ENGINE INSTALLATION
INSTRUCTIONS

STOP

NOTE: Verify that the replacement engine received is the correct one for the vehicle.

Before beginning the engine removal and installation process, be sure to review these Installation Instructions.

The following resources will assist in diagnosing the failure, engine removal, cleaning/inspecting/transferring component parts and engine installation:

- Vehicle Warranty History
- Special Service Messages
- Workshop Manuals (Ford/Lincoln/Mercury/Mazda)

ENSURE PROPER OPERATIONS OF SYSTEMS

The Technician must diagnose, repair and ensure proper operation of all related systems, subsystems and components. These include:

- Cooling System and Related Components (belt, fan, fan motor, fan switch, wiring, fan clutch, hoses, thermostat, water pump, hydraulic fan pump, hydraulic fan drive)
- Coolant (age, strength, contamination, compatibility)
- Fuel Injectors and Fuel Injection System
- Fuel Delivery System (volume and pressure)
- Fuel Quality (sugar, soap, water, debris)
- Lubrication (oil quality, oil filter, oil cooler, cooler lines)
- Ignition Systems and Engine Control
- Wiring Harnesses and Connectors
- Induction Systems
- Exhaust Systems and Catalytic Converters (plugged or loose catalytic bricks, restricted or leaking systems)
- Sensors
- EGR Systems
- PCV System
- Vacuum Systems
- Electrical and Charging Systems
- Air Conditioning and Power Steering Systems

GENUINE PARTS

STOP

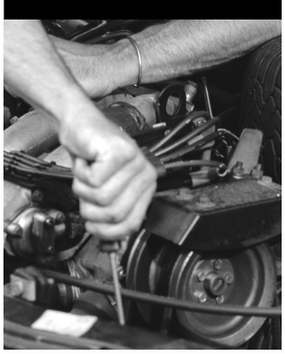

1 The **INTAKE MANIFOLD MUST** be thoroughly cleaned and free of debris **BEFORE BEING INSTALLED ON THIS ENGINE.**

- If the debris is metallic (aluminum or iron), then replacement of the intake manifold is required, as it is difficult to ensure all foreign materials have been removed. This is typical with a catastrophic engine failure.
- If the debris in the intake is soft deposits (carbon buildup, sludge, oil), it is not necessary to replace intake manifold. Intake manifolds can be cleaned with hot soapy water, rinsed thoroughly with clean water and blown dry with shop air.

2 **NEVER** reuse an oil cooler from the failed engine. A new oil cooler must be installed if not already provided on the replacement engine.

3 Engine lubrication system priming and purging **MUST** be performed before starting any replacement engine, or on an engine that has had a major repair. Doing so helps to ensure the life of the engine, and prevents you from having to deal with a costly repeat engine replacement.

- Verify the correct amount of oil is in the engine crankcase
- Install an engine oil pressure gauge
- Disable the fuel supply shutoff (inertia) switch to prevent the vehicle from starting
- Crank the engine in 15-second increments, allowing a 30-second cool-down pause between each cranking period
- Continue this procedure until oil pressure is observed on the pressure gauge, plus an additional two minutes (short durations) to ensure lubrication system is purged

https://www.auto-manual.com/

IMPORTANT NOTES

4 Overheating can cause severe engine damage. For this reason, it is **CRITICAL** to ensure the cooling system is properly filled. Always refer to section 303-03 of the vehicle workshop manual for specific cooling system fill and bleed procedures.

5 **NEVER** use impact tools to remove or install a knock sensor.

- Use of impact tools and overtightening the knock sensor mounting fastener can destroy the sensor and cause engine failure

Index Mark Torque Converter

Before disassembling the torque converter from the flex plate or the pressure plate from the flywheel, index mark the torque converter position to the flex plate or the pressure plate position to the flywheel.

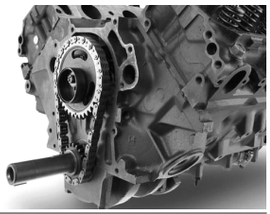

Clean and Inspect Transferred Components

Thoroughly clean and inspect all component parts being transferred from the failed engine to the replacement engine.

Use extreme care when cleaning sealing surfaces of component parts that will be transferred from the failed engine to the replacement engine.

TRANSMISSION COOLER SERVICE

- Most F-Super Duty vehicles have radiator in-tank fluid coolers. This type of cooler will require flushing or replacement. Always refer to the vehicle service publications.
- TorqShift transmission cooling system flushing procedure is unique. Refer to the vehicle workshop manual before performing this procedure.

IDENTIFICATION OF THE RETURN TRANSMISSION COOLER LINE

The best way to identify the return cooler line (fluid coming out of the cooler and returning to the transmission) is the locate the return cooler fitting or case inlet. The return cooler fitting can be found in the following locations on the products listed below:

Rear Wheel Drive

- TorqShift - The REAR transmission case fitting receives the return line.
- 4R100/E4OD - The REAR transmission case fitting receives the return line.
- 4R70/75W-E - The TOP transmission case fitting receives the return line.
- 4R44/55E, 5R44/55E, 5R55N, 5R55W, 5R55S- The TOP transmission case fitting receives the return line.

Front Wheel Drive

- CD4E (4F44E) - The REAR or pump end transaxle case fitting receives the return line.
- 4F27E -The REAR or cover end transaxle case fitting receives the return line.
- AX4S/AX4N (4F50N) - The BOTTOM transaxle cooler line fitting receives the return line.
- Automatic Transmission Fluid In-line Service Filter Kit must be installed in most rear wheel drive transmissions when overhauled or a remanufactured transmission is installed.
- The kit is designed for first time installations. For subsequent installations, the filter is also available as a separate service part (replace the in-line service filter after every transmission overhaul, exchange, or fluid change).

Note: Always verify the correct part numbers before ordering replacement parts.

Note: Failure to enter the base part number of the complete assembly as the causal part will result in the repair being returned unpaid.

Note: When requesting labor reimbursement for an over-the-counter (OTCM) purchased part, the claiming procedures are the same as above except the Program Code will be "OTCM."*

*Labor Operation OSL can be used, but the guidelines in the Warranty and Policy Manual must be followed.

General Installers—Warranty Claiming Instructions for Parts and Labor:

- Engine assemblies and components found to be defective before installation on the vehicle or sales over-the-counter are to be returned for credit to your selling Ford Powertrain Distributor or Dealer
- Only New Ford Original Equipment parts or assemblies may be used to complete covered warranty repairs
- Installer labor reimbursement is calculated using Ford Labor Times Standard hours multiplied by the selling dealership's warranty labor rate, or the installer's actual labor total, whichever is less
- When claiming warranty, the owner's repair order (or sales slip for the original purchase) and Installer invoice showing the labor amount charged for replacement must be provided to the Ford Powertrain Distributor or Dealer
- All parts replaced under warranty must be returned to your selling Dealer

To be eligible for warranty reimbursement, the Installer repair order must include:

- Customer's original concern, clearly stated
- Diagnostic steps taken to determine cause of warrantied concern with diagnostic results clearly documented on Installer repair order. (Warranty parts and labor reimbursement requests must be supported by diagnostic labor steps and test results)

DIESEL ENGINE TIPS & CHECKLIST

To perform the task of removing and installing a diesel engine, you should be A.S.E. certified in Automotive Engine Replacement or equivalent.

- Review all prior warranty history of the vehicle
- Review all Technical Service Bulletins and Special Service Messages pertaining to drivability and engine repair for the vehicle being serviced.
- Review engine removal and installation instructions in the appropriate Ford Workshop Manual. Determine the root cause of the engine failure.
- Remove failed engine
- Complete Step 1 of the Core Evaluation Form:

  1. First, check for block damage. Notate on form.
  2. Drain oil and coolant from used engine core

Inspect new engine for shipping damage, such as bent sheet metal, valve train damage, and debris of any kind.

IDENTIFICATION

Verify that you will be installing the correct engine.

- First, compare visually.
- Secondly, verify the part number you need in the application section of the Diesel Engine Reference Sales Manual.

A couple minutes spent double-checking what engine you will be installing for your customer could save you many hours of wasted labor.

ASSEMBLY TIPS

- Seal threads on flywheel bolts with red tread sealant.
- Use torque wrench on manifolds, oil cooler, water pump, and turbocharger, do not use power impact tools.

START-UP

- Monitor oil pressure and water temperature
- Check for any leaks, correct before road test.
- Drive 500-750 miles, then change oil and filter, recheck for leaks, retighten hoses and check belt adjustment.

COOLING SYSTEM

☐ *Radiator flushed/rodded or replaced.*

☐ *Replace coolant if contaminated, over recommended age or weak in strength.*

☐ *Add FW-16 supplemental coolant additive to VC-4A, Ethylene Glycol (green color) engine coolant. Note: FW-16 is not used with Ford Premium Gold extended life coolant.*

☐ *Inspect the radiator pressure cap for wear and proper application*

☐ *Inspect coolant hoses and clamps; replace as necessary*

☐ *Ensure water pump installed is in good condition or replace it. (On base engines, 6009,6012, and 6006)*

LUBRICATION SYSTEM

☐ *Oil pan should be thoroughly cleaned and inspected for bent places that would cause poor sealing. (on base engines, 6009 and 6012)*

☐ *Oil pickup tube screen cleaned or replaced*

☐ *Install a new or remanufactured oil pump on all short block engines (6009)*

☐ *Install a new oil cooler bundle on all short block engines (6009)*

☐ *Use Motorcraft Super Duty SAE 15W-40 engine oil or an equivalent oil meeting API service specifications CI-4/SL.*

INTAKE AND EXHAUST SYSTEM

☐ *Exhaust system checked for damage and restrictions*

If transferring old intake manifold from failed engine to new engine you must thoroughly clean manifold of any debris that could cause a second engine failure (trapped in the intake).

FUEL SYSTEM

☐ *Replace all fuel filters and add fuel lubricity additive to fuel tank*

Enjoy your new Ford or Motorcraft Reman Engine for years to come.

[2] When servicing these applications the EEC processor MUST be reflashed per TSB 98-24-2.

[7] When installing a remf'd.transmission you MUST order a new Oil-To-Air (OTA) Transmission fluid cooler. Due to internal design they can not be properly flushed and may cause transmission damage if not replaced. Refer to TSB 00-23-10.

[8] When installing a remf'd trans you MUST order a new Oil-To-Air (OTA) Trans fluid cooler. Due to internal design they can not be properly flushed and may cause trans damage if not replaced. Some vehicles will also be equipped with an additional cooler that is part of the radiator. These coolers must be properly flushed or replaced. Refer to the appropriate workshop manual and TSB's 99-7-4, 00-23-10, 00-24-4.

[8] When installing a remf'd trans you MUST order a new Oil-To-Air (OTA) Trans fluid cooler. Due to internal design they can not be properly flushed and may cause trans damage if not replaced. Some vehicles will also be equipped with an additional cooler that is part of the radiator. These coolers must be properly flushed or replaced. Refer to the appropriate workshop manual and TSB's 99-7-4, 00-23-10, 00-24-4.
