY OR DOES NOT HOLD VEHICLE

A1 CHECK THE PARKING BRAKE CONTROL

Pull up the parking brake control handle.

Does the parking brake control move?

Yes	GO to A2

No	GO to A3

NOTE: Have an assistant pull and release the parking brake to help isolate disconnected cables or cables that do not move.

A2 INSPECT THE FOLLOWING PARKING BRAKE COMPONENTS

Parking brake control

Front parking brake cable

Rear parking brake cables and/or equalizer

Rear brake caliper actuators

Is any damage found or are any components disconnected?

Yes	CONNECT the component(s) or INSTALL new parking brake component(s) as necessary. TEST the system for normal operation. ADJUST the parking brake cables. REFER to: Parking Brake Cable Adjustment .

No	VERIFY that the rear pads and brake discs are within thickness specifications. REFER to: Specifications . If the rear pads and brake discs are OK, INSTALL new rear brake caliper(s). REFER to: Brake Caliper .

A3 ISOLATE THE PARKING BRAKE CONTROL AND FRONT PARKING BRAKE CABLE

Disconnect the front parking brake cable from the rear parking brake cable equalizer.

Pull up the parking brake control handle.

Does the parking brake control handle move?

Yes	GO to A4

No	INSTALL a new parking brake control and front cable assembly as necessary. REFER to: Parking Brake Cable LH or REFER to Parking Brake Cable RH . TEST the system for normal operation.

A4 ISOLATE THE REAR PARKING BRAKE CABLES

Disconnect the rear parking brake cable from the rear brake caliper at the affected wheel end(s).

While holding the cable conduit, attempt to slide the cable inside the conduit.

Does the cable slide freely inside the conduit?

Yes	The parking brake system is operating normally at this time. INSPECT the rear brake components on the affected wheel end(s). INSTALL new rear brake components as necessary and ADJUST the parking brake cables. REFER to: Parking Brake Cable Adjustment .

No	INSTALL new RH or LH rear parking brake cables as necessary. REFER to: Parking Brake Cable LH (206-05 Parking Brake and Actuation, Removal and Installation). REFER to: Parking Brake Cable RH .

DIAGNOSIS AND TESTING > PARKING BRAKE > PINPOINT TESTS > PINPOINT TEST B : PARKING BRAKE WILL NOT RELEASE

Normal Operation and Fault Conditions

When the parking brake release button is pressed and the brake control is released, the tension on the parking brake cables return the system to the released position.

Possible Sources

- Parking brake cable(s)
- Parking brake control
- Rear brake caliper(s)
- Parking brake cable equalizer

DIAGNOSIS AND TESTING > PARKING BRAKE > PINPOINT TESTS > PINPOINT TEST B : PARKING BRAKE WILL NOT RELEASE > PINPOINT TEST B : PARKING BRAKE WILL NOT RELEASE

B1 CHECK THE PARKING BRAKE CONTROL

Apply and release the parking brake control.

Does the parking brake control fully release?

Yes	GO to B2

No	INSTALL a new parking brake control and front cable assembly as necessary. REFER to: Parking Brake Control . TEST the system for normal operation.

B2 ISOLATE THE FRONT BRAKE CABLE

Disconnect the front parking brake cable from the rear parking brake cable equalizer.

Do the rear wheel(s) spin freely?

Yes	INSTALL a new parking brake control and front cable assembly as necessary. REFER to: Parking Brake Control . TEST the system for normal operation.

No	GO to B3

B3 ISOLATE THE REAR PARKING BRAKE CABLES

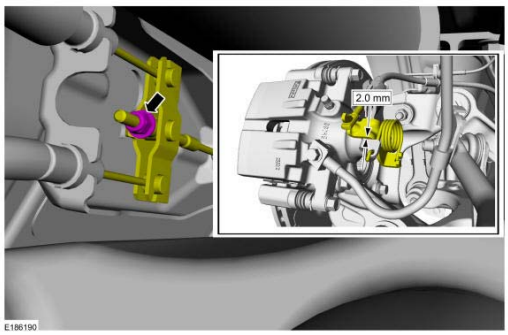
Disconnect the rear parking brake cable from the rear brake caliper at the affected wheel end(s).

Do the wheel(s) spin freely?

Yes	INSTALL new RH or LH rear parking brake cables as necessary. REFER to: Parking Brake Cable LH . REFER to: Parking Brake Cable RH .

No	ADJUST the parking brake cables. REFER to: Parking Brake Cable Adjustment .

GENERAL PROCEDURES > PARKING BRAKE CABLE ADJUSTMENT



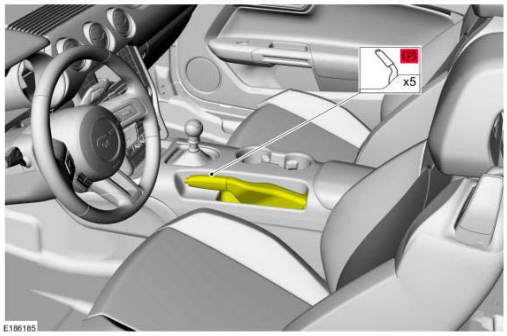
Special Tool(s) / General Equipment

Feeler Gauge

Adjustment

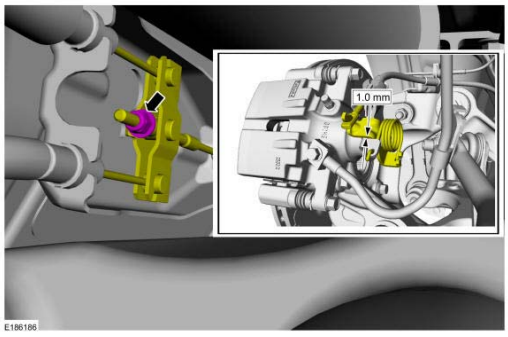
1.

With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .



2.

Tighten the parking brake cable adjustment nut until one or both caliper levers are 2.0 mm off of their stops. Use the General Equipment: Feeler Gauge



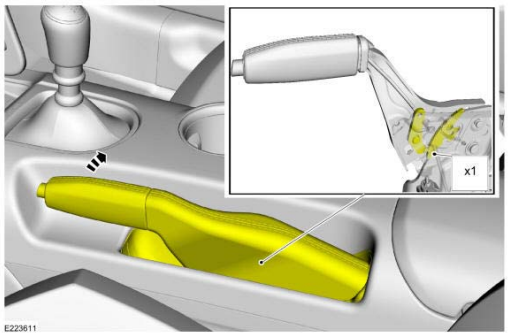
3.

Fully apply and release the parking brake 5 times

4.

Tighten the parking brake cable adjustment nut until one or both caliper levers are 1.0 mm off of their stops. Use the General Equipment: Feeler Gauge

GENERAL PROCEDURES > PARKING BRAKE CABLE ADJUSTMENT - VEHICLES WITH: SVT PERFORMANCE PACKAGE



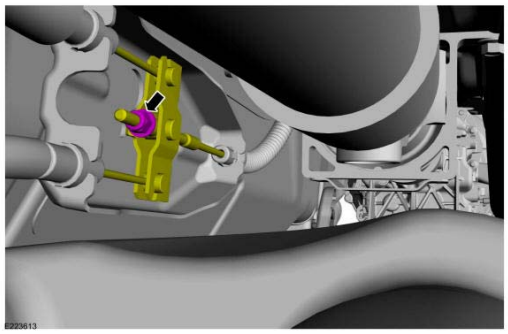
Adjustment

1.

With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

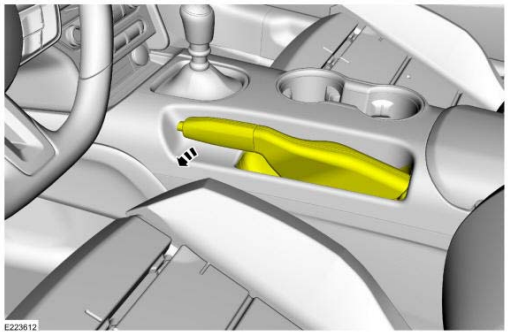
2.

Set the parking brake to the first click/position.



NOTE: While adjusting the parking brake cables, check for rotation of the rear wheels often to prevent over tightening the cables. The cables must only be tightened until the rear wheels do not spin freely. Make sure the rear wheel are not locked.

3.
Raise the vehicle and tighten the parking brake cable adjustment nut until the rear wheels meet the following criteria.



The rear wheel do not spin freely (have resistance).

The rear wheels are not locked.

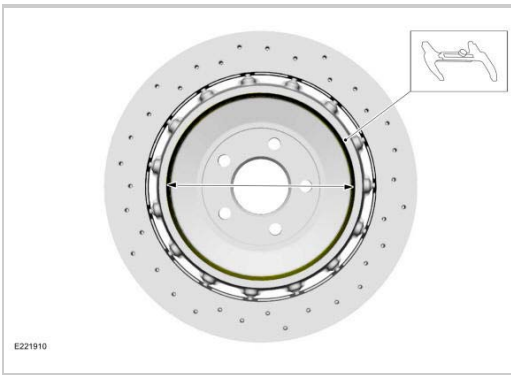
4.

Lower the vehicle, and with the wheels off the ground in the full rebound position, release the parking brake and confirm both rear wheels spin freely.

GENERAL PROCEDURES > PARKING BRAKE SHOE ADJUSTMENT - VEHICLES WITH: SVT PERFORMANCE PACKAGE

Special Tool(s) / General Equipment

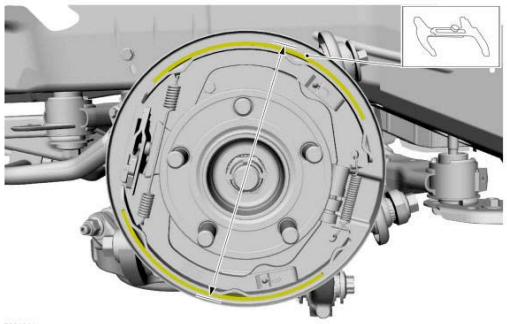
Caliper Gauge



Activation

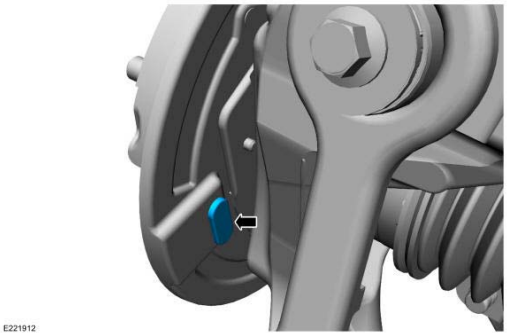
1.

Remove the brake disc. Refer to: Brake Disc - Vehicles With: SVT Performance Package .



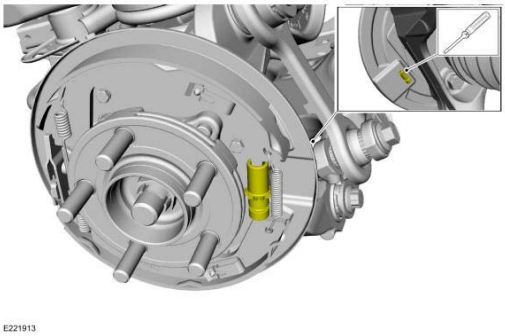
2.

Measure ID of the drum portion of the brake disc. Record the measurement. Use the General Equipment: Caliper Gauge



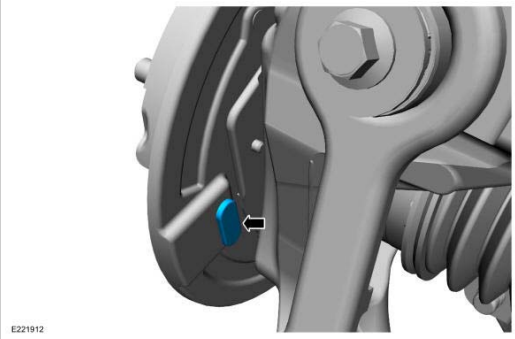
3.

Measure the widest diameter of the parking brake shoes. Use the General Equipment: Caliper Gauge



4.

Remove the backing plate plug.



5.

Adjust the parking brake shoe clearance by rotating the adjuster until the parking brake shoes measure 0.59 mm (0.023 in) less than the recorded ID of the drum portion of the brake disc.

6.

Install the backing plate plug.

7.

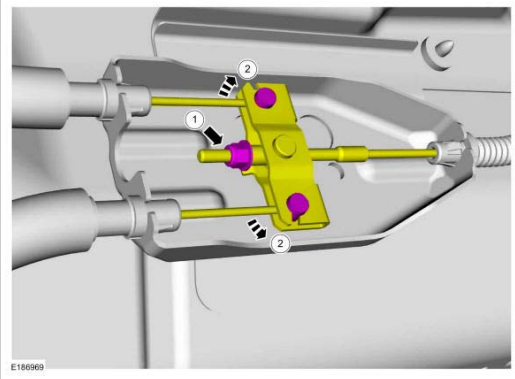
Install the brake disc. Refer to: Brake Disc - Vehicles With: SVT Performance Package .

REMOVAL AND INSTALLATION > PARKING BRAKE CONTROL > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

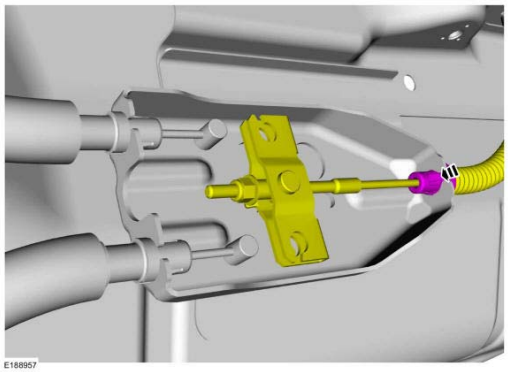
Remove the muffler and tailpipe assembly. Refer to: MUFFLER AND TAILPIPE - 2.3L EcoBoost (231kW/314PS). Refer to: MUFFLER AND TAILPIPE - 3.7L Duratec (227kW/301PS). Refer to: MUFFLER AND TAILPIPE - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS).



2.

1.

Loosen the parking brake cable adjustment nut.

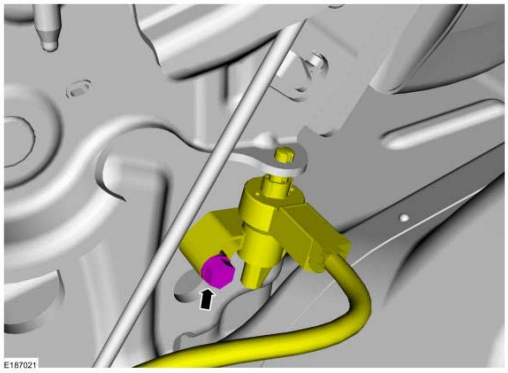


2.

Rotate the cable outward, then pull the pin and cable upwards and disconnect from the equalizer.

3.

Release the tabs and disconnect the front cable from the bracket.



4.

Remove the floor console. Refer to: Floor Console .

5.

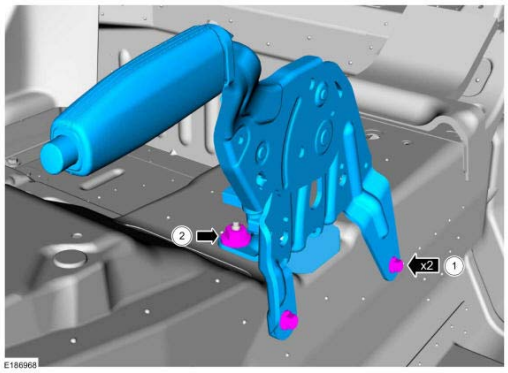
Remove the bolt and position the parking brake switch aside.

6.

1.

Remove the 2 bolts.

Torque



: 22 lb.ft (30 Nm)

2.

Remove the nut and the parking brake control and front cable assembly.

Torque

: 150 lb.in (17 Nm)

REMOVAL AND INSTALLATION > PARKING BRAKE CONTROL > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Adjust the parking brake cables. Refer to: Parking Brake Cable Adjustment . Refer to: Parking Brake Cable Adjustment - Vehicles With: SVT Performance Package .

REMOVAL AND INSTALLATION > PARKING BRAKE CABLE LH > REMOVAL

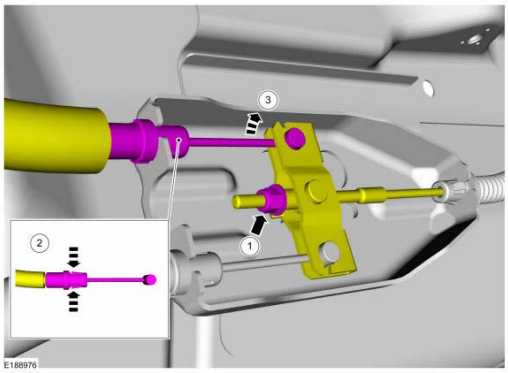
NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the muffler and tailpipe assembly. Refer to: MUFFLER AND TAILPIPE - 2.3L EcoBoost (231kW/314PS). Refer to: MUFFLER AND TAILPIPE - 3.7L Duratec (227kW/301PS). Refer to: MUFFLER AND TAILPIPE - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS).

2.

1.



Loosen the parking brake cable adjustment nut.

2.

Push inward on the 2 tabs and detach the LH cable from the bracket.

3.

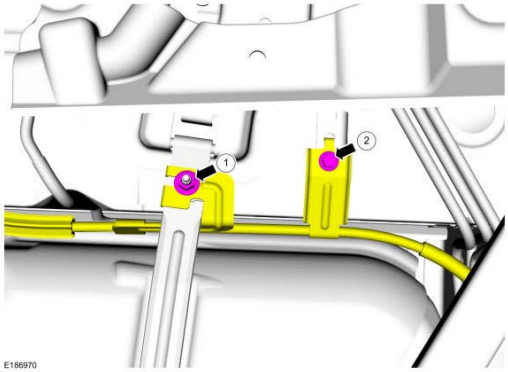
Rotate the cable, slide the pin upwards and detach the cable from the equalizer.

3.

1.

Remove the parking brake cable bracket nut.

Torque



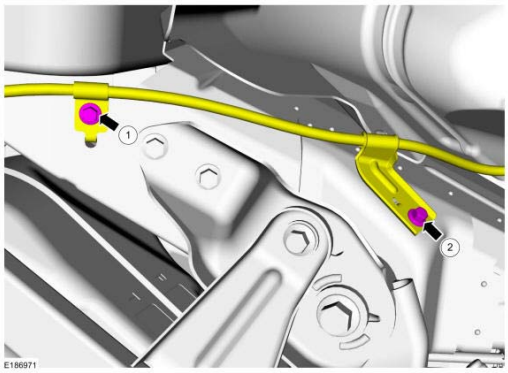
: 18 lb.ft (25 Nm)

2.

Remove the parking brake cable bracket bolt.

Torque

: 18 lb.ft (25 Nm)



4.

Remove the 2 parking brake cable bracket bolts.

Torque:

1.: 18 lb.ft (25 Nm)

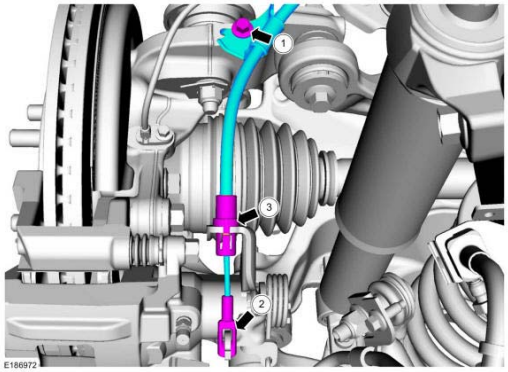
2.: 20 lb.ft (27.5 Nm)

5.

1.

Remove the parking brake cable bracket bolt.

Torque



: 20 lb.ft (27.5 Nm)

2.

Disconnect the parking brake cable from the brake caliper lever.

3.

Push inwards on the 2 tabs, detach the parking brake cable from the brake caliper bracket and remove the parking brake cable.

REMOVAL AND INSTALLATION > PARKING BRAKE CABLE LH > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Adjust the parking brake Cables. Refer to: Parking Brake Cable Adjustment .

REMOVAL AND INSTALLATION > PARKING BRAKE CABLE RH > REMOVAL

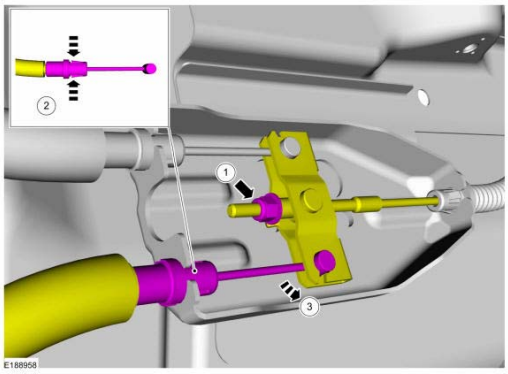
NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the muffler and tailpipe assembly. Refer to: MUFFLER AND TAILPIPE - 2.3L EcoBoost (231kW/314PS). Refer to: MUFFLER AND TAILPIPE - 3.7L Duratec (227kW/301PS). Refer to: MUFFLER AND TAILPIPE - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS).

2.

1.



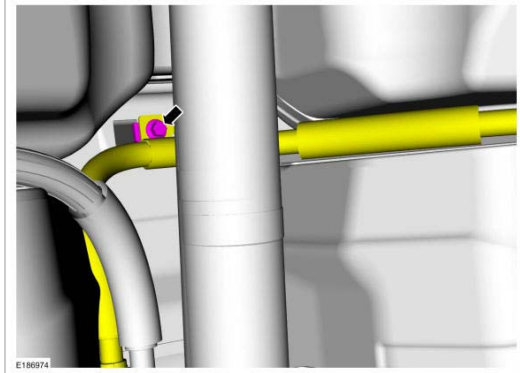
Loosen the parking brake cable adjustment nut.

2.

Push inward on the 2 tabs and detach the RH cable from the bracket.

3.

Rotate the cable, slide the pin upwards and detach the cable from the equalizer.



3.

Remove the parking brake cable bracket bolt.

Torque

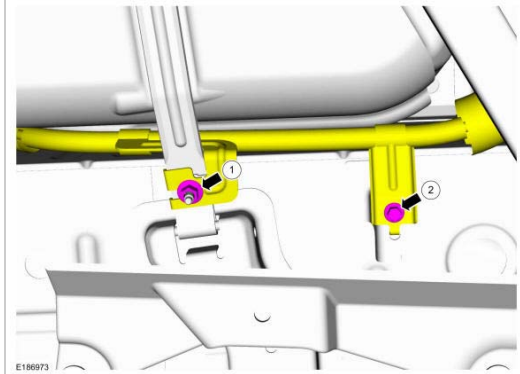
: 18 lb.ft (25 Nm)

4.

1.

Remove the parking brake cable bracket nut.

Torque



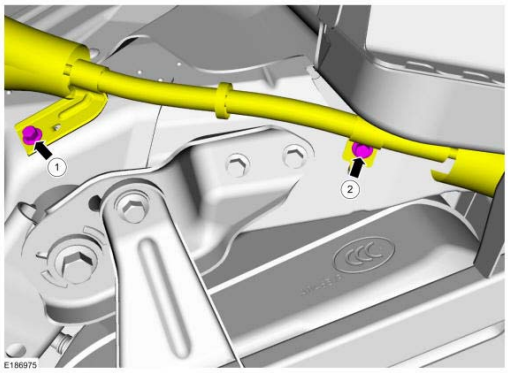
: 18 lb.ft (25 Nm)

2.

Remove the parking brake cable bracket bolt.

Torque

: 18 lb.ft (25 Nm)



5.

Remove the parking brake cable bracket bolts.

Torque:

1.: 20 lb.ft (27.5 Nm)

2.: 18 lb.ft (25 Nm)

6. -

Remove the wheel and tire.

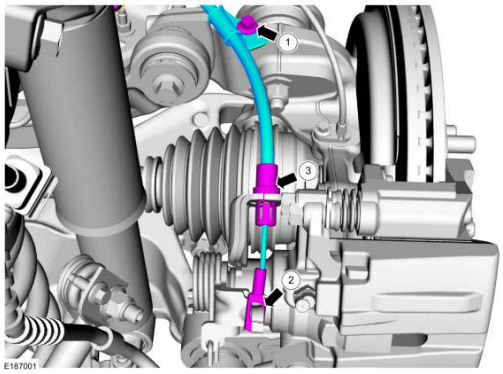
Refer to: WHEEL AND TIRE .

7.

1.

Remove the parking brake cable bracket bolt.

Torque



: 20 lb.ft (27.5 Nm)

2.

Disconnect the parking brake cable from the brake caliper lever.

3.

Push inwards on the 2 tabs, detach the parking brake cable from the brake caliper bracket and remove the parking brake cable.

REMOVAL AND INSTALLATION > PARKING BRAKE CABLE RH > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Adjust the parking brake Cables. Refer to: Parking Brake Cable Adjustment .

Service Manual: POWER BRAKE ACTUATION

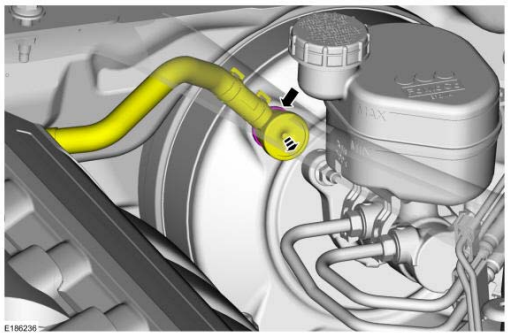
DIAGNOSIS AND TESTING > POWER BRAKE SYSTEM

REFER to: Brake System .

REMOVAL AND INSTALLATION > BRAKE BOOSTER - 2.3L ECOBOOST (201KW 273PS) > REMOVAL

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

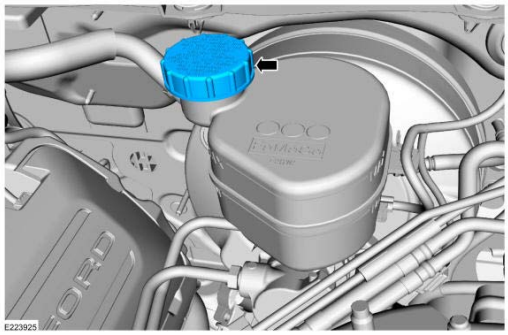


All vehicles

1.

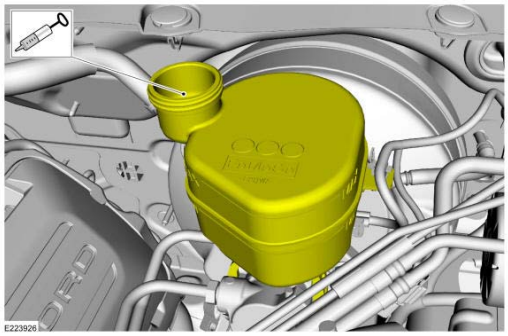
Remove the cowl panel grill. Refer to: Cowl Panel Grille

2.



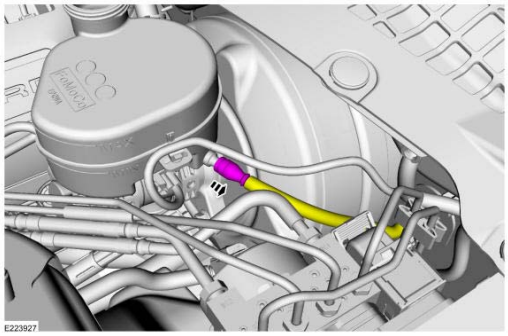
Detach the vacuum check valve from the booster and position aside.

Vehicles with manual transmission



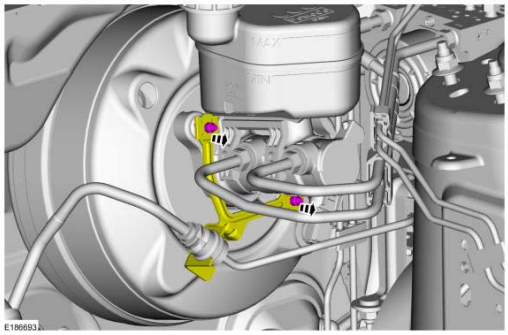
3.

Remove the brake fluid reservoir cap.



4.

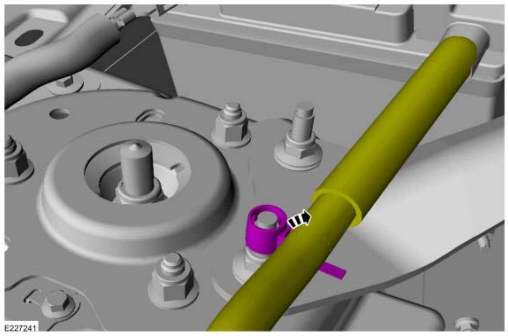
Using a suitable suction device, syphon the brake fluid from the brake fluid reservoir.



5.

Disconnect the clutch master cylinder tube.

6.

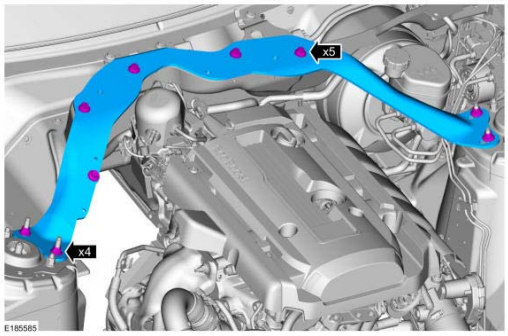


Detach the clutch master cylinder tube bracket from the master cylinder studs.

All vehicles

7.

Detach the battery cable retainer.



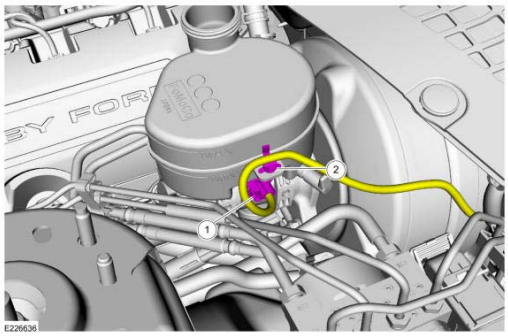
8.

Remove the 5 bolts, 4 nuts and the cowl extension.

Torque:

Bolts: 26 lb.ft (35 Nm)

Nuts: 41 lb.ft (55 Nm)



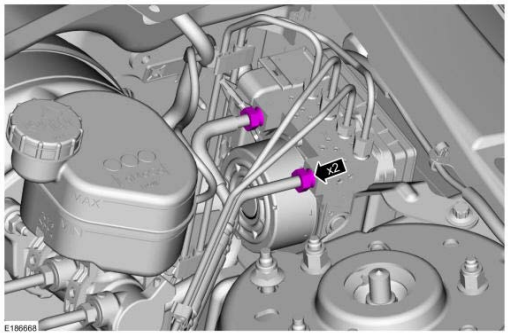
9.

1.

Disconnect the brake fluid level sensor electrical connector.

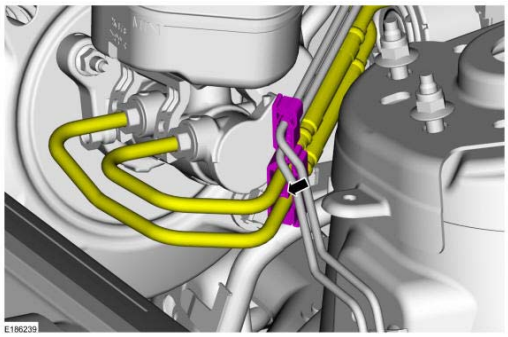
2.

Detach the wiring harness retainer from the brake fluid reservoir.



10.

Disconnect the 2 brake tubes at the HCU.

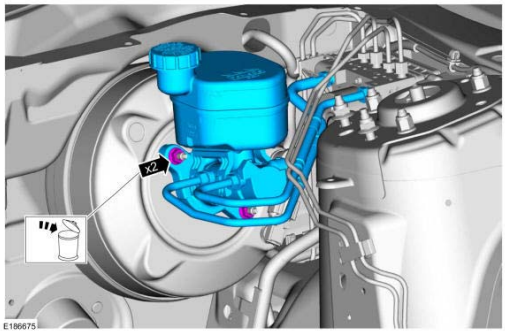


Torque

: 20 lb.ft (27.5 Nm)

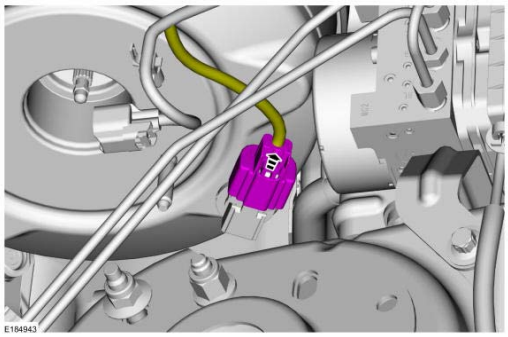
11.

Unclip the brake tubes.



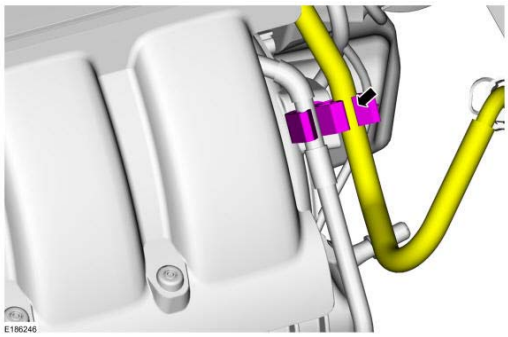
12.

Remove and discard the 2 master cylinder nuts. Remove the master cylinder and brake tubes.



Torque

: 17 lb.ft (23 Nm)

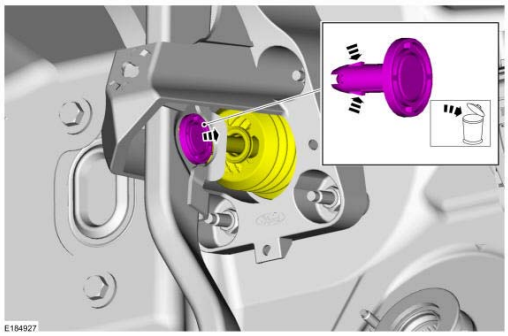


13.

Disconnect the vacuum sensor electrical connector.

14.

Detach and position aside the fuel pressure line from intake manifold clip.



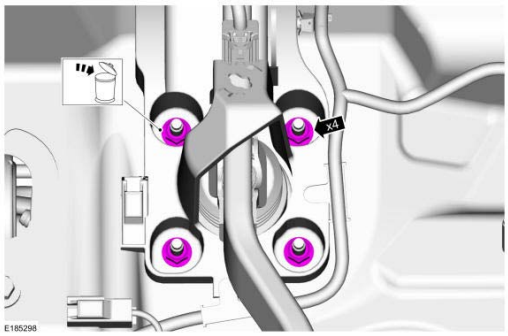
NOTE: Do not service the brake pedal or brake booster without first removing the stoplamp switch. This switch must be removed with the brake pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

15.

Remove the stop lamp switch. Refer to: Stoplamp Switch .

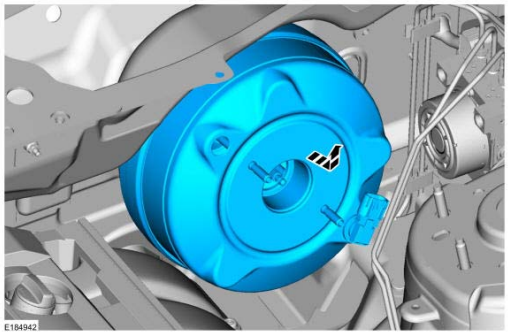
> *NOTE: The booster push rod clevis-locking pin is a one-time use only part. Any time the booster push rod clevis-locking pin is removed, a new booster push rod clevis-locking pin should be used.*

16.
Remove and discard the booster push rod clevis-locking pin and position aside the booster push rod.



17.

Remove and discard the 4 nuts.



Torque

: 17 lb.ft (22.5 Nm)

18.

Remove the brake booster.

REMOVAL AND INSTALLATION > BRAKE BOOSTER - 2.3L ECOBOOST (201KW 273PS) > INSTALLATION

NOTE: Do not press, pull or otherwise move the brake pedal while installing the stoplamp switch. The switch must be installed with the booster push rod attached to the brake pedal and with the brake pedal in the at-rest position. Installing the switch with the brake pedal in any other position will result in incorrect adjustment and may damage the switch.

1.
To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

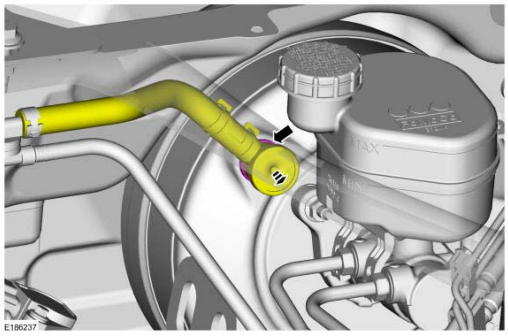
3.

If equipped with a manual transmission, bleed the clutch. Refer to: Clutch System Bleeding .

REMOVAL AND INSTALLATION > BRAKE BOOSTER - 3.7L DURATEC (227KW 301PS) > REMOVAL

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

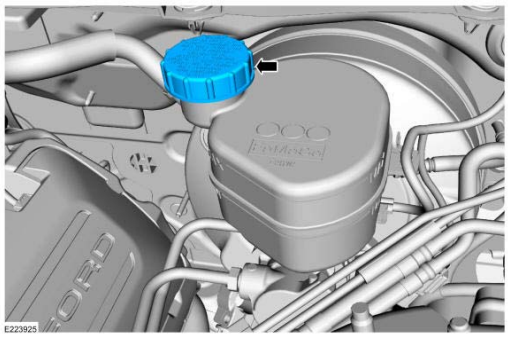


All vehicles

1.

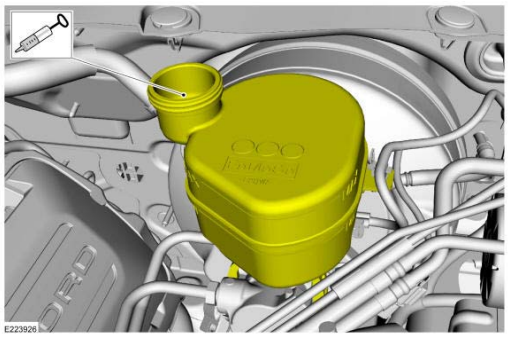
Remove the cowl panel grill. Refer to: Cowl Panel Grille .

2.



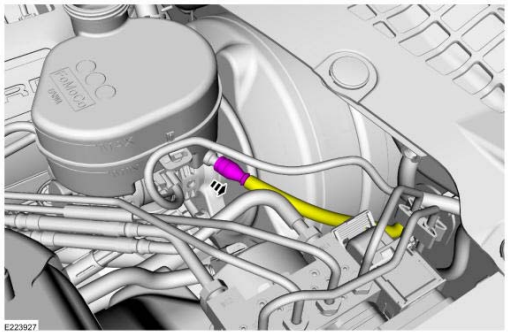
Detach the vacuum check valve from the booster and position aside.

Vehicles with manual transmission



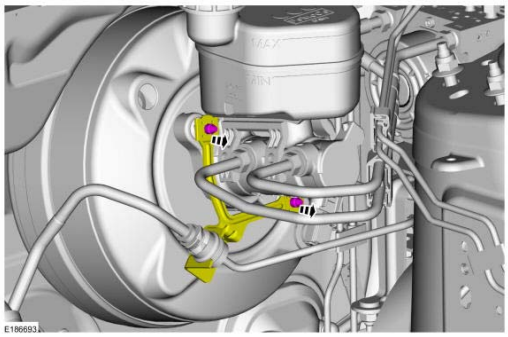
3.

Remove the brake fluid reservoir cap.



4.

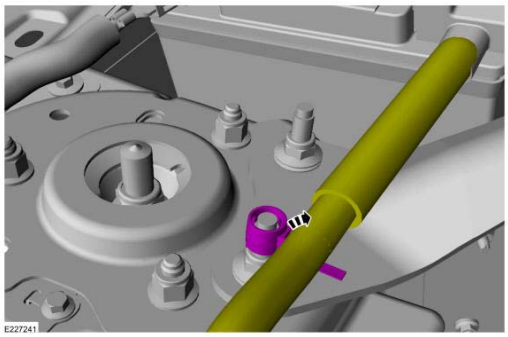
Using a suitable suction device, syphon the brake fluid from the brake fluid reservoir.



5.

Disconnect the clutch master cylinder tube.

6.

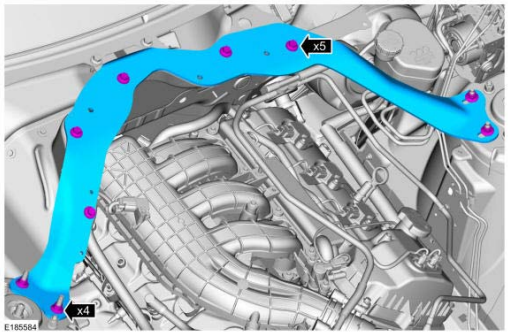


Detach the clutch master cylinder tube bracket from the master cylinder studs.

All vehicles

7.

Detach the battery cable retainer.



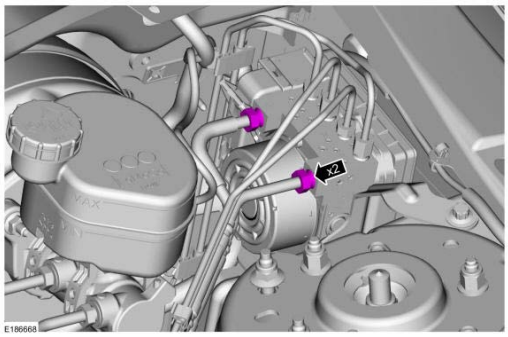
8.

Remove the 5 bolts, 4 nuts and the cowl extension.

Torque:

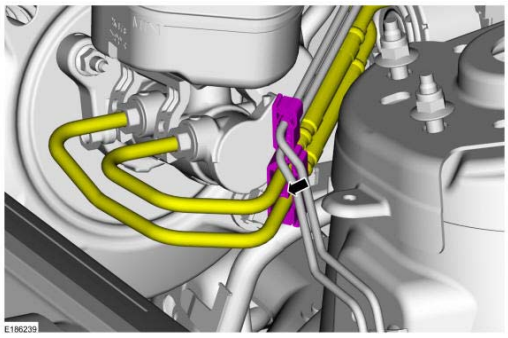
Bolts: 26 lb.ft (35 Nm)

Nuts: 41 lb.ft (55 Nm)



9.

Disconnect the 2 brake tubes at the HCU.

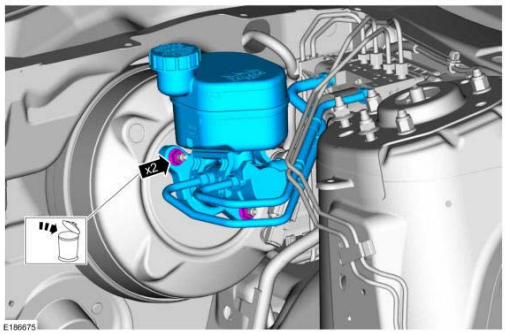


Torque

: 20 lb.ft (27.5 Nm)

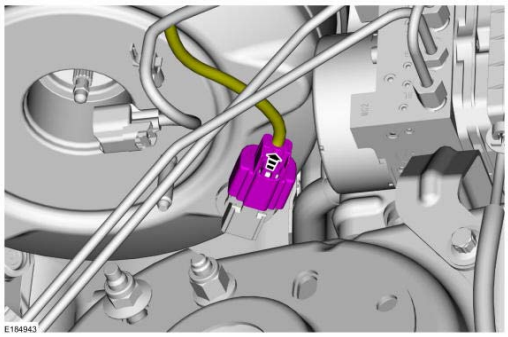
10.

Unclip the brake tubes.



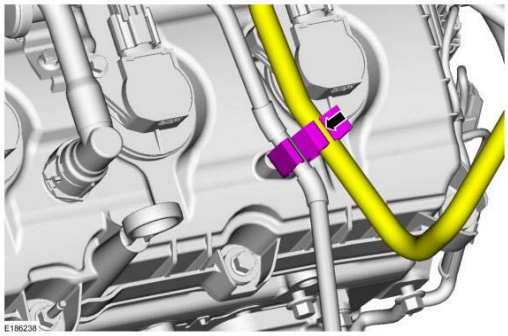
11.

Remove and discard the 2 master cylinder nuts. Remove the master cylinder and brake tubes.



Torque

: 17 lb.ft (23 Nm)

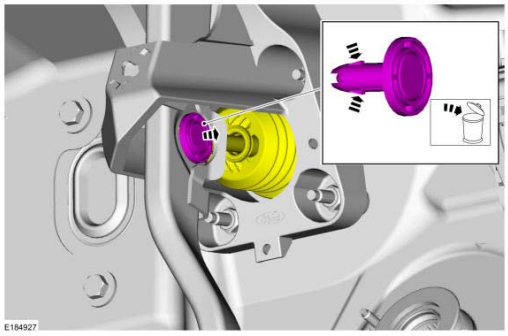


12.

Disconnect the vacuum sensor electrical connector.

13.

Detach and position aside the fuel pressure line from valve cover clip.



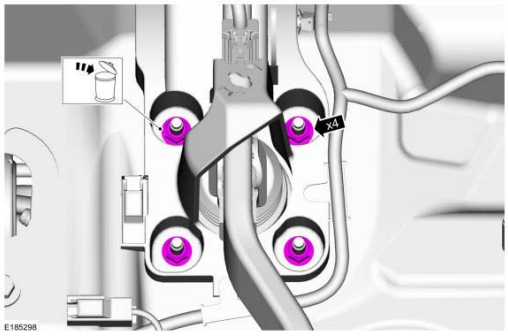
NOTE: Do not service the brake pedal or brake booster without first removing the stoplamp switch. This switch must be removed with the brake pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

14.
Remove the stop lamp switch. Refer to: Stoplamp Switch .

All vehicles

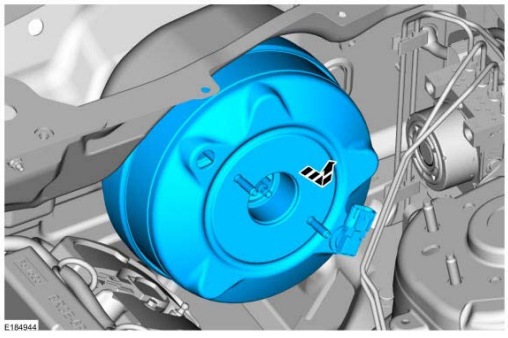
NOTE: The booster push rod clevis-locking pin is a one-time use only part. Any time the booster push rod clevis-locking pin is removed, a new booster push rod clevis-locking pin should be used.

15.
Remove and discard the booster push rod clevis-locking pin and position aside the booster push rod.



16.

Remove and discard the 4 nuts.



Torque

: 17 lb.ft (22.5 Nm)

17.

Remove the brake booster.

REMOVAL AND INSTALLATION > BRAKE BOOSTER - 3.7L DURATEC (227KW 301PS) > INSTALLATION

NOTE: Do not press, pull or otherwise move the brake pedal while installing the stoplamp switch. The switch must be installed with the booster push rod attached to the brake pedal and with the brake pedal in the at-rest position. Installing the switch with the brake pedal in any other position will result in incorrect adjustment and may damage the switch.

1.
To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

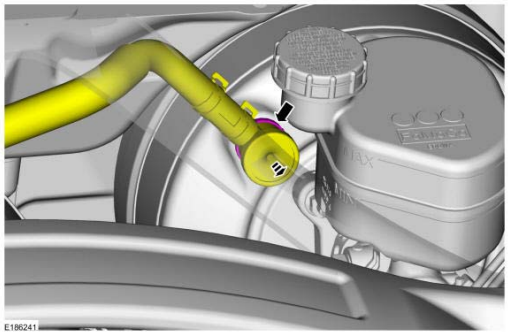
REMOVAL AND INSTALLATION > BRAKE BOOSTER - 5.0L 32V TI-VCT > REMOVAL

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

All vehicles

1.

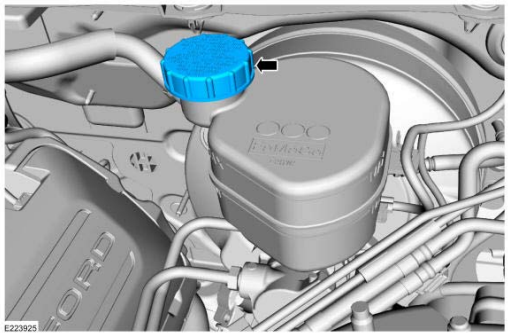


Remove the cowl panel grill. Refer to: Cowl Panel Grille .

2.

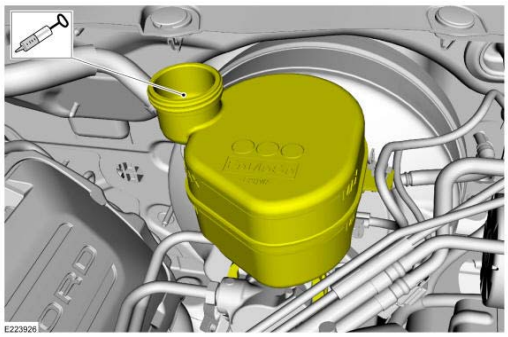
Disconnect the battery cables. Refer to: Battery Disconnect and Connect .

3.



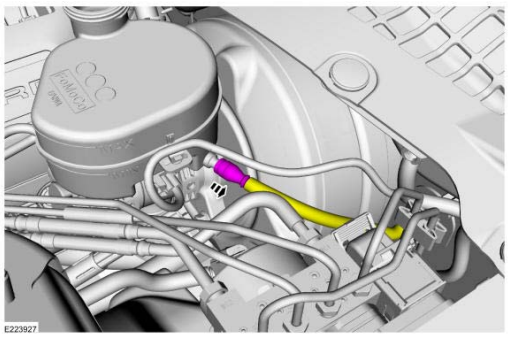
Detach the vacuum check valve from the booster and position aside.

Vehicles equipped with manual transmission



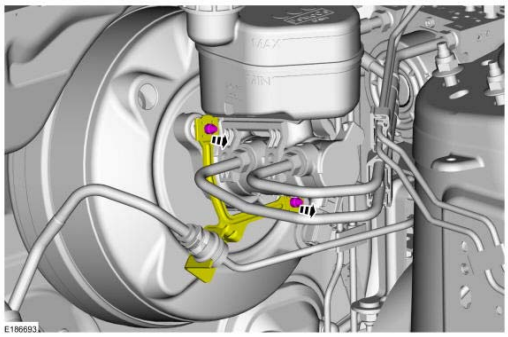
4.

Remove the brake fluid reservoir cap.



5.

Using a suitable suction device, syphon the brake fluid from the brake fluid reservoir.



6.

Disconnect the clutch master cylinder tube.

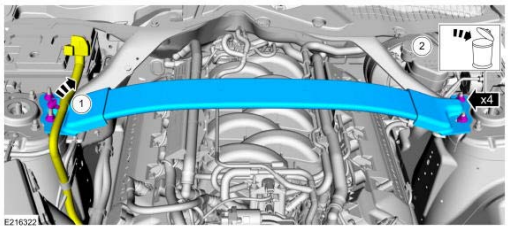
7.

Detach the clutch master cylinder tube bracket from the master cylinder studs.

All vehicles

8.

1.



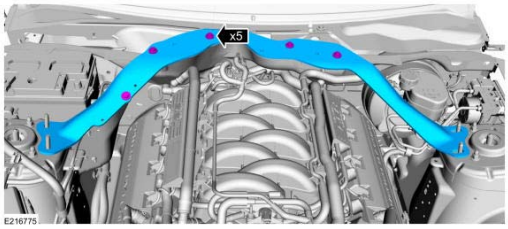
Detach the battery cable retainer.

2.

Remove the nuts and the cross brace. Discard the nuts.

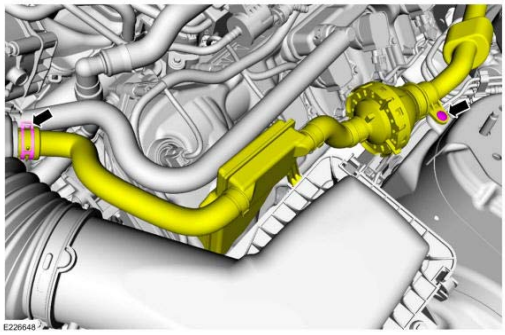
Torque

: 41 lb.ft (55 Nm)



9.

Remove the bolts and the cowl extension.

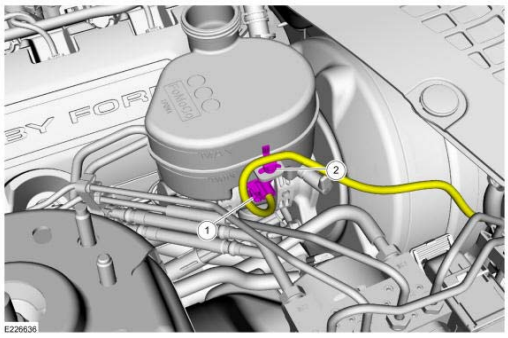


Torque

: 26 lb.ft (35 Nm)

10.

Release the clamp, remove the pin type retainer and position the noise generator aside.



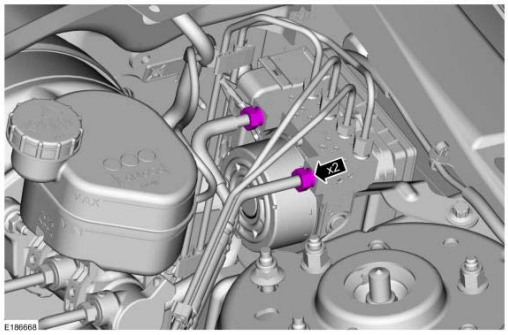
11.

1.

Disconnect the brake fluid level sensor electrical connector.

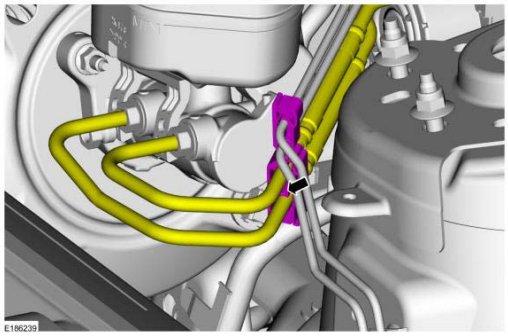
2.

Detach the wiring harness retainer from the brake fluid reservoir.



12.

Disconnect the 2 brake tubes at the HCU.

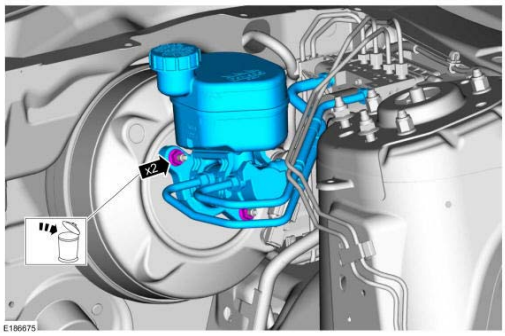


Torque

: 20 lb.ft (27.5 Nm)

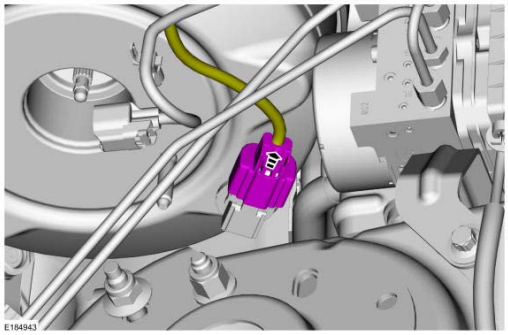
13.

Unclip the brake tubes.



14.

Remove and discard the 2 master cylinder nuts. Remove the master cylinder and brake tubes.

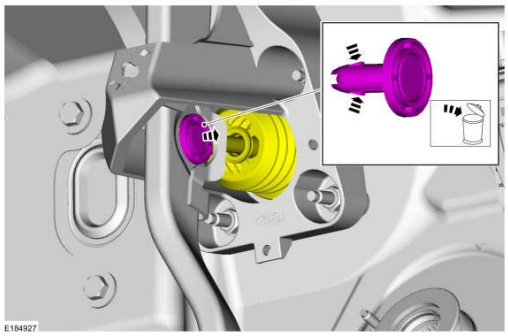


Torque

: 17 lb.ft (23 Nm)

15.

Disconnect the vacuum sensor electrical connector.

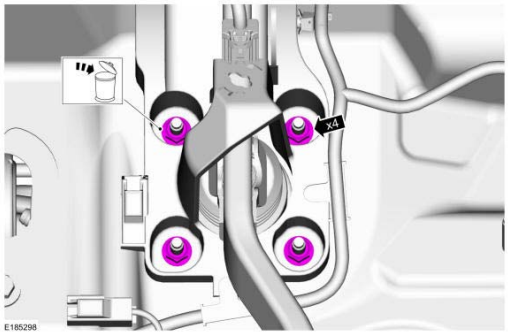


NOTE: Do not service the brake pedal or brake booster without first removing the stoplamp switch. This switch must be removed with the brake pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

16.
Remove the stop lamp switch. Refer to: Stoplamp Switch .

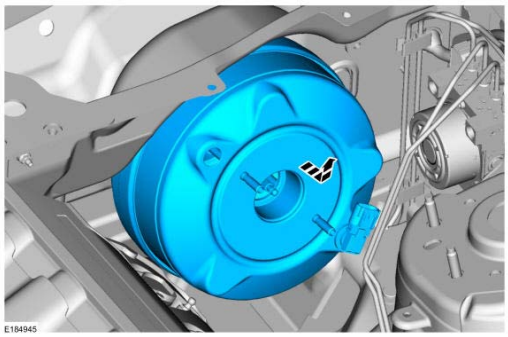
NOTE: The booster push rod clevis-locking pin is a one-time use only part. Any time the booster push rod clevis-locking pin is removed, a new booster push rod clevis-locking pin should be used.

17.
Remove and discard the booster push rod clevis-locking pin and position aside the booster push rod.



18.

Remove and discard the 4 nuts.



Torque

: 17 lb.ft (22.5 Nm)

19.

Remove the brake booster.

REMOVAL AND INSTALLATION > BRAKE BOOSTER - 5.0L 32V TI-VCT > INSTALLATION

NOTE: Do not press, pull or otherwise move the brake pedal while installing the stoplamp switch. The switch must be installed with the booster push rod attached to the brake pedal and with the brake pedal in the at-rest position. Installing the switch with the brake pedal in any other position will result in incorrect adjustment and may damage the switch.

1.
To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

3.

If equipped with a manual transmission, bleed the clutch. Refer to: Clutch System Bleeding .

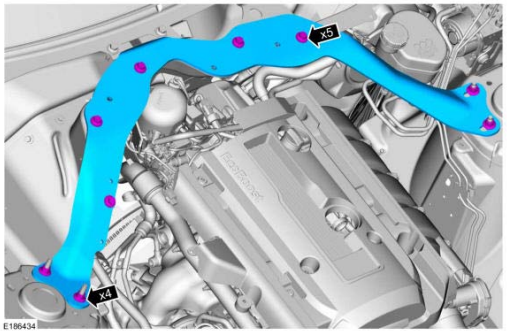
REMOVAL AND INSTALLATION > BRAKE VACUUM PUMP - 2.3L ECOBOOST (201KW

273PS) > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the cowl vent panel. Refer to: Cowl Panel Grille .



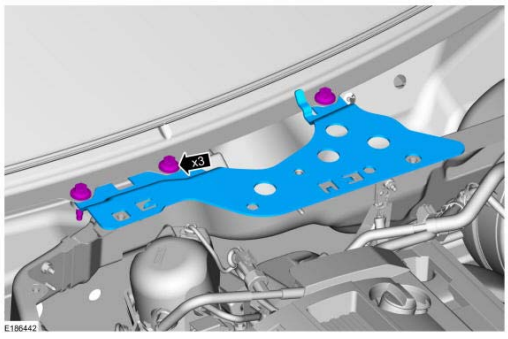
2.

Remove the 5 bolts, 4 nuts and the cowl extension.

Torque:

Bolts: 26 lb.ft (35 Nm)

Nuts: 41 lb.ft (55 Nm)

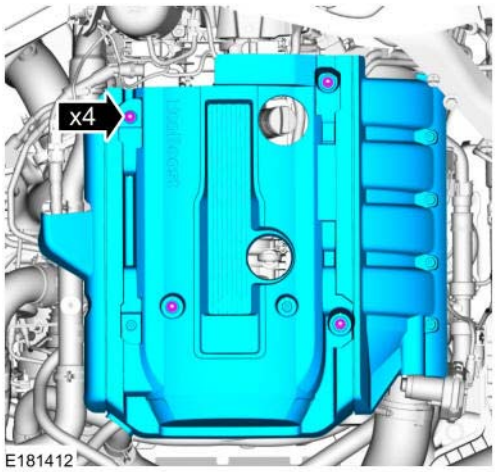


3.

Remove the 3 bolts and bracket.

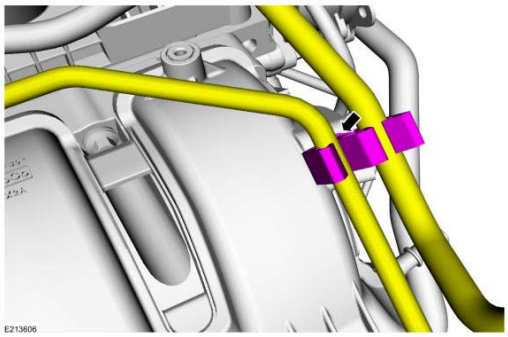
Torque

: 26 lb.ft (35 Nm)



4.

Remove the 4 nuts and the engine appearance cover.



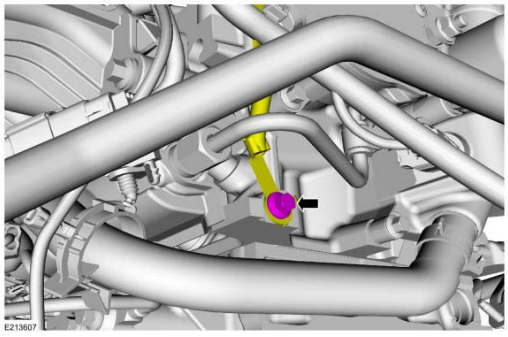
Torque

: 80 lb.in (9 Nm)

5.

Detach the fuel line bracket from the intake manifold.

6.



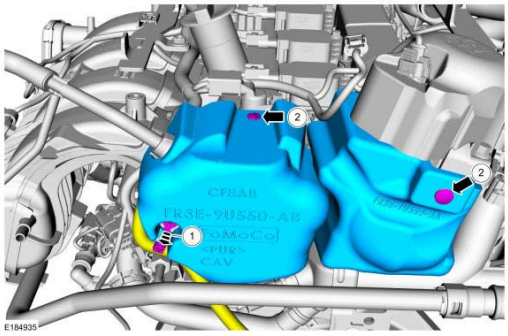
With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

7.

Remove the bolt and detach the ground wire from the cylinder head.

Torque

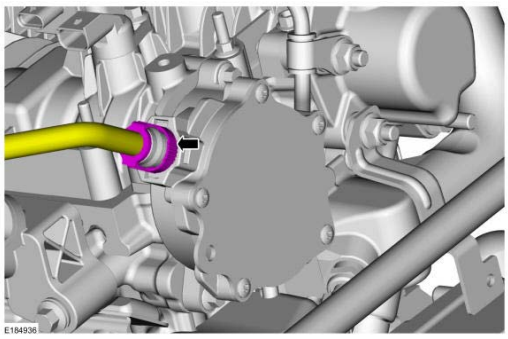
: 18 lb.ft (25 Nm)



8.

1.

Detach the wiring harness retainer.

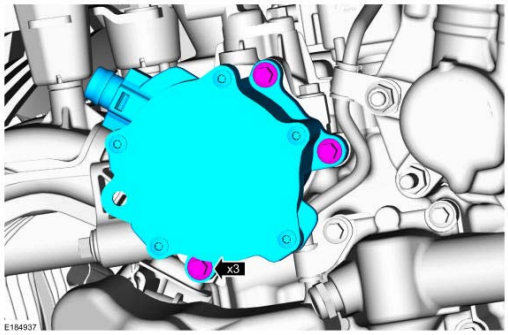


2.

Remove the 2 retainers, the brake vacuum pump cover and the high pressure fuel pump cover.

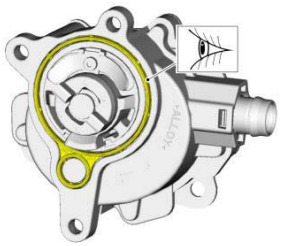
9.

Release the coupling and disconnect the vacuum tube.



10.

Remove the bolts and vacuum pump.



Torque

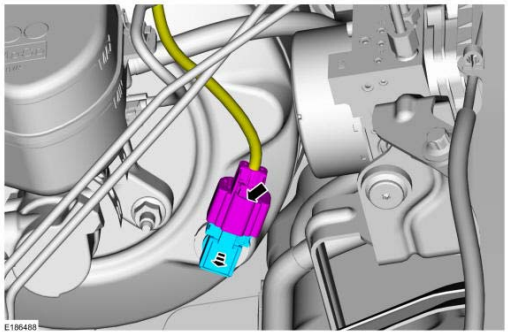
: 89 lb.in (10 Nm)

NOTE: Make sure that the mating faces are clean and free of foreign material.

11.
Inspect the brake vacuum pump housing gasket and replace as necessary.

REMOVAL AND INSTALLATION > BRAKE VACUUM PUMP - 2.3L ECOBOOST (201KW 273PS) > INSTALLATION

NOTE: Align the camshaft and vacuum pump couplings correctly or damage to the camshaft or vacuum pump may occur.



1.
To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > BRAKE VACUUM SENSOR > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Disconnect the brake booster vacuum sensor electrical connector and remove the brake booster vacuum sensor.

REMOVAL AND INSTALLATION > BRAKE VACUUM SENSOR > INSTALLATION

NOTE: Please note the correct installation position. It is critical that the sensor be installed in the exact position that it was removed.

1.

To install, reverse the removal procedure.

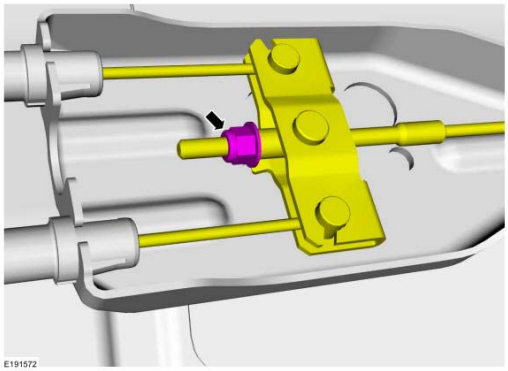
Service Manual: REAR DISC BRAKE

DIAGNOSIS AND TESTING > REAR DISC BRAKE

REFER to: Brake System .

REMOVAL AND INSTALLATION > BRAKE CALIPER > REMOVAL

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.



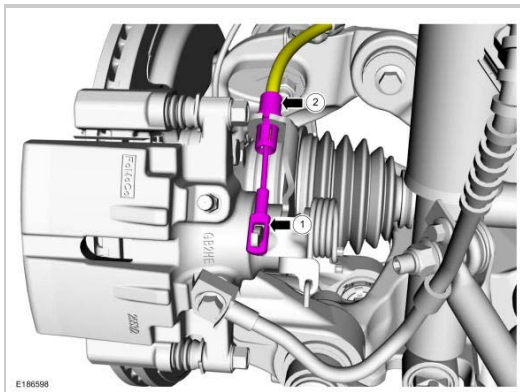
NOTE: Removal steps in this procedure may contain installation details.

1.

Remove wheel and tire. Refer to: Wheel and Tire .

2.

Loosen the parking brake cable adjustment nut.



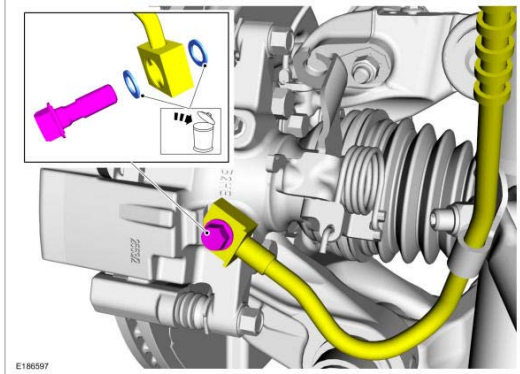
3.

1.

Disconnect the parking brake cable from the lever.

2.

Detach the parking brake cable from the bracket and position aside the parking brake cable.



NOTE: Make sure that all openings are sealed.

4.
Remove the brake caliper flow bolt and disconnect the brake hose from the brake caliper. Discard the washers.

Torque

: 35 lb.ft (47.5 Nm)

5.

Remove the 2 bolts and the brake caliper.

Torque

: 24 lb.ft (32 Nm)

REMOVAL AND INSTALLATION > BRAKE CALIPER > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

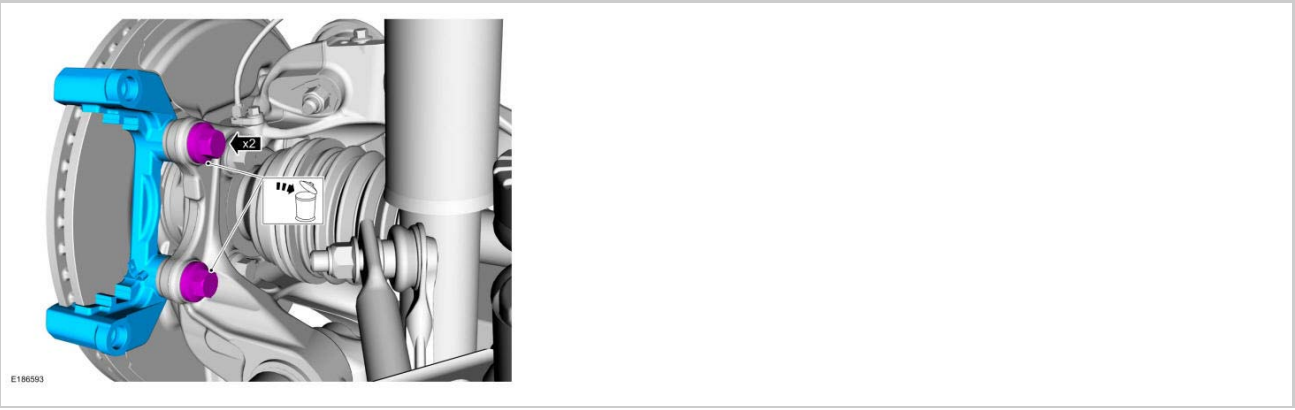
3.

Adjust park brake system. Refer to: Parking Brake Cable Adjustment .

REMOVAL AND INSTALLATION > BRAKE CALIPER ANCHOR PLATE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the brake pads. Refer to: Brake Pads .

NOTE: Do not allow the brake caliper and anchor plate assembly to hang from the brake hose or damage to the hose may occur.

2.
Remove the 2 bolts and the brake caliper anchor plate. Discard the bolts.

Torque

: 129 lb.ft (175 Nm)

REMOVAL AND INSTALLATION > BRAKE CALIPER ANCHOR PLATE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > BRAKE DISC

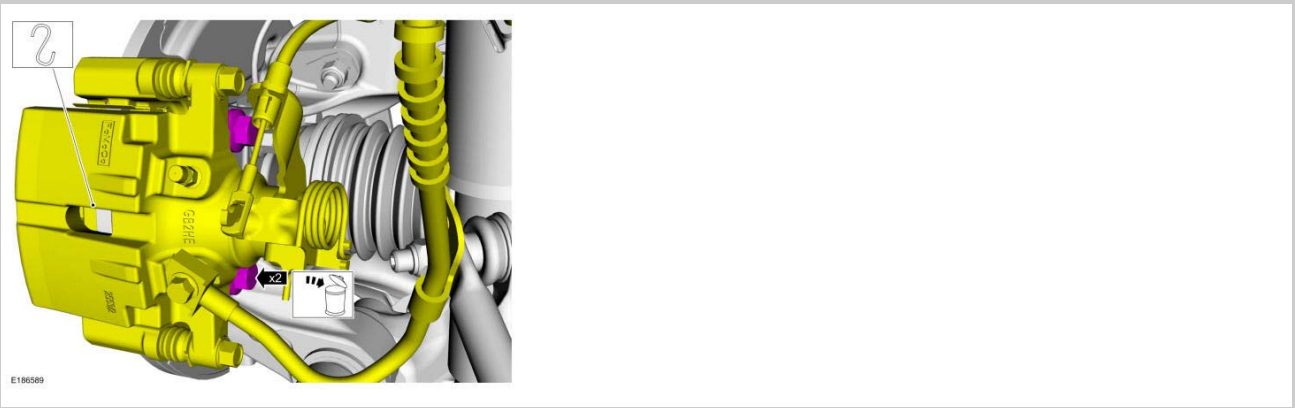
Materials

Name	Specification
Metal Brake Parts Cleaner (U.S.)PM-4-A, PM-4-B (U.S.)	-

REMOVAL AND INSTALLATION > BRAKE DISC > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove wheel and tire. Refer to: Wheel and Tire .

NOTE: Do not allow the brake caliper and anchor plate assembly to hang from the brake hose or damage to the hose may occur.

2.
Remove the 2 bolts and position the brake caliper and anchor plate assembly aside. Discard the bolts.

Torque

: 129 lb.ft (175 Nm)

3.

Remove the brake disc.

REMOVAL AND INSTALLATION > BRAKE DISC > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Clean the brake disc mating surfaces using a wire brush and the specified material.

Material

: Metal Brake Parts Cleaner (U.S.) / PM-4-A, PM-4-B (U.S.)

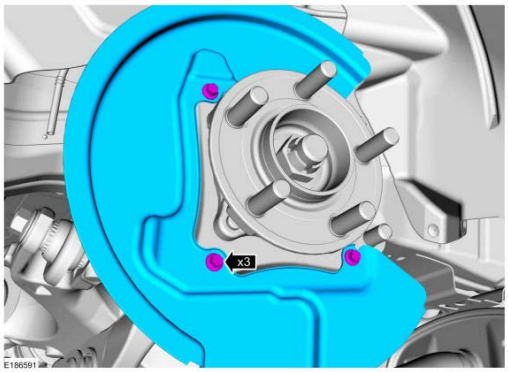
3.

Apply the brake pedal several times to verify correct brake system operation.

REMOVAL AND INSTALLATION > BRAKE DISC SHIELD > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.



Remove the brake disc. Refer to: Brake Disc .

2.

Remove the 3 bolts and the brake disc shield.

Torque

: 106 lb.in (12 Nm)

REMOVAL AND INSTALLATION > BRAKE DISC SHIELD > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > BRAKE PADS

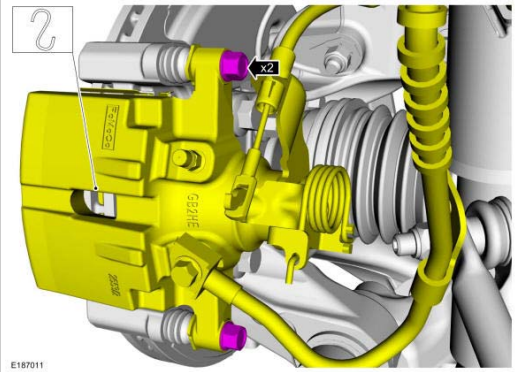
Special Tool(s) / General Equipment

Brake Caliper Piston Retractor

REMOVAL AND INSTALLATION > BRAKE PADS > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

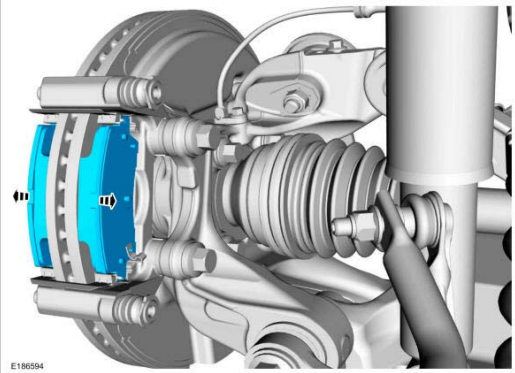
1.



Remove wheel and tire. Refer to: Wheel and Tire .

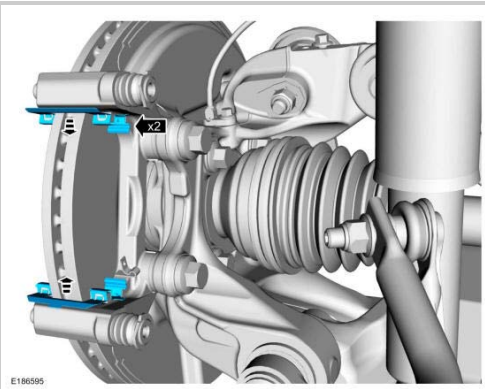
> *NOTE: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose may occur.*

2.
Remove the 2 bolts and position the brake caliper aside.



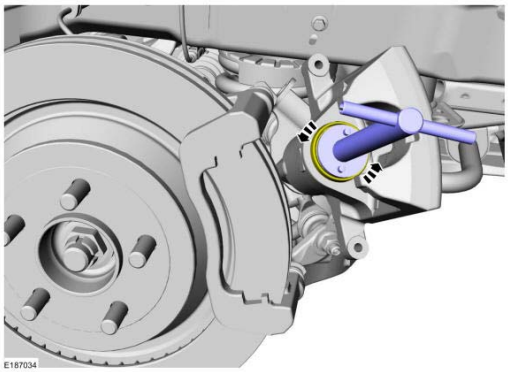
Torque

: 24 lb.ft (32 Nm)



3.

Remove the brake pads.



4.

Remove the clips.

NOTE: Make sure the notch on the piston is aligned with the pin on the inboard brake pad before installing the brake caliper. A moderate to heavy force toward the caliper piston must be applied. If sufficient force is not applied, the internal park brake mechanism clutch cone will not engage and the piston will not compress.

5.
If installing new brake pads. Retract the brake caliper pistons into the brake caliper bore. Use the General Equipment: Brake Caliper Piston Retractor

REMOVAL AND INSTALLATION > BRAKE PADS > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid. Refer to: Specifications .

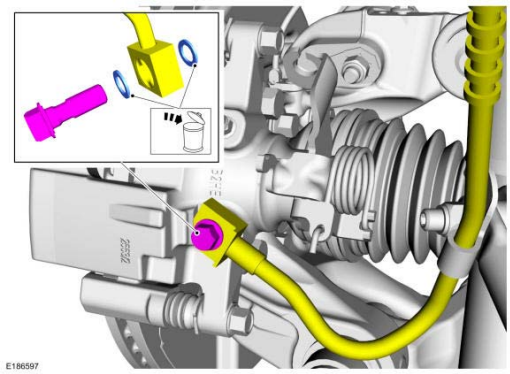
REMOVAL AND INSTALLATION > REAR BRAKE FLEXIBLE HOSE > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

1.



With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the brake caliper flow bolt and disconnect the brake hose from the brake caliper. Discard the washers.

Torque

: 35 lb.ft (47.5 Nm)

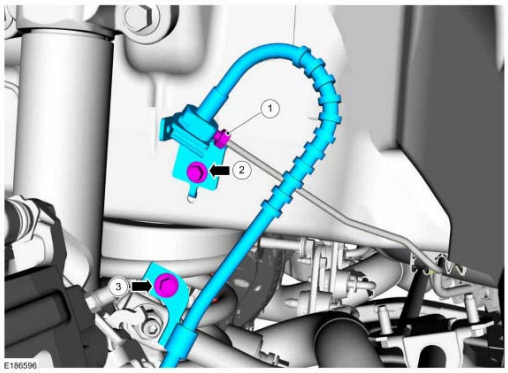
3.

1.

Disconnect the brake tube fitting.

Torque

: 155 lb.in (17.5 Nm)



2.

Remove the 2 brake hose bracket bolts and the brake hose.

Torque:

2.: 18 lb.ft (25 Nm)

3.: 22 lb.ft (30 Nm)

REMOVAL AND INSTALLATION > REAR BRAKE FLEXIBLE HOSE > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

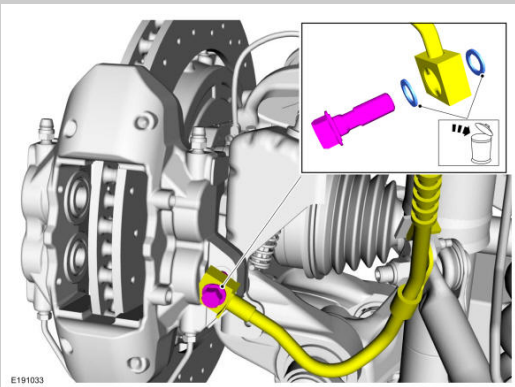
REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

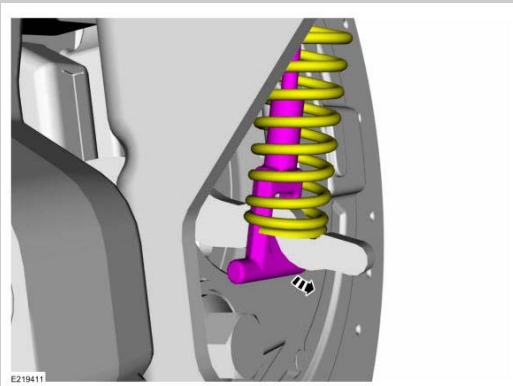
1.



Remove the brake pads. Refer to: Brake Pads - Vehicles With: SVT Performance Package .

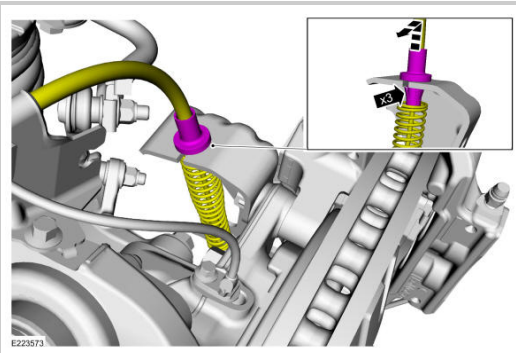
2.

Remove the brake caliper flow bolt and disconnect the brake hose from the brake caliper. Discard the washers.



Torque

: 30 lb.ft (40 Nm)



3.

Disconnect parking brake cable from parking brake shoe actuation lever.

4.

Press inward on the tabs and detach the parking brake cable from the bracket.

5.

1.

Remove and discard the bolts.

Torque

: 85 lb.ft (115 Nm)

2.

Remove the bracket.

3.

Remove the brake caliper.

REMOVAL AND INSTALLATION > BRAKE CALIPER - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

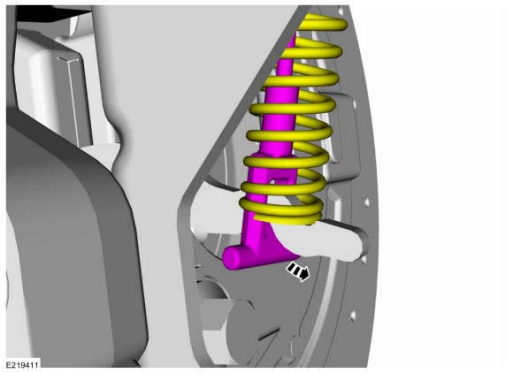
To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

REMOVAL AND INSTALLATION > BRAKE DISC - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

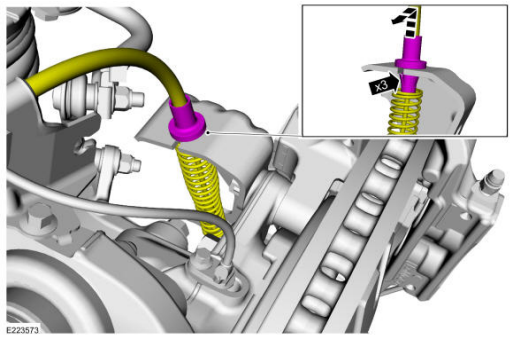
NOTE: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose may occur.



NOTE: Removal steps in this procedure may contain installation details.

1.

Remove wheel and tire. Refer to: Wheel and Tire .



2.

Disconnect parking brake cable from parking brake shoe actuation lever

3.

Press inward on the tabs and detach the parking brake cable from the bracket.

4.

1.

Remove and discard the bolts.

Torque

: 81 lb.ft (110 Nm)

2.

Remove the bracket.

3.

Position the brake caliper aside.

5.

Remove the brake disc.

REMOVAL AND INSTALLATION > BRAKE DISC - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Apply the brake pedal several times to verify correct brake system operation.

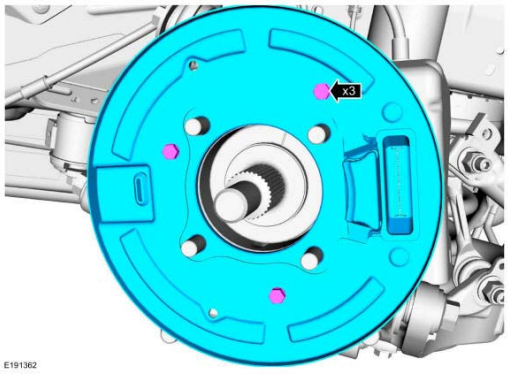
REMOVAL AND INSTALLATION > BRAKE DISC SHIELD - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the parking brake shoes. Refer to: PARKING BRAKE SHOE ADJUSTMENT - VEHICLES WITH: SVT PERFORMANCE PACKAGE .

2.



Remove the wheel bearing and wheel hub. Refer to: Wheel Bearing and Wheel Hub .

3.

Remove the bolts and the brake disc shield.

Torque

: 89 lb.in (10 Nm)

REMOVAL AND INSTALLATION > BRAKE DISC SHIELD - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: SVT PERFORMANCE PACKAGE

Special Tool(s) / General Equipment

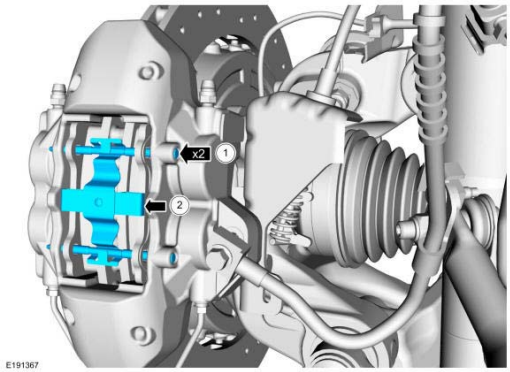
Brake Caliper Piston Retractor

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Removal steps in this procedure may contain installation details.

1.

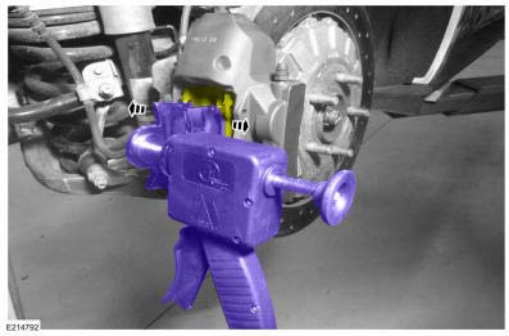
Remove wheel and tire. Refer to: Wheel and Tire .



2.

1.

Remove the brake pad pins.



2.

Remove brake pad spring.

3.

Compress the brake caliper pistons using a brake pad spreader tool and remove the brake pads. Use the General Equipment: Brake Caliper Piston Retractor

4.

Remove the brake pads.

REMOVAL AND INSTALLATION > BRAKE PADS - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid. Refer to: Specifications .

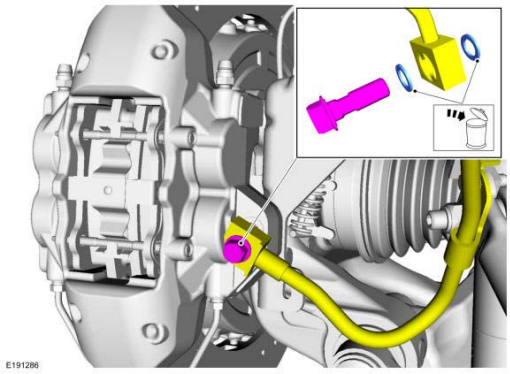
REMOVAL AND INSTALLATION > REAR BRAKE FLEXIBLE HOSE - VEHICLES WITH: SVT PERFORMANCE PACKAGE > REMOVAL

NOTE: Make sure that all openings are sealed.

NOTE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: Removal steps in this procedure may contain installation details.

1.



With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the brake caliper flow bolt and disconnect the brake hose from the brake caliper. Discard the washers.

Torque

: 30 lb.ft (40 Nm)

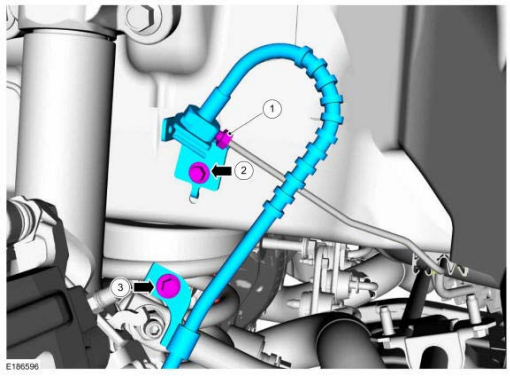
3.

1.

Disconnect the brake tube fitting.

Torque

: 155 lb.in (17.5 Nm)



2.

Remove the 2 brake hose bracket bolts and the brake hose.

Torque:

: 2.: 18 lb.ft (25 Nm)

3.: 22 lb.ft (30 Nm)

REMOVAL AND INSTALLATION > REAR BRAKE FLEXIBLE HOSE - VEHICLES WITH: SVT PERFORMANCE PACKAGE > INSTALLATION

1.

To install, reverse the removal procedure.

2.

Bleed the brake system. Refer to: Brake System Pressure Bleeding .

DIAGNOSIS AND TESTING > DRIVESHAFT > INSPECTION AND VERIFICATION

1.

Verify the customer concern.

2.

Visually inspect for obvious signs of mechanical or electrical damage.

3.

If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step

4.

If the cause is not visually evident, verify the symptom and refer to the Symptom Chart(s) .

DIAGNOSIS AND TESTING > DRIVESHAFT > SYMPTOM CHART(S)

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: NVH

Symptom Chart

Condition	Possible Sources	Actions
Driveline clunk - loud clunk when shifting from REVERSE to DRIVE	Damaged or worn driveshaft CV joint and/or u-joint	INSPECT the driveshaft CV joint and/or u-joint for wear or damage. INSTALL a new driveshaft as necessary. REFER to: Driveshaft .
Driveline clunk - occurs as the vehicle starts to move forward following a stop	Worn driveshaft CV joint and/or u-joint with excessive play	INSPECT the driveshaft CV joint and/or u-joint for a worn condition. INSTALL a new driveshaft if necessary. REFER to: Driveshaft .
Buzz - buzzing noise is the same at cruise or coast/deceleration	Incorrect driveline angles	CHECK for correct driveline angles. REFER to: Driveshaft Angle Measurement .
Rumble or Boom - noise occurs at coast/ deceleration, usually driveshaft speed-related and noticeable over a wide range of speeds	Driveshaft out of balance	CHECK the driveshaft for damage, missing weights or undercoating. INSTALL a new driveshaft as necessary. REFER to: Driveshaft .
Grunting - normally associated with a shudder experienced during acceleration from a complete stop	Driveshaft CV joint and/or u-joint binding	INSTALL a new driveshaft as necessary. REFER to: Driveshaft .
Driveline shudder - occurs during acceleration from a slow speed or stop	Driveline angles out of specification	CHECK for correct driveline angles. REFER to: Driveshaft Angle Measurement .
	Binding or damaged driveshaft CV joint and/or u-joint	INSPECT the driveshaft CV joint and/or u-joint and coupling shaft for wear or damage. INSTALL a new driveshaft as necessary. REFER to: Driveshaft .
Driveline vibration - occurs at cruising speeds	Worn or damaged driveshaft center bearing support	CHECK the insulator for damage or wear. ROTATE the driveshaft and CHECK for rough operation. INSTALL a new driveshaft as necessary. REFER to: Driveshaft .
	Loose axle pinion flange bolts	INSPECT the axle pinion flange. TIGHTEN the pinion flange bolts to specification. REFER to: Driveshaft .
	Excessive axle pinion flange runout	CARRY OUT a runout check. REPAIR as necessary. REFER to: SPECIFICATIONS .
	Driveshaft is out of balance	CHECK the driveshaft for damage, missing balance weights or undercoating. CHECK the

		driveshaft balance. REFER to: Driveshaft Runout and Balancing .
	Binding or damaged driveshaft CV joint and/or u-joint	INSPECT the driveshaft CV joint and/or u-joint for wear or damage. INSTALL a new driveshaft as necessary. REFER to: Driveshaft .
	Excessive driveshaft runout	CARRY OUT a runout check. REFER to: Driveshaft Runout and Balancing .
	Driveline angles out of specification	CHECK for correct driveline angles. REFER to: Driveshaft Angle Measurement . REPAIR as necessary.

GENERAL PROCEDURES > DRIVESHAFT ANGLE MEASUREMENT

Check

NOTE: This procedure does not apply to CV joints, flex couplers or double cardan joints that are used in some driveshafts. This check is for single-cross and roller-style joints found in the driveshafts.

NOTE: Prior to checking driveline angularity, inspect the U-joints for correct operation.

NOTE: An incorrect driveline angle can cause a vibration or shudder.

NOTE: Driveline angularity is the angular relationship between the engine crankshaft, the driveshaft and the rear axle pinion. Factors determining driveline angularity include ride height, rear spring and engine mounts.

1.

Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Carry out the following preliminary setup steps:

1.

Inspect the U-joints for correct operation.

2.

Park the vehicle on a level surface such as a drive-on hoist, or back onto a front end

alignment rack.

3.

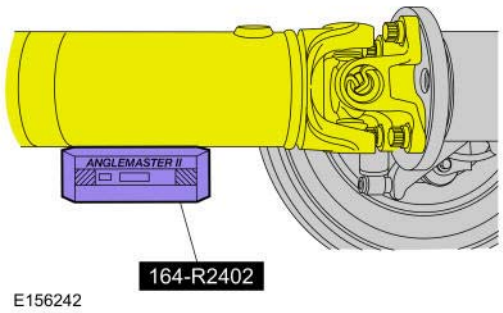
Verify the curb position ride height is within specifications with the vehicle unloaded and all of the tires are inflated to their normal operating pressures.

4.

Calibrate the Anglemaster II Driveline Inclinometer/Protractor by placing it on a clean, flat level section of the frame rail and press the ALT-ZERO button.

Vehicles with flat-flanged, split-pin or slip-flanged U-joints

NOTE: If equipped, remove the snap ring to allow access to the base of the U-joint cup. Make sure the Anglemaster II Driveline Inclinometer/Protractor is seated against the U-joint cup.

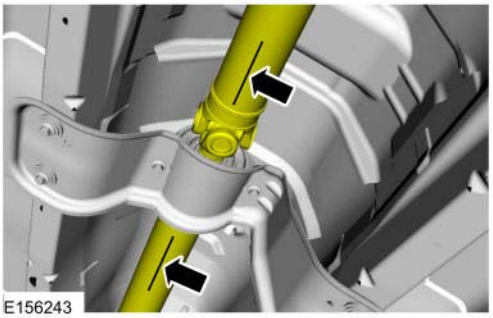


NOTE: Rotate the driveshaft until the flange U-joint cup is parallel with the floor. This will simplify taking measurements.

2.
Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Check and record the flange angle as angle A.

3.

Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Measure the slope of the connecting component. Record the measurement of the component angle as angle B.



Multiple piece driveshafts

NOTE: Repeat this step for each center support bearing on the driveshaft.

NOTE: It is not necessary to remove the U-joint snap ring, if equipped, for these measurements.

4.
Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Measure the slope of the components in front and behind the center support bearing U-joint in the area indicated. Record the front component as angle A and the rear component as angle B.

All vehicles

NOTE: When 2 connected components slope in the same direction, subtract the smallest number from the larger number to find the U-joint operating angle. When 2 connected components slope in the opposite direction, add the measurements to find the U-joint operating angle.

5.
Calculate the difference in the slope of the components to determine the U-joint operating angle.

6.

NOTE: The U-joint operating angle is the angle formed by 2 yokes

connected by a cross and bearing kit. Ideally, the operating angles on each connection of the driveshaft must:

1.

be equal or within one degree of each other.

2.

have a 3 degree maximum operating angle.

3.

have at least one-half of one degree continuous operating angle.

7.

If the angle is not within specifications, repair or adjust to obtain the correct angle. Inspect the engine mounts, transmission mounts, center support bearing mounting, rear suspension, rear axle, rear axle mounting or the frame for wear or damage.

GENERAL PROCEDURES > DRIVESHAFT RUNOUT AND BALANCING

Special Tool(s) / General Equipment

 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge

Inspection

NOTE: Driveline vibration exhibits a higher frequency and lower amplitude then high-speed shake. Driveline vibration is directly related to the speed of the vehicle and is noticed at various speeds. Driveline vibration can be perceived as a tremor in the floorpan or heard as a rumble, hum or boom.

NOTE: Refer to SPECIFICATIONS for runout specifications.

NOTE: Do not make any adjustments before carrying out a road test. Do not change the tire pressure or the vehicle load.

1.

Carry out a visual inspection of the vehicle. Operate the vehicle and verify the condition by reproducing it during the road test.

The concern should be directly related to vehicle road speed. not affected by acceleration or deceleration or could be reduced by coasting in NEUTRAL.

2.

Refer to: Jacking and Lifting - Overview .

NOTE: The driveshaft should be kept at an angle equal to or close to the curb-weighted position. Use a twin-post hoist or a frame hoist with jackstands.

3.

Inspect the driveshaft for damage, undercoating or incorrectly seated U-joints. Rotate the driveshaft slowly by hand and feel for binding or end play in the U-joint trunnions. Remove the driveshaft. Inspect the slip yoke splines for any galling, dirt, rust or incorrect lubrication. Clean the driveshaft or install new U-joints as necessary. Install a new driveshaft if damaged. After any corrections or new components are installed, recheck for the vibration at the road test speed.

If the vibration persists after inspection, measure the driveshaft runout.

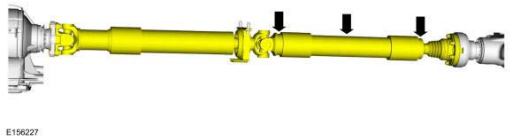
Check

1.

Measure and check for the specified maximum value. Install the Dial Indicator Gauge with Holding Fixture. Rotate the driveshaft by turning the axle and measure the runout at the front, center and rear of the driveshaft. Multiple piece driveshaft measure each section at the front, center and rear.

1.

If the runout exceeds 1 mm (0.040 in) at the front or center, install a new driveshaft.



Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

2.

If the front and center is within 1 mm (0.040 in), but the rear runout is not, index-mark the rear runout high point and proceed to step 2

3.

If the runout is within 1 mm (0.040 in) at all points, recheck for vibration at road test speed. If the vibration persists, balance the driveshaft. Refer to appropriate Driveshaft Balancing in this procedure.

NOTE: Circular pinion flanges can be turned in 90 degree or one-fourth increments. Half-round pinion flanges are limited to 2 positions. CV joint pinion flanges that have 6 bolts, can be turned in 60 degree or one-sixth increments.

2.

Index-mark the driveshaft to the pinion flange. Disconnect the driveshaft and rotate it 180 degrees. Reconnect the driveshaft. Recheck the runout at the rear of the driveshaft.

1.

If the runout is still over specification, mark the high point and proceed to Step 3.

2.

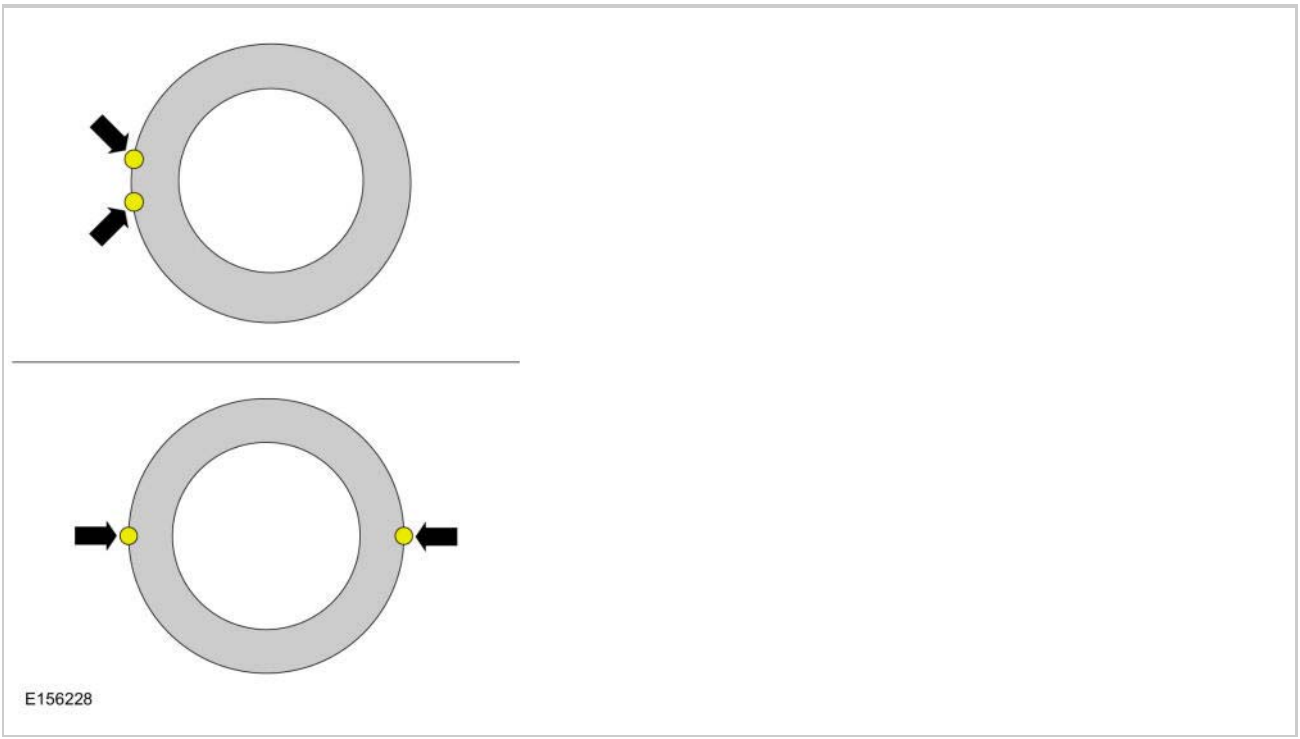
If the runout is within specification, check for the vibration at the road test speed. If the vibration is still present, balance the driveshaft. Refer to appropriate Driveshaft Balancing in this procedure.

3.

Excessive driveshaft runout can originate in the driveshaft itself or from the pinion flange. To find the source, compare the 2 high points previously determined.

1.

If the index marks are close together, within 25 mm (1 in), the driveshaft is eccentric. Install a new driveshaft.



2.

If the marks are on opposite sides of the driveshaft, 180 degrees apart, the slip yoke or pinion flange is responsible. Check the pinion flange runout. If the pinion flange runout exceeds specifications, a bent pinion is indicated.

3.

If the pinion flange and pinion runouts are within specifications, road test and check for the

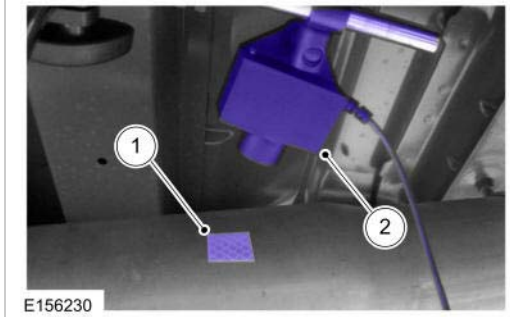
vibration at the road test speed. If the vibration persists, balance the driveshaft. Refer to appropriate Driveshaft Balancing in this procedure.

Driveshaft Balancing - Using the Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix)

4.

Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Working under the vehicle, install an accelerometer. The accelerometer can be attached and mounted near either the transmission or differential end of the driveshaft.

5.



Clean an area of the driveshaft and install the reflective tape, then install the photo-tachometer sensor. The sensor should be placed at approximately a 20-degree angle from perpendicular to the surface of the reflective tape. Make sure the sensor does not get moved during the balance procedure.

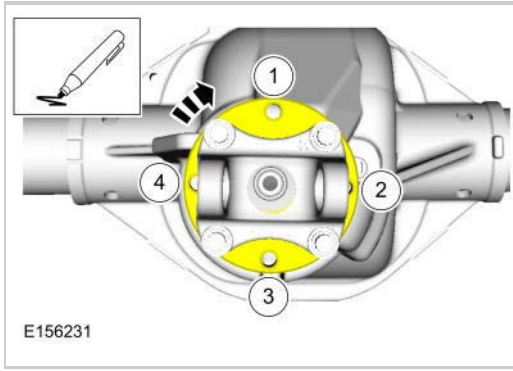
1.

Reflective tape.

2.

Photo-tachometer sensor.

6.



Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a driveshaft balance test with the driveshaft unmodified.

Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

Vehicles with tapped pinion flanges

7.

Label the tapped holes in the pinion flange numerically, starting at the top hole as 1. Mark the remaining holes 2, 3, 4, (depending on flange type, 5 and 6 may also be needed). Label in the direction of rotation.

8.

Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a second test with the 12 mm (0.47 in) test weight set screw in the No. 1 hole, previously marked on the pinion flange.

9.

Remove the test weight, then install the weight combination directed by the Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix).

Vehicles without tapped pinion flanges

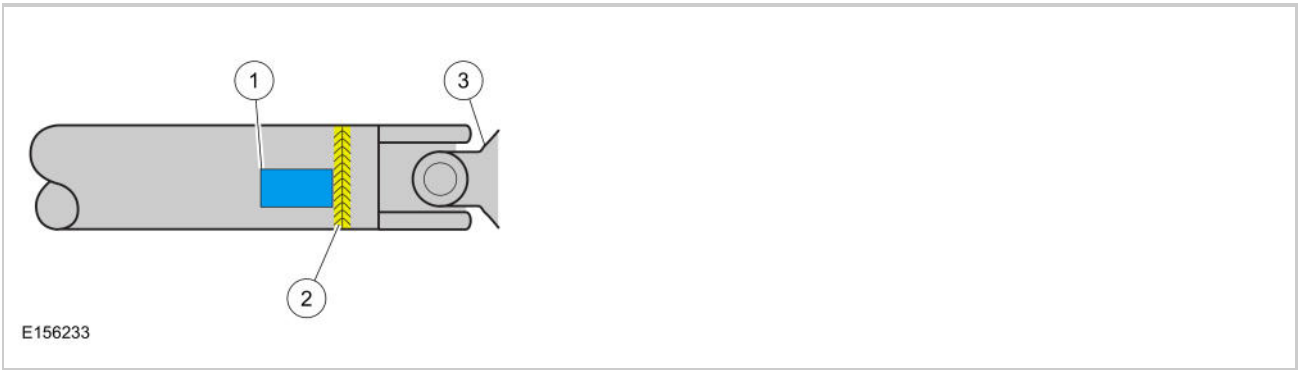
10.

Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a second test with a test weight. Using a metal band, secure the

test weight to the end of the driveshaft. The weight should be placed at the end of the driveshaft tube, as close to the tube-to-yoke weld seam as possible. Mark the location of the test weight on the driveshaft, as shown in the figure below.

1.

Test weight.



2.

Tube-to-yoke weld seam.

3.

Driveshaft pinion flange.

Select the test weight based on driveshaft size. Larger driveshafts use 10 g (0.353 oz). Smaller driveshafts use 5 g (0.176 oz).

11.

Remove the test weight, then install the recommended weight at the position directed by the Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix). Using a metal band and epoxy, secure the test weight to the driveshaft, as shown in the figure below.

1.

Test weight.

2.

Measure in this direction.

3.

Driveshaft diameter.

4.

Directional rotation.

5.

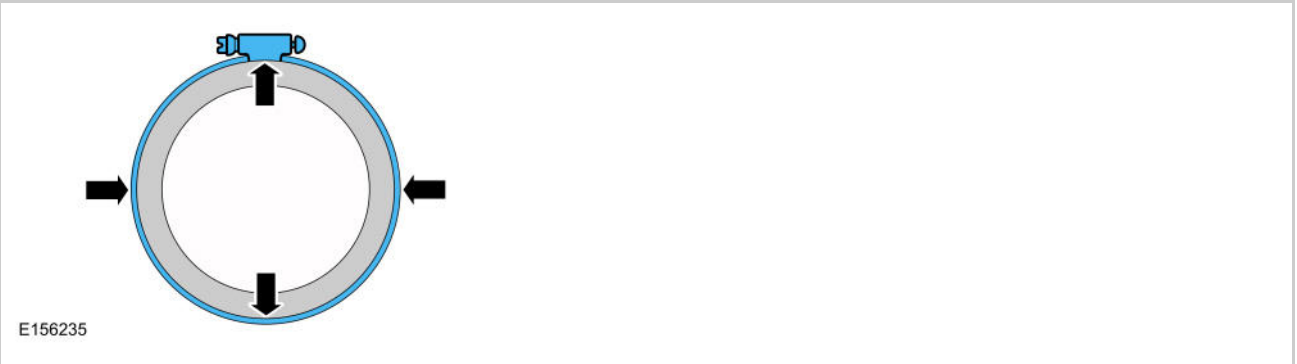
Balance weight relative to test weight centerline.

The results are displayed with respect to the location to where the test weight was placed.

All vehicles

12.

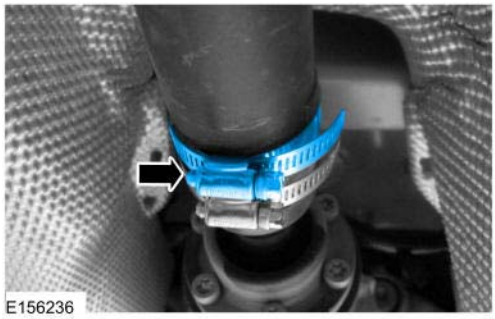
Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a third test to verify the repair.



Driveshaft Balancing - Hose Clamp Method

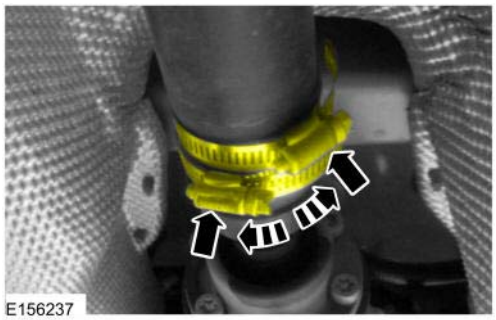
13.

Install 1 or 2 hose clamps on the driveshaft, near the rear. Position of the hose clamp head(s) can be determined through trial and error.



14.

Mark the rear of the driveshaft into 4 approximately equal sectors and number the marks 1 through 4. Install a hose clamp on the driveshaft with its head at position No. 1, as shown in the figure below. Check for vibration at road speed. Recheck with the clamp at each of the other positions to find the position that shows minimum vibration. If 2 adjacent positions show equal improvement, position the clamp head between them.



15.

If the vibration persists, add a second clamp at the same position and recheck for vibration.

16.

If no improvement is noted, rotate the clamps in opposite directions, equal distances from the best position determined in Step 14. Separate the clamp heads about 13 mm (1/2 in) and recheck for vibration at the road speed.

17.

Repeat the process with increasing separation until the best combination is found or the vibration is reduced to an acceptable level.

REMOVAL AND INSTALLATION > DRIVESHAFT

Special Tool(s) / General Equipment

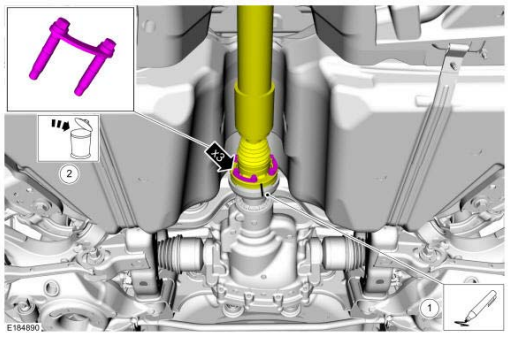
Flat Headed Screw Driver

REMOVAL AND INSTALLATION > DRIVESHAFT > REMOVAL

NOTE: The maximum articulation of the flex coupling is 4 degrees. The maximum articulation of any u-joint is 15 degrees. If the flex coupling or any u-joint of the driveshaft is articulated further then the maximum allowable degrees damage may occur.

1.

Remove the muffler and tailpipe. Refer to: MUFFLER AND TAILPIPE - 2.3L EcoBoost (231kW/314PS). Refer to: MUFFLER AND TAILPIPE - 3.7L Duratec (227kW/301PS). Refer to: MUFFLER AND TAILPIPE - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS).



2.

1.

Index mark the driveshaft and the pinion flange for reference during installation.

2.

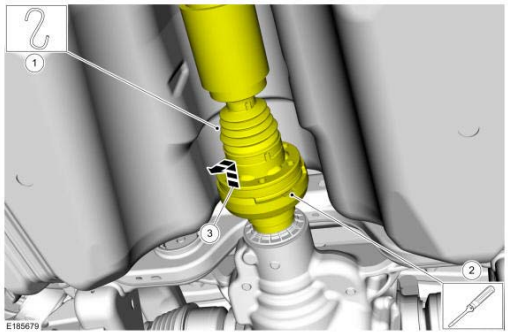
Remove and discard the driveshaft to pinion flange bolts.

NOTE: Do not over articulate the driveshaft or damage may occur.

3.

1.

Support the driveshaft.



NOTE: The driveshaft coupler is a tight fit, and may not be able to remove from the PTU coupler until the center bearing retainers are removed.

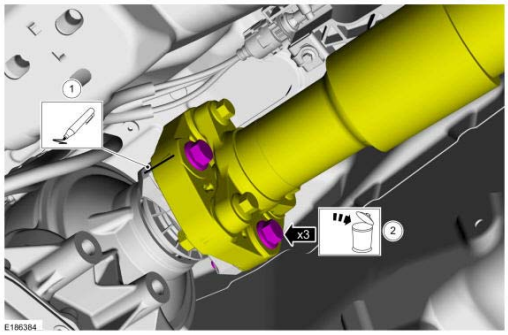
2.
Using a screwdriver inserted into the slot on the pinion flange, pry the driveshaft from the pinion flange.

Use the General Equipment: Flat Headed Screw Driver

3.

Separate the driveshaft from the pinion flange.

NOTE: Do not over articulate the driveshaft or damage may occur.



4.
If equipped with 3 bolt flange.

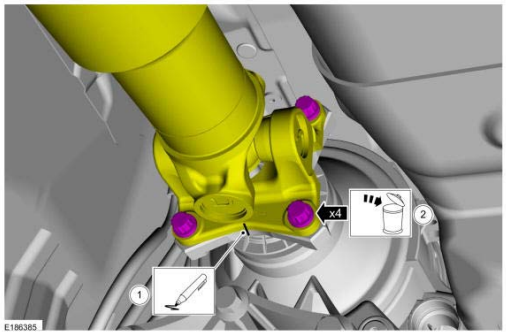
1.

Mark the driveshaft flex coupling to the transmission flange.

2.

Remove and discard the driveshaft to transmission flange bolts. Position and support the driveshaft aside.

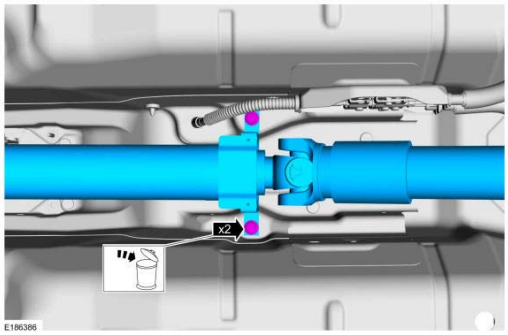
NOTE: Do not over articulate the driveshaft or damage may occur.



5.
If equipped with 4 bolt flange.

1.

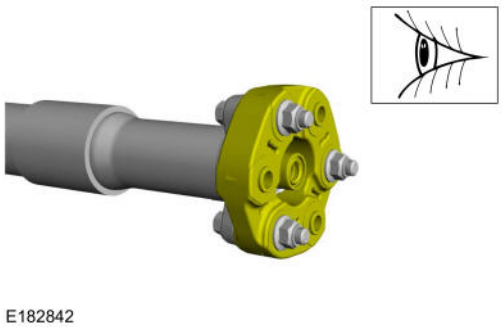
Mark the driveshaft to the transmission flange.



2.

Remove and discard the driveshaft to transmission flange bolts. Position and support the driveshaft aside.

NOTE: The help of a assistant may be needed. Do not over articulate the driveshaft or damage may occur.



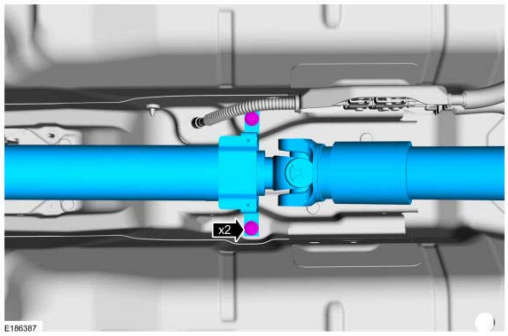
6.
If equipped. Remove and discard the driveshaft center bearing bolts and remove the driveshaft.

REMOVAL AND INSTALLATION > DRIVESHAFT > INSTALLATION

NOTE: If equipped.

1.
Inspect the flex coupling for cracks. If cracks are present, replace the flex coupling.

NOTE: The help of a assistant may be needed. Do not over articulate the



driveshaft or damage may occur.

NOTE: Align the flex coupling before installing the center bearing bolts.

2.
If equipped. Install the driveshaft and the new driveshaft center bearing bolts.

Torque

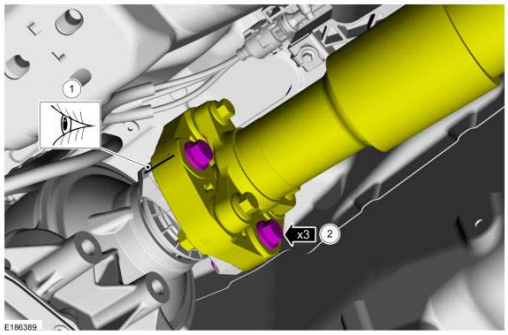
: 35 lb.ft (48 Nm)

NOTE: Do not over articulate the driveshaft or damage may occur.

NOTE: Do not force the flex coupling bushing on the transmission output shaft or damage will occur.

3.
If equipped with 3 bolt flex coupling.

1.



Align the index-mark on driveshaft flex coupling to the transmission flange.

2.

Install the new driveshaft flex coupling to transmission flange bolts.

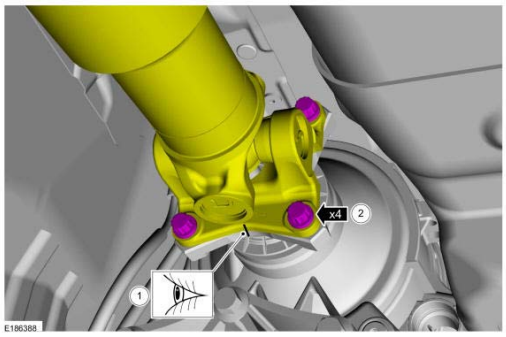
Torque

: 81 lb.ft (110 Nm)

NOTE: Do not over articulate the driveshaft or damage may occur.

4.
If equipped with 4 bolt flange.

1.

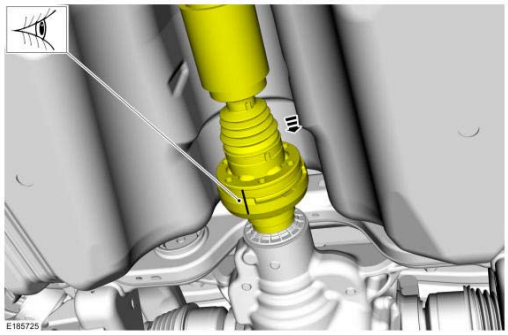


Align the index-mark on driveshaft to the transmission flange.

2.

Install the new driveshaft to transmission flange bolts.

Torque

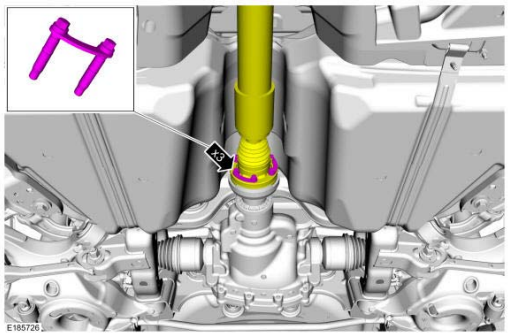


: 80 lb.ft (109 Nm)

NOTE: The help of a assistant will be needed. Do not over articulate the driveshaft or damage may occur.

NOTE: Make sure the mating surfaces are free of any contamination including removing any blue Loctite from any mating surfaces.

5.
Align the index-mark on driveshaft to the rear axle pinion flange.



NOTE: Make sure the drive shaft is fully seated in the rear pinion before starting bolts.

6.
Install the new driveshaft-to-pinion flange bolts in a star pattern.

Torque

: 41 lb.ft (55 Nm)

7.

Install the muffler and tailpipe. Refer to: MUFFLER AND TAILPIPE - 2.3L EcoBoost (231kW/314PS). Refer to: MUFFLER AND TAILPIPE - 3.7L Duratec (227kW/301PS). Refer to: MUFFLER AND TAILPIPE - 5.0L 32V Ti-VCT/5.0L Ti-VCT V8 (308kW/418PS).

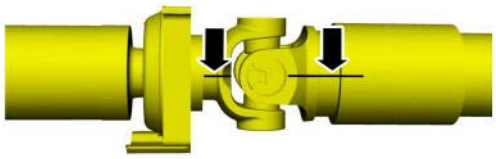
DISASSEMBLY AND ASSEMBLY > DRIVESHAFT UNIVERSAL JOINT

Special Tool(s) / General Equipment

	205-086 (T74P-4635-C) Installer/Remover, C-Frame and Screw

DISASSEMBLY AND ASSEMBLY > DRIVESHAFT UNIVERSAL JOINT > DISASSEMBLY

NOTE: Do not, under any circumstance, clamp the driveshaft assembly in the jaws of a vise or similar holding fixture. Denting or localized fracturing may result, causing driveshaft failure during vehicle operation.

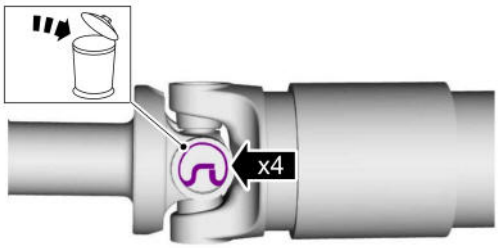


NOTE: Removal steps in this procedure may contain installation details.

1.

Remove the driveshaft. Refer to: Driveshaft .

NOTE: If the components are not marked and therefore installed incorrectly, driveshaft imbalance can occur.

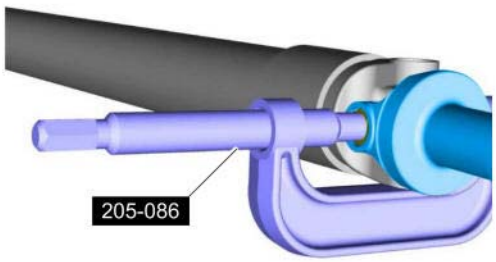


2.
Index-mark the driveshaft for reassembly.

E186636

3.

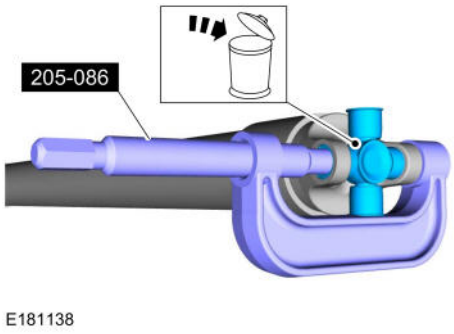
Remove and discard the snap rings.



E186637

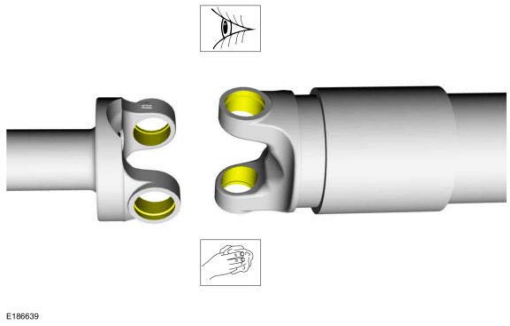
4.

Using the special tool, press the u-joint bearing cups out of the driveshaft yoke and remove the driveshaft yoke.



Use Special Service Tool: 205-086 (T74P-4635-C) Installer/Remover, C-Frame and Screw.

5.



Using the special tool, press the u-joint bearing cups out of the driveshaft yoke and remove the u-joint.

Use Special Service Tool: 205-086 (T74P-4635-C) Installer/Remover, C-Frame and Screw.

6.

Clean and inspect the u-joint bearing cup surfaces.

DISASSEMBLY AND ASSEMBLY > DRIVESHAFT UNIVERSAL JOINT > ASSEMBLY

NOTE: Install the u-joint kits as complete assemblies only. Do not mix components from other u-joint kits.

1.

To install, reverse the removal procedure.

Service Manual: REAR DRIVE AXLE DIFFERENTIAL

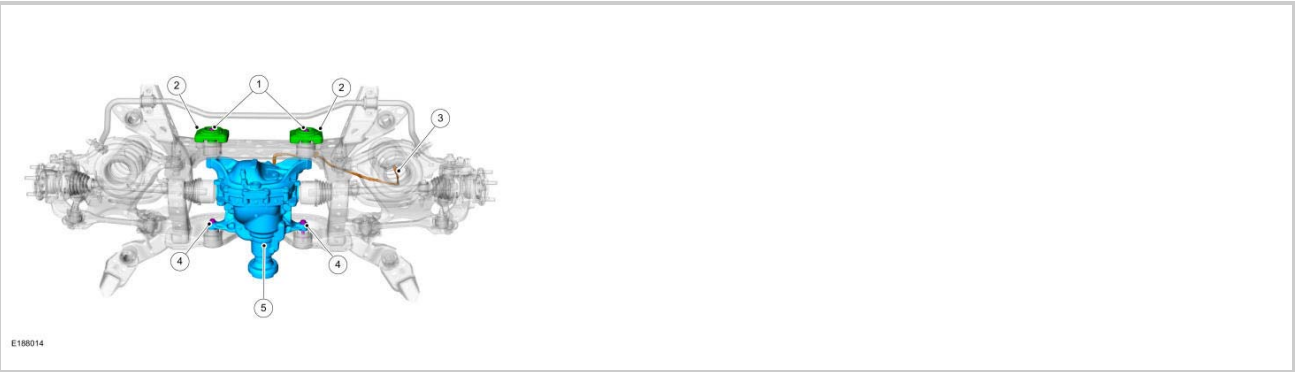
DESCRIPTION AND OPERATION > REAR DRIVE AXLE AND DIFFERENTIAL - OVERVIEW

The 8.8-inch ring gear rear differential is the IRS (Independent Rear Suspension) type. The 8.8-inch rear axle has 3.15, 3.31, 3.55, and 3.73 gear ratio versions.

DESCRIPTION AND OPERATION > REAR DRIVE AXLE AND DIFFERENTIAL - OVERVIEW > REAR DRIVE AXLE AND DIFFERENTIAL



The rear axle assembly consists of the following:

- Integral-type housing hypoid gear design (center of the pinion set below the centerline of the ring gear)
- Hypoid differential ring gear and pinion consisting of a 8.8-inch ring gear and an overhung drive pinion that is supported by 2 opposed tapered roller bearings
- Pinion bearing preload that is maintained by a drive pinion collapsible spacer on the differential pinion shaft and adjusted by the pinion nut
- Cast center section with a cast differential housing cover
- Differential housing cover using silicone rubber based sealant as a gasket
- Differential pinion shaft that is retained by a threaded differential pinion shaft lock bolt attached to the differential case
- Differential case that is mounted in the rear axle housing between 2 opposing differential bearings that are retained in the rear axle housing by 2 removable bearing caps
- Differential bearing preload and ring gear backlash which are adjusted by differential bearing shims that are located between the differential bearing cups and the rear axle housing
- Limited slip axle - (Traction-Lok) 3.15, 3.31 and 3.55 ratio axles
- Limited slip axle - (Torsen) 3.73 ratio axles

The rear drive axle receives rotational torque from the driveshaft. The direction of the rotation determines movement of the vehicle. The rotation enters the rear drive axle through the drive pinion flange, turning the drive pinion and rotating the ring gear. The ring gear is bolted to the differential case. The differential case houses the pinion shaft upon which the differential pinion gears ride. The pinion gears are in mesh with the differential side gears to which the halfshafts are splined. It is the unique arrangement of the differential that allows the halfshafts to be driven at different speed when needed, such as when driving around corners.

The Torsen rear differential carrier is serviced as a assembly only.

Overview

1	Rear differential mounting bolts
2	Rear differential vibration dampners (if equipped)
3	Differential vent tube

4	Front differential mounting bolts
5	IRS (Independent Rear Suspension) Differential

DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > PRELIMINARY INSPECTION

1.

Visually inspect the housing, seals, and pinion flange for obvious signs of mechanical damage.

2.

If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step

3.

If the cause is not visually evident, verify the symptom and REFER to Symptom Chart: NVH .

DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > SYMPTOM CHART(S)

Diagnostics in this article assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: NVH

Symptom Chart

Condition	Possible Sources	Actions
Axle howling or whine	Axle lubricant low	CHECK the lubricant level. FILL the axle to specification. REFER to: Differential Fluid Level Check .
	Axle housing damage	INSPECT and INSTALL a new axle assembly as necessary. REFER to: Axle Assembly .
	Damaged, worn or incorrect ring and pinion gear contact	INSPECT and INSTALL a new ring and pinion set as necessary. Refer to, Contact Pattern of this procedure, or REFER to: Drive Pinion .
Driveline clunk - loud clunk when shifting from REVERSE to DRIVE	Incorrect axle lubricant level	CHECK the lubricant level. FILL the axle to specification. REFER to: Differential Fluid Level Check .

	Excessive backlash in the axle	CHECK for excessive axle backlash. ADJUST backlash as necessary. REFER to: Ring Gear Backlash Adjustment .
Driveline clunk - occurs as the vehicle starts to move forward following a stop	Pinion gears	CHECK and REPLACE as necessary REFER to: Drive Pinion Front Bearing .
Grinding, popping or chattering - noise from the rear axle when the vehicle is turning	Damaged or worn differential (differential side gears and pinion gears)	INSPECT the differential carrier and the components of the differential carrier. INSTALL a new differential carrier and/or differential carrier components as necessary. REFER to: Differential Carrier .
Grunting - normally associated with a shudder experienced during acceleration from a complete stop	Loose rear axle mount bolts or suspension fasteners	CHECK for loose bolts. TIGHTEN to specifications. REFER to: Axle Assembly .
Howl - can occur at various speeds and driving conditions. Affected by acceleration and deceleration	Incorrect ring and pinion contact, incorrect bearing preload or gear damage	INSPECT and ADJUST as necessary. Refer to, Contact Pattern of this procedure, or REFER to: Differential Carrier . REFER to: Ring Gear Backlash Adjustment .
Chuckle - heard at coast/ deceleration. Also described as knock	Incorrect ring and pinion contact or damaged teeth on the coast side of the ring and pinion	INSPECT and INSTALL a new ring and pinion set as necessary. Refer to, Contact Pattern of this procedure, or REFER to: Drive Pinion .
Knock - noise occurs at various speeds. Not affected by acceleration or deceleration	Gear tooth damage to the driver side of the ring and pinion	INSPECT and INSTALL a new ring and pinion as necessary. REFER to: Drive Pinion . REFER to: Differential Carrier .
Scraping noise - a continuous low pitched noise starting at low speed	Worn or damaged pinion bearings	INSPECT and INSTALL new pinion bearings as necessary. REFER to: Drive Pinion Front Bearing .
Driveline shudder - occurs during acceleration from a slow speed or stop	Rear drive axle assembly mispositioned	CHECK the axle mounts and the rear suspension for damage or wear. Repair as necessary. REFER to: Axle Assembly .
	Loose rear axle bolts	CHECK the rear axle for loose bolts. TIGHTEN the bolts as necessary. REFER to: Axle Assembly .

	Driveline angles out of specification	CHECK for correct driveline angles. REFER to: Driveshaft Angle Measurement .

DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > ANALYSIS OF LEAKAGE

Clean up the leaking area enough to identify the exact source.

A plugged Rear axle housing vent can cause excessive pinion seal lip wear due to internal pressure buildup.

Verify the differential lubricant level is at the correct level. REFER to: Differential Fluid Level Check .

DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > AXLE VENT

A plugged vent will cause excessive seal lip wear due to internal pressure buildup. If a leak occurs, check the vent. If the vent cannot be cleared, install a new vent.

DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > DRIVE PINION SEAL

Leaks at the drive pinion seal originate from the following causes:

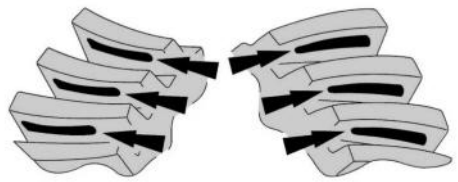
- Damaged seal
- Worn seal journal surface

A new drive pinion flange must be installed if any of these conditions exist.

- Any damage to the seal bore (dings, dents, gouges or other imperfections) distorts the seal casing and allows leakage past the outer edge of the drive pinion seal.
- The drive pinion seal can be torn, cut or gouged if it is not installed correctly. The spring that holds the drive pinion seal against the pinion flange may be knocked out and allow fluid to pass the lip.
- Metal chips trapped at the sealing lip can cause oil leaks. These can cause a wear groove on the drive pinion flange and result in pinion seal wear.
- When a seal leak occurs, install a new drive pinion seal and check the vent to make sure it is clean and free of foreign material.

DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > DIFFERENTIAL SEALS

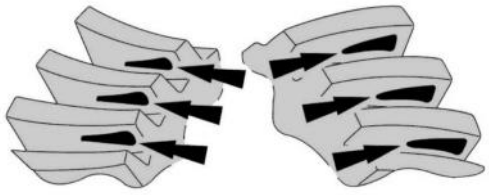
NOTE: When installing shafts, do not allow splines to contact seals during installation or damage to the seals may occur.



Halfshaft pilot bearing housing seals are susceptible to the same types of damage as drive pinion seals if incorrectly installed. The seal bore must be clean and the lip handled carefully to avoid cutting or tearing it. The seal journal surface must be free of nicks, gouges and rough surface texture.

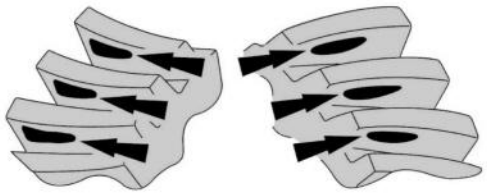
DIAGNOSIS AND TESTING > REAR DRIVE AXLE AND DIFFERENTIAL > CONTACT PATTERN

In general, desirable ring gear tooth patterns must have the following characteristics:



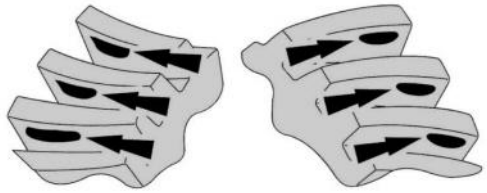
- Drive pattern on the drive side ring gear well centered on the tooth.
- Coast pattern on the coast side ring gear well centered on the tooth.
- Clearance between the pattern and the top of the tooth.
- No hard lines where the pressure is high.

Acceptable ring gear tooth patterns for all axles.



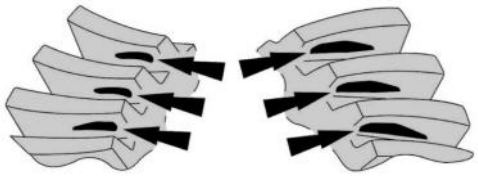
E181792

Correct backlash with a thinner pinion position shim required.



E181793

Correct backlash with a thicker pinion position shim required.



E181794

Correct pinion position shim that requires a decrease in backlash.

E181795

Correct pinion position shim that requires an increase in backlash.

E181796

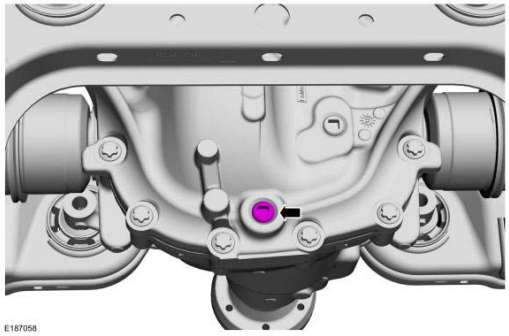
GENERAL PROCEDURES > AXLE AND DIFFERENTIAL DRAINING AND FILLING

Materials

Name	Specification
Motorcraft ® Additive Friction Modifier (U.S.) XL-3 (U.S.)	EST-M2C118-A
Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant XY-75W85-QL	WSS-M2C942-A

Draining

1.



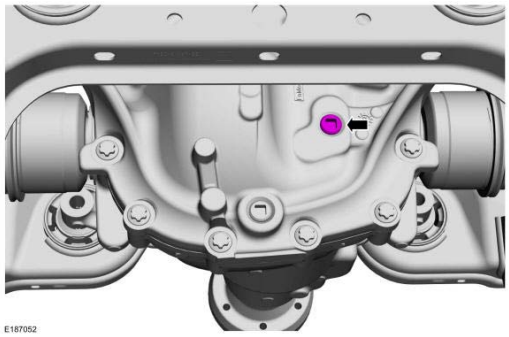
With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

NOTE: If equipped with a drain plug.

2.
Drain the differential gear lubricant.

Torque

: 25 lb.ft (34 Nm)



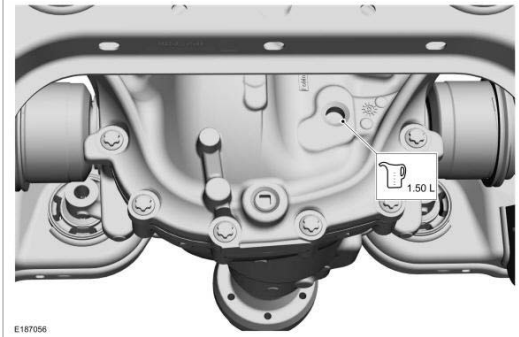
3.

If no drain plug is present, remove the differential housing cover to drain the fluid. Refer to: Differential Housing Cover .

Filling

1.

Remove the differential fill plug.

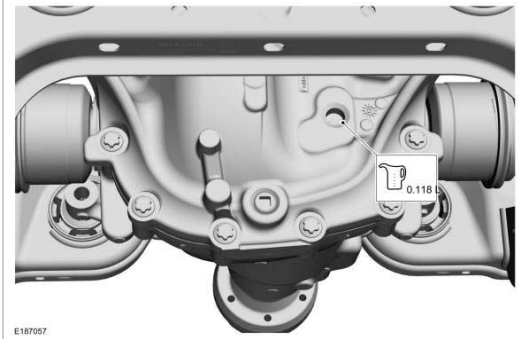


2.

Fill the differential with 1.50 L (3.18 pts) of clean differential gear lubricant.

Material

: Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant / XY-75W85-QL (WSS-M2C942-A)

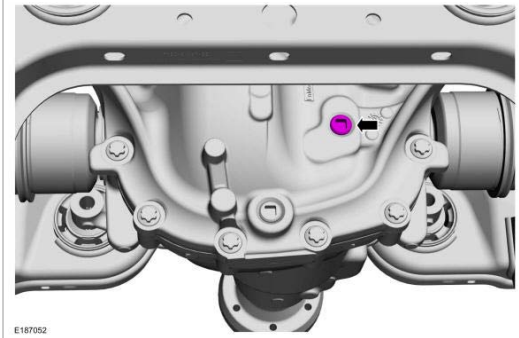


3.

Fill the differential with 4.0 oz. (0.118 L) of clean friction modifier.

Material

: Motorcraft ® Additive Friction Modifier (U.S.) / XL-3 (U.S.) (EST-M2C118-A)



4.

Install the differential fill plug.

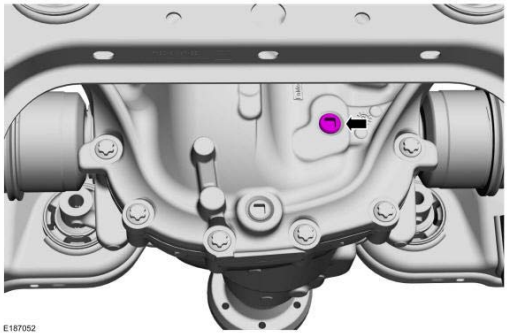
Torque

: 25 lb.ft (34 Nm)

GENERAL PROCEDURES > DIFFERENTIAL FLUID LEVEL CHECK

Materials

Name	Specification
Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant XY-75W85-QL	WSS-M2C942-A



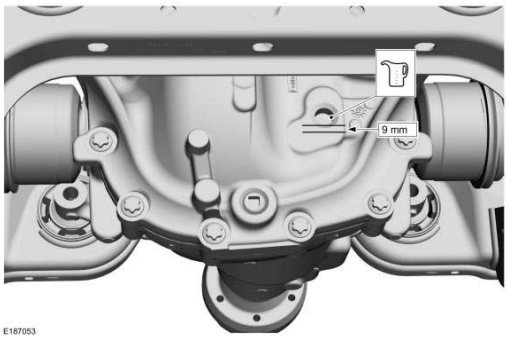
Check

1.

With the vehicle in NEUTRAL, position it on a hoist. Refer to: Jacking and Lifting - Overview .

2.

Remove the differential fluid fill plug.

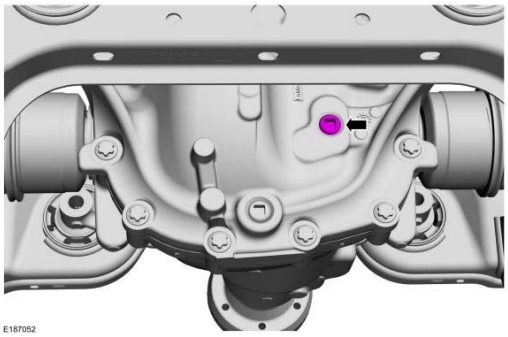


3.

Check and top off the differential with clean differential gear lubricant. The differential gear lubricant level should be within 9mm (0.354 in.) from the fluid level fill plug opening. Refer to: Specifications .

Material

: Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant / XY-75W85-QL (WSS-M2C942-A)



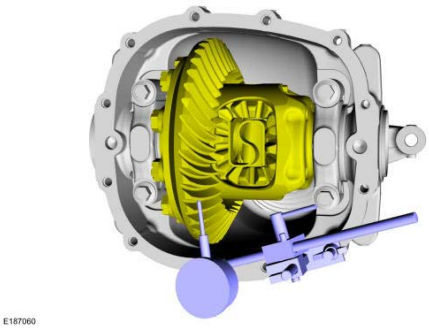
4.

Install the differential fluid fill plug.

Torque

: 25 lb.ft (34 Nm)

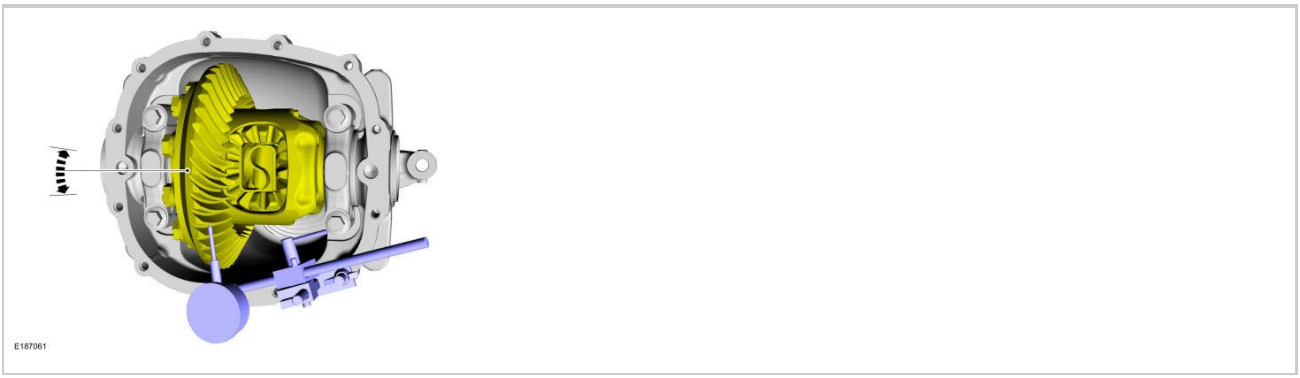
GENERAL PROCEDURES > RING GEAR BACKLASH ADJUSTMENT



Special Tool(s) / General Equipment

	205-220 Installer, Differential Shim TKIT-1985-FH
	308-021 (T75L-4201-A) Gauge, Clutch Housing
Dial Indicator	
Tire Lever	
Wooden Block	
Copper Hammer	

Adjustment



1.

Install the dial indicator gauge with holding fixture, with the dial indicator at a 90 degree angle from the ring gear tooth. Use the General Equipment: Dial Indicator

2.

Using the dial indicator check the ring gear backlash. Rotate the ring gear and carrier back and forth through the free play only. Refer to: Specifications . Use the General Equipment: Dial Indicator

3.

To correct for high or low backlash, increase the thickness of one differential bearing shim and decrease the thickness of the other differential bearing shim by the same amount.

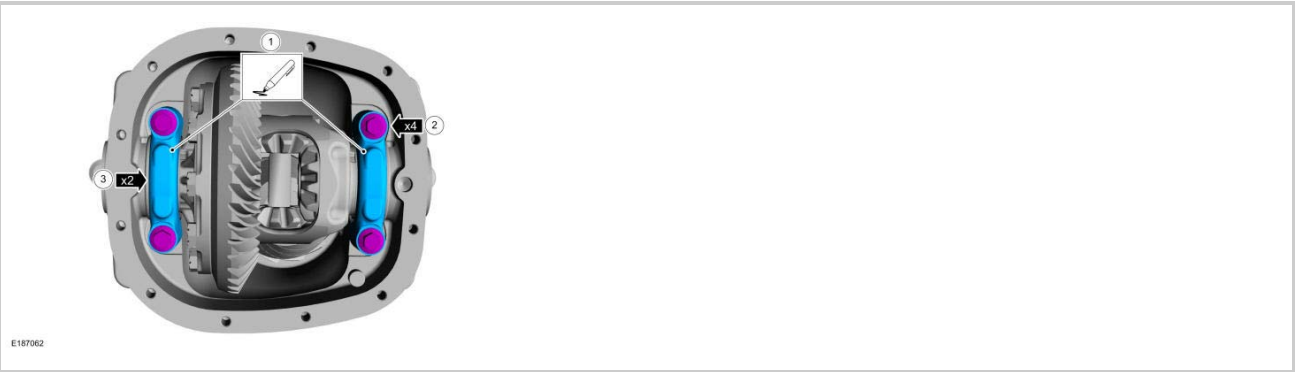
If a zero backlash condition had occurred, add 0.50 mm (0.020 in) to the RH side shim and subtract 0.50 mm (0.020 in) from the LH side shim to allow a backlash indication. Recheck backlash.

Using the backlash chart, determine the thickness of differential shim needed: Refer to: Specifications .

NOTE: The differential bearing caps and differential bearing cap bolts need to be installed in the same location as removed.

4.

1.



Mark the differential bearing caps.

2.

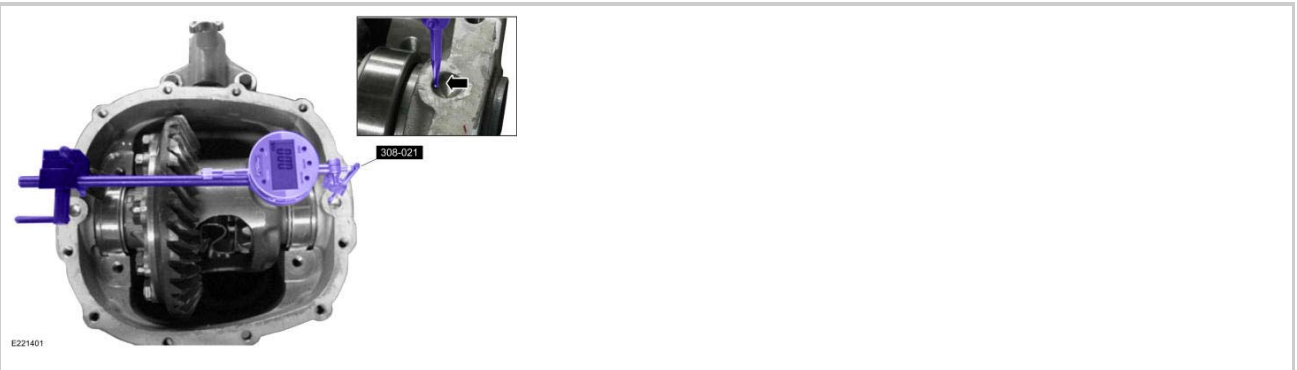
Remove the differential bearing cap bolts.

3.

Remove the differential bearing caps.

NOTE: If the old differential bearing cups and shims are to be reused, they need to be installed in the same location as removed.

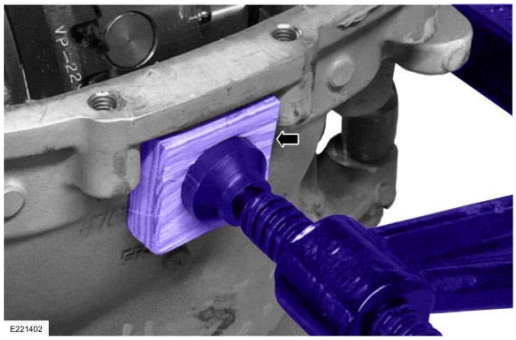
5.



Mark the differential shims.

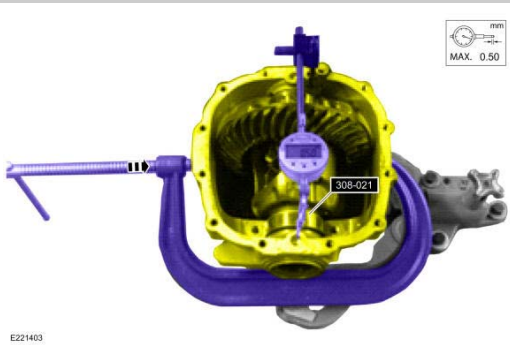
Mark the differential carrier bearing cups.

6.



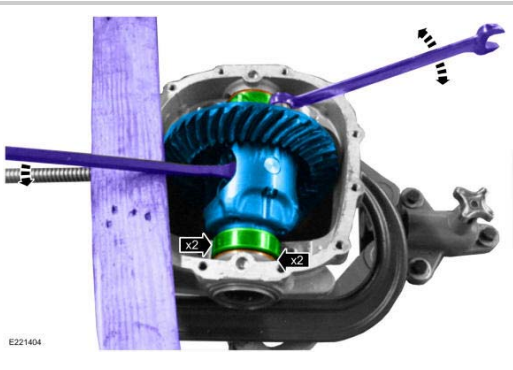
Install the Dial Indicator and special tool. Position the tip of the clutch housing gauge on the inside of the axle housing guide hole. Zero the dial indicator. Use Special Service Tool: 308-021(T75L-4201-A) Gauge, Clutch Housing. Use the General Equipment: Dial Indicator

7.



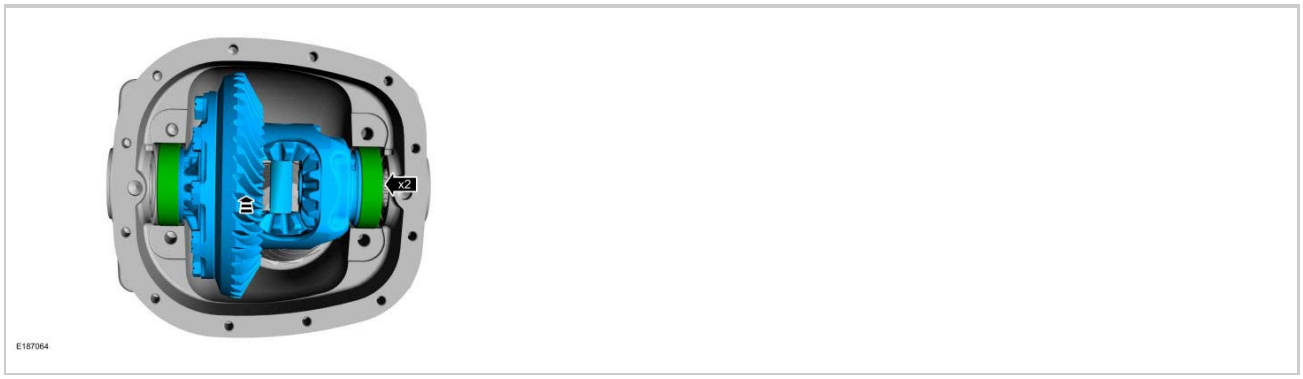
Install a 12" / 300mm C-Clamp on the axle housing at the 12:00 O'clock and 6:00 O'clock positions. Install 2" x 2" x 3/4" blocks of wood between the C-Clamp and the housing to prevent

housing cracks. Use the General Equipment: Wooden Block



8.

Tighten the C-Clamp until the housing spreads 0.020" / 0.50mm.

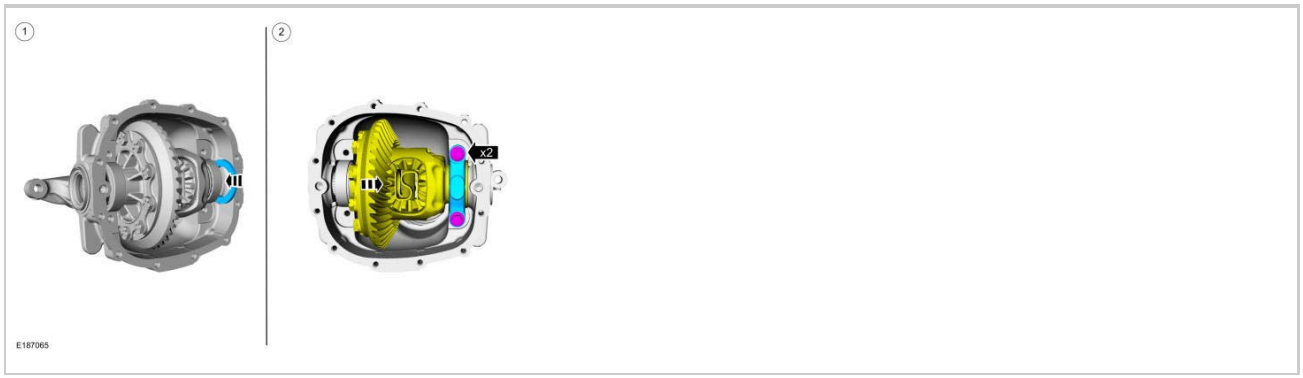


9.

With the dial indicator removed. Position a wood block on the housing sealing surface. Using the tire lever, block of wood and a wrench remove the differential carrier, differential carrier bearing cups and the differential shims. Use the General Equipment: Tire Lever Use the General Equipment: Wooden Block

NOTE: Have the selected shims available at this time. It will be required to hold the differential carrier and the differential carrier bearing cups in until shims are installed.

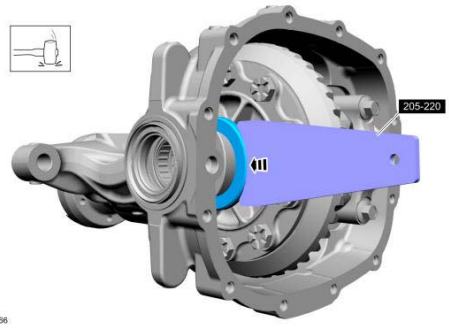
10.
Remove the dial indicator. Install the differential carrier and the differential carrier bearing cups.



11.

> *NOTE: Differential bearing shims are to be installed with the chamfer facing outboard.*

Install the selected or original RH differential bearing shim. If the original RH shim is not available, install the largest shim available.



> *NOTE: The differential bearing cap bolts should only be finger tight at this time.*

Position the differential to the RH side of the differential housing. Install the RH differential bearing cap and the differential bearing cap bolts.

> *NOTE: The C-Clamp can be removed after the selected ring gear backlash shim is installed.*

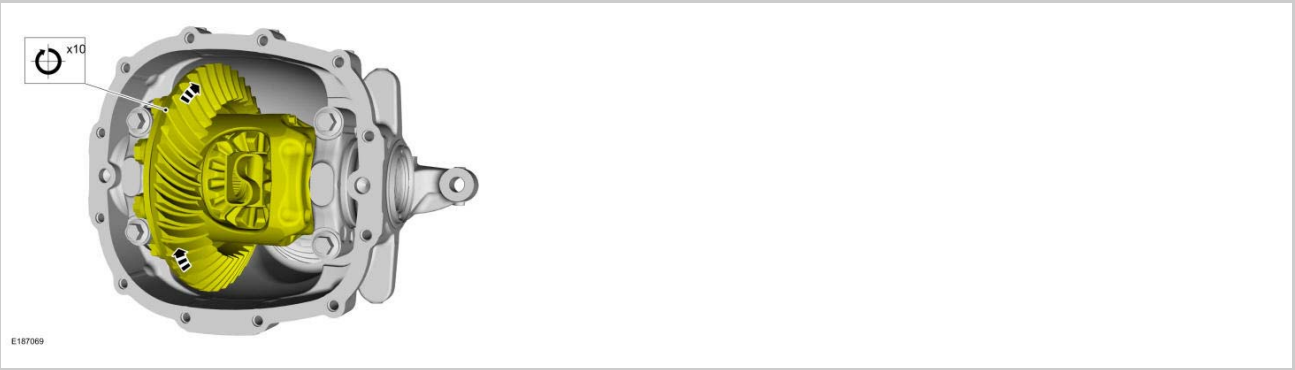
12.
Using the special tool and a soft face copper mallet, install the LH selected differential bearing shim. If the selected or original LH shim is not available, use the largest shim that can be installed by hand. Use Special Service Tool: 205-220 Installer, Differential Shim. Use the General Equipment: Copper Hammer

NOTE: The differential bearing cap bolts should only be finger tight at this time.

13.
Install the LH differential bearing cap and the differential bearing cap bolts.

14.

Tighten the differential bearing cap bolts.



Torque

: 71 lb.ft (96 Nm)

15.

Rotate the differential several times, to assure the differential assembly rotates freely.

16.

Using the dial indicator gauge with holding fixture, do a final check of the ring gear backlash. Refer to: Specifications . Use the General Equipment: Dial Indicator

REMOVAL AND INSTALLATION > AXLE ASSEMBLY

Special Tool(s) / General Equipment

Flat Headed Screw Driver
Transmission Jack

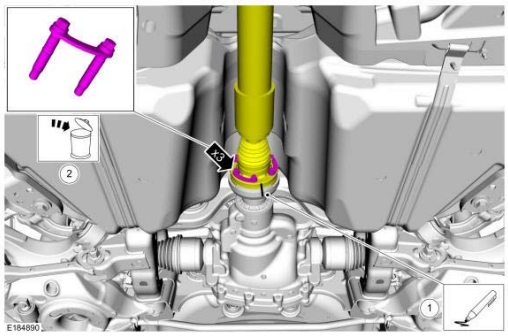
REMOVAL AND INSTALLATION > AXLE ASSEMBLY > REMOVAL

1.

Remove the muffler and tailpipe assembly. 2.3L Refer to: Muffler and Tailpipe . 3.7L Refer to: Muffler and Tailpipe . 5.0L Refer to: Muffler and Tailpipe .

2.

Remove both rear halfshafts. Refer to: Rear Halfshaft .



3.

1.

Index mark the driveshaft and the pinion flange for reference during installation.

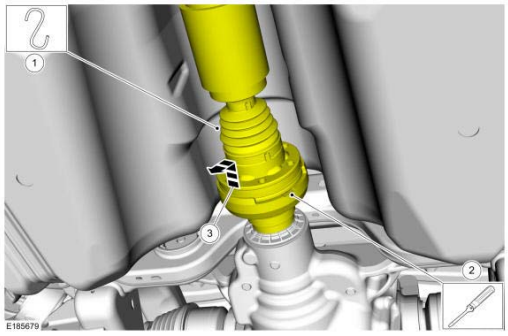
2.

Remove and discard the driveshaft-to-pinion flange bolts.

NOTE: Do not remove driveshaft from the pinion flange by pulling on the driveshaft tube. Damage to the CV-joint can result.

4.

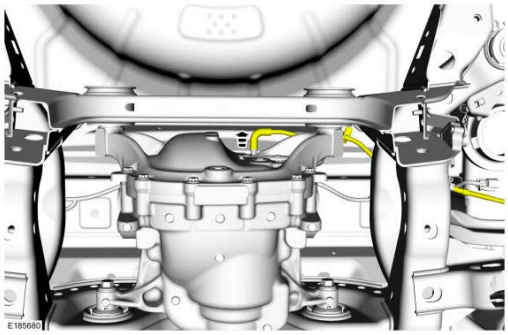
1.



Support the driveshaft.

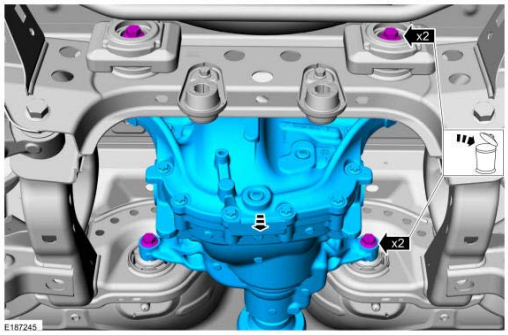
2.

Using a screwdriver inserted into the slot on the pinion flange, pry the driveshaft from the pinion flange. Use the General Equipment: Flat Headed Screw Driver



3.

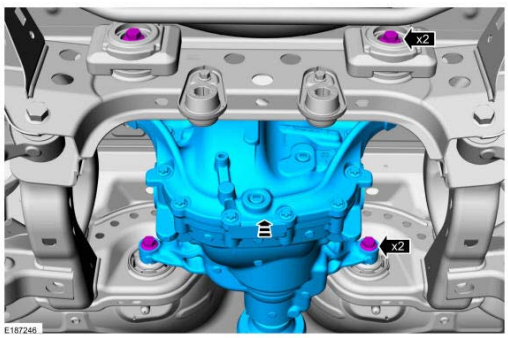
Separate the driveshaft from the pinion flange.



5.

Disconnect the differential vent tube.

NOTE: The rear differential is heavy and will require to be supported by a transmission jack before the fasteners are removed.



6.
Using a transmission jack, remove and discard the differential mounting bolts and remove the differential. Use the General Equipment: Transmission Jack

REMOVAL AND INSTALLATION > AXLE ASSEMBLY > INSTALLATION

NOTE: Only install the differential mounting bolts hand tight at this time.

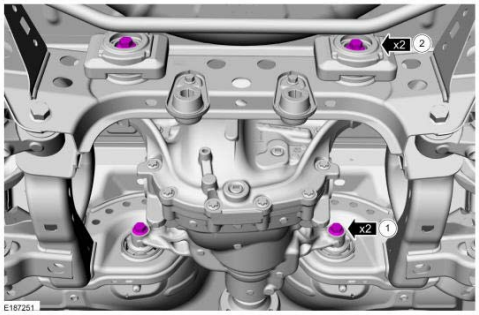
1.
Using a transmission jack, install the differential and the new differential mounting bolts hand tight. Use the General Equipment: Transmission Jack

2.

1.

Tighten the forward differential mounting bolts.

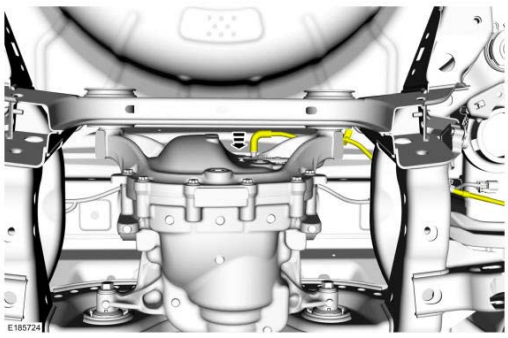
Torque



: 129 lb.ft (175 Nm)

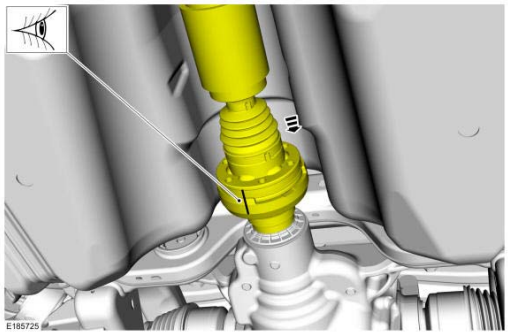
2.

Tighten the rear differential mounting bolts.



Torque

: 129 lb.ft (175 Nm)

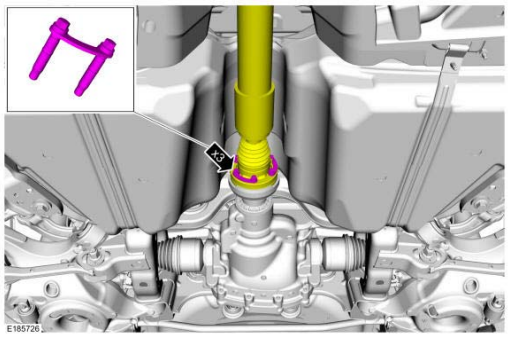


3.

Connect the differential vent tube.

4.

Position the driveshaft to the pinion flange and align the index mark made during removal.



5.

Install the driveshaft-to-pinion flange bolts.

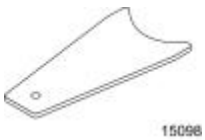
Torque

: 41 lb.ft (55 Nm)

6.

Install both rear halfshafts. Refer to: Rear Halfshaft .

7.



Install the muffler and tailpipe assembly. 2.3L Refer to: Muffler and Tailpipe . 3.7L Refer to: Muffler and Tailpipe . 5.0L Refer to: Muffler and Tailpipe .

8.

Check the differential fluid level. Refer to: Differential Fluid Level Check .

REMOVAL AND INSTALLATION > DIFFERENTIAL CARRIER

Special Tool(s) / General Equipment

REMOVAL AND INSTALLATION > DIFFERENTIAL CARRIER > REMOVAL

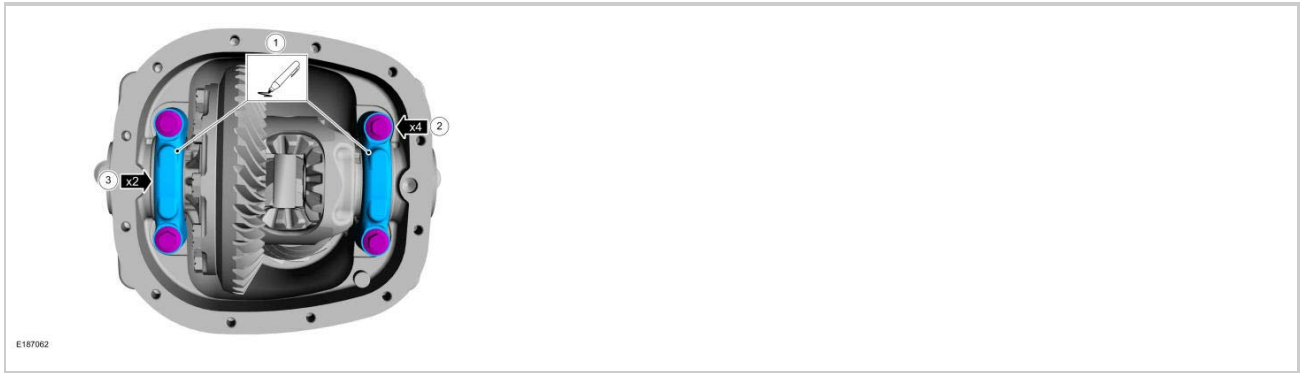
1.

Remove the differential housing cover. Refer to: Differential Housing Cover .

NOTE: The differential bearing caps and differential bearing cap bolts need to be installed in the same location as removed.

2.

1.



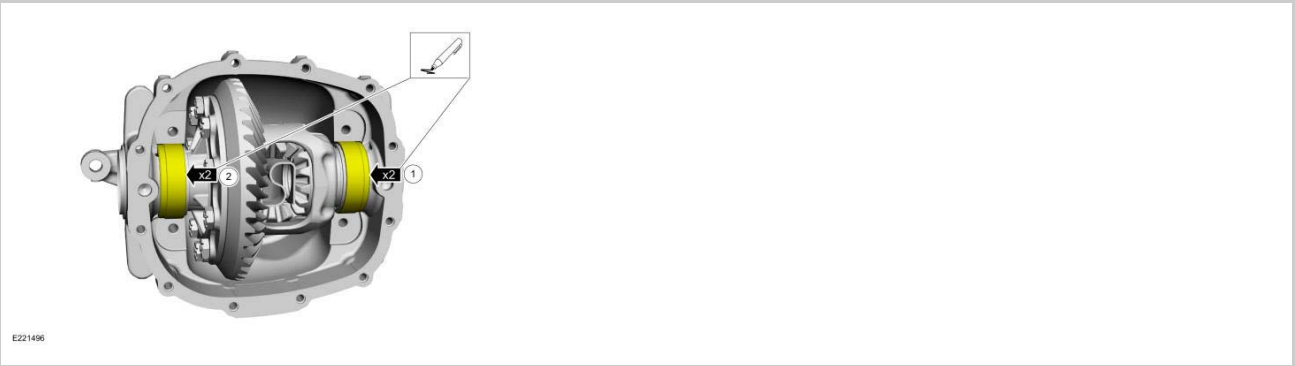
Mark the differential bearing caps.

2.

Remove the differential bearing cap bolts.

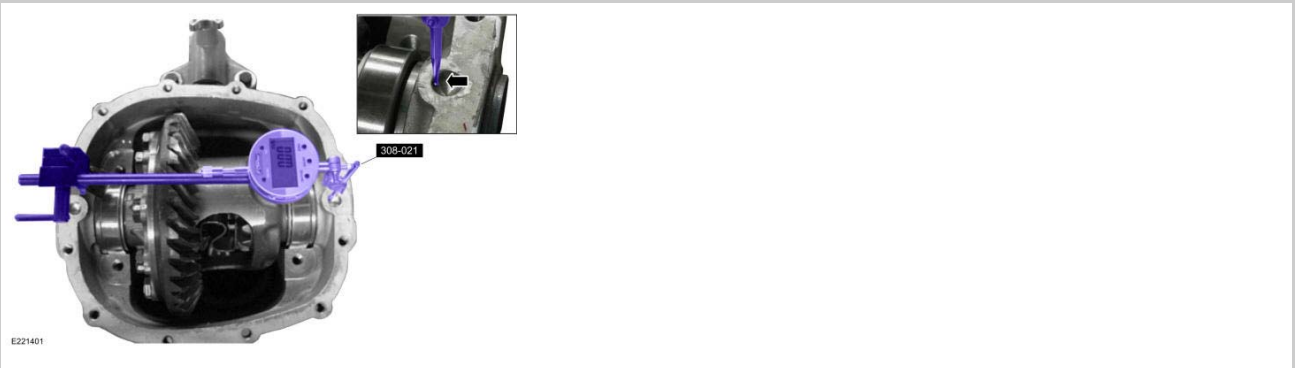
3.

Remove the differential bearing caps.



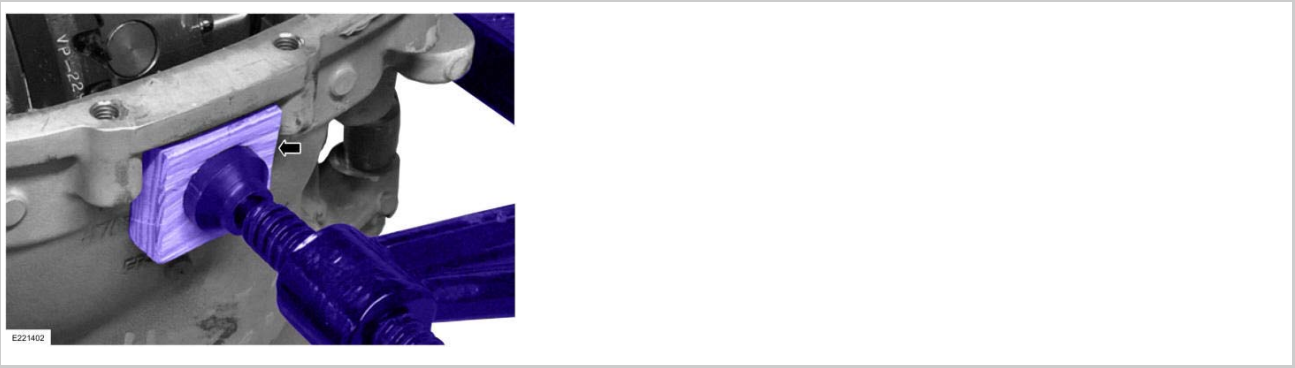
NOTE: If the old differential bearing cups and shims are to be reused, they need to be installed in the same location as removed.

3.



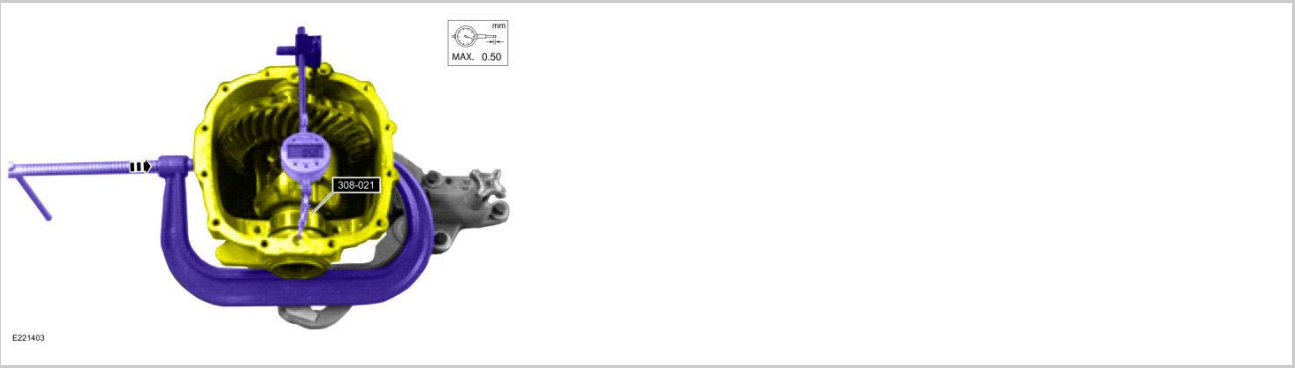
Mark the differential shims.

Mark the differential carrier bearing cups.



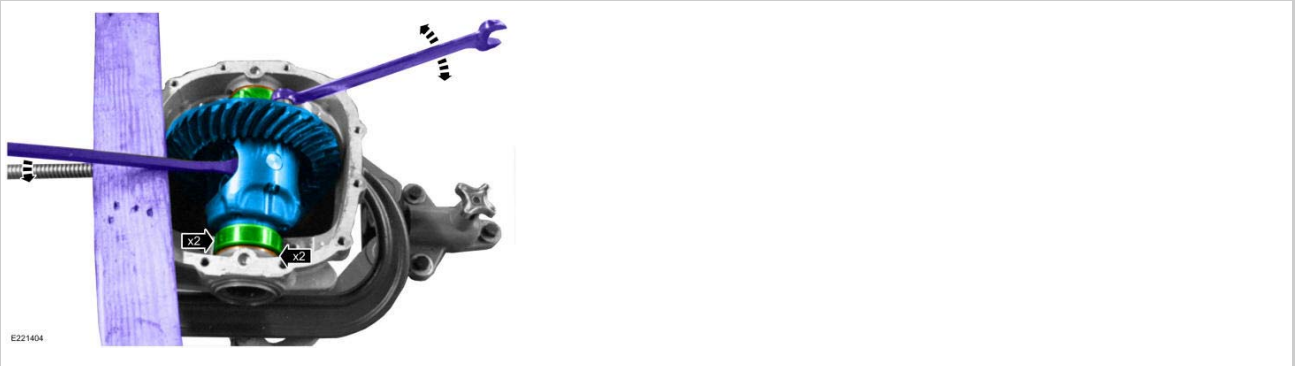
4.

Install the Dial Indicator and special tool. Position the tip of the clutch housing gauge on the inside of the axle housing guide hole. Zero the dial indicator. Use Special Service Tool: 308-021(T75L-4201-A) Gauge, Clutch Housing. Use the General Equipment: Dial Indicator



5.

Install a 12" / 300mm C-Clamp on the axle housing at the 12:00 O'clock and 6:00 O'clock positions. Install 2" x 2" x 3/4" blocks of wood between the C-Clamp and the housing to prevent housing cracks. Use the General Equipment: Wooden Block



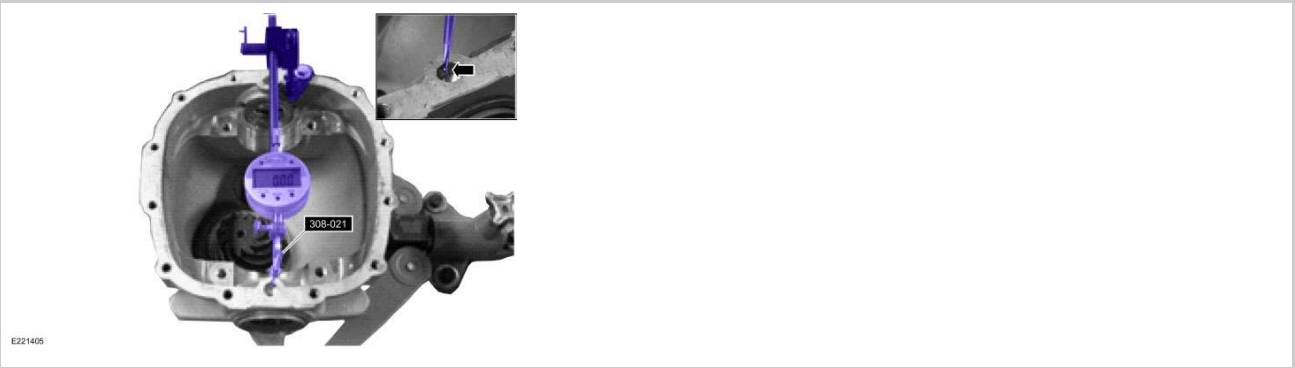
6.

Tighten the C-Clamp until the housing spreads 0.020" / 0.50mm.

7.

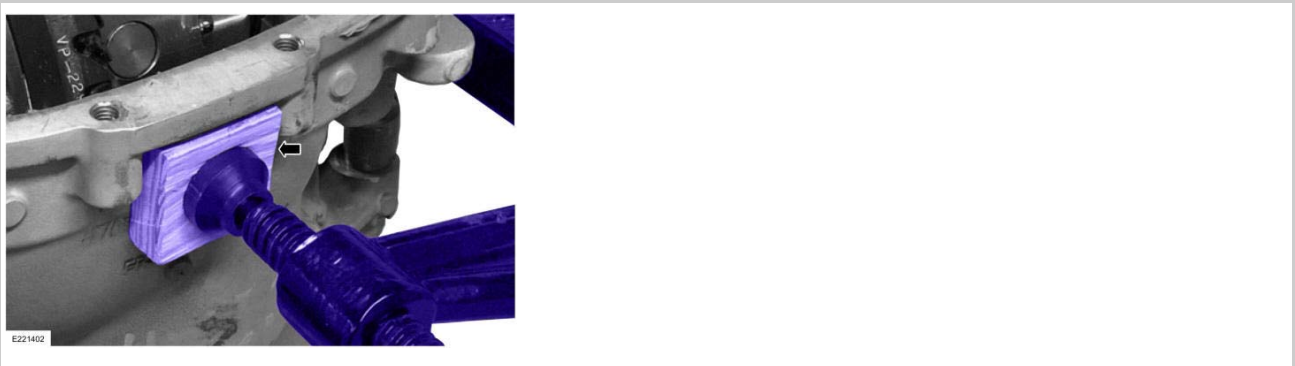
With the dial indicator removed. Position a wood block on the housing sealing surface. Using the tire lever, block of wood and a wrench remove the differential carrier, differential carrier bearing cups and the differential shims. Use the General Equipment: Tire Lever Use the General Equipment: Wooden Block

8.



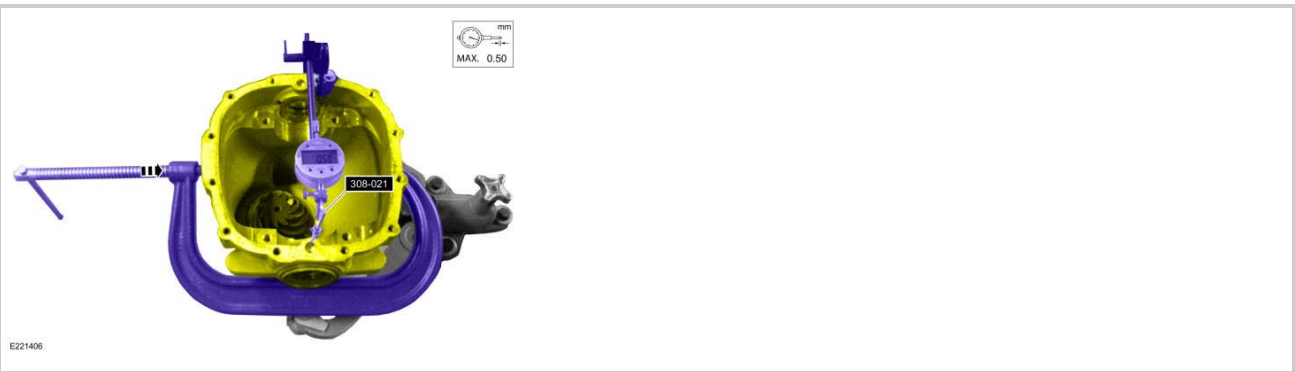
With the C-clamp removed inspect the differential case.

REMOVAL AND INSTALLATION > DIFFERENTIAL CARRIER > INSTALLATION



1.

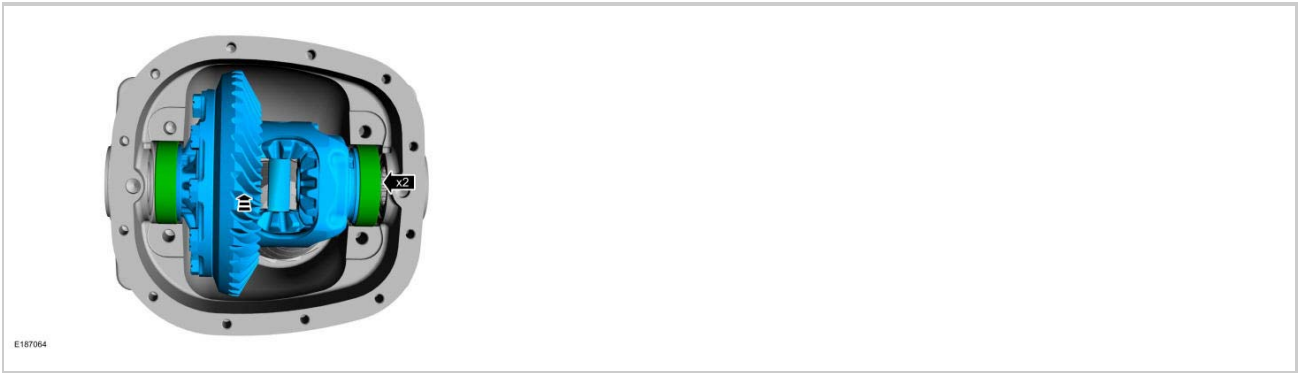
Install the Dial Indicator and special tool. Position the tip of the clutch housing gauge on the inside of the axle housing guide hole. Zero the dial indicator. Use Special Service Tool: 308-021 (T75L-4201-A) Gauge, Clutch Housing. Use the General Equipment: Dial Indicator



2.

Install a 12" / 300mm C-Clamp on the axle housing at the 12:00 O'clock and 6:00 O'clock positions. Install 2" x 2" x 3/4" blocks of wood between the C-Clamp and the housing to prevent housing cracks. Use the General Equipment: Wooden Block

3.

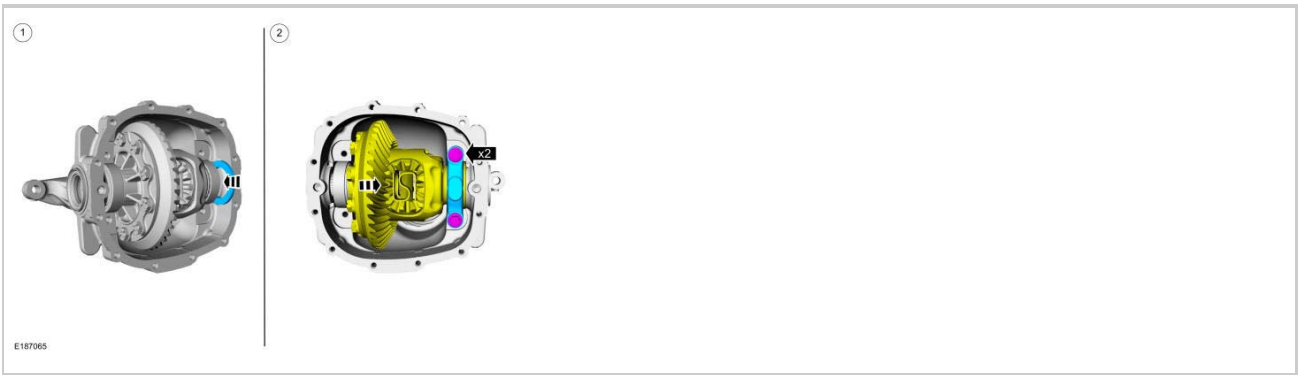


Tighten the C-Clamp until the housing spreads 0.020" / 0.50mm.

NOTE: Differential bearing shims are to be installed with the chamfer facing outboard.

NOTE: Have the selected shims or the previously removed shims available at this time. It will be required to hold the differential carrier and the differential carrier bearing cups in until shims are installed.

4.
With the dial indicator removed, install the differential carrier and the differential carrier bearing cups.

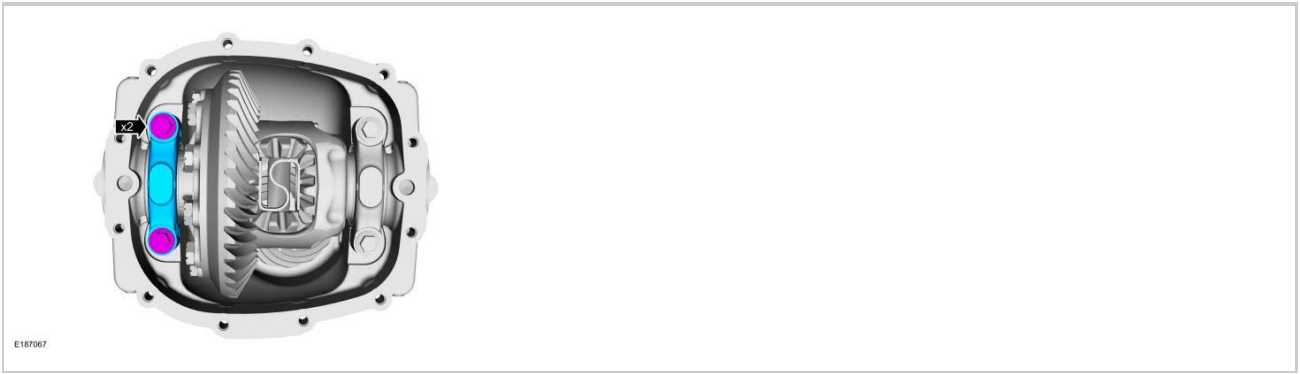


5.

Install the RH ring gear back lash shim.

NOTE: The differential bearing cap bolts should only be finger tight at this time.

Position the differential to the RH side of the differential housing. Install the RH differential bearing cap and the differential bearing cap bolts.

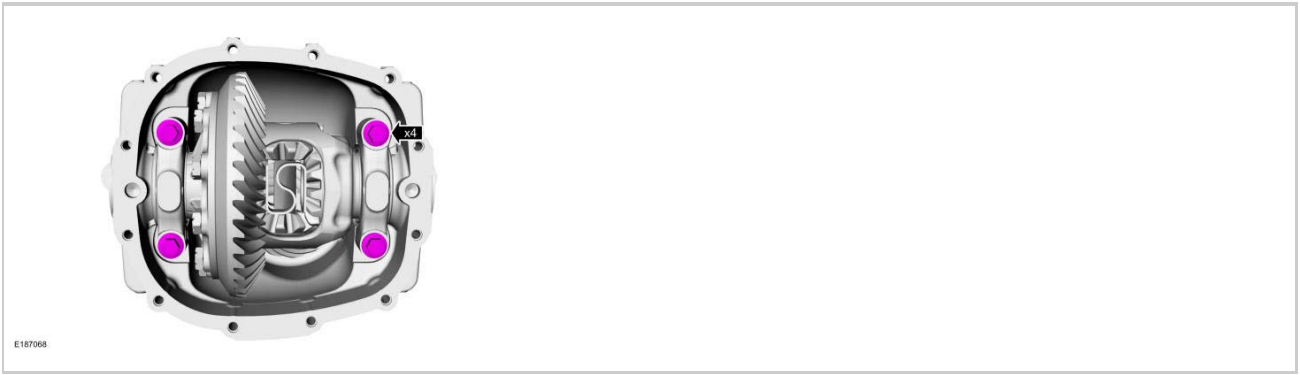


NOTE: The C-Clamp can be removed after the selected ring gear backlash shim is installed.

6.
Using the special tool and a soft face copper mallet, install the LH selected ring gear back lash shim. Use Special Service Tool: 205-220 Installer, Differential Shim. Use the General Equipment: Copper Hammer

NOTE: The differential bearing cap bolts should only be finger tight at this time.

7.
Install the LH differential bearing cap and the differential bearing cap bolts.



8.

Tighten the differential bearing cap bolts.

Torque

: 71 lb.ft (96 Nm)

9.

Check the ring gear backlash. Refer to: Ring Gear Backlash Adjustment .

10.

Install the differential housing cover. Refer to: Differential Housing Cover .

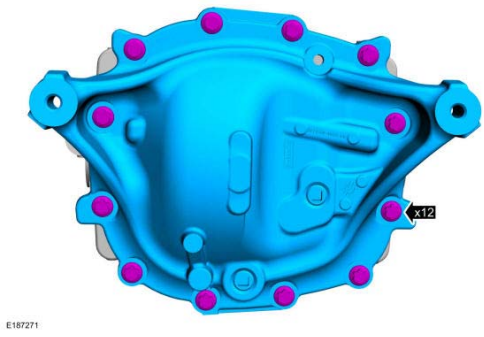
REMOVAL AND INSTALLATION > DIFFERENTIAL HOUSING COVER

Special Tool(s) / General Equipment

Plastic Scraper

Materials

Name	Specification
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4



REMOVAL AND INSTALLATION > DIFFERENTIAL HOUSING COVER > REMOVAL

1.

Remove the differential assembly. Refer to: Axle Assembly .

NOTE: The differential housing cover bolts are low profile external torx. Use an EPL16 socket to remove the bolts.

2.
Remove the differential cover bolts and the differential cover.

REMOVAL AND INSTALLATION > DIFFERENTIAL HOUSING COVER > INSTALLATION

1.

Clean the differential cover and differential housing mating surfaces. Refer to: RTV Sealing Surface Cleaning and Preparation . Use the General Equipment: Plastic Scraper

2.

Apply the differential cover gasket material in a 2mm bead.

Material

: Silicone Gasket and Sealant / TA-30 (WSE-M4G323-A4)

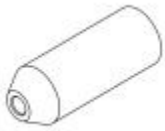
3.

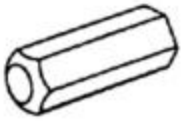
Install the differential housing cover, and the differential housing cover bolts.

Torque

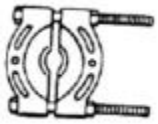
: 34 lb.ft (46 Nm)

4.





Install the differential assembly. Refer to: Axle Assembly .



5.

Fill the differential with clean differential fluid. Refer to: Axle and Differential Draining and Filling .

REMOVAL AND INSTALLATION > DRIVE PINION

Special Tool(s) / General Equipment

	205-024 (T67P-4616-A) Installer, Drive Pinion Bearing Cup
 E188619	205-1014 Gauge Disc TKIT-2014D-FL_ROW TKIT-2014D-ROW2

	205-229 (T85T-4209-AH) Protector, Drive Pinion Thread TKIT-1985-FH-1

	205-387 (T97T-4628-A) Installer, Rear Axle Bearing Cup TKIT-1997-F/FLM/LT TKIT-1998-LM (NavigatoR)
 E180811	205-488 Installer, Drive Pinion Bearing TKIT-1999S-FLM/LT
	205-852 Inner Pinion Bearing Cup Installer TKIT-2006UP-FLM TKIT-2006UP-ROW
 E180810	205-937 Adapter, Pinion Aligning TKIT-2009C-F TKIT-2009C-ROW
	205-D064 (D84L-1123-A) Puller, Bearing
Rubber Mallet	
Hydraulic Press	
Punch	
Copper Hammer	

REMOVAL AND INSTALLATION > DRIVE PINION > REMOVAL

1.

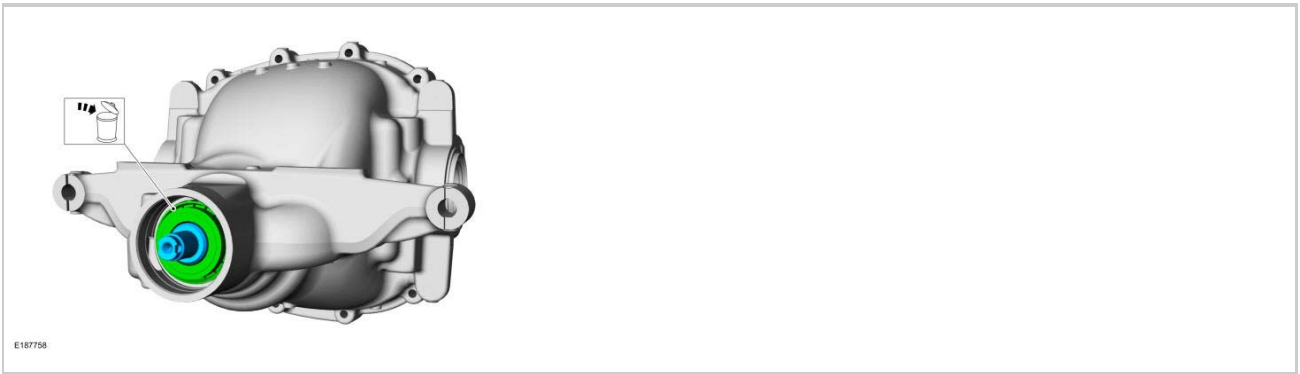
Remove the differential carrier. Refer to: Differential Carrier .

2.

Remove the drive pinion seal. Refer to: Drive Pinion Seal .

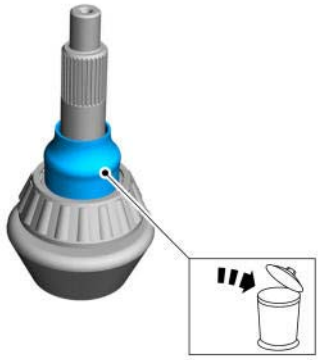
3.

Remove the drive pinion outer shim.



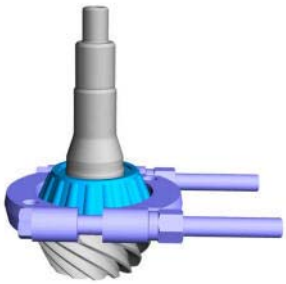
4.

Using the special tool and a soft face mallet, tap drive pinion free of the of the drive pinion outer bearing. Use Special Service Tool: 205-229 (T85T-4209-AH) Protector, Drive Pinion Thread. Use the General Equipment: Rubber Mallet



5.

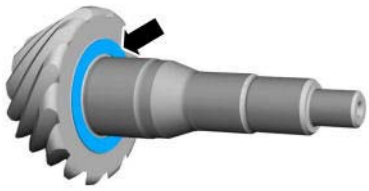
Remove the drive pinion and remove and discard the drive pinion outer bearing.



6.

Remove and discard the drive pinion collapsible spacer.

E179187



7.

Using the bearing puller and a hydraulic press, remove and discard the inner drive pinion bearing. Use Special Service Tool: 205-D064 (D84L-1123-A) Puller, Bearing. Use the General Equipment: Hydraulic Press

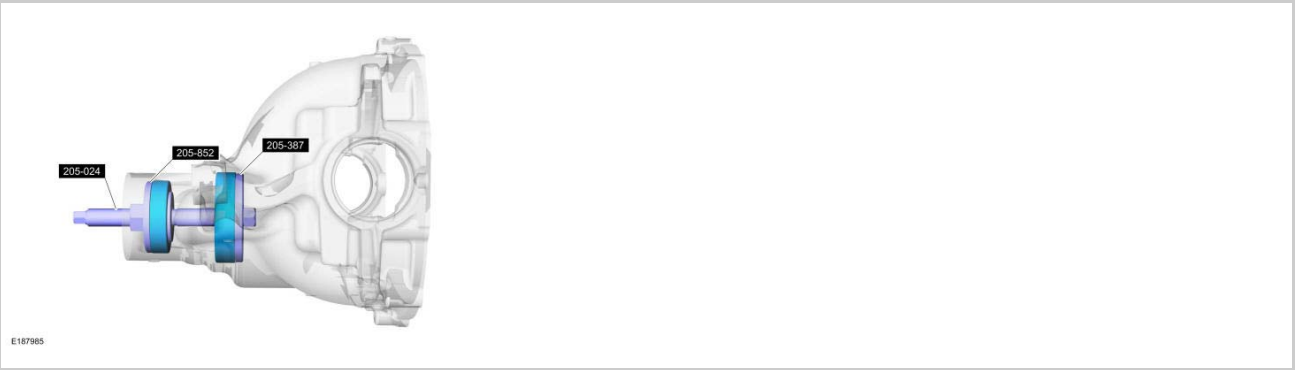
E181945

8.

Remove the inner drive pinion bearing shim.

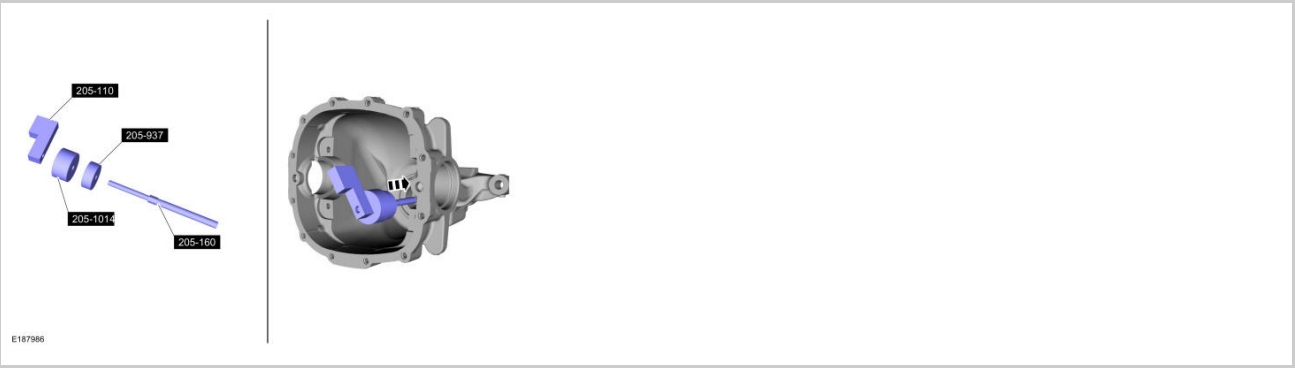
E181946

9.



Using the general equipment, remove and discard the drive pinion bearing cups. Use the General Equipment: Punch Use the General Equipment: Copper Hammer

REMOVAL AND INSTALLATION > DRIVE PINION > INSTALLATION



NOTE: Make sure the drive pinion bearing cups are seated correctly or damage to the components may occur.

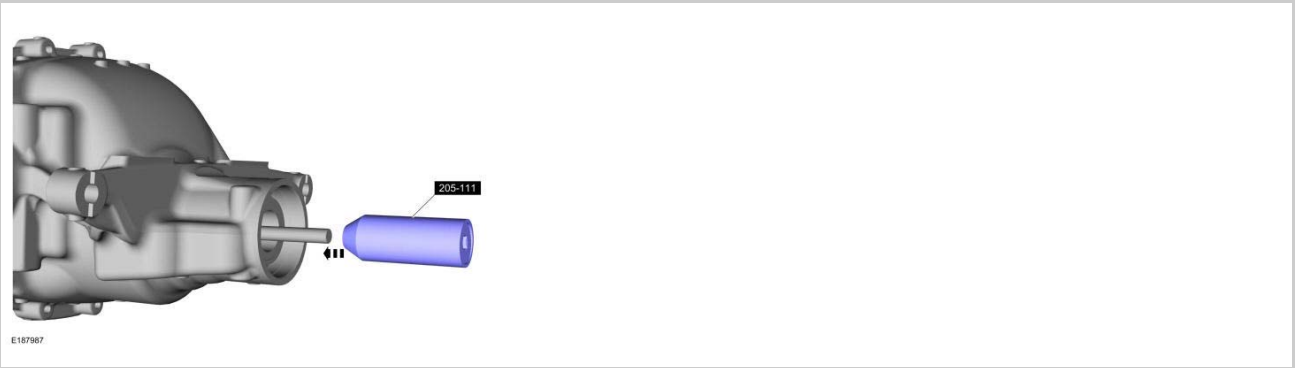
1.
Using the special tools, install the new inner and new outer drive pinion bearing cups. Use Special Service Tool: 205-024 (T67P-4616-A)Installer, Drive Pinion Bearing Cup., 205-852 Inner Pinion Bearing Cup Installer., 205-387 (T97T-4628-A) Installer, Rear Axle Bearing Cup.

NOTE: Only tighten finger tight at this stage.

2.
Assemble the special tools in the differential housing. Use Special Service Tool: 205-110 (T76P-4020-A10)Adapter for 205-S127., 205-160 (T80T-4020-F43) Adapter for 205-S156 Pinion Depth Gauge., 205-937 Adapter, Pinion Aligning., 205-1014 Gauge Disc.

3.

Install the special tool. Use Special Service Tool: 205-111(T76P-4020-A11) Adapter for 205-S127 Pinion Depth Gauge.



NOTE: This step duplicates final drive pinion bearing preload

Tighten the special tool to the specified torque.

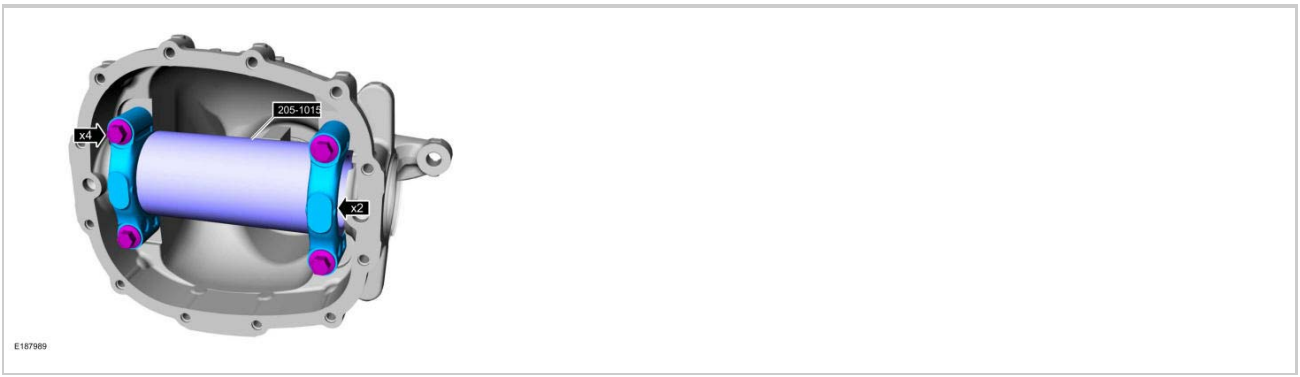
Torque

: 18 lb.in (2 Nm)

Slowly rotate and record the rotational torque readings.

4.

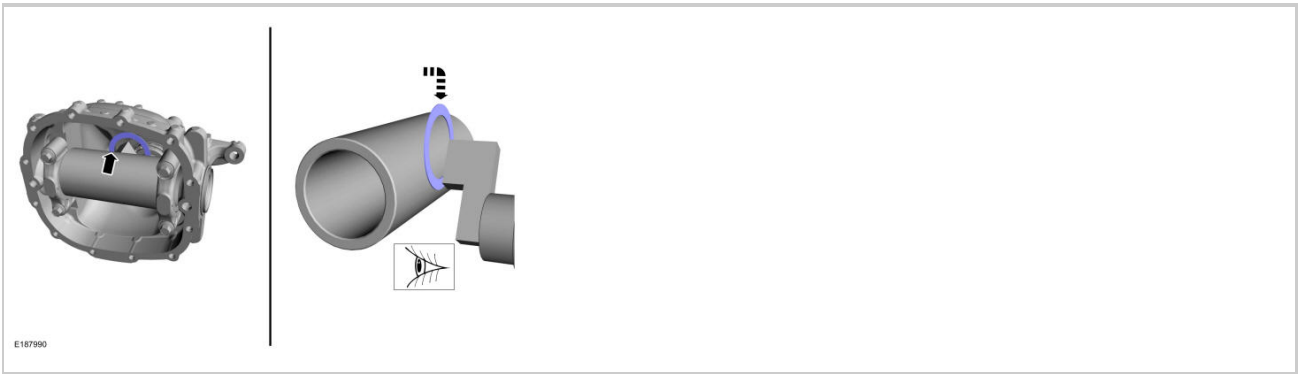
Check for proper location of special tools.



5.

Position the special tool. Install the differential bearing caps and differential bearing cap bolts. Use Special Service Tool: 205-1015 Gauge Tube.

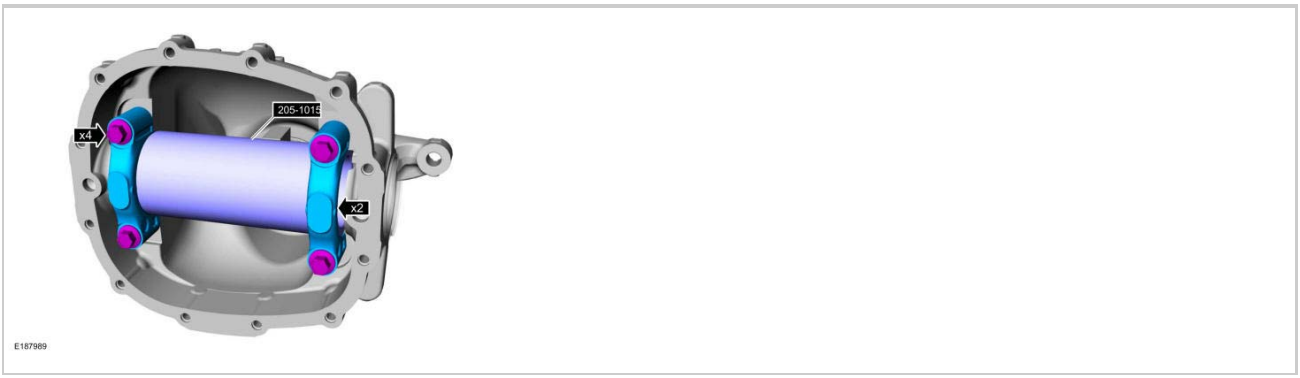
Torque



: 71 lb.ft (96 Nm)

NOTE: A slight drag should be felt for correct drive pinion bearing adjustment shim selection. Do not attempt to force the drive pinion bearing adjustment shim between the gauge block and the gauge tube. This will minimize selection of a drive pinion bearing adjustment shim thicker than required, which results in a deep tooth contact in the final assembly of integral axle assemblies.

NOTE: Drive pinion bearing adjustment shims must be flat and clean.

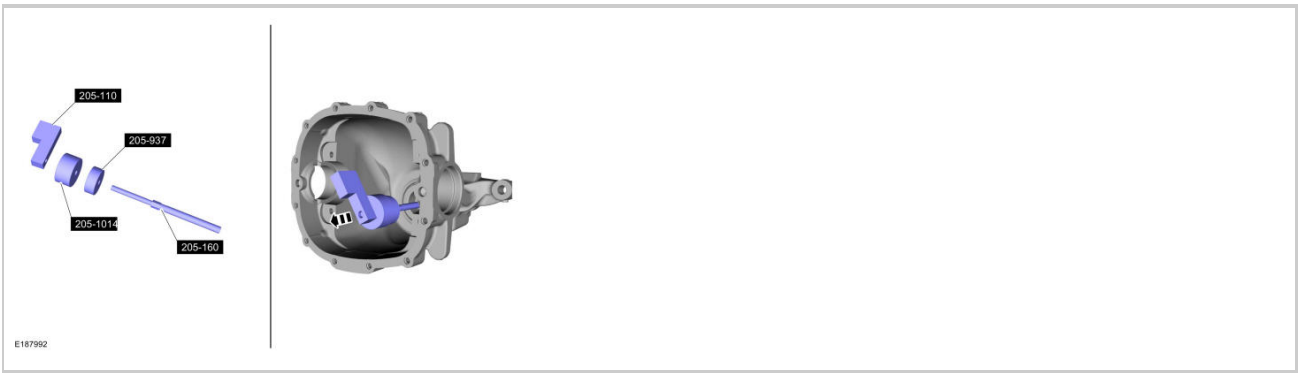


6.
Use a drive pinion bearing adjustment shim as a gauge for drive pinion bearing adjustment shim selection.

NOTE: The differential bearing caps need to stay in the correct orientation for installation.

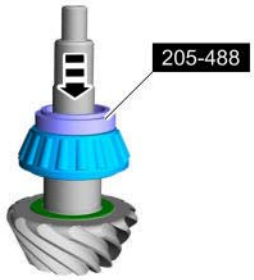
7.
Remove the differential bearing cap bolts and differential bearing caps, remove the special tools.

Use Special Service Tool: 205-1015 Gauge Tube.



8.

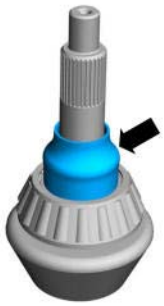
Remove the special tool. Use Special Service Tool: 205-111(T76P-4020-A11)Adapter for 205-S127 Pinion Depth Gauge.



9.

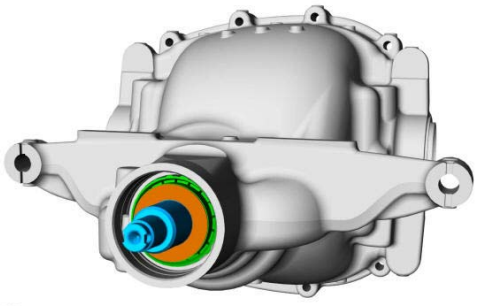
Remove the special tools. Use Special Service Tool: 205-110 (T76P-4020-A10) Adapter for 205-S127., 205-160 (T80T-4020-F43) Adapter for 205-S156 Pinion Depth Gauge., 205-937 Adapter, Pinion Aligning., 205-1014 Gauge Disc.

10.



Install the drive pinion inner bearing and selected drive pinion bearing adjustment shim until they are firmly seated on the drive pinion. Use Special Service Tool: 205-488 Installer, Drive Pinion Bearing. Use the General Equipment: Hydraulic Press

E181974



11.

Install the new drive pinion collapsible spacer.

E178165

12.

Install the new outer differential pinion bearing, outer differential pinion shim and the differential pinion.

E187760

NOTE: When installing the drive pinion flange and pinion nut with no differential carrier installed, the drag torque (torque to turn) should be 2.5 to 3.5 Nm (23-33 in-lbs).

13.
Install the drive pinion seal. Refer to: Drive Pinion Seal .

14.

Install the differential carrier. Refer to: Differential Carrier .

REMOVAL AND INSTALLATION > DRIVE PINION FLANGE

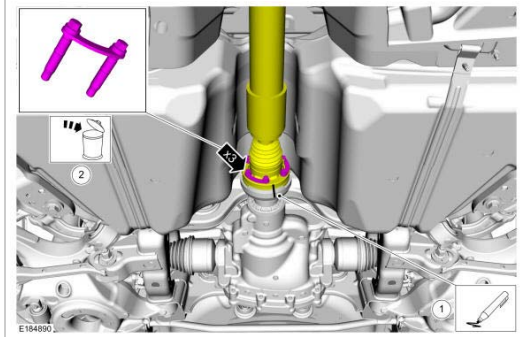
Special Tool(s) / General Equipment

	205-126 (T78P-4851-A) Holding Fixture, Drive Pinion Flange
	205-233 (T85T-4851-AH) Installer, Drive Pinion Flange TKIT-1985-FH-1
Flat Headed Screw Driver	
Three Leg Puller	

REMOVAL AND INSTALLATION > DRIVE PINION FLANGE > REMOVAL

NOTE: The rear brake calipers and brake pads must be removed for accurate pinion nut drag torque readings.

1.
Remove the rear brake pads. Refer to: Brake Pads .



2.

1.

Index mark the driveshaft and the pinion flange for reference during installation.

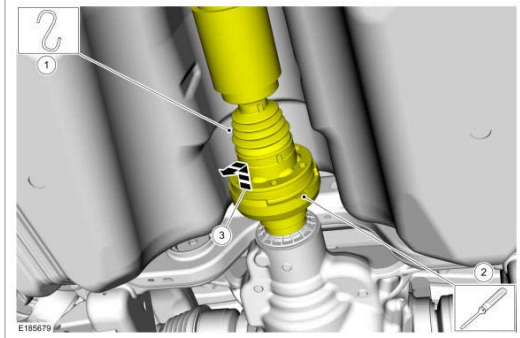
2.

Remove and discard the driveshaft to pinion flange bolts.

NOTE: Do not over articulate the driveshaft or damage may occur.

3.

1.



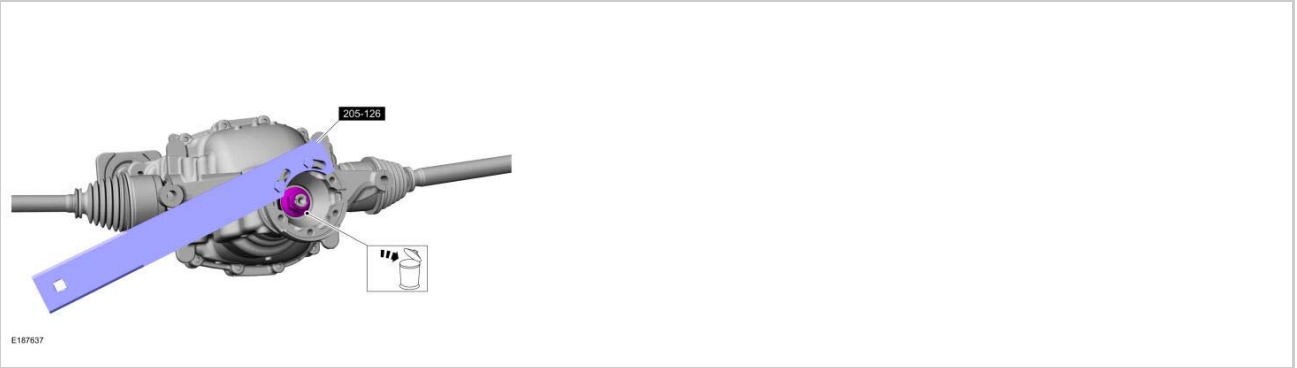
Support the driveshaft.

2.

Using a screwdriver inserted into the slot on the pinion flange, pry the driveshaft from the pinion flange. Use the General Equipment: Flat Headed Screw Driver

3.

Separate the driveshaft from the pinion flange.

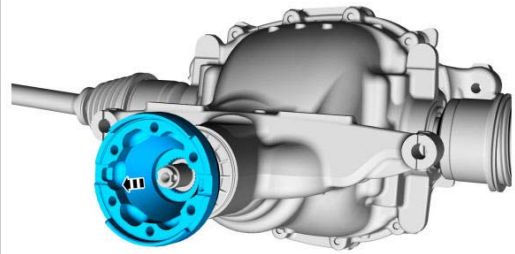


NOTE: Rotational torque of the drive pinion flange must be measured and recorded using a Nm (lb-in) torque wrench for correct pinion bearing preload when reassembled. This will be the torque-to-turn measurement.

4.
Using a dial type torque wrench, measure and record the rotational torque of the drive pinion.

5.

Using the special tool to hold the pinion flange, remove and discard the pinion nut. Use Special Service Tool: 205-126 (T78P-4851-A) Holding Fixture, Drive Pinion Flange.

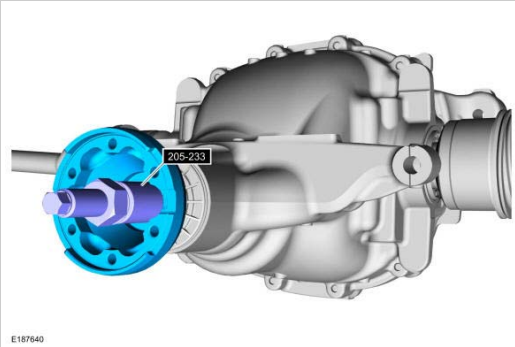


6.

Mark the drive pinion flange and the drive pinion stem for reassembly.

7.

Using the general equipment, remove the pinion flange. Use the General Equipment: Three Leg Puller

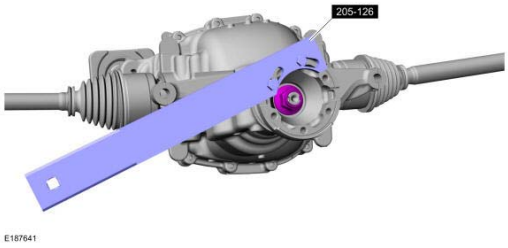


REMOVAL AND INSTALLATION > DRIVE PINION FLANGE > INSTALLATION

1.

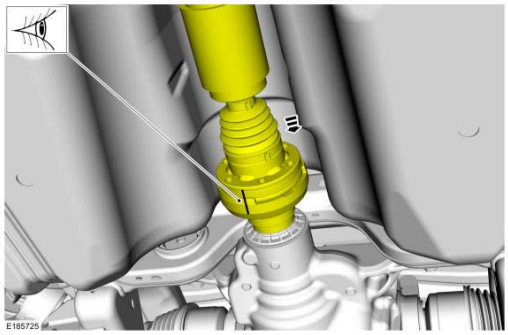
If necessary, install a new drive pinion seal. Refer to: Drive Pinion Seal .

> *NOTE: Mure sure drive pinion flange and drive pinion stem are phased correctly using previously applied mark.*



2.
Using the special tool, install the pinion flange. Use Special Service Tool: 205-233 (T85T-4851-AH) Installer, Drive Pinion Flange.

> *NOTE: Refer to the rotational torque previously recorded with the Nm (lb-in) torque wrench. Tighten the pinion nut in small increments until it is 0.00 Nm to +0.3 Nm (0 lb-in to 3 lb-in) of the reference measurement. If 0.3 Nm (3 lb-in) is exceeded, then the collapsible spacer will be damaged and a new collapsible spacer will be required.*

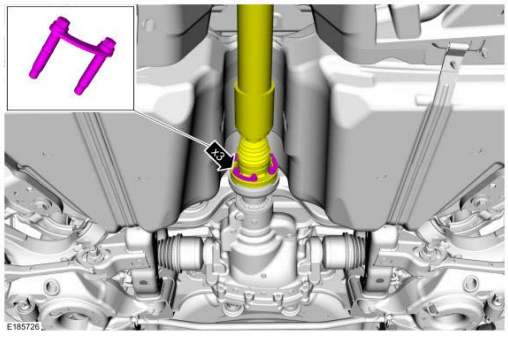


> *NOTE: When installing the drive pinion flange and pinion nut with no differential carrier installed, the drag torque (torque to turn) should be 2.5 to 3.5 Nm (23-33 in-lbs).*

3.
Using the special tool to hold the pinion flange, install the new pinion nut. Use Special Service Tool: 205-126 (T78P-4851-A) Holding Fixture, Drive Pinion Flange.

NOTE: The help of a assistant will be needed. Do not over articulate the driveshaft or damage may occur.

4.
Align the index-mark on driveshaft to the rear axle pinion flange.



NOTE: Make sure the driveshaft is fully seated into the pinion flange before installing the driveshaft to pinion flange bolts.

5.
Install the new driveshaft-to-pinion flange bolts.

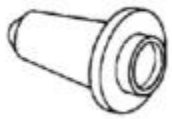
Torque

: 41 lb.ft (55 Nm)

6.

Install the rear brake pads. Refer to: Brake Pads .

REMOVAL AND INSTALLATION > DRIVE PINION FRONT BEARING > REMOVAL AND INSTALLATION



NOTE: The outer differential bearing cup needs to be replaced when replacing the outer differential bearing.

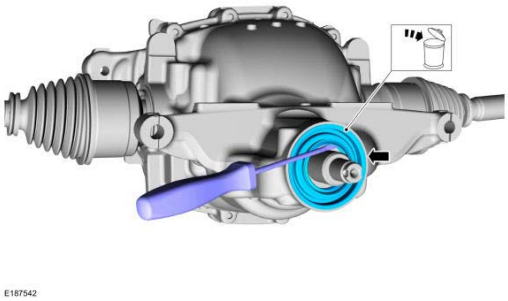
1.

Refer to: Drive Pinion .

REMOVAL AND INSTALLATION > DRIVE PINION SEAL

Special Tool(s) / General Equipment

	205-208 (T83T-4676-A) Installer, Drive Pinion Oil Seal TKIT-1983-F TKIT-1983-FLM TKIT-1983-FX
Flat Headed Screw Driver	

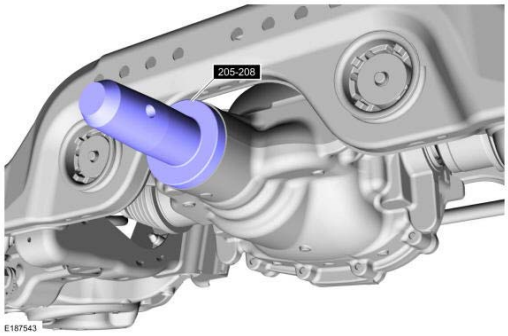


REMOVAL AND INSTALLATION > DRIVE PINION SEAL > REMOVAL

1.

Remove the drive pinion flange. Refer to: Drive Pinion Flange .

2.

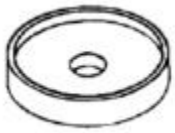


Using a flat blade screwdriver, remove and discard the drive pinion seal. Use the General Equipment: Flat Headed Screw Driver

REMOVAL AND INSTALLATION > DRIVE PINION SEAL > INSTALLATION

1.

Using the special tool, install the drive pinion seal. Use Special Service Tool: 205-208 (T83T-4676-A) Installer, Drive Pinion Oil Seal.



2.

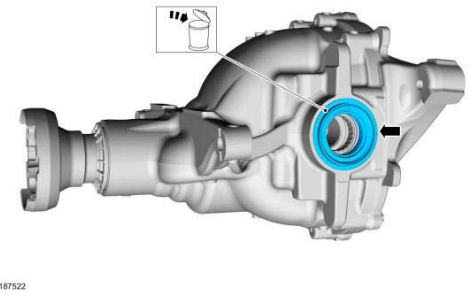
Install the drive pinion flange. Refer to: Drive Pinion Flange .

REMOVAL AND INSTALLATION > REAR HALFSHAFT SEAL

Special Tool(s) / General Equipment

	205-1013 Installer, Rear Axle pilot bearing TKIT-2014D-FL_ROW TKIT-2014D-ROW2
	205-504 Installer, Halfshaft Pilot Bearing TKIT-2002N-F/FM TKIT-2002N-FLM TKIT-2002N-LM

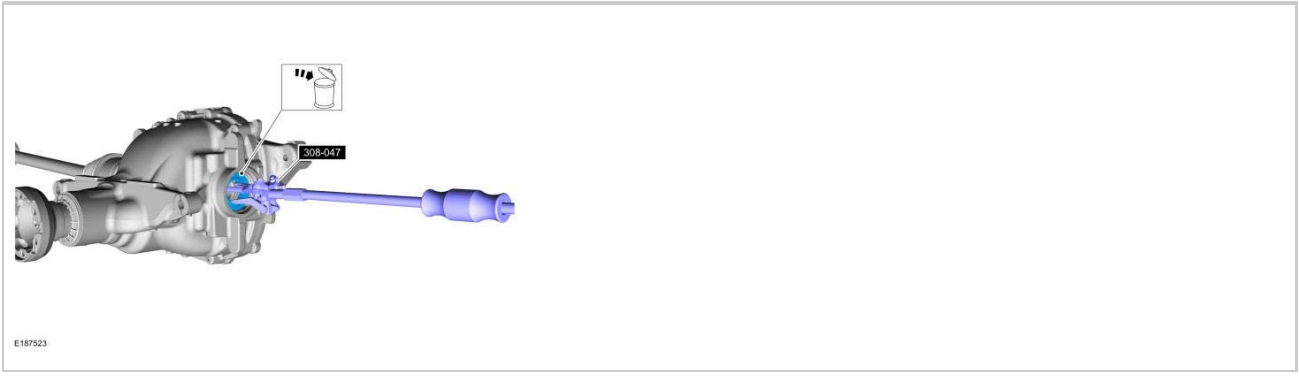
	205-907 Handle, 32 Driver TKIT-2008DH-FLM
	206-034 (T88P-20202-B) Installer, Wheel Speed Sensor Ring TKIT-1988-FLM TKIT-1988-LM
	308-047 (T77F-1102-A) Remover, Bearing Cup
Slide Hammer	



REMOVAL AND INSTALLATION > REAR HALFSHAFT SEAL > REMOVAL

1.

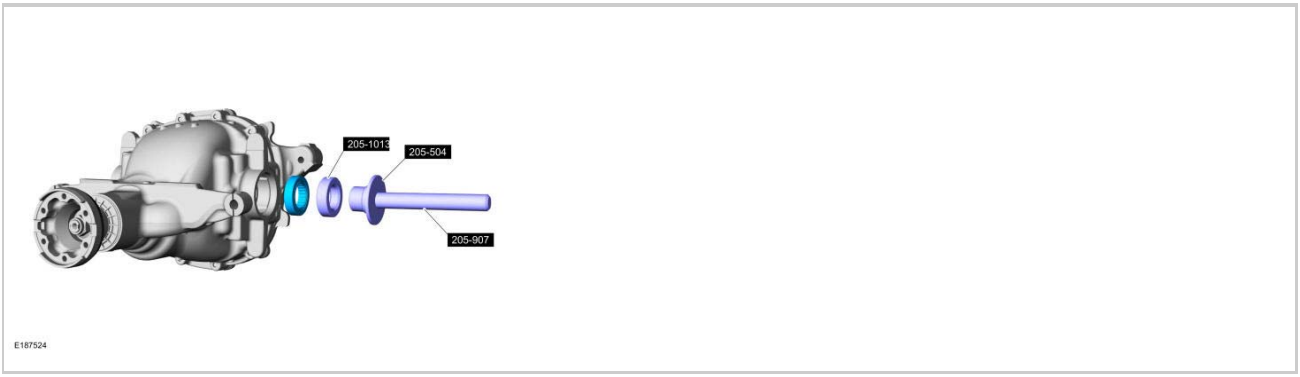
Remove the rear halfshafts. Refer to: Rear Halfshaft .



2.

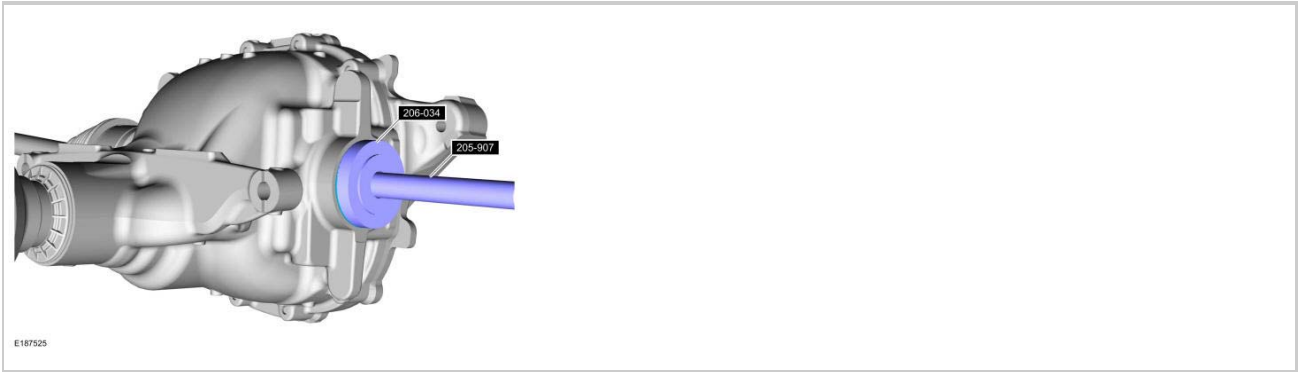
Remove and discard the rear half halfshaft seal.

3.



Remove and discard the rear halfshaft pilot bearing. Use Special Service Tool: 308-047 (T77F-1102-A) Remover, Bearing Cup. Use the General Equipment: Slide Hammer

REMOVAL AND INSTALLATION > REAR HALFSHAFT SEAL > INSTALLATION



1.

Install the new rear halfshaft pilot bearing. Use Special Service Tool: 205-907 Handle, 32 Driver., 205-504 Installer, Halfshaft Pilot Bearing., 205-1013 Installer, Rear Axle pilot bearing.

2.

Install the new rear half halfshaft seal. Use Special Service Tool: 206-034 (T88P-20202-B) Installer, Wheel Speed Sensor Ring., 205-907 Handle, 32 Driver.

3.

Install the rear halfshaft. Refer to: Rear Halfshaft .

4.

Check the differential fluid level. Refer to: Differential Fluid Level Check .

DISASSEMBLY AND ASSEMBLY > DIFFERENTIAL CARRIER

Special Tool(s) / General Equipment

	205-022 (T66L-4204-A) Gauge, Differential Clutch
 E188621	205-1016 Installer, Differential Bearing TKIT-2014D-FL_ROW TKIT-2014D-ROW2

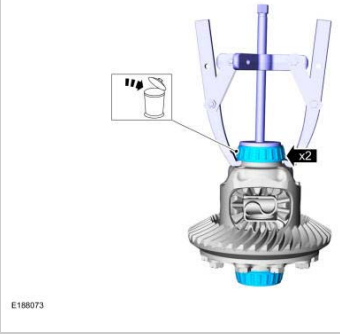
	205-D061 (D83T-4205-C2) Step Plate
 E155534	205-D072 (D97L-4221-A) 2 Jaw Puller
Feeler Gauge	
Rubber Mallet	
Punch	
Copper Hammer	
Vise	

Materials

Name	Specification
Motorcraft ® Additive Friction Modifier (U.S.) XL-3 (U.S.)	EST-M2C118-A
Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant XY-75W85-QL	WSS-M2C942-A

DISASSEMBLY AND ASSEMBLY > DIFFERENTIAL CARRIER > DISASSEMBLY

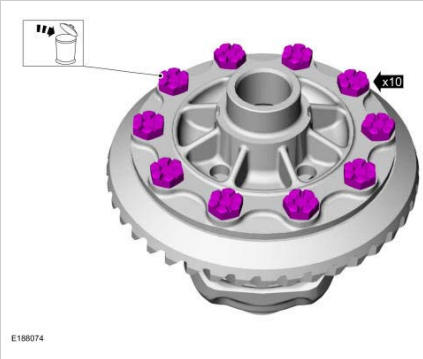
NOTE: This differential is serviced as an assembly with the differential spider gears and the differential side gears.



NOTE: Conventional differential carrier assembly shown, limited slip differential assembly similar.

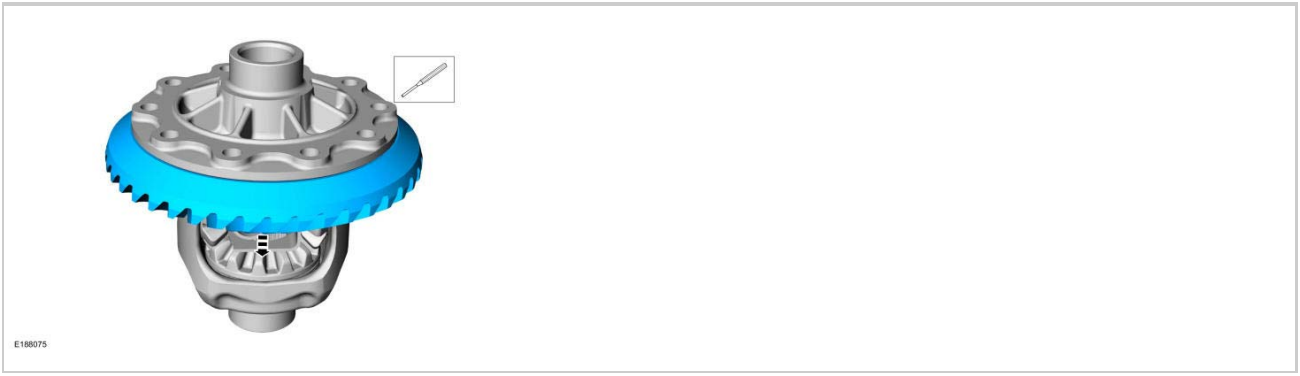
1.

Remove the differential carrier. Refer to: Differential Carrier .



2.

Using the general equipment, remove and discard the differential bearings. Use Special Service Tool: 205-D072 (D97L-4221-A) 2 Jaw Puller., 205-D061 (D83T-4205-C2) Step Plate.



3.

Remove and discard the ring gear bolts.

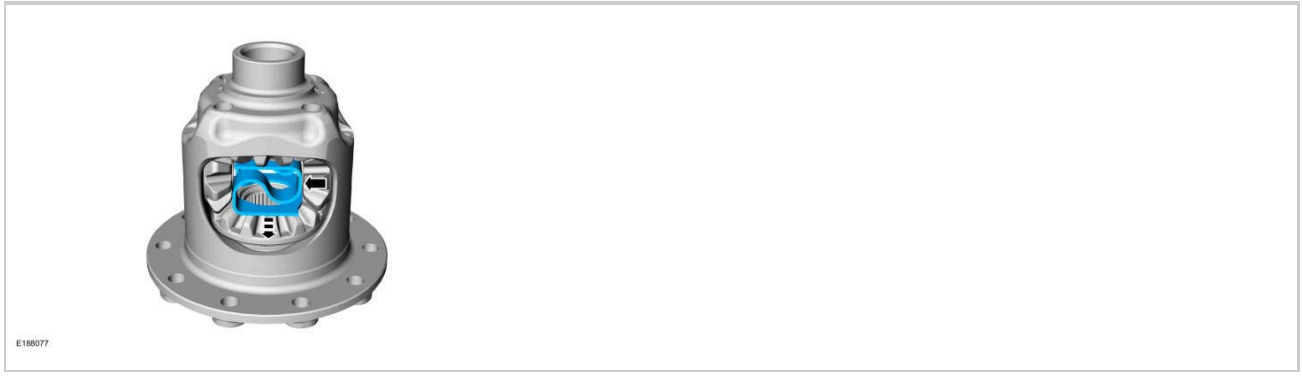
4.

Using the brass punch and a soft face hammer, remove the ring gear. Use the General Equipment: Punch Use the General Equipment: Copper Hammer

5.

1.

Remove and discard the differential pinion shaft lock bolt.



2.

Remove the differential pinion shaft.

NOTE: Due to the spring tension, care must be used when removing the differential s-spring.

6.
Remove the differential s-spring.

7.

Remove the differential pinion gears and the pinion gear thrust washers.

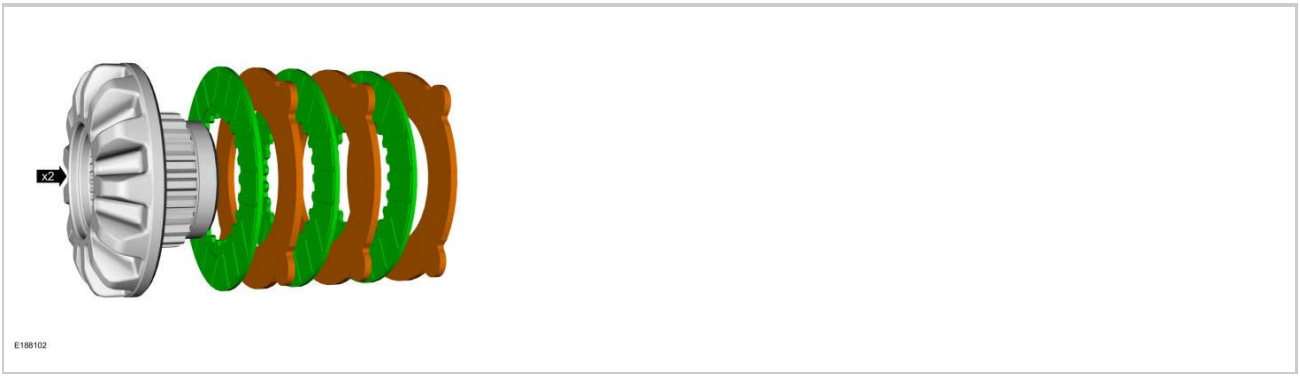
NOTE: Keep the differential clutch packs in order. Do not mix the differential clutch packs. The differential clutch packs must be reassembled in the same sequence.

8.
Remove the differential side gears and disassemble the clutch assemblies.

DISASSEMBLY AND ASSEMBLY > DIFFERENTIAL CARRIER > ASSEMBLY

1.

Lubricate the differential steel clutch plates. Soak the differential friction plates for no less than 15 minutes.



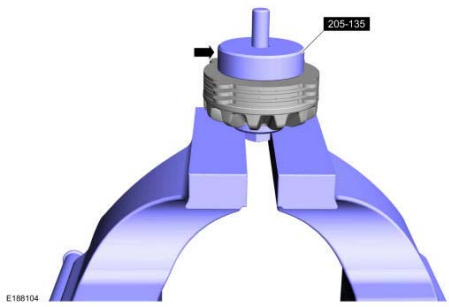
Material

: Motorcraft ® Additive Friction Modifier (U.S.) / XL-3 (U.S.) (EST-M2C118-A)

NOTE: Do not mix the clutch plates, clutch discs or shim from one side with the other.

2.
Assemble the differential clutch packs on their respective differential side gear.

3.

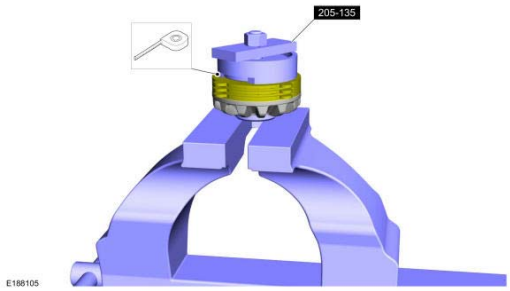


Place the base portion of the Differential Clutch Gauge in a vise. Install the differential side gear and differential clutch pack (without the shim and spacer) on the tool. Use Special Service Tool: 205-135 Gauge, Differential Clutch. Use the General Equipment: Vise

4.

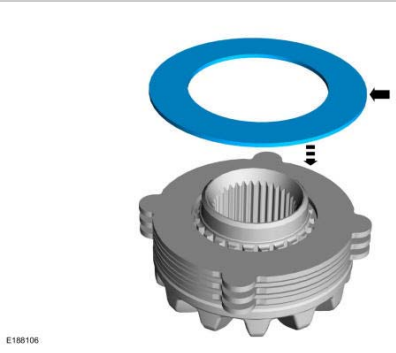
Position the Differential Clutch Gauge hand-tight on top of the differential clutch pack. Use Special

Service Tool: 205-135 Gauge, Differential Clutch. Use the General Equipment: Vise



5.

Select and insert the thickest feeler gauge blade that will enter between the tool and the differential clutch pack. Use the differential clutch pack chart to determine the correct thickness clutch shim to use. Refer to: Specifications . Use Special Service Tool: 205-135 Gauge, Differential Clutch. Use the General Equipment: Vise Use the General Equipment: Feeler Gauge

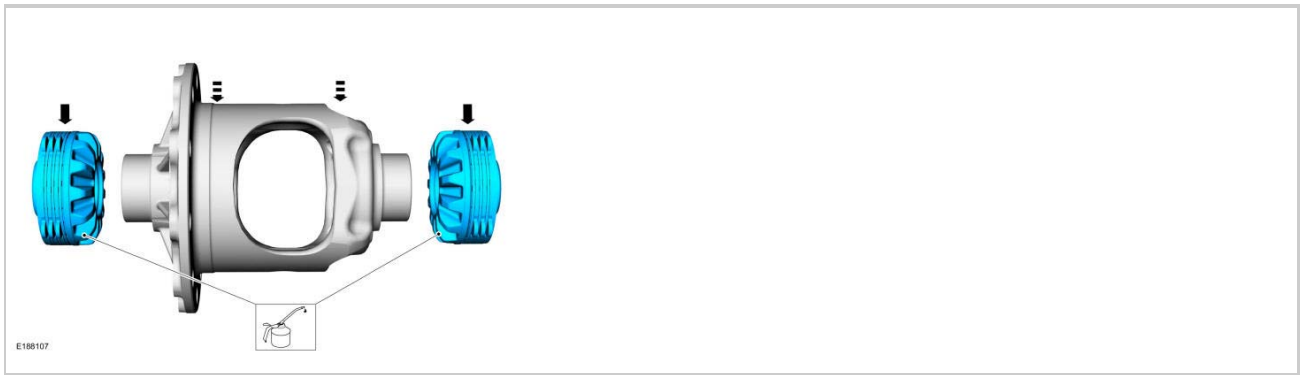


Torque

: 59 lb.in (6.7 Nm)

NOTE: Do not use more than 2 shims per side.

6.
With the special tool removed, Install the selective shim on the differential side gear and clutch pack assembly.



7.

Lube and install the differential side gear assemblies in the differential case.

Material

: Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant / XY-75W85-QL (WSS-M2C942-A)

8.

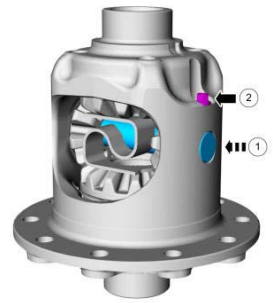
Lube and install the differential pinion gear and differential pinion thrust washer assemblies in the differential case.

Material

: Motorcraft ® SAE 75W-85 Premium Synthetic Hypoid Gear Lubricant / XY-75W85-QL (WSS-M2C942-A)

NOTE: The s-spring has tension and may need to be tapped in with a soft faced mallet.

9.
Install the differential S-spring. Use the General Equipment: Rubber Mallet



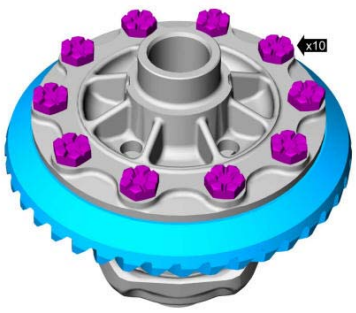
10.

Install the differential pinion shaft.

Install the new differential pinion shaft bolt.

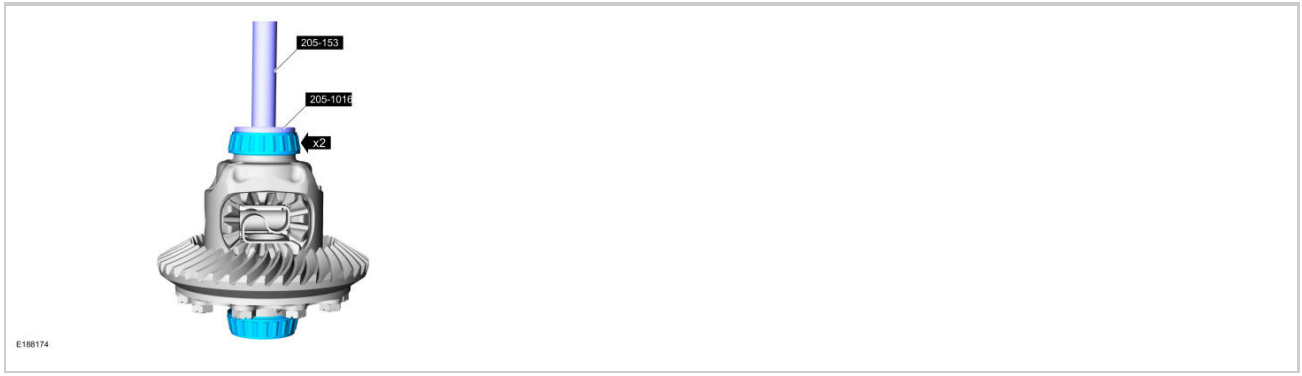
Torque

: 25 lb.ft (34 Nm)



NOTE: Tighten the ring gear bolts in a cross pattern.

11.
Install the ring gear and the new ring gear bolts.

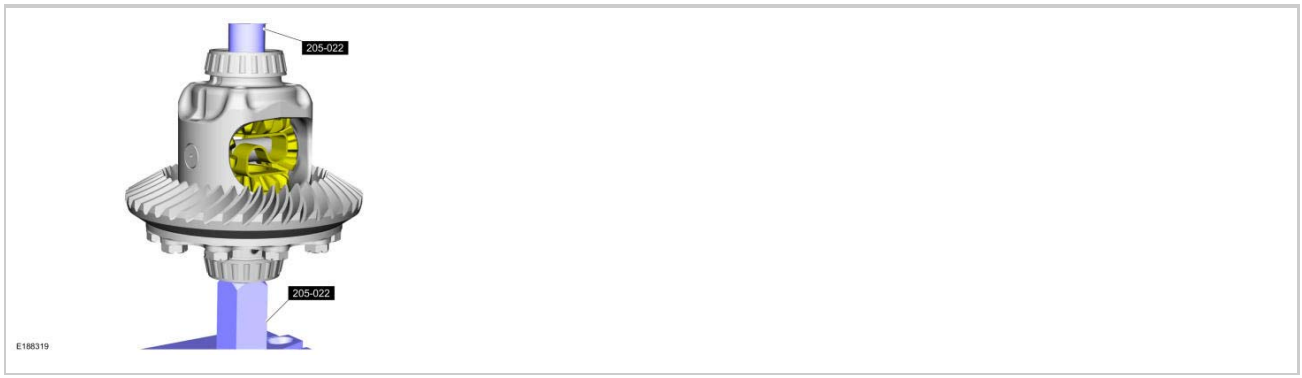


Torque

: 100 lb.ft (135 Nm)

12.

Using the special tools, install the new differential bearings. Use Special Service Tool: 205-153 (T80T-4000-W) Handle., 205-1016 Installer, Differential Bearing.



NOTE: The initial minimum break-away torque, if original clutch plates are used, must be within the specification below. The minimum rotating torque required to keep the differential side gear turning with new clutch plates may vary.

13.
Using the special tool, check the torque required to rotate one differential side gear. Use Special Service Tool: 205-022 (T66L-4204-A) Gauge, Differential Clutch. Use the General Equipment: Vise

Torque

: 20 lb.ft (27 Nm)

14.

Install the differential carrier. Refer to: Differential Carrier .

Service Manual: REAR DRIVE HALFSHAFTS

DIAGNOSIS AND TESTING > REAR DRIVE HALFSHAFTS > PRINCIPLES OF OPERATION

Inspection and Verification

1.

Verify the customer concern.

2.

Visually inspect for obvious signs of mechanical or electrical damage.

3.

If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step

4.

If the cause is not visually evident, verify the symptom and refer to the Symptom Chart(s) .

DIAGNOSIS AND TESTING > REAR DRIVE HALFSHAFTS > SYMPTOM CHART(S)

Diagnostics in this service information assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods .

Symptom Chart: NVH

Symptom Chart

Condition	Possible Sources	Actions
Driveline clunk - loud clunk when shifting from REVERSE to DRIVE	Damaged or worn CV joints	INSPECT the CV joints for wear or damage. INSTALL a new halfshaft as necessary. REFER to: Rear Halfshaft .
	Loose hub nut	CHECK the torque on the hub nut. REPLACE the hub nut if the torque is not at specification. For hub nuts. REFER to: Wheel Bearing and Wheel Hub .
Driveline clunk - occurs as the vehicle starts to move forward following a stop	Loose hub nut	CHECK the torque on the hub nut. REPLACE the hub nut if the torque is not at specification. REFER to: Rear Halfshaft . REFER to: Wheel Bearing and Wheel Hub .

Grunting - normally associated with a shudder experienced during acceleration from a complete stop	Halfshaft CV joint binding	CHECK the outer CV joint for correct seating into the hub. REPAIR as necessary. REFER to: Rear Halfshaft .
Driveline vibration - occurs at cruising speeds	Binding or damaged CV joint	CHECK the outer CV joint for correct seating into the hub. REPAIR as necessary. REFER to: Rear Halfshaft . REFER to: Wheel Bearing and Wheel Hub .

DIAGNOSIS AND TESTING > REAR DRIVE HALFSHAFTS > DIFFERENTIAL SEALS

NOTE: When installing shafts, do not allow splines to contact seals during installation or damage to the seals may occur.

Halfshaft seals are susceptible to the same types of damage as drive pinion seals if incorrectly installed. The seal bore must be clean and the lip handled carefully to avoid cutting or tearing it. The seal journal surface must be free of nicks, gouges and rough surface texture.

For information on differential seals, REFER to: Rear Halfshaft Seal .

REMOVAL AND INSTALLATION > INNER CONSTANT VELOCITY (CV) JOINT BOOT

Special Tool(s) / General Equipment

Flat Headed Screw Driver
Boot Clamp Pliers
Rubber Mallet
Three Leg Puller

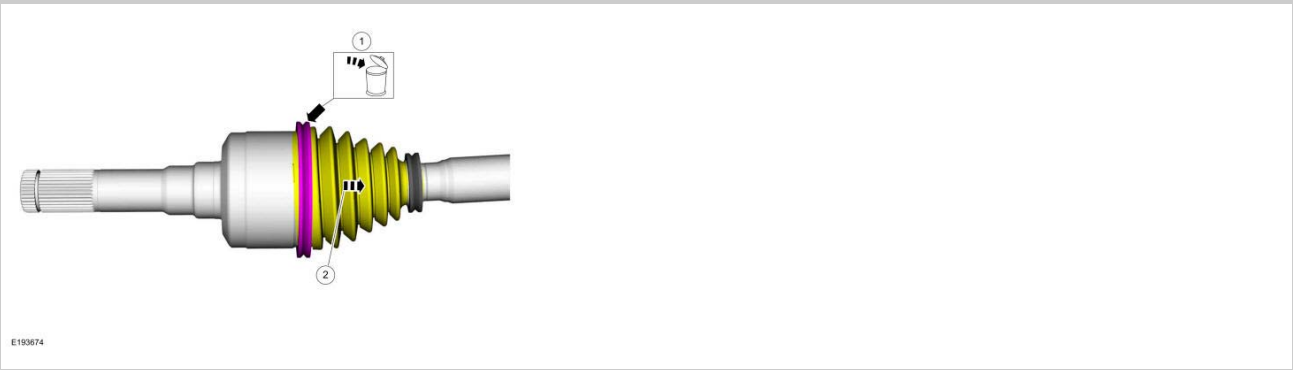
Materials

Name	Specification
Constant Velocity Joint Grease (High Temperature) XG-5	WSS-M1C258-A1

REMOVAL AND INSTALLATION > INNER CONSTANT VELOCITY (CV) JOINT BOOT > REMOVAL

1.

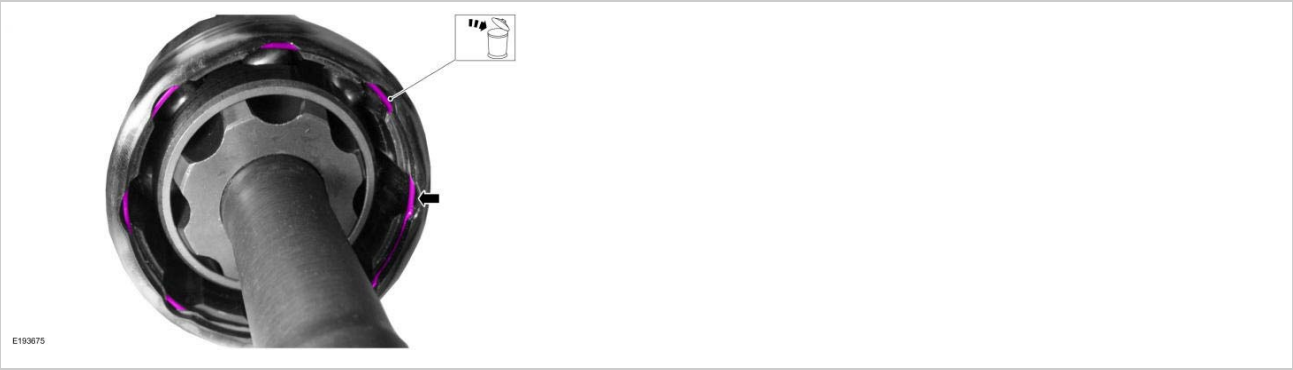
Remove the halfshaft. Refer to: Rear Halfshaft .



2.

1.

Remove and discard the large CV boot clamp.

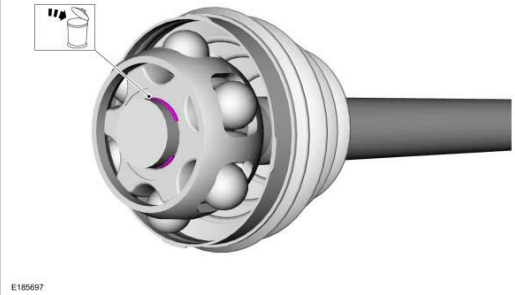


2.

Position the CV boot to access the inner CV housing retaining ring.

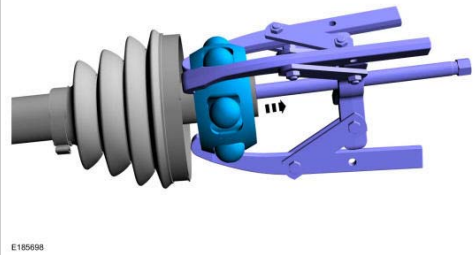
3.

Remove and discard the inner CV housing retaining ring.



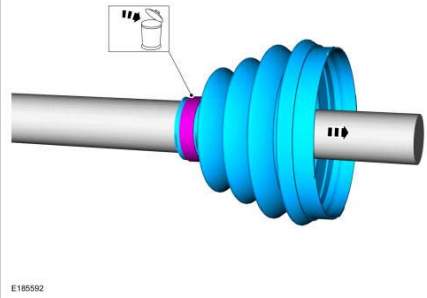
4.

Remove the inner CV joint housing.



NOTE: The CV joint cage balls are free to fall out.

5.
Remove and discard the CV joint cage circlip.



NOTE: The CV joint cage balls are free to fall out.

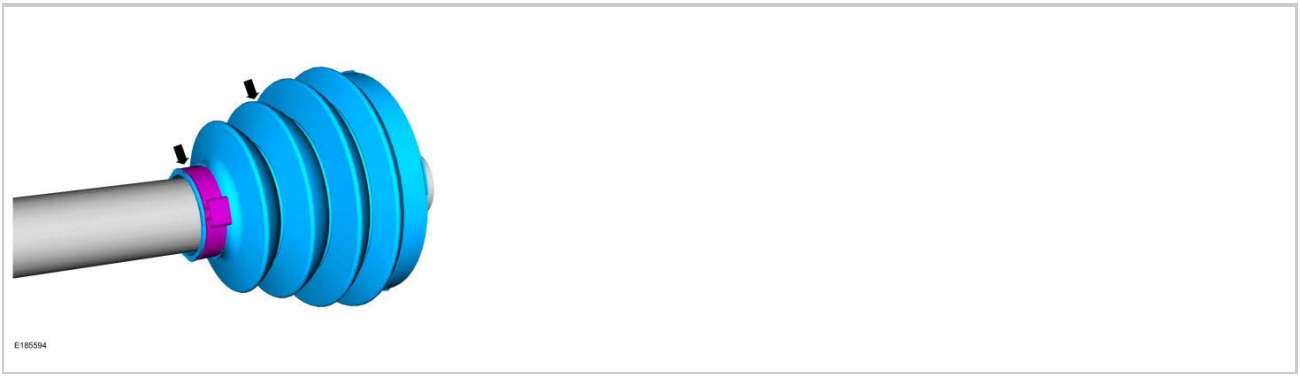
6.
Using a 3-leg puller, remove the CV joint cage. Use the General Equipment: Three Leg Puller

7.

Remove and discard the small clamp and remove the CV joint boot.

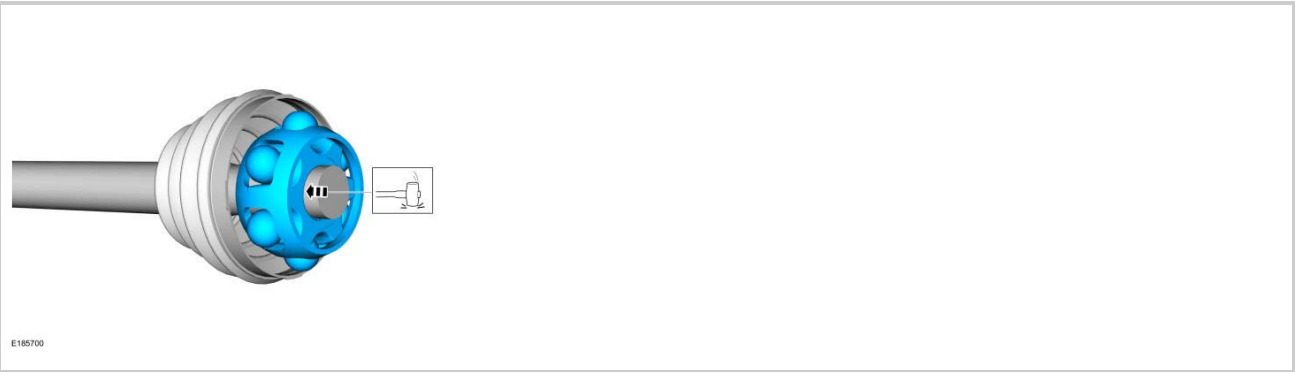
REMOVAL AND INSTALLATION > INNER CONSTANT VELOCITY (CV) JOINT BOOT >

INSTALLATION



NOTE: CV cage is shown in illustration assembled.

1.
Clean and inspect the CV joint cage.



2.

Using boot clamp pliers, install the new CV joint boot and the new small CV joint boot clamp. Use the General Equipment: Boot Clamp Pliers

NOTE: The CV joint cage is a snug fit and may need to tapped on with a soft face mallet.

3.
Using a soft face mallet, install the CV joint cage. Use the General Equipment: Rubber Mallet

4.

Install the new CV joint cage circlip.

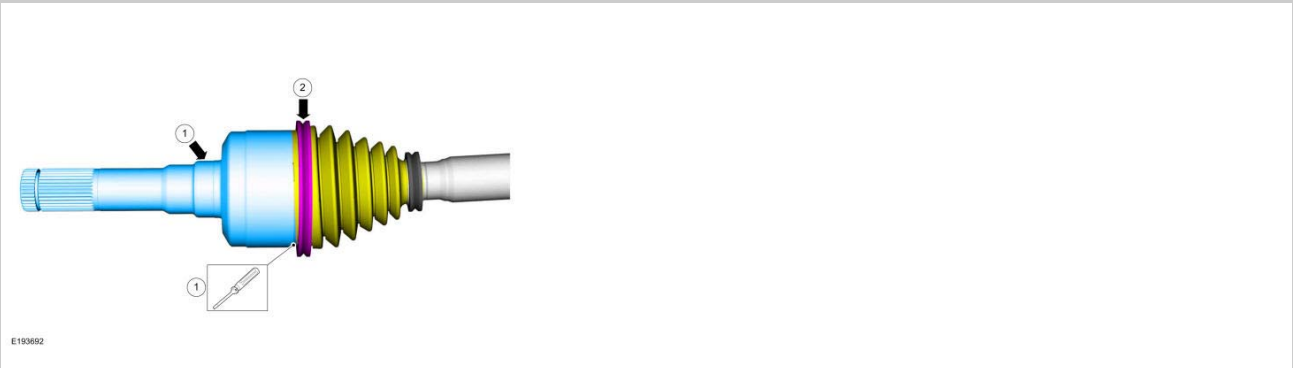
5.

Install the grease sachet evenly in the CV joint boot and housing.

Material

: Constant Velocity Joint Grease (High Temperature) / XG-5 (WSS-M1C258-A1)

NOTE: When installing the CV joint housing, insert a small flat blade screwdriver under the CV joint boot seat to allow air to escape.



6.
Install the inner CV housing.

1.

Using a flat blade screw driver to allow air to escape, install the CV joint housing. Use the General Equipment: Flat Headed Screw Driver

2.

Using boot clamp pliers, install the new large CV joint boot clamp. Use the General Equipment: Boot Clamp Pliers

7.

Install the halfshaft. Refer to: Rear Halfshaft .

REMOVAL AND INSTALLATION > OUTER CONSTANT VELOCITY (CV) JOINT BOOT

Special Tool(s) / General Equipment

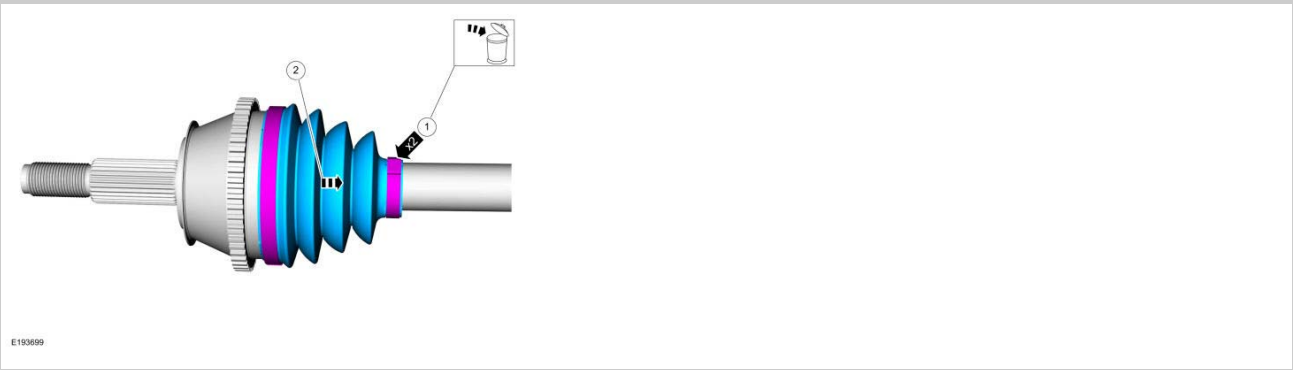
Flat Headed Screw Driver
Boot Clamp Pliers

REMOVAL AND INSTALLATION > OUTER CONSTANT VELOCITY (CV) JOINT BOOT > REMOVAL

NOTE: Only the RH halfshaft outer CV joint boot is serviceable.

1.

Remove the inner CV joint boot. Refer to: Inner Constant Velocity (CV) Joint Boot .

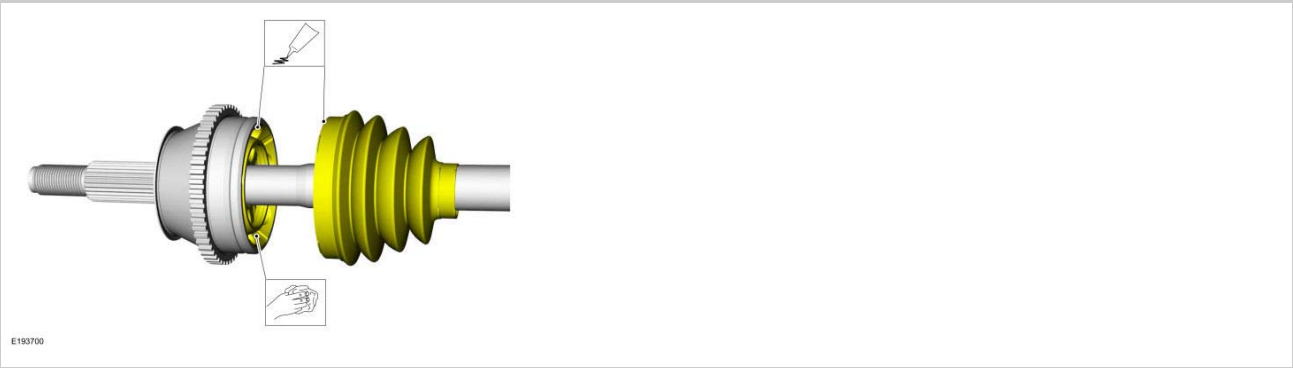


2.

1.

Remove and discard the CV joint boot clamps.

2.



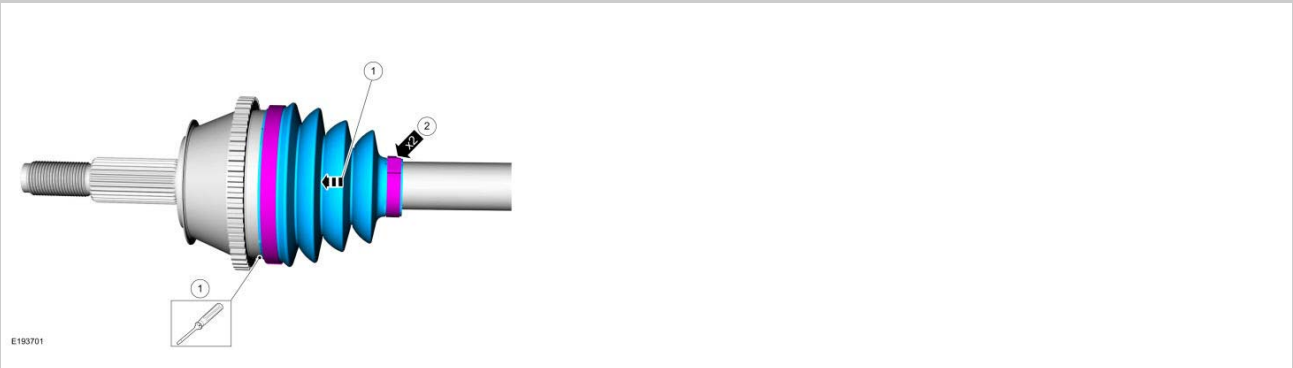
Remove the CV joint boot.

REMOVAL AND INSTALLATION > OUTER CONSTANT VELOCITY (CV) JOINT BOOT > INSTALLATION

1.

Clean and inspect the CV joint cage. Install The grease sachet evenly in the CV joint boot and housing.

2.



Install the CV joint housing.

> *NOTE: When installing the CV joint housing, insert a small flat blade screwdriver under the CV joint boot seat to allow air to escape.*

1.
Using a flat blade screw driver to allow air to escape, install the CV joint housing. Use the General Equipment: Flat Headed Screw Driver

2.

Using boot clamp pliers, install the new CV joint boot clamps. Use the General Equipment: Boot Clamp Pliers

3.

Install the halfshaft. Refer to: Rear Halfshaft .

REMOVAL AND INSTALLATION > REAR HALFSHAFT > REMOVAL

NOTE: Never pick up or hold the halfshaft by only the inner or outer Constant Velocity (CV) joint. Damage to the CV joint will occur.

NOTE: Never use a hammer to remove or install the halfshafts. Damage to the CV joint may occur.

NOTE: Never use the halfshaft assembly as a lever to position other components. Damage to the halfshaft or CV joint may occur.

NOTE: Do not allow the boots to contact sharp edges or hot exhaust components. Damage to the halfshaft boots will occur.

NOTE: Do not drop assembled halfshafts. The impact may cut the boots from the inside without evidence of external damage.

1.

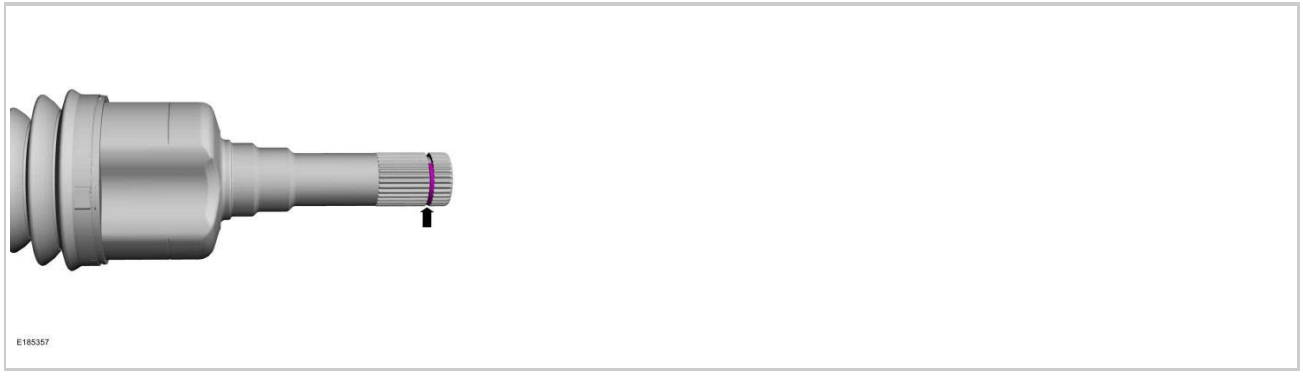
Remove the wheel knuckle. Refer to: Wheel Knuckle .

2.

Using a pry bar, remove the halfshaft.

3.

Inspect the inner halfshaft seal surface and splines for damage. Remove and discard the inner halfshaft circlip.

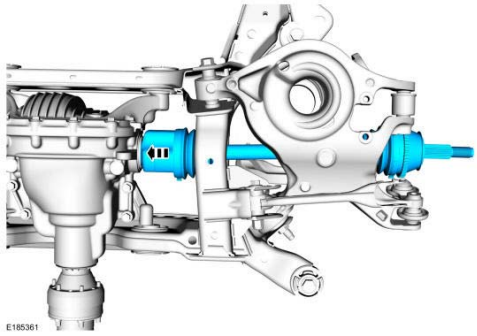


REMOVAL AND INSTALLATION > REAR HALFSHAFT > INSTALLATION

NOTE: The halfshaft seal has to be replaced whenever the halfshaft is removed.

1.
Replace the halfshaft seal. Refer to: Rear Halfshaft Seal .

2.



Install a new inner halfshaft circlip.
