- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B10 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

B10 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable core at the antenna unit (harness side)	—
AM/FM antenna coaxial cable shield at the ACM	—	AM/FM antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B11 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

B11 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

Yes
GO to B12 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

repair4less

- **Is the resistance greater than 10,000 ohms?**

B12 CHECK THE AM/FM ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
INSTALL a new AM/FM antenna.
REFER to Antenna — AM/FM .

No
GO to B13 .

B13 CHECK THE AM/FM ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B14 .

No
INSTALL a new AM/FM antenna.
REFER to Antenna — AM/FM .

B14 CHECK THE AM/FM ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B15 .

No
INSTALL a new AM/FM antenna.
REFER to Antenna — AM/FM .

B15 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: AM/FM antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Yes
GO to B17 .

No
GO to B16 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

B16 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE	
• Remove the AM/FM antenna. Refer to Antenna — AM/FM . • Measure the **resistance** between: Positive Lead: Pin — AM/FM antenna unit shield at the antenna unit (component side); Circuit — — Negative Lead: Pin — AM/FM antenna base (unpainted surface); Circuit — — • **Is the resistance less than 1 ohm?**	**Yes** GO to B17 . **No** INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .
B17 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test C: No Sound From All Speakers

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

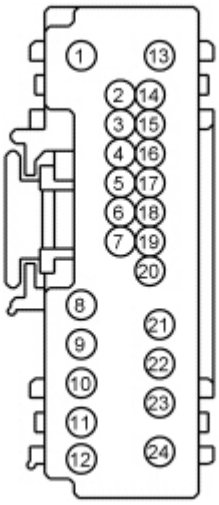
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

repair4less

When the ignition is in the START position, the ACM receives voltage on the START signal circuit and mutes the speaker output. This prevents voltage spikes from producing popping noises through the speakers. A short to voltage on this circuit causes the ACM output to be muted continuously.



Possible Sources

- Wiring, terminals or connectors
- ACM

PINPOINT TEST C: NO SOUND FROM ALL SPEAKERS

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>C1 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE

• Ignition OFF.
• Disconnect: ACM C290A .
• Ignition ON.
• Measure the voltage between:

Pinpoint Test E: The RF Door Speaker Is Inoperative

Diagnostic Overview

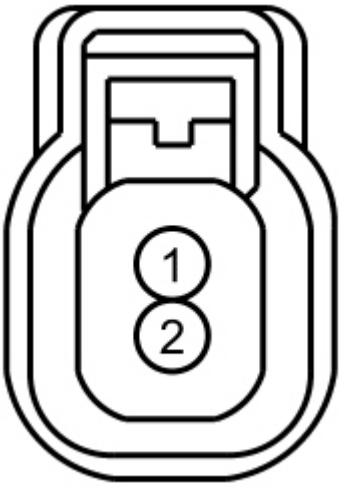
Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B2965	Speaker Failure	Sets when a short to ground, short to voltage, or short together is detected on the LF , RF , RR (if equipped), or LR (if equipped) door speaker circuits.



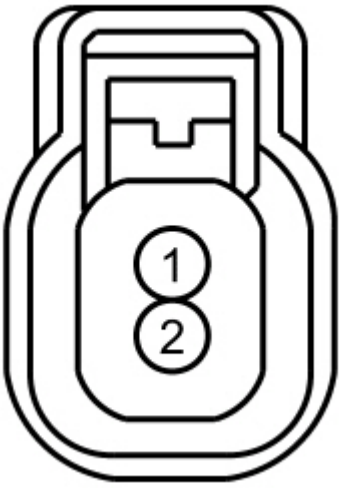
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST E: THE RF DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
E1 CHECK THE AUDIO SIGNAL TO THE RF DOOR SPEAKER • Ignition OFF. • Disconnect: RF Door Speaker C612 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C612-1, Circuit VME10 (WH/VT); Negative Lead: Pin C612-2, Circuit RME10 (WH/OG)	**Yes** INSTALL a new RF door speaker. REFER to Speaker — Door . **No** GO to E2 .

repair4less



- **Is a fluctuating AC voltage present?**

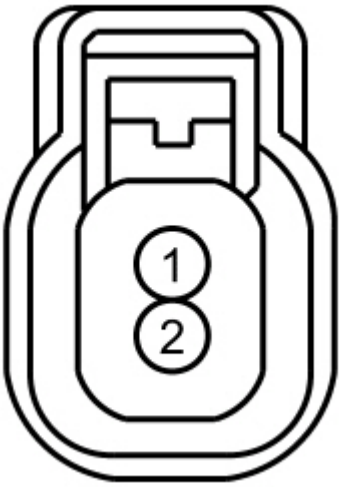
E2 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: ACM C290A .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	—	Ground
C612-2	RME10 (WH/OG)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.



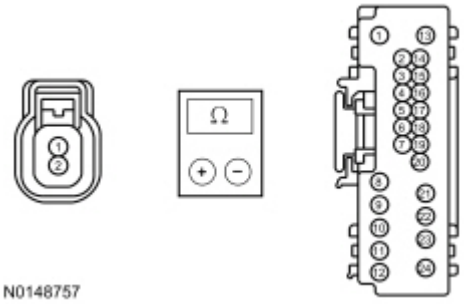
No
GO to E3 .

E3 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to E4 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	—	Ground
C612-2	RME10 (WH/OG)	—	Ground



- **Are the resistances greater than 10,000 ohms?**

No
REPAIR the circuit in question.

E4 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C290A-11	VME10 (WH/VT)

- Ignition OFF.
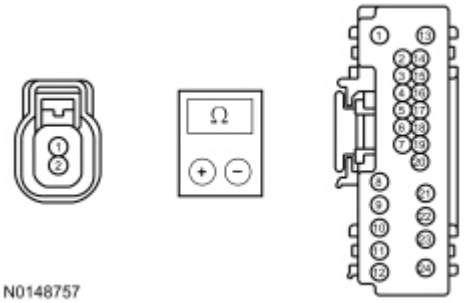
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	—	Ground
C802-2	RME12 (BN/BU)	—	Ground

Yes
GO to F4 .

No
REPAIR the circuit in question.



- **Are the resistances greater than 10,000 ohms?**

F4 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

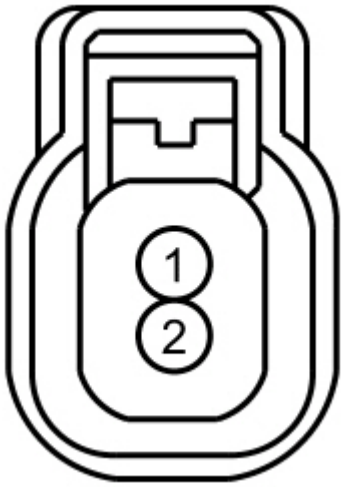
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C290A-10	VME12 (BN/WH)
C802-2	RME12 (BN/BU)	C290A-23	RME12 (BN/BU)

- **Are the resistances less than 3 ohms?**

Yes
GO to F5 .

No
REPAIR the circuit in question.

F5 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TOGETHER



- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C802-2	RME12 (BN/BU)

Yes
GO to F6 .

No
REPAIR the circuit in question.

repair4less

 • **Are the resistances greater than 10,000 ohms?**	

F6 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test G: The LR Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

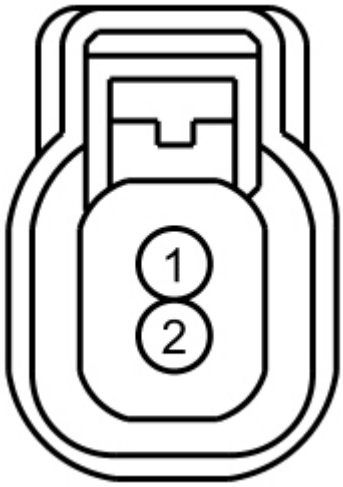
Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System.

Root DTC Description	Failure Types	Fault Trigger Conditions

B2965	Speaker Failure	Sets when a short to ground, short to voltage, or short together is detected on the LF , RF , RR (if equipped), or LR (if equipped) door speaker circuits.

Possible Sources



- Wiring, terminals, or connectors
- Speaker

repair4less

 • **Are the resistances greater than 10,000 ohms?**	

G6 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test H: Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas

- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST H: POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Test Step	Result / Action to Take
H1 ISOLATE THE ZONE	
• Operate the audio system using digital media (CD, MP3, etc.). • Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LF , RF , LR , and RR) of the vehicle to isolate the poor sound quality. • Locate and apply pressure to the trim panel(s) around the poor sound quality area in question. • **Does applying pressure to a trim panel reduce or eliminate the audible noise?**	**Yes** REPAIR or REPLACE the trim panel as needed. **No** GO to H2 .
H2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)	

• Remove the trim panel to access the suspect speaker.
• Operate the audio system using digital media (CD, MP3, etc.).
• Validate where the poor sound quality area is located.
• Check:
  ▪ Trim panel for loose components around the speaker area such as the speaker grille
  ▪ Trim panel joining components for missing or broken pieces
  ▪ Lock and handle mechanical parts for correct attachment
  ▪ Wire harnesses for correct routing
  ▪ Wire harness fasteners for correct attachment
  ▪ Water shield for correct placement (speaker air path not blocked)
  ▪ Water shield for correct bonding to sheet metal
  ▪ Storage areas for loose items
	Yes
	REPAIR or REPLACE any loose or broken component or fastener as needed.
	
	No
	GO to H3 .

repair4less

■ All child safety belt anchors (if equipped) ■ All safety belt retractors ■ All speaker bracket fasteners and other fasteners are secured and tightened to specified torque ● **Was the source of the noise located?**	
H3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION	
● Inspect for watermarks. ● Check the: ■ Cone ■ Magnet ■ Basket ● **Are any watermarks present on the speaker?**	**Yes** VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation. **No** GO to H4 .
H4 ISOLATE SPEAKER TO VERIFY NOISE	
● Remove the suspect speaker from its location and leave the speaker connected to the harness. ● Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact. ● Operate the audio system using digital media (CD, MP3, etc.). ● **Is the noise still present in the suspect speaker?**	**Yes** INSTALL a new speaker for the one in question. **No** LOCATE the source of the noise and REPAIR as needed.

Audio Control Module (ACM) Self-Diagnostic Mode

NOTE: If the Audio Front Control Module (ACM) is inoperative (blank or does not power on), obtain the ACM part number by referencing the label attached to the Audio Front Control Module (ACM) chassis.

1. Turn the ACM on.

2. Operate the audio system in radio tuner AM/FM mode.

3. Press and hold preset buttons 3 and 6 for 3 seconds until the speaker walk around test begins.
   - The display indicates each speaker as it is tested.

4. **NOTE:** If the speaker walk around test is the only test required, this procedure can be stopped after Step 3 by turning the ACM off.

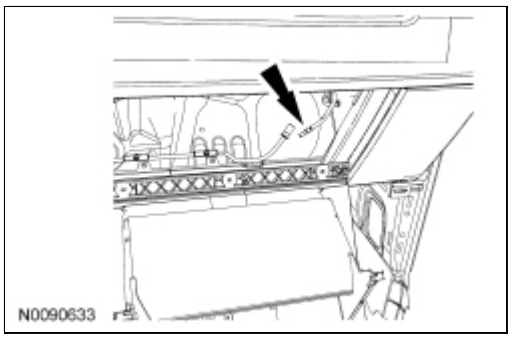
   Before the speaker walk around test is complete, the following actions can be performed:

Preset Button Press	Diagnostic Function	Display	Diagnostic Function Description
1	ACM Self-Test	SELF TEST, SELF PASS, SELF FAIL	The ACM carries out a self-test. At the end of the self-test, the display indicates either SELF PASS, or SELF FAIL. If the self-test failed, DTCs can be accessed by pressing the TUNE UP button.
2	View DTCs	NO DTCS, DTCS FOUND	The ACM displays DTCS FOUND if DTCs are present. To scroll through the DTCs, press the TUNE UP button. If no DTCs are present, the ACM displays NO DTCS. To clear DTCs, press the EJECT, then TUNE UP button.
3	AM/FM Antenna Signal Strength	SIGNAL ###	The ACM displays the AM/FM antenna signal strength. To view the AM signal strength, the audio system must be in AM radio tuner mode before entering the ACM self-diagnostic mode. To view the FM signal strength, the audio system must be in FM radio tuner mode before entering the ACM self-diagnostic mode. If no antenna is present, a signal strength of 0 will be displayed.
4	Software Levels	SOFT LEVELS	The ACM displays software levels for various components of the audio system. Knowing the software levels may aid diagnostics. Press the TUNE UP button to scroll through the software levels.
5	Display Test	DISPLAY TEST, then all segments illuminate	All of the ACM display segments illuminate.
6	Retrieve ACM Part Number	RADIO CONFIG	The ACM displays the ACM part number and various configuration levels. Press the TUNE UP button to scroll to the desired function.

5. To exit the self-diagnostic mode, turn the ACM off.

repair4less

Antenna — AM/FM



Item	Part Number	Description
1	18813	AM/FM antenna mast
2	18A927	AM/FM antenna base cap
3	N610019	AM/FM antenna screws (3 required)
4	18A894	AM/FM antenna base

Removal and Installation

1. Lower the glove compartment completely.

2. Disconnect the AM/FM antenna from the AM/FM antenna cable.
    - Push the antenna cable end and the grommet through the side cowl.

repair4less

3. ***NOTICE:*** **Do not over tighten the antenna mast or damage to the antenna base or mast may occur.**

   Remove the AM/FM antenna mast.
   1. To install, tighten to 4.2 Nm (36 lb/in).

4. **NOTE:** A new AM/FM antenna base cap must be installed.

   Using a suitable tool such as a hook-shaped pick, remove the AM/FM antenna base cap by prying upward.

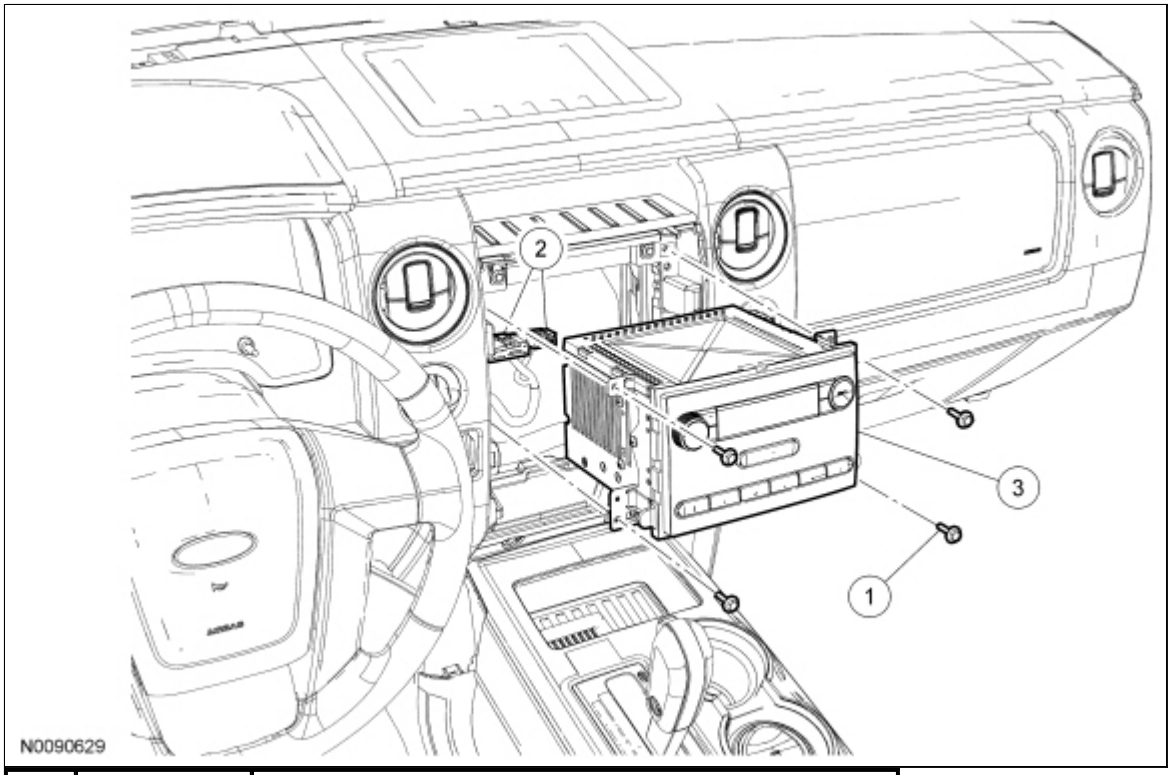
5. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .

6. Remove the 3 screws and the AM/FM antenna base.
   1. To install, tighten to 2.5 Nm (23 lb/in).

7. To install, reverse the removal procedure.

Antenna Cable — AM/FM

Item	Part Number	Description
1	18812	AM/FM antenna cable



Removal and Installation

1. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.
2. Lower the glove compartment completely.
3. Disconnect the AM/FM antenna cable from the AM/FM antenna.
4. Separate the pushpins and remove the AM/FM antenna cable.
5. To install, reverse the removal procedure.

repair4less

Audio Control Module (ACM)

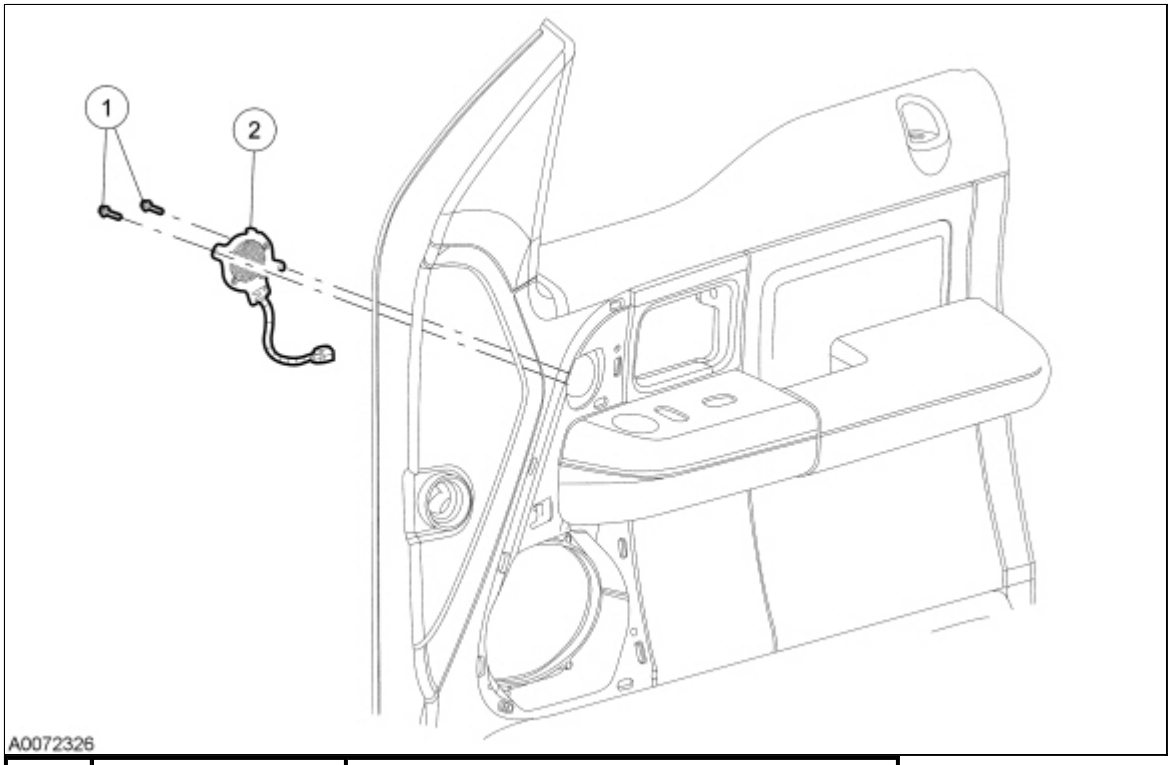
Base AM/FM

Item	Part Number	Description
1	W707628-S	Audio Front Control Module (ACM) screws (4 required)
2	—	ACM electrical connectors (part of 14401 and 18812)
3	18806	ACM

Removal and Installation

NOTE: It is not necessary to remove the Audio Front Control Module (ACM) to retrieve the part number. Refer to Audio Control Module (ACM) Self-Diagnostic Mode in this section.

1. Remove the center lower instrument panel finish panel. Refer to Section 501-12 .

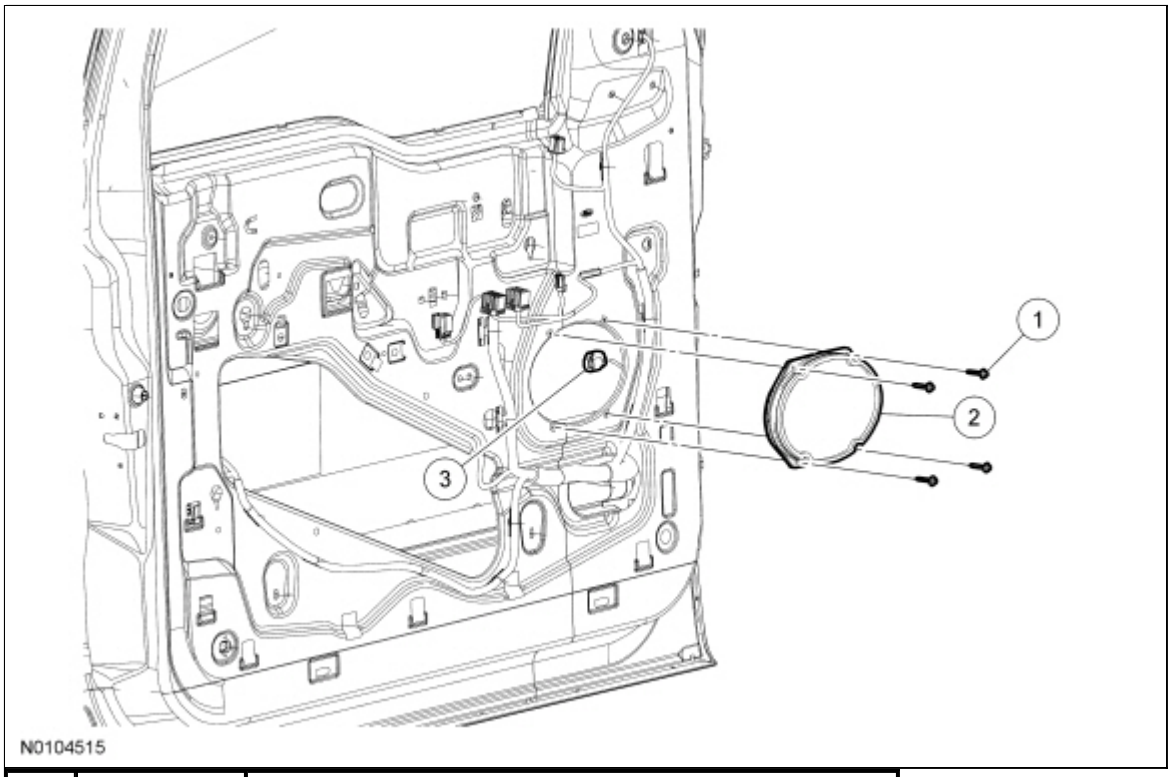


2. Remove the 4 screws and the ACM .
   - Disconnect the electrical connectors.
   - To install, tighten to 2.5 Nm (23 lb-in).

3. To install, reverse the removal procedure.

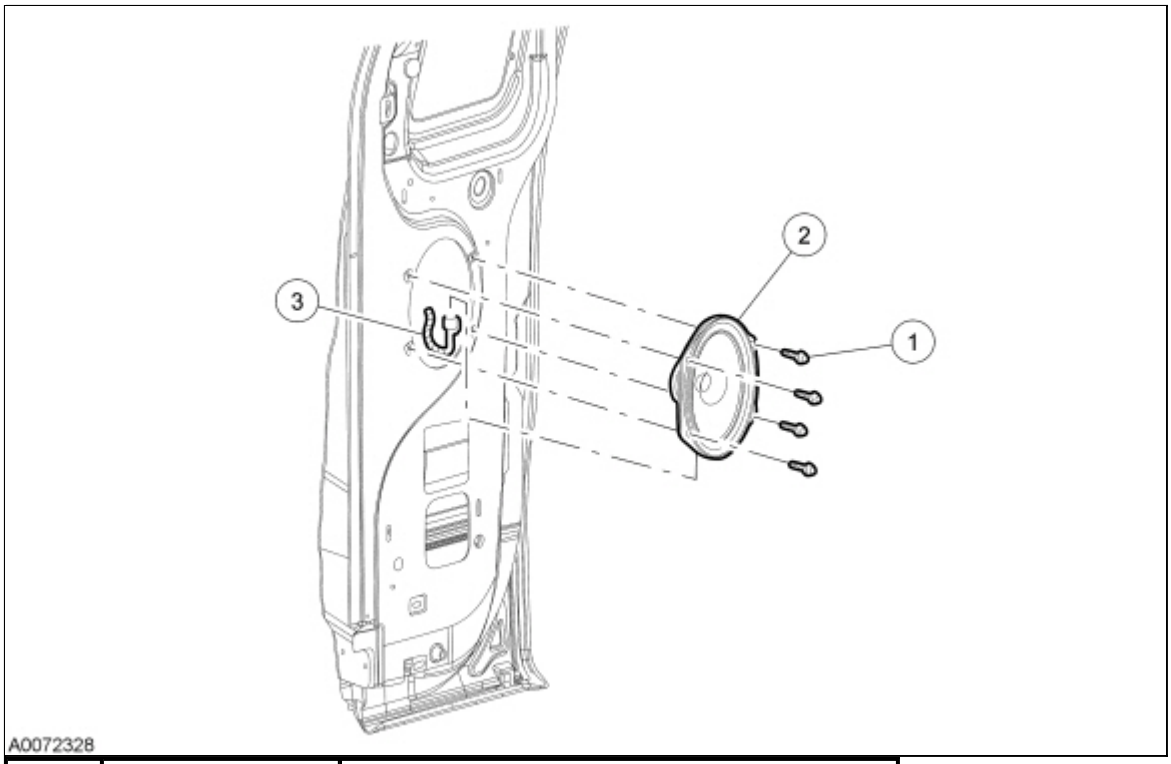
repair4less

Speaker — Door



Front Door Tweeter Speaker

Item	Part Number	Description
1	W701678	Tweeter speaker screws (2 required)
2	19B170/19B171	Tweeter speaker (RH/LH)



Front Door Speaker

repair4less

Item	Part Number	Description
1	W707628	Front door speaker screws (4 required)
2	18808	Front door speaker
3	—	Front door speaker electrical connector (part of door harness)

Rear Door Speaker

Item	Part Number	Description
1	W706766	Rear speaker screws (4 required)
2	18808	Rear speaker
3	180103	Rear speaker electrical connector

Removal and Installation

Front door

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the screws (2 for the tweeter, 4 for the door speaker) and the speaker.
   - Disconnect the electrical connector.

Rear door

3. Remove the rear door trim panel. For additional information, refer to Section 501-05 .

4. Remove the 4 screws and the rear door speaker.
   - Disconnect the electrical connector.

All speakers

5. To install, reverse the removal procedure.

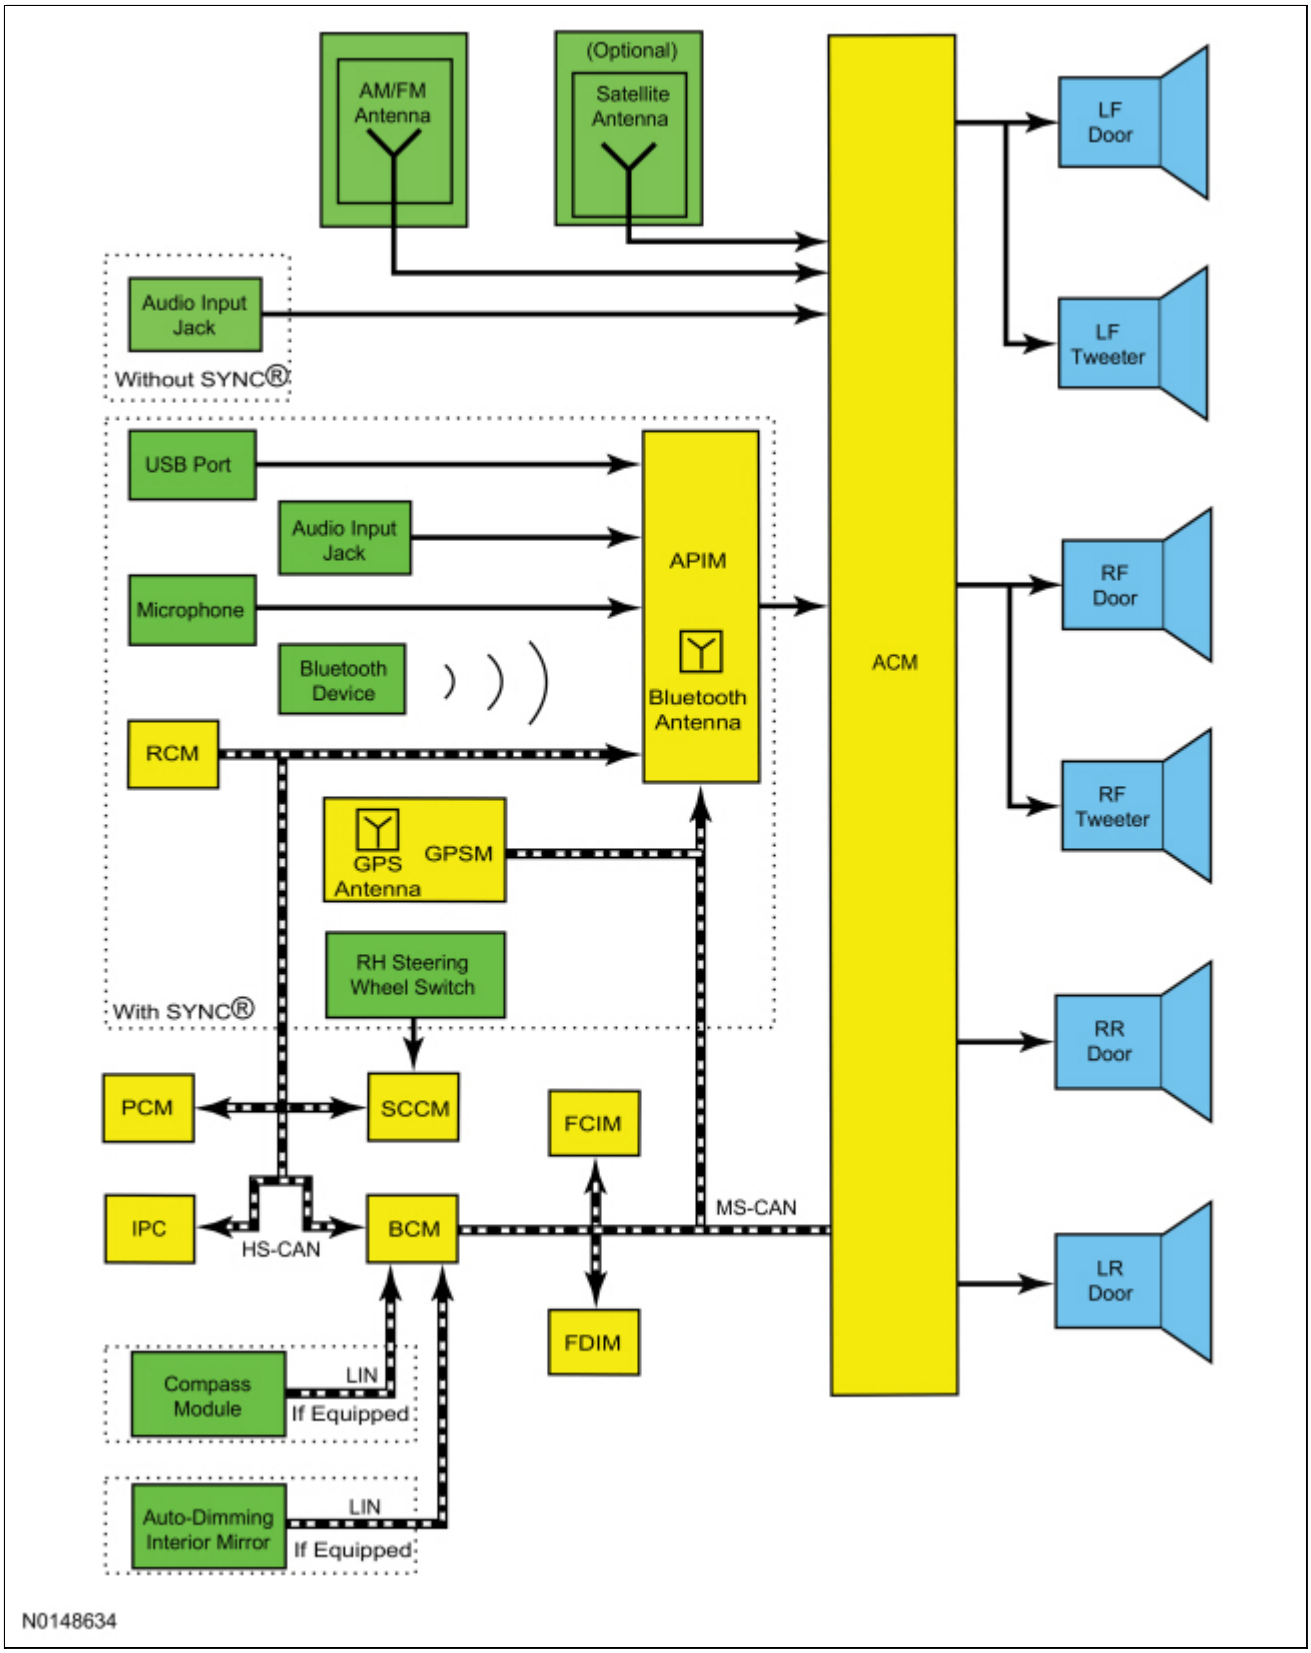
Overview

The audio system consists of the following:

Main Components

- 6 speakers
- AM/FM single CD ACM
- APIM (with SYNC®)
- Audio input jack
- Compass module (if equipped)
- FCIM
- GPSM (with SYNC®)
- Auto-dimming interior rear view mirror (if equipped)
- Non-touchscreen FDIM
- Redundant steering wheel controls (with SYNC®)
- SYNC® microphone (with SYNC®)
- USB port (with SYNC®)



Main Features

- Optional satellite radio
- Optional SYNC®

repair4less

System Operation

System Diagram

Network Message Chart

NOTE: A missing network message is indicated by a U-code DTC . When a missing message DTC (U-code)

repair4less

sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message. Refer to CAN Module Communication Message Chart in Section 418-00 . When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication DTCs may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Accessory delay status	BCM	Used to determine the audio system operating mode.
Ignition switch position	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for ACM operating modes and fault reporting.
Steering wheel switch media	SCCM	Used to set the audio system listening mode (AM/FM, CD, etc.) from the steering wheel switch.
Steering wheel switch seek left	SCCM	Used to access the next strong station to the left, to restart an audio track, to access the previous satellite radio station preset (if equipped), or the previous audio track from the steering wheel switch.
Steering wheel switch seek right	SCCM	Used to access the next strong station to the right, to access the next satellite radio station preset (if equipped), or to access the next audio track from the steering wheel switch.
Steering wheel switch volume down	SCCM	Used to decrease the audio system volume from the steering wheel switch.
Steering wheel switch volume up	SCCM	Used to increase the audio system volume from the steering wheel switch.
Vehicle speed	PCM	Used for the speed compensated volume function.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
Accessory delay status	BCM	Used to determine the audio system operating mode.
Airbag deployment eCall notification	RCM	Used to notify of a 911 assist call being initiated due to airbag deployment.

GPS location	GPSM	Used for vehicle positioning, heading, and direction for turn by turn navigation and 911 assist.
Steering wheel switch OK	SCCM	Used to confirm various audio system selections.
Steering wheel switch phone	SCCM	Used to answer or end a phone call from the steering wheel switch.
Steering wheel switch voice	SCCM	Used to access or exit the voice command feature from the steering wheel switch.

Module Network Input Messages - FDIM

Broadcast Message	Originating Module	Message Purpose
Compass display data	BCM	Used to display the compass direction on the FDIM .
Compass zone and calibration status	BCM	Used to display compass zone and calibration status on the FDIM .

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition switch position	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Selector lever (PRNDL) status	BCM	Used to verify the gear lever position for vehicle direction data.

Accessory Delay Feature

The accessory delay feature allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/FM Radio

The AM/FM fender-mounted antenna receives radio waves and sends them through the AM/FM antenna coaxial cable to the ACM . The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

Audible Prompts

The APIM receives stereo inputs from connected mobile phones and mono inputs from the SYNC® microphone.

Stereo and mono inputs, voice prompts, the TTS feature, ringtones, and any audio received through a connected mobile phone are transmitted to the ACM as stereo or mono sound.

The TTS feature speaks information so that it does not have to be read from the display.

Battery Load Shed

repair4less

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the vehicle OFF and the ignition in ACC or ON, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, SYS OFF TO SAVE BATT is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is a maximum of 9.75 m (32 feet).

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system. Any Bluetooth device used with the SYNC® system must first be paired with the system before it is operational.

Only one Bluetooth phone and one Bluetooth media device can be connected to the system at any one time. If an additional device of either type is paired with the system and made active, the APIM disconnects any active connection and establishes a connection with the new device.

When a new Bluetooth device is added, the APIM and the Bluetooth device must be paired together. Most Bluetooth devices can pair with the SYNC® system, although functionality may vary. To determine if a Bluetooth device is supported, verify the customer device is on the compatibility list for the current APIM software level.

Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be entered on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

It is important to understand that not all mobile phones have the same level of features when interacting with the SYNC® system. For a list of compatible phones, refer to SyncMyRide website.

MyKey® Audio Operation

When a MyKey® is in use, the following restrictions are activated:

- The audio system is muted until the safety belts are buckled when the Belt-Minder® feature is activated. The MyKey® "BUCKLE UP TO UNMUTE AUDIO" is displayed in the information display.
  - This is a standard setting and cannot be changed.
- Satellite radio adult content stations are blocked by being muted.
- If "Always On" is selected in the MyKey® menu, 911 assist and the Do Not Disturb features are enabled and cannot be disabled.
- The audio system volume is limited to 45%. In an attempt to exceed the limited volume, the MyKey® VOLUME LIMITED message is displayed in the centerstack infotainment display.
  - This is an optional setting.

Refer to the Owner's Literature for more information on MyKey®.

Satellite Radio (If Equipped)

Satellite radio is a subscription-based service.

The satellite radio roof-mounted antenna receives signals containing data (station call letters, artist names, song titles, etc.) and digital satellite radio audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM . The ACM separates the data from the audio. The data is sent to be displayed on the centerstack infotainment display, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

Speed Compensated Volume

The ACM adjusts the audio system volume based on the VSS signal to compensate for speed and wind noise.

When a MyKey® is in use and the MyKey® radio volume limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The RH 8-way steering wheel switches operate the volume +/-, seek +/-, and the audio system SYNC® functions (media, voice, phone, and OK).

SYNC® AppLink™

SYNC® AppLink™ allows the customer to control smartphone applications by using voice commands and in-vehicle controls. Data is transferred from the customer's device to the APIM through Bluetooth, or through the USB port with Apple® devices.

SYNC® Services

SYNC® Services is a subscription-based service. For SYNC® Services subscription information,, refer to SyncMyRide .

The customer's mobile phone is used to access and download the SYNC® services. SYNC® services information received by the customer's mobile device is sent to the APIM .

The GPS antenna, integral to the GPSM , is used to detect the location and direction of the vehicle.

SYNC® services includes the following features:

- Business search
- Personalized text alerts
- Real-time traffic updates
- Turn-by-turn directions

SYNC® services allows the customer to receive updates for:

- Entertainment
- News
- Sports
- Stocks
- Travel
- Weather

SYNC® System

The SYNC® system is a hands-free communication and entertainment system that supports many features. All features are not available with every phone.

repair4less

The SYNC® system provides the ability to:

- Connect media devices (such as an iPod® or USB device) in order to play audio files.
- Control the entertainment system using voice controls.
- Initiate an emergency call (911 Assist™) when the airbags deploy.
- Play media files via a paired Bluetooth-enabled audio device.
- Produce vehicle health reports.
- Send and receive phone calls via a paired Bluetooth-enabled phone.
- Send and receive text messages via a paired Bluetooth-enabled phone.

USB Audio Mode

The USB port can be used for connecting a media device (such as an iPod®) with the device's available cable, or for directly plugging in a portable mass storage device, such as a thumb drive. When playing media files stored on a mass storage device, the SYNC® system only plays files that do not have DRM protection. The USB port can also be used for uploading vehicle application upgrades. The USB port is powered by the APIM , so no external power source is needed to power a device plugged into the USB port if the device supports this feature.

In addition to audio information, metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device plugged into the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music, based on customer preference. Not all USB devices can send metadata to the APIM . When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes (depending on the amount of data on the device), and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index (rather than creating a new one), which reduces the amount of time needed to index the device.

Voice Recognition

Voice recognition is used for many vehicle functions, including the audio system. The microphone relays the microphone input to the APIM through dedicated wiring. The TTS and voice prompt features speak certain text information and interaction requests to minimize driver distraction by having to look at the audio system display while driving. The ringtone alerts the driver to an incoming call. The microphone is also used to detect outgoing audio during a phone call.

Audible prompts can range from a simple tone to more elaborate spoken text, based on the customer setting. When interaction mode is set to standard, detailed guidance is provided. When interaction mode is set to advanced, most prompts are tones only and minimal audible guidance is provided. Refer to the Owner's Literature for further information on voice interaction.

The audio signals for the TTS and voice prompt features, ringtones, and audio from the outside device during a phone call, are sent from the APIM to the ACM .

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s) and converts them into fluctuating AC voltage. The ACM receives audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes these inputs and sends left and right analog audio signals to the speakers as fluctuating AC voltage.

If equipped with satellite radio, the ACM will also receive radio waves containing data through the antenna coaxial cable(s). The data is sent to be displayed on the centerstack infotainment display.

The ACM requires PMI when it is replaced.

Antenna

The AM/FM fender-mounted antenna receives radio waves containing audio and sends them through the AM/FM antenna coaxial cable to the ACM . The antenna mast is used to amplify the AM/FM radio waves to improve reception.

If equipped with satellite radio, the satellite radio roof-mounted antenna receives signals containing data and digital audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM .

APIM

Audio signals received by the APIM are sent to the ACM as fluctuating AC voltage.

The APIM consists of 2 internal modules: the CIP and the VIP . The modules are not replaceable individually, but can be flashed independently, if required.

The CIP interfaces with all of the inputs to the APIM . It contains an analog-to-digital-to analog converter, as well as the Bluetooth chipset. Any Application upgrades that are available to the consumer are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs when a vehicle health report is requested.

Audio Input Jack

The audio input jack allows for a portable MP3 audio device (such as an iPod®) to be connected to the vehicle audio system utilizing a 1/8-inch (3 mm) audio jack.

Auto-Dimming Interior Rear View Mirror (If Equipped)

If the vehicle is equipped with an auto-dimming interior rear view mirror, a compass module will not be used.

The auto-dimming interior rear view mirror communicates the vehicle direction to the BCM through a LIN circuit. The data is then sent over the MS-CAN to the FDIM , where it is displayed. The BCM is only a gateway for the compass information and does not control the compass display

Compass Module (If Equipped)

The vehicle is eqiupped with a compass module if an auto-dimming interior rear view mirror is not used.

The compass module communicates the vehicle direction to the BCM through a LIN circuit. The data is then sent over the MS-CAN to the FDIM , where it is displayed. The BCM is only a gateway for the compass information and does not control the compass display

FCIM

The FCIM can be operated with the ignition in RUN, ACC, or OFF.

repair4less

The FCIM audio system buttons provide one of the methods in which the customer interacts with the infotainment system.

The FCIM is separate from the ACM .

FDIM

The FDIM receives CAN messages for all of its displays, which include:

- Audio information
- Climate control fan speed and temperature setting
- Outside air temperature
- Compass heading
    - The magnetic fields generated by the earth's north and south poles are divided into zones that differ from each other with respect to how the magnetic fields appear. The magnetic north can change by up to 4 degrees between zones and become noticeable across multiple zones. The compass zone must be set to the correct zone for the compass to read accurately. Factors within the vehicle, and outside factors such as bridges, steel structures, tall buildings, and power lines may affect compass accuracy. Calibrating the compass allows the auto-dimming interior rear view mirror (if equipped) or compass module (if equipped) to compensate for vehicle factors that influence the accuracy of the compass heading.

Global Positioning System Module (GPSM)

The Global Positioning System Module (GPSM) provides vehicle location for real-time traffic reports and re-routing, and for identifying vehicle location in the event of a collision.

Vehicle location information is broadcast from the Global Positioning System Module (GPSM) to the APIM .

Steering Wheel Switches

The RH steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH steering wheel switch on the input circuits. When a switch is pressed, the voltage is routed through the corresponding resistor(s), and then to ground through the SCCM . The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The SCCM sends a network message to the APIM for the SYNC® switches and to the ACM for the redundant audio controls.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and outgoing audio during a phone call. These signals are sent to the APIM .

USB Port

The USB port is connected to the APIM through the USB cable. The USB port can be used to play audio files, connect a media device, or upload software from mass storage.

B1A04:13	Speaker #4: Circuit Open	GO to Pinpoint Test K.

repair4less

B1A56:21	Antenna: Signal Amplitude	If DTC B1A56:21 sets after running the bezel diagnostic tests, disregard this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail. Therefore, tests ran from the bezel diagnostic screen and the DTC generated from the test can be disregarded.
B1A89:01	Satellite Antenna: General Electrical Failure	GO to Pinpoint Test B .
B1A89:13	Satellite Antenna: Circuit Open	GO to Pinpoint Test B .
B1D19:49	Compact Disc Unit: Internal Electronic Failure	• CLEAR the DTC. • WAIT at least 30 seconds. • REPEAT the self-test. • If DTC B1D19:49 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AC .
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AE .
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	GO to Pinpoint Test AF .
U0197:00	Lost Communication With Telephone Control Module: No Sub Type Information	GO to Pinpoint Test AK .
U0255:00	Lost Communication With Front Display Interface Module: No Sub Type Information	GO to Pinpoint Test AL .
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AM .
U2014:41	Control Module Hardware: General Checksum Failure	CLEAR the DTCs. REPEAT the self-test. If DTC U2014:41 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U2014:42	Control Module Hardware: General Memory Failure	CLEAR the DTCs. REPEAT the self-test. If DTC U2014:42 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U2014:96	Control Module Hardware: Component Internal Failure	CLEAR the DTCs. REPEAT the self-test. If DTC U2014:96 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

U201A:51	Control Module Main Calibration Data: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AN .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ao .

Accessory Protocol Interface Module (APIM) DTC Chart (If Equipped)

DTC	Description	Action
B1252:04	USB Port: System Internal Failure	GO to Pinpoint Test R .
B1252:11	USB Port: Circuit Short to Ground	GO to Pinpoint Test R .
B12B8:04	USB Port #2: System Internal Failure	**NOTE:** This DTC refers to USB port #2 on the APIM itself, which is not used. • INSPECT the APIM USB port #2 for damage and REMOVE any debris. • CLEAR the DTCs. • WAIT at least 10 seconds.

repair4less

		• REPEAT the self-test. • If DTC B12B8:04 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
B12B8:11	USB Port #2: Circuit Short To Ground	**NOTE:** This DTC refers to USB port #2 on the APIM itself, which is not used. • INSPECT the APIM USB port #2 for damage and REMOVE any debris. • CLEAR the DTCs. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B12B8:11 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
B1D79:01	Microphone Input: General Electrical Failure	GO to Pinpoint Test P .
B1D79:11	Microphone Input: Circuit Short To Ground	GO to Pinpoint Test P .
B1D79:12	Microphone Input: Circuit Short To Battery	GO to Pinpoint Test P .
B1D79:13	Microphone Input: Circuit Open	GO to Pinpoint Test P .
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AC .
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AE .
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the IPC . REFER to Section 413-01 .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2101:00	Control Module Configuration Incompatible: No Sub	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module,

	Type Information	REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:04	Control Module: System Internal Failure	GO to Pinpoint Test M .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:88	Control Module: Bus Off	**NOTE:** Network communication/message DTCs can result from intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming often set these DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. The module was unable to communicate on the network at a point in time. The fault is not currently present. To avoid repeat network concerns: • INSPECT for damaged or corroded wiring at the APIM . • TEST the vehicle battery. REFER to Charging Systems in Section 414-00 . • CLEAR the DTC. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AN .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ao .

FCIM DTC Chart

DTC	Description	Action
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AC .
U0184:00	Lost Communication	GO to Pinpoint Test AI .

repair4less

	With Radio: No Sub Type Information	
U2013:63	Switch Pack: Circuit / Component Protection Time-Out	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2013:63 is retrieved again, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
U2014:41	Control Module Hardware: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2014:41 is retrieved again, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
U2014:42	Control Module Hardware: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2014:42 is retrieved again, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
U201A:51	Control Module Main Calibration Data: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new FCIM to correct the failure to retain configuration data. REFER to Front Controls Interface Module (FCIM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AN .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ao .

FDIM DTC Chart

DTC	Description	Action
B1318	Battery Voltage Low	GO to Pinpoint Test Z .
B1342	ECU is Faulted	**NOTE:** Repair all other DTCs before diagnosing DTC B1342. • CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B1342 is retrieved again, INSTALL a new Front Display Interface Module (FDIM). REFER to Front Display Interface Module (FDIM) .
B2477	Module Configuration Failure	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic

		scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new FDIM to correct the failure to retain configuration data. REFER to Front Display Interface Module (FDIM) .
U0140	Lost Communication with Body Control Module (GEM)	GO to Pinpoint Test AB .
U0155	Lost Communication with Instrument Panel Cluster (IPC) Control Panel	GO to Pinpoint Test AD .
U0164	Lost Communication With HVAC Control Module (EATC)	GO to Pinpoint Test AG .
U0184	Lost Communication With Radio (ACM)	GO to Pinpoint Test AH .
U0197	Lost Communication with Telephone Control Module	GO to Pinpoint Test AJ .
U2050	No Application Present	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new FDIM to correct the failure to retain configuration data. REFER to Front Display Interface Module (FDIM) .
U2051	One or More Calibration Files Missing / Corrupt	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new FDIM to correct the failure to retain configuration data. REFER to Front Display Interface Module (FDIM) .

Global Positioning System Module (GPSM) DTC Chart

DTC	Description	Action
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test AA .

Symptom Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom Chart — General Audio System

Condition	Possible Sources	Action
• A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals, or connectors	• REFER to Section 418-00 .

repair4less

	• Module	
• The RH steering wheel controls are inoperative or do not operate correctly (if equipped)	• Refer to the Pinpoint Test	• GO to Pinpoint Test T .
• The CD player is inoperative or does not operate correctly	• CD • ACM	• INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
• The speed compensated volume does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test C .
• The compass is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test X .
• The compass is inaccurate	• Refer to the Pinpoint Test	• GO to Pinpoint Test Y .
• The FCIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	• REFER to Section 413-00 .
• The audio system does not operate correctly from the FCIM	• Refer to the Pinpoint Test	• GO to Pinpoint Test U .
• The audio input jack is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test Q .
• The FDIM is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test V .
• One or more FDIM displays are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test W .
• The FDIM illumination is inoperative or does not dim	• Illumination system concern • FDIM	• REFER to Section 413-00 .

Symptom Chart — Satellite Radio (If Equipped)

Condition	Possible Sources	Action
• Poor reception — satellite radio	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.
• Poor sound quality or no sound while in satellite radio mode - all other functions operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.
• The satellite radio is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.

Symptom Chart — Sound Quality

Condition	Possible Sources	Action
• Poor reception — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A.
• Continuous seek or scan — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A.
• Poor sound quality or distorted sound from one or more speakers (not all speakers)	• Refer to the Pinpoint Test	• GO to Pinpoint Test D.
• No sound from all speakers	• Refer to the Pinpoint Test	• GO to Pinpoint Test E.
• The LF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test F.
• The LF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test G.
• The RF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H.
• The RF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test I.
• The RR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test J.
• The LR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test K.

Symptom Chart — SYNC® System (If Equipped)

Condition	Possible Sources	Action
• All SYNC® functions are inoperative or	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset. If the concern is still

repair4less

do not operate correctly		present, GO to Pinpoint Test M .
• All SYNC® Services features are inoperative or inaccurate	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test O .
• The SYNC® system audible prompts are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test N .
• During a phone call, no incoming audio is heard in the vehicle	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test N .
• Voice recognition is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test P .
• During a phone call, poor quality or no outgoing audio is heard on the outside device	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test P .
• Poor quality, distorted, or no sound while in SYNC® mode	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test L .
• The RH SYNC® steering wheel controls are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test T .
• The audio input jack is inoperative or does not operate correctly (with SYNC®)	• Refer to the Pinpoint Test	• PERFORM the Accessory Protocol Interface Module (APIM) Reset. REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test Q .
• The USB port is inoperative or does not	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still

operate correctly		present, GO to Pinpoint Test R .
• Unable to pair Bluetooth device	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test S .
• An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	• Customer's device compatibility	• PERFORM the Accessory Protocol Interface Module (APIM) Reset. REFER to Accessory Protocol Interface Module (APIM) Reset . • If the concern is still present, INSTRUCT the customer to review the device compatibility list on the SyncMyRide website. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. • If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
• SYNC® AppLink™ is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the Accessory Protocol Interface Module (APIM) Reset. REFER to Accessory Protocol Interface Module (APIM) Reset . • If the concern is still present, INSTRUCT the customer to review the mobile device platform, application, and application version compatibility list on the SyncMyRide website. It is normal operation for incompatible mobile device platforms, applications, and application versions to be unavailable through SYNC® AppLink™. • If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth only, GO to Pinpoint Test S . • If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth and the USB port, GO to Pinpoint Test R
• An individual Bluetooth device feature is inoperative	• Customer's device compatibility	• **NOTE:** If a Bluetooth device is able to pair with the SYNC® system, there are no concerns with the APIM . INSTRUCT the customer to review the device compatibility list on the the SyncMyRide website. Not all phone features are available through the SYNC® system. This is normal operation.
• Unable to pair Bluetooth	• Refer to the Pinpoint Test	• GO to Pinpoint Test S .

repair4less

device or the Bluetooth functionality is inoperative		
• SYNC® AppLink™ is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• **NOTE:** NOTE: SYNC® AppLink™ is compatible with select smartphones and select applications. INSTRUCT the customer to review the device compatibility list. REFER to the SyncMyRide website. If SYNC® AppLink™ is inoperative through Bluetooth, GO to Pinpoint Test S . • If SYNC® AppLink™ is inoperative from the USB port, GO to Pinpoint Test R .
• 911 Assist™ or Vehicle Health Report (VHR) is inoperative or does not operate correctly	• Unregistered SYNC® owner account • RCM misconfiguration • IPC misconfiguration	• Verify that the customer has a SYNC® Owner Account on the SyncMyRide website. • This error message appears due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or RCM . ▪ If there have been recent service actions with the IPC or RCM , REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. REFER to Programmable Module Installation (PMI) in Section 418-01 . ▪ If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

Pinpoint Tests

Pinpoint Test A: Poor Reception Or Continuous Seek Or Scan — AM/FM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to AM/FM Radio, ACM , and Antenna in Information and Entertainment System .

Possible Sources

- AM/FM antenna
- AM/FM antenna coaxial cable
- Charging system
- Ignition system
- No channel found in the selected category
- Noise suppression equipment
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST A: POOR RECEPTION OR CONTINUOUS SEEK OR SCAN — AM/FM

Test Step	Result / Action to Take
A1 CHECK THE AUDIO SYSTEM RECEPTION • Operate the audio system in radio tuner AM/FM mode. • Check the reception with the engine running, and with the engine off. • **Does the poor reception only occur with the engine running?**	**Yes** GO to A2 . **No** GO to A4 .
A2 CHECK THE GENERATOR • Ignition OFF. • Disconnect: Wiring harness to the generator voltage regulator. • Start the engine. • Operate the audio system in radio tuner AM/FM mode. • **Is the reception OK?**	**Yes** INSTALL a new generator. REFER to Section 414-00 . **No** GO to A3 .
A3 CHECK THE IGNITION CIRCUITS • Ignition OFF. • Connect: Wiring harness to the generator voltage regulator. • Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings. • Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions. • **Are the ignition components OK?**	**Yes** USE a jumper cable to ground various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary. **No** REPAIR the ignition system as necessary.
A4 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: AM/FM antenna coaxial cable at the ACM . Refer to Audio Control Module (ACM) . • Disconnect: AM/FM antenna inline coaxial cable connection behind the glove compartment. Refer to	**Yes** REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

repair4less

Antenna Cable — AM/FM .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

No
GO to A5 .

A5 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A6 .

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A6 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM coaxial cable core at the ACM	—	Lower AM/FM antenna coaxial cable core at the inline connection	—
AM/FM antenna coaxial cable shield at the ACM	—	Lower AM/FM antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

Yes
GO to A7 .

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A7 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit

Yes
GO to A8 .

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER

AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

to Antenna Cable — AM/FM .

A8 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: AM/FM antenna coaxial cable at the antenna unit. Refer to Antenna — AM/FM .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

No
GO to A9 .

A9 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A10 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A10 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable core at the antenna unit (harness side)	—
AM/FM antenna		AM/FM antenna coaxial cable shield	—

Yes
GO to A11 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

repair4less

coaxial cable shield at the ACM	—	at the antenna unit (harness side)	

- **Is the resistance less than 1 ohm?**

A11 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A12 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A12 CHECK THE AM/FM ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

No
GO to A13 .

A13 CHECK THE AM/FM ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A14 .

No
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

A14 CHECK THE AM/FM ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Yes

<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>AM/FM antenna coaxial cable core at the ACM</td><td>—</td><td>AM/FM antenna coaxial cable shield at the ACM</td><td>—</td></tr></table> • **Is the resistance greater than 10,000 ohms?**	GO to A15 . **No** INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .
A15 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND • Disconnect: AM/FM antenna coaxial cable at the antenna unit. • Measure the **resistance** between: <table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>AM/FM antenna unit shield at the antenna unit (component side)</td><td>—</td><td>—</td><td>Ground</td></tr></table> • **Is the resistance less than 1 ohm?**	**Yes** GO to A17 . **No** GO to A16 .
A16 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE • Remove the AM/FM antenna. Refer to Antenna — AM/FM . • Measure the **resistance** between: <table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>AM/FM antenna unit shield at the antenna unit (component side)</td><td>—</td><td>AM/FM antenna base (unpainted surface)</td><td>—</td></tr></table> • **Is the resistance less than 1 ohm?**	**Yes** GO to A17 . **No** INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

A17 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any

repair4less

	connector or pin issues.

Pinpoint Test B: The Satellite Radio Is Inoperative, Has Poor Reception, Or Has No Sound

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to MyKey® and Satellite Radio in Information and Entertainment System .

When a satellite radio subscription is activated, the satellite receiver ESN is associated with the VIN .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:01	Satellite Antenna: General Electrical Failure	Set by the ACM when a short to ground is detected in the satellite antenna circuit for more than 250 milliseconds. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.

Possible Sources

- Expired subscription
- Incorrectly matched ESN
- Wiring, terminals, or connectors
- Obstructions in the antenna's line of sight
- Satellite radio antenna
- Satellite radio antenna coaxial cable
- ACM

PINPOINT TEST B: THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION, OR HAS NO SOUND

Test Step	Result / Action to Take
B1 VERIFY AN ACTIVE SUBSCRIPTION	
• Operate the infotainment system in satellite radio mode and observe the infotainment display. • **Does the display indicate that the subscription has expired?**	**Yes** The subscription has expired. INFORM the customer to contact SIRIUS to reactivate the subscription. **No**

	GO to B2 .
B2 CHECK THE RECEPTION • Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees. • Using a diagnostic scan tool, view the ACM PIDs. • Monitor the satellite signal strength (SAT_SIG_STR) PID. • If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained. • **Can a "Good," "Very Good," or "Excellent" PID value be obtained?**	**Yes** GO to B3 . **No** GO to B6 .
B3 CHECK THE SATELLITE RADIO SYSTEM FOR CORRECT OPERATION • Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight. **No** GO to B4 .
B4 CHECK FOR PROMOTIONAL CHANNEL 184 • Select channel 184. • **Does the satellite radio system receive channel 184 with normal sound quality?**	**Yes** GO to B5 . **No** GO to B6 .
B5 VERIFY THAT THE VIN AND ESN ON FILE MATCH THE VIN AND ESN FROM THE VEHICLE • Retrieve the satellite radio ESN . Satellite Radio Electronic Serial Number (ESN) Retrieval . • Contact the SIRIUS Dealer Support Line (888-465-8528). • Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle. • Follow the actions from step 2 to obtain "Good," "Very Good," or "Excellent" reception. • Operate the infotainment system in satellite radio mode. • **NOTE:** It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate. • Request for SIRIUS to send the activation signal to the vehicle 2-3 times. • Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle. **No** GO to B6 .
B6 CHECK FOR ACM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the ACM DTCs. • Using a diagnostic scan tool, perform the ACM self-	**Yes** For DTC B1A89:01 or DTC B1A89:13, GO to B7 . For all other ACM DTCs,

repair4less

test.

- **Are any DTCs recorded in the ACM ?**

REFER to the ACM DTC chart in Information and Entertainment System .

No
GO to B20 .

B7 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Satellite radio antenna coaxial cable at the ACM . Refer to Audio Control Module (ACM) .
- Disconnect: Satellite radio antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

No
GO to B8 .

B8 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B9 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B9 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio coaxial cable core at the	—	Lower satellite radio antenna coaxial cable core at the	—

Yes
GO to B10 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

ACM		inline connection	
Satellite radio antenna coaxial cable shield at the ACM	—	Lower satellite radio antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

B10 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B11 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B11 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: Satellite radio antenna coaxial cable at the antenna unit. Refer to Antenna — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

No
GO to B12 .

B12 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	

Yes
GO to B13 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite

repair4less

Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Radio .

B13 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable core at the antenna unit (harness side)	—
Satellite radio antenna coaxial cable shield at the ACM	—	Satellite radio antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B14 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B14 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B15 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B15 CHECK THE SATELLITE RADIO ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna		—	Ground

Yes
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

No
GO to B16 .

coaxial cable core at the ACM	—		
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

B16 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B17 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

B17 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B18 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

B18 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: Satellite radio antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

Yes
GO to B20 .

No
GO to B19 .

B19 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

repair4less

<table>

Is the resistance less than 1 ohm?

</td>
<td>Yes
GO to B20 .

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .</td>
</tr>
<tr><td>B20 CHECK FOR CORRECT ACM OPERATION</td><td></td></tr>
<tr>
<td>

Ignition OFF.
Disconnect and inspect all the ACM connectors.
Repair:

Corrosion (clean module pins or install new connectors or terminals)
Damaged or bent pins (install new terminals or pins)
Pushed-out pins (install new pins as necessary)

Reconnect the ACM connectors. Make sure they seat and latch correctly.
Operate the system and determine if the concern is still present.
Is the concern still present?

</td>
<td>Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.</td>
</tr>
</table>

Pinpoint Test C: The Speed Compensated Volume Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Speed Compensated Volume in Information and Entertainment System .

Possible Sources

- Speed compensated volume setting
- VSS signal concern
- Network communication concern
- ACM

PINPOINT TEST C: THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take

C1 CHECK THE SPEEDOMETER OPERATION • Drive the vehicle and observe the speedometer. • **Does the speedometer operate correctly?**	**Yes** GO to C2. **No** REFER to Section 413-01.
C2 CHECK THE SPEED COMPENSATED VOLUME SETTING • Turn the speed compensated volume off. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • **Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?**	**Yes** The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature. **No** GO to C3.
C3 CHECK FOR DTC U0155:00 • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0155:00 retrieved in any audio system module?**	**Yes** GO to Pinpoint Test AC. **No** GO to C4.

C4 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test D: Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Diagnostic Overview

repair4less

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST D: POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Test Step	Result / Action to Take
D1 ISOLATE THE ZONE • Operate the audio system using digital media (CD, MP3, etc.). • Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LF , RF , LR , and RR) of the vehicle to isolate the poor sound quality. • Locate and apply pressure to the trim panel(s) around the poor sound quality area in question. • **Does applying pressure to a trim panel reduce or eliminate the audible noise?**	**Yes** REPAIR or REPLACE the trim panel as needed. **No** GO to D2 .
D2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S) • Remove the trim panel to access the suspect speaker. • Operate the audio system using digital media (CD, MP3, etc.). • Validate where the poor sound quality area is located. • Check:	**Yes** REPAIR or REPLACE any loose or broken component or fastener as needed.

▪ Trim panel for loose components around the speaker area such as the speaker grille ▪ Trim panel joining components for missing or broken pieces ▪ Lock and handle mechanical parts for correct attachment ▪ Wire harnesses for correct routing ▪ Wire harness fasteners for correct attachment ▪ Water shield for correct placement (speaker air path not blocked) ▪ Water shield for correct bonding to sheet metal ▪ Storage areas for loose items ▪ All child safety belt anchors (if equipped) ▪ All safety belt retractors ▪ All speaker bracket fasteners and other fasteners are secured and tightened to specified torque • **Was the source of the noise located?**	**No** GO to D3 .
D3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION	
• Inspect for watermarks. • Check the: ▪ Cone ▪ Magnet ▪ Basket • **Are any watermarks present on the speaker?**	**Yes** VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation. **No** GO to D4 .
D4 ISOLATE SPEAKER TO VERIFY NOISE	
• Remove the suspect speaker from its location and leave the speaker connected to the harness. • Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact. • Operate the audio system using digital media (CD, MP3, etc.). • **Is the noise still present in the suspect speaker?**	**Yes** INSTALL a new speaker for the one in question. **No** LOCATE the source of the noise and REPAIR as needed.

Pinpoint Test E: No Sound From All Speakers

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

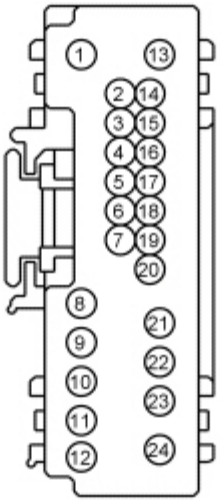
Refer to ACM in Information and Entertainment System .

When the ignition is in the START position, the ACM receives voltage on the START signal circuit and mutes

repair4less

the speaker output. This prevents voltage spikes from producing popping noises through the speakers. A short to voltage on this circuit causes the ACM output to be muted continuously.

A short to ground or short to voltage in the circuitry to one of the speakers may cause multiple speakers to lose sound due to the built-in overload protection feature of the ACM . In this case, a speaker fault DTC sets.



Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST E: NO SOUND FROM ALL SPEAKERS

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>E1 CHECK FOR SPEAKER DTCS</td><td rowspan="2">Yes
REFER to the ACM DTC chart in Information and Entertainment System .

No
GO to E2 .</td></tr>
<tr><td>• Ignition ON.
• Using a diagnostic scan tool, perform the ACM self-test.
• Are any speaker fault Diagnostic Trouble Codes (DTCs) present?</td></tr>
<tr><td>E2 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE</td><td rowspan="2">Yes
REPAIR the circuit. TEST the system for normal operation.

No
GO to E3 .</td></tr>

• Measure the voltage between:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C290A-15</td><td>CDC54 (WH/GN)</td><td>—</td><td>Ground</td></tr></table>• Is the voltage 5V or greater?</td></tr>
</table>

E3 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test F: The LF Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

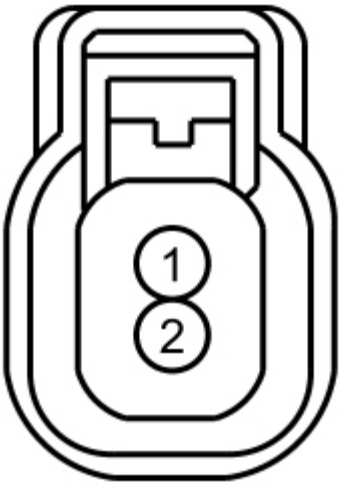
Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System.

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LF door or tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LF door or tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LF door or tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LF door or tweeter speaker circuits.

Possible Sources



- Wiring, terminals, or connectors
- Speaker

  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test G: The LF Tweeter Speaker Is Inoperative

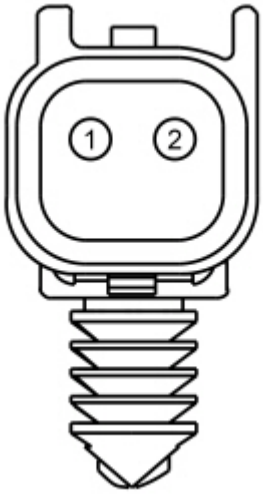
Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

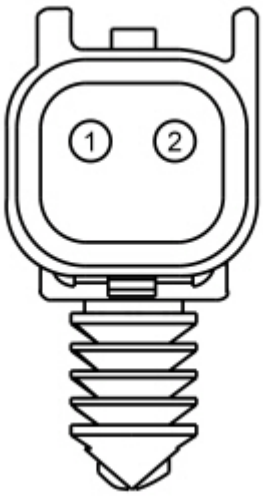
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

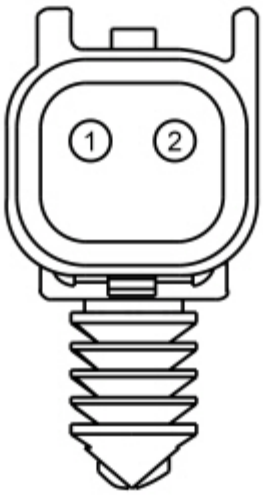


Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LF door or tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LF door or tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LF door or tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LF door or tweeter speaker circuits.



Possible Sources

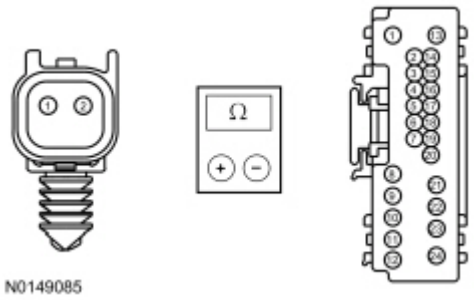
- Wiring, terminals, or connectors
- Speaker
- ACM



PINPOINT TEST G: THE LF TWEETER SPEAKER IS INOPERATIVE

repair4less

Test Step	Result / Action to Take
G1 CHECK THE AUDIO SIGNAL TO THE LF TWEETER SPEAKER • Ignition OFF. • Disconnect: LF Tweeter Speaker C230 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C230-1, Circuit VME07 (WH) Negative Lead: Pin C230-2, Circuit RME07 (WH/BN)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new LF tweeter speaker. REFER to Speaker — A-Pillar . **No** GO to G2 .
G2 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C290A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C230-1, Circuit VME07 (WH) Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C230-2, Circuit RME07 (WH/BN) Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to G3 .

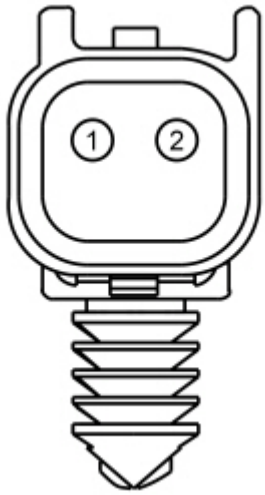


- **Is any voltage present?**

G3 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: LF Door Speaker C523 . • Measure the **resistance** between: Positive Lead: C230-1 VME07 (WH); C230-2 RME07 (WH/BN) Negative Lead: — Ground  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to G4 . **No** REPAIR the circuit in question.
G4 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR AN OPEN	
• Measure the **resistance** between:	**Yes** GO to G5 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME07 (WH)	C290A-8	VME07 (WH)
C230-2	RME07 (WH/BN)	C290A-21	RME07 (WH/BN)



- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

G5 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME07 (WH)	C230-2	RME07 (WH/BN)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to G6 .

No
REPAIR the circuit in question.

G6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.

Yes

• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test H: The RF Door Speaker Is Inoperative

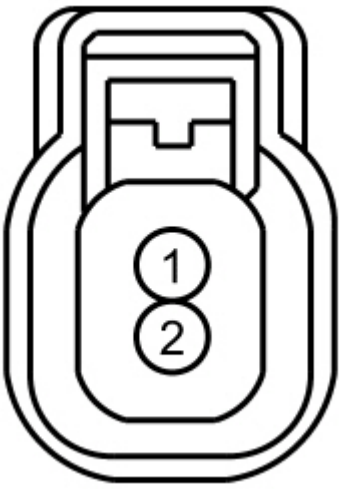
Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

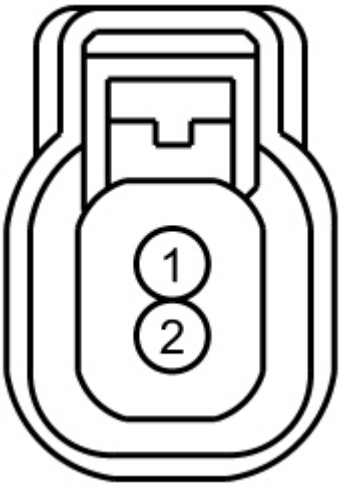
Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System.



Root DTC Description	Failure Types	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RF door or tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the RF door or tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the RF door or tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RF door or tweeter speaker circuits.



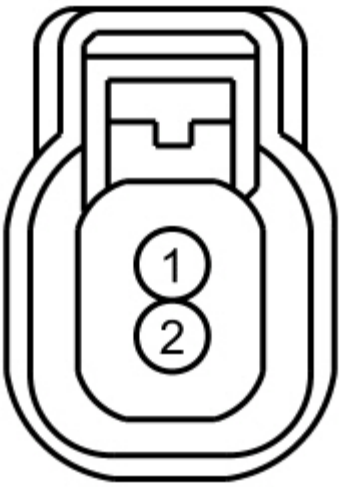
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST H: THE RF DOOR SPEAKER IS INOPERATIVE

repair4less

Test Step	Result / Action to Take
H1 CHECK THE AUDIO SIGNAL TO THE RF DOOR SPEAKER • Ignition OFF. • Disconnect: RF Door Speaker C612 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C612-1, Circuit VME10 (WH/VT); Negative Lead: Pin C612-2, Circuit RME10 (WH/OG)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new RF door speaker. REFER to Speaker — Door . **No** GO to H2 .
H2 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C290A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C612-1, Circuit VME10 (WH/VT); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C612-2, Circuit RME10 (WH/OG); Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to H3 .



- **Is any voltage present?**

H3 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO GROUND

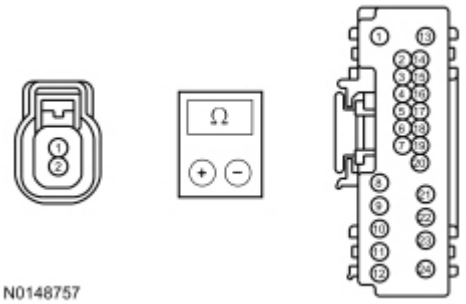
- Ignition OFF.
- Disconnect: RF Door Speaker C231 .
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	—	Ground
C612-2	RME10 (WH/OG)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to H4 .

No
REPAIR the circuit in question.



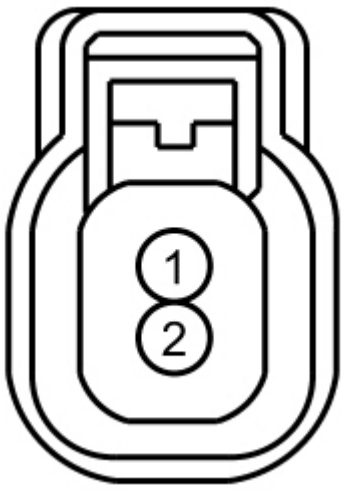
H4 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Yes
GO to H5 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C290A-11	VME10 (WH/VT)
C612-2	RME10 (WH/OG)	C290A-12	RME10 (WH/OG)



- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C612-2	RME10 (WH/OG)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to H6 .

No
REPAIR the circuit in question.

H6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.

Yes

• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test I: The RF Tweeter Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

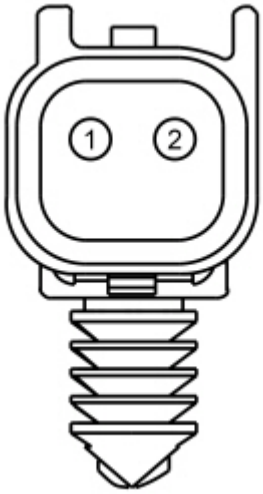
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RF door or tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the RF door or tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the RF door or tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RF door or tweeter speaker circuits.

Possible Sources



- Wiring, terminals, or connectors

• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBsTSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test J: The RR Door Speaker Is Inoperative

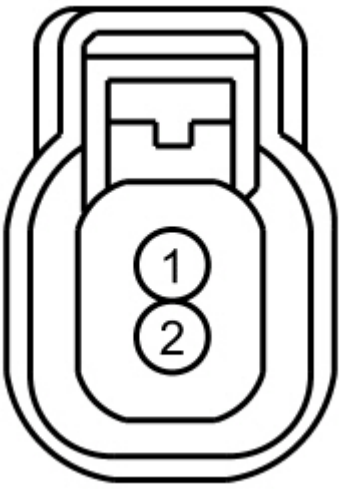
Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

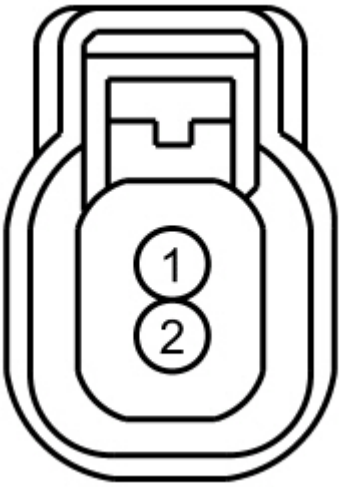
Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System.



Root DTC Description	Failure Types	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the RR door speaker circuits.
B1A03:11	Speaker #3: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the RR door speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the RR door speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the ACM when an open is detected on the RR door speaker circuits.



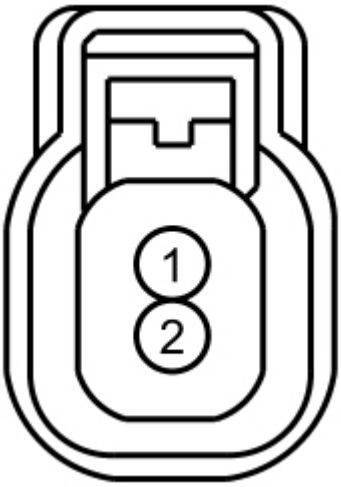
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST J: THE RR DOOR SPEAKER IS INOPERATIVE

repair4less

Test Step	Result / Action to Take
J1 CHECK THE AUDIO SIGNAL TO THE RR DOOR SPEAKER • Ignition OFF. • Disconnect: RR Door Speaker C802 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C802-1, Circuit VME12 (BN/WH); Negative Lead: Pin C802-2, Circuit RME12 (BN/BU)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new RR door speaker. REFER to Speaker — Door . **No** GO to J2 .
J2 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C290A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C802-1, Circuit VME12 (BN/WH); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C802-2, Circuit RME12 (BN/BU); Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to J3 .



- **Is any voltage present?**

J3 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	—	Ground
C802-2	RME12 (BN/BU)	—	Ground

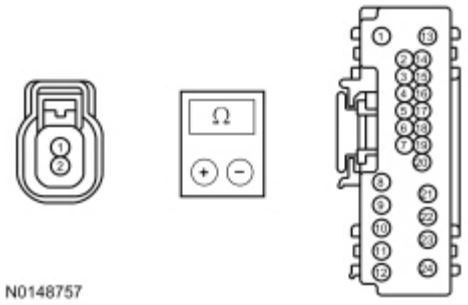
- **Are the resistances greater than 10,000 ohms?**

Yes
GO to J4 .

No
REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:



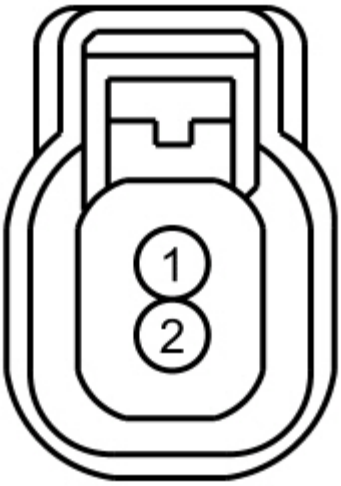
Positive Lead	Negative Lead

Yes
GO to J5 .

No

repair4less

Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C290A-10	VME12 (BN/WH)
C802-2	RME12 (BN/BU)	C290A-23	RME12 (BN/BU)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C802-2	RME12 (BN/BU)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to J6 .

No
REPAIR the circuit in question.

J6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.

Yes
CHECK OASIS for any applicable TSBs. If a

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test K: The LR Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

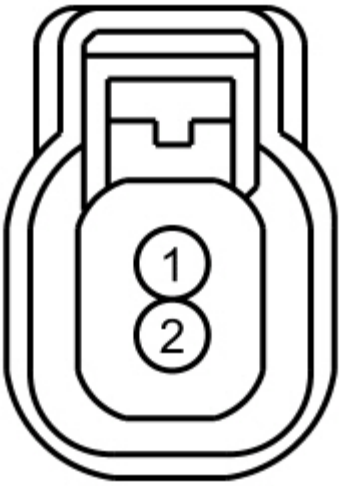
Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical Failure	Set by the ACM when a failure is detected on the LR door speaker circuits.
B1A04:11	Speaker #4: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LR door speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LR door speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the ACM when an open is detected on the LR door speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST K: THE LR DOOR SPEAKER IS INOPERATIVE



Test Step	Result / Action to Take

repair4less

K1 CHECK THE AUDIO SIGNAL TO THE LR DOOR SPEAKER

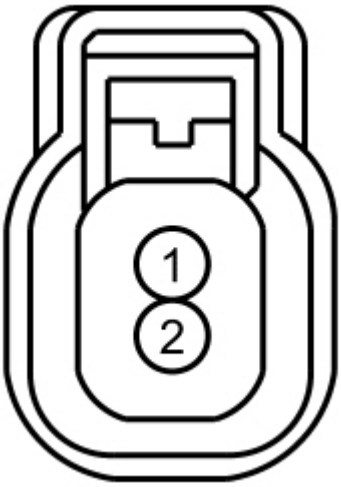
- Ignition OFF.
- Disconnect: LR Door Speaker C702 .
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	C702-2	RME09 (BN/YE)

- **Is a fluctuating AC voltage present?**

Yes
INSTALL a new LR door speaker. REFER to Speaker — Door .

No
GO to K2 .



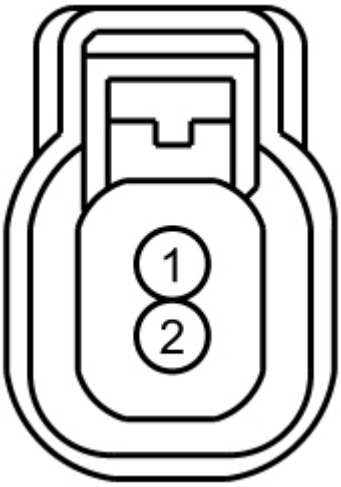
K2 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: ACM C290A .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	—	Ground
C702-2	RME09 (BN/YE)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to K3 .



- **Is any voltage present?**

K3 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	—	Ground
C702-2	RME09 (BN/YE)	—	Ground

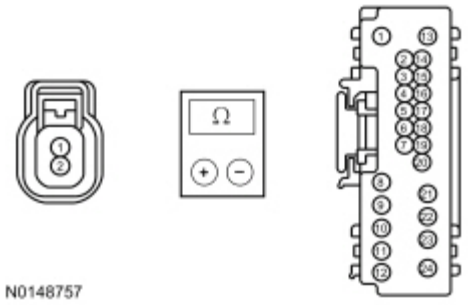
- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K4 .

No
REPAIR the circuit in question.

K4 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:



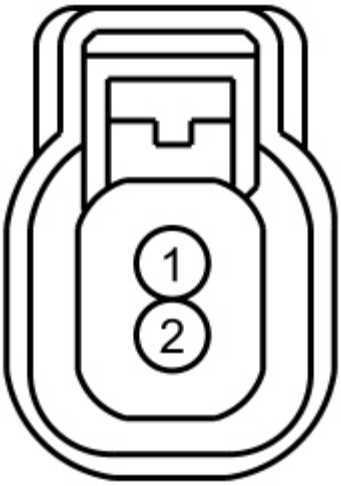
Positive Lead	Negative Lead

Yes
GO to K5 .

No

repair4less

Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	C290A-9	VME09 (WH/GN)
C702-2	RME09 (BN/YE)	C290A-22	RME09 (BN/YE)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

K5 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	C702-2	RME09 (BN/YE)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K6.

No
REPAIR the circuit in question.

K6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.

Yes
CHECK OASIS for any applicable TSBs. If a

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test L: No Sound From All SYNC® Audio Sources (Bluetooth, USB , Audio Input Jack)

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

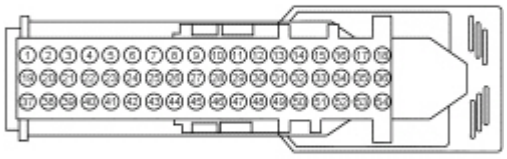
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® System in Information and Entertainment System .

The APIM transmits left and right channel analog audio signals to the ACM . These signals include inputs from the USB port, audio input jack, and Bluetooth media device. If a USB mass storage device is used to play an audio file, the SYNC® system only plays audio files that do not have DRM protection.

Possible Sources



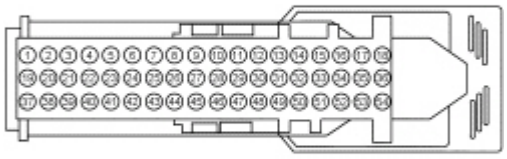
- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST L: NO SOUND FROM ALL SYNC® AUDIO SOURCES (BLUETOOTH, USB , AUDIO INPUT JACK)

Test Step	Result / Action to Take
L1 VERIFY THE OPERATION OF THE SYNC® SYSTEM AUDIO SOURCES	
• Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, test the audio output for the audio input jack, USB port, and Bluetooth. • **Is there poor quality, distorted, or no sound from all SYNC® audio sources?**	**Yes** GO to L2 . **No** If there is a concern with one or more, but not all audio sources, GO to Symptom Chart - SYNC® System to diagnose the observed symptom.

repair4less

	If all audio sources operate correctly, the concern is with the customer's device.
L2 CHECK THE AUDIO SIGNALS TO THE ACM ***NOTICE:*** **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.** • Operate the audio system in SYNC® mode and play an audio file. • Measure the **AC voltage** by back-probing ACM connector C290B: Positive Lead: Pin C290B-1, Circuit VME52 (BU); Negative Lead: Pin C290B-2, Circuit RME52 (GY/OG) Positive Lead: Pin C290B-9, Circuit VME53 (VT/GN); Negative Lead: Pin C290B-10, Circuit RME53 (BN/WH) • **Is a fluctuating AC voltage present?**	**Yes** GO to L7 . **No** GO to L3 .
L3 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C290B . • Disconnect: APIM C2383 . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C2383-23, Circuit VME53 (VT/GN); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C2383-24, Circuit RME53 (BN/WH); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C2383-25, Circuit VME52 (BU); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C2383-26, Circuit RME52 (GY/OG); Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to L4 .



- **Is any voltage present?**

L4 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO GROUND

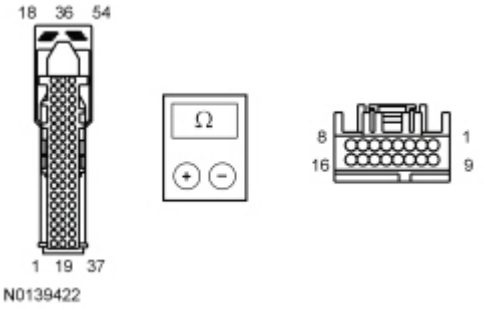
- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME53 (VT/GN)	—	Ground
C2383-24	RME53 (BN/WH)	—	Ground
C2383-25	VME52 (BU)	—	Ground
C2383-26	RME52 (GY/OG)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to L5 .

No
REPAIR the circuit in question.



L5 CHECK THE CIRCUITS TO THE ACM FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to L6 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME53 (VT/GN)	C290B-9	VME53 (VT/GN)
C2383-24	RME53 (BN/WH)	C290B-10	RME53 (BN/WH)
C2383-25	VME52 (BU)	C290B-1	VME52 (BU)
C2383-26	RME52 (GY/OG)	C290B-2	RME52 (GY/OG)

- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

L6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L7 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

• Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test M: The SYNC® System Is Inoperative (No Response Is Received From Phone, Voice, And Media Inputs)

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® System in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3000:04	Control Module: System Internal Failure	Set by the APIM when it detects a fault due to a device conflict or internal failure.

Possible Sources

- Customer's device
- APIM

PINPOINT TEST M: THE SYNC® SYSTEM IS INOPERATIVE (NO RESPONSE IS RECEIVED FROM PHONE, VOICE, AND MEDIA INPUTS)

Test Step	Result / Action to Take
M1 VERIFY THAT THE APIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the APIM pass the network test?**	**Yes** GO to M2 . **No** REFER to Section 418-00 .
M2 CHECK THE SYNC® SYSTEM INPUTS FOR FUNCTIONALITY	
NOTE: Carrying out a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature.

repair4less

devices paired with the SYNC® system. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, test the audio output for the audio input jack, USB port, and Bluetooth connection using the VOICE switch on the steering wheel controls to enter each mode. • **Do all of the SYNC® inputs function correctly?**	REVIEW the SYNC® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device. **No** GO to M3 .
M3 RESET THE APIM AND RECHECK SYNC® SYSTEM OPERATION	
NOTE: Carrying out a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any devices paired with the SYNC® system. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, test the audio output for the audio input jack, USB port, and Bluetooth connection using the VOICE switch on the steering wheel controls to enter each mode. • **Do all of the SYNC® inputs function correctly?**	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature. REVIEW the SYNC® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device. **No** If only some, but not all of the inputs are inoperative, GO to Symptom Chart - SYNC® System to diagnose the observed symptom. If all inputs are inoperative and/or DTC U3000:04 is present, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

Pinpoint Test N: The SYNC® System Voice Or Tone Prompts, TTS Feature, Or Ringtones Are Inoperative Or Do Not Operate Correctly, Or During A Phone Call, No Incoming Audio Is Heard In The Vehicle

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® System and Voice Recognition in Information and Entertainment System .

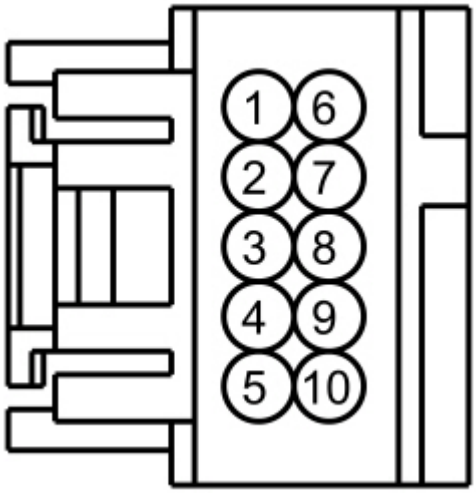
Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST N: THE SYNC® SYSTEM VOICE OR TONE PROMPTS, TTS FEATURE, OR RINGTONES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, NO INCOMING AUDIO IS HEARD IN THE VEHICLE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>N1 CHECK THE AUDIBLE PROMPT SETTING
• Operate the audio system in SYNC® mode.
• Verify the audible prompts are enabled. Refer to "SYNC® Voice Recognition Feature" in the Owner's Literature.
• Operate the VOICE button on the steering wheel controls and observe the SYNC® audible prompt.
• Does the SYNC® system produce an audible prompt correctly?</td><td>Yes
The system is operating correctly at this time. The concern was caused by the customer's setting. INSTRUCT the customer in the correct operation of the audible prompt feature.

No
GO to N2 .</td></tr>
<tr><td>N2 CHECK FOR A VOLTAGE SIGNAL FROM THE APIM
NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.
• Operate the audio system in SYNC® mode.
• While operating the VOICE button repeatedly, measure the AC voltage by back-probing ACM connector C290B:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C290B-4</td><td>VMN14 (WH/VT)</td><td>C290B-5</td><td>RMN14 (GY/BN)</td></tr></table>• Is a fluctuating AC voltage present each time the VOICE switch is operated?</td><td>Yes
GO to N7 .



No
GO to N3 .</td></tr>
<tr><td>N3 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO VOLTAGE
• Ignition OFF.
• Disconnect: ACM C290B .
• Disconnect: APIM C2383 .
• Ignition ON.</td><td>Yes
REPAIR the circuit in question.

No</td></tr>
</table>

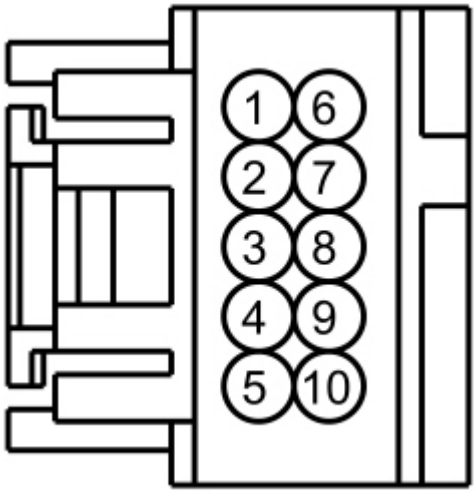
repair4less

- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C290B-4	VMN14 (WH/VT)	—	Ground
C290B-5	RMN14 (GY/BN)	—	Ground

- **Is any voltage present?**

GO to N4 .



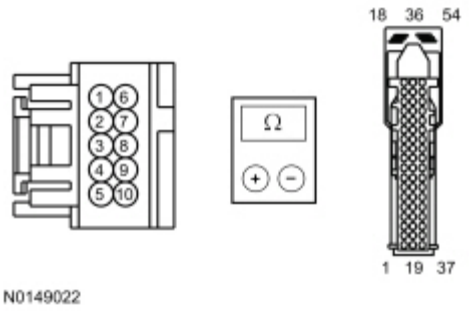
N4 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C290B-4	VMN14 (WH/VT)	—	Ground
C290B-5	RMN14 (GY/BN)	—	Ground

Yes
GO to N5 .

No
REPAIR the circuit in question.



- **Are the resistances greater than 10,000 ohms?**

N5 CHECK THE AUDIBLE PROMPT CIRCUITS FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C290B-4	VMN14 (WH/VT)	C2383-3	VMN14 (WH/VT)
C290B-5	RMN14 (GY/BN)	C2383-4	RMN14 (GY/BN)

- **Are the resistances less than 3 ohms?**

Yes
GO to N6 .

No
REPAIR the circuit in question.

N6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

repair4less

• Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
N7 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test O: All SYNC® Services Features Are Inoperative Or Inaccurate

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® Services in Information and Entertainment System.

Possible Sources

- Unregistered SYNC® owner account
- Unregistered or expired SYNC® Services subscription
- Unregistered mobile phone number
- Mobile phone being used not selected as "Active"
- SYNC® Services server
- APIM
- GPSM

PINPOINT TEST O: ALL SYNC® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE

Test Step	Result / Action to Take
O1 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION	

AND SUBSCRIPTION	
• Verify that the customer has a SYNC® Owner Account on SyncMyRide • Verify that the customer has registered for SYNC® Services and has an active subscription. • **Does the customer have a SYNC® Owner Account and an active SYNC® Services subscription?**	**Yes** GO to O2. **No** If the customer does not have a SYNC® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC® Services. REFER to SyncMyRide. If the customer does not have an active SYNC® Services subscription, INFORM the customer that in order for SYNC® Services to function, the subscription needs to be activated. REFER to SyncMyRide.
O2 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS	
• Verify that the mobile phone being used has the correct phone number registered with SYNC® Services. • Verify that the mobile phone being used is selected as "Active" on SyncMyRide. • **Is the customer using the registered and active mobile phone associated with the SYNC® services account?**	**Yes** GO to O3. **No** INFORM the customer that the correct phone number must be registered on the SYNC® website and selected as "Active." REFER to SyncMyRide.
O3 CHECK FOR APIM DTCs	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Are any DTCs recorded in the APIM ?**	**Yes** REFER to the APIM DTC Chart in Information and Entertainment System. **No** GO to O4.
O4 CHECK FOR GPSM DTCs	
• Using a diagnostic scan tool, perform the GPSM self-test. • **Are any DTCs recorded in the GPSM ?**	**Yes** REFER to the GPSM DTC Chart in Information and Entertainment System. **No** GO to O5.
O5 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES	
• Advise the customer to connect their phone to SYNC® Services. Caller ID blocking must be disabled on the customer's phone. Refer to the Owner's Literature. • Operate a SYNC® Services feature. • Verify that the phone call is placed and that the phone is connected to SYNC®	**Yes** GO to O6. **No** GO to Pinpoint Test S.

repair4less

Services. • **Does the phone connect to SYNC® Services and operate correctly?**	
O6 OBSERVE THE SYNC® SERVICES SUBSCRIPTION COMMERCIAL	
• Once the customer's phone is connected to SYNC® Services, observe the subscription commercial. • **Does the SYNC® Services subscription commercial repeat with no selection option?**	**Yes** There is a potential SYNC® Services server issue, and the problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance. **No** GO to O7 .
O7 CHECK THE OPERATION OF THE DIRECTIONS FROM SYNC® SERVICES	
• When prompted, select directions from SYNC® Services and observe the audible prompts from the audio system. • **Is a single chime, audible prompt, then a short chime heard, indicating the navigation route is being sent to the vehicle?**	**Yes** SYNC® Services is operating correctly at this time. **No** If a single chime, audible prompt, then a repeating chime is heard, indicating the navigation route is being sent to the vehicle, GO to O8 . If no chime or audible prompt is heard, indicating that the system was unable to locate the vehicle, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance.
O8 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test P: Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone

Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Voice Recognition in Information and Entertainment System .

DTC Fault Trigger Conditions

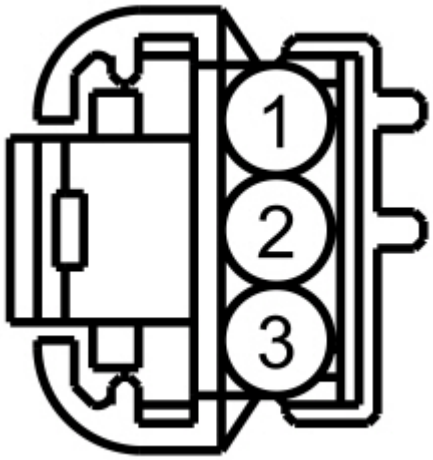
DTC	Description	Fault Trigger Conditions
B1D79:01	Microphone Input: General Electrical Failure	Set by the APIM when a microphone is not detected during the on-demand self-test.
B1D79:11	Microphone Input: Circuit Short To Ground	Set by the APIM when short to ground is detected on the microphone circuits.
B1D79:12	Microphone Input: Circuit Short To Battery	Set by the APIM when short to voltage is detected on the microphone circuits.
B1D79:13	Microphone Input: Circuit Open	Set by the APIM when an open is detected on the microphone circuits.

Possible Sources

- Insufficiently quiet vehicle
- Inadequate phone reception
- Wiring, terminals, or connectors
- Microphone
- APIM

PINPOINT TEST P: VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

Test Step	Result / Action to Take
P1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY	
• Operate the audio system in radio tuner AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **Does the SYNC® system produce an audible prompt correctly, indicating voice recognition mode has been entered?**	**Yes** GO to P3 . **No** GO to P2 .
P2 CHECK THE OPERATION OF THE RH STEERING WHEEL SWITCHES	



repair4less

• Operate the audio system in AM/FM mode. • Operate the VOLUME +/-, SEEK +/-, MEDIA, PHONE, and OK steering wheel switches. • **Do the VOLUME +/-, SEEK +/-, MEDIA, PHONE, and OK steering wheel switches operate correctly?**	**Yes** GO to Pinpoint Test N . **No** GO to Pinpoint Test T to diagnose the RH steering wheel switches.
P3 CHECK THE OPERATION OF THE "PHONE" VOICE COMMAND	
• Pair a Bluetooth phone with the SYNC® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on syncmyride.com . • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands. • Clearly speak the word "phone." • **Does the SYNC® system respond correctly to the "phone" voice command?**	**Yes** For a concern with the voice recognition being inoperative or not operating correctly, the system is operating correctly at this time. The concern may have been caused by an insufficiently quiet vehicle. Delete the just-paired Bluetooth phone from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. For a concern with poor quality or no outgoing audio being heard on the outside device during a phone call, GO to P4 **No** GO to P5 .
P4 CHECK THE OUTGOING PHONE CALL QUALITY AND VOICE VOLUME	
• Ensure that the Bluetooth phone paired in step 3 has adequate reception. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the call from having clear call quality and acceptable voice volume. • Using the SYNC® system, place a phone call. For information on making calls from the SYNC® system, refer to the Owner's Literature. • Ensure that the called party's phone has adequate reception. • Instruct the called party to determine if the call quality is clear and of acceptable volume. • Delete the Bluetooth phone paired in step 3 from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. • **Is the outgoing call quality clear and of acceptable volume?**	**Yes** The system is operating correctly at this time. The concern may have been caused by poor phone reception or an insufficiently quiet vehicle. **No** GO to P5 .
P5 CHECK THE MICROPHONE AND MICROPHONE CIRCUITS FOR CORRECT VOLTAGE DROP	
NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that**	**Yes** If diagnosing an intermittent concern, GO to P6 . If **not** diagnosing an intermittent concern, GO to P12 . **No** GO to P7 .

good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

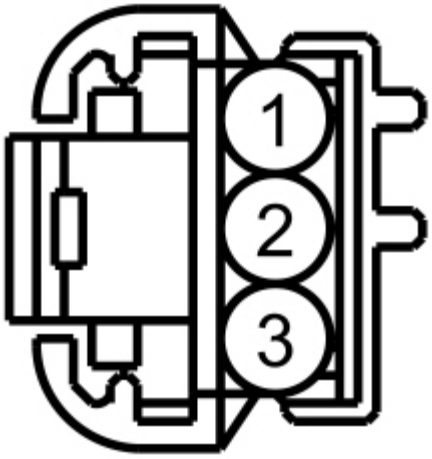
- Ignition ON.
- While back-probing microphone C9221, measure and record the **DC voltage** .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

- **Is the voltage between 2.7 and 6.2 volts?**

P6 CHECK THE MICROPHONE CIRCUITS FOR INTERMITTENT CONCERNS

NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**



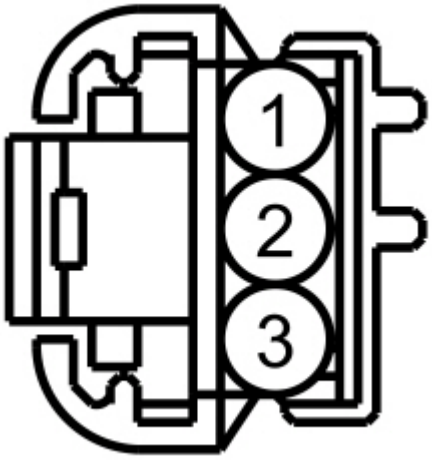
- While back-probing microphone C9221, measure the **DC voltage** while agitating the microphone harness back and forth and up and down (wiggle testing).

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

Yes
REPAIR the circuit(s), connector, or terminal(s) in question. For corrosion, clean pins or install a new connector or terminals. For damaged or bent pins, install new terminals or pins.

No
GO to P11 .

repair4less



- Review the recorded results from step 5.
- **Does the voltage fluctuate more than .5 volts from the recorded result in step 5?**

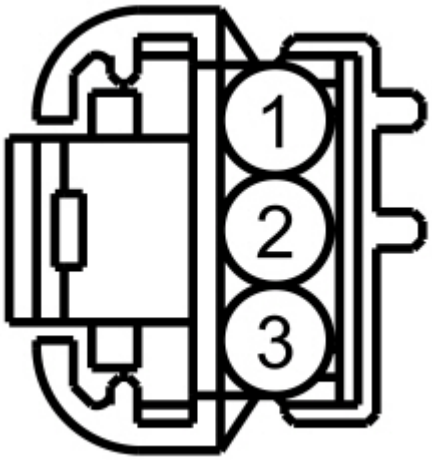
P7 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Microphone C9221.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.



No
GO to P8 .

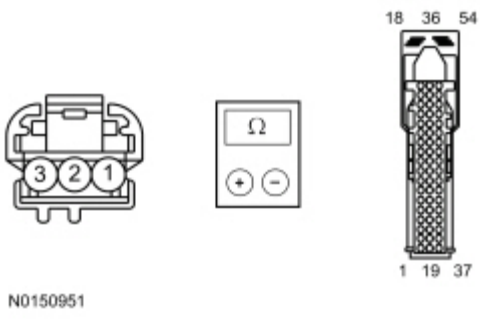
P8 CHECK THE MICROPHONE CIRCUITS TO THE APIM

FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

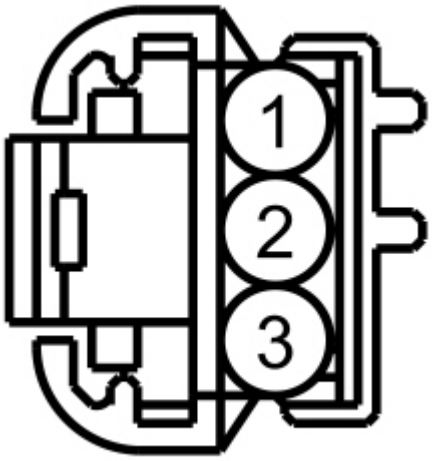


Yes
GO to P9 .

No
REPAIR the circuit in question.

P9 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR AN OPEN

- Measure the **resistance** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C2383-5	VMM13 (YE/GN)
C9221-3	DMM13 (BK)	C2383-6	DMM13 (BK)

Yes
GO to P10 .

No
REPAIR the circuit in question.

repair4less

• **Are the resistances less than 3 ohms?**	
P10 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TOGETHER • Measure the **resistance** between: <table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C9221-2</td><td>VMM13 (YE/GN)</td><td>C9221-3</td><td>DMM13 (BK)</td></tr></table> • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to P12 . **No** REPAIR the circuit in question.
P11 ISOLATE THE MICROPHONE • Install a new microphone. Refer to Microphone . • If necessary, connect: APIM C2383. • Operate the audio system in AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • Speak a command to test the voice recognition for normal operation. • **Is the voice recognition functioning correctly?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative microphone. **No** GO to P12 .

P12 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections.

	ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Q: The Audio Input Jack Is Inoperative Or Has Poor Sound Quality

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Audio Input Jack Mode in Information and Entertainment System .

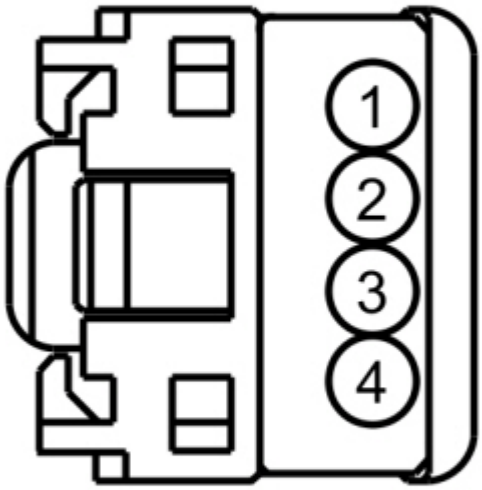
Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Audio input jack
- APIM (with SYNC®)
- ACM (without SYNC®)

PINPOINT TEST Q: THE AUDIO INPUT JACK IS INOPERATIVE OR HAS POOR SOUND QUALITY

NOTE: Before carrying out this pinpoint test, make sure the MP3 device is operating correctly.

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>Q1 CHECK THE AUDIO INPUT JACK AUDIO FUNCTIONALITY</td><td></td></tr>
<tr><td>• Connect: Multi-Media Interface Tester 105-00120.
• Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the audio input jack.
• Is the audio output OK for the audio input jack?</td><td>Yes
The system is operating correctly at this time. The concern may be with the customer's device.



No
GO to Q2 .</td></tr>
<tr><td>Q2 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE</td><td></td></tr>
<tr><td>• Ignition OFF.
• Disconnect: Audio Input Jack C2362.
• Disconnect: APIM C2383 (with SYNC®).
• Disconnect: ACM C290B (without SYNC®).
• Ignition ON.
• Measure the voltage between:

<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td></td><td></td><td></td><td></td></tr></table></td><td>Yes
REPAIR the circuit in question.

No
GO to Q3 .</td></tr>
</table>

repair4less

C2362-1	VME46 (BU/GN)	—	Ground

C2362-3	RME45 (YE/GN)	C2383-46	RME45 (YE/GN)
C2362-4	VME45 (BU)	C2383-45	VME45 (BU)

N0148923

- For vehicles without SYNC®, measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-1	VME46 (BU/GN)	C290B-6	VME46 (BU/GN)
C2362-3	RME45 (YE/GN)	C290B-8	RME45 (YE/GN)
C2362-4	VME45 (BU)	C290B-7	VME45 (BU)

N0148924

- **Are the resistances less than 3 ohms?**

GO to Q5 .

No
REPAIR the circuit in question.

Q5 ISOLATE THE AUDIO INPUT JACK

- Connect: APIM C2383 (with SYNC®).

Yes

• Connect: ACM C290B (without SYNC®). • Install a new audio input jack. Refer to Audio Input Jack . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the audio input jack. • **Is the audio output OK for the audio input jack?**	The system is now correctly at this time. The concern was caused by an inoperative audio input jack. **No** GO to Q6 (with SYNC®). GO to Q7 (without SYNC®).
Q6 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q7 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test R: The USB Port Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® AppLink™, USB Audio Mode, and USB Port. in Information and Entertainment System .

repair4less

The USB port is part of the USB cable, and cannot be replaced separately.

The Multi-Media Interface Tester 105-00120 is powered by the USB port.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:04	USB Port: System Internal Failure	Set by the APIM when an over-temperature condition is detected in the USB circuit. This can be caused by a fault in the USB cable, USB port, or customer's USB device.
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB circuit. This can be caused by a fault in the USB cable, USB port, or customer's USB device.

Possible Sources

- Customer's device
- USB cable/port
- USB cable/port connection
- APIM

PINPOINT TEST R: THE USB PORT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
R1 RESET THE APIM AND RECHECK SYNC® SYSTEM OPERATION • Remove any devices connected to the USB port. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the USB port. • **Is the audio output OK for the USB port?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to R2.
R2 CHECK THE APIM FOR DTC B1252:04 OR DTC B1252:11 • Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:04 or DTC B1252:11 present?**	**Yes** GO to R3. **No** GO to R5.

R3 INSPECT THE USB CABLE AND APIM	
• Ignition OFF. • Disconnect: USB cable at the APIM . • Inspect the APIM connector port and both ends of the USB cable for damage. Remove any debris. • **Is any damage present?**	**Yes** For the USB cable, INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . For the APIM , For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** GO to R4 .
R4 CHECK THE USB PORT FOR FUNCTIONALITY	
• Connect: USB cable at the APIM . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the USB port. • **Is the audio output OK for the USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly. **No** GO to R5 .
R5 ISOLATE THE USB CABLE/PORT	
• Install a new USB cable/port. Universal Serial Bus (USB) Cable and Port . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play a file using the USB port. • **Is the audio output OK for the USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative USB cable. **No** GO to R6 .
R6 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

• Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test S: Unable To Pair Bluetooth Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Bluetooth Mode and SYNC® AppLink™ in Information and Entertainment System .

Possible Sources

- Incompatible Bluetooth device
- APIM

PINPOINT TEST S: UNABLE TO PAIR BLUETOOTH DEVICE

Test Step	Result / Action to Take
S1 CHECK THE BLUETOOTH CONNECTION	
NOTE: Carrying out a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any devices paired with the SYNC® system. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, connect to the SYNC® system using Bluetooth. Follow the tool instructions. • Using a diagnostic scan tool, view the APIM PIDs. • Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN). • **Do the PIDs both read "Yes"?**	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device. **No** GO to S2 .
S2 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF. • Disconnect and inspect the APIM	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists

connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test T: The RH steering wheel controls are inoperative or do not operate correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Steering Wheel Switch Functions and Steering Wheel Switches in Information and Entertainment System .

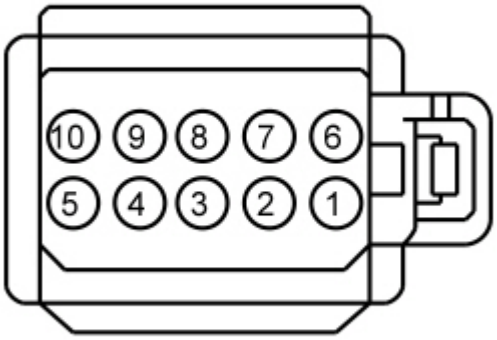
DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH steering wheel switch is stuck.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected in the RH steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected in the RH steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

repair4less



PINPOINT TEST T: THE RH STEERING WHEEL CONTROLS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>T1 CHECK THE RH STEERING WHEEL SWITCH PIDs</td><td rowspan="2">Yes
GO to T10 .

No
If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH steering wheel switch. REFER to Section 211-05 .
If all PID values are incorrect or always read one particular switch position, GO to T2 .</td></tr>
<tr><td>• Ignition ON.
• Monitor the steering wheel controls PIDs while pressing each RH steering wheel switch.
• Using a diagnostic scan tool, view the SCCM PIDs.
  ◦ SW_VOLDOWN
  ◦ SW_VOLUP
  ◦ SW_SEEKMINUS
  ◦ SW_SEEKPLUS
  ◦ SW_VOICE
  ◦ SW_MEDIA
  ◦ SW_PHONE
• Using a diagnostic scan tool, view the APIM PID.
  ◦ SW_OK
• Do the PID values agree with the switch positions?</td></tr>
<tr><td>T2 CHECK FOR IPC DTC U0212:00</td><td rowspan="2">Yes
REFER to Section 413-01 .

No
GO to T3 .</td></tr>
<tr><td>• Ignition ON.
• Using a diagnostic scan tool, clear the DTCs from the IPC .
• Ignition OFF.
• Ignition ON.
• Wait at least 10 seconds.
• Using a diagnostic scan tool, perform the IPC self-test.
• Is DTC U0212:00 set in the IPC ?</td></tr>
<tr><td>T3 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TO GROUND</td><td rowspan="2">Yes
GO to T4 .

No
INSTALL a new steering wheel. REFER to Section 211-04 .</td></tr>
<tr><td>WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.
• Ignition OFF.
• Disconnect: RH Steering Wheel Switch C2999.
• Disconnect: Clockspring C218B.
• Measure the resistance between:
<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td>C2999-2</td><td>VME14</td><td>—</td><td>Ground</td></tr><tr><td>C2999-4</td><td>RME14</td><td>—</td><td>Ground</td></tr><tr><td>C2999-6</td><td>VME54</td><td>—</td><td>Ground</td></tr><tr><td>C2999-7</td><td>RME54</td><td>—</td><td>Ground</td></tr></table></td></tr>

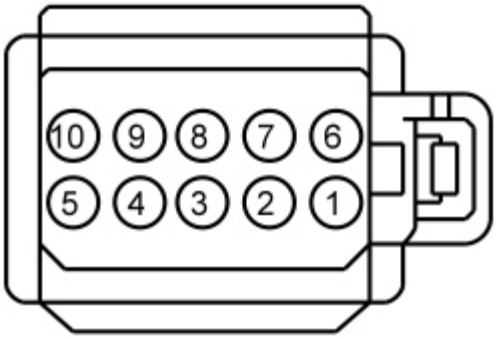
					Yes GO to T6 . **No** INSTALL a new steering wheel. REFER to Section 211-04 .

repair4less

C2999-6	VME54	C2999-7	RME54



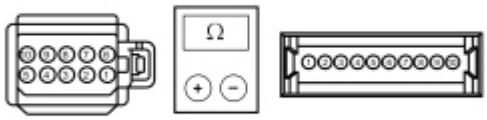
- **Are the resistances greater than 10,000 ohms?**

T6 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect: Clockspring C218B.
- Disconnect: Clockspring C218C.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	—	Ground
C2999-4	RME14	—	Ground
C2999-6	VME54	—	Ground
C2999-7	RME54	—	Ground

Yes
GO to T7 .



No
INSTALL a new clockspring.
REFER to Section 501-20B .

- **Are the resistances greater than 10,000 ohms?**

T7 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218C-6	—
C2999-4	RME14	C218C-5	—
C2999-6	VME54	C218C-10	—
C2999-7	RME54	C218C-9	—

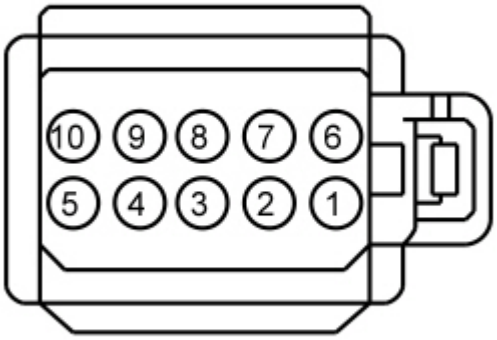
N0148946

- **Are the resistances less than 3 ohms?**

Yes
GO to T8 .

No
INSTALL a new clockspring.
REFER to Section 501-20B .

T8 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER



- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14
C2999-6	VME54	C2999-7	RME54

Yes
GO to T9 .

No
INSTALL a new clockspring.
REFER to Section 501-20B .

repair4less

- **Are the resistances greater than 10,000 ohms?**

T9 CHECK FOR VOLTAGE AT THE SCCM

- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2414D-6	—	C2414D-5	—
C2414D-10	—	C2414D-9	—

- **Is approximately 5 volts present?**

Yes
INSTALL a new RH steering wheel switch. REFER to Section 211-05 .

No
GO to T10 .

T10 CHECK FOR CORRECT SCCM OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM . REFER to

▪ Pushed-out pins (install new pins as necessary) • Reconnect the SCCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	Section 211-05 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test U: The Audio System Does Not Operate Correctly From The FCIM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Accessory Delay Feature and FCIM in Information and Entertainment System .

Possible Sources

- Network communication concern
- FCIM

PINPOINT TEST U: THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM

Test Step	Result / Action to Take
U1 VERIFY THAT THE ACM , APIM , AND FCIM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the ACM , APIM , and FCIM pass the network test?**	**Yes** GO to U2 . **No** If the ACM failed the network test, REFER to Section 418-00 The ACM Does Not Respond To The Scan Tool. If the APIM failed the network test, REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool. If the FCIM failed the network test, REFER to Section 418-00 The FCIM Does Not Respond To The Scan Tool.
U2 RESET THE AUDIO SYSTEM MODULES AND RECHECK THE FCIM OPERATION	
• Disconnect the battery for 5 minutes, then reconnect it. • Turn the infotainment system on. • Test the FCIM for normal operation.	**Yes** The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules. **No** GO to U3

repair4less

• **Does the FCIM operate correctly?**	

U3 RETRIEVE THE ACM , APIM , AND FCIM DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  • ACM
  • APIM
  • FCIM
• **Are any DTCs present in the ACM , APIM , or FCIM ?**
	Yes
	For ACM DTCs, REFER to the ACM DTC Chart in Information and Entertainment System For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For FCIM DTCs, REFER to the FCIM DTC Chart in Information and Entertainment System
	
	No
	GO to U4 .

U4 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test V: The FDIM Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to FDIM in Information and Entertainment System .

Possible Sources

- Wiring, terminals, or connectors
- FDIM

PINPOINT TEST V: THE FDIM IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
V1 VERIFY THAT THE FDIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the FDIM pass the network test?**	**Yes** GO to V2 . **No** REFER to Section 418-00 The FDIM Does Not Respond To The Scan Tool.
V2 OBSERVE THE FDIM DISPLAY	
• Turn the audio system on and verify the FDIM operation. • **Is the FDIM screen completely inoperative or blank?**	**Yes** GO to V4 . **No** GO to V3 .
V3 CHECK FOR LOST COMMUNICATION DTCS SET IN THE FDIM	
• Ignition ON. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Are any lost communication DTCs (U-codes) present in the FDIM ?**	**Yes** REFER to the FDIM DTC Chart in Information and Entertainment System . **No** GO to V4 .
V4 CHECK FOR CORRECT FDIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FDIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FDIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FDIM . REFER to Front Display Interface Module (FDIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test W: One Or More FDIM Displays Are Inoperative Or Do Not Operate Correctly

repair4less

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to FDIM in Information and Entertainment System .

Possible Sources

- Customer error
- Wiring, terminals, or connectors
- FDIM

PINPOINT TEST W: ONE OR MORE FDIM DISPLAYS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
W1 VERIFY THAT THE FDIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the FDIM pass the network test?**	**Yes** GO to W2 . **No** REFER to Section 418-00 The FDIM Does Not Respond To The Scan Tool.
W2 CHECK FOR LOST COMMUNICATION DTCS SET IN THE FDIM	
• Ignition ON. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Are any lost communication DTCs (U-codes) present in the FDIM ?**	**Yes** REFER to the FDIM DTC Chart in Information and Entertainment System . **No** GO to W3 .
W3 CHECK THE FDIM DISPLAY SEGMENTS	
• Perform the Display Test. REFER to Audio Control Module (ACM) Self-Diagnostic Mode • **Do all of the FDIM segments illuminate?**	**Yes** The system is operating correctly at this time. INFORM the customer of the operation of the FDIM display. **No** GO to W4 .
W4 CHECK FOR CORRECT FDIM OPERATION	
• Ignition OFF. • Disconnect and inspect the FDIM connector. • Repair: ▪ Corrosion (clean module	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FDIM . REFER to Front Display Interface Module (FDIM) .

pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the FDIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test X: The Compass Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Auto-Dimming Interior Rear View Mirror, Compass Module, and FDIM in Information and Entertainment System .

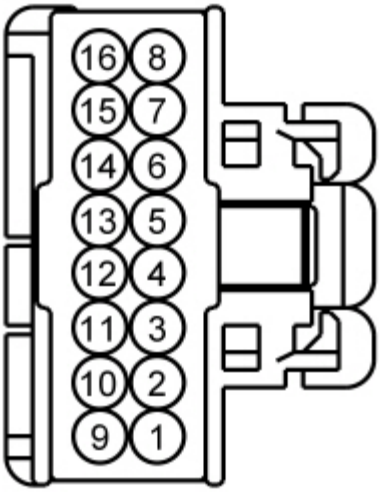
Root DTC Description	Failure Types	Fault Trigger Conditions
U0462:82	Invalid Data Received from Compass Module: Alive/Sequence Counter Incorrect/Not Updated	Set by the IPC when compass data from the BCM is missing or invalid for more than 5 seconds with the ignition in the RUN position.

If compass data is missing or invalid for 5 seconds or less, the compass display will indicate the vehicle direction based on the last known good compass display message received. When U0462:82 sets, the IPC defaults the compass display to all dashes (---).

Possible Sources

- Wiring, terminals, or connectors
- Compass module
- Auto-dimming interior rear view mirror
- BCM

PINPOINT TEST X: THE COMPASS IS INOPERATIVE



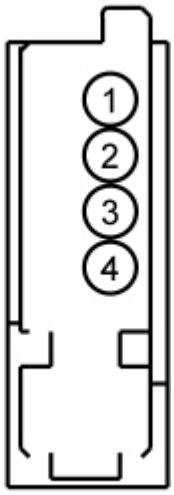
Test Step	Result / Action to Take

repair4less

X1 CHECK THE VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect: Auto-Dimming Interior Rear View Mirror C9039 (With Auto-Dimming Interior Rear View Mirror).
- Disconnect: Compass Module C909 (Without Auto-Dimming Interior Rear View Mirror).
- Ignition ON.
- For vehicles with an auto-dimming interior rear view mirror, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9039-1	CBP32 (GN/VT)	—	Ground

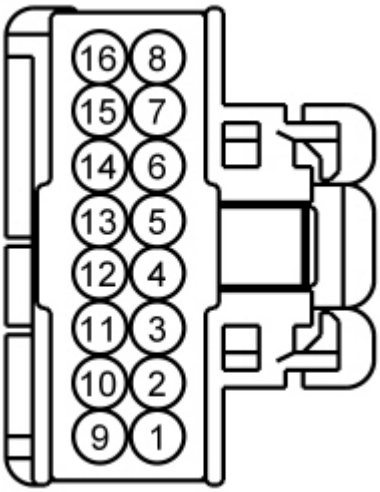


- For vehicles **without** an auto-dimming interior rear view mirror, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C909-1	CBP32 (GN/VT)	—	Ground

Yes
GO to X2 .

No
REPAIR the circuit in question.

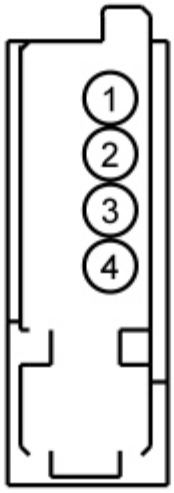


- **Is the voltage greater than 11 volts?**

X2 CHECK THE GROUND CIRCUIT

- For vehicles with an auto-dimming interior rear view mirror, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9039-1	CBP32 (GN/VT)	C9039-4	GD133 (BK)



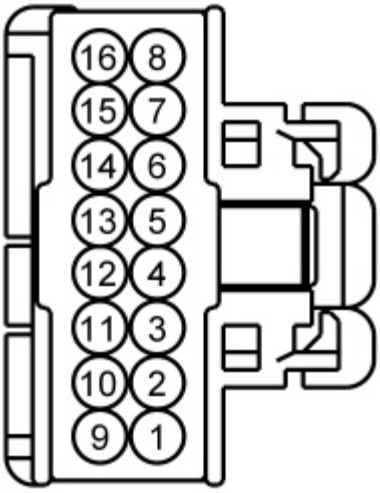
- For vehicles **without** an auto-dimming interior rear view mirror, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C909-1	CBP32 (GN/VT)	C909-2	GD133 (BK)

Yes
GO to X3 .

No
REPAIR the circuit in question.

repair4less

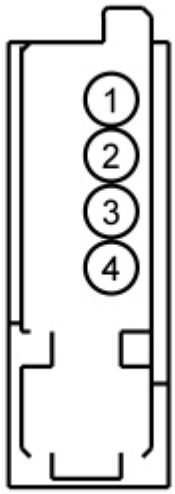


- **Is the voltage greater than 11 volts?**

X3 CHECK THE LIN CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: BCM C2280B.
- Ignition ON.
- For vehicles with an auto-dimming interior rear view mirror, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9039-2	VDN01 (BU/WH)	—	Ground



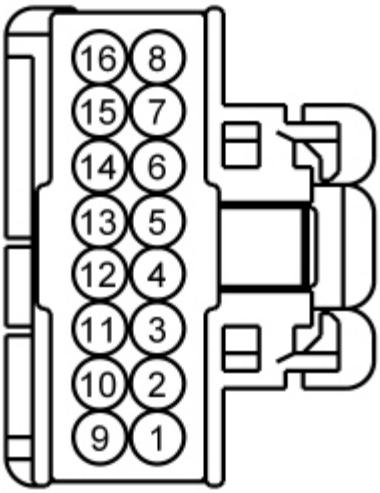
- For vehicles **without** an auto-dimming interior rear view mirror, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit

Yes
REPAIR the circuit in question.

No
GO to X4 .

C909-3	VDN01 (BU/WH)	—	Ground



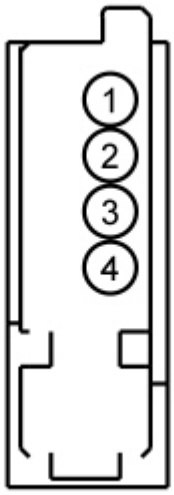
- **Is any voltage present?**

X4 CHECK THE LIN CIRCUIT FOR A SHORT TO GROUND

- For vehicles with an auto-dimming interior rear view mirror, measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9039-2	VDN01 (BU/WH)	—	Ground

- For vehicles **without** an auto-dimming interior rear view mirrorr, measure the **resistance** between:



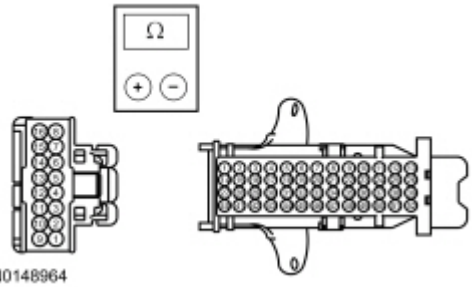
Positive Lead		Negative Lead	

Yes
GO to X5 .

No
REPAIR the circuit in question.

repair4less

Pin	Circuit	Pin	Circuit
C909-3	VDN01 (BU/WH)	—	Ground

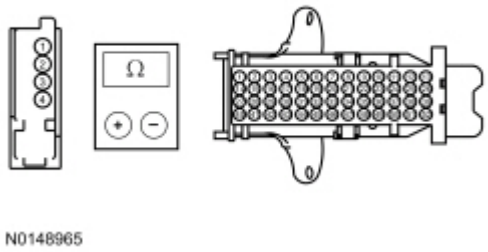


- **Are the resistances greater than 10,000 ohms?**

X5 CHECK THE LIN CIRCUIT FOR AN OPEN

- For vehicles with an auto-dimming interior rear view mirror, measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9039-2	VDN01 (BU/WH)	C2280B-52	VDN01 (BU/WH)



- For vehicles **without** an auto-dimming interior rear view mirror, measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C909-3	VDN01 (BU/WH)	C2280B-52	VDN01 (BU/WH)

Yes
For vehicles with an auto-dimming interior rear view mirror, GO to X6 . For vehicles without an auto-dimming interior rear view mirror, GO to X7 .

No
REPAIR the circuit in question.

 N0148965 • **Are the resistances less than 3 ohms?**	
X6 ISOLATE THE AUTO-DIMMING INTERIOR REAR VIEW MIRROR	
• INSTALL a new auto-dimming interior rear view mirror. REFER to Section 501-09 . • SET the zone. REFER to the Compass Zone Adjustment General Procedure in Section 413-01 . • CALIBRATE the compass. REFER to the Compass Calibration General Procedure in Section 413-01 . • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** GO to X8 . **No** The system is operating correctly at this time. The concern was corrected by installing a new auto-dimming interior rear view mirror.
X7 ISOLATE THE COMPASS MODULE	
• INSTALL a new compass module. REFER to Compass Module . • SET the zone. REFER to the Compass Zone Adjustment General Procedure in Section 413-01 . • CALIBRATE the compass. REFER to the Compass Calibration General Procedure in Section 413-01 . • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** GO to X8 . **No** The system is operating correctly at this time. The concern was corrected by installing a new compass module.
X8 CHECK FOR CORRECT BCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the BCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Y: The Compass Is Inaccurate

repair4less

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Auto-Dimming Interior Rear View Mirror, Compass Module, and FDIM in Information and Entertainment System .

Possible Sources

- Zone setting
- Calibration
- Auto-dimming interior mirror
- Compass module

PINPOINT TEST Y: The Compass Is Inaccurate

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>Y1 CHECK THE COMPASS ACCURACY
• Position the vehicle and observe the compass display as follows:
<table><tr><th>Direction</th><th>Compass Display</th></tr><tr><td>North</td><td>N</td></tr><tr><td>Northeast</td><td>NE</td></tr><tr><td>East</td><td>E</td></tr><tr><td>Southeast</td><td>SE</td></tr><tr><td>South</td><td>S</td></tr><tr><td>Southwest</td><td>SW</td></tr><tr><td>West</td><td>W</td></tr><tr><td>Northwest</td><td>NW</td></tr></table>• Does the compass heading accurately display the vehicle direction?</td><td>Yes
The compass is operating correctly at this time.

No
GO to Y2 .</td></tr>
<tr><td>Y2 CHECK THE COMPASS ZONE SETTING AND CALIBRATION
• SET the zone. REFER to the Compass Zone Adjustment General Procedure in Section 413-01 .
• CALIBRATE the compass. REFER to the Compass Calibration General Procedure in Section 413-01 .
• Operate the system and verify the concern is still present.</td><td>Yes
The system is operating correctly at this time. The concern may have been caused by an incorrect compass zone selection or compass calibration.

No
For vehicles with an auto-dimming interior rear</td></tr>
</table>

• **Is the concern still present?**	view mirror, GO to Y3. For vehicles without an auto-dimming interior rear view mirror, GO to Y4.
Y3 ISOLATE THE AUTO-DIMMING INTERIOR REAR VIEW MIRROR	
• INSTALL a new auto-dimming interior rear view mirror. REFER to Section 501-09. • SET the zone. REFER to the Compass Zone Adjustment General Procedure in Section 413-01. • CALIBRATE the compass. REFER to the Compass Calibration General Procedure in Section 413-01. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** GO to Y5. **No** The system is operating correctly at this time. The concern was corrected by installing a new auto-dimming interior rear view mirror.
Y4 ISOLATE THE COMPASS MODULE	
• INSTALL a new compass module. REFER to Compass Module. • SET the zone. REFER to the Compass Zone Adjustment General Procedure in Section 413-01. • CALIBRATE the compass. REFER to the Compass Calibration General Procedure in Section 413-01. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** GO to Y5. **No** The system is operating correctly at this time. The concern was corrected by installing a new compass module.
Y5 CHECK FOR CORRECT BCM OPERATION	

• Ignition OFF.
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Z: DTC B1318

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System for schematic and connector information.

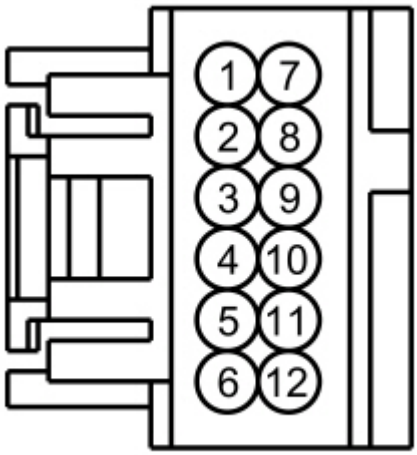
Normal Operation and Fault Conditions

repair4less

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1318	Battery Voltage Low	Set by the FDIM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

PINPOINT TEST Z: DTC B1318



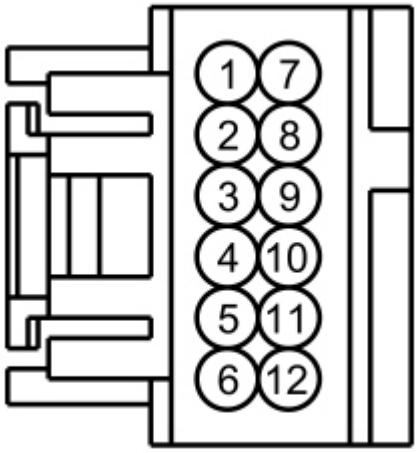
<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>Z1 RECHECK FOR DTC B1318
• Ignition ON.
• Using a diagnostic scan tool, clear the FDIM DTCs.
• Wait at least 15 seconds.
• Using a diagnostic scan tool, repeat the self-test.
• Is DTC B1318 still present?</td><td>Yes
GO to Z2.

No
The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.</td></tr>
<tr><td>Z2 CHECK FOR CHARGING SYSTEM DTCS IN THE PCM
• Using a diagnostic scan tool, retrieve all CMDTCs.
• Are any voltage-related DTCs set in the PCM ?</td><td>Yes
REFER to PCM DTC Chart in Section 303-14.

No
GO to Z3.</td></tr>
<tr><td>Z3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE
• Check the battery condition and verify that the battery is fully charged. REFER to Battery Condition Test in Section 414-01.
• Is the battery OK and fully charged?</td><td>Yes
GO to Z4.

No
REFER to the Symptom Chart in Section 414-01.</td></tr>
<tr><td>Z4 CHECK THE FDIM VOLTAGE SUPPLY
• Ignition OFF.
• Measure and record the voltage at the battery.
• Disconnect: FDIM C2123.
• Ignition ON.
• Measure the voltage between:
<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td>C2123-12</td><td>SBP09 (RD)</td><td>—</td><td>Ground</td></tr></table></td><td>Yes
GO to Z5.

No
REPAIR the circuit for high resistance.</td></tr>
</table>



- **Is the voltage within 0.2 volts of the recorded battery voltage?**

Z5 CHECK THE FDIM GROUND CIRCUIT FOR CONTINUITY

- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2123-12	SBP09 (RD)	C2123-8	GD133 (BK)

- **Is the voltage greater than 11 volts?**

Yes
GO to Z6 .

No
REPAIR the circuit for high resistance.

Z6 CHECK FOR CORRECT FDIM OPERATION

- Ignition OFF.
- Disconnect and inspect the FDIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FDIM . REFER to Front Display Interface Module (FDIM) .

repair4less

▪ Pushed-out pins (install new pins as necessary) • Reconnect the FDIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AA: DTC U0100:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AA: DTC U0100:00

Test Step	Result / Action to Take
AA1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AA2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AA2 RECHECK FOR DTC U0100:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0100:00 set in the GPSM ?**	**Yes** GO to AA3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AA3 CHECK THE PCM FOR BATTERY VOLTAGE OUT-OF-	

RANGE DTCS	
• Using a diagnostic scan tool, perform the PCM self-test. • **Are any low or high voltage DTCs recorded in the PCM ?**	**Yes** REFER to PCM DTC Chart in Section 303-14 . **No** GO to AA4 .
AA4 CHECK THE GPSM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the GPSM self-test. • **Are any low or high voltage DTCs recorded in the GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AA5 .
AA5 CHECK FOR CORRECT PCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the PCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the PCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new PCM . REFER to Section 303-14 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AB: DTC U0140

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140	Lost Communication with Body Control Module (GEM)	Set by the FDIM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

repair4less

PINPOINT TEST AB: DTC U0140

Test Step	Result / Action to Take
AB1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AB2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB2 RECHECK FOR DTC U0140 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0140 set in the FDIM?**	**Yes** GO to AB3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB3 CHECK THE BCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the BCM self-test. • **Are any low or high voltage DTCs recorded in the BCM?**	**Yes** REFER to BCM DTC Chart in Section 419-10. **No** GO to AB4.

AB4 CHECK FOR CORRECT BCM OPERATION
• Ignition OFF.
• Disconnect and inspect all the BCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM. REFER to Section 419-10.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AC: DTC U0140:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Set by the ACM , APIM (if equipped), FCIM , and GPSM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AC: DTC U0140:00

Test Step	Result / Action to Take
AC1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AC2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC2 RECHECK FOR DTC U0140:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0140:00 set in the ACM , APIM (if equipped), FCIM , or GPSM ?**	**Yes** GO to AC3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC3 CHECK THE BCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the BCM self-test. • **Are any low or high voltage DTCs recorded in the BCM ?**	**Yes** REFER to BCM DTC Chart in Section 419-10 . **No** GO to AC4 .
AC4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

repair4less

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM (if equipped)
  ▪ FCIM
  ▪ GPSM
• **Are low or high voltage DTCs recorded in the ACM, APIM (if equipped), FCIM, or GPSM?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao
	
	No
	GO to AC5.

AC5 CHECK FOR DTC U0140:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0140:00 set in more than one audio system module?**	**Yes** GO to AC6. **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC6 CHECK FOR CORRECT BCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the BCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM. REFER to Section 419-10.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AD: DTC U0155

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155	Lost Communication with Instrument Panel Cluster (IPC) Control Panel	Set by the FDIM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AD: DTC U0155

Test Step	Result / Action to Take
AD1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AD2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD2 RECHECK FOR DTC U0155	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155 set in the FDIM ?**	**Yes** GO to AD3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD3 CHECK THE IPC FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the IPC self-test. • **Are any low or high voltage DTCs recorded in the IPC ?**	**Yes** REFER to IPC DTC Chart in Section 413-01 . **No** GO to AD4 .
AD4 CHECK FOR CORRECT IPC OPERATION	

• Ignition OFF.
• Disconnect and inspect the IPC connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the IPC connector.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new IPC . REFER to Section 413-01 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test AE: DTC U0155:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	Set by the ACM , APIM (if equipped), and GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AE: DTC U0155:00

Test Step	Result / Action to Take
AE1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AE2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE2 RECHECK FOR DTC U0155:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155:00 set in the ACM , APIM (if equipped), or GPSM ?**	**Yes** GO to AE3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE3 CHECK THE IPC FOR BATTERY VOLTAGE OUT-OF-	

RANGE DTCS	
• Using a diagnostic scan tool, perform the IPC self-test. • **Are any low or high voltage DTCs recorded in the IPC ?**	**Yes** REFER to IPC DTC Chart in Section 413-01 . **No** GO to AE4 .
AE4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM (if equipped) ▪ GPSM • **Are low or high voltage DTCs recorded in the ACM , APIM (if equipped), or GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AE5 .
AE5 CHECK FOR DTC U0155:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0155:00 set in more than one audio system module?**	**Yes** GO to AE6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE6 CHECK FOR CORRECT IPC OPERATION	
• Ignition OFF. • Disconnect and inspect the IPC connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the IPC connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new IPC . REFER to Section 413-01 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AF: DTC U0159:00

repair4less

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	Set by the ACM when the volume cutback message is missing from the PAM for more than 5 seconds with the ignition in RUN. When the message is missing, the ACM defaults to no volume cutback when the parking aid tone is sounding.

PINPOINT TEST AF: DTC U0159:00

Test Step	Result / Action to Take
AF1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AF2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AF2 RECHECK FOR DTC U0159:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0159:00 set in the ACM ?**	**Yes** GO to AF3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AF3 CHECK THE PAM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the PAM self-test. • **Are any low or high voltage DTCs recorded in the PAM ?**	**Yes** REFER to PAM DTC Chart in Section 413-13 . **No** GO to AF4 .
AF4 CHECK THE ACM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool,	**Yes**

perform the ACM self-test. • **Are any low or high voltage DTCs recorded in the ACM ?**	For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AF5 .
AF5 CHECK FOR CORRECT PAM OPERATION	
• Ignition OFF. • Disconnect and inspect the PAM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the PAM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new PAM . REFER to Section 413-13 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AG: DTC U0164

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0164	Lost Communication With HVAC Control Module (EATC)	Set by the FDIM when network messages are missing from the HVAC module for more than 5 seconds with the ignition in RUN. .

PINPOINT TEST AG: DTC U0164

Test Step	Result / Action to Take
AG1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present.	**Yes** GO to AG2 .

repair4less

• **Is an observable symptom present?**	**No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AG2 RECHECK FOR DTC U0164	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0164 set in the FDIM ?**	**Yes** GO to AG3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AG3 CHECK THE HVAC MODULE FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the HVAC module self-test. • **Are any low or high voltage DTCs recorded in the HVAC module?**	**Yes** REFER to HVAC module DTC Chart in Section 412-00 . **No** GO to AG4 .
AG4 CHECK FOR CORRECT HVAC MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the HVAC module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the HVAC module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new HVAC module. REFER to Section 412-01 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AH: DTC U0184

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184	Lost Communication With Radio (ACM)	Set by the FDIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AH: DTC U0184

Test Step	Result / Action to Take
AH1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AH2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH2 RECHECK FOR DTC U0184	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0184 set in the FDIM ?**	**Yes** GO to AH3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH3 CHECK THE ACM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the ACM self-test. • **Are any low or high voltage DTCs recorded in the ACM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AH4 .
AH4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test AI: DTC U0184:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the FCIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AI: DTC U0184:00

Test Step	Result / Action to Take
AI1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AI2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AI2 RECHECK FOR DTC U0184:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0184:00 set in the FCIM ?**	**Yes** GO to AI3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ FCIM
• **Are low or high voltage DTCs recorded in the ACM or FCIM ?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao
	
	No
	GO to AI4 .

AI4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AJ: DTC U0197

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0197	Lost Communication with Telephone Control Module	Set by the FDIM when network messages are missing from the APIM (if equipped) for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AJ: DTC U0197

repair4less

Test Step	Result / Action to Take
AJ1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AJ2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AJ2 RECHECK FOR DTC U0197 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0197 set in the FDIM ?**	**Yes** GO to AJ3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AJ3 CHECK THE APIM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the APIM self-test. • **Are any low or high voltage DTCs recorded in the APIM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AJ4 .

AJ4 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

• Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test AK: DTC U0197:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0197:00	Lost Communication With Telephone Control Module: No Sub Type Information	Set by the ACM when network messages are missing from the APIM (if equipped) for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AK: DTC U0197:00

Test Step	Result / Action to Take
AK1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AK2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AK2 RECHECK FOR DTC U0197:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0197:00 set in the ACM ?**	**Yes** GO to AK3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AK3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

repair4less

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
• **Are low or high voltage DTCs recorded in the ACM or APIM ?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao
	
	No
	GO to AK4 .

AK4 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AL: DTC U0255:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0255:00	Lost Communication With Front Display Interface Module: No Sub Type Information	Set by the ACM when network messages are missing from the FDIM for greater than 5 seconds with the ignition in RUN.

PINPOINT TEST AL: DTC U0255:00

Test Step	Result / Action to Take
AL1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AL2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AL2 RECHECK FOR DTC U0255:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0255:00 set in the ACM ?**	**Yes** GO to AL3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AL3 CHECK THE ACM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the ACM self-test. • **Are any low or high voltage DTCs recorded in the ACM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AL4 .
AL4 CHECK FOR CORRECT FDIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FDIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FDIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FDIM . REFER to Front Display Interface Module (FDIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

• **Is the concern still present?**	

Pinpoint Test AM: DTC U0256:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM when network messages are missing from the FCIM for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AM: DTC U0256:00

Test Step	Result / Action to Take
AM1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AM2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AM2 RECHECK FOR DTC U0256:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0256:00 set in the ACM ?**	**Yes** GO to AM3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AM3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ FCIM	**Yes** For DTC U3003:16, GO to Pinpoint Test AN For DTC U3003:17, GO to Pinpoint Test ao **No** GO to AM4 .

• **Are low or high voltage DTCs recorded in the ACM or FCIM ?**	

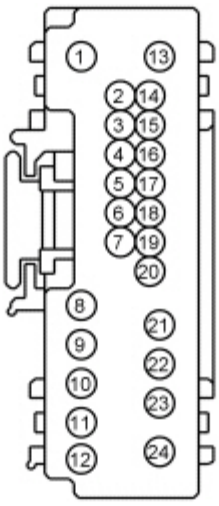
AM4 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AN: DTC U3003:16

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

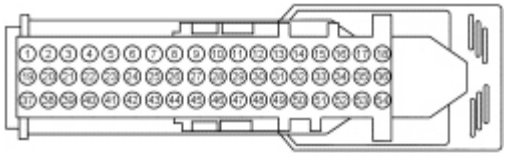
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.



DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM , APIM , FCIM , and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

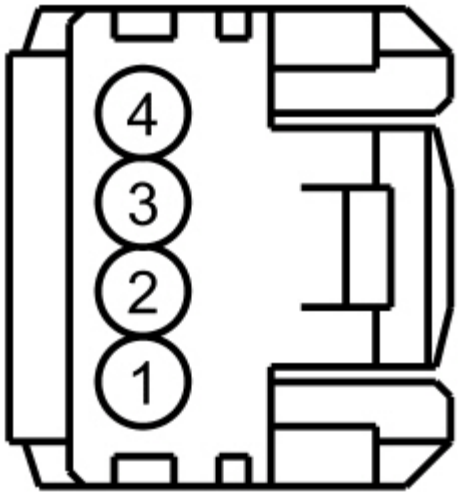
PINPOINT TEST AN: DTC U3003:16



Test Step	Result / Action to Take
AN1 RECHECK FOR DTC U3003:16 • Ignition ON. • Using a diagnostic scan tool, clear the DTCs	**Yes** GO to AN2 .

repair4less

for the module in question. • Wait at least 15 seconds. • Using a diagnostic scan tool, repeat the self-test for the module in question. • **Is DTC U3003:16 still present?**	**No** The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.
AN2 CHECK FOR CHARGING SYSTEM DTCS IN THE PCM	
• Using a diagnostic scan tool, perform the PCM self-test. • **Are any voltage-related DTCs set in the PCM ?**	**Yes** REFER to PCM DTC Chart in Section 303-14 . **No** GO to AN3 .
AN3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE	
• Check the battery condition and verify that the battery is fully charged. REFER to Battery Condition Test in Section 414-01 . • **Is the battery OK and fully charged?**	**Yes** GO to AN4 . **No** REFER to the Symptom Chart in Section 414-00 .
AN4 CHECK THE MODULE VOLTAGE SUPPLY	
• Ignition OFF. • Measure and record the voltage at the battery. • Disconnect the audio system module setting DTC U3003:16. • Ignition ON. • Measure the voltage between the module setting DTC U3003:16 and ground. • For the ACM , measure the **voltage** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit C290A-1 / SBP29 (GY/RD) / — / Ground  	**Yes** GO to AN5 . **No** REPAIR the circuit for high resistance.

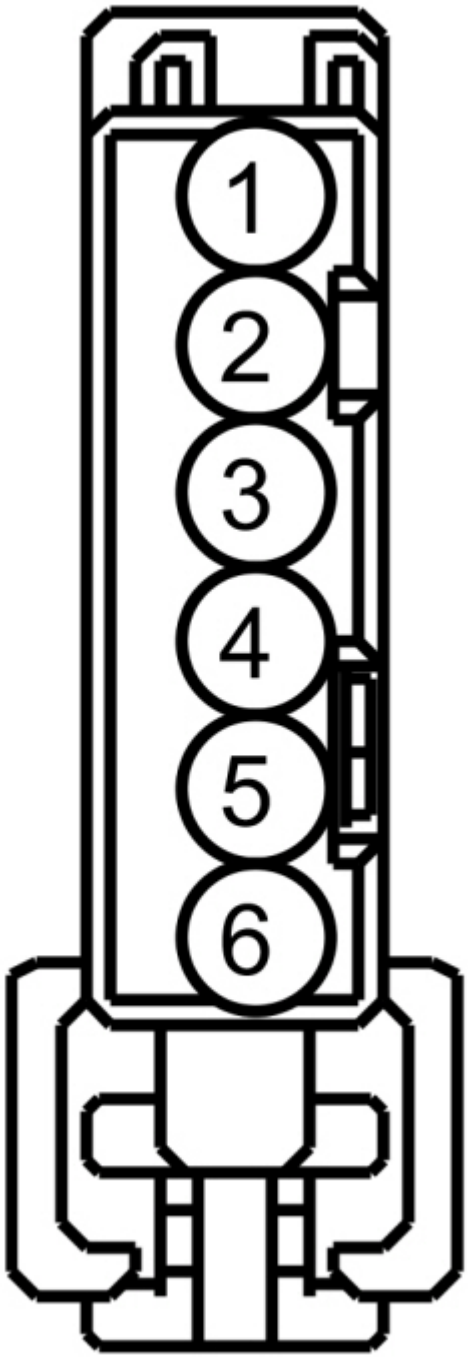


- For the APIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	—	Ground

- For the FCIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	—	Ground

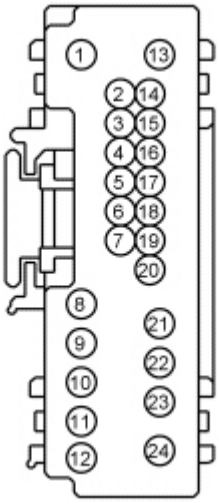


- For the GPSM , measure the **voltage** between:

Positive Lead		Negative Lead	

repair4less

Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	—	Ground

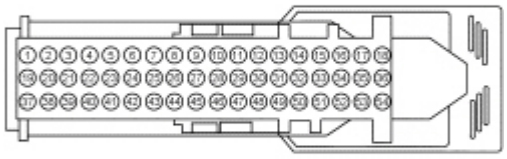


- **Is the voltage within 0.2 volts of the recorded battery voltage?**

AN5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY

- Measure the voltage at the suspect module.
- For the ACM, measure the **voltage** between:

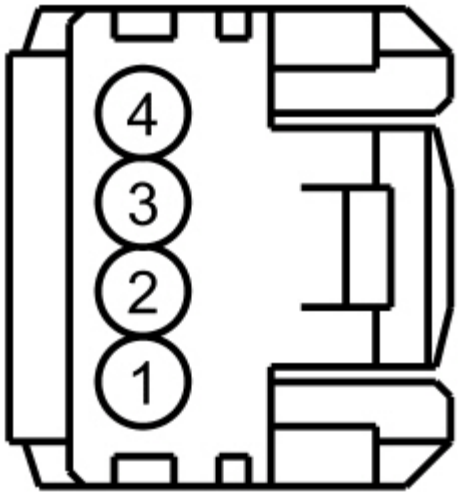
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C290A-1	SBP29 (GY/RD)	C290A-13	GD114 (BK/BU)



- For the APIM, measure the **voltage** between:

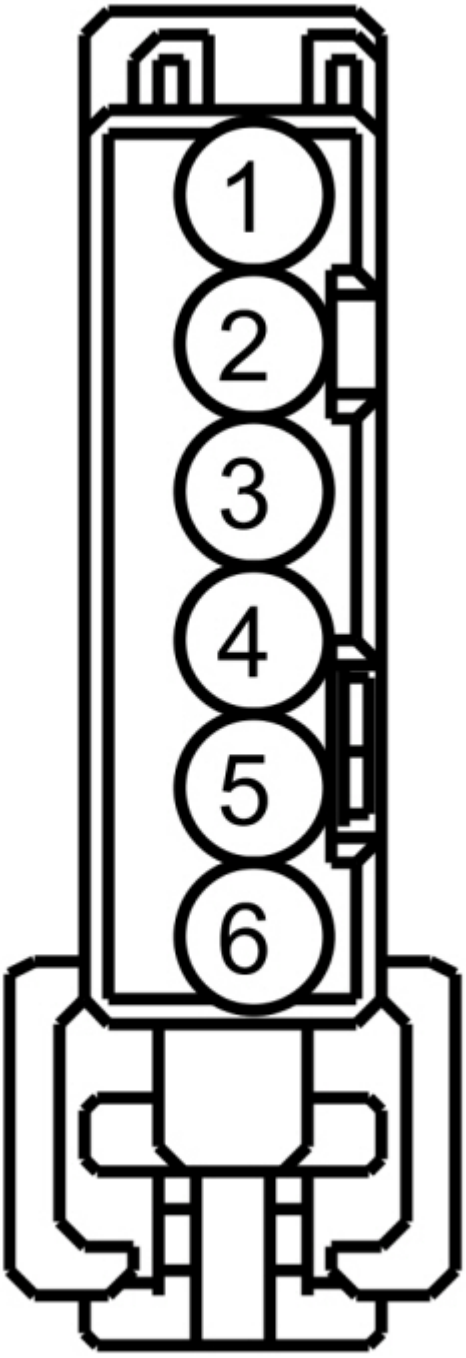
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	C2383-37	GD114 (BK/BU)
		C2383-38	GD114 (BK/BU)

Yes
For the ACM, GO to AN6. For the APIM, GO to AN7. For the FCIM, GO to AN8. For the GPSM, GO to AN9.



No
REPAIR the circuit for high resistance.

repair4less



- For the FCIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	C2402-4	GD133 (BK)

- For the GPSM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	C2398-6	GD114 (BK/BU)

- **Is the suspect module voltage greater than 11 volts?**

AN6 CHECK FOR CORRECT ACM OPERATION	
• Ignition OFF. • Disconnect and inspect all the ACM	**Yes** CHECK OASIS for any applicable TSBs. If a

repair4less

connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN7 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN8 CHECK FOR CORRECT FCIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN9 CHECK FOR CORRECT GPSM OPERATION	

• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) .
	
	No
	The system is operating correctly at this time.

seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AO: DTC U3003:17

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM , APIM , FCIM , and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

PINPOINT TEST AO: DTC U3003:17

Test Step	Result / Action to Take
AO1 RECHECK FOR DTC U3003:17	
• Turn the engine off. • Ignition ON. • Using a diagnostic scan tool, clear the DTC for the module in question. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question. • **Is DTC U3003:17 present?**	**Yes** GO to AO2 . **No** The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.
AO2 CHECK FOR HIGH VOLTAGE DTCs SET IN OTHER MODULES	
• Ignition ON. • Using a diagnostic scan tool, retrieve all CMDTCs . • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question. • **Are high voltage DTCs such as B1676, P0563, U3003:17 set in more than one module?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** GO to AO3 .

repair4less

AO3 CHECK THE BATTERY VOLTAGE	
• Turn off all interior lights, exterior lights, and accessories. • Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** For the ACM , GO to AO4 . For the APIM , GO to AO5 . For the FCIM , GO to AO6 . For the GPSM , GO to AO7 .
AO4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AO5 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

• Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

AO6 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM. REFER to Front Controls Interface Module (FCIM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AO7 CHECK FOR CORRECT GPSM OPERATION
• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Accessory Protocol Interface Module (APIM) Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool
 ST3051-A	Universal Serial Bus (USB) Male-A to Male-A Cable CCMUSB2-AM-AM-10 or equivalent

Accessory Protocol Interface Module (APIM) Programming Using the Integrated Diagnostic System (IDS)

NOTE:

- If a new Accessory Protocol Interface Module (APIM) is being installed, install the new APIM before carrying out the following procedure. Refer to the appropriate section in Group 415 for the procedure.

NOTE:

- The programming procedure deletes any phones that were paired with the SYNC® system.
- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- A file of approximately 80 megabytes needs to be downloaded from the online database for the programming. Allow extra time for the file to download.
- The USB male A to male A cable (CCMUSB2-AM-AM-10 or equivalent) is required.
- The diagnostic scan tool is required.
  - Ensure that the IDS version and patch software levels are up to date.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.

1.
   - Close the IDS program before attempting to program the Accessory Protocol Interface Module (APIM).
   - Connect a battery charger set on low.
     - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.
   - Connect one end of the USB male-A to male-A cable to the diagnostic scan tool, and the other end to the vehicle's USB port.

repair4less

- Connect the diagnostic scan tool to the DLC .
- Access the technician service publication website and run On-Line Automotive Service Information System (OASIS) using "Read VIN & DTCs."
    - If the "Read VIN & DTCs" button is green with a red IDS icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.
    - If the "Read VIN & DTCs" button is red with a grey IDS icon, ensure pop ups are enabled, follow the Internet Explorer pop ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.
- If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.

2. From the OASIS tab, select the "SYNC" button.

3. **NOTE:** There are 3 types of Accessory Protocol Interface Module (APIM) programming available:
    - Standard — Used to update the Accessory Protocol Interface Module (APIM) and any currently installed applications to the latest software levels.
    - Custom — Used to show all the available software options (including applications that may not have been installed previously) that can be programmed into the Accessory Protocol Interface Module (APIM). Use this selection when upgrades become available or as directed by a TSB.
    - Module Replacement — Used when the Accessory Protocol Interface Module (APIM) has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).

4. After selecting 1 of the 3 options (Standard, Custom, or Module Replacement), select the "Read SYNC" button to verify the current Accessory Protocol Interface Module (APIM) assembly, VIP , and CIP software levels. The software levels are compared to an online database, followed by the available software being displayed.

5. **NOTE:** Do not disconnect the VCM or USB cable during Accessory Protocol Interface Module (APIM) programming.

   Select the "Program SYNC" button to begin the Accessory Protocol Interface Module (APIM) programming process.

6. Follow the diagnostic scan tool on-screen directions.
    - After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."

repair4less

Accessory Protocol Interface Module (APIM) Reset

NOTE: Carrying out an APIM Reset consists of a battery disconnect and a SYNC® system Master Reset.

NOTE: NOTE: This procedure will clear all CMDTCs . The DTCs must be recorded now if other (non SYNC®) diagnoses are to be performed after this procedure.

1. Remove any devices connected to the USB port(s), audio input jack (if equipped), or media hub (if equipped).

2. **NOTE:** After the APIM reset procedure has been completed the customer should be advised to reset their device following the manufacturer's instructions. Refer to the device's owner's manual and/or website for information on how to perform a Manual / Master Reset or Clear. Devices can be powered off and back on for a simple re-boot. In some cases the device's battery may also need to be removed and re-installed to complete a re-boot. In addition, cell phones may need to have SYNC® deleted from the Bluetooth menu prior to re-pairing the phone to the SYNC® system. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.

   Disconnect the negative battery cable for 1 minute, then reconnect it. Refer to Section 414-01 .

3. **NOTE:** Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. On vehicles equipped MyFord Touch or MyLincoln Touch with navigation, the customer’s saved destination points (home address and points of interest) and preferences will also be lost with a Master Reset.

   Carry out a SYNC® system Master Reset. Refer to the owner's literature

4. Verify system function using the Multi-Media Interface Tester 105-00120, to test the audio output for the audio input jack/socket (if equipped), USB port(s), and Bluetooth. If equipped, use the RCA Adapter 105-00121 to test the audio output for the RCA jacks.

5. If a concern is still present return to the Symptom Charts.

repair4less

Audio Control Module (ACM) Self-Diagnostic Mode

NOTE: If the Audio Front Control Module (ACM), FCIM , or FDIM are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the Audio Front Control Module (ACM) chassis.

1. Turn the ACM on.

2. Operate the audio system in radio tuner AM/FM mode.

3. Press and hold preset buttons 3 and 6 for 3 seconds until the speaker walk around test begins.
   - The display indicates each speaker as it is tested.

4. **NOTE:** If the speaker walk around test is the only test required, this procedure can be stopped after Step 3 by turning the ACM off.

   Before the speaker walk around test is complete, the following actions can be performed:

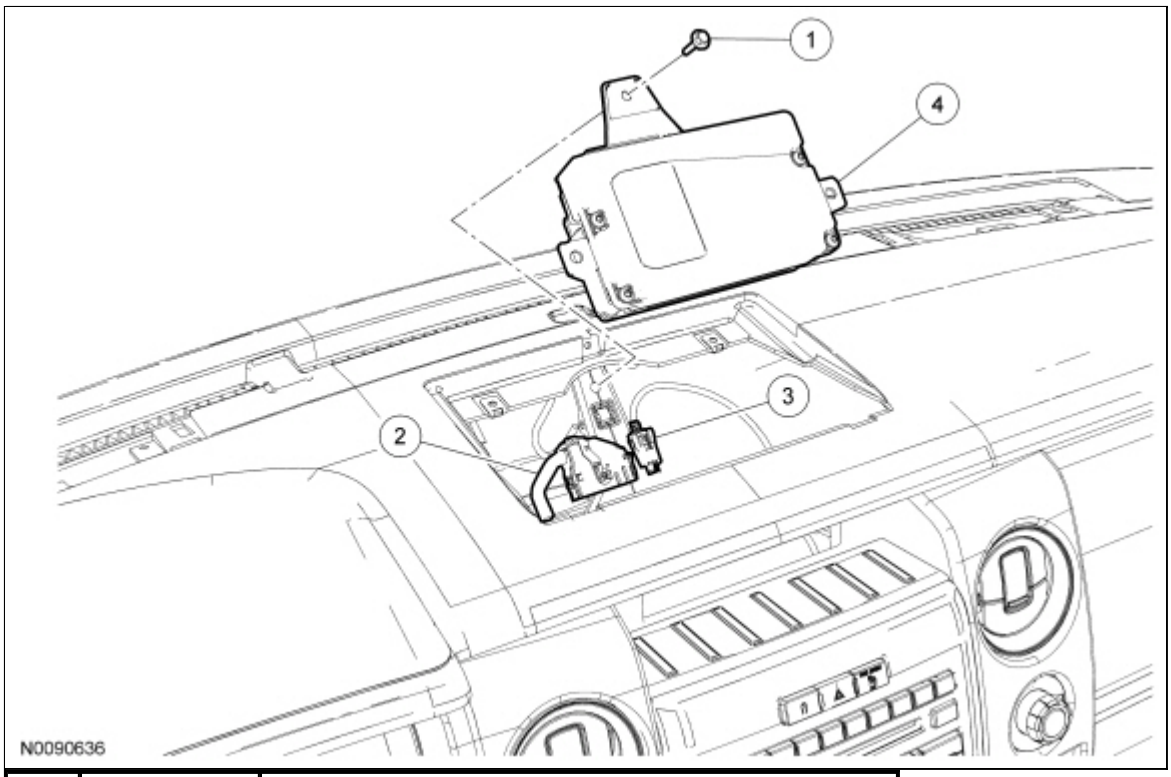
Preset Button Press	Diagnostic Function	Display	Diagnostic Function Description
1	ACM Self-Test	SELF TEST, SELF PASS, SELF FAIL	The ACM carries out a self-test. At the end of the self-test, the FDIM display indicates either SELF PASS, or SELF FAIL. If the self-test failed, DTCs can be accessed by pressing the TUNE UP button.
2	View DTCs	NO DTCS, DTCS FOUND	The FDIM displays DTCS FOUND if DTCs are present. To scroll through the DTCs, press the TUNE UP button. If no DTCs are present, the FDIM displays NO DTCS. To clear DTCs, press the EJECT, then TUNE UP button.
3	AM/FM Antenna Signal Strength	SIGNAL ###	The FDIM displays the AM/FM antenna signal strength. To see the AM signal strength, the audio system must be in AM radio tuner mode before entering the ACM self-diagnostic mode. To see the FM signal strength, the audio system must be in FM radio tuner mode before entering the ACM self-diagnostic mode. If no antenna is present, a signal strength of 0 will be displayed.
4	Software Levels	SOFT LEVELS	The FDIM displays software levels for various components of the audio system. Knowing the software levels may aid diagnostics. Press the TUNE UP button to scroll through the software levels.
5	Display Test	DISPLAY TEST, then all segments illuminate	All of the FDIM display segments illuminate.
6	Retrieve ACM Part Number	RADIO CONFIG	The FDIM displays the ACM part number and various configuration levels. Press the TUNE UP button to scroll to the desired function.

5. To exit the self-diagnostic mode, turn the ACM off.

repair4less

Satellite Radio Electronic Serial Number (ESN) Retrieval

NOTE: If the SDARS , Audio Front Control Module (ACM), FCIM (if equipped), or FDIM (if equipped) are inoperative (blank or do not power on), obtain the Electronic Serial Number (ESN) by referencing the label attached to the Audio Front Control Module (ACM) chassis.



1. Turn the Audio Front Control Module (ACM) on.

2. Operate the audio system in satellite radio mode.

3. Depending on vehicle configuration, simultaneously press and hold the AUX button and preset button 1, or the SIRIUS button and preset button 1.
   - The Satellite Digital Audio Receiver System (SDARS) module Electronic Serial Number (ESN) displays on the FDIM .

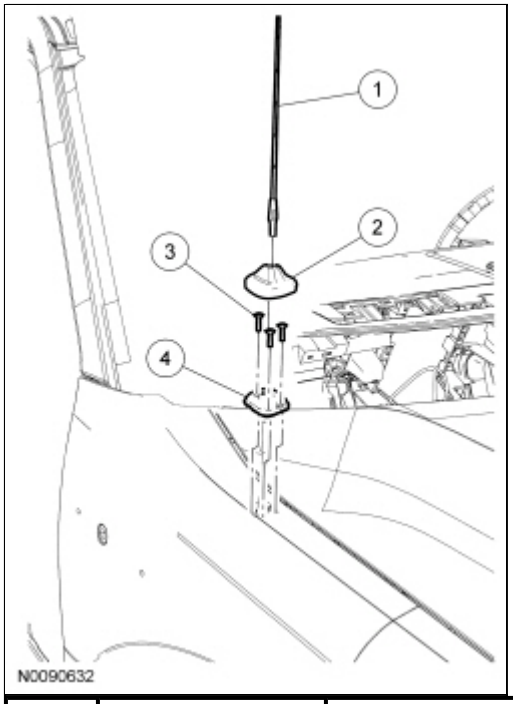
4. Record the SDARS module ESN .

Accessory Protocol Interface Module (APIM)

Item	Part Number	Description
1	W704875-S	Accessory Protocol Interface Module (APIM) screw
2	—	APIM electrical connector (part of 14401)
3	—	Universal Serial Bus (USB) cable (part of 14D202)
4	14D212	APIM

Removal and Installation

1. Remove the instrument panel upper bin.
    1. Remove the rubber mat.
    2. Remove the 2 screws.
    3. Remove the instrument panel upper bin.



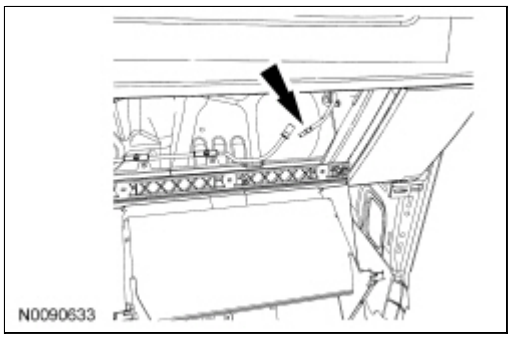
2. Remove the APIM screw and position the APIM upward.

3. Remove the APIM .
    - Disconnect the electrical connector and the Universal Serial Bus (USB) cable.

4. To install, reverse the removal procedure.
    - If a new APIM is being installed, program the APIM . For additional information, refer to Accessory Protocol Interface Module (APIM) Programming .

repair4less

Antenna — AM/FM



Item	Part Number	Description
1	18813	AM/FM antenna mast
2	18A927	AM/FM antenna base cap
3	N610019	AM/FM antenna screws (3 required)
4	18A894	AM/FM antenna base

Removal and Installation

1. Lower the glove compartment completely.

2. Disconnect the AM/FM antenna from the AM/FM antenna cable.
    - Push the antenna cable end and the grommet through the side cowl.

repair4less

3. ***NOTICE:*** **Do not over tighten the antenna mast or damage to the antenna base or mast may occur.**

   Remove the AM/FM antenna mast.
   1. To install, tighten to 4.2 Nm (36 lb/in).

4. **NOTE:** A new AM/FM antenna base cap must be installed.

   Using a suitable tool such as a hook-shaped pick, remove the AM/FM antenna base cap by prying upward.

5. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .

6. Remove the 3 screws and the AM/FM antenna base.
   1. To install, tighten to 2.5 Nm (23 lb/in).

7. To install, reverse the removal procedure.

Antenna — Satellite Radio

Item	Part Number	Description
1	10E893	Satellite radio antenna
2	—	Satellite radio antenna electrical connector (part of 19A397)
2	—	Satellite radio antenna retaining bolt (part of 10E893)

Removal and Installation

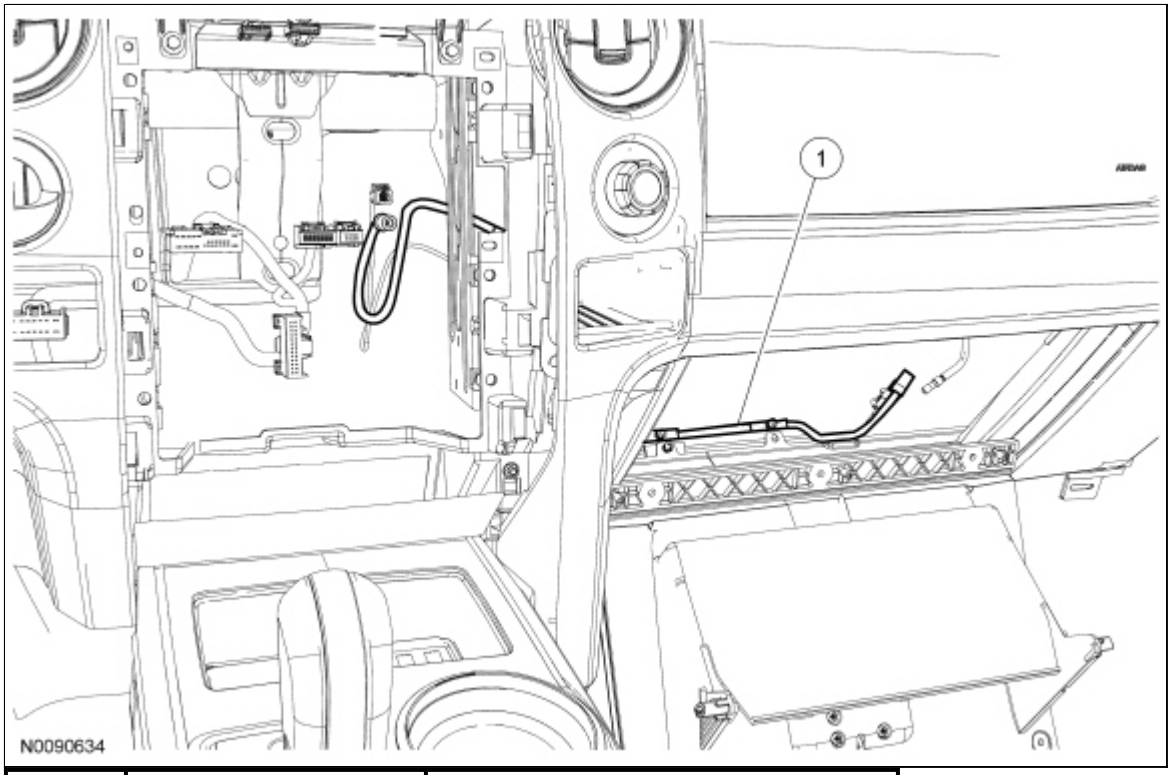
1. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .

2. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.

3. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical connector.

4. **NOTE:** Remove the satellite antenna and pigtail through the mounting opening in the roof panel.

   Remove the satellite antenna.
   - Disconnect the electrical connector.
   - Remove the satellite antenna retaining bolt and retainer then remove the satellite antenna from



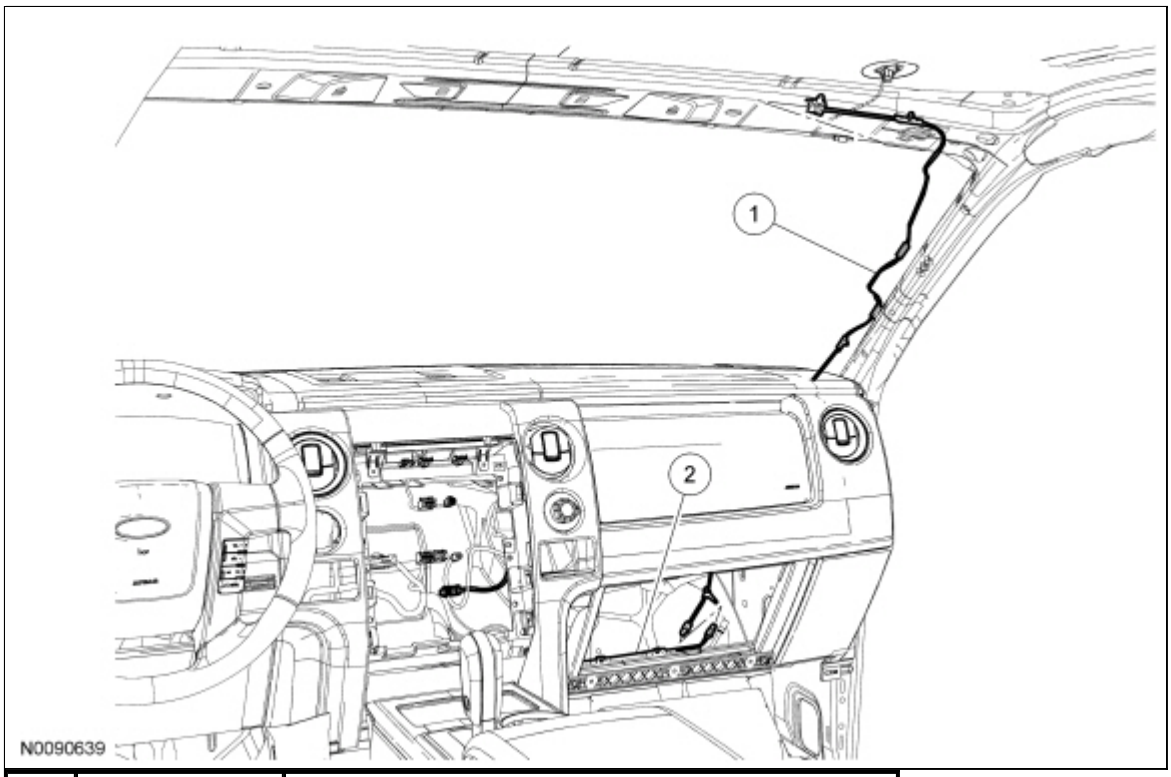
repair4less

the roof panel.

- To install, tighten to 7 Nm (62 lb-in).

5. To install, reverse the removal procedure.

Antenna Cable — AM/FM



Item	Part Number	Description
1	18812	AM/FM antenna cable

Removal and Installation

1. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.
2. Lower the glove compartment completely.
3. Disconnect the AM/FM antenna cable from the AM/FM antenna.
4. Separate the pushpins and remove the AM/FM antenna cable.
5. To install, reverse the removal procedure.

repair4less

Antenna Cable — Satellite Radio

Item	Part Number	Description
1	19A397	Upper satellite radio antenna cable
2	19A397/10E928	Lower satellite radio antenna cable (without/with navigation)

Removal and Installation

Both cables

1. Lower the glove compartment completely.
2. Disconnect the upper-to-lower satellite radio antenna cable connection.

Upper cable

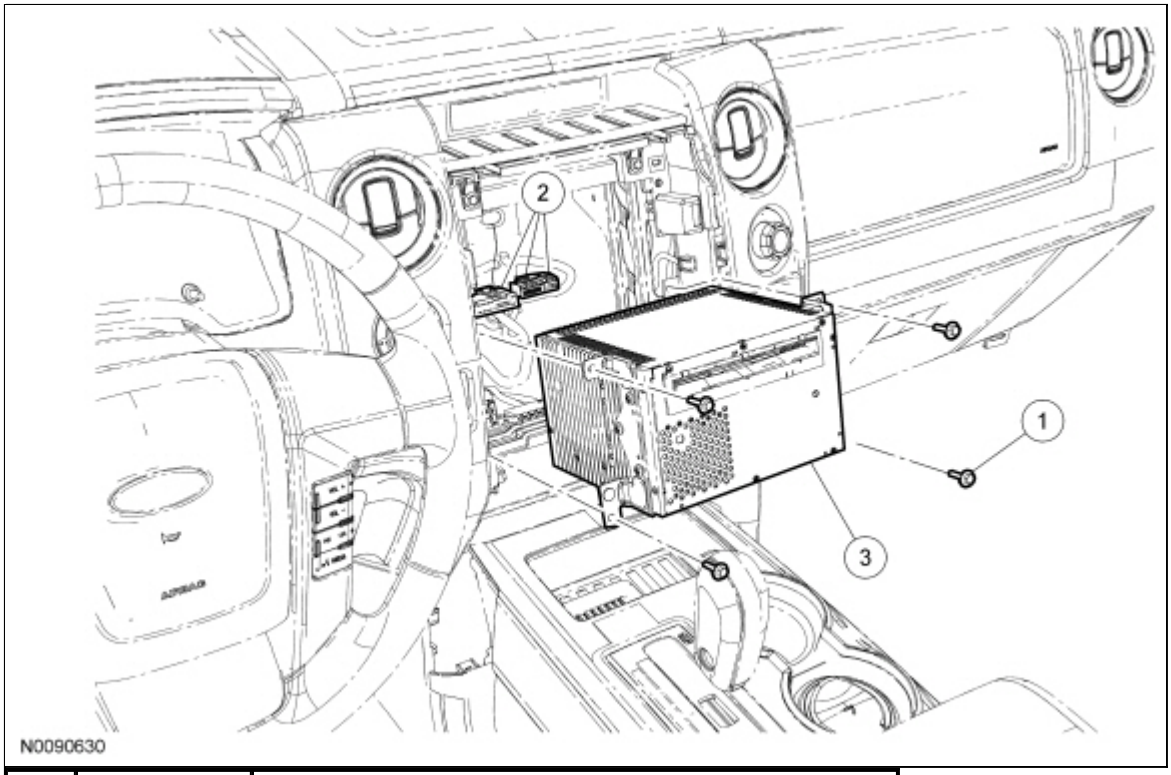
3. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .
4. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.
5. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical connector.

repair4less

6. Remove the upper satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the A-pillar and instrument panel.

Lower cable

7. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.



8. Remove the lower satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the instrument panel.

Both cables

9. To install, reverse the removal procedure.

Audio Control Module (ACM)

Single CD

Item	Part Number	Description
1	W707628-S	Audio Front Control Module (ACM) screws (4 required)
2	—	ACM electrical connectors (part of 14401 and 18812)
3	18806	ACM

Removal and Installation

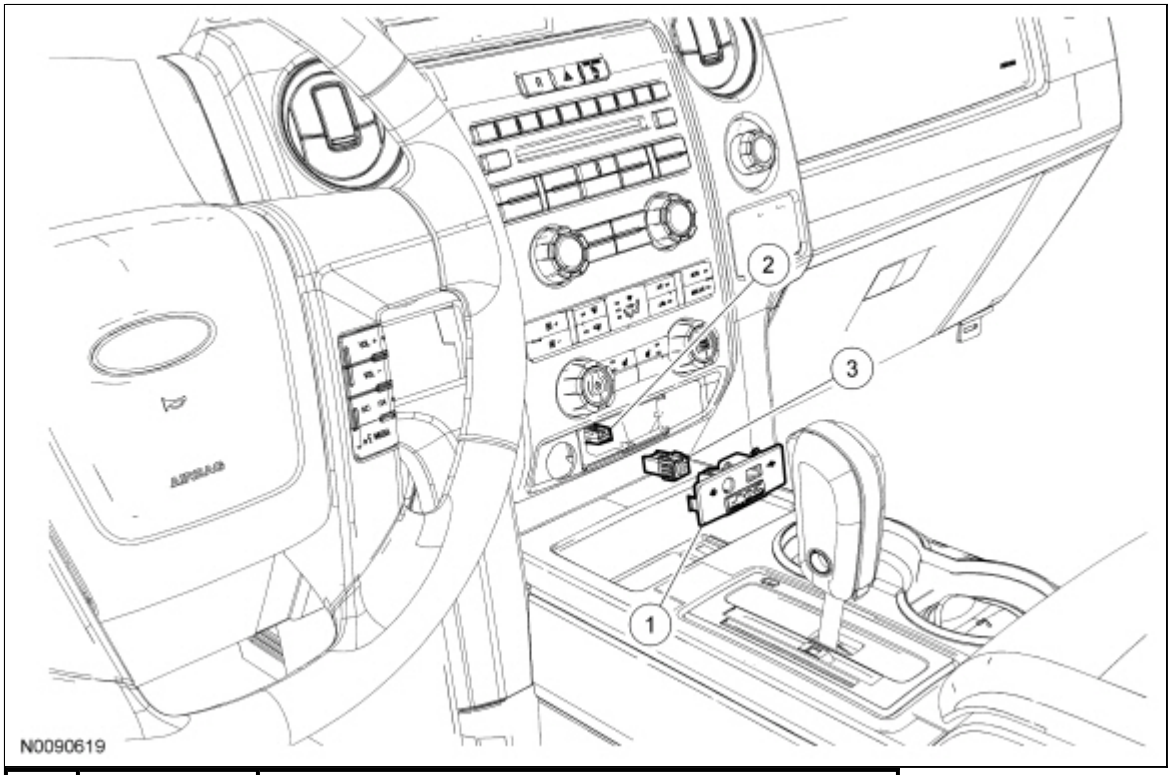
NOTE: It is not necessary to remove the Audio Front Control Module (ACM) to retrieve the part number. Refer to Audio Control Module (ACM) Self-Diagnostic Mode in this section.

1. **NOTE:** Module configuration is required when a new ACM is being installed.

   Upload the ACM configuration information to the scan tool . Refer to Programmable Module Installation (PMI) in Section 418-01 .

2. Remove the Front Controls Interface Module (FCIM). Refer to Front Controls Interface Module (FCIM) .

3. Remove the 4 screws and the ACM .



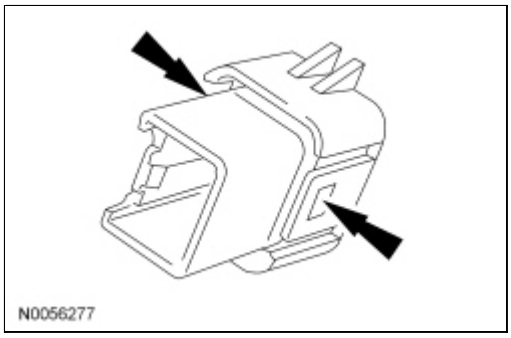
repair4less

- Disconnect the electrical connectors.
- To install, tighten to 2.5 Nm (23 lb-in).

4. To install, reverse the removal procedure.
    - Download the configuration information to the ACM . Refer to PMI in Section 418-01 .

Audio Input Jack

NOTE: Vehicle with the SYNC® system shown, others similar.



Item	Part Number	Description
1	19C149	Audio input jack bezel
2	—	Audio input jack electrical connector (part of 14401)
3	19A164	Audio input jack

Removal and Installation

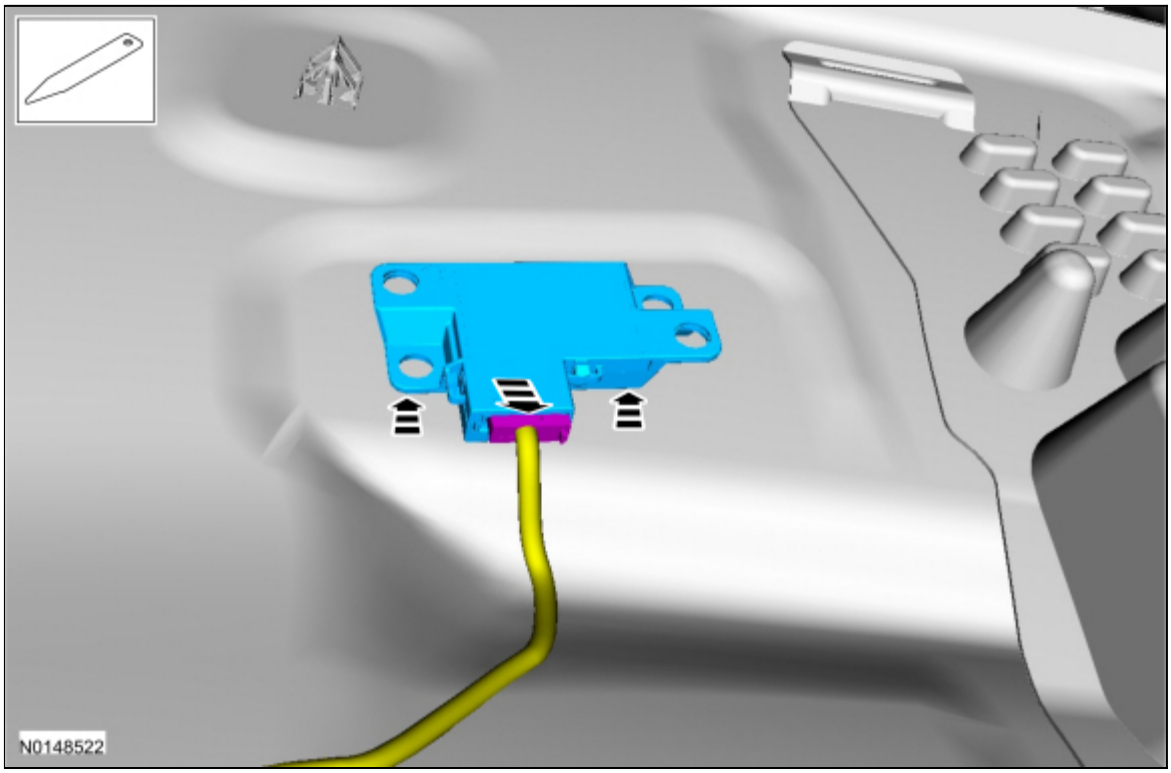
1. Using a suitable tool such as a hook-shaped pick, remove the audio input jack bezel by prying rearward.
    - Disconnect the electrical connector(s).

2. Release the tabs and remove the audio input jack.

repair4less

3. To install, reverse the removal procedure.

Compass Module



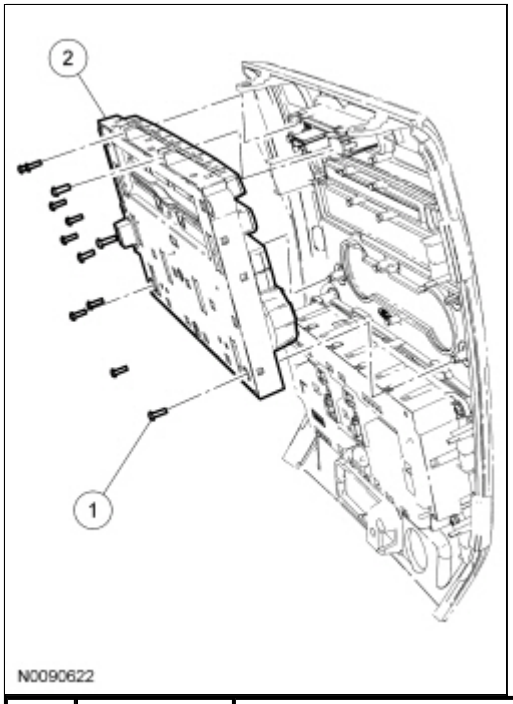
Removal and Installation

NOTE: The compass module is glued to the headliner.

NOTE: When replacing the compass module, obtain 3M™ Duramix™ 4747 Super Fast Adhesive commercially to attach the compass module to the headliner. The 3M™ Duramix™ 4747 Super Fast Adhesives is a 2- part adhesive in a 50 ml dual-tube applicator.

1. Remove the headliner. Refer to Section 501-05 .

2. Remove the compass module from the headliner.
   - Disconnect the electical connector.



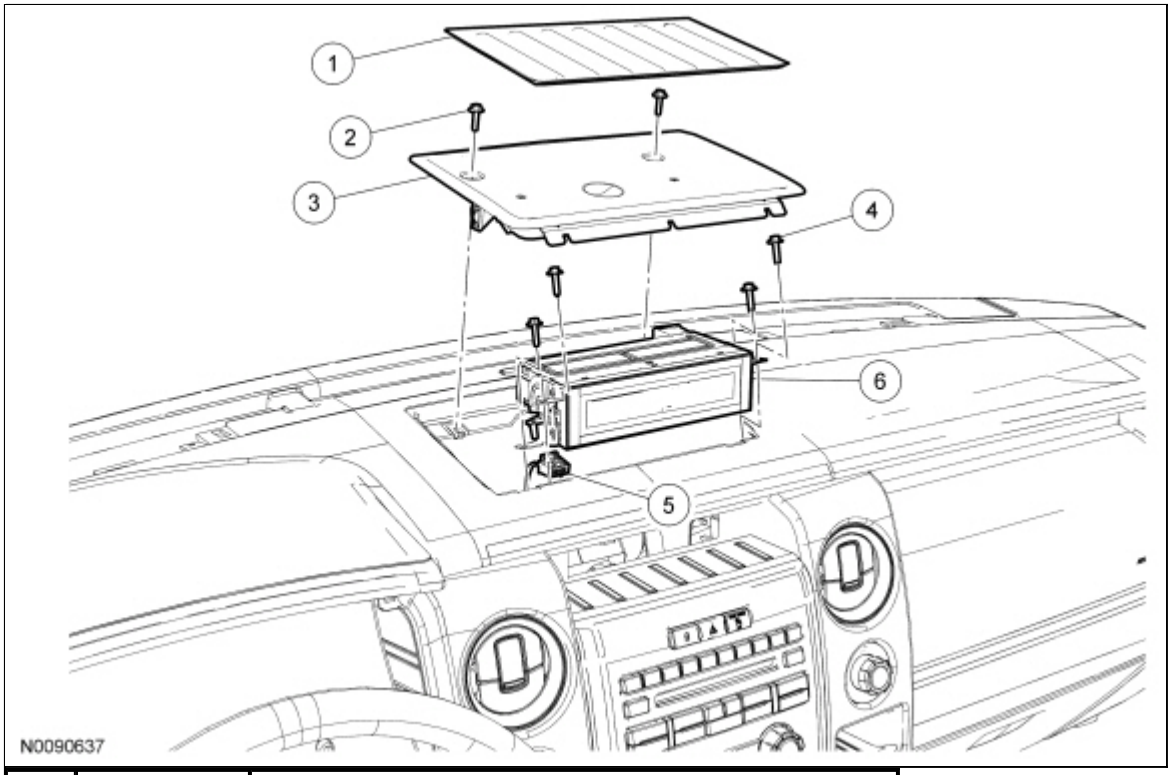
3. To install, reverse the removal procedure.

4. CALIBRATE the compass. Refer to General Procedures in Section 413-01 .

repair4less

Front Controls Interface Module (FCIM)

Item	Part Number	Description
1	—	Front Controls Interface Module (FCIM) screws (12 required) (part of 18842)
2	18842	FCIM



Removal and Installation

1. Remove the instrument panel finish panel - center lower. For additional information, refer to Section 501-12 .
2. Remove the 12 screws and the Front Controls Interface Module (FCIM).
3. To install, reverse the removal procedure.

repair4less

Front Display Interface Module (FDIM)

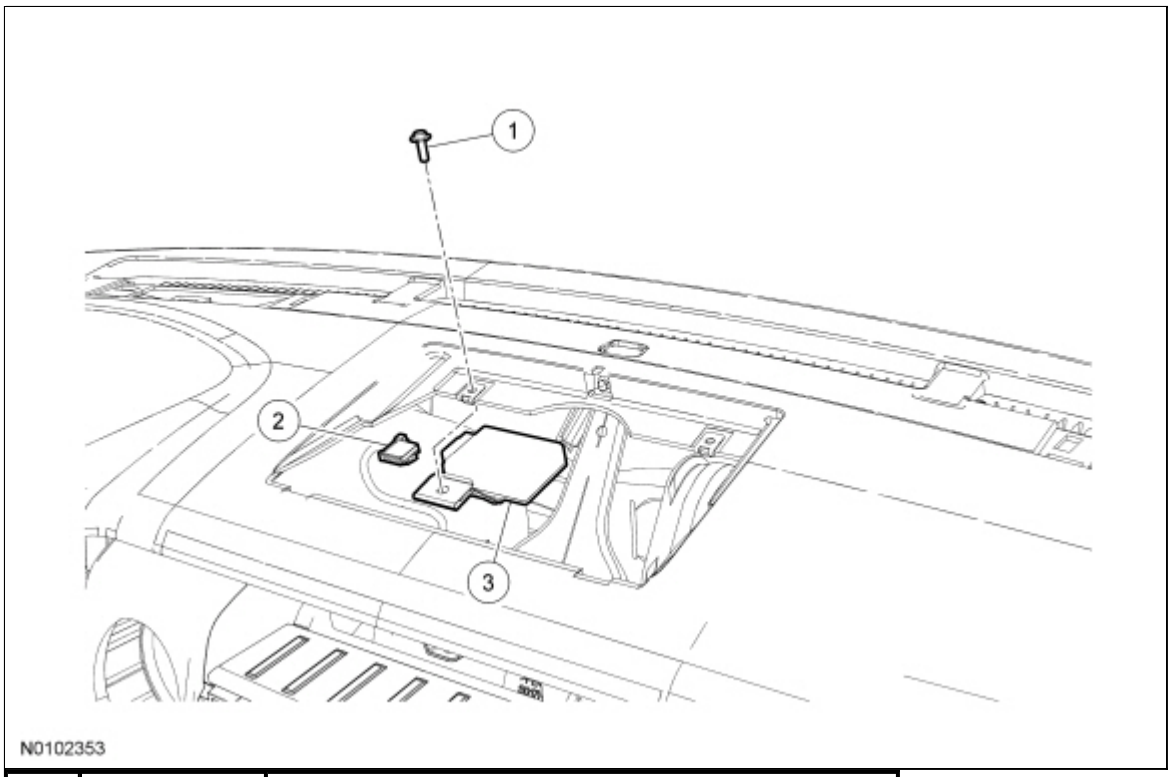
Vehicles Without Navigation

Item	Part Number	Description
1	15044G24	Instrument panel upper bin mat
2	W707628	Instrument panel upper bin screws (2 required)
3	—	Instrument panel upper bin
4	W707628-S	Front Display Interface Module (FDIM) screws (4 required)
5	—	FDIM electrical connector (part of 14401)
6	10D885	FDIM

Removal and Installation

1. **NOTE:** Module configuration is required when a new Front Display Interface Module (FDIM) is being installed.

   Upload the FDIM configuration information to the scan tool . Refer to Programmable Module Installation (PMI) in Section 418-01 .



2. Remove the mat, the 2 screws, and the instrument panel upper bin.

repair4less

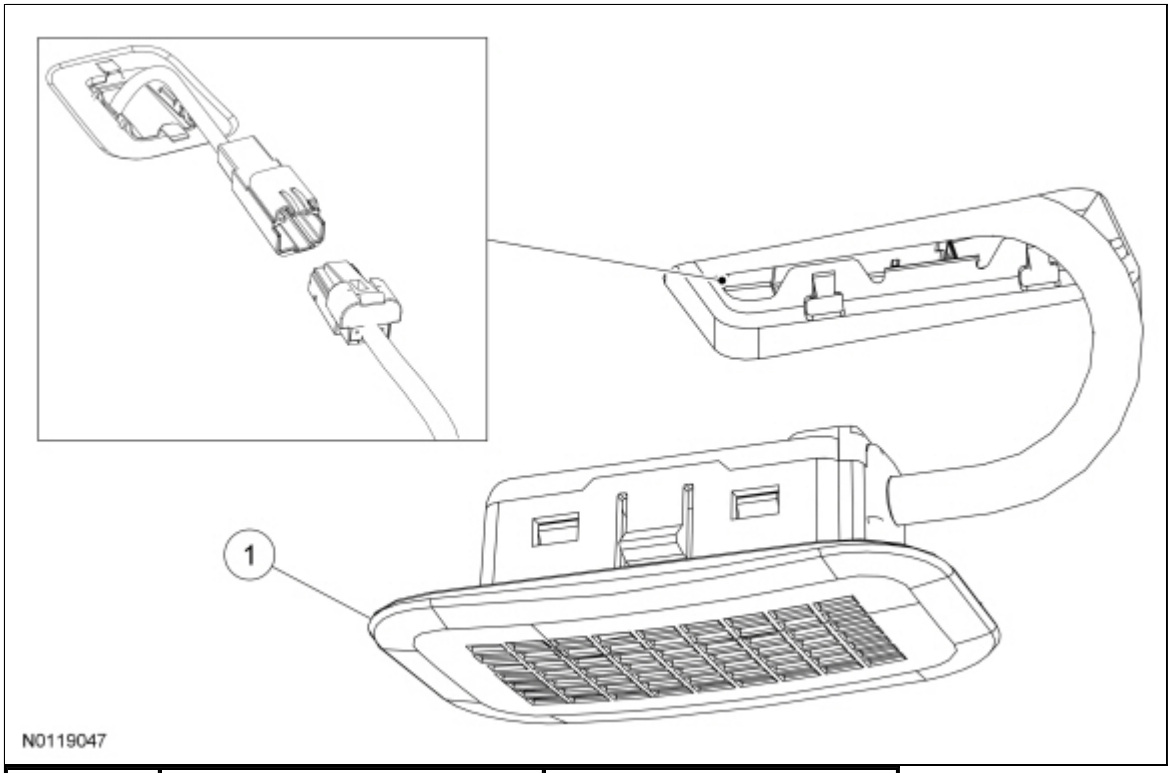
3. Remove the 4 screws and the FDIM .
    - Disconnect the electrical connector(s).
    - To install, tighten to 2 Nm (18 lb-in).

4. To install, reverse the removal procedure.
    - Download the configuration information to the FDIM . Refer to PMI in Section 418-01 .

Global Positioning System Module (GPSM)

Item	Part Number	Description
1	W707628-S	Global Positioning System Module (GPSM) screw
2	—	GPSM electrical connector (part of 14401)
3	10E893	GPSM

Removal and Installation



1. Remove the Front Display Interface Module (FDIM). For additional information, refer to Front Display Interface Module (FDIM) in this section.

2. Remove the screw and the Global Positioning System Module (GPSM).
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

repair4less

Microphone

Item	Part Number	Description
1	19A391	Microphone

Removal

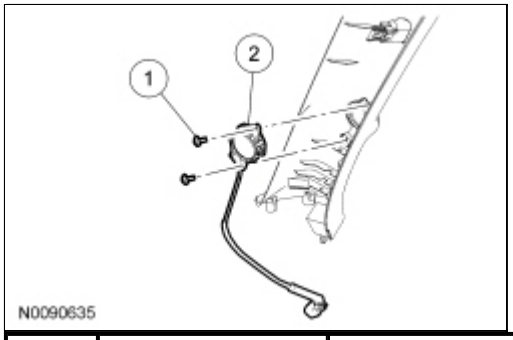
1. Using a suitable tool, (such as a thin small flat head screwdriver) twist and pry the microphone bezel from the headliner metal mounting bracket.

2. Remove the microphone from the headliner by grasping the microphone pigtail.
    - Disconnect the microphone electrical connector.

Installation

1. Reconnect the microphone electrical connector.

2. Wrap the connection with anti-rattle tape.



3. Feed the microphone pigtail into the headliner through the microphone hole.
    - Verify the microphone pigtail points towards the front of the vehicle.

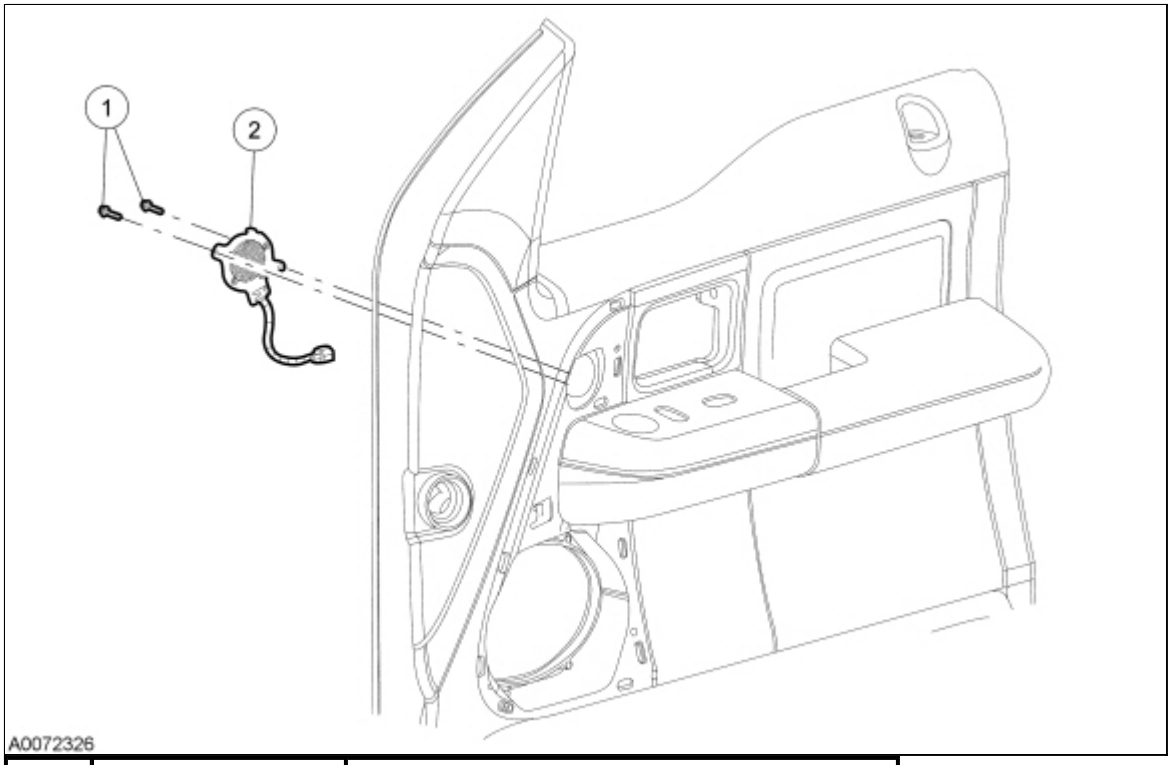
4. Snap the microphone into the headliner mounting bracket.
    - Verify the mounting bracket and microphone are snug to the headliner.

repair4less

Speaker — A-Pillar

NOTE: LH shown, RH similar.

Item	Part Number	Description
1	W701678-S	A-pillar speaker screws (2 required)
2	18978	A-pillar speaker

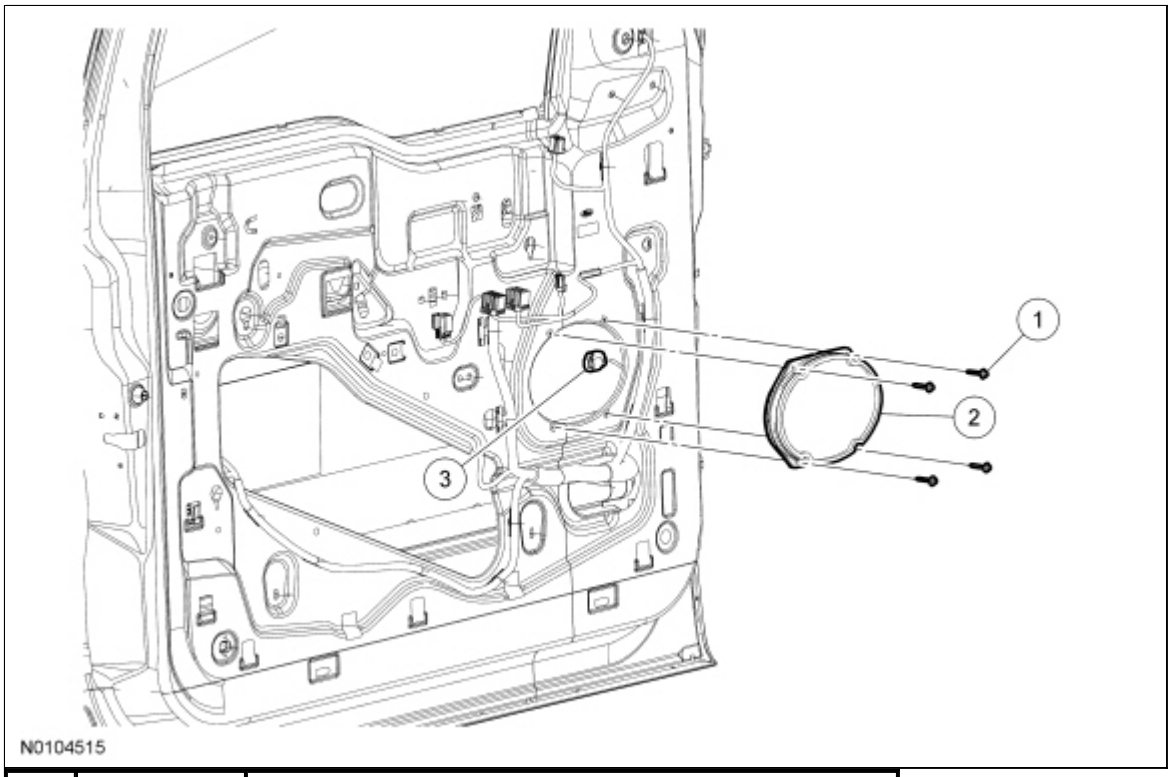


Removal and Installation

1. Remove the A-pillar trim panel. For additional information, refer to Section 501-05 .
2. Remove the 2 screws and the A-pillar speaker.
3. To install, reverse the removal procedure.

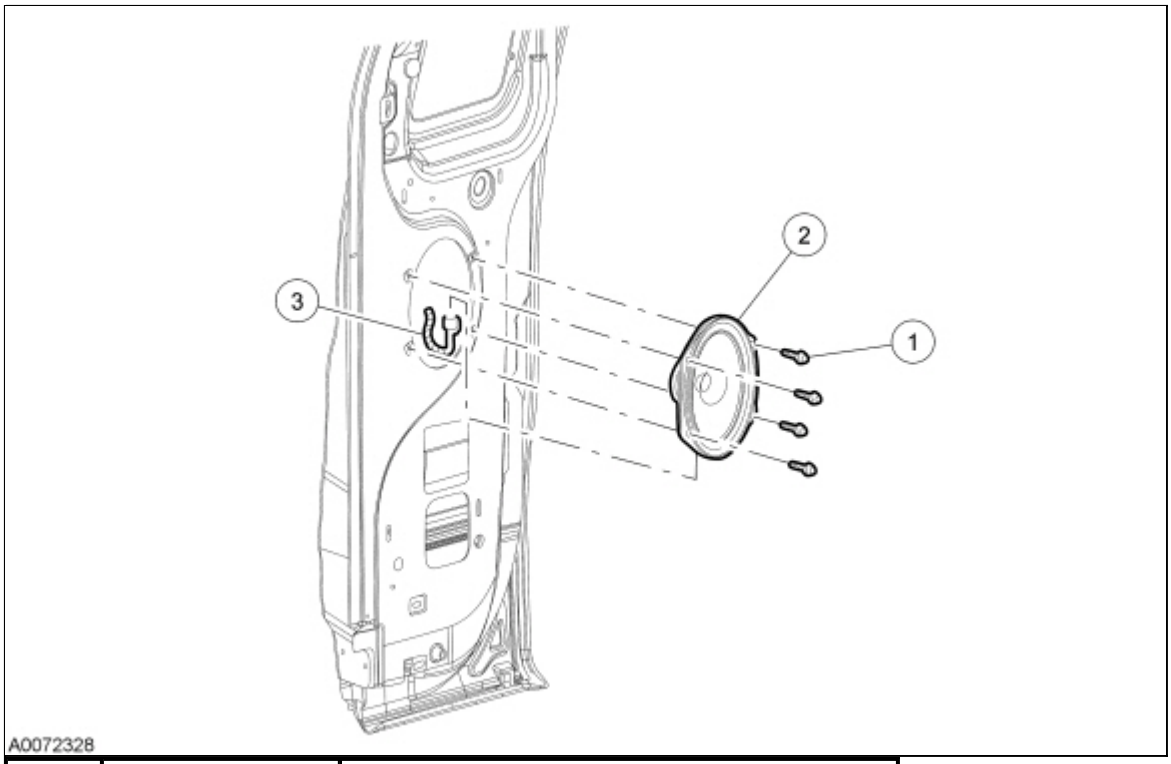
repair4less

Speaker — Door



Front Door Tweeter Speaker

Item	Part Number	Description
1	W701678	Tweeter speaker screws (2 required)
2	19B170/19B171	Tweeter speaker (RH/LH)



Front Door Speaker

repair4less

Item	Part Number	Description
1	W707628	Front door speaker screws (4 required)
2	18808	Front door speaker
3	—	Front door speaker electrical connector (part of door harness)

Rear Door Speaker

Item	Part Number	Description
1	W706766	Rear speaker screws (4 required)
2	18808	Rear speaker
3	180103	Rear speaker electrical connector

Removal and Installation

Front door

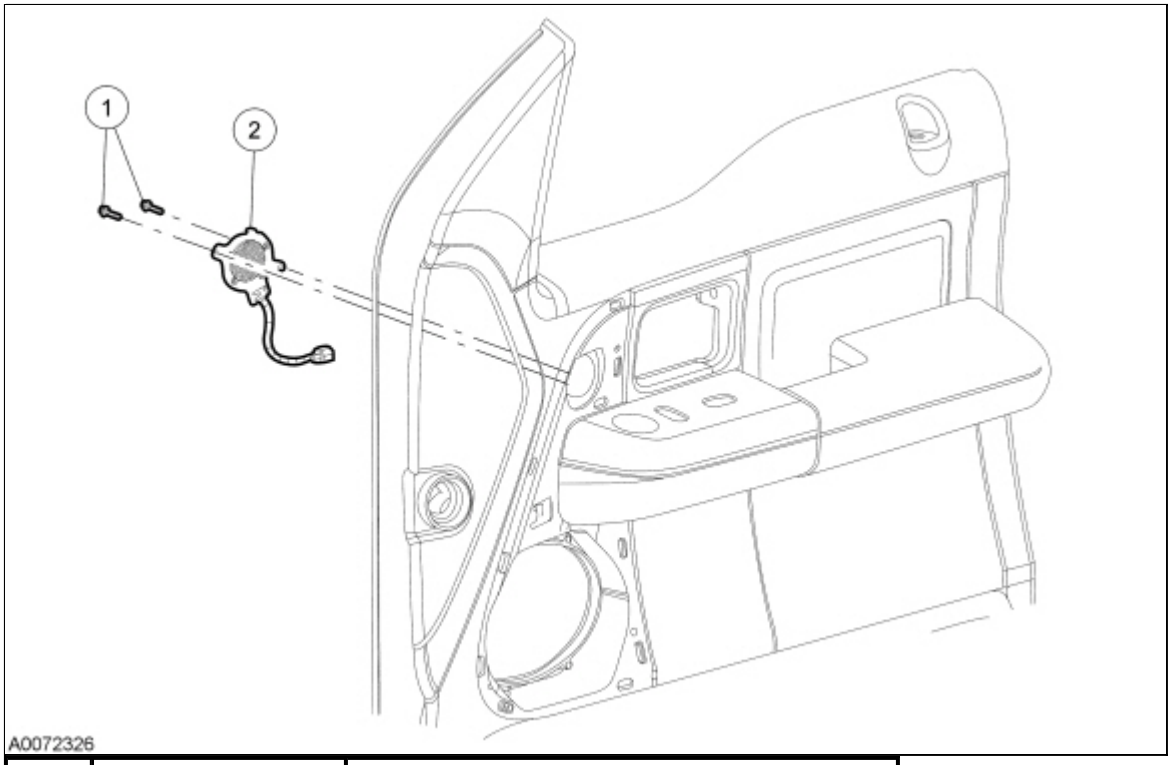
1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the screws (2 for the tweeter, 4 for the door speaker) and the speaker.
   - Disconnect the electrical connector.

Rear door

3. Remove the rear door trim panel. For additional information, refer to Section 501-05 .

4. Remove the 4 screws and the rear door speaker.
   - Disconnect the electrical connector.

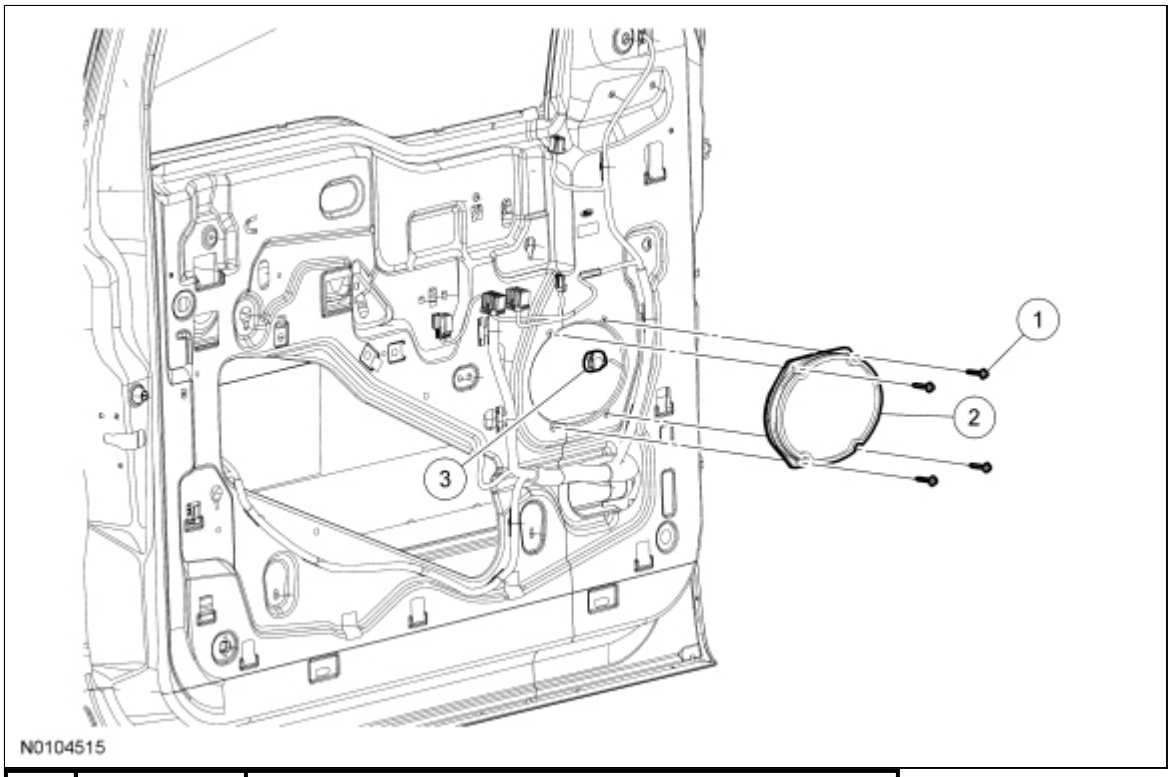


All speakers

5. To install, reverse the removal procedure.

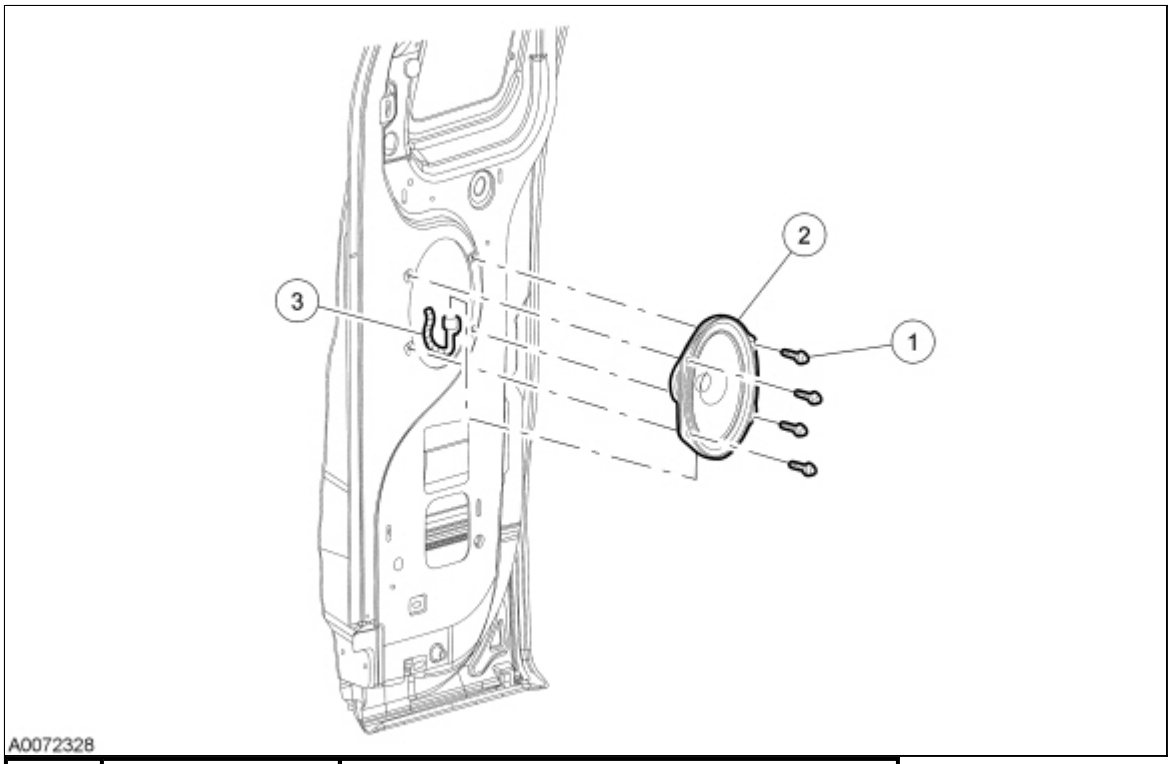
repair4less

Speaker — Door



Front Door Tweeter Speaker

Item	Part Number	Description
1	W701678	Tweeter speaker screws (2 required)
2	19B170/19B171	Tweeter speaker (RH/LH)



Front Door Speaker

repair4less

Item	Part Number	Description
1	W707628	Front door speaker screws (4 required)
2	18808	Front door speaker
3	—	Front door speaker electrical connector (part of door harness)

Rear Door Speaker

Item	Part Number	Description
1	W706766	Rear speaker screws (4 required)
2	18808	Rear speaker
3	180103	Rear speaker electrical connector

Removal and Installation

Front door

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the screws (2 for the tweeter, 4 for the door speaker) and the speaker.
   - Disconnect the electrical connector.

Rear door

3. Remove the rear door trim panel. For additional information, refer to Section 501-05 .

4. Remove the 4 screws and the rear door speaker.
   - Disconnect the electrical connector.

All speakers

5. To install, reverse the removal procedure.

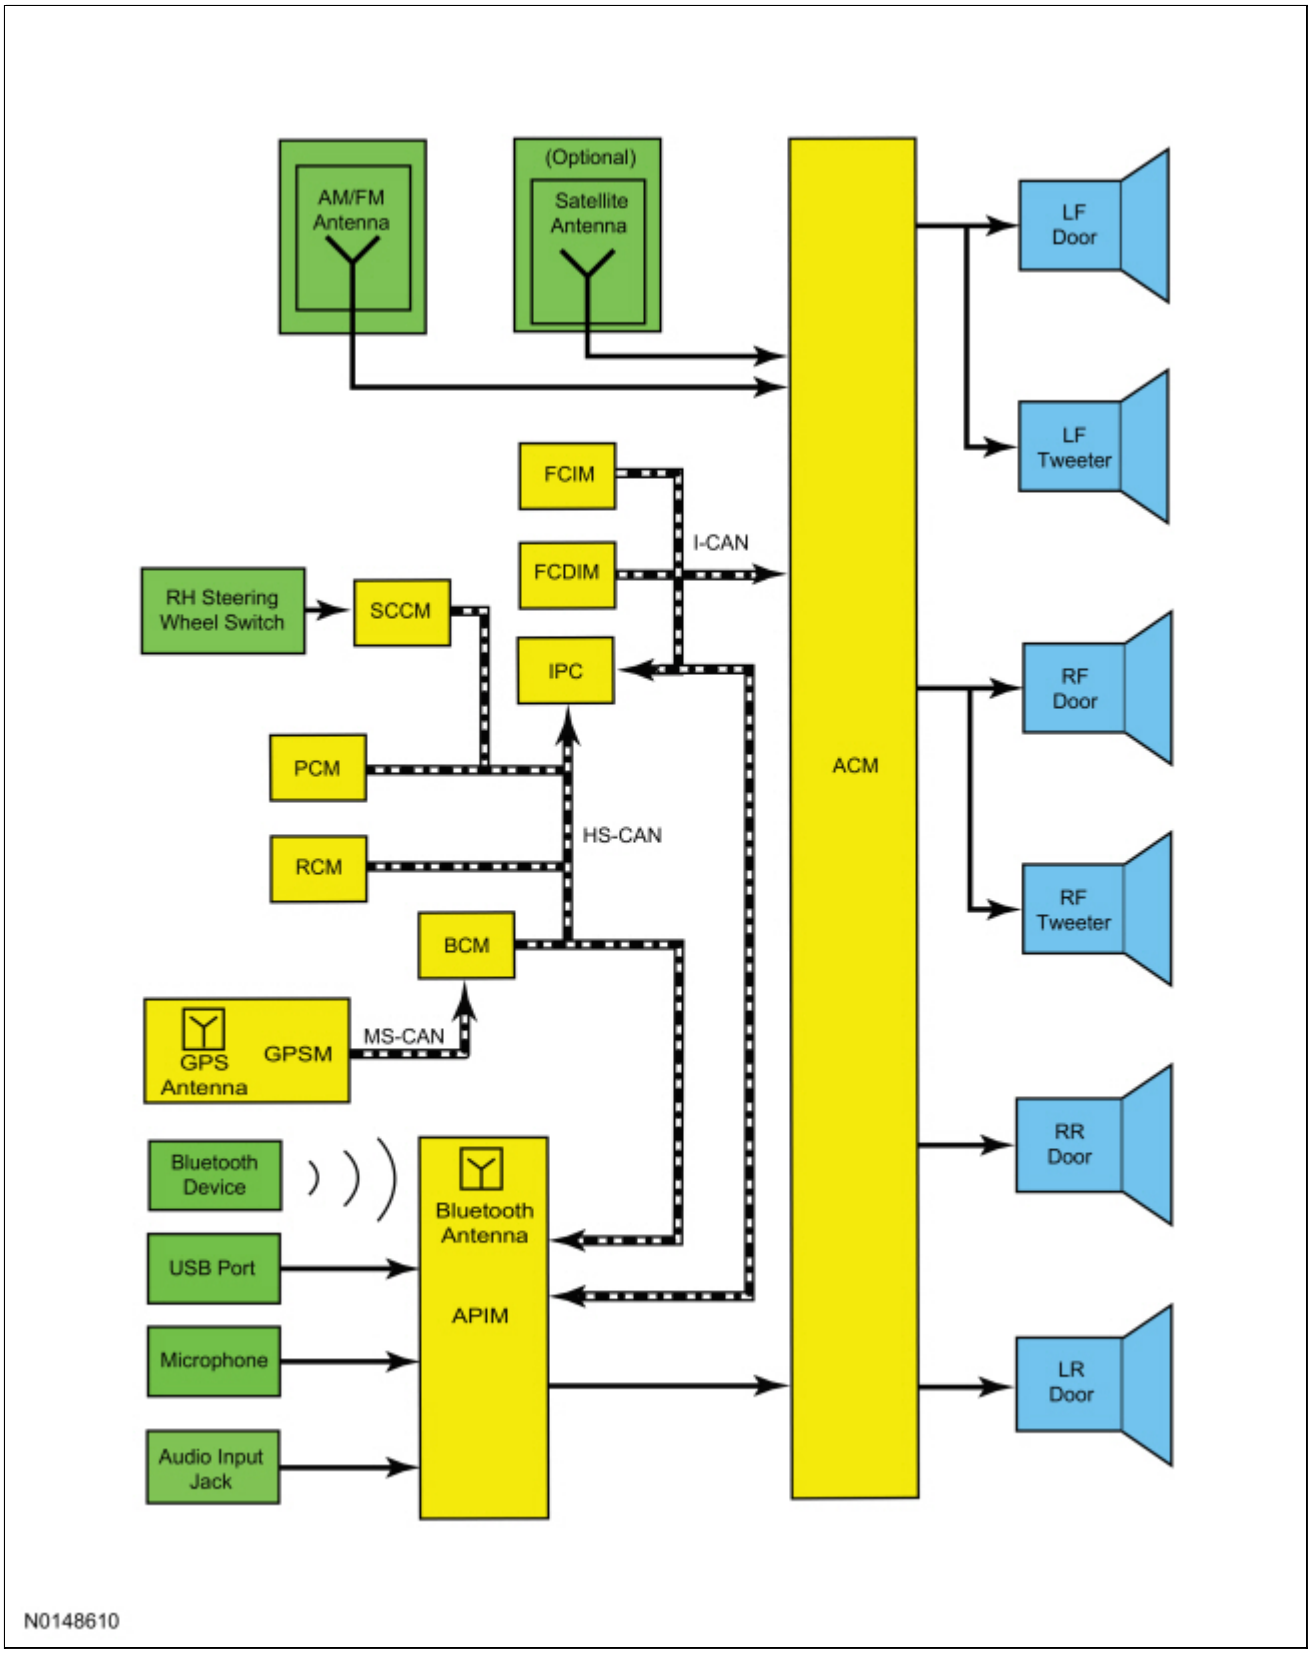
Overview

The audio system consists of the following:

Main Components

- 6 speakers
- 4.2-inch (107 mm) non-touchscreen FCDIM
- AM/FM single CD ACM
- APIM
- Audio input jack
- FCIM
- GPSM
- SYNC® microphone
- Redundant steering wheel controls
- USB port



Main Features

- Optional satellite radio
- SYNC®

System Operation

System Diagram

repair4less

Network Message Chart

NOTE: A missing network message is indicated by a U-code DTC . When a missing message DTC (U-code)

sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message. Refer to CAN Module Communication Message Chart in Section 418-00 . When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication DTCs may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Media player display request	FCDIM	Used to display detailed folder and track information on the FCDIM from the ACM for the different audio system operating modes when the appropriate FCIM button is pressed.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
Airbag status	RCM	Used to monitor airbag deployment status for 911 assist.
Front seat belt latched status	RCM	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
Seat belt buckle status	RCM	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.

Module Network Input Messages - FCDIM

Broadcast Message	Originating Module	Message Purpose

repair4less

ACM radio functions	ACM	Used to display the ACM radio functions such as seek, tune and AM/FM stations on the FCDIM .
Audio source	ACM	Used to display the selected audio source on the FCDIM .
CD load/eject	ACM	Used to display the loaded or ejected CD status on the FCDIM .
Date and time	IPC	Used to display the current date and time on the FCDIM .
Gear lever position	BCM	Used to verify the gear selector position for bezel diagnostics.
FCIM button press	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCDIM operating modes and fault reporting.
Illumination dimming level	IPC	Used to control the backlight intensity of the FCDIM based on the dimmer switch input.
Language selection	IPC	Used to display information on the FCDIM in the selected language.
Steering wheel switch media	SCCM	Used to set the audio system listening mode (AM/FM, CD, etc.) from the steering wheel switch.
Steering wheel switch OK	SCCM	Used to confirm various audio system selections.
Steering wheel switch seek left	SCCM	Used to access the next strong station to the left, to restart an audio track, to access the previous satellite radio station preset (if equipped), or the previous audio track from the steering wheel switch.
Steering wheel swtich seek right	SCCM	Used to access the next strong station to the right, to access the next satellite radio station preset (if equipped), or to access the next audio track from the steering wheel switch.
Steering wheel switch voice	SCCM	Used to access or exit the voice command feature from the steering wheel switch.
Steering wheel switch volume down	SCCM	Used to decrease the audio system volume from the steering wheel switch.
Steering wheel switch volume up	SCCM	Used to increase the audio system volume from the steering wheel switch.
Voice recognition status	APIM	Used to display the voice recognition status in the FCDIM .

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.
Illumination dimming level	IPC	Used to control the backlight intensity of the FCIM based on the dimmer switch input.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition switch position	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Selector lever (PRNDL) status	BCM	Used to verify the gear lever position for vehicle direction data.

Accessory Delay Feature

The accessory delay feature allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/FM Radio

The AM/FM fender-mounted antenna receives radio waves and sends them through the AM/FM antenna coaxial cable to the ACM . The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

Audible Prompts

The APIM receives stereo inputs from connected mobile phones and mono inputs from the SYNC® microphone.

Stereo and mono inputs, voice prompts, the TTS feature, ringtones, and any audio received through a connected mobile phone are transmitted to the ACM as stereo or mono sound.

The TTS feature speaks information so that it does not have to be read from the display.

Audio Extended Play

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. To turn the audio system off, the power button on the FCIM is pressed. Audio extended play will not function if the battery load shed is active.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the vehicle OFF and the ignition in ACC or ON, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, SYS OFF TO SAVE BATT is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is a maximum of 9.75 m (32 feet).

repair4less

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system. Any Bluetooth device used with the SYNC® system must first be paired with the system before it is operational.

Only one Bluetooth phone and one Bluetooth media device can be connected to the system at any one time. If an additional device of either type is paired with the system and made active, the APIM disconnects any active connection and establishes a connection with the new device.

When a new Bluetooth device is added, the APIM and the Bluetooth device must be paired together. Most Bluetooth devices can pair with the SYNC® system, although functionality may vary. To determine if a Bluetooth device is supported, verify the customer device is on the compatibility list for the current APIM software level.

Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be entered on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

It is important to understand that not all mobile phones have the same level of features when interacting with the SYNC® system. For a list of compatible phones, refer to SyncMyRide website.

MyKey® Audio Operation

When a MyKey® is in use, the following restrictions are activated:

- The audio system is muted until the safety belts are buckled when the Belt-Minder® feature is activated. The MyKey® "BUCKLE UP TO UNMUTE AUDIO" is displayed in the information display.
  - This is a standard setting and cannot be changed.
- Satellite radio adult content stations are blocked by being muted.
- If "Always On" is selected in the MyKey® menu, 911 assist and the Do Not Disturb features are enabled and cannot be disabled.
- The audio system volume is limited to 45%. In an attempt to exceed the limited volume, the MyKey® VOLUME LIMITED message is displayed in the centerstack infotainment display.
  - This is an optional setting.

Refer to the Owner's Literature for more information on MyKey®.

Satellite Radio (If Equipped)

Satellite radio is a subscription-based service.

The satellite radio roof-mounted antenna receives signals containing data (station call letters, artist names, song titles, etc.) and digital satellite radio audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM . The ACM separates the data from the audio. The data is sent to be displayed on the centerstack infotainment display, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

Speed Compensated Volume

The ACM adjusts the audio system volume based on the VSS signal to compensate for speed and wind noise.

When a MyKey® is in use and the MyKey® radio volume limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The RH 8-way steering wheel switches operate the volume +/-, seek +/-, and the audio system SYNC® functions (media, voice, phone, and OK).

SYNC® AppLink™

SYNC® AppLink™ allows the customer to control smartphone applications by using voice commands and in-vehicle controls. Data is transferred from the customer's device to the APIM through Bluetooth, or through the USB port with Apple® devices.

SYNC® Services

SYNC® Services is a subscription-based service. For SYNC® Services subscription information,, refer to SyncMyRide .

The customer's mobile phone is used to access and download the SYNC® services. SYNC® services information received by the customer's mobile device is sent to the APIM .

The GPS antenna, integral to the GPSM , is used to detect the location and direction of the vehicle.

SYNC® services includes the following features:

- Business search
- Personalized text alerts
- Real-time traffic updates
- Turn-by-turn directions

SYNC® services allows the customer to receive updates for:

- Entertainment
- News
- Sports
- Stocks
- Travel
- Weather

SYNC® System

The SYNC® system is a hands-free communication and entertainment system that supports many features. All features are not available with every phone.

The SYNC® system provides the ability to:

- Connect media devices (such as an iPod® or USB device) in order to play audio files.
- Control the entertainment system using voice controls.
- Initiate an emergency call (911 Assist™) when the airbags deploy.
- Play media files via a paired Bluetooth-enabled audio device.
- Produce vehicle health reports.
- Send and receive phone calls via a paired Bluetooth-enabled phone.
- Send and receive text messages via a paired Bluetooth-enabled phone.

USB Audio Mode

The USB port can be used for connecting a media device (such as an iPod®) with the device's available cable, or for directly plugging in a portable mass storage device, such as a thumb drive. When playing media

repair4less

files stored on a mass storage device, the SYNC® system only plays files that do not have DRM protection. The USB port can also be used for uploading vehicle application upgrades. The USB port is powered by the APIM , so no external power source is needed to power a device plugged into the USB port if the device supports this feature.

In addition to audio information, metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device plugged into the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music, based on customer preference. Not all USB devices can send metadata to the APIM . When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes (depending on the amount of data on the device), and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index (rather than creating a new one), which reduces the amount of time needed to index the device.

Voice Recognition

Voice recognition is used for many vehicle functions, including the audio system. The microphone relays the microphone input to the APIM through dedicated wiring. The TTS and voice prompt features speak certain text information and interaction requests to minimize driver distraction by having to look at the audio system display while driving. The ringtone alerts the driver to an incoming call. The microphone is also used to detect outgoing audio during a phone call.

Audible prompts can range from a simple tone to more elaborate spoken text, based on the customer setting. When interaction mode is set to standard, detailed guidance is provided. When interaction mode is set to advanced, most prompts are tones only and minimal audible guidance is provided. Refer to the Owner's Literature for further information on voice interaction.

The audio signals for the TTS and voice prompt features, ringtones, and audio from the outside device during a phone call, are sent from the APIM to the ACM .

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s) and converts them into fluctuating AC voltage. The ACM receives audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes these inputs and sends left and right analog audio signals to the speakers as fluctuating AC voltage.

If equipped with satellite radio, the ACM will also receive radio waves containing data through the antenna coaxial cable(s). The data is sent to be displayed on the centerstack infotainment display.

The ACM requires PMI when it is replaced.

Antenna

The AM/FM fender-mounted antenna receives radio waves containing audio and sends them through the AM/FM antenna coaxial cable to the ACM . The antenna mast is used to amplify the AM/FM radio waves to improve reception.

If equipped with satellite radio, the satellite radio roof-mounted antenna receives signals containing data and digital audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio

receiver built into the ACM .

APIM

Audio signals received by the APIM are sent to the ACM as fluctuating AC voltage.

The APIM consists of 2 internal modules: the CIP and the VIP . The modules are not replaceable individually, but can be flashed independently, if required.

The CIP interfaces with all of the inputs to the APIM . It contains an analog-to-digital-to analog converter, as well as the Bluetooth chipset. Any Application upgrades that are available to the consumer are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs when a vehicle health report is requested.

Audio Input Jack

The audio input jack allows for a portable MP3 audio device (such as an iPod®) to be connected to the vehicle audio system utilizing a 1/8-inch (3 mm) audio jack.

FCDIM

The FCDIM can be operated with the ignition in RUN, ACC, or OFF.

The FCDIM displays driver information messages, vehicle settings, infotainment, audio, and climate control system information.

The FCDIM requires PMI when it is replaced.

FCIM

The FCIM can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods in which the customer interacts with the infotainment system.

The FCIM is separate from the ACM .

Global Positioning System Module (GPSM)

The Global Positioning System Module (GPSM) provides vehicle location for real-time traffic reports and re-routing, and for identifying vehicle location in the event of a collision.

Vehicle location information is broadcast from the Global Positioning System Module (GPSM) to the APIM .

Steering Wheel Switches

The RH steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH steering wheel switch on the input circuits. When a switch is pressed, the voltage is routed through the corresponding resistor(s), and then to ground through

repair4less

the SCCM . The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The SCCM sends a network message to the APIM for the SYNC® switches and to the ACM for the redundant audio controls.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and outgoing audio during a phone call. These signals are sent to the APIM .

USB Port

The USB port is connected to the APIM through the USB cable. The USB port can be used to play audio files, connect a media device, or upload software from mass storage.

DTC Charts

repair4less

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

NOTE: For SYNC® related concerns, REFER to the SYNC® Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

Audio Front Control Module (ACM) DTC Chart

DTC	Description	Action
B1A01:01	Speaker #1: General Electrical Failure	• For a LF door speaker concern, GO to Pinpoint Test F • For a LF tweeter speaker concern, GO to Pinpoint Test G
B1A01:11	Speaker #1: Circuit Short to Ground	• For a LF door speaker concern, GO to Pinpoint Test F • For a LF tweeter speaker concern, GO to Pinpoint Test G
B1A01:12	Speaker #1: Circuit Short to Battery	• For a LF door speaker concern, GO to Pinpoint Test F • For a LF tweeter speaker concern, GO to Pinpoint Test G
B1A01:13	Speaker #1: Circuit Open	• For a LF door speaker concern, GO to Pinpoint Test F • For a LF tweeter speaker concern, GO to Pinpoint Test G
B1A02:01	Speaker #2: General Electrical Failure	• For a RF door speaker concern, GO to Pinpoint Test H • For a RF tweeter speaker concern, GO to Pinpoint Test I
B1A02:11	Speaker #2: Circuit Short to Ground	• For a RF door speaker concern, GO to Pinpoint Test H • For a RF tweeter speaker concern, GO to Pinpoint Test I

B1A04:13	Speaker #4: Circuit Open	GO to Pinpoint Test K .
B1A56:21	Antenna: Signal Amplitude	If DTC B1A56:21 sets after running the bezel diagnostic tests, disregard this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail. Therefore, tests ran from the bezel diagnostic screen and the DTC generated from the test can be disregarded.
B1A89:11	Satellite Antenna: Circuit Short To Ground	GO to Pinpoint Test B .
B1A89:13	Satellite Antenna: Circuit Open	GO to Pinpoint Test B .
B1D19:49	Compact Disc Unit: Internal Electronic Failure	• CLEAR the DTC. • WAIT at least 30 seconds. • REPEAT the self-test. • If DTC B1D19:49 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC. This is normal operation.
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AA .
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AC .
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AD .
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AE .
U201A:51	Control Module Main Calibration Data: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2100:00	Initial Configuration Not	CHECK vehicle service history for recent service actions related to

repair4less

	Complete: No Sub Type Information	this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3000:96	Control Module: Component Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:96 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AF .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ag .

Accessory Protocol Interface Module (APIM) DTC Chart

DTC	Description	Action
B1252:04	USB Port: System Internal Failure	GO to Pinpoint Test R .
B1252:11	USB Port: Circuit Short to Ground	GO to Pinpoint Test R .
B12B8:04	USB Port #2: System Internal Failure	**NOTE:** This DTC refers to USB port #2 on the APIM itself, which is not used.

		• INSPECT the APIM USB port #2 for damage and REMOVE any debris. • CLEAR the DTCs. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B12B8:04 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
B12B8:11	USB Port #2: Circuit Short To Ground	**NOTE:** This DTC refers to USB port #2 on the APIM itself, which is not used. • INSPECT the APIM USB port #2 for damage and REMOVE any debris. • CLEAR the DTCs. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B12B8:11 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
B1D79:01	Microphone Input: General Electrical Failure	GO to Pinpoint Test P .
B1D79:11	Microphone Input: Circuit Short To Ground	GO to Pinpoint Test P .
B1D79:12	Microphone Input: Circuit Short To Battery	GO to Pinpoint Test P .
B1D79:13	Microphone Input: Circuit Open	GO to Pinpoint Test P .
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test Z .
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AA .
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AE .
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the IPC . REFER to Section 413-01 .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic

repair4less

		scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:04	Control Module: System Internal Failure	GO to Pinpoint Test M .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:88	Control Module: Bus Off	**NOTE:** Network communication/message DTCs can result from intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming often set these DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. The module was unable to communicate on the network at a point in time. The fault is not currently present. To avoid repeat network concerns: • INSPECT for damaged or corroded wiring at the APIM . • TEST the vehicle battery. REFER to Charging Systems in Section 414-00 . • CLEAR the DTC. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AF .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ag .

Global Positioning System Module (GPSM) DTC Chart

DTC	Description	Action
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test Y .
U0140:00	Lost Communication With Body Control Module: No Sub Type Information: No Sub Type Information	GO to Pinpoint Test Z .
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AA .
U0401:00	Invalid Data Received from ECM/PCM A: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the PCM . REFER to Section 303-14 .
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the BCM . REFER to Section 419-10 .
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the IPC . REFER to Section 413-01 .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new Global Positioning System Module (GPSM) to correct the failure to retain configuration data. REFER to Global Positioning System Module (GPSM) .

repair4less

U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new Global Positioning System Module (GPSM) to correct the failure to retain configuration data. REFER to Global Positioning System Module (GPSM) .
U3000:09	Control Module: Component Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:09 is retrieved again, PERFORM a battery reset by disconnecting the battery for 1 minute, then reconnecting it. • CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:09 is retrieved again, INSTALL a new Global Positioning System Module (GPSM). REFER to Global Positioning System Module (GPSM) .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new Global Positioning System Module (GPSM). REFER to Global Positioning System Module (GPSM) .
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new Global Positioning System Module (GPSM). REFER to Global Positioning System Module (GPSM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AF .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ag .

SCCM DTC Chart

DTC	Description	Action
B1380:09	Steering Wheel Right Switch Pack: Component Failure	GO to Pinpoint Test T .
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	GO to Pinpoint Test T .
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	GO to Pinpoint Test T .
All other DTCs	—	REFER to Section 211-05 .

Symptom Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom Chart — General Audio System

Condition	Possible Sources	Action
• A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals, or connectors • Module	• REFER to Section 418-00 .
• The RH steering wheel controls are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test T .
• The CD player is inoperative or does not operate correctly	• CD • ACM	• INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
• The speed compensated volume does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test C .
• The compass is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test X .
• The FCIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	• REFER to Section 413-00 .
• The audio system does not operate correctly from the FCIM	• Refer to the Pinpoint Test	• GO to Pinpoint Test U .
• The FCDIM is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test V .
• One or more FCDIM displays are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test W .
• The FCDIM	• Illumination	• REFER to Section 413-00 .

repair4less

illumination is inoperative or does not dim	system concern • FCDIM	

Symptom Chart — Satellite Radio (If Equipped)

Condition	Possible Sources	Action
• Poor reception — satellite radio	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.
• Poor sound quality or no sound while in satellite radio mode - all other functions operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.
• The satellite radio is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.

Symptom Chart — Sound Quality

Condition	Possible Sources	Action
• Poor reception — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A.
• Continuous seek or scan — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A.
• Poor sound quality or distorted sound from one or more speakers (not all speakers)	• Refer to the Pinpoint Test	• GO to Pinpoint Test D.
• No sound from all speakers	• Refer to the Pinpoint Test	• GO to Pinpoint Test E.
• The LF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test F.
• The LF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test G.
• The RF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H.
• The RF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test I.
• The RR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test J.
• The LR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test K.

SYNC System

Condition	Possible Sources	Action
• The SYNC® system is inoperative (no response is received from phone, voice, and media inputs)	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test M .
• All SYNC® Services features are inoperative or inaccurate (traffic, directions, and information)	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test O .
• The SYNC® system voice or tone prompts, TTS feature, or ringtones are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test N .
• During a phone call, no incoming audio is heard in the vehicle	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test N .
• Voice recognition is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test P .
• During a phone call, poor quality or no outgoing audio is heard on the outside device	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test P .
• No sound from all SYNC® audio sources (Bluetooth, USB , audio input jack)	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test L .
• The SYNC® steering wheel switches are inoperative or	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test T .

repair4less

do not operate correctly		
• The audio input jack is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the Accessory Protocol Interface Module (APIM) Reset. REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test Q .
• The Universal Serial Bus (USB) port is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test R .
• Unable to pair Bluetooth device	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test S .
• An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	• Customer's device compatibility	• PERFORM the Accessory Protocol Interface Module (APIM) Reset. REFER to Accessory Protocol Interface Module (APIM) Reset . • If the concern is still present, INSTRUCT the customer to review the device compatibility list on the SyncMyRide website. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. • If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
• SYNC® AppLink™ is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the Accessory Protocol Interface Module (APIM) Reset. REFER to Accessory Protocol Interface Module (APIM) Reset . • If the concern is still present, INSTRUCT the customer to review the mobile device platform, application, and application version compatibility list on the SyncMyRide website. It is normal operation for incompatible mobile device platforms, applications, and application versions to be unavailable through SYNC® AppLink™. • If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth only, GO to Pinpoint Test S . • If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth and the USB port, GO to

		Pinpoint Test R
• 911 Assist™ or Vehicle Health Report (VHR) is inoperative or does not operate correctly	• Unregistered SYNC® owner account • RCM misconfiguration • IPC misconfiguration	• Verify that the customer has a SYNC® Owner Account on the SyncMyRide website. • This error message appears due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or RCM . ▪ If there have been recent service actions with the IPC or RCM , REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. REFER to Programmable Module Installation (PMI) in Section 418-01 . ▪ If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

Pinpoint Tests

Pinpoint Test A: Poor Reception Or Continuous Seek Or Scan — AM/FM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to AM/FM Radio, ACM , and Antenna in Information and Entertainment System .

The RDS function allows the vehicle operator to choose which genre (category) of music to listen to. When the SCAN button is pressed, the ACM only stops at channels falling within the selected category. If no channel in the selected category is found, the ACM continues to scan without stopping. This can appear to be a reception issue, but it is actually due to the customer's setting.

Possible Sources

- AM/FM antenna
- AM/FM antenna coaxial cable
- Charging system
- Ignition system
- No channel found in the selected category
- Noise suppression equipment
- Wiring, terminals, or connectors

repair4less

- ACM

PINPOINT TEST A: POOR RECEPTION OR CONTINUOUS SEEK OR SCAN — AM/FM

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>A1 CHECK THE AUDIO SYSTEM RECEPTION
• Operate the audio system in radio tuner AM/FM mode.
• Check the reception with the engine running, and with the engine off.
• Does the poor reception only occur with the engine running?</td><td>Yes
GO to A2 .

No
GO to A4 .</td></tr>
<tr><td>A2 CHECK THE GENERATOR
• Ignition OFF.
• Disconnect: Wiring harness to the generator voltage regulator.
• Start the engine.
• Operate the audio system in radio tuner AM/FM mode.
• Is the reception OK?</td><td>Yes
INSTALL a new generator. REFER to Section 414-00 .

No
GO to A3 .</td></tr>
<tr><td>A3 CHECK THE IGNITION CIRCUITS
• Ignition OFF.
• Connect: Wiring harness to the generator voltage regulator.
• Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings.
• Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.
• Are the ignition components OK?</td><td>Yes
USE a jumper cable to ground various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary.

No
REPAIR the ignition system as necessary.</td></tr>
<tr><td>A4 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE
• Ignition OFF.
• Disconnect: AM/FM antenna coaxial cable at the ACM . Refer to Audio Control Module (ACM) .
• Disconnect: AM/FM antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — AM/FM .
• Ignition ON.
• Measure the voltage between:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>AM/FM antenna coaxial cable core at the ACM</td><td>—</td><td>—</td><td>Ground</td></tr><tr><td>AM/FM antenna coaxial cable</td><td></td><td>—</td><td>Ground</td></tr></table></td><td>Yes
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

No
GO to A5 .</td></tr>
</table>

shield at the ACM —	
• **Is any voltage present?**	
A5 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the **resistance** between: Positive Lead: Pin — AM/FM antenna coaxial cable core at the ACM; Circuit — Negative Lead: Pin —; Circuit Ground • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A6 . **No** REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .
A6 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN	
• Measure the **resistance** between: Positive Lead: Pin — AM/FM coaxial cable core at the ACM; Circuit — Negative Lead: Pin — Lower AM/FM antenna coaxial cable core at the inline connection; Circuit — Positive Lead: Pin — AM/FM antenna coaxial cable shield at the ACM; Circuit — Negative Lead: Pin — Lower AM/FM antenna coaxial cable shield at the inline connection; Circuit — • **Is the resistance less than 1 ohm?**	**Yes** GO to A7 . **No** REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .
A7 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER	
• Measure the **resistance** between: Positive Lead: Pin — AM/FM antenna coaxial cable core at the ACM; Circuit — Negative Lead: Pin — AM/FM antenna coaxial cable shield at the ACM; Circuit — • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A8 . **No** REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .
A8 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Connect: AM/FM antenna inline coaxial cable connection behind the glove compartment.	**Yes** REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER

repair4less

- Disconnect: AM/FM antenna coaxial cable at the antenna unit. Refer to Antenna — AM/FM .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

to Antenna Cable — AM/FM .

No
GO to A9 .

A9 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A10 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A10 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable core at the antenna unit (harness side)	—
AM/FM antenna coaxial cable shield at the ACM	—	AM/FM antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to A11 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A11 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead	Negative Lead

Yes
GO to A12 .

No

Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A12 CHECK THE AM/FM ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

No
GO to A13 .

A13 CHECK THE AM/FM ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A14 .

No
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

A14 CHECK THE AM/FM ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A15 .

No
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

A15 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

repair4less

<table>

Pinpoint Test B: The Satellite Radio Is Inoperative, Has Poor Reception, Or Has No Sound

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to MyKey® and Satellite Radio in Information and Entertainment System .

When a satellite radio subscription is activated, the satellite receiver ESN is associated with the VIN .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected in the satellite antenna circuit for more than 250 milliseconds. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.

Possible Sources

- Expired subscription
- Incorrectly matched ESN
- Wiring, terminals, or connectors
- Obstructions in the antenna's line of sight
- Satellite radio antenna
- Satellite radio antenna coaxial cable
- ACM

PINPOINT TEST B: THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION, OR HAS NO SOUND

Test Step	Result / Action to Take
B1 VERIFY AN ACTIVE SUBSCRIPTION	
• Operate the infotainment system in satellite radio mode and observe the infotainment display. • **Does the display indicate that the subscription has expired?**	**Yes** The subscription has expired. INFORM the customer to contact SIRIUS to reactivate the subscription. **No** GO to B2 .
B2 CHECK THE RECEPTION	
• Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees. • Using a diagnostic scan tool, view the ACM PIDs. • Monitor the satellite signal strength (SAT_SIG_STR) PID. • If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained. • **Can a "Good," "Very Good," or "Excellent" PID value be obtained?**	**Yes** GO to B3 . **No** GO to B6 .
B3 CHECK THE SATELLITE RADIO SYSTEM FOR	

repair4less

CORRECT OPERATION • Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight. **No** GO to B4.
B4 CHECK FOR PROMOTIONAL CHANNEL 184 • Select channel 184. • **Does the satellite radio system receive channel 184 with normal sound quality?**	**Yes** GO to B5. **No** GO to B6.
B5 VERIFY THAT THE VIN AND ESN ON FILE MATCH THE VIN AND ESN FROM THE VEHICLE • Retrieve the satellite radio ESN. Satellite Radio Electronic Serial Number (ESN) Retrieval. • Contact the SIRIUS Dealer Support Line (888-465-8528). • Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle. • Follow the actions from step 2 to obtain "Good," "Very Good," or "Excellent" reception. • Operate the infotainment system in satellite radio mode. • **NOTE:** It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate. • Request for SIRIUS to send the activation signal to the vehicle 2-3 times. • Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle. **No** GO to B6.
B6 CHECK FOR ACM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the ACM DTCs. • Using a diagnostic scan tool, perform the ACM self-test. • **Are any DTCs recorded in the ACM?**	**Yes** For DTC B1A89:11 or DTC B1A89:13, GO to B7. For all other ACM DTCs, REFER to the ACM DTC chart in Information and Entertainment System. **No** GO to B20.
B7 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: Satellite radio antenna coaxial cable at the ACM. Refer to Audio Control Module (ACM). • Disconnect: Satellite radio antenna inline coaxial cable connection behind the glove compartment.	**Yes** REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio.

Refer to Antenna Cable — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

No
GO to B8 .

B8 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B9 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B9 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio coaxial cable core at the ACM	—	Lower satellite radio antenna coaxial cable core at the inline connection	—
Satellite radio antenna coaxial cable shield at the ACM	—	Lower satellite radio antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B10 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B10 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Yes
GO to B11 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

Positive Lead	Negative

Yes
GO to B17 .

No
INSTALL a new satellite radio antenna.

repair4less

		Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

REFER to Antenna — Satellite Radio .

B17 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B18 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

B18 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: Satellite radio antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

Yes
GO to B20 .

No
GO to B19 .

B19 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the satellite radio antenna. Refer to Antenna — Satellite Radio .
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	Satellite radio antenna base (unpainted surface)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B20 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

B20 CHECK FOR CORRECT ACM OPERATION

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test C: The Speed Compensated Volume Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Speed Compensated Volume in Information and Entertainment System.

Possible Sources

- Speed compensated volume setting
- VSS signal concern
- Network communication concern
- ACM

PINPOINT TEST C: THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
C1 CHECK THE SPEEDOMETER OPERATION	
• Drive the vehicle and observe the speedometer. • **Does the speedometer operate correctly?**	**Yes** GO to C2. **No** REFER to Section 413-01.
C2 CHECK THE SPEED COMPENSATED VOLUME SETTING	
• Turn the speed compensated volume off. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume.	**Yes** The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature. **No**

repair4less

• Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • **Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?**	GO to C3 .
C3 CHECK FOR DTC U0155:00	
• Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155:00 retrieved in any audio system module?**	**Yes** GO to Pinpoint Test AA . **No** GO to C4 .
C4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test D: Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners

- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST D: POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Test Step	Result / Action to Take
D1 ISOLATE THE ZONE	
• Operate the audio system using digital media (CD, MP3, etc.). • Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LF , RF , LR , and RR) of the vehicle to isolate the poor sound quality. • Locate and apply pressure to the trim panel(s) around the poor sound quality area in question. • **Does applying pressure to a trim panel reduce or eliminate the audible noise?**	**Yes** REPAIR or REPLACE the trim panel as needed. **No** GO to D2 .
D2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)	

• Remove the trim panel to access the suspect speaker.
• Operate the audio system using digital media (CD, MP3, etc.).
• Validate where the poor sound quality area is located.
• Check:
  ▪ Trim panel for loose components around the speaker area such as the speaker grille
  ▪ Trim panel joining components for missing or broken pieces
  ▪ Lock and handle mechanical parts for correct attachment
  ▪ Wire harnesses for correct routing
  ▪ Wire harness fasteners for correct attachment
  ▪ Water shield for correct placement (speaker air path not blocked)
  ▪ Water shield for correct bonding to sheet metal
  ▪ Storage areas for loose items
  ▪ All child safety belt anchors (if equipped)
  ▪ All safety belt retractors
  ▪ All speaker bracket fasteners and other fasteners
	Yes
	REPAIR or REPLACE any loose or broken component or fastener as needed.
	
	No
	GO to D3 .

repair4less

are secured and tightened to specified torque • **Was the source of the noise located?**	
D3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION	

• Inspect for watermarks.
• Check the:
  ▪ Cone
  ▪ Magnet
  ▪ Basket
• **Are any watermarks present on the speaker?**
	Yes
	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required.
	
	DRY the speaker in question and TEST the system for normal operation.
	
	No
	GO to D4 .

D4 ISOLATE SPEAKER TO VERIFY NOISE	
• Remove the suspect speaker from its location and leave the speaker connected to the harness. • Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact. • Operate the audio system using digital media (CD, MP3, etc.). • **Is the noise still present in the suspect speaker?**	**Yes** INSTALL a new speaker for the one in question. **No** LOCATE the source of the noise and REPAIR as needed.

Pinpoint Test E: No Sound From All Speakers

Diagnostic Overview

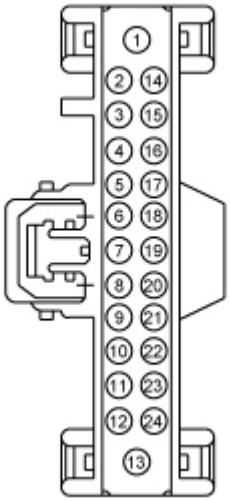
Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

When the ignition is in the START position, the ACM receives voltage on the START signal circuit and mutes the speaker output. This prevents voltage spikes from producing popping noises through the speakers. A short to voltage on this circuit causes the ACM output to be muted continuously.



A short to ground or short to voltage in the circuitry to one of the speakers may cause multiple speakers to lose sound due to the built-in overload protection feature of the ACM . In this case, a speaker fault DTC sets.

Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST E: NO SOUND FROM ALL SPEAKERS

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>E1 CHECK FOR SPEAKER DTCS
• Ignition ON.
• Using a diagnostic scan tool, perform the ACM self-test.
• Are any speaker fault Diagnostic Trouble Codes (DTCs) present?</td><td>Yes
REFER to the ACM DTC chart in Information and Entertainment System .

No
GO to E2 .</td></tr>
<tr><td>E2 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE
• Ignition OFF.
• Disconnect: ACM C240A .
• Ignition ON.
• Measure the voltage between:
<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td>C240A-3</td><td>CDC54 (WH/GN)</td><td>—</td><td>Ground</td></tr></table>
• Is the voltage 5V or greater?</td><td>Yes
REPAIR the circuit. TEST the system for normal operation.

No
GO to E3 .</td></tr>
<tr><td>E3 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
▪ Corrosion (clean module pins or install new connectors or terminals)
▪ Damaged or bent pins (install new terminals or pins)
▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.</td><td>Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.</td></tr>
</table>

repair4less

• **Is the concern still present?**	

Pinpoint Test F: The LF Door Speaker Is Inoperative

Diagnostic Overview

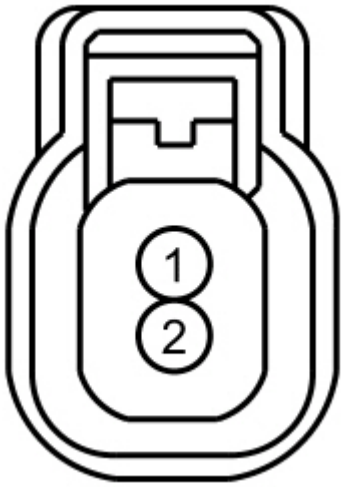
Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LF door or tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LF door or tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LF door or tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LF door or tweeter speaker circuits.



Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

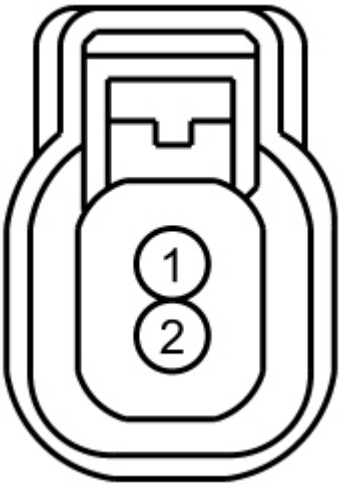
PINPOINT TEST F: THE LF DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
F1 CHECK THE AUDIO SIGNAL TO THE LF DOOR SPEAKER	
• Ignition OFF. • Disconnect: LF Door Speaker C523 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between:	**Yes** INSTALL a new LF door speaker. REFER to Speaker — Door . **No** GO to F2 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	C523-2	RME07 (WH/BN)

- **Is a fluctuating AC voltage present?**

F2 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TO VOLTAGE



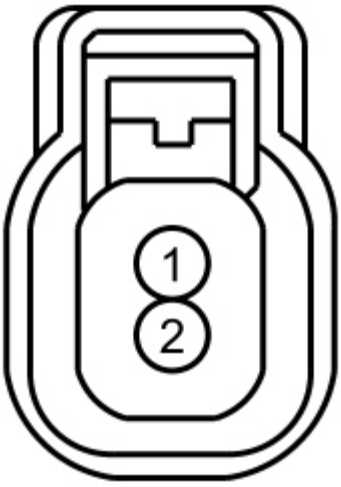
- Ignition OFF.
- Disconnect: ACM C240A .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	—	Ground
C523-2	RME07 (WH/BN)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to F3 .

repair4less



- **Is any voltage present?**

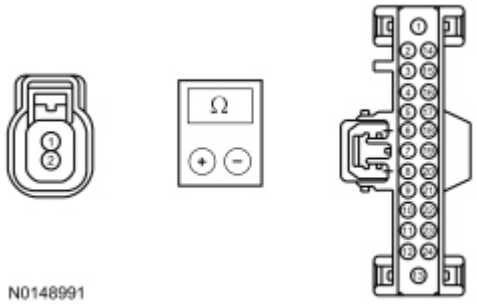
F3 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: LF Tweeter Speaker C230 .
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	—	Ground
C523-2	RME07 (WH/BN)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to F4 .



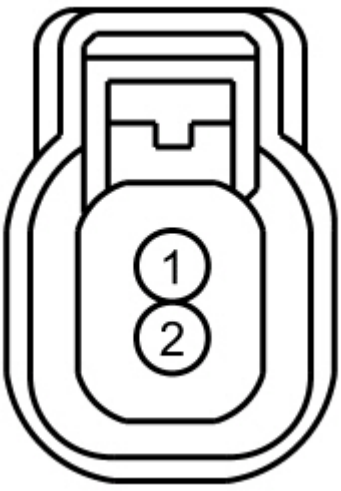
No
REPAIR the circuit in question.

F4 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Yes
GO to F5 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	C240A-22	VME07 (WH)
C523-2	RME07 (WH/BN)	C240A-10	RME07 (WH/BN)



- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

F5 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	C523-2	RME07 (WH/BN)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to F6 .

No
REPAIR the circuit in question.

F6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.

Yes

repair4less

• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

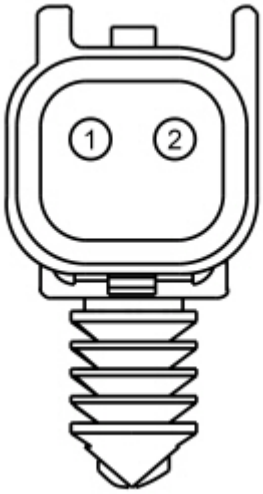
Pinpoint Test G: The LF Tweeter Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

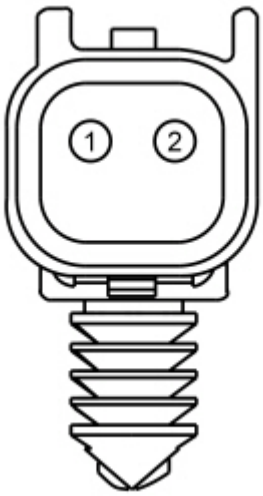
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions



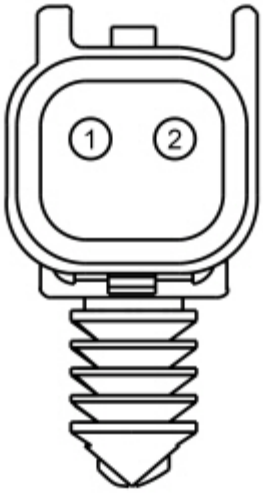
Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LF door or tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LF door or tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LF door or tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LF door or tweeter speaker circuits.



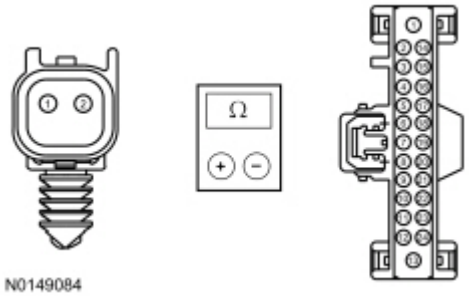
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM



PINPOINT TEST G: THE LF TWEETER SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
G1 CHECK THE AUDIO SIGNAL TO THE LF TWEETER SPEAKER • Ignition OFF. • Disconnect: LF Tweeter Speaker C230 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C230-1, Circuit VME07 (WH) Negative Lead: Pin C230-2, Circuit RME07 (WH/BN)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new LF tweeter speaker. REFER to Speaker — A-Pillar . **No** GO to G2 .
G2 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C230-1, Circuit VME07 (WH) Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C230-2, Circuit RME07 (WH/BN) Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to G3 .

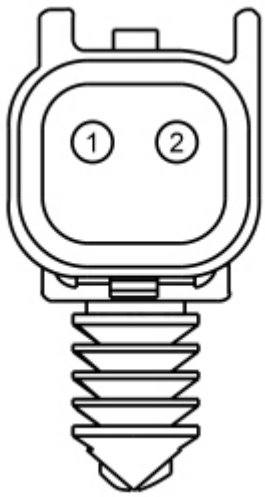


repair4less

- **Is any voltage present?**

G3 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: LF Door Speaker C523 . • Measure the **resistance** between: Positive Lead: Pin C230-1, Circuit VME07 (WH); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C230-2, Circuit RME07 (WH/BN); Negative Lead: Pin —, Circuit Ground  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to G4 . **No** REPAIR the circuit in question.
G4 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR AN OPEN	
• Measure the **resistance** between:	**Yes** GO to G5 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME07 (WH)	C240A-22	VME07 (WH)
C230-2	RME07 (WH/BN)	C240A-10	RME07 (WH/BN)



- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

G5 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME07 (WH)	C230-2	RME07 (WH/BN)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to G6 .

No
REPAIR the circuit in question.

G6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.

Yes

repair4less

• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

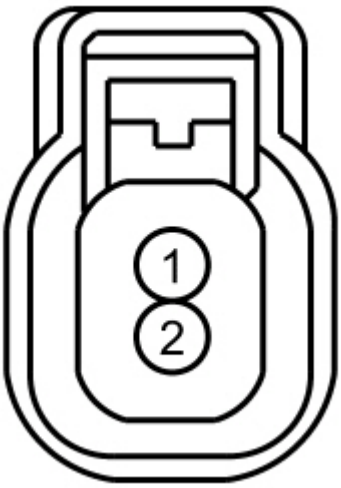
Pinpoint Test H: The RF Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

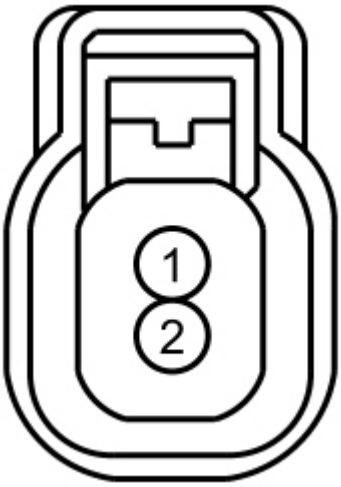
Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions



Refer to ACM in Information and Entertainment System.

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RF door or tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the RF door or tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the RF door or tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RF door or tweeter speaker circuits.



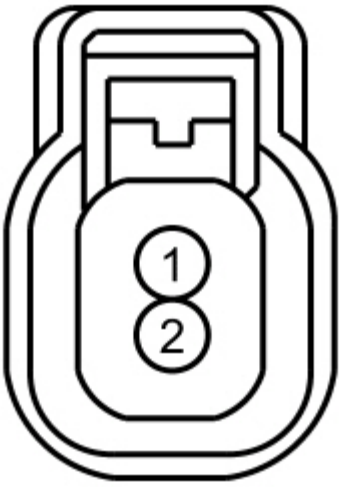
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST H: THE RF DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
H1 CHECK THE AUDIO SIGNAL TO THE RF DOOR SPEAKER • Ignition OFF. • Disconnect: RF Door Speaker C612 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C612-1, Circuit VME10 (WH/VT) Negative Lead: Pin C612-2, Circuit RME10 (WH/OG)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new RF door speaker. REFER to Speaker — Door . **No** GO to H2 .
H2 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C612-1, Circuit VME10 (WH/VT) Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C612-2, Circuit RME10 (WH/OG) Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to H3 .

repair4less



- **Is any voltage present?**

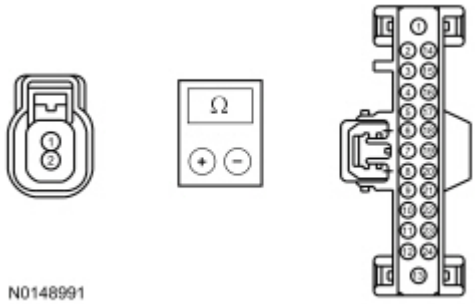
H3 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: RF Door Speaker C231 .
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	—	Ground
C612-2	RME10 (WH/OG)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to H4 .



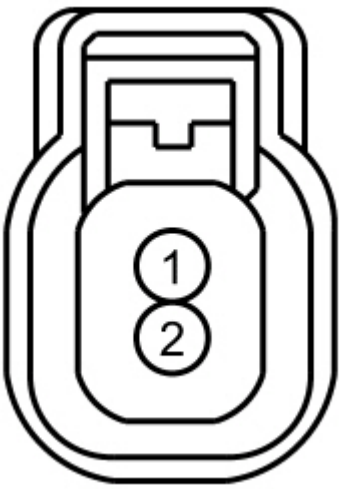
No
REPAIR the circuit in question.

H4 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Yes
GO to H5 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C240A-23	VME10 (WH/VT)
C612-2	RME10 (WH/OG)	C240A-11	RME10 (WH/OG)



- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C612-2	RME10 (WH/OG)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to H6 .

No
REPAIR the circuit in question.

H6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.

Yes

repair4less

• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

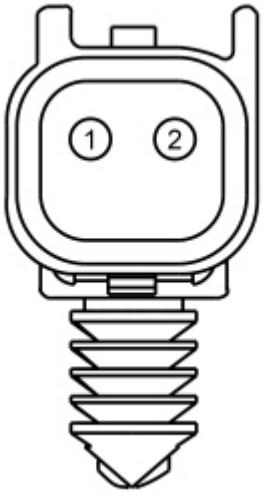
Pinpoint Test I: The RF Tweeter Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

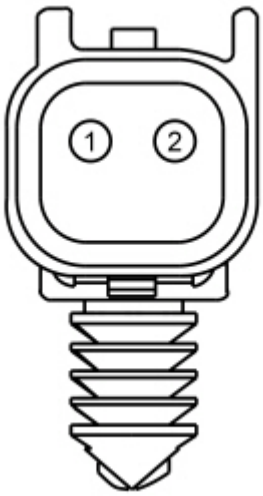
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions



Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RF door or tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the RF door or tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the RF door or tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RF door or tweeter speaker circuits.



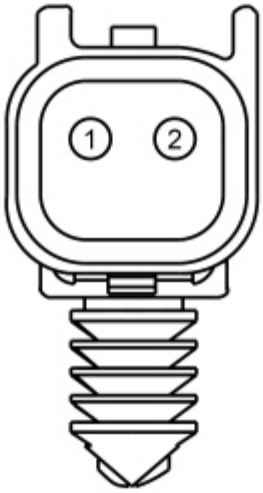
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST I: THE RF TWEETER SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
I1 CHECK THE AUDIO SIGNAL TO THE RF TWEETER SPEAKER • Ignition OFF. • Disconnect: RF Tweeter Speaker C231 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C231-1, Circuit VME10 (WH/VT) Negative Lead: Pin C231-2, Circuit RME10 (WH/OG)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new RF tweeter speaker. REFER to Speaker — A-Pillar . **No** GO to I2 .
I2 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C231-1, Circuit VME10 (WH/VT) Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C231-2, Circuit RME10 (WH/OG) Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to I3 .

repair4less



- **Is any voltage present?**

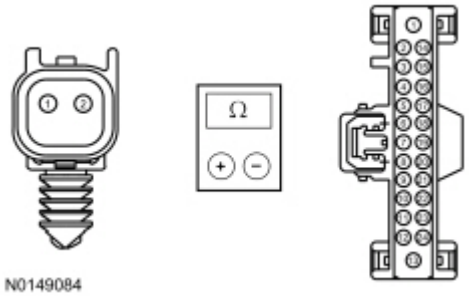
I3 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: RF Door Speaker C612 .
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME10 (WH/VT)	—	Ground
C231-2	RME10 (WH/OG)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to I4 .



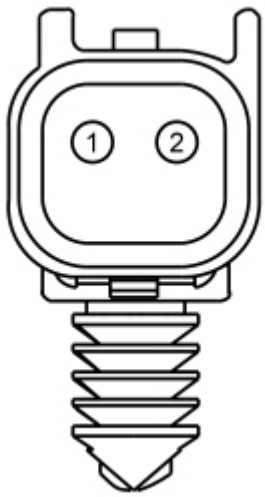
No
REPAIR the circuit in question.

I4 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Yes
GO to I5 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME10 (WH/VT)	C240A-23	VME10 (WH/VT)
C231-2	RME10 (WH/OG)	C240A-11	RME10 (WH/OG)



- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

I5 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME10 (WH/VT)	C231-2	RME10 (WH/OG)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to I6 .

No
REPAIR the circuit in question.

I6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.

Yes

repair4less

• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

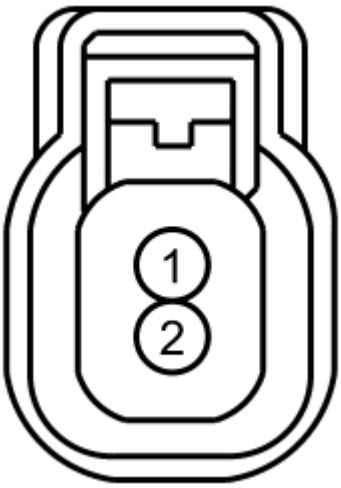
Pinpoint Test J: The RR Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

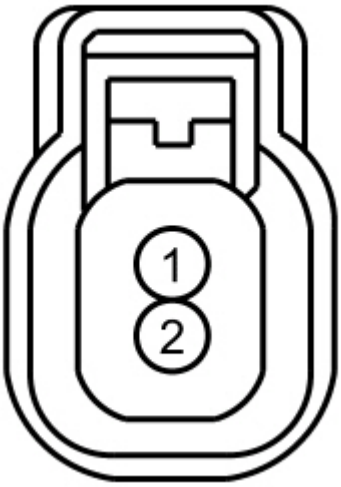
Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions



Refer to ACM in Information and Entertainment System.

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the RR door speaker circuits.
B1A03:11	Speaker #3: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the RR door speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the RR door speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the ACM when an open is detected on the RR door speaker circuits.



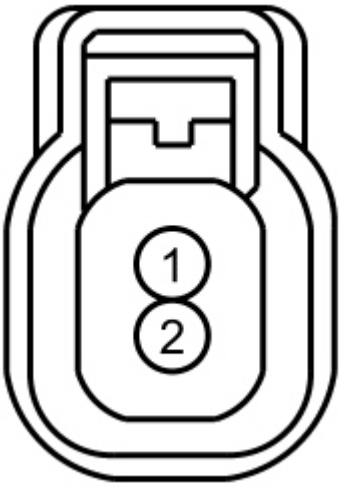
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST J: THE RR DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
J1 CHECK THE AUDIO SIGNAL TO THE RR DOOR SPEAKER • Ignition OFF. • Disconnect: RR Door Speaker C802 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C802-1, Circuit VME12 (BN/WH) Negative Lead: Pin C802-2, Circuit RME12 (BN/BU)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new RR door speaker. REFER to Speaker — Door . **No** GO to J2 .
J2 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C802-1, Circuit VME12 (BN/WH) Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C802-2, Circuit RME12 (BN/BU) Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to J3 .

repair4less



- **Is any voltage present?**

J3 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

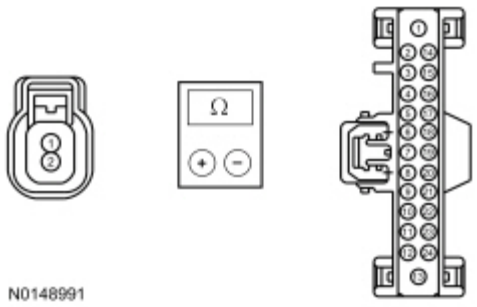
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	—	Ground
C802-2	RME12 (BN/BU)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to J4 .

No
REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR AN OPEN



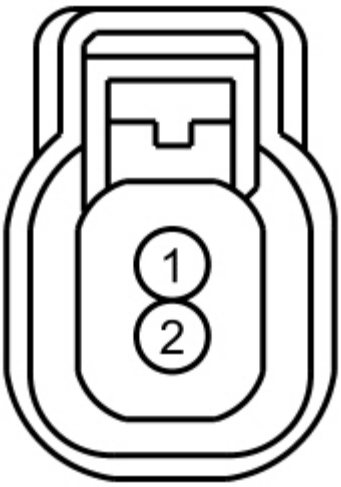
- Measure the **resistance** between:

Positive Lead	Negative Lead

Yes
GO to J5 .

No

Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C240A-24	VME12 (BN/WH)
C802-2	RME12 (BN/BU)	C240A-12	RME12 (BN/BU)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C802-2	RME12 (BN/BU)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to J6 .

No
REPAIR the circuit in question.

J6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.

Yes
CHECK OASIS for any applicable TSBs. If a

repair4less

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test K: The LR Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

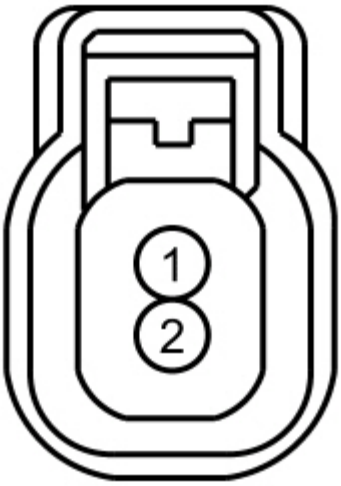
Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical Failure	Set by the ACM when a failure is detected on the LR door speaker circuits.
B1A04:11	Speaker #4: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LR door speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LR door speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the ACM when an open is detected on the LR door speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM



PINPOINT TEST K: THE LR DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take

K1 CHECK THE AUDIO SIGNAL TO THE LR DOOR SPEAKER

- Ignition OFF.
- Disconnect: LR Door Speaker C702 .
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

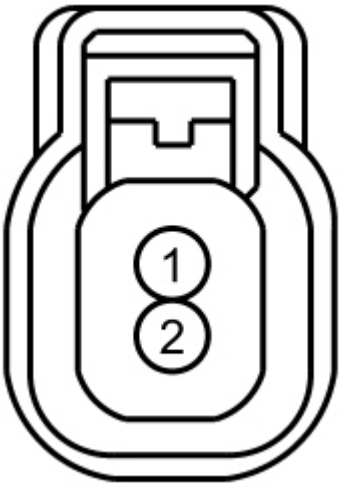
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	C702-2	RME09 (BN/YE)

- **Is a fluctuating AC voltage present?**

Yes
INSTALL a new LR door speaker. REFER to Speaker — Door .

No
GO to K2 .

K2 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR A SHORT TO VOLTAGE



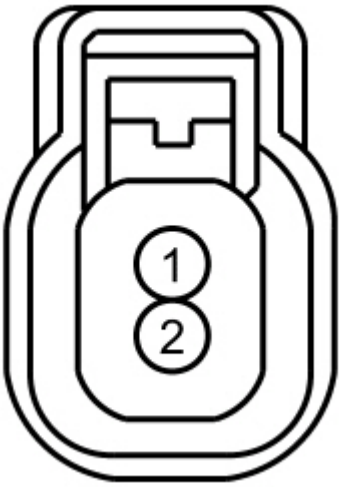
- Ignition OFF.
- Disconnect: ACM C240A .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	—	Ground
C702-2	RME09 (BN/YE)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to K3 .

repair4less



- **Is any voltage present?**

K3 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

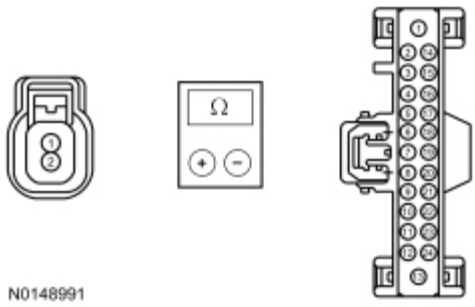
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	—	Ground
C702-2	RME09 (BN/YE)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K4 .

No
REPAIR the circuit in question.

K4 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR AN OPEN



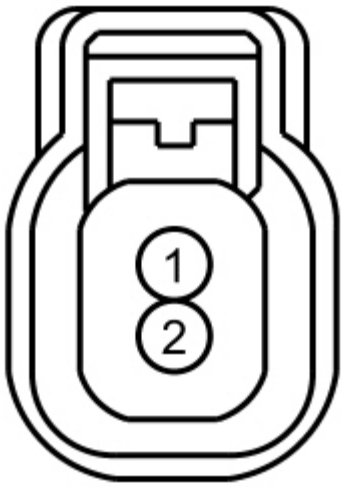
- Measure the **resistance** between:

Positive Lead	Negative Lead

Yes
GO to K5 .

No

Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	C240A-21	VME09 (WH/GN)
C702-2	RME09 (BN/YE)	C240A-9	RME09 (BN/YE)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

K5 CHECK THE AUDIO CIRCUITS TO THE LR DOOR SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C702-1	VME09 (WH/GN)	C702-2	RME09 (BN/YE)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K6.

No
REPAIR the circuit in question.

K6 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.

Yes
CHECK OASIS for any applicable TSBs. If a

repair4less

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test L: Poor Quality, Distorted, Or No Sound While In SYNC® Mode

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

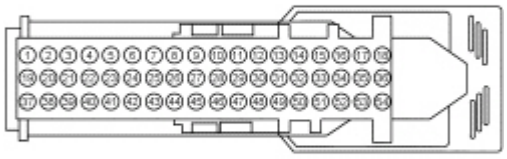
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® System in Information and Entertainment System .

The APIM transmits left and right channel analog audio signals to the ACM . These signals include inputs from the USB port, audio input jack, and Bluetooth media device. If a USB mass storage device is used to play an audio file, the SYNC® system only plays audio files that do not have DRM protection.

Possible Sources



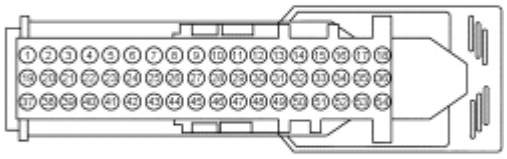
- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST L: POOR QUALITY, DISTORTED, OR NO SOUND WHILE IN SYNC® MODE

Test Step	Result / Action to Take
L1 VERIFY THE OPERATION OF THE SYNC® SYSTEM AUDIO SOURCES	
• Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, test the audio output for the audio input jack, USB port, and Bluetooth. • **Is there poor quality, distorted, or no sound from all SYNC® audio sources?**	**Yes** GO to L2 . **No** If there is a concern with one or more, but not all audio sources, GO to Symptom Chart - SYNC® System to diagnose the observed symptom. If all audio sources operate correctly,

	the concern is with the customer's device.
L2 CHECK THE AUDIO SIGNALS TO THE ACM ***NOTICE:*** **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.** • Operate the audio system in SYNC® mode and play an audio file. • Measure the **AC voltage** by back-probing ACM connector C240B: Positive Lead: Pin C240B-12, Circuit VME52 (BU); Negative Lead: Pin C240B-25, Circuit RME52 (GY/OG) Positive Lead: Pin C240B-13, Circuit VME53 (VT/GN); Negative Lead: Pin C240B-26, Circuit RME53 (BN/WH) • **Is a fluctuating AC voltage present?**	**Yes** GO to L7 . **No** GO to L3 .
L3 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240B . • Disconnect: APIM C2383 . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C2383-23, Circuit VME53 (VT/GN); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C2383-24, Circuit RME53 (BN/WH); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C2383-25, Circuit VME52 (BU); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C2383-26, Circuit RME52 (GY/OG); Negative Lead: Pin —, Circuit Ground	**Yes** REPAIR the circuit in question. **No** GO to L4 .

repair4less



- **Is any voltage present?**

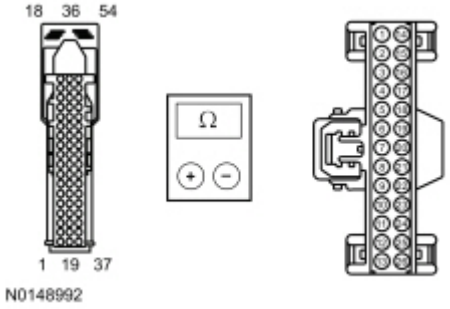
L4 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME53 (VT/GN)	—	Ground
C2383-24	RME53 (BN/WH)	—	Ground
C2383-25	VME52 (BU)	—	Ground
C2383-26	RME52 (GY/OG)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to L5 .



No
REPAIR the circuit in question.

L5 CHECK THE CIRCUITS TO THE ACM FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to L6 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME53 (VT/GN)	C240B-13	VME53 (VT/GN)
C2383-24	RME53 (BN/WH)	C240B-26	RME53 (BN/WH)
C2383-25	VME52 (BU)	C240B-12	VME52 (BU)
C2383-26	RME52 (GY/OG)	C240B-25	RME52 (GY/OG)

- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

L6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L7 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

repair4less

• Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test M: All SYNC® Functions Are Inoperative Or Do Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® System in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3000:04	Control Module: System Internal Failure	Set by the APIM when it detects a fault due to a device conflict or internal failure.

Possible Sources

- Network communication concern
- Customer error
- Customer's device
- APIM

PINPOINT TEST M: ALL SYNC® FUNCTIONS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
M1 VERIFY THAT THE APIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the APIM pass the network test?**	**Yes** GO to M2 . **No** REFER to Section 418-00 .
M2 CHECK THE SYNC® SYSTEM INPUTS FOR FUNCTIONALITY	
NOTE: Carrying out a Master Reset returns all preference settings to the factory defaults, erases the phone book and call	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature.

histories, and deletes any devices paired with the SYNC® system. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, test the audio output for the audio input jack, USB port, and Bluetooth connection using the VOICE switch on the steering wheel controls to enter each mode. • **Do all of the SYNC® inputs function correctly?**	REVIEW the SYNC® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device. **No** GO to M3.
M3 RESET THE APIM AND RECHECK SYNC® SYSTEM OPERATION	
NOTE: Carrying out a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any devices paired with the SYNC® system. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, test the audio output for the audio input jack, USB port, and Bluetooth connection using the VOICE switch on the steering wheel controls to enter each mode. • **Do all of the SYNC® inputs function correctly?**	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature. REVIEW the SYNC® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device. **No** If only some, but not all of the inputs are inoperative, GO to Symptom Chart - SYNC® System to diagnose the observed symptom. If all inputs are inoperative and/or DTC U3000:04 is present, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

Pinpoint Test N: The SYNC® System Voice Or Tone Prompts, TTS Feature, Or Ringtones Are Inoperative Or Do Not Operate Correctly, Or During A Phone Call, No Incoming Audio Is Heard In The Vehicle

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System for schematic and connector information.

Normal Operation and Fault Conditions

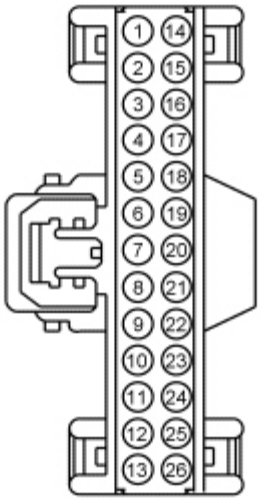
Refer to SYNC® System and Voice Recognition in Information and Entertainment System.

repair4less

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST N: THE SYNC® SYSTEM VOICE OR TONE PROMPTS, TTS FEATURE, OR RINGTONES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, NO INCOMING AUDIO IS HEARD IN THE VEHICLE



<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>N1 CHECK THE AUDIBLE PROMPT SETTING</td><td rowspan="2">Yes
The system is operating correctly at this time. The concern was caused by the customer's setting. INSTRUCT the customer in the correct operation of the audible prompt feature.

No
GO to N2 .</td></tr>
<tr><td>• Operate the audio system in SYNC® mode.
• Verify the audible prompts are enabled. Refer to "SYNC® Voice Recognition Feature" in the Owner's Literature.
• Operate the VOICE button on the steering wheel controls and observe the SYNC® audible prompt.
• Does the SYNC® system produce an audible prompt correctly?</td></tr>
<tr><td>N2 CHECK FOR A VOLTAGE SIGNAL FROM THE APIM</td><td rowspan="2">Yes
GO to N7 .

No
GO to N3 .</td></tr>
<tr><td>NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.
• Operate the audio system in SYNC® mode.
• While operating the VOICE button repeatedly, measure the AC voltage by back-probing ACM connector C240B:
<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td>C240B-8</td><td>VMN14 (WH/VT)</td><td>C240B-21</td><td>RMN14 (GY/BN)</td></tr></table>• Is a fluctuating AC voltage present each time the VOICE switch is operated?</td></tr>
<tr><td>N3 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO VOLTAGE</td><td rowspan="2">Yes
REPAIR the circuit in question.</td></tr>
<tr><td>• Ignition OFF.
• Disconnect: ACM C240B .
• Disconnect: APIM C2383 .</td></tr>
</table>

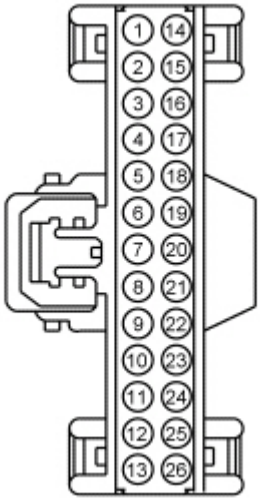
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-8	VMN14 (WH/VT)	—	Ground
C240B-21	RMN14 (GY/BN)	—	Ground

- **Is any voltage present?**

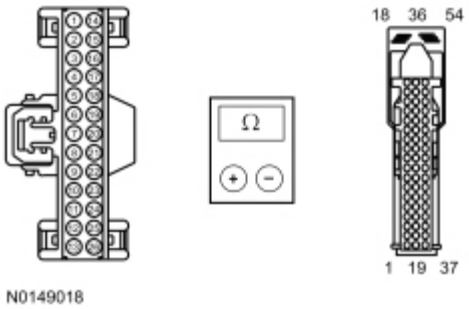
No
GO to N4 .

N4 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO GROUND



- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-8	VMN14 (WH/VT)	—	Ground
C240B-21	RMN14 (GY/BN)	—	Ground



Yes
GO to N5 .

No
REPAIR the circuit in question.

repair4less

- **Are the resistances greater than 10,000 ohms?**

N5 CHECK THE AUDIBLE PROMPT CIRCUITS FOR AN OPEN	
• Measure the **resistance** between: 	Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-8	VMN14 (WH/VT)	C2383-3	VMN14 (WH/VT)
C240B-21	RMN14 (GY/BN)	C2383-4	RMN14 (GY/BN) |  • **Are the resistances less than 3 ohms?**	**Yes** GO to N6 . **No** REPAIR the circuit in question.
N6 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

• Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
N7 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test O: All SYNC® Services Features Are Inoperative Or Inaccurate

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® Services in Information and Entertainment System.

Possible Sources

- Expired subscription
- APIM
- GPSM
- SYNC® Services server

PINPOINT TEST O: ALL SYNC® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE

Test Step	Result / Action to Take
O1 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION AND SUBSCRIPTION	
• Verify that the customer has a SYNC® Owner Account on	**Yes** GO to O2.

repair4less

SyncMyRide • Verify that the customer has registered for SYNC® Services and has an active subscription. • **Does the customer have a SYNC® Owner Account and an active SYNC® Services subscription?**	**No** If the customer does not have a SYNC® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC® Services. REFER to SyncMyRide . If the customer does not have an active SYNC® Services subscription, INFORM the customer that in order for SYNC® Services to function, the subscription needs to be activated. REFER to SyncMyRide .
O2 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS	
• Verify that the mobile phone being used has the correct phone number registered with SYNC® Services. • Verify that the mobile phone being used is selected as "Active" on SyncMyRide . • **Is the customer using the registered and active mobile phone associated with the SYNC® services account?**	**Yes** GO to O3 . **No** INFORM the customer that the correct phone number must be registered on the SYNC® website and selected as "Active." REFER to SyncMyRide .
O3 CHECK FOR APIM DTCs	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Are any DTCs recorded in the APIM ?**	**Yes** REFER to the APIM DTC Chart in Information and Entertainment System . **No** GO to O4 .
O4 CHECK FOR GPSM DTCs	
• Using a diagnostic scan tool, perform the GPSM self-test. • **Are any DTCs recorded in the GPSM ?**	**Yes** REFER to the GPSM DTC Chart in Information and Entertainment System . **No** GO to O5 .
O5 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES	
• Advise the customer to connect their phone to SYNC® Services. Caller ID blocking must be disabled on the customer's phone. Refer to the Owner's Literature. • Operate a SYNC® Services feature. • Verify that the phone call is placed and that the phone is connected to SYNC® Services. • **Does the phone connect to SYNC® Services and operate correctly?**	**Yes** GO to O6 . **No** GO to Pinpoint Test S .

O6 OBSERVE THE SYNC® SERVICES SUBSCRIPTION COMMERCIAL	
• Once the customer's phone is connected to SYNC® Services, observe the subscription commercial. • **Does the SYNC® Services subscription commercial repeat with no selection option?**	**Yes** There is a potential SYNC® Services server issue, and the problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance. **No** GO to O7 .
O7 CHECK THE OPERATION OF THE DIRECTIONS FROM SYNC® SERVICES	
• When prompted, select directions from SYNC® Services and observe the audible prompts from the audio system. • **Is a single chime, audible prompt, then a short chime heard, indicating the navigation route is being sent to the vehicle?**	**Yes** SYNC® Services is operating correctly at this time. **No** If a single chime, audible prompt, then a repeating chime is heard, indicating the navigation route is being sent to the vehicle, GO to O8 . If no chime or audible prompt is heard, indicating that the system was unable to locate the vehicle, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance.
O8 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test P: Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Diagnostic Overview

repair4less

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Voice Recognition in Information and Entertainment System .

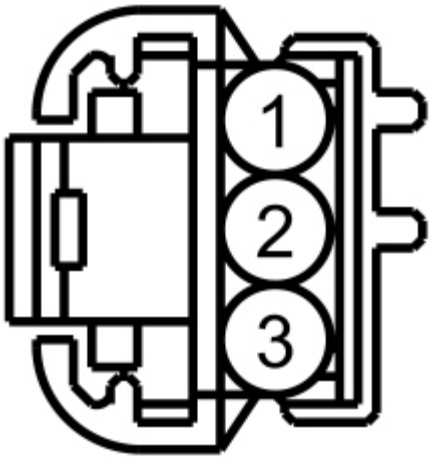
DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D79:01	Microphone Input: General Electrical Failure	Set by the APIM when a microphone is not detected during the on-demand self-test.
B1D79:11	Microphone Input: Circuit Short To Ground	Set by the APIM when short to ground is detected on the microphone circuits.
B1D79:12	Microphone Input: Circuit Short To Battery	Set by the APIM when short to voltage is detected on the microphone circuits.
B1D79:13	Microphone Input: Circuit Open	Set by the APIM when an open is detected on the microphone circuits.

Possible Sources

- Insufficiently quiet vehicle
- Inadequate phone reception
- Wiring, terminals, or connectors
- Microphone
- APIM

PINPOINT TEST P: VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE



Test Step	Result / Action to Take
P1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY	
• Operate the audio system in radio tuner AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **Does the SYNC® system produce an audible prompt correctly, indicating voice recognition mode has been entered?**	**Yes** GO to P3 . **No** GO to P2 .
P2 CHECK THE OPERATION OF THE RH STEERING WHEEL SWITCHES	
• Operate the audio system in AM/FM mode. • Operate the VOLUME +/-, SEEK +/-, MEDIA, PHONE, and OK steering wheel switches. • **Do the VOLUME +/-, SEEK +/-, MEDIA, PHONE,**	**Yes** GO to Pinpoint Test N . **No**

and OK steering wheel switches operate correctly?	GO to Pinpoint Test T to diagnose the RH steering wheel switches.
P3 CHECK THE OPERATION OF THE "PHONE" VOICE COMMAND	
• Pair a Bluetooth phone with the SYNC® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on syncmyride.com . • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands. • Clearly speak the word "phone." • **Does the SYNC® system respond correctly to the "phone" voice command?**	**Yes** For a concern with the voice recognition being inoperative or not operating correctly, the system is operating correctly at this time. The concern may have been caused by an insufficiently quiet vehicle. Delete the just-paired Bluetooth phone from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. For a concern with poor quality or no outgoing audio being heard on the outside device during a phone call, GO to P4 **No** GO to P5 .
P4 CHECK THE OUTGOING PHONE CALL QUALITY AND VOICE VOLUME	
• Ensure that the Bluetooth phone paired in step 3 has adequate reception. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the call from having clear call quality and acceptable voice volume. • Using the SYNC® system, place a phone call. For information on making calls from the SYNC® system, refer to the Owner's Literature. • Ensure that the called party's phone has adequate reception. • Instruct the called party to determine if the call quality is clear and of acceptable volume. • Delete the Bluetooth phone paired in step 3 from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. • **Is the outgoing call quality clear and of acceptable volume?**	**Yes** The system is operating correctly at this time. The concern may have been caused by poor phone reception or an insufficiently quiet vehicle. **No** GO to P5 .
P5 CHECK THE MICROPHONE AND MICROPHONE CIRCUITS FOR CORRECT VOLTAGE DROP	
***NOTICE:* This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**	**Yes** If diagnosing an intermittent concern, GO to P6 . If **not** diagnosing an intermittent concern, GO to P12 . **No** GO to P7 .

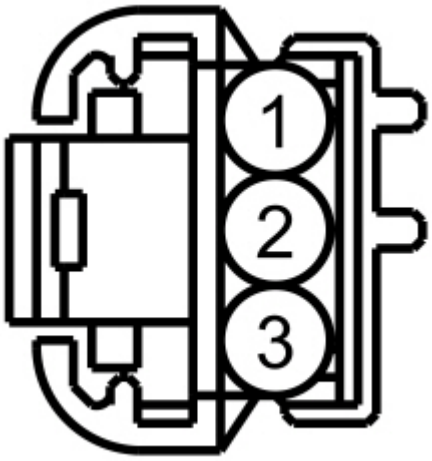
repair4less

- Ignition ON.
- While back-probing microphone C9221, measure and record the **DC voltage** .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

- **Is the voltage between 2.7 and 6.2 volts?**

P6 CHECK THE MICROPHONE CIRCUITS FOR INTERMITTENT CONCERNS



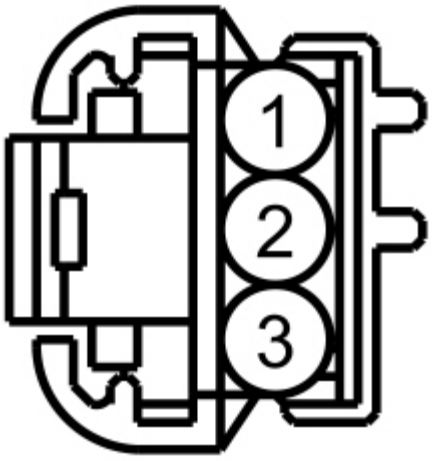
NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**

- While back-probing microphone C9221, measure the **DC voltage** while agitating the microphone harness back and forth and up and down (wiggle testing).

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

Yes
REPAIR the circuit(s), connector, or terminal(s) in question. For corrosion, clean pins or install a new connector or terminals. For damaged or bent pins, install new terminals or pins.

No
GO to P11 .



- Review the recorded results from step 5.
- **Does the voltage fluctuate more than .5 volts from the recorded result in step 5?**

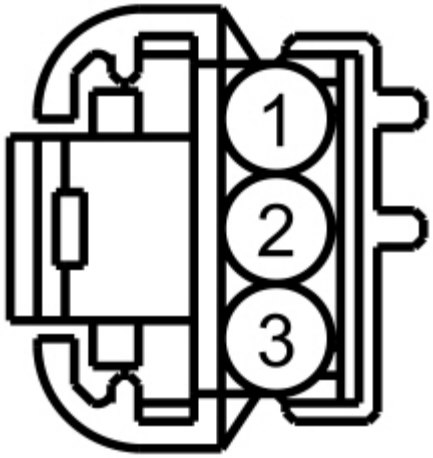
P7 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Microphone C9221.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.



No
GO to P8 .

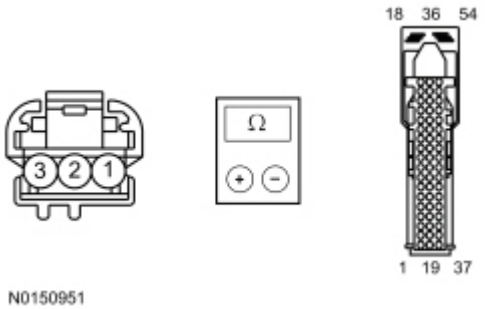
P8 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO GROUND

repair4less

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

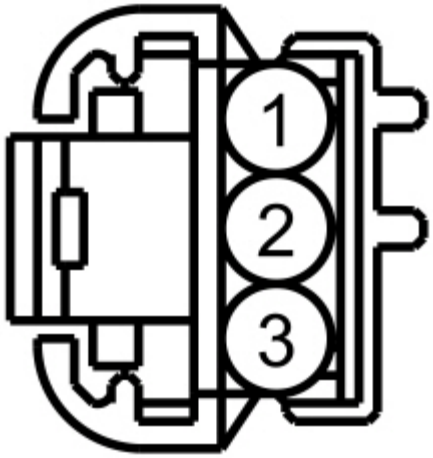


Yes
GO to P9 .

No
REPAIR the circuit in question.

P9 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR AN OPEN

- Measure the **resistance** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C2383-5	VMM13 (YE/GN)
C9221-3	DMM13 (BK)	C2383-6	DMM13 (BK)

- **Are the resistances less than 3 ohms?**

Yes
GO to P10 .

No
REPAIR the circuit in question.

P10 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TOGETHER	
• Measure the **resistance** between: Positive Lead: Pin C9221-2, Circuit VMM13 (YE/GN) Negative Lead: Pin C9221-3, Circuit DMM13 (BK)  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to P12 . **No** REPAIR the circuit in question.
P11 ISOLATE THE MICROPHONE	
• Install a new microphone. Refer to Microphone . • If necessary, connect: APIM C2383. • Operate the audio system in AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • Speak a command to test the voice recognition for normal operation. • **Is the voice recognition functioning correctly?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative microphone. **No** GO to P12 .
P12 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Pinpoint Test Q: The Audio Input Jack Is Inoperative Or Has Poor Sound Quality

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

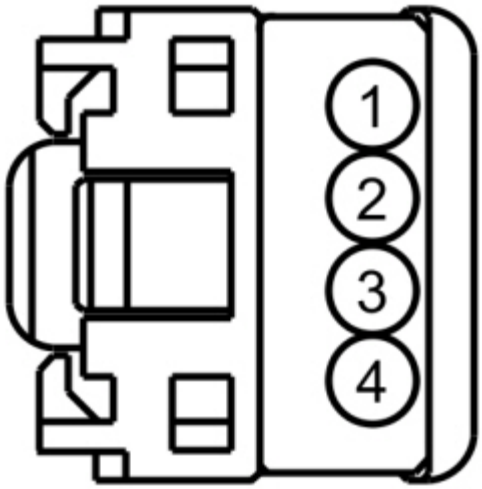
Normal Operation and Fault Conditions

Refer to Audio Input Jack Mode in Information and Entertainment System .

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Audio input jack
- APIM

PINPOINT TEST Q: THE AUDIO INPUT JACK IS INOPERATIVE OR HAS POOR SOUND QUALITY



NOTE: Before carrying out this pinpoint test, make sure the MP3 device is operating correctly.

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>Q1 CHECK THE AUDIO INPUT JACK AUDIO FUNCTIONALITY</td><td></td></tr>
<tr><td>• Connect: Multi-Media Interface Tester 105-00120.
• Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the audio input jack.
• Is the audio output OK for the audio input jack?</td><td>Yes
The system is operating correctly at this time. The concern may be with the customer's device.

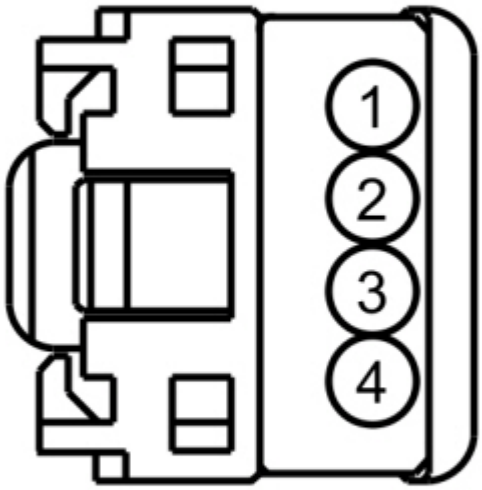
No
GO to Q2 .</td></tr>
<tr><td>Q2 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE</td><td></td></tr>
<tr><td>• Ignition OFF.
• Disconnect: Audio Input Jack C2362.
• Disconnect: APIM C2383.
• Ignition ON.
• Measure the voltage between:

<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td>C2362-1</td><td>VME46 (BU/GN)</td><td>—</td><td>Ground</td></tr><tr><td>C2362-3</td><td>RME45 (YE/GN)</td><td>—</td><td>Ground</td></tr><tr><td>C2362-4</td><td>VME45 (BU)</td><td>—</td><td>Ground</td></tr></table></td><td>Yes
REPAIR the circuit in question.

No
GO to Q3 .</td></tr>
</table>

- **Is any voltage present?**

Q3 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO GROUND



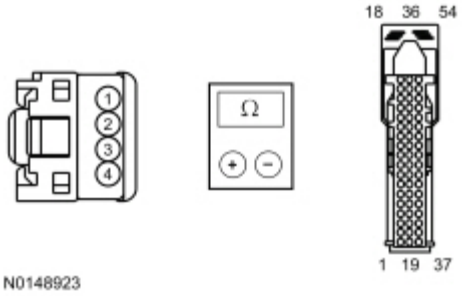
repair4less

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-1	VME46 (BU/GN)	—	Ground
C2362-3	RME45 (YE/GN)	—	Ground
C2362-4	VME45 (BU)	—	Ground

Yes
GO to Q4 .

No
REPAIR the circuit.



- **Is the resistance greater than 10,000 ohms?**

Q4 CHECK THE AUDIO INPUT JACK CIRCUITS FOR AN OPEN	
• Measure the **resistance** between:	**Yes**

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-1	VME46 (BU/GN)	C2383-47	VME46 (BU/GN)
C2362-3	RME45 (YE/GN)	C2383-46	RME45 (YE/GN)
C2362-4	VME45 (BU)	C2383-45	VME45 (BU)

- **Are the resistances less than 3 ohms?**

GO to Q5.

No
REPAIR the circuit in question.

Q5 ISOLATE THE AUDIO INPUT JACK

- Connect: APIM C2383.
- Install a new audio input jack. Refer to Audio Input Jack.
- Connect: Multi-Media Interface Tester 105-00120.
- Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the audio input jack.
- **Is the audio output OK for the audio input jack?**

Yes
The system is now correctly at this time. The concern was caused by an inoperative audio input jack.

No
GO to Q6.

Q6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test R: The USB Port Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® AppLink™, USB Audio Mode and USB Port. in Information and Entertainment System .

The USB port is part of the USB cable, and cannot be replaced separately.

The Multi-Media Interface Tester 105-00120 is powered by the USB port

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:04	USB Port: System Internal Failure	Set by the APIM when an over-temperature condition is detected in the USB circuit. This can be caused by a fault in the USB cable, USB port, or customer's USB device.
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB circuit. This can be caused by a fault in the USB cable, USB port, or customer's USB device.

Possible Sources

- Customer's device
- USB cable/port
- USB cable/port connection
- APIM

PINPOINT TEST R: THE USB PORT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
R1 RESET THE APIM AND RECHECK SYNC® SYSTEM OPERATION	
• Remove any devices connected to the USB port. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Connect: Multi-Media Interface Tester 105-00120.	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to R2 .

repair4less

• Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the USB port. • **Is the audio output OK for the USB port?**	
R2 CHECK THE APIM FOR DTC B1252:04 OR DTC B1252:11	
• Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:04 or DTC B1252:11 present?**	**Yes** GO to R3 . **No** GO to R5 .
R3 INSPECT THE USB CABLE AND APIM	
• Ignition OFF. • Disconnect: USB cable at the APIM . • Inspect the APIM connector port and both ends of the USB cable for damage. Remove any debris. • **Is any damage present?**	**Yes** For the USB cable, INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . For the APIM , For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** GO to R4 .
R4 CHECK THE USB PORT FOR FUNCTIONALITY	
• Connect: USB cable at the APIM . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using the USB port. • **Is the audio output OK for the USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly. **No** GO to R5 .
R5 ISOLATE THE USB CABLE/PORT	
• Install a new USB cable/port. Universal Serial Bus (USB) Cable and Port . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play a file using the USB port. • **Is the audio output OK for the USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative USB cable. **No** GO to R6 .
R6 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF. • Disconnect and inspect the APIM connector.	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions.

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test S: Unable To Pair Bluetooth Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Bluetooth Mode and SYNC® AppLink™ in Information and Entertainment System .

Possible Sources

- Incompatible Bluetooth device
- APIM

PINPOINT TEST S: UNABLE TO PAIR BLUETOOTH DEVICE

Test Step	Result / Action to Take
S1 CHECK THE BLUETOOTH CONNECTION	
NOTE: Carrying out a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any devices paired with the SYNC® system. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device. **No**

repair4less

Tester 105-00120, connect to the SYNC® system using Bluetooth. Follow the tool instructions. • Using a diagnostic scan tool, view the APIM PIDs. • Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN). • **Do the PIDs both read "Yes"?**	GO to S2.

S2 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test T: The RH steering wheel controls are inoperative or do not operate correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Steering Wheel Switch Functions and Steering Wheel Switches in Information and Entertainment System.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH steering wheel switch is stuck.
B1380:11	Steering Wheel Right Switch Pack:	Set by the SCCM when a short to ground is detected

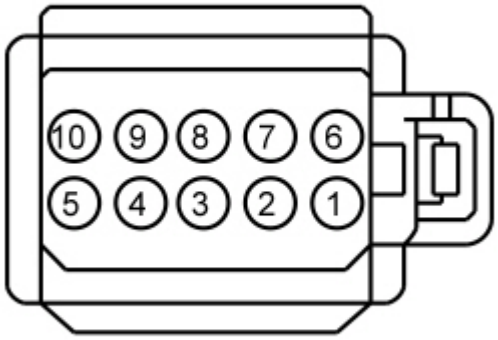
	Circuit Short To Ground	in the RH steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected in the RH steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

PINPOINT TEST T: THE RH STEERING WHEEL CONTROLS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take



T1 CHECK THE RH STEERING WHEEL SWITCH PIDs
• Ignition ON.
• Monitor the steering wheel controls PIDs while pressing each RH steering wheel switch.
• Using a diagnostic scan tool, view the SCCM PIDs.
  ◦ SW_VOLDOWN
  ◦ SW_VOLUP
  ◦ SW_SEEKMINUS
  ◦ SW_SEEKPLUS
  ◦ SW_VOICE
  ◦ SW_MEDIA
  ◦ SW_PHONE
• Using a diagnostic scan tool, view the APIM PID.
  ◦ SW_OK
• **Do the PID values agree with the switch positions?**
	Yes
	GO to T10.
	
	No
	If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH steering wheel switch. REFER to Section 211-05. If all PID values are incorrect or always read one particular switch position, GO to T2.

T2 CHECK FOR IPC DTC U0212:00 • Ignition ON. • Using a diagnostic scan tool, clear the DTCs from the IPC. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the IPC self-test. • **Is DTC U0212:00 set in the IPC ?**	**Yes** REFER to Section 413-01. **No** GO to T3.
T3 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TO GROUND **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Ignition OFF. • Disconnect: RH Steering Wheel Switch C2999. • Disconnect: Clockspring C218B.	**Yes** GO to T4. **No** INSTALL a new steering wheel. REFER to Section 211-04.

repair4less

- Measure the **resistance** between:

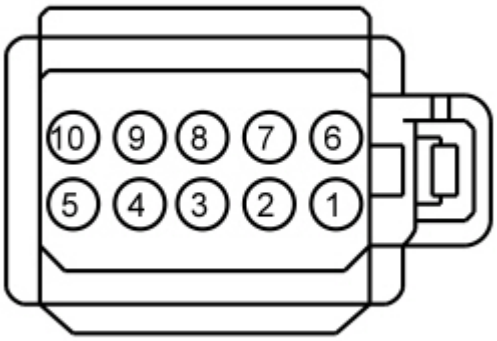
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	—	Ground
C2999-4	RME14	—	Ground
C2999-6	VME54	—	Ground
C2999-7	RME54	—	Ground

- **Are the resistances greater than 10,000 ohms?**

T4 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR AN OPEN

- Measure the **resistance** between:

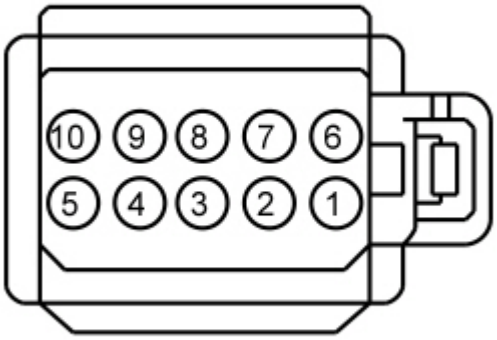
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218B-14	VME14
C2999-4	RME14	C218B-6	RME14
C2999-6	VME54	C218B-16	VME54
C2999-7	RME54	C218B-8	RME54



Yes
GO to T5 .

No
INSTALL a new steering wheel.
REFER to Section 211-04 .

N0148938



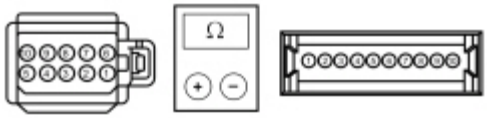
- **Are the resistances less than 3 ohms?**

T5 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TOGETHER	
• Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14
C2999-6	VME54	C2999-7	RME54 |  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to T6 . **No** INSTALL a new steering wheel. REFER to Section 211-04 .

T6 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND	
• Connect: Clockspring C218B. • Disconnect: Clockspring C218C. • Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C2999-2	VME14	—	Ground
C2999-4	RME14	—	Ground		**Yes** GO to T7 . **No** INSTALL a new clockspring. REFER to Section 501-20B .

repair4less

C2999-6	VME54	—	Ground
C2999-7	RME54	—	Ground



- **Are the resistances greater than 10,000 ohms?**

T7 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218C-6	—
C2999-4	RME14	C218C-5	—
C2999-6	VME54	C218C-10	—
C2999-7	RME54	C218C-9	—

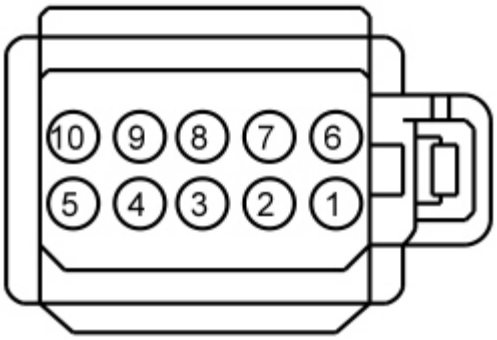
N0148946

- **Are the resistances less than 3 ohms?**

Yes
GO to T8 .

No
INSTALL a new clockspring.
REFER to Section 501-20B .

T8 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER



- Measure the **resistance** between:

Positive Lead		Negative Lead	

Yes
GO to T9 .

No

Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14
C2999-6	VME54	C2999-7	RME54

- **Are the resistances greater than 10,000 ohms?**

INSTALL a new clockspring. REFER to Section 501-20B .

T9 CHECK FOR VOLTAGE AT THE SCCM

- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2414D-6	—	C2414D-5	—
C2414D-10	—	C2414D-9	—

- **Is approximately 5 volts present?**

Yes
INSTALL a new RH steering wheel switch. REFER to Section 211-05 .

No
GO to T10 .

repair4less

T10 CHECK FOR CORRECT SCCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the SCCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the SCCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM . REFER to Section 211-05 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test U: The Audio System Does Not Operate Correctly From The FCIM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Accessory Delay Feature and FCIM in Information and Entertainment System .

Possible Sources

- Network communication concern
- FCIM

PINPOINT TEST U: THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM

Test Step	Result / Action to Take
U1 VERIFY THAT THE ACM , APIM , AND FCIM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the ACM , APIM , and FCIM pass the network test?**	**Yes** GO to U2 . **No** If the ACM failed the network test, REFER to Section 418-00 The ACM Does Not Respond To The Scan Tool. If the APIM failed the network test, REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool. If the FCIM failed the network test, REFER to Section 418-00 The FCIM Does Not Respond To The Scan Tool.
U2 RESET THE AUDIO SYSTEM MODULES AND	

RECHECK THE FCIM OPERATION • Disconnect the battery for 5 minutes, then reconnect it. • Turn the infotainment system on. • Test the FCIM for normal operation. • **Does the FCIM operate correctly?**	**Yes** The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules. **No** GO to U3

U3 RETRIEVE THE ACM, APIM, AND FCIM DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ ACM
  ◦ APIM
  ◦ FCIM
• **Are any DTCs present in the ACM, APIM, or FCIM?**
	Yes
	For ACM DTCs, REFER to the ACM DTC Chart in Information and Entertainment System For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For FCIM DTCs, REFER to the FCIM DTC Chart in Information and Entertainment System
	
	No
	GO to U4.

U4 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM. REFER to Front Controls Interface Module (FCIM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test V: The FCDIM Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

repair4less

Refer to FCDIM in Information and Entertainment System .

Possible Sources

- Wiring, terminals, or connectors
- FCDIM

PINPOINT TEST V: THE FCDIM IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
V1 VERIFY THAT THE FCDIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the FCDIM pass the network test?**	**Yes** GO to V2 . **No** REFER to Section 418-00 The FCDIM Does Not Respond To The Scan Tool.
V2 OBSERVE THE FCDIM DISPLAY	
• Turn the audio system on and verify the FCDIM operation. • **Is the FCDIM screen completely inoperative or blank?**	**Yes** GO to V4 . **No** GO to V3 .
V3 CHECK FOR LOST COMMUNICATION DTCS SET IN THE FCDIM	
• Ignition ON. • Using a diagnostic scan tool, perform the FCDIM self-test. • **Are any lost communication DTCs (U-codes) present in the FCDIM ?**	**Yes** REFER to the FCDIM DTC Chart in Information and Entertainment System . **No** GO to V4 .
V4 CHECK FOR CORRECT FCDIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FCDIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCDIM . REFER to Front Controls/Display Interface Module (FCDIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

• Reconnect the FCDIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test W: One Or More FCDIM Displays Are Inoperative Or Do Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to FCDIM in Information and Entertainment System .

All of the displays on the FCDIM screen are controlled through network messages. The modules sending display data to the FCDIM are:

- ACM : audio system information
- APIM : SYNC® system information
- IPC : warning messages and indicators

If the FCDIM loses the signal from any of these modules, only those specific displays will be inoperative.

Possible Sources

- ACM
- APIM
- FCDIM
- IPC

PINPOINT TEST W: ONE OR MORE FCDIM DISPLAYS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
W1 VERIFY THAT THE FCDIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the FCDIM pass the network test?**	**Yes** GO to W2 . **No** REFER to Section 418-00 The FCDIM Does Not Respond To The Scan Tool.
W2 CHECK FOR LOST COMMUNICATION DTCS SET IN THE FCDIM	

repair4less

• Ignition ON. • Using a diagnostic scan tool, perform the FCDIM self-test. • **Are any lost communication DTCs (U-codes) present in the FCDIM ?**	**Yes** REFER to the FCDIM DTC Chart in Information and Entertainment System . **No** GO to W3 .
W3 CHECK THE FCDIM DISPLAY SEGMENTS	
• Using a diagnostic scan tool, view the FCDIM PIDs. • Command all of the LCD segments on using the FCDIM active command LCD_SEG (All LCD Segments). • **Do all of the FCDIM segments illuminate?**	**Yes** The system is operating correctly at this time. INFORM the customer of the operation of the FCDIM display. **No** GO to W4 .
W4 CHECK FOR CORRECT FCDIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FCDIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCDIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCDIM . REFER to Front Controls/Display Interface Module (FCDIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test X: The Compass Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to FCDIM in Information and Entertainment System .

Possible Sources

- Network communication concern
- FCDIM
- GPSM

PINPOINT TEST X: THE COMPASS IS INOPERATIVE

Test Step	Result / Action to Take
X1 VERIFY THAT THE FCDIM AND GPSM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the FCDIM and GPSM pass the network test?**	**Yes** GO to X2. **No** If the FCDIM failed the network test, REFER to Section 418-00 The FCDIM Does Not Respond To The Scan Tool. If the GPSM failed the network test, REFER to Section 418-00 The GPSM Does Not Respond To The Scan Tool.
X2 RETRIEVE THE FCDIM AND GPSM DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ FCDIM
  ◦ GPSM
• **Are any DTCs present in the FCDIM or GPSM ?**
	Yes
	For FCDIM DTCs, REFER to the FCDIM DTC Chart in Information and Entertainment System For GPSM DTCs, REFER to the GPSM DTC Chart in Information and Entertainment System
	
	No
	GO to X3.

X3 CHECK FOR CORRECT GPSM OPERATION	

• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Y: DTC U0100:00

Diagnostic Overview

repair4less

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST Y: DTC U0100:00

Test Step	Result / Action to Take
Y1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to Y2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
Y2 RECHECK FOR DTC U0100:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0100:00 set in the GPSM?**	**Yes** GO to Y3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
Y3 CHECK THE PCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the PCM self-test. • **Are any low or high voltage DTCs recorded in the PCM?**	**Yes** REFER to PCM DTC Chart in Section 303-14. **No** GO to Y4.
Y4 CHECK THE GPSM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the GPSM self-test. • **Are any low or high voltage DTCs recorded in the GPSM?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AF. For DTC U3003:17, GO to Pinpoint Test ag. **No**

	GO to Y5 .
Y5 CHECK FOR CORRECT PCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the PCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the PCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new PCM . REFER to Section 303-14 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Z: DTC U0140:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Set by the APIM and GPSM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST Z: DTC U0140:00

Test Step	Result / Action to Take
Z1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to Z2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

repair4less

Z2 RECHECK FOR DTC U0140:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0140:00 set in the APIM or GPSM ?**	**Yes** GO to Z3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
Z3 CHECK THE BCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the BCM self-test. • **Are any low or high voltage DTCs recorded in the BCM ?**	**Yes** REFER to BCM DTC Chart in Section 419-10 . **No** GO to Z4 .
Z4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ APIM ▪ GPSM • **Are low or high voltage DTCs recorded in the APIM or GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AF . For DTC U3003:17, GO to Pinpoint Test ag . **No** GO to Z5 .
Z5 CHECK FOR DTC U0140:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0140:00 set in more than one audio system module?**	**Yes** GO to Z6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
Z6 CHECK FOR CORRECT BCM OPERATION	
• Ignition OFF. • Disconnect and inspect all the BCM connectors. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root

pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the BCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	cause of any connector or pin issues.

Pinpoint Test AA: DTC U0155:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	Set by the ACM , APIM , FCDIM , FCIM , and GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AA: DTC U0155:00

Test Step	Result / Action to Take
AA1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AA2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AA2 RECHECK FOR DTC U0155:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool,	**Yes** GO to AA3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

repair4less

retrieve all CMDTCs . • **Is DTC U0155:00 set in the ACM , APIM , FCDIM , FCIM , or GPSM ?**	
AA3 CHECK THE IPC FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the IPC self-test. • **Are any low or high voltage DTCs recorded in the IPC ?**	**Yes** REFER to IPC DTC Chart in Section 413-01 . **No** GO to AA4 .
AA4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM ▪ FCDIM ▪ FCIM ▪ GPSM • **Are low or high voltage DTCs recorded in the ACM , APIM , FCDIM , FCIM , or GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AF . For DTC U3003:17, GO to Pinpoint Test ag . **No** GO to AA5 .
AA5 CHECK FOR DTC U0155:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0155:00 set in more than one audio system module?**	**Yes** GO to AA6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AA6 CHECK FOR CORRECT IPC OPERATION	
• Ignition OFF. • Disconnect and inspect the IPC connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the IPC connector. Make sure it seats and latches correctly.	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new IPC . REFER to Section 413-01 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

• Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test AB: DTC U0184:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the FCDIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AB: DTC U0184:00

Test Step	Result / Action to Take
AB1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AB2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB2 RECHECK FOR DTC U0184:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0184:00 set in the FCDIM?**	**Yes** GO to AB3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the	**Yes** For DTC U3003:16, GO to Pinpoint Test AF. For DTC U3003:17, GO to Pinpoint Test ag.

repair4less

following modules: ■ ACM ■ FCDIM • **Are low or high voltage DTCs recorded in the ACM or FCDIM ?**	**No** GO to AB4 .
AB4 CHECK FOR CORRECT ACM OPERATION	
• Ignition OFF. • Disconnect and inspect all the ACM connectors. • Repair: ■ Corrosion (clean module pins or install new connectors or terminals) ■ Damaged or bent pins (install new terminals or pins) ■ Pushed-out pins (install new pins as necessary) • Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AC: DTC U0253:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM and FCDIM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AC: DTC U0253:00

Test Step	Result / Action to Take
AC1 VERIFY THE CUSTOMER'S CONCERN	
	Yes

• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	GO to AC2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC2 RECHECK FOR DTC U0253:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0253:00 set in the ACM or FCDIM ?**	**Yes** GO to AC3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
  ▪ FCDIM
• **Are low or high voltage DTCs recorded in the ACM , APIM , or FCDIM ?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AF . For DTC U3003:17, GO to Pinpoint Test ag .
	
	No
	GO to AC4 .

AC4 CHECK FOR DTC U0253:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0253:00 set in more than one audio system module?**	**Yes** GO to AC5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC5 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF. • Disconnect and inspect the APIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals)	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** The system is operating correctly at this time. The concern may

repair4less

▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AD: DTC U0256:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM and FCDIM when network messages are missing from the FCIM for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AD: DTC U0256:00

Test Step	Result / Action to Take
AD1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AD2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD2 RECHECK FOR DTC U0256:00	
• Ignition ON. • Using a diagnostic scan	**Yes** GO to AD3 .

tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0256:00 set in the ACM or FCDIM ?**	**No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ FCDIM ▪ FCIM • **Are low or high voltage DTCs recorded in the ACM , FCDIM , or FCIM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AF . For DTC U3003:17, GO to Pinpoint Test ag . **No** GO to AD4 .
AD4 CHECK FOR DTC U0256:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0256:00 set in more than one audio system module?**	**Yes** GO to AD5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD5 CHECK FOR CORRECT FCIM OPERATION	
• Ignition OFF. • Disconnect and inspect the FCIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the FCIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Pinpoint Test AE: DTC U0257:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	Set by the ACM , APIM , and FCIM when Infotainment Controller Area Network (I-CAN) network messages are missing from the FCDIM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AE: DTC U0257:00

Test Step	Result / Action to Take
AE1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AE2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE2 RECHECK FOR DTC U0257:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0257:00 set in the ACM , APIM , or FCIM ?**	**Yes** GO to AE3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs • Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM ▪ FCDIM	**Yes** For DTC U3003:16, GO to Pinpoint Test AF . For DTC U3003:17, GO to Pinpoint Test ag . **No** GO to AE4 .

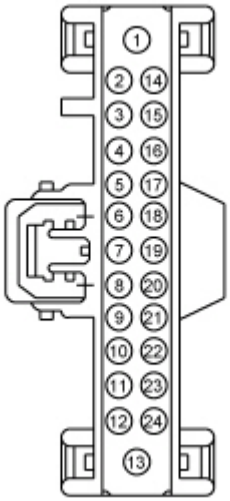
▪ FCIM • **Are low or high voltage DTCs recorded in the ACM , APIM , FCDIM , or FCIM ?**	
AE4 CHECK FOR DTC U0257:00 SET IN MULTIPLE MODULES • Review the recorded results from the self-test. • **Is DTC U0257:00 set in more than one audio system module?**	**Yes** GO to AE5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE5 CHECK FOR CORRECT FCDIM OPERATION • Ignition OFF. • Disconnect and inspect the FCDIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the FCDIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCDIM . REFER to Front Controls/Display Interface Module (FCDIM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AF: DTC U3003:16

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

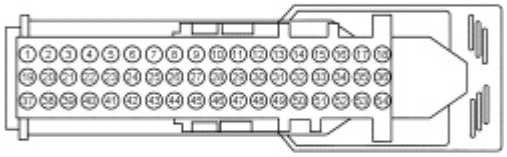
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.



DTC Fault Trigger Conditions

repair4less

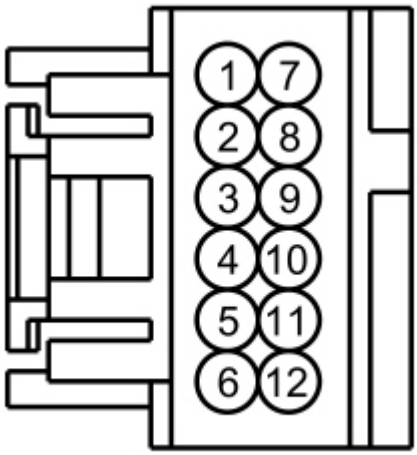
DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM, APIM, FCDIM, FCIM, and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.



PINPOINT TEST AF: DTC U3003:16

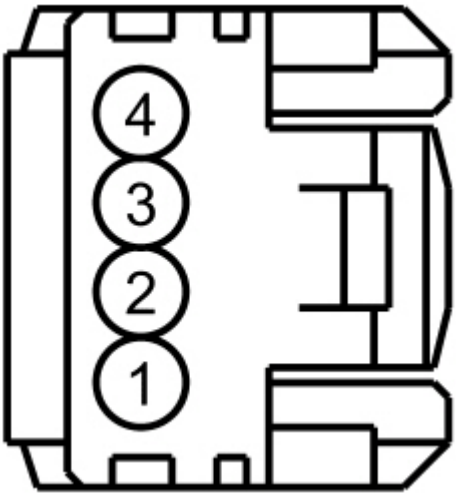
Test Step	Result / Action to Take
AF1 RECHECK FOR DTC U3003:16	
• Ignition ON. • Using a diagnostic scan tool, clear the DTCs for the module in question. • Wait at least 15 seconds. • Using a diagnostic scan tool, repeat the self-test for the module in question. • **Is DTC U3003:16 still present?**	**Yes** GO to AF2. **No** The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.
AF2 CHECK FOR CHARGING SYSTEM DTCS IN THE PCM	
• Using a diagnostic scan tool, perform the PCM self-test. • **Are any voltage-related DTCs set in the PCM?**	**Yes** REFER to PCM DTC Chart in Section 303-14. **No** GO to AF3.
AF3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE	
• Check the battery condition and verify that the battery is fully charged. REFER to Battery Condition Test in Section 414-01. • **Is the battery OK and fully charged?**	**Yes** GO to AF4. **No** REFER to the Symptom Chart in Section 414-00.
AF4 CHECK THE MODULE VOLTAGE SUPPLY	
• Ignition OFF. • Measure and record the voltage at the battery. • Disconnect the audio system module setting DTC U3003:16. • Ignition ON. • Measure the voltage between the module setting DTC U3003:16 and ground. • For the ACM, measure the **voltage** between: Positive Lead: Pin C240A-1, Circuit SBP29 (GY/RD) Negative Lead: Pin —, Circuit Ground	**Yes** GO to AF5. **No** REPAIR the circuit for high resistance.

- For the APIM, measure the **voltage** between:



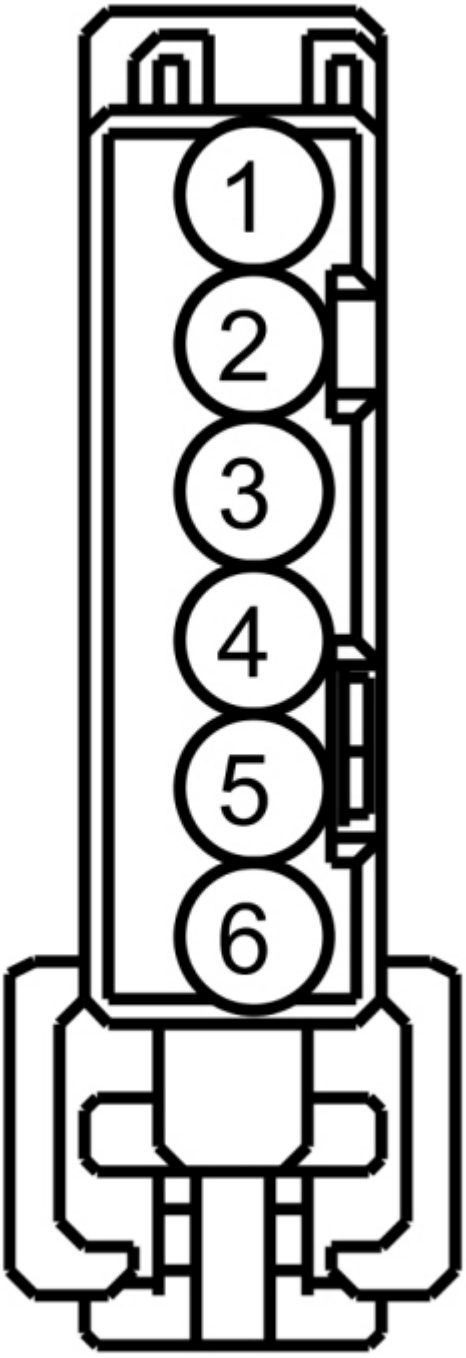
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	—	Ground

- For the FCDIM, measure the **voltage** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2123-1	SBP09 (RD)	—	Ground

repair4less

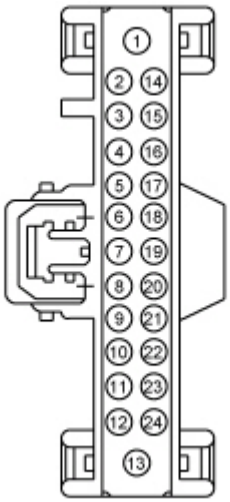


- For the FCIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	—	Ground

- For the GPSM , measure the **voltage** between:

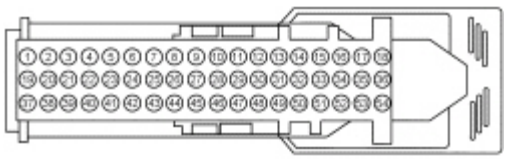
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	—	Ground



- **Is the voltage within 0.2 volts of the recorded battery voltage?**

AF5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY	
• Measure the voltage at the suspect module.	**Yes**

repair4less

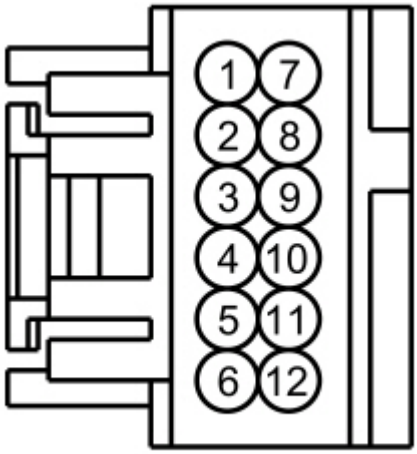


- For the ACM, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240A-1	SBP29 (GY/RD)	C240A-13	GD114 (BK/BU)

- For the APIM, measure the **voltage** between:

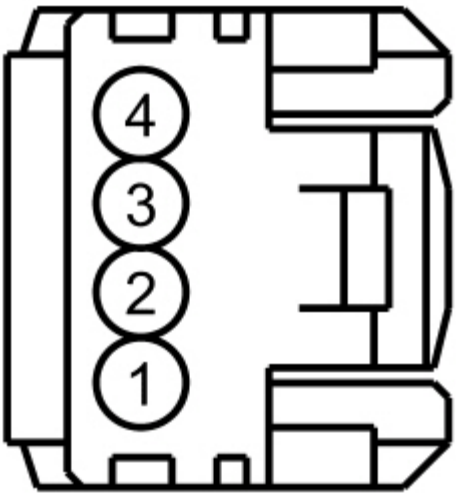
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	C2383-37	GD114 (BK/BU)
		C2383-38	GD114 (BK/BU)



- For the FCDIM, measure the **voltage**

For the ACM, GO to AF6. For the APIM, GO to AF7. For the FCDIM, GO to AF8. For the FCIM, GO to AF9. For the GPSM, GO to AF10.

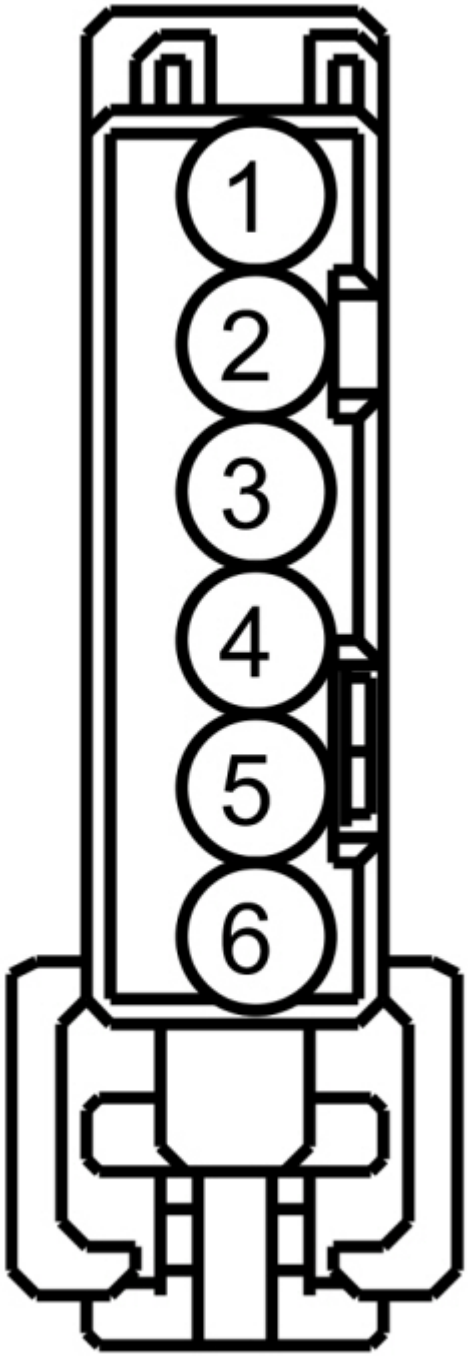
No
REPAIR the circuit for high resistance.



between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2123-1	SBP09 (RD)	C2123-9	GD114 (BK/BU)

- For the FCIM , measure the **voltage** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	C2402-4	GD133 (BK)

- For the GPSM , measure the **voltage** between:

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	C2398-6	GD114 (BK/BU)

 • **Is the suspect module voltage greater than 11 volts?**	
AF6 CHECK FOR CORRECT ACM OPERATION • Ignition OFF. • Disconnect and inspect all the ACM	**Yes** CHECK OASIS for any applicable TSBs. If a

repair4less

connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF7 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF8 CHECK FOR CORRECT FCDIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCDIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCDIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCDIM . REFER to Front Controls/Display Interface Module (FCDIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF9 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
	
	No
	The system is operating correctly at this time.

seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
AF10 CHECK FOR CORRECT GPSM OPERATION • Ignition OFF. • Disconnect and inspect the GPSM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the GPSM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM). **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AG: DTC U3003:17

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM, APIM, FCDIM, FCIM, and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

PINPOINT TEST AG: DTC U3003:17

Test Step	Result / Action to Take
AG1 RECHECK FOR DTC U3003:17 • Turn the engine off. • Ignition ON. • Using a diagnostic scan tool, clear the DTC for the module in question. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question.	**Yes** GO to AG2. **No** The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

repair4less

• **Is DTC U3003:17 present?**	
AG2 CHECK FOR HIGH VOLTAGE DTCs SET IN OTHER MODULES	
• Ignition ON. • Using a diagnostic scan tool, retrieve all CMDTCs . • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question. • **Are high voltage DTCs such as B1676, P0563, U3003:17 set in more than one module?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** GO to AG3 .
AG3 CHECK THE BATTERY VOLTAGE	
• Turn off all interior lights, exterior lights, and accessories. • Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** For the ACM , GO to AG4 . For the APIM , GO to AG5 . For the FCDIM , GO to AG6 For the FCIM , GO to AG7 For the GPSM , GO to AG8 .
AG4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG5 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF.	**Yes**

• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG6 CHECK FOR CORRECT FCDIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FCDIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCDIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCDIM . REFER to Front Controls/Display Interface Module (FCDIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG7 CHECK FOR CORRECT FCIM OPERATION	
• Ignition OFF. • Disconnect and inspect the FCIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals)	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) . **No** The system is operating correctly at this time. The concern may

repair4less

▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the FCIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
AG8 CHECK FOR CORRECT GPSM OPERATION • Ignition OFF. • Disconnect and inspect the GPSM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the GPSM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool
 ST3051-A	Universal Serial Bus (USB) Male-A to Male-A Cable CCMUSB2-AM-AM-10 or equivalent

Accessory Protocol Interface Module (APIM) Programming Using the Integrated Diagnostic System (IDS)

NOTE:

- If a new Accessory Protocol Interface Module (APIM) is being installed, install the new APIM before carrying out the following procedure. Refer to the appropriate section in Group 415 for the procedure.

NOTE:

- The programming procedure deletes any phones that were paired with the SYNC® system.
- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- A file of approximately 80 megabytes needs to be downloaded from the online database for the programming. Allow extra time for the file to download.
- The USB male A to male A cable (CCMUSB2-AM-AM-10 or equivalent) is required.
- The diagnostic scan tool is required.
  - Ensure that the IDS version and patch software levels are up to date.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.

1.
   - Close the IDS program before attempting to program the Accessory Protocol Interface Module (APIM).
   - Connect a battery charger set on low.
     - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.
   - Connect one end of the USB male-A to male-A cable to the diagnostic scan tool, and the other

end to the vehicle's USB port.
- Connect the diagnostic scan tool to the DLC .
- Access the technician service publication website and run On-Line Automotive Service Information System (OASIS) using "Read VIN & DTCs."
    - If the "Read VIN & DTCs" button is green with a red IDS icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.
    - If the "Read VIN & DTCs" button is red with a grey IDS icon, ensure pop ups are enabled, follow the Internet Explorer pop ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.
- If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.

2. From the OASIS tab, select the "SYNC" button.

3. **NOTE:** There are 3 types of Accessory Protocol Interface Module (APIM) programming available:
    - Standard — Used to update the Accessory Protocol Interface Module (APIM) and any currently installed applications to the latest software levels.
    - Custom — Used to show all the available software options (including applications that may not have been installed previously) that can be programmed into the Accessory Protocol Interface Module (APIM). Use this selection when upgrades become available or as directed by a TSB.
    - Module Replacement — Used when the Accessory Protocol Interface Module (APIM) has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).

4. After selecting 1 of the 3 options (Standard, Custom, or Module Replacement), select the "Read SYNC" button to verify the current Accessory Protocol Interface Module (APIM) assembly, VIP , and CIP software levels. The software levels are compared to an online database, followed by the available software being displayed.

5. **NOTE:** Do not disconnect the VCM or USB cable during Accessory Protocol Interface Module (APIM) programming.

   Select the "Program SYNC" button to begin the Accessory Protocol Interface Module (APIM) programming process.

6. Follow the diagnostic scan tool on-screen directions.
    - After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."

repair4less

Accessory Protocol Interface Module (APIM) Reset

NOTE: Carrying out an APIM Reset consists of a battery disconnect and a SYNC® system Master Reset.

NOTE: NOTE: This procedure will clear all CMDTCs . The DTCs must be recorded now if other (non SYNC®) diagnoses are to be performed after this procedure.

1. Remove any devices connected to the USB port(s), audio input jack (if equipped), or media hub (if equipped).

2. **NOTE:** After the APIM reset procedure has been completed the customer should be advised to reset their device following the manufacturer's instructions. Refer to the device's owner's manual and/or website for information on how to perform a Manual / Master Reset or Clear. Devices can be powered off and back on for a simple re-boot. In some cases the device's battery may also need to be removed and re-installed to complete a re-boot. In addition, cell phones may need to have SYNC® deleted from the Bluetooth menu prior to re-pairing the phone to the SYNC® system. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.

   Disconnect the negative battery cable for 1 minute, then reconnect it. Refer to Section 414-01 .

3. **NOTE:** Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. On vehicles equipped MyFord Touch or MyLincoln Touch with navigation, the customer’s saved destination points (home address and points of interest) and preferences will also be lost with a Master Reset.

   Carry out a SYNC® system Master Reset. Refer to the owner's literature

4. Verify system function using the Multi-Media Interface Tester 105-00120, to test the audio output for the audio input jack/socket (if equipped), USB port(s), and Bluetooth. If equipped, use the RCA Adapter 105-00121 to test the audio output for the RCA jacks.

5. If a concern is still present return to the Symptom Charts.

repair4less

Audio Control Module (ACM) Self-Diagnostic Mode

NOTE: If the Audio Front Control Module (ACM), Front Control/Display Interface Module (FCDIM) (if equipped), Front Controls Interface Module (FCIM), or Front Display Interface Module (FDIM) (if equipped) are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the ACM chassis.

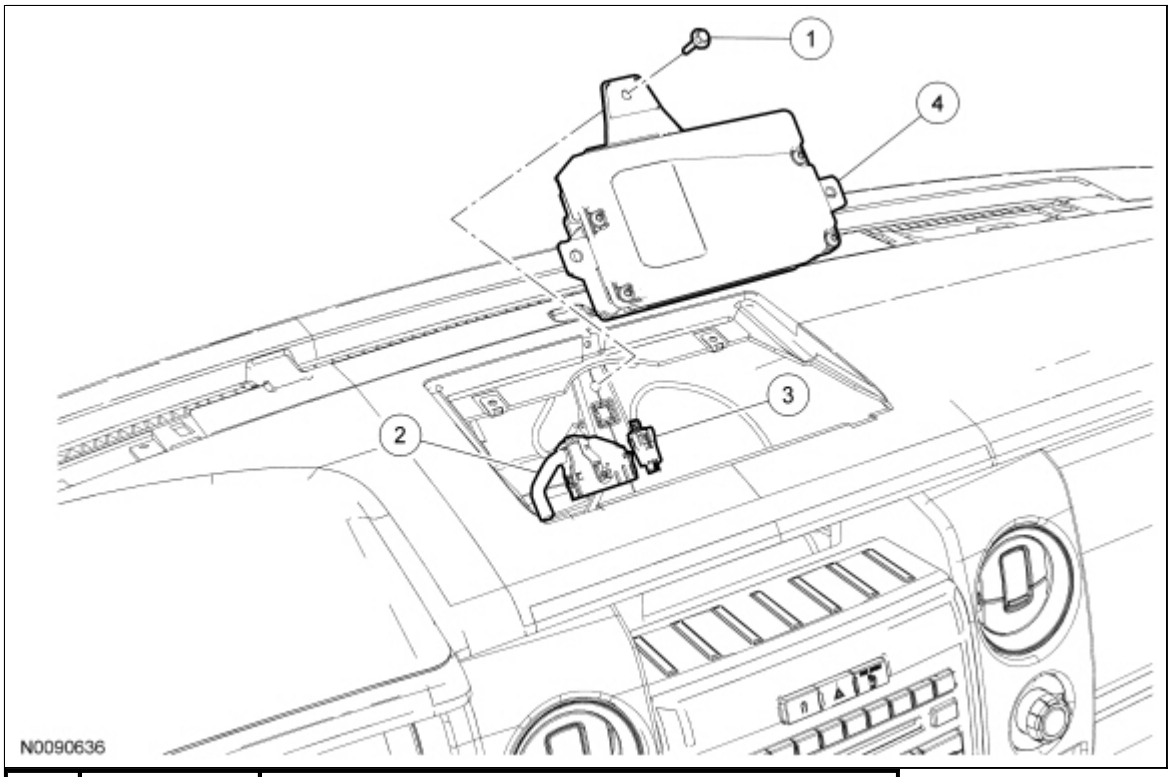
1. Turn the ACM on.

2. Operate the audio system in radio tuner AM/FM mode.

3. Press and hold the EJECT button, and within 1 second, press and hold the SEEK UP button until the speaker walk-around test begins.

   NOTE: AHU Diagnostics refers to the ACM , EFP Diagnostics refers to the FCIM , and MFD Diagnostics (if supported) refers to the FCDIM (if equipped).

4. To exit the self-diagnostic mode, turn the ACM off, or select "Exit Diagnostics."



repair4less

Satellite Radio Electronic Serial Number (ESN) Retrieval

NOTE: If the Audio Front Control Module (ACM), FCDIM (if equipped), FCIM , or FDIM (if equipped) are inoperative (blank or do not power on), obtain the Electronic Serial Number (ESN) by referencing the label attached to the Audio Front Control Module (ACM) chassis.

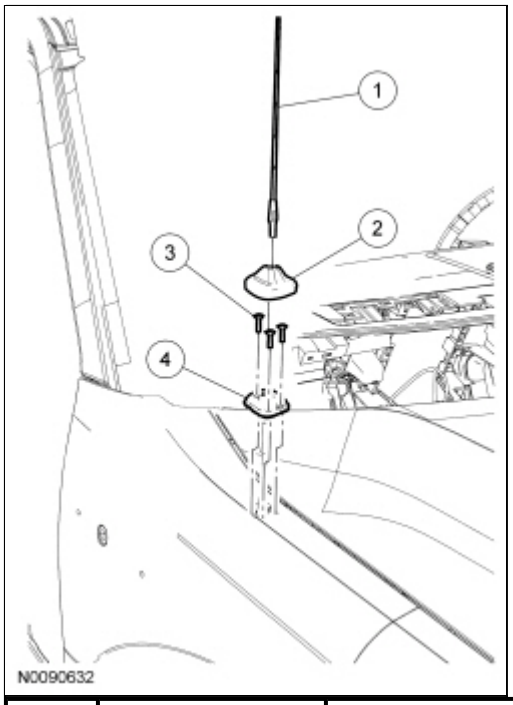
1. Turn the Audio Front Control Module (ACM) on.
2. Operate the audio system in radio tuner AM/FM mode.
3. Press and hold the eject button, and within 1 second, press and hold the seek up button. If supported, the speaker walk around test will begin.
4. Select AHU Diagnostics.
5. Select SIRIUS ESN.

Accessory Protocol Interface Module (APIM)

Item	Part Number	Description
1	W704875-S	Accessory Protocol Interface Module (APIM) screw
2	—	APIM electrical connector (part of 14401)
3	—	Universal Serial Bus (USB) cable (part of 14D202)
4	14D212	APIM

Removal and Installation

1. Remove the instrument panel upper bin.
    1. Remove the rubber mat.
    2. Remove the 2 screws.
    3. Remove the instrument panel upper bin.



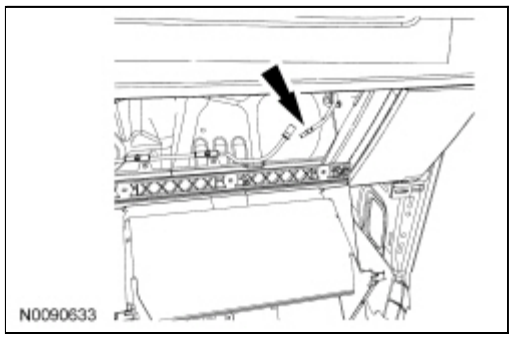
2. Remove the APIM screw and position the APIM upward.

3. Remove the APIM .
    - Disconnect the electrical connector and the Universal Serial Bus (USB) cable.

4. To install, reverse the removal procedure.
    - If a new APIM is being installed, program the APIM . For additional information, refer to Accessory Protocol Interface Module (APIM) Programming .

repair4less

Antenna — AM/FM



Item	Part Number	Description
1	18813	AM/FM antenna mast
2	18A927	AM/FM antenna base cap
3	N610019	AM/FM antenna screws (3 required)
4	18A894	AM/FM antenna base

Removal and Installation

1. Lower the glove compartment completely.

2. Disconnect the AM/FM antenna from the AM/FM antenna cable.
   - Push the antenna cable end and the grommet through the side cowl.

repair4less

3. ***NOTICE:*** **Do not over tighten the antenna mast or damage to the antenna base or mast may occur.**

   Remove the AM/FM antenna mast.
   1. To install, tighten to 4.2 Nm (36 lb/in).

4. **NOTE:** A new AM/FM antenna base cap must be installed.

   Using a suitable tool such as a hook-shaped pick, remove the AM/FM antenna base cap by prying upward.

5. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .

6. Remove the 3 screws and the AM/FM antenna base.
   1. To install, tighten to 2.5 Nm (23 lb/in).

7. To install, reverse the removal procedure.

Antenna — Satellite Radio

Item	Part Number	Description
1	10E893	Satellite radio antenna
2	—	Satellite radio antenna electrical connector (part of 19A397)
2	—	Satellite radio antenna retaining bolt (part of 10E893)

Removal and Installation

1. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .

2. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.

3. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical connector.

4. **NOTE:** Remove the satellite antenna and pigtail through the mounting opening in the roof panel.

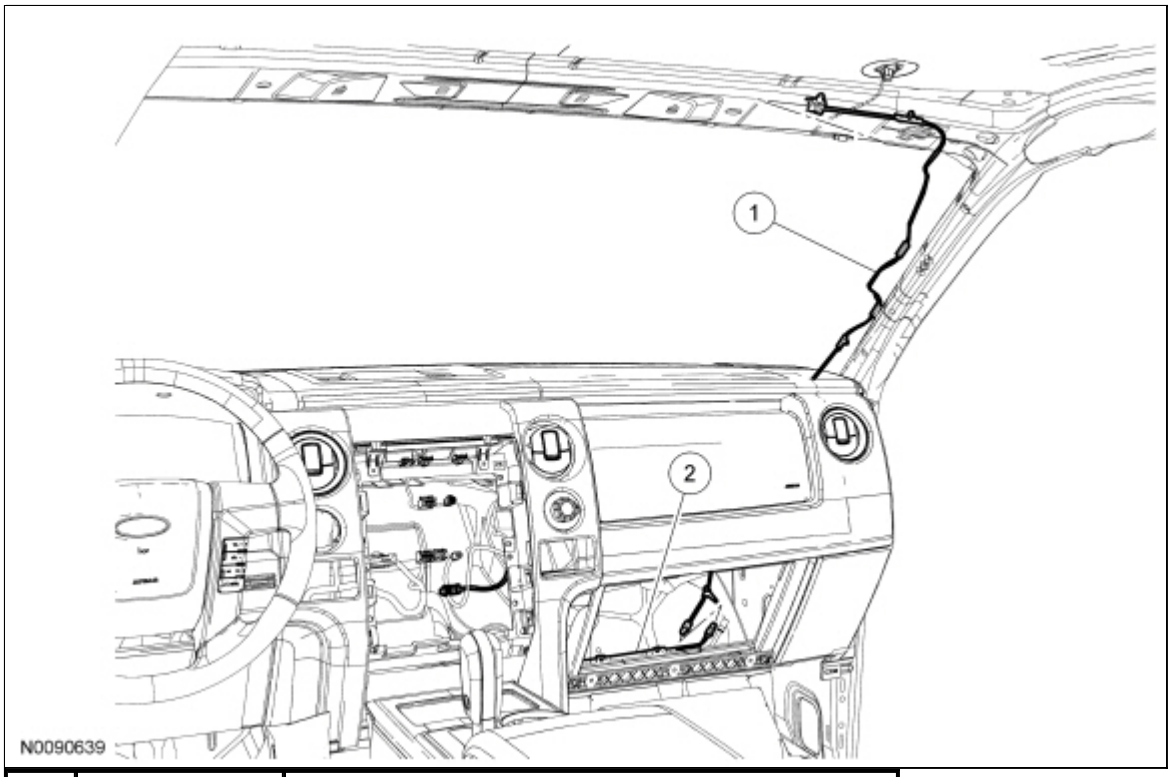
   Remove the satellite antenna.
   - Disconnect the electrical connector.

repair4less

- Remove the satellite antenna retaining bolt and retainer then remove the satellite antenna from the roof panel.
    - To install, tighten to 7 Nm (62 lb-in).

5. To install, reverse the removal procedure.

Antenna Cable — AM/FM



Item	Part Number	Description
1	18812	AM/FM antenna cable

Removal and Installation

1. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.
2. Lower the glove compartment completely.
3. Disconnect the AM/FM antenna cable from the AM/FM antenna.
4. Separate the pushpins and remove the AM/FM antenna cable.
5. To install, reverse the removal procedure.

repair4less

Antenna Cable — Satellite Radio

Item	Part Number	Description
1	19A397	Upper satellite radio antenna cable
2	19A397/10E928	Lower satellite radio antenna cable (without/with navigation)

Removal and Installation

Both cables

1. Lower the glove compartment completely.
2. Disconnect the upper-to-lower satellite radio antenna cable connection.

Upper cable

3. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .
4. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.
5. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical

repair4less

connector.

6. Remove the upper satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the A-pillar and instrument panel.

Lower cable

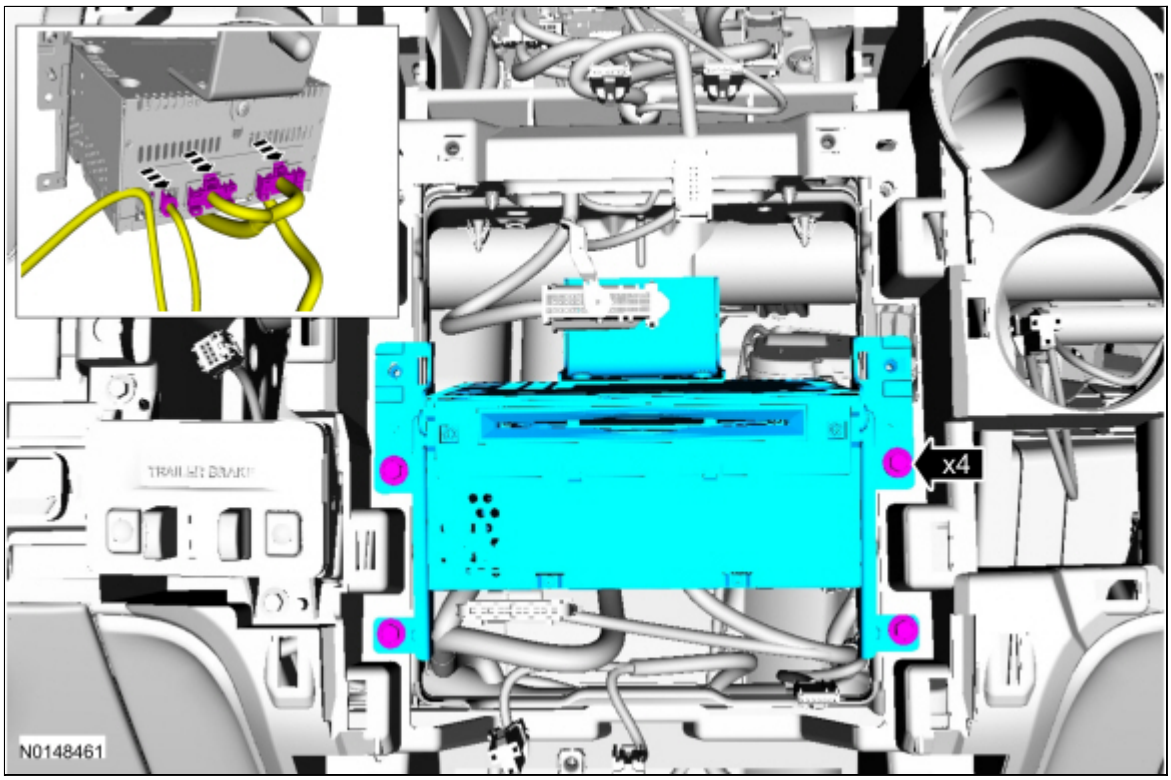
7. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.

8. Remove the lower satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the instrument panel.

Both cables

9. To install, reverse the removal procedure.

Audio Control Module (ACM)



Removal and Installation

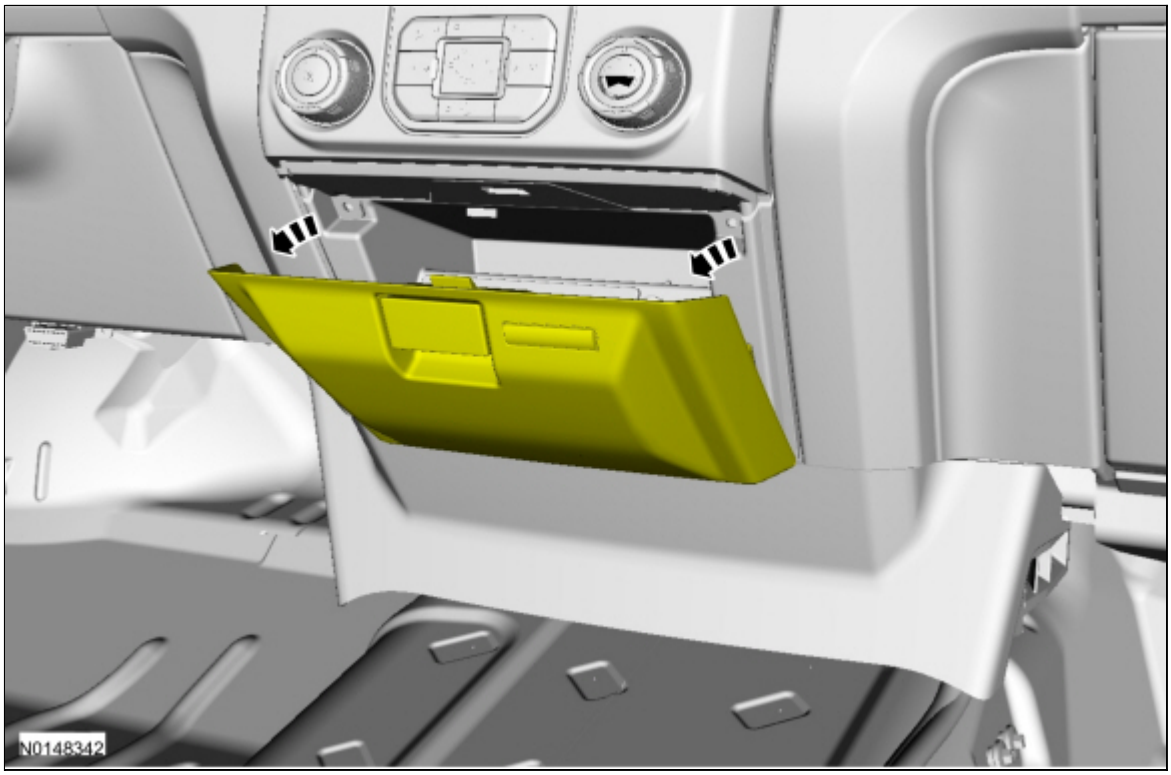
1. **NOTE:** If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

   Upload the Audio Front Control Module (ACM) configuration information to the scan tool by following the scan tool on screen instructions.

2. Remove the Front Control/Display Interface Module (FCDIM). Refer to Front Controls/Display Interface Module (FCDIM) .

3. Remove the 4 ACM bolts.
   - Disconnect the electrical connectors.
   - To install, tighten to 2.5 Nm (23 lb-in).

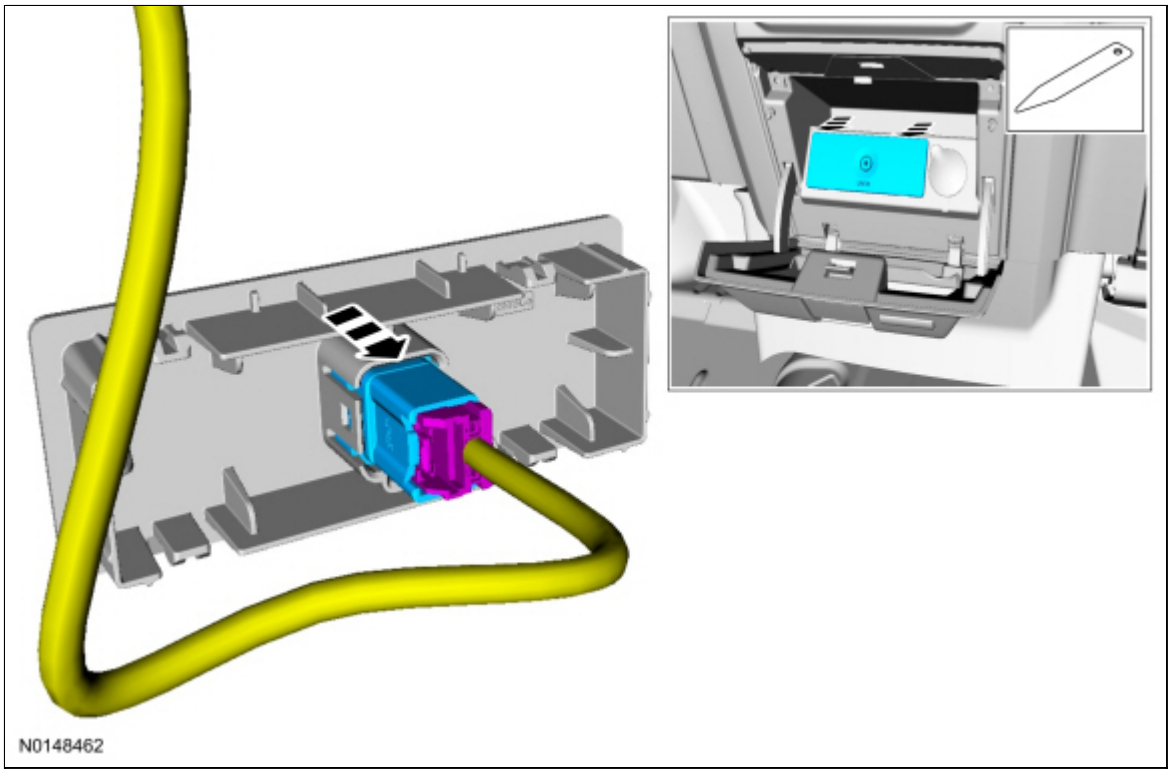
4. To install, reverse the removal procedure.



5. Download the ACM configuration information from the scan tool to the new ACM following the scan tool on screen instructions.

repair4less

Audio Input Jack



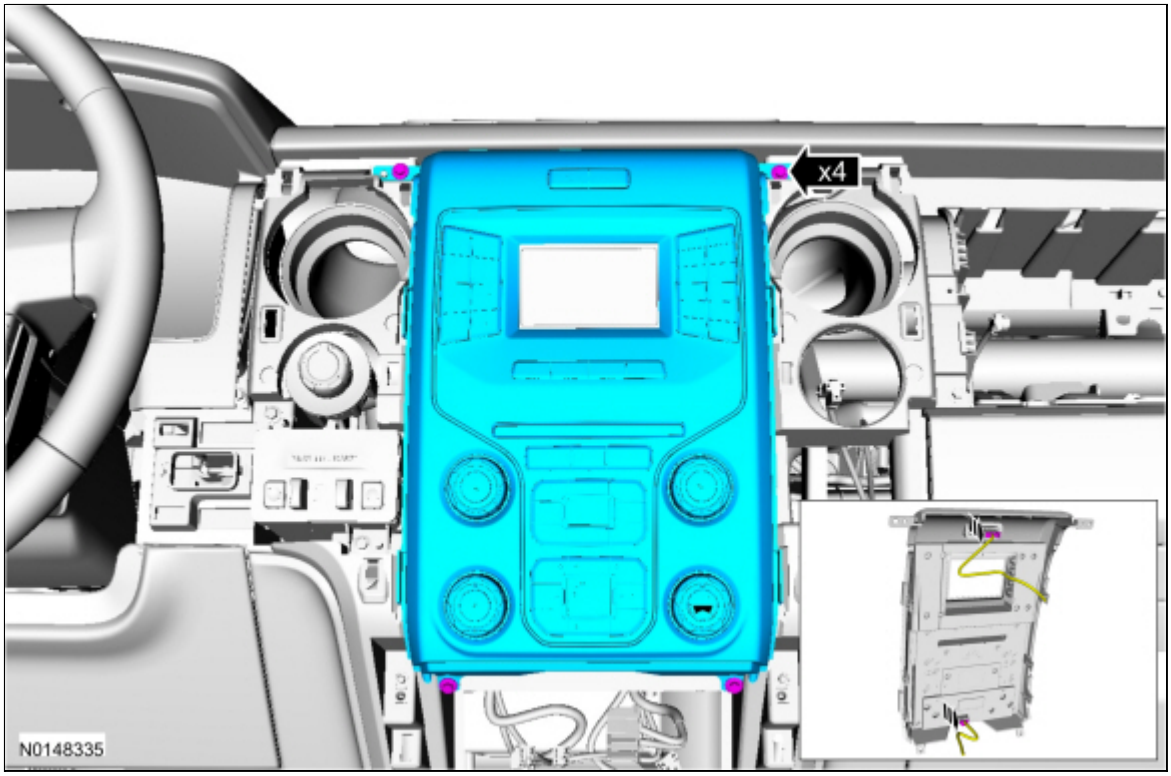
Removal and Installation

1.

2. Remove the audio input jack bezel by prying rearward.
    - Disconnect the electrical connector.
    - Release the tabs and remove the audio input jack.

repair4less

3. To install, reverse the removal procedure.



Front Controls Interface Module (FCIM)

Removal and Installation

1. Remove the LH center instrument panel finish panel. For additional information, refer to Section 501-12 .

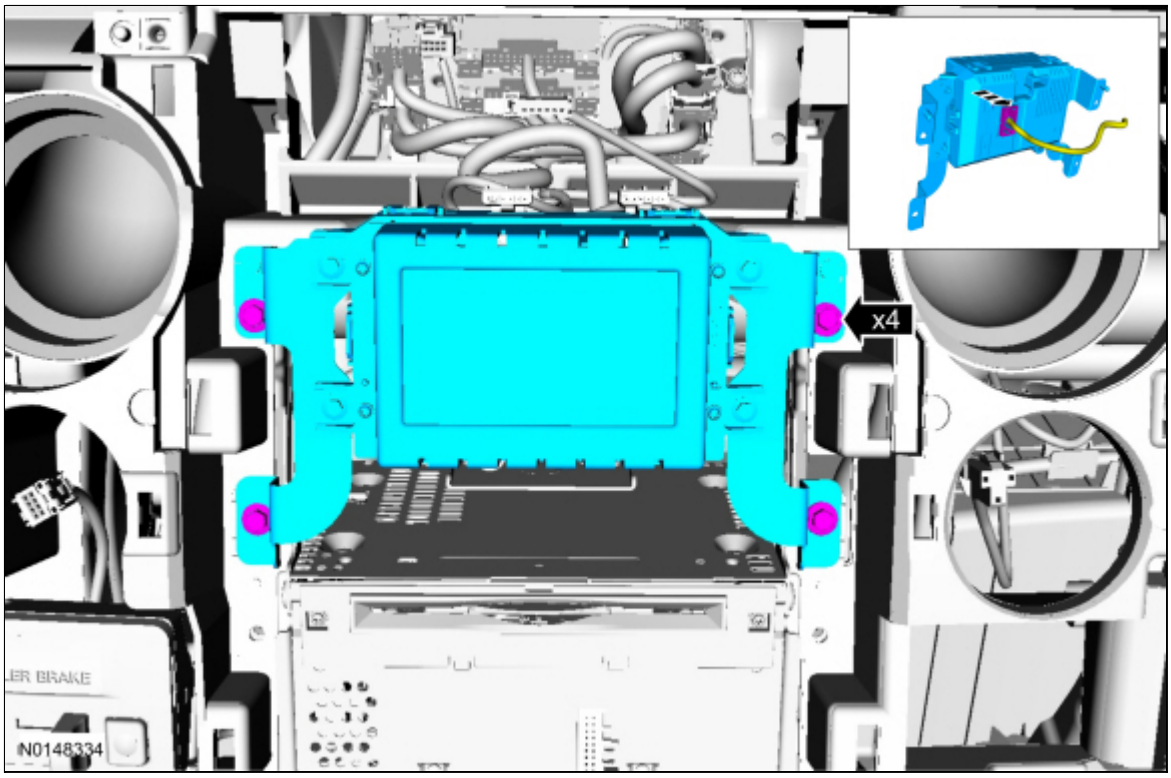
2. Remove the RH center instrument panel finish panel. For additional information, refer to Section 501-12 .

3. Remove the 4 screws and the Front Controls Interface Module (FCIM).
   - Disconnect the electrical connectors.
   - To install, tighten to 3 Nm (27 lb-in).

4. To install, reverse the removal procedure.

repair4less

Front Controls/Display Interface Module (FCDIM)



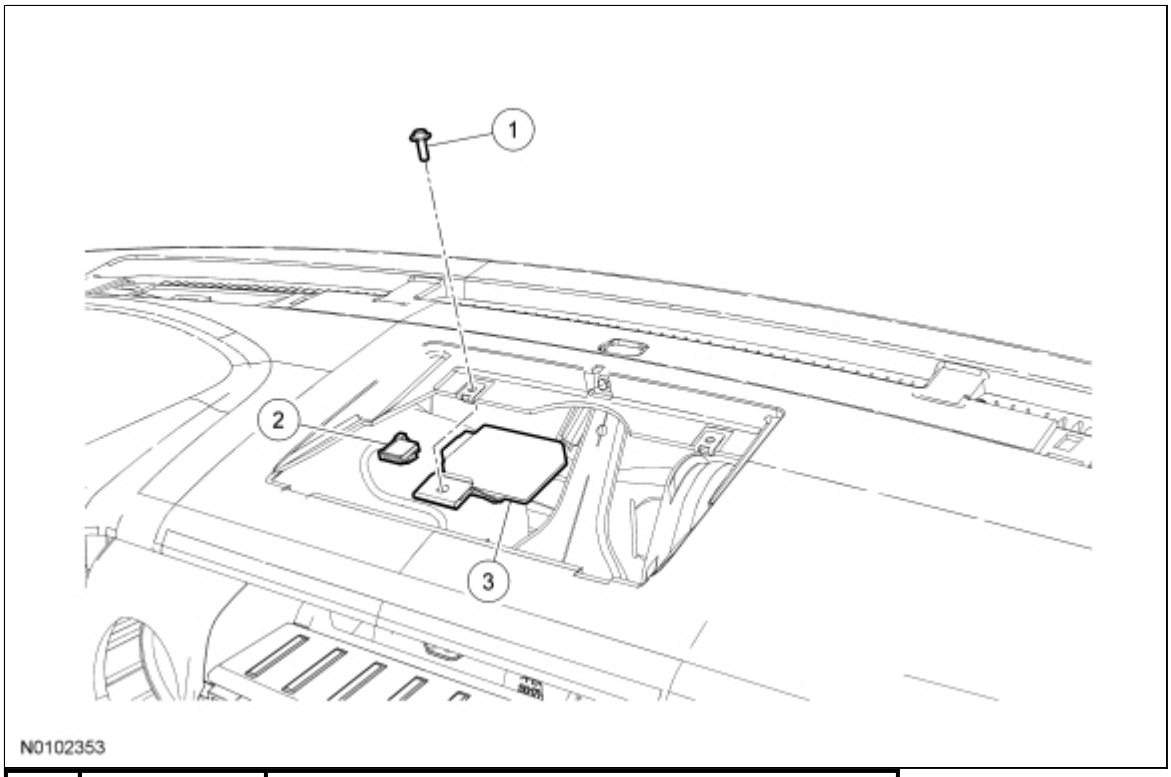
Removal and Installation

1. **NOTE:** If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

   Upload the Front Control/Display Interface Module (FCDIM) configuration information to the scan tool by following the scan tool on screen instructions.

2. Remove the Front Controls Interface Module (FCIM). Refer to Section 415-00C .

3. Remove the 4 screws and remove the Front Control/Display Interface Module (FCDIM).
   - Disconnect the electrical connector.
   - To install, tighten to 2.5 Nm (23 lb-in).



4. To install, reverse the removal procedure.

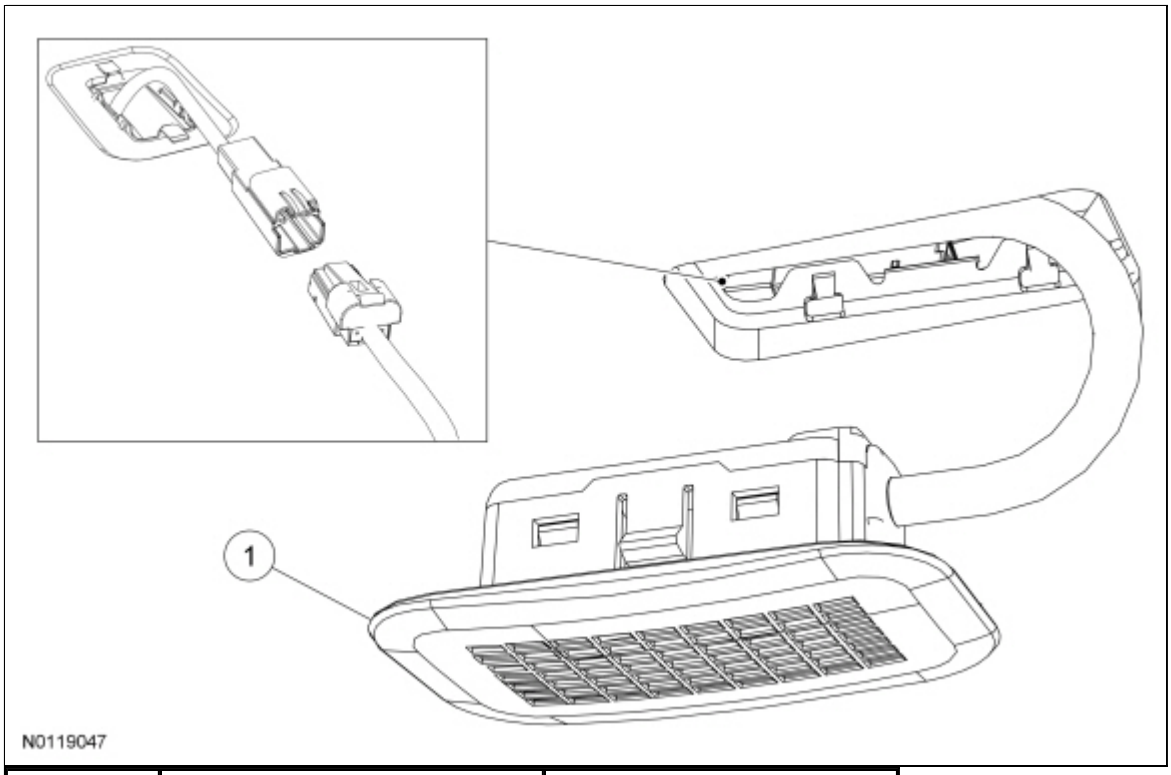
5. Download the Front Control/Display Interface Module (FCDIM) configuration information from the scan tool to the new Front Control/Display Interface Module (FCDIM) following the scan tool on screen instructions.

repair4less

Global Positioning System Module (GPSM)

Item	Part Number	Description
1	W707628-S	Global Positioning System Module (GPSM) screw
2	—	GPSM electrical connector (part of 14401)
3	10E893	GPSM

Removal and Installation



1. Remove the Front Display Interface Module (FDIM). For additional information, refer to Front Controls/Display Interface Module (FCDIM) in this section.

2. Remove the screw and the Global Positioning System Module (GPSM).
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

repair4less

Microphone

Item	Part Number	Description
1	19A391	Microphone

Removal

1. Using a suitable tool, (such as a thin small flat head screwdriver) twist and pry the microphone bezel from the headliner metal mounting bracket.

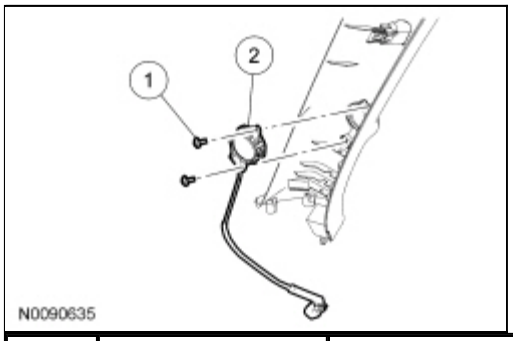
2. Remove the microphone from the headliner by grasping the microphone pigtail.
    - Disconnect the microphone electrical connector.

Installation

1. Reconnect the microphone electrical connector.

2. Wrap the connection with anti-rattle tape.

3. Feed the microphone pigtail into the headliner through the microphone hole.
    - Verify the microphone pigtail points towards the front of the vehicle.



4. Snap the microphone into the headliner mounting bracket.

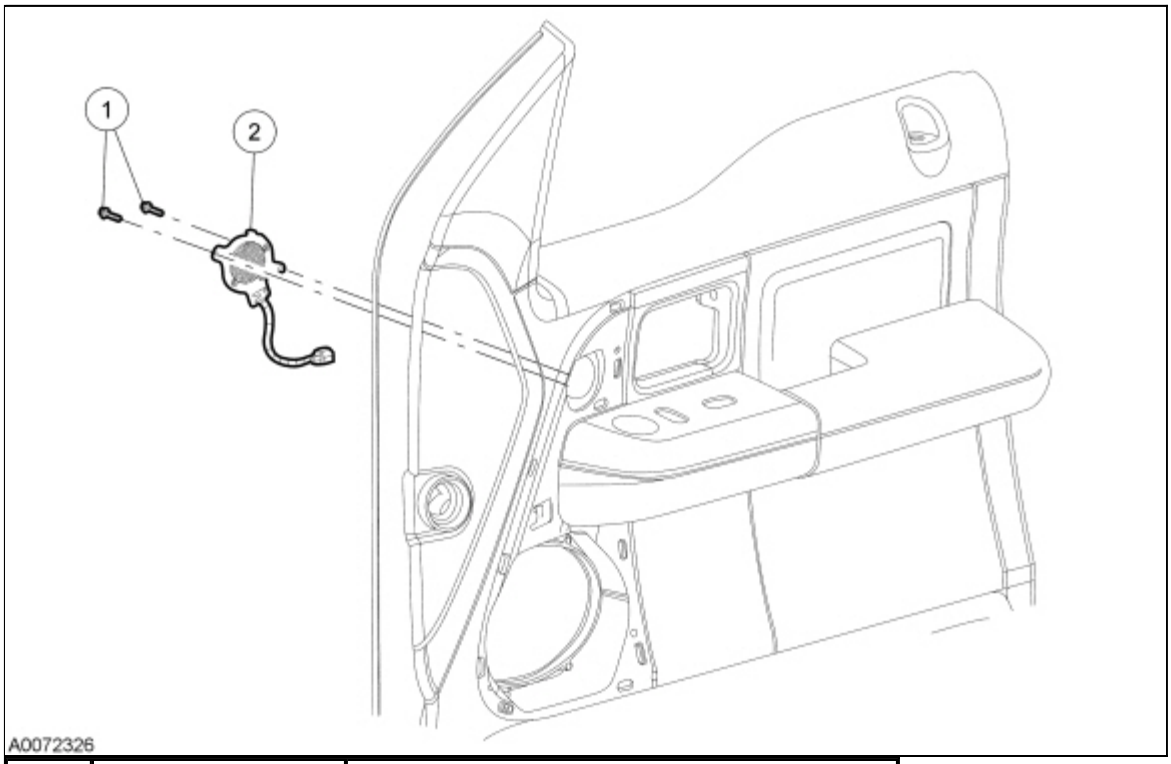
repair4less

- Verify the mounting bracket and microphone are snug to the headliner.

Speaker — A-Pillar

NOTE: LH shown, RH similar.

Item	Part Number	Description
1	W701678-S	A-pillar speaker screws (2 required)
2	18978	A-pillar speaker

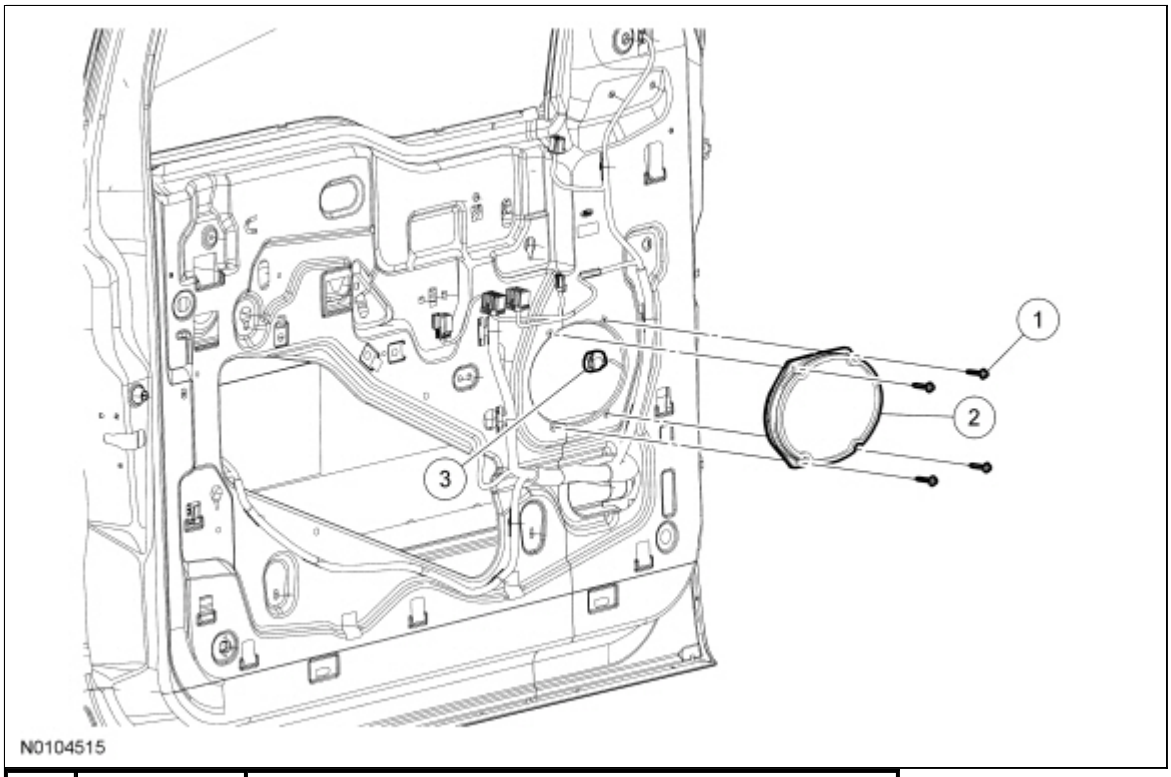


Removal and Installation

1. Remove the A-pillar trim panel. For additional information, refer to Section 501-05 .
2. Remove the 2 screws and the A-pillar speaker.
3. To install, reverse the removal procedure.

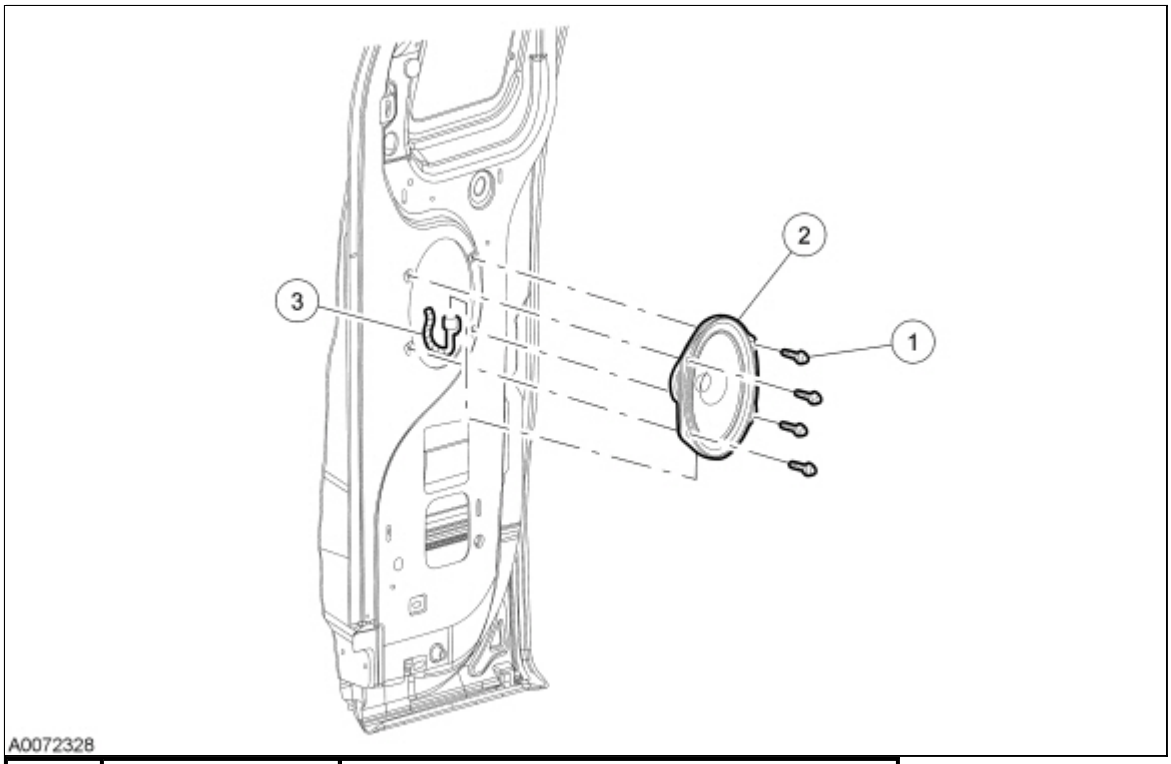
repair4less

Speaker — Door



Front Door Tweeter Speaker

Item	Part Number	Description
1	W701678	Tweeter speaker screws (2 required)
2	19B170/19B171	Tweeter speaker (RH/LH)



Front Door Speaker

repair4less

Item	Part Number	Description
1	W707628	Front door speaker screws (4 required)
2	18808	Front door speaker
3	—	Front door speaker electrical connector (part of door harness)

Rear Door Speaker

Item	Part Number	Description
1	W706766	Rear speaker screws (4 required)
2	18808	Rear speaker
3	180103	Rear speaker electrical connector

Removal and Installation

Front door

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the screws (2 for the tweeter, 4 for the door speaker) and the speaker.
   - Disconnect the electrical connector.

Rear door

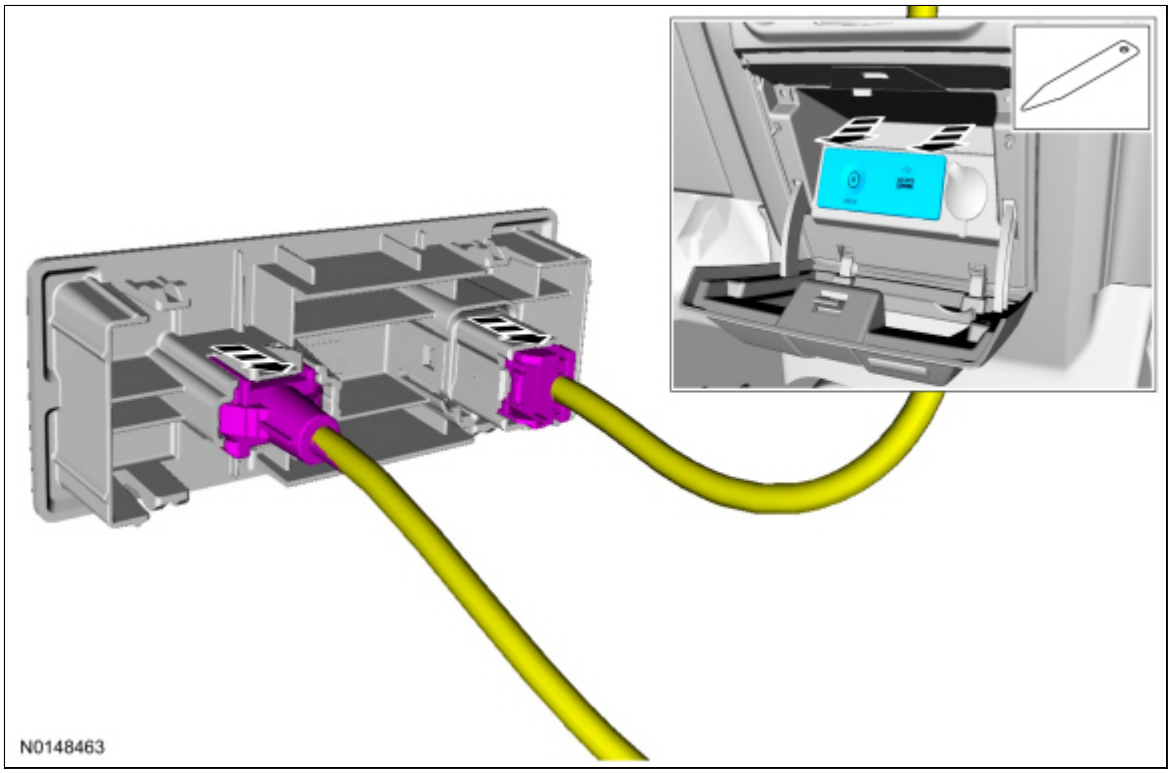
3. Remove the rear door trim panel. For additional information, refer to Section 501-05 .

4. Remove the 4 screws and the rear door speaker.
   - Disconnect the electrical connector.

All speakers

5. To install, reverse the removal procedure.

repair4less

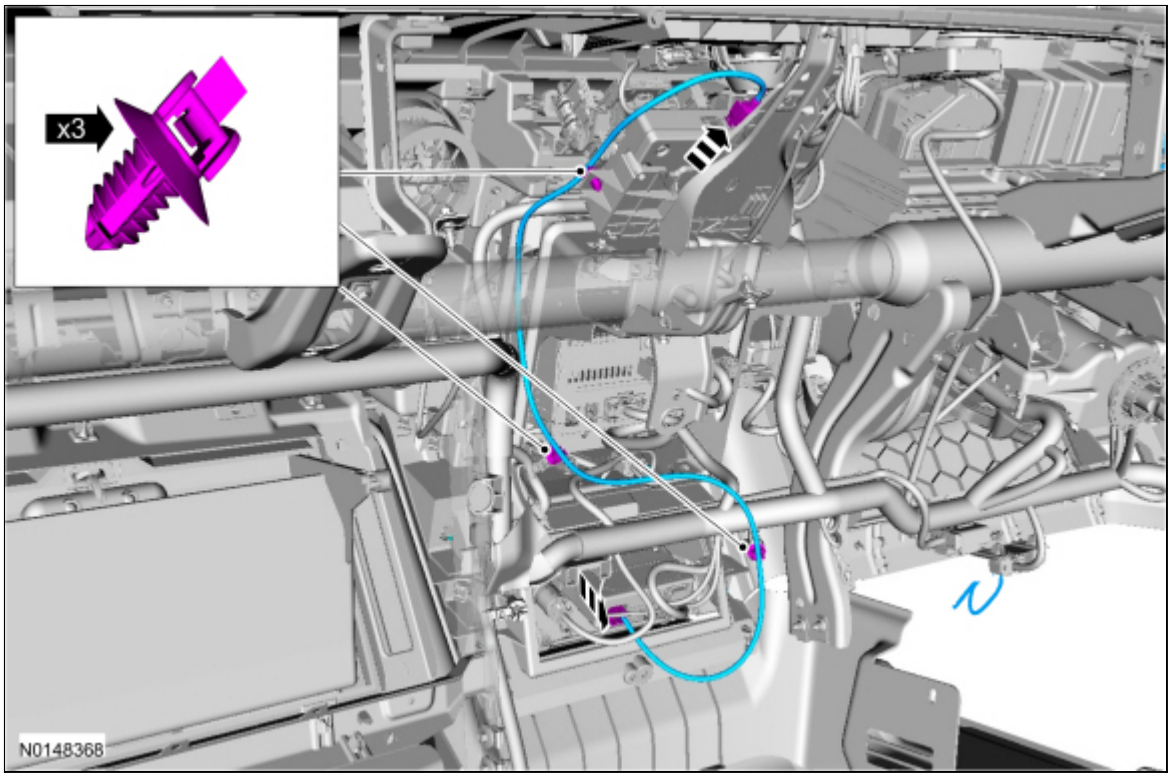


Universal Serial Bus (USB) Cable and Port

Removal and Installation

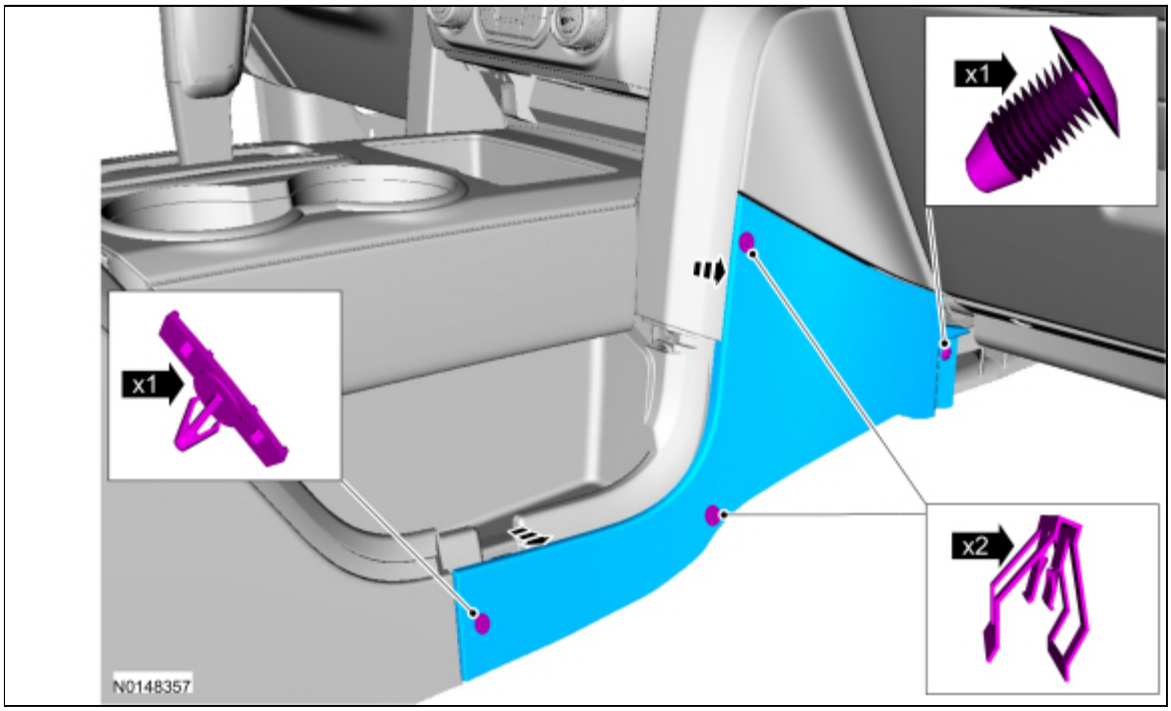
Instrument Panel USB Cable Without Floor Console

1. Remove the APIM. Refer to Accessory Protocol Interface Module (APIM).



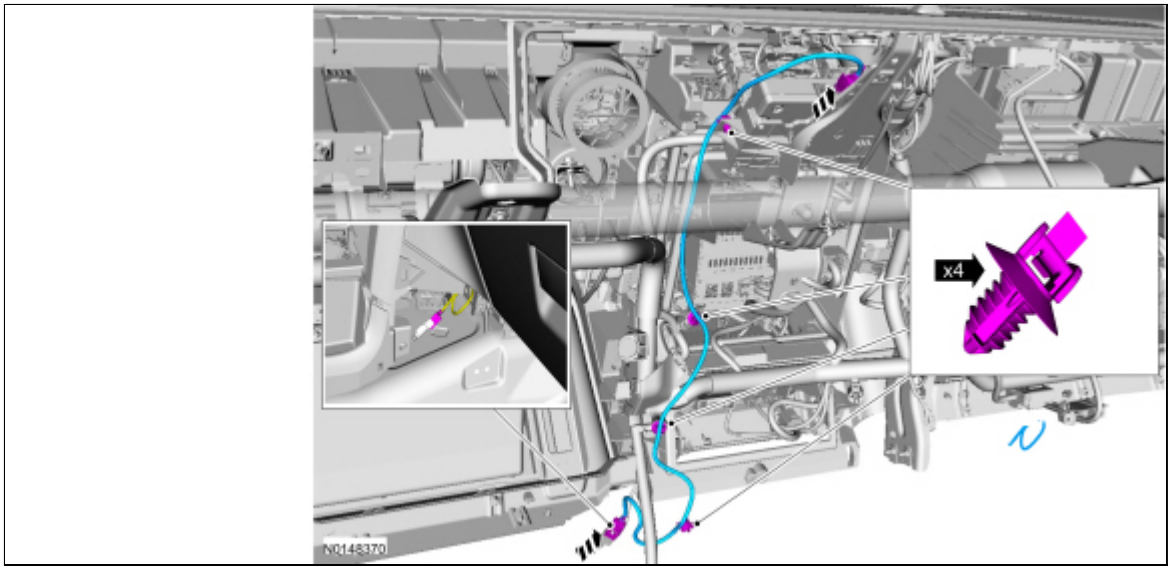
2. Remove the audio input jack USB bezel.
   - Disconnect the electrical connectors.

3. For access remove the glove box. Refer to Section 501-12.



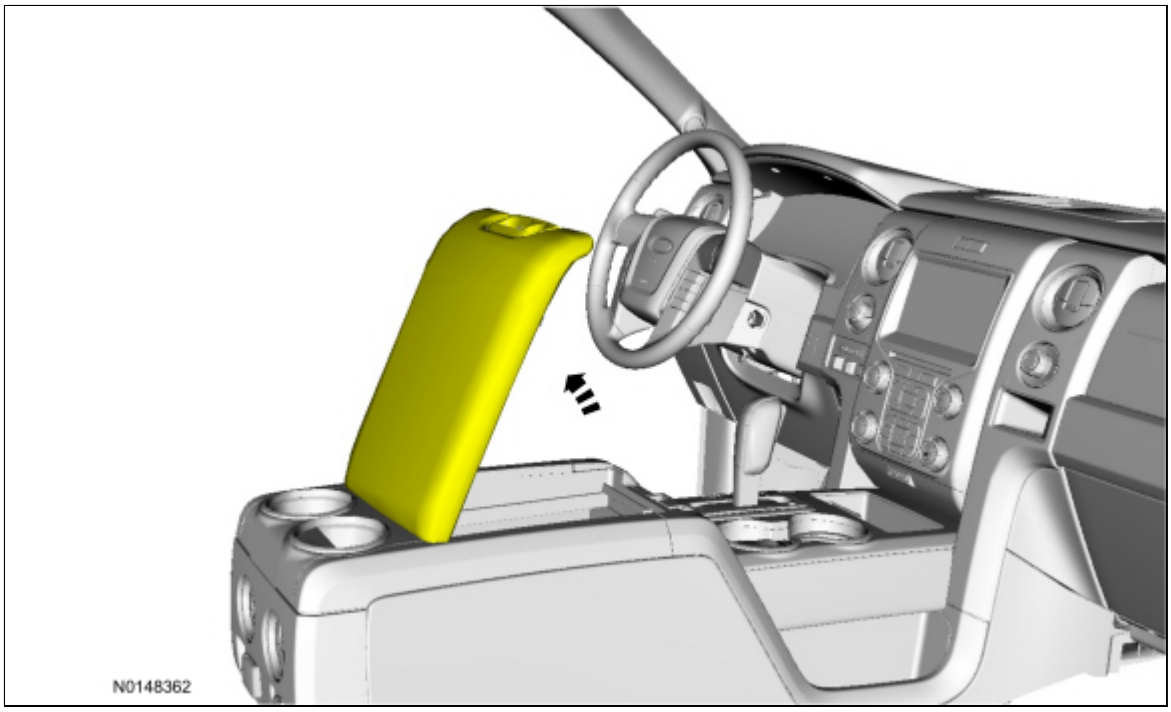
4. Remove the USB cable following the routing shown.

repair4less

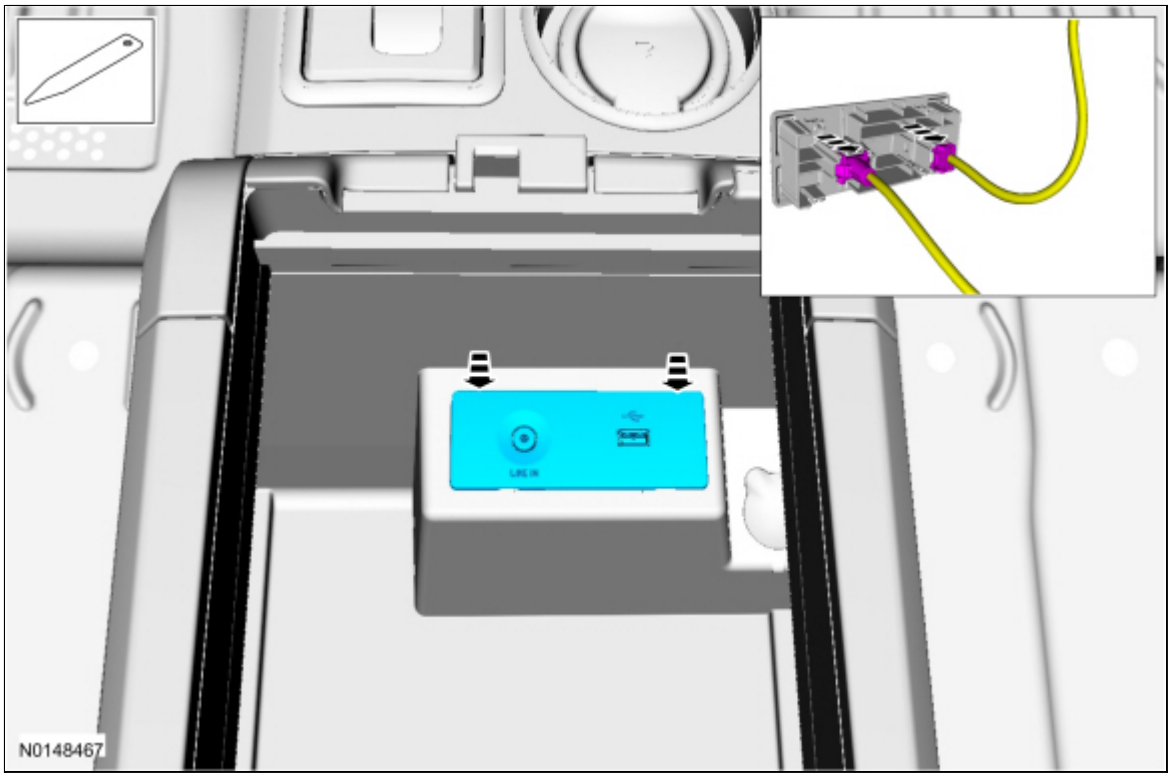


Instrument Panel USB Cable With Floor Console

5. Remove the APIM . Refer to Accessory Protocol Interface Module (APIM) .
6. For access remove the glove box. Refer to Section 501-12 .
7. Remove the RH lower floor console trim panel.

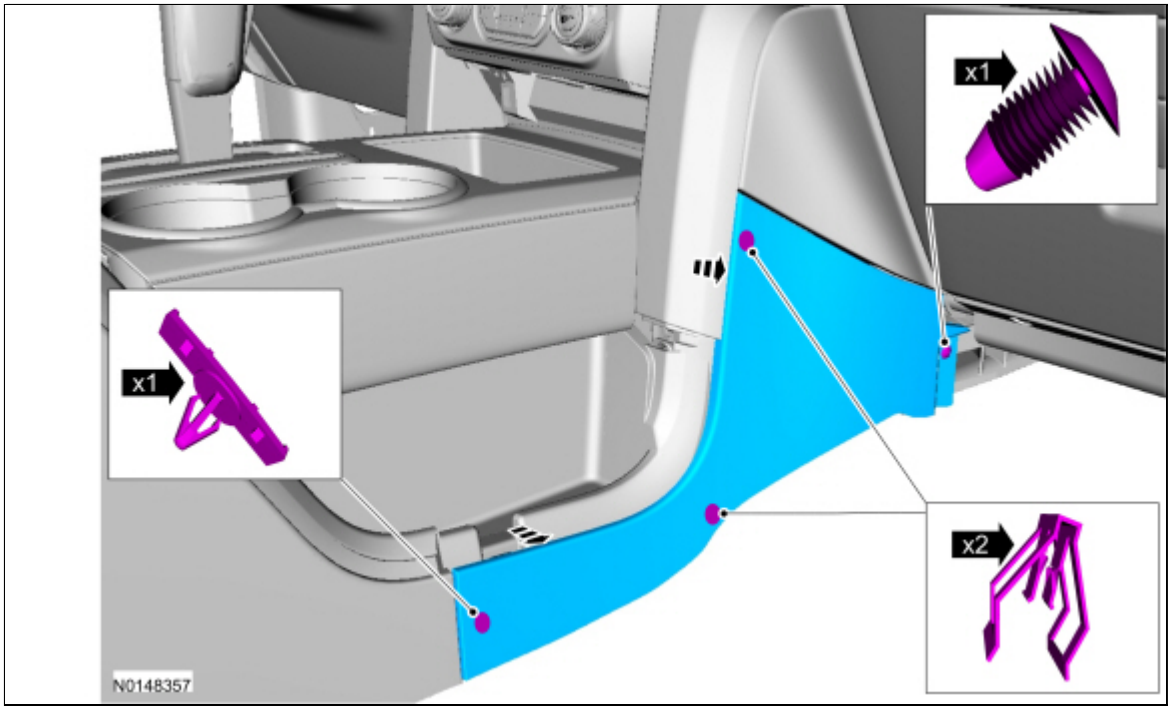


8. Remove the USB cable following the routing shown.



Floor Console USB Cable

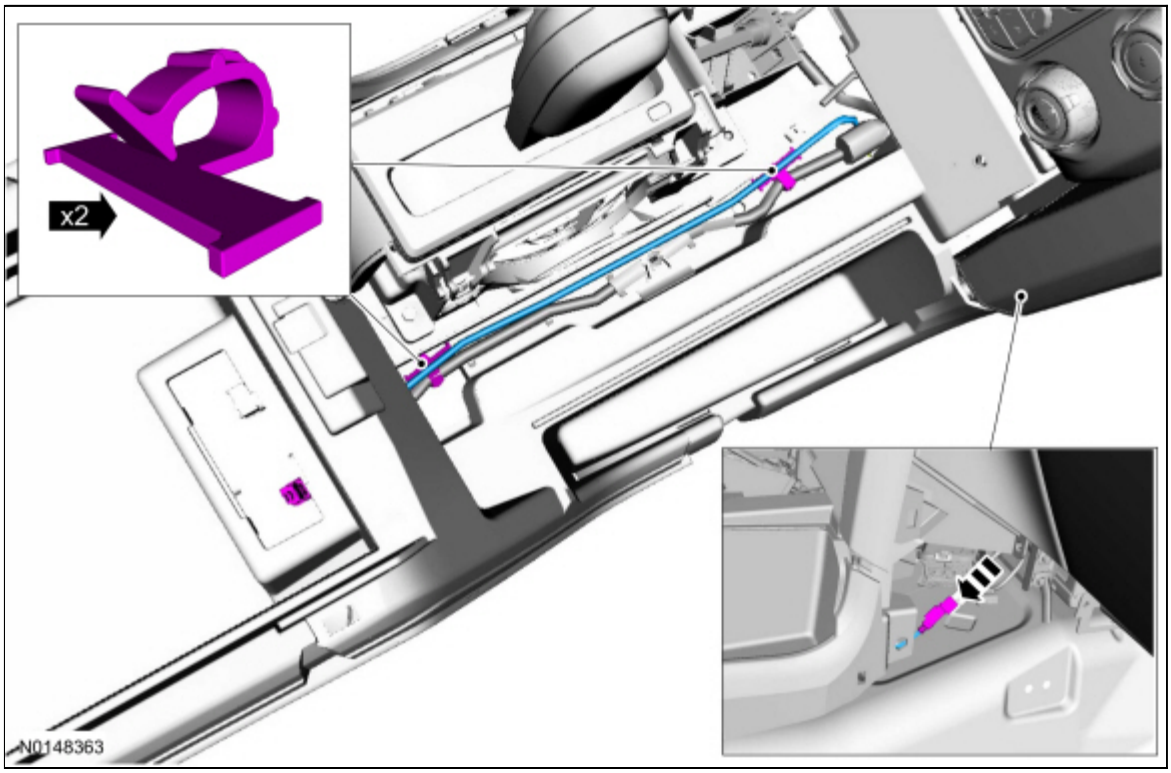
9. Open the floor console stowage bin door.



10. Remove the audio input jack USB bezel from the floor console.
    - Disconnect the electrical connectors.

repair4less

11.



12. Remove the RH lower floor console trim panel.

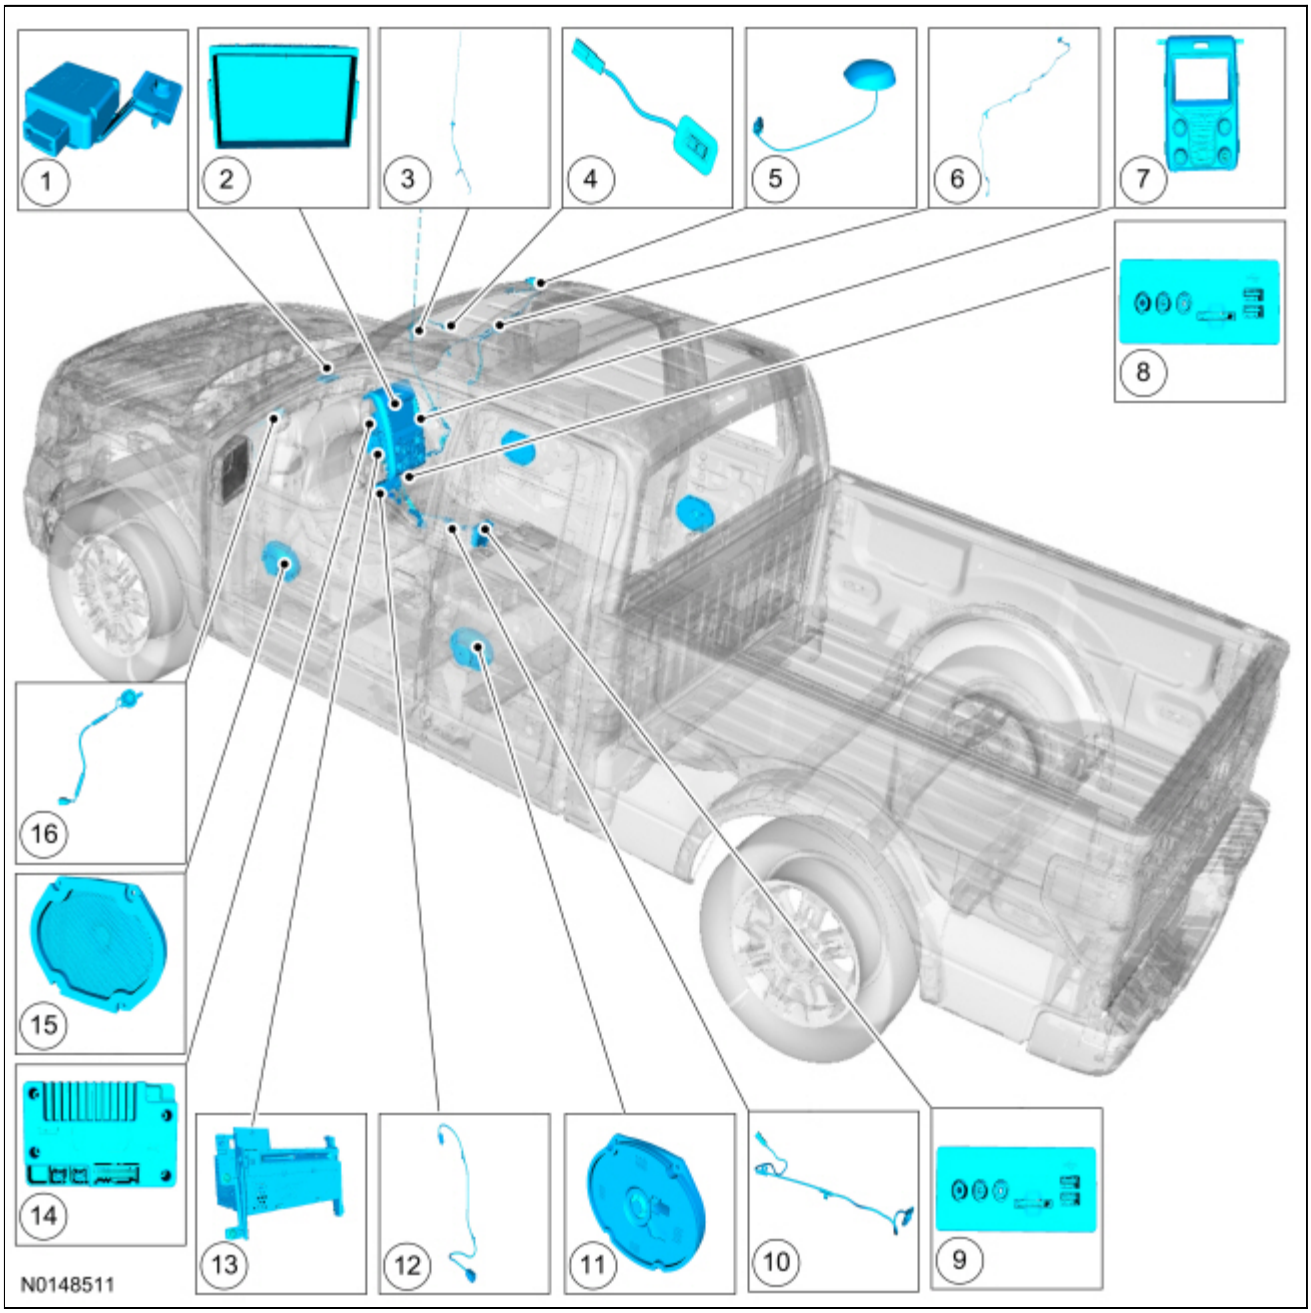
13. Remove the floor console upper finish panel.

14. Remove the floor console USB cable following the routing shown.

All Cables

15. To install, reverse the removal procedure.

repair4less



Torque Specifications

Description	Nm	lb-in

Information and Entertainment System

Component Location

Item	Description	Comments

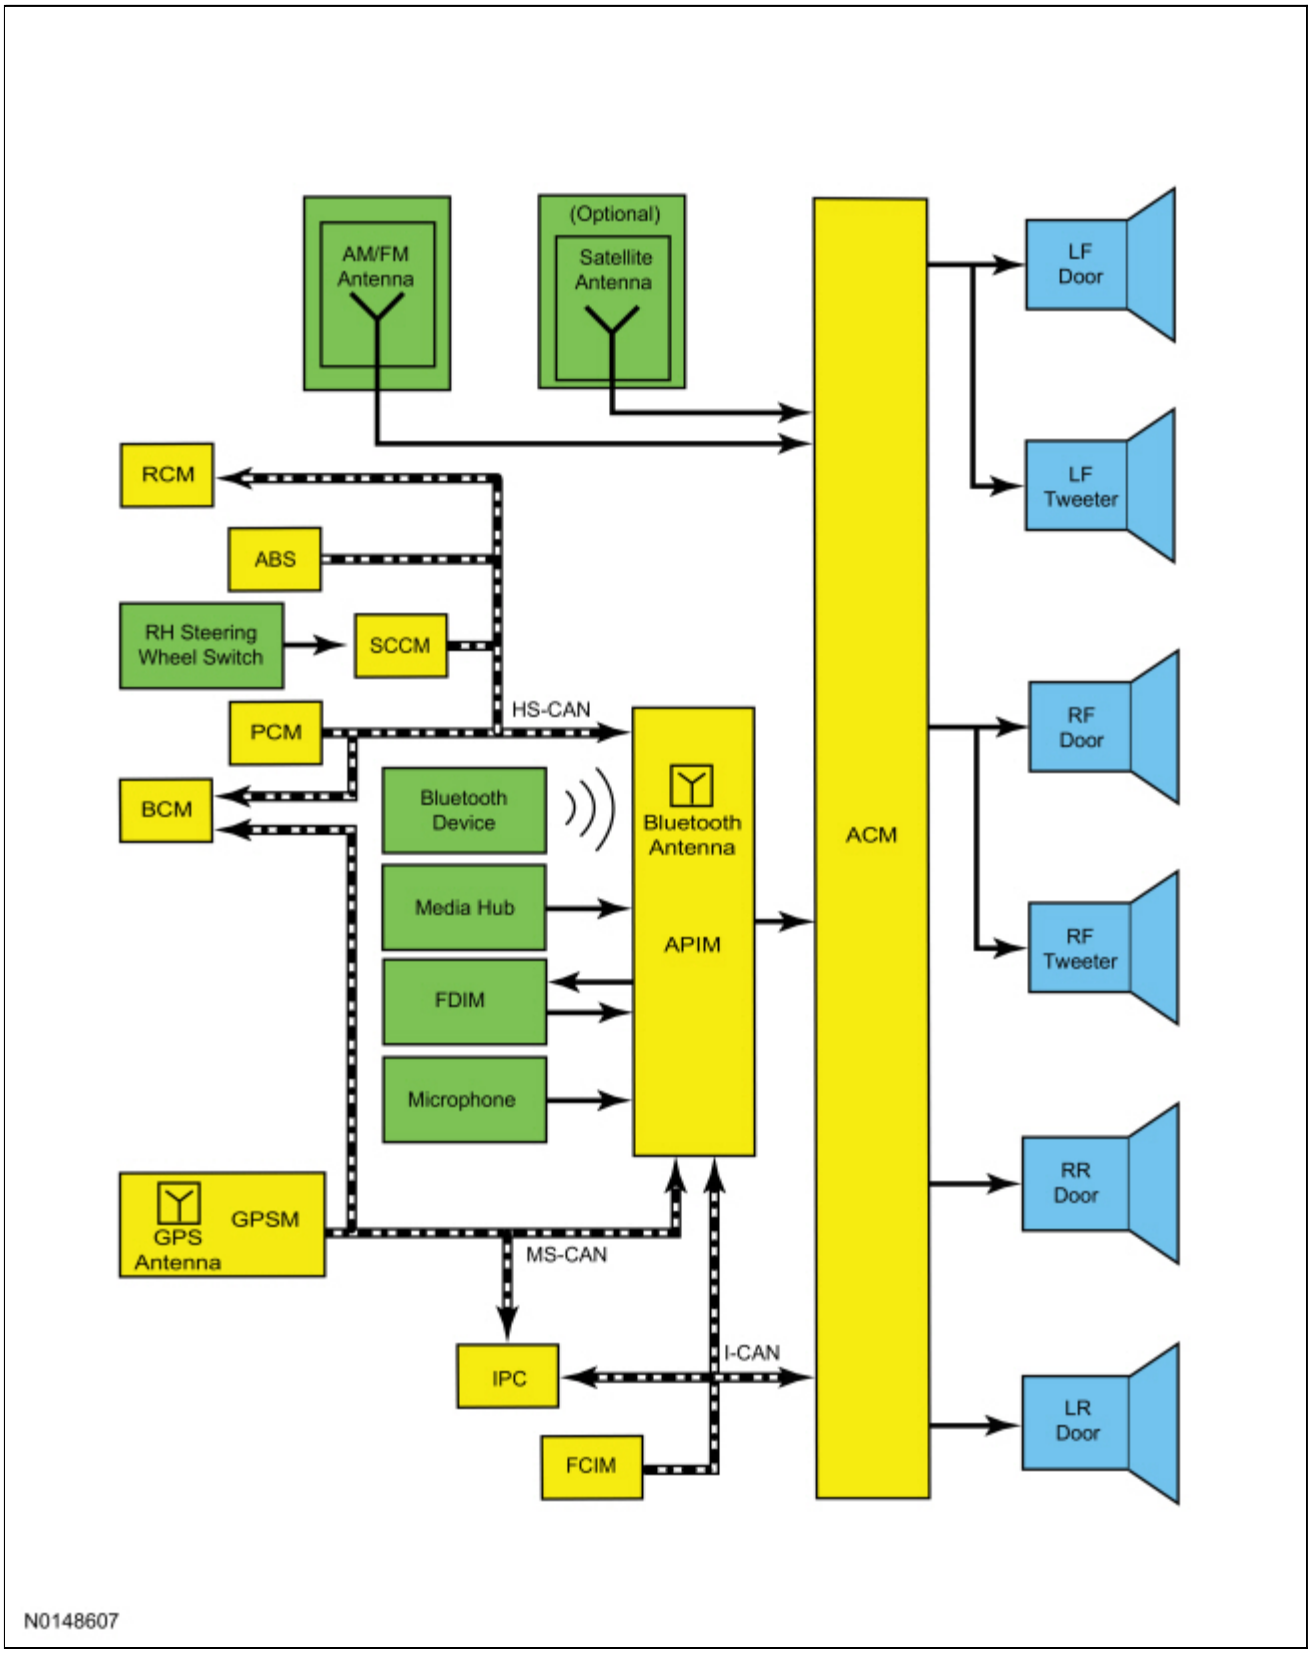
1	GPSM	Located in the top center area of the instrument panel
2	FDIM	Attached to the APIM
3	AM/FM/ HD Radio® antenna and AM/FM/ HD Radio® coaxial cable	HD Radio® (if equipped)
4	SYNC® microphone	Located in the headliner
5	Satellite radio antenna	If equipped
6	Satellite radio antenna coaxial cable	If equipped
7	FCIM	-
8	Media hub	Located in the instrument panel (with split bench)
9	Media hub	Located in the console (with front captain chairs)
10	USB cable	Located in the console (with front captain chairs)
11	Rear door speaker	-
12	USB cable	Located in the instrument panel (with split bench)
13	ACM	-
14	APIM	Attached to the FDIM
15	Front door speaker	-
16	A-pillar speaker	LF shown, RF similar

Overview

The audio system consists of the following:

Main Components

- 6 speakers
- 8-inch (203 mm) FDIM touchscreen
- AM/FM single CD ACM
- APIM
- FCIM
- GPSM
- Media hub
- Redundant steering wheel controls
- SYNC® microphone



Main Features

- Optional HD Radio®
- Optional navigation
- Optional satellite radio
- SYNC®

repair4less

System Operation

System Diagram

Network Message Chart

NOTE: A missing network message is indicated by a U-code DTC . When a missing message DTC (U-code) sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message. Refer to CAN Module Communication Message Chart in Section 418-00 . When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication DTCs may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Belt-Minder® audio mute	IPC	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
FCIM set volume	FCIM	Used to set the ACM volume from the FCIM .
Media player display request	APIM	Used to display detailed folder and track information on the FDIM from the ACM for the different audio system operating modes when the appropriate FCIM button is pressed.
MyKey® volume limit	IPC	Used to limit the maximum audio system volume when a MyKey® restricted key is in use.
Navigation audio settings	APIM	Used to set the navigation command volume.
SYNC® alerts	APIM	Used for text message, news, sports, weather, satellite radio artist/title favorites (if activated), and traffic alert notifications.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
ACM radio functions	ACM	Used to display the ACM radio functions such as seek, tune and AM/FM stations on the FDIM .
Airbag status	RCM	Used to monitor airbag deployment status for 911 assist.
Audio source	ACM	Used to display the selected audio source on the FDIM .

repair4less

CD load/eject	ACM	Used to display the loaded or ejected CD status on the FDIM .
Date and time	IPC	Used to display the current date and time on the FDIM .
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
FCIM button press	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Front seat belt latched status	RCM	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
Illumination dimming level	BCM	Used to control the backlight intensity of the FDIM based on the dimmer switch input.
Language selection	IPC	Used to display information on the FDIM in the selected language.
Navigation rolling wheel count	ABS module	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Seat belt buckle status	RCM	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Steering wheel switch media	SCCM	Used to set the audio system listening mode (AM/FM, CD, etc.) from the steering wheel switch.
Steering wheel switch seek left	SCCM	Used to access the next strong station to the left, to restart an audio track, to access the previous satellite radio station preset (if equipped), or the previous audio track from the steering wheel switch.
Steering wheel swtich seek right	SCCM	Used to access the next strong station to the right, to access the next satellite radio station preset (if equipped), or to access the next audio track from the steering wheel switch.
Steering wheel switch voice	SCCM	Used to access or exit the voice command feature from the steering wheel switch.
Steering wheel switch volume down	SCCM	Used to decrease the audio system volume from the steering wheel switch.
Steering wheel switch volume up	SCCM	Used to increase the audio system volume from the steering wheel switch.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.

Illumination dimming level	IPC	Used to control the backlight intensity of the FCIM based on the dimmer switch input.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition switch position	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Selector lever (PRNDL) status	BCM	Used to verify the gear lever position for vehicle direction data.

Accessory Delay Feature

The accessory delay feature allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/FM Radio

The AM/FM fender-mounted antenna receives radio waves and sends them through the AM/FM antenna coaxial cable to the ACM . The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

APIM Programming

The APIM requires specific programming procedures for correct operation. APIM programming is required when:

- The APIM is replaced
- Directed by a TSB. Updates to resolve SYNC® performance concerns can only be performed when directed by a TSB.
- Feature upgrades are requested. Occasional feature upgrades and/or new applications can be programmed when they become available. This type of programming is available upon customer request and expense.

There are 3 types of APIM programming available:

- Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).
- Standard — Used to update the APIM and any currently installed Applications to the latest software level.
- Custom — Used to show all the available software options (including applications that may not have been installed previously) that can be programmed into the APIM . Use this selection when upgrades become available or as directed by a TSB.

There are 3 types of software installation methods:

- Full Flash (Force CIP) — A CIP program is the entire software package for the APIM . Performing a Full Flash erases the existing APIM software and installs the complete program. A Full Flash should only be performed if a Service Pack is not available. If a Full Flash is performed, all applications must be re-installed. Performing a Full Flash by selecting Force CIP requires additional programming time

repair4less

and is not necessary unless directed by a TSB.

- Service Pack — A Service Pack update only provides the necessary software to update the existing APIM program to a new level. For example, a Service Pack changes the software program from an 'AA' to an 'AB' version level. It does not delete or overwrite the existing APIM software. A Service Pack is a much smaller program than a Full Flash and requires less downloading and programming time. A Service Pack software installation should always be performed instead of a Full Flash, if possible.
- Applications — Applications are special software programs that may be installed on the APIM . Applications necessary for each vehicle are determined by the vehicle build information stored in the Ford online database. Selecting individual applications for installation may not be necessary every time the APIM is programmed.

NOTE: VIP programming is not selectable because the VIP is configured automatically during programming.

There are some general programming guidelines that are applicable to multiple types of programming:

- Full Flash/Force CIP
  - The media hub must be removed for programming.
  - The diagnostic scan tool and SYNC® Re-Flash Kit (or equivalent), are required to complete the flash procedure.
  - All previously paired phones are deleted from the SYNC® system.
  - The file needs to be downloaded from the Ford online database. Allow for extra time in order to complete the download. The compressed files are between 200 and 400 megabytes (MB), and once downloaded, are extracted to the full size of approximately 2 gigabytes (GB).
  - Once diagnostic scan tool programming is complete, applications need to be installed with the USB flash drive. This should be accomplished by reinstalling the media hub and connecting the USB flash drive to the media hub.
- Service Pack and Applications
  - A USB flash drive with a minimum 1 gigabyte (GB) storage capacity is required.
  - The file is downloaded from the Ford online database onto the flash drive. The files are then transferred via the flash drive to the APIM through the vehicle USB port.

To perform module replacement programming, refer to Accessory Protocol Interface Module (APIM) Module Replacement Programming

To perform standard programming, refer to Accessory Protocol Interface Module (APIM) Standard Programming

To perform custom programming, refer to Accessory Protocol Interface Module (APIM) Custom Programming

Audible Prompts

The APIM receives stereo inputs from connected mobile phones and mono inputs from the SYNC® microphone.

Stereo and mono inputs, voice prompts, the TTS feature, ringtones, and any audio received through a connected mobile phone are transmitted to the ACM as stereo or mono sound.

The TTS feature speaks information so that it does not have to be read from the display.

Audio Extended Play

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position.

When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. To turn the audio system off, the power button on the FCIM is pressed. Audio extended play will not function if the battery load shed is active.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the vehicle OFF and the ignition in ACC or ON, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, SYS OFF TO SAVE BATT is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is a maximum of 9.75 m (32 feet).

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system. Any Bluetooth device used with the SYNC® system must first be paired with the system before it is operational.

Only one Bluetooth phone and one Bluetooth media device can be connected to the system at any one time. If an additional device of either type is paired with the system and made active, the APIM disconnects any active connection and establishes a connection with the new device.

When a new Bluetooth device is added, the APIM and the Bluetooth device must be paired together. Most Bluetooth devices can pair with the SYNC® system, although functionality may vary. To determine if a Bluetooth device is supported, verify the customer device is on the compatibility list for the current APIM software level.

Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be entered on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

It is important to understand that not all mobile phones have the same level of features when interacting with the SYNC® system. For a list of compatible phones, refer to SyncMyRide website.

Composite Audio-Video Input Mode

The composite audio and video inputs consist of the RCA jack connections that are used for playing video or audio content from an external device (such as a gaming system). The media hub contains an internal composite audio/video translator connected to the external RCA jacks, which outputs video and audio signals to the APIM via a shielded audio and video harness.

HD Radio® (If Equipped)

HD Radio® is a free to the public digital radio broadcast. HD Radio® channels duplicate certain analog FM channels, and some subdivide (multicast) the digital signal into multiple channels that do not have analog equivalents.

The AM/FM fender-mounted antenna receives radio waves containing data (station call letters, artist names,

repair4less

song titles, etc.) and digital HD Radio® audio. The radio waves are sent through the AM/FM antenna coaxial cable to the ACM , where the data is separated from the audio. The data is sent to be displayed on the centerstack infotainment display, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

MyKey® Audio Operation

When a MyKey® is in use, the following restrictions are activated:

- The audio system is muted until the safety belts are buckled when the Belt-Minder® feature is activated. The MyKey® "BUCKLE UP TO UNMUTE AUDIO" is displayed in the information display.
  - This is a standard setting and cannot be changed.
- Satellite radio adult content stations are blocked by being muted.
- If "Always On" is selected in the MyKey® menu, 911 assist and the Do Not Disturb features are enabled and cannot be disabled.
- The audio system volume is limited to 45%. In an attempt to exceed the limited volume, the MyKey® VOLUME LIMITED message is displayed in the centerstack infotainment display.
  - This is an optional setting.

Refer to the Owner's Literature for more information on MyKey®.

Navigation

The navigation system guides the user to a pre-entered destination. Map data is read from the map data SD card plugged into the media hub. The APIM calculates route information based on GPS data received by the GPSM . The APIM also uses vehicle speed and transmission gear selected signals received through the network to detect vehicle speed and direction, resulting in more accurate navigation tracking. The navigation display is shown on the FDIM . Installing different size tires other than what is indicated on the vehicle placard may cause the navigation system to be inaccurate.

The voice recognition system allows the user to interface with the system without using the touchscreen. A microphone located in the headliner provides a direct input to the APIM .

Satellite Radio (If Equipped)

Satellite radio is a subscription-based service.

The satellite radio roof-mounted antenna receives signals containing data (station call letters, artist names, song titles, etc.) and digital satellite radio audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM . The ACM separates the data from the audio. The data is sent to be displayed on the centerstack infotainment display, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

SD Card Mode

The SD card slot can be used for playing audio content that is stored on a SD card.

Image files can be saved to the APIM from a SD card in order to be used as wallpaper backgrounds displayed on the FDIM .

SD card data is transmitted to the APIM through the USB cable.

SIRIUS Data Services - If Equipped

SIRIUS Data Services is a subscription-based service and requires a separate subscription from the satellite radio.

The combination HD /satellite radio roof-mounted antenna receives digital signals and sends them to the satellite radio receiver through the satellite radio antenna coaxial cable. The satellite radio receiver is built into the ACM . The signals are then sent to the APIM , and then to the FDIM touchscreen to be displayed.

SIRIUS Data Services allows the customer to receive updates for:

- Fuel Prices
- Movies (movie listings, start times, ratings)
- Sports (in game and final scores, weekly schedules)
- Stocks
- Ski Conditions
- Traffic (traffic speed, accidents, construction, road closings)
- Weather (current weather, forecasts, radar images)

Some services may be available separately while others are only available as packages.

Speed Compensated Volume

The ACM adjusts the audio system volume based on the VSS signal to compensate for speed and wind noise.

When a MyKey® is in use and the MyKey® radio volume limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The RH 8-way steering wheel switches operate the volume +/-, seek +/-, and the audio system SYNC® functions (media, voice, and phone).

SYNC® Services

SYNC® Services is a subscription-based service. For SYNC® Services subscription information,, refer to SyncMyRide .

The customer's mobile phone is used to access and download the SYNC® services. SYNC® services information received by the customer's mobile device is sent to the APIM .

The GPS antenna, integral to the GPSM , is used to detect the location and direction of the vehicle.

SYNC® services includes the following features:

- Business search
- Personalized text alerts
- Real-time traffic updates
- Turn-by-turn directions

SYNC® services allows the customer to receive updates for:

- Entertainment
- News
- Sports
- Stocks
- Travel
- Weather

SYNC® System

repair4less

The SYNC® system is a hands-free communication and entertainment system that supports many features. All features are not available with every phone.

The SYNC® system provides the ability to:

- Connect media devices (such as an iPod® or USB device) in order to play audio files.
- Control the entertainment system, climate control system, ambient lighting system, and several other vehicle systems using the touchscreen or voice controls.
- Initiate an emergency call (911 Assist™) when the airbags deploy.
- Play media files via a paired Bluetooth-enabled audio device.
- Produce vehicle health reports.
- Send and receive phone calls via a paired Bluetooth-enabled phone.
- Send and receive text messages via a paired Bluetooth-enabled phone.
- Wi-Fi signal receiver for in-car Internet access (requires customer-supplied USB modem).

USB Mode

The USB port can be used for connecting a media device (such as an iPod®) with the device's available cable, or for directly plugging in a portable mass storage device, such as a thumb drive. When playing media files stored on a mass storage device, the SYNC® system only plays files that do not have DRM protection. The USB port can also be used for uploading vehicle application upgrades. The USB port is powered by the APIM , so no external power source is needed to power a device plugged into the USB port if the device supports this feature.

In addition to audio information, metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device plugged into the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music, based on customer preference. Not all USB devices can send metadata to the APIM . When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes (depending on the amount of data on the device), and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index (rather than creating a new one), which reduces the amount of time needed to index the device.

Image files can be saved to the APIM from a USB device. These images can be displayed on the FDIM as wallpaper backgrounds.

Voice Recognition

Voice recognition is used for many vehicle functions, including audio system and climate controls. The microphone relays the microphone input to the APIM through dedicated wiring. The TTS and voice prompt features speak certain text information and interaction requests to minimize driver distraction by having to look at the audio system display while driving. The ringtone alerts the driver to an incoming call. The microphone is also used to detect outgoing audio during a phone call.

Audible prompts can range from a simple tone to more elaborate spoken text, based on the customer setting. When interaction mode is set to standard, detailed guidance is provided. When interaction mode is set to advanced, most prompts are tones only and minimal audible guidance is provided. Refer to the Owner's Literature for further information on voice interaction.

The audio signals for the TTS and voice prompt features, ringtones, and audio from the outside device during a phone call, are sent from the APIM to the ACM .

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s) and converts them into fluctuating AC voltage. The ACM receives audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes these inputs and sends left and right analog audio signals to the speakers as fluctuating AC voltage.

If equipped with satellite radio or HD Radio®, the ACM will also receive radio waves containing data through the antenna coaxial cable(s). The data is sent to be displayed on the centerstack infotainment display.

The ACM requires PMI when it is replaced.

Antenna

The AM/FM fender-mounted antenna receives radio waves containing audio and sends them through the AM/FM antenna coaxial cable to the ACM . The antenna mast is used to amplify the AM/FM radio waves to improve reception.

If equipped with HD Radio®, the AM/FM fender-mounted antenna receives radio waves containing data and digital audio and sends them through the AM/FM antenna coaxial cable to the ACM .

If equipped with satellite radio, the satellite radio roof-mounted antenna receives signals containing data and digital audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM .

APIM

Audio signals received by the APIM are sent to the ACM as fluctuating AC voltage.

The APIM consists of 2 internal modules: the CIP and the VIP . The modules are not replaceable individually, but can be flashed independently, if required.

The CIP interfaces with all of the inputs to the APIM . It contains an analog-to-digital-to analog converter, as well as the Bluetooth chipset. Any Application upgrades that are available to the consumer are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs when a vehicle health report is requested.

FCIM

The FCIM can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods in which the customer interacts with the infotainment system.

The FCIM is separate from the ACM .

FDIM

The FDIM can be operated with the ignition in RUN, ACC, or OFF.

repair4less

The FDIM touchscreen provides one of the methods in which the customer interacts with the infotainment system.

The FDIM plugs directly into the APIM , and therefore does not communicate directly on any network, and no external circuits are connected.

Global Positioning System Module (GPSM)

The Global Positioning System Module (GPSM) provides vehicle location for real-time traffic reports and re-routing, and for identifying vehicle location in the event of a collision.

For vehicles with navigation, the Global Positioning System Module (GPSM) acts as the antenna for the navigation system.

Vehicle location information is broadcast from the Global Positioning System Module (GPSM) to the APIM .

Media Hub

The media hub allows for various audio and video devices to play content through the vehicle speakers and to be viewed in the FDIM .

The media hub receives inputs from:

- 2 USB ports
- 1 Secure Digital (SD) card slot
- 1 set of component RCA jacks

Steering Wheel Switches

The RH steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH steering wheel switch on the input circuits. When a switch is pressed, the voltage is routed through the corresponding resistor(s), and then to ground through the SCCM . The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The SCCM sends a network message to the APIM for the SYNC® switches and to the ACM for the redundant audio controls.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and outgoing audio during a phone call. These signals are sent to the APIM .

DTC Charts

NOTE: For SYNC® related concerns, REFER to the SYNC® Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Audio Front Control Module (ACM) DTC Chart

DTC	Description	Action
B1A01:01	Speaker #1: General Electrical Failure	• For a LF door speaker concern, GO to Pinpoint Test G • For a LF tweeter speaker concern, GO to Pinpoint Test H
B1A01:11	Speaker #1: Circuit Short to Ground	• For a LF door speaker concern, GO to Pinpoint Test G • For a LF tweeter speaker concern, GO to Pinpoint Test H
B1A01:12	Speaker #1: Circuit Short to Battery	• For a LF door speaker concern, GO to Pinpoint Test G • For a LF tweeter speaker concern, GO to Pinpoint Test H
B1A01:13	Speaker #1: Circuit Open	• For a LF door speaker concern, GO to Pinpoint Test G • For a LF tweeter speaker concern, GO to Pinpoint Test H
B1A02:01	Speaker #2: General Electrical Failure	• For a RF door speaker concern, GO to Pinpoint Test I • For a RF tweeter speaker concern, GO to Pinpoint Test J
B1A02:11	Speaker #2: Circuit Short to Ground	• For a RF door speaker concern, GO to Pinpoint Test I • For a RF tweeter speaker concern, GO to Pinpoint Test J
B1A02:12	Speaker #2: Circuit Short to Battery	• For a RF door speaker concern, GO to Pinpoint Test I • For a RF tweeter speaker concern, GO to Pinpoint Test J
B1A02:13	Speaker #2: Circuit Open	• For a RF door speaker concern, GO to Pinpoint Test I • For a RF tweeter speaker concern, GO to Pinpoint Test J
B1A03:01	Speaker #3: General Electrical Failure	GO to Pinpoint Test K .
B1A03:11	Speaker #3: Circuit Short to Ground	GO to Pinpoint Test K .
B1A03:12	Speaker #3: Circuit Short to Battery	GO to Pinpoint Test K .
B1A03:13	Speaker #3: Circuit Open	GO to Pinpoint Test K .
B1A04:01	Speaker #4: General Electrical Failure	GO to Pinpoint Test L .
B1A04:11	Speaker #4: Circuit Short to Ground	GO to Pinpoint Test L .
B1A04:12	Speaker #4: Circuit	GO to Pinpoint Test L .

repair4less

	Short to Battery	
B1A04:13	Speaker #4: Circuit Open	GO to Pinpoint Test L .
B1A56:21	Antenna: Signal Amplitude	If DTC B1A56:21 sets after running the bezel diagnostic tests, disregard this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail. Therefore, tests ran from the bezel diagnostic screen and the DTC generated from the test can be disregarded.
B1A89:11	Satellite Antenna: Circuit Short To Ground	• For a satellite radio concern, GO to Pinpoint Test B • For a SIRIUS Data Services concern, GO to Pinpoint Test C
B1A89:13	Satellite Antenna: Circuit Open	• For a satellite radio concern, GO to Pinpoint Test B • For a SIRIUS Data Services concern, GO to Pinpoint Test C
B1D19:49	Compact Disc Unit: Internal Electronic Failure	• CLEAR the DTC. • WAIT at least 30 seconds. • REPEAT the self-test. • If DTC B1D19:49 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC. This is normal operation.
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AD .
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AG .
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AH .
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AI .
U201A:51	Control Module Main Calibration Data: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2100:00	Initial Configuration Not	CHECK vehicle service history for recent service actions related to

	Complete: No Sub Type Information	this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3000:96	Control Module: Component Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:96 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AJ .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ak .

U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AF .
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AH .
U0423:00	Invalid Data Received	RETRIEVE and FOLLOW DTCs present in the IPC . REFER to

	from Instrument Panel Cluster Control Module: No Sub Type Information	Section 413-01 .
U1A00:87	Private Communication Network: Missing Message	GO to Pinpoint Test C .
U2017:45	Control Module Software #2: Program Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2017:45 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2017:51	Control Module Software #2: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2017:52	Control Module Software #2: Not Activated	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2017:54	Control Module Software #2: Missing Calibration	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2101:00	Control Module	CHECK vehicle service history for recent service actions related to this

repair4less

	Configuration Incompatible: No Sub Type Information	module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:04	Control Module: System Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:04 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:88	Control Module: Bus Off	**NOTE:** Network communication/message DTCs can result from intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming often set these DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. The module was unable to communicate on the network at a point in time. The fault is not currently present. To avoid repeat network concerns: • INSPECT for damaged or corroded wiring at the APIM . • TEST the vehicle battery. REFER to Charging Systems in Section 414-00 . • CLEAR the DTC. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AJ .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ak .

FCIM DTC Chart

DTC	Description	Action

Global Positioning System Module (GPSM) DTC Chart

DTC	Description	Action
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test AA .
U0140:00	Lost Communication With Body Control Module: No Sub Type Information: No Sub Type Information	GO to Pinpoint Test AB .
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AD .
U0401:00	Invalid Data Received from ECM/PCM A: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the PCM . REFER to Section 303-14 .
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the BCM . REFER to Section 419-10 .
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the IPC . REFER to Section 413-01 .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new Global Positioning System Module (GPSM) to correct the failure to retain configuration data. REFER to Global Positioning System Module (GPSM) .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new Global Positioning System Module (GPSM) to correct the failure to retain configuration data. REFER to Global Positioning System Module (GPSM) .
U3000:09	Control Module: Component Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:09 is retrieved again, PERFORM a battery reset by disconnecting the battery for 1 minute, then reconnecting it. • CLEAR the DTC. • WAIT at least 10 seconds.

		• REPEAT the self-test. • If DTC U3000:09 is retrieved again, INSTALL a new Global Positioning System Module (GPSM). REFER to Global Positioning System Module (GPSM) .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new Global Positioning System Module (GPSM). REFER to Global Positioning System Module (GPSM) .
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new Global Positioning System Module (GPSM). REFER to Global Positioning System Module (GPSM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AJ .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test ak .

SCCM DTC Chart

DTC	Description	Action
B1380:09	Steering Wheel Right Switch Pack: Component Failure	GO to Pinpoint Test V .
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	GO to Pinpoint Test V .
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	GO to Pinpoint Test V .
All other DTCs	—	REFER to Section 211-05 .

Symptom Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom Chart — General Audio System

Condition	Possible Sources	Action
• A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals, or connectors • Module	• REFER to Section 418-00 .
• The RH steering wheel controls are	• Refer to the Pinpoint Test	• GO to Pinpoint Test V .

repair4less

inoperative or do not operate correctly		
• The CD player is inoperative or does not operate correctly	• CD • ACM	• INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM. REFER to Audio Control Module (ACM).
• The speed compensated volume does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test D.
• The compass is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test Z.
• The FCIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	• REFER to Section 413-00.
• The audio system does not operate correctly from the FCIM	• Refer to the Pinpoint Test	• GO to Pinpoint Test W.
• The FDIM touchscreen is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test X.
• The FDIM displays “SD CARD FAULT”	• Refer to the Pinpoint Test	• GO to Pinpoint Test Y.

Symptom Chart — HD Radio® System (If Equipped)

Condition	Possible Sources	Action
• Data errors for text display	• Data error from radio broadcaster	• This condition is due to the data from the radio broadcaster. ADVISE the customer that the HD Radio® is functioning correctly.
• Echo, stutter, skip, repeat or volume fluctuation in HD	• Signal alignment error from radio broadcaster	• This condition is due to the signal alignment from the radio broadcaster. ADVISE the customer that the HD Radio® is functioning correctly.
• Sound fading in and out or sound delay	• Transition between HD and analog	• This condition is due to the transition between HD and analog. ADVISE the customer that the HD Radio® must have an available channel in order to output HD content.

• Sound dropout or channel unavailable in HD 2 or HD 3	• HD 2 and HD 3 do not have analog equivalents causing complete signal loss when HD signal fades	• This condition is due to the HD 2 and HD 3 do not have analog equivalents causing complete signal loss when HD signal fades. ADVISE the customer that the HD Radio® must have an available channel in order to output HD content.

Symptom Chart — Navigation (If Equipped)

Condition	Possible Sources	Action
• Navigation is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test Y.
• The SIRIUS data services are not available	• Refer to the Pinpoint Test	• GO to Pinpoint Test C.

Symptom Chart — Satellite Radio (If Equipped)

Condition	Possible Sources	Action
• Poor reception — satellite radio	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.
• Poor sound quality or no sound while in satellite radio mode - all other functions operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.
• The satellite radio is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B.

Symptom Chart — Sound Quality

Condition	Possible Sources	Action
• Poor reception — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A.
• Continuous seek or scan — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A.
• Poor sound quality or distorted sound from one or more speakers (not all speakers)	• Refer to the Pinpoint Test	• GO to Pinpoint Test E.
• No sound from all speakers	• Refer to the Pinpoint Test	• GO to Pinpoint Test F.
• The LF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test G.
• The LF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H.
• The RF door speaker is inoperative	• Refer to the	• GO to

repair4less

	Pinpoint Test	Pinpoint Test L.
• The RF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test J.
• The RR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test K.
• The LR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test L.

SYNC System

Condition	Possible Sources	Action
• All SYNC® Services features are inoperative or inaccurate (traffic, directions, and information)	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset. If the concern is still present, GO to Pinpoint Test O.
• The SYNC® system voice or tone prompts, Text-To-Speech (TTS) feature, or ringtones are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset. If the concern is still present, GO to Pinpoint Test N.
• During a phone call, no incoming audio is heard in the vehicle	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset If the concern is still present, GO to Pinpoint Test N.
• Voice recognition is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset. If the concern is still present, GO to Pinpoint Test P.
• During a phone call, poor quality or no outgoing audio is heard on the outside device	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset. If the concern is still present, GO to Pinpoint Test P.
• No sound from all	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module

SYNC® audio sources (Bluetooth, USB, audio input jack)		(APIM) Reset . If the concern is still present, GO to Pinpoint Test M .
• The SYNC® steering wheel switches are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test V .
• All media hub functions are inoperative or do not operate correctly (USB ports, Secure Digital (SD) card, and RCA jacks)	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test Q .
• The USB port (s) are/is inoperative or do/does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test R .
• The Secure Digital (SD) card slot is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test S .
• The RCA jacks are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test T .
• Unable to pair Bluetooth device	• Refer to the Pinpoint Test	• PERFORM the APIM Reset., REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test U .
• An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	• Customer's device compatibility	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, INSTRUCT the customer to review the device compatibility list. REFER to www.syncmyride.com. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the

repair4less

		manufacturer's instructions.
• 911 Assist™ or Vehicle Health Report (VHR) is inoperative or does not operate correctly	• Unregistered SYNC® owner account • RCM misconfiguration • IPC misconfiguration	• Verify that the customer has a SYNC® Owner Account on www.syncmyride.com. This error message appears due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or RCM. If there have been recent service actions with the IPC or RCM, REPEAT/PERFORM the Programmable Module Installation (PMI) procedure as directed by the diagnostic scan tool. REFER to: Section 418-01. If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

Pinpoint Tests

Pinpoint Test A: Poor Reception Or Continuous Seek Or Scan — AM/FM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to AM/FM Radio, ACM, and Antenna in Information and Entertainment System.

The RDS function allows the vehicle operator to choose which genre (category) of music to listen to. When the SCAN button is pressed, the ACM only stops at channels falling within the selected category. If no channel in the selected category is found, the ACM continues to scan without stopping. This can appear to be a reception issue, but it is actually due to the customer's setting.

Possible Sources

- AM/FM antenna
- AM/FM antenna coaxial cable
- Charging system
- Ignition system
- No channel found in the selected category
- Noise suppression equipment
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST A: POOR RECEPTION OR CONTINUOUS SEEK OR SCAN — AM/FM

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>A1 CHECK THE AUDIO SYSTEM RECEPTION
• Operate the audio system in radio tuner AM/FM mode.
• Check the reception with the engine running, and with the engine off.
• Does the poor reception only occur with the engine running?</td><td>Yes
GO to A2 .

No
GO to A4 .</td></tr>
<tr><td>A2 CHECK THE GENERATOR
• Ignition OFF.
• Disconnect: Wiring harness to the generator voltage regulator.
• Start the engine.
• Operate the audio system in radio tuner AM/FM mode.
• Is the reception OK?</td><td>Yes
INSTALL a new generator. REFER to Section 414-00 .

No
GO to A3 .</td></tr>
<tr><td>A3 CHECK THE IGNITION CIRCUITS
• Ignition OFF.
• Connect: Wiring harness to the generator voltage regulator.
• Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings.
• Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.
• Are the ignition components OK?</td><td>Yes
USE a jumper cable to ground various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary.

No
REPAIR the ignition system as necessary.</td></tr>
<tr><td>A4 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE
• Ignition OFF.
• Disconnect: AM/FM antenna coaxial cable at the ACM . Refer to Audio Control Module (ACM) .
• Disconnect: AM/FM antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — AM/FM .
• Ignition ON.
• Measure the voltage between:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>AM/FM antenna coaxial cable core at the ACM</td><td>—</td><td>—</td><td>Ground</td></tr><tr><td>AM/FM antenna coaxial cable shield at the ACM</td><td>—</td><td>—</td><td>Ground</td></tr></table>• Is any voltage present?</td><td>Yes
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

No
GO to A5 .</td></tr>
<tr><td>A5 CHECK THE LOWER AM/FM ANTENNA COAXIAL</td><td></td></tr>
</table>

repair4less

CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A6.

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM.

A6 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM coaxial cable core at the ACM	—	Lower AM/FM antenna coaxial cable core at the inline connection	—
AM/FM antenna coaxial cable shield at the ACM	—	Lower AM/FM antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

Yes
GO to A7.

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM.

A7 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A8.

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM.

A8 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: AM/FM antenna coaxial cable at the antenna unit. Refer to Antenna — AM/FM.
- Ignition ON.
- Measure the **voltage** between:

Yes
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM.

No
GO to A9.

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

A9 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A10 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A10 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable core at the antenna unit (harness side)	—
AM/FM antenna coaxial cable shield at the ACM	—	AM/FM antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to A11 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A11 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

Yes
GO to A12 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

repair4less

- **Is the resistance greater than 10,000 ohms?**

A12 CHECK THE AM/FM ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
INSTALL a new AM/FM antenna.
REFER to Antenna — AM/FM .

No
GO to A13 .

A13 CHECK THE AM/FM ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A14 .

No
INSTALL a new AM/FM antenna.
REFER to Antenna — AM/FM .

A14 CHECK THE AM/FM ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A15 .

No
INSTALL a new AM/FM antenna.
REFER to Antenna — AM/FM .

A15 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: AM/FM antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Yes
GO to A17 .

No
GO to A16 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

A16 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE	
• Remove the AM/FM antenna. Refer to Antenna — AM/FM . • Measure the **resistance** between: Positive Lead: Pin — AM/FM antenna unit shield at the antenna unit (component side); Circuit — — Negative Lead: Pin — AM/FM antenna base (unpainted surface); Circuit — — • **Is the resistance less than 1 ohm?**	**Yes** GO to A17 . **No** INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .
A17 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test B: The Satellite Radio Is Inoperative, Has Poor Reception, Or Has No Sound

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to MyKey® and Satellite Radio in Information and Entertainment System .

repair4less

When a satellite radio subscription is activated, the satellite receiver ESN is associated with the VIN .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected in the satellite antenna circuit for more than 250 milliseconds. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.

Possible Sources

- Expired subscription
- Incorrectly matched ESN
- Wiring, terminals, or connectors
- Obstructions in the antenna's line of sight
- Satellite radio antenna
- Satellite radio antenna coaxial cable
- ACM

PINPOINT TEST B: THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION, OR HAS NO SOUND

Test Step	Result / Action to Take
B1 VERIFY AN ACTIVE SUBSCRIPTION	
• Operate the infotainment system in satellite radio mode and observe the infotainment display. • **Does the display indicate that the subscription has expired?**	**Yes** The subscription has expired. INFORM the customer to contact SIRIUS to reactivate the subscription. **No** GO to B2 .
B2 CHECK THE RECEPTION	
• Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees. • Using a diagnostic scan tool, view the ACM PIDs. • Monitor the satellite signal strength (SAT_SIG_STR) PID. • If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained. • **Can a "Good," "Very Good," or "Excellent" PID value be obtained?**	**Yes** GO to B3 . **No** GO to B6 .
B3 CHECK THE SATELLITE RADIO SYSTEM FOR CORRECT OPERATION	
• Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple**	**Yes** The system is operating correctly at this time. The concern was a result of

channels with normal sound quality?	obstructions in the antenna's line of sight. **No** GO to B4.
B4 CHECK FOR PROMOTIONAL CHANNEL 184 • Select channel 184. • **Does the satellite radio system receive channel 184 with normal sound quality?**	**Yes** GO to B5. **No** GO to B6.
B5 VERIFY THAT THE VIN AND ESN ON FILE MATCH THE VIN AND ESN FROM THE VEHICLE • Retrieve the satellite radio ESN. Satellite Radio Electronic Serial Number (ESN) Retrieval. • Contact the SIRIUS Dealer Support Line (888-465-8528). • Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle. • Follow the actions from step 2 to obtain "Good," "Very Good," or "Excellent" reception. • Operate the infotainment system in satellite radio mode. • **NOTE:** It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate. • Request for SIRIUS to send the activation signal to the vehicle 2-3 times. • Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle. **No** GO to B6.
B6 CHECK FOR ACM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the ACM DTCs. • Using a diagnostic scan tool, perform the ACM self-test. • **Are any DTCs recorded in the ACM?**	**Yes** For DTC B1A89:11 or DTC B1A89:13, GO to B7. For all other ACM DTCs, REFER to the ACM DTC chart in Information and Entertainment System. **No** GO to B20.
B7 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: Satellite radio antenna coaxial cable at the ACM. Refer to Audio Control Module (ACM). • Disconnect: Satellite radio antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — Satellite Radio. • Ignition ON. • Measure the **voltage** between:	**Yes** REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio. **No** GO to B8.

No
GO to B16 .

B16 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit

Yes
GO to B17 .

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

B17 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B18 .

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

B18 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: Satellite radio antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

Yes
GO to B20 .

No
GO to B19 .

B19 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the satellite radio antenna. Refer to Antenna — Satellite Radio .
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	Satellite radio antenna base (unpainted surface)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B20 .

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

B20 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern,

repair4less

▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM). **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test C: The SIRIUS Data Services Are Not Available

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SIRIUS Data Services in Information and Entertainment System.

When a SIRIUS Data Services subscription is activated, the satellite receiver ESN is associated with the VIN.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected in the satellite antenna circuit for more than 250 milliseconds. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.
U1A00:87	Private Communication Network: Missing Message	Set by the APIM when messages are missing from the ACM on the satellite digital radio data link (SDL) circuits.

Removal of the navigation SD card results in loss of navigation while the card is removed. This is normal operation.

Possible Sources

- Navigation map SD card not present, not fully seated, or damaged
- Expired subscription
- Obstructions in the antenna's line of sight
- Incorrectly matched ESN
- Wiring, terminals, or connectors
- APIM
- ACM
- Satellite radio antenna

- Satellite radio antenna coaxial cable

PINPOINT TEST C: THE SIRIUS DATA SERVICES ARE NOT AVAILABLE

Test Step	Result / Action to Take
C1 VERIFY THE NAVIGATION MAP SD CARD IS PRESENT • Check for the presence of a navigation map SD card in the media hub SD slot. • **Is the navigation map SD card present and fully seated?**	**Yes** GO to C2. **No** INSTALL the navigation map SD card. TEST the system for normal operation.
C2 INSPECT THE NAVIGATION MAP SD CARD • Remove the navigation map SD card. • Inspect the navigation map SD card for damage. • **Is any damage present?**	**Yes** INSTALL a new navigation map SD card. **No** GO to C3.
C3 VERIFY AN ACTIVE SUBSCRIPTION **NOTE:** The status of the satellite radio subscription should be disregarded in this step since SIRIUS data services does not require a satellite radio subscription to operate. • Access the Subscription Info selection in the touchscreen Travel Link menu. • **Does the display indicate the subscription has expired for traffic, weather, fuel prices, movie times, sports, weather map, or ski conditions?**	**Yes** If the subscription has expired for one or more, but not all categories mentioned above, GO to C28 If the subscription has expired for all categories mentioned above, INFORM the customer to contact SIRIUS to reactivate the subscription. **No** GO to C4.
C4 CHECK THE RECEPTION • Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees. • Using a diagnostic scan tool, view the ACM PIDs. • Monitor the satellite signal strength (SAT_SIG_STR) PID. • If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained. • **Can a "Good," "Very Good," or "Excellent" PID value be obtained?**	**Yes** GO to C5. **No** GO to C8.
C5 CHECK THE SIRIUS DATA SERVICES FOR CORRECT OPERATION • Operate the infotainment system in SIRIUS data services mode and observe the infotainment display. • **Do SIRIUS data services operate correctly?**	**Yes** The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight.

repair4less

	No GO to C6 .
C6 CHECK FOR PROMOTIONAL CHANNEL 184 • Operate the infotainment system in satellite radio mode. • Select channel 184. • **Does the satellite radio system receive promotional channel 184 with normal sound quality?**	**Yes** GO to C7 . **No** GO to C8 .
C7 VERIFY THAT THE VIN AND ESN ON FILE MATCH THE VIN AND ESN FROM THE VEHICLE • Retrieve the satellite radio ESN . Satellite Radio Electronic Serial Number (ESN) Retrieval . • Contact the SIRIUS Dealer Support Line (888-465-8528). • Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle. • Follow the actions from step 4 to obtain "Good," "Very Good," or "Excellent" reception. • Operate the infotainment system in SIRIUS data services mode. • **NOTE:** It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate. • Request for SIRIUS to send the activation signal to the vehicle 2-3 times. • Operate the infotainment system in SIRIUS data services mode and observe the infotainment display. • **Do SIRIUS data services operate correctly?**	**Yes** The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle. **No** GO to C8 .
C8 CHECK FOR ACM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the ACM DTCs. • Using a diagnostic scan tool, perform the ACM self-test. • **Are any DTCs recorded in the ACM ?**	**Yes** For DTC B1A89:11 or DTC B1A89:13, GO to C10 . For all other ACM DTCs, REFER to the ACM DTC chart in Information and Entertainment System . **No** GO to C9 .
C9 CHECK FOR APIM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the APIM DTCs. • Using a diagnostic scan tool, perform the APIM self-test. • **Are any DTCs recorded in the APIM ?**	**Yes** For DTC U1A00:87, GO to C23 . For all other APIM DTCs, REFER to the APIM DTC chart in Information and Entertainment System . **No** GO to C27 .
C10 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: Satellite radio antenna coaxial cable	**Yes** REPAIR or INSTALL a new lower satellite

at the ACM . Refer to Audio Control Module (ACM) .
- Disconnect: Satellite radio antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

No
GO to C11 .

C11 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C12 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C12 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio coaxial cable core at the ACM	—	Lower satellite radio antenna coaxial cable core at the inline connection	—
Satellite radio antenna coaxial cable shield at the ACM	—	Lower satellite radio antenna coaxial cable shield at the inline connection	—

Yes
GO to C13 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

repair4less

- **Is the resistance less than 1 ohm?**

C13 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C14 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C14 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: Satellite radio antenna coaxial cable at the antenna unit. Refer to Antenna — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

No
GO to C15 .

C15 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

Yes
GO to C16 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

- **Is the resistance greater than 10,000 ohms?**

C16 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable core at the antenna unit (harness side)	—
Satellite radio antenna coaxial cable shield at the ACM	—	Satellite radio antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to C17 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C17 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C18 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C18 CHECK THE SATELLITE RADIO ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna		—	Ground

Yes
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

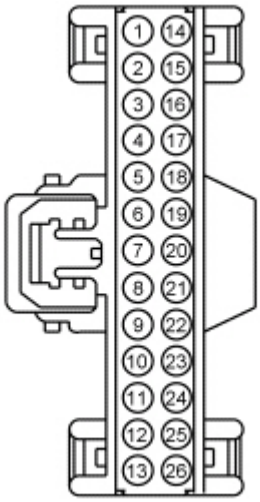
No
GO to C19 .

repair4less

coaxial cable shield at the ACM —	
• **Is any voltage present?**	
C19 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the **resistance** between: Positive Lead: Pin — Satellite radio antenna coaxial cable core at the ACM; Circuit — Negative Lead: Pin —; Circuit Ground • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C20 . **No** INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .
C20 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER	
• Measure the **resistance** between: Positive Lead: Pin — Satellite radio antenna coaxial cable core at the ACM; Circuit — Negative Lead: Pin — Satellite radio antenna coaxial cable shield at the ACM; Circuit — • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C21 . **No** INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .
C21 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND	
• Disconnect: Satellite radio antenna coaxial cable at the antenna unit. • Measure the **resistance** between: Positive Lead: Pin — Satellite radio antenna unit shield at the antenna unit (component side); Circuit — Negative Lead: Pin —; Circuit Ground • **Is the resistance less than 1 ohm?**	**Yes** GO to C27 . **No** GO to C22 .
C22 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE	
• Remove the satellite radio antenna. Refer to Antenna — Satellite Radio .	**Yes** GO to C27 .

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	Satellite radio antenna base (unpainted surface)	—



- **Is the resistance less than 1 ohm?**

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

C23 CHECK THE SATELLITE DATA CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: ACM C240B.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	—	Ground
C240B-19	VME91 (WH/BN)	—	Ground

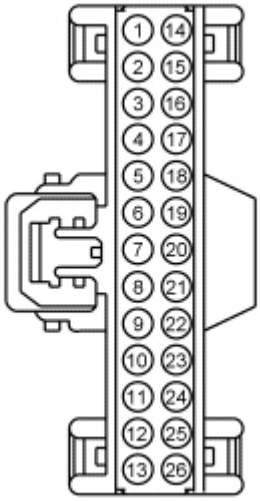
- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to C24 .

C24 CHECK THE SATELLITE DATA CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:



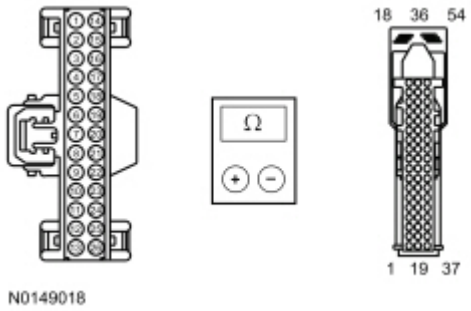
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit

Yes
GO to C25 .

No
REPAIR the circuit in question.

repair4less

C240B-6	VME90 (GY/BU)	—	Ground
C240B-19	VME91 (WH/BN)	—	Ground



- **Are the resistances greater than 10,000 ohms?**

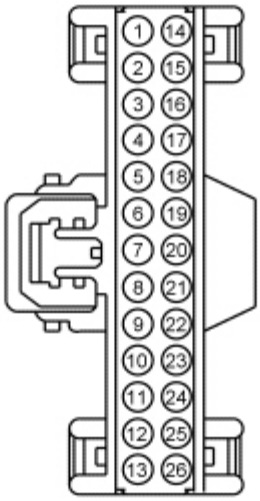
C25 CHECK THE SATELLITE DATA CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	C2383-51	VME90 (GY/BU)
C240B-19	VME91 (WH/BN)	C2383-52	VME91 (WH/BN)

- **Are the resistances less than 3 ohms?**

Yes
GO to C26 .



No
REPAIR the circuit in question.

C26 CHECK THE SATELLITE DATA CIRCUITS FOR A SHORT TOGETHER

- Measure the **resistance** between:

Yes

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	C240B-19	VME91 (WH/BN)

- **Is the resistance greater than 10,000 ohms?**

GO to C28 .

No
REPAIR the circuit in question.

C27 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C28 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused

repair4less

• Operate the system and determine if the concern is still present. • **Is the concern still present?**	by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test D: The Speed Compensated Volume Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Speed Compensated Volume in Information and Entertainment System .

Possible Sources

- Speed compensated volume setting
- VSS signal concern
- Network communication concern
- ACM

PINPOINT TEST D: THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
D1 CHECK THE SPEEDOMETER OPERATION	
• Drive the vehicle and observe the speedometer. • **Does the speedometer operate correctly?**	**Yes** GO to D2 . **No** REFER to Section 413-01 .
D2 CHECK THE SPEED COMPENSATED VOLUME SETTING	
• Turn the speed compensated volume off. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • **Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?**	**Yes** The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature. **No** GO to D3 .

D3 CHECK FOR DTC U0155:00	
• Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155:00 retrieved in any audio system module?**	**Yes** GO to Pinpoint Test AD . **No** GO to D4 .
D4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test E: Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)

repair4less

- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST E: POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Test Step	Result / Action to Take
E1 ISOLATE THE ZONE • Operate the audio system using digital media (CD, MP3, etc.). • Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LF , RF , LR , and RR) of the vehicle to isolate the poor sound quality. • Locate and apply pressure to the trim panel(s) around the poor sound quality area in question. • **Does applying pressure to a trim panel reduce or eliminate the audible noise?**	**Yes** REPAIR or REPLACE the trim panel as needed. **No** GO to E2 .

E2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)
• Remove the trim panel to access the suspect speaker.
• Operate the audio system using digital media (CD, MP3, etc.).
• Validate where the poor sound quality area is located.
• Check:
  ▪ Trim panel for loose components around the speaker area such as the speaker grille
  ▪ Trim panel joining components for missing or broken pieces
  ▪ Lock and handle mechanical parts for correct attachment
  ▪ Wire harnesses for correct routing
  ▪ Wire harness fasteners for correct attachment
  ▪ Water shield for correct placement (speaker air path not blocked)
  ▪ Water shield for correct bonding to sheet metal
  ▪ Storage areas for loose items
  ▪ All child safety belt anchors (if equipped)
  ▪ All safety belt retractors
  ▪ All speaker bracket fasteners and other fasteners are secured and tightened to specified torque
• **Was the source of the noise located?**
	Yes
	REPAIR or REPLACE any loose or broken component or fastener as needed.
	
	No
	GO to E3 .

E3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION
• Inspect for watermarks.
• Check the:
  ▪ Cone
  ▪ Magnet
  ▪ Basket
• **Are any watermarks present on the speaker?**
	Yes
	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required.
	
	DRY the speaker in question and

	TEST the system for normal operation. **No** GO to E4.
E4 ISOLATE SPEAKER TO VERIFY NOISE	
• Remove the suspect speaker from its location and leave the speaker connected to the harness. • Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact. • Operate the audio system using digital media (CD, MP3, etc.). • **Is the noise still present in the suspect speaker?**	**Yes** INSTALL a new speaker for the one in question. **No** LOCATE the source of the noise and REPAIR as needed.

Pinpoint Test F: No Sound From All Speakers

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

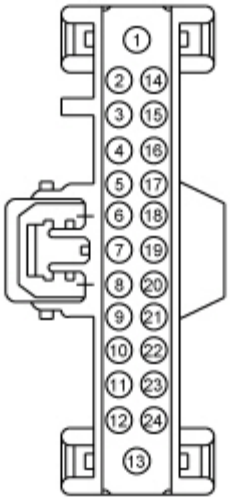
Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System.

When the ignition is in the START position, the ACM receives voltage on the START signal circuit and mutes the speaker output. This prevents voltage spikes from producing popping noises through the speakers. A short to voltage on this circuit causes the ACM output to be muted continuously.

A short to ground or short to voltage in the circuitry to one of the speakers may cause multiple speakers to lose sound due to the built-in overload protection feature of the ACM. In this case, a speaker fault DTC sets.



Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST F: NO SOUND FROM ALL SPEAKERS

Test Step	Result / Action to Take
F1 CHECK FOR SPEAKER DTCS	
• Ignition ON. • Using a diagnostic scan tool, perform the ACM self-test. • **Are any speaker fault Diagnostic Trouble Codes (DTCs) present?**	**Yes** REFER to the audio ACM module DTC chart in Information and Entertainment System. **No** GO to F2.
F2 CHECK THE START SENSE CIRCUIT FOR A	

repair4less

SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C240A-3, Circuit CDC54 (WH/GN) Negative Lead: Pin —, Circuit Ground  • **Is the voltage 5V or greater?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to F3 .

F3 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test G: The LF Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

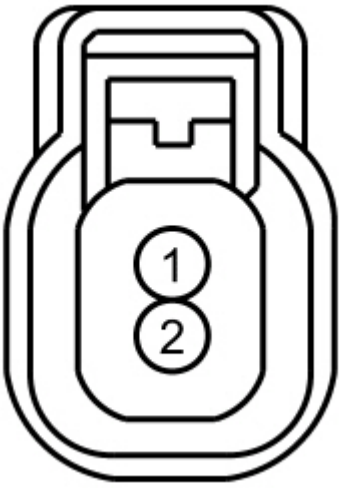
Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LF door or tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LF door or tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LF door or tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LF door or tweeter speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM

PINPOINT TEST G: THE LF DOOR SPEAKER IS INOPERATIVE



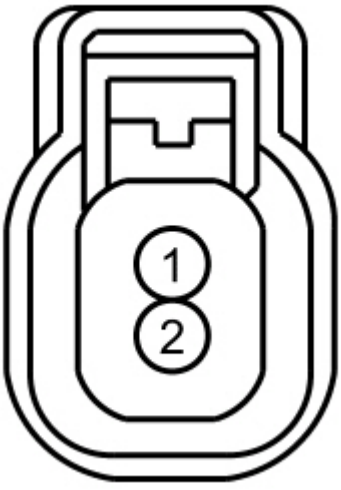
<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>G1 CHECK THE AUDIO SIGNAL TO THE LF DOOR SPEAKER

• Ignition OFF.
• Disconnect: LF Door Speaker C523 .
• Operate the audio system in radio tuner AM/FM mode.
• Measure the AC voltage between:

<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C523-1</td><td>VME07 (WH)</td><td>C523-2</td><td>RME07 (WH/BN)</td></tr></table></td><td>Yes
INSTALL a new LF door speaker. REFER to Speaker — Door .

No
GO to G2 .</td></tr>
</table>

repair4less



- **Is a fluctuating AC voltage present?**

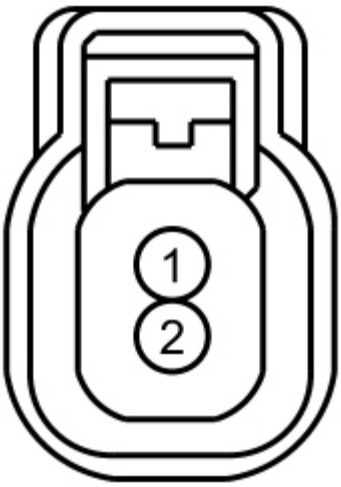
G2 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: ACM C240A .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	—	Ground
C523-2	RME07 (WH/BN)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.



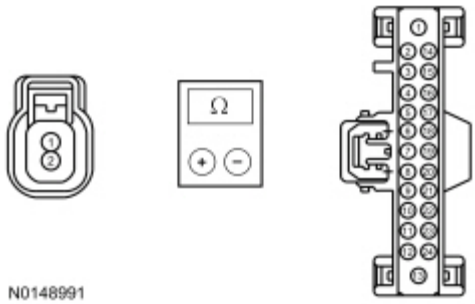
No
GO to G3 .

G3 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: LF Tweeter Speaker C230 .
- Measure the **resistance** between:

Yes
GO to G4 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	—	Ground
C523-2	RME07 (WH/BN)	—	Ground



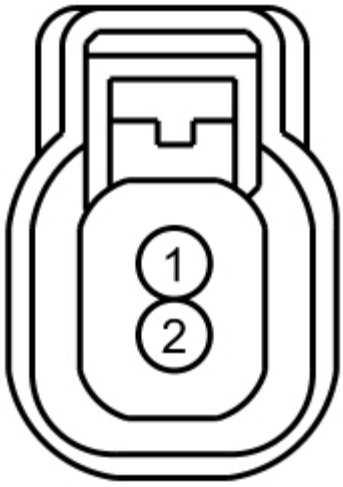
- **Are the resistances greater than 10,000 ohms?**

No
REPAIR the circuit in question.

G4 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	C240A-22	VME07 (WH)
C523-2	RME07 (WH/BN)	C240A-10	RME07 (WH/BN)



- **Are the resistances less than 3 ohms?**

Yes
GO to G5 .

No
REPAIR the circuit in question.

repair4less

DOOR SPEAKER FOR A SHORT TOGETHER • Measure the **resistance** between: <table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C523-1</td><td>VME07 (WH)</td><td>C523-2</td><td>RME07 (WH/BN)</td></tr></table>  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to G6 . **No** REPAIR the circuit in question.

G6 CHECK FOR CORRECT ACM OPERATION
• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test H: The LF Tweeter Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LF door or tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the ACM when a short to ground is detected on the LF door or tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short to Battery	Set by the ACM when a short to battery is detected on the LF door or tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LF door or tweeter speaker circuits.

Pinpoint Test M: Poor Quality, Distorted, Or No Sound While In SYNC® Mode

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® System in Information and Entertainment System .

The APIM transmits left and right channel analog audio signals to the ACM . These signals include inputs from the USB port, the SD card slot, the RCA jacks, and a Bluetooth media device. If a USB mass storage device is used to play an audio file, the SYNC® system only plays audio files that do not have DRM protection.

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST M: POOR QUALITY, DISTORTED, OR NO SOUND WHILE IN SYNC® MODE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>M1 VERIFY THE OPERATION OF THE SYNC® SYSTEM AUDIO SOURCES</td><td></td></tr>
<tr><td>• Connect: Multi-Media Interface Tester 105-00120.
• Using the Multi-Media Interface Tester 105-00120 and RCA Adapter 105-00121, test the audio output for the RCA jacks, USB ports, and Bluetooth.
• Is there poor quality, distorted, or no sound from all SYNC® audio sources?</td><td>Yes
GO to M2 .

No
If there is a concern with one or more, but not all audio sources, GO to Symptom Chart - SYNC® System to diagnose the observed symptom.

If all audio sources operate correctly, the concern is with the customer's device.</td></tr>
<tr><td>M2 CHECK THE AUDIO SIGNALS TO THE ACM</td><td></td></tr>
<tr><td>NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.
• Operate the audio system in SYNC® mode and play an audio file.
• Measure the AC voltage by back-probing ACM connector C240B:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C240B-12</td><td>VME52 (BU)</td><td>C240B-25</td><td>RME52 (GY/OG)</td></tr></table></td><td>Yes

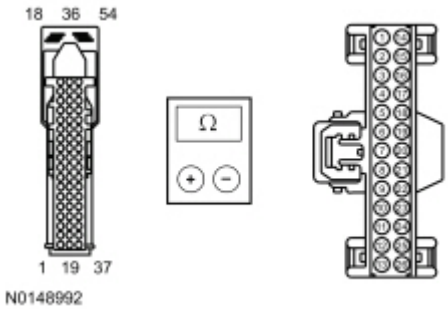
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME52 (BU)	—	Ground
C2383-24	RME52 (GY/OG)	—	Ground
C2383-25	VME53 (VT/GN)	—	Ground

Yes
GO to M5 .

No
REPAIR the circuit in question.

C2383-26	RME53 (BN/WH)	—	Ground



- **Are the resistances greater than 10,000 ohms?**

M5 CHECK THE CIRCUITS TO THE ACM FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME52 (BU)	C240B-12	VME52 (BU)
C2383-24	RME52 (GY/OG)	C240B-25	RME52 (GY/OG)
C2383-25	VME53 (VT/GN)	C240B-13	VME53 (VT/GN)
C2383-26	RME53 (BN/WH)	C240B-26	RME53 (BN/WH)

- **Are the resistances less than 3 ohms?**

Yes
GO to M6 .

No
REPAIR the circuit in question.

M6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.

Yes

repair4less

• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M7 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test N: The SYNC® System Audible Prompts Are Inoperative Or Do Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

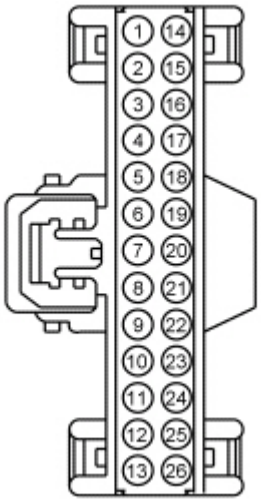
Normal Operation and Fault Conditions

Refer to SYNC® System and Voice Recognition in Information and Entertainment System .

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST N: THE SYNC® SYSTEM AUDIBLE PROMPTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY



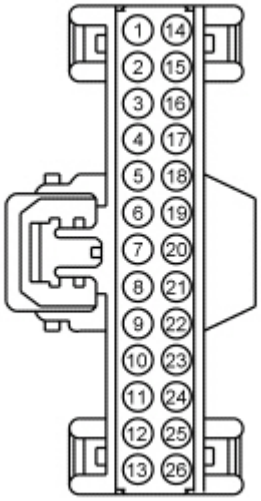
<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>N1 CHECK THE AUDIBLE PROMPT SETTING
• Operate the audio system in SYNC® mode.
• Verify the audible prompts are enabled. Refer to "SYNC® Voice Recognition Feature" in the Owner's Literature.
• Operate the VOICE button on the steering wheel controls and observe the SYNC® audible prompt.
• Does the SYNC® system produce an audible prompt correctly?</td><td>Yes
The system is operating correctly at this time. The concern was caused by the customer's setting. INSTRUCT the customer in the correct operation of the audible prompt feature.

No
GO to N2 .</td></tr>
<tr><td>N2 CHECK FOR A VOLTAGE SIGNAL FROM THE APIM
NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.
• Operate the audio system in SYNC® mode.
• While operating the VOICE button repeatedly, measure the AC voltage by back-probing ACM connector C240B:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C240B-8</td><td>VMN14 (WH/VT)</td><td>C240B-21</td><td>RMN14 (GY/BN)</td></tr></table>• Is a fluctuating AC voltage present each time the VOICE switch is operated?</td><td>Yes
GO to N7 .

No
GO to N3 .</td></tr>
<tr><td>N3 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO VOLTAGE
• Ignition OFF.
• Disconnect: ACM C240B .
• Disconnect: APIM C2383 .
• Ignition ON.
• Measure the voltage between:
<table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C240B-8</td><td>VMN14 (WH/VT)</td><td>—</td><td>Ground</td></tr><tr><td>C240B-21</td><td>RMN14 (GY/BN)</td><td>—</td><td>Ground</td></tr></table></td><td>Yes
REPAIR the circuit in question.

No
GO to N4 .</td></tr>
</table>

repair4less



- **Is any voltage present?**

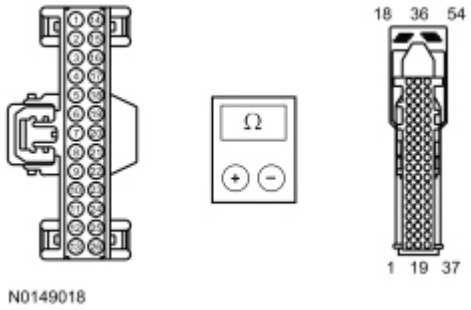
N4 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-8	VMN14 (WH/VT)	—	Ground
C240B-21	RMN14 (GY/BN)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to N5 .



No
REPAIR the circuit in question.

N5 CHECK THE AUDIBLE PROMPT CIRCUITS FOR AN OPEN

- Measure the **resistance** between:

Yes
GO to N6 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-8	VMN14 (WH/VT)	C2383-3	VMN14 (WH/VT)
C240B-21	RMN14 (GY/BN)	C2383-4	RMN14 (GY/BN)

- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

N6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N7 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any

repair4less

	connector or pin issues.

Pinpoint Test O: All SYNC® Services Features Are Inoperative Or Inaccurate

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® Services in Information and Entertainment System .

Possible Sources

- Expired subscription
- APIM
- GPSM
- SYNC® Services server

PINPOINT TEST O: ALL SYNC® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE

Test Step	Result / Action to Take
O1 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION AND SUBSCRIPTION	
• Verify that the customer has a SYNC® Owner Account on SyncMyRide • Verify that the customer has registered for SYNC® Services and has an active subscription. • **Does the customer have a SYNC® Owner Account and an active SYNC® Services subscription?**	**Yes** GO to O2 . **No** If the customer does not have a SYNC® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC® Services. REFER to SyncMyRide . If the customer does not have an active SYNC® Services subscription, INFORM the customer that in order for SYNC® Services to function, the subscription needs to be activated. REFER to SyncMyRide .
O2 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS	
• Verify that the mobile phone being used has the correct phone number registered with SYNC® Services. • Verify that the mobile phone being used is selected as "Active" on SyncMyRide . • **Is the customer using the registered and active mobile phone associated with the**	**Yes** GO to O3 . **No** INFORM the customer that the correct phone number must be registered on the SYNC® website and selected as "Active." REFER to SyncMyRide .

SYNC® services account?	
O3 CHECK FOR APIM DTCs	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Are any DTCs recorded in the APIM ?**	**Yes** REFER to the APIM DTC Chart in Information and Entertainment System . **No** GO to O4 .
O4 CHECK FOR GPSM DTCs	
• Using a diagnostic scan tool, perform the GPSM self-test. • **Are any DTCs recorded in the GPSM ?**	**Yes** REFER to the GPSM DTC Chart in Information and Entertainment System . **No** GO to O5 .
O5 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES	
• Advise the customer to connect their phone to SYNC® Services. Caller ID blocking must be disabled on the customer's phone. Refer to the Owner's Literature. • Operate a SYNC® Services feature. • Verify that the phone call is placed and that the phone is connected to SYNC® Services. • **Does the phone connect to SYNC® Services and operate correctly?**	**Yes** GO to O6 . **No** GO to Pinpoint Test S .
O6 OBSERVE THE SYNC® SERVICES SUBSCRIPTION COMMERCIAL	
• Once the customer's phone is connected to SYNC® Services, observe the subscription commercial. • **Does the SYNC® Services subscription commercial repeat with no selection option?**	**Yes** There is a potential SYNC® Services server issue, and the problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance. **No** GO to O7 .
O7 CHECK THE OPERATION OF THE DIRECTIONS FROM SYNC® SERVICES	
• When prompted, select directions from SYNC® Services and observe the audible prompts from the audio system. • **Is a single chime, audible prompt, then a short chime**	**Yes** SYNC® Services is operating correctly at this time. **No** If a single chime, audible prompt, then a repeating chime is heard, indicating the navigation route is being sent to the vehicle, GO to O8 . If no chime or audible prompt is heard,

repair4less

heard, indicating the navigation route is being sent to the vehicle?	indicating that the system was unable to locate the vehicle, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance.

O8 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test P: Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Voice Recognition in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B116A:01	Handset Microphone: General Electrical Failure	Set by the APIM when a short to voltage, short to ground, or open is detected on the microphone circuits.

Possible Sources

- Insufficiently quiet vehicle
- Inadequate phone reception

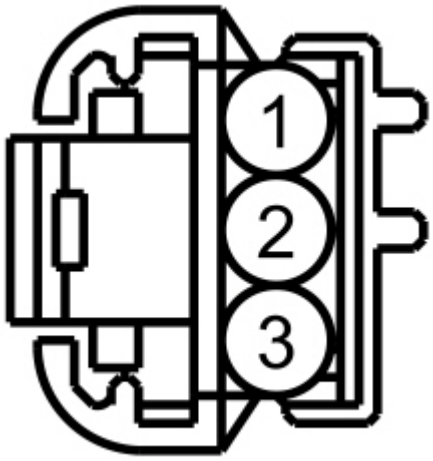
- Wiring, terminals, or connectors
- Microphone
- APIM

PINPOINT TEST P: VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

Test Step	Result / Action to Take
P1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY • Operate the audio system in radio tuner AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **Does the SYNC® system produce an audible prompt correctly, indicating voice recognition mode has been entered?**	**Yes** GO to P3 . **No** GO to P2 .
P2 CHECK THE OPERATION OF THE RH STEERING WHEEL SWITCHES • Operate the audio system in AM/FM mode. • Operate the VOLUME +/-, SEEK +/-, MEDIA, and PHONE steering wheel switches. • **Do the VOLUME +/-, SEEK +/-, MEDIA, and PHONE steering wheel switches operate correctly?**	**Yes** GO to Pinpoint Test N . **No** GO to Pinpoint Test V to diagnose the RH steering wheel switches.
P3 CHECK THE OPERATION OF THE "PHONE" VOICE COMMAND • Pair a Bluetooth phone with the SYNC® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on syncmyride.com . • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands. • Clearly speak the word "phone." • **Does the SYNC® system respond correctly to the "phone" voice command?**	**Yes** For a concern with the voice recognition being inoperative or not operating correctly, the system is operating correctly at this time. The concern may have been caused by an insufficiently quiet vehicle. Delete the just-paired Bluetooth phone from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. For a concern with poor quality or no outgoing audio being heard on the outside device during a phone call, GO to P4 **No** GO to P5 .
P4 CHECK THE OUTGOING PHONE CALL QUALITY AND VOICE VOLUME • Ensure that the Bluetooth phone paired in step 3 has adequate reception. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the	**Yes** The system is operating correctly at this time. The concern may have been caused by poor phone reception or an insufficiently quiet vehicle.

repair4less

call from having clear call quality and acceptable voice volume.
- Using the SYNC® system, place a phone call. For information on making calls from the SYNC® system, refer to the Owner's Literature.
- Ensure that the called party's phone has adequate reception.
- Instruct the called party to determine if the call quality is clear and of acceptable volume.
- Delete the Bluetooth phone paired in step 3 from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature.
- **Is the outgoing call quality clear and of acceptable volume?**



No
GO to P5 .

P5 CHECK THE MICROPHONE AND MICROPHONE CIRCUITS FOR CORRECT VOLTAGE DROP

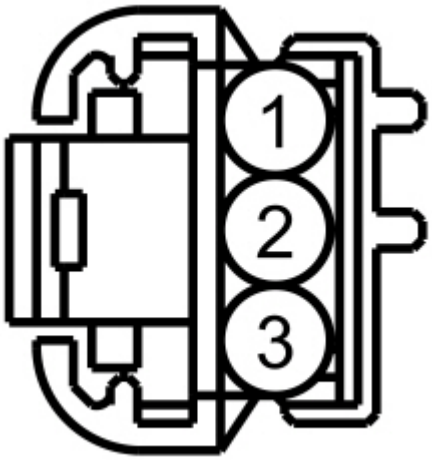
NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**

- Ignition ON.
- While back-probing microphone C9221, measure and record the **DC voltage** .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

- **Is the voltage between 2.7 and 6.2 volts?**

Yes
If diagnosing an intermittent concern, GO to P6 . If **not** diagnosing an intermittent concern, GO to P13



No
GO to P7 .

P6 CHECK THE MICROPHONE CIRCUITS FOR INTERMITTENT CONCERNS

NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**

- While back-probing microphone C9221, measure the **DC voltage** while agitating the microphone harness back and forth and up and down (wiggle testing).

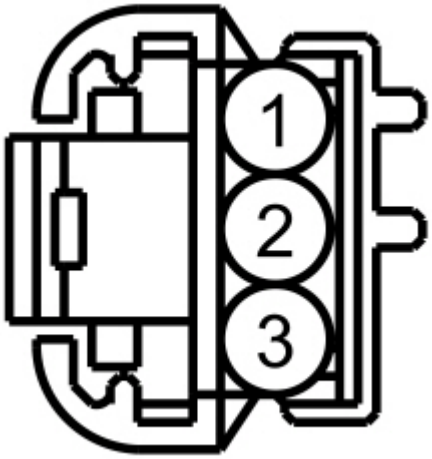
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

- Review the recorded results from step 5.
- **Does the voltage fluctuate more than .5 volts from the recorded result in step 5?**

Yes
REPAIR the circuit(s), connector, or terminal(s) in question. For corrosion, clean pins or install a new connector or terminals. For damaged or bent pins, install new terminals or pins.

No
GO to P12 .

P7 CHECK THE MICROPHONE CIRCUITS FOR CORRECT VOLTAGE



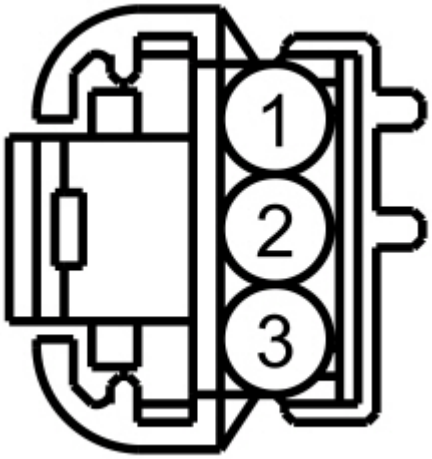
- Ignition OFF.
- Disconnect: Microphone C9221.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

Yes
GO to P12 .

No
GO to P8 .

repair4less



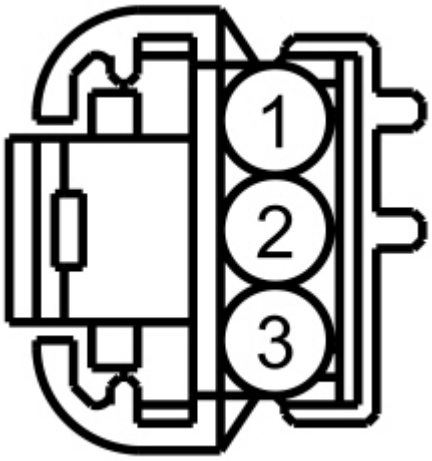
- **Is the voltage between 7.9 and 9.0 volts?**

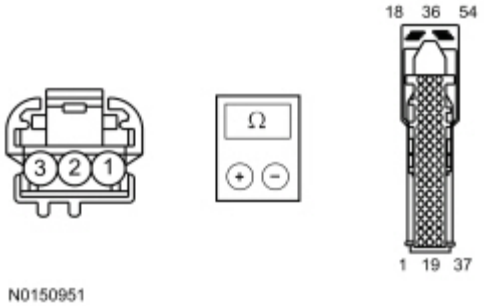
P8 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground

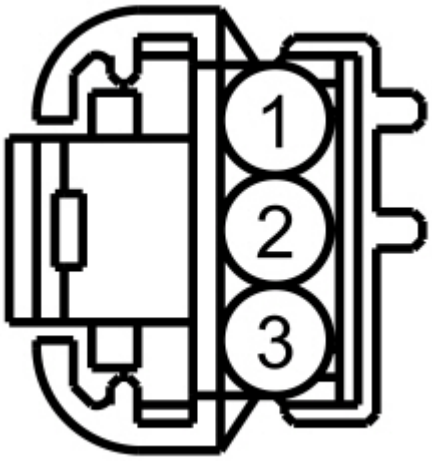
- **Is any voltage present?**





Yes
REPAIR the circuit in question.

No
GO to P9 .



P9 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO GROUND

- Ignition OFF.

Yes

• Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground |  • **Are the resistances greater than 10,000 ohms?**	GO to P10 . **No** REPAIR the circuit in question.
P10 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR AN OPEN • Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C2383-12	VMM13 (YE/GN)
C9221-3	DMM13 (BK)	C2383-13	DMM13 (BK) |  • **Are the resistances less than 3 ohms?**	**Yes** GO to P11 . **No** REPAIR the circuit in question.
P11 CHECK THE MICROPHONE CIRCUITS TO THE	

repair4less

APIM FOR A SHORT TOGETHER • Measure the **resistance** between: <table><tr><th colspan="2">Positive Lead</th><th colspan="2">Negative Lead</th></tr><tr><th>Pin</th><th>Circuit</th><th>Pin</th><th>Circuit</th></tr><tr><td>C9221-2</td><td>VMM13 (YE/GN)</td><td>C9221-3</td><td>DMM13 (BK)</td></tr></table> • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to P13 . **No** REPAIR the circuit in question.
P12 ISOLATE THE MICROPHONE • Install a new microphone. Refer to Microphone . • If necessary, connect: APIM C2383. • Operate the audio system in AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • Speak a command to test the voice recognition for normal operation. • **Is the voice recognition functioning correctly?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative microphone. **No** GO to P13 .

P13 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Q: All Media Hub Functions Are Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub, Composite Audio-Video Input Mode, SD Card Mode, and USB Mode in Information and Entertainment System .

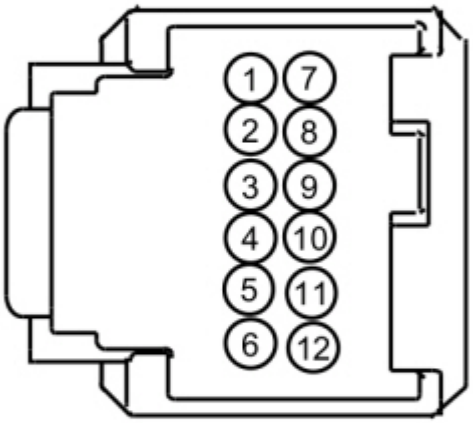
The media hub requires a power and ground circuit from the APIM to operate. Loss of power or ground disables all media hub functionality.

Possible Sources

- Device conflict
- Wiring, terminals, or connectors
- Media hub
- APIM

PINPOINT TEST Q: ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE

NOTE: Before carrying out this pinpoint test, make sure the MP3 device is operating correctly.



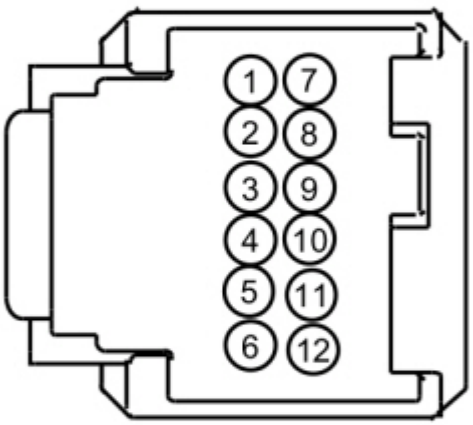
Test Step	Result / Action to Take
Q1 CHECK FOR APIM BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the APIM self-test. • **Are any low or high voltage DTCs recorded in the APIM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AJ . For DTC U3003:17, GO to Pinpoint Test ak . **No** GO to Q2 .
Q2 RESET THE APIM	
• Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Test the system for normal operation. • **Does the system operate correctly?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to Q3 .
Q3 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT	
• Ignition OFF. • Disconnect: Media Hub C3618.	**Yes** GO to Q4 .

repair4less

- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	—	Ground

No
GO to Q5 .



- **Is the voltage greater than 11 volts?**

Q4 CHECK THE MEDIA HUB GROUND CIRCUIT	
• Measure the **voltage** between: Positive Lead / Negative Lead	**Yes** Install a new media hub. Media Hub

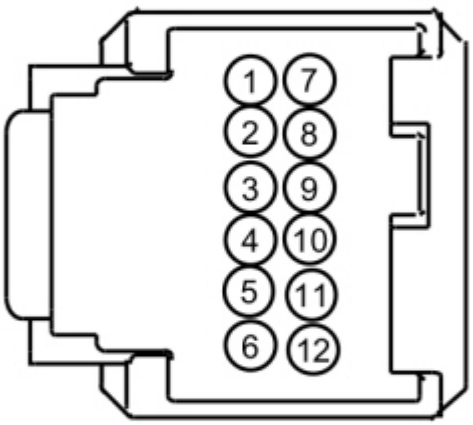
repair4less

Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	C3618-10	RME89 (WH/BU)

No
GO to Q5 .

- **Is the voltage greater than 11 volts?**

Q5 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER	
• Ignition OFF.	**Yes**



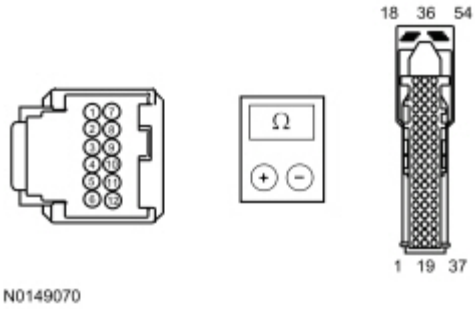
repair4less

- Disconnect: APIM C2383.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	C3618-10	RME89 (WH/BU)

GO to Q6 .

No
Repair the circuit in question.



- **Is the resistance greater than 10,000 ohms?**

Q6 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR AN OPEN	
• Measure the **resistance** between:	**Yes**

repair4less

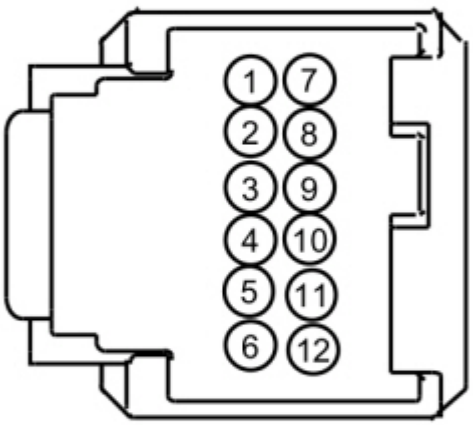
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	C2383-8	LME89 (YE/BU)
C3618-10	RME89 (WH/BU)	C2383-38	RME89 (WH/BU)

N0149070

- **Are the resistances less than 3 ohms?**

GO to Q7 .

No
Repair the circuit in question.



Q7 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Measure the **resistance** between:

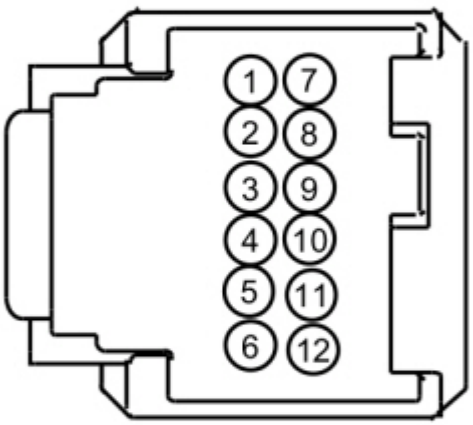
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	—	Ground

Yes
GO to Q8 .

No
REPAIR the circuit.

- **Is the resistance greater than 10,000 ohms?**

Q8 CHECK THE MEDIA HUB GROUND CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON.	**Yes**



repair4less

- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-10	RME89 (WH/BU)	—	Ground

REPAIR the circuit.

No
GO to Q9 .

- **Is any voltage present?**

Q9 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF. • Disconnect and inspect the APIM connector. • Repair:	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE

repair4less

▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test R: The USB Port(s) Is/Are Inoperative Or Do/Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub and USB Mode in Information and Entertainment System .

Although there are two USB ports, there is only one USB cable connecting the media hub to the APIM . The USB cable is used for data transfer, and does not supply power. The Multi-Media Interface Tester 105-00120 is powered by the USB port.

USB and SD card data is transmitted to the APIM through the USB cable.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB cable. This can be caused by a fault in the USB cable, USB port, or customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected in the USB cable.

Possible Sources

- Device conflict
- USB cable
- Media hub
- APIM

PINPOINT TEST R: THE USB PORT(S) IS/ARE INOPERATIVE OR DO/DOES NOT OPERATE

CORRECTLY

Test Step	Result / Action to Take
R1 CHECK THE USB PORT FOR POWER OUTPUT • Connect: Multi-Media Interface Tester 105-00120. • **Does the Multi-Media Interface Tester 105-00120 power on from both USB ports?**	**Yes** GO to R2. **No** If the Multi-Media Interface Tester 105-00120 powers on from only one USB port, INSTALL a new media hub. REFER to Media Hub. If the Multi-Media Interface Tester 105-00120 does not power on from either USB port, GO to Pinpoint Test Q.
R2 RESET THE APIM • Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to Media Hub. If the audio output is not OK from both USB ports, GO to R3.
R3 CHECK THE SD CARD SLOT FUNCTIONALITY • Using a known good SD card, attempt to play an audio file using the SD card slot. • **Is the audio output OK for the SD card slot?**	**Yes** INSTALL a new media hub. REFER to Media Hub. **No** GO to R4.
R4 CHECK THE APIM FOR DTC B1252:11 OR DTC B1252:13 • Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:11 or DTC B1252:13 present?**	**Yes** GO to R5. **No** GO to R7.
R5 INSPECT THE USB CABLE, MEDIA HUB, AND APIM • Ignition OFF. • Disconnect: USB cable at the media hub. • Disconnect: USB cable at the APIM. • Inspect the USB cable ends, media hub USB connector	**Yes** For the USB cable, INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port. For the media hub, INSTALL a new media hub. REFER to Media Hub. For the APIM, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

repair4less

port, and APIM USB connector port for damage. Remove any debris. • **Is any damage present?**	**No** GO to R6 .
R6 CHECK EACH USB PORT FOR FUNCTIONALITY • Connect: USB cable at the media hub. • Connect: USB cable at the APIM . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly. **No** GO to R7 .
R7 ISOLATE THE USB CABLE • INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative USB cable. **No** GO to R8 .

R8 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test S: The SD Card Slot Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub and SD Card Mode in Information and Entertainment System .

SD card data is transmitted to the APIM through the USB cable.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB cable. This can be caused by a fault in the USB cable, USB port, or customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected in the USB cable.

Possible Sources

- Device conflict
- USB cable
- Media hub
- APIM

PINPOINT TEST S: THE SD CARD SLOT IS INOPERATIVE

Test Step	Result / Action to Take
S1 RESET THE APIM	
• Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Using a known good SD card, attempt to play an audio file using the SD card slot. • **Is the audio output OK for the SD card slot?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to S2 .
S2 CHECK THE USB PORTS FOR	

repair4less

FUNCTIONALITY	
• Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** Install a new media hub. REFER to Media Hub . **No** If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to Media Hub . If the audio output is not OK from both USB ports, GO to S3 .
S3 CHECK THE APIM FOR DTC B1252:11 OR DTC B1252:13	
• Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:11 or DTC B1252:13 present?**	**Yes** GO to S4 . **No** Isolate the USB cable. INSTALL a new USB cable. Universal Serial Bus (USB) Cable and Port . Retest the system for normal operation. If the concern is still present, GO to S6 .
S4 INSPECT USB CABLE, MEDIA HUB, AND APIM	
• Ignition OFF. • Disconnect: USB cable at media hub. • Disconnect: USB cable at APIM . • Inspect the USB cable ends, media hub USB connector port, and APIM USB connector port for damage and remove any debris. • **Is any damage present?**	**Yes** For the USB cable, INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . For the media hub, INSTALL a new media hub. REFER to Media Hub . For the APIM , For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** GO to S5 .
S5 RECHECK FOR APIM DTC B1252:11 OR DTC B1252:13	
• Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:11 or DTC B1252:13 present?**	**Yes** GO to S6 . **No** Isolate the USB cable. INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . Retest the system for normal operation. If the concern is still present, GO to S6 .
S6 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

• Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test T: The RCA Jacks Are Inoperative Or Have Poor Sound Quality

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub and Composite Audio-Video Input Mode in Information and Entertainment System .

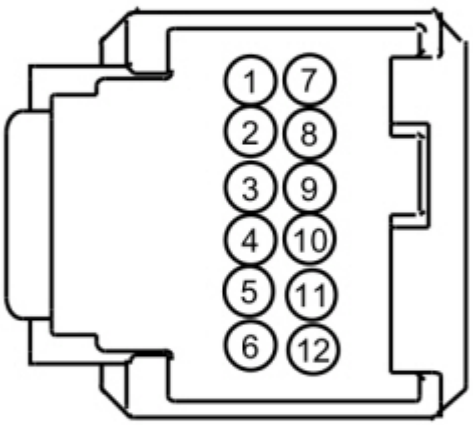
The data transmitted through the RCA cables to the media hub is sent to the APIM through dedicated audio and video circuits.

Possible Sources

- Device conflict
- Wiring, terminals, or connectors
- Media hub
- APIM

PINPOINT TEST T: THE RCA JACKS ARE INOPERATIVE OR HAVE POOR SOUND QUALITY

Test Step	Result / Action to Take
T1 RESET THE APIM	
• Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Using the Multi-Media Interface Tester 105-00120 and RCA Adapter 105-00121, attempt to play audio content using the RCA jacks. • **Is the audio output OK for the RCA jacks?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to T2 .
T2 CHECK THE RCA CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF.	**Yes**



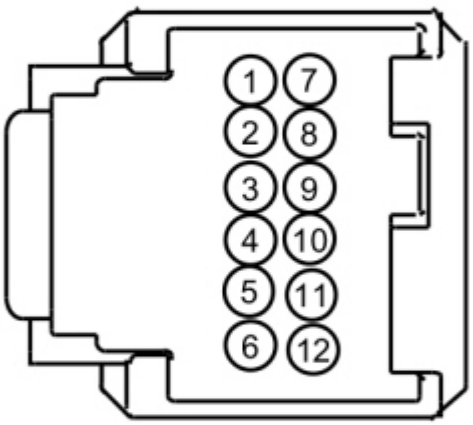
repair4less

- Disconnect: Media Hub C3618.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-2	DME88	—	Ground
C2362-3	VME88 (BU/WH)	—	Ground
C2362-4	DME45	—	Ground
C2362-5	VME45 (BU)	—	Ground
C2362-6	RME45 (YE/GN)	—	Ground
C2362-9	RME88 (GN/BU)	—	Ground
C2362-11	VME46 (BU/GN)	—	Ground
C2362-12	RME46 (WH/GN)	—	Ground

REPAIR the circuit in question.

No
GO to T3 .



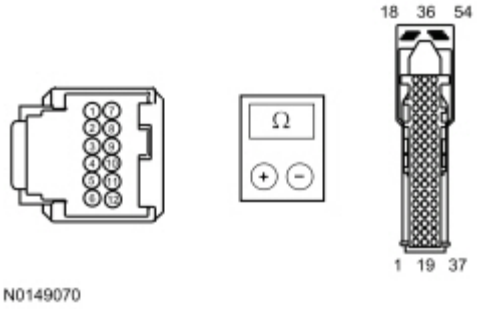
- **Is any voltage present?**

T3 CHECK THE RCA CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the **resistance** between:	**Yes** REPAIR the circuit in question.

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-2	DME88	—	Ground
C2362-3	VME88 (BU/WH)	—	Ground
C2362-4	DME45	—	Ground
C2362-5	VME45 (BU)	—	Ground
C2362-6	RME45 (YE/GN)	—	Ground
C2362-9	RME88 (GN/BU)	—	Ground
C2362-11	VME46 (BU/GN)	—	Ground
C2362-12	RME46 (WH/GN)	—	Ground

No
GO to T4 .



- **Are the resistances greater than 10,000 ohms?**

T4 CHECK THE RCA CIRCUITS FOR AN OPEN	
• Measure the **resistance** between:	**Yes** INSTALL a new media hub. REFER to Media

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-2	DME88	C2383-36	DME88
C2362-3	VME88 (BU/WH)	C2383-34	VME88 (BU/WH)
C2362-4	DME45	C2383-9	DME45
C2362-5	VME45 (BU)	C2383-10	VME45 (BU)
C2362-6	RME45 (YE/GN)	C2383-11	RME45 (YE/GN)
C2362-9	RME88 (GN/BU)	C2383-35	RME88 (GN/BU)
C2362-11	VME46 (BU/GN)	C2383-28	VME46 (BU/GN)
C2362-12	RME46 (WH/GN)	C2383-29	RME46 (WH/GN)

- **Are the resistances less than 3 ohms?**

Hub .

Retest the system for normal operation. If the concern is still present, GO to T5 .

No
REPAIR the circuit in question.

T5 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test U: Unable To Pair Bluetooth Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Bluetooth Mode in Information and Entertainment System .

Possible Sources

- Incompatible Bluetooth device
- Customer error
- Customer's Bluetooth device
- APIM

PINPOINT TEST U: UNABLE TO PAIR BLUETOOTH DEVICE

Test Step	Result / Action to Take
U1 CHECK THE BLUETOOTH CONNECTION **NOTE:** Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, connect to the SYNC® system using Bluetooth. Follow the tool instructions. • Using a diagnostic scan tool, view the APIM PIDs. • Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN). • **Do the PIDs both read "Yes"?**	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device. **No** GO to U2 .
U2 CHECK FOR CORRECT APIM OPERATION • Ignition OFF. • Disconnect and inspect the APIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No**

repair4less

pins) ■ Pushed-out pins (install new pins as necessary) ● Reconnect the APIM connector. Make sure it seats and latches correctly. ● Wait at least 2 minutes for the APIM to re-initialize. ● Operate the system and determine if the concern is still present. ● **Is the concern still present?**	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test V: The RH Steering Wheel Controls Are Inoperative Or Do Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

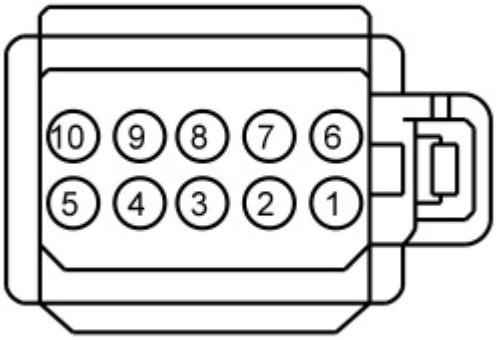
Refer to Steering Wheel Switch Functions and Steering Wheel Switches in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH steering wheel switch is stuck.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected in the RH steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected in the RH steering wheel switch circuits.

Possible Sources

- Wiring, terminals, or connectors
- Clockspring
- Steering wheel switch
- SCCM



PINPOINT TEST V: THE RH STEERING WHEEL CONTROLS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
V1 CHECK THE RH STEERING WHEEL SWITCH PIDs	

• Ignition ON.
• Monitor the steering wheel controls PIDs while pressing each RH steering wheel switch.
• Using a diagnostic scan tool, view the SCCM PIDs.
  • SW_VOLDOWN
  • SW_VOLUP
  • SW_SEEKMINUS
  • SW_SEEKPLUS
  • SW_VOICE
  • SW_MEDIA
  • SW_PHONE
• **Do the PID values agree with the switch positions?**
	Yes
	GO to V10.
	
	No
	If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH steering wheel switch. REFER to Section 211-05. If all PID values are incorrect or always read one particular switch position, GO to V2.

V2 CHECK FOR IPC DTC U0212:00	
• Ignition ON. • Using a diagnostic scan tool, clear the DTCs from the IPC. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the IPC self-test. • **Is DTC U0212:00 set in the IPC ?**	**Yes** REFER to Section 413-01. **No** GO to V3.
V3 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TO GROUND	
WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment. • Ignition OFF. • Disconnect: RH Steering Wheel Switch C2999. • Disconnect: Clockspring C218B. • Measure the **resistance** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit C2999-2 / VME14 / — / Ground C2999-4 / RME14 / — / Ground C2999-6 / VME54 / — / Ground C2999-7 / RME54 / — / Ground	**Yes** GO to V4. **No** INSTALL a new steering wheel. REFER to Section 211-04.

repair4less

- **Are the resistances greater than 10,000 ohms?**

V4 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218B-14	VME14
C2999-4	RME14	C218B-6	RME14
C2999-6	VME54	C218B-16	VME54
C2999-7	RME54	C218B-8	RME54

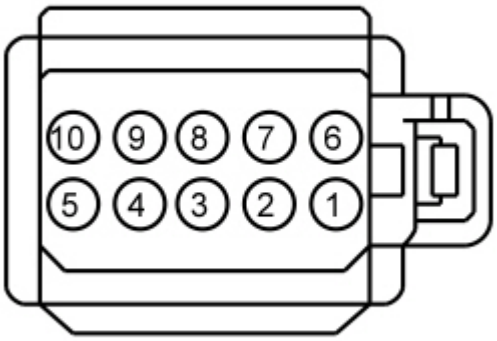
N0148938

- **Are the resistances less than 3 ohms?**

Yes
GO to V5 .

No
INSTALL a new steering wheel.
REFER to Section 211-04 .

V5 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TOGETHER



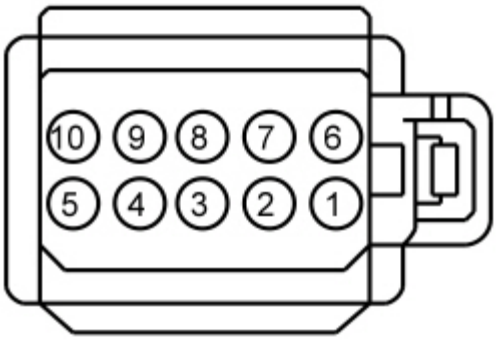
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14

Yes
GO to V6 .

No
INSTALL a new steering wheel.
REFER to Section 211-04 .

C2999-6	VME54	C2999-7	RME54



- **Are the resistances greater than 10,000 ohms?**

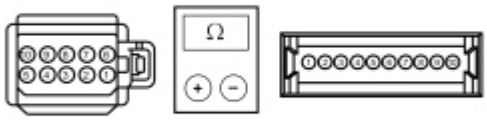
V6 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect: Clockspring C218B.
- Disconnect: Clockspring C218C.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	—	Ground
C2999-4	RME14	—	Ground
C2999-6	VME54	—	Ground
C2999-7	RME54	—	Ground

Yes
GO to V7 .

No
INSTALL a new clockspring.
REFER to Section 501-20B .



repair4less

- **Are the resistances greater than 10,000 ohms?**

V7 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure the **resistance** between:

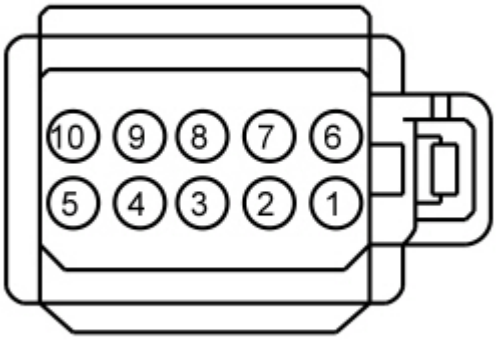
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218C-6	—
C2999-4	RME14	C218C-5	—
C2999-6	VME54	C218C-10	—
C2999-7	RME54	C218C-9	—

N0148946

- **Are the resistances less than 3 ohms?**

Yes
GO to V8.

No
INSTALL a new clockspring.
REFER to Section 501-20B.



V8 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14
C2999-6	VME54	C2999-7	RME54

Yes
GO to V9.

No
INSTALL a new clockspring.
REFER to Section 501-20B.

- **Are the resistances greater than 10,000 ohms?**

V9 CHECK FOR VOLTAGE AT THE SCCM	
• Ignition ON. • Measure the **voltage** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit C2414D-6 / — / C2414D-5 / — C2414D-10 / — / C2414D-9 / —  • **Is approximately 5 volts present?**	**Yes** INSTALL a new RH steering wheel switch. REFER to Section 211-05 . **No** GO to V10 .
V10 CHECK FOR CORRECT SCCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the SCCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM . REFER to

repair4less

▪ Pushed-out pins (install new pins as necessary) • Reconnect the SCCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	Section 211-05 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test W: The Audio System Does Not Operate Correctly From The FCIM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Accessory Delay Feature, Audio Extended Play, and FCIM in Information and Entertainment System .

Possible Sources

- Network communication concern
- FCIM

PINPOINT TEST W: THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM

Test Step	Result / Action to Take
W1 CHECK THE FDIM OPERATION	
• Verify the FDIM screen operation. • **Does the FDIM operate correctly?**	**Yes** GO to W2 . **No** GO to Pinpoint Test X .
W2 VERIFY THAT THE ACM , APIM , AND FCIM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the ACM , APIM , and FCIM pass the network test?**	**Yes** GO to W3 . **No** If the ACM failed the network test, REFER to Section 418-00 The ACM Does Not Respond To The Scan Tool. If the APIM failed the network test, REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool. If the FCIM failed the network test, REFER to Section 418-00 The FCIM Does Not Respond To The Scan Tool.
W3 RESET THE AUDIO	

SYSTEM MODULES AND RECHECK THE FCIM OPERATION • Disconnect the battery for 5 minutes, then reconnect it. • Turn the infotainment system on. • Test the FCIM for normal operation. • **Does the FCIM operate correctly?**	**Yes** The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules. **No** GO to W4.

W4 RETRIEVE THE ACM, APIM, AND FCIM DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ ACM
  ◦ APIM
  ◦ FCIM
• **Are any DTCs present in the ACM, APIM, or FCIM?**
	Yes
	For ACM DTCs, REFER to the ACM DTC Chart in Information and Entertainment System For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For FCIM DTCs, REFER to the FCIM DTC Chart in Information and Entertainment System
	
	No
	GO to W5.

W5 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM. REFER to Front Controls Interface Module (FCIM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test X: The FDIM Touchscreen Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

repair4less

Normal Operation and Fault Conditions

Refer to FDIM in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108E:01	Display: General Electrical Failure	Set by the APIM when an error is detected in the touch sensing ability of the FDIM .
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	Set by the APIM when communication is missing from the FDIM for more than 1 second with the ignition in the RUN position.

Possible Sources

- Network communication concern
- APIM
- FDIM

PINPOINT TEST X: THE FDIM TOUCHSCREEN IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
X1 OBSERVE THE FDIM SCREEN	
• Ignition ON. • Verify the FDIM operation. • **Is the FDIM screen completely inoperative or blank?**	**Yes** GO to X2 . **No** GO to X4 .
X2 VERIFY THAT THE APIM PASSES THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the APIM pass the network test?**	**Yes** GO to X3 . **No** REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool.
X3 CHECK FOR DTC U0162:00 SET IN THE APIM	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Is DTC U0162:00 present?**	**Yes** INSTALL a new FDIM . Front Display Interface Module (FDIM) . **No** GO to X6 .
X4 VERIFY THE TOUCHSCREEN RESPONDS TO TOUCH COMMANDS	
• While pressing each tab of the 4	**Yes**

corners on the FDIM, observe the touchscreen operation. • **Does the FDIM respond correctly when each tab is pressed?**	VERIFY the customer's concern and the steps to reproduce the inoperative state. If the inoperative state is not duplicated, the system is operating correctly at this time. INFORM the customer on the operation of the FDIM display. **No** GO to X5.
X5 ENSURE THE TOUCHSCREEN IS CALIBRATED	
• Calibrate the touchscreen. REFER to Touchscreen Calibration. • Verify the touchscreen operation. • **Does the FDIM touchscreen respond correctly?**	**Yes** The system is operating correctly at this time. The concern was a result of the touchscreen not being calibrated. **No** GO to X6.
X6 CHECK FOR DTC B108E:01 SET IN THE APIM	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Is DTC B108E:01 present?**	**Yes** INSTALL a new FDIM. REFER to Front Display Interface Module (FDIM). **No** GO to X7.
X7 RESET THE APIM AND RECHECK THE SYSTEM OPERATION	
NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Turn the infotainment system on. • While pressing each tab of the 4 corners on the FDIM, observe the touchscreen operation. • **Does the touchscreen operate correctly?**	**Yes** The FDIM is operating correctly at this time. PERFORM a SYNC® system Master Reset. REFER to the Owner's Literature. **No** GO to X8.
X8 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

repair4less

(install new terminals or pins) ■ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Y: Navigation Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Navigation in Information and Entertainment System .

Removal of the navigation SD card results in the loss of navigation while the card is removed. This is normal operation.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1215:00	External Memory Card: No Sub Type Information	Set by the APIM when the navigation SD card is missing.

Possible Sources

- Navigation map SD card not present, not fully seated, or damaged
- Communications network concern
- GPSM

PINPOINT TEST Y: NAVIGATION IS INOPERATIVE

Test Step	Result / Action to Take
Y1 CHECK THE NAVIGATION SYSTEM OPERATION	
• Verify the navigation system operation. • **Does the FDIM display "SD CARD FAULT?"**	**Yes** GO to Y2 . **No** GO to Y4 .

Y2 VERIFY THE NAVIGATION MAP SD CARD IS PRESENT	
• Check for the presence of a navigation map SD card in the media hub SD slot. • **Is the navigation map SD card present and fully seated?**	**Yes** GO to Y3 . **No** INSTALL the navigation map SD card. TEST the system for normal operation.
Y3 INSPECT THE NAVIGATION MAP SD CARD	
• Remove the navigation map SD card. • Inspect the navigation map SD card for damage. • **Is any damage present?**	**Yes** INSTALL a new navigation map SD card. **No** GO to Y4 .
Y4 CHECK FOR DIAGNOSTIC SCAN TOOL COMMUNICATION WITH THE GPSM	
• Ignition ON. • Using a diagnostic scan tool, perform the network test. • **Does the diagnostic scan tool communicate with the GPSM ?**	**Yes** GO to Y5 . **No** REFER to Section 418-00 The GPSM Does Not Respond To The Scan Tool.
Y5 RETRIEVE THE DTCS FROM THE APIM AND GPSM	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ APIM
  ◦ GPSM
• **Are any DTCs present in the APIM or GPSM ?**
	Yes
	For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For GPSM DTCs, REFER to the GPSM DTC Chart in Information and Entertainment System
	
	No
	GO to Y6 .

Y6 CHECK FOR CORRECT GPSM OPERATION	

• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ◦ Corrosion (clean module pins or install new connectors or terminals)
  ◦ Damaged or bent pins (install new terminals or pins)
  ◦ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

• **Is the concern still present?**	

Pinpoint Test Z: The Compass Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Possible Sources

- Network communication concern
- APIM
- GPSM

PINPOINT TEST Z: THE COMPASS IS INOPERATIVE

Test Step	Result / Action to Take
Z1 VERIFY THAT THE APIM AND GPSM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the APIM and GPSM pass the network test?**	**Yes** GO to Z2 . **No** If the APIM failed the network test, REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool. If the GPSM failed the network test, REFER to Section 418-00 The GPSM Does Not Respond To The Scan Tool.
Z2 RETRIEVE THE APIM AND GPSM DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ APIM
  ◦ GPSM
• **Are any DTCs present in the APIM or GPSM ?**
	Yes
	For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For GPSM DTCs, REFER to the GPSM DTC Chart in Information and Entertainment System
	
	No
	GO to Z3 .

Z3 CHECK FOR CORRECT GPSM OPERATION	

• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
	Yes
	CHECK OASIS for any applicable TSBs. If a TSBTSB exists for this concern, DISCONTINUE this test and FOLLOW TSBTSB instructions. If no TSBs address this concern, INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

▪ Pushed-out pins (install new pins as necessary) • Reconnect the GPSM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test AA: DTC U0100:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AA: DTC U0100:00

Test Step	Result / Action to Take
AA1 VERIFY THE CUSTOMER'S CONCERN	
• **NOTE:** Confirm that the tire size is correct as indicated on the vehicle placard. Incorrect tire size will affect navigation system accuracy. • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AA2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AA2 RECHECK FOR DTC U0100:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs.	**Yes** GO to AA3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

repair4less

• **Is DTC U0100:00 set in the GPSM ?**	
AA3 CHECK THE PCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the PCM self-test. • **Are any low or high voltage DTCs recorded in the PCM ?**	**Yes** REFER to PCM DTC Chart in Section 303-14 . **No** GO to AA4 .
AA4 CHECK THE GPSM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the GPSM self-test. • **Are any low or high voltage DTCs recorded in the GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AJ . For DTC U3003:17, GO to Pinpoint Test ak . **No** GO to AA5 .
AA5 CHECK FOR CORRECT PCM OPERATION • Ignition OFF. • Disconnect and inspect all the PCM connectors. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the PCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new PCM . REFER to Section 303-14 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AB: DTC U0140:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Set by the APIM and GPSM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AB: DTC U0140:00

Test Step	Result / Action to Take
AB1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AB2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB2 RECHECK FOR DTC U0140:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0140:00 set in the APIM or GPSM ?**	**Yes** GO to AB3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB3 CHECK THE BCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the BCM self-test. • **Are any low or high voltage DTCs recorded in the BCM ?**	**Yes** REFER to BCM DTC Chart in Section 419-10 . **No** GO to AB4 .

AB4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ APIM
  ▪ GPSM
• **Are low or high voltage DTCs recorded in the APIM or GPSM ?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AJ . For DTC U3003:17, GO to Pinpoint Test ak .
	
	No
	GO to AB5 .

AB5 CHECK FOR DTC U0140:00 SET IN MULTIPLE MODULES • Review the recorded results from the self-test. • **Is DTC U0140:00 set in more than one audio system module?**	**Yes** GO to AB6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly

repair4less

	at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AB6 CHECK FOR CORRECT BCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the BCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AC: DTC U0151:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	Set by the APIM when the airbag deployment notification message from the RCM is missing for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AC: DTC U0151:00

Test Step	Result / Action to Take
AC1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present.	**Yes** GO to AC2 .

• **Is an observable symptom present?**	**No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC2 RECHECK FOR DTC U0151:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0151:00 set in the APIM ?**	**Yes** GO to AC3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC3 CHECK THE RCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the RCM self-test. • **Are any low or high voltage DTCs recorded in the RCM ?**	**Yes** For DTC U3003:16, REFER to RCM DTC Chart in Section 501-20B . For DTC U3003:16, REFER to RCM DTC Chart in Section 501-20B . **No** GO to AC4 .
AC4 CHECK THE APIM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS • Using a diagnostic scan tool, perform the APIM self-test. • **Are any low or high voltage DTCs recorded in the APIM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AJ . For DTC U3003:17, GO to Pinpoint Test ak . **No** GO to AC5 .

AC5 CHECK FOR CORRECT RCM OPERATION
• Ignition OFF.
• Disconnect and inspect all the RCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the RCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new RCM . REFER to Section 501-20B .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

present. • **Is the concern still present?**	

Pinpoint Test AD: DTC U0155:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	Set by the ACM , APIM , FCIM , and GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AD: DTC U0155:00

Test Step	Result / Action to Take
AD1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AD2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD2 RECHECK FOR DTC U0155:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155:00 set in the ACM , APIM , FCIM , or GPSM ?**	**Yes** GO to AD3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD3 CHECK THE IPC FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the IPC self-test.	**Yes** REFER to IPC DTC Chart in Section 413-01 .

• **Are any low or high voltage DTCs recorded in the IPC ?**	**No** GO to AD4 .
AD4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs • Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM ▪ FCIM ▪ GPSM • **Are low or high voltage DTCs recorded in the ACM , APIM , FCIM , or GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AJ . For DTC U3003:17, GO to Pinpoint Test ak . **No** GO to AD5 .
AD5 CHECK FOR DTC U0155:00 SET IN MULTIPLE MODULES • Review the recorded results from the self-test. • **Is DTC U0155:00 set in more than one audio system module?**	**Yes** GO to AD6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD6 CHECK FOR CORRECT IPC OPERATION • Ignition OFF. • Disconnect and inspect the IPC connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the IPC connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new IPC . REFER to Section 413-01 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AE: DTC U016A:00

Diagnostic Overview

repair4less

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	Set by the APIM when network messages are missing from the GPSM for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AE: DTC U016A:00

Test Step	Result / Action to Take
AE1 VERIFY THE CUSTOMER CONCERN • Ignition ON. • Verify that there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AE2. **No** The system is operating correctly at this time. The DTC may have been set due to an intermittent fault in the network wiring. CHECK the MS-CAN wiring between the APIM and the GPSM for a fault.
AE2 CHECK THE COMMUNICATION NETWORK • Ignition ON. • Carry out the network test using the scan tool. • **Does the GPSM pass the network test?**	**Yes** GO to AE3. **No** REFER to Section 418-00.
AE3 CHECK FOR ANY RECENT PMI CHANGES **NOTE:** If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Check the vehicle service history for recent service actions related to the GPSM. • **Have there been any recent service actions with either module?**	**Yes** CARRY out a manual PMI on the GPSM using As-Built data. REFER to the diagnostic scan tool instructions. **No** GO to AE4.
AE4 RETRIEVE THE RECORDED DTCs FROM THE GPSM • Clear the GPSM DTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds.	**Yes** REFER to the GPSM DTC chart in this section. **No**

• Repeat the GPSM self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	GO to AE5 .
AE5 RETRIEVE THE RECORDED DTCs FROM THE APIM • Repeat the APIM self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test aj . For DTC U3003:17, GO to Pinpoint Test ak **No** GO to AE6 .
AE6 RECHECK THE APIM DTCs • Perform the APIM self-test. • **Is DTC U016A:00 still present?**	**Yes** GO to AE7 . **No** The system is operating correctly at this time. The DTC may have been set due to an intermittent fault in the network wiring.
AE7 CHECK FOR DTC U016A:00 SET IN OTHER MODULES • Clear all DTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Repeat the APIM self-test. • **Is DTC U016A:00 set in any other module?**	**Yes** GO to AE8 . **No** GO to AE9

AE8 CHECK FOR CORRECT GPSM OPERATION
• Ignition OFF.
• Disconnect the GPSM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the GPSM connector and make sure it seats correctly.
• **Is the concern still present?**
	Yes
	INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

AE9 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect the APIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the APIM connector and make sure it seats correctly.
• Wait 2 minutes for the APIM to re-initialize.
• **Is the concern still present?**
	Yes
	For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

Pinpoint Test AF: DTC U0184:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the APIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AF: DTC U0184:00

Test Step	Result / Action to Take
AF1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AF2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AF2 RECHECK FOR DTC U0184:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0184:00 set in the APIM?**	**Yes** GO to AF3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AF3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
• **Are low or high voltage DTCs recorded in the ACM or APIM?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AJ. For DTC U3003:17, GO to Pinpoint Test ak.
	
	No
	GO to AF4.

AF4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AG: DTC U0253:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AG: DTC U0253:00

Test Step	Result / Action to Take
AG1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AG2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AG2 RECHECK FOR DTC U0253:00	
	Yes

repair4less

• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0253:00 set in the ACM ?**	GO to AG3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AG3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
• **Are low or high voltage DTCs recorded in the ACM or APIM ?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AJ . For DTC U3003:17, GO to Pinpoint Test ak .
	
	No
	GO to AG4 .

AG4 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AH: DTC U0256:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM and APIM when network messages are missing from the FCIM for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AH: DTC U0256:00

Test Step	Result / Action to Take
AH1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AH2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH2 RECHECK FOR DTC U0256:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0256:00 set in the ACM or APIM?**	**Yes** GO to AH3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
  ▪ FCIM
• **Are low or high voltage DTCs recorded in the ACM, APIM, or FCIM?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AJ. For DTC U3003:17, GO to Pinpoint Test ak.
	
	No
	GO to AH4.

AH4 CHECK FOR DTC U0256:00 SET IN MULTIPLE MODULES	

repair4less

• Review the recorded results from the self-test. • **Is DTC U0256:00 set in more than one audio system module?**	**Yes** GO to AH5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH5 CHECK FOR CORRECT FCIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AI: DTC U0257:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	**NOTE:** The FDIM is a non-networked module attached to the APIM . The APIM acts as the gateway module for messages sent over the I-CAN between the FDIM , ACM , and FCIM . Set by the ACM and FCIM when I-CAN network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

		This DTC may be set in conjunction with DTC U0253:00.

PINPOINT TEST AI: DTC U0257:00

Test Step	Result / Action to Take
AI1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AI2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AI2 RECHECK FOR DTC U0257:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0257:00 set in the ACM or FCIM?**	**Yes** GO to AI3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
  ▪ FCIM
• **Are low or high voltage DTCs recorded in the ACM, APIM, or FCIM?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AJ. For DTC U3003:17, GO to Pinpoint Test ak.
	
	No
	GO to AI4.

AI4 CHECK FOR DTC U0257:00 SET IN MULTIPLE MODULES • Review the recorded results from the self-test. • **Is DTC U0257:00 set in more than one audio system module?**	**Yes** GO to AI5. **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AI5 CHECK FOR CORRECT	

repair4less

APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AJ: DTC U3003:16

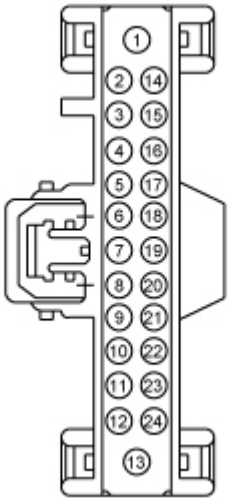
Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

DTC Fault Trigger Conditions

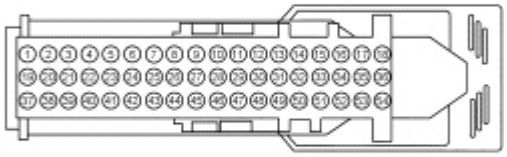
DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM , APIM , FCIM , and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.



PINPOINT TEST AJ: DTC U3003:16

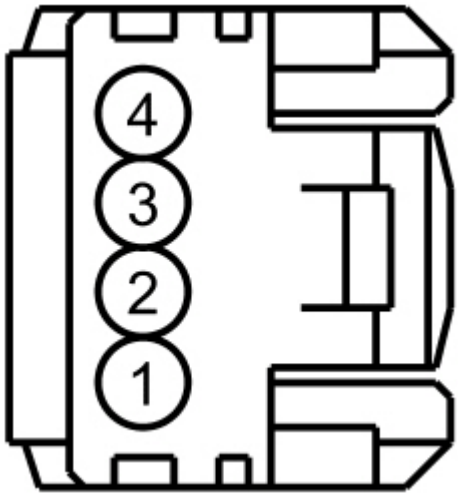
Test Step	Result / Action to Take
AJ1 RECHECK FOR DTC U3003:16	

• Ignition ON. • Using a diagnostic scan tool, clear the DTCs for the module in question. • Wait at least 15 seconds. • Using a diagnostic scan tool, repeat the self-test for the module in question. • **Is DTC U3003:16 still present?**	**Yes** GO to AJ2 . **No** The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.
AJ2 CHECK FOR CHARGING SYSTEM DTCS IN THE PCM	
• Using a diagnostic scan tool, retrieve all CMDTCs . • **Are any voltage-related DTCs set in the PCM ?**	**Yes** REFER to PCM DTC Chart in Section 303-14 . **No** GO to AJ3 .
AJ3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE	
• Check the battery condition and verify that the battery is fully charged. REFER to Battery Condition Test in Section 414-01 . • **Is the battery OK and fully charged?**	**Yes** GO to AJ4 . **No** REFER to the Symptom Chart in Section 414-00 .
AJ4 CHECK THE MODULE VOLTAGE SUPPLY	
• Ignition OFF. • Measure and record the voltage at the battery. • Disconnect the audio system module setting DTC U3003:16. • Ignition ON. • Measure the voltage between the module setting DTC U3003:16 and ground. • For the ACM , measure the **voltage** between:	**Yes** GO to AJ5 . **No** REPAIR the circuit for high resistance.



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240A-1	SBP29 (GY/RD)	—	Ground

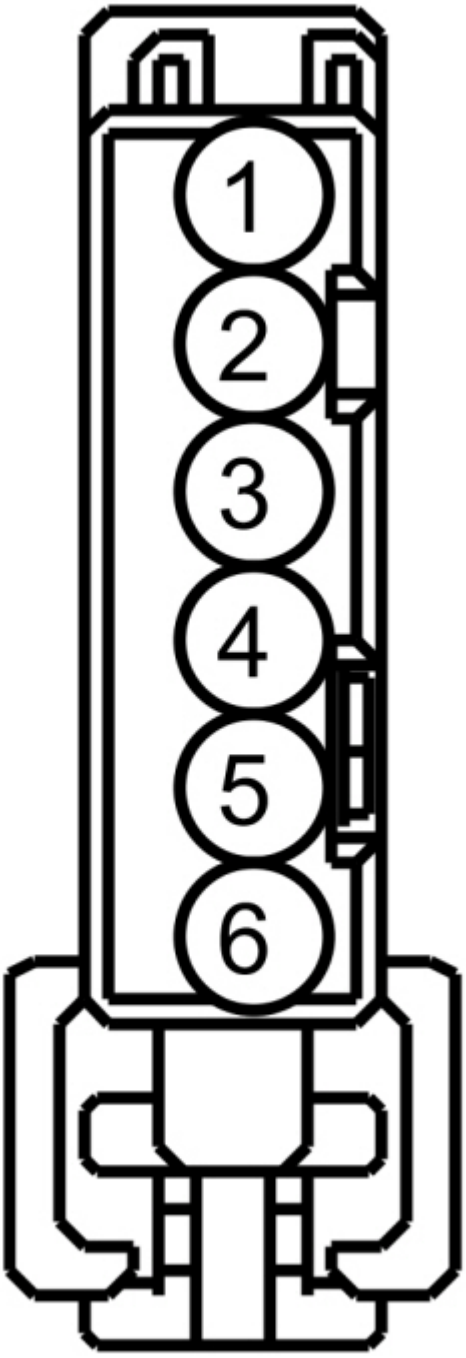
repair4less



- For the APIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	—	Ground

- For the FCIM , measure the **voltage** between:

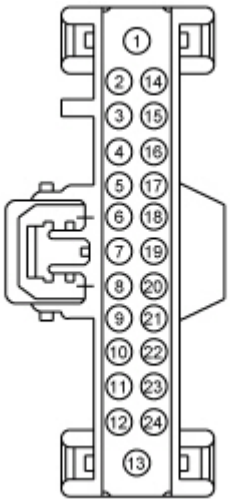


Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	—	Ground

- For the GPSM , measure the **voltage** between:

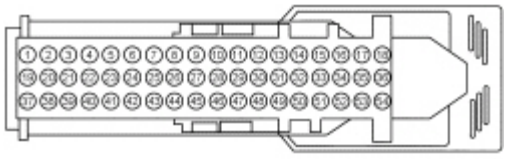
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	—	Ground

repair4less



- **Is the voltage within 0.2 volts of the recorded battery voltage?**

AJ5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY	
• Measure the voltage at the suspect module.	**Yes**



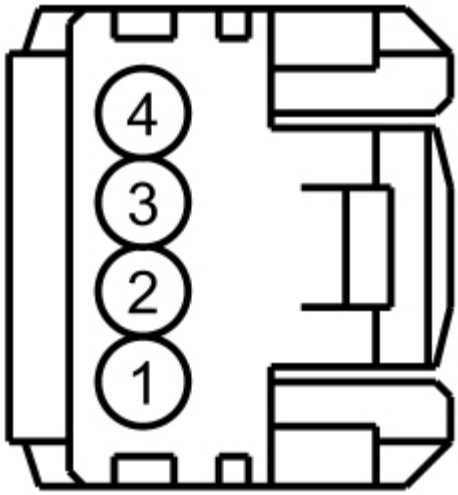
- For the ACM, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240A-1	SBP29 (GY/RD)	C240A-13	GD114 (BK/BU)

- For the APIM, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	C2383-37	GD114 (BK/BU)

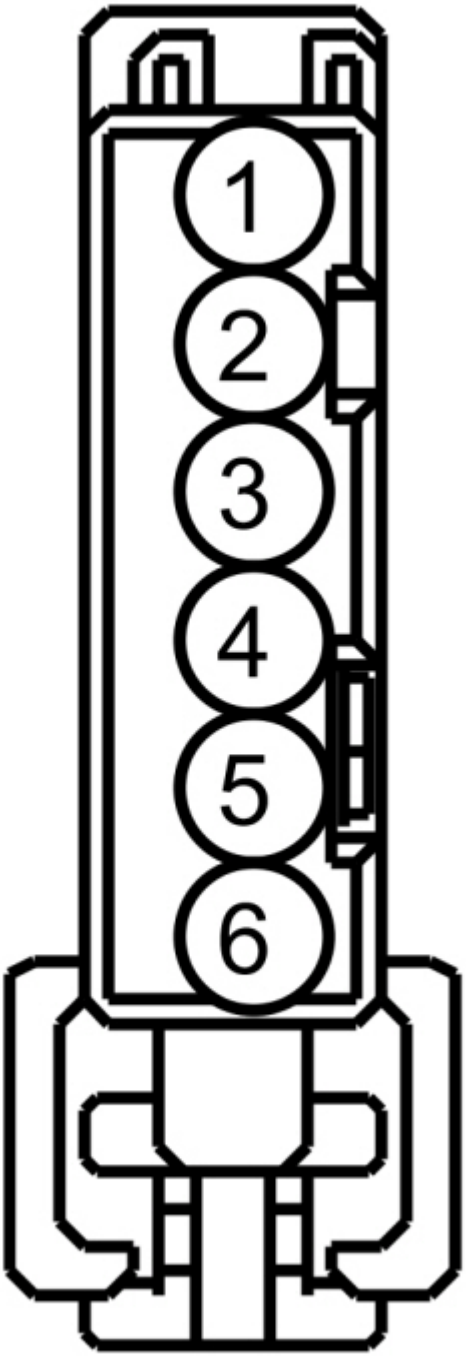
- For the FCIM, measure the **voltage** between:



Positive Lead		Negative Lead	

For the ACM, GO to AJ6. For the APIM, GO to AJ7. For the FCIM, GO to AJ8. For the GPSM, GO to AJ9.

No
REPAIR the circuit for high resistance.



repair4less

Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	C2402-4	GD133 (BK)

- For the GPSM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	C2398-6	GD114 (BK/BU)

- **Is the suspect module voltage greater than 11 volts?**

AJ6 CHECK FOR CORRECT ACM OPERATION • Ignition OFF. • Disconnect and inspect all the ACM	**Yes** CHECK OASIS for any applicable TSBs. If a

repair4less

connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AJ7 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AJ8 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AJ9 CHECK FOR CORRECT GPSM OPERATION
• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) .
	
	No
	The system is operating correctly at this time.

seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AK: DTC U3003:17

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM , APIM , FCIM , and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

PINPOINT TEST AK: DTC U3003:17

Test Step	Result / Action to Take
AK1 RECHECK FOR DTC U3003:17	
• Turn the engine off. • Ignition ON. • Using a diagnostic scan tool, clear the DTC for the module in question. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question. • **Is DTC U3003:17 present?**	**Yes** GO to AK2 . **No** The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.
AK2 CHECK FOR HIGH VOLTAGE DTCs SET IN OTHER MODULES	
• Ignition ON. • Using a diagnostic scan tool, retrieve all CMDTCs . • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question. • **Are high voltage DTCs such as B1676, P0563, U3003:17 set in more than one module?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** GO to AK3 .

repair4less

AK3 CHECK THE BATTERY VOLTAGE	
• Turn off all interior lights, exterior lights, and accessories. • Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** For the ACM , GO to AK4 . For the APIM , GO to AK5 . For the FCIM , GO to AK6 For the GPSM , GO to AK7 .
AK4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AK5 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

• Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

AK6 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM. REFER to Front Controls Interface Module (FCIM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AK7 CHECK FOR CORRECT GPSM OPERATION
• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Accessory Protocol Interface Module (APIM) Custom Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool.
 ST3256-A	SYNC® Re-Flash Kit CCMSYNC-KIT or equivalent [Tools are also available individually CCMUSB2-AM-AM-10 (cable) and CCMUSB-AF-BF5 (adapter)]

NOTE: Use this procedure to show all available software options, including Applications, that can be programmed into the APIM when upgrades become available, or as directed by a TSB. For additional information about choosing the correct APIM programming procedure, refer to Information and Entertainment System , APIM Programming.

NOTE: A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

NOTE: Some programming files are large (greater than 2 gigabytes). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download. If a "Disk Space Error" is received, create additional free space on the hard drive.

NOTE:

- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- During programming, the vehicle display may go blank momentarily.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.
- Close the IDS program before attempting to perform this procedure.

1. Connect a battery charger set on low.
    - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

2. Place the ignition in the ON/RUN position.

3. Connect the diagnostic scan tool and VCM to the vehicle.

repair4less

4. Open Internet Explorer on the diagnostic scan tool and go to the technician service publications web site. On the OASIS tab, select "Read VIN & DTCs," and select "Go."

5. **NOTE:** This procedure clears all CMDTCs. The DTCs must be recorded now if other diagnoses are to be performed after this procedure.

   Select "Toolbox" from the technician service publications web site to retrieve and record all CMDTCs.

6. **NOTE:** If unable to complete programming because the operation stops or errors are received, the web browser settings may need to be configured. Refer to "Software Programming v1.1" on the technician service publications web site under the Service Tips tab.

   From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

7. Scroll to the bottom of the screen, select "Custom," and select the "Read SYNC" button to compare the current APIM Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels to the last reported state in the Ford online database.
   - After the comparison is performed, the diagnostic scan tool displays a list of available software. Select the software level needed as indicated by the TSB. If the software level is not known, stop this procedure and perform standard programming, which automatically selects the latest software levels. Refer to Accessory Protocol Interface Module (APIM) Standard Programming.
   - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no re-installation required). All Applications can be selected for installation.
   - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
   - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force CIP, choosing this option requires additional programming time and is not recommended unless directed by a TSB.

8. Select the customer-requested upgrade or the Application directed by the TSB.

9. **NOTE:** Only Applications on a flash drive may be loaded to the APIM through the media hub.

   NOTE: If not performing a Full Flash/Force CIP, go to Step 11.

   Remove the media hub. REFER to Media Hub.

10. **NOTE:** Do not disconnect the diagnostic scan tool or cable from the APIM during programming unless directed by the diagnostic scan tool on-screen prompts.

    Connect the SYNC® Re-Flash Kit cable and adapter between the diagnostic scan tool USB port and the vehicle USB cable.

11. **NOTE:** Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "retry" button to continue programming.

    NOTE: This step may take 20 minutes or longer.

    Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

- The updates are downloaded to the diagnostic scan tool or USB flash drive.

12. **NOTE:** If the diagnostic scan tool does not have an available USB port, the Re-Flash Kit cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool.

    NOTE: This step may take 20 minutes or longer.

    Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions for downloading service packs and Applications onto the USB flash drive.

13. **NOTE:** If the media hub was removed, install it before connecting the USB flash drive to the vehicle.Refer to Media Hub .

    This step may take 20 minutes or longer.

    When prompted by the diagnostic scan tool, remove the USB flash drive and connect it to the media hub to install the Applications into the APIM .
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

14. **NOTE:** Re-installing the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.

    Once diagnostic scan tool programming and USB flash drive programming are complete, re-install the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

15. Calibrate the touchscreen. Refer to Touchscreen Calibration .

---

repair4less

Accessory Protocol Interface Module (APIM) Module Replacement Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool
 ST3256-A	SYNC® Re-Flash Kit CCMSYNC-KIT or equivalent [Tools are also available individually CCMUSB2-AM-AM-10 (cable) and CCMUSB-AF-BF5 (adapter)]

NOTE: Use this procedure to program and provision the module when a new Accessory Protocol Interface Module (APIM) is being installed. For additional information about choosing the correct programming procedure, refer to Information and Entertainment System , APIM Programming.

NOTE: A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

NOTE: Some programming files are large (greater than 2 gigabytes). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download. If a "Disk Space Error" is received, create additional free space on the hard drive.

NOTE:

- Install the new APIM before performing this procedure. Refer to Accessory Protocol Interface Module (APIM)
- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- During programming, the vehicle display may go blank momentarily.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.
- Close the IDS program before attempting to perform this procedure.

1. Connect a battery charger set on low.
    - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

2. Place the ignition in the ON/RUN position.

3. Connect the diagnostic scan tool and VCM to the vehicle.

4. Open Internet Explorer on the diagnostic scan tool and go to the technician service publications web site. On the OASIS tab, select "Read VIN & DTCs," and select "Go."

5. **NOTE:** This procedure clears all CMDTCs . The DTCs must be recorded now if other diagnoses are to be performed after this procedure.

   Select "Toolbox" from the technician service publications web site to retrieve and record all CMDTCs .

6. **NOTE:** If unable to complete programming because the operation stops or errors are received, the web browser settings may need to be configured. Refer to "Software Programming v1.1" on the technician service publications web site under the Service Tips tab.

   From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

7. Scroll to the bottom of the screen, and select "Module Replacement," and select the "Read SYNC" button to compare the current APIM VIP , CIP , and Application software levels to the last reported state in the Ford online database.
   - After the comparison is performed, the diagnostic scan tool automatically selects software for programming.
   - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no re-installation required).
   - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
   - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force CIP , choosing this option requires additional programming time and is not recommended unless directed by a TSB .

8. **NOTE:** Only Applications on a flash drive may be loaded to the APIM through the media hub.

   NOTE: If not performing a Full Flash/Force CIP , go to Step 10.

   Remove the media hub. REFER to Media Hub .

9. **NOTE:** Do not disconnect the diagnostic scan tool or cable from the APIM during programming unless directed by the diagnostic scan tool on-screen prompts.

   Connect the SYNC® Re-Flash Kit cable and adapter between the diagnostic scan tool USB port and the vehicle USB cable.

10. **NOTE:** Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "retry" button to continue programming.

    NOTE: This step may take 20 minutes or longer.

    Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.
    - The updates are downloaded to the diagnostic scan tool or USB flash drive.

11. **NOTE:** If the diagnostic scan tool does not have an available USB port, the Re-Flash Kit cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool.

repair4less

NOTE: This step may take 20 minutes or longer.

Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions for downloading service packs and Applications onto the USB flash drive.

12. **NOTE:** If the media hub was removed, install it before connecting the USB flash drive to the vehicle.Refer to Media Hub .

    This step may take 20 minutes or longer.

    When prompted by the diagnostic scan tool, remove the USB flash drive and connect it to the media hub to install the Applications into the APIM .
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

13. **NOTE:** Re-installing the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.

    Once diagnostic scan tool programming and USB flash drive programming are complete, re-install the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

14. Calibrate the touchscreen. Refer to Touchscreen Calibration .

Accessory Protocol Interface Module (APIM) Reset

NOTE: Carrying out an APIM Reset consists of a battery disconnect and a SYNC® system Master Reset.

NOTE: NOTE: This procedure will clear all CMDTCs . The DTCs must be recorded now if other (non SYNC®) diagnoses are to be performed after this procedure.

1. Remove any devices connected to the USB port(s), audio input jack (if equipped), or media hub (if equipped).

2. **NOTE:** After the APIM reset procedure has been completed the customer should be advised to reset their device following the manufacturer's instructions. Refer to the device's owner's manual and/or website for information on how to perform a Manual / Master Reset or Clear. Devices can be powered off and back on for a simple re-boot. In some cases the device's battery may also need to be removed and re-installed to complete a re-boot. In addition, cell phones may need to have SYNC® deleted from the Bluetooth menu prior to re-pairing the phone to the SYNC® system. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.

   Disconnect the negative battery cable for 1 minute, then reconnect it. Refer to Section 414-01 .

3. **NOTE:** Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. On vehicles equipped MyFord Touch or MyLincoln Touch with navigation, the customer’s saved destination points (home address and points of interest) and preferences will also be lost with a Master Reset.

   Carry out a SYNC® system Master Reset. Refer to the owner's literature

4. Verify system function using the Multi-Media Interface Tester 105-00120, to test the audio output for the audio input jack/socket (if equipped), USB port(s), and Bluetooth. If equipped, use the RCA Adapter 105-00121 to test the audio output for the RCA jacks.

5. If a concern is still present return to the Symptom Charts.

repair4less

Accessory Protocol Interface Module (APIM) Standard Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool
 ST3256-A	SYNC® Re-Flash Kit CCMSYNC-KIT or equivalent [Tools are also available individually CCMUSB2-AM-AM-10 (cable) and CCMUSB-AF-BF5 (adapter)]

NOTE: Use this procedure to update the Accessory Protocol Interface Module (APIM) and any installed Applications to the latest level. For additional information about choosing the correct programming procedure, refer to Information and Entertainment System , APIM Programming.

NOTE: A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

NOTE: Some programming files are large (greater than 2 gigabytes). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download. If a "Disk Space Error" is received, create additional free space on the hard drive.

NOTE:

- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- During programming, the vehicle display may go blank momentarily.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.
- Close the IDS program before attempting to perform this procedure.

1. Connect a battery charger set on low.
    - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

2. Place the ignition in the ON/RUN position.

3. Connect the diagnostic scan tool and VCM to the vehicle.

4. Open Internet Explorer on the diagnostic scan tool and go to the technician service publications web

repair4less

site. On the OASIS tab, select "Read VIN & DTCs," and select "Go."

5. **NOTE:** This procedure clears all CMDTCs . The DTCs must be recorded now if other diagnoses are to be performed after this procedure.

   Select "Toolbox" from the technician service publications web site to retrieve and record all CMDTCs .

6. **NOTE:** If unable to complete programming because the operation stops or errors are received, the web browser settings may need to be configured. Refer to "Software Programming v1.1" on the technician service publications web site under the Service Tips tab.

   From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

7. Scroll to the bottom of the screen, select "Standard", and select the "Read SYNC" button to compare the current APIM Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels to the last reported state in the Ford online database.
   - After the comparison is performed, the diagnostic scan tool automatically selects software for programming.
   - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no re-installation required).
   - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
   - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force CIP , choosing this option requires additional programming time and is not recommended unless directed by a TSB .

8. **NOTE:** Only Applications on a flash drive may be loaded to the APIM through the media hub.

   NOTE: If not performing a Full Flash/Force CIP , go to Step 10.

   Remove the media hub. REFER to Media Hub .

9. **NOTE:** Do not disconnect the diagnostic scan tool or cable from the APIM during programming unless directed by the diagnostic scan tool on-screen prompts.

   Connect the SYNC® Re-Flash Kit cable and adapter between the diagnostic scan tool USB port and the vehicle USB cable.

10. **NOTE:** Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "retry" button to continue programming.

    NOTE: This step may take 20 minutes or longer.

    Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.
    - The updates are downloaded to the diagnostic scan tool or USB flash drive.

11. **NOTE:** If the diagnostic scan tool does not have an available USB port, the Re-Flash Kit cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool.

NOTE: This step may take 20 minutes or longer.

Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions for downloading service packs and Applications onto the USB flash drive.

12. **NOTE:** If the media hub was removed, install it before connecting the USB flash drive to the vehicle.Refer to Media Hub .

    This step may take 20 minutes or longer.

    When prompted by the diagnostic scan tool, remove the USB flash drive and connect it to the media hub to install the Applications into the APIM .
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

13. **NOTE:** Re-installing the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.

    Once diagnostic scan tool programming and USB flash drive programming are complete, re-install the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

14. Calibrate the touchscreen. Refer to Touchscreen Calibration .

Audio Control Module (ACM) Self-Diagnostic Mode

NOTE: If the Audio Front Control Module (ACM), Front Control/Display Interface Module (FCDIM) (if equipped), Front Controls Interface Module (FCIM), or Front Display Interface Module (FDIM) (if equipped) are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the ACM chassis.

1. Turn the ACM on.

2. Operate the audio system in radio tuner AM/FM mode.

3. Press and hold the EJECT button, and within 1 second, press and hold the SEEK UP button until the speaker walk-around test begins.

   NOTE: AHU Diagnostics refers to the ACM, EFP Diagnostics refers to the FCIM, and MFD Diagnostics (if supported) refers to the FCDIM (if equipped).

4. To exit the self-diagnostic mode, turn the ACM off, or select "Exit Diagnostics."

Satellite Radio Electronic Serial Number (ESN) Retrieval

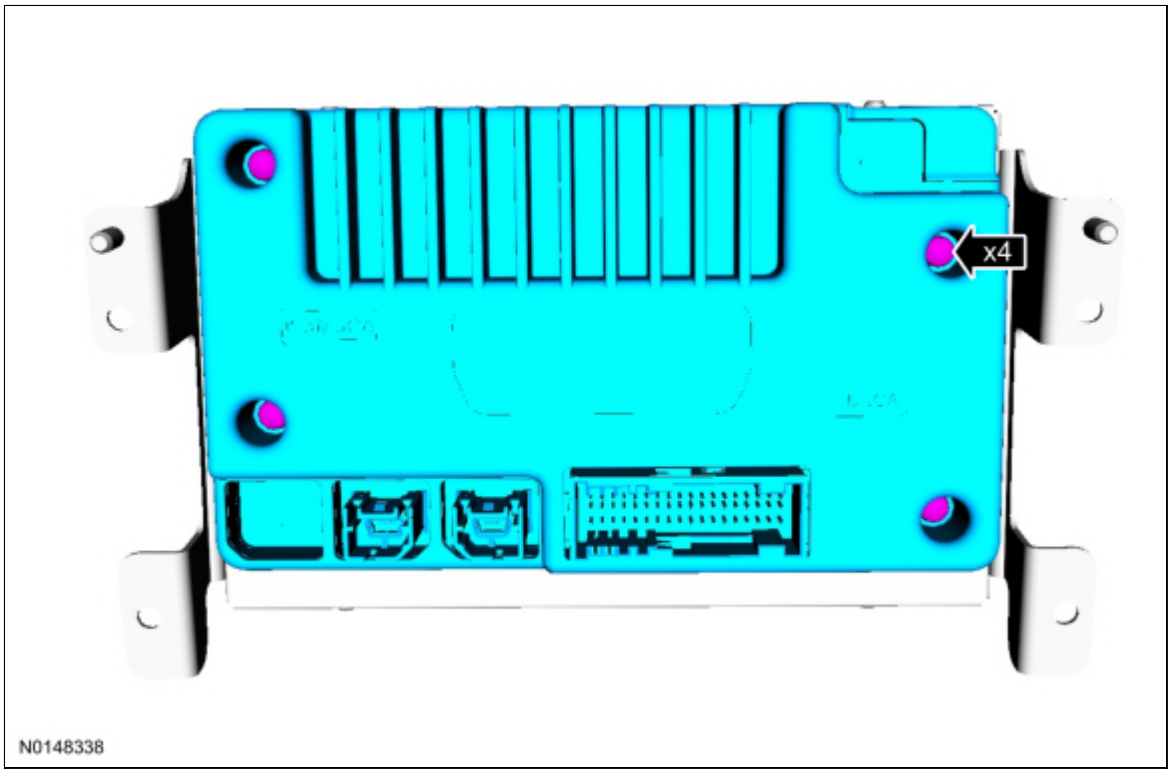
NOTE: If the Audio Front Control Module (ACM), FCDIM (if equipped), FCIM , or FDIM (if equipped) are inoperative (blank or do not power on), obtain the Electronic Serial Number (ESN) by referencing the label attached to the Audio Front Control Module (ACM) chassis.

1. Turn the Audio Front Control Module (ACM) on.
2. Operate the audio system in radio tuner AM/FM mode.
3. Press and hold the eject button, and within 1 second, press and hold the seek up button. If supported, the speaker walk around test will begin.
4. Select AHU Diagnostics.
5. Select SIRIUS ESN.

repair4less

Touchscreen Calibration

NOTE: Recalibrate the touchscreen by following the scan tool prompts or the steps below.



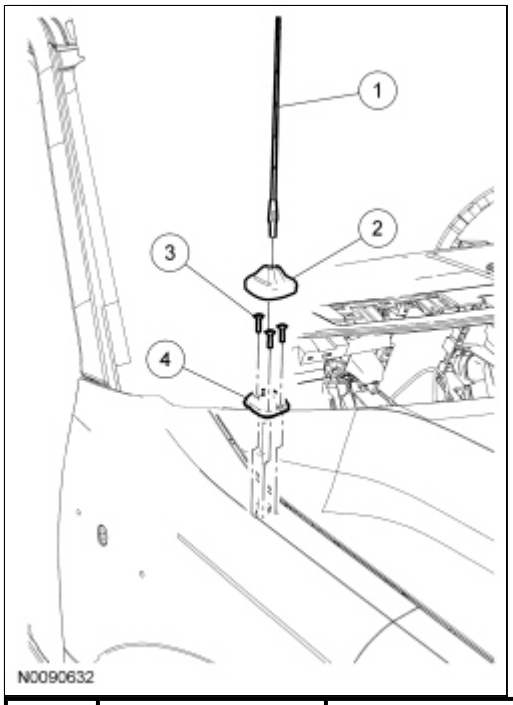
1. To avoid an inoperative touchscreen, make sure the vehicle battery is fully charged.
2. Turn on the ACM .
3. While in AM/FM mode, press and hold the EJECT button, and within 1 second, press the SEEK UP button.
4. Press and hold the SEEK DOWN button to enter the touchscreen calibration.
5. Touch and hold the touch points as they appear on the touchscreen (a stylus is not required).
6. To accept the new settings, touch anywhere on the screen when the screen displays “New calibration settings have been measured. Press the Enter key to accept the new settings.”
7. Clear all CMDTCs .

Accessory Protocol Interface Module (APIM)

Removal and Installation

1. Remove the Front Display Interface Module (FDIM). Refer to Front Display Interface Module (FDIM) .

2. Remove the 4 APIM screws and remove the APIM .
   - To install, tighten to 0.6 Nm (5 lb-in).

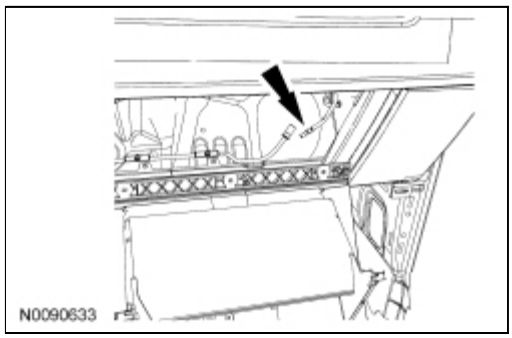


3. To install, reverse the removal procedure.

4. Program the APIM . Refer to Accessory Protocol Interface Module (APIM) Module Replacement Programming .

repair4less

Antenna — AM/FM



Item	Part Number	Description
1	18813	AM/FM antenna mast
2	18A927	AM/FM antenna base cap
3	N610019	AM/FM antenna screws (3 required)
4	18A894	AM/FM antenna base

Removal and Installation

1. Lower the glove compartment completely.

2. Disconnect the AM/FM antenna from the AM/FM antenna cable.
   - Push the antenna cable end and the grommet through the side cowl.

repair4less

3. ***NOTICE:*** **Do not over tighten the antenna mast or damage to the antenna base or mast may occur.**

   Remove the AM/FM antenna mast.
   1. To install, tighten to 4.2 Nm (36 lb/in).

4. **NOTE:** A new AM/FM antenna base cap must be installed.

   Using a suitable tool such as a hook-shaped pick, remove the AM/FM antenna base cap by prying upward.

5. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .

6. Remove the 3 screws and the AM/FM antenna base.
   1. To install, tighten to 2.5 Nm (23 lb/in).

7. To install, reverse the removal procedure.

Antenna — Satellite Radio

Item	Part Number	Description
1	10E893	Satellite radio antenna
2	—	Satellite radio antenna electrical connector (part of 19A397)
2	—	Satellite radio antenna retaining bolt (part of 10E893)

Removal and Installation

1. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .

2. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.

3. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical connector.

4. **NOTE:** Remove the satellite antenna and pigtail through the mounting opening in the roof panel.

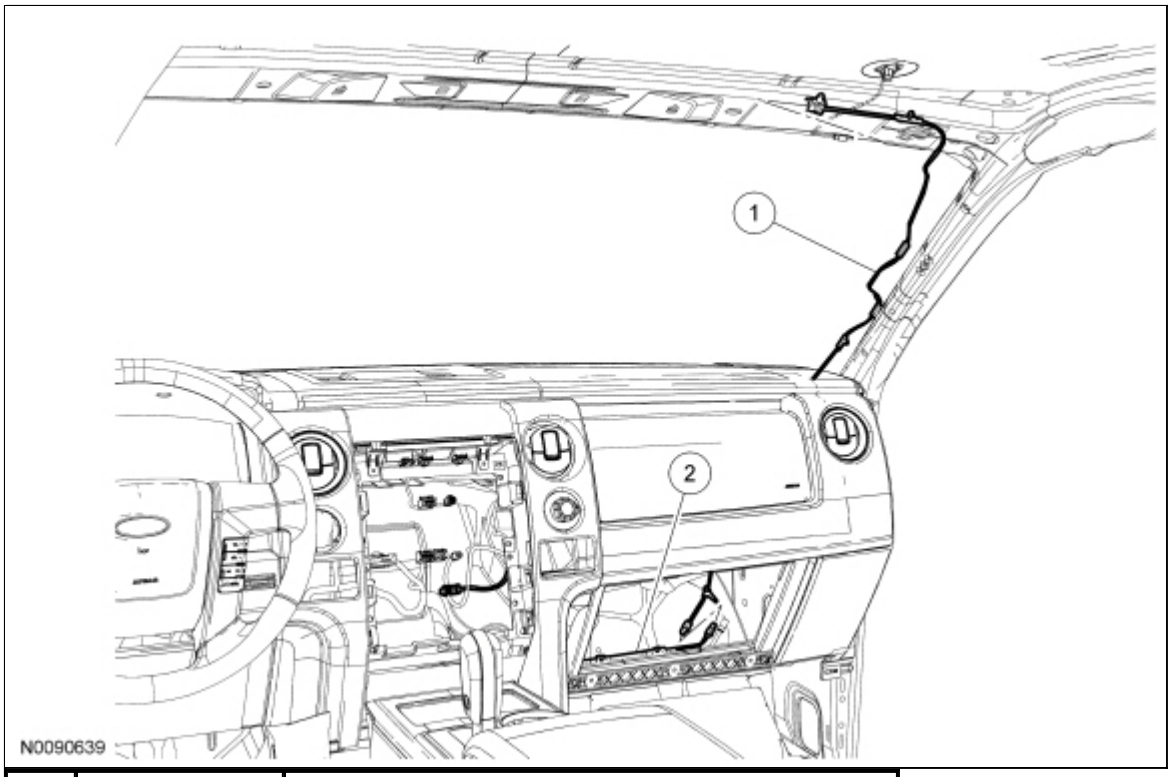
   Remove the satellite antenna.
   - Disconnect the electrical connector.

repair4less

- Remove the satellite antenna retaining bolt and retainer then remove the satellite antenna from the roof panel.
    - To install, tighten to 7 Nm (62 lb-in).

5. To install, reverse the removal procedure.

Antenna Cable — AM/FM



Item	Part Number	Description
1	18812	AM/FM antenna cable

Removal and Installation

1. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.
2. Lower the glove compartment completely.
3. Disconnect the AM/FM antenna cable from the AM/FM antenna.
4. Separate the pushpins and remove the AM/FM antenna cable.
5. To install, reverse the removal procedure.

repair4less

Antenna Cable — Satellite Radio

Item	Part Number	Description
1	19A397	Upper satellite radio antenna cable
2	19A397/10E928	Lower satellite radio antenna cable (without/with navigation)

Removal and Installation

Both cables

1. Lower the glove compartment completely.
2. Disconnect the upper-to-lower satellite radio antenna cable connection.

Upper cable

3. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .
4. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.
5. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical

repair4less

connector.

6. Remove the upper satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the A-pillar and instrument panel.

Lower cable

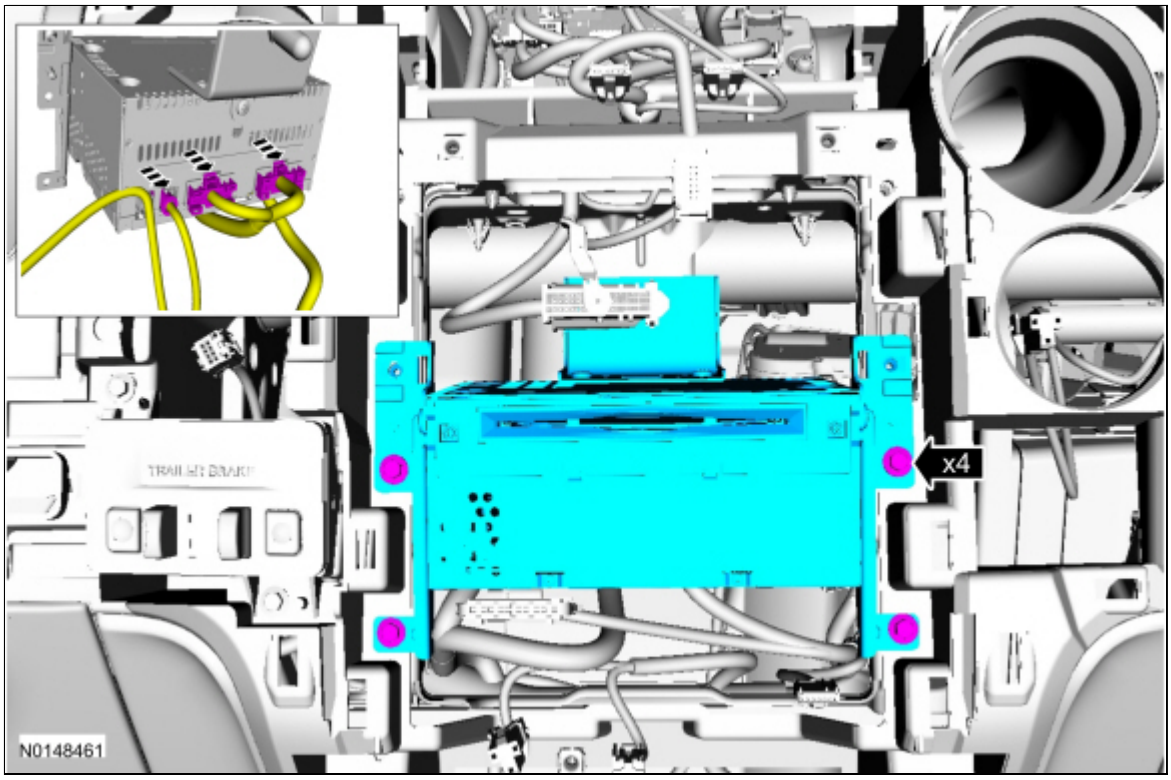
7. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.

8. Remove the lower satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the instrument panel.

Both cables

9. To install, reverse the removal procedure.

Audio Control Module (ACM)



Removal and Installation

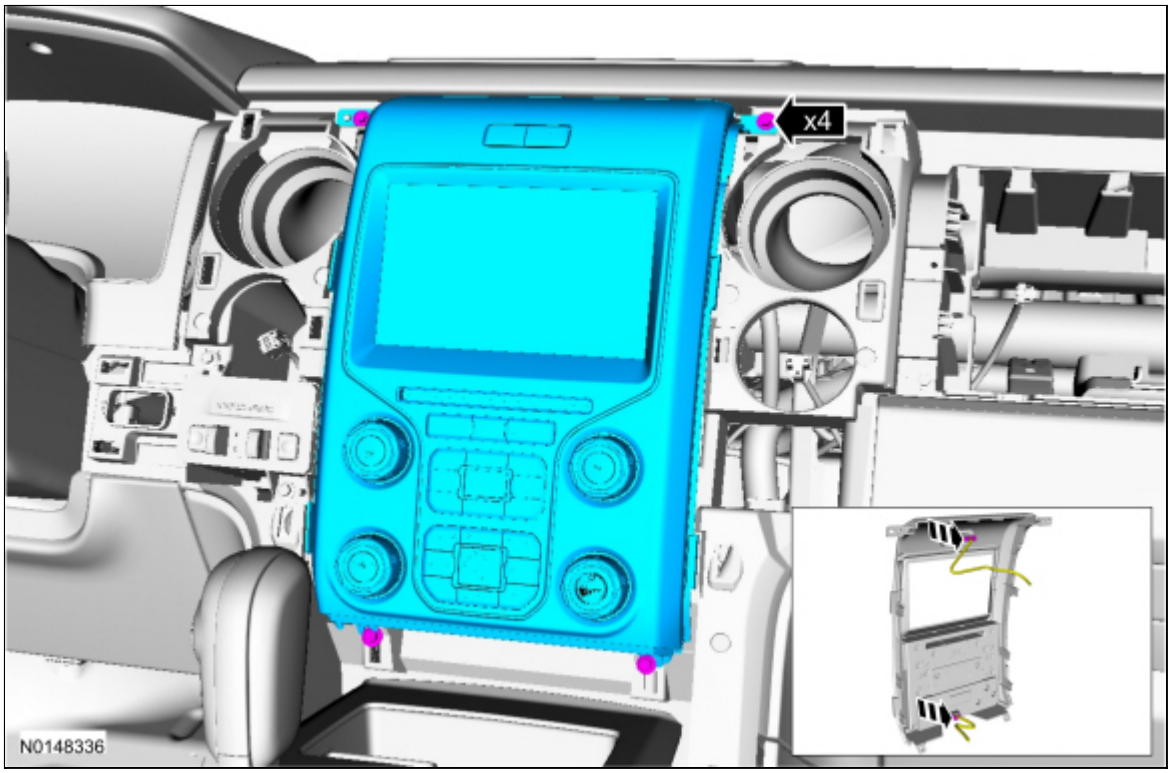
1. **NOTE:** If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

   Upload the Audio Front Control Module (ACM) configuration information to the scan tool by following the scan tool on screen instructions.

2. Remove the Front Display Interface Module (FDIM). Refer to Front Display Interface Module (FDIM) .

3. Remove the 4 ACM bolts and the ACM .
   - Disconnect the electrical connectors.
   - To install, tighten to 2.5 Nm (23 lb-in).

4. To install, reverse the removal procedure.



5. Download the ACM configuration information from the scan tool to the new ACM following the scan tool on screen instructions.

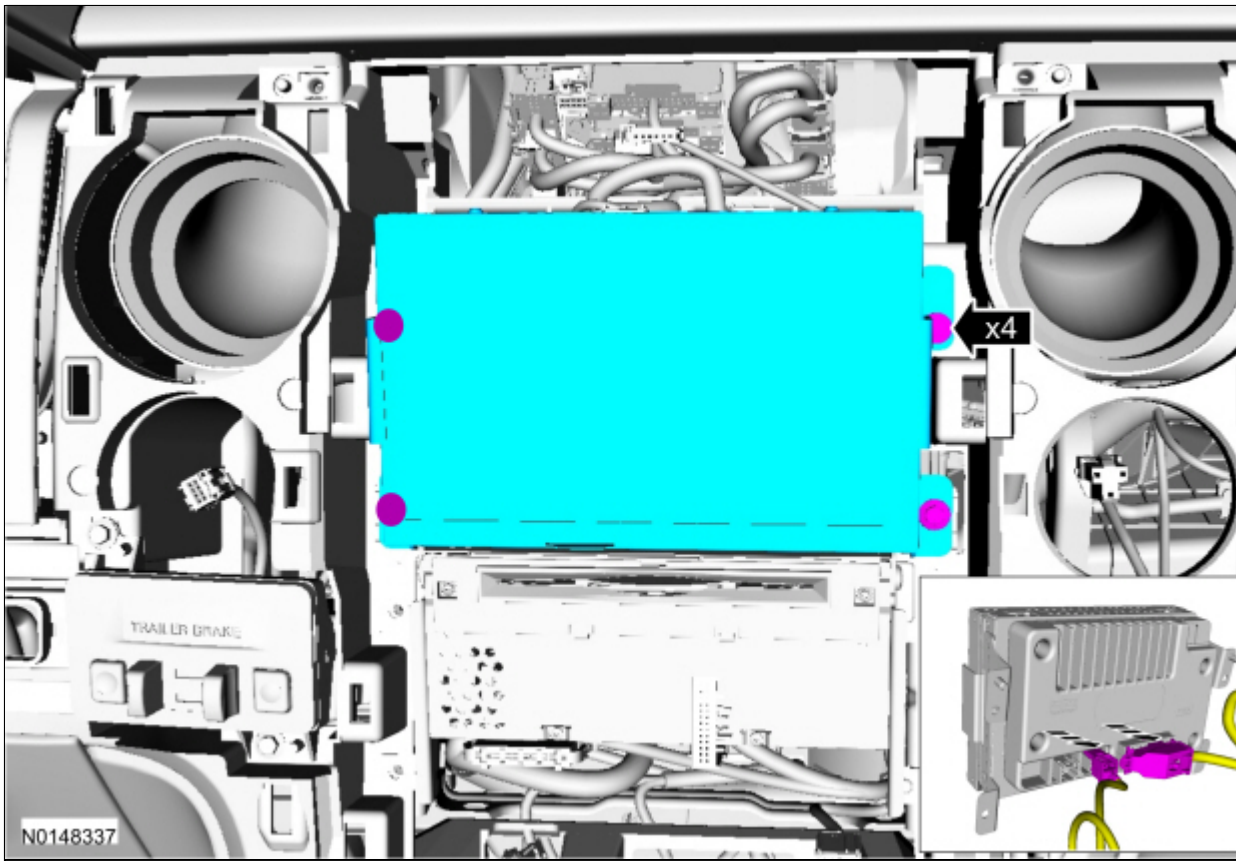
repair4less

Front Controls Interface Module (FCIM)

Removal and Installation

1. Remove the LH center instrument panel finish panel. Refer to Section 501-12 .
2. Remove the RH center instrument panel finish panel. Refer to Section 501-12 .
3. Remove the 4 screws and the FCIM .
   - Disconnect the electrical connectors.
   - To install, tighten to 3 Nm (27 lb-in).

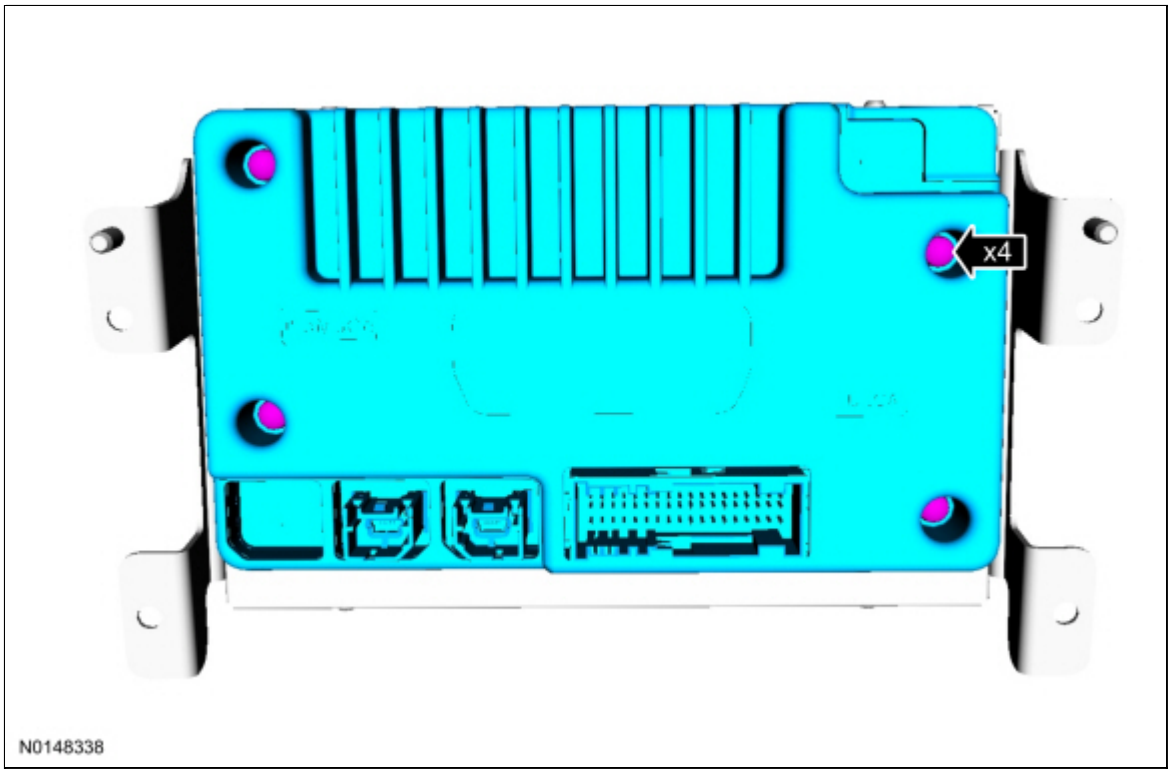
4. To install, reverse the removal procedure.



repair4less

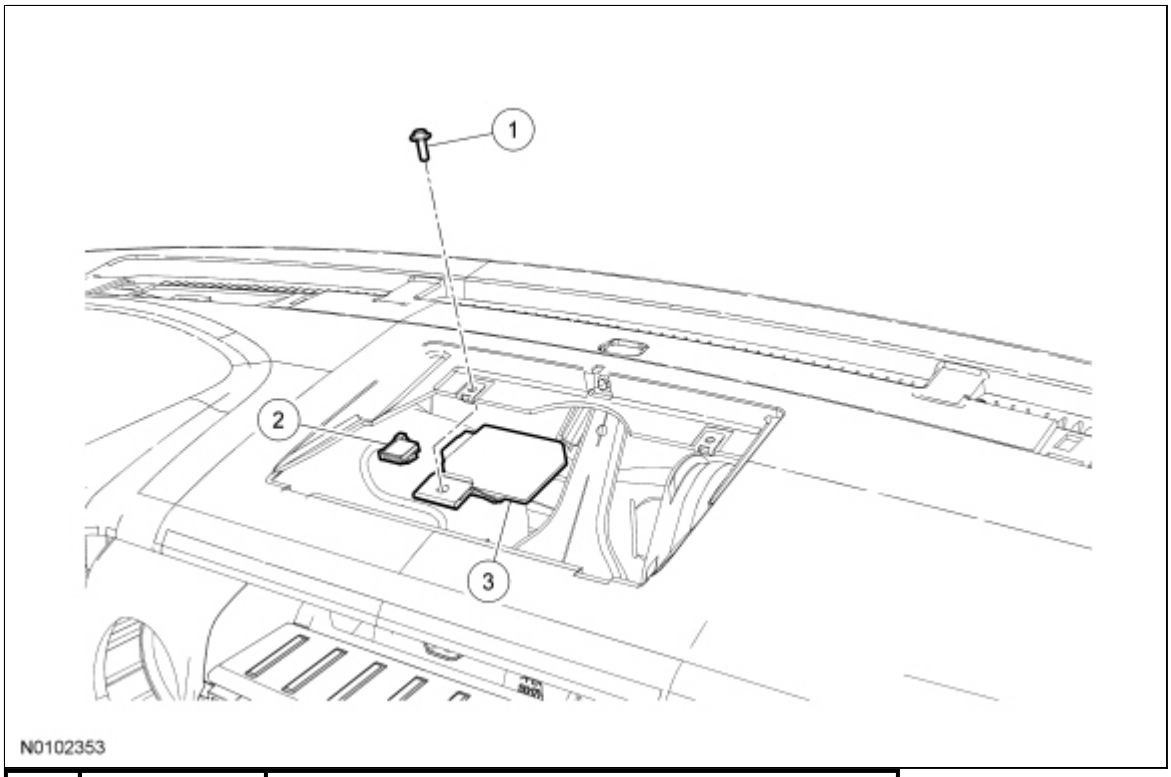
Front Display Interface Module (FDIM)

Removal and Installation



1. Remove the Front Controls Interface Module (FCIM). Front Controls Interface Module (FCIM) .

2. Remove the 4 bolts and the Front Display Interface Module (FDIM).
   - Disconnect the electrical connectors.
   - To install, tighten to 2.5 Nm (23 lb-in).



3. Remove the 4 screws and remove theAccessory Protocol Interface Module (APIM) from the FDIM .
   - To install, tighten to 0.6 Nm (5 lb-in).

repair4less

4. To install, reverse the removal procedure.
5. Calibrate FDIM touchscreen. Refer to Touchscreen Calibration .

Global Positioning System Module (GPSM)

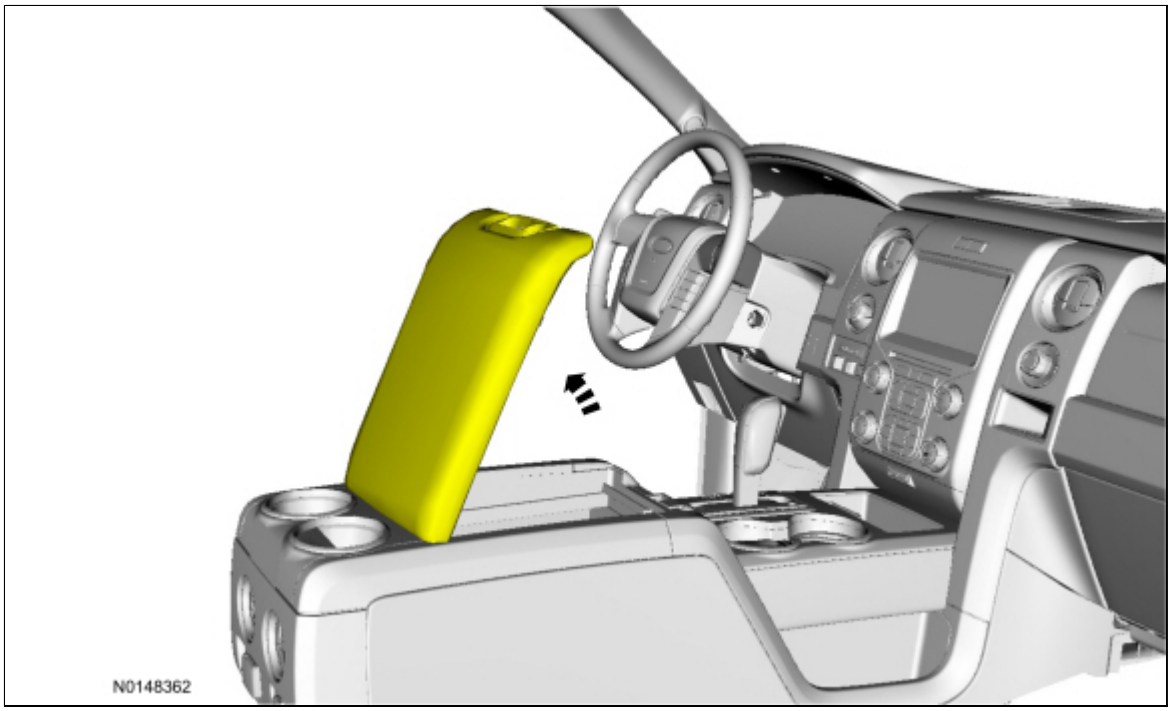
Item	Part Number	Description
1	W707628-S	Global Positioning System Module (GPSM) screw
2	—	GPSM electrical connector (part of 14401)
3	10E893	GPSM

Removal and Installation

1. Remove the Front Display Interface Module (FDIM). For additional information, refer to Front Display Interface Module (FDIM) in this section.

2. Remove the screw and the Global Positioning System Module (GPSM).
   - Disconnect the electrical connector.

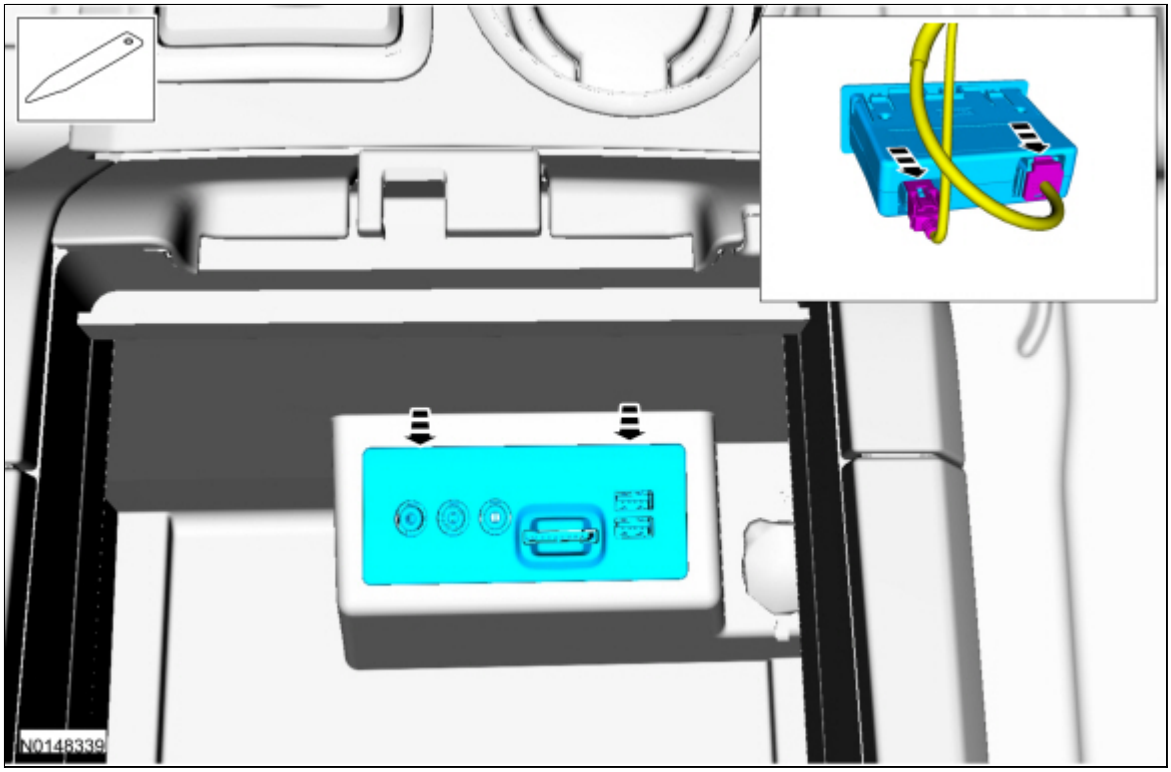
3. To install, reverse the removal procedure.



repair4less

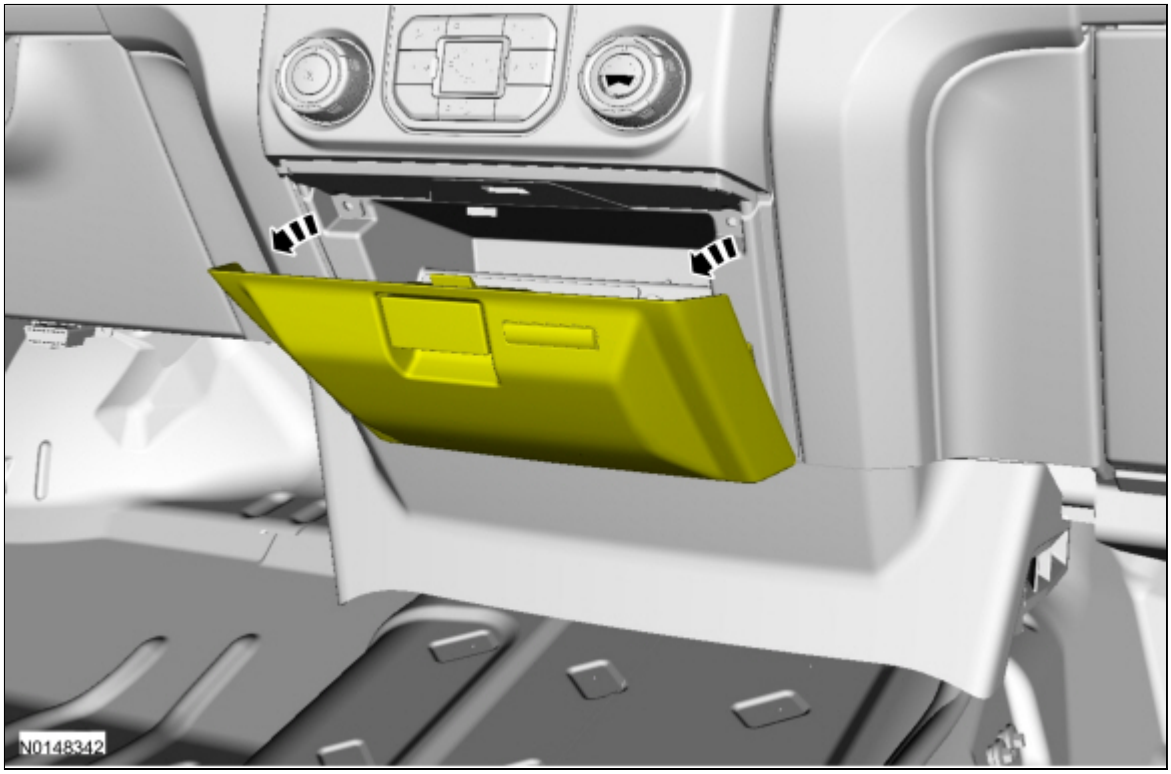
Media Hub

Removal and Installation



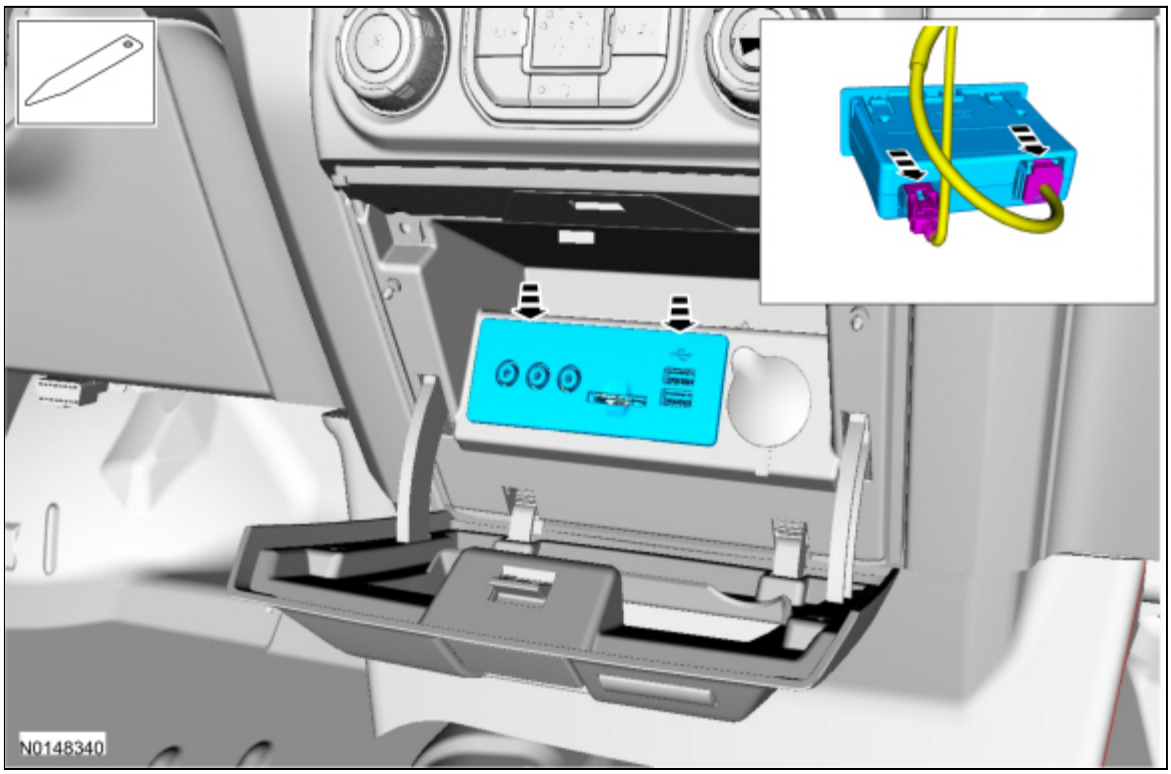
Vehicles with floor console

1. Open the floor console stowage bin door.



2. Remove the media hub.
    - Disconnect the electrical connectors.

repair4less

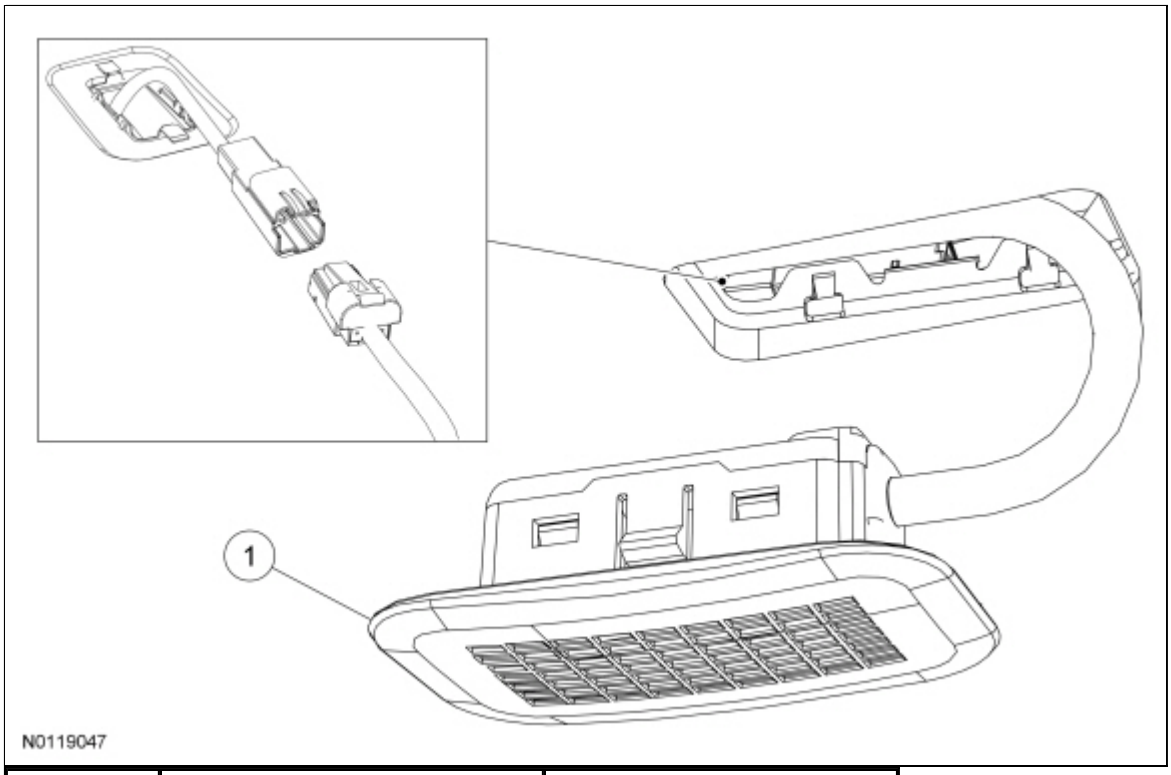


Vehicles without floor console

3. Open the lower instrument panel door.

4. Remove the media hub.

- Disconnect the electrical connectors.



All vehicles

5. To install, reverse the removal procedure.

repair4less

Microphone

Item	Part Number	Description
1	19A391	Microphone

Removal

1. Using a suitable tool, (such as a thin small flat head screwdriver) twist and pry the microphone bezel from the headliner metal mounting bracket.

2. Remove the microphone from the headliner by grasping the microphone pigtail.
    - Disconnect the microphone electrical connector.

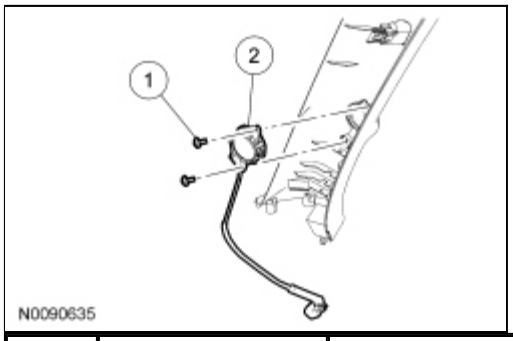
Installation

1. Reconnect the microphone electrical connector.

2. Wrap the connection with anti-rattle tape.

3. Feed the microphone pigtail into the headliner through the microphone hole.
    - Verify the microphone pigtail points towards the front of the vehicle.

4. Snap the microphone into the headliner mounting bracket.



- Verify the mounting bracket and microphone are snug to the headliner.

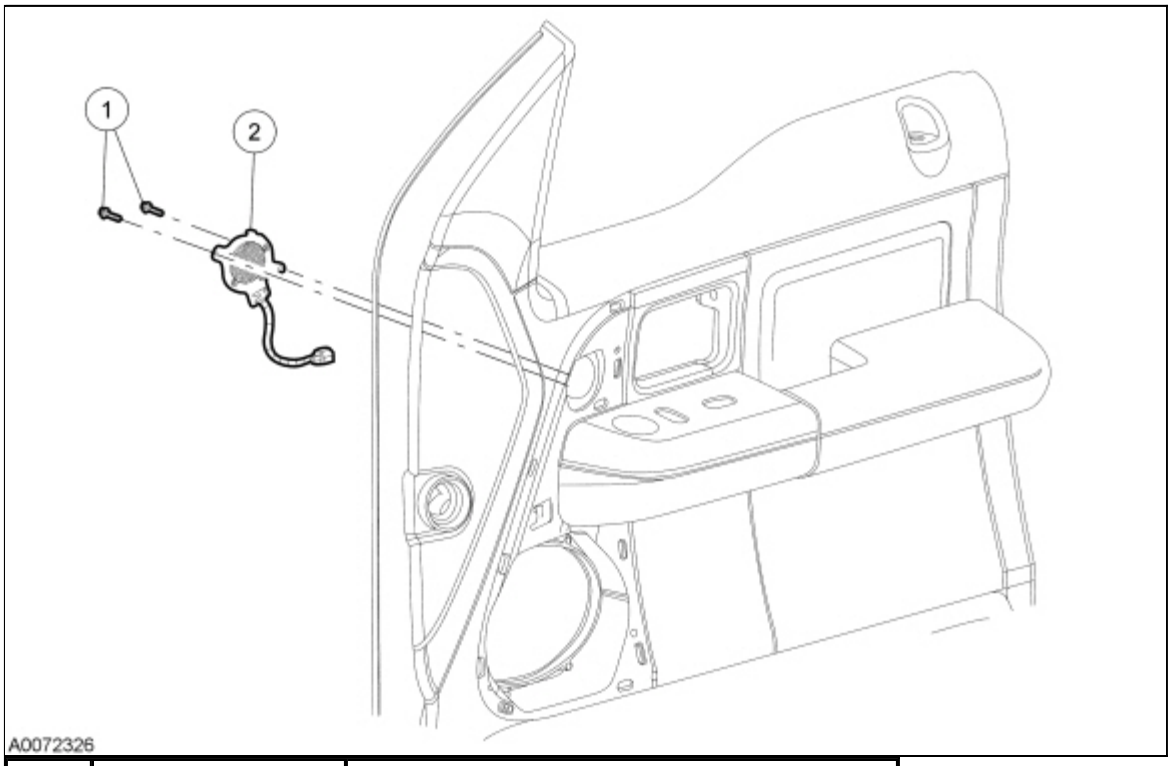
Speaker — A-Pillar

NOTE: LH shown, RH similar.

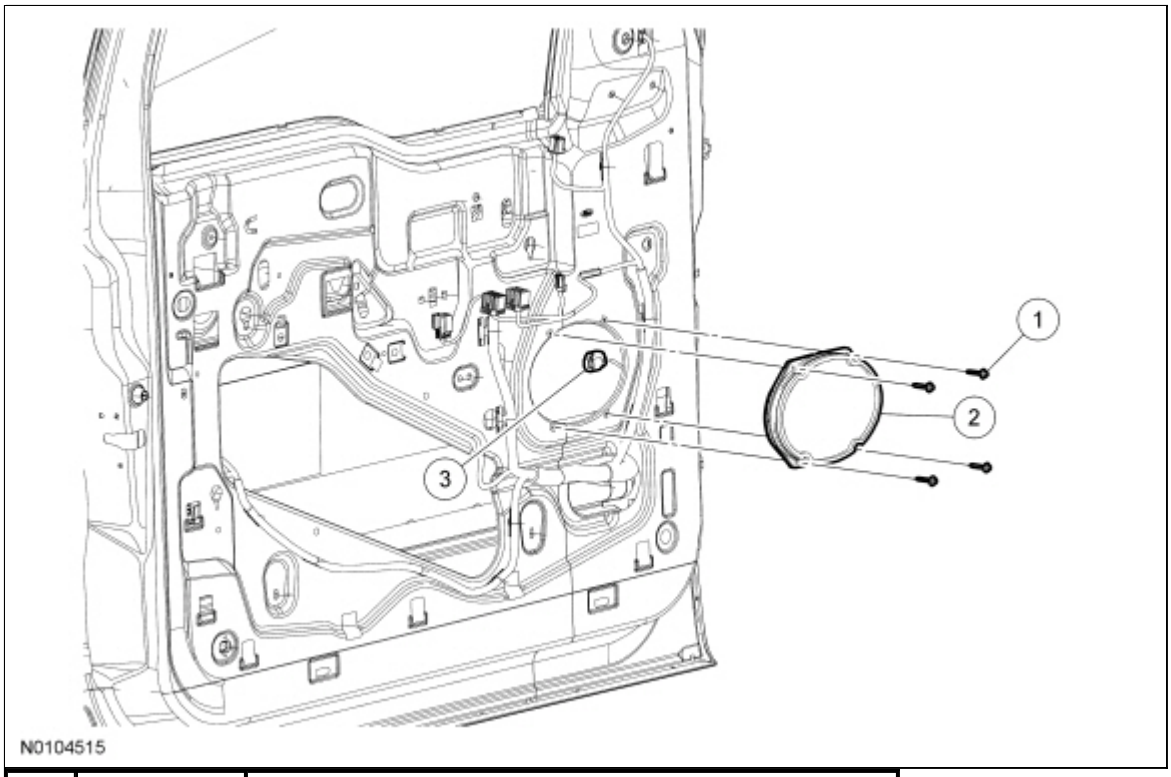
Item	Part Number	Description
1	W701678-S	A-pillar speaker screws (2 required)
2	18978	A-pillar speaker



Removal and Installation

1. Remove the A-pillar trim panel. For additional information, refer to Section 501-05 .
2. Remove the 2 screws and the A-pillar speaker.
3. To install, reverse the removal procedure.

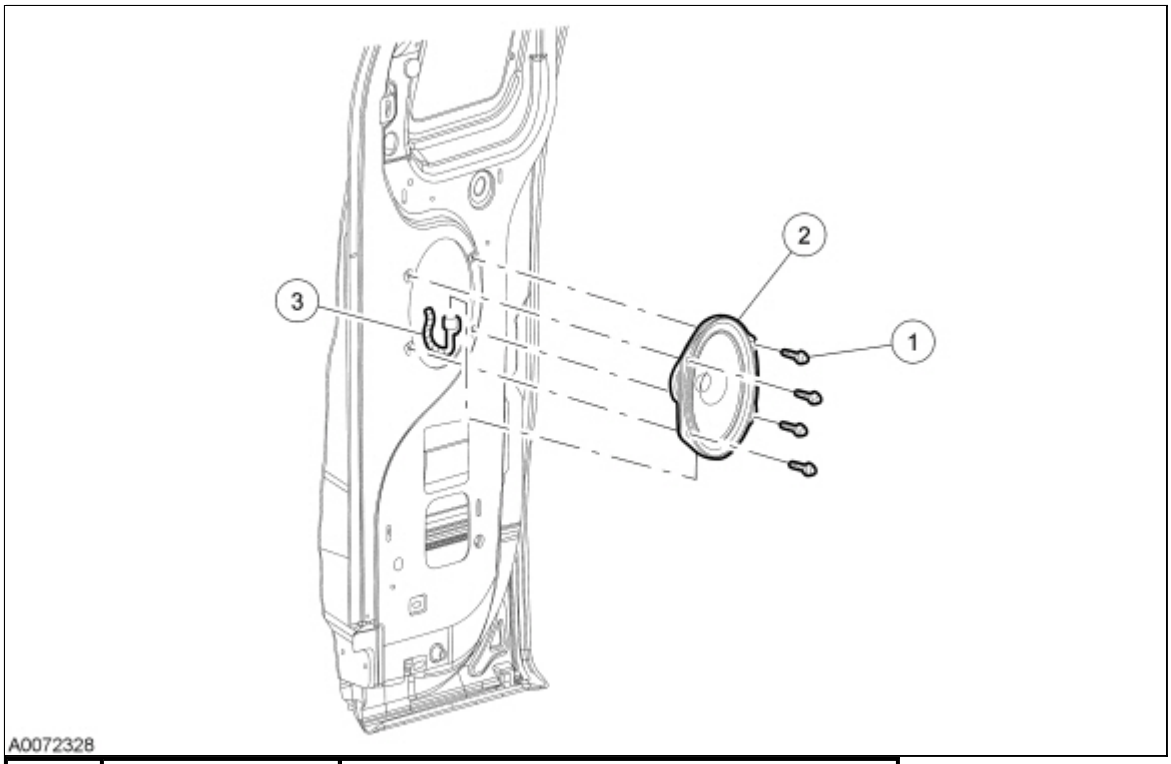
repair4less



Speaker — Door

Front Door Tweeter Speaker

Item	Part Number	Description
1	W701678	Tweeter speaker screws (2 required)
2	19B170/19B171	Tweeter speaker (RH/LH)



Front Door Speaker

Item	Part Number	Description
1	W707628	Front door speaker screws (4 required)
2	18808	Front door speaker
3	—	Front door speaker electrical connector (part of door harness)

Rear Door Speaker

repair4less

Item	Part Number	Description
1	W706766	Rear speaker screws (4 required)
2	18808	Rear speaker
3	180103	Rear speaker electrical connector

Removal and Installation

Front door

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the screws (2 for the tweeter, 4 for the door speaker) and the speaker.
   - Disconnect the electrical connector.

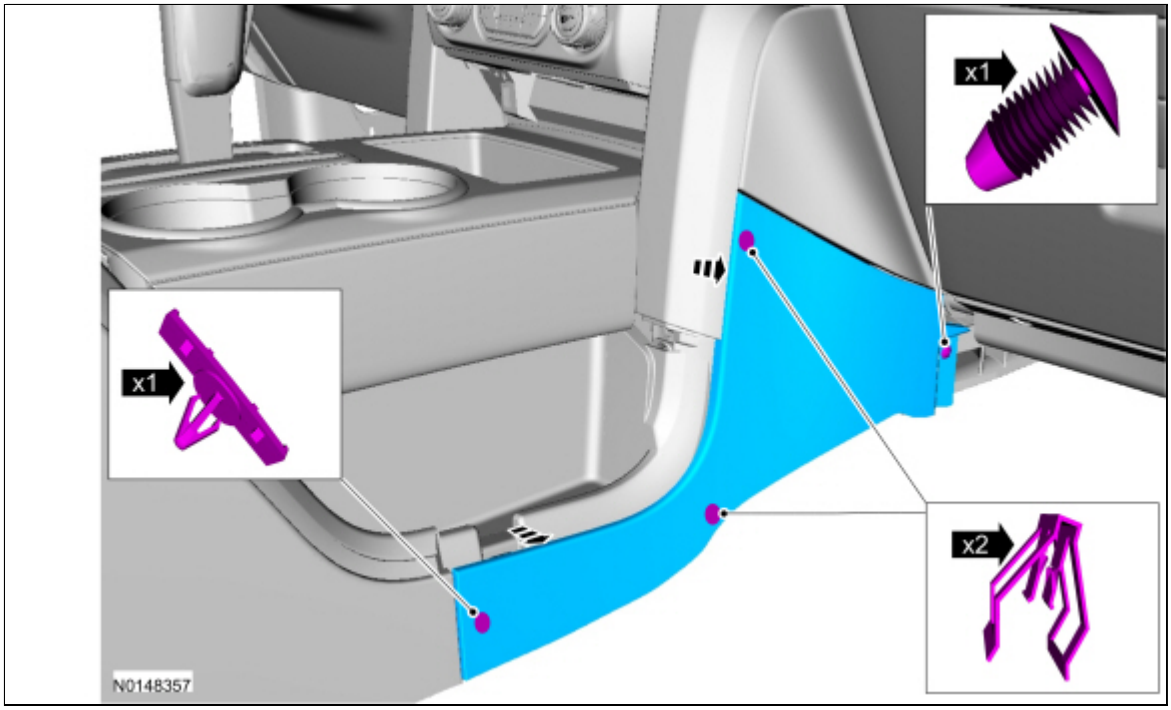
Rear door

3. Remove the rear door trim panel. For additional information, refer to Section 501-05 .

4. Remove the 4 screws and the rear door speaker.
   - Disconnect the electrical connector.

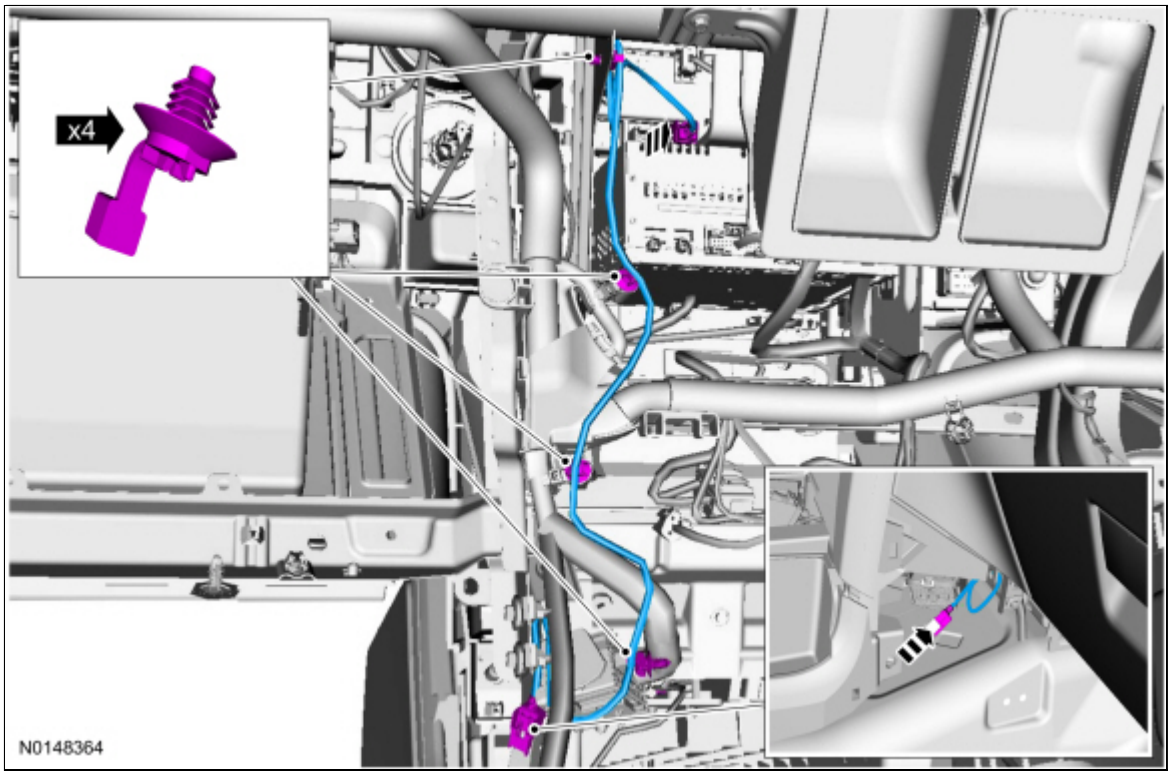
All speakers

5. To install, reverse the removal procedure.



repair4less

Universal Serial Bus (USB) Cable and Port



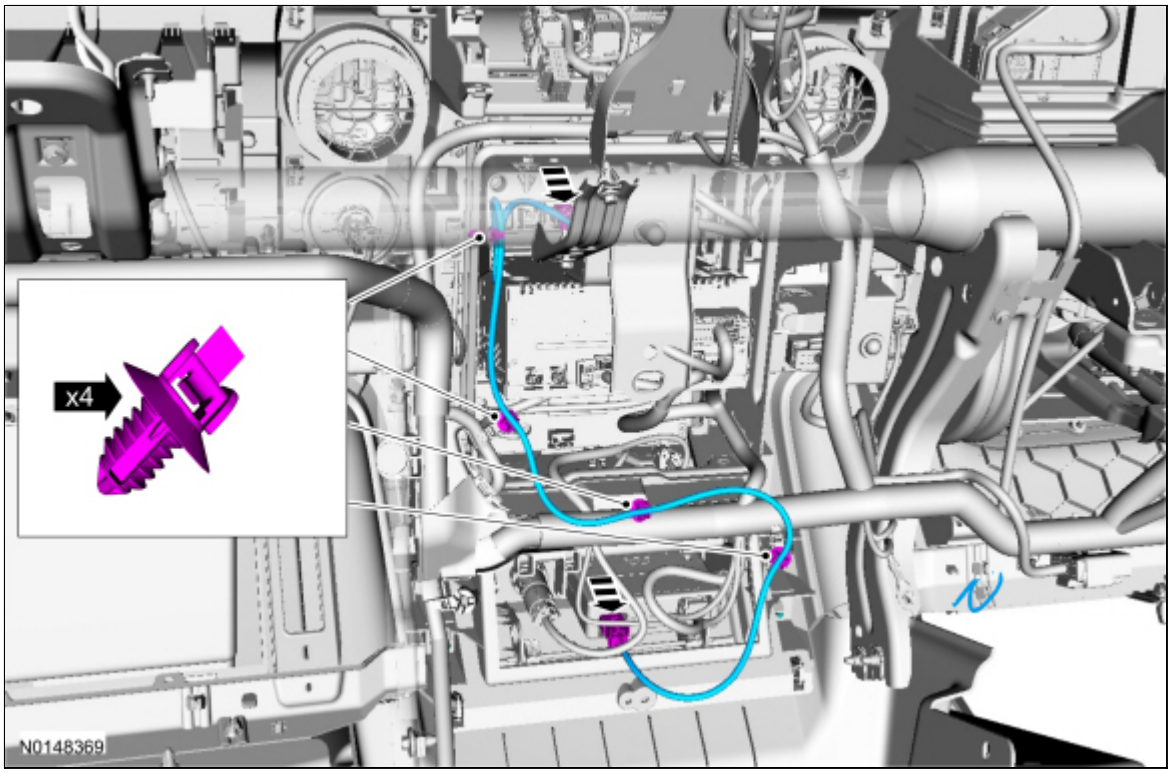
Removal and Installation

Instrument panel USB cable with floor console

1. Remove the Accessory Protocol Interface Module (APIM). Refer to Accessory Protocol Interface Module (APIM) .
2. For access remove the glove box. Refer to Section 501-12 .
3. Remove the RH lower floor console trim panel

4. Remove the USB cable following the routing shown.

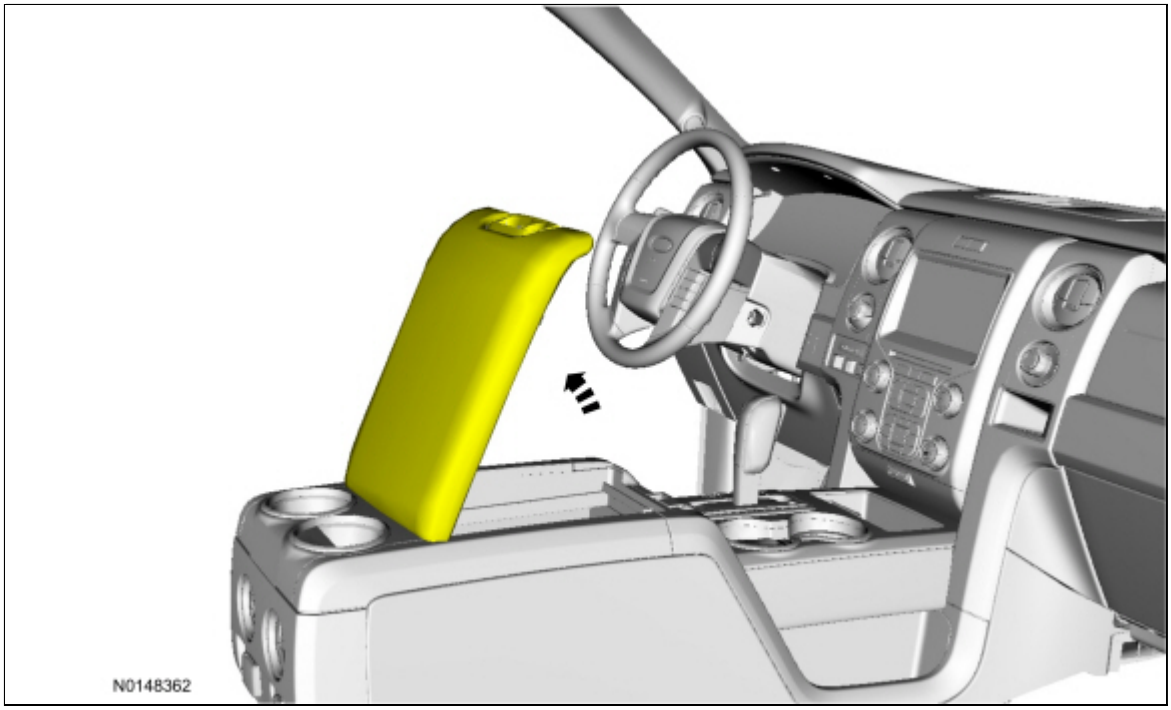
Instrument panel USB without floor console



5. Remove the Accessory Protocol Interface Module (APIM). Refer to Accessory Protocol Interface Module (APIM) .

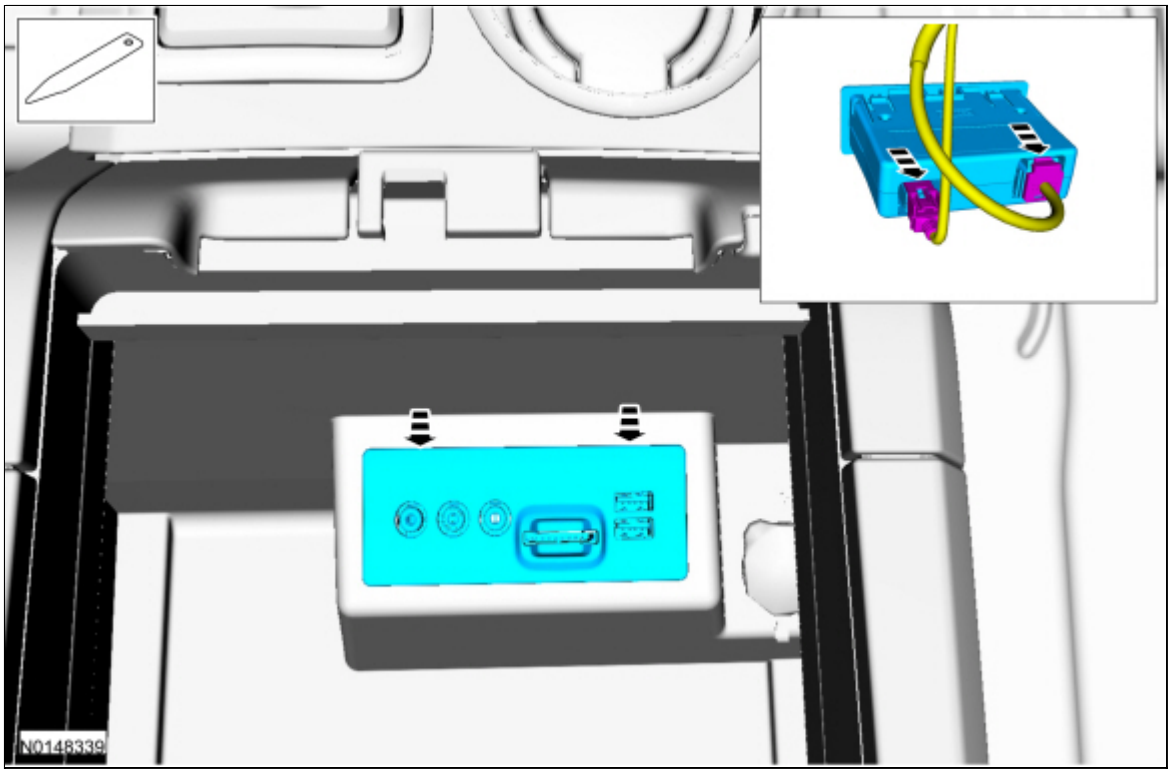
6. For access remove the glove box. Refer to Section 501-12 .

7. Remove the media hub. Refer to Media Hub .

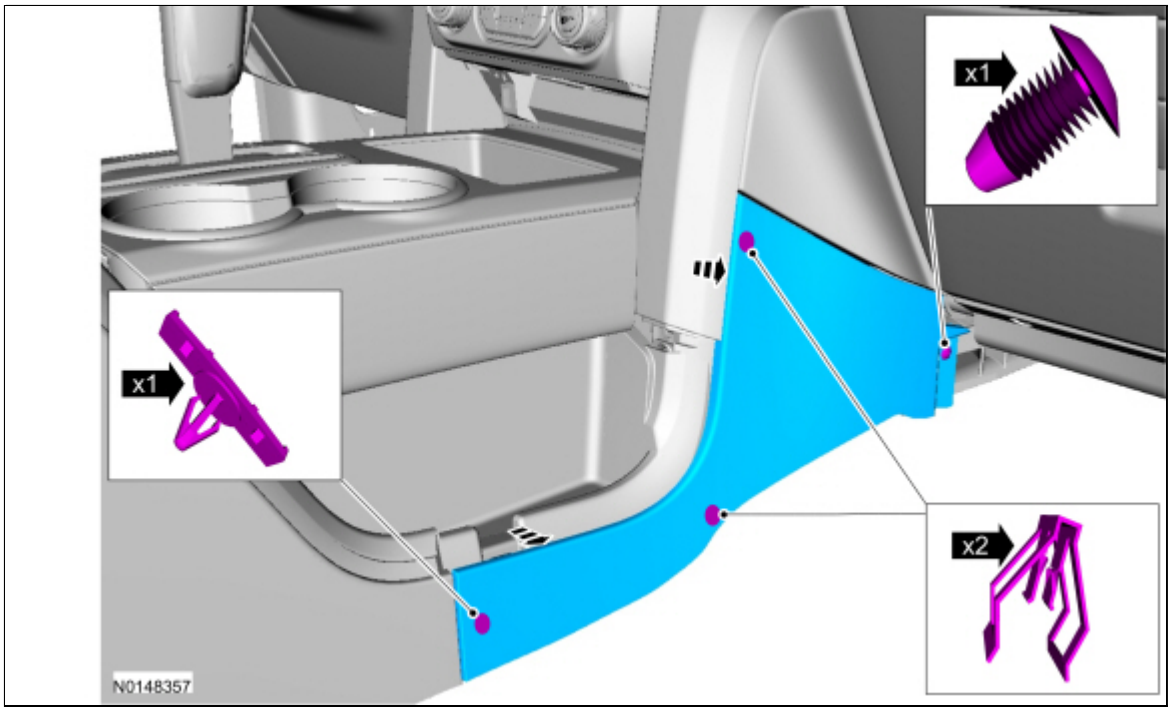


8. Remove the USB cable following the routing shown.

repair4less



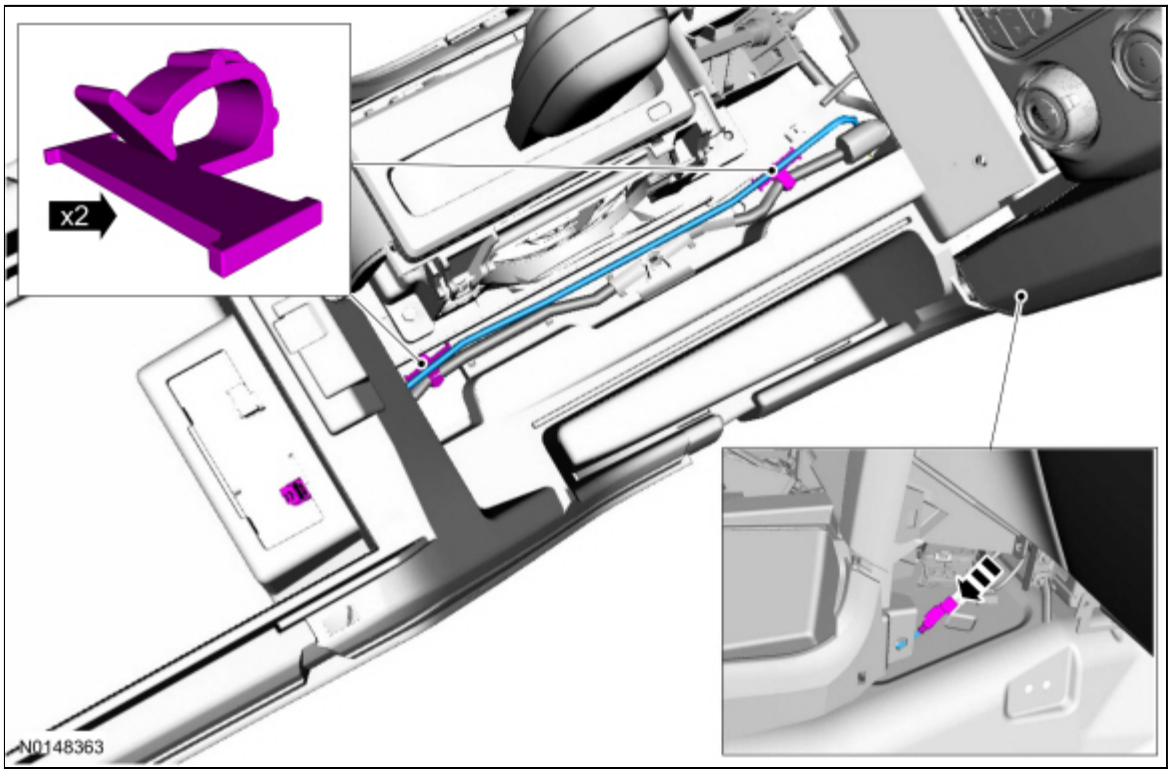
Floor console USB cable



9. Open the floor console stowage bin door.

10. Remove the media hub.

11. Remove the RH lower floor console trim panel.



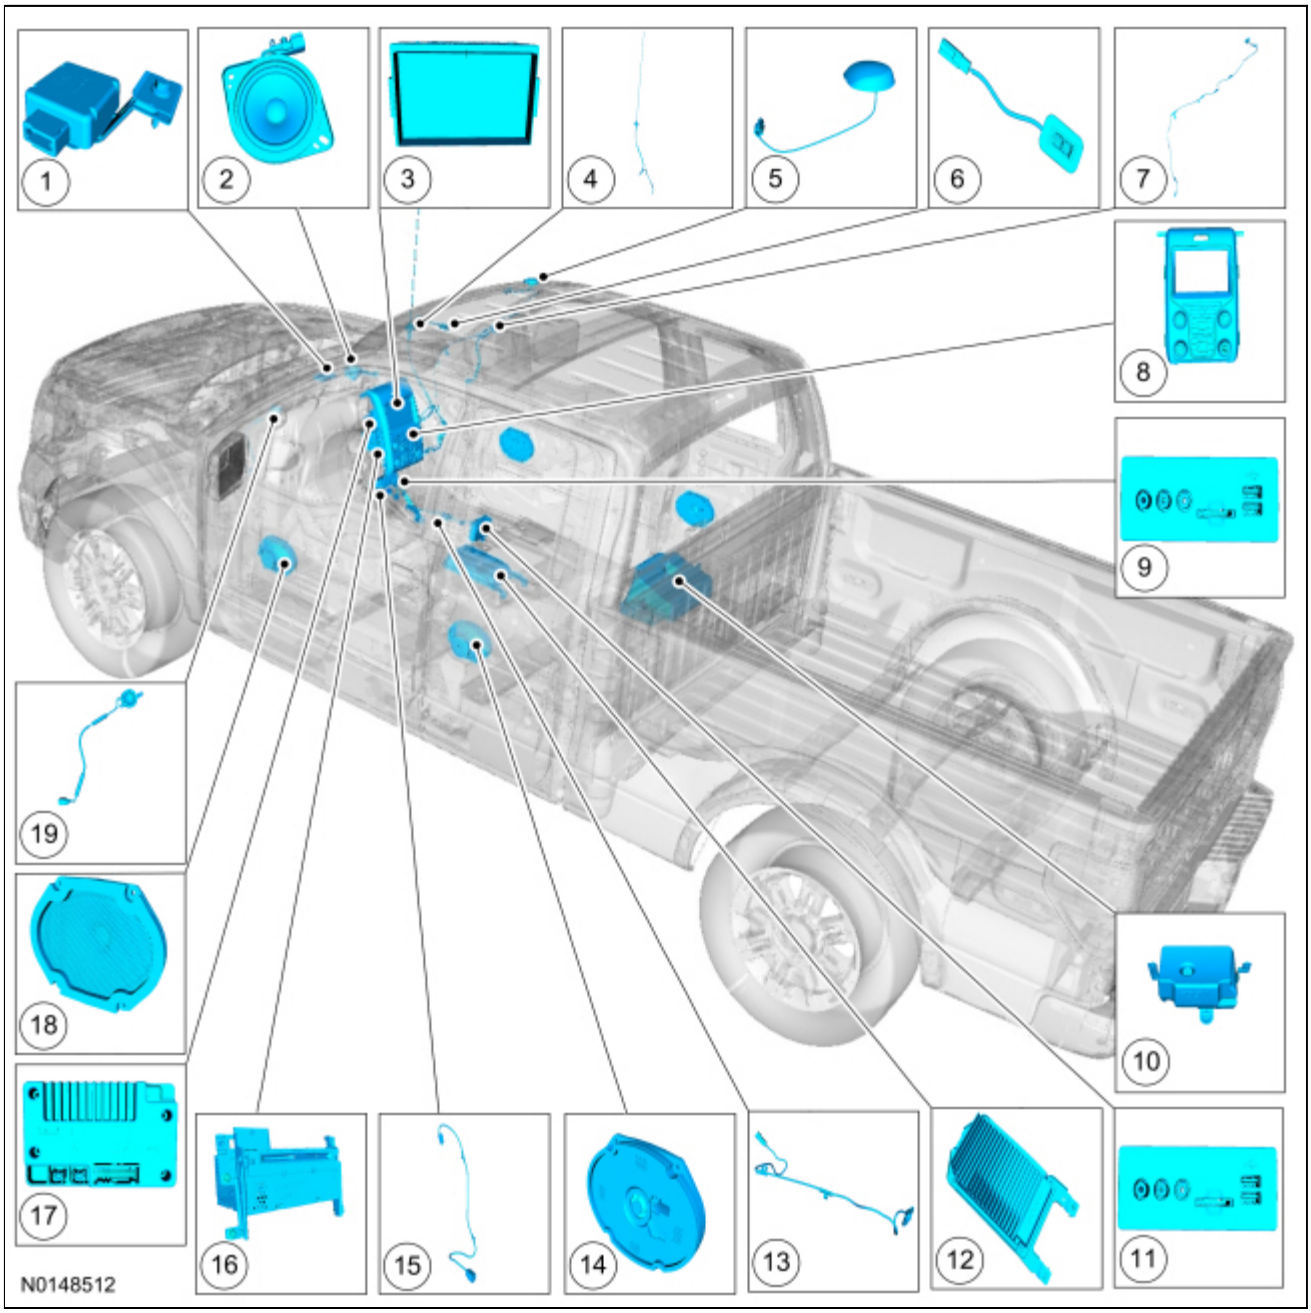
12. Remove the floor console upper finish panel.

repair4less

13. Remove the floor console USB cable following the routing shown.

All USB cables

14. To install, reverse the removal procedure.



repair4less

Torque Specifications

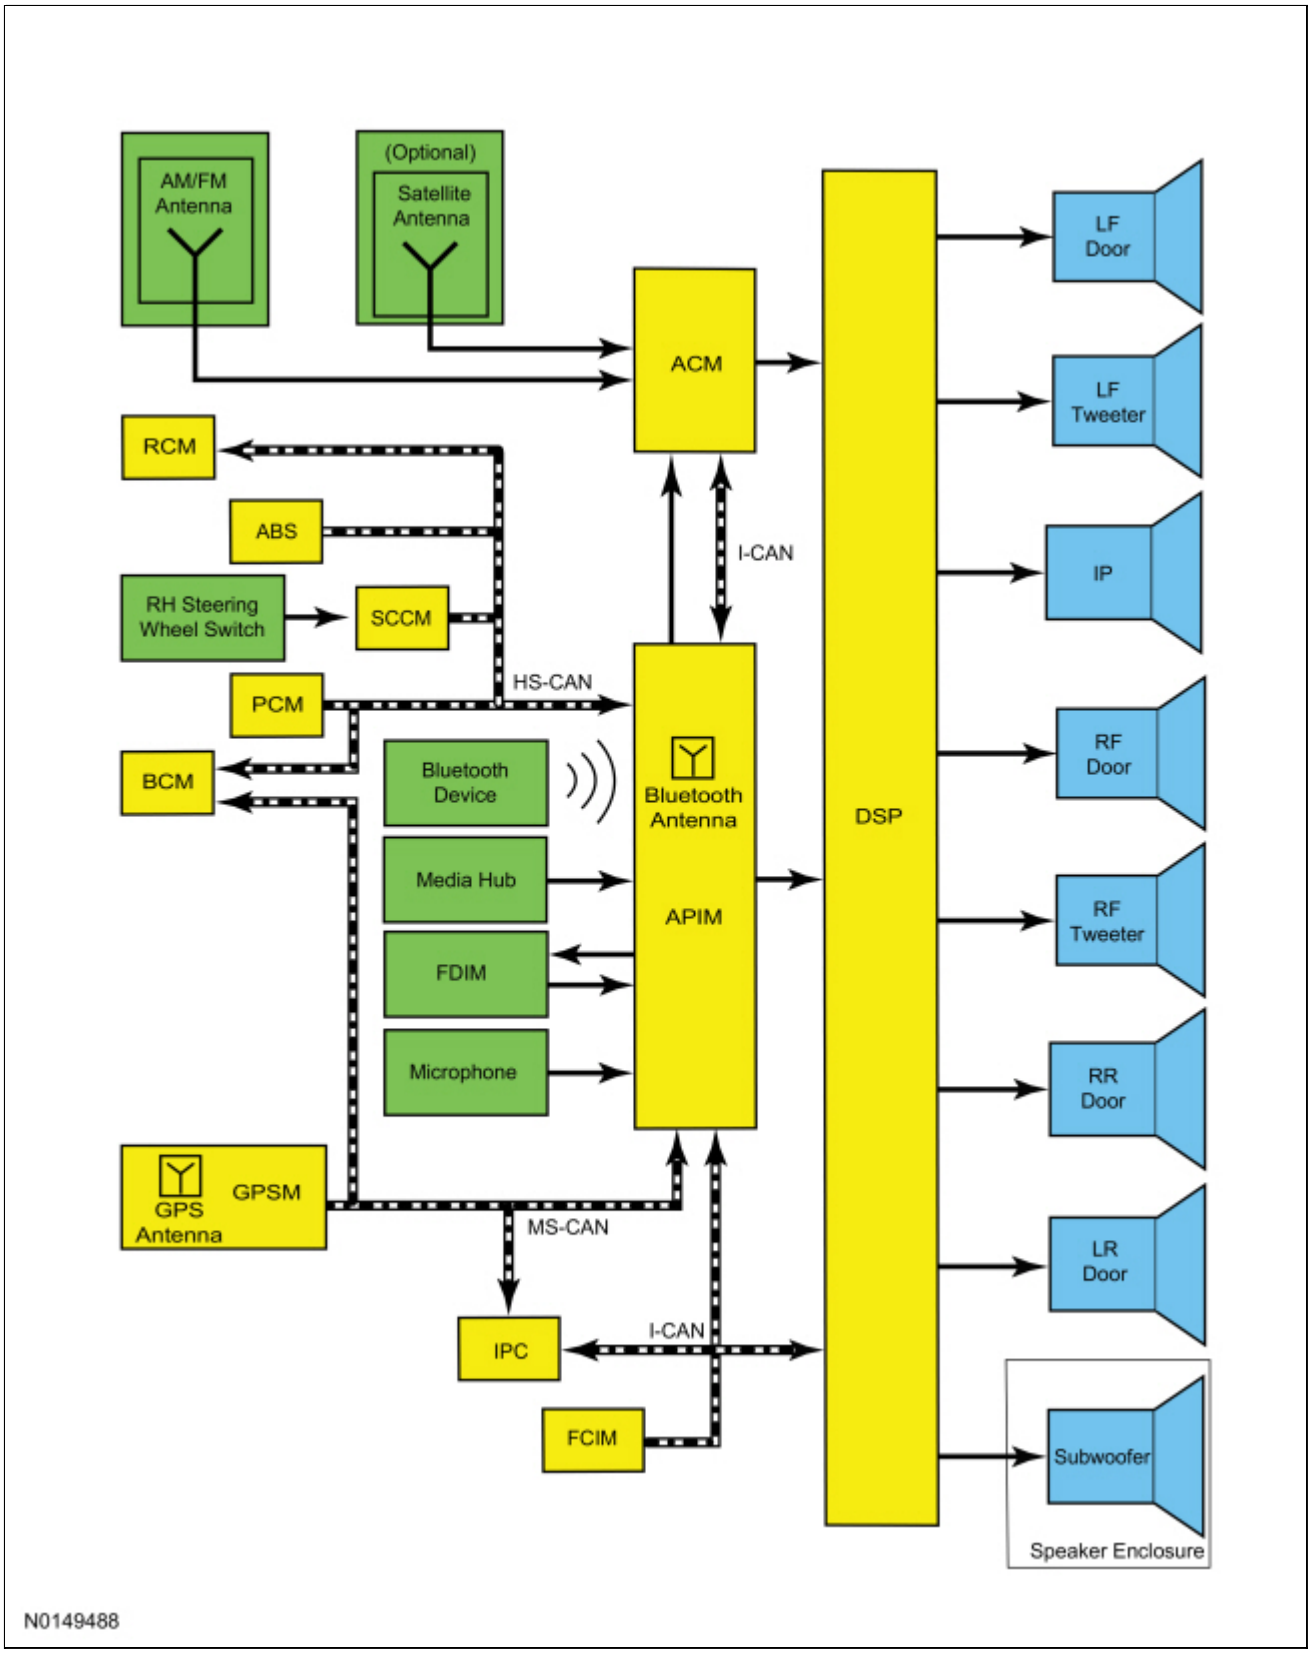
Overview

The audio system consists of the following:

Main Components

- 8 speakers
- 8-inch (203 mm) FDIM touchscreen
- AM/FM single CD ACM
- APIM
- Audio DSP module
- FCIM
- GPSM
- Media hub
- Redundant steering wheel controls
- SYNC® microphone



Main Features

- Optional HD Radio®
- Optional navigation
- Optional satellite radio
- SYNC®

System Operation

System Diagram

repair4less

Network Message Chart

NOTE: A missing network message is indicated by a U-code DTC . When a missing message DTC (U-code)

sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message. Refer to CAN Module Communication Message Chart in Section 418-00 . When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication DTCs may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
FCIM set volume	FCIM	Used to set the ACM volume from the FCIM .
Media player display request	APIM	Used to display detailed folder and track information on the FDIM from the ACM for the different audio system operating modes when the appropriate FCIM button is pressed.
SYNC® alerts	APIM	Used for text message, news, sports, weather, satellite radio artist/title favorites (if activated), and traffic alert notifications.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
ACM radio functions	ACM	Used to display the ACM radio functions such as seek, tune and AM/FM stations on the FDIM .
Airbag status	RCM	Used to monitor airbag deployment status for 911 Assist®.
Audio source	ACM	Used to display the selected audio source on the FDIM .
DSP volume status	Audio DSP module	Used to display the audio DSP module volume on the FDIM .
CD load/eject	ACM	Used to display the loaded or ejected CD status on the FDIM .
Date and time	IPC	Used to display the current date and time on the FDIM .
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
FCIM button press	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Front seat belt latched status	RCM	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s)

repair4less

		are buckled.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
Illumination dimming level	BCM	Used to control the backlight intensity of the FDIM based on the dimmer switch input.
Language selection	IPC	Used to display information on the FDIM in the selected language.
Navigation rolling wheel count	ABS module	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Seat belt buckle status	RCM	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Steering wheel switch media	SCCM	Used to set the audio system listening mode (AM/FM, CD, etc.) from the steering wheel switch.
Steering wheel switch seek left	SCCM	Used to access the next strong station to the left, to restart an audio track, to access the previous satellite radio station preset (if equipped), or the previous audio track from the steering wheel switch.
Steering wheel swtich seek right	SCCM	Used to access the next strong station to the right, to access the next satellite radio station preset (if equipped), or to access the next audio track from the steering wheel switch.
Steering wheel switch voice	SCCM	Used to access or exit the voice command feature from the steering wheel switch.
Steering wheel switch volume down	SCCM	Used to decrease the audio system volume from the steering wheel switch.
Steering wheel switch volume up	SCCM	Used to increase the audio system volume from the steering wheel switch.

Module Network Input Messages - Audio DSP Module

Broadcast Message	Originating Module	Message Purpose
Belt-Minder® audio mute	IPC	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for audio DSP module operating modes and fault reporting.
MyKey® volume limit	IPC	Used to limit the maximum audio system volume when a MyKey® restricted key is in use.
Navigation audio settings	APIM	Used to set the navigation command volume.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.
Illumination dimming level	IPC	Used to control the backlight intensity of the FCIM based on the dimmer switch input.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition switch position	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Selector lever (PRNDL) status	BCM	Used to verify the gear lever position for vehicle direction data.

Accessory Delay Feature

The accessory delay feature allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/FM Radio

The AM/FM fender-mounted antenna receives radio waves and sends them through the AM/FM antenna coaxial cable to the ACM . The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. The audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage.

APIM Programming

The APIM requires specific programming procedures for correct operation. APIM programming is required when:

- The APIM is replaced
- Directed by a TSB. Updates to resolve SYNC® performance concerns can only be performed when directed by a TSB.
- Feature upgrades are requested. Occasional feature upgrades and/or new applications can be programmed when they become available. This type of programming is available upon customer request and expense.

There are 3 types of APIM programming available:

- Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).
- Standard — Used to update the APIM and any currently installed Applications to the latest software level.
- Custom — Used to show all the available software options (including applications that may not have

repair4less

been installed previously) that can be programmed into the APIM . Use this selection when upgrades become available or as directed by a TSB.

There are 3 types of software installation methods:

- Full Flash (Force CIP) — A CIP program is the entire software package for the APIM . Performing a Full Flash erases the existing APIM software and installs the complete program. A Full Flash should only be performed if a Service Pack is not available. If a Full Flash is performed, all applications must be re-installed. Performing a Full Flash by selecting Force CIP requires additional programming time and is not necessary unless directed by a TSB.
- Service Pack — A Service Pack update only provides the necessary software to update the existing APIM program to a new level. For example, a Service Pack changes the software program from an 'AA' to an 'AB' version level. It does not delete or overwrite the existing APIM software. A Service Pack is a much smaller program than a Full Flash and requires less downloading and programming time. A Service Pack software installation should always be performed instead of a Full Flash, if possible.
- Applications — Applications are special software programs that may be installed on the APIM . Applications necessary for each vehicle are determined by the vehicle build information stored in the Ford online database. Selecting individual applications for installation may not be necessary every time the APIM is programmed.

NOTE: VIP programming is not selectable because the VIP is configured automatically during programming.

There are some general programming guidelines that are applicable to multiple types of programming:

- Full Flash/Force CIP
  - The media hub must be removed for programming.
  - The diagnostic scan tool and SYNC® Re-Flash Kit (or equivalent), are required to complete the flash procedure.
  - All previously paired phones are deleted from the SYNC® system.
  - The file needs to be downloaded from the Ford online database. Allow for extra time in order to complete the download. The compressed files are between 200 and 400 megabytes (MB), and once downloaded, are extracted to the full size of approximately 2 gigabytes (GB).
  - Once diagnostic scan tool programming is complete, applications need to be installed with the USB flash drive. This should be accomplished by reinstalling the media hub and connecting the USB flash drive to the media hub.
- Service Pack and Applications
  - A USB flash drive with a minimum 1 gigabyte (GB) storage capacity is required.
  - The file is downloaded from the Ford online database onto the flash drive. The files are then transferred via the flash drive to the APIM through the vehicle USB port.

To perform module replacement programming, refer to Accessory Protocol Interface Module (APIM) Module Replacement Programming

To perform standard programming, refer to Accessory Protocol Interface Module (APIM) Standard Programming

To perform custom programming, refer to Accessory Protocol Interface Module (APIM) Custom Programming

Audible Prompts

The APIM receives stereo inputs from connected mobile phones and mono inputs from the SYNC® microphone.

Stereo and mono inputs, voice prompts, the TTS feature, ringtones, and any audio received through a connected mobile phone are transmitted to the ACM as stereo or mono sound.

The TTS feature speaks information so that it does not have to be read from the display.

Audio Extended Play

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. To turn the audio system off, the power button on the FCIM is pressed. Audio extended play will not function if the battery load shed is active.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the vehicle OFF and the ignition in ACC or ON, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, SYS OFF TO SAVE BATT is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is a maximum of 9.75 m (32 feet).

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system. Any Bluetooth device used with the SYNC® system must first be paired with the system before it is operational.

Only one Bluetooth phone and one Bluetooth media device can be connected to the system at any one time. If an additional device of either type is paired with the system and made active, the APIM disconnects any active connection and establishes a connection with the new device.

When a new Bluetooth device is added, the APIM and the Bluetooth device must be paired together. Most Bluetooth devices can pair with the SYNC® system, although functionality may vary. To determine if a Bluetooth device is supported, verify the customer device is on the compatibility list for the current APIM software level.

Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be entered on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

It is important to understand that not all mobile phones have the same level of features when interacting with the SYNC® system. For a list of compatible phones, Refer to SyncMyRide website.

Composite Audio-Video Input Mode

The composite audio and video inputs consist of the RCA jack connections that are used for playing video or audio content from an external device (such as a gaming system). The media hub contains an internal composite audio/video translator connected to the external RCA jacks, which outputs video and audio signals to the APIM via a shielded audio and video harness.

repair4less

DSP

The Sony® audio system provides theater quality sound in the vehicle. Audio signals are sent from the ACM to the audio DSP module, where the signals are processed and sent to the speakers.

The audio DSP module determines the correct audio environment based on the audio signals and network messages it receives from other audio system modules. These messages include such information as fade/balance and speed compensated volume settings.

HD Radio® (If Equipped)

HD Radio® is a free to the public digital radio broadcast. HD Radio® channels duplicate certain analog FM channels, and some subdivide (multicast) the digital signal into multiple channels that do not have analog equivalents.

The AM/FM fender-mounted antenna receives radio waves containing data (station call letters, artist names, song titles, etc.) and digital HD Radio® audio. The radio waves are sent through the AM/FM antenna coaxial cable to the ACM where the data is separated from the audio. The data is sent to be displayed on the centerstack infotainment display, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. The audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage.

MyKey® Audio Operation

When a MyKey® is in use, the following restrictions are activated:

- The audio system is muted until the safety belts are buckled when the Belt-Minder® feature is activated. The MyKey® "BUCKLE UP TO UNMUTE AUDIO" is displayed in the information display.
  - This is a standard setting and cannot be changed.
- Satellite radio adult content stations are blocked by being muted.
- If "Always On" is selected in the MyKey® menu, 911 Assist® and the Do Not Disturb features are enabled and cannot be disabled.
- The audio system volume is limited to 45%. In an attempt to exceed the limited volume, the MyKey® VOLUME LIMITED message is displayed in the centerstack infotainment display.
  - This is an optional setting.

Refer to the Owner's Literature for more information on MyKey®.

Navigation

The navigation system guides the user to a pre-entered destination. Map data is read from the map data SD card plugged into the media hub. The APIM calculates route information based on GPS data received by the GPSM . The APIM also uses vehicle speed and transmission gear selected signals received through the network to detect vehicle speed and direction, resulting in more accurate navigation tracking. The navigation display is shown on the FDIM . Installing different size tires other than what is indicated on the vehicle placard may cause the navigation system to be inaccurate.

The voice recognition system allows the user to interface with the system without using the touchscreen. A microphone located in the headliner provides a direct input to the APIM .

Satellite Radio (If Equipped)

Satellite radio is a subscription-based service.

The satellite radio roof-mounted antenna receives signals containing data (station call letters, artist names, song titles, etc.) and digital satellite radio audio. These signals are sent through the satellite radio antenna

coaxial cable to the satellite radio receiver built into the ACM . The ACM separates the data from the audio. The data is sent to be displayed on the centerstack infotainment display, and the audio is converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio DSP module. The audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage.

SD Card Mode

The SD card slot can be used for playing audio content that is stored on a SD card.

Image files can be saved to the APIM from a SD card in order to be used as wallpaper backgrounds displayed on the FDIM .

SD card data is transmitted to the APIM through the USB cable.

SIRIUS Data Services - If Equipped

SIRIUS Data Services is a subscription-based service and requires a separate subscription from the satellite radio.

The combination HD /satellite radio roof-mounted antenna receives digital signals and sends them to the satellite radio receiver through the satellite radio antenna coaxial cable. The satellite radio receiver is built into the ACM . The signals are then sent to the APIM , and then to the FDIM touchscreen to be displayed.

SIRIUS Data Services allows the customer to receive updates for:

- Fuel Prices
- Movies (movie listings, start times, ratings)
- Sports (in game and final scores, weekly schedules)
- Stocks
- Ski Conditions
- Traffic (traffic speed, accidents, construction, road closings)
- Weather (current weather, forecasts, radar images)

Some services may be available separately while others are only available as packages.

Speed Compensated Volume

The audio DSP module adjusts the audio system volume based on the VSS signal to compensate for speed and wind noise.

When a MyKey® is in use and the MyKey® radio volume limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The RH 8-way steering wheel switches operate the volume +/-, seek +/-, and the audio system SYNC® functions (media, voice, and phone).

SYNC® System

The SYNC® system is a hands-free communication and entertainment system that supports many features. All features are not available with every phone.

The SYNC® system provides the ability to:

- Connect media devices (such as an iPod® or USB device) in order to play audio files.

repair4less

- Control the entertainment system, climate control system, ambient lighting system, and several other vehicle systems using the touchscreen or voice controls.
- Initiate an emergency call (911 Assist®) when the airbags deploy.
- Play media files via a paired Bluetooth-enabled audio device.
- Produce vehicle health reports.
- Send and receive phone calls via a paired Bluetooth-enabled phone.
- Send and receive text messages via a paired Bluetooth-enabled phone.
- Wi-Fi signal receiver for in-car Internet access (requires customer-supplied USB modem).

SYNC® Services

SYNC® Services is a subscription-based service. For SYNC® Services subscription information, refer to SyncMyRide .

The customer's mobile phone is used to access and download the SYNC® services. SYNC® services information received by the customer's mobile device is sent to the APIM .

The GPS antenna, integral to the GPSM , is used to detect the location and direction of the vehicle.

SYNC® services includes the following features:

- Business search
- Personalized text alerts
- Real-time traffic updates
- Turn-by-turn directions

SYNC® services allows the customer to receive updates for:

- Entertainment
- News
- Sports
- Stocks
- Travel
- Weather

USB Mode

The USB port can be used for connecting a media device (such as an iPod®) with the device's available cable, or for directly plugging in a portable mass storage device, such as a thumb drive. When playing media files stored on a mass storage device, the SYNC® system only plays files that do not have DRM protection. The USB port can also be used for uploading vehicle application upgrades. The USB port is powered by the APIM , so no external power source is needed to power a device plugged into the USB port if the device supports this feature.

In addition to audio information, metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device plugged into the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music, based on customer preference. Not all USB devices can send metadata to the APIM . When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes (depending on the amount of data on the device), and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index (rather than creating a new one), which reduces the amount of time needed to index the device.

Image files can be saved to the APIM from a USB device. These images can be displayed on the FDIM as wallpaper backgrounds.

Voice Recognition

Voice recognition is used for many vehicle functions, including audio system and climate controls. The microphone relays the microphone input to the APIM through dedicated wiring. The TTS and voice prompt features speak certain text information and interaction requests to minimize driver distraction by having to look at the audio system display while driving. The ringtone alerts the driver to an incoming call. The microphone is also used to detect outgoing audio during a phone call.

Audible prompts can range from a simple tone to more elaborate spoken text, based on the customer setting. When interaction mode is set to standard, detailed guidance is provided. When interaction mode is set to advanced, most prompts are tones only and minimal audible guidance is provided. Refer to the Owner's Literature for further information on voice interaction.

The audio signals for the TTS and voice prompt features, ringtones, and audio from the outside device during a phone call, are sent from the APIM to the ACM .

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s) and converts them into fluctuating AC voltage. The ACM receives audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes these inputs and sends left and right analog audio signals to the audio DSP module as fluctuating AC voltage. The audio DSP module processes the audio signals and sends them to the speakers as fluctuating AC voltage.

If equipped with satellite radio or HD Radio®, the ACM will also receive radio waves containing data through the antenna coaxial cable(s). The data is sent to be displayed on the centerstack infotainment display.

The ACM requires PMI when it is replaced.

Antenna

The AM/FM fender-mounted antenna receives radio waves containing audio and sends them through the AM/FM antenna coaxial cable to the ACM . The antenna mast is used to amplify the AM/FM radio waves to improve reception.

If equipped with HD Radio®, the AM/FM fender-mounted antenna receives radio waves containing data and digital audio and sends them through the AM/FM antenna coaxial cable to the ACM .

If equipped with satellite radio, the satellite radio roof-mounted antenna receives signals containing data and digital audio. These signals are sent through the satellite radio antenna coaxial cable to the satellite radio receiver built into the ACM .

APIM

Audio signals received by the APIM are sent to the ACM as fluctuating AC voltage.

The APIM consists of 2 internal modules: the CIP and the VIP . The modules are not replaceable individually, but can be flashed independently, if required.

repair4less

The CIP interfaces with all of the inputs to the APIM . It contains an analog-to-digital-to analog converter, as well as the Bluetooth chipset. Any Application upgrades that are available to the consumer are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs when a vehicle health report is requested.

Audio DSP Module

The audio DSP module enhances the input audio signal sound quality from the ACM .

Audio signals received by the audio DSP module are sent to the audio system speakers as fluctuating AC voltage.

The audio DSP module receives audio signals from the ACM in the form of fluctuating AC voltage. The audio DSP module processes these inputs and sends left and right analog audio signals to the speakers as fluctuating AC voltage.

The audio DSP module requires PMI when it is replaced.

FCIM

The FCIM can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods in which the customer interacts with the infotainment system.

The FCIM is separate from the ACM .

FDIM

The FDIM can be operated with the ignition in RUN, ACC, or OFF.

The FDIM touchscreen provides one of the methods in which the customer interacts with the infotainment system.

The FDIM plugs directly into the APIM , and therefore does not communicate directly on any network, and no external circuits are connected.

Global Positioning System Module (GPSM)

The Global Positioning System Module (GPSM) provides vehicle location for real-time traffic reports and re-routing, and for identifying vehicle location in the event of a collision.

For vehicles with navigation, the Global Positioning System Module (GPSM) acts as the antenna for the navigation system.

Vehicle location information is broadcast from the Global Positioning System Module (GPSM) to the APIM .

Media Hub

The media hub allows for various audio and video devices to play content through the vehicle speakers and to be viewed in the FDIM .

The media hub receives inputs from:

- 2 USB ports
- 1 Secure Digital (SD) card slot
- 1 set of component RCA jacks

Steering Wheel Switches

The RH steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH steering wheel switch on the input circuits. When a switch is pressed, the voltage is routed through the corresponding resistor(s), and then to ground through the SCCM . The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The SCCM sends a network message to the APIM for the SYNC® switches and to the ACM for the redundant audio controls.

Subwoofer Speaker

The subwoofer speaker is contained within an enclosure and recieves audio signals from the audio DSP module.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and outgoing audio during a phone call. These signals are sent to the APIM .

DTC Charts

NOTE: For SYNC® related concerns, REFER to the SYNC® Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Audio Front Control Module (ACM) DTC Chart

DTC	Description	Action
B1A56:21	Antenna: Signal Amplitude	If DTC B1A56:21 sets after running the bezel diagnostic tests, disregard this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail. Therefore, tests ran from the bezel diagnostic screen and the DTC generated from the test can be disregarded.
B1A89:11	Satellite Antenna: Circuit Short To Ground	• For a satellite radio concern, GO to Pinpoint Test B • For a SIRIUS Data Services concern, GO to Pinpoint Test C
B1A89:13	Satellite Antenna: Circuit Open	• For a satellite radio concern, GO to Pinpoint Test B • For a SIRIUS Data Services concern, GO to Pinpoint Test C
B1D19:49	Compact Disc Unit: Internal Electronic Failure	• CLEAR the DTC. • WAIT at least 30 seconds. • REPEAT the self-test. • If DTC B1D19:49 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC. This is normal operation.
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AF .
U0238:00	Lost Communication With Digital Audio Control Module "D" : No Sub Type Information	GO to Pinpoint Test AI .
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AJ .
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AK .
U0257:00	Lost Communication With Front Controls / Display Interface	GO to Pinpoint Test AL .

repair4less

	Module: No Sub Type Information	
U201A:51	Control Module Main Calibration Data: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, INSTALL a new ACM to correct the failure to retain configuration data. REFER to Audio Control Module (ACM) .
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3000:96	Control Module: Component Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:96 is retrieved again, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AM .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test an .

Accessory Protocol Interface Module (APIM) DTC Chart

DTC	Description	Action
C1001:01	Vision System Camera: General Electrical Failure	REFER to The rear video is inoperative in Section 413-13 .
B108E:01	Display: General Electrical Failure	GO to Pinpoint Test z .
B116A:01	Handset Microphone: General Electrical Failure	GO to Pinpoint Test r .
B1215:00	External Memory Card: No Sub Type Information	GO to Pinpoint Test aa .
B1252:11	USB Port: Circuit Short to Ground	• For an inoperative USB port, GO to Pinpoint Test T • For an inoperative SD card slot, GO to Pinpoint Test U
B1252:13	USB Port: Circuit Open	• For an inoperative USB port, GO to Pinpoint Test T • For an inoperative SD card slot, GO to Pinpoint Test U
B12B8:11	USB Port #2: Circuit Short To Ground	**NOTE:** This DTC refers to USB port #2 on the APIM itself, which is not used. • INSPECT the APIM USB port #2 for damage and REMOVE any debris. • CLEAR the DTCs. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B12B8:11 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AD .
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test AE .
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AF .

U016A:00	Lost Communication	GO to Pinpoint Test AG .

repair4less

	With Global Positioning System Module: No Sub Type Information	
U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AH .
U0238:00	Lost Communication With Digital Audio Control Module "D" : No Sub Type Information	GO to Pinpoint Test AI .
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AK .
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	RETRIEVE and FOLLOW DTCs present in the IPC . REFER to Section 413-01 .
U1A00:87	Private Communication Network: Missing Message	GO to Pinpoint Test C .
U2017:45	Control Module Software #2: Program Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2017:45 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2017:51	Control Module Software #2: Not Programmed	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2017:52	Control Module Software #2: Not Activated	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2017:54	Control Module Software #2: Missing	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures.

	Calibration	If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT/PERFORM the PMI procedure as directed by the diagnostic scan tool. For more information, REFER to Programmable Module Installation (PMI) in Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:04	Control Module: System Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:04 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
U3000:88	Control Module: Bus Off	**NOTE:** Network communication/message DTCs can result from intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming often set these DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. The module was unable to communicate on the network at a point in time. The fault is not currently present. To avoid repeat network concerns:

repair4less

		• INSPECT for damaged or corroded wiring at the APIM . • TEST the vehicle battery. REFER to Charging Systems in Section 414-00 . • CLEAR the DTC. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AM .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test an .

Symptom Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom Chart — General Audio System

Condition	Possible Sources	Action
• A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals, or connectors • Module	• REFER to Section 418-00 .
• The RH steering wheel controls are inoperative or do not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test X .
• The CD player is inoperative or does not operate correctly	• CD • ACM	• INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
• The speed compensated volume does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test D .
• The compass is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test AB .
• The FCIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	• REFER to Section 413-00 .
• The audio system does not operate correctly from the FCIM	• Refer to the Pinpoint Test	• GO to Pinpoint Test Y .
• The FDIM touchscreen is inoperative or	• Refer to the Pinpoint Test	• GO to Pinpoint Test Z .

does not operate correctly		
• The FDIM displays “SD CARD FAULT”	• Refer to the Pinpoint Test	• GO to Pinpoint Test AA .

Symptom Chart — HD Radio® System (If Equipped)

Condition	Possible Sources	Action
• Data errors for text display	• Data error from radio broadcaster	• This condition is due to the data from the radio broadcaster. ADVISE the customer that the HD Radio® is functioning correctly.
• Echo, stutter, skip, repeat or volume fluctuation in HD	• Signal alignment error from radio broadcaster	• This condition is due to the signal alignment from the radio broadcaster. ADVISE the customer that the HD Radio® is functioning correctly.
• Sound fading in and out or sound delay	• Transition between HD and analog	• This condition is due to the transition between HD and analog. ADVISE the customer that the HD Radio® must have an available channel in order to output HD content.
• Sound dropout or channel unavailable in HD 2 or HD 3	• HD 2 and HD 3 do not have analog equivalents causing complete signal loss when HD signal fades	• This condition is due to the HD 2 and HD 3 do not have analog equivalents causing complete signal loss when HD signal fades. ADVISE the customer that the HD Radio® must have an available channel in order to output HD content.

Symptom Chart — Navigation (If Equipped)

Condition	Possible Sources	Action
• Navigation is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test AA .
• The SIRIUS data services are not available	• Refer to the Pinpoint Test	• GO to Pinpoint Test C .

Symptom Chart — Satellite Radio (If Equipped)

Condition	Possible Sources	Action
• Poor reception — satellite radio	• Refer to the Pinpoint Test	• GO to Pinpoint Test B .
• Poor sound quality or no sound while in satellite radio mode - all other functions operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B .
• The satellite radio is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test B .

repair4less

Symptom Chart — Sound Quality

Condition	Possible Sources	Action
• Poor reception — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A .
• Continuous seek or scan — AM/FM	• Refer to the Pinpoint Test	• GO to Pinpoint Test A .
• Poor sound quality or distorted sound from one or more speakers (not all speakers)	• Refer to the Pinpoint Test	• GO to Pinpoint Test E .
• No sound from all speakers	• Refer to the Pinpoint Test	• GO to Pinpoint Test F .
• The LF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test G .
• The LF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H .
• The instrument panel speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test I .
• The RF door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test J .
• The RF tweeter speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test K .
• The RR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test L .
• The subwoofer speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test M .
• The LR door speaker is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test N .

SYNC System

Condition	Possible Sources	Action
• All SYNC® Services features are inoperative or inaccurate (traffic, directions, and information)	• Unregistered SYNC® owner account • Unregistered or expired SYNC® Services subscription • Unregistered mobile phone number • Mobile phone being used not selected as "Active" • SYNC® Services server • Accessory Protocol Interface Module (APIM) • GPSM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test Q .

• The SYNC® system voice or tone prompts, Text-To-Speech (TTS) feature, or ringtones are inoperative or do not operate correctly	• Customer's setting • Wiring, terminals, or connectors • APIM • Audio Front Control Module (ACM) (for vehicles without the Audio DSP Module) or Audio DSP Module (If equipped)	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test P .
• During a phone call, no incoming audio is heard in the vehicle	• Customer's setting • Wiring, terminals, or connectors • APIM • Audio Front Control Module (ACM) (for vehicles without the Audio DSP Module) or Audio DSP Module (If equipped)	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset If the concern is still present, GO to Pinpoint Test P .
• Voice recognition is inoperative or does not operate correctly	• Wiring, terminals, or connectors • Microphone • APIM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test R .
• During a phone call, poor quality or no outgoing audio is heard on the outside device	• Wiring, terminals, or connectors • Microphone • APIM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test R .
• No sound from all SYNC® audio sources (Bluetooth, USB, audio input jack)	• Customer's device • Wiring, terminals, or connectors • APIM • Audio Front Control Module (ACM)	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test O .
• The SYNC® steering wheel switches are inoperative or do not operate correctly	• Steering wheel switch • Wiring, terminals, or connectors • Clockspring • SCCM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test X .
• All media hub	• Customer's	• PERFORM the APIM Reset, REFER to

repair4less

functions are inoperative or do not operate correctly (USB ports, Secure Digital (SD) card, and RCA jacks)	device • Media hub • Wiring, terminals, or connectors • APIM	Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test S .
• The USB port (s) are/is inoperative or do/does not operate correctly	• USB cable/port • Customer's device • APIM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test T .
• The Secure Digital (SD) card slot is inoperative or does not operate correctly	• Customer's device • Media hub • USB cable • APIM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test U .
• The RCA jacks are inoperative or do not operate correctly	• Customer's device • Wiring, terminals, or connectors • Media hub • APIM	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test V .
• Unable to pair Bluetooth device	• Incompatible Bluetooth device • APIM	• PERFORM the APIM Reset., REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, GO to Pinpoint Test W .
• An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	• Customer's device compatibility	• PERFORM the APIM Reset, REFER to Accessory Protocol Interface Module (APIM) Reset . If the concern is still present, INSTRUCT the customer to review the device compatibility list. REFER to www.syncmyride.com. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
• 911 Assist™ or Vehicle Health Report (VHR) is inoperative or does not operate correctly	• Unregistered SYNC® owner account • RCM misconfiguration • IPC misconfiguration	• Verify that the customer has a SYNC® Owner Account on www.syncmyride.com. This error message appears due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or RCM . If there have been recent service actions

		with the IPC or RCM , REPEAT/PERFORM the Programmable Module Installation (PMI) procedure as directed by the diagnostic scan tool. REFER to: Section 418-01 . If there have been no recent service actions, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

Pinpoint Tests

Pinpoint Test A: Poor Reception Or Continuous Seek Or Scan — AM/FM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to AM/FM Radio, ACM , and Antenna in Information and Entertainment System .

The RDS function allows the vehicle operator to choose which genre (category) of music to listen to. When the SCAN button is pressed, the ACM only stops at channels falling within the selected category. If no channel in the selected category is found, the ACM continues to scan without stopping. This can appear to be a reception issue, but it is actually due to the customer's setting.

Possible Sources

- AM/FM antenna
- AM/FM antenna coaxial cable
- Charging system
- Ignition system
- No channel found in the selected category
- Noise suppression equipment
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST A: POOR RECEPTION OR CONTINUOUS SEEK OR SCAN — AM/FM

Test Step	Result / Action to Take
A1 CHECK THE AUDIO SYSTEM RECEPTION	**Yes**
• Operate the audio system in radio tuner AM/FM	

repair4less

mode. • Check the reception with the engine running, and with the engine off. • **Does the poor reception only occur with the engine running?**	GO to A2. **No** GO to A4.
A2 CHECK THE GENERATOR • Ignition OFF. • Disconnect: Wiring harness to the generator voltage regulator. • Start the engine. • Operate the audio system in radio tuner AM/FM mode. • **Is the reception OK?**	**Yes** INSTALL a new generator. REFER to Section 414-00. **No** GO to A3.
A3 CHECK THE IGNITION CIRCUITS • Ignition OFF. • Connect: Wiring harness to the generator voltage regulator. • Visually inspect the engine compartment and make sure all ignition coils are correctly and securely connected, and that there are no visible cracks in the coil housings. • Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions. • **Are the ignition components OK?**	**Yes** USE a jumper cable to ground various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary. **No** REPAIR the ignition system as necessary.
A4 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: AM/FM antenna coaxial cable at the ACM. Refer to Audio Control Module (ACM). • Disconnect: AM/FM antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — AM/FM. • Ignition ON. • Measure the **voltage** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit AM/FM antenna coaxial cable core at the ACM / — / — / Ground AM/FM antenna coaxial cable shield at the ACM / — / — / Ground • **Is any voltage present?**	**Yes** REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM. **No** GO to A5.
A5 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND • Ignition OFF. • Measure the **resistance** between: Positive Lead / Negative	**Yes** GO to A6. **No** REPAIR or INSTALL a new lower

			Lead	
	Pin	Circuit	Pin	Circuit
	AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A6 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM coaxial cable core at the ACM	—	Lower AM/FM antenna coaxial cable core at the inline connection	—
AM/FM antenna coaxial cable shield at the ACM	—	Lower AM/FM antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

Yes
GO to A7 .

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A7 CHECK THE LOWER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A8 .

No
REPAIR or INSTALL a new lower AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A8 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: AM/FM antenna coaxial cable at the antenna unit. Refer to Antenna — AM/FM .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable	—	—	Ground

Yes
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

No
GO to A9 .

repair4less

core at the ACM			
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

A9 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A10 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A10 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable core at the antenna unit (harness side)	—
AM/FM antenna coaxial cable shield at the ACM	—	AM/FM antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to A11 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A11 CHECK THE UPPER AM/FM ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A12 .

No
REPAIR or INSTALL a new upper AM/FM antenna coaxial cable. REFER to Antenna Cable — AM/FM .

A12 CHECK THE AM/FM ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/FM antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground
AM/FM antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

No
GO to A13 .

A13 CHECK THE AM/FM ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A14 .

No
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

A14 CHECK THE AM/FM ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna coaxial cable core at the ACM	—	AM/FM antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A15 .

No
INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

A15 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: AM/FM antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna unit shield at		—	Ground

Yes
GO to A17 .

No
GO to A16 .

repair4less

the antenna unit (component side)	—		

- **Is the resistance less than 1 ohm?**

A16 CHECK THE AM/FM ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE	
• Remove the AM/FM antenna. Refer to Antenna — AM/FM . • Measure the **resistance** between:	**Yes** GO to A17 . **No** INSTALL a new AM/FM antenna. REFER to Antenna — AM/FM .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
AM/FM antenna unit shield at the antenna unit (component side)	—	AM/FM antenna base (unpainted surface)	—

A17 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test B: The Satellite Radio Is Inoperative, Has Poor Reception, Or Has No Sound

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to MyKey® and Satellite Radio in Information and Entertainment System .

When a satellite radio subscription is activated, the satellite receiver ESN is associated with the VIN .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected in the satellite antenna circuit for more than 250 milliseconds. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.

Possible Sources

- Expired subscription
- Incorrectly matched ESN
- Wiring, terminals, or connectors
- Obstructions in the antenna's line of sight
- Satellite radio antenna
- Satellite radio antenna coaxial cable
- ACM

PINPOINT TEST B: THE SATELLITE RADIO IS INOPERATIVE, HAS POOR RECEPTION, OR HAS NO SOUND

Test Step	Result / Action to Take
B1 VERIFY AN ACTIVE SUBSCRIPTION	
• Operate the infotainment system in satellite radio mode and observe the infotainment display. • **Does the display indicate that the subscription has expired?**	**Yes** The subscription has expired. INFORM the customer to contact SIRIUS to reactivate the subscription. **No** GO to B2.
B2 CHECK THE RECEPTION	
• Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees. • Using a diagnostic scan tool, view the ACM PIDs. • Monitor the satellite signal strength (SAT_SIG_STR) PID. • If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained. • **Can a "Good," "Very Good," or "Excellent" PID value be obtained?**	**Yes** GO to B3. **No** GO to B6.
B3 CHECK THE SATELLITE RADIO SYSTEM FOR CORRECT OPERATION	
• Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight.

repair4less

	No GO to B4 .
B4 CHECK FOR PROMOTIONAL CHANNEL 184 • Select channel 184. • **Does the satellite radio system receive channel 184 with normal sound quality?**	**Yes** GO to B5 . **No** GO to B6 .
B5 VERIFY THAT THE VIN AND ESN ON FILE MATCH THE VIN AND ESN FROM THE VEHICLE • Retrieve the satellite radio ESN . Satellite Radio Electronic Serial Number (ESN) Retrieval . • Contact the SIRIUS Dealer Support Line (888-465-8528). • Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle. • Follow the actions from step 2 to obtain "Good," "Very Good," or "Excellent" reception. • Operate the infotainment system in satellite radio mode. • **NOTE:** It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate. • Request for SIRIUS to send the activation signal to the vehicle 2-3 times. • Operate multiple channels with the infotainment system in satellite radio mode. • **Does the satellite radio system receive multiple channels with normal sound quality?**	**Yes** The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle. **No** GO to B6 .
B6 CHECK FOR ACM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the ACM DTCs. • Using a diagnostic scan tool, perform the ACM self-test. • **Are any DTCs recorded in the ACM ?**	**Yes** For DTC B1A89:11 or DTC B1A89:13, GO to B7 . For all other ACM DTCs, REFER to the ACM DTC chart in Information and Entertainment System . **No** GO to B20 .
B7 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: Satellite radio antenna coaxial cable at the ACM . Refer to Audio Control Module (ACM) . • Disconnect: Satellite radio antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — Satellite Radio . • Ignition ON. • Measure the **voltage** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit	**Yes** REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio . **No** GO to B8 .

Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

B8 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B9.

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio.

B9 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio coaxial cable core at the ACM	—	Lower satellite radio antenna coaxial cable core at the inline connection	—
Satellite radio antenna coaxial cable shield at the ACM	—	Lower satellite radio antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B10.

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio.

B10 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

Yes
GO to B11.

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio.

repair4less

- **Is the resistance greater than 10,000 ohms?**

B11 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: Satellite radio antenna coaxial cable at the antenna unit. Refer to Antenna — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

No
GO to B12 .

B12 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B13 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B13 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable core at the antenna unit (harness side)	—
Satellite radio antenna		Satellite radio antenna coaxial	—

Yes
GO to B14 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

coaxial cable shield at the ACM	—	cable shield at the antenna unit (harness side)	

- **Is the resistance less than 1 ohm?**

B14 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B15 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

B15 CHECK THE SATELLITE RADIO ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

No
GO to B16 .

B16 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

Yes
GO to B17 .

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

repair4less

- **Is the resistance greater than 10,000 ohms?**

B17 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to B18.

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio.

B18 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: Satellite radio antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

Yes
GO to B20.

No
GO to B19.

B19 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the satellite radio antenna. Refer to Antenna — Satellite Radio.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	Satellite radio antenna base (unpainted surface)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to B20.

No
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio.

B20 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).

▪ Pushed-out pins (install new pins as necessary) • Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test C: The SIRIUS Data Services Are Not Available

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SIRIUS Data Services in Information and Entertainment System .

When a SIRIUS Data Services subscription is activated, the satellite receiver ESN is associated with the VIN .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A89:11	Satellite Antenna: Circuit Short To Ground	Set by the ACM when a short to ground is detected in the satellite antenna circuit for more than 250 milliseconds. This DTC can be either continuous or on-demand.
B1A89:13	Satellite Antenna: Circuit Open	Set by the ACM when an open is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.
U1A00:87	Private Communication Network: Missing Message	Set by the APIM when messages are missing from the ACM on the satellite digital radio data link (SDL) circuits.

Removal of the navigation SD card results in loss of navigation while the card is removed. This is normal operation.

Possible Sources

- Navigation map SD card not present, not fully seated, or damaged
- Expired subscription
- Obstructions in the antenna's line of sight
- Incorrectly matched ESN
- Wiring, terminals, or connectors
- APIM
- ACM
- Satellite radio antenna
- Satellite radio antenna coaxial cable

repair4less

PINPOINT TEST C: CHECK FOR SATELLITE AUDIO CONCERNS

Test Step	Result / Action to Take
C1 VERIFY THE NAVIGATION MAP SD CARD IS PRESENT • Check for the presence of a navigation map SD card in the media hub SD slot. • **Is the navigation map SD card present and fully seated?**	**Yes** GO to C2. **No** INSTALL the navigation map SD card. TEST the system for normal operation.
C2 INSPECT THE NAVIGATION MAP SD CARD • Remove the navigation map SD card. • Inspect the navigation map SD card for damage. • **Is any damage present?**	**Yes** INSTALL a new navigation map SD card. **No** GO to C3.
C3 VERIFY AN ACTIVE SUBSCRIPTION **NOTE:** The status of the satellite radio subscription should be disregarded in this step since SIRIUS data services does not require a satellite radio subscription to operate. • Access the Subscription Info selection in the touchscreen Travel Link menu. • **Does the display indicate the subscription has expired for traffic, weather, fuel prices, movie times, sports, weather map, or ski conditions?**	**Yes** If the subscription has expired for one or more, but not all categories mentioned above, GO to C28. If the subscription has expired for all categories mentioned above, INFORM the customer to contact SIRIUS to reactivate the subscription. **No** GO to C4.
C4 CHECK THE RECEPTION • Drive the vehicle to an open location that is free from obstacles such as tall buildings or large trees. • Using a diagnostic scan tool, view the ACM PIDs. • Monitor the satellite signal strength (SAT_SIG_STR) PID. • If the PID reads "No Signal" or "Poor," move the vehicle to another area and retest until "Good," "Very Good," or "Excellent" PID values are obtained. • **Can a "Good," "Very Good," or "Excellent" PID value be obtained?**	**Yes** GO to C5. **No** GO to C8.
C5 CHECK THE SIRIUS DATA SERVICES FOR CORRECT OPERATION • Operate the infotainment system in SIRIUS data services mode and observe the infotainment display. • **Do SIRIUS data services operate correctly?**	**Yes** The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight. **No** GO to C6.

C6 CHECK FOR PROMOTIONAL CHANNEL 184 • Operate the infotainment system in satellite radio mode. • Select channel 184. • **Does the satellite radio system receive promotional channel 184 with normal sound quality?**	**Yes** GO to C7. **No** GO to C8.
C7 VERIFY THAT THE VIN AND ESN ON FILE MATCH THE VIN AND ESN FROM THE VEHICLE • Retrieve the satellite radio ESN. Satellite Radio Electronic Serial Number (ESN) Retrieval. • Contact the SIRIUS Dealer Support Line (888-465-8528). • Ensure that the VIN and ESN SIRIUS has on the customer's file match the VIN and ESN retrieved from the vehicle. • Follow the actions from step 4 to obtain "Good," "Very Good," or "Excellent" reception. • Operate the infotainment system in SIRIUS data services mode. • **NOTE:** It may take up to 30 minutes for the activation signal to be received and satellite radio functions to operate. • Request for SIRIUS to send the activation signal to the vehicle 2-3 times. • Operate the infotainment system in SIRIUS data services mode and observe the infotainment display. • **Do SIRIUS data services operate correctly?**	**Yes** The system is operating correctly at this time. The concern was a result of the activation signal needing to be resent or the VIN and ESN SIRIUS had on file not matching the VIN and ESN from the vehicle. **No** GO to C8.
C8 CHECK FOR ACM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the ACM DTCs. • Using a diagnostic scan tool, perform the ACM self-test. • **Are any DTCs recorded in the ACM?**	**Yes** For DTC B1A89:11 or DTC B1A89:13, GO to C10. For all other ACM DTCs, REFER to the ACM DTC chart in Information and Entertainment System. **No** GO to C9.
C9 CHECK FOR APIM DTCS • Ignition ON. • Using a diagnostic scan tool, clear the APIM DTCs. • Using a diagnostic scan tool, perform the APIM self-test. • **Are any DTCs recorded in the APIM?**	**Yes** For DTC U1A00:87, GO to C23. For all other APIM DTCs, REFER to the APIM DTC chart in Information and Entertainment System. **No** GO to C27.
C10 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: Satellite radio antenna coaxial cable at the ACM. Refer to Audio Control Module (ACM).	**Yes** REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio.

repair4less

- Disconnect: Satellite radio antenna inline coaxial cable connection behind the glove compartment. Refer to Antenna Cable — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

No
GO to C11 .

C11 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C12 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C12 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio coaxial cable core at the ACM	—	Lower satellite radio antenna coaxial cable core at the inline connection	—
Satellite radio antenna coaxial cable shield at the ACM	—	Lower satellite radio antenna coaxial cable shield at the inline connection	—

- **Is the resistance less than 1 ohm?**

Yes
GO to C13 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C13 CHECK THE LOWER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C14 .

No
REPAIR or INSTALL a new lower satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C14 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna inline coaxial cable connection behind the glove compartment.
- Disconnect: Satellite radio antenna coaxial cable at the antenna unit. Refer to Antenna — Satellite Radio .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

- **Is any voltage present?**

Yes
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

No
GO to C15 .

C15 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C16 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

repair4less

C16 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable core at the antenna unit (harness side)	—
Satellite radio antenna coaxial cable shield at the ACM	—	Satellite radio antenna coaxial cable shield at the antenna unit (harness side)	—

- **Is the resistance less than 1 ohm?**

Yes
GO to C17 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C17 CHECK THE UPPER SATELLITE RADIO ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C18 .

No
REPAIR or INSTALL a new upper satellite radio antenna coaxial cable. REFER to Antenna Cable — Satellite Radio .

C18 CHECK THE SATELLITE RADIO ANTENNA UNIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: Satellite radio antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground
Satellite radio antenna coaxial cable shield at the ACM	—	—	Ground

Yes
INSTALL a new satellite radio antenna. REFER to Antenna — Satellite Radio .

No
GO to C19 .

- **Is any voltage present?**

C19 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C20 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

C20 CHECK THE SATELLITE RADIO ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna coaxial cable core at the ACM	—	Satellite radio antenna coaxial cable shield at the ACM	—

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to C21 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

C21 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Disconnect: Satellite radio antenna coaxial cable at the antenna unit.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	—	Ground

- **Is the resistance less than 1 ohm?**

Yes
GO to C27 .

No
GO to C22 .

C22 CHECK THE SATELLITE RADIO ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

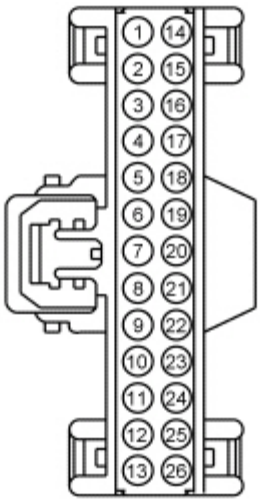
- Remove the satellite radio antenna. Refer to Antenna — Satellite Radio .
- Measure the **resistance** between:

Positive Lead	Negative Lead

Yes
GO to C27 .

No
INSTALL a new satellite radio antenna.
REFER to Antenna — Satellite Radio .

repair4less



Pin	Circuit	Pin	Circuit
Satellite radio antenna unit shield at the antenna unit (component side)	—	Satellite radio antenna base (unpainted surface)	—

- **Is the resistance less than 1 ohm?**

C23 CHECK THE SATELLITE DATA CIRCUITS FOR A SHORT TO VOLTAGE

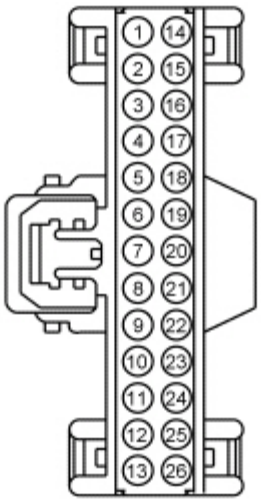
- Ignition OFF.
- Disconnect: ACM C240B.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	—	Ground
C240B-19	VME91 (WH/BN)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to C24 .



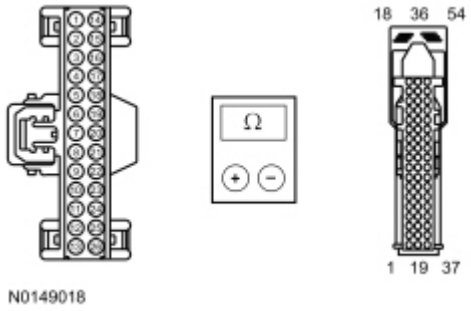
C24 CHECK THE SATELLITE DATA CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	—	Ground
C240B-19	VME91 (WH/BN)	—	Ground

Yes
GO to C25 .

No
REPAIR the circuit in question.



- **Are the resistances greater than 10,000 ohms?**

C25 CHECK THE SATELLITE DATA CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	C2383-51	VME90 (GY/BU)
C240B-19	VME91 (WH/BN)	C2383-52	VME91 (WH/BN)

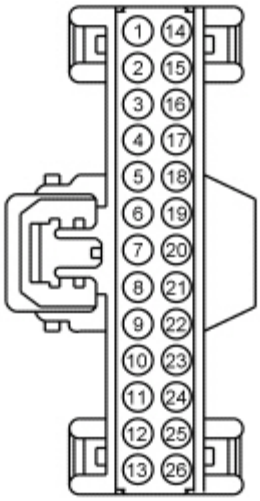
- **Are the resistances less than 3 ohms?**

Yes
GO to C26 .

No
REPAIR the circuit in question.

C26 CHECK THE SATELLITE DATA CIRCUITS FOR A SHORT TOGETHER

- Measure the **resistance** between:



Positive Lead		Negative Lead	

Yes
GO to C28 .

No
REPAIR the circuit in question.

repair4less

Pin	Circuit	Pin	Circuit
C240B-6	VME90 (GY/BU)	C240B-19	VME91 (WH/BN)

- **Is the resistance greater than 10,000 ohms?**

C27 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C28 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test D: The Speed Compensated Volume Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Speed Compensated Volume in Information and Entertainment System .

Possible Sources

- Speed compensated volume setting
- VSS signal concern
- Network communication concern
- Audio DSP module

PINPOINT TEST D: THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
D1 CHECK THE SPEEDOMETER OPERATION	
• Drive the vehicle and observe the speedometer. • **Does the speedometer operate correctly?**	**Yes** GO to D2 . **No** REFER to Section 413-01 .
D2 CHECK THE SPEED COMPENSATED VOLUME SETTING	
• Turn the speed compensated volume off. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature. • Operate the audio system in radio tuner AM/FM mode. • Drive the vehicle at various speeds and observe the speaker volume. • **Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?**	**Yes** The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature. **No** GO to D3 .
D3 CHECK FOR DTC U0155:00	

repair4less

• Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155:00 or U0238:00 retrieved in any audio system module?**	**Yes** For DTC U0155:00, GO to Pinpoint Test AF . For DTC U0238:00, GO to Pinpoint Test AI . **No** GO to D4 .
D4 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test E: Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

The audio DSP module sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)

- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST E: POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

Test Step	Result / Action to Take
E1 ISOLATE THE ZONE • Operate the audio system using digital media (CD, MP3, etc.). • Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LF , RF , LR , and RR) of the vehicle to isolate the poor sound quality. • Locate and apply pressure to the trim panel(s) around the poor sound quality area in question. • **Does applying pressure to a trim panel reduce or eliminate the audible noise?**	**Yes** REPAIR or REPLACE the trim panel as needed. **No** GO to E2 .

E2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)
• Remove the trim panel to access the suspect speaker.
• Operate the audio system using digital media (CD, MP3, etc.).
• Validate where the poor sound quality area is located.
• Check:
  ▪ Trim panel for loose components around the speaker area such as the speaker grille
  ▪ Trim panel joining components for missing or broken pieces
  ▪ Lock and handle mechanical parts for correct attachment
  ▪ Wire harnesses for correct routing
  ▪ Wire harness fasteners for correct attachment
  ▪ Water shield for correct placement (speaker air path not blocked)
  ▪ Water shield for correct bonding to sheet metal
  ▪ Storage areas for loose items
  ▪ All child safety belt anchors (if equipped)
  ▪ All safety belt retractors
  ▪ All speaker bracket fasteners and other fasteners are secured and tightened to specified torque
• **Was the source of the noise located?**
	Yes
	REPAIR or REPLACE any loose or broken component or fastener as needed.
	
	No
	GO to E3 .

E3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION
• Inspect for watermarks.
• Check the:
  ▪ Cone
  ▪ Magnet
	Yes
	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker

repair4less

▪ Basket • **Are any watermarks present on the speaker?**	seal as required. DRY the speaker in question and TEST the system for normal operation. **No** GO to E4 .
E4 ISOLATE SPEAKER TO VERIFY NOISE	
• Remove the suspect speaker from its location and leave the speaker connected to the harness. • Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact. • Operate the audio system using digital media (CD, MP3, etc.). • **Is the noise still present in the suspect speaker?**	**Yes** INSTALL a new speaker for the one in question. **No** LOCATE the source of the noise and REPAIR as needed.

Pinpoint Test F: No Sound From All Speakers

Diagnostic Overview

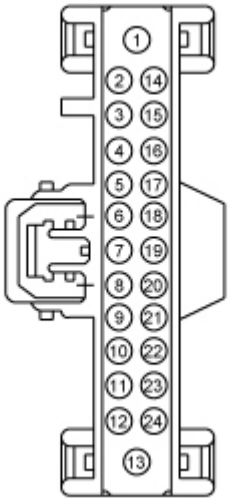
Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

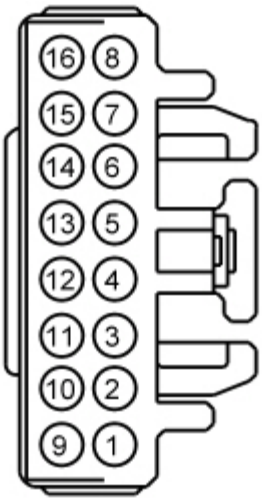
Refer to ACM in Information and Entertainment System .

When the ignition is in the START position, the ACM receives voltage on the START signal circuit and mutes the speaker output. This prevents voltage spikes from producing popping noises through the speakers. A short to voltage on this circuit causes the ACM output to be muted continuously.



The audio DSP module is enabled through software. Additionally, the ACM can mute the audio DSP module through the mute/unmute circuit. If the audio DSP module detects less than 3.5 volts on the mute/unmute circuit, it mutes the speaker output. As a result, an open or short to ground in the mute/unmute circuit causes the audio system to produce no sound, because the enable signal does not reach the audio DSP module. In the event of an overload, the audio DSP module clips the audio output signal to the speakers and subwoofer (heard as distortion) in order to prevent damage to the speakers.

A short to ground or short to voltage in the circuitry to one of the speakers may cause multiple speakers to lose sound due to the built-in overload protection feature of the ACM . In this case, a speaker fault DTC sets.



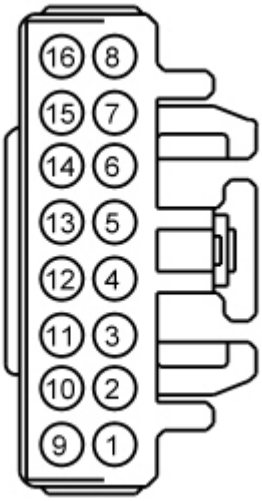
Possible Sources

- Wiring, terminals, or connectors
- ACM
- Audio DSP module

PINPOINT TEST F: NO SOUND FROM ALL SPEAKERS

Test Step	Result / Action to Take
F1 CHECK FOR SPEAKER DTCS • Ignition ON. • Using a diagnostic scan tool, perform the audio DSP module self-test. • **Are any speaker fault Diagnostic Trouble Codes (DTCs) present?**	**Yes** REFER to the audio DSP module DTC chart in Information and Entertainment System . **No** GO to F2 .
F2 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: ACM C240A . • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C240A-3, Circuit CDC54 (WH/GN); Negative Lead: Pin —, Circuit Ground  • **Is the voltage 5V or greater?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to F3 .
F3 CHECK THE AUDIO DSP MODULE VOLTAGE SUPPLY • Ignition OFF. • Disconnect: Audio DSP C3154C. • Ignition ON. • Measure the **voltage** between: Positive Lead: Pin C3154C-5, Circuit SBP19 (BU/RD); Negative Lead: Pin —, Circuit Ground Positive Lead: Pin C3154C-6, Circuit SBP19 (BU/RD); Negative Lead: Pin —, Circuit Ground	**Yes** GO to F4 . **No** REPAIR the circuit.

repair4less



- **Are the voltages greater than 11 volts?**

F4 CHECK THE AUDIO DSP MODULE GROUND CIRCUITS

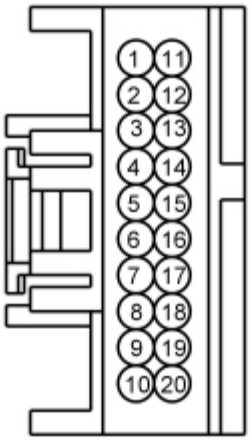
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154C-5	SBP19 (BU/RD)	C3154C-15	GD148 (BK/YE)
C3154C-6	SBP19 (BU/RD)	C3154C-16	GD148 (BK/YE)

- **Are the voltages greater than 11 volts?**

Yes
GO to F5 .

No
REPAIR the circuit.



F5 CHECK THE AUDIO DSP MODULE ENABLE CIRCUIT FOR CORRECT VOLTAGE

- Ignition OFF.
- Disconnect: Audio DSP C3154A.
- Ignition ON.

Yes
GO to F10 .

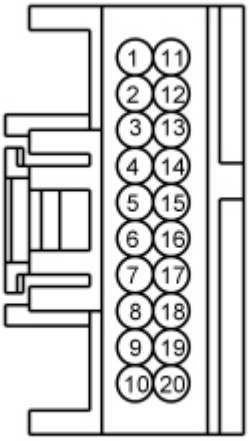
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-3	SME23 (VT/RD)	—	Ground

- **Is the voltage between 3.5 and 5 volts?**

No
GO to F6 .

F6 CHECK THE AUDIO DSP MODULE ENABLE CIRCUIT FOR A SHORT TO VOLTAGE



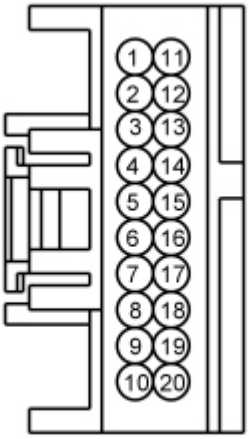
- Ignition OFF.
- Disconnect: ACM C240B.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-3	SME23 (VT/RD)	—	Ground

Yes
REPAIR the circuit.

No
GO to F7 .

repair4less



- **Is any voltage present?**

F7 CHECK THE AUDIO DSP MODULE ENABLE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

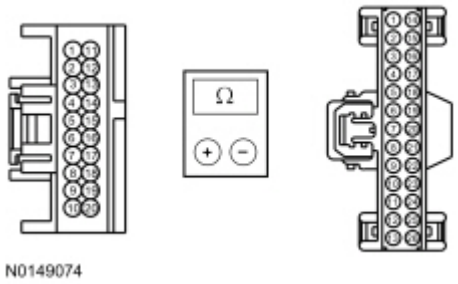
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-3	SME23 (VT/RD)	—	Ground

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to F8 .

No
REPAIR the circuit in question.

F8 CHECK THE AUDIO DSP MODULE ENABLE CIRCUIT FOR AN OPEN



- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit

Yes
GO to F9 .

No
REPAIR the circuit in question.

C3154A-3	SME23 (VT/RD)	C240B-18	SME23 (VT/RD)

- **Is the resistance less than 3 ohms?**

F9 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

F10 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test G: The LF Door Speaker Is Inoperative

Diagnostic Overview

repair4less

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

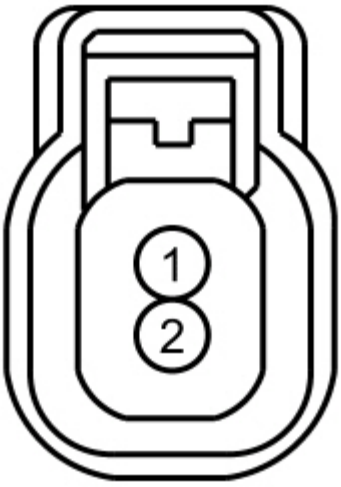
Normal Operation and Fault Conditions

Refer to ACM , Audio DSP Module, and DSP in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LF door speaker circuits.
B1A02:11	Speaker #2: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the LF door speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the LF door speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the audio DSP module when an open is detected on the LF door speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM
- Audio DSP module



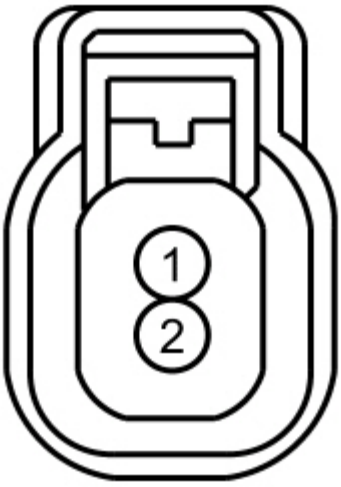
PINPOINT TEST G: THE LF DOOR SPEAKER IS INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>G1 CHECK THE AUDIO SIGNAL TO THE LF DOOR SPEAKER

• Ignition OFF.
• Disconnect: LF Door Speaker C523.
• Operate the audio system in radio tuner AM/FM mode.
• Measure the AC voltage between:

<table><tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr><tr><td>Pin</td><td>Circuit</td><td>Pin</td><td>Circuit</td></tr><tr><td>C523-1</td><td>VME07 (WH)</td><td>C523-2</td><td>RME07 (WH/BN)</td></tr></table></td><td>Yes
INSTALL a new LF door speaker. REFER to Speaker — Door .

No
GO to G2 .</td></tr>
</table>



- **Is a fluctuating AC voltage present?**

G2 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TO VOLTAGE

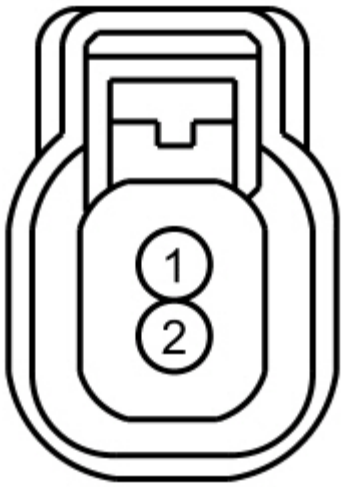
- Ignition OFF.
- Disconnect: Audio DSP module C3154B.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	—	Ground
C523-2	RME07 (WH/BN)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to G3.



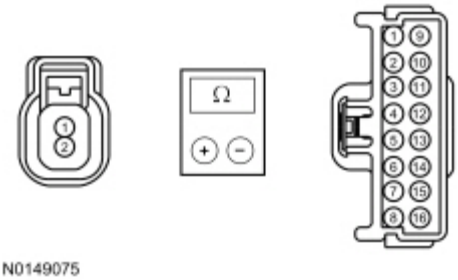
G3 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to G4.

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	—	Ground
C523-2	RME07 (WH/BN)	—	Ground



- **Are the resistances greater than 10,000 ohms?**

No
REPAIR the circuit in question.

G4 CHECK THE AUDIO CIRCUITS TO THE LF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C523-1	VME07 (WH)	C3154B-2	VME07 (WH)
C523-2	RME07 (WH/BN)	C3154B-10	RME07 (WH/BN)

G10 CHECK THE LEFT AUDIO SIGNAL TO THE

repair4less

AUDIO DSP MODULE FOR A SHORT TOGETHER	
• Measure the **resistance** between: Positive Lead: Pin C3154A-7, Circuit VME17 (GN) Negative Lead: Pin C3154A-17, Circuit RME17 (GY)  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to G11. **No** REPAIR the circuit in question.
G11 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G12 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench.

necessary) • Reconnect the audio DSP module connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test H: The LF Tweeter Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

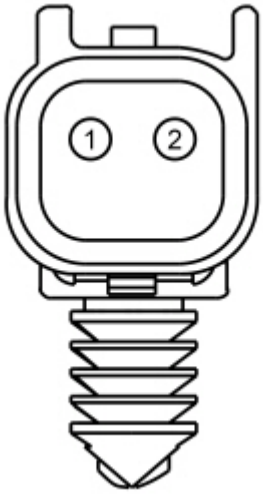
Normal Operation and Fault Conditions

Refer to ACM , Audio DSP Module, and DSP in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LF tweeter speaker circuits.
B1A03:11	Speaker #3: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the LF tweeter speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the LF tweeter speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the audio DSP module when an open is detected on the LF tweeter speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM
- Audio DSP module



PINPOINT TEST H: THE LF TWEETER SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
H1 CHECK THE AUDIO SIGNAL TO THE LF TWEETER SPEAKER	
	Yes

repair4less

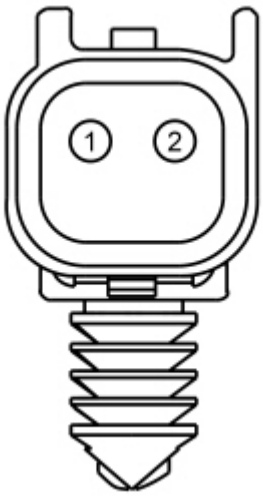
- Ignition OFF.
- Disconnect: LF Tweeter Speaker C230 .
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME08 (GN/OG)	C230-2	RME08 (GY/OG)

- **Is a fluctuating AC voltage present?**

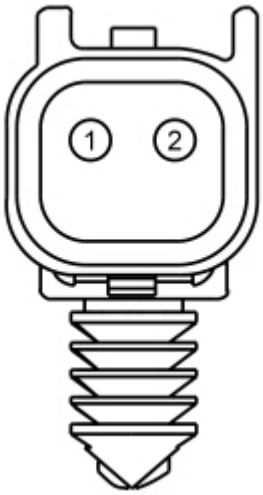
INSTALL a new LF tweeter speaker. REFER to Speaker — A-Pillar .

No
GO to H2 .



H2 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TO VOLTAGE

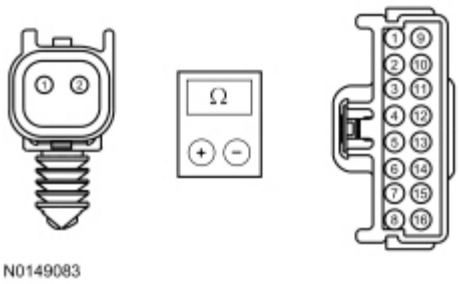
- Ignition OFF.
- Disconnect: Audio DSP module C3154B.
- Ignition ON.
- Measure the **voltage** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME08 (GN/OG)	—	Ground
C230-2	RME08 (GY/OG)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to H3 .

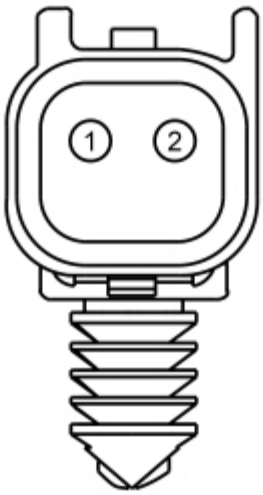


- **Is any voltage present?**

H3 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TO GROUND • Ignition OFF. • Measure the **resistance** between: Positive Lead: Pin C230-1, Circuit VME08 (GN/OG); C230-2, RME08 (GY/OG) Negative Lead: Pin —, Circuit Ground  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to H4 . **No** REPAIR the circuit in question.
H4 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR AN OPEN • Measure the **resistance** between: Positive Lead Negative Lead	**Yes** GO to H5 . **No**

repair4less

Pin	Circuit	Pin	Circuit
C230-1	VME08 (GN/OG)	C3154B-3	VME08 (GN/OG)
C230-2	RME08 (GY/OG)	C3154B-11	RME08 (GY/OG)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE LF TWEETER SPEAKER FOR A SHORT TOGETHER

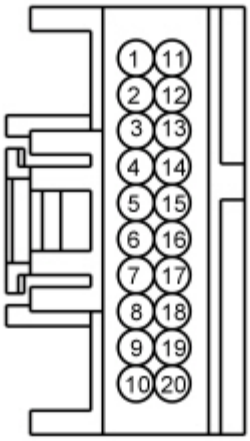
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C230-1	VME08 (GN/OG)	C230-2	RME08 (GY/OG)

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to H6.

No
REPAIR the circuit in question.



H6 CHECK THE LEFT AUDIO SIGNAL TO THE AUDIO DSP MODULE

- Ignition OFF.
- Disconnect: Audio DSP module C3154A.

Yes
GO to H12.

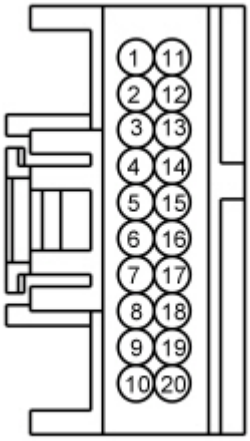
- Ignition ON.
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-7	VME17 (GN)	C3154A-17	RME17 (GY)

- **Is a fluctuating AC voltage present?**

No
GO to H7 .

H7 CHECK THE LEFT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO VOLTAGE



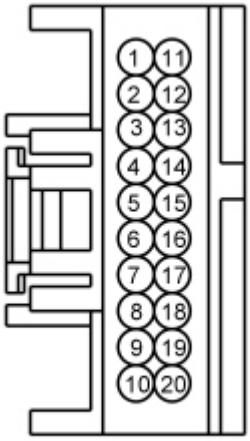
- Ignition OFF.
- Disconnect: ACM C240A.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-7	VME17 (GN)	—	Ground
C3154A-17	RME17 (GY)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to H8 .

repair4less



- **Is any voltage present?**

H8 CHECK THE LEFT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

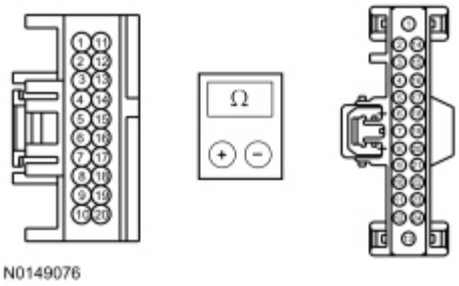
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-7	VME17 (GN)	—	Ground
C3154A-17	RME17 (GY)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to H9 .

No
REPAIR the circuit in question.

H9 CHECK THE LEFT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR AN OPEN



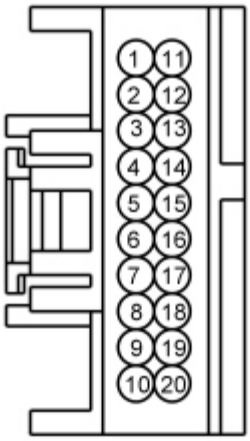
- Measure the **resistance** between:

Positive Lead	Negative Lead

Yes
GO to H10 .

No

Pin	Circuit	Pin	Circuit
C3154A-7	VME17 (GN)	C240A-22	VME17 (GN)
C3154A-17	RME17 (GY)	C240A-10	RME17 (GY)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

H10 CHECK THE LEFT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-7	VME17 (GN)	C3154A-17	RME17 (GY)

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to H11 .

No
REPAIR the circuit in question.

H11 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE

repair4less

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

H12 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test I: The Instrument Panel Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

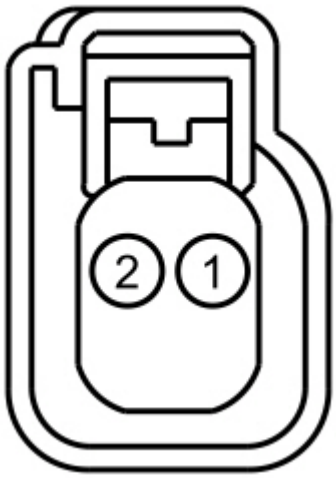
Normal Operation and Fault Conditions

Refer to ACM, Audio DSP Module, and DSP in Information and Entertainment System.

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the audio DSP module when a failure is detected on the instrument panel speaker circuits.
B1A01:11	Speaker #1: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the instrument panel speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.

B1A01:12	Speaker #1: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the instrument panel speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the audio DSP module when an open is detected on the instrument panel speaker circuits.

Possible Sources



- Wiring, terminals, or connectors
- Speaker
- Audio DSP module

PINPOINT TEST I: THE INSTRUMENT PANEL SPEAKER IS INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>I1 CHECK THE AUDIO SIGNAL TO THE INSTRUMENT PANEL SPEAKER</td><td rowspan="2">Yes
INSTALL a new instrument panel speaker.
REFER to Speaker — Instrument Panel .

No
GO to I2 .</td></tr>
<tr><td>

Ignition OFF.
Disconnect: Instrument Panel Speaker C2356.
Operate the audio system in radio tuner AM/FM mode.
Measure the AC voltage between:

<table>

repair4less

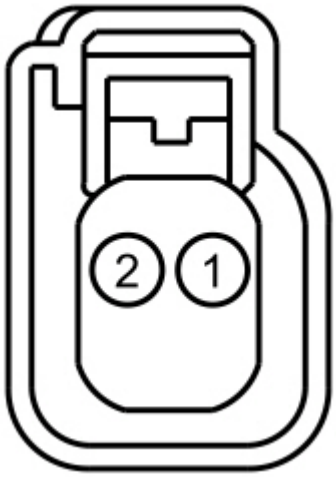
- Ignition OFF.
- Disconnect: Audio DSP Module C3154B.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2356-1	VME06 (GN)	—	Ground
C2356-2	RME06 (GY/YE)	—	Ground

- **Is any voltage present?**

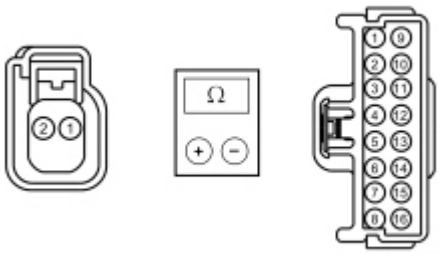
Yes
REPAIR the circuit in question.

No
GO to I3 .



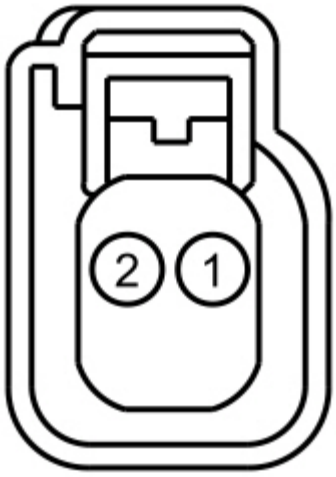
I3 CHECK THE AUDIO CIRCUITS TO THE INSTRUMENT PANEL SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2356-1	VME06 (GN)	—	Ground
C2356-2	RME06 (GY/YE)	—	Ground

Yes
GO to I4 .



No
REPAIR the circuit in question.

- **Are the resistances greater than 10,000 ohms?**

I4 CHECK THE AUDIO CIRCUITS TO THE INSTRUMENT PANEL SPEAKER FOR AN OPEN	
• Measure the **resistance** between: | Positive Lead		Negative Lead	| | --- | --- | --- | --- | | Pin | Circuit | Pin | Circuit | | C2356-1 | VME06 (GN) | C3154B-1 | VME06 (GN) | | C2356-2 | RME06 (GY/YE) | C3154B-9 | RME06 (GY/YE) |  N0149077 • **Are the resistances less than 3 ohms?**	**Yes** GO to I5 . **No** REPAIR the circuit in question.
I5 CHECK THE AUDIO CIRCUITS TO THE INSTRUMENT PANEL SPEAKER FOR A SHORT TOGETHER	
• Measure the **resistance** between: | Positive Lead		Negative Lead	| | --- | --- | --- | --- | | Pin | Circuit | Pin | Circuit | | C2356-1 | VME06 (GN) | C2356-2 | RME06 (GY/YE) |	**Yes** GO to I6 . **No** REPAIR the circuit in question.

repair4less

 • **Is the resistance greater than 10,000 ohms?**	

I6 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION
• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test J: The RF Door Speaker Is Inoperative

Diagnostic Overview

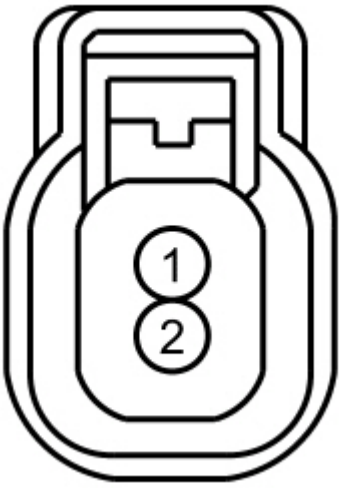
Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM , Audio DSP Module, and DSP in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A06:01	Speaker #6: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RF door speaker circuits.
B1A06:11	Speaker #6: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the RF door speaker circuits. When DTC B1A06:11 is set, the speaker output is disabled.
B1A06:12	Speaker #6: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the RF door speaker circuits. When DTC B1A06:12 is set, the speaker output is disabled.
B1A06:13	Speaker #6: Circuit Open	Set by the audio DSP module when an open is detected on the RF door speaker circuits.



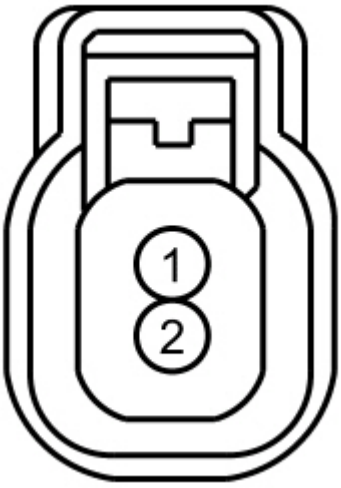
Possible Sources

- Wiring, terminals, or connectors
- Speaker
- ACM
- Audio DSP module

PINPOINT TEST J: THE RF DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
J1 CHECK THE AUDIO SIGNAL TO THE RF DOOR SPEAKER • Ignition OFF. • Disconnect: RF Door Speaker C612 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C612-1, Circuit VME10 (WH/VT) Negative Lead: Pin C612-2, Circuit RME10 (WH/OG)	**Yes** INSTALL a new RF door speaker. REFER to Speaker — Door . **No** GO to J2 .

repair4less



- **Is a fluctuating AC voltage present?**

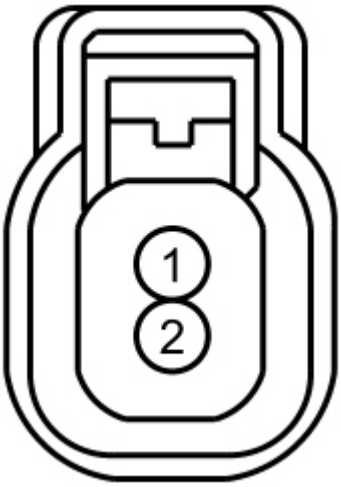
J2 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Audio DSP module C3154B.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	—	Ground
C612-2	RME10 (WH/OG)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.



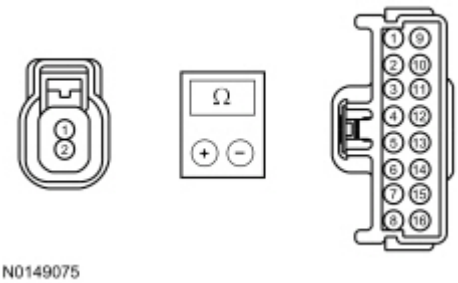
No
GO to J3 .

J3 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to J4 .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	—	Ground
C612-2	RME10 (WH/OG)	—	Ground



- **Are the resistances greater than 10,000 ohms?**

No
REPAIR the circuit in question.

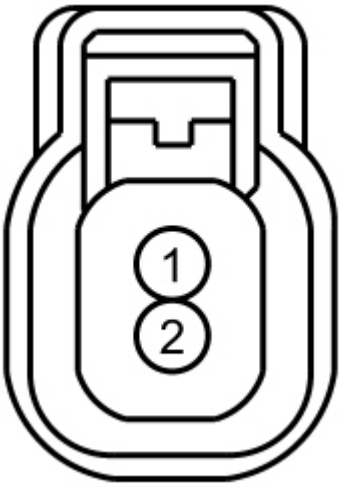
J4 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C3154B-6	VME10 (WH/VT)
C612-2	RME10 (WH/OG)	C3154B-14	RME10 (WH/OG)

- **Are the resistances less than 3 ohms?**

Yes
GO to J5 .



No
REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE RF DOOR SPEAKER FOR A SHORT TOGETHER

repair4less

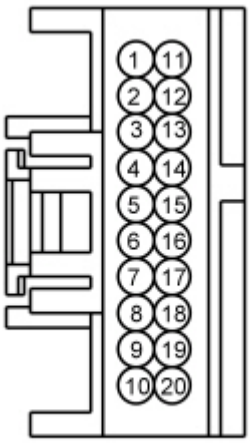
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C612-1	VME10 (WH/VT)	C612-2	RME10 (WH/OG)

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to J6 .

No
REPAIR the circuit in question.



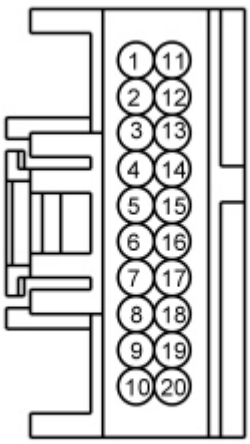
J6 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE

- Ignition OFF.
- Disconnect: Audio DSP module C3154A.
- Ignition ON.
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C3154A-19	RME18 (YE)

Yes
GO to J12 .

No
GO to J7 .



- **Is a fluctuating AC voltage present?**

J7 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO VOLTAGE

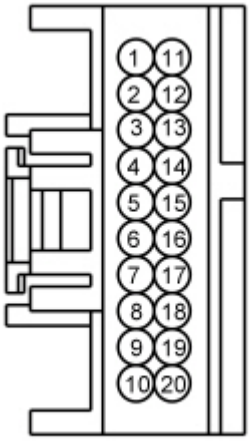
- Ignition OFF.
- Disconnect: ACM C240A.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	—	Ground
C3154A-19	RME18 (YE)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to J8 .



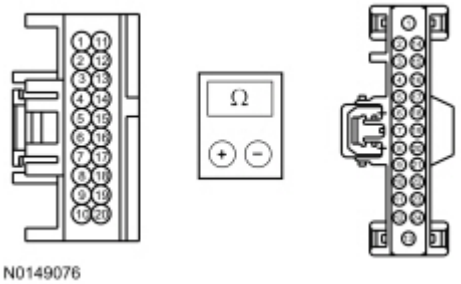
J8 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to J9 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	—	Ground
C3154A-19	RME18 (YE)	—	Ground



- **Are the resistances greater than 10,000 ohms?**

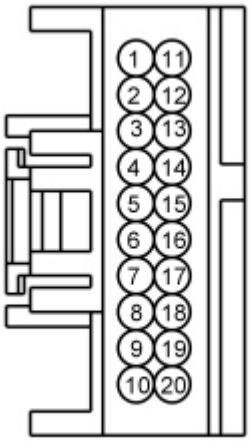
No
REPAIR the circuit in question.

J9 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C240A-23	VME18 (VT)
C3154A-19	RME18 (YE)	C240A-11	RME18 (YE)

- **Are the resistances less than 3 ohms?**



Yes
GO to J10 .

No
REPAIR the circuit in question.

J10 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C3154A-19	RME18 (YE)

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to J11 .

No
REPAIR the circuit in question.

J11 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

J12 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all the audio DSP module connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .

repair4less

• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test K: The RF Tweeter Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

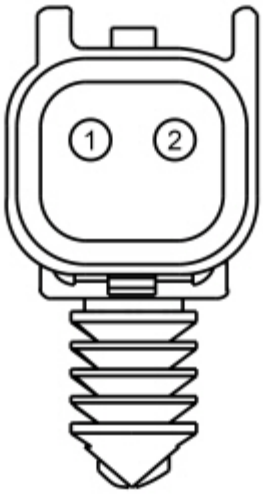
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM , Audio DSP Module, and DSP in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A07:01	Speaker #7: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RF tweeter speaker circuits.
B1A07:11	Speaker #7: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the RF tweeter speaker circuits. When DTC B1A07:11 is set, the speaker output is disabled.
B1A07:12	Speaker #7: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the RF tweeter speaker circuits. When DTC B1A07:12 is set, the speaker output is disabled.
B1A07:13	Speaker #7: Circuit Open	Set by the audio DSP module when an open is detected on the RF tweeter speaker circuits.

Possible Sources



- Wiring, terminals, or connectors
- Speaker
- ACM
- Audio DSP module

PINPOINT TEST K: THE RF TWEETER SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
K1 CHECK THE AUDIO SIGNAL TO THE RF TWEETER SPEAKER	
• Ignition OFF.	**Yes** INSTALL a new RF tweeter speaker. REFER

- Disconnect: RF Tweeter Speaker C231 .
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

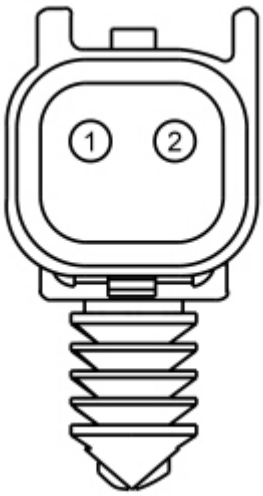
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME11 (VT/OG)	C231-2	RME11 (YE/OG)

- **Is a fluctuating AC voltage present?**

to Speaker — A-Pillar .

No
GO to K2 .

K2 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR A SHORT TO VOLTAGE



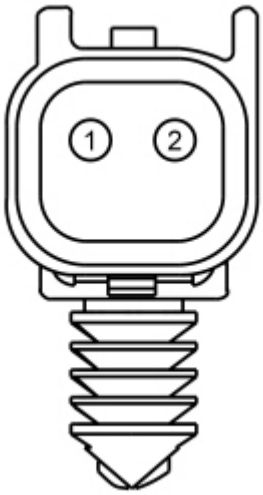
- Ignition OFF.
- Disconnect: Audio DSP module C3154B.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME11 (VT/OG)	—	Ground
C231-2	RME11 (YE/OG)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to K3 .

repair4less



- **Is any voltage present?**

K3 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

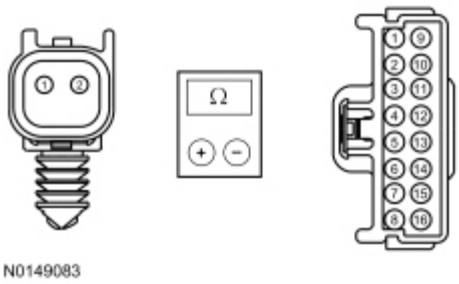
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME11 (VT/OG)	—	Ground
C231-2	RME11 (YE/OG)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K4 .

No
REPAIR the circuit in question.

K4 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR AN OPEN



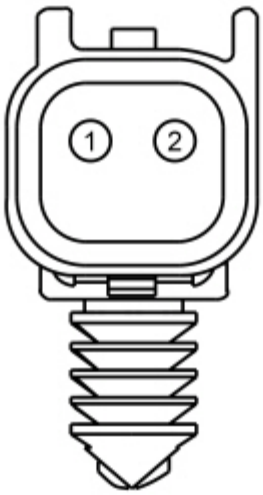
- Measure the **resistance** between:

Positive Lead	Negative Lead

Yes
GO to K5 .

No

Pin	Circuit	Pin	Circuit
C231-1	VME11 (VT/OG)	C3154B-7	VME11 (VT/OG)
C231-2	RME11 (YE/OG)	C3154B-15	RME11 (YE/OG)



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

K5 CHECK THE AUDIO CIRCUITS TO THE RF TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

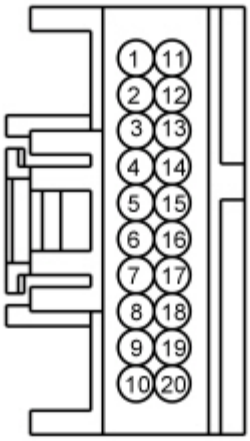
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C231-1	VME11 (VT/OG)	C231-2	RME11 (YE/OG)

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to K6.

No
REPAIR the circuit in question.

K6 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE



- Ignition OFF.
- Disconnect: Audio DSP module C3154A.

Yes
GO to K12.

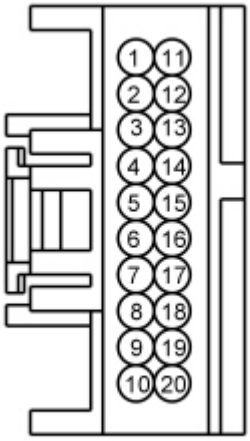
repair4less

- Ignition ON.
- Operate the audio system in radio tuner AM/FM mode.
- Measure the **AC voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C3154A-19	RME18 (YE)

- **Is a fluctuating AC voltage present?**

No
GO to K7 .



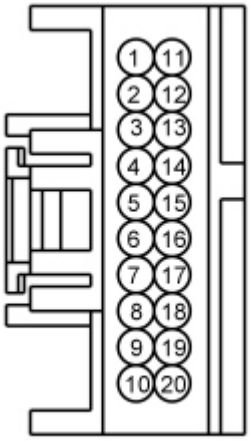
K7 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: ACM C240A.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	—	Ground
C3154A-19	RME18 (YE)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to K8 .



- **Is any voltage present?**

K8 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	—	Ground
C3154A-19	RME18 (YE)	—	Ground

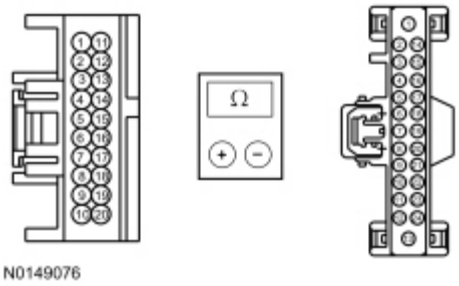
- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K9 .

No
REPAIR the circuit in question.

K9 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR AN OPEN

- Measure the **resistance** between:



Positive Lead	Negative Lead

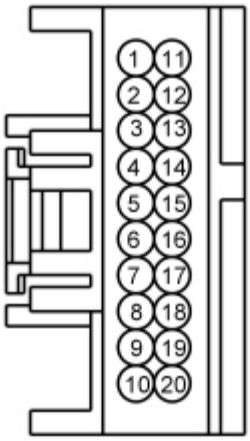
Yes
GO to K10 .

No

repair4less

Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C240A-23	VME18 (VT)
C3154A-19	RME18 (YE)	C240A-11	RME18 (YE)

N0149076



- **Are the resistances less than 3 ohms?**

REPAIR the circuit in question.

K10 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C3154A-19	RME18 (YE)

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to K11 .

No
REPAIR the circuit in question.

K11 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE

• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

K12 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test L: The RR Door Speaker Is Inoperative

Diagnostic Overview

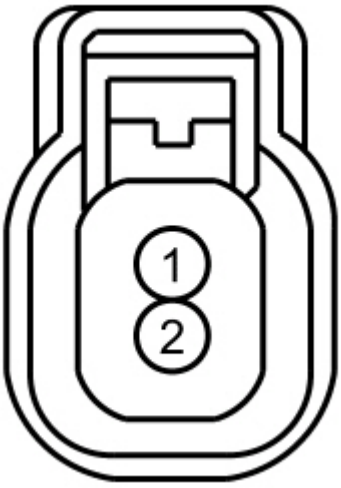
Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM, Audio DSP Module, and DSP in Information and Entertainment System.

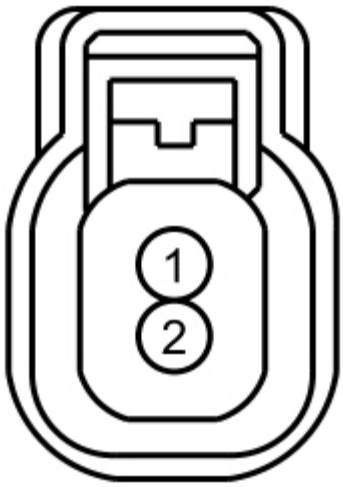
Root DTC Description	Failure Types	Fault Trigger Conditions
B1A08:01	Speaker #8: General Electrical Failure	Set by the audio DSP module when a failure is detected on the RR door speaker circuits.
B1A08:11	Speaker #8: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the RR door speaker circuits. When DTC B1A08:11 is set, the speaker output is disabled.



repair4less

B1A08:12	Speaker #8: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the RR door speaker circuits. When DTC B1A08:12 is set, the speaker output is disabled.
B1A08:13	Speaker #8: Circuit Open	Set by the audio DSP module when an open is detected on the RR door speaker circuits.

Possible Sources



- Wiring, terminals, or connectors
- Speaker
- ACM
- Audio DSP module

PINPOINT TEST L: THE RR DOOR SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK THE AUDIO SIGNAL TO THE RR DOOR SPEAKER	
• Ignition OFF. • Disconnect: RR Door Speaker C802 . • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C802-1, Circuit VME12 (BN/WH) Negative Lead: Pin C802-2, Circuit RME12 (BN/BU)  • **Is a fluctuating AC voltage present?**	**Yes** INSTALL a new RR door speaker. REFER to Speaker — Door . **No** GO to L2 .
L2 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TO VOLTAGE	

- Ignition OFF.
- Disconnect: Audio DSP module C3154B.
- Ignition ON.
- Measure the **voltage** between:

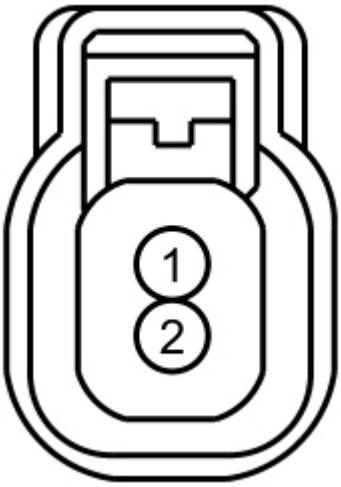
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	—	Ground
C802-2	RME12 (BN/BU)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to L3 .

L3 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TO GROUND



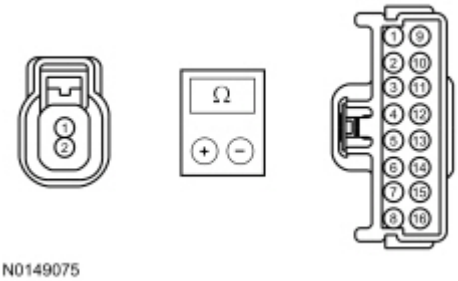
- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	—	Ground
C802-2	RME12 (BN/BU)	—	Ground

Yes
GO to L4 .

No
REPAIR the circuit in question.

repair4less



- **Are the resistances greater than 10,000 ohms?**

L4 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR AN OPEN

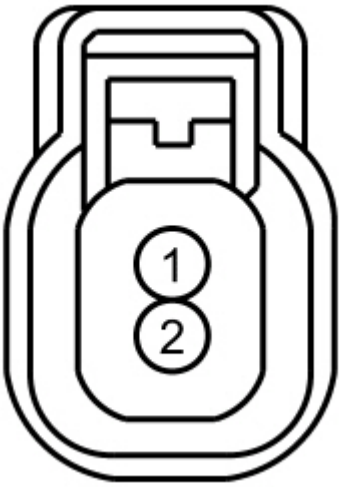
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C3154B-8	VME12 (BN/WH)
C802-2	RME12 (BN/BU)	C3154B-16	RME12 (BN/BU)

- **Are the resistances less than 3 ohms?**

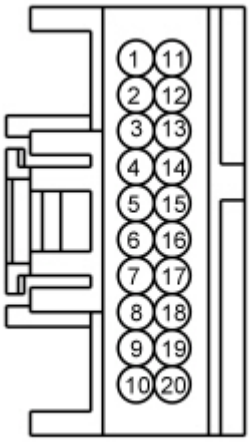
Yes
GO to L5 .

No
REPAIR the circuit in question.



L5 CHECK THE AUDIO CIRCUITS TO THE RR DOOR SPEAKER FOR A SHORT TOGETHER

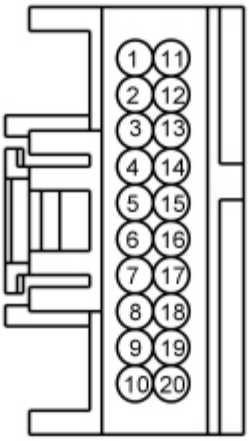
- Measure the **resistance** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C802-1	VME12 (BN/WH)	C802-2	RME12 (BN/BU)

Yes
GO to L6 .

No
REPAIR the circuit in question.



- **Is the resistance greater than 10,000 ohms?**

L6 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE	
• Ignition OFF. • Disconnect: Audio DSP module C3154A. • Ignition ON. • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between: Positive Lead: Pin C3154A-9, Circuit VME18 (VT) Negative Lead: Pin C3154A-19, Circuit RME18 (YE)  • **Is a fluctuating AC voltage present?**	**Yes** GO to L12 . **No** GO to L7 .
L7 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO VOLTAGE	

repair4less

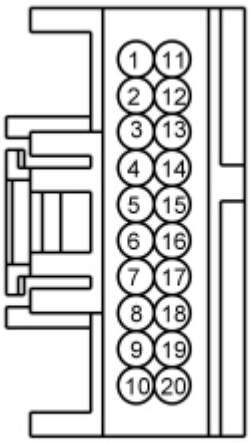
- Ignition OFF.
- Disconnect: ACM C240A.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	—	Ground
C3154A-19	RME18 (YE)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to L8 .



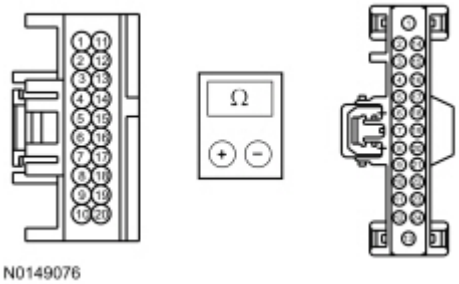
L8 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	—	Ground
C3154A-19	RME18 (YE)	—	Ground

Yes
GO to L9 .

No
REPAIR the circuit in question.



- **Are the resistances greater than 10,000 ohms?**

L9 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR AN OPEN

- Measure the **resistance** between:

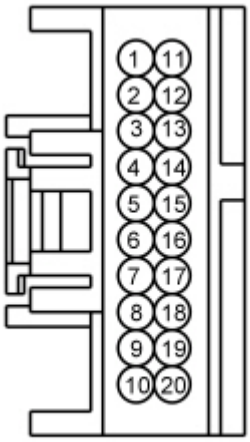
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C240A-23	VME18 (VT)
C3154A-19	RME18 (YE)	C240A-11	RME18 (YE)

- **Are the resistances less than 3 ohms?**

Yes
GO to L10 .

No
REPAIR the circuit in question.

L10 CHECK THE RIGHT AUDIO SIGNAL TO THE AUDIO DSP MODULE FOR A SHORT TOGETHER



- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-9	VME18 (VT)	C3154A-19	RME18 (YE)

Yes
GO to L11 .

No
REPAIR the circuit in question.

repair4less

 • **Is the resistance greater than 10,000 ohms?**	
L11 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L12 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test M: The Subwoofer Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

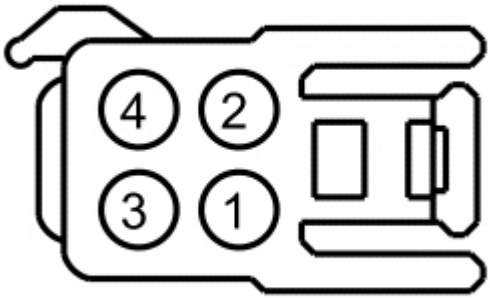
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM , Audio DSP Module, DSP , and Subwoofer Speaker in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions
B1A09:11	Speaker #9: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the subwoofer speaker circuits. When DTC B1A09:11 is set, the speaker output is disabled.
B1A09:12	Speaker #9: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the subwoofer speaker circuits. When DTC B1A09:12 is set, the speaker output is disabled.
B1A09:13	Speaker #9: Circuit Open	Set by the audio DSP module when an open is detected on the subwoofer speaker circuits.
B1A10:11	Speaker #10: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the subwoofer speaker circuits. When DTC B1A10:11 is set, the speaker output is disabled.
B1A10:12	Speaker #10: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the subwoofer speaker circuits. When DTC B1A10:12 is set, the speaker output is disabled.
B1A10:13	Speaker #10: Circuit Open	Set by the audio DSP module when an open is detected on the subwoofer speaker circuits.

Possible Sources



- Wiring, terminals, or connectors
- Speaker
- Audio DSP module

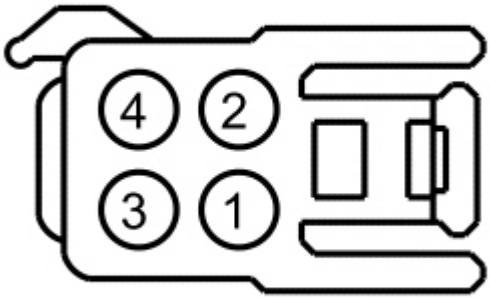
PINPOINT TEST M: THE SUBWOOFER SPEAKER IS INOPERATIVE

Test Step	Result / Action to Take
M1 CHECK THE AUDIO SIGNAL TO THE SUBWOOFER SPEAKER	
• Ignition OFF. • Disconnect: Subwoofer Speaker C3020. • Operate the audio system in radio tuner AM/FM mode. • Measure the **AC voltage** between:	**Yes** INSTALL a new subwoofer speaker. REFER to Speaker Enclosure . **No** GO to M2 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3020-1	VME22 (VT/GN)	C3020-2	RME22 (GN/WH)
C3020-3	VME01 (GN/VT)	C3020-4	RME01 (GY)

- **Is a fluctuating AC voltage present?**



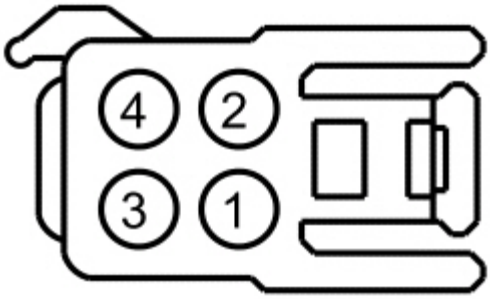
M2 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Audio DSP Module C3154C.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3020-1	VME22 (VT/GN)	—	Ground
C3020-2	RME22 (GN/WH)	—	Ground
C3020-3	VME01 (GN/VT)	—	Ground
C3020-4	RME01 (GY)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to M3 .



- **Is any voltage present?**

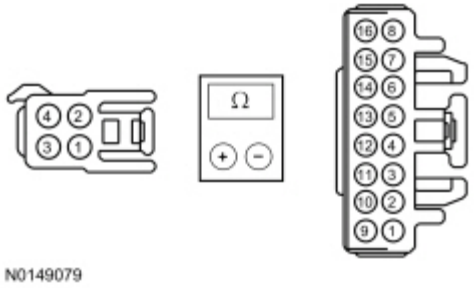
M3 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3020-1	VME22 (VT/GN)	—	Ground
C3020-2	RME22 (GN/WH)	—	Ground
C3020-3	VME01 (GN/VT)	—	Ground
C3020-4	RME01 (GY)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to M4 .



No
REPAIR the circuit in question.

M4 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER SPEAKER FOR AN OPEN

repair4less

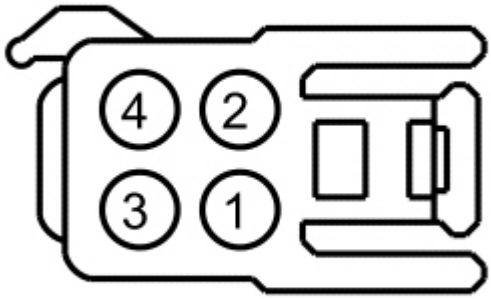
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3020-1	VME22 (VT/GN)	C3154C-1	VME22 (VT/GN)
C3020-2	RME22 (GN/WH)	C3154C-9	RME22 (GN/WH)
C3020-3	VME01 (GN/VT)	C3154C-2	VME01 (GN/VT)
C3020-4	RME01 (GY)	C3154C-10	RME01 (GY)

- **Are the resistances less than 3 ohms?**

Yes
GO to M5.

No
REPAIR the circuit in question.



M5 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER SPEAKER FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3020-1	VME22 (VT/GN)	C3020-2	RME22 (GN/WH)
C3020-1	VME22 (VT/GN)	C3020-3	VME01 (GN/VT)
C3020-1	VME22 (VT/GN)	C3020-4	RME01 (GY)
C3020-2	RME22 (GN/WH)	C3020-3	VME01 (GN/VT)
C3020-2	RME22 (GN/WH)	C3020-4	RME01 (GY)
C3020-3	VME01 (GN/VT)	C3020-4	RME01 (GY)

Yes
GO to M6.

No
REPAIR the circuit in question.

 • **Are the resistances greater than 10,000 ohms?**	

M6 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION
• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test N: The LR Door Speaker Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to ACM , Audio DSP Module, and DSP in Information and Entertainment System .

Root DTC Description	Failure Types	Fault Trigger Conditions

repair4less

B1A04:01	Speaker #4: General Electrical Failure	Set by the audio DSP module when a failure is detected on the LR door speaker circuits.
B1A04:11	Speaker #4: Circuit Short to Ground	Set by the audio DSP module when a short to ground is detected on the LR door speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short to Battery	Set by the audio DSP module when a short to battery is detected on the LR door speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the audio DSP module when an open is detected on the LR door speaker circuits.

Possible Sources

- Wiring, terminals, or connectors

repair4less

AUDIO DSP MODULE FOR A SHORT TOGETHER	
• Measure the **resistance** between: Positive Lead: Pin C3154A-7, Circuit VME17 (GN) Negative Lead: Pin C3154A-17, Circuit RME17 (GY)  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to N11 . **No** REPAIR the circuit in question.
N11 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N12 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .

necessary) • Reconnect the audio DSP module connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test O: Poor Quality, Distorted, Or No Sound While In SYNC® Mode

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® System in Information and Entertainment System .

The APIM transmits left and right channel analog audio signals to the ACM . These signals include inputs from the USB port, the SD card slot, the RCA jacks, and a Bluetooth media device. If a USB mass storage device is used to play an audio file, the SYNC® system only plays audio files that do not have DRM protection.

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST O: POOR QUALITY, DISTORTED, OR NO SOUND WHILE IN SYNC® MODE

Test Step	Result / Action to Take
O1 VERIFY THE OPERATION OF THE SYNC® SYSTEM AUDIO SOURCES	
• Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120 and RCA Adapter 105-00121, test the audio output for the RCA jacks, USB ports, and Bluetooth. • **Is there poor quality, distorted, or no sound from all SYNC® audio sources?**	**Yes** GO to O2 . **No** If there is a concern with one or more, but not all audio sources, GO to Symptom Chart - SYNC® System to diagnose the observed symptom. If all audio sources operate correctly, the concern is with the customer's device.

repair4less

O2 CHECK THE AUDIO SIGNALS TO THE ACM

NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**

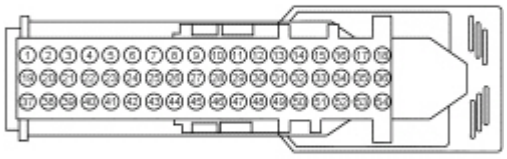
- Operate the audio system in SYNC® mode and play an audio file.
- Measure the **AC voltage** by back-probing ACM connector C240B:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240B-12	VME52 (BU)	C240B-25	RME52 (GY/OG)
C240B-13	VME53 (VT/GN)	C240B-26	RME53 (BN/WH)

- **Is a fluctuating AC voltage present?**

Yes
GO to O7.

No
GO to O3.



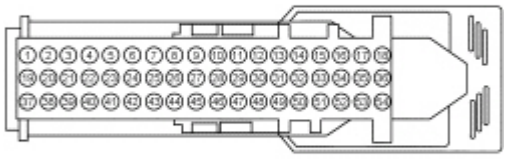
O3 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: ACM C240B .
- Disconnect: APIM C2383 .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME52 (BU)	—	Ground
C2383-24	RME52 (GY/OG)	—	Ground
C2383-25	VME53 (VT/GN)	—	Ground
C2383-26	RME53 (BN/WH)	—	Ground

Yes
REPAIR the circuit in question.

No
GO to O4.



- **Is any voltage present?**

O4 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO GROUND

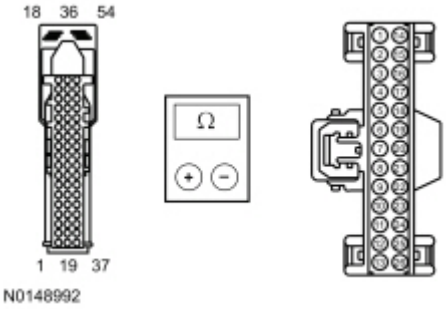
- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME52 (BU)	—	Ground
C2383-24	RME52 (GY/OG)	—	Ground
C2383-25	VME53 (VT/GN)	—	Ground
C2383-26	RME53 (BN/WH)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to O5 .

No
REPAIR the circuit in question.



O5 CHECK THE CIRCUITS TO THE ACM FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to O6 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-23	VME52 (BU)	C240B-12	VME52 (BU)
C2383-24	RME52 (GY/OG)	C240B-25	RME52 (GY/OG)
C2383-25	VME53 (VT/GN)	C240B-13	VME53 (VT/GN)
C2383-26	RME53 (BN/WH)	C240B-26	RME53 (BN/WH)

- **Are the resistances less than 3 ohms?**

No
REPAIR the circuit in question.

O6 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new APIM. REFER to Accessory Protocol Interface Module (APIM).

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

O7 CHECK FOR CORRECT ACM OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control

• Operate the system and determine if the concern is still present. • **Is the concern still present?**	Module (ACM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test P: The SYNC® System Audible Prompts Are Inoperative Or Do Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

Normal Operation and Fault Conditions

Refer to SYNC® System and Voice Recognition in Information and Entertainment System .

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- Audio DSP module

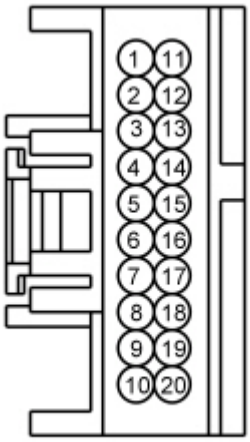
PINPOINT TEST P: THE SYNC® SYSTEM AUDIBLE PROMPTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
P1 CHECK THE AUDIBLE PROMPT SETTING	
• Operate the audio system in SYNC® mode. • Verify the audible prompts are enabled. Refer to "SYNC® Voice Recognition Feature" in the Owner's Literature. • Operate the VOICE button on the steering wheel controls and observe the SYNC® audible prompt. • **Does the SYNC® system produce an audible prompt correctly?**	**Yes** The system is operating correctly at this time. The concern was caused by the customer's setting. INSTRUCT the customer in the correct operation of the audible prompt feature. **No** GO to P2 .
P2 CHECK FOR A VOLTAGE SIGNAL FROM THE APIM	
NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage**	**Yes** GO to P7 . **No** GO to P3 .

repair4less

while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Operate the audio system in SYNC® mode.
- While operating the VOICE button repeatedly, measure the **AC voltage** by back-probing audio DSP module connector C3154A:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-5	VME80 (VT/GN)	C3154A-15	RME80 (BU/GY)

- **Is a fluctuating AC voltage present each time the VOICE switch is operated?**

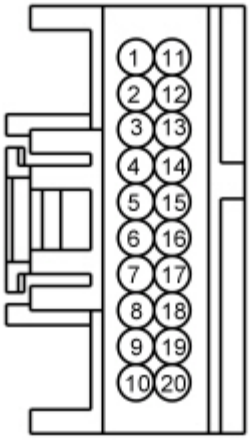
P3 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Audio DSP Module C3154A .
- Disconnect: APIM C2383 .
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-5	VME80 (VT/GN)	—	Ground
C3154A-15	RME80 (BU/GY)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.



No
GO to P4 .

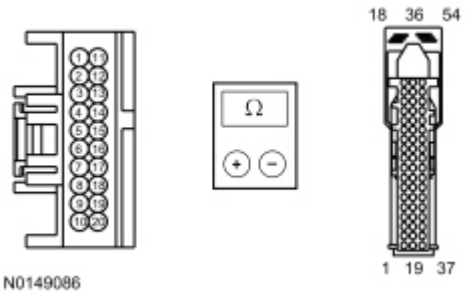
P4 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO GROUND

Yes

- Ignition OFF.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-5	VME80 (VT/GN)	—	Ground
C3154A-15	RME80 (BU/GY)	—	Ground

- **Are the resistances greater than 10,000 ohms?**



GO to P5.

No
REPAIR the circuit in question.

P5 CHECK THE AUDIBLE PROMPT CIRCUITS FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154A-5	VME80 (VT/GN)	C2383-3	VME80 (VT/GN)
C3154A-15	RME80 (BU/GY)	C2383-4	RME80 (BU/GY)

- **Are the resistances less than 3 ohms?**

Yes
GO to P6.

No
REPAIR the circuit in question.

repair4less

P6 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P7 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Q: All SYNC® Services Features Are Inoperative Or Inaccurate

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to SYNC® Services in Information and Entertainment System .

Possible Sources

- Expired subscription
- APIM

- GPSM
- SYNC® Services server

PINPOINT TEST Q: ALL SYNC® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE

Test Step	Result / Action to Take
Q1 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION AND SUBSCRIPTION	
• Verify that the customer has a SYNC® Owner Account on SyncMyRide • Verify that the customer has registered for SYNC® Services and has an active subscription. • **Does the customer have a SYNC® Owner Account and an active SYNC® Services subscription?**	**Yes** GO to Q2 . **No** If the customer does not have a SYNC® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC® Services. REFER to SyncMyRide . If the customer does not have an active SYNC® Services subscription, INFORM the customer that in order for SYNC® Services to function, the subscription needs to be activated. REFER to SyncMyRide .
Q2 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS	
• Verify that the mobile phone being used has the correct phone number registered with SYNC® Services. • Verify that the mobile phone being used is selected as "Active" on SyncMyRide . • **Is the customer using the registered and active mobile phone associated with the SYNC® services account?**	**Yes** GO to Q3 . **No** INFORM the customer that the correct phone number must be registered on the SYNC® website and selected as "Active." REFER to SyncMyRide .
Q3 CHECK FOR APIM DTCs	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Are any DTCs recorded in the APIM ?**	**Yes** REFER to the APIM DTC Chart in Information and Entertainment System . **No** GO to Q4 .
Q4 CHECK FOR GPSM DTCs	
• Using a diagnostic scan tool, perform the GPSM self-test. • **Are any DTCs recorded in the GPSM ?**	**Yes** REFER to the GPSM DTC Chart in Information and Entertainment System . **No** GO to Q5 .
Q5 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC®	

repair4less

SERVICES	
• Advise the customer to connect their phone to SYNC® Services. Caller ID blocking must be disabled on the customer's phone. Refer to the Owner's Literature. • Operate a SYNC® Services feature. • Verify that the phone call is placed and that the phone is connected to SYNC® Services. • **Does the phone connect to SYNC® Services and operate correctly?**	**Yes** GO to Q6 . **No** GO to Pinpoint Test S .
Q6 OBSERVE THE SYNC® SERVICES SUBSCRIPTION COMMERCIAL	
• Once the customer's phone is connected to SYNC® Services, observe the subscription commercial. • **Does the SYNC® Services subscription commercial repeat with no selection option?**	**Yes** There is a potential SYNC® Services server issue, and the problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance. **No** GO to Q7 .
Q7 CHECK THE OPERATION OF THE DIRECTIONS FROM SYNC® SERVICES	
• When prompted, select directions from SYNC® Services and observe the audible prompts from the audio system. • **Is a single chime, audible prompt, then a short chime heard, indicating the navigation route is being sent to the vehicle?**	**Yes** SYNC® Services is operating correctly at this time. **No** If a single chime, audible prompt, then a repeating chime is heard, indicating the navigation route is being sent to the vehicle, GO to Q8 . If no chime or audible prompt is heard, indicating that the system was unable to locate the vehicle, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system. CONTACT the Ford Technical Hotline for assistance.
Q8 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test R: Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Voice Recognition in Information and Entertainment System .

DTC Fault Trigger Conditions

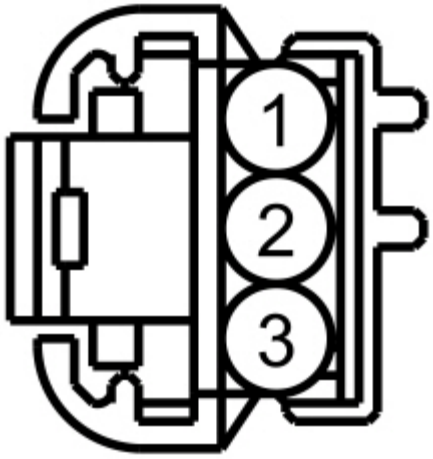
DTC	Description	Fault Trigger Conditions
B116A:01	Handset Microphone: General Electrical Failure	Set by the APIM when a short to voltage, short to ground, or open is detected on the microphone circuits.

Possible Sources

- Insufficiently quiet vehicle
- Inadequate phone reception
- Wiring, terminals, or connectors
- Microphone
- APIM

PINPOINT TEST R: VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

Test Step	Result / Action to Take
R1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY	
• Operate the audio system in radio tuner AM/FM mode. • Operate the VOICE steering wheel switch and listen	**Yes** GO to R3 . **No**



repair4less

for the SYNC® audible prompt. • **Does the SYNC® system produce an audible prompt correctly, indicating voice recognition mode has been entered?**	GO to R2.
R2 CHECK THE OPERATION OF THE RH STEERING WHEEL SWITCHES	
• Operate the audio system in AM/FM mode. • Operate the VOLUME +/-, SEEK +/-, MEDIA, and PHONE steering wheel switches. • **Do the VOLUME +/-, SEEK +/-, MEDIA, and PHONE steering wheel switches operate correctly?**	**Yes** GO to Pinpoint Test P. **No** GO to Pinpoint Test X to diagnose the RH steering wheel switches.
R3 CHECK THE OPERATION OF THE "PHONE" VOICE COMMAND	
• Pair a Bluetooth phone with the SYNC® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on syncmyride.com. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands. • Clearly speak the word "phone." • **Does the SYNC® system respond correctly to the "phone" voice command?**	**Yes** For a concern with the voice recognition being inoperative or not operating correctly, the system is operating correctly at this time. The concern may have been caused by an insufficiently quiet vehicle. Delete the just-paired Bluetooth phone from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. For a concern with poor quality or no outgoing audio being heard on the outside device during a phone call, GO to R4 **No** GO to R5.
R4 CHECK THE OUTGOING PHONE CALL QUALITY AND VOICE VOLUME	
• Ensure that the Bluetooth phone paired in step 3 has adequate reception. • **NOTE:** Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the call from having clear call quality and acceptable voice volume. • Using the SYNC® system, place a phone call. For information on making calls from the SYNC® system, refer to the Owner's Literature. • Ensure that the called party's phone has adequate reception. • Instruct the called party to determine if the call quality is clear and of acceptable volume. • Delete the Bluetooth phone paired in step 3 from the SYNC® system. For information on deleting a Bluetooth device from the SYNC® system, refer to the Owner's Literature. • **Is the outgoing call quality clear and of acceptable volume?**	**Yes** The system is operating correctly at this time. The concern may have been caused by poor phone reception or an insufficiently quiet vehicle. **No** GO to R5.
R5 CHECK THE MICROPHONE AND MICROPHONE CIRCUITS FOR CORRECT VOLTAGE DROP	

NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**

- Ignition ON.
- While back-probing microphone C9221, measure and record the **DC voltage** .

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

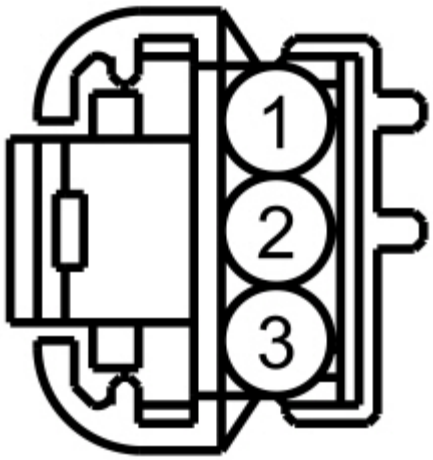
- **Is the voltage between 2.7 and 6.2 volts?**

Yes
If diagnosing an intermittent concern, GO to R6 . If **not** diagnosing an intermittent concern, GO to R13

No
GO to R7 .

R6 CHECK THE MICROPHONE CIRCUITS FOR INTERMITTENT CONCERNS

NOTICE: **This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.**



- While back-probing microphone C9221, measure the **DC voltage** while agitating the microphone harness back and forth and up and down (wiggle testing).

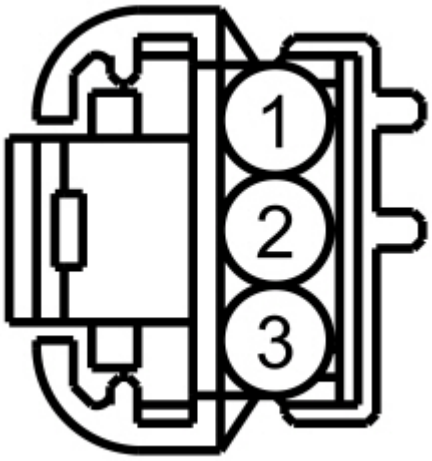
Yes
REPAIR the circuit(s), connector, or terminal(s) in question. For corrosion, clean pins or install a new connector or terminals. For damaged or bent pins, install new terminals or pins.

No
GO to R12 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

- Review the recorded results from step 5.
- **Does the voltage fluctuate more than .5 volts from the recorded result in step 5?**



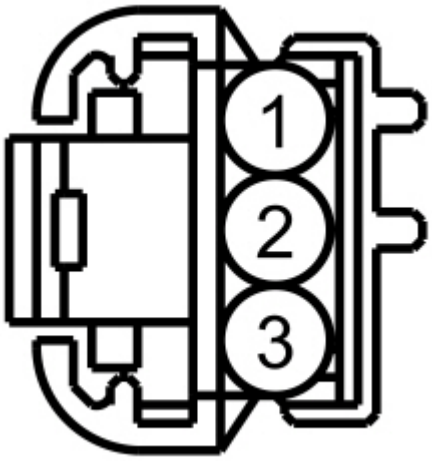
R7 CHECK THE MICROPHONE CIRCUITS FOR CORRECT VOLTAGE

- Ignition OFF.
- Disconnect: Microphone C9221.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK)

Yes
GO to R12 .

No
GO to R8 .



- **Is the voltage between 7.9 and 9.0 volts?**

R8 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO VOLTAGE

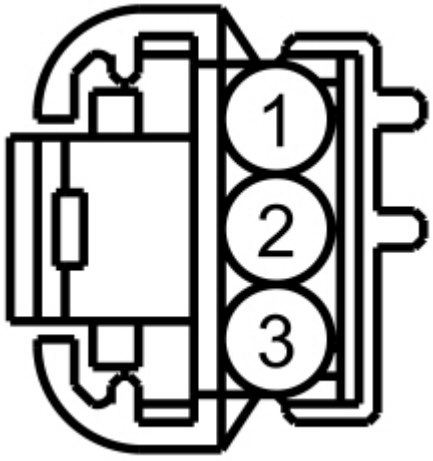
- Ignition OFF.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to R9 .



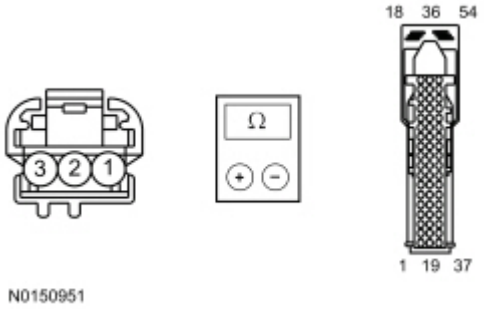
R9 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the **resistance** between:

Yes
GO to R10 .

repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	—	Ground
C9221-3	DMM13 (BK)	—	Ground



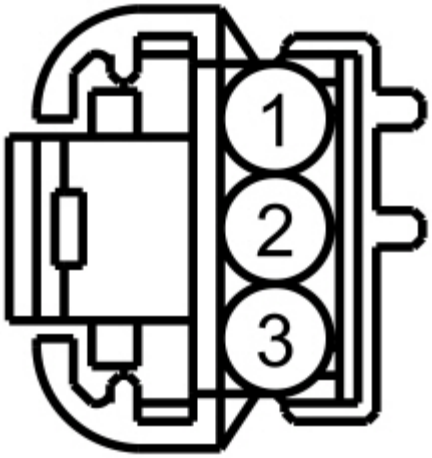
- **Are the resistances greater than 10,000 ohms?**

No
REPAIR the circuit in question.

R10 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C2383-12	VMM13 (YE/GN)
C9221-3	DMM13 (BK)	C2383-13	DMM13 (BK)



- **Are the resistances less than 3 ohms?**

Yes
GO to R11 .

No
REPAIR the circuit in question.

R11 CHECK THE MICROPHONE CIRCUITS TO THE APIM FOR A SHORT TOGETHER

• Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C9221-2	VMM13 (YE/GN)	C9221-3	DMM13 (BK) |  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to R13 . **No** REPAIR the circuit in question.
R12 ISOLATE THE MICROPHONE • Install a new microphone. Refer to Microphone . • If necessary, connect: APIM C2383. • Operate the audio system in AM/FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • Speak a command to test the voice recognition for normal operation. • **Is the voice recognition functioning correctly?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative microphone. **No** GO to R13 .

R13 CHECK FOR CORRECT APIM OPERATION
 	
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Pinpoint Test S: All Media Hub Functions Are Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub, Composite Audio-Video Input Mode, SD Card Mode, and USB Mode in Information and Entertainment System .

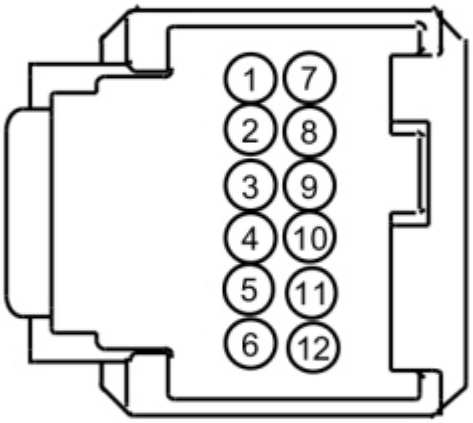
The media hub requires a power and ground circuit from the APIM to operate. Loss of power or ground disables all media hub functionality.

Possible Sources

- Device conflict
- Wiring, terminals, or connectors
- Media hub
- APIM

PINPOINT TEST S: ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE

NOTE: Before carrying out this pinpoint test, make sure the MP3 device is operating correctly.



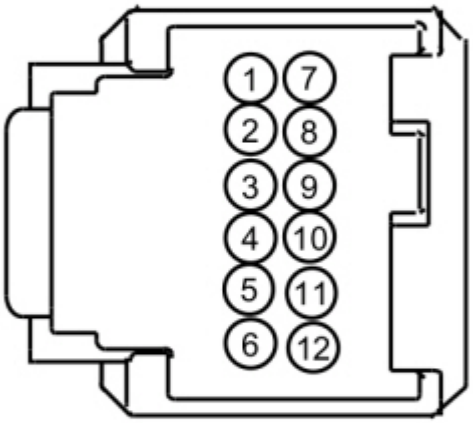
Test Step	Result / Action to Take
S1 CHECK FOR APIM BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the APIM self-test. • **Are any low or high voltage DTCs recorded in the APIM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an . **No** GO to S2 .
S2 RESET THE APIM	
• Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Test the system for normal operation. • **Does the system operate correctly?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to S3 .
S3 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT	
• Ignition OFF. • Disconnect: Media Hub C3618.	**Yes** GO to S4 .

- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	—	Ground

No
GO to S5 .

repair4less



- **Is the voltage greater than 11 volts?**

S4 CHECK THE MEDIA HUB GROUND CIRCUIT	
• Measure the **voltage** between: Positive Lead / Negative Lead	**Yes** Install a new media hub. REFER to Media Hub .

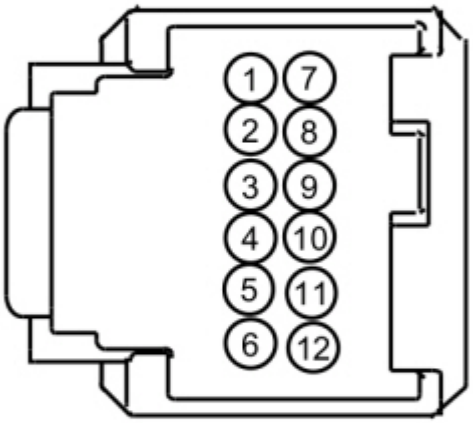
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	C3618-10	RME89 (WH/BU)

No
GO to S5 .

repair4less

- **Is the voltage greater than 11 volts?**

S5 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER	
• Ignition OFF.	**Yes**

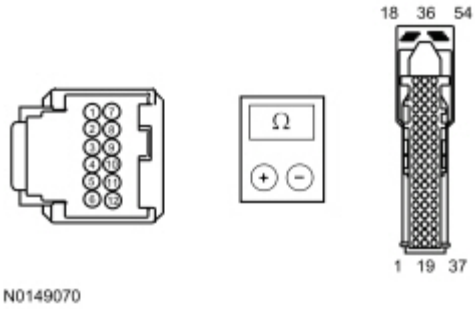


- Disconnect: APIM C2383.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	C3618-10	RME89 (WH/BU)

GO to S6 .

No
Repair the circuit in question.



repair4less

- **Is the resistance greater than 10,000 ohms?**

S6 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR AN OPEN	
• Measure the **resistance** between:	**Yes**

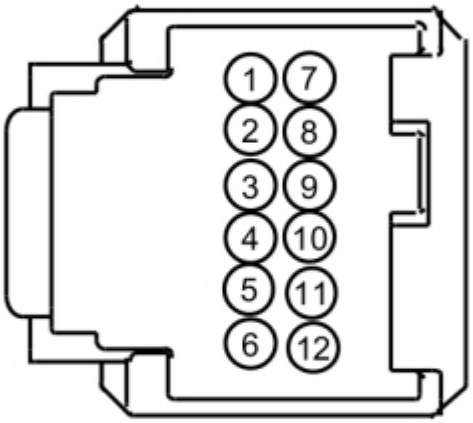
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	C2383-8	LME89 (YE/BU)
C3618-10	RME89 (WH/BU)	C2383-38	RME89 (WH/BU)

- **Are the resistances less than 3 ohms?**

GO to S7 .

No
Repair the circuit in question.

S7 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND



- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-1	LME89 (YE/BU)	—	Ground

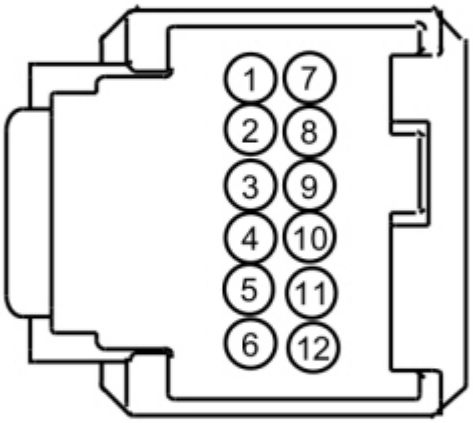
Yes
GO to S8 .

No
REPAIR the circuit.

repair4less

- **Is the resistance greater than 10,000 ohms?**

S8 CHECK THE MEDIA HUB GROUND CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON.	**Yes**



- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3618-10	RME89 (WH/BU)	—	Ground

REPAIR the circuit.

No
GO to S9 .

repair4less

- **Is any voltage present?**

S9 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF. • Disconnect and inspect the APIM connector. • Repair:	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE

▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test T: The USB Port(s) Is/Are Inoperative Or Do/Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub and USB Mode in Information and Entertainment System .

Although there are two USB ports, there is only one USB cable connecting the media hub to the APIM . The USB cable is used for data transfer, and does not supply power. The Multi-Media Interface Tester 105-00120 is powered by the USB port.

USB and SD card data is transmitted to the APIM through the USB cable.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB cable. This can be caused by a fault in the USB cable, USB port, or customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected in the USB cable.

Possible Sources

- Device conflict
- USB cable
- Media hub
- APIM

PINPOINT TEST T: THE USB PORT(S) IS/ARE INOPERATIVE OR DO/DOES NOT OPERATE

repair4less

CORRECTLY

Test Step	Result / Action to Take
T1 CHECK THE USB PORT FOR POWER OUTPUT • Connect: Multi-Media Interface Tester 105-00120. • **Does the Multi-Media Interface Tester 105-00120 power on from both USB ports?**	**Yes** GO to T2. **No** If the Multi-Media Interface Tester 105-00120 powers on from only one USB port, INSTALL a new media hub. REFER to Media Hub. If the Multi-Media Interface Tester 105-00120 does not power on from either USB port, GO to Pinpoint Test R.
T2 RESET THE APIM • Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to Media Hub. If the audio output is not OK from both USB ports, GO to T3.
T3 CHECK THE SD CARD SLOT FUNCTIONALITY • Using a known good SD card, attempt to play an audio file using the SD card slot. • **Is the audio output OK for the SD card slot?**	**Yes** INSTALL a new media hub. REFER to Media Hub. **No** GO to T4.
T4 CHECK THE APIM FOR DTC B1252:11 OR DTC B1252:13 • Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:11 or DTC B1252:13 present?**	**Yes** GO to T5. **No** GO to T7.
T5 INSPECT THE USB CABLE, MEDIA HUB, AND APIM • Ignition OFF. • Disconnect: USB cable at the media hub. • Disconnect: USB cable at the APIM. • Inspect the USB cable ends, media hub USB connector	**Yes** For the USB cable, INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port. For the media hub, INSTALL a new media hub. REFER to Media Hub. For the APIM, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

port, and APIM USB connector port for damage. Remove any debris. • **Is any damage present?**	**No** GO to T6 .
T6 CHECK EACH USB PORT FOR FUNCTIONALITY	
• Connect: USB cable at the media hub. • Connect: USB cable at the APIM . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly. **No** GO to T7 .
T7 ISOLATE THE USB CABLE	
• INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** The system is operating correctly at this time. The concern was caused by an inoperative USB cable. **No** GO to T8 .
T8 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Pinpoint Test U: The SD Card Slot Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub and SD Card Mode in Information and Entertainment System .

SD card data is transmitted to the APIM through the USB cable.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB cable. This can be caused by a fault in the USB cable, USB port, or customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected in the USB cable.

Possible Sources

- Device conflict
- USB cable
- Media hub
- APIM

PINPOINT TEST U: THE SD CARD SLOT IS INOPERATIVE

Test Step	Result / Action to Take
U1 RESET THE APIM	
• Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Using a known good SD card, attempt to play an audio file using the SD card slot. • **Is the audio output OK for the SD card slot?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to U2 .
U2 CHECK THE USB PORTS FOR	

FUNCTIONALITY	
• Using the Multi-Media Interface Tester 105-00120, attempt to play an audio file using each USB port. • **Is the audio output OK for each USB port?**	**Yes** Install a new media hub. REFER to Media Hub . **No** If the audio output is not OK from one USB port, INSTALL a new media hub. REFER to Media Hub . If the audio output is not OK from both USB ports, GO to U3 .
U3 CHECK THE APIM FOR DTC B1252:11 OR DTC B1252:13	
• Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:11 or DTC B1252:13 present?**	**Yes** GO to U4 . **No** Isolate the USB cable. INSTALL a new USB cable. Universal Serial Bus (USB) Cable and Port . Retest the system for normal operation. If the concern is still present, GO to U6 .
U4 INSPECT USB CABLE, MEDIA HUB, AND APIM	
• Ignition OFF. • Disconnect: USB cable at media hub. • Disconnect: USB cable at APIM . • Inspect the USB cable ends, media hub USB connector port, and APIM USB connector port for damage and remove any debris. • **Is any damage present?**	**Yes** For the USB cable, INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . For the media hub, INSTALL a new media hub. REFER to Media Hub . For the APIM , For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** GO to U5 .
U5 RECHECK FOR APIM DTC B1252:11 OR DTC B1252:13	
• Using a diagnostic scan tool, clear the APIM DTCs. • Perform the APIM self-test. • **Is DTC B1252:11 or DTC B1252:13 present?**	**Yes** GO to U6 . **No** Isolate the USB cable. INSTALL a new USB cable. REFER to Universal Serial Bus (USB) Cable and Port . Retest the system for normal operation. If the concern is still present, GO to U6 .
U6 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

• Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test V: The RCA Jacks Are Inoperative Or Have Poor Sound Quality

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Media Hub and Composite Audio-Video Input Mode in Information and Entertainment System .

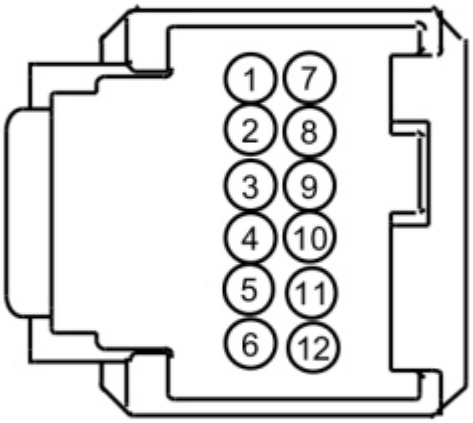
The data transmitted through the RCA cables to the media hub is sent to the APIM through dedicated audio and video circuits.

Possible Sources

- Device conflict
- Wiring, terminals, or connectors
- Media hub
- APIM

PINPOINT TEST V: THE RCA JACKS ARE INOPERATIVE OR HAVE POOR SOUND QUALITY

Test Step	Result / Action to Take
V1 RESET THE APIM	
• Remove any devices connected to the media hub. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Using the Multi-Media Interface Tester 105-00120 and RCA Adapter 105-00121, attempt to play audio content using the RCA jacks. • **Is the audio output OK for the RCA jacks?**	**Yes** The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. **No** GO to V2 .
V2 CHECK THE RCA CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF.	**Yes**



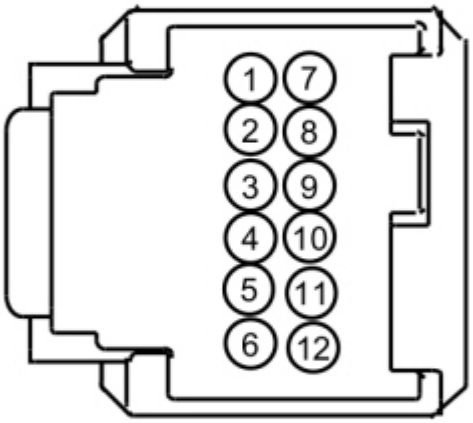
- Disconnect: Media Hub C3618.
- Disconnect: APIM C2383.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-2	DME88	—	Ground
C2362-3	VME88 (BU/WH)	—	Ground
C2362-4	DME45	—	Ground
C2362-5	VME45 (BU)	—	Ground
C2362-6	RME45 (YE/GN)	—	Ground
C2362-9	RME88 (GN/BU)	—	Ground
C2362-11	VME46 (BU/GN)	—	Ground
C2362-12	RME46 (WH/GN)	—	Ground

REPAIR the circuit in question.

No
GO to V3 .

repair4less

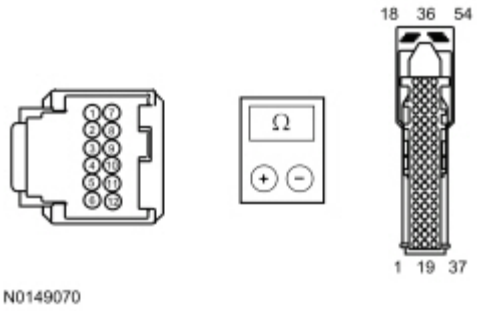


- **Is any voltage present?**

V3 CHECK THE RCA CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the **resistance** between:	**Yes** REPAIR the circuit in question.

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-2	DME88	—	Ground
C2362-3	VME88 (BU/WH)	—	Ground
C2362-4	DME45	—	Ground
C2362-5	VME45 (BU)	—	Ground
C2362-6	RME45 (YE/GN)	—	Ground
C2362-9	RME88 (GN/BU)	—	Ground
C2362-11	VME46 (BU/GN)	—	Ground
C2362-12	RME46 (WH/GN)	—	Ground

No
GO to V4 .



repair4less

- **Are the resistances greater than 10,000 ohms?**

V4 CHECK THE RCA CIRCUITS FOR AN OPEN	
• Measure the **resistance** between:	**Yes** INSTALL a new media hub. REFER to Media

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2362-2	DME88	C2383-36	DME88
C2362-3	VME88 (BU/WH)	C2383-34	VME88 (BU/WH)
C2362-4	DME45	C2383-9	DME45
C2362-5	VME45 (BU)	C2383-10	VME45 (BU)

C2362-11	VME46 (BU/GN)	C2383-28	VME46 (BU/GN)
C2362-12	RME46 (WH/GN)	C2383-29	RME46 (WH/GN)

- **Are the resistances less than 3 ohms?**

Hub .

Retest the system for normal operation. If the concern is still present, GO to V5 .

No
REPAIR the circuit in question.

V5 CHECK FOR CORRECT APIM OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

No
The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Pinpoint Test W: Unable To Pair Bluetooth Device

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Bluetooth Mode in Information and Entertainment System .

Possible Sources

- Incompatible Bluetooth device
- Customer error
- Customer's Bluetooth device
- APIM

PINPOINT TEST W: UNABLE TO PAIR BLUETOOTH DEVICE

Test Step	Result / Action to Take
W1 CHECK THE BLUETOOTH CONNECTION	**Yes** The SYNC® system is operating correctly at this time. CARRY OUT a SYNC® system Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device. **No** GO to W2 .
NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. • Connect: Multi-Media Interface Tester 105-00120. • Using the Multi-Media Interface Tester 105-00120, connect to the SYNC® system using Bluetooth. Follow the tool instructions. • Using a diagnostic scan tool, view the APIM PIDs. • Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN). • **Do the PIDs both read "Yes"?**	
W2 CHECK FOR CORRECT APIM OPERATION	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No**

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or	

pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test X: The RH Steering Wheel Controls Are Inoperative Or Do Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation and Fault Conditions

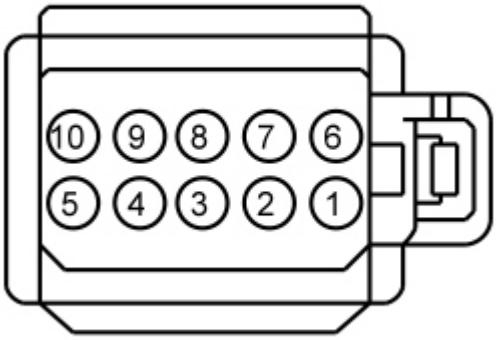
Refer to Steering Wheel Switch Functions and Steering Wheel Switches in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH steering wheel switch is stuck.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected in the RH steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected in the RH steering wheel switch circuits.

Possible Sources

- Wiring, terminals, or connectors
- Clockspring
- Steering wheel switch
- SCCM



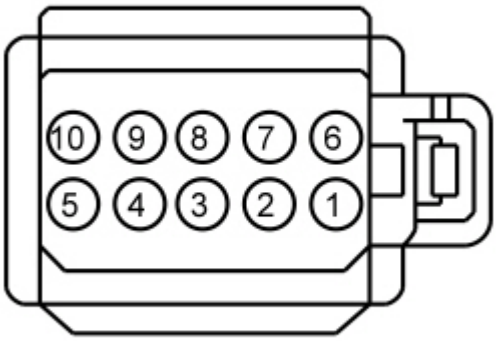
PINPOINT TEST X: THE RH STEERING WHEEL CONTROLS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
X1 CHECK THE RH STEERING WHEEL SWITCH PIDs	

repair4less

• Ignition ON.
• Monitor the steering wheel controls PIDs while pressing each RH steering wheel switch.
• Using a diagnostic scan tool, view the SCCM PIDs.
  • SW_VOLDOWN
  • SW_VOLUP
  • SW_SEEKMINUS
  • SW_SEEKPLUS
  • SW_MEDIA
  • SW_VOICE
  • SW_PHONE
• **Do the PID values agree with the switch positions?**
	Yes
	GO to X10.
	
	No
	If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH steering wheel switch. REFER to Section 211-05. If all PID values are incorrect or always read one particular switch position, GO to X2.

X2 CHECK FOR IPC DTC U0212:00	
• Ignition ON. • Using a diagnostic scan tool, clear the DTCs from the IPC. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the IPC self-test. • **Is DTC U0212:00 set in the IPC ?**	**Yes** REFER to Section 413-01. **No** GO to X3.
X3 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TO GROUND	
WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment. • Ignition OFF. • Disconnect: RH Steering Wheel Switch C2999. • Disconnect: Clockspring C218B. • Measure the **resistance** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit C2999-2 / VME14 / — / Ground C2999-4 / RME14 / — / Ground C2999-6 / VME54 / — / Ground C2999-7 / RME54 / — / Ground	**Yes** GO to X4. **No** INSTALL a new steering wheel. REFER to Section 211-04.



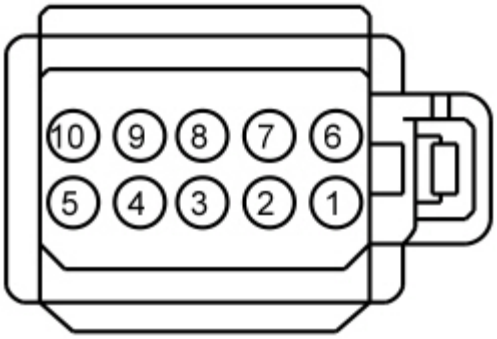
- **Are the resistances greater than 10,000 ohms?**

X4 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR AN OPEN	
• Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218B-14	VME14
C2999-4	RME14	C218B-6	RME14
C2999-6	VME54	C218B-16	VME54
C2999-7	RME54	C218B-8	RME54 |  N0148938 • **Are the resistances less than 3 ohms?**	**Yes** GO to X5 . **No** INSTALL a new steering wheel. REFER to Section 211-04 .

X5 CHECK THE CIRCUITRY BETWEEN THE CLOCKSPRING AND STEERING WHEEL CONTROLS FOR A SHORT TOGETHER	
• Measure the **resistance** between: 	Positive Lead		Negative Lead	
---	---	---	---
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14
					Yes GO to X6 . **No** INSTALL a new steering wheel. REFER to Section 211-04 .

repair4less

C2999-6	VME54	C2999-7	RME54



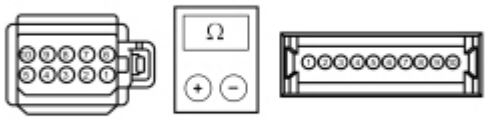
- **Are the resistances greater than 10,000 ohms?**

X6 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect: Clockspring C218B.
- Disconnect: Clockspring C218C.
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	—	Ground
C2999-4	RME14	—	Ground
C2999-6	VME54	—	Ground
C2999-7	RME54	—	Ground

Yes
GO to X7 .



No
INSTALL a new clockspring.
REFER to Section 501-20B .

- **Are the resistances greater than 10,000 ohms?**

X7 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C218C-6	—
C2999-4	RME14	C218C-5	—
C2999-6	VME54	C218C-10	—
C2999-7	RME54	C218C-9	—

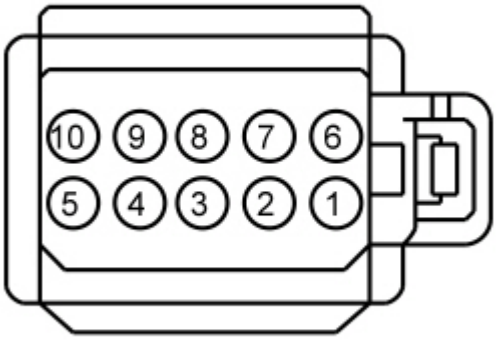
N0148946

- **Are the resistances less than 3 ohms?**

Yes
GO to X8 .

No
INSTALL a new clockspring.
REFER to Section 501-20B .

X8 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER



- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2999-2	VME14	C2999-4	RME14
C2999-6	VME54	C2999-7	RME54

Yes
GO to X9 .

No
INSTALL a new clockspring.
REFER to Section 501-20B .

repair4less

- **Are the resistances greater than 10,000 ohms?**

X9 CHECK FOR VOLTAGE AT THE SCCM

- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2414D-6	—	C2414D-5	—
C2414D-10	—	C2414D-9	—

- **Is approximately 5 volts present?**

Yes
INSTALL a new RH steering wheel switch. REFER to Section 211-05 .

No
GO to X10 .

X10 CHECK FOR CORRECT SCCM OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

Yes
CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM . REFER to

▪ Pushed-out pins (install new pins as necessary) • Reconnect the SCCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	Section 211-05 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Y: The Audio System Does Not Operate Correctly From The FCIM

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Accessory Delay Feature, Audio Extended Play, and FCIM in Information and Entertainment System .

Possible Sources

- Network communication concern
- FCIM

PINPOINT TEST Y: THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM

Test Step	Result / Action to Take
Y1 CHECK THE FDIM OPERATION	
• Verify the FDIM screen operation. • **Does the FDIM operate correctly?**	**Yes** GO to Y2 . **No** GO to Pinpoint Test Z .
Y2 VERIFY THAT THE ACM , APIM , AND FCIM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the ACM , APIM , and FCIM pass the network test?**	**Yes** GO to Y3 . **No** If the ACM failed the network test, REFER to Section 418-00 The ACM Does Not Respond To The Scan Tool. If the APIM failed the network test, REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool. If the FCIM failed the network test, REFER to Section 418-00 The FCIM Does Not Respond To The Scan Tool.
Y3 RESET THE AUDIO	

repair4less

SYSTEM MODULES AND RECHECK THE FCIM OPERATION • Disconnect the battery for 5 minutes, then reconnect it. • Turn the infotainment system on. • Test the FCIM for normal operation. • **Does the FCIM operate correctly?**	**Yes** The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules. **No** GO to Y4.

Y4 RETRIEVE THE ACM, APIM, AND FCIM DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ ACM
  ◦ APIM
  ◦ FCIM
• **Are any DTCs present in the ACM, APIM, or FCIM?**
	Yes
	For ACM DTCs, REFER to the ACM DTC Chart in Information and Entertainment System. For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System. For FCIM DTCs, REFER to the FCIM DTC Chart in Information and Entertainment System.
	
	No
	GO to Y5.

Y5 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ◦ Corrosion (clean module pins or install new connectors or terminals)
  ◦ Damaged or bent pins (install new terminals or pins)
  ◦ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM. REFER to Front Controls Interface Module (FCIM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test Z: The FDIM Touchscreen Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to FDIM in Information and Entertainment System .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108E:01	Display: General Electrical Failure	Set by the APIM when an error is detected in the touch sensing ability of the FDIM .
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	Set by the APIM when communication is missing from the FDIM for more than 1 second with the ignition in the RUN position.

Possible Sources

- Network communication concern
- APIM
- FDIM

PINPOINT TEST Z: THE FDIM TOUCHSCREEN IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
Z1 OBSERVE THE FDIM SCREEN • Ignition ON. • Verify the FDIM operation. • **Is the FDIM screen completely inoperative or blank?**	**Yes** GO to Z2 . **No** GO to Z4 .
Z2 VERIFY THAT THE APIM PASSES THE NETWORK TEST • Using a diagnostic scan tool, perform the network test. • **Did the APIM pass the network test?**	**Yes** GO to Z3 . **No** REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool.
Z3 CHECK FOR DTC U0162:00 SET IN THE APIM • Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Is DTC U0162:00 present?**	**Yes** INSTALL a new FDIM . Front Display Interface Module (FDIM) . **No** GO to Z6 .
Z4 VERIFY THE TOUCHSCREEN RESPONDS TO TOUCH COMMANDS • While pressing each tab of the 4	**Yes**

repair4less

corners on the FDIM, observe the touchscreen operation. • **Does the FDIM respond correctly when each tab is pressed?**	VERIFY the customer's concern and the steps to reproduce the inoperative state. If the inoperative state is not duplicated, the system is operating correctly at this time. INFORM the customer on the operation of the FDIM display. **No** GO to Z5.
Z5 ENSURE THE TOUCHSCREEN IS CALIBRATED	
• Calibrate the touchscreen. REFER to Touchscreen Calibration. • Verify the touchscreen operation. • **Does the FDIM touchscreen respond correctly?**	**Yes** The system is operating correctly at this time. The concern was a result of the touchscreen not being calibrated. **No** GO to Z6.
Z6 CHECK FOR DTC B108E:01 SET IN THE APIM	
• Ignition ON. • Using a diagnostic scan tool, perform the APIM self-test. • **Is DTC B108E:01 present?**	**Yes** INSTALL a new FDIM. REFER to Front Display Interface Module (FDIM). **No** GO to Z7.
Z7 RESET THE APIM AND RECHECK THE SYSTEM OPERATION	
NOTE: Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. • Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it. • Wait at least 2 minutes for the APIM to re-initialize. • Turn the infotainment system on. • While pressing each tab of the 4 corners on the FDIM, observe the touchscreen operation. • **Does the touchscreen operate correctly?**	**Yes** The FDIM is operating correctly at this time. PERFORM a SYNC® system Master Reset. REFER to the Owner's Literature. **No** GO to Z8.
Z8 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.

(install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AA: Navigation Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Normal Operation and Fault Conditions

Refer to Navigation in Information and Entertainment System .

Removal of the navigation SD card results in the loss of navigation while the card is removed. This is normal operation.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1215:00	External Memory Card: No Sub Type Information	Set by the APIM when the navigation SD card is missing.

Possible Sources

- Navigation map SD card not present, not fully seated, or damaged
- Communications network concern
- GPSM

PINPOINT TEST AA: NAVIGATION IS INOPERATIVE

Test Step	Result / Action to Take
AA1 CHECK THE NAVIGATION SYSTEM OPERATION	
• **NOTE:** Confirm that the tire size is correct as indicated on the vehicle placard. Incorrect tire size will affect navigation system accuracy. • Verify the navigation system	**Yes** GO to AA2 . **No** GO to AA4 .

repair4less

operation. • **Does the FDIM display "SD CARD FAULT?"**	
AA2 VERIFY THE NAVIGATION MAP SD CARD IS PRESENT	
• Check for the presence of a navigation map SD card in the media hub SD slot. • **Is the navigation map SD card present and fully seated?**	**Yes** GO to AA3 . **No** INSTALL the navigation map SD card. TEST the system for normal operation.
AA3 INSPECT THE NAVIGATION MAP SD CARD	
• Remove the navigation map SD card. • Inspect the navigation map SD card for damage. • **Is any damage present?**	**Yes** INSTALL a new navigation map SD card. **No** GO to AA4 .
AA4 CHECK FOR DIAGNOSTIC SCAN TOOL COMMUNICATION WITH THE GPSM	
• Ignition ON. • Using a diagnostic scan tool, perform the network test. • **Does the diagnostic scan tool communicate with the GPSM ?**	**Yes** GO to AA5 . **No** REFER to Section 418-00 The GPSM Does Not Respond To The Scan Tool.
AA5 RETRIEVE THE DTCS FROM THE APIM AND GPSM	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ◦ APIM
  ◦ GPSM
• **Are any DTCs present in the APIM or GPSM ?**
	Yes
	For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For GPSM DTCs, REFER to the GPSM DTC Chart in Information and Entertainment System
	
	No
	GO to AA6 .

AA6 CHECK FOR CORRECT GPSM OPERATION	

• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ◦ Corrosion (clean module pins or install new connectors or terminals)
  ◦ Damaged or bent pins (install new terminals or pins)
  ◦ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it seats and latches correctly.
• Operate the system and determine if
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

the concern is still present. • **Is the concern still present?**	

Pinpoint Test AB: The Compass Is Inoperative

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Possible Sources

- Network communication concern
- APIM
- GPSM

PINPOINT TEST AB: THE COMPASS IS INOPERATIVE

Test Step	Result / Action to Take
AB1 VERIFY THAT THE APIM AND GPSM PASS THE NETWORK TEST	
• Using a diagnostic scan tool, perform the network test. • **Did the APIM and GPSM pass the network test?**	**Yes** GO to AB2. **No** If the APIM failed the network test, REFER to Section 418-00 The APIM Does Not Respond To The Scan Tool. If the GPSM failed the network test, REFER to Section 418-00 The GPSM Does Not Respond To The Scan Tool.
AB2 RETRIEVE THE APIM AND GPSM DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ APIM
  ▪ GPSM
• **Are any DTCs present in the APIM or GPSM ?**
	Yes
	For APIM DTCs, REFER to the APIM DTC Chart in Information and Entertainment System For GPSM DTCs, REFER to the GPSM DTC Chart in Information and Entertainment System
	
	No
	GO to AB3.

AB3 CHECK FOR CORRECT GPSM OPERATION	

• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root

repair4less

or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the GPSM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	cause of any connector or pin issues.

Pinpoint Test AC: DTC U0100:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AC: DTC U0100:00

Test Step	Result / Action to Take
AC1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AC2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AC2 RECHECK FOR DTC U0100:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0100:00 set in the**	**Yes** GO to AC3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

GPSM ?	
AC3 CHECK THE PCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the PCM self-test. • **Are any low or high voltage DTCs recorded in the PCM ?**	**Yes** REFER to PCM DTC Chart in Section 303-14 . **No** GO to AC4 .
AC4 CHECK THE GPSM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the GPSM self-test. • **Are any low or high voltage DTCs recorded in the GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an . **No** GO to AC5 .
AC5 CHECK FOR CORRECT PCM OPERATION	
• Ignition OFF. • Disconnect and inspect all the PCM connectors. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the PCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new PCM . REFER to Section 303-14 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AD: DTC U0140:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body	Set by the APIM and GPSM when network messages

repair4less

	Control Module: No Sub Type Information	are missing from the BCM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AD: DTC U0140:00

Test Step	Result / Action to Take
AD1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AD2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD2 RECHECK FOR DTC U0140:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0140:00 set in the APIM or GPSM?**	**Yes** GO to AD3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD3 CHECK THE BCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the BCM self-test. • **Are any low or high voltage DTCs recorded in the BCM?**	**Yes** REFER to BCM DTC Chart in Section 419-10. **No** GO to AD4.
AD4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ APIM
  ▪ GPSM
• **Are low or high voltage DTCs recorded in the APIM or GPSM?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AM. For DTC U3003:17, GO to Pinpoint Test an.
	
	No
	GO to AD5.

AD5 CHECK FOR DTC U0140:00 SET IN MULTIPLE MODULES	

• Review the recorded results from the self-test. • **Is DTC U0140:00 set in more than one audio system module?**	**Yes** GO to AD6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD6 CHECK FOR CORRECT BCM OPERATION	
• Ignition OFF. • Disconnect and inspect all the BCM connectors. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the BCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AE: DTC U0151:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	Set by the APIM when the airbag deployment notification message from the RCM is missing for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AE: DTC U0151:00

repair4less

Test Step	Result / Action to Take
AE1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AE2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE2 RECHECK FOR DTC U0151:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0151:00 set in the APIM?**	**Yes** GO to AE3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AE3 CHECK THE RCM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the RCM self-test. • **Are any low or high voltage DTCs recorded in the RCM?**	**Yes** For DTC U3003:16, REFER to RCM DTC Chart in Section 501-20B. For DTC U3003:16, REFER to RCM DTC Chart in Section 501-20B. **No** GO to AE4.
AE4 CHECK THE APIM FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the APIM self-test. • **Are any low or high voltage DTCs recorded in the APIM?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AM. For DTC U3003:17, GO to Pinpoint Test an. **No** GO to AE5.
AE5 CHECK FOR CORRECT RCM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the RCM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new RCM. REFER to Section 501-20B.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

▪ Pushed-out pins (install new pins as necessary) • Reconnect the RCM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	

Pinpoint Test AF: DTC U0155:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	Set by the ACM , APIM , audio DSP module, FCIM , and GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AF: DTC U0155:00

Test Step	Result / Action to Take
AF1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AF2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AF2 RECHECK FOR DTC U0155:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0155:00 set in the ACM , APIM , audio DSP module, FCIM , or GPSM ?**	**Yes** GO to AF3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

repair4less

AF3 CHECK THE IPC FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS	
• Using a diagnostic scan tool, perform the IPC self-test. • **Are any low or high voltage DTCs recorded in the IPC ?**	**Yes** REFER to IPC DTC Chart in Section 413-01 . **No** GO to AF4 .
AF4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM ▪ Audio DSP module ▪ FCIM ▪ GPSM • **Are low or high voltage DTCs recorded in the ACM , APIM , audio DSP module, FCIM , or GPSM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an . **No** GO to AF5 .
AF5 CHECK FOR DTC U0155:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0155:00 set in more than one audio system module?**	**Yes** GO to AF6 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AF6 CHECK FOR CORRECT IPC OPERATION	
• Ignition OFF. • Disconnect and inspect the IPC connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the IPC connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new IPC . REFER to Section 413-01 . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AG: DTC U016A:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	Set by the APIM when network messages are missing from the GPSM for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AG: DTC U016A:00

Test Step	Result / Action to Take
AG1 VERIFY THE CUSTOMER CONCERN • Ignition ON. • Verify that there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AG2 . **No** The system is operating correctly at this time. The DTC may have been set due to an intermittent fault in the network wiring. CHECK the MS-CAN wiring between the APIM and the GPSM for a fault.
AG2 CHECK THE COMMUNICATION NETWORK • Ignition ON. • Carry out the network test using the scan tool. • **Does the GPSM pass the network test?**	**Yes** GO to AG3 . **No** REFER to Section 418-00 .
AG3 CHECK FOR ANY RECENT PMI CHANGES **NOTE:** If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Check the vehicle service history for recent service actions related to the GPSM . • **Have there been any recent service actions with either module?**	**Yes** CARRY out a manual PMI on the GPSM using As-Built data. REFER to the diagnostic scan tool instructions. **No** GO to AG4 .
AG4 RETRIEVE THE RECORDED DTCs FROM THE GPSM	

repair4less

• Clear the GPSM DTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Repeat the GPSM self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** REFER to the GPSM DTC chart in this section. **No** GO to AG5 .
AG5 RETRIEVE THE RECORDED DTCs FROM THE APIM • Repeat the APIM self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test am . For DTC U3003:17, GO to Pinpoint Test an **No** GO to AG6 .
AG6 RECHECK THE APIM DTCs • Perform the APIM self-test. • **Is DTC U016A:00 still present?**	**Yes** GO to AG7 . **No** The system is operating correctly at this time. The DTC may have been set due to an intermittent fault in the network wiring.
AG7 CHECK FOR DTC U016A:00 SET IN OTHER MODULES • Clear all DTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Repeat the APIM self-test. • **Is DTC U016A:00 set in any other module?**	**Yes** GO to AG8 . **No** GO to AG9

AG8 CHECK FOR CORRECT GPSM OPERATION
• Ignition OFF.
• Disconnect the GPSM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the GPSM connector and make sure it seats correctly.
• **Is the concern still present?**
	Yes
	INSTALL a new GPSM . REFER to Global Positioning System Module (GPSM) in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

AG9 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect the APIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the APIM connector and make sure it seats correctly.
• Wait 2 minutes for the APIM to re-
	Yes
	For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or

initialize. • **Is the concern still present?**	corroded connector.

Pinpoint Test AH: DTC U0184:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the APIM and audio DSP module when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AH: DTC U0184:00

Test Step	Result / Action to Take
AH1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AH2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH2 RECHECK FOR DTC U0184:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0184:00 set in the APIM and audio DSP module?**	**Yes** GO to AH3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules:	**Yes** For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an .

repair4less

■ ACM ■ APIM ■ Audio DSP module • **Are low or high voltage DTCs recorded in the ACM , APIM , or audio DSP module?**	**No** GO to AH4 .
AH4 CHECK FOR DTC U0184:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0184:00 set in more than one audio system module?**	**Yes** GO to AH5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AH5 CHECK FOR CORRECT ACM OPERATION	
• Ignition OFF. • Disconnect and inspect all the ACM connectors. • Repair: ■ Corrosion (clean module pins or install new connectors or terminals) ■ Damaged or bent pins (install new terminals or pins) ■ Pushed-out pins (install new pins as necessary) • Reconnect the ACM connectors. Make sure they seat and latch correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AI: DTC U0238:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

U0238:00	Lost Communication With Digital Audio Control Module "D" : No Sub Type Information	Set by the ACM and APIM when network messages are missing from the audio DSP module for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AI: DTC U0238:00

Test Step	Result / Action to Take
AI1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AI2. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AI2 RECHECK FOR DTC U0238:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs. • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs. • **Is DTC U0238:00 set in the ACM and APIM?**	**Yes** GO to AI3. **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs
• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
  ▪ Audio DSP module
• **Are low or high voltage DTCs recorded in the ACM, APIM, or audio DSP module?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AM. For DTC U3003:17, GO to Pinpoint Test an.
	
	No
	GO to AI4.

AI4 CHECK FOR DTC U0238:00 SET IN MULTIPLE MODULES • Review the recorded results from the self-test. • **Is DTC U0238:00 set in more than one audio system module?**	**Yes** GO to AI5. **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network

repair4less

	traffic or an intermittent fault condition.
AI5 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AJ: DTC U0253:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM and audio DSP module when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

PINPOINT TEST AJ: DTC U0253:00

Test Step	Result / Action to Take
AJ1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON.	**Yes**

• Verify if there is an observable symptom present. • **Is an observable symptom present?**	GO to AJ2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AJ2 RECHECK FOR DTC U0253:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0253:00 set in the ACM and audio DSP module?**	**Yes** GO to AJ3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AJ3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM ▪ Audio DSP module • **Are low or high voltage DTCs recorded in the ACM , APIM , or audio DSP module?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an . **No** GO to AJ4 .
AJ4 CHECK FOR DTC U0253:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0253:00 set in more than one audio system module?**	**Yes** GO to AJ5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AJ5 CHECK FOR CORRECT APIM OPERATION	
• Ignition OFF. • Disconnect and inspect the APIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals)	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** The system is operating correctly at this time. The concern may

repair4less

▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the APIM connector. Make sure it seats and latches correctly. • Wait at least 2 minutes for the APIM to re-initialize. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AK: DTC U0256:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM APIM , and audio DSP module when network messages are missing from the FCIM for more than 5 seconds with the ignition in the RUN position.

PINPOINT TEST AK: DTC U0256:00

Test Step	Result / Action to Take
AK1 VERIFY THE CUSTOMER'S CONCERN	
• Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AK2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AK2 RECHECK FOR DTC U0256:00	
• Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs .	**Yes** GO to AK3 .

• Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0256:00 set in the ACM , APIM , or audio DSP module?**	**No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AK3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	
• Using a diagnostic scan tool, perform the self-test for the following modules: ▪ ACM ▪ APIM ▪ Audio DSP module ▪ FCIM • **Are low or high voltage DTCs recorded in the ACM , APIM , audio DSP module, or FCIM ?**	**Yes** For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an . **No** GO to AK4 .
AK4 CHECK FOR DTC U0256:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0256:00 set in more than one audio system module?**	**Yes** GO to AK5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AK5 CHECK FOR CORRECT FCIM OPERATION	
• Ignition OFF. • Disconnect and inspect the FCIM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the FCIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) . **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Pinpoint Test AL: DTC U0257:00

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	**NOTE:** The FDIM is a non-networked module attached to the APIM . The APIM acts as the gateway module for messages sent over the I-CAN between the FDIM , ACM , and FCIM . Set by the ACM , audio DSP module, and FCIM when I-CAN network messages are missing from the APIM for more than 5 seconds with the ignition in RUN. This DTC may be set in conjunction with DTC U0253:00.

PINPOINT TEST AL: DTC U0257:00

Test Step	Result / Action to Take
AL1 VERIFY THE CUSTOMER'S CONCERN • Ignition ON. • Verify if there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AL2 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AL2 RECHECK FOR DTC U0257:00 • Ignition ON. • Using a diagnostic scan tool, clear all CMDTCs . • Ignition OFF. • Ignition ON. • Wait at least 10 seconds. • Using a diagnostic scan tool, retrieve all CMDTCs . • **Is DTC U0257:00 set in the ACM , audio DSP module, or FCIM ?**	**Yes** GO to AL3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AL3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DTCs	

• Using a diagnostic scan tool, perform the self-test for the following modules:
  ▪ ACM
  ▪ APIM
  ▪ Audio DSP module
  ▪ FCIM
• **Are low or high voltage DTCs recorded in the ACM , APIM , audio DSP module, or FCIM ?**
	Yes
	For DTC U3003:16, GO to Pinpoint Test AM . For DTC U3003:17, GO to Pinpoint Test an .
	
	No
	GO to AL4 .

AL4 CHECK FOR DTC U0257:00 SET IN MULTIPLE MODULES	
• Review the recorded results from the self-test. • **Is DTC U0257:00 set in more than one audio system module?**	**Yes** GO to AL5 . **No** If there is an observable symptom, GO to Symptom Chart - General Audio System to diagnose the observed symptom. If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AL5 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AM: DTC U3003:16

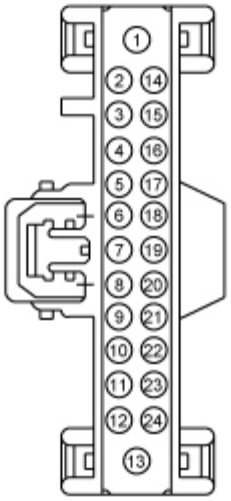
Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.

repair4less

Refer to Diagnostic Methods in Section 100-00 for information about these practices.

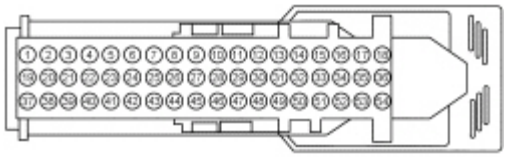
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.



DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM , APIM , audio DSP module, FCIM , and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

PINPOINT TEST AM: DTC U3003:16

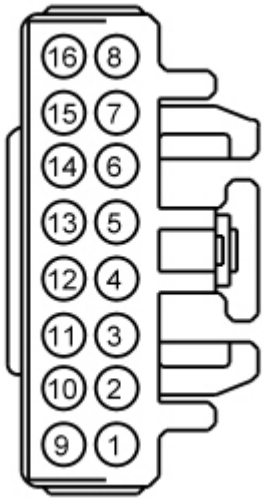


Test Step	Result / Action to Take
AM1 RECHECK FOR DTC U3003:16 • Ignition ON. • Using a diagnostic scan tool, clear the DTCs for the module in question. • Wait at least 15 seconds. • Using a diagnostic scan tool, repeat the self-test for the module in question. • **Is DTC U3003:16 still present?**	**Yes** GO to AM2 . **No** The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.
AM2 CHECK FOR CHARGING SYSTEM DTCS IN THE PCM • Using a diagnostic scan tool, retrieve all CMDTCs . • **Are any voltage-related DTCs set in the PCM ?**	**Yes** REFER to PCM DTC Chart in Section 303-14 . **No** GO to AM3 .
AM3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE • Check the battery condition and verify that the battery is fully charged. REFER to Battery Condition Test in Section 414-01 . • **Is the battery OK and fully charged?**	**Yes** GO to AM4 . **No** REFER to the Symptom Chart in Section 414-00 .
AM4 CHECK THE MODULE VOLTAGE SUPPLY • Ignition OFF. • Measure and record the voltage at the battery. • Disconnect the audio system module setting DTC U3003:16. • Ignition ON. • Measure the voltage between the module setting DTC U3003:16 and ground. • For the ACM , measure the **voltage** between:	**Yes** GO to AM5 . **No** REPAIR the circuit(s) for high resistance.

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240A-1	SBP29 (GY/RD)	—	Ground

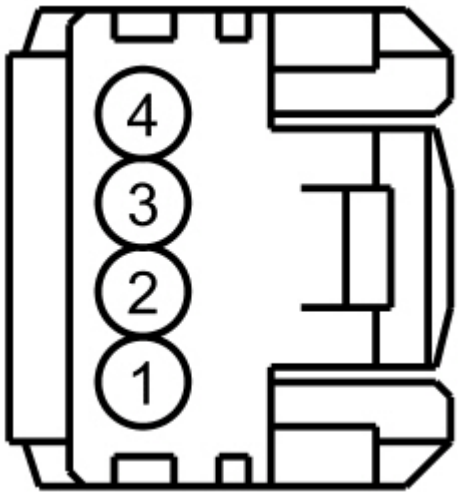
- For the APIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	—	Ground



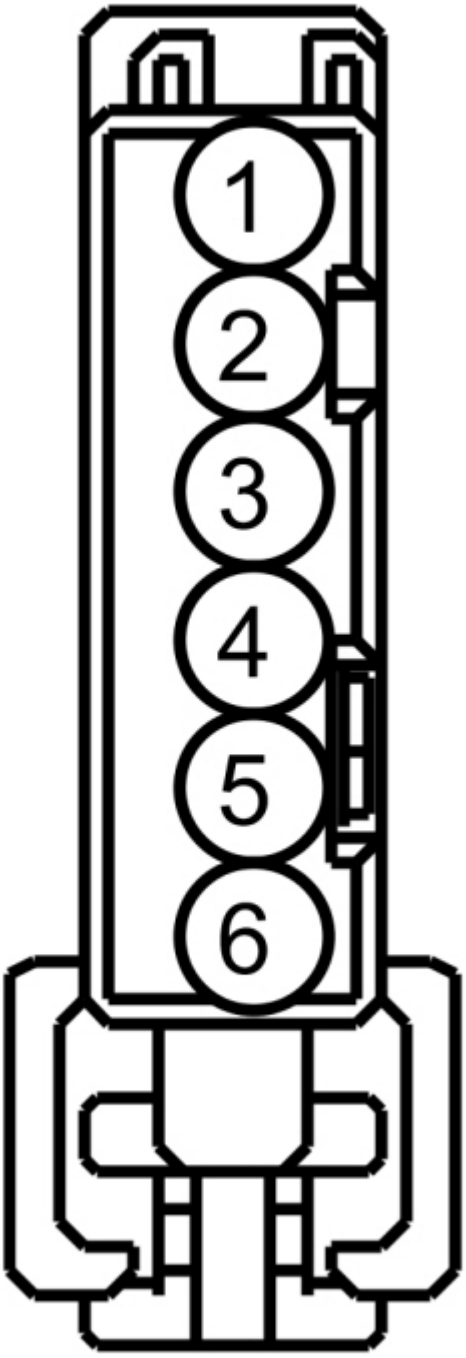
- For the audio DSP module, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C3154C-5	SBP19 (BU/RD)	—	Ground



repair4less

C3154C-6	SBP19 (BU/RD)	—	Ground

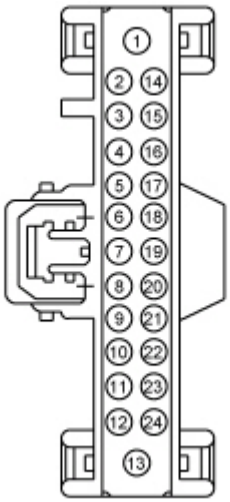


- For the FCIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2402-1	SBP09 (RD)	—	Ground

- For the GPSM , measure the **voltage** between:

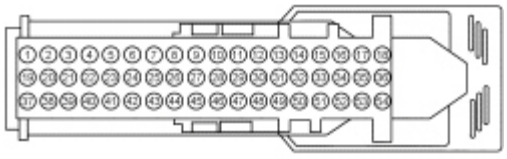
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2398-1	SBP09 (RD)	—	Ground



- **Is the voltage within 0.2 volts of the recorded battery voltage?**

AM5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY	
• Measure the voltage at the suspect module.	**Yes**

repair4less

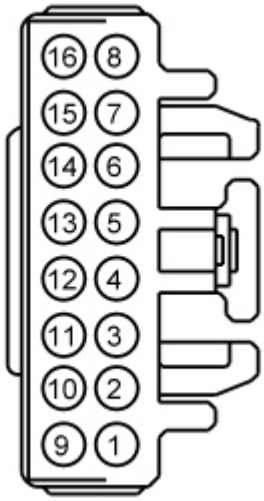


- For the ACM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C240A-1	SBP29 (GY/RD)	C240A-13	GD114 (BK/BU)

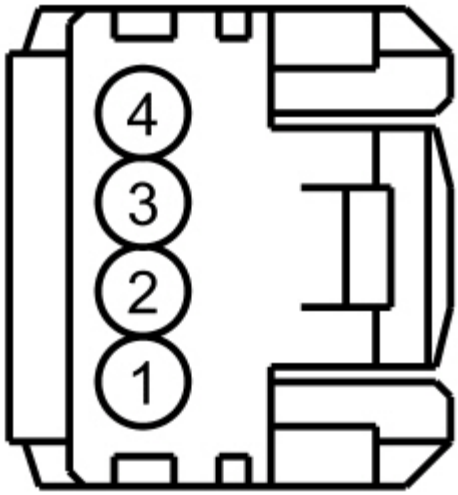
- For the APIM , measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2383-1	SBP02 (YE/RD)	C2383-37	GD114 (BK/BU)



- For the audio DSP module, measure the **voltage** between:

For the ACM , GO to AM6 . For the APIM , GO to AM7 . For the audio DSP module, GO to AM8 . For the FCIM , GO to AM9 . For the GPSM , GO to AM10 .



No
REPAIR the circuit for high resistance.

AM6 CHECK FOR CORRECT ACM OPERATION • Ignition OFF. • Disconnect and inspect all the ACM	**Yes** CHECK OASIS for any applicable TSBs. If a

repair4less

connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM . REFER to Audio Control Module (ACM) .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AM7 CHECK FOR CORRECT APIM OPERATION
• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AM8 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION
• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AM9 CHECK FOR CORRECT FCIM OPERATION
• Ignition OFF.
• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM . REFER to Front Controls Interface Module (FCIM) .

necessary) • Reconnect the FCIM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
AM10 CHECK FOR CORRECT GPSM OPERATION	
• Ignition OFF. • Disconnect and inspect the GPSM connector. • Repair: ▪ Corrosion (clean module pins or install new connectors or terminals) ▪ Damaged or bent pins (install new terminals or pins) ▪ Pushed-out pins (install new pins as necessary) • Reconnect the GPSM connector. Make sure it seats and latches correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM). **No** The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test AN: DTC U3003:17

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM, APIM, audio DSP module, FCIM, and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

PINPOINT TEST AN: DTC U3003:17

Test Step	Result / Action to Take
AN1 RECHECK FOR DTC U3003:17	
• Turn the engine off. • Ignition ON. • Using a diagnostic scan tool, clear the DTC for the module in question. • Wait at least 10 seconds.	**Yes** GO to AN2. **No** The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

repair4less

• Using a diagnostic scan tool, perform the self-test for the module in question. • **Is DTC U3003:17 present?**	
AN2 CHECK FOR HIGH VOLTAGE DTCs SET IN OTHER MODULES	
• Ignition ON. • Using a diagnostic scan tool, retrieve all CMDTCs. • Wait at least 10 seconds. • Using a diagnostic scan tool, perform the self-test for the module in question. • **Are high voltage DTCs such as B1676, P0563, U3003:17 set in more than one module?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** GO to AN3.
AN3 CHECK THE BATTERY VOLTAGE	
• Turn off all interior lights, exterior lights, and accessories. • Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	**Yes** REFER to Section 414-01 to diagnose an overcharging condition. **No** For the ACM, GO to AN4. For the APIM, GO to AN5. For the audio DSP module, GO to AN6. For the FCIM, GO to AN7 For the GPSM, GO to AN8.
AN4 CHECK FOR CORRECT ACM OPERATION	

• Ignition OFF.
• Disconnect and inspect all the ACM connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the ACM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new ACM. REFER to Audio Control Module (ACM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN5 CHECK FOR CORRECT APIM OPERATION	

• Ignition OFF.
• Disconnect and inspect the APIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the APIM connector. Make sure it seats and latches correctly.
• Wait at least 2 minutes for the APIM to re-initialize.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN6 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect all the audio DSP module connectors.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the audio DSP module connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new audio DSP module. REFER to Audio Digital Signal Processing (DSP) Module — Front Captain's Chair or Audio Digital Signal Processing (DSP) Module — Split Bench .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN7 CHECK FOR CORRECT FCIM OPERATION	
• Ignition OFF.	**Yes**

repair4less

• Disconnect and inspect the FCIM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the FCIM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new FCIM. REFER to Front Controls Interface Module (FCIM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN8 CHECK FOR CORRECT GPSM OPERATION
• Ignition OFF.
• Disconnect and inspect the GPSM connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the GPSM connector. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new GPSM. REFER to Global Positioning System Module (GPSM).
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

repair4less

Accessory Protocol Interface Module (APIM) Custom Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool.
 ST3256-A	SYNC® Re-Flash Kit CCMSYNC-KIT or equivalent [Tools are also available individually CCMUSB2-AM-AM-10 (cable) and CCMUSB-AF-BF5 (adapter)]

NOTE: Use this procedure to show all available software options, including Applications, that can be programmed into the APIM when upgrades become available, or as directed by a TSB. For additional information about choosing the correct APIM programming procedure, refer to Information and Entertainment System , APIM Programming.

NOTE: A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

NOTE: Some programming files are large (greater than 2 gigabytes). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download. If a "Disk Space Error" is received, create additional free space on the hard drive.

NOTE:

- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- During programming, the vehicle display may go blank momentarily.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.
- Close the IDS program before attempting to perform this procedure.

1. Connect a battery charger set on low.
    - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

2. Place the ignition in the ON/RUN position.

3. Connect the diagnostic scan tool and VCM to the vehicle.

4. Open Internet Explorer on the diagnostic scan tool and go to the technician service publications web site. On the OASIS tab, select "Read VIN & DTCs," and select "Go."

5. **NOTE:** This procedure clears all CMDTCs. The DTCs must be recorded now if other diagnoses are to be performed after this procedure.

   Select "Toolbox" from the technician service publications web site to retrieve and record all CMDTCs.

6. **NOTE:** If unable to complete programming because the operation stops or errors are received, the web browser settings may need to be configured. Refer to "Software Programming v1.1" on the technician service publications web site under the Service Tips tab.

   From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

7. Scroll to the bottom of the screen, select "Custom," and select the "Read SYNC" button to compare the current APIM Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels to the last reported state in the Ford online database.
   - After the comparison is performed, the diagnostic scan tool displays a list of available software. Select the software level needed as indicated by the TSB. If the software level is not known, stop this procedure and perform standard programming, which automatically selects the latest software levels. Refer to Accessory Protocol Interface Module (APIM) Standard Programming.
   - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no re-installation required). All Applications can be selected for installation.
   - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
   - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force CIP, choosing this option requires additional programming time and is not recommended unless directed by a TSB.

8. Select the customer-requested upgrade or the Application directed by the TSB.

9. **NOTE:** Only Applications on a flash drive may be loaded to the APIM through the media hub.

   NOTE: If not performing a Full Flash/Force CIP, go to Step 11.

   Remove the media hub. REFER to Media Hub.

10. **NOTE:** Do not disconnect the diagnostic scan tool or cable from the APIM during programming unless directed by the diagnostic scan tool on-screen prompts.

    Connect the SYNC® Re-Flash Kit cable and adapter between the diagnostic scan tool USB port and the vehicle USB cable.

11. **NOTE:** Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "retry" button to continue programming.

    NOTE: This step may take 20 minutes or longer.

    Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

repair4less

- The updates are downloaded to the diagnostic scan tool or USB flash drive.

12. **NOTE:** If the diagnostic scan tool does not have an available USB port, the Re-Flash Kit cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool.

    NOTE: This step may take 20 minutes or longer.

    Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions for downloading service packs and Applications onto the USB flash drive.

13. **NOTE:** If the media hub was removed, install it before connecting the USB flash drive to the vehicle.Refer to Media Hub .

    This step may take 20 minutes or longer.

    When prompted by the diagnostic scan tool, remove the USB flash drive and connect it to the media hub to install the Applications into the APIM .
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

14. **NOTE:** Re-installing the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.

    Once diagnostic scan tool programming and USB flash drive programming are complete, re-install the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

15. Calibrate the touchscreen. Refer to Touchscreen Calibration .

Accessory Protocol Interface Module (APIM) Module Replacement Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool
 ST3256-A	SYNC® Re-Flash Kit CCMSYNC-KIT or equivalent [Tools are also available individually CCMUSB2-AM-AM-10 (cable) and CCMUSB-AF-BF5 (adapter)]

NOTE: Use this procedure to program and provision the module when a new Accessory Protocol Interface Module (APIM) is being installed. For additional information about choosing the correct programming procedure, refer to Information and Entertainment System , APIM Programming.

NOTE: A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

NOTE: Some programming files are large (greater than 2 gigabytes). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download. If a "Disk Space Error" is received, create additional free space on the hard drive.

NOTE:

- Install the new APIM before performing this procedure. Refer to Accessory Protocol Interface Module (APIM)
- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- During programming, the vehicle display may go blank momentarily.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.
- Close the IDS program before attempting to perform this procedure.

1. Connect a battery charger set on low.
    - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

2. Place the ignition in the ON/RUN position.

3. Connect the diagnostic scan tool and VCM to the vehicle.

repair4less

4. Open Internet Explorer on the diagnostic scan tool and go to the technician service publications web site. On the OASIS tab, select "Read VIN & DTCs," and select "Go."

5. **NOTE:** This procedure clears all CMDTCs. The DTCs must be recorded now if other diagnoses are to be performed after this procedure.

   Select "Toolbox" from the technician service publications web site to retrieve and record all CMDTCs.

6. **NOTE:** If unable to complete programming because the operation stops or errors are received, the web browser settings may need to be configured. Refer to "Software Programming v1.1" on the technician service publications web site under the Service Tips tab.

   From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

7. Scroll to the bottom of the screen, and select "Module Replacement," and select the "Read SYNC" button to compare the current APIM VIP, CIP, and Application software levels to the last reported state in the Ford online database.
   - After the comparison is performed, the diagnostic scan tool automatically selects software for programming.
   - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no re-installation required).
   - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
   - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force CIP, choosing this option requires additional programming time and is not recommended unless directed by a TSB.

8. **NOTE:** Only Applications on a flash drive may be loaded to the APIM through the media hub.

   NOTE: If not performing a Full Flash/Force CIP, go to Step 10.

   Remove the media hub. REFER to Media Hub.

9. **NOTE:** Do not disconnect the diagnostic scan tool or cable from the APIM during programming unless directed by the diagnostic scan tool on-screen prompts.

   Connect the SYNC® Re-Flash Kit cable and adapter between the diagnostic scan tool USB port and the vehicle USB cable.

10. **NOTE:** Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "retry" button to continue programming.

    NOTE: This step may take 20 minutes or longer.

    Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.
    - The updates are downloaded to the diagnostic scan tool or USB flash drive.

11. **NOTE:** If the diagnostic scan tool does not have an available USB port, the Re-Flash Kit cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool.

NOTE: This step may take 20 minutes or longer.

Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions for downloading service packs and Applications onto the USB flash drive.

12. **NOTE:** If the media hub was removed, install it before connecting the USB flash drive to the vehicle.Refer to Media Hub .

    This step may take 20 minutes or longer.

    When prompted by the diagnostic scan tool, remove the USB flash drive and connect it to the media hub to install the Applications into the APIM .
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

13. **NOTE:** Re-installing the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.

    Once diagnostic scan tool programming and USB flash drive programming are complete, re-install the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

14. Calibrate the touchscreen. Refer to Touchscreen Calibration .

---

repair4less

Accessory Protocol Interface Module (APIM) Reset

NOTE: Carrying out an APIM Reset consists of a battery disconnect and a SYNC® system Master Reset.

NOTE: NOTE: This procedure will clear all CMDTCs . The DTCs must be recorded now if other (non SYNC®) diagnoses are to be performed after this procedure.

1. Remove any devices connected to the USB port(s), audio input jack (if equipped), or media hub (if equipped).

2. **NOTE:** After the APIM reset procedure has been completed the customer should be advised to reset their device following the manufacturer's instructions. Refer to the device's owner's manual and/or website for information on how to perform a Manual / Master Reset or Clear. Devices can be powered off and back on for a simple re-boot. In some cases the device's battery may also need to be removed and re-installed to complete a re-boot. In addition, cell phones may need to have SYNC® deleted from the Bluetooth menu prior to re-pairing the phone to the SYNC® system. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.

   Disconnect the negative battery cable for 1 minute, then reconnect it. Refer to Section 414-01 .

3. **NOTE:** Performing a Master Reset returns all preference settings to the factory defaults, erases all the phone book and call histories, and deletes any devices paired with the SYNC® system. On vehicles equipped MyFord Touch or MyLincoln Touch with navigation, the customer’s saved destination points (home address and points of interest) and preferences will also be lost with a Master Reset.

   Carry out a SYNC® system Master Reset. Refer to the owner's literature

4. Verify system function using the Multi-Media Interface Tester 105-00120, to test the audio output for the audio input jack/socket (if equipped), USB port(s), and Bluetooth. If equipped, use the RCA Adapter 105-00121 to test the audio output for the RCA jacks.

5. If a concern is still present return to the Symptom Charts.

repair4less

Accessory Protocol Interface Module (APIM) Standard Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent diagnostic scan tool
 ST3256-A	SYNC® Re-Flash Kit CCMSYNC-KIT or equivalent [Tools are also available individually CCMUSB2-AM-AM-10 (cable) and CCMUSB-AF-BF5 (adapter)]

NOTE: Use this procedure to update the Accessory Protocol Interface Module (APIM) and any installed Applications to the latest level. For additional information about choosing the correct programming procedure, refer to Information and Entertainment System , APIM Programming.

NOTE: A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.

NOTE: Some programming files are large (greater than 2 gigabytes). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download. If a "Disk Space Error" is received, create additional free space on the hard drive.

NOTE:

- To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.
- During programming, the vehicle display may go blank momentarily.
- Make sure the diagnostic scan tool is plugged into a power supply due to the length of programming time.
- Close the IDS program before attempting to perform this procedure.

1. Connect a battery charger set on low.
    - When connecting the charger, the negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

2. Place the ignition in the ON/RUN position.

3. Connect the diagnostic scan tool and VCM to the vehicle.

4. Open Internet Explorer on the diagnostic scan tool and go to the technician service publications web

site. On the OASIS tab, select "Read VIN & DTCs," and select "Go."

5. **NOTE:** This procedure clears all CMDTCs . The DTCs must be recorded now if other diagnoses are to be performed after this procedure.

   Select "Toolbox" from the technician service publications web site to retrieve and record all CMDTCs .

6. **NOTE:** If unable to complete programming because the operation stops or errors are received, the web browser settings may need to be configured. Refer to "Software Programming v1.1" on the technician service publications web site under the Service Tips tab.

   From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

7. Scroll to the bottom of the screen, select "Standard", and select the "Read SYNC" button to compare the current APIM Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels to the last reported state in the Ford online database.
   - After the comparison is performed, the diagnostic scan tool automatically selects software for programming.
   - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no re-installation required).
   - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
   - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force CIP , choosing this option requires additional programming time and is not recommended unless directed by a TSB .

8. **NOTE:** Only Applications on a flash drive may be loaded to the APIM through the media hub.

   NOTE: If not performing a Full Flash/Force CIP , go to Step 10.

   Remove the media hub. REFER to Media Hub .

9. **NOTE:** Do not disconnect the diagnostic scan tool or cable from the APIM during programming unless directed by the diagnostic scan tool on-screen prompts.

   Connect the SYNC® Re-Flash Kit cable and adapter between the diagnostic scan tool USB port and the vehicle USB cable.

10. **NOTE:** Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "retry" button to continue programming.

    NOTE: This step may take 20 minutes or longer.

    Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.
    - The updates are downloaded to the diagnostic scan tool or USB flash drive.

11. **NOTE:** If the diagnostic scan tool does not have an available USB port, the Re-Flash Kit cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool.

repair4less

NOTE: This step may take 20 minutes or longer.

Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions for downloading service packs and Applications onto the USB flash drive.

12. **NOTE:** If the media hub was removed, install it before connecting the USB flash drive to the vehicle.Refer to Media Hub .

    This step may take 20 minutes or longer.

    When prompted by the diagnostic scan tool, remove the USB flash drive and connect it to the media hub to install the Applications into the APIM .
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

13. **NOTE:** Re-installing the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.

    Once diagnostic scan tool programming and USB flash drive programming are complete, re-install the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

14. Calibrate the touchscreen. Refer to Touchscreen Calibration .

Audio Control Module (ACM) Self-Diagnostic Mode

NOTE: If the Audio Front Control Module (ACM), Front Control/Display Interface Module (FCDIM) (if equipped), Front Controls Interface Module (FCIM), or Front Display Interface Module (FDIM) (if equipped) are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the ACM chassis.

1. Turn the ACM on.

2. Operate the audio system in radio tuner AM/FM mode.

3. Press and hold the EJECT button, and within 1 second, press and hold the SEEK UP button until the speaker walk-around test begins.

   NOTE: AHU Diagnostics refers to the ACM, EFP Diagnostics refers to the FCIM, and MFD Diagnostics (if supported) refers to the FCDIM (if equipped).

4. To exit the self-diagnostic mode, turn the ACM off, or select "Exit Diagnostics."

repair4less

Satellite Radio Electronic Serial Number (ESN) Retrieval

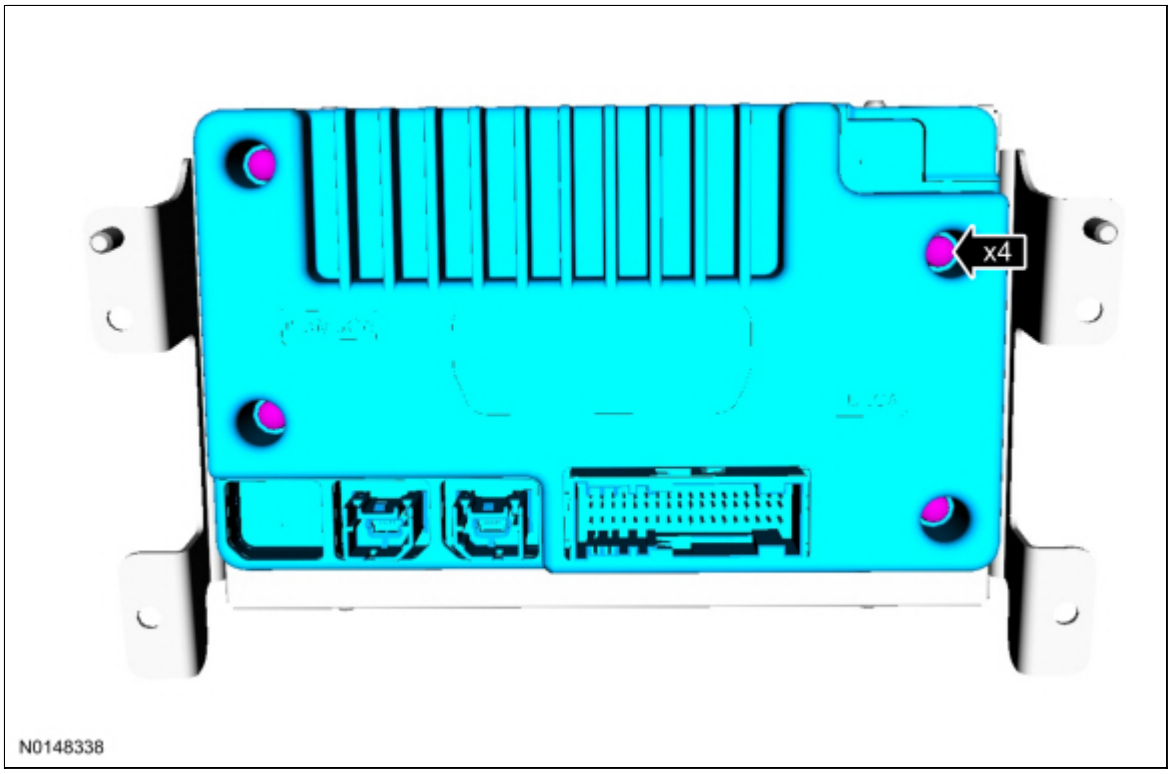
NOTE: If the Audio Front Control Module (ACM), FCDIM (if equipped), FCIM , or FDIM (if equipped) are inoperative (blank or do not power on), obtain the Electronic Serial Number (ESN) by referencing the label attached to the Audio Front Control Module (ACM) chassis.

1. Turn the Audio Front Control Module (ACM) on.
2. Operate the audio system in radio tuner AM/FM mode.
3. Press and hold the eject button, and within 1 second, press and hold the seek up button. If supported, the speaker walk around test will begin.
4. Select AHU Diagnostics.
5. Select SIRIUS ESN.

Touchscreen Calibration

NOTE: Recalibrate the touchscreen by following the scan tool prompts or the steps below.

1. To avoid an inoperative touchscreen, make sure the vehicle battery is fully charged.
2. Turn on the ACM .
3. While in AM/FM mode, press and hold the EJECT button, and within 1 second, press the SEEK UP button.
4. Press and hold the SEEK DOWN button to enter the touchscreen calibration.
5. Touch and hold the touch points as they appear on the touchscreen (a stylus is not required).
6. To accept the new settings, touch anywhere on the screen when the screen displays “New calibration settings have been measured. Press the Enter key to accept the new settings.”
7. Clear all CMDTCs .



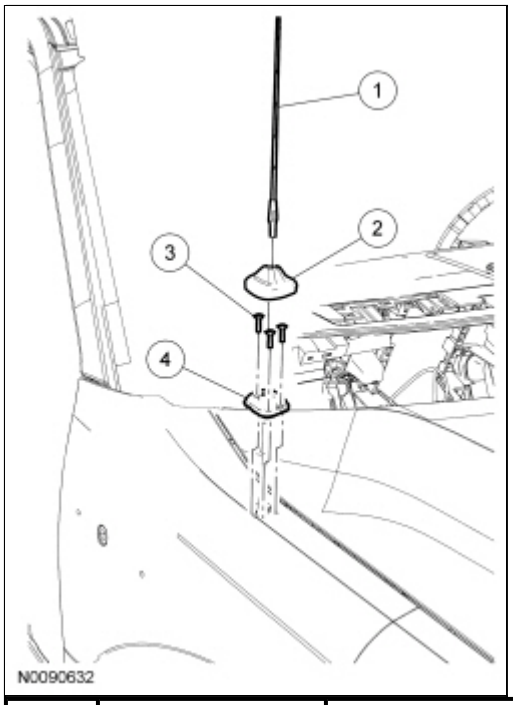
repair4less

Accessory Protocol Interface Module (APIM)

Removal and Installation

1. Remove the Front Display Interface Module (FDIM). Refer to Front Display Interface Module (FDIM) .

2. Remove the 4 APIM screws and remove the APIM .
   - To install, tighten to 0.6 Nm (5 lb-in).

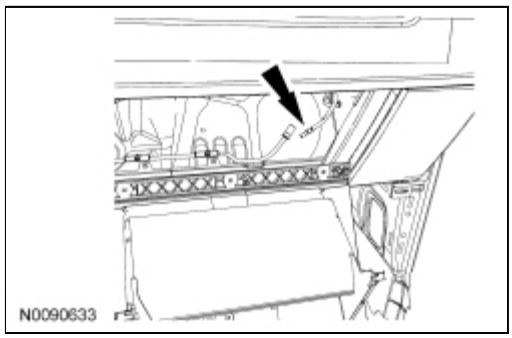


3. To install, reverse the removal procedure.

4. Program the APIM . Refer to Accessory Protocol Interface Module (APIM) Module Replacement Programming .

repair4less

Antenna — AM/FM



Item	Part Number	Description
1	18813	AM/FM antenna mast
2	18A927	AM/FM antenna base cap
3	N610019	AM/FM antenna screws (3 required)
4	18A894	AM/FM antenna base

Removal and Installation

1. Lower the glove compartment completely.

2. Disconnect the AM/FM antenna from the AM/FM antenna cable.
    - Push the antenna cable end and the grommet through the side cowl.

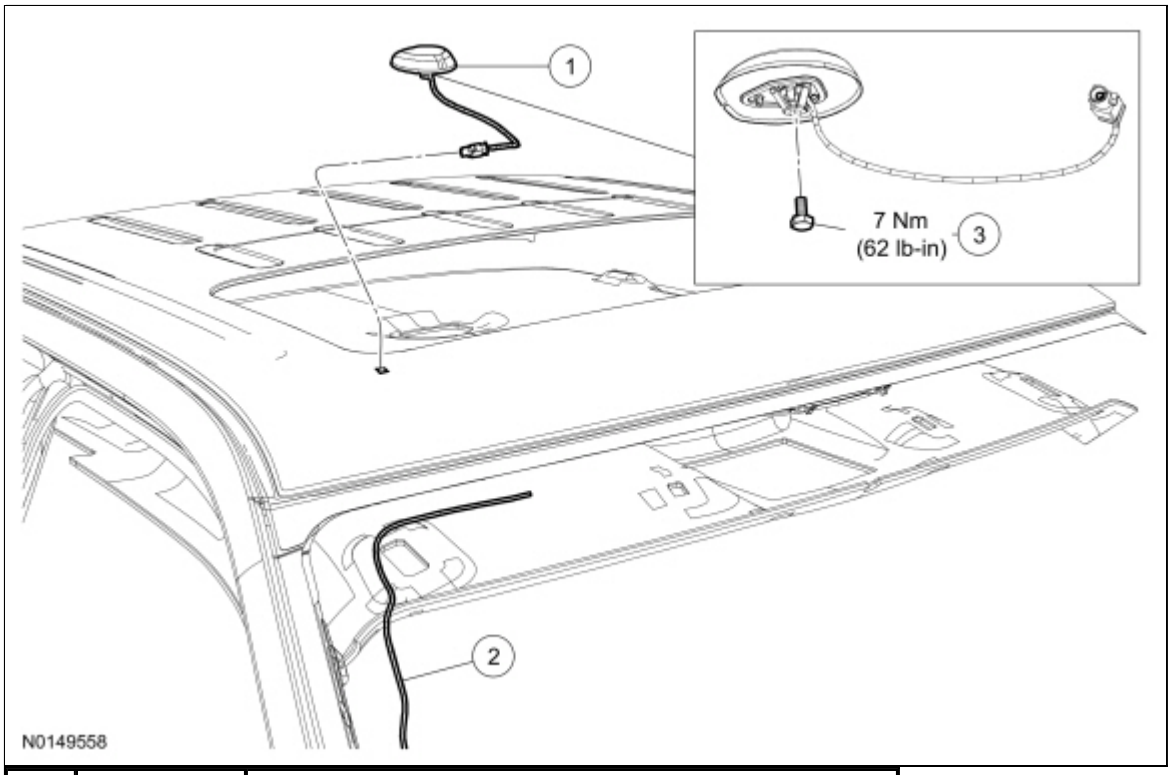
3. ***NOTICE:*** **Do not over tighten the antenna mast or damage to the antenna base or mast may occur.**

   Remove the AM/FM antenna mast.
   1. To install, tighten to 4.2 Nm (36 lb/in).

4. **NOTE:** A new AM/FM antenna base cap must be installed.

   Using a suitable tool such as a hook-shaped pick, remove the AM/FM antenna base cap by prying upward.

5. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .



6. Remove the 3 screws and the AM/FM antenna base.
   1. To install, tighten to 2.5 Nm (23 lb/in).

7. To install, reverse the removal procedure.

Antenna — Satellite Radio

Item	Part Number	Description
1	10E893	Satellite radio antenna
2	—	Satellite radio antenna electrical connector (part of 19A397)
2	—	Satellite radio antenna retaining bolt (part of 10E893)

Removal and Installation

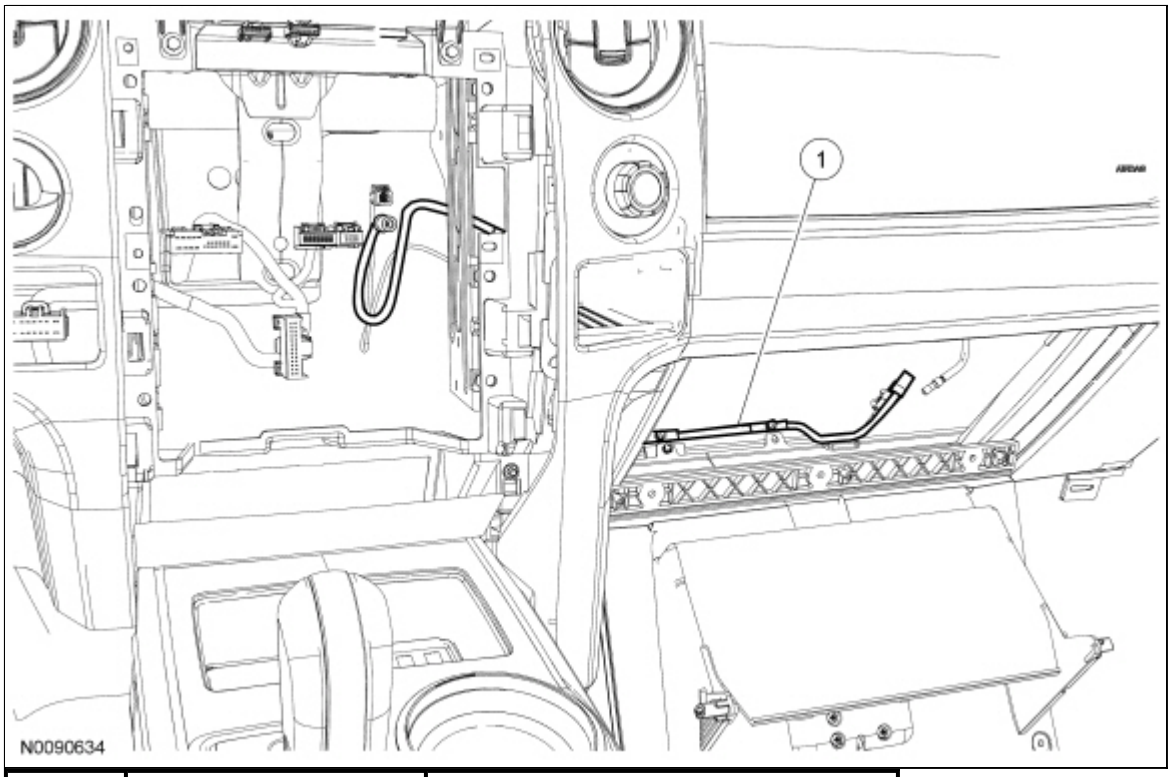
1. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .

2. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
   - If equipped, disconnect the electrical connector.

3. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical connector.

4. **NOTE:** Remove the satellite antenna and pigtail through the mounting opening in the roof panel.

   Remove the satellite antenna.
   - Disconnect the electrical connector.



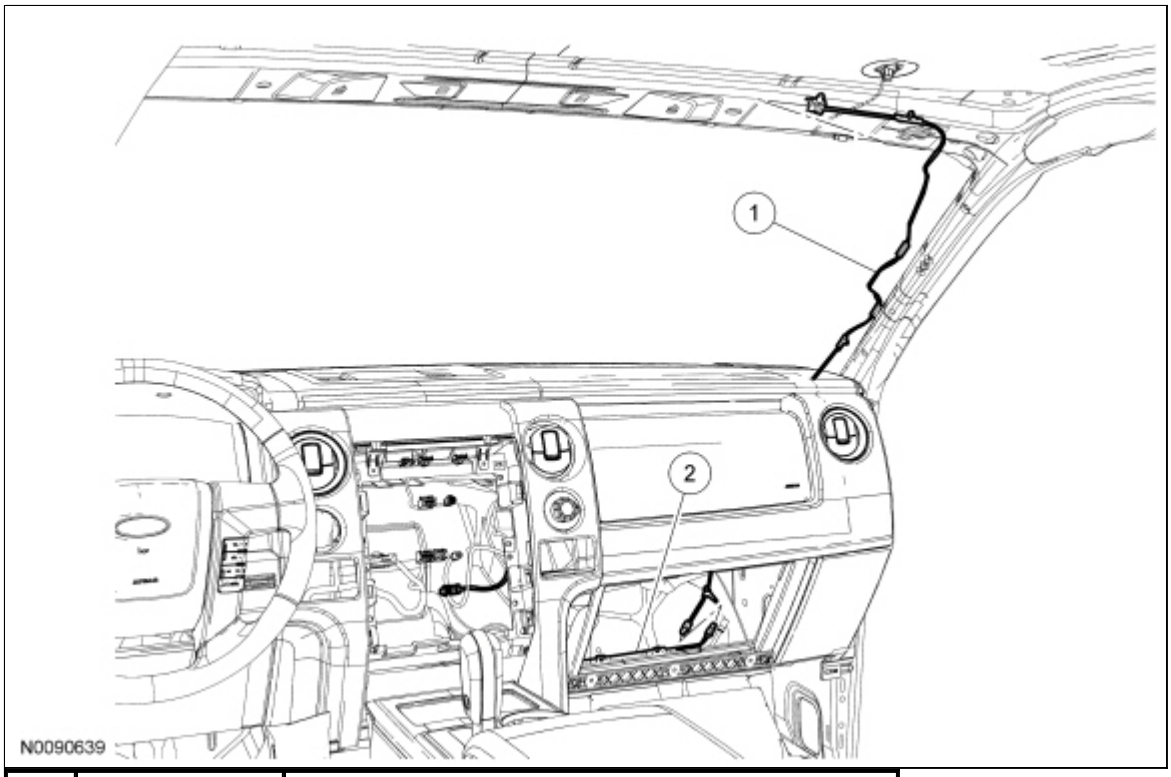
- Remove the satellite antenna retaining bolt and retainer then remove the satellite antenna from the roof panel.
    - To install, tighten to 7 Nm (62 lb-in).

5. To install, reverse the removal procedure.

---

repair4less

Antenna Cable — AM/FM



Item	Part Number	Description
1	18812	AM/FM antenna cable

Removal and Installation

1. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.
2. Lower the glove compartment completely.
3. Disconnect the AM/FM antenna cable from the AM/FM antenna.
4. Separate the pushpins and remove the AM/FM antenna cable.
5. To install, reverse the removal procedure.

repair4less

Antenna Cable — Satellite Radio

Item	Part Number	Description
1	19A397	Upper satellite radio antenna cable
2	19A397/10E928	Lower satellite radio antenna cable (without/with navigation)

Removal and Installation

Both cables

1. Lower the glove compartment completely.
2. Disconnect the upper-to-lower satellite radio antenna cable connection.

Upper cable

3. Remove the RH A-pillar trim panel. For additional information, refer to Section 501-05 .
4. Remove the 3 screws, the RH sun visor retaining clip, and the RH sun visor.
    - If equipped, disconnect the electrical connector.
5. Lower the front of the headliner enough to gain access to the satellite radio antenna electrical

connector.

6. Remove the upper satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the A-pillar and instrument panel.

Lower cable

7. Remove the Audio Front Control Module (ACM). For additional information, refer to Audio Control Module (ACM) in this section.

8. Remove the lower satellite radio antenna cable.
    - Disconnect the electrical connector.
    - Separate the pushpins from the instrument panel.

Both cables

9. To install, reverse the removal procedure.

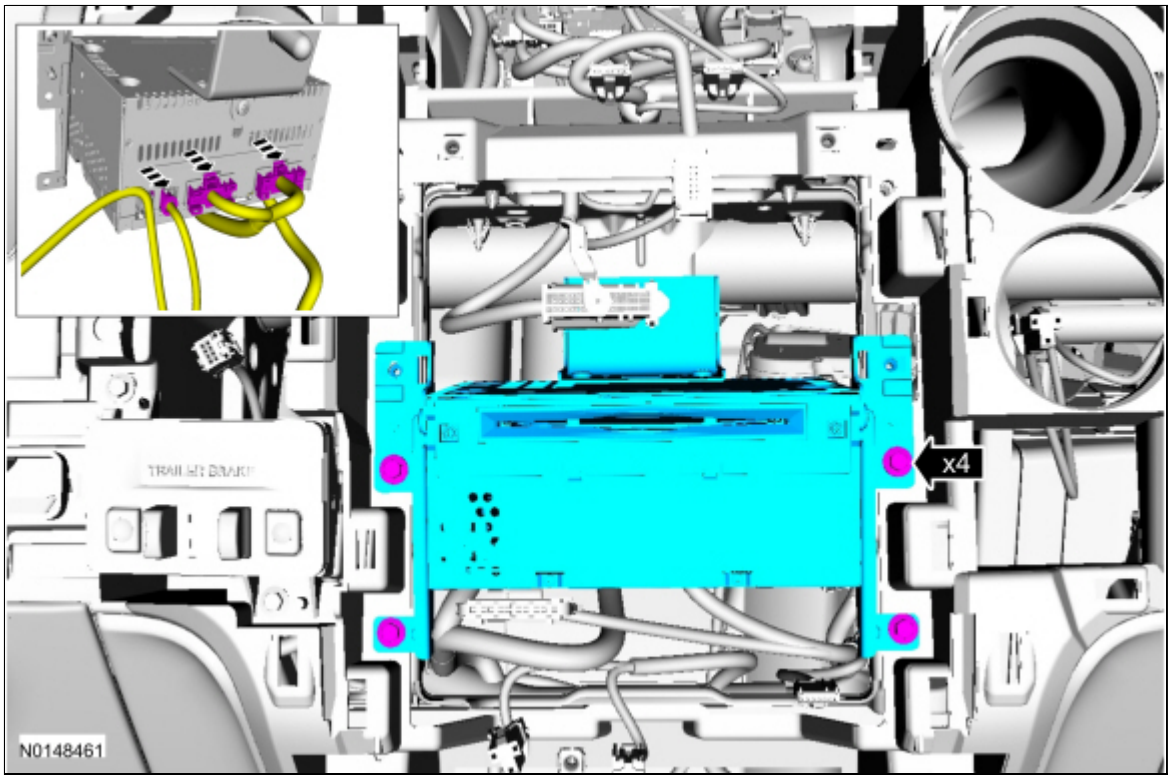
repair4less

Audio Control Module (ACM)



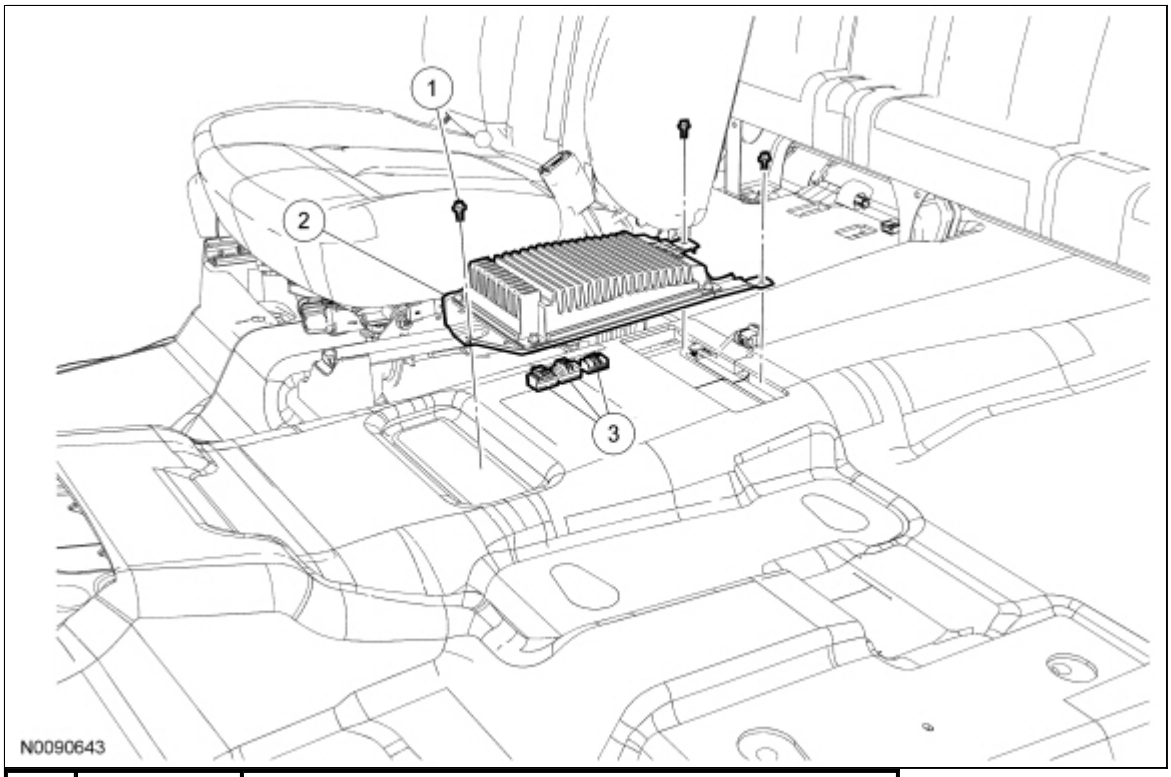
Removal and Installation

1. **NOTE:** If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.

   Upload the Audio Front Control Module (ACM) configuration information to the scan tool by following the scan tool on screen instructions.

2. Remove the Front Display Interface Module (FDIM). Refer to Front Display Interface Module (FDIM) .

3. Remove the 4 ACM bolts and the ACM .
   - Disconnect the electrical connectors.
   - To install, tighten to 2.5 Nm (23 lb-in).



4. To install, reverse the removal procedure.

5. Download the ACM configuration information from the scan tool to the new ACM following the scan tool on screen instructions.

repair4less

Audio Digital Signal Processing (DSP) Module — Front Captain's Chair

Item	Part Number	Description
1	—	Audio Digital Signal Processing (DSP) module bolts (3 required)
2	18B849	Audio DSP module
3	—	Audio DSP module electrical connectors (part of 14A005)

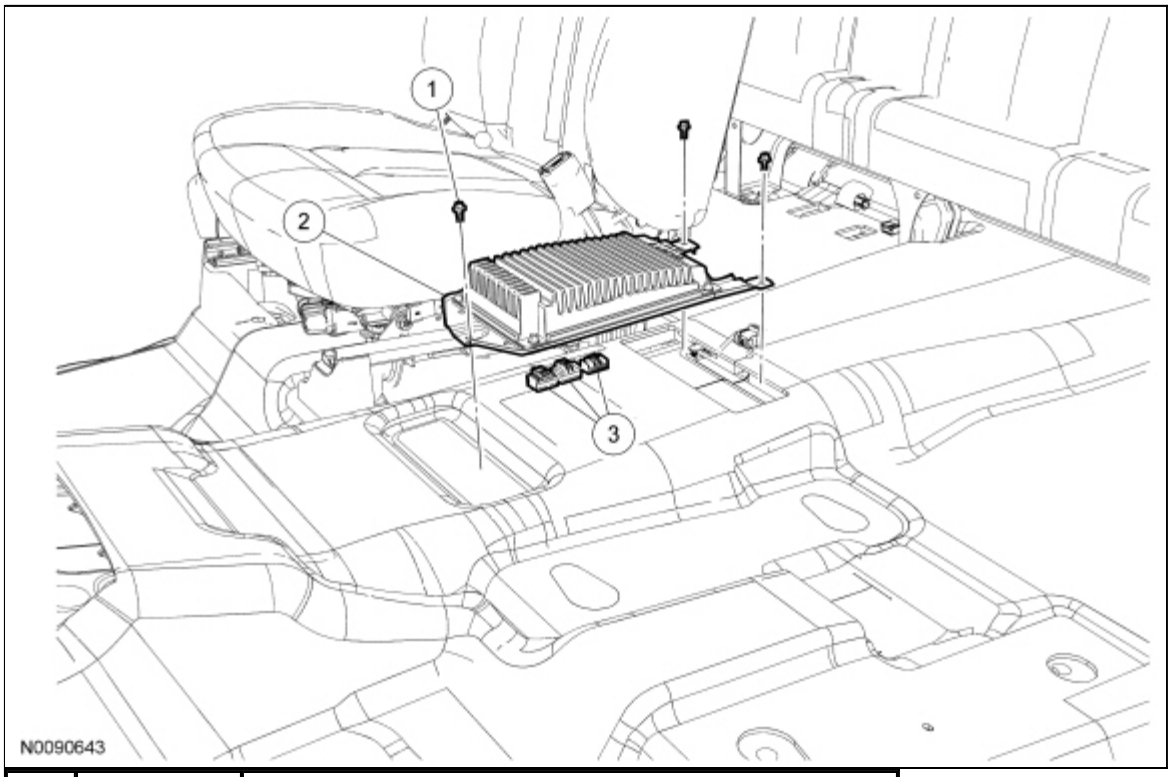
Removal and Installation

1. **NOTE:** Module configuration is required when a new audio Digital Signal Processing (DSP) module is being installed.

   Upload the audio DSP module configuration information to the scan tool. For additional information, refer to Programmable Module Installation (PMI) in Section 418-01 .

2. Remove the floor console. For additional information, refer to Section 501-12 .

3. Disconnect the audio DSP module electrical connectors.



4. Remove the 3 bolts and the audio DSP module.

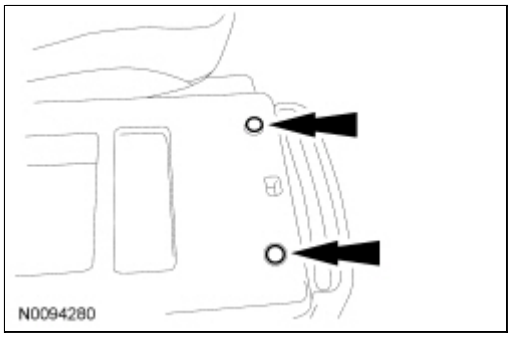
5. To install, reverse the removal procedure.
    - Download the configuration information to the audio DSP module. For additional information, refer to PMI in Section 418-01 .

repair4less

Audio Digital Signal Processing (DSP) Module — Split Bench

NOTE: The seats are shown removed for clarity only.

Item	Part Number	Description
1	—	Audio Digital Signal Processing (DSP) module bolts (3 required)
2	18B849	Audio DSP module
3	—	Audio DSP module electrical connectors (part of 14A005)



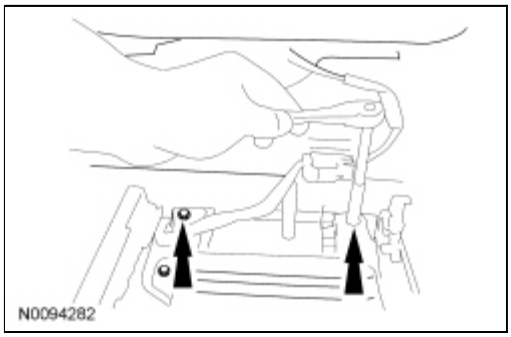
Removal and Installation

1. **NOTE:** Module configuration is required when a new audio Digital Signal Processing (DSP) module is being installed.

   Upload the audio DSP module configuration information to the scan tool. For additional information, refer to Programmable Module Installation (PMI) in Section 418-01 .

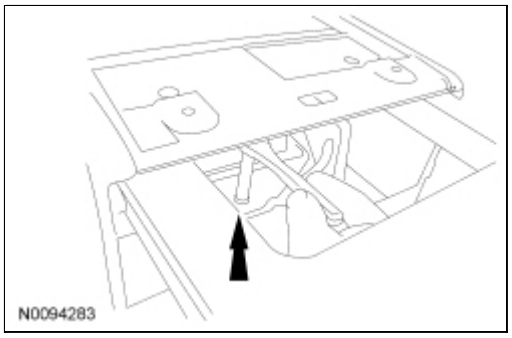
2. Raise the middle seat completely.

3. Remove the 2 pushpins and the top tray.

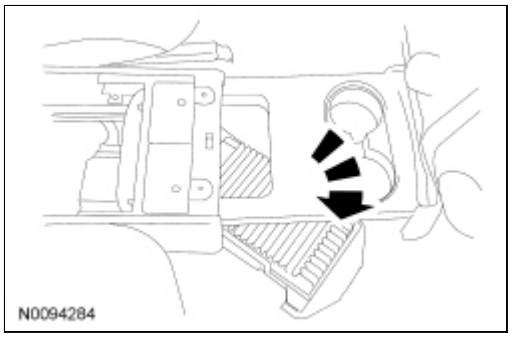


4. Position the cupholder aside.
    1. Release the tabs.
    2. Move the cupholder as far forward as possible.
    3. Move the front of the cupholder as far to the driver side of the vehicle as possible.

5. Disconnect the audio Digital Signal Processing (DSP) module electrical connectors.



6. Remove the 2 rear audio DSP module bolts.

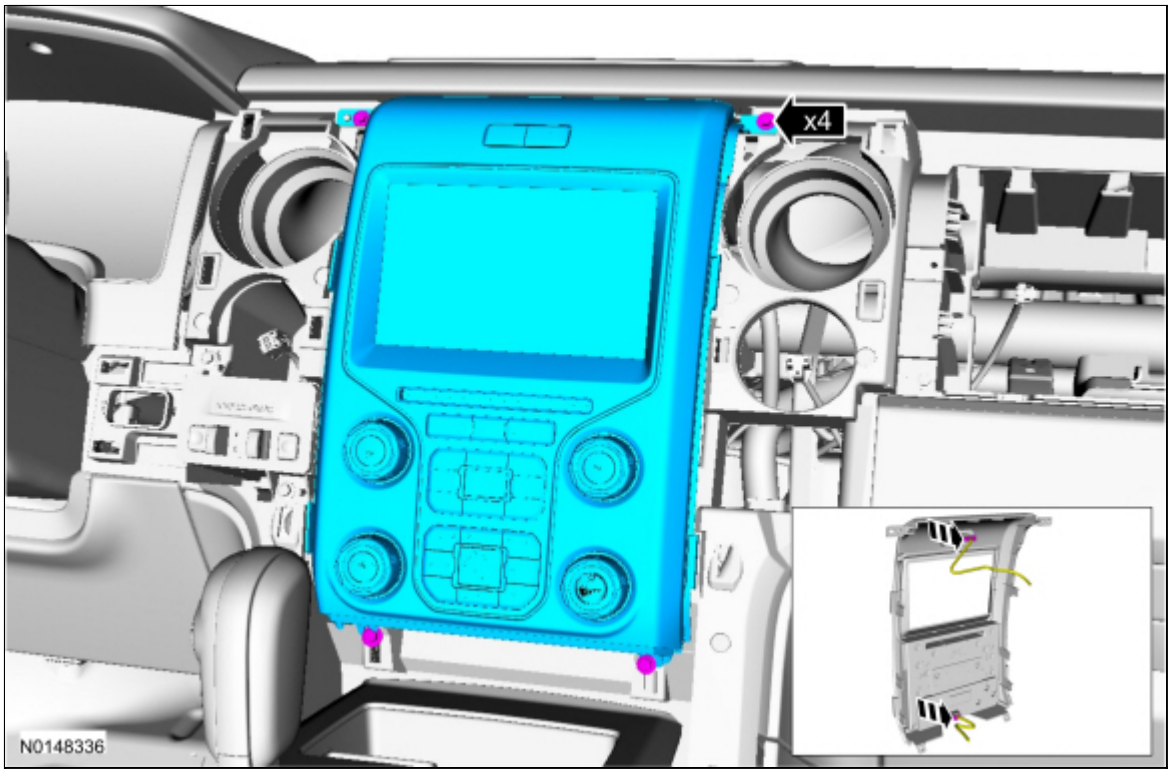


7. **NOTE:** Access the bolt from underneath the cupholder.

    Remove the front audio DSP module bolt.

repair4less

8. Remove the audio DSP module.
    - Route the audio DSP module forward and towards the passenger side of the vehicle.



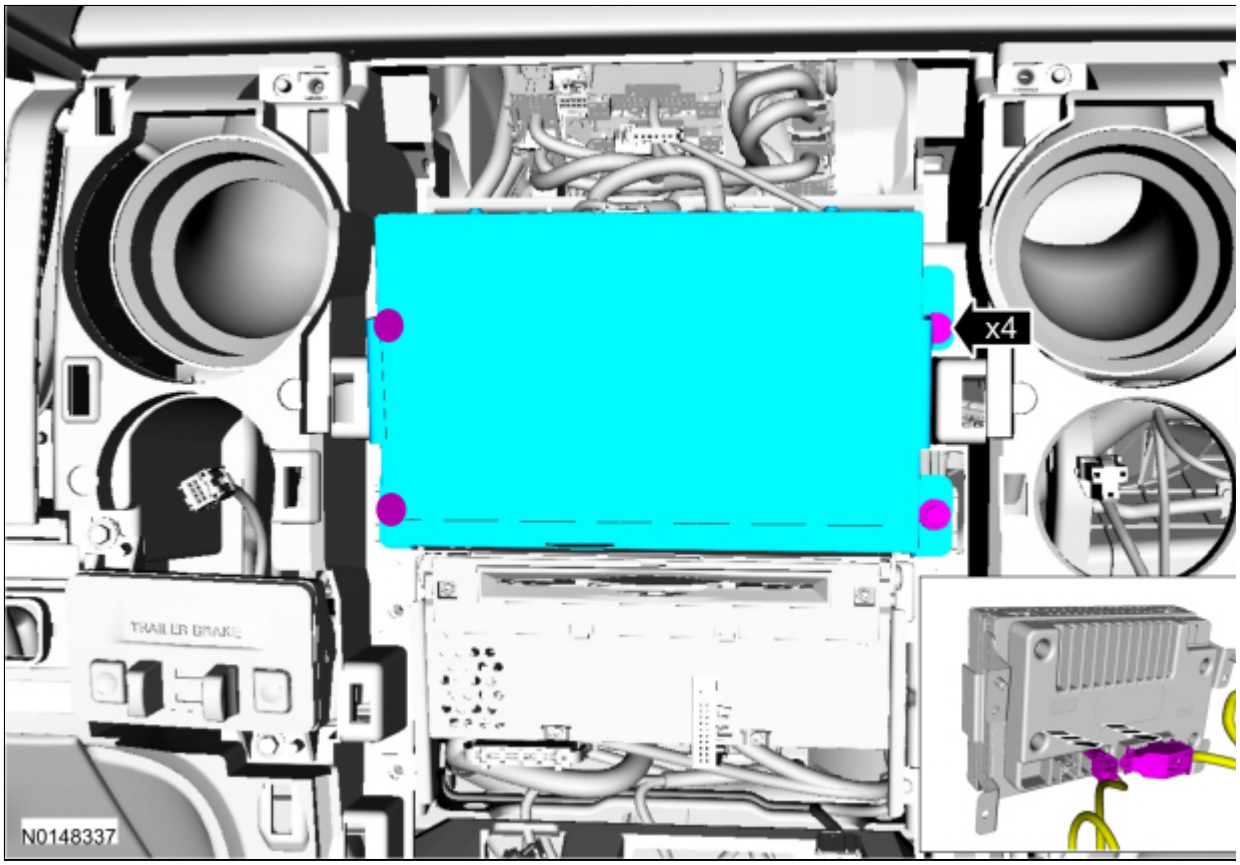
9. To install, reverse the removal procedure.
    - Download the configuration information to the audio DSP module. For additional information, refer to PMI in Section 418-01 .

Front Controls Interface Module (FCIM)

Removal and Installation

1. Remove the LH center instrument panel finish panel. Refer to Section 501-12 .
2. Remove the RH center instrument panel finish panel. Refer to Section 501-12 .
3. Remove the 4 screws and the FCIM .
   - Disconnect the electrical connectors.
   - To install, tighten to 3 Nm (27 lb-in).

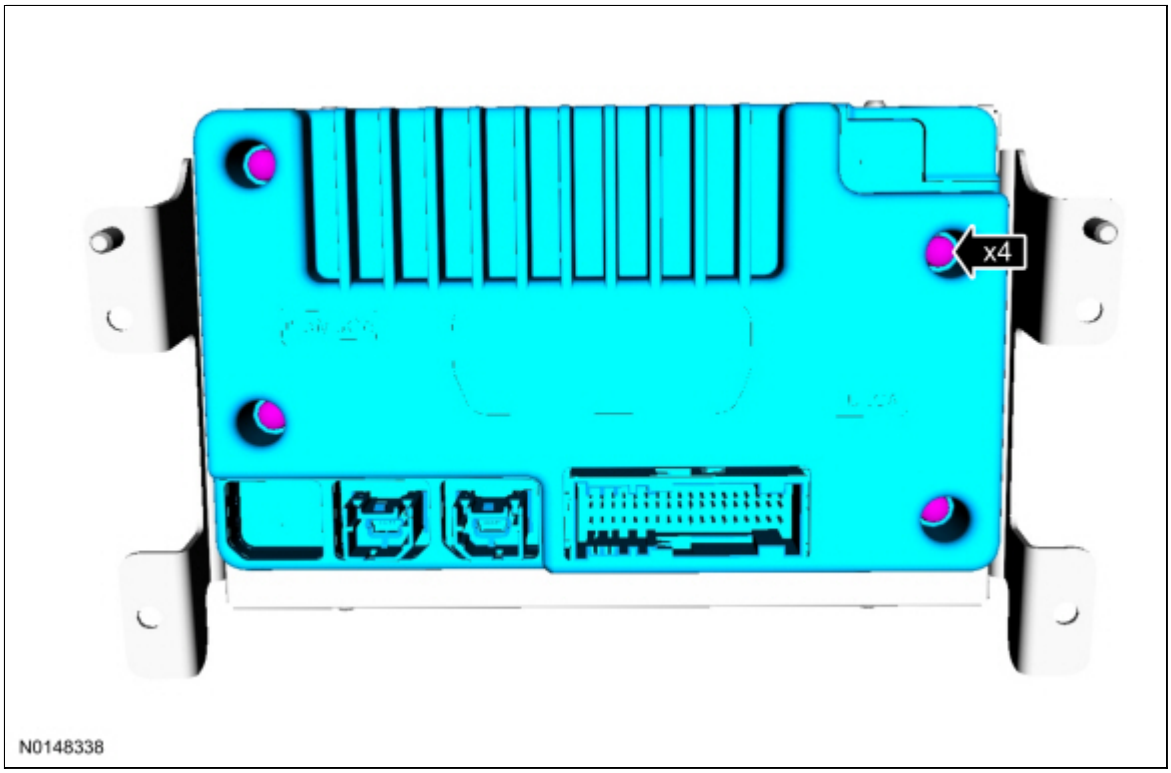
4. To install, reverse the removal procedure.



repair4less

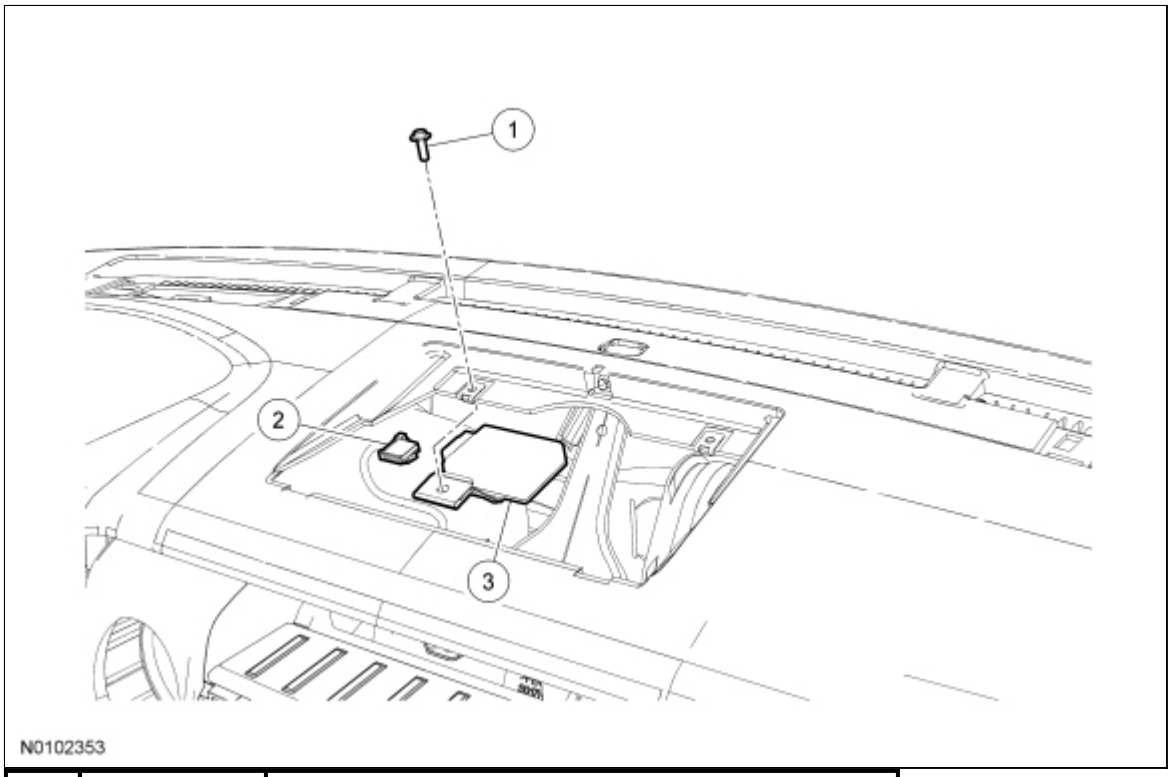
Front Display Interface Module (FDIM)

Removal and Installation



1. Remove the Front Controls Interface Module (FCIM). Front Controls Interface Module (FCIM) .

2. Remove the 4 bolts and the Front Display Interface Module (FDIM).
   - Disconnect the electrical connectors.
   - To install, tighten to 2.5 Nm (23 lb-in).



3. Remove the 4 screws and remove the Accessory Protocol Interface Module (APIM) from the FDIM .
   - To install, tighten to 0.6 Nm (5 lb-in).

repair4less

4. To install, reverse the removal procedure.
5. Calibrate the FDIM touchscreen. Refer to Touchscreen Calibration .

Global Positioning System Module (GPSM)

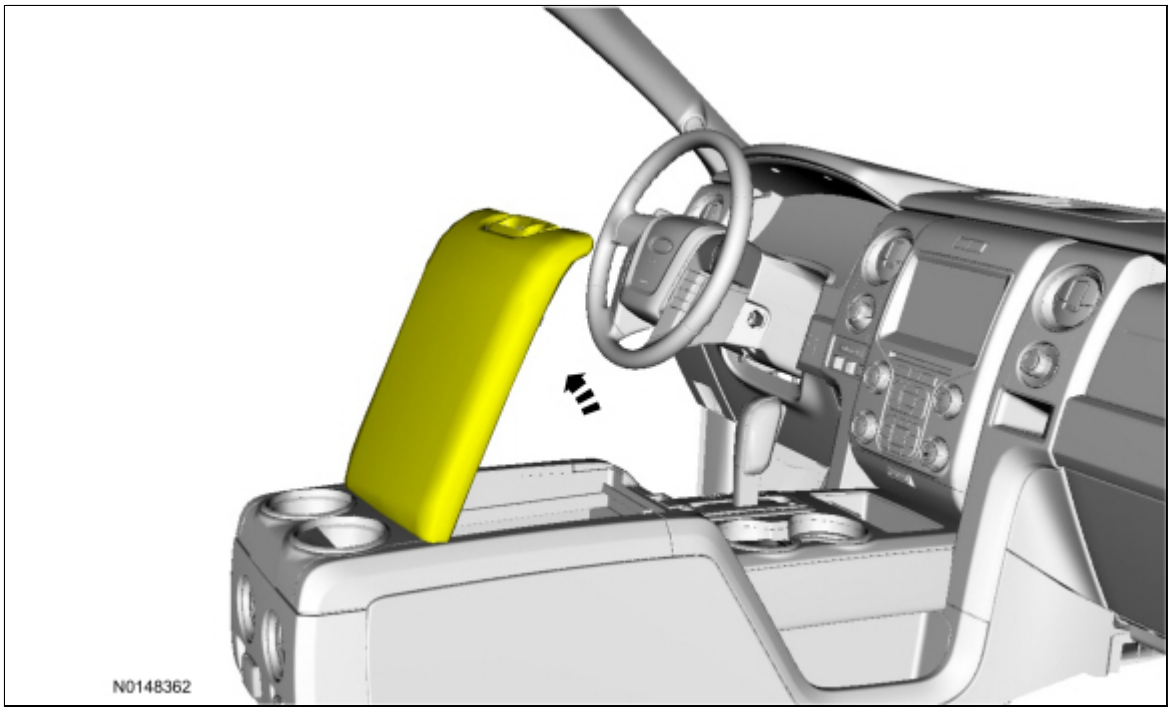
Item	Part Number	Description
1	W707628-S	Global Positioning System Module (GPSM) screw
2	—	GPSM electrical connector (part of 14401)
3	10E893	GPSM

Removal and Installation

1. Remove the Front Display Interface Module (FDIM). For additional information, refer to Front Display Interface Module (FDIM) in this section.

2. Remove the screw and the Global Positioning System Module (GPSM).
   - Disconnect the electrical connector.

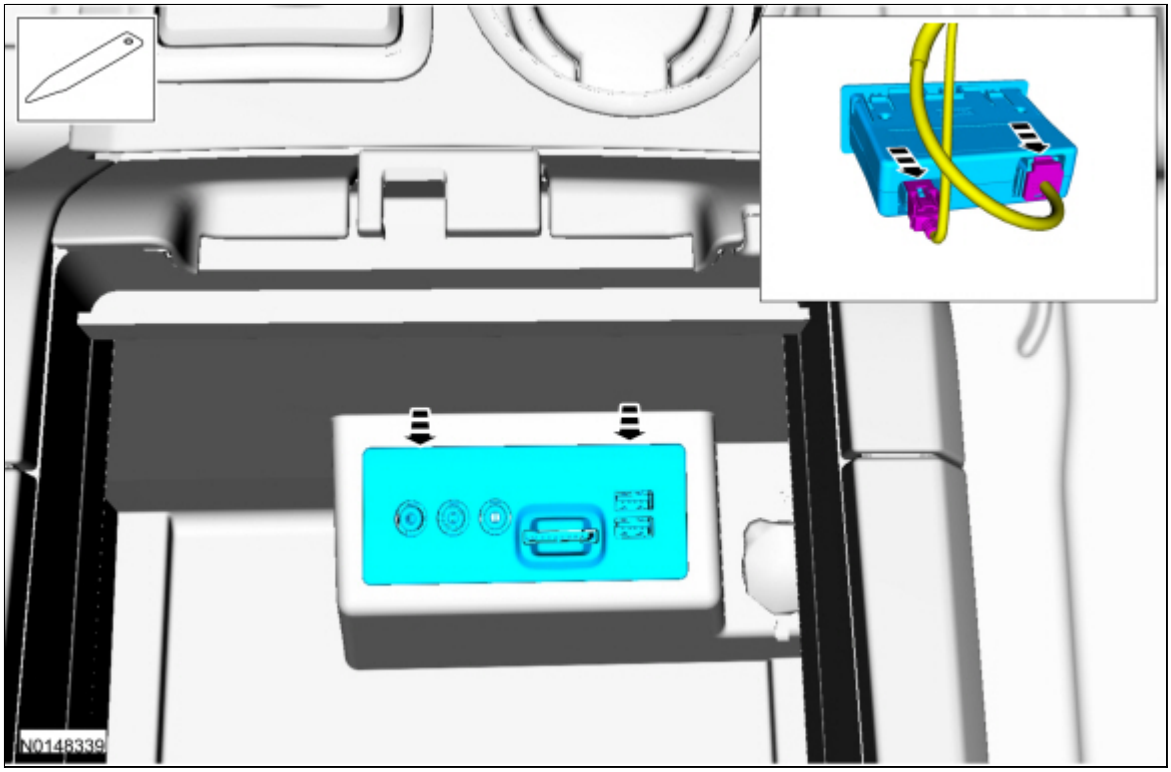
3. To install, reverse the removal procedure.



repair4less

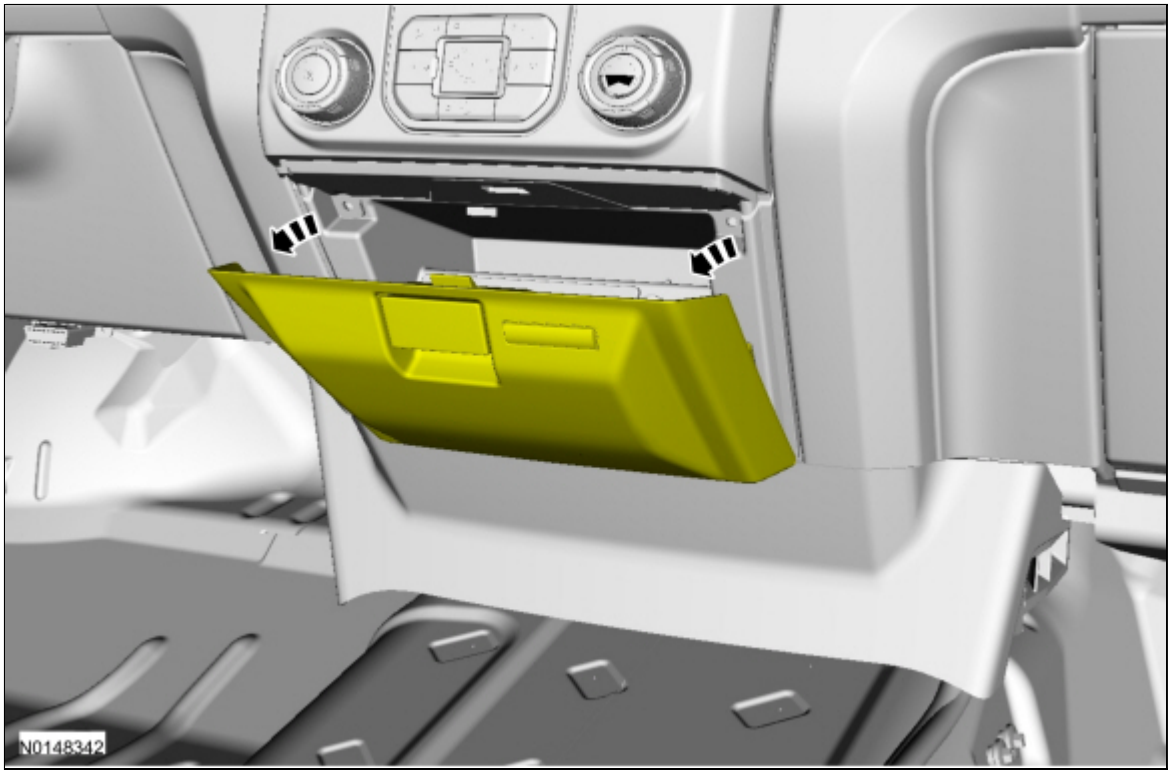
Media Hub

Removal and Installation



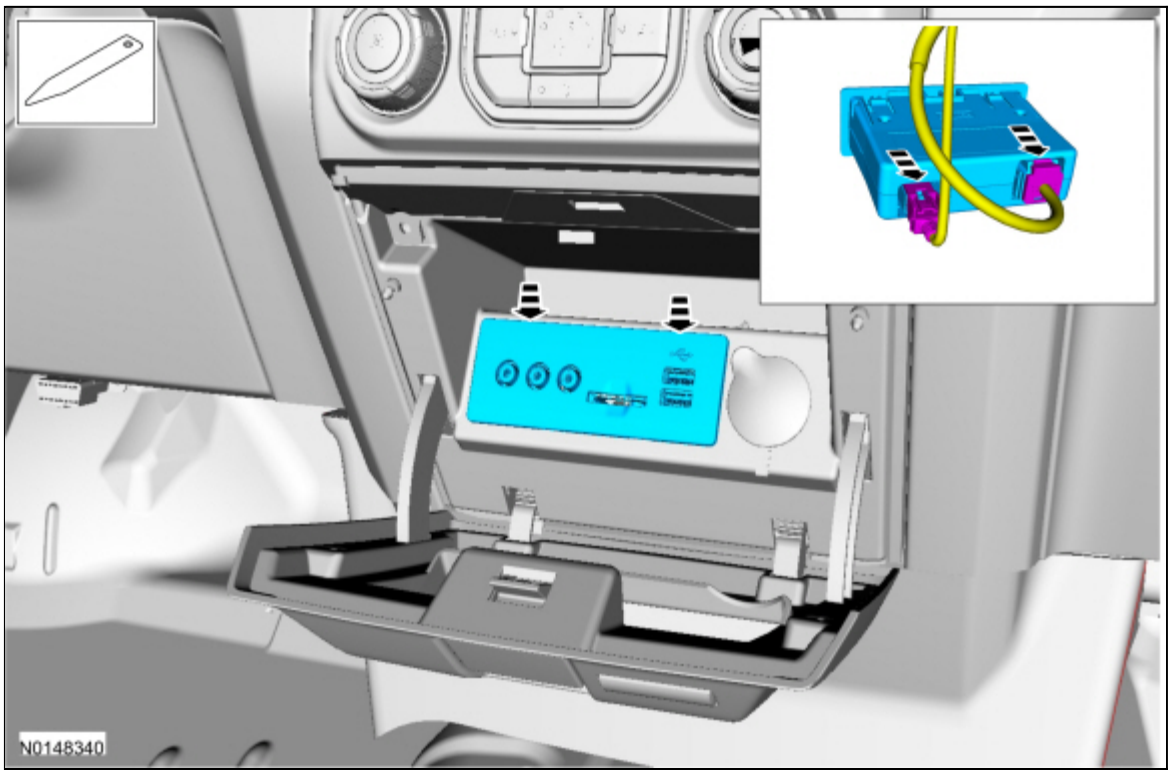
Vehicles with floor console

1. Open the floor console stowage bin door.



2. Remove the media hub.
    - Disconnect the electrical connectors.

repair4less

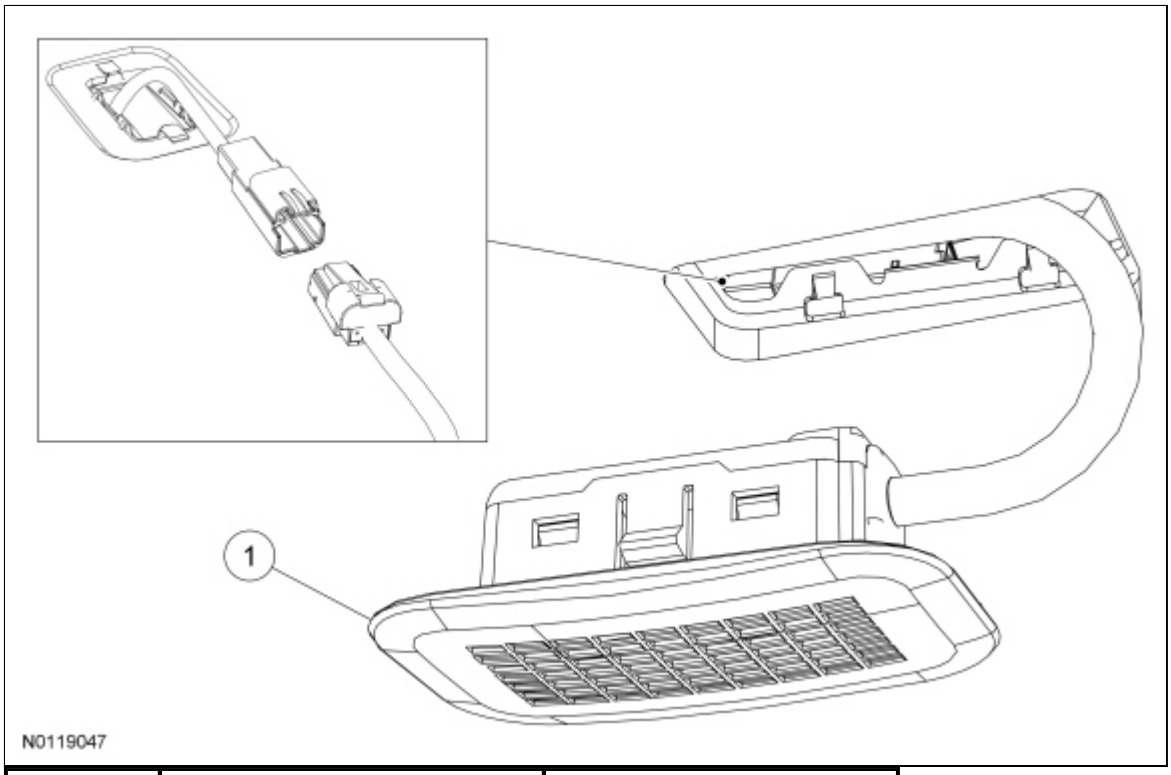


Vehicles without floor console

3. Open the lower instrument panel door.

4. Remove the media hub.

- Disconnect the electrical connectors.



All vehicles

5. To install, reverse the removal procedure.

repair4less

Microphone

Item	Part Number	Description
1	19A391	Microphone

Removal

1. Using a suitable tool, (such as a thin small flat head screwdriver) twist and pry the microphone bezel from the headliner metal mounting bracket.

2. Remove the microphone from the headliner by grasping the microphone pigtail.
    - Disconnect the microphone electrical connector.

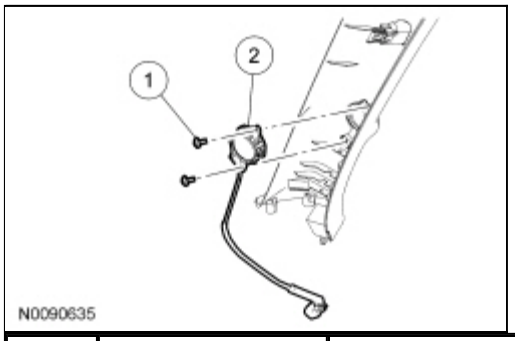
Installation

1. Reconnect the microphone electrical connector.

2. Wrap the connection with anti-rattle tape.

3. Feed the microphone pigtail into the headliner through the microphone hole.
    - Verify the microphone pigtail points towards the front of the vehicle.

4. Snap the microphone into the headliner mounting bracket.



- Verify the mounting bracket and microphone are snug to the headliner.

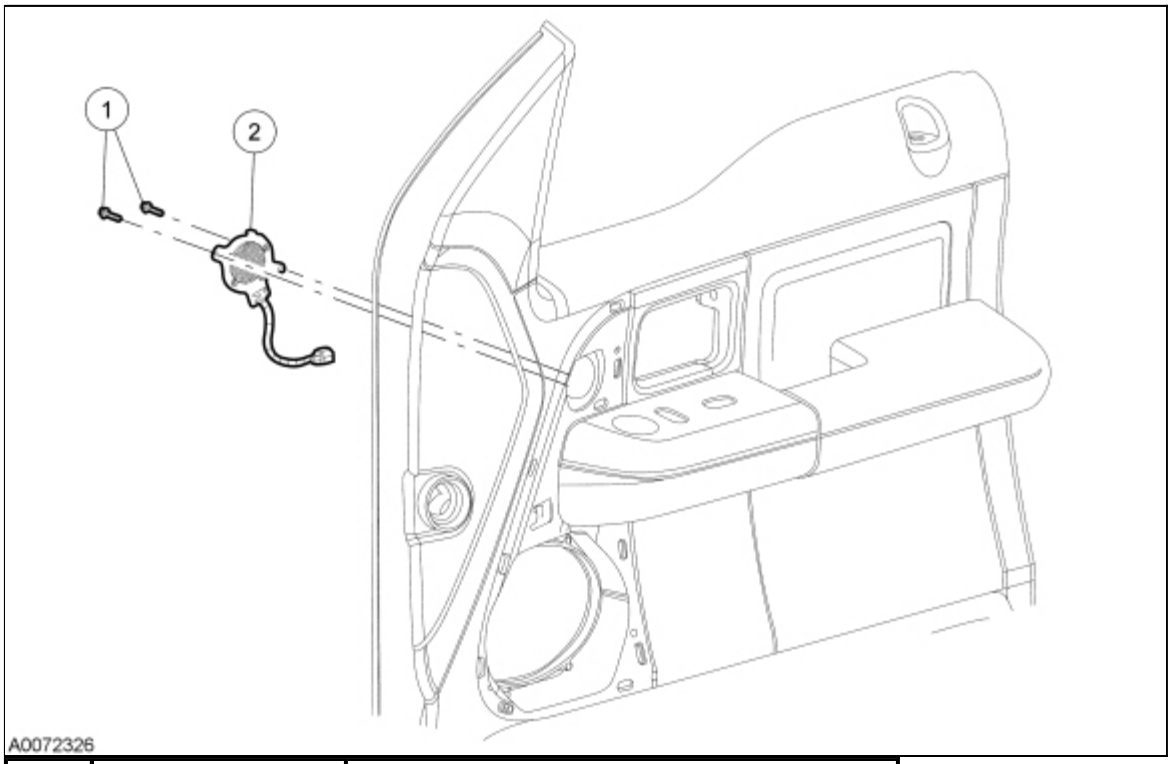
Speaker — A-Pillar

NOTE: LH shown, RH similar.

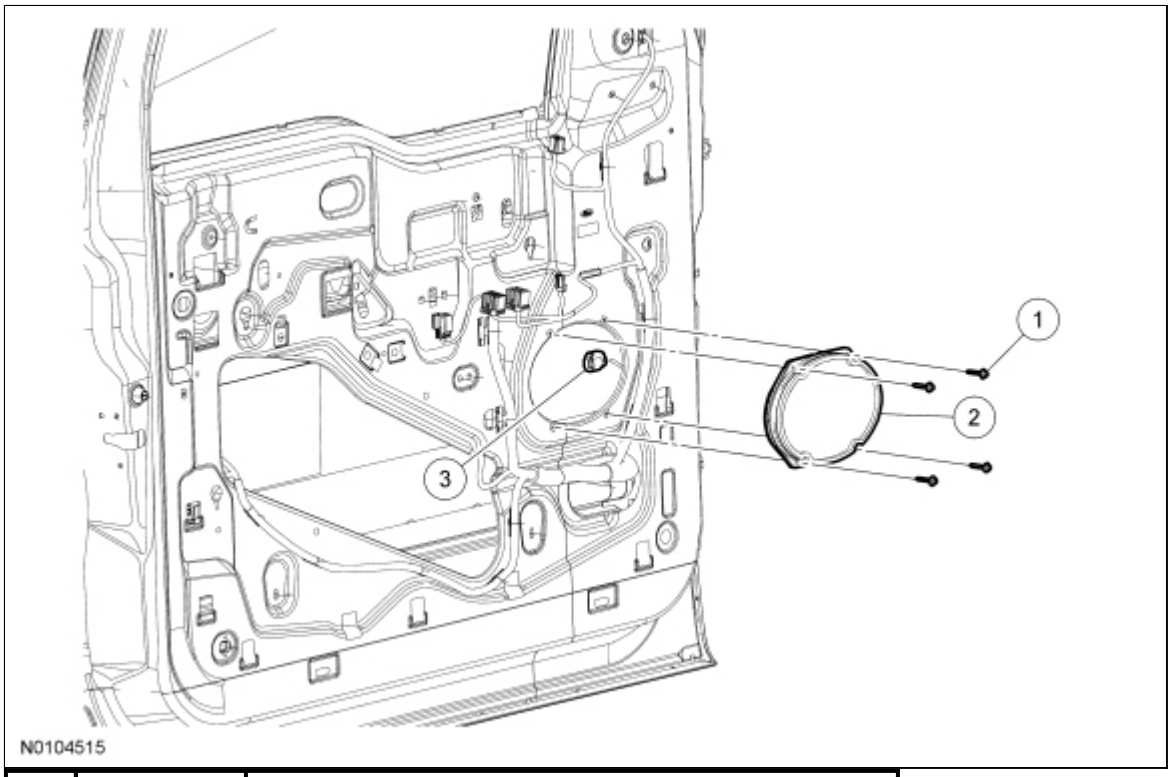
Item	Part Number	Description
1	W701678-S	A-pillar speaker screws (2 required)
2	18978	A-pillar speaker



Removal and Installation

1. Remove the A-pillar trim panel. For additional information, refer to Section 501-05 .
2. Remove the 2 screws and the A-pillar speaker.
3. To install, reverse the removal procedure.

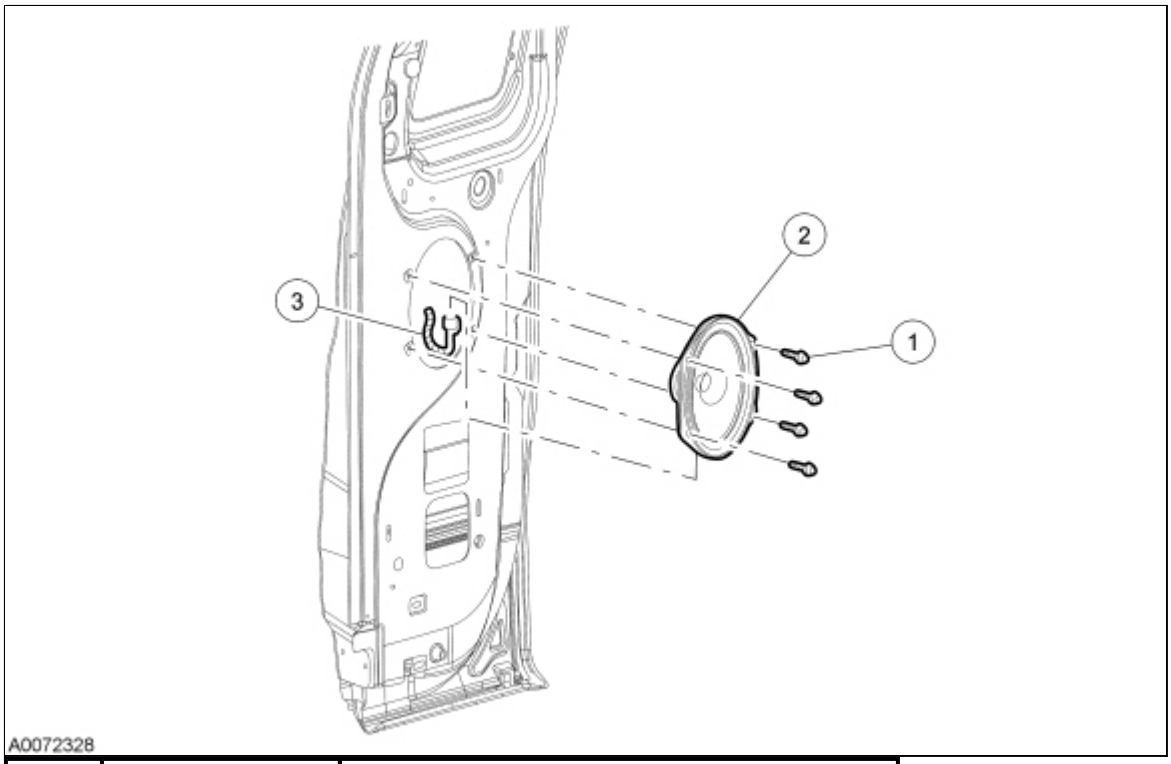
repair4less



Speaker — Door

Front Door Tweeter Speaker

Item	Part Number	Description
1	W701678	Tweeter speaker screws (2 required)
2	19B170/19B171	Tweeter speaker (RH/LH)



Front Door Speaker

Item	Part Number	Description
1	W707628	Front door speaker screws (4 required)
2	18808	Front door speaker
3	—	Front door speaker electrical connector (part of door harness)

Rear Door Speaker

repair4less

Item	Part Number	Description
1	W706766	Rear speaker screws (4 required)
2	18808	Rear speaker
3	180103	Rear speaker electrical connector

Removal and Installation

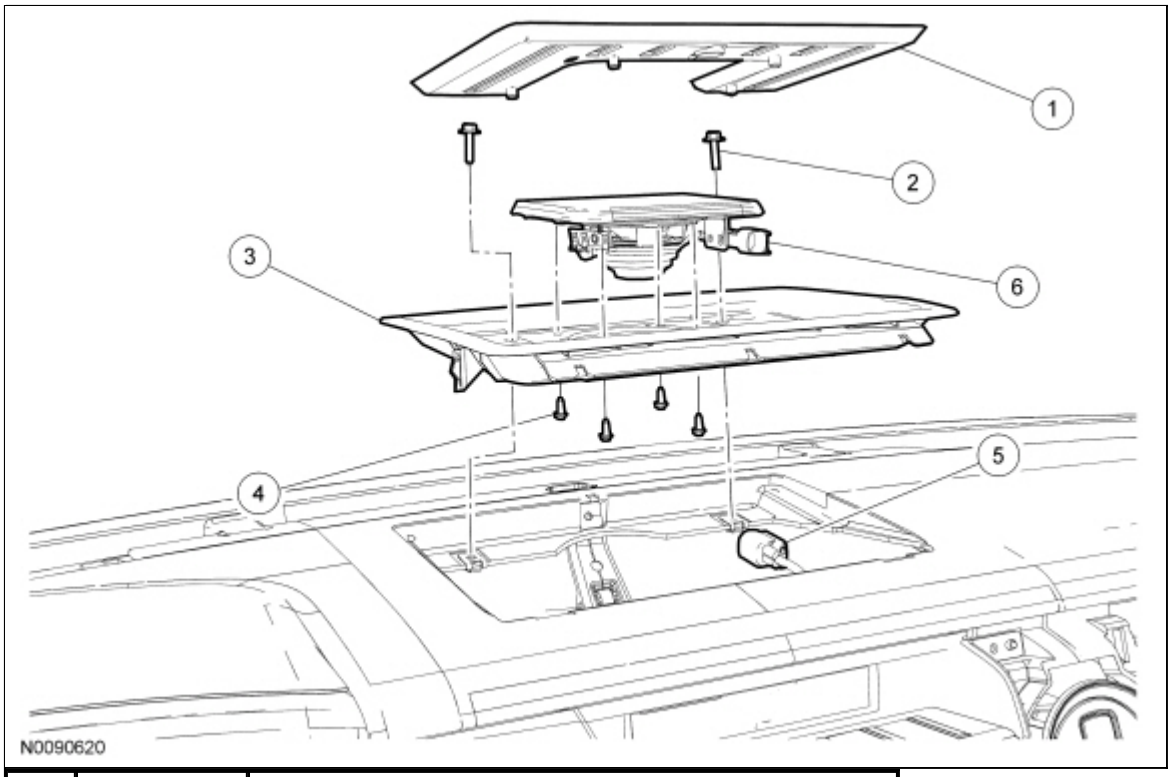
Front door

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the screws (2 for the tweeter, 4 for the door speaker) and the speaker.
   - Disconnect the electrical connector.

Rear door

3. Remove the rear door trim panel. For additional information, refer to Section 501-05 .



4. Remove the 4 screws and the rear door speaker.
   - Disconnect the electrical connector.

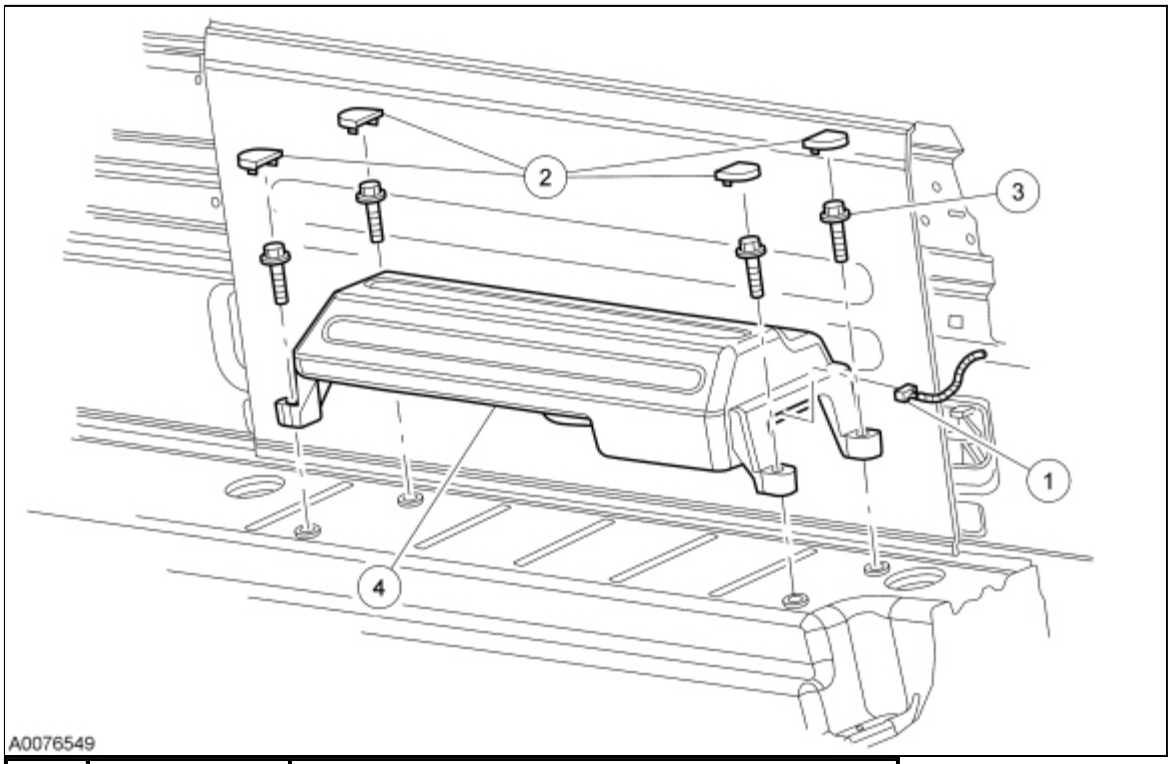
All speakers

5. To install, reverse the removal procedure.

repair4less

Speaker — Instrument Panel

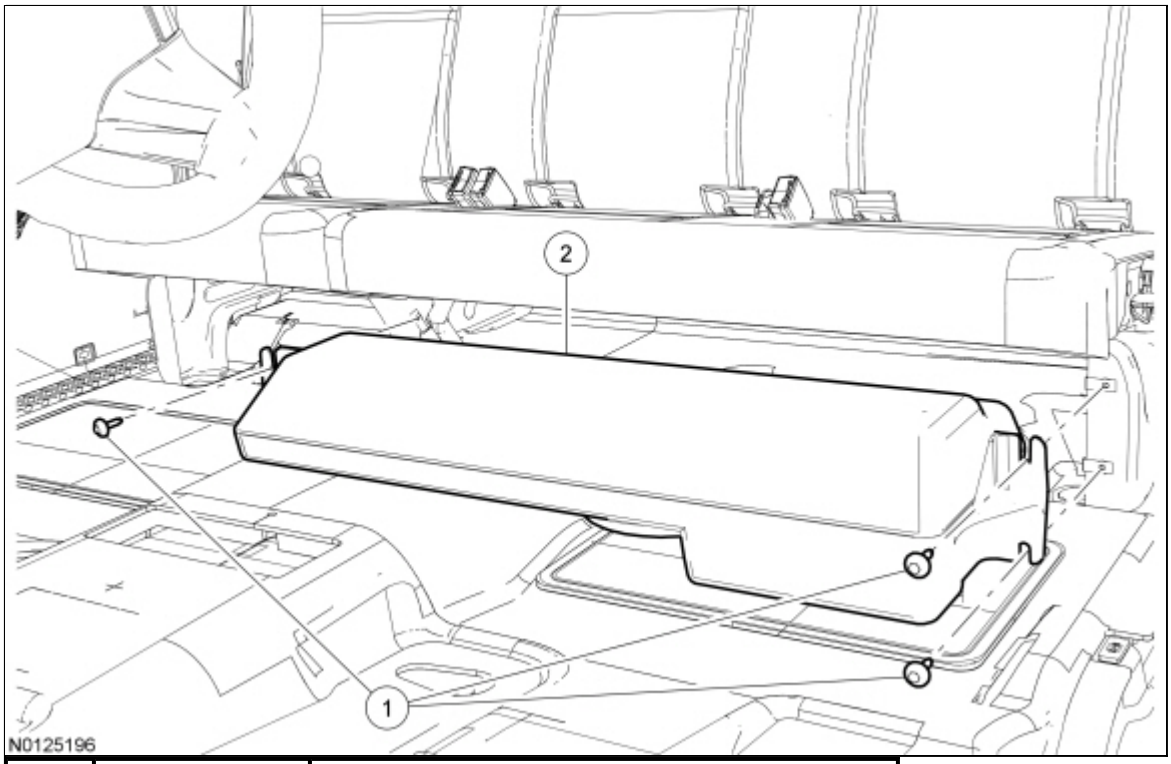
Item	Part Number	Description
1	15045G34	Instrument panel top bin mat
2	W707628-S	Instrument panel top bin screw (2 required)
3	15042A82	Instrument panel top bin
4	W506821	Instrument panel speaker screw (4 required)
5	—	Instrument panel speaker electrical connector (part of 14401)
6	18808	Instrument panel speaker



Removal and Installation

1. Remove the mat, the 2 screws, and the instrument panel top bin.
    - Disconnect the instrument panel speaker electrical connector.
2. Remove the 4 screws and the instrument panel speaker.
3. To install, reverse the removal procedure.

repair4less



Speaker Enclosure

Regular Cab

Item	Part Number	Description
1	14A005	Subwoofer enclosure electrical connector
2	4273	Subwoofer enclosure bolt caps (4 required)
3	W709027	Subwoofer enclosure bolts (4 required)
4	18C804	Subwoofer enclosure

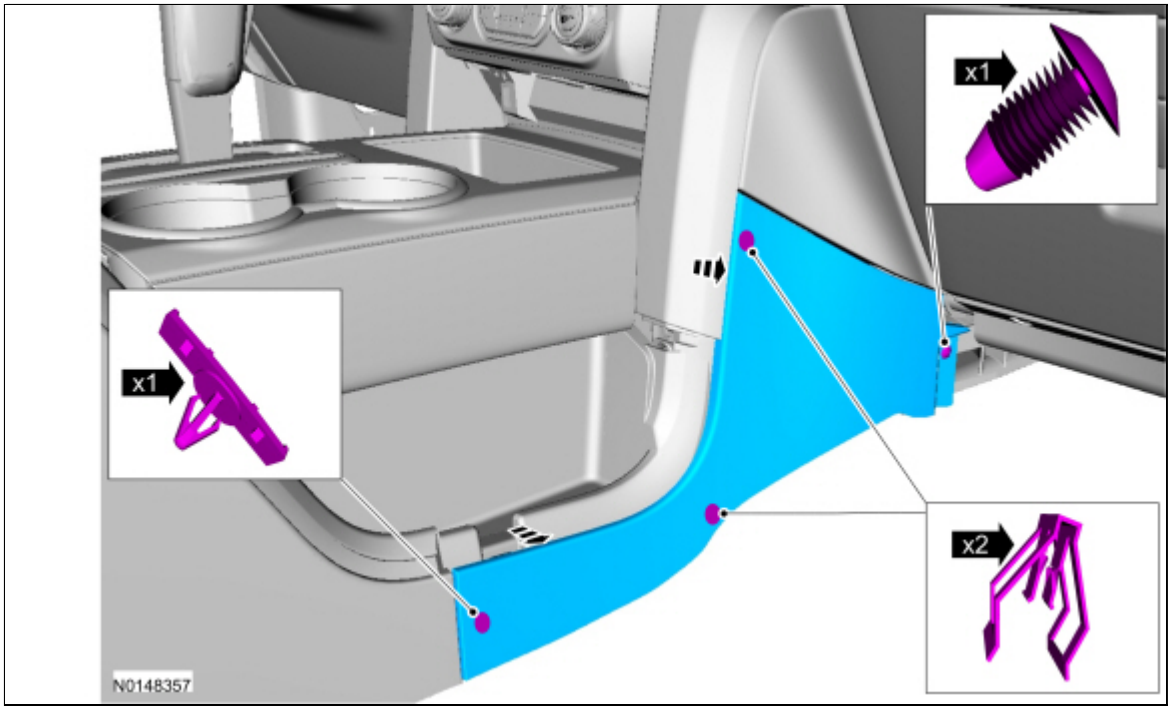
SuperCab and Super Crew

Item	Part Number	Description
1	W714310	Subwoofer enclosure bolts (3 required)
2	18808	Subwoofer enclosure

Removal and Installation

1. Remove the 3 bolts (Regular Cab) or 4 bolts (SuperCab and Super Crew) and the subwoofer enclosure.
    - If equipped, remove the 4 bolt caps.
    - Disconnect the electrical connector.

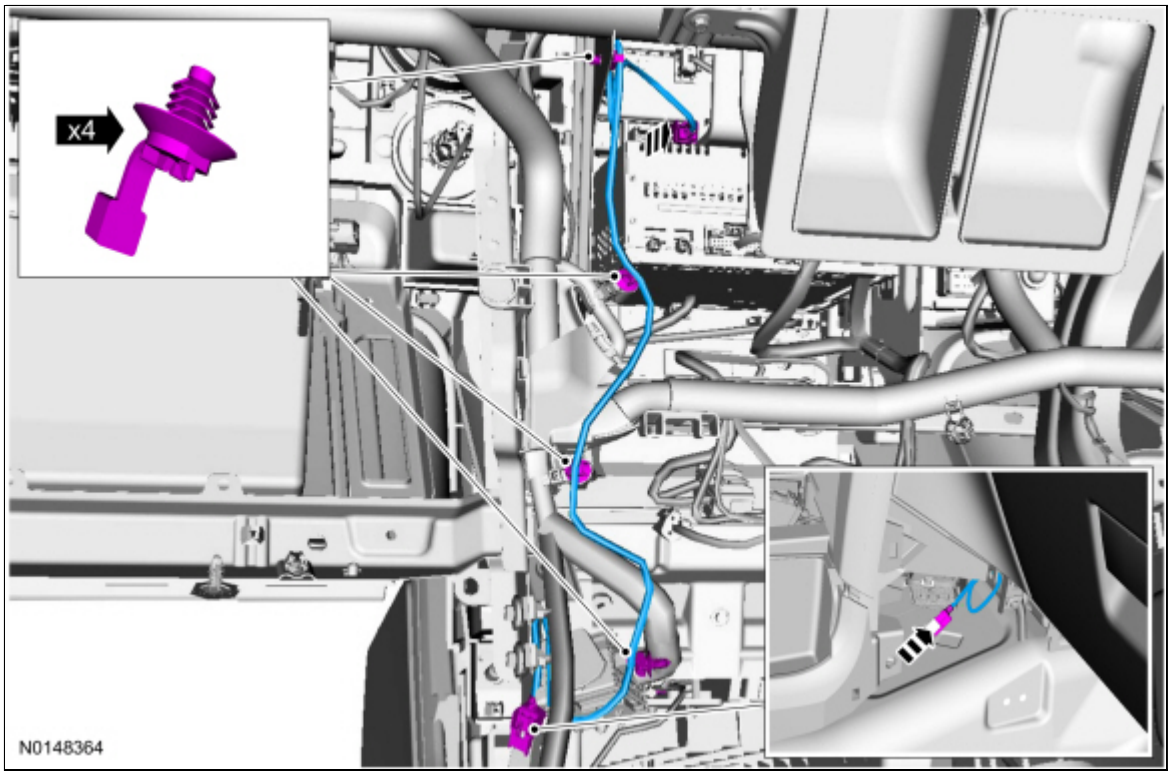
2. To install, reverse the removal procedure.



repair4less

Universal Serial Bus (USB) Cable and Port

Removal and Installation

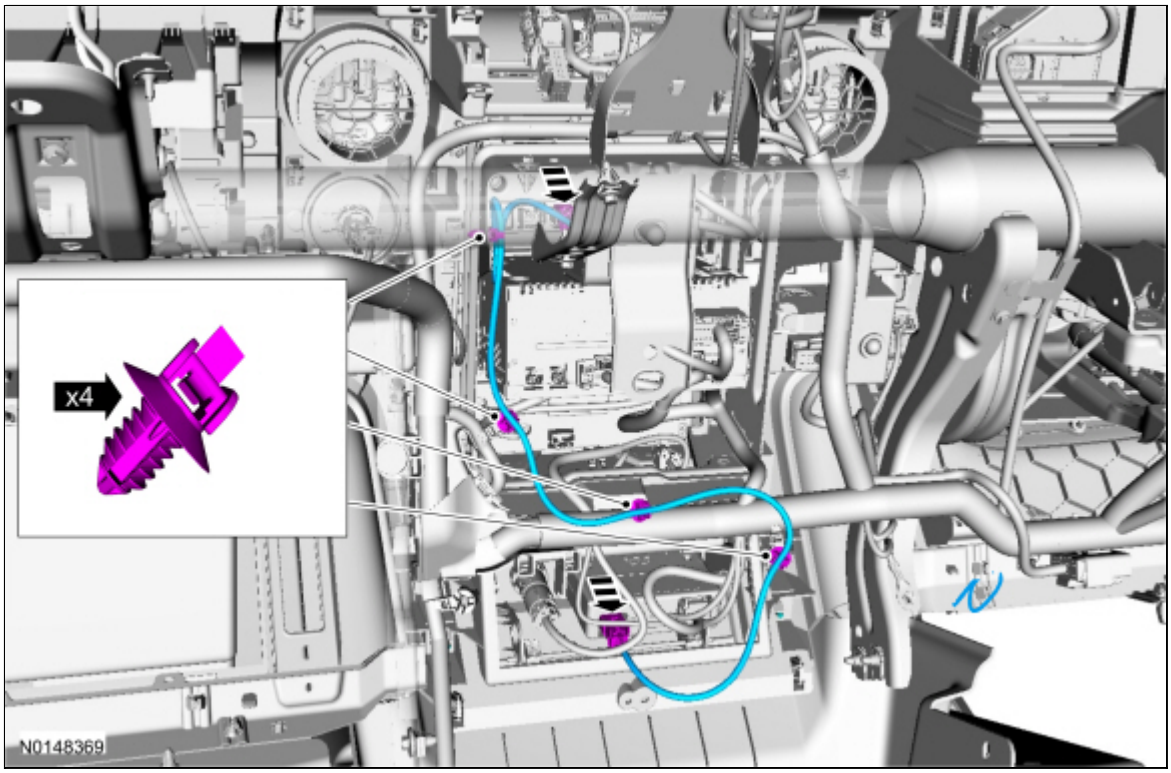


Instrument panel USB cable with floor console

1. Remove the Accessory Protocol Interface Module (APIM). Refer to Accessory Protocol Interface Module (APIM) .
2. For access remove the glove box. Refer to Section 501-12 .
3. Remove the RH lower floor console trim panel

4. Remove the USB cable following the routing shown.

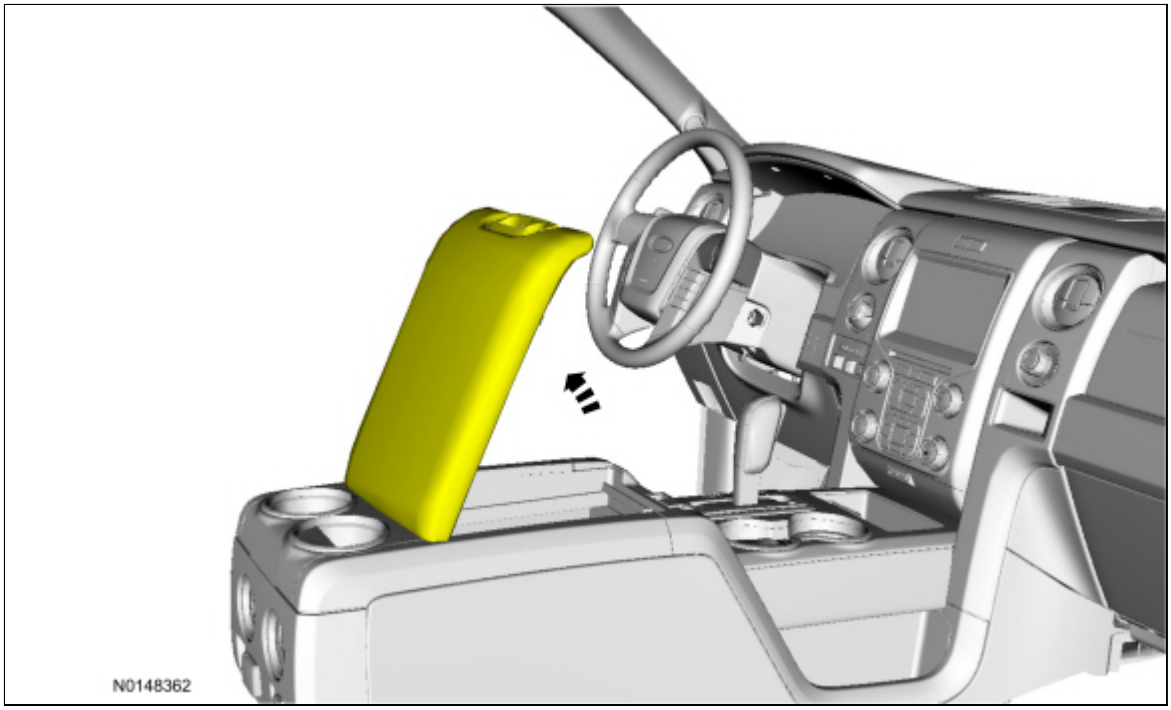
repair4less



Instrument panel USB without floor console

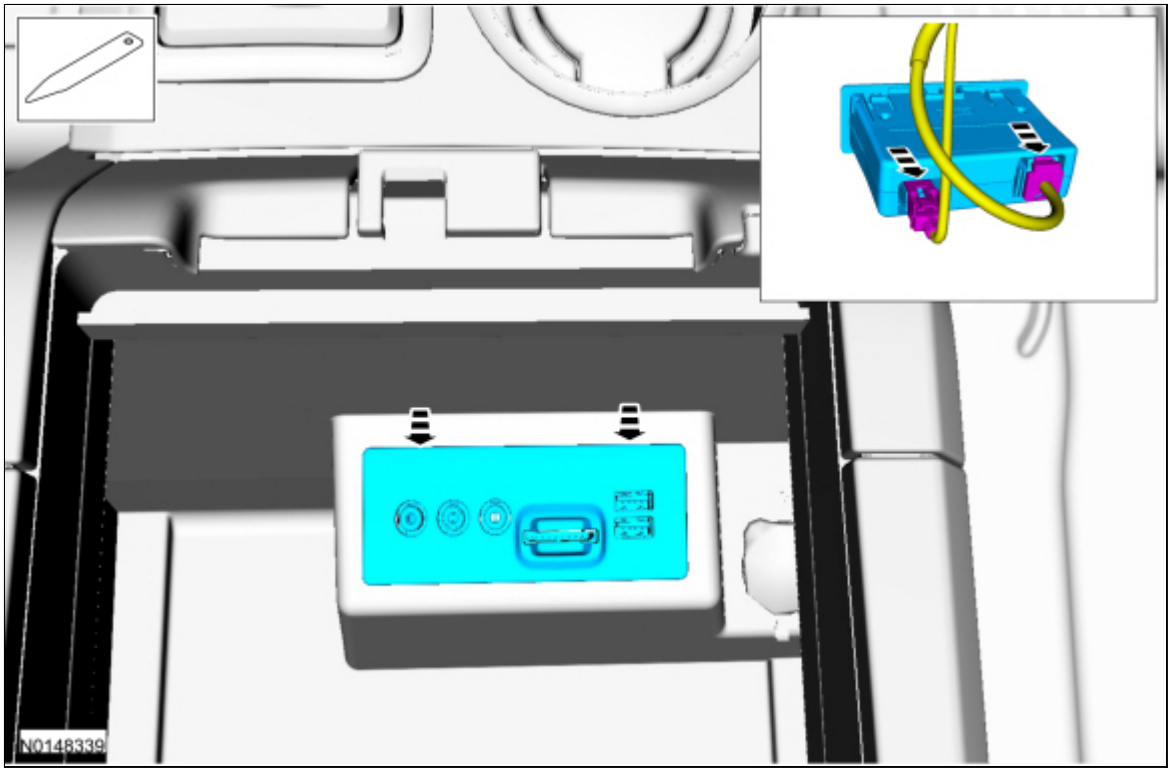
5. Remove the Accessory Protocol Interface Module (APIM). Refer to Accessory Protocol Interface Module (APIM) .

6. For access remove the glove box. Refer to Section 501-12 .



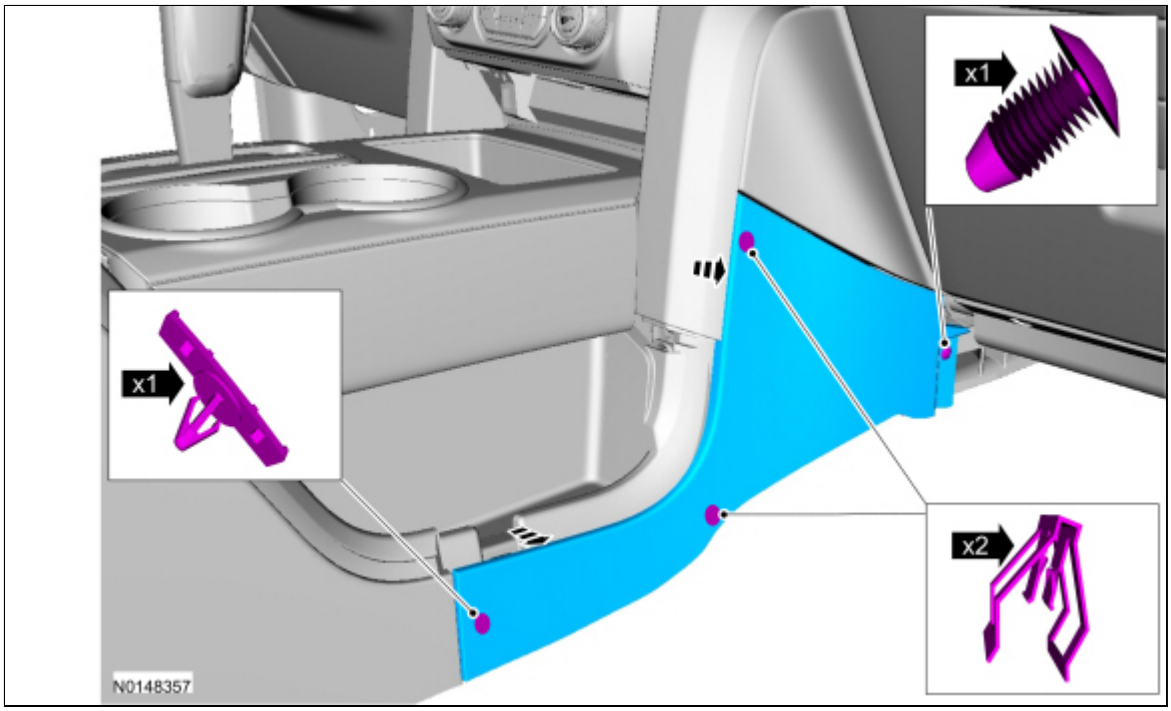
7. Remove the media hub. Refer to Media Hub .

8. Remove the USB cable following the routing shown.



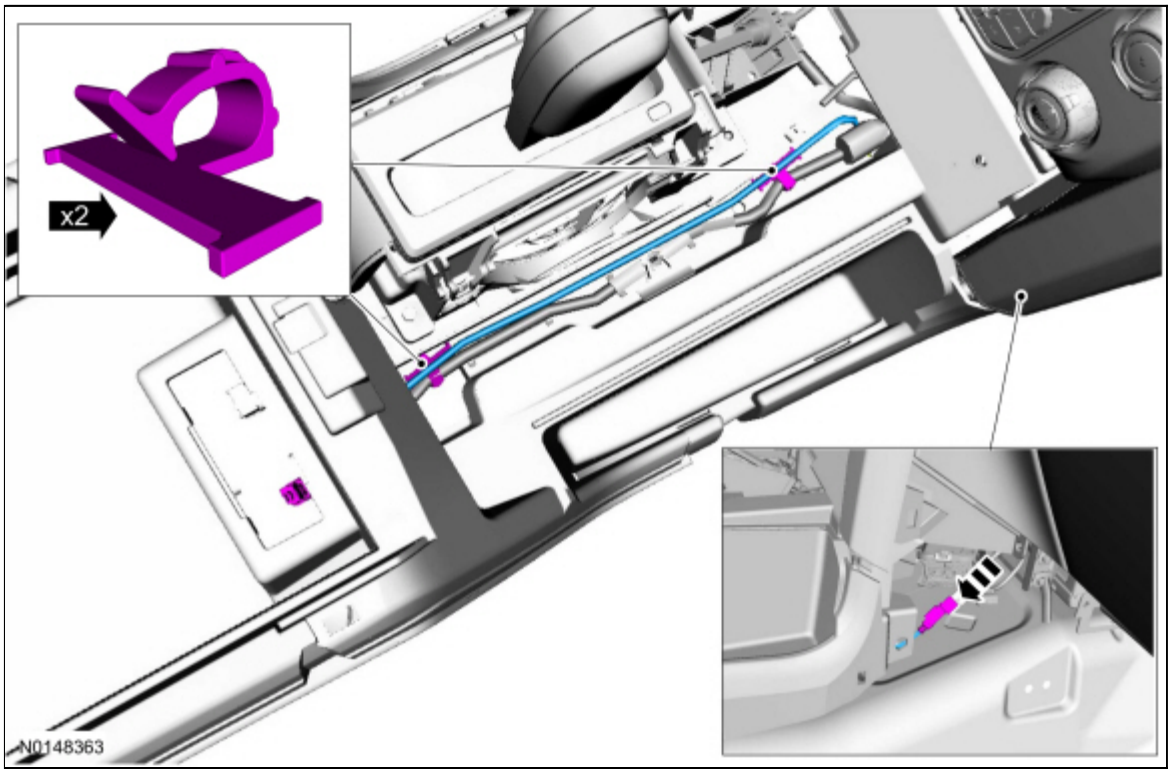
Floor console USB cable

9. Open the floor console stowage bin door.



10. Remove the media hub.

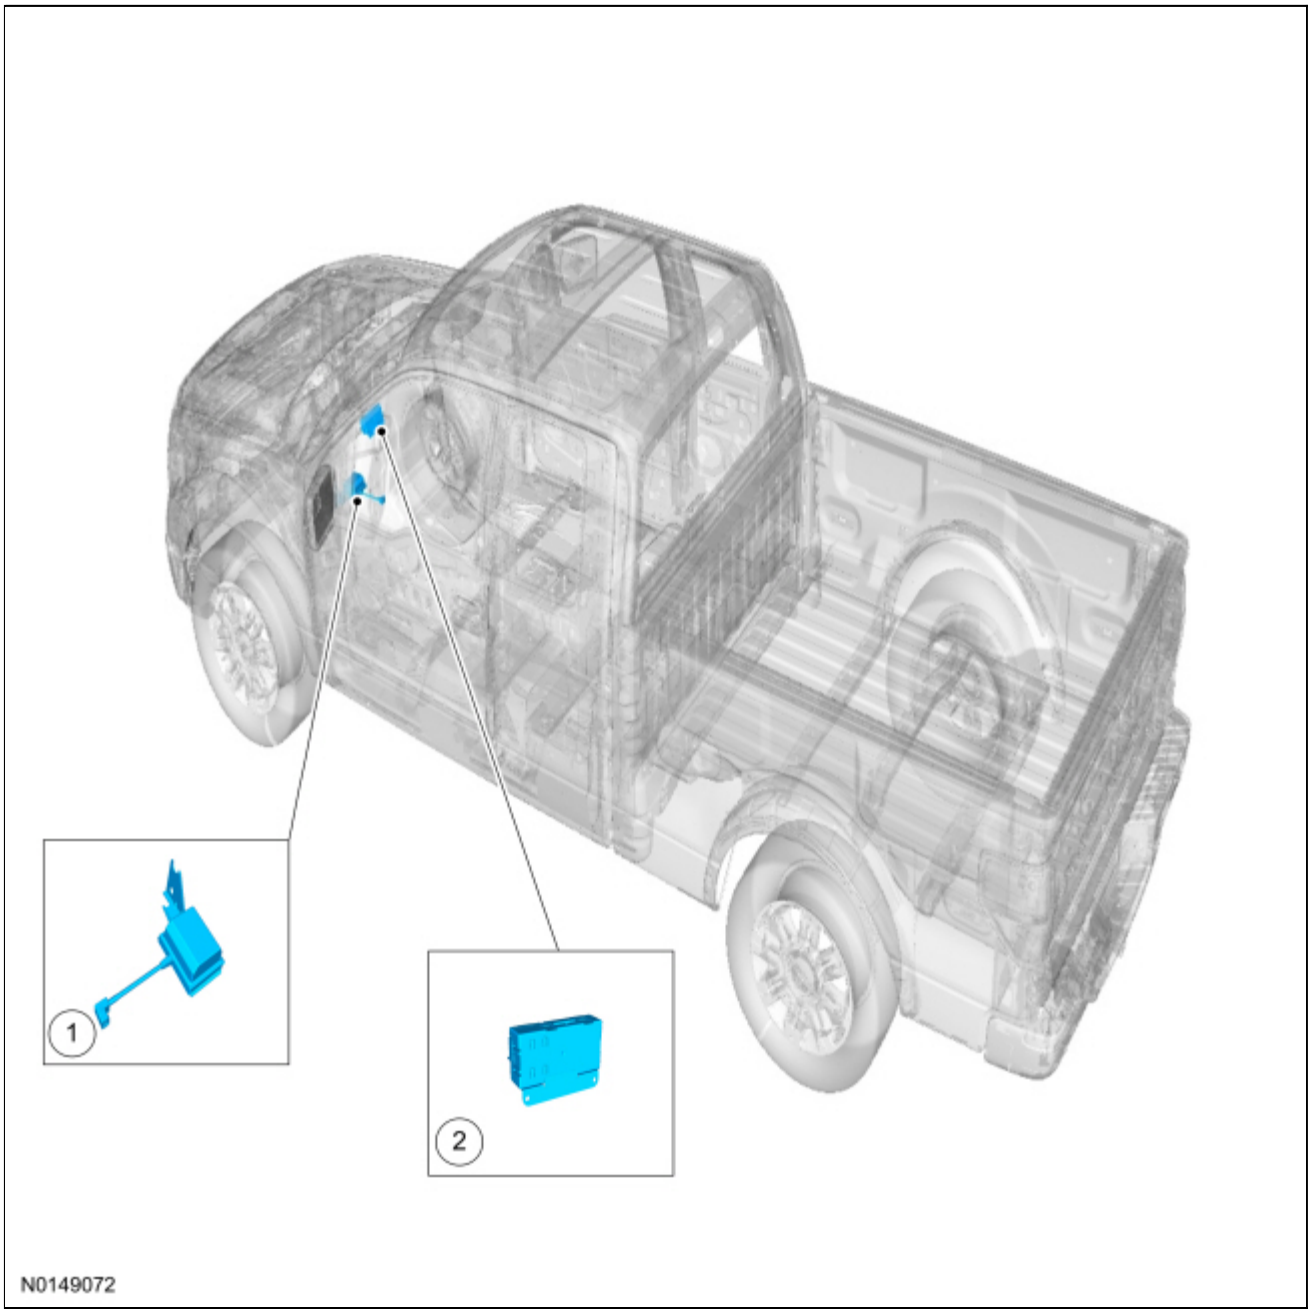
repair4less



11. Remove the RH lower floor console trim panel.

12. Remove the floor console upper finish panel.

13. Remove the floor console USB cable following the routing shown.



All USB cables

14. To install, reverse the removal procedure.

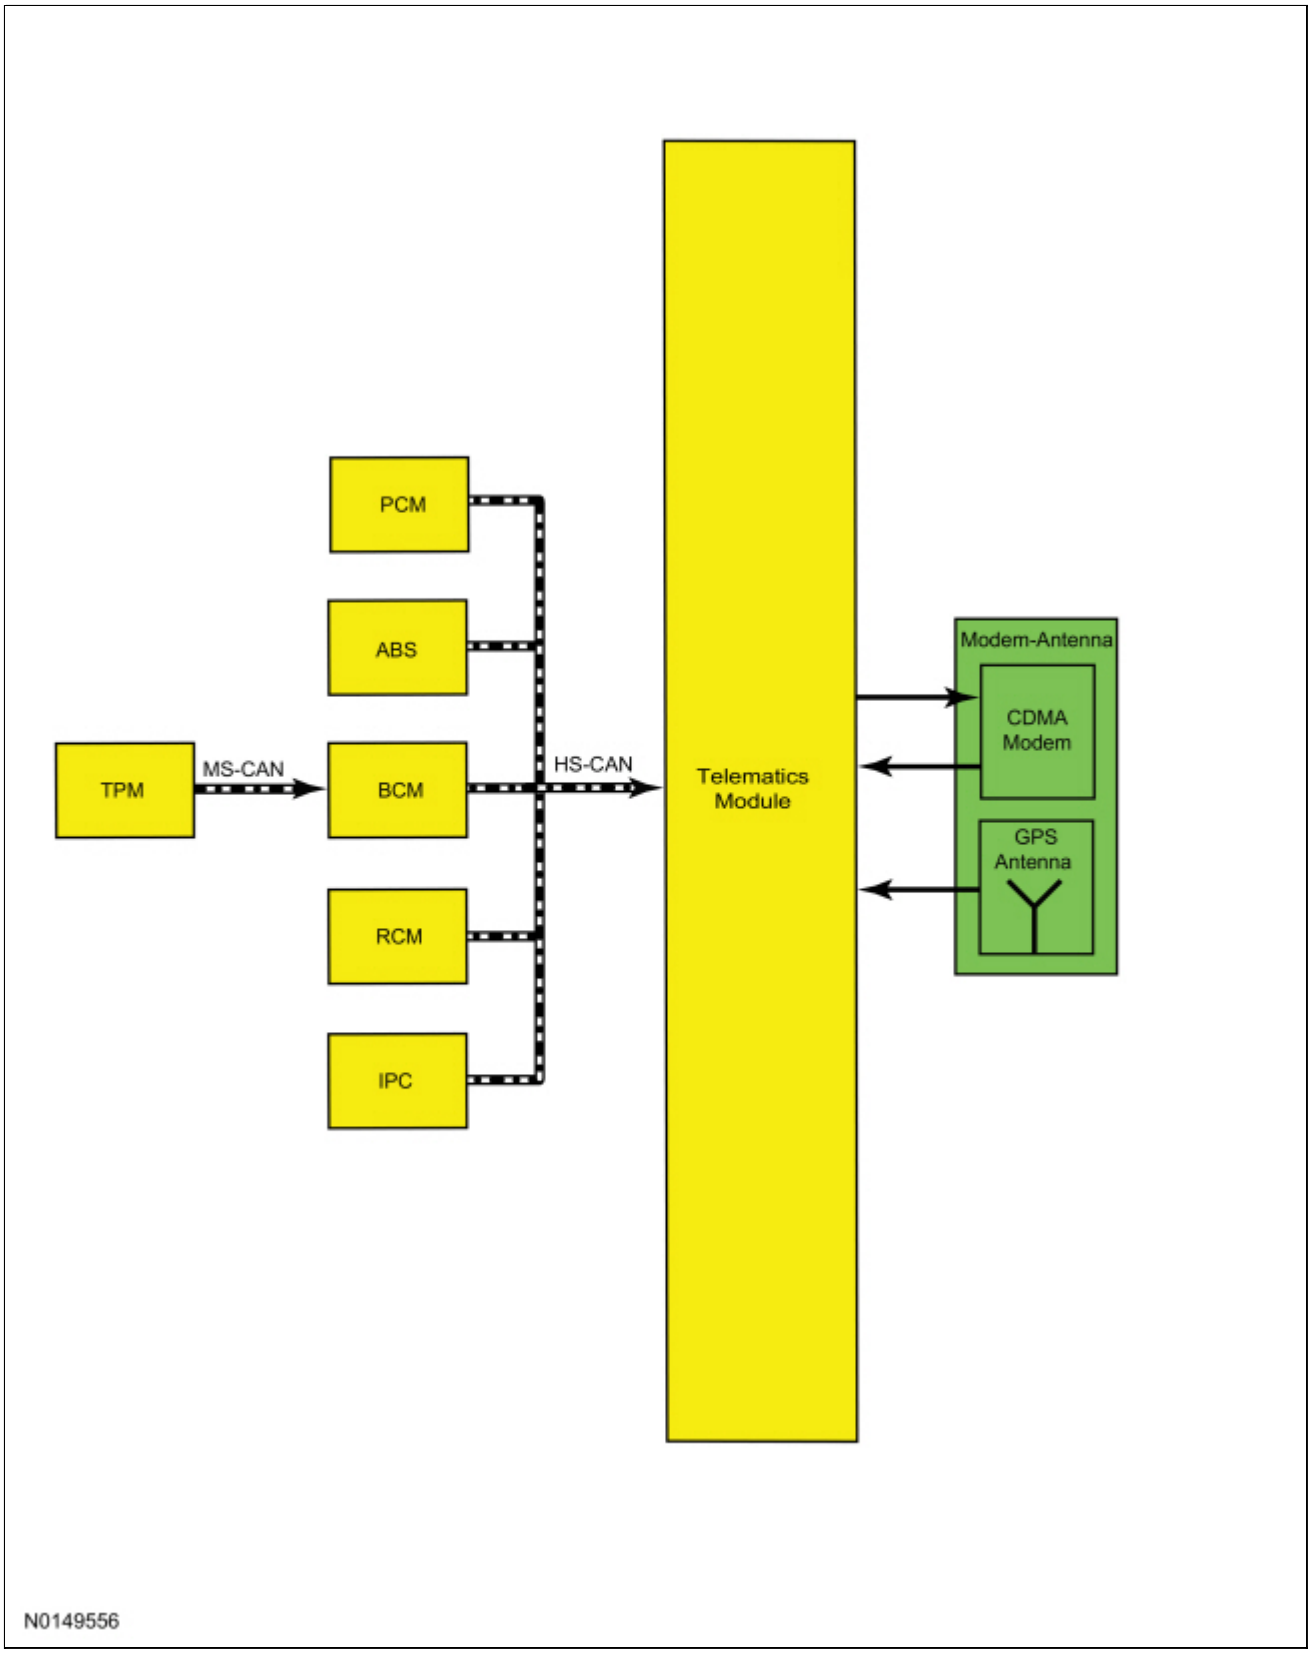
Component Location

Item	Description	Comments

repair4less

1	Modem-antenna	Located in the instrument panel behind the LH instrument panel side finish panel
2	Telematics module	Located in the instrument panel behind the IPC



Overview

Ford Work Solutions™ Crew Chief package consists of the following:

- Telematics module
- Modem-antenna
- Crew Chief harness

System Operation

System Diagram

Crew Chief

Crew Chief is a web-based application used to view vehicle data, create reports, and monitor real-time

repair4less

alerts.

Component Description

Modem-Antenna

The modem-antenna contains a CDMA (Code Division Multiple Access) modem and a GPS antenna.

The CDMA (Code Division Multiple Access) modem receives vehicle information from the telematics module and transmits this data via a mobile phone network to a server, where it can be accessed through a secure website.

The GPS antenna is used to determine the vehicle's location. The GPS information is processed and sent to the telematics module.

Telematics Module

The telematics module can be operated with the ignition in ON/RUN, ACC, or OFF.

The telematics module does not communicate with a diagnostic scan tool.

All information collected by the telematics module is transmitted to the CDMA (Code Division Multiple Access) modem contained within the modem-antenna.

The telematics module reads and requests vehicle information by communicating with other vehicle modules through the HS-CAN . The telematics module may collect or calculate vehicle information such as:

- Airbag indicator status
- Battery voltage
- Driver seatbelt status
- DTCs
- Engine coolant temperature
- Engine speed
- Fuel level
- Fuel used
- Harsh acceleration occurrences
- Harsh braking occurrences
- Idle time
- MIL status
- Odometer reading
- Oil life status
- Throttle position
- TPMS indicator status
- Vehicle location
- Vehicle speed

Some vehicle information can be collected and transmitted to the modem-antenna with the ignition in ACC, but the majority requires the ignition to be in ON/RUN in order to be collected and transmitted. With the ignition in ON/RUN, the telematics module packages and transmits a message approximately every 3 minutes, except for special instances which are transmitted per occurrence, such as harsh braking or an airbag deployment. With the ignition in OFF, the telematics module transmits a message approximately

every 12 hours to indicate the vehicle location and that contact is being maintained between the telematics module and server.

The telematics module receives GPS information from the GPS antenna. The GPS information is packaged with collected vehicle information in order to associate a vehicle location with the collected vehicle information.

In addition to transmitting information, the telematics module receives information from the modem-antenna such as vehicle location and over-the-air firmware updates.

Information and Entertainment System

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Symptom Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom Chart — General Audio System

Condition	Possible Sources	Action
• Crew Chief is inoperative or does not operate correctly	• Refer to the Pinpoint Test	• GO to Pinpoint Test A .

Pinpoint Test

Pinpoint Test A: Crew Chief Is Inoperative Or Does Not Operate Correctly

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Refer to Telematics Module and Modem-Antenna.

Refer to Wiring Diagrams Cell 141 for schematic and connector information.

Normal Operation and Fault Conditions

Refer to Crew Chief, Telematics Module, and Modem-Antenna in Information and Entertainment System .

Possible Sources

- Inadequate reception
- Improper installation
- Wiring, terminals, or connectors
- Modem-antenna
- Telematics module

PINPOINT TEST A: CREW CHIEF IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
A1 CHECK THE RECEPTION	
• Check to make sure the location where the vehicle is being diagnosed is within CDMA (Code Division Multiple Access) network coverage. Refer to the coverage map. • **Is the location where the vehicle is being diagnosed within CDMA (Code Division Multiple Access) network coverage?**	**Yes** GO to A2 . **No** Drive the vehicle to a location with adequate CDMA (Code Division Multiple Access) network coverage, and retest the system for normal operation. If the concern is still present, GO to A2 .
A2 CHECK THE FOUR STATUS INDICATORS	
• Access the technician service publications website. • Enter the vehicle VIN . • Select GO. • Select the OASIS tab. • Choose FW Status. • Start the vehicle and allow it to idle. • **NOTE:** A system that is operating correctly will have a green status indicator next to four data fields: VIN , Last Contact, Last GPS Fix, and Last CAN Data. • Observe the color of the four status indicators. • **Are all four status indicators green?**	**Yes** The system is operating correctly at this time. The concern may have been caused by the vehicle being outside of CDMA (Code Division Multiple Access) network coverage. **No** Record the date and time stamp for any red status indicator. GO to A3 .
A3 CHECK FOR UPDATED DATE AND/OR TIME STAMPS	
NOTE: The telematics module has the capability to accumulate messages if it is unable to transmit due to a loss of CDMA (Code Division Multiple Access) network coverage or a system fault. • Start the vehicle and allow it to idle for a minimum of 30 seconds. • Ignition OFF. • Review the recorded date and time stamp(s) for the red status indicator(s). • **Did the date and/or time change for any recorded red status indicator?**	**Yes** GO to A4 . **No** GO to A5 .
A4 CHECK FOR ACCUMULATED MESSAGES IN THE	

repair4less

TELEMATICS MODULE

- Start the vehicle and allow it to idle.
- Waiting at least 3 minutes between attempts, select the Refresh button on the technician service publications website continuously until the time stamp(s) for the recorded red status indicator(s) no longer update.
- Ignition OFF.
- Observe the color of the four status indicators.
- **Are all four status indicators green?**

Yes
The system is operating correctly at this time. The concern was corrected by allowing the telematics module to send all of the accumulated messages.

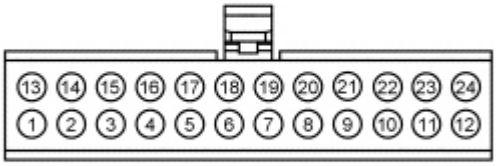
No
GO to A5 .

A5 VERIFY PROPER INSTALLATION AND PROVISIONING

- Perform steps A, B, C, and D three times, for a total of three ignition cycles.
  A. Ignition ON.
  B. Wait 10 seconds or until the airbag indicator has turned off.
  C. Start the vehicle and run the engine for a minimum of 30 seconds.
  D. Ignition OFF.
- Select Refresh on the technician service publications website and observe the color of the four status indicators.
- **Are all four status indicators green?**

Yes
The system is operating correctly at this time. The concern may have been caused by an incorrectly provisioned or incorrectly installed telematics module or modem-antenna.

No
If the VIN status indicator is red, GO to A8 . If the Last Contact status indicator is red, GO to A6 . If the Last GPS Fix status indicator is red, GO to A9 . If the Last CAN Data status indicator is red, GO to A8 .



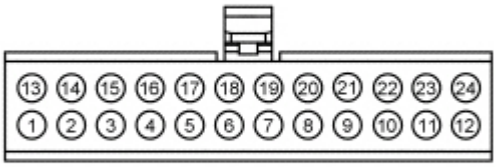
A6 CHECK THE TELEMATICS MODULE POWER SUPPLY

- Ignition OFF.
- Disconnect: Telematics Module C2409.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2409-12	VB1 (GY/RD)	—	Ground
C2409-10	IGRUN-C (WH/BN)	—	Ground

Yes
GO to A7 .

No
REPAIR the circuit in question.



- **Is the voltage greater than 11 volts?**

A7 CHECK THE TELEMATICS MODULE GROUND CIRCUIT

- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2409-12	VB1 (GY/RD)	C2409-1	GND1 (BK/GY)

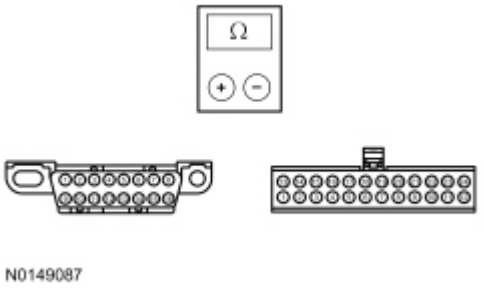
- **Is the voltage greater than 11 volts?**

Yes
GO to A8 .

No
REPAIR the circuit.

A8 CHECK THE TELEMATICS MODULE COMMUNICATION CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure the **resistance** between:



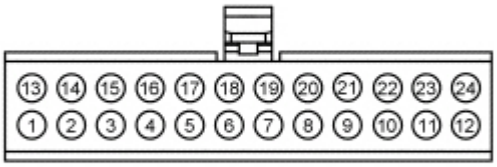
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C251-6	VDB04 (WH/BU)	C2409-15	HSC-1 (WH/BU)

Yes
GO to A9 .

No
REPAIR the circuit in question.

repair4less

C251-14	VDB05 (WH)	C2409-16	HSC-2 (WH)



- **Are the resistances less than 3 ohms?**

A9 CHECK THE CIRCUITS TO THE MODEM ANTENNA FOR A SHORT TO VOLTAGE

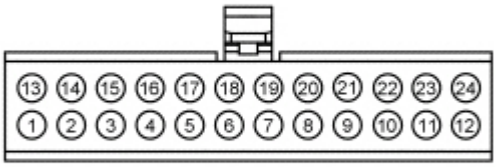
- Ignition OFF.
- Disconnect: Modem Antenna C2410.
- Ignition ON.
- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2409-3	TXD (YE)	—	Ground
C2409-4	RXD (GN)	—	Ground
C2409-6	CGND (BK)	—	Ground
C2409-24	5VTB (RD)	—	Ground

- **Is any voltage present?**

Yes
REPAIR the circuit in question.

No
GO to A10 .



A10 CHECK THE CIRCUITS TO THE MODEM ANTENNA FOR A SHORT TO GROUND

- Ignition OFF.

Yes

- Measure the **resistance** between:

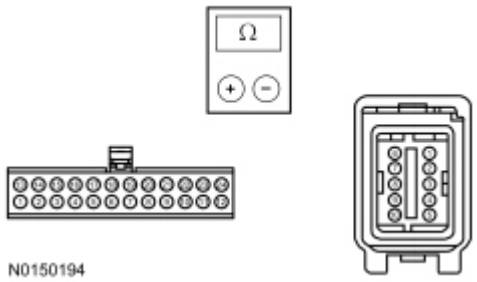
Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2409-3	TXD (YE)	—	Ground
C2409-4	RXD (GN)	—	Ground
C2409-6	CGND (BK)	—	Ground
C2409-24	5VTB (RD)	—	Ground

- **Are the resistances greater than 10,000 ohms?**

GO to A11 .

No
REPAIR the circuit in question.

A11 CHECK THE CIRCUITS TO THE MODEM ANTENNA FOR AN OPEN



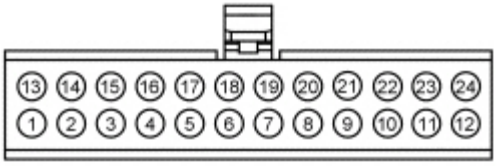
- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2409-3	TXD (YE)	C2410-6	TXD (YE)
C2409-4	RXD (GN)	C2410-7	RXD (GN)
C2409-6	CGND (BK)	C2410-4	CGND (BK)
C2409-24	5VTB (RD)	C2410-8	5VTB (RD)

Yes
GO to A12 .

No
REPAIR the circuit in question.

repair4less



- **Are the resistances less than 3 ohms?**

A12 CHECK THE CIRCUITS TO THE MODEM ANTENNA FOR A SHORT TOGETHER

- Measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
C2409-3	TXD (YE)	C2409-4	RXD (GN)
C2409-3	TXD (YE)	C2409-6	CGND (BK)
C2409-3	TXD (YE)	C2409-24	5VTB (RD)
C2409-4	RXD (GN)	C2409-24	5VTB (RD)
C2409-4	RXD (GN)	C2409-6	CGND (BK)
C2409-6	CGND (BK)	C2409-24	5VTB (RD)

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to A13 .

No
REPAIR the circuit in question.

A13 ISOLATE THE MODEM-ANTENNA

- Connect: Telematics Module C2409.
- Install a new modem-antenna. Refer to Modem — Antenna .
- Start the vehicle and allow it to idle.
- Select Refresh on the technician service publications website and observe the color of the four status

Yes
The system is operating correctly at this time. The concern was caused by an inoperative modem-antenna.

No

indicators. • **Are all four status indicators green?**	GO to A14 .
A14 CHECK FOR CORRECT TELEMATICS MODULE OPERATION	

• Ignition OFF.
• Disconnect and inspect the telematics module connector.
• Repair:
  ▪ Corrosion (clean module pins or install new connectors or terminals)
  ▪ Damaged or bent pins (install new terminals or pins)
  ▪ Pushed-out pins (install new pins as necessary)
• Reconnect the telematics module connector. Make sure it seats and latches correctly.
• Start the vehicle and allow it to idle.
• Select Refresh on the technician service publications website and observe the color of the four status indicators.
• **Are all four status indicators green?**
	Yes
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
	
	No
	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new telematics module. REFER to Telematics Module .

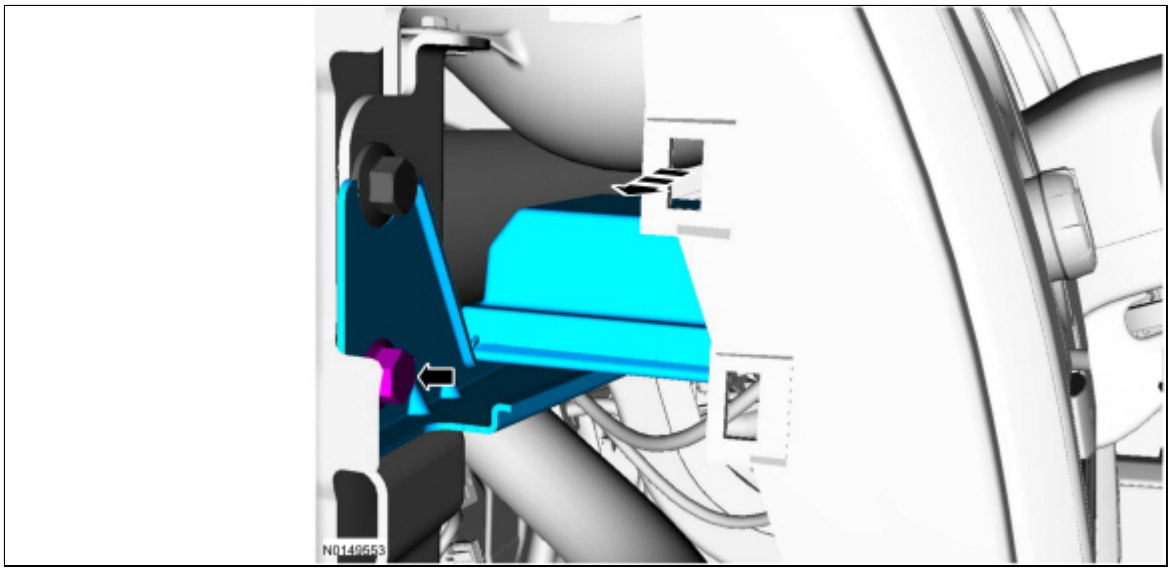
Modem — Antenna



Removal

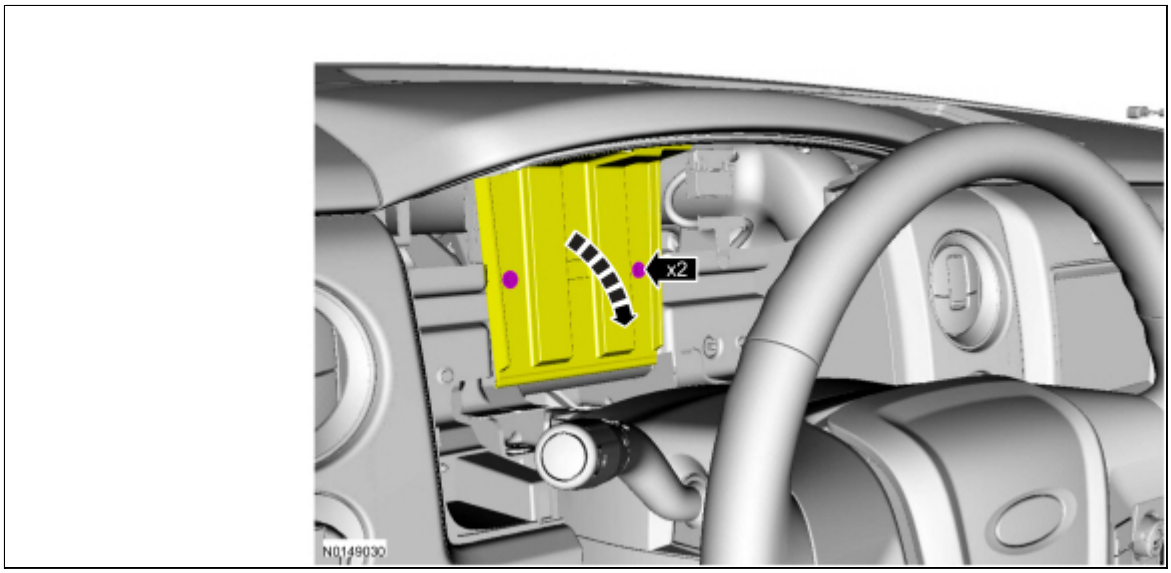
NOTE: For vehicles with an in-dash computer, the customer must contact the internet service provider to re-activate the account after the modem-antenna has been replaced. The account must be re-activated before internet services can operate correctly.

1. Turn the ignition to OFF.
2. Remove the LH instrument panel side finish panel.

3. Remove the modem-antenna bolt and the modem-antennna.
    - Disconnect the electrical connector.
    - To install, tighten to 30 Nm (22 lb-ft).

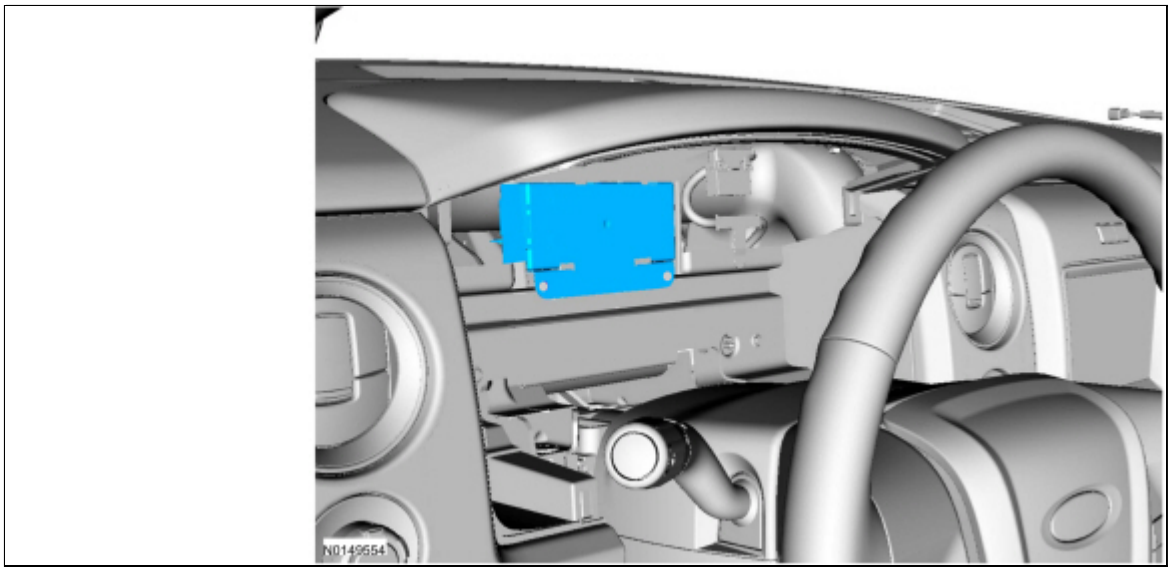
Installation

1. To install, reverse the removal procedure.



2. Initialize the modem-antenna.
    1. Connect all electrical connectors.
    2. Wait 5 minutes after the modem-antenna is installed.
    3. Turn the ignition to RUN.
    4. Wait 10 seconds.
    5. Start the vehicle and run the engine for 30 seconds.
    6. Turn the ignition to OFF.

repair4less



Telematics Module

Removal

1. Turn the ignition to OFF.
2. Remove the Instrument Panel Cluster (IPC). Refer to Section 413-01 .
3. Remove the 2 bolts and position the panel down.

4. Remove the 2 screws and the telematics module.
    - Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.

2. Initialize the telematics module.
    1. Wait 5 minutes after the modem-antenna is connected.
    2. Turn the ignition to RUN.
    3. Wait 10 seconds for the airbag light to turn off.
    4. Start the vehicle and run the engine for 30 seconds.
    5. Turn the ignition to OFF.
    6. Repeat steps 4 and 5 two more times for a total of 3 ignition key cycles.

3. Go to the technician service publications web site. On the On-Line Automotive Service Information System (OASIS) tab, select the "FW Status" tab.
    1. Enter data in at least one of the required fields.
    2. All 4 green status indicators will illuminate to validate the telematics module installation. If all 4 of the green status indicators do not illuminate, refer to Information and Entertainment System .

Torque Specifications

Description	Nm	lb-in
Fog lamp bracket bolts	5	44
Headlamp bolts	3	27
High mounted stoplamp screws	1.5	14
Rear lamp bolts	5	44

repair4less

Exterior Lighting

NOTE: The puddle lamps are listed and diagnosed in Section 417-02 .

The exterior lighting system consists of the following components:

- Headlamp assemblies
- Ballasts (HID only)
- Fog lamps
- LED marker lamps (Raptor only)
- Exterior mirrors
- High mounted stoplamp
- Rear lamp assemblies
- License plate lamps
- Headlamp switch
- Stoplamp switch
- Multifunction switch
- Light sensor
- Body Control Module (BCM) (located on the RH side cowl)
- Steering Column Control Module (SCCM) (located on the steering column)

Battery Saver

NOTE: Time-out is 1 minute if the vehicle has less than 80 km (50 miles).

NOTE: The battery saver does **not** control the parking lamps if the headlamp switch is in the PARKING LAMPS ON position.

To save battery voltage, the BCM provides automatic shut-off of the headlamps and parking lamps after a time-out period when the ignition is off. A timer in the BCM starts when any of the following occur:

- the ignition state changes to off
- any door becomes ajar while the ignition is off
- an unlock button of the Remote Keyless Entry (RKE) transmitter is pressed while the ignition is off
- a valid keypad code is entered while the ignition is off
- the instrument panel dimmer switch is used to turn the courtesy lamps on while the ignition is off

When 10 minutes have elapsed, the BCM automatically shuts off voltage to the lamps. The timer restarts (voltage is restored if the BCM is in battery saver mode) if any of the following occurs:

- the ignition changes out of off
- any door becomes ajar
- the unlock button of the RKE transmitter is pressed
- a valid keypad code is entered
- the instrument panel dimmer switch is pressed

Lamp Assembly Condensation

Exterior lamps are vented to accommodate normal changes in pressure. Condensation can be a natural by product of this design. When moist air enters the lamp assembly through the vents, there is a possibility that condensation can occur if the temperature is cold. When normal condensation occurs, a thin mist forms on the interior of the lens. The thin mist eventually clears and exits through the vents during normal operation. The amount of time it takes to clear the lens of acceptable mist varies with ambient humidity and lamp types. Normal condensation clears from any lamp in 48 hours under dry conditions.

Do **not** replace a lamp assembly with acceptable levels of condensation such as:

- presence of thin mist (no streaks, drip marks or droplets are present)
- fine mist covers less than 50% of the lens

Examples of unacceptable moisture (usually caused by a lamp housing leak):

- water puddling inside the lamp
- large water droplets, drip marks or streaks present on the interior of the lens

Headlamps

The halogen headlamp system is a dual-beam pattern system and consists of replaceable low/high beam bulbs.

The HID headlamp system is a dual-beam pattern system. It consists of a single replaceable HID bulb in each headlamp assembly.

The BCM supplies voltage to the headlamps when demanded. If the headlamps are on when the ignition switch is turned off, the battery saver feature turns the headlamps off after 10 minutes have elapsed.

Daytime Running Lamps (DRL)

NOTE: The Daytime Running Lamps (DRL) are a programmable parameter for this vehicle.

If equipped with halogen headlamps, the DRL system utilizes the existing circuitry and components from the headlamp low beam system. The DRL system operates the low beam headlamps at a reduced intensity.

If equipped with HID headlamps, the DRL system utilizes the existing circuitry and components from the front turn lamp system.

The DRL are activated when the following conditions are met:

- the ignition is in run
- the headlamps have not been turned on by the autolamp system or the headlamp switch
- the transmission is not in park

Autolamps

The autolamp system provides light sensitive automatic on/off control of the exterior lamps. The autolamp system keeps the exterior lamps on for a preselected period of time after the ignition is turned off (20 seconds is the factory default setting). The preselected time lapse is adjustable up to approximately 3 minutes. To change the autolamps time delay, refer to Autolamps Time Delay Adjustment in this section.

Headlamps On With Wipers On Feature

When the headlamp switch is in the AUTOLAMPS ON position and the front wipers are on for more than 3

repair4less

seconds (except during a mist wipe or while the wipers are on to clear washer fluid during a wash condition), the exterior lamps turn on. The exterior lamps turn off when the ignition is changed to off or accessory, the headlamp switch is placed in the OFF position, or the front wipers are off for more than 30 seconds. The exception to this is when the exterior lights are on because of darkness determined by the light sensor.

Stoplamps

The stoplamp switch, located on the brake pedal assembly, activates the rear stoplamps and the high mounted stoplamp when the brake pedal is applied. The rear lamps are combination stop/turn lamps.

Turn Signal/Hazard Lamps

When the multifunction switch is placed in the LH or RH TURN position, the corresponding turn lamps cycle on and off approximately 80 times per minute. If a front or rear turn bulb is inoperative, the remaining turn lamps cycle on and off approximately 160 times per minute.

The multifunction switch is a momentary contact switch, with 2 detents for the LH turn position and 2 detents for the RH turn position. When placed in the first detent and released, the corresponding turn signals flash 3 times and turn off. When the multifunction switch is moved to the second detent and released, the turn signal flashes until the steering wheel is turned in the opposite direction, the multifunction switch is moved to the second detent a second time or the vehicle travels farther than 3.2 km (2 miles).

The hazard flasher switch is located in the center instrument panel finish panel (integrated into the Passenger Air Bag Deactivation (PAD)). When the hazard function is active, all the turn lamps cycle on and off approximately 80 times per minute. The hazard flasher lamp switch is a momentary contact switch.

The front turn signal indicator lamps are integrated into the headlamp assemblies.

The rear lamps share functionality with the stoplamps.

Parking Lamps

The parking lamps illuminate when requested from the headlamp switch or the autolamp system.

The front parking and side lamps are integrated into the headlamp assemblies.

When the vehicle is equipped with power telescoping exterior mirrors, the mirrors are equipped with exterior mirror marker lamps.

The rear parking lamps are located in the rear lamp assemblies.

Vehicles equipped with the Raptor option also have LED marker lamps located in the grille and at each corner of the vehicle.

Fog Lamps

The fog lamp switch is integrated into the headlamp switch. The fog lamps can be turned on when the ignition switch is in run or accessory, the parking lamps are on, and the high beams are off.

Reversing Lamps

When the transmission is placed in reverse, the reversing lamps are illuminated. The reversing lamps are located within the rear lamp assemblies.

Trailer Tow

The Battery Junction Box (BJB) supplies voltage to the trailer tow stop/turn, parking and reversing lamps. When the vehicle's rear stop/turn, parking lamps or reversing are illuminated, voltage is supplied to a corresponding trailer tow relay located in the BJB .

The trailer tow battery charge relay provides voltage to the trailer tow connector when the ignition switch is in run.

The vehicle can be equipped with a factory manufactured Trailer Brake Control (TBC) module. For diagnostic information, refer to Section 206-10 .

On vehicles not equipped with a factory manufactured TBC module, the vehicle comes equipped with circuitry to support an aftermarket TBC module.

Autolamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

Exterior Lighting

The Steering Column Control Module (SCCM) monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground. The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the headlamp switch position.

If the SCCM does not detect any active inputs from the headlamp switch for 5 seconds, or if the SCCM detects multiple headlamp switch input circuits are active, the SCCM sends a message to the BCM to indicate the fault. The BCM then turns the parking lamps and headlamps on and keeps them on until the battery saver feature times out.

Refer to Exterior Lighting in the Description and Operation portion of this section for information regarding the battery saver feature.

If either situation occurs, the SCCM and the BCM **cannot** be ruled immediately as being at fault. This is normal behavior of the SCCM and the BCM design as a fault has been detected with the inputs from the headlamp switch.

The autolamp feature is enabled when the BCM receives a network message from the SCCM indicating the headlamp switch is in the AUTOLAMPS ON position.

Autolamps Feature

The BCM monitors the light sensor with a voltage signal. The light sensor input to the BCM varies with the ambient light conditions.

When the BCM receives a message from the SCCM indicating a request for the autolamps, the BCM monitors the light sensor for the ambient light condition. If the BCM determines the ambient light level is dark, the BCM supplies voltage to the exterior lamps.

If the ignition is already in RUN and the vehicle enters a dark/lighted area (such as when entering/exiting a non-lighted tunnel during the daytime), the transition from light to dark (or dark to light) needs to last 15 seconds before the BCM turns the exterior lamps on or off. This strategy prevents the exterior lamps from unnecessarily flashing on and off.

The BCM reacts quicker under extreme light conditions. If the BCM has detected a very dark condition, the exterior lamps are turned on after 1.5 seconds. If the BCM has detected a very high ambient light level, the exterior lamps are turned off after 4 seconds.

If a fault is detected with the light sensor input, the BCM turns the parking lamps and headlamps on.

Headlamps On With Wipers On Feature

When the autolamps feature is active and the front wipers are on for more than 3 seconds (except during a mist wipe or while the wipers are on to clear washer fluid during a wash condition), the exterior lamps are turned on. The exterior lamps are turned off when the ignition is changed to OFF or ACC, the headlamp switch is placed in the OFF position, or the front wipers are off for more than 30 seconds. The exception to this is when the exterior lights are on because of darkness determined by the light sensor.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Headlamp switch	• Wiring, terminals or connectors • Light sensor

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .

repair4less

- refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the Body Control Module (BCM) and the Steering Column Control Module (SCCM).

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The autolamps are inoperative	• Light sensor • Body Control Module (BCM)	• GO to Pinpoint Test G .
• The autolamps are on continuously	• Wiring, terminals or connectors • Light sensor • Headlamp switch • Steering Column Control Module (SCCM) • BCM	• GO to Pinpoint Test H .

Pinpoint Tests

Pinpoint Test G: The Autolamps Are Inoperative

Refer to Wiring Diagrams Cell 85 , Headlamps/Autolamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) sends voltage signals to the headlamp switch through the

headlamp switch input circuits (off, parking lamps, headlamps, autolamps). At any given time, the headlamp switch routes one of the input circuits to ground, indicating the headlamp switch position to the SCCM .

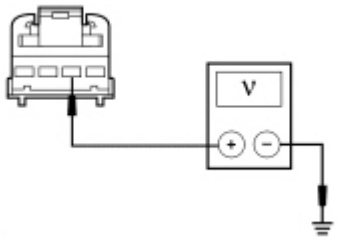
The SCCM sends the status of the headlamp switch position to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN).

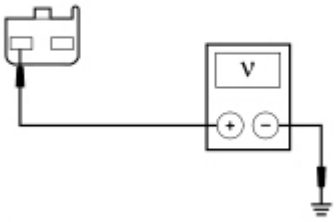
The autolamps feature is enabled when the BCM receives a message from the SCCM indicating the headlamp switch is in the AUTOLAMPS ON position.

When the BCM enables the autolamps feature, the BCM monitors the light sensor input. The light sensor determines the amount of light based on the input received from the ambient lighting conditions. When the ambient level has reached a point (determined by the internal programming of the BCM), the BCM provides voltage to the exterior lamps.

Any fault detected from the light sensor or headlamp switch inputs causes the exterior lamps to be turned on.

This pinpoint test is intended to diagnose the following:





- Light sensor
- BCM

PINPOINT TEST G: THE AUTOLAMPS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
G1 CHECK THE MANUAL HEADLAMP OPERATION	
• Place the headlamp switch in the HEADLAMPS ON and OFF positions. • **Do the headlamps operate correctly?**	**Yes** GO to G2 . **No** REFER to Headlamps in this section.
G2 CHECK FOR VOLTAGE TO THE LIGHT SENSOR	
• Ignition OFF. • Disconnect: Light Sensor C287 (Manual Temperature Control) or C286 (Automatic Temperature Control). • Ignition ON. • Place the headlamp switch in the AUTOLAMPS ON position. • For vehicles with automatic temperature control, measure the voltage between the light sensor C286-2, circuit VLF14 (BU), harness side and ground.	**Yes** INSTALL a new light sensor. REFER to Light Sensor in this section. TEST the system for normal operation. **No** GO to G3 .

repair4less

 N0057372 • For vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.  N0057373 • **Is the voltage approximately 5 volts?**	
G3 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: The Autolamps Are On Continuously

Refer to Wiring Diagrams Cell 85, Headlamps/Autolamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) sends voltage signals to the headlamp switch through the headlamp switch input circuits (off, parking lamps, headlamps, autolamps). At any given time, the headlamp switch routes one of the input circuits to ground, indicating the headlamp switch position to the SCCM.

The SCCM sends the status of the headlamp switch position to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN).

The autolamp feature is enabled when the BCM receives a message from the SCCM indicating the headlamp switch in the AUTOLAMPS ON position.

When the BCM enables the autolamps feature, the BCM monitors the light sensor input. The light sensor determines the amount of light based on the input received from the ambient lighting conditions. When the ambient level has reached a point (determined by the internal programming of the BCM), the BCM provides voltage to the exterior lamps.

If the SCCM detects multiple or no active headlamp switch inputs, it sends a message to the BCM to indicate a fault with the headlamp switch input.

The BCM defaults the exterior lamps on when the BCM detects any of the following conditions:

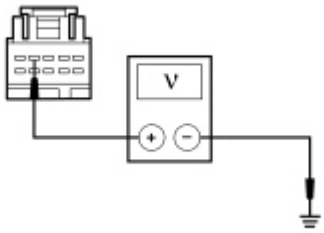
- a fault with the light sensor input
- a message from the SCCM indicating a fault with the headlamp switch input
- the BCM loses communication with the SCCM

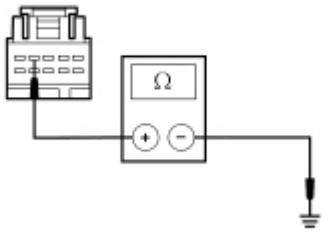
Autolamp System DTCs

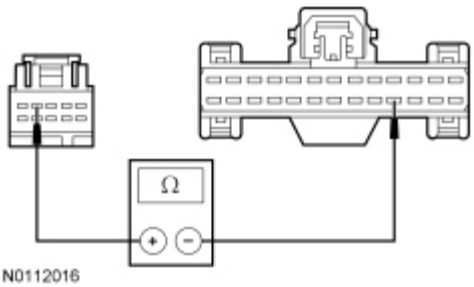
- DTC B1A85:11 (Ambient Light Sensor: Circuit Short To Ground) — This DTC sets when the BCM detects a short to ground from the light sensor input circuit.
- DTC B1A85:13 (Ambient Light Sensor: Circuit Open) — This DTC sets when the BCM detects an open or short to voltage from the light sensor input circuit.

This pinpoint test is intended to diagnose the following:

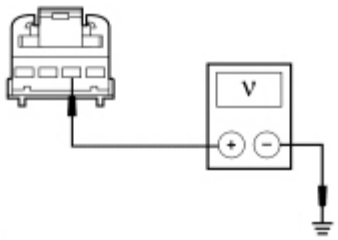
- Wiring, terminals or connectors
- Light sensor
- Headlamp switch
- SCCM
- BCM

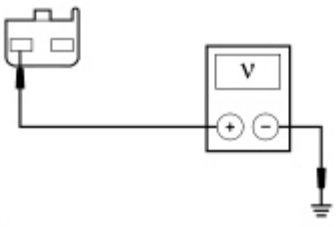






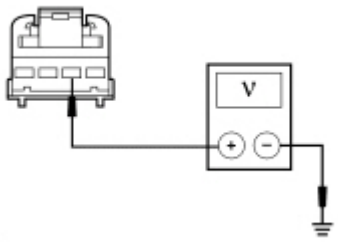
PINPOINT TEST H: THE AUTOLAMPS ARE ON CONTINUOUSLY

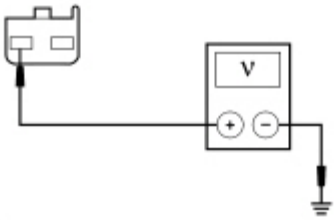


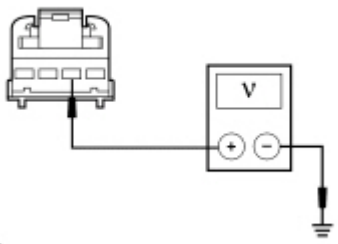


NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

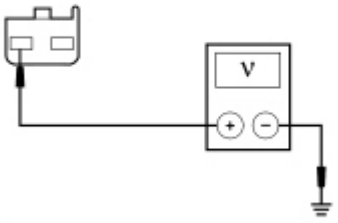
NOTE: Make sure the HVAC control operates correctly before diagnosing the autolamp system.







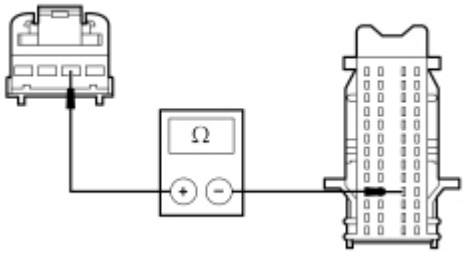
Test Step	Result / Action to Take
H1 CHECK THE SCCM AUTOLAMP ON REQUEST PID	
NOTE: Make sure the headlamp switch is lined up in the correct position when monitoring the PID. • Ignition ON. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • While placing the headlamp switch in the AUTOLAMPS ON and then OFF position, monitor the SCCM headlamp switch PID (EXT_LMP_SW). • **Does the PID agree with the headlamp switch when it is in the AUTOLAMPS ON position and indicate it is not in the AUTOLAMPS ON position when the headlamp switch is in the OFF position?**	**Yes** GO to H5 . **No** GO to H2 .
H2 CHECK FOR A VOLTAGE SIGNAL TO THE HEADLAMP SWITCH	

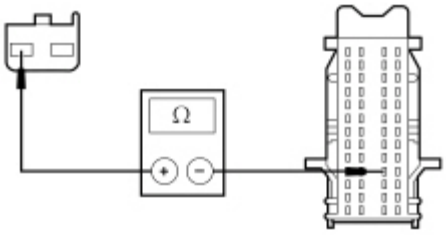


repair4less

• Ignition OFF. • Disconnect: Headlamp Switch C205. • Measure the voltage between the headlamp switch C205-4, circuit CLF19 (VT), harness side and ground.  N0099677 • **Is the voltage greater than 5 volts?**	**Yes** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation. **No** GO to H3.
H3 CHECK AUTOLAMPS REQUEST INPUT CIRCUIT FOR A SHORT TO GROUND	
• Disconnect: SCCM C2414A. • Measure the resistance between the headlamp switch C205-4, circuit CLF19 (VT), harness side and ground.  N0083964 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H4. **No** REPAIR circuit CLF19 (VT) for a short to ground. TEST the system for normal operation.
H4 CHECK THE AUTOLAMPS REQUEST INPUT CIRCUIT FOR AN OPEN	
• Measure the resistance between the headlamp switch C205-4, circuit CLF19 (VT), harness side and the SCCM C2414A-17, circuit CLF19 (VT), harness side.  N0112016 • **Is the resistance less than 5 ohms?**	**Yes** GO to H14. **No** REPAIR circuit CLF19 (VT) for an open. TEST the system for normal operation.
H5 CHECK THE SCCM HEADLAMP SWITCH PIDs	
NOTE: Make sure the headlamp switch is aligned in the correct	**Yes** GO to H6.

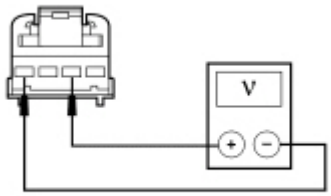
position when monitoring the PID. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger . • While moving the headlamp switch through all positions (OFF, PARKING LAMPS and HEADLAMPS), monitor the SCCM headlamp switch input PID (EXT_LMP_SW). • **Do the headlamp switch positions agree with the PID?**	**No** GO to Pinpoint Test C .
H6 USE THE RECORDED DTCs FROM THE BCM SELF-TEST • Check the recorded results from the BCM self-test. • **Is DTC B1A85:13 or DTC B1A85:11 present?**	**Yes** For DTC B1A85:13, GO to H8 . For DTC B1A85:11, GO to H12 . **No** GO to H7 .
H7 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (NO DTC) • Ignition OFF. • Disconnect: Light Sensor C287 (Manual Temperature Control) or C286 (Automatic Temperature Control). • Ignition ON. • Place the headlamp switch in the AUTOLAMPS ON position. • On vehicles with automatic temperature control, measure the voltage between the light sensor C286-2, circuit VLF14 (BU), harness side and ground.  N0057372 • On vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.  N0057373 • **Is the voltage approximately 5 volts?**	**Yes** INSTALL a new light sensor. REFER to Light Sensor in this section. TEST the system for normal operation. **No** GO to H15 .
H8 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC B1A85:13) • Ignition OFF. • Disconnect: Light Sensor C287 (Manual Temperature Control) or	**Yes** GO to H11 .

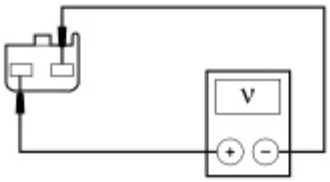


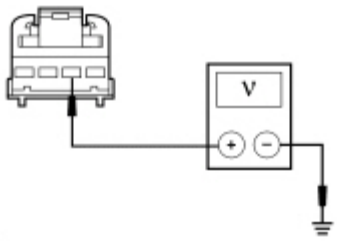


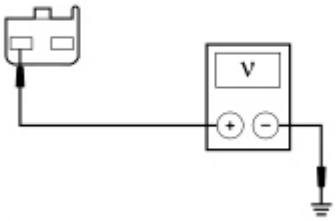
repair4less

C286 (Automatic Temperature Control). • Ignition ON. • Place the headlamp switch in the AUTOLAMPS ON position. • On vehicles with automatic temperature control, measure the voltage between the light sensor C286-2, circuit VLF14 (BU), harness side and ground.  N0057372 • On vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.  N0057373 • **Is the voltage approximately 5 volts?**	**No** GO to H9 .
H9 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280B. • Ignition ON. • On vehicles with automatic temperature control, measure the voltage between the light sensor C286-2, circuit VLF14 (BU), harness side and ground.  N0057372 • On vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.	**Yes** REPAIR circuit VLF14 (BU/BN) or VLF14 (BU) for a short to voltage. TEST the system for normal operation. **No** GO to H10 .





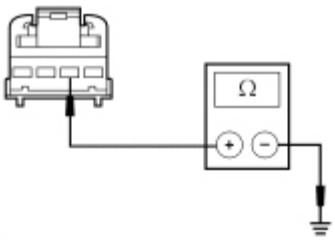


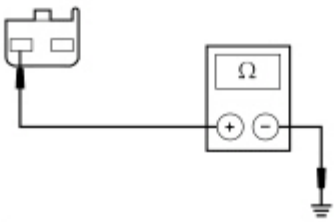


N0057373

- **Is any voltage present?**

H10 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • On vehicles with automatic temperature control, measure the resistance between the light sensor C286-2, circuit VLF14 (BU), harness side and the BCM C2280B-30, circuit VLF14 (BU), harness side.  N0112017 • On vehicles with manual temperature control, measure the resistance between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and the BCM C2280B-30, circuit VLF14 (BU/BN), harness side.  N0112018 • **Is the resistance less than 5 ohms?**	**Yes** GO to H15 . **No** REPAIR circuit VLF14 (BU/BN) or VLF14 (BU) for an open. TEST the system for normal operation.
H11 CHECK THE LIGHT SENSOR GROUND CIRCUIT FOR AN OPEN	
• For vehicles with automatic temperature control, measure the voltage between the light sensor C286-2, circuit VLF14 (BU), harness side and the light sensor C286-4, circuit RH111 (GY/BU), harness side.	**Yes** INSTALL a new light sensor. REFER to Light Sensor in this section. TEST the system for normal operation. **No** REPAIR circuit RH111





repair4less

 N0088170 • For vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and the light sensor C287-B, circuit RH111 (GY/BU), harness side.  N0088171 • **Is the voltage approximately 5 volts?**	(GY/BU) for an open. TEST the system for normal operation.
H12 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC B1A85:11)	
• Ignition OFF. • Disconnect: Light Sensor C287 (Manual Temperature Control) or C286 (Automatic Temperature Control). • Ignition ON. • Place the headlamp switch in the AUTOLAMPS ON position. • On vehicles with automatic temperature control, measure the voltage between the light sensor C286-2, circuit VLF14 (BU), harness side and ground.  N0057372 • On vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.	**Yes** INSTALL a new light sensor. REFER to Light Sensor in this section. TEST the system for normal operation. **No** GO to H13 .

N0057373

- **Is the voltage approximately 5 volts?**

H13 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280B. • On vehicles with automatic temperature control, measure the resistance between the light sensor C286-2, circuit VLF14 (BU), harness side and ground.  N0057374 • On vehicles with manual temperature control, measure the resistance between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.  N0057375 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H15 . **No** REPAIR circuit VLF14 (BU/BN) or VLF14 (BU) for a short to ground. TEST the system for normal operation.
H14 CHECK FOR CORRECT SCCM OPERATION	

• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the SCCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new SCCM . REFER to Section 211-05 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The

repair4less

	concern may have been caused by a loose or corroded connector.
H15 CHECK FOR CORRECT BCM OPERATION ● Disconnect all the BCM connectors. ● Check for: ■ corrosion ■ damaged pins ■ pushed-out pins ● Connect all the BCM connectors and make sure they seat correctly. ● Operate the system and verify the concern is still present. ● **Is the concern still present?**	**Yes** INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Daytime Running Lamps (DRL)

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

The Body Control Module (BCM) controls the Daytime Running Lamps (DRL) by using various inputs to determine whether or not the DRL should be illuminated. These inputs include:

- Ignition status
- Headlamp switch position
- Headlamps on or off
- Transmission gear selection

If equipped with halogen headlamps, when the DRL is active, the BCM provides a pulse-width modulated voltage to the low beam headlamps. This illuminates the headlamps at a reduced intensity.

If equipped with HID headlamps, when the DRL is active, the BCM provides voltage to the front turn lamps.

The DRL is a programmable parameter for this vehicle.

Inspection and Verification

1. Verify the customer concern.

2. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

3. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

4. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.

repair4less

- refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

5. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

6. Check the operation of the PRNDL display by placing the gear selector lever in each of its positions.
   - If the PRNDL display does not operate correctly, refer to Section 413-01 .

7. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The Daytime Running Lamps (DRL) are inoperative	• Exterior lighting system input/output • Transmission gear input • Body Control Module (BCM)	• GO to Pinpoint Test F .

Pinpoint Tests

Pinpoint Test F: The Daytime Running Lamps (DRL) Are Inoperative

Normal Operation

When the ignition is in RUN, the headlamps are not on (from the autolamp system or manual control from the headlamp switch), and the transmission is not in park, the Body Control Module (BCM) activates the DRL .

If equipped with halogen headlamps, when the DRL is active, the BCM provides a pulse-width modulated voltage to the low beam headlamps. This illuminates the headlamps at a reduced intensity.

If equipped with HID headlamps, when the DRL is active, the BCM provides voltage to the front turn lamps.

This pinpoint test is intended to diagnose the following:

- Exterior lighting system input/output

- Transmission gear input
- BCM

PINPOINT TEST F: THE DRL ARE INOPERATIVE

Test Step	Result / Action to Take
F1 VERIFY THE DRL OPERATION • Ignition ON. • Place the headlamp switch in the OFF position. • Place the gear selector lever in any gear other than PARK (P). • **Are the DRL illuminated?**	**Yes** The system is operating correctly. INFORM the customer of the conditions required for the DRL to operate correctly. **No** GO to F2.
F2 CHECK THE OPERATION OF THE HEADLAMPS • Place the headlamp switch in the HEADLAMPS ON position and observe the headlamps. • **Do the headlamps illuminate?**	**Yes** GO to F3. **No** GO to Pinpoint Test A.
F3 CHECK THE TRANSMISSION GEAR INPUT • Enter the following diagnostic mode on the scan tool: PCM DataLogger. • Monitor the PCM transmission gear status PID (TR_F) while placing the gear selector lever through all its positions. • **Does the PID agree with the gear selection?**	**Yes** INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation. **No** REFER to Section 307-01 to diagnose the transmission range input.

Fog Lamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The Steering Column Control Module (SCCM) monitors the fog lamp switch (integrated into the headlamp switch) and sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the fog lamp switch position.

The fog lamps can be turned on when the following conditions are met:

- The ignition is in RUN or START
- The low beam headlamps or the parking lamps are on
- The high beams are off

When the BCM receives an input from the headlamp switch indicating a request for the fog lamps, the BCM provides ground to the fog lamp relay (integrated into the BCM). When the fog lamp relay is energized, voltage is routed to the fog lamps.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Body Control Module (BCM) fuse 47 (15A) (fog lamps) • Bulb • Wiring, terminals or connectors • Headlamp switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00, The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM and the SCCM.

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10.

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart.

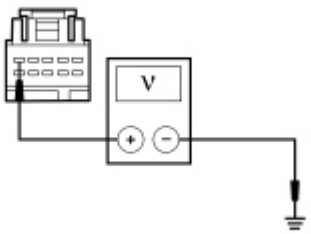
Pinpoint Tests

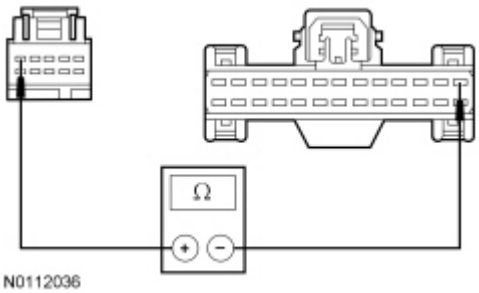
Pinpoint Test Q: Both Fog Lamps Are Inoperative

Refer to Wiring Diagrams Cell 86 , Fog Lamps for schematic and connector information.

Normal Operation

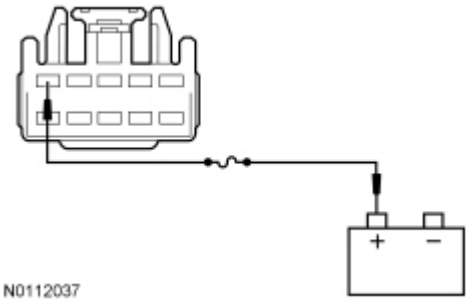
The Steering Column Control Module (SCCM) monitors the fog lamp switch position by sending a voltage signal to the headlamp switch. When the fog lamp switch is engaged, the voltage signal is routed to ground indicating a request for the fog lamps.





The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the fog lamp switch position. When the BCM receives input from the SCCM indicating a request for the fog lamps, the BCM provides ground to the fog lamp relay (integrated into the BCM). When the fog lamp relay is energized, voltage is routed to the fog lamps.

This pinpoint test is intended to diagnose the following:



- Fuse
- Wiring, terminals or connectors
- Headlamp switch
- SCCM
- BCM

PINPOINT TEST Q: BOTH FOG LAMPS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
Q1 CHECK THE FOG LAMP SWITCH PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • Monitor the SCCM fog lamp switch PID (FOG_F_SW) while engaging the fog lamp switch. • **Does the PID indicate the fog lamp switch is on?**	**Yes** VERIFY the BCM fuse 47 (15A) is OK. If OK, GO to Q4 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. **No** GO to Q2 .
Q2 CHECK FOR A VOLTAGE SIGNAL TO THE HEADLAMP SWITCH	
• Ignition OFF. • Disconnect: Headlamp Switch C205. • Measure the voltage between the headlamp switch C205-5, circuit CLF21 (GY/VT), harness side and ground.  N0099713 • **Is the voltage greater than 5 volts?**	**Yes** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation. **No** GO to Q3 .
Q3 CHECK THE FOG LAMP REQUEST INPUT CIRCUIT FOR AN OPEN	
• Disconnect: SCCM C2414A. • Measure the resistance between the headlamp switch C205-5, circuit CLF21 (GY/VT), harness side and the SCCM C2414A-1, circuit CLF21 (GY/VT), harness side.  N0112036 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q5 . **No** REPAIR circuit CLF21 (GY/VT) for an open. TEST the system for normal operation.
Q4 BYPASS THE BCM	

repair4less

NOTE: If the fuse in the jumper wire fails, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. • Ignition OFF. • Disconnect: BCM C2280E. • Connect a fused jumper wire between the BCM C2280E-5, circuit CLF12 (BN/YE), harness side and battery positive.  • **Do the fog lamps illuminate?**	**Yes** REMOVE the jumper wire. GO to Q6 . **No** REMOVE the jumper wire. REPAIR circuit CLF12 (BN/YE) for an open. TEST the system for normal operation.

Q5 CHECK FOR CORRECT SCCM OPERATION
• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the SCCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new SCCM . REFER to Section 211-05 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

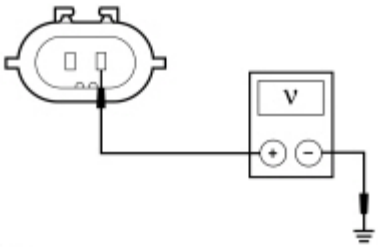
Q6 CHECK FOR CORRECT BCM OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test R: An Individual Fog Lamp Is Inoperative

Refer to Wiring Diagrams Cell 86 , Fog Lamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) monitors the fog lamp switch position by sending a voltage signal to the headlamp switch. When the fog lamp switch is engaged, the voltage signal is routed to ground indicating a request for the fog lamps.



The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the fog lamp switch position. When the BCM receives input from the SCCM indicating a request for the fog lamps, the BCM provides ground to the fog lamp relay (integrated into the BCM). When the fog lamp relay is energized, voltage is routed to the fog lamps. The fog lamps share a common ground circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors

PINPOINT TEST R: AN INDIVIDUAL FOG LAMP IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
R1 CHECK FOR VOLTAGE TO THE FOG LAMP • Ignition OFF. • Disconnect: Inoperative Fog Lamp. • Ignition ON. • Place the headlamp switch in the PARKING LAMPS ON position and engage the fog lamp switch. • Measure the voltage between the LH fog lamp C152-B, circuit CLF12 (BN/YE), harness side and ground; or between the RH fog lamp C162-B, circuit CLF12 (BN/YE), harness side and ground.  N0117368 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit GD120 (BK/GN) (LH fog lamp) or circuit GD123 (BK/GY) (RH fog lamp) for an open. TEST the system for normal operation. **No** REPAIR circuit CLF12 (BN/YE) for an open. TEST the system for normal operation.

Pinpoint Test S: The Fog Lamps Are On Continuously

Refer to Wiring Diagrams Cell 86 , Fog Lamps for schematic and connector information.

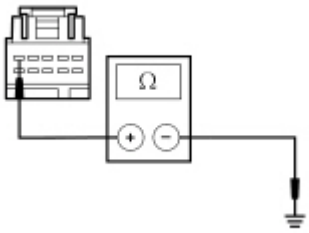
Normal Operation

The Steering Column Control Module (SCCM) monitors the fog lamp switch position by sending a voltage signal to the headlamp switch. When the fog lamp switch is engaged, the voltage signal is routed to ground indicating a request for the fog lamps.

The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the fog lamp switch position. When the BCM receives input from the SCCM

repair4less

indicating a request for the fog lamps, the BCM provides ground to the fog lamp relay (integrated into the BCM). When the fog lamp relay is energized, voltage is routed to the fog lamps.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp switch
- SCCM
- BCM

PINPOINT TEST S: THE FOG LAMPS ARE ON CONTINUOUSLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
S1 CHECK THE FOG LAMP SWITCH PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • Monitor the SCCM fog lamp switch PID (FOG_F_SW) while turning the fog lamp switch on and off. • **Does the PID indicate the fog lamp switch is operating correctly?**	**Yes** GO to S4 . **No** GO to S2 .
S2 CHECK THE HEADLAMP SWITCH	
• Ignition OFF. • Disconnect: Headlamp Switch C205. • Ignition ON. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • Monitor the SCCM fog lamp switch PID (FOG_F_SW). • **Does the PID indicate the fog lamp switch is on?**	**Yes** GO to S3 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
S3 CHECK THE FOG LAMP REQUEST INPUT CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: SCCM C2414A. • Measure the resistance between the headlamp switch C205-5, circuit CLF21 (GY/VT), harness side and ground.	**Yes** GO to S6 . **No** REPAIR circuit CLF21 (GY/VT) for a short to ground. TEST the system for normal operation.

 N0083977 • **Is the resistance greater than 10,000 ohms?**	
S4 CHECK THE BCM FOG LAMP INDICATOR OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280A. • Ignition ON. • **Do the fog lamps continue to illuminate?**	**Yes** GO to S5 . **No** REPAIR circuit CLF12 (BN/YE) (between the BCM and the headlamp switch) for a short to voltage. TEST the system for normal operation.
S5 CHECK THE BCM FOG LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280E. • Ignition ON. • **Do the fog lamps continue to illuminate?**	**Yes** REPAIR circuit CLF12 (BN/YE) (between the BCM and the fog lamps) for a short to voltage. TEST the system for normal operation. **No** GO to S7 .

S6 CHECK FOR CORRECT SCCM OPERATION
• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the SCCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new SCCM . REFER to Section 211-05 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

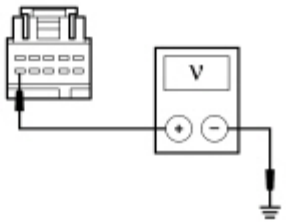
S7 CHECK FOR CORRECT BCM OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

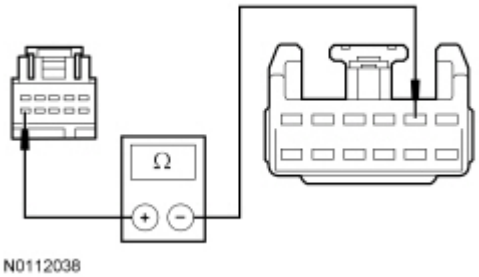
Pinpoint Test T: The Fog Lamps On Indicator Is Inoperative

Refer to Wiring Diagrams Cell 86 , Fog Lamps for schematic and connector information.

Normal Operation



The Steering Column Control Module (SCCM) sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the fog lamp switch position. When the BCM receives input from the SCCM indicating a request for the fog lamps, the BCM provides ground to the fog lamp relay (integrated into the BCM). When the fog lamp relay is energized, voltage is routed to the fog lamps and on a separate circuit, to the headlamp switch for the fog lamps on indicator.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp switch
- BCM

PINPOINT TEST T: THE FOG LAMPS ON INDICATOR IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
T1 CHECK THE HEADLAMP SWITCH	
• Ignition OFF. • Disconnect: Headlamp Switch C205. • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM fog lamps active command PID (FOG_LAMPS). Command the fog lamps on. • **NOTE:** Make sure the fog lamps are illuminated when taking a reading. • Measure the voltage between the headlamp switch C205-10, circuit CLF12 (BN/YE), harness side and ground.  N0083978 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation. **No** GO to T2 .
T2 CHECK THE BCM FOG LAMP INDICATOR OUTPUT CIRCUIT	

FOR AN OPEN	
• Ignition OFF. • Disconnect: BCM C2280A. • Measure the resistance between the headlamp switch C205-10, circuit CLF12 (BN/YE), harness side and the BCM C2280A-2, circuit CLF12 (BN/YE), harness side.  N0112038 • **Is the resistance less than 5 ohms?**	**Yes** GO to T3 . **No** REPAIR circuit CLF12 (BN/YE) for an open. TEST the system for normal operation.
T3 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM .
	REFER to Section 419-10 .
	TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

Headlamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

Exterior Lighting

The Steering Column Control Module (SCCM) monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground. The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the headlamp switch status.

When the BCM receives input requesting the headlamps on, it supplies voltage to the headlamp bulbs.

If the SCCM does not detect any active inputs from the headlamp switch for 5 seconds, or if the SCCM detects multiple headlamp switch input circuits are active, the SCCM sends a message to the BCM to indicate the fault. The BCM then turns the parking lamps and headlamps on and keeps them on until the battery saver times out.

Refer to Exterior Lighting in the Description and Operation portion of this section for information regarding the battery saver function.

If either situation occurs, the SCCM and the BCM **cannot** be ruled immediately as being at fault. This is normal behavior for the SCCM and the BCM when a fault has been detected with the inputs from the headlamp switch.

High Beam and Flash-to-Pass

The SCCM monitors the multifunction switch for a flash-to-pass and high beam request. When the multifunction switch is in the FLASH-TO-PASS or HIGH BEAM position, the SCCM sends a message to the BCM to indicate the request.

On vehicles with halogen headlamps, when the BCM receives a request for high beams (the low beams must be on), the BCM supplies voltage to the high beam bulbs.

On vehicles with HID headlamps, when the BCM receives a request for high beams (the low beams must be on), the headlamps remain powered on, and the BCM supplies voltage to the shutter (located within each headlamp). This changes the headlamp beam pattern to illuminate a greater distance.

When the flash-to-pass is requested, the high beams are illuminated as long as the multifunction switch is held in the FLASH-TO-PASS position (regardless if the low beams are on or off).

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow.

The BCM utilizes a FET protective circuit strategy for many of its outputs (such as a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET protection, allowing the circuit to function. If the circuit is still shorted the next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection), the FET protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When a tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by the clear the continuous DTCs command. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand DTCs present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the repair.

The BCM FET protected output circuits for the headlamp system are both low and high beam output circuits.

Inspection and Verification

repair4less

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical

• Headlamp switch
• Multifunction switch
	• Body Control Module (BCM) fuse(s):
	  ▪ 16 (10A) (RH low beam)
	  ▪ 17 (10A) (LH low beam)
	  ▪ 39 (15A) (high beams)
	• BJB fuse(s):
	  ▪ 16 (20A) RH ballast (HID headlamps)
	  ▪ 35 (20A) LH ballast (HID headlamps)
	• Bulb
	• Wiring, terminals or connectors

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM and the SCCM .

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Condition	Possible Sources	Action
• One or both low beams are inoperative	• Fuse • Bulb • Wiring, terminals or connectors • Ballast (HID headlamps) • Body Control Module (BCM)	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test A .
• One or both high beams are inoperative	• Fuse • Bulb • Wiring, terminals or connectors • Multifunction switch • Headlamp assembly (HID headlamps) • Steering Column Control Module (SCCM) • BCM	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test B .
• The low beam(s) are always on	• Wiring, terminals or connectors • Headlamp switch • SCCM • BCM	• GO to Pinpoint Test C .
• The high beam(s) are always on	• Wiring, terminals or connectors • Multifunction switch • Headlamp assembly (HID headlamps) • SCCM • BCM	• GO to Pinpoint Test D .
• The flash-to-pass feature is inoperative	• Multifunction switch • SCCM	• GO to Pinpoint Test E .

Pinpoint Tests

Pinpoint Test A: One Or Both Low Beams Are Inoperative

Refer to Wiring Diagrams Cell 85 , Headlamps/Autolamps for schematic and connector information.

Normal Operation

When the Body Control Module (BCM) receives a message that the headlamp switch is in the HEADLAMPS ON position and the multifunction switch is in the LOW BEAM position (or the autolamps feature has requested the headlamps on), the BCM provides voltage through the headlamp output circuits to the LH and RH low beam headlamps.

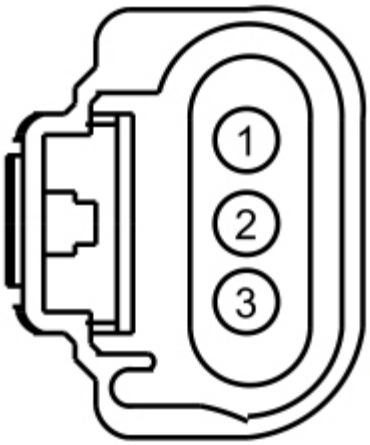
repair4less

The BCM also provides an overload protection of the low beam output circuits. When an excessive current draw is detected, the BCM disables the affected low beam circuit driver.

DTC Description	Fault Trigger Conditions
• B1D00:11 — Left Low Beam: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the LH low beam output circuit.
• B1D01:11 — Right Low Beam: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the RH low beam output circuit.
• U1000:00 — Solid State Driver Protection Active - Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. **The module has temporarily disabled a low beam output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the low beam output until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. **The module has permanently disabled a low beam output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM .**

This pinpoint test is intended to diagnose the following:

- Fuse
- Bulb
- Ballast (HID headlamps)
- Wiring, terminals or connectors
- BCM



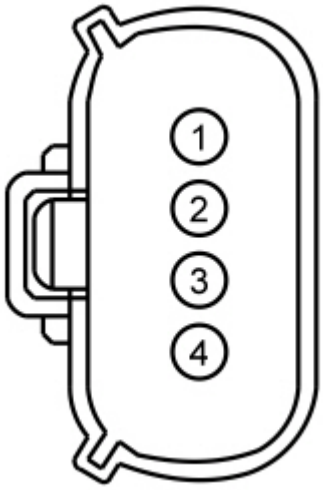
PINPOINT TEST A: ONE OR BOTH LOW BEAMS ARE INOPERATIVE

NOTE: Due to varying wattage ratings and the resulting current draw differences of certain aftermarket halogen headlamp bulbs, the BCM may activate its short circuit protection strategy, resulting in the low beam output circuit becoming inoperative. Verify the bulbs meet Ford specifications. If the bulbs do not meet Ford specifications, install the correct bulbs. Run the self-test (required to clear certain DTCs and reset the BCM). Correct any unresolved DTCs. Clear all DTCs. Test the system for normal operation.

Test Step	Result / Action to Take
A1 CHECK FOR VOLTAGE TO THE HEADLAMP ASSEMBLY • Ignition OFF. • Disconnect: Inoperative LH Headlamp C1021 or RH Headlamp C1041 (Halogen headlamps). • Disconnect: Inoperative LH Headlamp C1284 or RH Headlamp C1285 (HID Headlamps). • Place the headlamp switch in the headlamps on position.	**Yes** GO to A2 . **No** VERIFY the BCM fuse 17 (10A) (LH low beam) or fuse 16 (10A) (RH low beam) is OK. If OK, GO to A6 . If not OK, REFER to the

- For halogen headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1021-1	CLF04 (BN/BU)	—	Ground
RH Headlamp			
C1041-1	CLF05 (BU/GN)	—	Ground

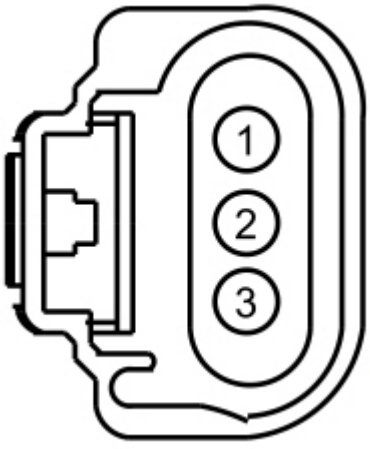


- For HID headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-1	CLF04 (BN/BU)	—	Ground
RH Headlamp			
C1285-1	CLF05 (BU/GN)	—	Ground

Wiring Diagrams manual to identify the possible causes of the circuit short.

repair4less

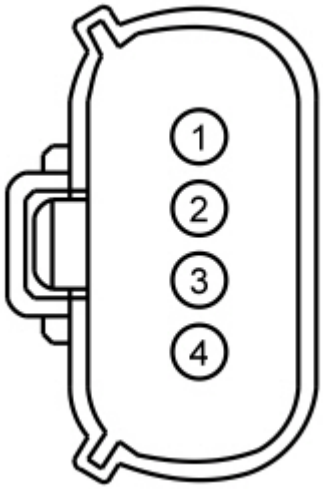


- **Is the voltage greater than 11 volts?**

A2 CHECK THE HEADLAMP ASSEMBLY GROUND CIRCUIT FOR AN OPEN

- For halogen headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1021-1	CLF04 (BN/BU)	C1021-2	GD120 (BK/GN)
RH Headlamp			
C1041-1	CLF05 (BU/GN)	C1041-2	GD123 (BK/GY)



- For HID headlamps, measure the **voltage** between:

Yes
For halogen headlamps, INSTALL a new headlamp bulb. REFER to Headlamp Bulb — Halogen .

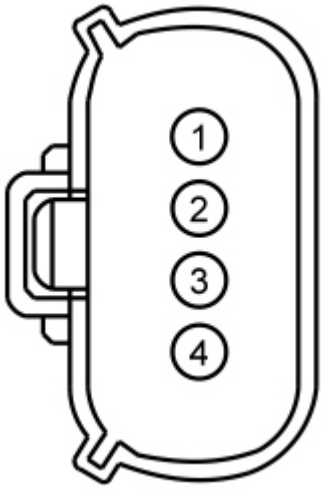
For HID headlamps, GO to A3 .

No
REPAIR the circuit.

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-1	CLF04 (BN/BU)	C1284-4	GD120 (BK/GN)
RH Headlamp			
C1285-1	CLF05 (BU/GN)	C1285-4	GD123 (BK/GY)

- **Is the voltage greater than 11 volts?**

A3 CHECK FOR BALLAST SUPPLY VOLTAGE TO THE HEADLAMP ASSEMBLY



- Measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-2	SBB35 (BU/RD)	—	Ground
RH Headlamp			
C1285-2	SBB16 (VT/RD)	—	Ground

Yes
GO to A4 .

No
VERIFY the BJB fuse 35 (20A) (LH headlamp) or fuse 16 (20A) (RH headlamp) is OK. If OK, REPAIR the affected circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

repair4less

- **Is the voltage greater than 11 volts?**

A4 CHECK THE BALLAST

- Place the headlamp switch in the off position.
- Substitute a known good ballast.
- Place the headlamp switch in the headlamps on position.
- **Does the inoperative headlamp illuminate?**

Yes
REMOVE the known good ballast. INSTALL a new ballast. REFER to Ballast .

No
REMOVE the known good ballast. GO to A5 .

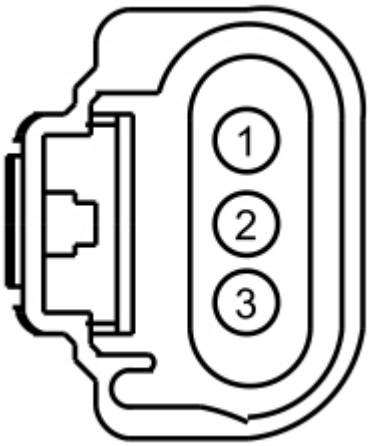
A5 CHECK THE HID BULB

- Place the headlamp switch in the off position.
- Substitute a known good HID bulb.
- Place the headlamp switch in the headlamps on position.
- **Does the inoperative headlamp illuminate?**

Yes
REMOVE the known good HID bulb. INSTALL a new HID bulb. REFER to Headlamp Bulb — HID .

No
REMOVE the known good HID bulb. REPAIR or INSTALL a new headlamp assembly. REFER to Headlamp Assembly .

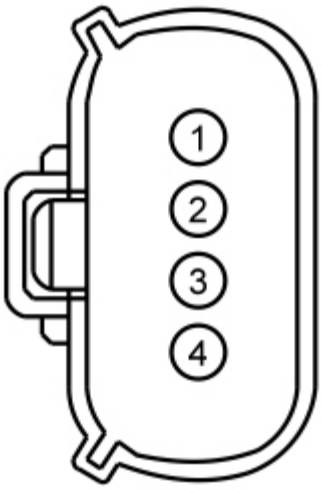
A6 REPEAT THE BCM SELF-TEST AND CHECK FOR VOLTAGE TO THE HEADLAMP



- Place the headlamp switch in the off position.
- Ignition ON.
- Using a scan tool, clear the DTCs and perform the BCM self-test.
- Place the headlamp switch in the headlamps on position.
- For halogen headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1021-1	CLF04 (BN/BU)	—	Ground
RH Headlamp			
C1041-1	CLF05 (BU/GN)	—	Ground

Yes
For halogen headlamps, INSTALL a new headlamp bulb. REFER to Headlamp Bulb — Halogen .



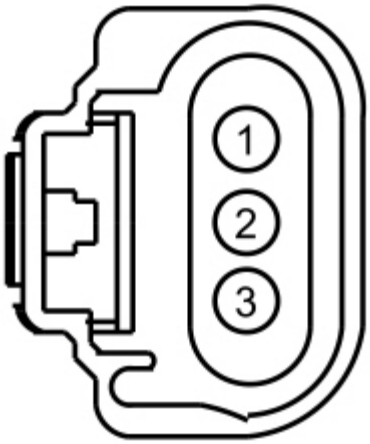
For HID headlamps, GO to A7 .

No
GO to A8 .

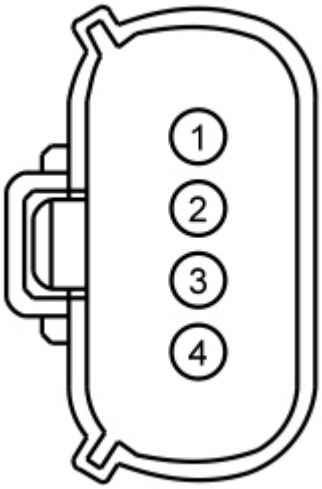
- For HID headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-1	CLF04 (BN/BU)	—	Ground
RH Headlamp			
C1285-1	CLF05 (BU/GN)	—	Ground

- **Is the voltage greater than 11 volts?**



A7 CHECK THE HEADLAMP HARNESS



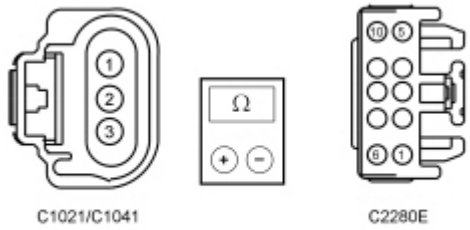
- Ignition OFF.
- Place the headlamp switch in the off position.
- Check the headlamp harness for an internal short to the ground circuit.
- **Is the headlamp harness OK?**

Yes
INSTALL a new ballast. REFER to Ballast .

No
REPAIR or INSTALL a new headlamp

repair4less

	assembly. REFER to Headlamp Assembly .
A8 CHECK THE BCM LOW BEAM VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND • Ignition OFF. • Place the headlamp switch in the off position. • Disconnect: BCM C2280E. • For halogen headlamps, measure the **resistance** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit **LH Headlamp** C1021-1 / CLF04 (BN/BU) / — / Ground **RH Headlamp** C1041-1 / CLF05 (BU/GN) / — / Ground  • For HID headlamps, measure the **resistance** between: Positive Lead / Negative Lead Pin / Circuit / Pin / Circuit **LH Headlamp** C1284-1 / CLF04 (BN/BU) / — / Ground **RH Headlamp** C1285-1 / CLF05 (BU/GN) / — / Ground	**Yes** GO to A9 . **No** REPAIR the circuit.



- **Is the resistance greater than 10,000 ohms?**

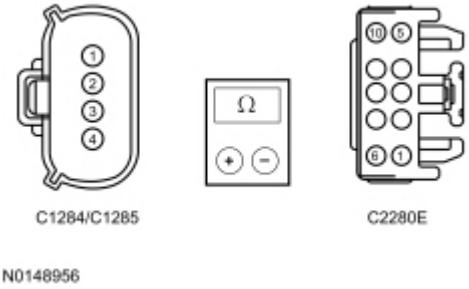
A9 CHECK THE BCM LOW BEAM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- For halogen headlamps, measure the **resistance** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1021-1	CLF04 (BN/BU)	C2280E-2	CLF04 (BN/BU)
RH Headlamp			
C1041-1	CLF05 (BU/GN)	C2280E-1	CLF05 (BU/GN)

N0139803

- For HID headlamps, measure the **resistance** between:



Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-	CLF04	C2280E-	CLF04

Yes
GO to A10 .

No
REPAIR the circuit.

repair4less

1	(BN/BU)	2	(BN/BU)
RH Headlamp			
C1285-1	CLF05 (BU/GN)	C2280E-1	CLF05 (BU/GN)

- **Is the resistance less than 3 ohms?**

A10 CHECK FOR CORRECT BCM OPERATION
• Disconnect and inspect all the BCM connectors.
• Repair:
  • corrosion (install new connector or terminals – clean module pins)
  • damaged or bent pins – install new terminals/pins
  • pushed-out pins – install new pins as necessary
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK On-Line Automotive Service Information System (OASIS) for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test B: One or Both High Beams are Inoperative

Refer to Wiring Diagrams Cell 85 , Headlamps/Autolamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) monitors input from the multifunction and headlamp switches. When the headlamp switch is in the HEADLAMPS ON position and the multifunction switch is placed in the HIGH BEAM position, the SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating a high beam request.

On vehicles with halogen headlamps, when the BCM receives a request for high beams (the low beams must be on), the BCM supplies voltage to the high beam bulbs.

On vehicles with HID headlamps, when the BCM receives a request for high beams (the low beams must be on), the headlamps remain powered on, and the BCM supplies voltage to the shutter (located within each headlamp). This changes the headlamp beam pattern to illuminate a greater distance.

The BCM provides an overload protection of the high beam output circuits. When an excessive current draw is detected, the BCM disables the affected high beam circuit driver.

The Instrument Panel Cluster (IPC) also receives a message over the HS-CAN to illuminate the high beam indicator when a request for the high beams is received.

DTC Description	Fault Trigger Conditions
• B1007:09 — High-Beam Headlamp Switch: Component Failure	This DTC sets when the SCCM detects a fault from the multifunction switch input.
• B1D02:11 — Left High Beam Circuit: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the LH high beam output circuit.
• B1D02:15 — Left High Beam Circuit: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open from the LH high beam output circuit.
• B1D03:11 — Right High Beam Circuit: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the RH high beam output circuit.
• B1D03:15 — Right High Beam Circuit: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open from the RH high beam output circuit.
• U1000:00 — Solid State Driver Protection Active - Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. **The module has temporarily disabled a high beam output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the high beam output until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. **The module has permanently disabled a high beam output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM .**

This pinpoint test is intended to diagnose the following:

- Fuse
- Bulb
- Wiring, terminals or connectors
- Multifunction switch
- Headlamp assembly (HID headlamps)
- SCCM
- BCM

PINPOINT TEST B: ONE OR BOTH HIGH BEAMS ARE INOPERATIVE

repair4less

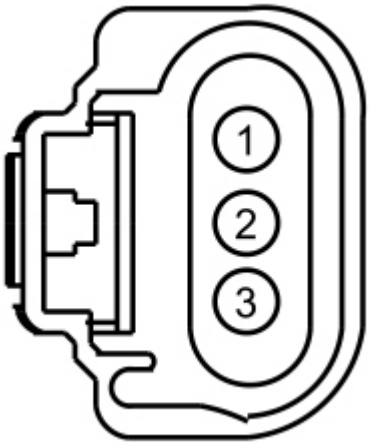
<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>B1 CHECK THE LOW BEAM OPERATION

• Ignition OFF.
• Place the headlamp switch in the headlamps on position and observe the headlamps.
• Place the multifunction switch in the HIGH BEAM position and observe the headlamps.
• Place the multifunction switch in the LOW BEAM position and observe the headlamps.
• Do the low beams illuminate?</td><td>Yes
If an individual high beam is inoperative, GO to B3.

If both high beams are inoperative, VERIFY the BCM fuse 39 (15A) is OK. If OK, GO to B2. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

No
GO to Pinpoint Test A.</td></tr>
<tr><td>B2 CHECK THE MULTIFUNCTION SWITCH INPUT

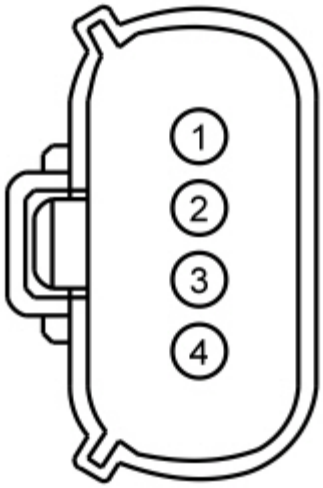
• Ignition ON.
• Using a scan tool, view SCCM PIDs.
• Monitor the SCCM HEADLAMP_SW PID while placing the multifunction switch in the flash-to-pass and high beam positions.
• Do the PID states agree with the multifunction switch positions?</td><td>Yes
GO to B8.



No
INSTALL a new multifunction switch. REFER to Section 211-05.

If the concern still exists, INSTALL an new SCCM. REFER to Section 211-05.</td></tr>
<tr><td>B3 CHECK FOR VOLTAGE TO THE HEADLAMP

• Place the headlamp switch in the off position.
• Disconnect: Inoperative LH Headlamp C1021 or RH Headlamp C1041 (Halogen headlamps).
• Disconnect: Inoperative LH Headlamp C1284 or RH Headlamp C1285 (HID Headlamps).
• Place the headlamp switch in the headlamps on position and the multifunction switch in the HIGH BEAM position.
• For halogen headlamps, measure the voltage between:



<table>

B8 CHECK FOR CORRECT BCM OPERATION	

• Disconnect and inspect all the BCM connectors.
• Repair:
  • corrosion (install new connector or terminals – clean module pins)
  • damaged or bent pins – install new terminals/pins
  • pushed-out pins – install new pins as necessary
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK On-Line Automotive Service Information System (OASIS) for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test C: The Low Beam(s) Are Always On

Refer to Wiring Diagrams Cell 85 , Headlamps/Autolamps for schematic and connector information.

Normal Operation

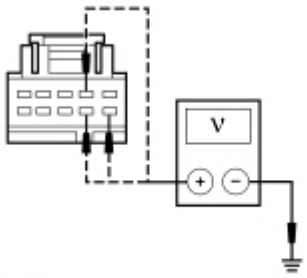
The Steering Column Control Module (SCCM) sends voltage signals to the headlamp switch through the headlamp switch input circuits (off, parking lamps, headlamps). At any given time, the headlamp switch routes one of the input circuits to ground, indicating the headlamp switch position to the SCCM . The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the headlamp switch position. When the BCM receives a message from the SCCM indicating the headlamp switch in the HEADLAMPS ON position, the BCM provides voltage to the LH and RH low beams.

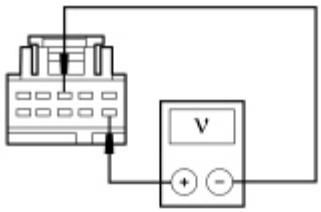
If the SCCM detects multiple or no active headlamp switch inputs, the BCM receives a message from the SCCM indicating a fault with the headlamp switch input and the BCM defaults the parking lamps and headlamps on.

If the BCM loses communication with the SCCM , the BCM defaults the parking lamps and headlamps on.

repair4less

- DTC B10A6:09 (Main Light Switch: Component Failure) — a continuous and on-demand DTC that sets when the SCCM detects a fault from the headlamp switch input circuit(s).

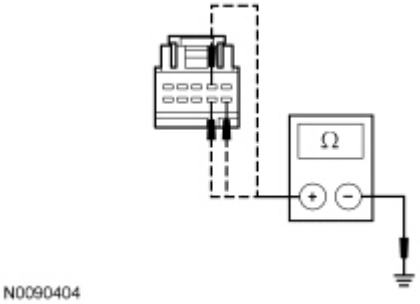




This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp switch
- SCCM
- BCM

PINPOINT TEST C: THE LOW BEAM(S) ARE ALWAYS ON



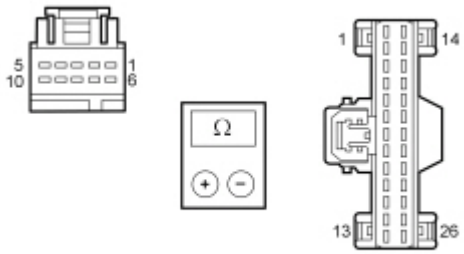
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
C1 CHECK THE COMMUNICATION NETWORK • Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the SCCM module pass the network test?**	**Yes** If equipped with autolamps, GO to C2. If not equipped with autolamps, GO to C4. **No** REFER to Section 418-00.
C2 CHECK FOR LIGHT SENSOR DTCs • Review the DTCs recorded from the BCM self-test. • **Is DTC B1A85:11 or DTC B1A85:13 present?**	**Yes** GO to Pinpoint Test H. **No** GO to C3.
C3 CHECK THE SCCM AUTOLAMP ON REQUEST PID • Ignition ON. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • While placing the headlamp switch in the AUTOLAMPS ON and then OFF position, monitor the SCCM headlamp switch PID (EXT_LMP_SW). • **Does the PID agree with the headlamp switch when it is in the AUTOLAMPS ON position and indicate it is not in the AUTOLAMPS ON position when the headlamp switch is in the OFF position?**	**Yes** GO to C4. **No** GO to Pinpoint Test H.
C4 CHECK THE SCCM HEADLAMP SWITCH PIDs **NOTE:** Make sure the headlamp switch is aligned in the correct position when monitoring the PID. • Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • While moving the headlamp switch through all positions (OFF, PARKING LAMPS and HEADLAMPS), monitor the SCCM headlamp switch input PID (EXT_LMP_SW). • **Do the headlamp switch positions agree with the PID?**	**Yes** GO to C9. **No** GO to C5.

C5 CHECK FOR VOLTAGE TO THE HEADLAMP SWITCH	
• Ignition OFF. • Disconnect: Headlamp Switch C205. • Measure the voltage between the headlamp switch, harness side and ground as follows: **Headlamp Switch Connector-Pin** / **Circuit** C205-6 / CLF23 (WH/VT) C205-2 / CLS34 (GY) C205-7 / CLF24 (YE)  N0099675 • **Are the voltages greater than 5 volts?**	**Yes** GO to C6 . **No** GO to C7 .
C6 CHECK THE HEADLAMP SWITCH GROUND CIRCUIT FOR AN OPEN	
• Measure the voltage between the headlamp switch C205-6, circuit CLF23 (WH/VT), harness side and headlamp switch C205-3, circuit GD133 (BK), harness side.  N0099676 • **Is the voltage greater than 5 volts?**	**Yes** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation. **No** REPAIR circuit GD133 (BK) for an open. TEST the system for normal operation.
C7 CHECK THE HEADLAMP SWITCH INPUT CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: SCCM C2414A. • Measure the resistance between the headlamp switch, harness side and ground as follows: **Headlamp Switch Connector-Pin** / **Circuit** C205-6 / CLF23 (WH/VT) C205-2 / CLS34 (GY)	**Yes** GO to C8 . **No** REPAIR the circuit in question for a short to ground. TEST the system for normal operation.

repair4less

C205-7	CLF24 (YE)



N0090404

- **Are the resistances greater than 10,000 ohms?**

C8 CHECK THE HEADLAMP SWITCH INPUT CIRCUITS FOR AN OPEN

- Measure the resistance between the headlamp switch, harness side and the SCCM, harness side as follows:

Headlamp Switch Connector-Pin	SCCM Connector-Pin	Circuit
C205-6	C2414A-21	CLF23 (WH/VT)
C205-2	C2414A-22	CLS34 (GY)
C205-7	C2414A-18	CLF24 (YE)

N0112015

- **Are the resistances less than 5 ohms?**

Yes
GO to C10.

No
REPAIR the circuit in question for an open. TEST the system for normal operation.

C9 CHECK THE BCM OUTPUT

- Ignition OFF.
- Disconnect: BCM C2280E.
- Ignition ON.
- **Does the LH or RH headlamp continue to illuminate?**

Yes
REPAIR circuit CLF04 (BN/BU) (LH headlamp) or circuit CLF05 (BU/GN) (RH headlamp) for a short to voltage as necessary. TEST the system for normal operation.

No
GO to C11.

C10 CHECK FOR CORRECT SCCM OPERATION	

• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the SCCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new SCCM.
	REFER to Section 211-05.
	TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

C11 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM.
	REFER to Section 419-10.
	TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: The High Beam(s) Are Always On

Refer to Wiring Diagrams Cell 85, Headlamps/Autolamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) monitors input from the multifunction switch. When the multifunction switch is placed in the FLASH-TO-PASS position (first detent when pulled towards the operator) or the headlamp switch is in the HEADLAMPS ON position and the multifunction switch is placed in the HIGH BEAM position (second detent), the SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating a flash-to-pass or high beam request.

On vehicles with halogen headlamps, when the BCM receives a request for high beams (the low beams must be on), the BCM supplies voltage to the high beam bulbs.

On vehicles with HID headlamps, when the BCM receives a request for high beams (the low beams must be on), the headlamps remain powered on, and the BCM supplies voltage to the shutter (located within each headlamp). This changes the headlamp beam pattern to illuminate a greater distance.

The multifunction switch returns to a rest position when released. The switch positions for the flash-to-pass and high beam features are momentary contact.

- DTC B1007:09 (High-Beam Headlamp Switch: Component Failure) — this DTC sets when the SCCM detects a fault from the multifunction switch input.
- DTC B1D02:15 (Left High Beam Circuit: Circuit Short To Battery or Open) — this DTC sets when the BCM detects a short to voltage from the LH high beam output circuit.

repair4less

- DTC B1D03:15 (Right High Beam Circuit: Circuit Short To Battery or Open) — this DTC sets when the BCM detects a short to voltage from the RH high beam output circuit.

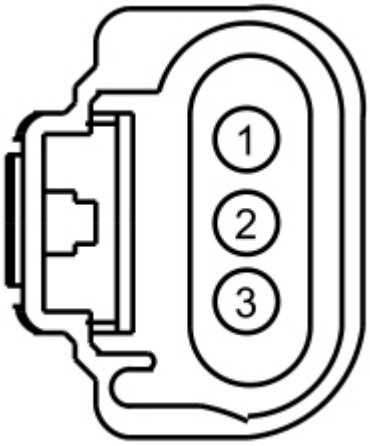
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Multifunction switch
- SCCM
- BCM

PINPOINT TEST D: THE HIGH BEAMS ARE ON CONTINUOUSLY

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>D1 CHECK THE MULTIFUNCTION SWITCH INPUT

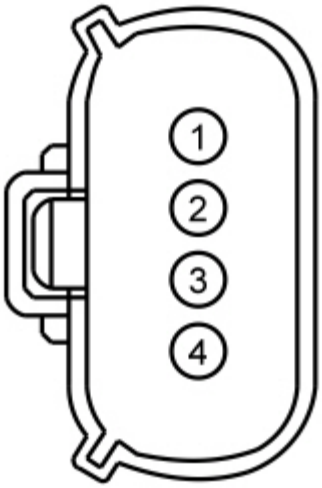
• Ignition ON.
• Using a scan tool, view SCCM PIDs.
• Monitor the SCCM FLASH-to-PASS and HIGH_BEAM_SW PIDs while placing the multifunction switch in the flash-to-pass, high beam and rest positions.
• Do the PID values agree with the multifunction switch position?</td><td>Yes
GO to D2.



No
INSTALL a new multifunction switch. REFER to Section 211-05.

If the concern still exists, INSTALL a new SCCM. REFER to Section 211-05.</td></tr>
<tr><td>D2 CHECK THE HIGH BEAM VOLTAGE SUPPLY CIRCUIT FOR VOLTAGE

• Ignition OFF.
• Disconnect: Incorrectly Operating LH Headlamp C1021 or RH Headlamp C1041 (Halogen headlamps).
• Disconnect: Incorrectly Operating LH Headlamp C1284 or RH Headlamp C1285 (HID Headlamps).
• Ignition ON.
• Make sure the multifunction switch in the rest position.
• For halogen headlamps, measure the voltage between:



<table>
<tr><td colspan="2">Positive Lead</td><td colspan="2">Negative Lead</td></tr>

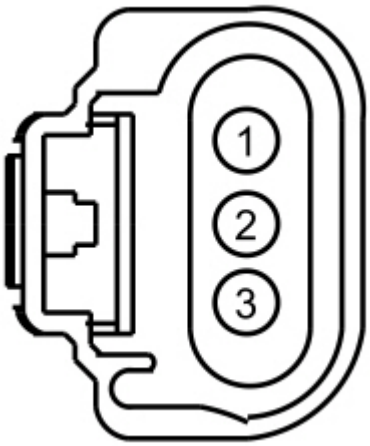
</td><td>Yes
GO to D3.

No
INSTALL a new headlamp assembly. REFER to Headlamp Assembly.</td></tr>
</table>

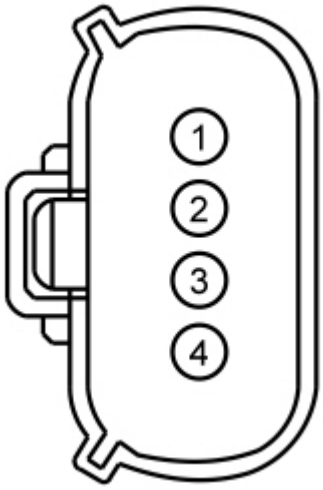
- For HID headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-3	CLF02 (GY/BN)	—	Ground
RH Headlamp			
C1285-3	CLF03 (VT/OG)	—	Ground



- **Is any voltage present?**

D3 CHECK THE BCM HIGH BEAM OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280E. • Ignition ON. • For halogen headlamps, measure the **voltage** between:	**Yes** REPAIR the circuit. **No** GO to D4.



repair4less

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1021-3	CLF02 (GY/BN)	—	Ground
RH Headlamp			
C1041-3	CLF03 (VT/OG)	—	Ground

- For HID headlamps, measure the **voltage** between:

Positive Lead		Negative Lead	
Pin	Circuit	Pin	Circuit
LH Headlamp			
C1284-3	CLF02 (GY/BN)	—	Ground
RH Headlamp			
C1285-3	CLF03 (VT/OG)	—	Ground

 • **Is any voltage present?**	

D4 CHECK FOR CORRECT BCM OPERATION
• Disconnect and inspect all the BCM connectors.
• Repair:
  • corrosion (install new connector or terminals – clean module pins)
  • damaged or bent pins – install new terminals/pins
  • pushed-out pins – install new pins as necessary
• Reconnect the BCM connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
• **Is the concern still present?**
	Yes
	CHECK On-Line Automotive Service Information System (OASIS) for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new BCM . REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Test E: The Flash-To-Pass Feature Is Inoperative

Normal Operation

The Steering Column Control Module (SCCM) monitors input from the multifunction switch. When the multifunction switch is placed in the FLASH-TO-PASS position, the SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating a flash-to-pass request. The BCM then provides voltage to the high beams.

This pinpoint test is intended to diagnose the following:

- Multifunction switch
- SCCM

PINPOINT TEST E: THE FLASH-TO-PASS FEATURE IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

repair4less

Test Step	Result / Action to Take
E1 VERIFY THE HIGH BEAM HEADLAMP OPERATION • Ignition ON. • Place the headlamp switch in the HEADLAMPS ON position and activate the high beams. • **Do the high beam headlamps illuminate?**	**Yes** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation. If the concern still exists, INSTALL a new SCCM . REFER to Section 211-05 . TEST the system for normal operation. **No** GO to Pinpoint Test B .

Parking, Rear and License Plate Lamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The Steering Column Control Module (SCCM) monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground. The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the headlamp switch position.

When the BCM receives a network message from the SCCM that the headlamp switch is in the PARKING LAMPS ON position, the BCM provides voltage to the parking lamps.

If the SCCM does not detect any active inputs from the headlamp switch for 5 seconds, or if the SCCM detects multiple headlamp switch input circuits are active, the SCCM sends a message to the BCM to indicate the fault. The BCM then turns the parking lamps and headlamps on and keeps them on until the battery saver feature times out.

Refer to Exterior Lighting in the Description and Operation portion of this section for information regarding the battery saver feature.

If either situation occurs, the SCCM and the BCM **cannot** be ruled immediately as being at fault. This is normal behavior of the SCCM and the BCM when a fault has been detected with the inputs from the headlamp switch.

repair4less

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical

• Headlamp switch	• Body Control Module (BCM) fuse(s):
	  ▪ 30 (15A) (front parking lamps)
	  ▪ 40 (10A) (rear parking lamps)
	• Bulb
	• Bulb socket
	• Exterior mirrors
	• Wiring, terminals or connectors

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00, The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM.

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10.

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• One or more parking, rear or license plate lamps is inoperative	• Fuse • Wiring, terminals or connectors • Bulb socket • Exterior mirror • Body Control Module (BCM)	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test O .
• The parking, rear or license plate lamps are on continuously	• Wiring, terminals or connectors • BCM	• GO to Pinpoint Test P .

Pinpoint Tests

Pinpoint Test O: One Or More Parking, Rear or License Plate Lamps Is Inoperative

Refer to Wiring Diagrams Cell 92 , Parking, Rear and License Lamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) sends voltage signals to the headlamp switch through the headlamp switch input circuits (off, parking lamps, headlamps, autolamps). At any given time, the headlamp switch routes one of the input circuits to ground, indicating the headlamp switch position to the SCCM .

The SCCM sends the status of the headlamp switch position to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN).

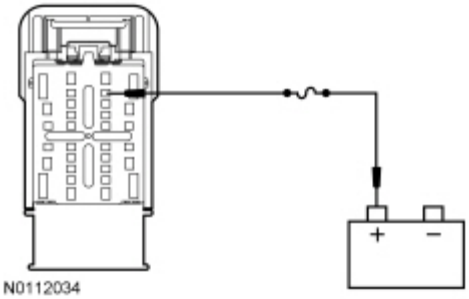
The BCM provides voltage to the parking lamps based on the headlamp switch position.

If the SCCM detects multiple or no active headlamp switch inputs, the SCCM sends a message to the BCM to indicate a fault with the headlamp switch input.

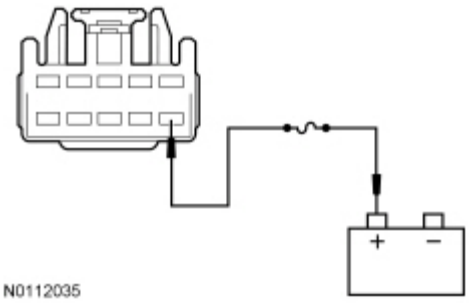
If the BCM receives a message from the SCCM indicating a fault with the headlamp switch inputs or the BCM loses communication with the SCCM , the BCM defaults the exterior lamps (headlamps and parking lamps) on.

There are 2 output circuits from the BCM for the parking lamps. One is for the front parking lamps, the other is for the rear parking lamps.

This pinpoint test is intended to diagnose the following:



- Fuse
- Wiring, terminals or connectors



repair4less

- Bulb socket
- Exterior mirror
- BCM

PINPOINT TEST O: ONE OR MORE PARKING, REAR OR LICENSE PLATE LAMPS IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
O1 DETERMINE IF ALL THE PARKING LAMPS ARE INOPERATIVE	
• Ignition OFF. • Place the headlamp switch in the PARKING LAMPS ON position. • **Are all the parking lamps inoperative?**	**Yes** GO to O7. **No** If all the rear parking lamps are inoperative, VERIFY the BCM fuse 40 (10A) is OK. If OK, GO to O2. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If all the front parking lamps are inoperative, VERIFY the BCM fuse 30 (15A) is OK. If OK, GO to O4. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. For any other inoperative lamp, GO to O5.
O2 BYPASS THE BCM (REAR PARKING LAMPS)	
NOTE: If the fuse in the jumper wire fails, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. • Place the headlamp switch in the OFF position. • Disconnect: BCM C2280D. • Connect a fused jumper wire between the positive battery terminal and the BCM C2280D-18, circuit CBP40 (YE/GN), harness side.  N0112034 • **Do the rear parking lamps illuminate?**	**Yes** REMOVE the jumper wire. GO to O7. **No** REMOVE the jumper wire. GO to O3.
O3 CHECK THE STOPLAMP OPERATION	
• Observe the stoplamps while applying the brake	**Yes** REPAIR circuit CBP40 (YE/GN) for an open.

pedal. • **Are the stoplamps illuminated with he brake pedal applied?**	TEST the system for normal operation. **No** REPAIR circuit GD117 (BK) for an open. TEST the system for normal operation.
O4 BYPASS THE BCM (FRONT LAMPS) **NOTE:** If the fuse in the jumper wire fails, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. • Place the headlamp switch to the OFF position. • Disconnect: BCM C2280E. • Connect a fused jumper wire between the positive battery terminal and the BCM C2280E-6, circuit CBP30 (YE/BU), harness side.  • **Do the front parking lamps illuminate?**	**Yes** REMOVE the jumper wire. GO to O7 . **No** REMOVE the jumper wire. REPAIR circuit CBP30 (YE/BU) for an open. TEST the system for normal operation.
O5 CHECK FOR VOLTAGE TO THE INOPERATIVE PARKING LAMP • Place the headlamp switch in the OFF position. • Disconnect: Inoperative Lamp. • Place the headlamp switch in the PARKING LAMPS ON position. • Measure the voltage between the inoperative lamp, harness side and ground as follows:	**Yes** GO to O6 . **No** REPAIR the parking lamp voltage supply circuit in question for an open. TEST the system for normal operation.

Inoperative Lamp	Connector-Pin	Circuit
LH front	C1023-2	CBP30 (YE/BU)
RH front	C1043-2	CBP30 (YE/BU)
LH front side lamp	C1127-1	CBP30 (YE/BU)
RH front side lamp	C1126-1	CBP30 (YE/BU)

- **Is the voltage greater than 10 volts?**

O7 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test P: The Parking, Rear Or License Plate Lamps Are On Continuously

Refer to Wiring Diagrams Cell 92, Parking, Rear and License Lamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) sends voltage signals to the headlamp switch through the headlamp switch input circuits (off, parking lamps, headlamps, autolamps). At any given time, the headlamp switch routes one of the input circuits to ground, indicating the headlamp switch position to the SCCM.

The SCCM sends the status of the headlamp switch position to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN).

The BCM provides voltage to the parking lamps when the it receives a message from the SCCM indicating the headlamp switch in the PARKING LAMPS ON position.

If the SCCM detects multiple or no active headlamp switch inputs, the SCCM sends a message to the BCM to indicate a fault with the headlamp switch input.

If the BCM receives a message from the SCCM indicating a fault with the headlamp switch inputs or the BCM loses communication with the SCCM , the BCM defaults the exterior lamps on.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- BCM

PINPOINT TEST P: THE PARKING, REAR OR LICENSE PLATE LAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
P1 CHECK IF THE HEADLAMPS ARE ON • Ignition ON. • Observe the headlamps. • **Are the headlamps illuminated?**	**Yes** GO to Pinpoint Test C . **No** GO to P2 .
P2 CHECK THE BCM REAR PARKING LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280D. • Ignition ON. • **Do the rear lamps continue to illuminate?**	**Yes** REPAIR circuit CBP40 (YE/GN) for a short to voltage. TEST the system for normal operation. **No** GO to P3 .
P3 CHECK THE BCM FRONT PARKING LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280E. • Ignition ON. • **Do the parking lamps continue to illuminate?**	**Yes** REPAIR circuit CBP30 (YE/BU) for a short to voltage. TEST the system for normal operation. **No** GO to P4 .

P4 CHECK FOR CORRECT BCM OPERATION
• Ignition OFF.
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

Reversing Lamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

When the transmission is in reverse, the PCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the transmission is in reverse. The BCM provides voltage to the reversing lamps when it receives the message that the transmission is in reverse and the ignition is in RUN.

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow.

The BCM utilizes a FET protective circuit strategy for many of its outputs (such as a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET protection, allowing the circuit to function. If the circuit is still shorted the next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection), the FET protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair

repair4less

procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When a tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by the clear the continuous DTCs command. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand DTCs present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the repair.

The BCM FET protected output circuits for the reverse lamp system is the reverse lamps output circuit.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Bulb • Wiring, terminals or connectors

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no

power in run.
- verify the scan tool operation with a known good vehicle.
- refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM and the PCM.

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• Both reversing lamps are inoperative	• Wiring, terminals or connectors • Transmission gear input • Body Control Module (BCM)	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test U .
• An individual reversing lamp is inoperative	• Wiring, terminals or connectors • Bulb socket	• VERIFY the bulb is OK. If OK, GO to Pinpoint Test V .
• The reversing lamps are on continuously	• Wiring, terminals or connectors • Auto-dimming interior mirror • Transmission gear input • BCM	• GO to Pinpoint Test W .

Pinpoint Tests

Pinpoint Test U: Both Reversing Lamps Are Inoperative

Refer to Wiring Diagrams Cell 93 , Reversing Lamps for schematic and connector information.

Normal Operation

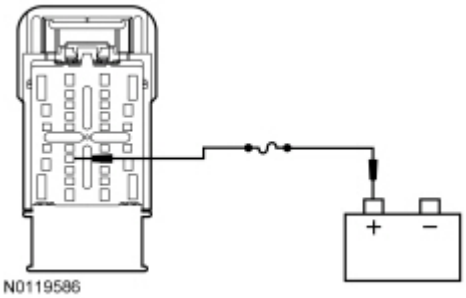
The PCM monitors the transmission gear status. When the transmission is in reverse, the PCM sends a

repair4less

message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the transmission is in reverse. When the BCM receives the message indicating the transmission is in reverse and the ignition is in RUN, the BCM provides voltage to the reversing lamps.

The reversing lamps share the fused power supply with the high mounted stoplamp and the ground circuit with the rear stoplamps.

- DTC B1277:11 (Reverse Lamp: Circuit Short To Ground) — This DTC sets when the BCM detects a short to ground from the reversing lamp output circuit.
- DTC B1277:15 (Reverse Lamp: Circuit Short To Battery or Open) — This DTC sets when the BCM detects an open from the reversing lamp output circuit.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Transmission gear input
- BCM

PINPOINT TEST U: BOTH REVERSING LAMPS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
U1 CHECK THE STOPLAMP OPERATION	
• Ignition OFF. • Apply the brake pedal while observing all the stoplamps. • **Do the stoplamps illuminate?**	**Yes** GO to U2 . **No** GO to Pinpoint Test I .
U2 CHECK THE BCM OUTPUT	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM reverse lamps active command (RVRS_LMPS). Command the reverse lamps on then off. • **Do the reversing lamps illuminate when commanded on?**	**Yes** REFER to Section 307-01 to diagnose a Transmission Range (TR) concern. **No** GO to U3 .
U3 BYPASS THE BCM	
NOTE: If the jumper wire fails, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. After the repair: If no DTCs are present, test the system for normal operation. If DTC U1000:00 is present, clear the DTCs **and** repeat the self-test **(required to enable the reversing lamp output driver if DTC U1000:00 is present).** Test the system for normal operation. If DTC U3000:49 is present, install a new BCM . Refer to Section 419-10 . Test the system for normal operation.	**Yes** REMOVE the jumper wire. GO to U4 . **No** REMOVE the jumper wire. REPAIR circuit CLS28 (BU/WH) for an open. TEST the system for normal operation.

• Ignition OFF. • Disconnect: BCM C2280D. • Connect a fused jumper wire between the BCM C2280D-13, circuit CLS28 (BU/WH), harness side and battery positive.  N0119586 • **Do the reversing lamps illuminate?**	

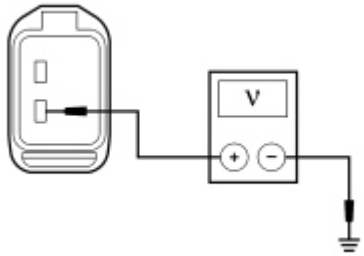
U4 CHECK FOR CORRECT BCM OPERATION
• Disconnect the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

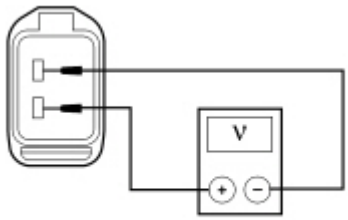
Pinpoint Test V: An Individual Reversing Lamp Is Inoperative

Refer to Wiring Diagrams Cell 93, Reversing Lamps for schematic and connector information.

Normal Operation

When the transmission is in reverse, the PCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the transmission is in reverse. When the BCM receives the message indicating the transmission is in reverse, the BCM provides voltage to the reversing lamps.





This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Bulb socket

PINPOINT TEST V: AN INDIVIDUAL REVERSING LAMP IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

repair4less

Test Step	Result / Action to Take
V1 CHECK FOR VOLTAGE TO THE REVERSING LAMP	**Yes** GO to V2 . **No** REPAIR circuit CLS28 (BU/WH) for an open. TEST the system for normal operation.
• Ignition OFF. • Apply the parking brake. • Disconnect: Inoperative Reversing Lamp. • Ignition ON. • Select REVERSE. • Measure the voltage between the LH reversing lamp C487-1, circuit CLS28 (BU/WH), harness side and ground; or between the RH reversing lamp C488-1, circuit CLS28 (BU/WH), harness side and ground.  A0057554 • **Is the voltage greater than 10 volts?**	
V2 CHECK THE REVERSING LAMP GROUND CIRCUIT FOR AN OPEN	**Yes** INSTALL a new bulb socket. TEST the system for normal operation. **No** REPAIR circuit GD117 (BK) for an open. TEST the system for normal operation.
• Measure the voltage between the LH reversing lamp C487-1, circuit CLS28 (BU/WH), harness side and the LH reversing lamp C487-2, circuit GD117 (BK), harness side; or between the RH reversing lamp C488-1, circuit CLS28 (BU/WH), harness side and the RH reversing lamp C488-2, circuit GD117 (BK), harness side.  N0088182 • **Is the voltage greater than 10 volts?**	

Pinpoint Test W: The Reversing Lamps Are On Continuously

Refer to Wiring Diagrams Cell 93 , Reversing Lamps for schematic and connector information.

Normal Operation

The PCM monitors the transmission gear status. When the transmission is in reverse, the PCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the transmission is in reverse. When the BCM receives the message indicating the transmission is in reverse and the ignition is in RUN, the BCM provides voltage to the reversing lamps and the auto-dimming interior mirror.

- DTC B1277:15 (Reverse Lamp: Circuit Short To Battery or Open) — This DTC sets when the BCM detects a short to voltage from the reversing lamp output circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Auto-dimming interior mirror
- Transmission gear input
- BCM

PINPOINT TEST W: THE REVERSING LAMPS ARE ON CONTINUOUSLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
W1 CHECK THE BCM CONTROL OF THE REVERSING LAMPS • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM reverse lamps active command (RVRS_LMPS). Command the reverse lamps off. • **Do the reversing lamps turn off?**	**Yes** REFER to Section 307-01 to diagnose a Transmission Range (TR) concern. **No** GO to W2.
W2 CHECK THE BCM OUTPUT • Ignition OFF. • Disconnect: BCM C2280D. • Ignition ON. • **Do the reversing lamps continue to illuminate?**	**Yes** REPAIR circuit CLS28 (BU/WH) for a short to voltage. TEST the system for normal operation. **No** GO to W3.

W3 CHECK FOR CORRECT BCM OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

Stoplamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The Body Control Module (BCM) monitors the input from the stoplamp switch. When the brake pedal is applied, voltage is routed to the BCM and the PCM. The BCM then supplies voltage to the stoplamps.

Aside from the stoplamp operation, when the brake pedal is applied, voltage passes through the BCM fuse 31 (5A) to the Trailer Brake Control (TBC) module and a separate circuit for customer use.

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow.

The BCM utilizes a FET protective circuit strategy for many of its outputs (such as a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET protection, allowing the circuit to function. If the circuit is still shorted the next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection), the FET protection shuts off the circuit again and the cumulative counter advances.

repair4less

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When a tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by the clear the continuous DTCs command. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand DTCs present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the repair.

The BCM FET protected output circuits for the stoplamps system are the high mounted stoplamp, and the LH and RH rear stoplamp output circuits.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
● Stoplamp switch	● Battery Junction Box (BJB) fuse 46 (10A) (stoplamp switch) ● Body Control Module (BCM) fuse(s): ■ 13 (15A) (RH rear stoplamp) ■ 14 (15A) (LH rear stoplamp) ■ 15 (15A) (high mounted stoplamp) ● Bulb ● Bulb socket ● Wiring, terminals or connectors ● Rear lamp assembly ● High mounted stoplamp

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .

- refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM .

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• All the stoplamps are inoperative	• Fuse • Wiring, terminals or connectors • Stoplamp switch • Body Control Module (BCM)	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test I .
• One or more stoplamps are inoperative	• Fuse • Wiring, terminals or connectors • Bulb socket • High mounted stoplamp • BCM	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test J .
• The stoplamp(s) are on continuously	• Wiring, terminals or connectors • Stoplamp switch • Trailer Brake Control (TBC) module • PCM • BCM	• GO to Pinpoint Test K .

Pinpoint Tests

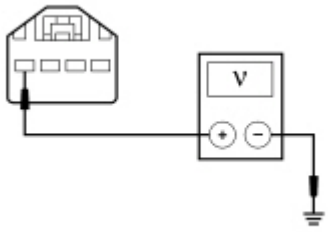
repair4less

Pinpoint Test I: All The Stoplamps Are Inoperative

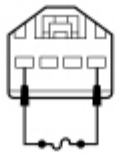
Refer to Wiring Diagrams Cell 90 , Turn Signal/Stop/Hazard Lamps for schematic and connector information.

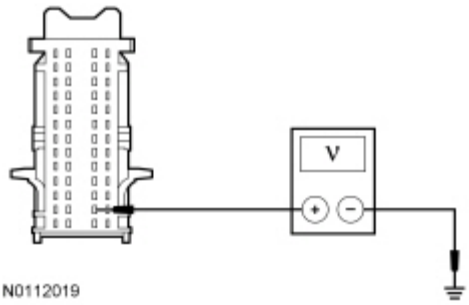
Normal Operation

The stoplamp switch is supplied voltage from the Battery Junction Box (BJB) fuse 46 (10A). When the brake pedal is applied, the stoplamp switch routes voltage to the Body Control Module (BCM), indicating the brake pedal is applied.



The BCM provides voltage to all the stoplamps (on independent circuits) when it detects the brake pedal is applied.





This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Stoplamp switch
- BCM

PINPOINT TEST I: ALL THE STOPLAMPS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
I1 CHECK FOR VOLTAGE TO THE STOPLAMP SWITCH	**Yes** GO to I2 . **No** VERIFY the BJB fuse 46 (10A) is OK. If OK, REPAIR circuit SBB46 (BN/RD) for an open. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
• Ignition OFF. • Disconnect: Stoplamp Switch C278. • Measure the voltage between the stoplamp switch C278-4, circuit SBB46 (BN/RD), harness side and ground.  N0104362 • **Is the voltage greater than 10 volts?**	
I2 BYPASS THE STOPLAMP SWITCH	**Yes** REMOVE the jumper wire. INSTALL a new stoplamp switch. REFER to Stoplamp Switch in this section.
• Connect a fused jumper wire between the stoplamp switch C278-4, circuit SBB46 (BN/RD), harness side and the stoplamp switch C278-1, circuit CCB08 (VT/WH), harness side.	

 N0038807 • **Are the stoplamps illuminated?**	TEST the system for normal operation. **No** LEAVE the jumper wire connected. GO to I3 .
I3 CHECK THE STOPLAMP SWITCH SIGNAL TO THE BCM	
• Disconnect: BCM C2280B. • Measure the voltage between the BCM C2280B-28, circuit CCB08 (VT/WH), harness side and ground.  N0112019 • **Is the voltage greater than 10 volts?**	**Yes** REMOVE the jumper wire. GO to I4 . **No** REMOVE the jumper wire. REPAIR circuit CCB08 (VT/WH) for an open. TEST the system for normal operation.
I4 CHECK FOR CORRECT BCM OPERATION	
• Disconnect all the BCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the BCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test J: One Or More Stoplamps Are Inoperative

Refer to Wiring Diagrams Cell 90 , Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

When the brake pedal is applied, the stoplamp switch routes voltage to the Body Control Module (BCM), indicating the brake pedal is applied.

The BCM provides voltage to all the stoplamps (on independent circuits) when it detects the brake pedal is applied.

repair4less

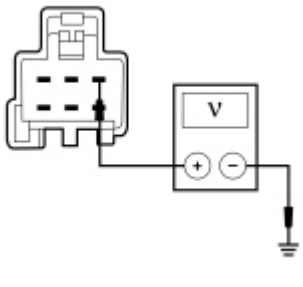
The LH stoplamps share the fused power source with the LH front turn lamp and the LH exterior mirror turn lamp.

The RH stoplamps share the fused power source with the RH front turn lamp and the RH exterior mirror turn lamp.

The high mounted stoplamp shares the fused power source with the reversing lamps.

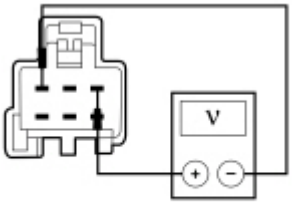
The rear stoplamps share a common ground circuit.

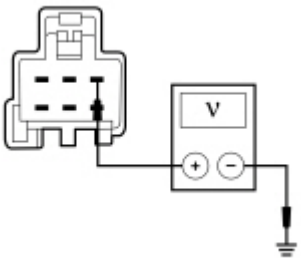
DTC Description	Fault Trigger Conditions
• B1115:11 — High Mounted Stop Lamp Control: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the high mounted stoplamp voltage supply circuit.
• B132B:11 — Left Stop/Turn Lamp: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the LH rear stop/turn lamp voltage supply circuit.
• B132B:15 — Left Stop/Turn Lamp: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open from the LH rear stop/turn lamp voltage supply circuit.
• B132C:11 — Right Stop/Turn Lamp: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the RH rear stop/turn lamp voltage supply circuit.
• B132C:15 — Right Stop/Turn Lamp: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open from the RH rear stop/turn lamp voltage supply circuit.
• U1000:00 — Solid State Driver Protection Active - Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. **The module has temporarily disabled a stoplamp output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the stoplamp output until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. **The module has permanently disabled a stoplamp output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM .**

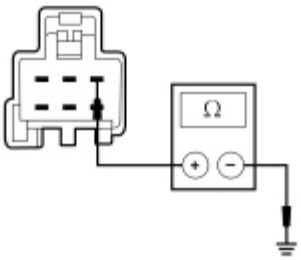


This pinpoint test is intended to diagnose the following:

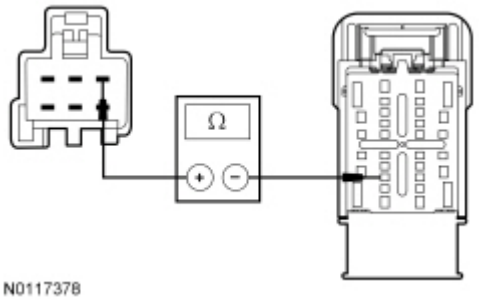
- Fuse
- Wiring, terminals or connectors
- Bulb socket
- High mounted stoplamp
- BCM

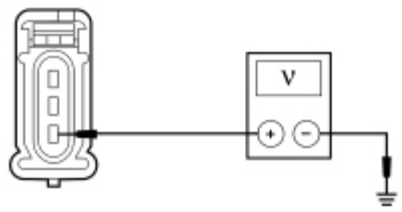






PINPOINT TEST J: ONE OR MORE STOPLAMPS ARE INOPERATIVE





NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Make sure the bulb is good before continuing diagnostics.

Test Step	Result / Action to Take
J1 DETERMINE THE INOPERATIVE STOPLAMP • Ignition OFF. • Apply the brake pedal and observe the stoplamps. • **Are all the stoplamps inoperative?**	**Yes** GO to Pinpoint Test I . **No** For the high mounted stoplamp, GO to J2 . If an individual rear stoplamp is inoperative, GO to J7 . If both LH and RH rear stoplamps are inoperative, REPAIR circuit GD117 (BK) for an open. TEST the system for normal operation.
J2 CHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP • Disconnect: High Mounted Stoplamp C904. • While applying the brake pedal, measure the voltage between the high mounted stoplamp C904-3, circuit CLS52 (BN), harness side and ground.  N0117374 • **Is the voltage greater than 10 volts?**	**Yes** GO to J3 . **No** VERIFY the BCM fuse 15 (15A) is OK. If OK, GO to J4 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs **and** REPEAT the self-test **(required to enable the stoplamp output driver if DTC U1000:00 is present).** TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
J3 CHECK THE HIGH MOUNTED STOPLAMP GROUND CIRCUIT FOR AN OPEN • While applying the brake pedal, measure the voltage between the high mounted stoplamp C904-3, circuit CLS52 (BN), harness side and the high mounted stoplamp C904-1, circuit GD139 (BK/YE), harness side.	**Yes** INSTALL a new high mounted stoplamp. TEST the system for normal operation. **No** REPAIR circuit GD139 (BK/YE) for an open. TEST the system for normal operation.

repair4less

 N0117376 • **Is the voltage greater than 10 volts?**	
J4 CARRY OUT THE BCM ON-DEMAND SELF-TEST AND RECHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP	**Yes** INSTALL a new high mounted stoplamp. TEST the system for normal operation. **No** GO to J5.
• Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • Clear the DTCs and repeat the BCM on-demand self-test. • While applying the brake pedal, measure the voltage between the high mounted stoplamp C904-3, circuit CLS52 (BN), harness side and ground.  N0117374 • **Is the voltage greater than 10 volts?**	
J5 CHECK THE HIGH MOUNTED STOPLAMP OUTPUT CIRCUIT FOR A SHORT TO GROUND	**Yes** GO to J6.
• Ignition OFF. • Disconnect: BCM C2280D. • Measure the resistance between the high mounted stoplamp C904-3, circuit CLS52 (BN), harness side and ground.  N0117377 • **Is the resistance greater than 10,000 ohms?**	**No** REPAIR circuit CLS52 (BN) for a short to ground. After the repair: If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs **and** REPEAT the self-test **(required to enable the stoplamp output driver if DTC U1000:00 is present).** TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.

J6 CHECK THE HIGH MOUNTED STOPLAMP OUTPUT CIRCUIT FOR AN OPEN	
• Measure the resistance between the high mounted stoplamp C904-3, circuit CLS52 (BN), harness side and the BCM C2280D-14, circuit CLS52 (BN), harness side.  N0117378 • **Is the resistance less than 5 ohms?**	**Yes** GO to J12 . **No** REPAIR circuit CLS52 (BN) for an open. TEST the system for normal operation.
J7 CHECK FOR VOLTAGE TO THE REAR STOPLAMP	
• Disconnect: Inoperative Rear Lamp. • While applying the brake pedal, measure the voltage between the inoperative lamp, harness side and ground as follows: **Inoperative Lamp** / **Connector-Pin** / **Circuit** LH upper / C4112-3 / CLS18 (GY/BN) LH lower / C4113-3 / CLS18 (GY/BN) RH upper / C4114-3 / CLS19 (VT/OG) RH lower / C4115-3 / CLS19 (VT/OG)  N0064675 • **Is the voltage greater than 10 volts?**	**Yes** GO to J8 . **No** VERIFY the BCM fuse 14 (15A) (LH stoplamps) or fuse 13 (15A) (RH stoplamps) is OK. If OK, GO to J9 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs **and** REPEAT the self-test **(required to enable the stoplamp output driver if DTC U1000:00 is present).** TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
J8 CHECK THE REAR STOPLAMP GROUND CIRCUIT FOR AN OPEN	
• While applying the brake pedal, measure the	**Yes**

repair4less

voltage between the inoperative lamp, harness side and ground as follows:

Inoperative Lamp	Connector-Pin Circuit	Connector-Pin Circuit
LH upper	C4112-3 CLS18 (GY/BN)	C4112-1 GD117 (BK)
LH lower	C4113-3 CLS18 (GY/BN)	C4113-1 GD117 (BK)
RH upper	C4114-3 CLS19 (VT/OG)	C4114-1 GD117 (BK)
RH lower	C4115-3 CLS19 (VT/OG)	C4115-1 GD117 (BK)

N0090078

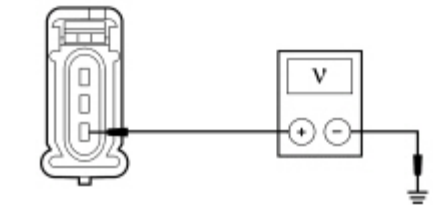
- **Is the voltage greater than 10 volts?**

Yes
INSTALL a new bulb socket. TEST the system for normal operation.

No
REPAIR circuit GD176 (BK/WH) for an open. TEST the system for normal operation.

J9 CARRY OUT THE BCM ON-DEMAND SELF-TEST AND RECHECK FOR VOLTAGE TO THE REAR STOPLAMP

NOTE: If both lamps are inoperative on the same side, disconnect one lamp at a time when carrying out this test.



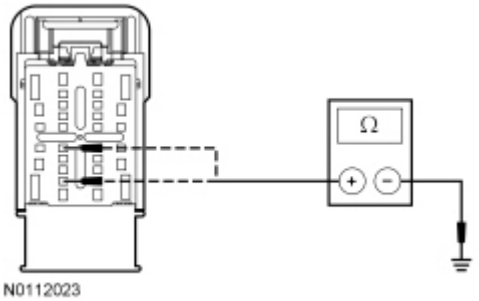
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: BCM Self-Test.
- Clear the DTCs and repeat the BCM on-demand self-test.
- While applying the brake pedal, measure the voltage between the inoperative lamp, harness side and ground as follows:

Inoperative	Connector-	

Yes
INSTALL a new bulb socket. TEST the system for normal operation.

No
GO to J10 .

Lamp	Pin	Circuit
LH upper	C4112-3	CLS18 (GY/BN)
LH lower	C4113-3	CLS18 (GY/BN)
RH upper	C4114-3	CLS19 (VT/OG)
RH lower	C4115-3	CLS19 (VT/OG)



N0064675

- **Is the voltage greater than 10 volts?**

J10 CHECK THE REAR STOPLAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

NOTE: It is important to disconnect the corresponding trailer tow stop/turn relay for correct test results.

- Ignition OFF.
- Disconnect: BCM C2280D.
- Disconnect: Corresponding Trailer Tow Stop/Turn Relay.
- Measure the resistance between the BCM C2280D-12 (LH stoplamps), circuit CLS18 (GY/BN), harness side and ground; or between the BCM C2280D-15 (RH stoplamps), circuit CLS19 (VT/OG), harness side and ground.

N0112023

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to J11.

No
REPAIR circuit CLS18 (GY/BN) (LH stoplamps) or circuit CLS19 (VT/OG) (RH stoplamps) for a short to ground. After the repair: If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs **and** REPEAT the self-test **(required to enable the stoplamp output driver if DTC U1000:00 is present).** TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.

J11 CHECK THE REAR STOPLAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

Pinpoint Test K: The Stoplamp(s) Are On Continuously

Refer to Wiring Diagrams Cell 90, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

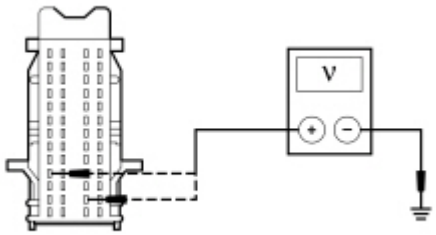
When the brake pedal is applied, the stoplamp switch routes voltage to the PCM and to the Body Control Module (BCM) to indicate that the brake pedal is applied.

The BCM provides voltage to all the stoplamps (on independent circuits) when it detects that the brake pedal is applied.

The voltage from the stoplamp switch also passes through the BCM fuse 31 (5A) and is routed to the Trailer Brake Control (TBC) module on one circuit and for a customer access use on another circuit.

DTC Description	Fault Trigger Conditions
• B132B:15 — Left Stop/Turn Lamp: Circuit Short To Battery or Open	This DTC sets when the BCM detects a short to voltage from the LH rear stop/turn lamp voltage supply circuit.
• B132C:15 — Right Stop/Turn Lamp: Circuit Short To Battery or Open	This DTC sets when the BCM detects a short to voltage from the RH rear stop/turn lamp voltage supply circuit.
• C0040:12 — Brake Pedal Switch "A": Circuit Short To Battery	This DTC sets when the BCM detects a short to voltage from the stoplamp switch input circuit.

This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- Stoplamp switch
- TBC module
- PCM
- BCM

PINPOINT TEST K: THE STOPLAMP(S) ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
K1 DETERMINE IF ALL THE STOPLAMPS ARE ON	
• Ignition ON. • Observe the stoplamps. • **Are all the stoplamps on?**	**Yes** GO to K3 . **No** GO to K2 .
K2 CHECK THE STOPLAMP VOLTAGE SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280D. • Ignition ON. • **Does any stoplamp continue to illuminate?**	**Yes** If the LH rear lamps continue to illuminate, REPAIR circuit CLS18 (GY/BN) for a short to voltage. TEST the system for normal operation. If the RH rear lamps continue to illuminate, REPAIR circuit CLS19 (VT/OG) for a short to voltage. TEST the system for normal operation. If the high mounted stoplamp continues to illuminate, REPAIR circuit CLS52 (BN) for a short to

repair4less

	voltage. TEST the system for normal operation. **No** GO to K9.
K3 CHECK THE STOPLAMP SWITCH • Disconnect: Stoplamp Switch C278. • **Do the stoplamps continue to illuminate?**	**Yes** GO to K4. **No** INSTALL a new stoplamp switch. REFER to Stoplamp Switch in this section. TEST the system for normal operation.
K4 CHECK THE PCM • Ignition OFF. • Disconnect: PCM C1551 (3.5L), C175B (3.7L) or C1381B (5.0L/6.2L). • Ignition ON. • **Do the stoplamps continue to illuminate?**	**Yes** If the vehicle is equipped with an aftermarket TBC module, GO to K5. If the vehicle is not equipped with an aftermarket TBC module, GO to K6. **No** GO to K8.
K5 CHECK THE TBC MODULE • Ignition OFF. • Disconnect: TBC Module C2142. • Ignition ON. • **Do the stoplamps continue to illuminate?**	**Yes** GO to K6. **No** INSTALL a new TBC module. TEST the system for normal operation.
K6 CHECK THE CUSTOMER ACCESS CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280F. • Ignition ON. • **Do the stoplamps continue to illuminate?**	**Yes** GO to K7. **No** REPAIR circuit CBP31 (BU/OG) for a short to voltage. TEST the system for normal operation.
K7 CHECK THE STOPLAMP SWITCH INPUT AND TBC MODULE BRAKE INPUT CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280B. • Ignition ON. • Measure the voltage between the BCM C2280B-28, circuit CCB08 (VT/WH), harness side and ground; and between the BCM C2280B-4, circuit CBP31 (BU/OG), harness side and ground	**Yes** REPAIR circuit CCB08 (VT/WH) or circuit CBP31 (BU/OG) for a short to voltage as necessary. TEST the system for normal operation. **No** GO to K9.

 N0117379 • **Is any voltage present?**	
K8 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

K9 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

Trailer Lamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The trailer lamps and trailer battery charge are supplied power by relays that are energized to correspond with the exterior lighting and ignition state functions of the vehicle.

If the vehicle is not equipped with the factory manufactured Trailer Brake Control (TBC) module, the vehicle supplies circuitry to support the installation of an aftermarket TBC module (installed by the customer). To support the aftermarket TBC module, the vehicle circuitry only supplies voltage, ground, stoplamp switch input and a brake controlling circuit to the trailer tow connector. The trailer electric brakes themselves are controlled by the aftermarket trailer brake controller and not the vehicle itself.

For diagnostics and a description of the factory manufactured trailer brake control system, refer to Section 206-10 .

The trailer tow battery charge relay is controlled by the Body Control Module (BCM). If the BCM detects a low voltage concern when the ignition is in ACC or RUN, the BCM disables the trailer tow battery charge relay coil circuit.

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow.

repair4less

The BCM utilizes a FET protective circuit strategy for many of its outputs (such as a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET protection, allowing the circuit to function. If the circuit is still shorted the next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection), the FET protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When a tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by the clear the continuous DTCs command. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand DTCs present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the repair.

The BCM FET protected output circuits for the trailer tow electrical system is the trailer tow battery charge relay coil ground controlled circuit.

Inspection and Verification

1. Verify the customer concern.

2. Verify the exterior lighting and charging system of the vehicle is operating correctly. If not, refer to the appropriate pinpoint test in this section.

3. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical

• Battery Junction Box (BJB) fuse(s):
  ▪ 17 (30A) (Trailer Brake Control (TBC) module)
  ▪ 21 (30A) (trailer tow battery charge relay switch side)
  ▪ 43 (15A) (trailer tow reversing lamps)
  ▪ 54 (5A) (trailer tow battery charge relay coil)
  ▪ 67 (20A) (trailer tow parking lamps)
  ▪ 73 (20A) (trailer tow turn relays)
• Body Control Module (BCM) fuse 31 (5A) (stoplamp switch input)
• Wiring, terminals or connectors
• Trailer tow connector
• Trailer tow stop/turn relays
• Trailer tow battery charge relay

- Trailer tow parking lamp relay
- TBC module (aftermarket)
- Trailer

4. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

5. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

6. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

7. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00, The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

8. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record the continuous memory DTCs.

9. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM.

10. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10.

11. If no DTCs related to the concern are retrieved, GO to Symptom Chart.

Pinpoint Tests

Pinpoint Test X: All The Trailer Lamps Are Inoperative

Refer to Wiring Diagrams Cell 11, Fuse and Relay Information for schematic and connector information.

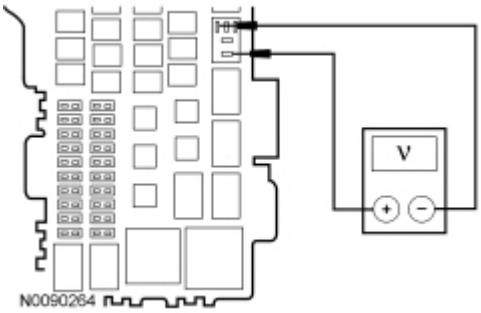
Refer to Wiring Diagrams Cell 95, Trailer/Camper Adapter for schematic and connector information.

Normal Operation

The trailer tow connector receives ground through a dedicated ground circuit. This circuit is the shared ground for all of the trailer lamps.

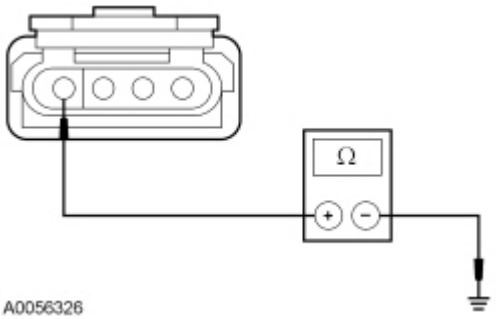
All of the trailer lamp relays share a common ground.

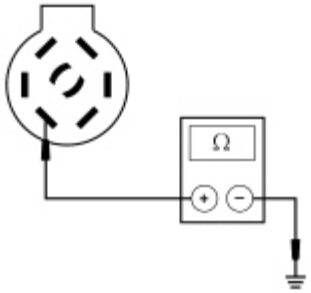
This pinpoint test is intended to diagnose the following:

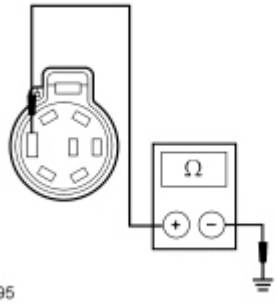


- Wiring, terminals or connectors
- Trailer tow connector
- Trailer

PINPOINT TEST X: ALL THE TRAILER LAMPS ARE INOPERATIVE







NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Before beginning diagnostics, visually inspect the trailer tow connector mounted on the bumper for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
X1 CHECK THE RELAY GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Trailer Tow Parking Lamp Relay. • Measure the voltage between the trailer tow parking lamp relay pin 3, circuit SBB67 (BU/RD), BJB face side and the trailer tow parking lamp relay pin 2, circuit GD123 (BK/GY), BJB face side.  • **Is the voltage greater than 10 volts?**	**Yes** GO to X2 . **No** REPAIR circuit GD123 (BK/GY) for an open. TEST the system for normal operation
X2 CHECK THE TRAILER TOW GROUND CIRCUIT FOR CONTINUITY TO GROUND	
• Disconnect: Negative Battery Cable. • For the 4-pin connector, measure the resistance between the trailer tow C439B-4, circuit RAT08 (WH), harness side and ground.	**Yes** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility. **No**

repair4less

 A0056326 • For the 7-pin connector, measure the resistance between the trailer tow connector pin 2, circuit RAT08 (WH), component side and ground.  N0068878 • **Is the resistance less than 5 ohms?**	For the 4-pin connector, REPAIR circuit RAT08 (WH) for an open. TEST the system for normal operation. For the 7-pin connector, GO to X3 .
X3 CHECK THE TRAILER TOW GROUND CIRCUIT FOR AN OPEN • Disconnect: Trailer Tow C439A. • Measure the resistance between the trailer tow C439A-2, circuit RAT08 (WH), harness side and ground.  N0066295 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** REPAIR circuit RAT08 (WH) for an open. TEST the system for normal operation.

Pinpoint Test Y: The Trailer Stop/Turn Lamp Is Inoperative

Refer to Wiring Diagrams Cell 11 , Fuse and Relay Information for schematic and connector information.

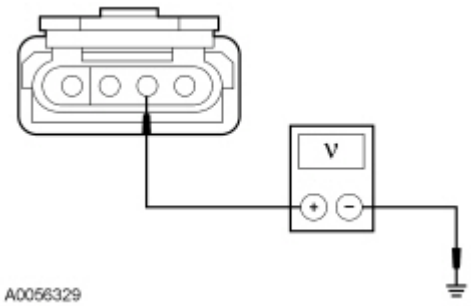
Refer to Wiring Diagrams Cell 95 , Trailer/Camper Adapter for schematic and connector information.

Normal Operation

The trailer tow LH stop/turn relay coil receives voltage when the vehicle LH rear stoplamp is illuminated. When the trailer tow LH stop/turn relay is energized, voltage is routed to the trailer tow connector.

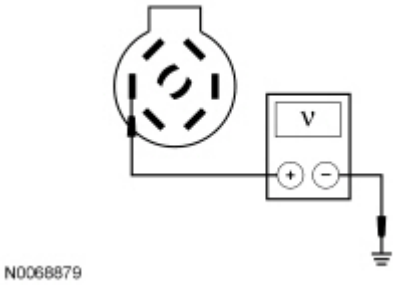
The trailer tow RH stop/turn relay coil receives voltage when the vehicle RH rear stoplamp is illuminated. When the trailer tow RH stop/turn relay is energized, voltage is routed to the trailer tow connector.

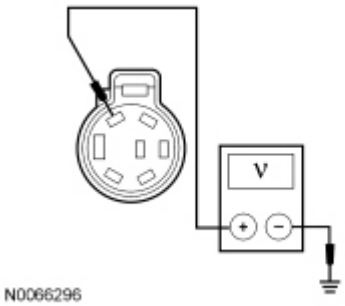
The Battery Junction Box (BJB) fuse 73 (20A) supplies voltage to both trailer tow stop/turn relays.

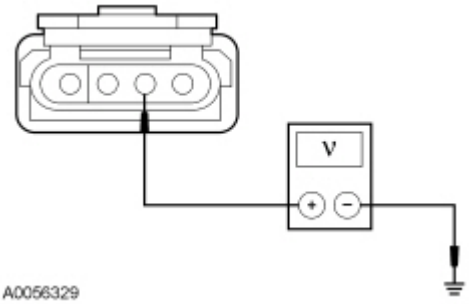


This pinpoint test is intended to diagnose the following:

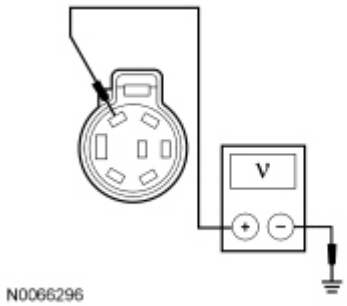
- Fuse
- Wiring, terminals or connectors
- Trailer tow connector
- Trailer tow stop/turn relay
- Trailer

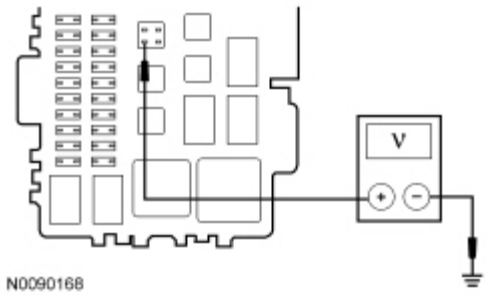


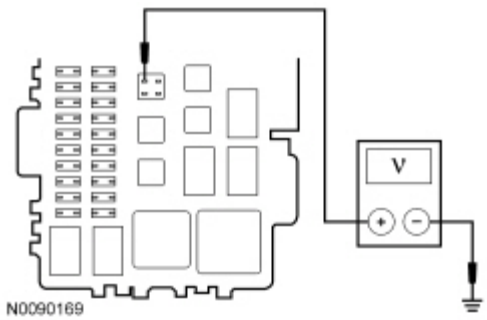




PINPOINT TEST Y: THE TRAILER STOP/TURN LAMP IS INOPERATIVE

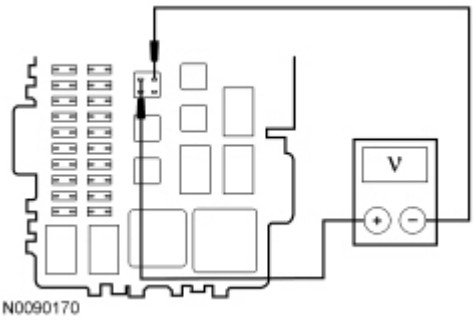


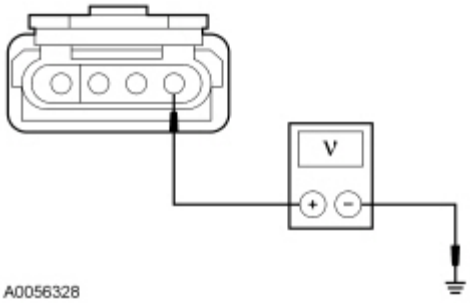


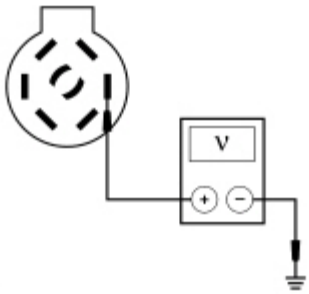


NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

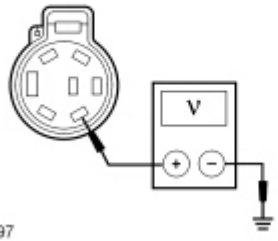
NOTE: Before beginning diagnostics, visually inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.







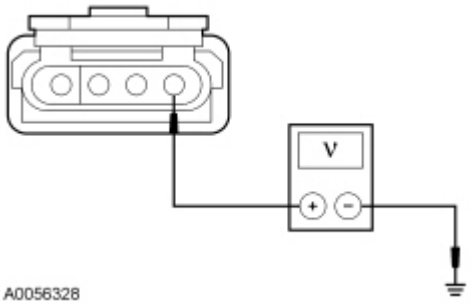
Test Step	Result / Action to Take
Y1 VERIFY THE TRAILER LAMP OPERATION	
• Ignition OFF. • Determine if both trailer stop/turn lamps are inoperative. • **Are both trailer stop/turn lamps inoperative?**	**Yes** VERIFY the BJB fuse 73 (20A) is OK. If OK, REPAIR circuit SBB73 (RD) for an open. TEST the system for normal operation. **No** For an inoperative LH trailer lamp, GO to Y2 . For an inoperative RH trailer lamp, GO to Y8 .
Y2 CHECK FOR VOLTAGE THROUGH THE TRAILER TOW CONNECTOR (LH TRAILER STOP/TURN LAMP)	
• For the 4-pin connector, while applying the brake pedal, measure the voltage between the trailer tow C439B-2, circuit CAT06 (YE), harness side and ground.  	**Yes** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility. **No** For the 4-pin connector, GO to Y4 . For the 7-pin connector, GO to Y3 .

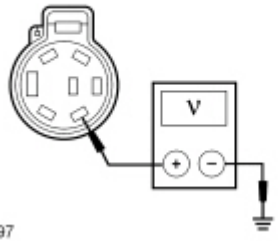


repair4less

• For the 7-pin connector, while applying the brake pedal, measure the voltage between the trailer tow connector pin 1, circuit CAT06 (YE), component side and ground.  N0068879 • **Is the voltage greater than 10 volts?**	
Y3 CHECK FOR VOLTAGE TO THE TRAILER TOW CONNECTOR (LH STOP/TURN 7-PIN)	
• Disconnect: Trailer Tow C439A. • While applying the brake pedal, measure the voltage between the trailer tow C439A-1, circuit CAT06 (YE), harness side and ground.  N0066296 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** GO to Y4 .
Y4 CHECK THE TRAILER TOW LH STOP/TURN RELAY	
• Disconnect: Trailer Tow LH Stop/Turn Relay. • Substitute a known good relay. • For the 4-pin connector, while applying the brake pedal, measure the voltage between the trailer tow C439B-2, circuit CAT06 (YE), harness side and ground.  A0056329 • For the 7-pin connector, while applying the brake pedal, measure the voltage between the trailer tow C439A-1, circuit CAT06 (YE), harness side and ground.	**Yes** REMOVE the known good relay. INSTALL a new trailer tow turn relay. TEST the system for normal operation. **No** REMOVE the known good relay. GO to Y5 .

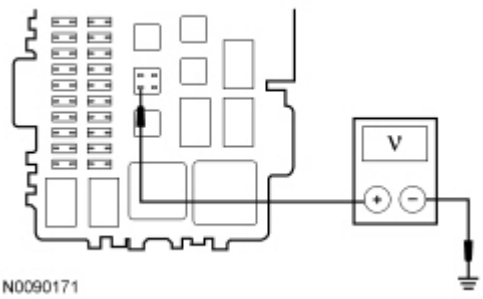
 N0066296 • **Is the voltage greater than 10 volts?**	
Y5 CHECK FOR VOLTAGE TO THE LH STOP/TURN LAMP RELAY COIL	
• While applying the brake pedal, measure the voltage between the trailer tow LH turn relay pin 1, circuit CLS18 (GY/BN), BJB face side and ground.  N0090168 • **Is the voltage greater than 10 volts?**	**Yes** GO to Y6 . **No** REPAIR circuit CLS18 (GY/BN) for an open. TEST the system for normal operation.
Y6 CHECK THE VOLTAGE SUPPLY CIRCUIT TO THE LH STOP/TURN LAMP RELAY	
• Measure the voltage between the trailer tow LH turn relay pin 3, circuit SBB73 (RD), BJB face side and ground.  N0090169 • **Is the voltage greater than 10 volts?**	**Yes** GO to Y7 . **No** REPAIR circuit SBB73 (RD) for an open. TEST the system for normal operation.
Y7 CHECK THE LH STOP/TURN LAMP RELAY GROUND CIRCUIT FOR AN OPEN	
• Measure the voltage between the trailer tow LH turn relay pin 3, circuit SBB73 (RD), BJB face side and the trailer tow LH turn relay pin 2, circuit GD123 (BK/GY), BJB face side.	**Yes** REPAIR circuit CAT06 (YE) for an open. TEST the system for normal operation. **No** REPAIR circuit GD123

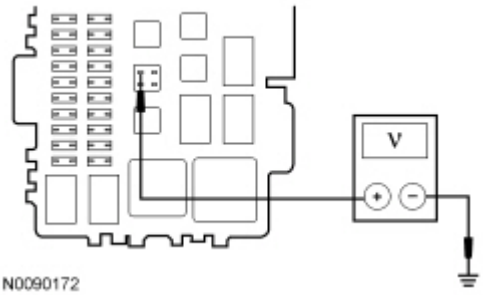


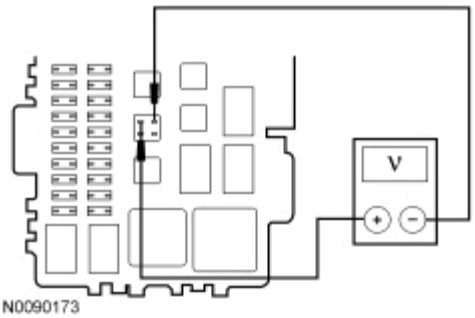


repair4less

 N0090170 • **Is the voltage greater than 10 volts?**	(BK/GY) for an open. TEST the system for normal operation.
Y8 CHECK FOR VOLTAGE THROUGH THE TRAILER TOW CONNECTOR (RH TRAILER STOP/TURN LAMP)	
• For the 4-pin connector, while applying the brake pedal, measure the voltage between the trailer tow C439B-1, circuit CAT09 (GN), harness side and ground.  A0056328 • For the 7-pin connector, while applying the brake pedal, measure the voltage between the trailer tow connector pin 4, circuit CAT09 (GN), component side and ground.  N0068880 • **Is the voltage greater than 10 volts?**	**Yes** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility. **No** For the 4-pin connector, GO to Y10 . For the 7-pin connector, GO to Y9 .
Y9 CHECK FOR VOLTAGE TO THE TRAILER TOW CONNECTOR (RH STOP/TURN 7-PIN)	
• Disconnect: Trailer Tow C439A. • While applying the brake pedal, measure the voltage between the trailer tow C439A-4, circuit CAT09 (GN), harness side and ground.	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** GO to Y10 .







N0066297

- **Is the voltage greater than 10 volts?**

Y10 CHECK THE TRAILER TOW RH STOP/TURN RELAY	
• Disconnect: Trailer Tow RH Stop/Turn Relay. • Substitute a known good relay. • For the 4-pin connector, while applying the brake pedal, measure the voltage between the trailer tow C439B-1, circuit CAT09 (GN), harness side and ground.  A0056328 • For the 7-pin connector, while applying the brake pedal, measure the voltage between the trailer tow C439A-4, circuit CAT09 (GN), harness side and ground. • Measure the voltage between the trailer tow RH turn relay pin 3, circuit SBB73 (RD), BJB face side and ground.  N0090172 • **Is the voltage greater than 10 volts?**	**Yes** GO to Y13 . **No** REPAIR circuit SBB73 (RD) for an open. TEST the system for normal operation.
Y13 CHECK THE RH STOP/TURN LAMP RELAY GROUND CIRCUIT FOR AN OPEN	
• Measure the voltage between the trailer tow RH turn relay pin 3, circuit SBB73 (RD), BJB face side and the trailer tow RH turn relay pin 2, circuit GD123 (BK/GY), BJB face side.  N0090173 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit CAT09 (GN) for an open. TEST the system for normal operation. **No** REPAIR circuit GD123 (BK/GY) for an open. TEST the system for normal operation.

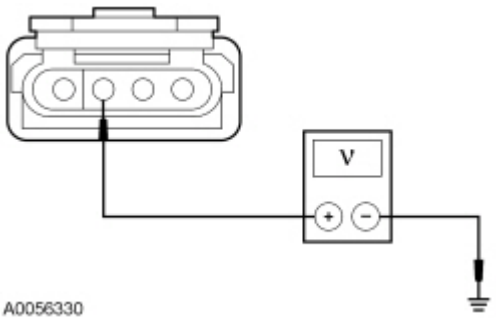
Pinpoint Test Z: The Trailer Parking Lamps Are Inoperative

Refer to Wiring Diagrams Cell 11 , Fuse and Relay Information for schematic and connector information.

Refer to Wiring Diagrams Cell 95 , Trailer/Camper Adapter for schematic and connector information.

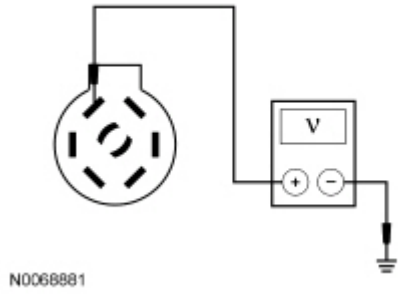
Normal Operation

The trailer tow parking lamp relay coil receives voltage when the vehicle parking lamps are illuminated. The Battery Junction Box (BJB) fuse 67 (20A) supplies voltage to the trailer tow parking lamp relay switch side. When the trailer tow parking lamp relay is energized, voltage is routed to the trailer tow connector.



This pinpoint test is intended to diagnose the following:

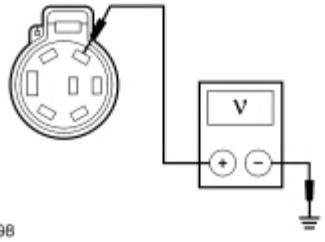
- Fuse
- Wiring, terminals or connectors
- Trailer tow connector
- Trailer tow parking lamp relay
- Trailer

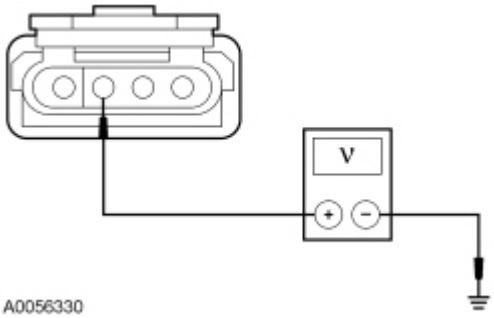


PINPOINT TEST Z: THE TRAILER PARKING LAMPS ARE INOPERATIVE

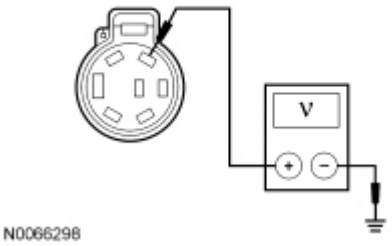
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

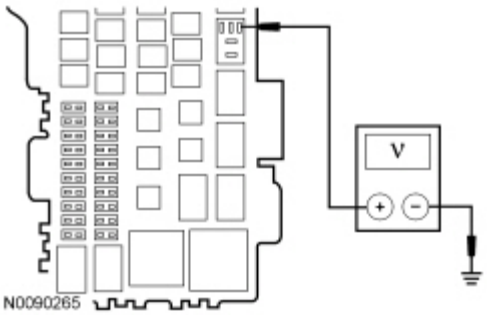
NOTE: Before beginning diagnostics, visually inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

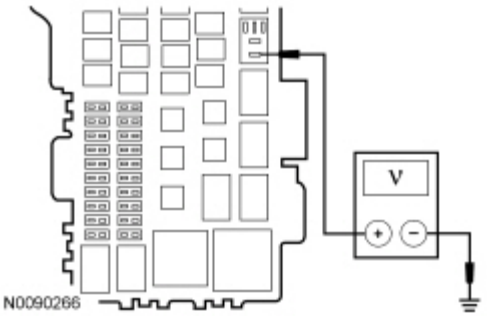




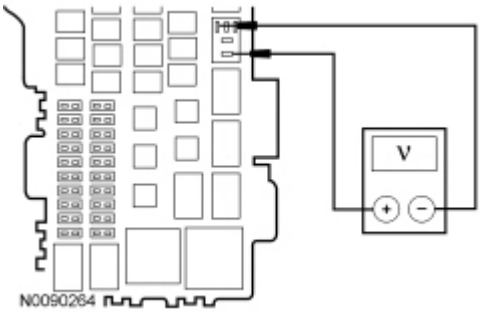
Test Step	Result / Action to Take
Z1 CHECK FOR VOLTAGE THROUGH THE TRAILER TOW CONNECTOR	
• Ignition OFF. • Place the headlamp switch in the PARKING LAMPS ON position. • For the 4-pin connector, measure the voltage between the trailer tow C439B-3, circuit CAT17 (BN), harness side and ground.  A0056330 • For the 7-pin connector, measure the voltage between the trailer tow connector pin 6, circuit CAT17 (BN), component side and ground.	**Yes** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility. **No** For the 4-pin connector, GO to Z3 . For the 7-pin connector, GO to Z2 .







repair4less



N0068881

- **Is the voltage greater than 10 volts?**

Z2 CHECK FOR VOLTAGE TO THE TRAILER TOW CONNECTOR (7-PIN)	
• Disconnect: Trailer Tow C439A. • Measure the voltage between the trailer tow C439A-6, circuit CAT17 (BN), harness side and ground.  N0066298 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** GO to Z3 .
Z3 CHECK THE TRAILER TOW PARKING LAMP RELAY	
• Place the headlamp switch in the OFF position. • Disconnect: Trailer Tow Parking Lamp Relay. • Substitute a known good relay. • Place the headlamp switch in the PARKING LAMPS ON position. • For the 4-pin connector, measure the voltage between the trailer tow C439B-3, circuit CAT17 (BN), harness side and ground.  A0056330 • For the 7-pin connector, measure the voltage between the trailer tow C439A-6, circuit CAT17 (BN), harness side and ground.	**Yes** REMOVE the known good relay. GO to Z4 . **No** REMOVE the known good relay. INSTALL a new trailer tow parking lamp relay. TEST the system for normal operation.

 N0066298 • **Is the trailer tow parking lamp relay OK?**	
Z4 CHECK FOR VOLTAGE TO THE TRAILER TOW PARKING LAMP RELAY COIL	
• Measure the voltage between the trailer tow parking lamp relay pin 1, circuit CBP40 (YE/GN), BJB face side and ground.  N0090265 • **Is the voltage greater than 10 volts?**	**Yes** GO to Z5 . **No** REPAIR circuit CBP40 (YE/GN) for an open. TEST the system for normal operation.
Z5 CHECK THE VOLTAGE SUPPLY CIRCUIT TO THE TRAILER TOW PARKING LAMP RELAY	
• Place the headlamp switch in the OFF position. • Measure the voltage between the trailer tow parking lamp relay pin 3, circuit SBB67 (BU/RD), BJB face side and ground.  N0090266 • **Is the voltage greater than 10 volts?**	**Yes** GO to Z6 . **No** VERIFY the BJB fuse 67 (20A) is OK. If OK, REPAIR circuit SBB67 (BU/RD) for an open. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
Z6 CHECK THE TRAILER TOW PARKING LAMP RELAY GROUND CIRCUIT FOR AN OPEN	
• Measure the voltage between the trailer tow parking lamp relay pin 3, circuit SBB67 (BU/RD), BJB face side and the trailer tow parking lamp relay pin 2, circuit GD123 (BK/GY), BJB face side.	**Yes** REPAIR circuit CAT17 (BN) for an open. TEST the system for normal operation.

repair4less

 • **Is the voltage greater than 10 volts?**	**No** REPAIR circuit GD123 (BK/GY) for an open. TEST the system for normal operation.

Pinpoint Test AA: The Trailer Reversing Lamps Are Inoperative

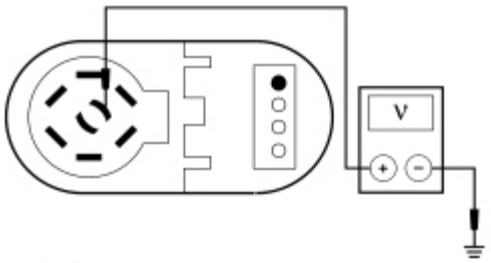
Refer to Wiring Diagrams Cell 11 , Fuse and Relay Information for schematic and connector information.

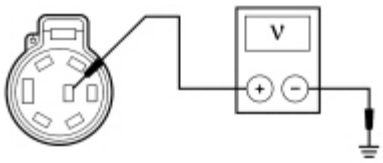
Refer to Wiring Diagrams Cell 95 , Trailer/Camper Adapter for schematic and connector information.

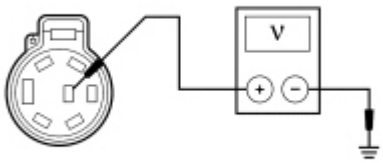
Normal Operation

The trailer tow reversing lamp relay coil receives voltage when the vehicle reversing lamps are illuminated. The Battery Junction Box (BJB) fuse 43 (15A) supplies voltage to the trailer tow reversing lamp relay switch side. When the trailer tow reversing lamp relay is energized, voltage is routed to the trailer tow connector.

This pinpoint test is intended to diagnose the following:

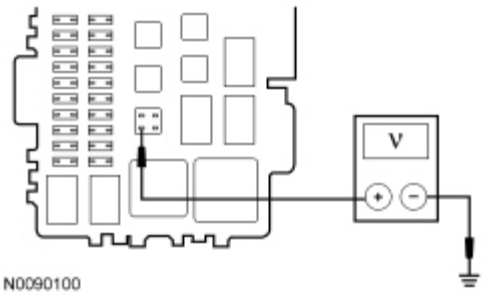


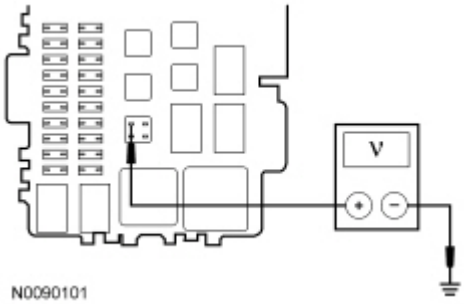


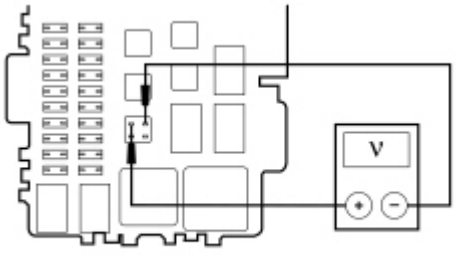


- Fuse
- Wiring, terminals or connectors
- Trailer tow connector
- Trailer tow reversing lamp relay
- Trailer

PINPOINT TEST AA: THE TRAILER REVERSING LAMPS ARE INOPERATIVE







NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Before beginning diagnostics, visually inspect the trailer tow connector mounted on the bumper for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

Test Step	Result / Action to Take
AA1 CHECK FOR VOLTAGE THROUGH THE TRAILER TOW CONNECTOR	
• Apply the parking brake. • Ignition ON. • Select REVERSE. • Measure the voltage between the trailer tow connector reversing lamp voltage supply pin, circuit CAT16 (GY/BN), component side and ground.	**Yes** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.

 N0084021 • **Is the voltage greater than 10 volts?**	**No** VERIFY the BJB fuse 43 (15A) is OK. If OK, GO to AA2 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
AA2 CHECK FOR VOLTAGE TO THE TRAILER TOW CONNECTOR (VEHICLE HARNESS)	
• Ignition OFF. • Disconnect: Trailer Tow C439A. • Ignition ON. • Select REVERSE. • Measure the voltage between the trailer tow C439A-7, circuit CAT16 (GY/BN), harness side and ground.  A0025848 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** GO to AA3 .
AA3 CHECK THE TRAILER TOW REVERSING LAMP RELAY	
• Ignition OFF. • Disconnect: Trailer Tow Parking Lamp Relay. • Substitute a known good relay. • Ignition ON. • Select REVERSE. • Measure the voltage between the trailer tow C439A-7, circuit CAT16 (GY/BN), harness side and ground.  A0025848 • **Is the voltage greater than 10 volts?**	**Yes** REMOVE the known good relay. INSTALL a new trailer tow reversing lamp relay. TEST the system for normal operation. **No** REMOVE the known good relay. GO to AA4 .
AA4 CHECK FOR VOLTAGE TO THE TRAILER TOW	

repair4less

REVERSING LAMP RELAY COIL	
• Select REVERSE. • Measure the voltage between the trailer tow reversing lamp relay pin 1, circuit CLS28 (BU/WH), BJB face side and ground.  N0090100 • **Is the voltage greater than 10 volts?**	**Yes** GO to AA5 . **No** REPAIR circuit CLS28 (BU/WH) for an open. TEST the system for normal operation.
AA5 CHECK THE TRAILER TOW REVERSING LAMP RELAY BJB VOLTAGE SUPPLY	
• Select PARK. • Ignition OFF. • Measure the voltage between the trailer tow reversing lamp relay pin 3, circuit SBB43 (BU/RD), BJB face side and ground.  N0090101 • **Is the voltage greater than 10 volts?**	**Yes** GO to AA6 . **No** REPAIR circuit SBB43 (BU/RD) for an open. TEST the system for normal operation.
AA6 CHECK THE TRAILER TOW REVERSING LAMP RELAY GROUND CIRCUIT FOR AN OPEN	
• Measure the voltage between the trailer tow reversing lamp relay pin 3, circuit SBB43 (BU/RD), BJB face side and the trailer tow reversing lamp relay pin 2, circuit GD123 (BK/GY), BJB face side.  N0117369	**Yes** REPAIR circuit CAT16 (GY/BN) for an open. TEST the system for normal operation. **No** REPAIR circuit GD123 (BK/GY) for an open. TEST the system for normal operation.

• **Is the voltage greater than 10 volts?**	

Pinpoint Test AB: The Trailer Lamps Are On Continuously

Refer to Wiring Diagrams Cell 11 , Fuse and Relay Information for schematic and connector information.

Refer to Wiring Diagrams Cell 95 , Trailer/Camper Adapter for schematic and connector information.

Normal Operation — Trailer Tow Stop/Turn Lamps

The trailer tow LH stop/turn relay coil receives voltage when the vehicle LH rear stoplamp is illuminated. When the trailer tow LH stop/turn relay is energized, voltage is routed to the trailer tow connector.

The trailer tow RH stop/turn relay coil receives voltage when the vehicle RH rear stoplamp is illuminated. When the trailer tow RH stop/turn relay is energized, voltage is routed to the trailer tow connector.

Trailer Tow Parking Lamps

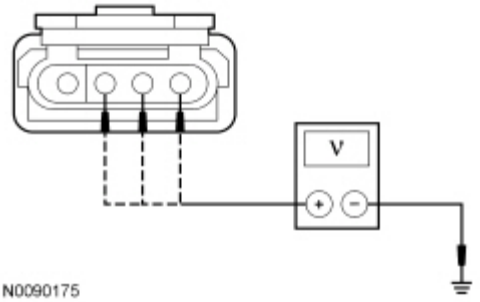
The trailer tow parking lamp relay coil receives voltage when the vehicle parking lamps are illuminated. When the trailer tow parking lamp relay is energized, voltage is routed to the trailer tow connector.

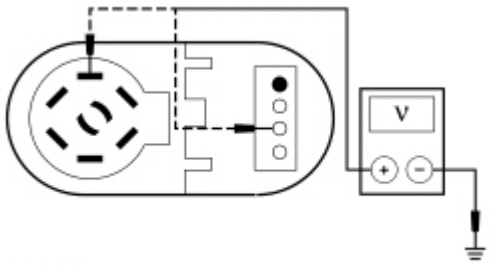
Trailer Tow Reversing Lamps

The trailer tow reversing lamp relay coil receives voltage when the vehicle reversing lamps are illuminated. When the trailer tow reversing lamp relay is energized, voltage is routed to the trailer tow connector.

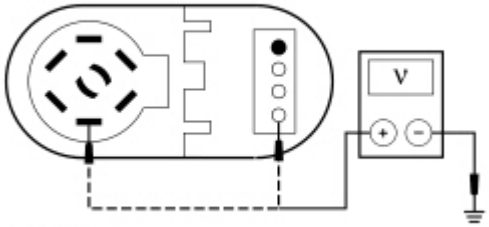
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Trailer tow relay
- Trailer





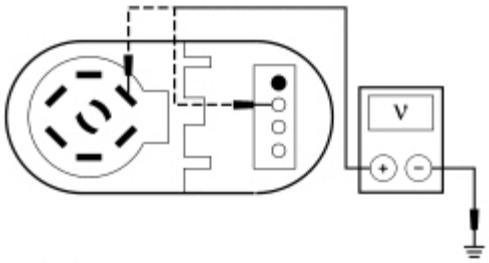
PINPOINT TEST AB: THE TRAILER LAMPS ARE ON CONTINUOUSLY



NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

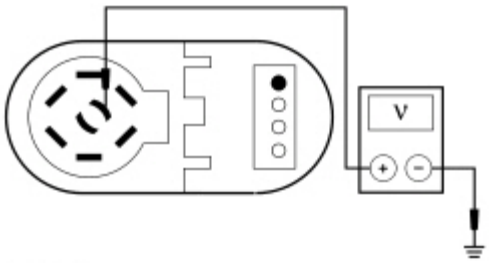
NOTE: Before beginning diagnostics, visually inspect the trailer tow connector mounted on the bumper for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

Test Step	Result / Action to Take
AB1 CHECK THE VEHICLE EQUIPMENT FOR A 7-PIN CONNECTOR	
• Ignition OFF. • Inspect the vehicle for a 7-pin trainer tow connector. • **Is the vehicle equipped with a 7-pin trailer tow connector?**	**Yes** GO to AB3 . **No** GO to AB2 .
AB2 CHECK FOR VOLTAGE AT THE TRAILER TOW 4-PIN	



repair4less

CONNECTOR • Ignition ON. • Measure the voltage between the trailer tow 4-pin connector, harness side and ground as follows: **Connector-Pin** / **Circuit** C439B-1 (RH stop/turn lamp) / CAT09 (GN) C439B-2 (LH stop/turn lamp) / CAT06 (YE) C439B-3 (parking lamps) / CAT17 (BN)  N0090175 • **Is any voltage present?**	**Yes** GO to AB4 . **No** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
AB3 CHECK FOR VOLTAGE AT THE TRAILER TOW 7-PIN CONNECTOR • Ignition ON. • For the LH trailer stop/turn lamp, measure the voltage between the trailer tow connector LH stop/turn lamp voltage supply pins, circuit CAT06 (YE), component side and ground.  N0084018 • For the RH trailer stop/turn lamp, measure the voltage between the trailer tow connector RH stop/turn lamp voltage supply pins, circuit CAT09 (GN), component side and ground.	**Yes** GO to AB4 . **No** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.



N0084019

- For the trailer parking lamps, measure the voltage between the trailer tow connector parking lamp voltage supply pins, circuit CAT17 (BN), component side and ground.

N0084020

- For the trailer reversing lamps, measure the voltage between the trailer tow connector reversing lamp voltage supply pin, circuit CAT16 (GY/BN), component side and ground.

N0084021

- **Is any voltage present?**

AB4 CHECK THE SUSPECT RELAY	
• Ignition OFF. • Disconnect: Suspect Trailer Tow Relay. • Carry out the component test for the suspect trailer tow relay. Refer to Wiring Diagrams Cell 149 for component testing. • **Is the trailer tow relay OK?**	**Yes** REPAIR circuit CAT06 (YE) (LH stop/turn), circuit CAT09 (GN) (RH stop/turn), circuit CAT17 (BN) (parking lamps) or CAT16 (GY/BN) (reversing lamps) for a short to voltage. TEST the system for normal operation. **No** INSTALL a new trailer tow relay in question. TEST the system for normal operation.

repair4less

Pinpoint Test AC: The Trailer Battery Charging Is Inoperative/Does Not Operate Correctly

Refer to Wiring Diagrams Cell 11 , Fuse and Relay Information for schematic and connector information.

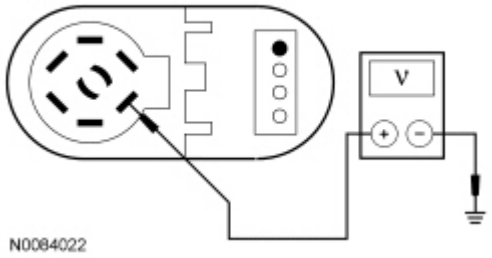
Refer to Wiring Diagrams Cell 95 , Trailer/Camper Adapter for schematic and connector information.

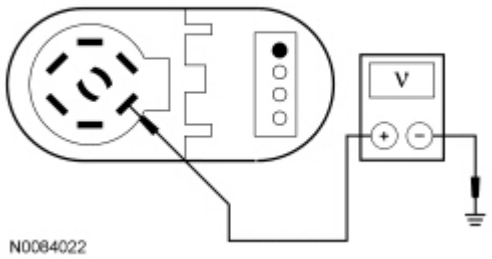
Normal Operation

The trailer battery charge relay coil receives voltage from the Battery Junction Box (BJB) fuse 54 (5A) when the ignition is in RUN. The BJB fuse 21 (30A) supplies voltage to the trailer battery charge relay switch side at all times. The Body Control Module (BCM) controls the ground side for the battery charge relay coil.

The BCM provides ground for the trailer battery charge relay when the ignition is in RUN and the BCM determines that the battery voltage is not low. When the trailer battery charge relay is energized, the voltage is routed to the trailer tow connector.

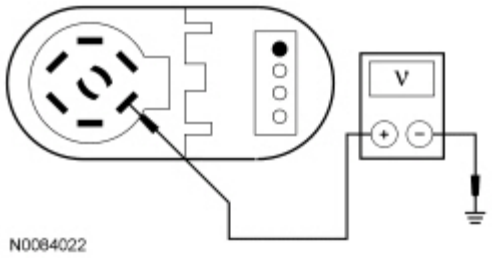
DTC Description	Fault Trigger Conditions
• B130C:12 — Load Shed Control: Circuit Short To Battery	This DTC sets when the BCM detects a short to battery from the trailer battery charge relay coil ground controlled circuit.
• B130C:14 — Load Shed Control: Circuit Short To Ground or Open	This DTC sets when the BCM detects an open or short to ground from the trailer battery charge relay coil ground controlled circuit.
• U1000:00 — Solid State Driver Protection Active - Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the control driver. **The module has temporarily disabled the trailer battery charge relay control because an excessive current draw exists (such as a short to ground). The BCM cannot enable the trailer battery charge relay control until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. **The module has permanently disabled the trailer battery charge relay control because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM .**

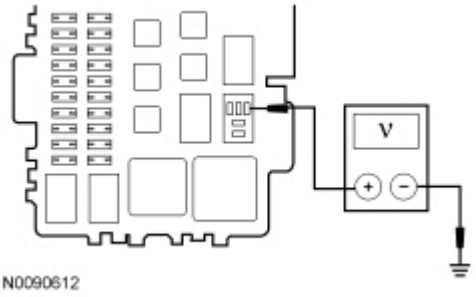




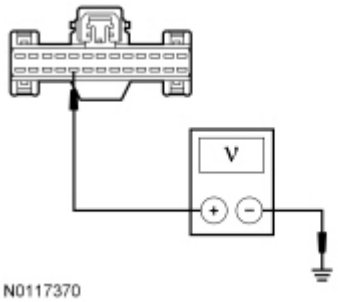
This pinpoint test is intended to diagnose the following:

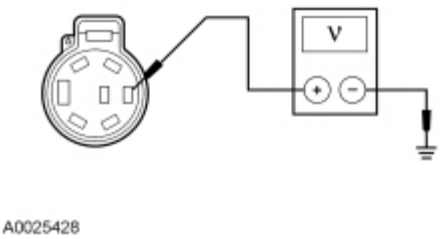
- Fuse
- Wiring, terminals or connectors
- Trailer tow connector
- Trailer battery charge relay
- Trailer
- BCM

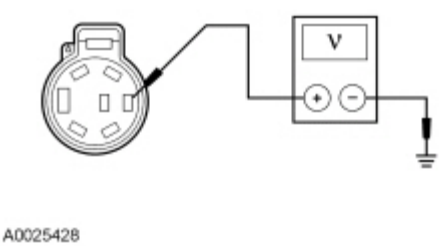




PINPOINT TEST AC: THE TRAILER BATTERY CHARGING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

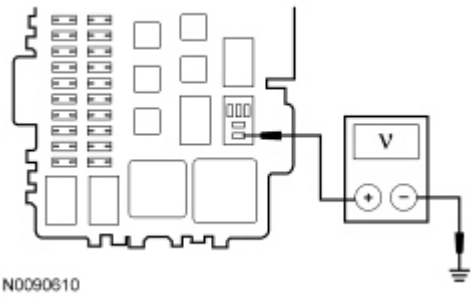


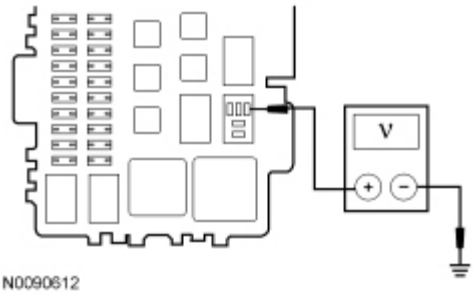




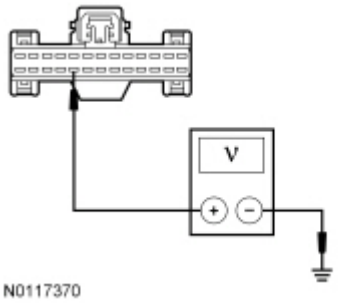
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

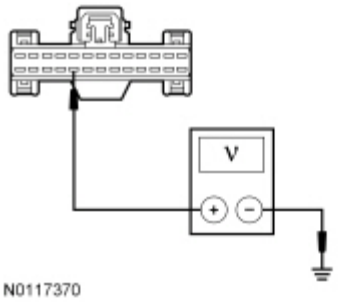
NOTE: Before beginning diagnostics, visually inspect the trailer tow connector mounted on the bumper for signs of corrosion or damage. Repair or install a new trailer tow connector as required.





Test Step	Result / Action to Take
AC1 CHECK FOR VOLTAGE THROUGH THE TRAILER TOW CONNECTOR (BATTERY CHARGE INOPERATIVE)	
• Start the engine. • Measure the voltage between the trailer tow connector battery charge voltage supply pin, circuit CAT14 (OG), component side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to AC2 . **No** VERIFY the BJB fuse 21 (30A) is OK. If OK, GO to AC7 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
AC2 CHECK FOR VOLTAGE AT THE TRAILER TOW CONNECTOR (BATTERY CHARGE ALWAYS ON)	
• Ignition OFF. • Measure the voltage between the trailer tow connector battery charge voltage supply pin, circuit CAT14 (OG), component side and ground.  • **Is any voltage present?**	**Yes** GO to AC3 . **No** GO to AC5 .
AC3 CHECK THE TRAILER BATTERY CHARGE VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE	





repair4less

• Disconnect: Trailer Battery Charge Relay. • Measure the voltage between the trailer tow connector battery charge voltage supply pin, circuit CAT14 (OG), component side and ground.  N0084022 • **Is any voltage present?**	**Yes** REPAIR circuit CAT14 (OG) for a short to voltage. TEST the system for normal operation. **No** GO to AC4 .
AC4 CHECK FOR VOLTAGE TO THE TRAILER BATTERY CHARGE RELAY COIL (ALWAYS ON)	
• Measure the voltage between the trailer battery charge relay pin 1, circuit CBB54 (VT/OG), BJB face side and ground.  N0090612 • **Is any voltage present?**	**Yes** REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. **No** INSTALL a new trailer battery charge relay. TEST the system for normal operation.
AC5 CHECK FOR DTC B130C:14	
• Review the DTCs recorded from the BCM self-test. • **Is DTC B130C:14 present?**	**Yes** GO to AC6 . **No** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
AC6 CHECK FOR VOLTAGE TO THE BCM (DTC B130C:14)	
• Disconnect: BCM C2280F. • Measure the voltage between the BCM C2280F-22, circuit CDC66 (BN/YE), harness side and ground.	**Yes** GO to AC13 . **No** REPAIR circuit CDC66 (BN/YE) for a short to ground. TEST the system for normal operation.

 • **Is the voltage greater than 10 volts?**	
AC7 CHECK FOR VOLTAGE AT THE TRAILER TOW CONNECTOR (BATTERY CHARGE INOPERATIVE)	
• Ignition OFF. • Disconnect: Trailer Tow C439A. • Ignition ON. • Measure the voltage between the trailer tow C439A-5, circuit CAT14 (OG), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** GO to AC8 .
AC8 CHECK THE TRAILER BATTERY CHARGE RELAY (INOPERATIVE CONDITION)	
• Ignition OFF. • Disconnect: Trailer Battery Charge Relay. • Substitute a known good relay. • Ignition ON. • Measure the voltage between the trailer tow C439A-5, circuit CAT14 (OG), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** REMOVE the known good relay. INSTALL a new trailer battery charge relay. TEST the system for normal operation. **No** REMOVE the known good relay. GO to AC9 .

repair4less

AC9 CHECK FOR VOLTAGE TO THE BATTERY CHARGE RELAY (SWITCH SIDE)	
• Ignition OFF. • Measure the voltage between the trailer battery charge relay pin 3, SBB21 (GY/RD), BJB face side and ground.  N0090610 • **Is the voltage greater than 10 volts?**	**Yes** GO to AC10 . **No** REPAIR circuit SBB21 (GY/RD) for an open. TEST the system for normal operation.
AC10 CHECK FOR VOLTAGE TO THE TRAILER BATTERY CHARGE RELAY COIL (INOPERATIVE CONDITION)	
• Ignition ON. • Measure the voltage between the trailer battery charge relay pin 1, circuit CBB54 (VT/OG), BJB face side and ground.  N0090612 • **Is the voltage greater than 10 volts?**	**Yes** GO to AC11 . **No** VERIFY the BJB fuse 54 (5A) is OK. If OK, REPAIR circuit CBB54 (VT/OG) for an open. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
AC11 CHECK THE BATTERY CHARGE RELAY COIL GROUND CONTROLLED CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: Trailer Battery Charge Relay. • Disconnect: BCM C2280F. • Ignition ON. • Measure the voltage between the BCM C2280F-22, circuit CDC66 (BN/YE), harness side and ground.	**Yes** REPAIR circuit CDC66 (BN/YE) for a short to voltage. TEST the system for normal operation. After the repair: If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs **and** REPEAT the self-test **(required to enable the trailer battery charge relay control driver if DTC U1000:00 is present).** TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.

 • **Is any voltage present?**	**No** GO to AC12.
AC12 CHECK THE BATTERY CHARGE RELAY COIL GROUND CONTROLLED CIRCUIT FOR AN OPEN	
• Ignition OFF. • Connect: Trailer Battery Charge Relay. • Ignition ON. • Measure the voltage between the BCM C2280F-22, circuit CDC66 (BN/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to AC13. **No** REPAIR circuit CDC66 (BN/YE) for an open. TEST the system for normal operation.
AC13 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AD: The Trailer Electric Brakes Are Inoperative/Always Applied

Refer to Wiring Diagrams Cell 95, Trailer/Camper Adapter for schematic and connector information.

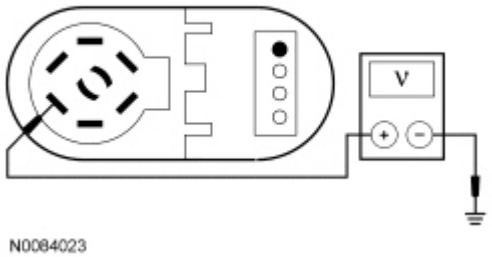
NOTE: This pinpoint test diagnoses the circuitry supplied for an aftermarket Trailer Brake Control (TBC) module. For diagnostics of the factory trailer brake control system, refer to Section 206-10.

Normal Operation

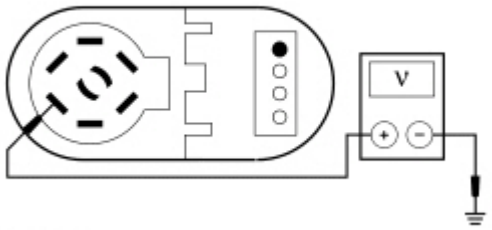
repair4less

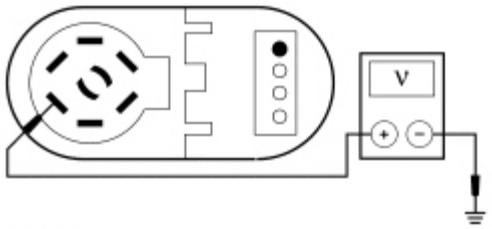
The TBC module is provided voltage at all times by the Battery Junction Box (BJB) fuse 17 (30A). The TBC module receives voltage from the Body Control Module (BCM) fuse 31 (5A) when the brake pedal is applied. When a brake application is detected from the stoplamp switch, the TBC module sends voltage to the trailer tow connector.

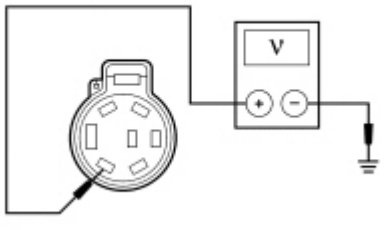
This pinpoint test is intended to diagnose the following:



- Fuse
- Wiring, terminals or connectors
- Trailer tow connector
- TBC module (aftermarket)
- Trailer
- BCM

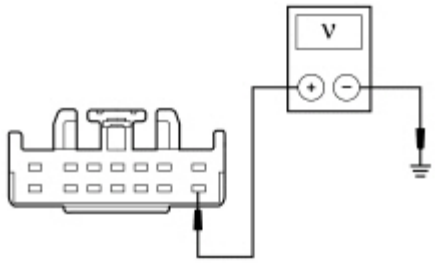


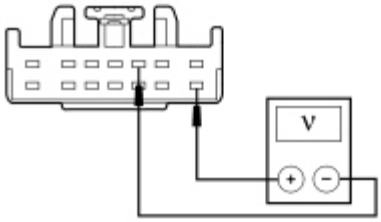


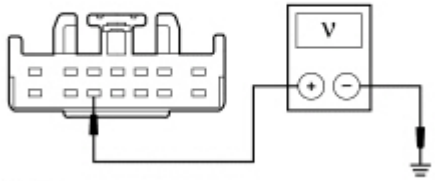


PINPOINT TEST AD: THE TRAILER ELECTRIC BRAKES ARE INOPERATIVE/ALWAYS APPLIED

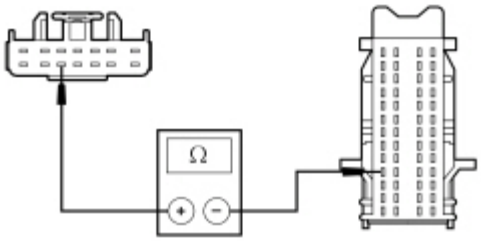
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

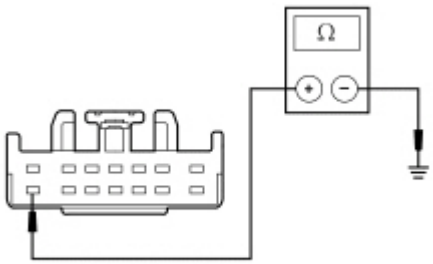


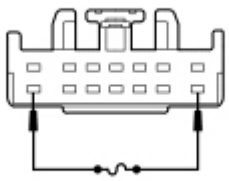




NOTE: Before beginning diagnostics, visually inspect the trailer tow connector mounted on the bumper for signs of corrosion or damage. Repair or install a new trailer tow connector as required.







NOTE: Make sure the vehicle stoplamps operate correctly before beginning diagnostics of the trailer brakes.

Test Step	Result / Action to Take
AD1 CHECK THE TRAILER ELECTRIC BRAKE CONTROLLER FOR A SHORTED OUTPUT	
• Ignition ON. • Measure the voltage between the trailer tow connector electric brake control supply pin, circuit CAT19 (BU), component side and ground.  N0084023 • **Is any voltage present?**	**Yes** GO to AD2 . **No** GO to AD3 .
AD2 CHECK THE TBC MODULE OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: TBC Module C2142. • Measure the voltage between the trailer tow connector electric brake control supply pin, circuit CAT19 (BU), component side and ground.	**Yes** REPAIR circuit CAT19 (BU) for a short to voltage. TEST the system for normal operation. **No**

 N0084023 • **Is any voltage present?**	INSTALL a new TBC module. TEST the system for normal operation.
AD3 CHECK THE TBC MODULE OUTPUT	
• Set the gain on the trailer electric brake controller to the maximum setting. • While applying the brake pedal, measure the voltage between the trailer tow connector electric brake control supply pin, circuit CAT19 (BU), component side and ground.  N0084023 • **Is the voltage greater than 10 volts?**	**Yes** The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility. **No** GO to AD4.
AD4 CHECK FOR VOLTAGE TO THE TRAILER TOW CONNECTOR (VEHICLE HARNESS)	
• Disconnect: Trailer Tow C439A. • **NOTE:** Make sure the gain is set to the maximum setting. • While applying the brake pedal, measure the voltage between the trailer tow C439A-3, circuit CAT19 (BU), harness side and ground.  A0025430 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new trailer tow connector. TEST the system for normal operation. **No** GO to AD5.
AD5 CHECK FOR VOLTAGE TO THE TBC MODULE	
• Disconnect: TBC Module C2142. • Measure the voltage between the TBC module C2142-8, circuit SBB17 (RD), harness side and ground.	**Yes** GO to AD6.

repair4less

 N0066300 • **Is the voltage greater than 10 volts?**	**No** VERIFY the BJB fuse 17 (30A) is OK. If OK, REPAIR circuit SBB17 (RD) for an open. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
AD6 CHECK THE TBC MODULE GROUND CIRCUIT FOR AN OPEN • Measure the voltage between the trailer electric brake controller C2142-8, circuit SBB17 (RD), harness side and the trailer electric brake controller C2142-3, circuit GD138 (BK/WH), harness side.  N0090613 • **Is the voltage greater than 10 volts?**	**Yes** GO to AD7 . **No** REPAIR circuit GD138 (BK/WH) for an open. TEST the system for normal operation.
AD7 CHECK THE STOPLAMP SWITCH INPUT TO THE TBC MODULE • While applying the brake pedal, measure the voltage between the TBC module C2142-12, circuit CBP31 (BU/OG), harness side and ground.  N0090614 • **Is the voltage greater than 10 volts?**	**Yes** GO to AD9 . **No** VERIFY the BCM fuse 31 (5A) Is OK. If OK, GO to AD8 . If not OK, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short.
AD8 CHECK THE STOPLAMP SWITCH INPUT CIRCUIT TO THE TBC MODULE FOR AN OPEN • Disconnect: BCM C2280B. • Measure the resistance between the TBC module C2142-12, circuit CBP31 (BU/OG), harness side and the BCM C2280B-4, circuit CBP31 (BU/OG), harness side.	**Yes** GO to AD11 . **No**

 N0117380 • **Is the resistance less than 5 ohms?**	REPAIR circuit CBP31 (BU/OG) for an open. TEST the system for normal operation.
AD9 CHECK THE TBC MODULE OUTPUT CIRCUIT FOR A SHORT TO GROUND	
• Measure the resistance between the trailer electric brake controller C2142-14, circuit CAT19 (BU), harness side and ground.  N0066303 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AD10 . **No** REPAIR circuit CAT19 (BU) for a short to ground. TEST the system for normal operation.
AD10 CHECK THE TBC MODULE OUTPUT CIRCUIT FOR AN OPEN	
• Connect a fused jumper wire between the trailer electric brake controller C2142-8, circuit SBB17 (RD), harness side and the trailer electric brake controller C2142-14, circuit CAT19 (BU), harness side.  N0088194 • Measure the voltage between the trailer tow C439A-3, circuit CAT19 (BU), harness side and ground.	**Yes** INSTALL a new trailer electric brake controller. TEST the system for normal operation. **No** REPAIR circuit CAT19 (BU) for an open. TEST the system for normal operation.

repair4less

A0025430

- **Is the voltage greater than 10 volts?**

AD11 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Turn Signal and Hazard Lamps

Special Tool(s)

 ST3093-A	Fluke 77-1V Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

Turn Signals

The Steering Column Control Module (SCCM) monitors the multifunction switch position. When the multifunction switch is in the LH or RH TURN position, the SCCM sends a message over the High Speed Controller Area Network (HS-CAN) to the Body Control Module (BCM) indicating a request for the LH or RH turn signal.

The multifunction switch is a momentary contact switch, with 2 detents for the LH turn position and 2 detents for the RH turn position. When placed in the first detent, the corresponding turn signals flash 3 times and turn off. When the multifunction switch is moved to the second detent, the turn signal flashes until the steering wheel is turned in the opposite direction (based on input from the steering wheel rotation sensor), the multifunction switch is moved to the second detent a second time or the vehicle travels farther than 3.2 km (2 miles). The BCM monitors the steering wheel rotation sensor, the multifunction switch input and the distance traveled to determine when to cancel the turn signals.

When the BCM receives a request for a turn signal, the BCM supplies on/off voltage to the appropriate turn lamps.

The timed on/off cycle for turn lamps is determined by the BCM and is set to flash approximately 80 times per minute if both the front and rear turn signal lamps operate correctly. If an individual turn signal lamp is inoperative, the BCM fast flashes the remaining turn lamps approximately 160 times per minute to indicate a bulb outage to the driver.

repair4less

There is no bulb outage indication for the auxiliary turn signal lamps located in the exterior mirrors.

The rear turn signal lamps share functionality with the rear stoplamps.

Hazard Lamps

The BCM sends a voltage signal to the hazard flasher lamp switch (part of the Passenger Air Bag Deactivation (PAD) indicator). When the hazard flasher switch (a momentary contact switch) is pressed, the voltage signal is routed to ground, indicating a request to activate or deactivate the hazard lamp function.

When the BCM receives a request for the hazard lamps, the BCM supplies on/off voltage to all of the turn lamps.

The timed on/off cycle for the hazard lamps is approximately 80 times per minute regardless of bulb outage.

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow.

The BCM utilizes a FET protective circuit strategy for many of its outputs (such as a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET protection, allowing the circuit to function. If the circuit is still shorted the next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection), the FET protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When a tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by the clear the continuous DTCs command. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand DTCs present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the repair.

The BCM FET protected output circuits for the turn lamps system are the front turn and mirror turn lamp output circuits.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical

• Multifunction switch	• Body Control Module (BCM) fuse(s)
	  ▪ 13 (15A) (RH lamps)
	  ▪ 14 (15A) (LH lamps)
	  ▪ 47 (15A) (mirror turn lamps)
	• Bulb
	• Bulb socket
	• Wiring, terminals or connectors
	• Passenger Air Bag Deactivation (PAD) indicator
	• Auxiliary turn signal lamp
	• Exterior mirror

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is on.
     - The air bag warning indicator prove-out confirms ignition on (other indicators may not prove ignition on). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in run.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00, The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM and the Steering Column Control Module (SCCM).

9. If the DTCs retrieved are related to the concern, refer to Diagnostic Trouble Code (DTC) Chart in this section. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10.

repair4less

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• **NOTE:** LED lamps draw low current compared to an incandescent bulb. The Body Control Module (BCM) interprets this as a bulb out and fast flashes (bulb outage mode) the turn lamps. The turn signal lamps flash fast and no bulbs are inoperative	• Bulb	• INSTALL the correct bulb. TEST the system for normal operation.
• The turn signal function is inoperative	• Multifunction switch • Steering Column Control Module (SCCM)	• VERIFY the bulbs are OK. If OK, GO to Pinpoint Test L.
• The turn signal function is always on	• Multifunction switch • SCCM	• INSTALL a new multifunction switch. REFER to Section 211-05. TEST the system for normal operation. If the concern still exists, INSTALL a new SCCM. REFER to Section 211-05. TEST the system for normal operation.
• One turn signal lamp is inoperative/always on	• Fuse • Wiring, terminals or connectors • Bulb socket • Exterior mirror turn lamp • Exterior mirror • BCM	• VERIFY the bulb is OK. If OK, GO to Pinpoint Test M.
• The hazard lamp function is inoperative/always on	• Wiring, terminals or connectors • Multifunction switch • Passenger Air Bag Deactivation (PAD)	• GO to Pinpoint Test N.

	indicator • BCM	

Pinpoint Tests

Pinpoint Test L: The Turn Signal Function Is Inoperative

Refer to Wiring Diagrams Cell 90 , Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) monitors multifunction switch input. The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the multifunction switch is in the OFF, LH or RH TURN position. When the BCM receives a message indicating a LH or RH turn request, the BCM provides on/off voltage to the appropriate turn lamps.

- DTC B1D36:09 (Turn Indicator Switch: Component Failure) — This DTC sets when the BCM detects an input concern from the multifunction switch.

This pinpoint test is intended to diagnose the following:

- Multifunction switch
- SCCM

PINPOINT TEST L: THE TURN SIGNAL FUNCTION IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK THE COMMUNICATION NETWORK • Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the SCCM module pass the network test?**	**Yes** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation. If the concern still exists, INSTALL a new SCCM . REFER to Section 211-05 . TEST the system for normal operation. **No** REFER to Section 418-00 .

Pinpoint Test M: One Turn Signal Lamp Is Inoperative/Always On

Refer to Wiring Diagrams Cell 90 , Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The Steering Column Control Module (SCCM) monitors multifunction switch input. The SCCM sends a message to the Body Control Module (BCM) over the High Speed Controller Area Network (HS-CAN), indicating the multifunction switch is in the OFF, LH or RH TURN position. When the BCM receives a

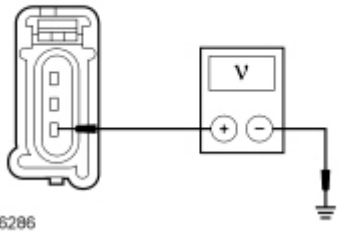
repair4less

message indicating a LH or RH turn request, the BCM provides on/off voltage to the appropriate turn lamps.

The front turn lamps share the same fuses as the rear stoplamps. The rear turn lamps are controlled utilizing the rear stoplamp circuitry.

DTC Description	Fault Trigger Conditions
• B123A:11 — Left Front Turn Indicator: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the LH front turn lamp voltage supply circuit.
• B123A:15 — Left Front Turn Indicator: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open or short to voltage from the LH front turn lamp voltage supply circuit.
• B123B:11 — Right Front Turn Indicator: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the RH front turn lamp voltage supply circuit.
• B123B:15 — Right Front Turn Indicator: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open or short to voltage from the RH front turn lamp voltage supply circuit.
• B1C98:11 — Left Corner Lamp Circuit: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the LH mirror turn lamp voltage supply circuit.
• B1C99:11 — Right Corner Lamp Circuit: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the RH mirror turn lamp voltage supply circuit.
• U1000:00 — Solid State Driver Protection Active - Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. **The module has temporarily disabled a turn lamp output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the turn lamp output until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. **The module has permanently disabled a turn lamp output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM .**

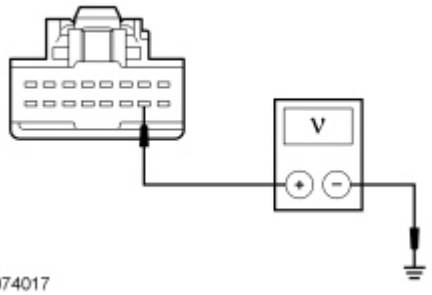
This pinpoint test is intended to diagnose the following:



- Fuse
- Wiring, terminals or connectors
- Bulb socket
- Exterior mirror turn lamp
- Exterior mirror
- BCM

PINPOINT TEST M: ONE TURN SIGNAL LAMP IS INOPERATIVE/ALWAYS ON

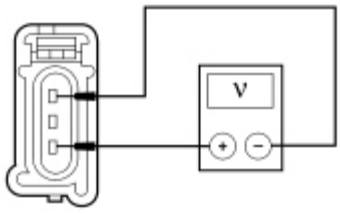
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**



Test Step	Result / Action to Take
M1 CHECK THE STOPLAMPS	
• Apply and release the brake pedal while observing the stoplamps. • **Do the stoplamps operate correctly?**	**Yes** GO to M2 . **No** GO to Pinpoint Test J .
M2 DETERMINE IF A TURN LAMP IS ALWAYS ON	
• Ignition ON. • Observe the front turn lamps and the signal mirror lamps if equipped. • **Is any turn lamp always on?**	**Yes** GO to M3 . **No** GO to M4 .
M3 CHECK THE TURN LAMP OUTPUT CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280F. • Ignition ON. • **Does the turn lamp in question continue to illuminate?**	**Yes** For a LH turn lamp, REPAIR circuit CLS21 (BU/GN) for a short to voltage between the lamp and the BCM . TEST the system for normal operation. For a RH turn lamp, REPAIR circuit CLS25 (YE/VT) for a short to voltage between the lamp and the BCM . TEST the system for normal operation. **No** GO to M10 .
M4 CHECK FOR VOLTAGE TO THE INOPERATIVE TURN LAMP	
NOTE: If both exterior mirror turn lamps are inoperative, verify the BCM fuse 47 (15A) is OK. If not OK, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. • Ignition OFF. • Disconnect: Inoperative Turn Lamp. • Activate the hazard flasher lamp function. • For a front turn lamp, measure the voltage between the LH front turn lamp C1023-3, circuit CLS21 (BU/GN), harness side and ground; or between the RH front turn lamp C1043-3, circuit CLS25 (YE/VT), harness side and ground.	**Yes** GO to M5 . **No** GO to M7 .

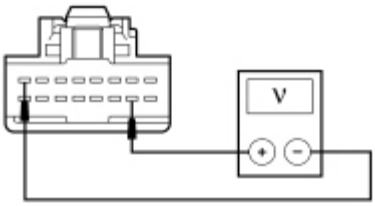
repair4less

N0066286



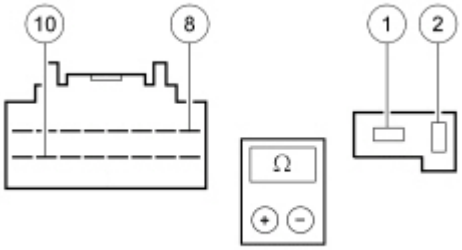
- For an exterior mirror turn lamp, measure the voltage between the LH exterior mirror C521-10, circuit CLS21 (BU/GN), harness side and ground; or between the RH exterior mirror C615-10, circuit CLS25 (YE/VT), harness side and ground.

A0074017



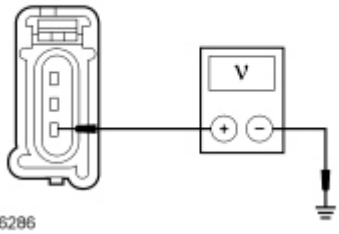
- **Does the voltage alternate between 0 and greater than 10 volts?**

M5 CHECK THE TURN LAMP GROUND CIRCUIT FOR AN OPEN	
• For a front turn lamp, measure the voltage between the LH front turn lamp C1023-3, circuit CLS21 (BU/GN), harness side and the LH front turn lamp C1023-1, circuit GD123 (BK/GY), harness side; or between the RH front turn lamp C1043-3, circuit CLS25 (YE/VT), harness side and the RH front turn lamp C1043-1, circuit GD120 (BK/GN), harness side.	**Yes** For a front turn lamp, INSTALL a new bulb socket. TEST the system for normal operation. For exterior mirror turn lamp, GO to M6 . **No** REPAIR the ground circuit in question for an open. TEST the system for normal operation.



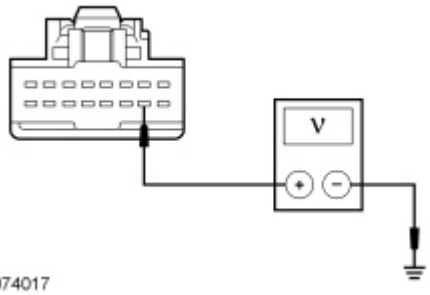
N0088174

- For an exterior mirror turn lamp, measure the voltage between the LH exterior mirror C521-10, circuit CLS21 (BU/GN), harness side and the LH exterior mirror C521-8, circuit GD134 (BK/VT), harness side; or between the RH exterior mirror C615-10, circuit CLS25 (YE/VT), harness side and the RH exterior mirror C615-8, circuit GD139 (BK/YE), harness side.



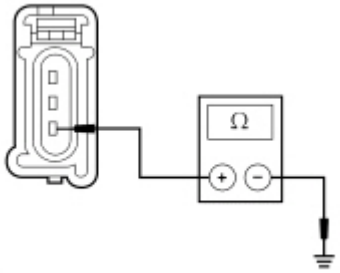
N0090592

- **Does the voltage alternate between 0 and greater than 10 volts?**

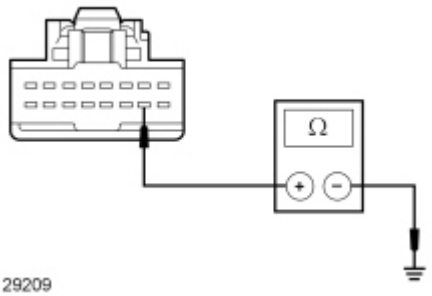


M6 CHECK THE CIRCUITS TO THE LED ASSEMBLY FOR AN OPEN	
• Turn the hazard function off. • Disconnect: Suspect LED Turn Lamp. • Measure the resistance between the suspect exterior mirror pin 10, component side and the LED turn lamp connector pin 1 (GN/WH), harness side; and between the suspect exterior mirror pin 8, component side and the LED turn lamp connector pin 2 (BK), harness side.  N0090618 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new exterior mirror turn lamp. REFER to Side Lamp Assembly — Outside Rear View Mirror, Aero or Side Lamp Assembly — Outside Rear View Mirror, Trailer Tow in this section. TEST the system for normal operation. **No** INSTALL a new exterior mirror. REFER to Section 501-09 . TEST the system for normal operation.
M7 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE INOPERATIVE TURN LAMP	
• Deactivate the hazard flasher lamp function. • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • Clear the DTCs **and** repeat the self-test **(required to enable the turn lamp output driver if DTC U1000:00 is present).** • Activate the hazard flasher lamp function. • For a front lamp, measure the voltage between the LH front turn lamp C1023-3, circuit CLS21 (BU/GN), harness side and ground; or between the RH front turn lamp C1043-3, circuit CLS25 (YE/VT), harness side and ground.	**Yes** For a front turn lamp, INSTALL a new bulb socket. TEST the system for normal operation. For an exterior mirror turn lamp, INSTALL a new exterior mirror in question. REFER to Section 501-09 . TEST the system for normal operation. **No** GO to M8 .

repair4less



N0066286

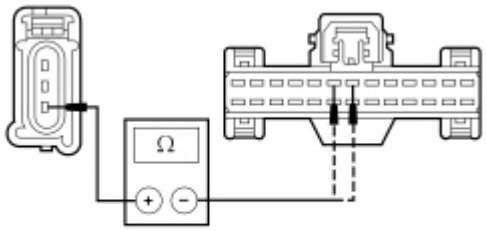


- For an exterior mirror turn lamp, measure the voltage between the LH exterior mirror C521-10, circuit CLS21 (BU/GN), harness side and ground; or between the RH exterior mirror C615-10, circuit CLS25 (YE/VT), harness side and ground.

A0074017

- **Does the voltage alternate between 0 and greater than 10 volts?**

M8 CHECK THE TURN LAMP OUTPUT CIRCUIT FOR A SHORT TO GROUND	
• Turn the hazard lamp function off. • Ignition OFF. • Disconnect: BCM C2280F. • For a front turn lamp, measure the resistance between the LH front turn lamp C1023-3, circuit CLS21 (BU/GN), harness side and ground; or between the RH front turn lamp C1043-3, circuit CLS25 (YE/VT), harness side and ground.  N0077657 • For an exterior mirror turn lamp, measure the resistance between the LH exterior mirror C521-10, circuit CLS21 (BU/GN), harness side and ground; or between the RH exterior mirror C615-10, circuit CLS25 (YE/VT), harness side and ground.	**Yes** GO to M9 . **No** REPAIR the circuit in question for a short to ground. After the repair: If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs and REPEAT the self-test **(required to enable the turn lamp output driver if DTC U1000:00 is present).** TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.



N0129209

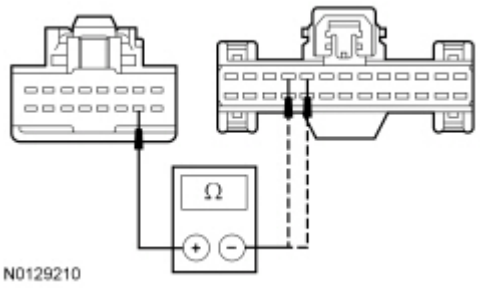
- **Is the resistance greater than 10,000 ohms?**

M9 CHECK THE BCM TURN LAMP OUTPUT CIRCUIT FOR AN OPEN

- For a front turn lamp, measure the resistance between the inoperative front turn lamp, harness side and the BCM, harness side as follows:

Inoperative Turn Lamp Connector-Pin	BCM Connector-Pin	Circuit
LH front C1023-3	C2280F-8	CLS21 (BU/GN)
RH front C1043-3	C2280F-7	CLS25 (YE/VT)

N0117364



- For an exterior mirror turn lamp, measure the resistance between the exterior mirror in question, harness side and the BCM, harness side as follows:

Exterior Mirror Connector-Pin	BCM Connector-Pin	Circuit
LH exterior mirror C521-10	C2280F-9	CLS21 (BU/GN)
RH exterior mirror C615-10	C2280F-10	CLS25 (YE/VT)

Yes
GO to M10.

No
REPAIR the circuit in question for an open. TEST the system for normal operation.

repair4less

 • **Is the resistance less than 5 ohms?**	
M10 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test N: The Hazard Lamp Function Is Inoperative/Always On

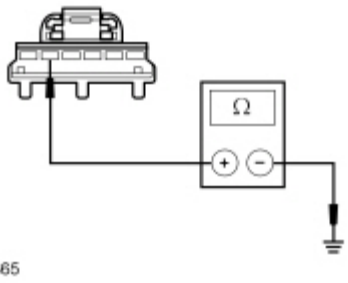
Refer to Wiring Diagrams Cell 90, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The Body Control Module (BCM) sends a voltage signal to the hazard flasher lamp switch (part of the Passenger Air Bag Deactivation (PAD) indicator) for the hazard lamp function input. When the hazard flasher lamp switch is pressed, the voltage signal is routed to ground, indicating a request for the hazard lamp function. When the BCM detects a request for the hazard lamps, the BCM provides on/off voltage to all the turn lamps.

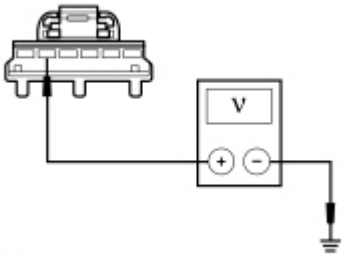
The hazard flasher lamp switch is a momentary contact switch.

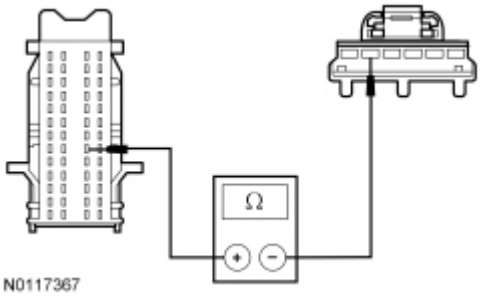
- DTC B1D35:11 (Hazard Switch: Circuit Short to Ground) — This DTC sets when the BCM detects a short to ground from the hazard lamp function input circuit.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Multifunction switch
- PAD indicator
- BCM





PINPOINT TEST N: THE HAZARD LAMP FUNCTION IS INOPERATIVE/ALWAYS ON

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct**

probe adapter(s) may damage the connector.

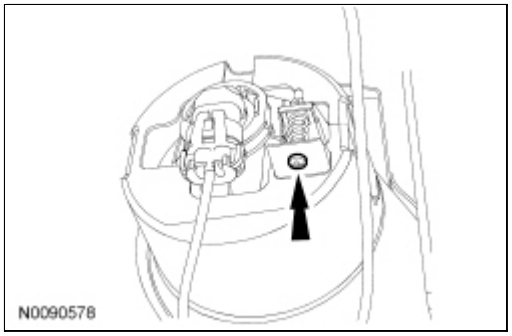
Test Step	Result / Action to Take
N1 CHECK THE RECORDED DTCs FROM THE BCM SELF-TEST • Check the recorded DTCs from the BCM self-test. • **Is DTC B1D35:11 present?**	**Yes** GO to N2. **No** GO to N4.
N2 ISOLATE THE PAD INDICATOR AS THE CAUSE OF DTC B1D35:11 • Ignition OFF. • Disconnect: PAD Indicator C2355. • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • Repeat the BCM self-test. • **Is DTC B1D35:11 still present?**	**Yes** GO to N3. **No** INSTALL a new PAD indicator. REFER to Section 501-20B. TEST the system for normal operation.
N3 CHECK THE HAZARD LAMP REQUEST INPUT CIRCUIT FOR A SHORT TO GROUND • Ignition OFF. • Disconnect: BCM C2280B. • Measure the resistance between the PAD indicator C2355-5, circuit CLS32 (BN), harness side and ground.  N0117365 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to N6. **No** REPAIR circuit CLS32 (BN) for a short to ground. TEST the system for normal operation.
N4 CHECK FOR A VOLTAGE SIGNAL TO THE PAD INDICATOR • Disconnect: PAD Indicator C2355. • Ignition OFF. • Measure the voltage between the PAD indicator C2355-5, circuit CLS32 (BN), harness side and ground.	**Yes** INSTALL a new PAD indicator. REFER to Section 501-20B. TEST the system for normal operation. **No** GO to N5.

repair4less

 N0117366 • **Is the voltage greater than 10 volts?**	
N5 CHECK THE HAZARD FLASHER LAMP REQUEST INPUT CIRCUIT FOR AN OPEN	**Yes** GO to N6 . **No** REPAIR circuit CLS32 (BN) for an open. TEST the system for normal operation.
• Disconnect: BCM C2280B. • Measure the resistance between the BCM C2280B-32, circuit CLS32 (BN), harness side and the PAD indicator C2355-5, circuit CLS32 (BN), harness side.  N0117367 • **Is the resistance less than 5 ohms?**	
N6 CHECK FOR CORRECT BCM OPERATION	**Yes** INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
• Disconnect all the BCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the BCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	

repair4less

Autolamps Time Delay Adjustment



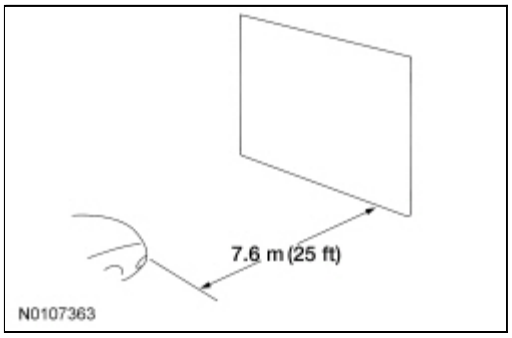
NOTE: The time delay can be programmed through the message center using the message center buttons (if equipped) or using the following steps.

NOTE: Steps 2 through 5 must be carried out within a 10-second period.

1. Start with the ignition switch off and the headlamp switch in the AUTOLAMPS ON position.
2. Place the headlamp switch in the OFF position.
3. Place the ignition switch in the RUN position.
4. Place the ignition switch in the OFF position.
5. Place the headlamp switch in the AUTOLAMPS ON position. The exterior lamps turn on at this point.
6. Wait the desired amount of time and place the headlamp switch in the OFF position (maximum of 3 minutes). The exterior lamps turn off and the autolamp time delay is now set.

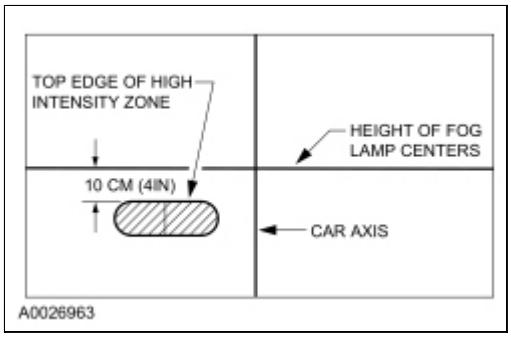
Front Fog Lamp Adjustment

Front Fog Lamp Adjustment Screw



1. **NOTE:** Horizontal aim is not required for this vehicle and is not adjustable. Consult your state vehicle inspection center for recommended tolerance ranges for visual aiming.

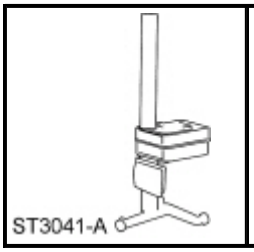
   Before starting the fog lamp assembly adjustment:
   - check the tire inflation.
   - make sure there are no other loads in the vehicle other than a half tank of fuel.
   - make sure the vehicle is on level ground.
   - make sure the fog lamps and headlamps are clean.
   - make sure the headlamps are operating and are correctly aimed.



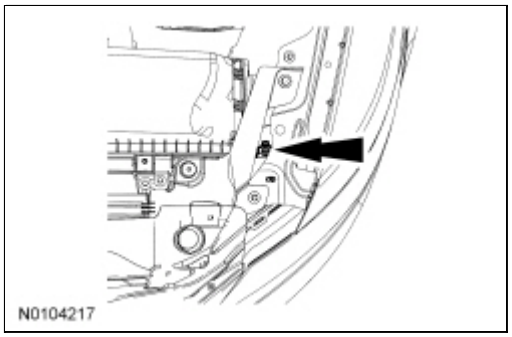
2. **NOTE:** The vertical wall screen must be a minimum of 2.4 m (8 ft) wide.

   Park the vehicle on a level surface approximately 7.6 m (25 ft) from the vertical wall or screen directly in front of it.

3. The correct visual aim for the fog lamps is with the top edge of the high-intensity zone 10 cm (4 in) below the horizontal center of the fog lamps.



repair4less



4. If necessary, rotate the adjustment screw until the fog lamp beam is within specification.

Headlamp Adjustment

Special Tool(s)

 ST3041-A	Vision 100 Headlamp Aimer 196-00005 or equivalent

Headlamp Adjustment Screw Location

N0104217

Headlamp Aiming

1. The headlamp aiming procedure depends on what type of beam pattern the headlamp is equipped with. Vehicles may come equipped with visually optically aligned left (VOL) or visually optically aligned right (VOR) headlamps. To identify the headlamp beam pattern, look on the headlamp lens. Molded in small letters on the headlamp lens is one of the following:
   - VOL and SAE
   - VOR and SAE

2. **NOTE:** Mechanical aimers cannot be used with VOR- or VOL-type headlamps.

   Once the headlamp beam pattern is identified, aim the headlamps using one of the following methods:
   - Photometric aimers can aim VOL- and VOR- headlamps. This is the preferred method of headlamp aiming.
   - Visual or screen method aiming can be used to aim VOL- and VOR- headlamps.

Photometric Aiming

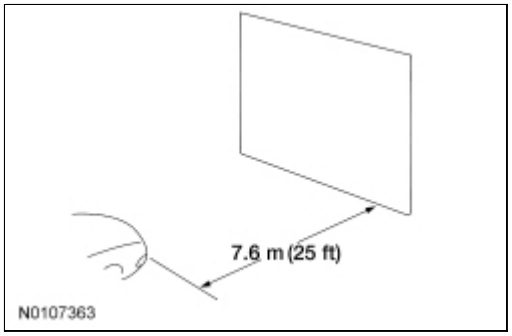
1. For the photometric aiming procedure, refer to the appropriate photometric headlamp aimer

repair4less

instruction manual.

Screen Method Aiming

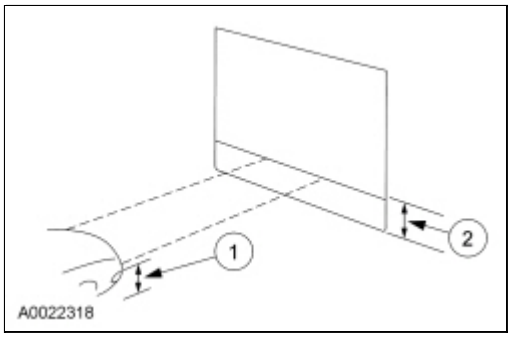
All headlamp types



NOTE: Horizontal aim is not adjustable.

NOTE: Consult your state vehicle inspection manual for recommended tolerance ranges for visual aiming.

1. Before starting headlamp adjustment:
   - check that the vehicle is on level ground.
   - check the tire inflation.
   - check that no other load is in the vehicle other than a half tank of fuel.
   - check that the headlamps are clean.
   - check for correct headlamp operation.
   - if the vehicle is equipped with air suspension, make sure that the switch is on.



2. **NOTE:** The vertical wall or screen must be a minimum of 2.4 m (8 ft) wide.

   Park the vehicle on a level surface approximately 7.6 m (25 ft) from the vertical wall or screen directly in front of it.

3. **NOTE:** The center of the lamp is marked either on the lens (circle, crosshair or other mark) or on the bulb shield internal to the lamp (crosshair or other mark).

   Mark a horizontal reference line on the vertical wall or screen.
   1. Measure the center of the headlamp height to ground and record the measurement.
   2. Make a 2.4 m (8 ft) horizontal mark (using masking tape) on the vertical wall or screen at the same distance from the ground as previously recorded.

4. **NOTE:** This procedure should be done in a dark environment to effectively see the headlamp beam pattern.

   Turn on the low beam headlamps to illuminate the wall or screen and open the hood.

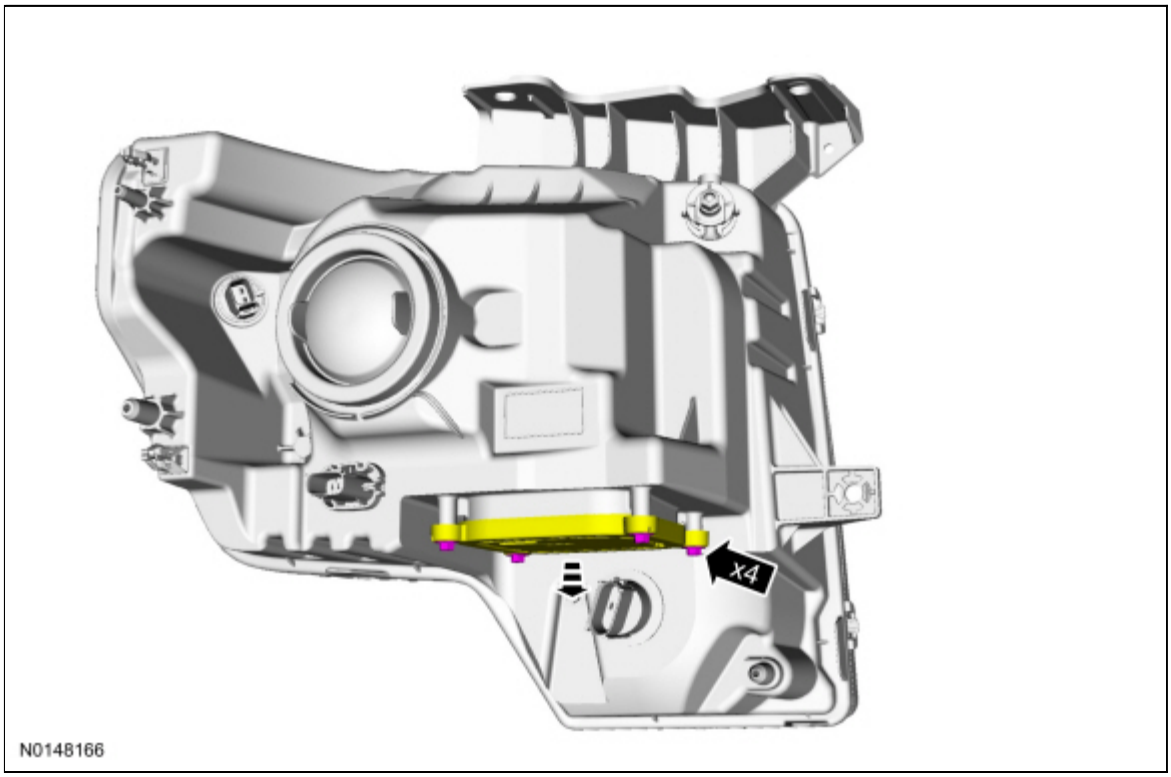
5. On the wall or screen, locate the high intensity area of the beam pattern.

VOR-type headlamps

6. **NOTE:** The appearance of the VOR beam pattern may vary between vehicles.

   Identify at the top edge of this high intensity area a distinct horizontal cutoff in the beam pattern. If the top edge of this cutoff is not even with the horizontal reference line, the headlamp beam needs to be adjusted using the headlamp adjusting screw.

VOL-type headlamps



7. There is a distinct cutoff in the left portion of the beam pattern. The edge of this cutoff should be positioned 50.2 mm (2 in) below the horizontal reference line. Adjust the headlamp as necessary using the headlamp adjusting screw.
   1. Horizontal reference line.
   2. Top edge of the beam pattern.
   3. High intensity zone.

4. To install, reverse the removal procedure.

Fog Lamp Bulb

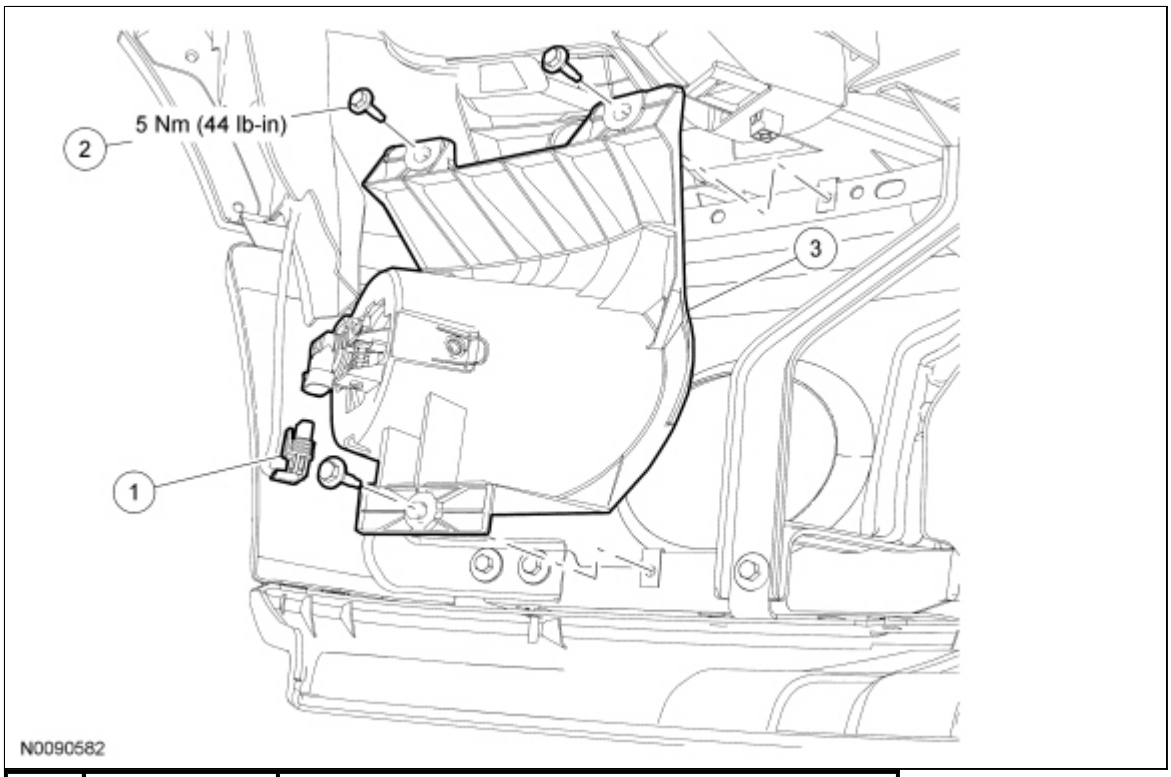
Item	Part Number	Description
1	—	Fog lamp bulb electrical connector (part of 12A581)
2	13466	Fog lamp bulb

Removal and Installation

WARNING: The bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The fog lamp bulb should not be removed from the fog lamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp where they can settle on the lens and reflector. Never turn on the fog lamp with the bulb removed from the fog lamp.

NOTE: Make sure the headlamp switch and the ignition switch are in the OFF position.



1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

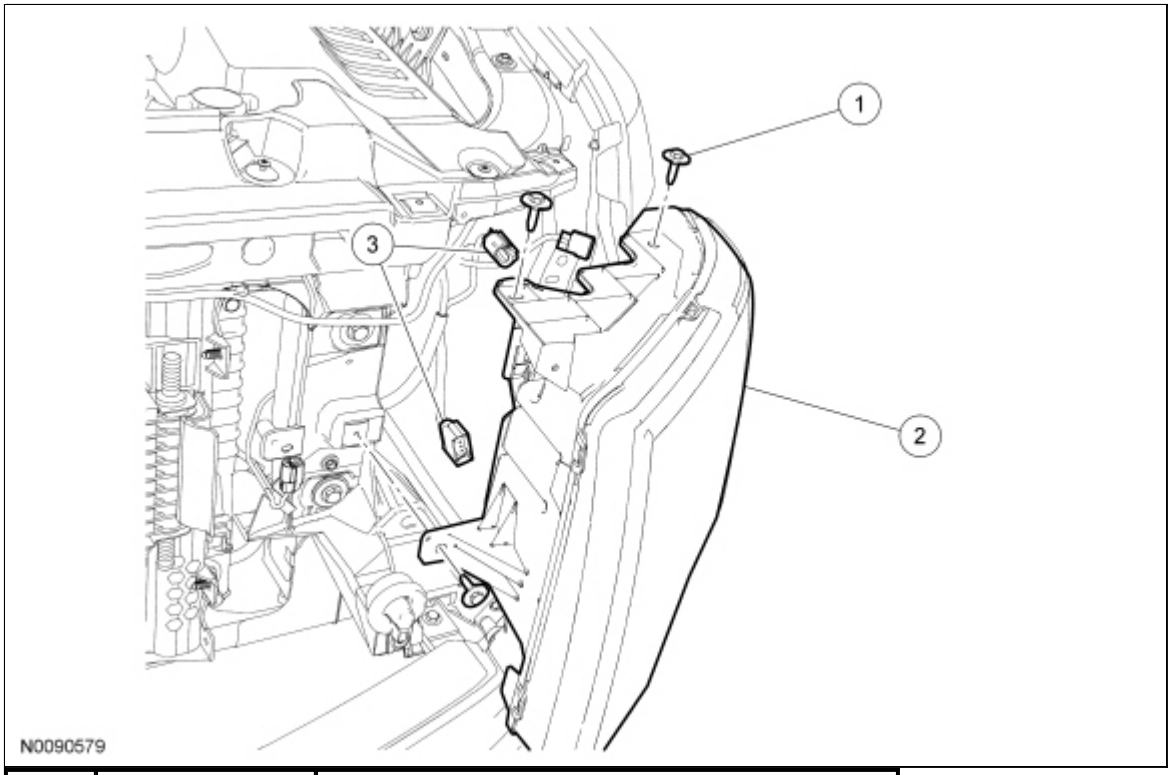
2. Disconnect the fog lamp electrical connector.

repair4less

3. Rotate the fog lamp bulb approximately one-eighth turn counterclockwise and remove it.
4. To install, reverse the removal procedure.

Fog Lamp

Item	Part Number	Description
1	—	Fog lamp electrical connector (part of 12A581)
2	W505424	Fog lamp bolts (3 required)
3	15200/15201	Fog lamp assembly (RH/LH)



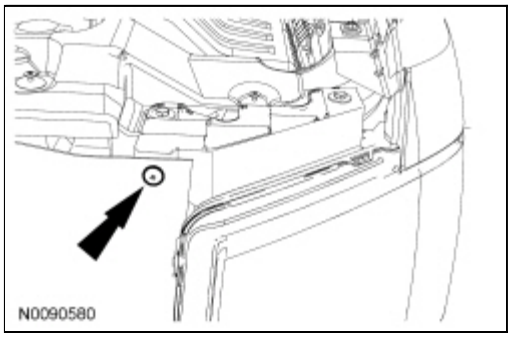
Removal and Installation

NOTE: Make sure the fog lamp switch and ignition switch are in the OFF position.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the fog lamp electrical connector.
3. Remove the 3 bolts and the fog lamp bracket.
4. To install, reverse the removal procedure.

repair4less

Headlamp Assembly

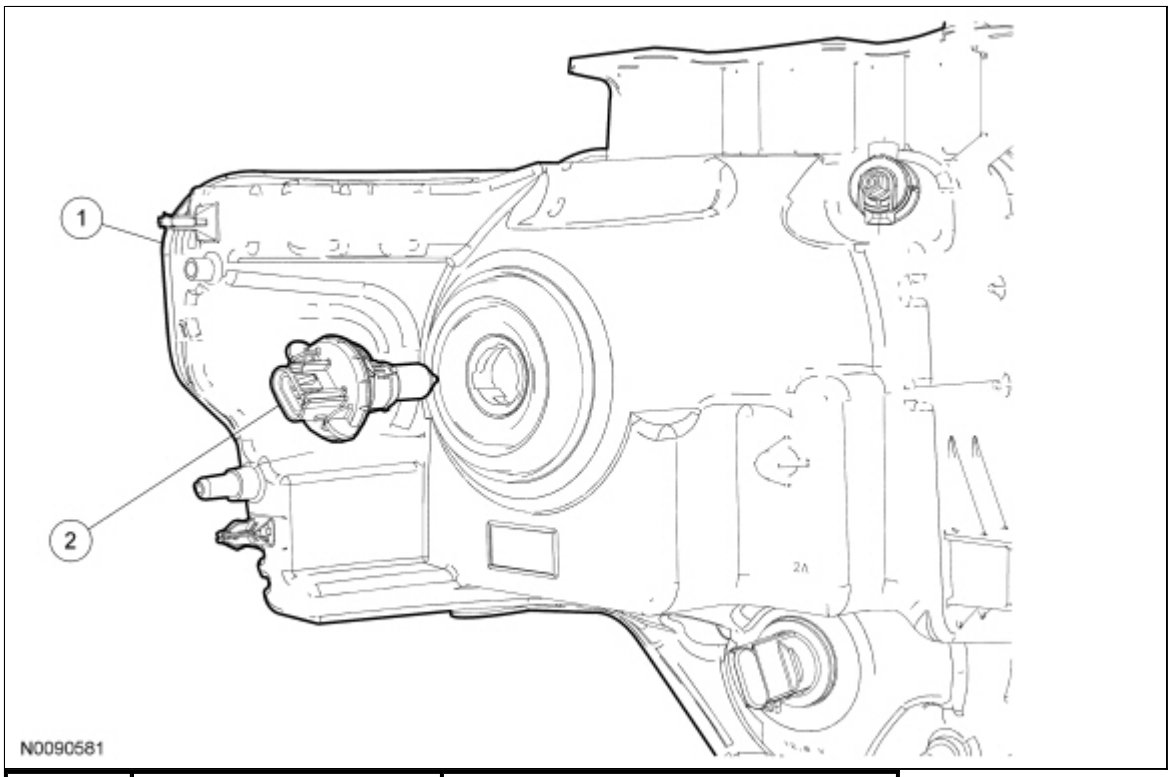


Item	Part Number	Description
1	W703277	Headlamp bolts (3 required)
2	13008	Headlamp assembly
3	—	Electrical connectors (part of 12A581)

Removal and Installation

NOTE: Make sure the headlamp switch and the ignition switch are in the OFF position.

1. Remove the pin-type retainer and position the radiator side air deflector aside.



repair4less

2. **NOTE:** Grasp the headlamp assembly firmly and pull forward to release the 2 metal clips.

   Remove the 3 bolts and the headlamp assembly.
   - Disconnect the electrical connectors.

3. To install, reverse the removal procedure.

Headlamp Bulb — Halogen

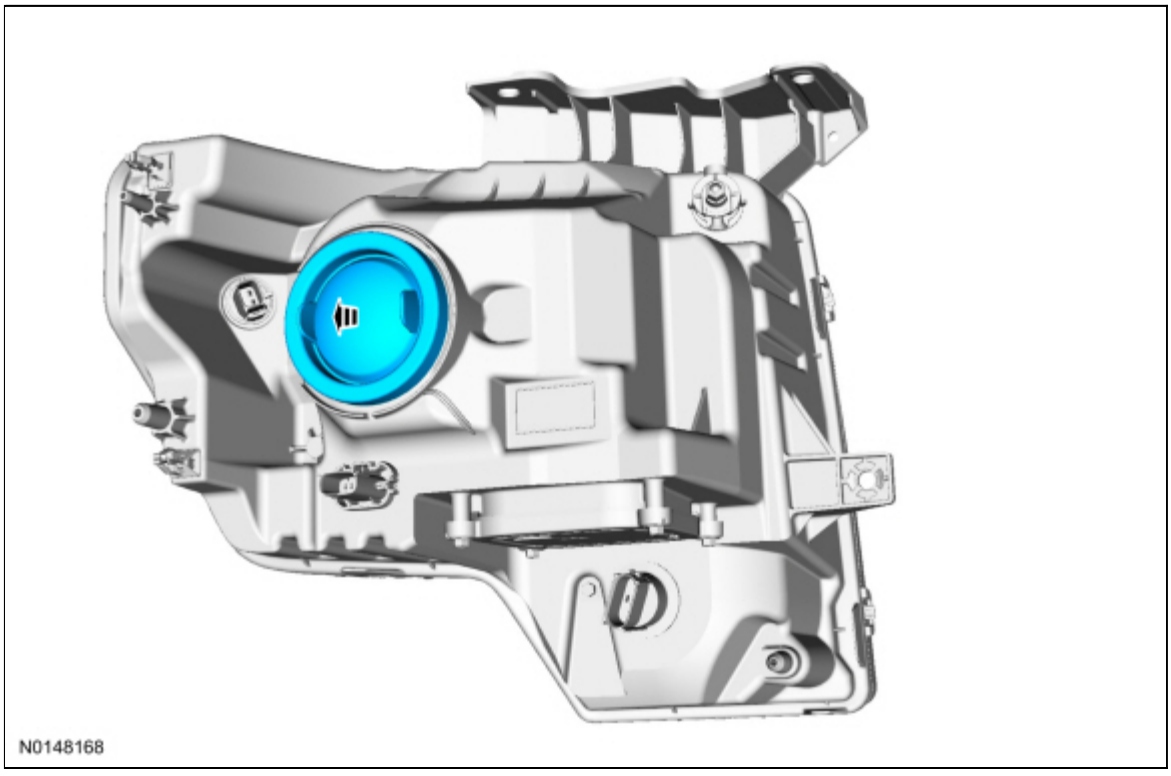
Item	Part Number	Description
1	13008	Headlamp assembly
2	13N021	Headlamp bulb

Removal and Installation

WARNING: The bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp where they can settle on the lens and reflector. Never turn on the headlamp with the bulb removed from the headlamp.

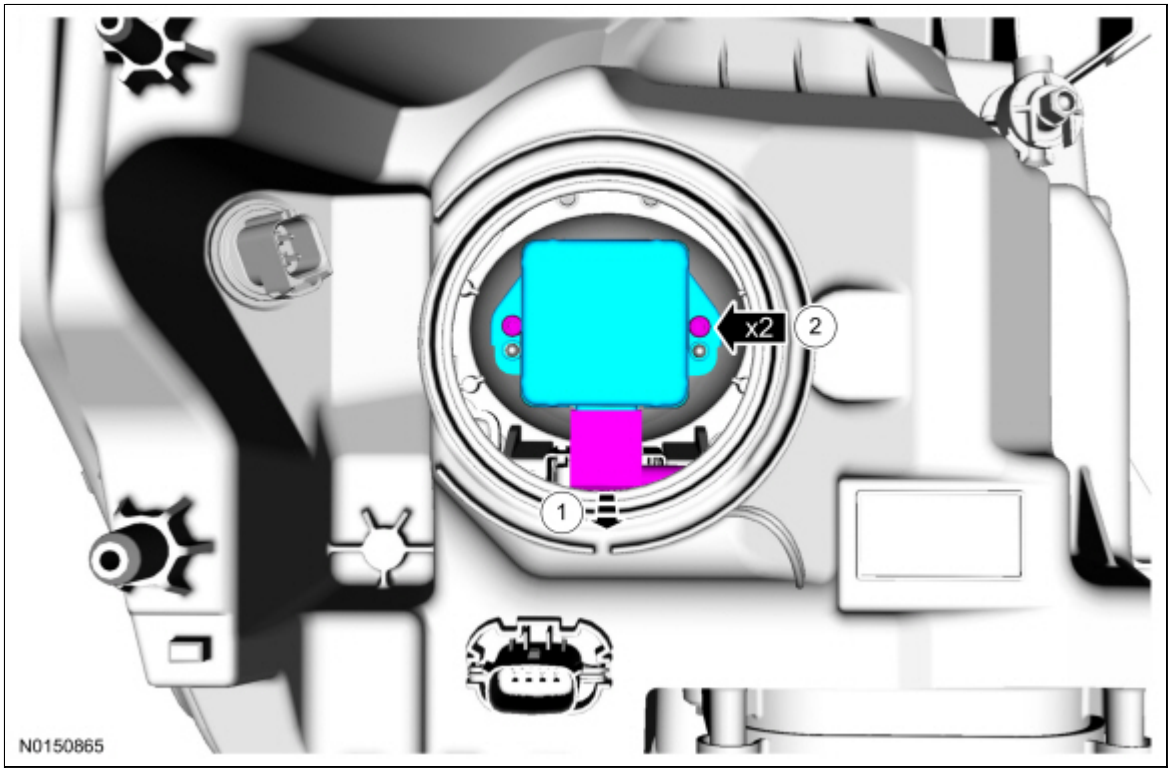
1. Remove the headlamp assembly. For additional information, refer to Headlamp Assembly in this section.
2. Rotate the headlamp bulb approximately one-eighth turn counterclockwise and remove the bulb from the headlamp assembly.
3. To install, reverse the removal procedure.



repair4less

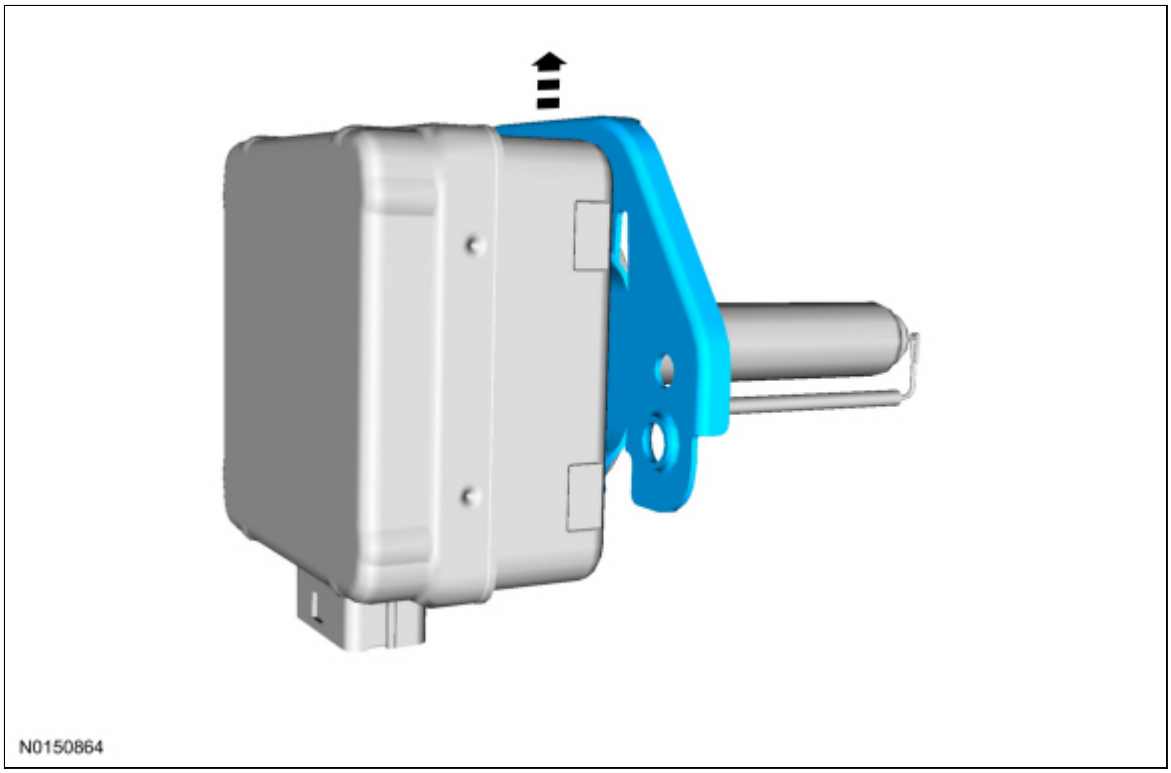
Headlamp Bulb — HID

Removal



WARNING: The bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp where they can settle on the lens and reflector. Never turn on the headlamp with the bulb removed from the headlamp.



1. Remove the headlamp assembly. Refer to Headlamp Assembly .
2.

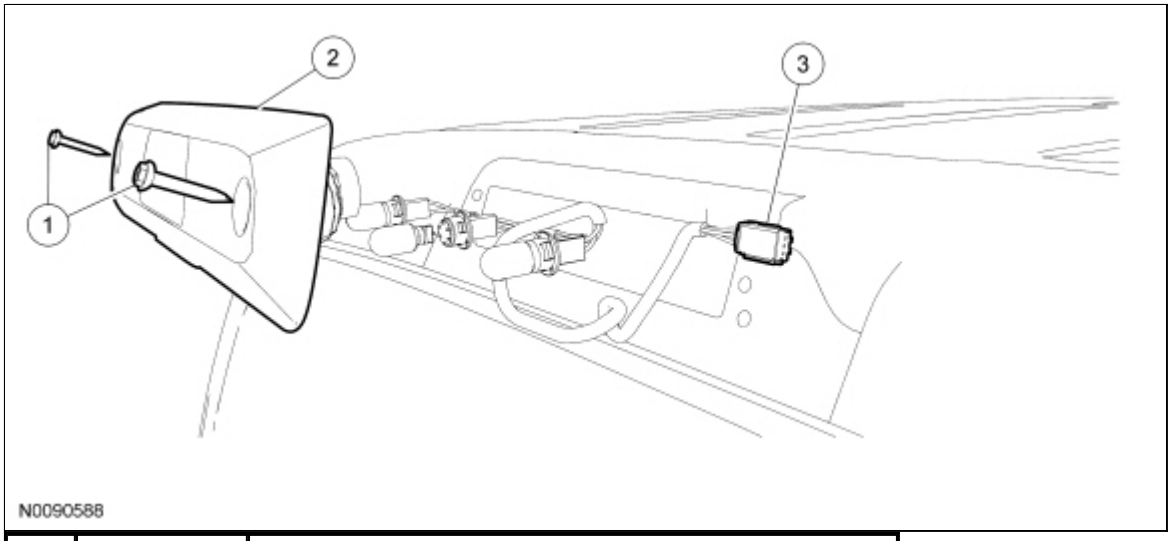
Headlamp Switch

Item	Part Number	Description
1	1504481	LH instrument panel side finish panel
2	11654	Headlamp switch
3	—	Headlamp switch electrical connector (part of 14401)

Removal and Installation

1. Remove the instrument panel side finish panel.



2. **NOTE:** The 3 retaining tabs on the headlamp switch are located at approximately 3, 6 and 11 o'clock positions when viewed from the front.

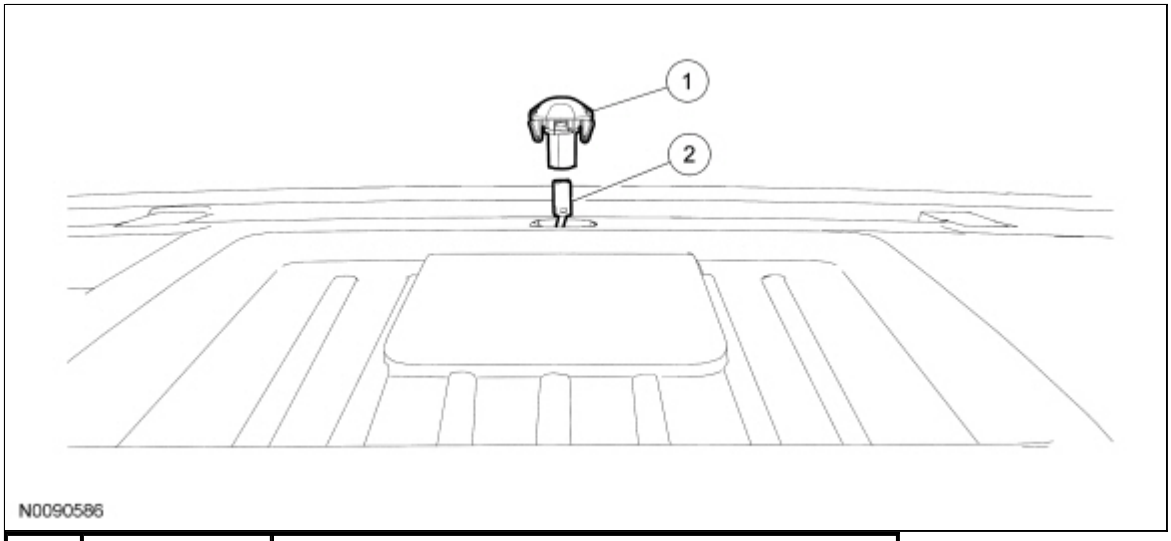
   Reaching from behind, release the 3 tabs and push the headlamp switch through the opening.
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

repair4less

High Mounted Stoplamp

Item	Part Number	Description
1	W713620	High mounted stoplamp screws (2 required)
2	13A613	High mounted stoplamp
3	—	High mounted stoplamp electrical connector (part of 14335)



Removal and Installation

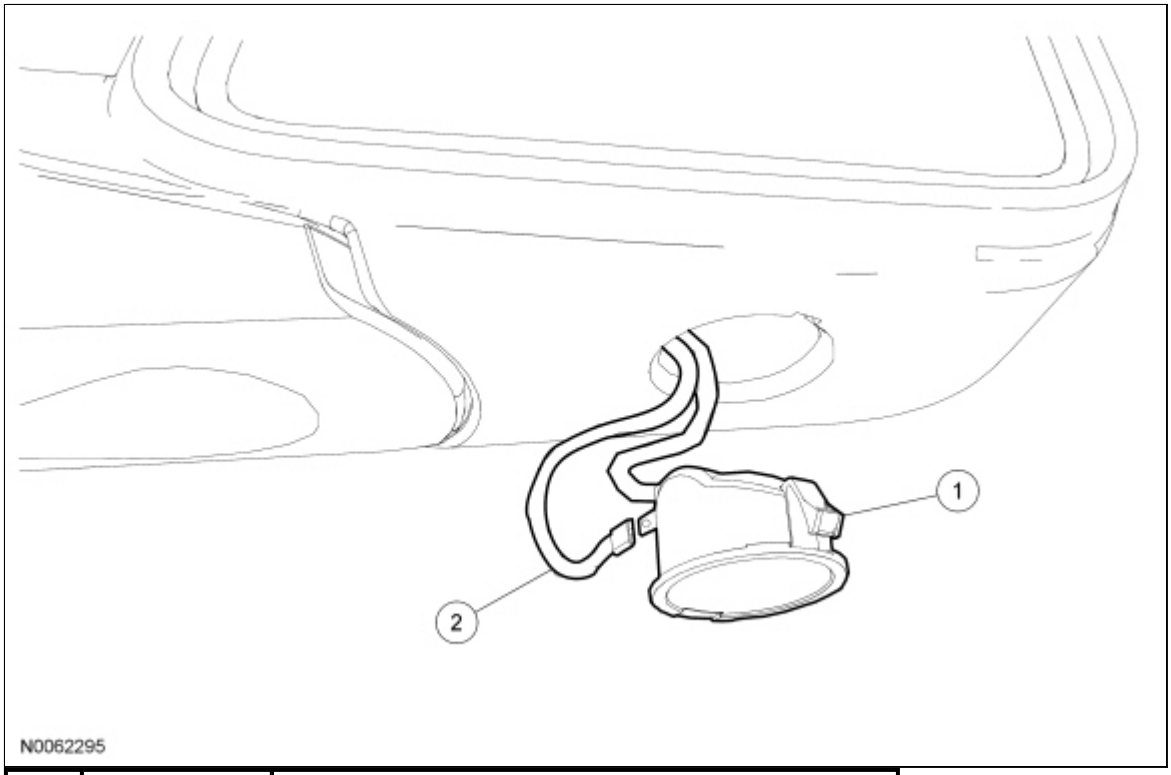
1. Remove the 2 screws and the high mounted stoplamp.
    - Disconnect the electrical connector.

2. To install, reverse the removal procedure.

repair4less

Light Sensor

Item	Part Number	Description
1	13A018	Light sensor
2	—	Light sensor electrical connector (part of 14401)

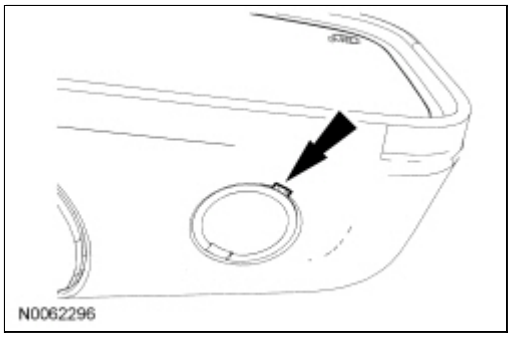


Removal and Installation

1. Using a thin-bladed flat tool, remove the light sensor.
    - Disconnect the electrical connector.

2. To install, reverse the removal procedure.

repair4less

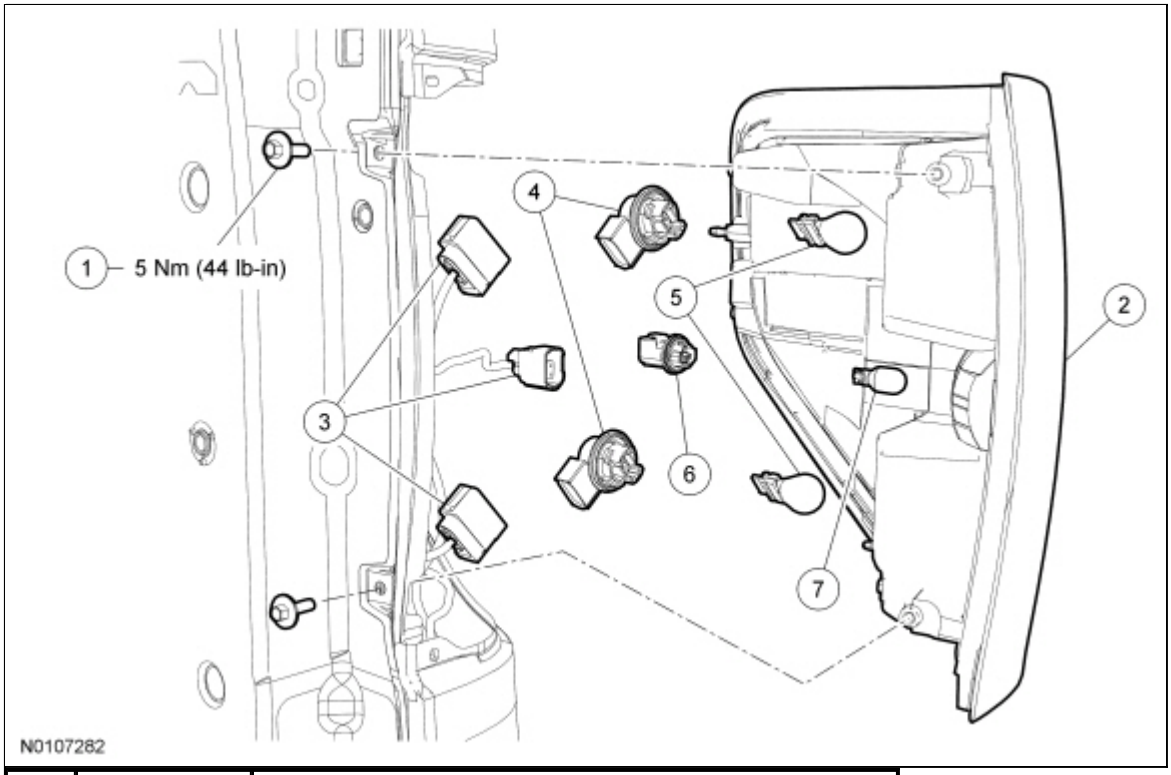


Puddle Lamp

Item	Part Number	Description
1	13B375	Puddle lamp
2	—	Puddle lamp electrical connector (part of 17683)

Removal and Installation

1. Release the tab to remove the puddle lamp from the mirror housing.
    - Disconnect the electrical connector.



2. **NOTE:** An audible click can be heard when the puddle lamp is fully seated.

   To install, reverse the removal procedure.

repair4less

Rear Lamp Assembly

NOTE: Styleside lamp shown, flareside similar.

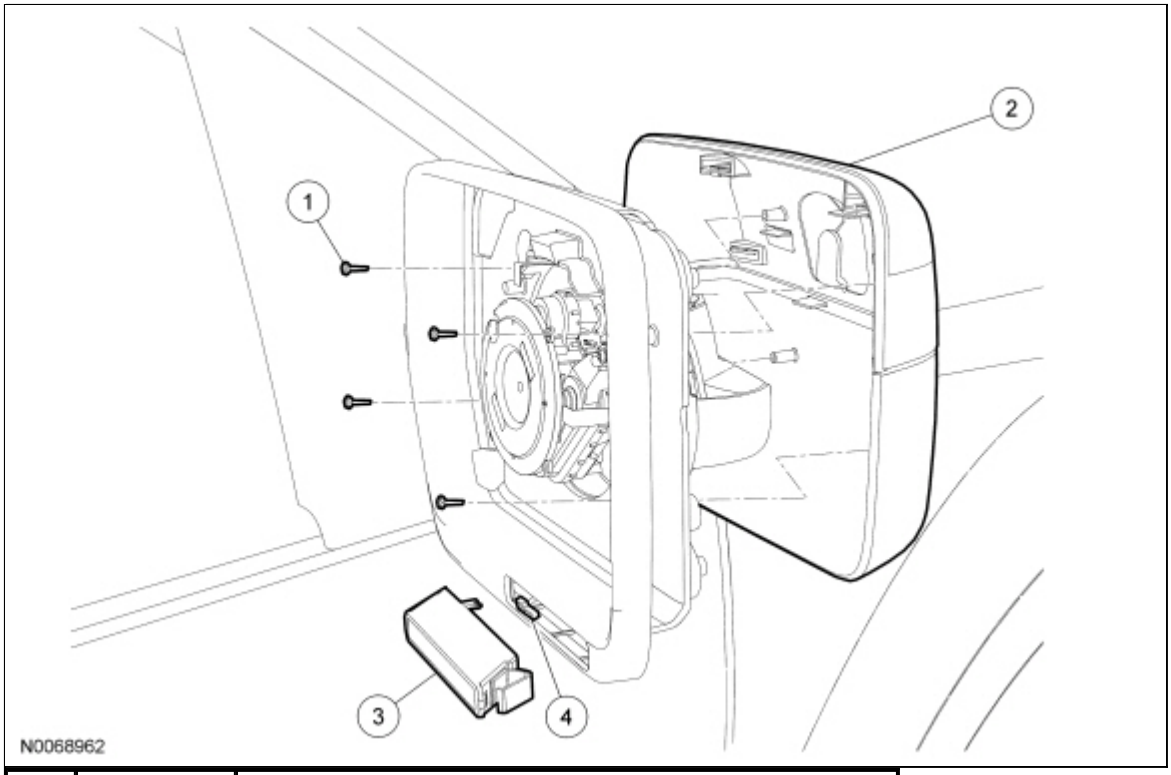
Item	Part Number	Description
1	N808955	Rear lamp assembly bolts (2 required)
2	13405/13404	Rear lamp assembly (LH/RH)
3	—	Rear lamp assembly electrical connectors (part of 13A409)
4	13411	Rear stop/turn lamp bulb holder
5	13466	Rear stop/turn lamp bulb
6	13411	Reversing lamp bulb holder
7	13466	Reversing lamp bulb

Removal and Installation

1. Remove the 2 rear lamp assembly bolts.
    - To install, tighten to 5 Nm (44 lb-in).

2. Firmly pull the rear lamp assembly rearward to disengage the metal studs from the grommets on the outboard side of the sheet metal.
    - Disconnect the electrical connectors.

3. If necessary, rotate the bulb holder counterclockwise approximately one-eighth turn and remove it.
    - Separate the bulb from the bulb holder.



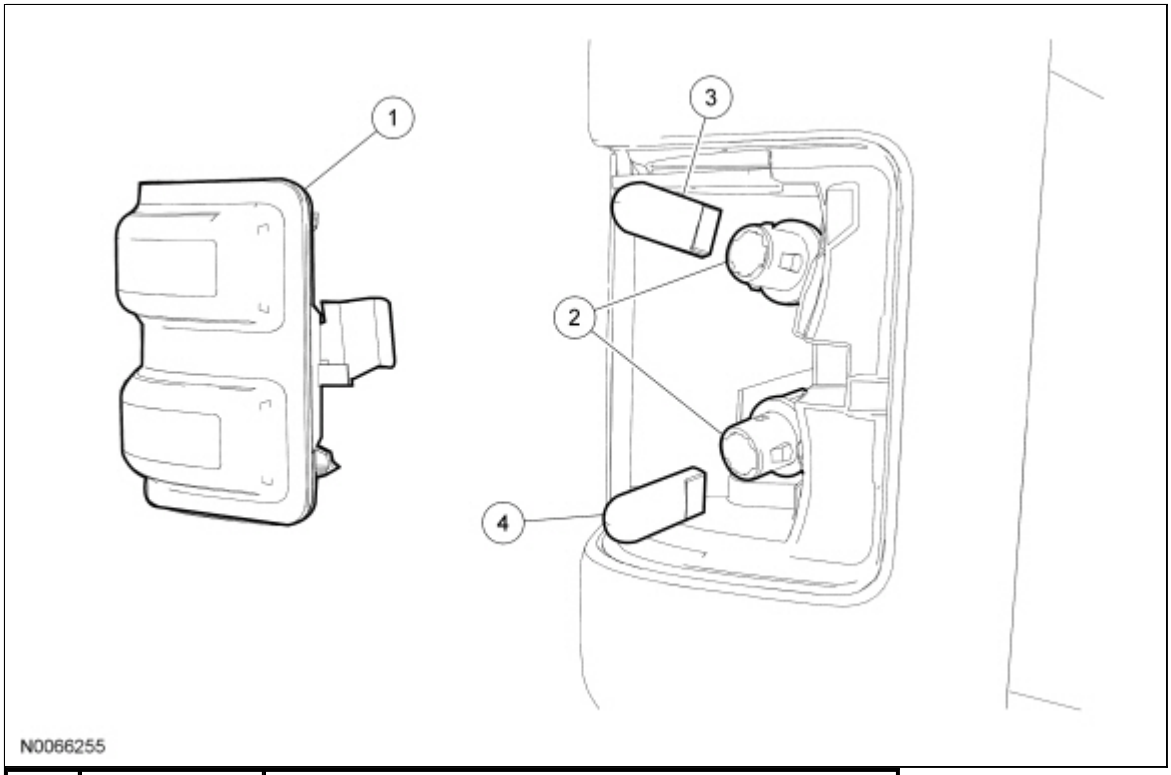
4. To install, reverse the removal procedure.

---

repair4less

Side Lamp Assembly — Outside Rear View Mirror, Aero

Aero-Styled Mirror



Item	Part Number	Description
1	—	Exterior mirror cover screws (4 required) (part of 17682 RH/17683 LH)
2	17682	Exterior mirror cover
3	13B374	Trailer tow turn lamp
4	—	Trailer tow turn lamp electrical connector (part of 17682 RH/17683 LH)

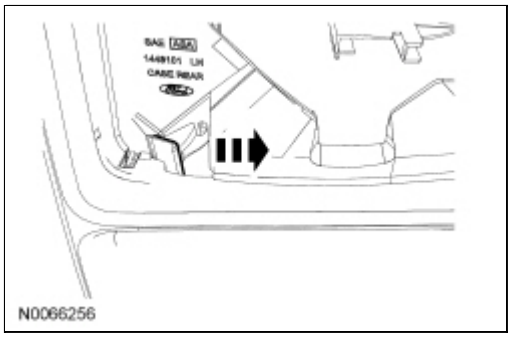
Removal and Installation

1. Remove the exterior mirror glass. For additional information, refer to Section 501-09 .
2. Remove the 4 screws and the outboard exterior mirror cover.
3. Using a thin-bladed tool, release the tab by pushing it inward and remove the trailer tow turn lamp.
   - Disconnect the electrical connector.
4. To install, reverse the removal procedure.

repair4less

Side Lamp Assembly — Outside Rear View Mirror, Trailer Tow

Item	Part Number	Description
1	13776	Exterior mirror side lamp assembly
2	—	Mirror bulb holders (part of 17683/17682) (LH/RH)
3	13465	Side marker lamp bulb
4	13465	Turn lamp bulb



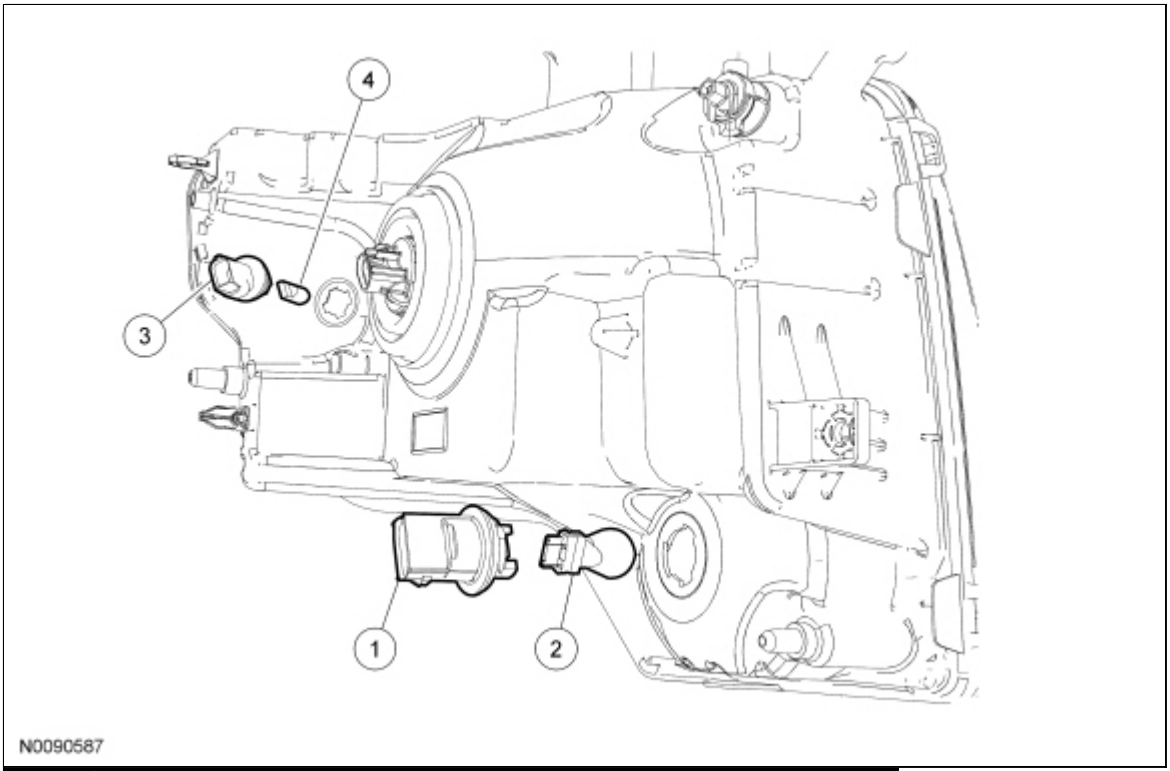
Removal and Installation

1. Position the exterior mirror glass inward toward the vehicle.

2. ***NOTICE:*** **Use caution to not trap the side lamp assembly wiring during installation, or damage to the wiring may occur.**

   NOTE: Mirror glass removed for clarity.

   Using a flat blade screwdriver or suitable tool, push the mirror side lamp assembly forward while releasing the retaining clip.



3. Separate the bulb holders from the mirror side lamp assembly and remove the side lamp.
4. To install, reverse the removal procedure.

---

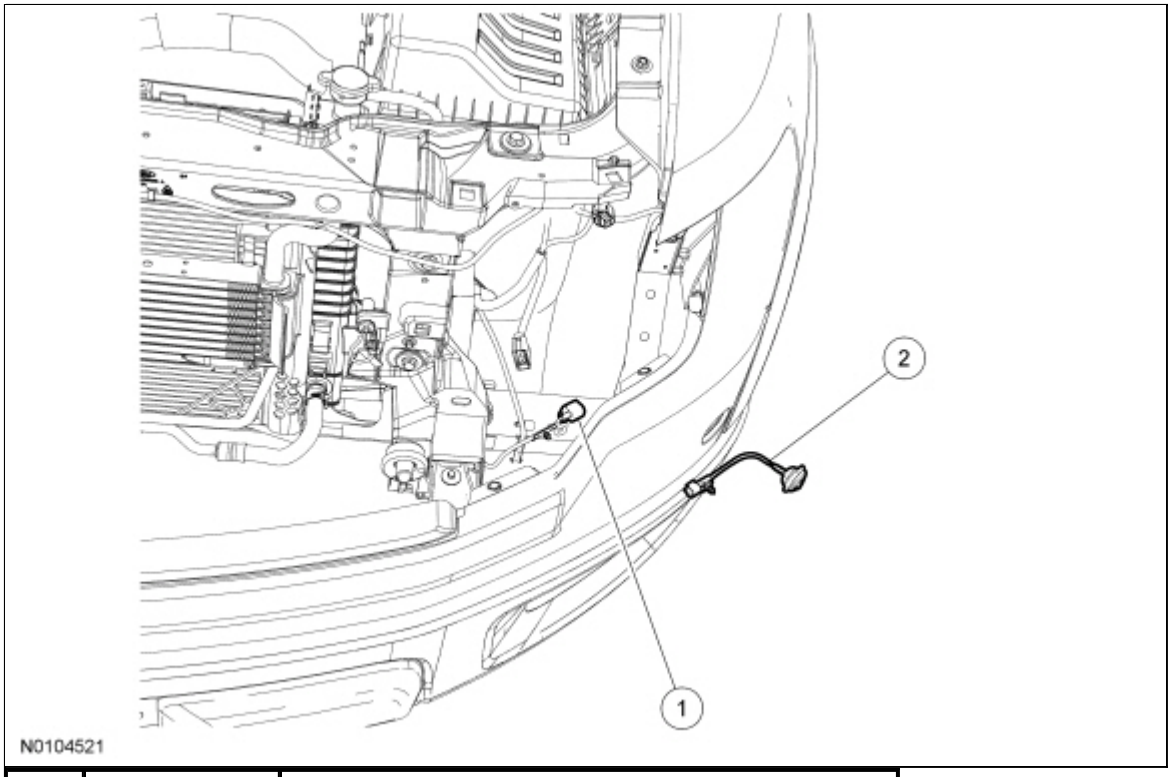
repair4less

Side Lamp/Front Turn Signal Lamp Bulb

Item	Part Number	Description
1	13411	Front park/turn signal lamp bulb holder
2	13466	Front park/turn signal lamp bulb
3	13411	Side marker lamp bulb holder
4	13466	Side marker lamp bulb

Removal and Installation

1. Remove the headlamp assembly. For additional information, refer to Headlamp Assembly in this section.



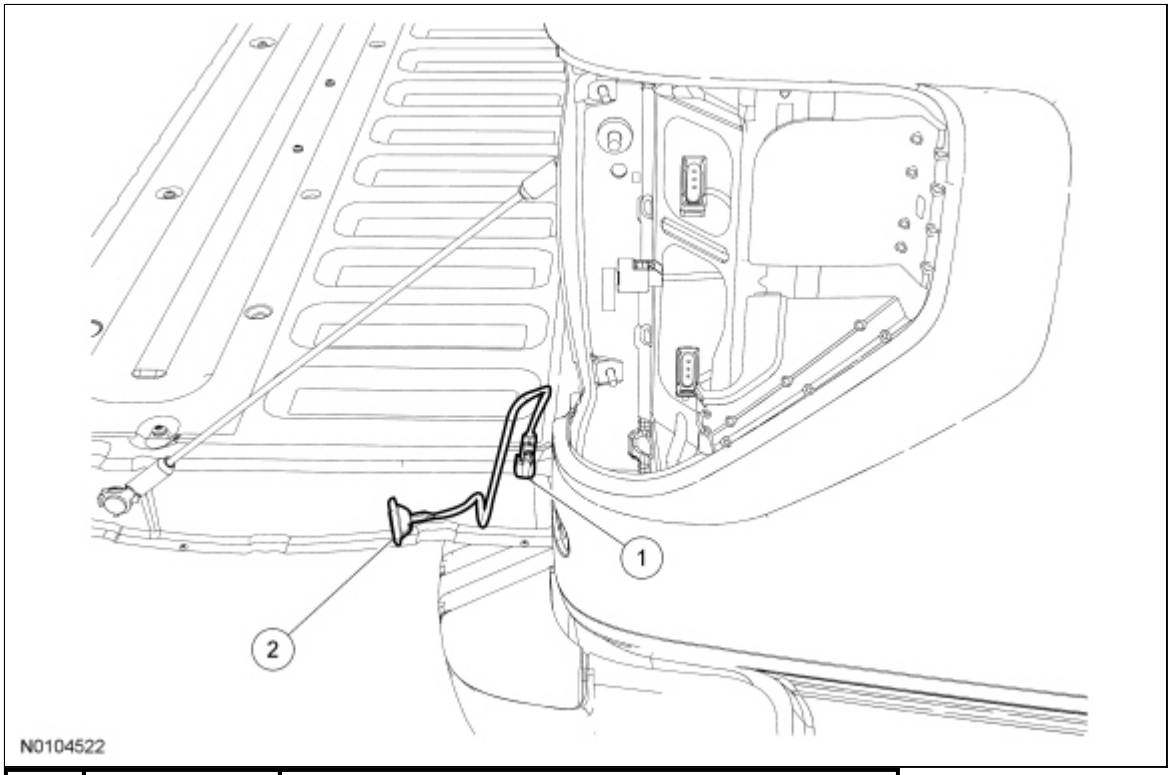
2. Rotate the bulb holder counterclockwise approximately one-eighth turn and remove it.
   - If necessary, separate the bulb from the bulb holder.

3. To install, reverse the removal procedure.

repair4less

Side Marker Lamp — Front

NOTE: Headlamp removed for clarity.



Item	Part Number	Description
1	—	Side lamp electrical connector (part of 13192)
2	13192	Side LED lamp

Removal and Installation

1. Disconnect the electrical connector and separate the LED connector push-pin from the vehicle harness.
2. Push the LED harness through the front bumper cover and remove.
3. To install, reverse the removal procedure.

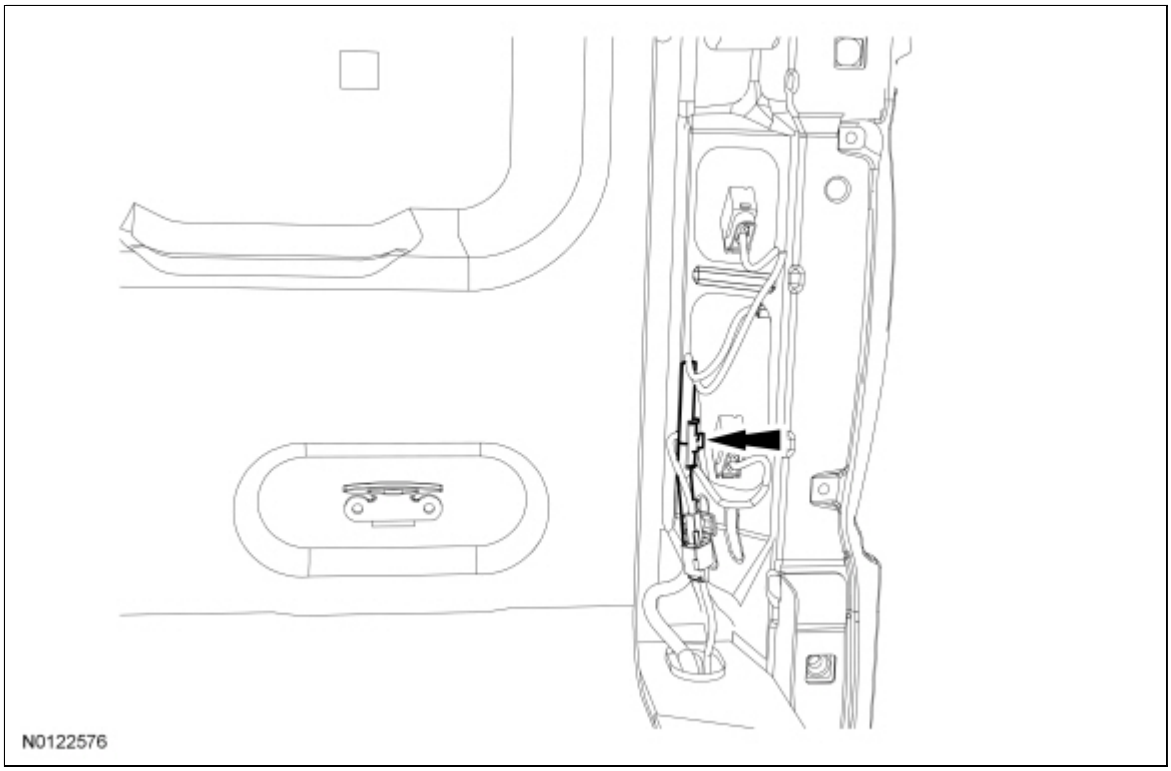
repair4less

Side Marker Lamp — Rear

Item	Part Number	Description
1	—	Side lamp electrical connector (part of 13192)
2	13192	Side LED lamp

Removal and Installation

1. Remove the rear lamp assembly. For additional information, refer to Rear Lamp Assembly in this section.



2. Disconnect the electrical connector and separate the LED connector push-pin from the vehicle harness.

3. Push the LED harness through the sheet metal and remove.

4. **NOTE:** Make sure the edge biter clip is attached to the outboard side of the sheet metal during installation.

   NOTE: Edge biter clip must be retained so that the wire bundle is positioned behined the sheet metal.

   To install, reverse the removal procedure.

repair4less

Stoplamp Switch

Item	Part Number	Description
1	—	Stoplamp switch electrical connector (part of 12A581)
2	13480	Stoplamp switch

Removal and Installation

NOTICE: **Do not press or pull on the brake pedal when installing or removing the stoplamp switch, otherwise misadjustment or damage to the stoplamp switch can occur.**

1. Disconnect the stoplamp switch electrical connector.
2. Rotate the stoplamp switch clockwise approximately one-eighth turn and remove it.
3. To install, reverse the removal procedure.

repair4less

Interior Lighting

The interior lighting system consists of the following:

- Interior lamp(s)
- Cargo lamp
- Puddle lamps
- Vanity mirror lamps
- Door ajar switches
- Instrument panel dimmer switch
- FDIM
- HVAC module.
- Steering Column Control Module (SCCM)
- Body Control Module (BCM)

NOTE: All the door ajar switches are integral to the door latch **except** for the rear door ajar switches on Super Cab vehicles. The rear door ajar switches on Super Cab vehicles can be replaced independently of the door latch.

The interior lighting system consists of up to 3 subsystems:

- Courtesy lamps
- Demand lamps
- Ambient lighting (if equipped)

Battery Saver

NOTE: Time-out is 1 minute if the vehicle has less than 80 km (50 miles).

To save battery voltage, the BCM provides automatic shut-off of the courtesy and demand lamps after a time-out period when the ignition is OFF. A timer in the BCM starts when any of the following occur:

- the ignition changes to OFF
- any door becomes ajar while the ignition is OFF
- an UNLOCK button of the Remote Keyless Entry (RKE) transmitter is pressed while the ignition is OFF
- a valid keypad code is entered while the ignition is OFF
- the instrument panel dimmer switch is used to turn the courtesy lamps on while the ignition is OFF

When 10 minutes have elapsed, the BCM automatically shuts off voltage to the lamps. The timer restarts (voltage is restored if the BCM is in battery saver mode) if any of the following occurs:

- the ignition changes out of OFF
- any door becomes ajar
- the UNLOCK button of the RKE transmitter is pressed
- a valid keypad code is entered
- the instrument panel dimmer switch is pressed

Courtesy Lamps

The courtesy lamp subsystem consists of the door ajar switches, the interior dome lamps, the cargo lamp, the puddle lamps, the instrument panel dimmer switch, the SCCM , and the BCM .

Illuminated Entry

The illuminated entry requests the dimmable backlighting, the parking lamps and the courtesy lamps to illuminate when the ignition is OFF and a door is opened, the RKE transmitter UNLOCK button is pressed, or the vehicle is unlocked using the keyless entry keypad. If no doors are open, the illuminated entry requests the lamps off after 25 seconds have elapsed, the ignition is switched out of OFF, the RKE transmitter LOCK button is pressed, or the vehicle is locked using the keyless entry keypad.

Interior Lighting Delay

The interior lighting delay feature provides temporary illumination of the dimmable backlighting, the parking lamps and the courtesy lamps after the doors are opened and then closed. The interior lighting delay feature keeps the lamps on for a period of 25 seconds after all the doors are closed. If during the 25-second delay time the BCM detects the ignition has been switched out of OFF, or if the vehicle is locked using the RKE transmitter or the keyless entry keypad, the lamp illumination is discontinued.

Illuminated Exit

The illuminated exit requests the dimmable backlighting, the parking lamps, and the courtesy lamps to illuminate for 25 seconds after all doors are closed and the ignition is turned OFF. The illuminated exit deactivates when the ignition transitions out of OFF, a door becomes ajar, or 25 seconds have elapsed.

Theater Lighting

The theater lighting feature ramps-up the courtesy lamps over 0.7 second when courtesy lamp activation is requested. The theater lighting feature ramps-down the courtesy lamps over 1.7 seconds when interior lighting deactivation is requested by any feature other than the panic alarm or battery saver.

Dark Car Feature

The dark car configuration disables the activation of the illuminated entry and illuminated exit features when active. The courtesy lamps can still be activated by the instrument panel dimmer switch.

Demand Lamps

The demand lamps subsystem consists of the map/reading lamps and the vanity mirror lamps located in the visors. The BCM energizes the battery saver relay to supply voltage to the demand lamps when the battery saver feature is not active.

Ambient Lighting

The ambient lighting subsystem provides illumination to the center console cup holders, the storage bin and the front and rear footwells. The ambient lighting is controlled using the touch screen display in the center of the instrument panel.

The touch screen display is used to select one of 7 color combinations or turn the ambient lighting feature on or off. The ambient lighting system retains the last color setting and brightness between uses.

When the illuminated entry feature is active, the ambient lighting defaults to a pre-set color and brightness setting. When all the doors are closed and the illuminated entry is no longer active, the ambient lighting

repair4less

returns to the last color and brightness setting that was set by the operator.

Interior Lighting

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The Body Control Module (BCM) controls all the interior lighting functions and timing by monitoring inputs from the following:

- door ajar switches
- ignition state
- instrument panel dimmer switch (monitored by the Steering Column Control Module (SCCM))
- Remote Keyless Entry (RKE) system
- vehicle speed

The BCM turns off the courtesy lamps when the vehicle speed exceeds 15 km/h (9 mph) or 5 km/h (3 mph) for the puddle lamps, unless the courtesy lamps are turned on using the instrument panel dimmer switch.

Interior Lamp Arbitrator

The interior lamp arbitrator (programming within the BCM) chooses between the interior lighting delay, the illuminated entry and exit, the battery saver, and the alarm flash processing to determine which feature has precedence of activating and deactivating the interior lamps.

Ambient Lighting

The HVAC provides voltage and ground to the LEDs. There are 3 different color LEDs (red, blue and green)

repair4less

housed within each LED assembly. By illuminating various color combinations, the LEDs can produce 7 different colors of ambient light.

The HVAC module receives input from the APIM and the Body Control Module (BCM) over the communication network for color and brightness settings.

The display interface in the center of the instrument panel is used to cycle through different color variations or turn the ambient lighting feature on or off. APIM communicates messages over the HS-CAN to the Body Control Module (BCM) .

The Body Control Module (BCM) gateways the messages to the HVAC module over the MS-CAN . The HVAC module retains the last color and brightness setting between uses.

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow. For additional information, refer to Principles of Operation in Section 419-10 .

The BCM FET protected output circuits for the interior lighting system are the interior courtesy lamp and puddle lamp output circuits.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical

• Door ajar switches	• Body Control Module (BCM) fuse(s):
	  ▪ 12 (15A) (courtesy lamps)
	  ▪ 21 (10A) (ambient lighting)
	• Wiring, terminals, or connectors
	• Cargo lamp (part of the high mounted stoplamp)
	• Instrument panel dimmer switch
	• Interior lamps
	• Puddle lamps
	• Vanity mirror lamps
	• BCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

If the scan tool does not communicate with the VCM :

- check the VCM connection to the vehicle.
- check the scan tool connection to the VCM .
- refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is ON.
     - The air bag warning indicator prove-out confirms ignition ON (other indicators may not prove ignition ON). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in RUN.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication with one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM , the Interior Lighting Control Module (ILCM) and the Steering Column Control Module (SCCM).

9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The courtesy lamps flash on and off	• The Body Control Module (BCM) is not configured correctly	• CARRY OUT the Programmable Module Installation (PMI) for the BCM . REFER to Section 418-01 . TEST the system for normal operation.
• The courtesy lamps do not illuminate with a door open	• Wiring, terminals or connectors • Door ajar switch • BCM	• GO to Pinpoint Test A .
• The courtesy lamps do not illuminate from the instrument panel dimmer switch	• Wiring, terminals or connectors • Instrument panel dimmer switch • Steering Column Control Module (SCCM)	• GO to Pinpoint Test B .
• One or more interior courtesy lamp is inoperative	• Fuse • Wiring, terminals or connectors • Interior lamp • BCM	• VERIFY the bulb(s) is OK. If OK, GO to Pinpoint Test C .
• One or more puddle lamp is inoperative	• Wiring, terminals or connectors • Puddle lamp • Exterior mirror	• VERIFY the bulb(s) is OK. If OK, GO to Pinpoint Test D .
• The cargo lamp is inoperative	• Fuse • Wiring, terminals or connectors • High mounted stoplamp • BCM	• VERIFY the bulb(s) is OK. If OK, GO to Pinpoint Test E .
• All the courtesy lamps stay on continuously	• Wiring, terminals or connectors • Door ajar switch • BCM	• GO to Pinpoint Test F .

repair4less

• The interior courtesy lamps stay on continuously	• Wiring, terminals or connectors • BCM	• GO to Pinpoint Test G .
• The cargo lamp/puddle lamps stay on continuously	• Wiring, terminals or connectors • BCM	• GO to Pinpoint Test H .
• One or more demand lamp is inoperative	• Fuse • Wiring, terminals or connectors • Sun visor • Interior lamp • BCM	• VERIFY the bulb(s) is OK. If OK, GO to Pinpoint Test I .
• The battery saver does not deactivate after time-out	• Wiring, terminals or connectors • BCM	• GO to Pinpoint Test J .
• An individual ambient lighting LED is inoperative/does not cycle through all color combinations	• Ambient lighting harness	• **NOTE:** The LEDs are not serviceable separate from the harness. REPAIR or INSTALL a new ambient lighting harness in question. TEST the system for normal operation.
• The ambient lighting is inoperative	• Wiring, terminals or connectors • HVAC module	• GO to Pinpoint Test K .
• The ambient lighting does not cycle through all color combinations	• Wiring, terminals or connectors • HVAC module	• GO to Pinpoint Test L .

Pinpoint Tests

Pinpoint Test A: The Courtesy Lamps Do Not Illuminate With A Door Open

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Body Control Module (BCM) sends a voltage signal to each door ajar switch, which is routed to ground when the door is closed (the door ajar switch is closed when the door is closed). When the door is opened, the signal to ground is interrupted indicating an open door to the BCM .

When the BCM detects an open door, voltage is provided to the courtesy lamps.

NOTE: All the door ajar switches are integral to the door latch **except** for the rear door ajar switches on Super Cab vehicles. The rear door ajar switches on Super Cab vehicles are replaced independently of the door latch.

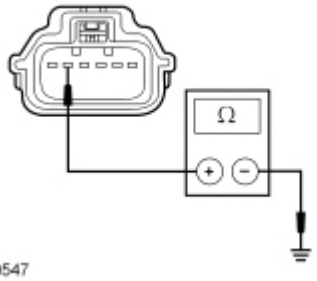
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door ajar switch
- BCM

PINPOINT TEST A: THE COURTESY LAMPS DO NOT ILLUMINATE WITH A DOOR OPEN

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>A1 CHECK THE OPERATION OF THE COURTESY LAMPS FROM THE INSTRUMENT PANEL DIMMER SWITCH</td><td rowspan="2">Yes
GO to A2 .

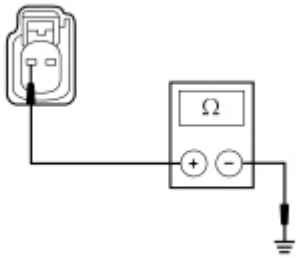


No
GO to Pinpoint Test C .</td></tr>
<tr><td>• Ignition OFF.
• Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds.
• Do the interior courtesy lamps illuminate?</td></tr>
<tr><td>A2 CHECK THE DOOR AJAR SWITCH OPERATION</td><td rowspan="2">Yes
INSTALL a new door latch or ajar switch in question. REFER to Section 501-14 . TEST the system for normal operation.

No
GO to A3 .</td></tr>
<tr><td>• Press and hold the instrument panel dimmer switch to the DOME LAMP OFF (second detent down) position for 3 seconds.
• Disconnect: Suspect Door Ajar Switch.
• Do the courtesy lamps illuminate?</td></tr>
<tr><td>A3 CHECK THE DOOR AJAR SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND</td><td rowspan="2">Yes
GO to A4 .

No
REPAIR the circuit in question for a short to ground. TEST the system for normal operation.</td></tr>
<tr><td>• Disconnect: BCM C2280C.
• For any door except a rear door on Super Cab vehicles, measure the resistance between the suspect door latch, harness side and ground as follows:

<table>
<tr><th>Location</th><th>Connector-Pin</th><th>Circuit</th></tr>
<tr><td>LH front</td><td>C525-5</td><td>CPL26 (GN/VT)</td></tr>
<tr><td>RH front</td><td>C609-5</td><td>CPL31 (WH)</td></tr>
<tr><td>LH rear</td><td>C705-5</td><td>CPL36 (GN)</td></tr>
<tr><td>RH rear</td><td>C805-5</td><td>CPL39 (YE)</td></tr>
</table>
</td></tr>
</table>



repair4less

N0090547

- For a rear door on Super Cab vehicles, measure the resistance between the suspect door ajar switch, harness side and ground as follows:

Location	Connector-Pin	Circuit
LH rear	C715-2	CPL36 (GN)
RH rear	C820-2	CPL39 (YE)

N0058790

- **Is the resistance greater than 10,000 ohms?**

A4 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: The Courtesy Lamps Do Not Illuminate From The Instrument Panel Dimmer Switch

Refer to Wiring Diagrams Cell 89, Interior Lighting for schematic and connector information.

Normal Operation

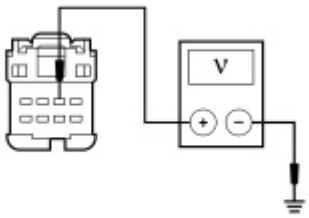
The Steering Column Control Module (SCCM) sends 3 voltage signals to the instrument panel dimmer switch to monitor the DIM UP, DIM DOWN and DOME LAMP request inputs. The SCCM sends a message

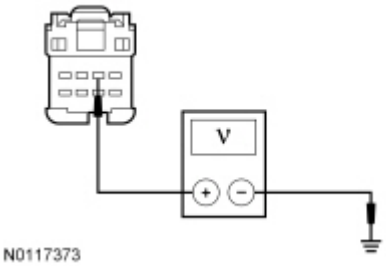
over the communication network to the Body Control Module (BCM) to indicate the instrument panel dimmer switch position.

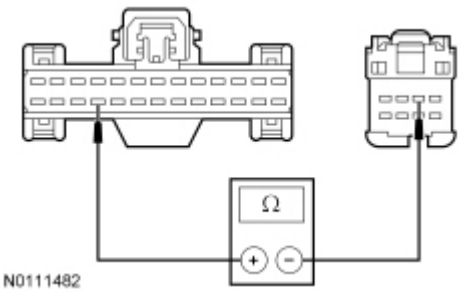
The BCM turns the courtesy lamps on and off by monitoring the dimmer switch and dome lamp request input circuits. When the instrument panel dimmer switch is pressed to the second detent up, the SCCM receives signals indicating DIM UP and DOME LAMP request circuits at the same time, indicating a request to turn the courtesy lamps on. When the instrument panel dimmer switch is pressed to the second detent down, the SCCM receives signals indicating DIM DOWN and DOME LAMP request circuits at the same time, indicating a request to turn the courtesy lamps off. When the SCCM detects these inputs from the instrument panel dimmer switch, the SCCM sends the appropriate message to the BCM and voltage is supplied to the courtesy lamps.

If the SCCM detects a fault with any of the 3 inputs from the switch (circuit shorted to ground for example), the SCCM sets DTC B1124:09 (Lamp Fade Control: Component Failure). The BCM then defaults the dimmable backlighting to a preset level that cannot be adjusted.

This pinpoint test is intended to diagnose the following:







- Wiring, terminals or connectors
- Instrument panel dimmer switch
- SCCM

PINPOINT TEST B: THE COURTESY LAMPS DO NOT ILLUMINATE FROM THE INSTRUMENT PANEL DIMMER SWITCH

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK THE OPERATION OF THE COURTESY LAMPS FROM A DOOR	
• Place the headlamp switch in the OFF position. • Open any door and observe the interior courtesy lamps. • **Do the interior courtesy lamps illuminate?**	**Yes** GO to B2. **No** GO to Pinpoint Test C.
B2 CHECK THE DIMMABLE BACKLIGHTING OPERATION	
• Place the headlamp switch in the PARKING LAMPS ON position. • Monitor the instrument panel dimmable backlighting while pressing (and holding) the instrument panel dimmer switch to the first detent up and then the first detent down. • **Does the dimmable backlighting intensity change with the instrument panel dimmer switch position?**	**Yes** GO to B3. **No** REFER to Section 413-00.
B3 CHECK FOR A VOLTAGE SIGNAL TO THE INSTRUMENT PANEL DIMMER SWITCH	
• Ignition OFF. • Disconnect: Instrument Panel Dimmer Switch C2298. • Measure the voltage between the instrument panel dimmer switch C2298-2, circuit VLN36 (GY/OG), harness side and ground.	**Yes** INSTALL a new instrument panel dimmer switch. REFER to Section 413-00. TEST the system for normal operation.

repair4less

 N0102465 • **Is the voltage approximately 5 volts?**	**No** GO to B4 .
B4 CHECK THE DOME LAMP REQUEST INPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: SCCM C2414A. • Ignition ON. • Measure the voltage between the instrument panel dimmer switch C2298-2, circuit VLN36 (GY/OG), harness side and ground.  N0117373 • **Is any voltage present?**	**Yes** REPAIR circuit VLN36 (GY/OG) for a short to voltage. TEST the system for normal operation. **No** GO to B5 .
B5 CHECK THE DOME LAMP REQUEST INPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between the SCCM C2414A-23, circuit VLN36 (GY/OG), harness side and the instrument panel dimmer switch C2298-2, circuit VLN36 (GY/OG), harness side.  N0111482 • **Is the resistance less than 5 ohms?**	**Yes** GO to B6 . **No** REPAIR circuit VLN36 (GY/OG) for an open. TEST the system for normal operation.
B6 CHECK FOR CORRECT SCCM OPERATION	

• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
	Yes
	INSTALL a new SCCM .
	REFER to Section 211-05 .
	TEST the system for normal operation.

• Connect all the SCCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test C: One Or More Interior Courtesy Lamp Is Inoperative

Refer to Wiring Diagrams Cell 89 , Interior Lamps for schematic and connector information.

Normal Operation

The Body Control Module (BCM) fuse 12 (15A) supplies power for the interior courtesy lamps (and the running board lamps if equipped). When the BCM receives the required input (such as an open door or request from the instrument panel dimmer switch), it provides voltage to the interior courtesy lamps.

DTC Description	Fault Trigger Conditions
• B1313:11 — Interior Lighting Output: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the courtesy lighting output circuit.
• B1313:15 — Interior Lighting Output: Circuit Short To Battery or Open	This DTC sets when the BCM detects an open from the courtesy lighting output circuit.
• U1000:00 — Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. **The module has temporarily disabled the interior courtesy lamp output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the courtesy lamp output until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. **The module has permanently disabled the interior courtesy lamp output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed.**

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Interior lamp
- BCM

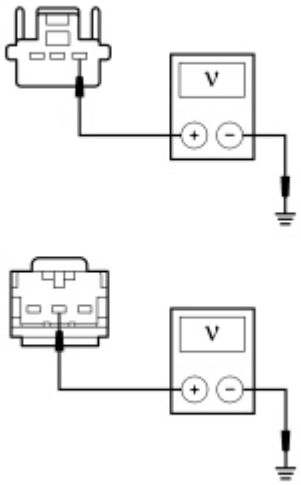
PINPOINT TEST C: ONE OR MORE INTERIOR COURTESY LAMP IS INOPERATIVE

repair4less

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>C1 CHECK THE OPERATION OF ALL THE INTERIOR COURTESY LAMPS</td><td></td></tr>
<tr><td>

Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds.
Are all the interior courtesy lamps inoperative?



</td><td>Yes
VERIFY the BCM fuse 12 (15A) is OK. If OK, GO to C4 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. After the repair: If no DTCs are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the DTCs and REPEAT the self-test (required to enable the courtesy lamp output driver if DTC U1000:00 is present) . TEST the system for normal operation. If DTC U3000:49 is present, INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.

No
GO to C2 .</td></tr>
<tr><td>C2 CHECK FOR VOLTAGE TO THE INTERIOR LAMP</td><td></td></tr>
<tr><td>

Turn the interior courtesy lamps off.
Disconnect: Inoperative Interior Lamp.
Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds.
Measure the voltage between the inoperative interior lamp, harness side and ground as follows:

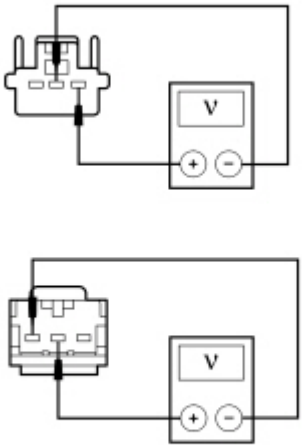
<table>
<tr><th>Inoperative Lamp</th><th>Connector-Pin</th><th>Circuit</th></tr>
<tr><td>Front interior lamp (without overhead console)</td><td>C901-1</td><td>VLN33 (GY/VT)</td></tr>
<tr><td>Front interior lamp (with overhead console)</td><td>C929-2</td><td>VLN33 (GY/VT)</td></tr>
<tr><td>Rear interior lamp</td><td>C932-1</td><td>VLN33 (GY/VT)</td></tr>
</table>
</td><td>Yes
GO to C3 .

No
REPAIR circuit VLN33 (GY/VT) for an open. TEST the system for normal operation.</td></tr>
</table>

N0090548

- **Is the voltage greater than 10 volts?**

C3 CHECK THE INTERIOR LAMP GROUND CIRCUIT FOR AN OPEN



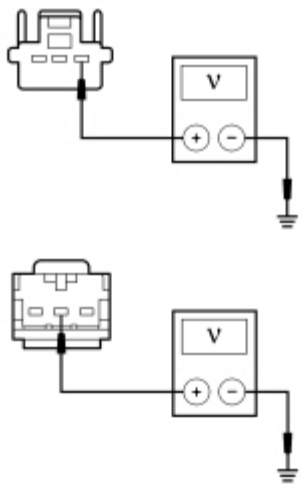
- Measure the voltage between the suspect interior lamp pins, harness side as follows:

Inoperative Lamp	Connector-Pin Circuit	Connector-Pin Circuit
Front interior lamp (without overhead console)	C901-1 VLN33 (GY/VT)	C901-2 GD139 (BK/YE)
Front interior lamp (with overhead console)	C929-2 VLN33 (GY/VT)	C929-1 GD139 (BK/YE)
Rear interior lamp	C932-1 VLN33 (GY/VT)	C932-2 GD139 (BK/YE)

Yes
INSTALL a new interior lamp for the lamp in question. REFER to Interior Lamp in this section. TEST the system for normal operation.

No
REPAIR circuit GD139 (BK/YE) for an open. TEST the system for normal operation.

repair4less

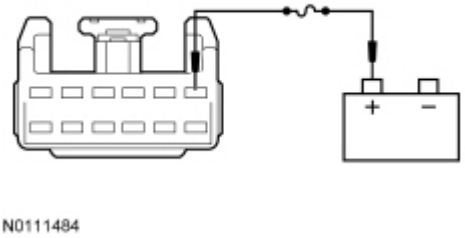


N0090549

- **Is the voltage greater than 10 volts?**

C4 CHECK THE OPERATION OF THE DEMAND LIGHTING	
• Operate the demand lighting function (such as the map light) on any interior lamp. • **Does the interior lamp illuminate?**	**Yes** For vehicles that only have a single interior lamp, GO to C5 . For vehicles that have 2 interior lamps, GO to C6 . **No** REPAIR circuit GD139 (BK/YE) for an open. TEST the system for normal operation.
C5 CHECK FOR VOLTAGE TO THE INTERIOR LAMP	
• Press and hold the instrument panel dimmer switch to the DOME LAMP OFF (second detent down) position for 3 seconds. • Disconnect: Front Interior Lamp. • Ignition ON. • Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds. • Measure the voltage between the interior lamp, harness side and ground as follows:	**Yes** INSTALL a new interior lamp. REFER to Interior Lamp in this section. TEST the system for normal operation. **No** GO to C6 .

Inoperative Lamp	Connector-Pin	Circuit
Front interior/map lamp (without overhead console)	C901-1	VLN33 (GY/VT)
Front interior/map lamp (with overhead console)	C929-2	VLN33 (GY/VT)



N0090548

- **Is the voltage greater than 10 volts?**

C6 BYPASS THE BCM	
NOTE: If the jumper wire fails, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. After the repair: If no DTCs are present, test the system for normal operation. If DTC U1000:00 is present, clear the DTCs and repeat the self-test **(required to enable the courtesy lamp output driver if DTC U1000:00 is present).** Test the system for normal operation. If DTC U3000:49 is present, install a new BCM. Refer to Section 419-10. Test the system for normal operation. • Connect: Front Interior Lamp. • Disconnect: BCM C2280A. • Connect a fused jumper wire between the BCM C2280A-1, circuit VLN33 (GY/VT), harness side and battery positive.	**Yes** REMOVE the jumper wire. GO to C7. **No** REMOVE the jumper wire. REPAIR circuit VLN33 (GY/VT) for an open. TEST the system for normal operation.

repair4less

 N0111484 • **Do the courtesy lamps illuminate?**	
C7 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

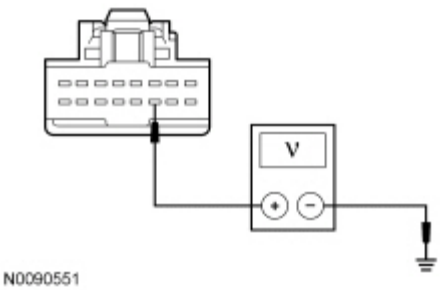
Pinpoint Test D: One Or More Puddle Lamp Is Inoperative

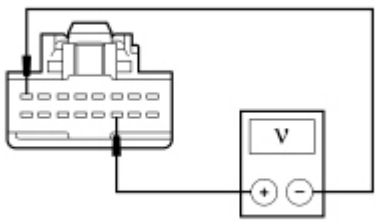
Refer to Wiring Diagrams Cell 89, Interior Lamps for schematic and connector information.

Normal Operation

The puddle lamps illuminate when the cargo lamp illuminates. The Body Control Module (BCM) uses a separate output circuit independent of the interior courtesy lamps that supplies voltage to the cargo lamp and puddle lamps.

This pinpoint test is intended to diagnose the following:





- Wiring, terminals or connectors
- Puddle lamp
- Exterior mirror

PINPOINT TEST D: ONE OR MORE PUDDLE LAMP IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Make sure the interior courtesy lamps operate before continuing diagnostics.

Test Step	Result / Action to Take
D1 DETERMINE IF THE CARGO LAMP IS INOPERATIVE	
• Ignition OFF.	**Yes**

• Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds. • **Is the cargo lamp illuminated?**	GO to D2 . **No** GO to Pinpoint Test E .
D2 CHECK FOR VOLTAGE TO THE EXTERIOR MIRROR	
NOTE: Make sure the suspect puddle lamp bulb is OK before continuing diagnostics. • Press and hold the instrument panel dimmer switch to the DOME LAMP OFF (second detent down) position for 3 seconds. • Disconnect: Suspect Exterior Mirror. • Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds. • Measure the voltage between the LH exterior mirror connector C521-11, circuit CLN25 (VT), harness side and ground; or between the RH exterior mirror connector C615-11, circuit CLN25 (VT), harness side and ground.  N0090551 • **Is the voltage greater than 10 volts?**	**Yes** GO to D3 . **No** REPAIR circuit CLN25 (VT) for an open. TEST the system for normal operation.
D3 CHECK THE PUDDLE LAMP GROUND CIRCUIT FOR AN OPEN	
• Measure the voltage between the LH exterior mirror connector C521-11, circuit CLN25 (VT), harness side and the LH exterior mirror connector C521-8, circuit GD134 (BK/VT), harness side; or between the RH exterior mirror connector C615-11, circuit CLN25 (VT), harness side and the RH exterior mirror connector C615-8, circuit GD139 (BK/YE), harness side.  N0090552 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new exterior mirror in question. REFER to Section 501-09 . TEST the system for normal operation. **No** For the LH exterior mirror, REPAIR circuit GD134 (BK/VT) for an open. TEST the system for normal operation. For the RH exterior mirror, REPAIR circuit GD139 (BK/YE) for an open. TEST the system for normal operation.

Pinpoint Test E: The Cargo Lamp is Inoperative

Refer to Wiring Diagrams Cell 89 , Interior Lamps for schematic and connector information.

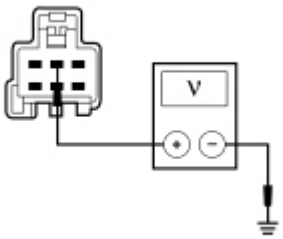
repair4less

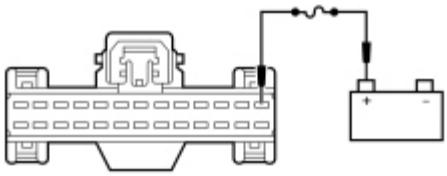
Normal Operation

The cargo lamp illuminates when the courtesy lamps illuminate. The Body Control Module (BCM) uses a separate output circuit that supplies voltage to the cargo lamp. The cargo lamp shares the ground circuit with the high mounted stoplamp.

The puddle lamps (if equipped) share the voltage supply with the cargo lamp.

DTC Description	Fault Trigger Conditions
• B12C2:11 — Puddle Lamp: Circuit Short To Ground	This DTC sets when the BCM detects a short to ground from the cargo lamp output circuit.
• U1000:00 — Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	A continuous DTC that sets when the BCM has temporarily shut down the output driver. **The module has temporarily disabled the cargo lamp output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the cargo lamp output until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.**
• U3000:49 — Control Module: Internal Electronic Failure	A continuous DTC that sets when the BCM has permanently shut down the output driver. **The module has permanently disabled the cargo lamp output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed.**





This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- High mounted stoplamp
- BCM

PINPOINT TEST E: THE CARGO LAMP IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
E1 CHECK THE OPERATION OF THE HIGH MOUNTED STOPLAMP	
• Apply the brake pedal. • **Does the high mounted stoplamp illuminate?**	**Yes** GO to E2 . **No** REFER to Section 417-01 .
E2 CHECK FOR VOLTAGE TO THE CARGO LAMP	
• Ignition OFF. • Disconnect: High Mounted Stoplamp C904.	**Yes** INSTALL a new high

• Press and hold the instrument panel dimmer switch to the DOME LAMP ON (second detent up) position for 3 seconds. • Measure the voltage between the high mounted stoplamp C904-2, circuit CLN25 (VT), harness side and ground.  N0104860 • **Is the voltage greater than 10 volts?**	mounted stoplamp. REFER to Section 417-01 . TEST the system for normal operation. **No** GO to E3 .
E3 BYPASS THE BCM	
NOTE: If the jumper wire fails, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short. After the repair: If no DTCs are present, test the system for normal operation. If DTC U1000:00 is present, clear the DTCs and repeat the self-test **(required to enable the cargo lamp output driver if DTC U1000:00 is present)** . Test the system for normal operation. If DTC U3000:49 is present, install a new BCM . REFER to Section 419-10 . Test the system for normal operation. • Press and hold the instrument panel dimmer switch to the DOME LAMP OFF (second detent down) position for 3 seconds. • Connect: High Mounted Stoplamp C904. • Disconnect: BCM C2280C. • Connect a fused jumper wire between the BCM C2280C-1, circuit CLN25 (VT), harness side and battery positive.  N0111485 • **Does the cargo lamp illuminate?**	**Yes** REMOVE the jumper wire. GO to E4 . **No** REMOVE the jumper wire. REPAIR circuit CLN25 (VT) for an open. TEST the system for normal operation.
E4 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for

repair4less

▪ pushed-out pins • Connect all the BCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test F: All The Courtesy Lamps Stay On Continuously

Refer to Wiring Diagrams Cell 89 , Interior Lamps for schematic and connector information.

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Body Control Module (BCM) sends a voltage signal to each door ajar switch, which is routed to ground when the door is closed (the door ajar switch is closed when the door is closed). When the door is opened, the signal to ground is interrupted indicating an open door to the BCM .

NOTE: All the door ajar switches are integral to the door latch **except** for the rear door ajar switches on Super Cab vehicles. The rear door ajar switches on Super Cab vehicles are replaced independently of the door latch.

When the BCM detects an open door or a request from the instrument panel dimmer switch, voltage is provided to the courtesy lamps.

DTC Description	Fault Trigger Conditions
• B1175:01 — Drivers Door Ajar Switch: General Electrical Failure	This DTC sets when the BCM detects an open from the LH front door ajar circuit.
• B1176:01 — Passenger Door Ajar Switch: General Electrical Failure	This DTC sets when the BCM detects an open from the RH front door ajar circuit.
• B11C0:01 — Driver Side Rear Door Ajar Switch: General Electrical Failure	This DTC sets sets when the BCM detects an open from the LH rear door ajar circuit.
• B11C1:01 — Passenger Side Rear Door Ajar Switch: General Electrical Failure	This DTC sets when the BCM detects an open from the RH rear door ajar circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door ajar switch
- BCM

PINPOINT TEST F: ALL THE COURTESY LAMPS STAY ON CONTINUOUSLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>F1 CHECK THE DOOR AJAR SWITCH PIDs</td><td></td></tr>
<tr><td>

Ignition ON.
Enter the following diagnostic mode on the scan tool: BCM DataLogger.
Monitor the BCM door ajar switch PIDs (DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR, DOOR_SW_RR) while opening and closing all the doors.
Do all the door ajar switch PID values agree with the door positions?

</td><td>Yes
If the interior courtesy lamps are on, GO to Pinpoint Test G. If the cargo lamp or puddle lamps are on, GO to Pinpoint Test H.

No
GO to F2.</td></tr>
<tr><td>F2 BYPASS THE SUSPECT DOOR AJAR SWITCH</td><td></td></tr>
<tr><td>

Disconnect: Suspect Door Ajar Switch.
For any door except a rear door on Super Cab vehicles, connect a fused jumper wire between the suspect door ajar switch connector pins, harness side as follows:

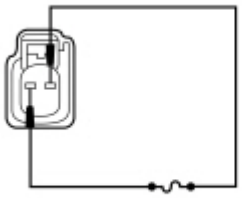
For a rear door on Super Cab vehicles, connect a fused



</td><td>Yes
REMOVE the jumper wire. INSTALL a new door latch or door ajar switch in question. REFER to Section 501-14. TEST the system for normal operation.

No
REMOVE the jumper wire. GO to F3.</td></tr>
</table>

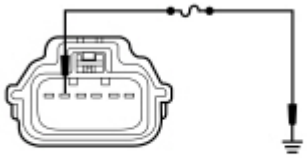
repair4less

jumper wire between the suspect door ajar switch connector pins, harness side as follows:

Location	Connector-Pin Circuit	Connector-Pin Circuit
LH rear	C715-2 CPL36 (GN)	C715-1 GD134 (BK/VT)
RH rear	C820-2 CPL39 (YE)	C820-1 GD139 (BK/YE)

N0119593

- Enter the following diagnostic mode on the scan tool: BCM DataLogger.
- Monitor the suspect BCM door ajar switch PID (DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR, DOOR_SW_RR).
- **Does the PID indicate the door is closed?**

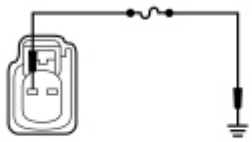


F3 BYPASS THE DOOR AJAR SWITCH GROUND CIRCUIT

- For any door except a rear door on Super Cab vehicles, connect a fused jumper wire between the suspect door ajar switch connector, harness side and ground as follows:

Suspect Door Ajar Switch	Connector-Pin	Circuit
LH front	C525-5	CPL26 (GN/VT)
RH front	C609-5	CPL31 (WH)
LH rear	C705-5	CPL36 (GN)
RH rear	C805-5	CPL39 (YE)

Yes
REMOVE the jumper wire. REPAIR the ground circuit in question for an open. TEST the system for normal operation.



No
REMOVE the jumper wire. GO to F4 .

N0119595

- For a rear door on Super Cab vehicles, connect a fused jumper wire between the suspect door ajar switch connector, harness side and ground as follows:

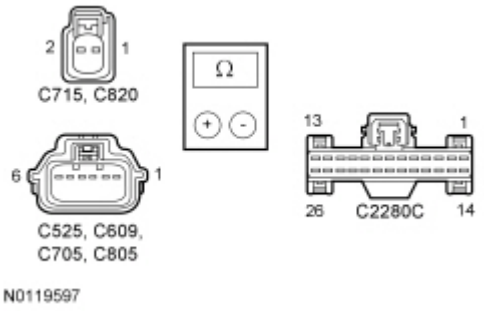
Location	Connector-Pin	Circuit
LH rear	C715-2	CPL36 (GN)
RH rear	C820-2	CPL39 (YE)

N0119596

- Enter the following diagnostic mode on the scan tool: BCM DataLogger.
- Monitor the suspect BCM door ajar switch PID (DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR, DOOR_SW_RR).
- **Does the PID indicate the door is closed?**

F4 CHECK THE SUSPECT DOOR AJAR SWITCH INPUT CIRCUIT FOR AN OPEN

- Disconnect: BCM C2280C.
- Measure the resistance between the suspect door ajar switch connector, harness side and the BCM connector, harness side as follows:



Suspect Door Ajar Switch Connector-Pin	BCM Connector-Pin	Circuit
LH front C525-5	C2280C-9	CPL26 (GN/VT)
RH front C609-5	C2280C-5	CPL31 (WH)
LH rear (Super Crew) C705-5	C2280C-20	CPL36 (GN)

Yes
GO to F5 .

No
REPAIR the ajar input circuit in question for an open. TEST the system for normal operation.

repair4less

LH rear (Super Cab) C715-2	C2280C-20	CPL36 (GN)
RH rear (Super Crew) C805-5	C2280C-21	CPL39 (YE)
RH rear (Super Crew) C820-2	C2280C-21	CPL39 (YE)

- **Is the resistance less than 5 ohms?**

F5 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test G: The Interior Courtesy Lamps Stay On Continuously

Refer to Wiring Diagrams Cell 89, Interior Lamps for schematic and connector information.

Normal Operation

When the Body Control Module (BCM) detects a request for the courtesy lamps (such as an open door or from the instrument panel dimmer switch), the BCM provides voltage to the interior courtesy lamps.

- DTC B1313:15 (Interior Lighting Output: Circuit Short To Battery or Open) — this DTC sets when the BCM detects a short to voltage from the interior courtesy lighting output circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- BCM

PINPOINT TEST G: THE INTERIOR COURTESY LAMPS STAY ON CONTINUOUSLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
G1 CHECK THE DOOR AJAR SWITCH PIDs • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Monitor the BCM door ajar switch PIDs (DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR, DOOR_SW_RR) while opening and closing all the doors. • **Do all the door ajar switch PID values agree with the door positions?**	**Yes** GO to G2. **No** GO to Pinpoint Test F.
G2 CHECK THE INTERIOR COURTESY LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: BCM C2280A. • Ignition ON. • **Do the interior courtesy lamps continue to illuminate?**	**Yes** REPAIR circuit VLN33 (GY/VT) for a short to voltage. TEST the system for normal operation. **No** GO to G3.

G3 CHECK FOR CORRECT BCM OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: The Cargo Lamp/Puddle Lamps Stay On Continuously

Refer to Wiring Diagrams Cell 89, Interior Lamps for schematic and connector information.

Normal Operation

When the Body Control Module (BCM) detects a request for the courtesy lamps (such as an open door or from the instrument panel dimmer switch), the BCM provides voltage to the cargo lamp and puddle lamps (if equipped).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- BCM

repair4less

PINPOINT TEST H: THE CARGO LAMP/PUDDLE LAMPS STAY ON CONTINUOUSLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
H1 CHECK THE INTERIOR COURTESY LAMPS	
• Observe the interior courtesy lamps. • **Are the interior courtesy lamps illuminated?**	**Yes** GO to Pinpoint Test F . **No** GO to H2 .
H2 CHECK THE CARGO LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280C. • Ignition ON. • **Does the cargo lamp continue to illuminate?**	**Yes** REPAIR circuit CLN25 (VT) for a short to voltage. TEST the system for normal operation. **No** GO to H3 .
H3 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test I: One Or More Demand Lamp Is Inoperative

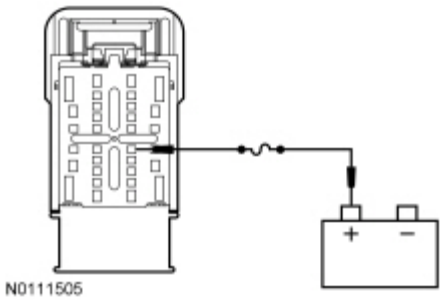
Refer to Wiring Diagrams Cell 89 , Interior Lamps for schematic and connector information.

Normal Operation

The Body Control Module (BCM) controls the operation of the battery saver relay. The BCM deactivates the battery saver relay 10 minutes after the ignition is switched to off and no other inputs are detected by the BCM to energize the battery saver relay (such as a flash-to-pass request or a button is pressed on a Remote Keyless Entry (RKE) transmitter).

When the battery saver relay is energized, the BCM supplies voltage to the demand lamps.

This pinpoint test is intended to diagnose the following:



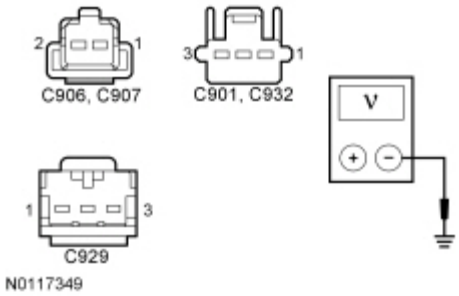
- Fuse

- Wiring, terminals or connectors
- Sun visor
- Interior lamp
- BCM

PINPOINT TEST I: ONE OR MORE DEMAND LAMP IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>I1 CHECK ALL THE DEMAND LAMPS
• Ignition OFF.
• Check the operation of all the interior demand lamps (map lamps and vanity mirror lamps).
• Are all the interior demand lamps inoperative?</td><td>Yes
GO to I2 .



No
GO to I3 .</td></tr>
<tr><td>I2 BYPASS THE BCM
NOTE: If the fuse fails, repair circuit CLN09 (YE/GN) for a short to ground.
• Disconnect: BCM C2280D.
• Connect a fused jumper wire between the BCM C2280d-22, circuit CLN09 (YE/GN), harness side and battery positive.

N0111505
• Switch any demand lamp (map or vanity mirror) on.
• Does the demand lamp illuminate when switched on?</td><td>Yes
REMOVE the jumper wire. VERIFY the BCM fuse 4 (10A) is OK. If OK, GO to I5 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

No
REMOVE the jumper wire. REPAIR circuit CLN09 (YE/GN) for an open. TEST the system for normal operation.</td></tr>
<tr><td>I3 CHECK FOR VOLTAGE TO THE INOPERATIVE LAMP
• Ignition OFF.
• Disconnect: Inoperative Lamp.
• Ignition ON.
• Measure the voltage between the inoperative demand lamp, harness side and ground as follows:
<table><tr><th>Inoperative Lamp</th><th>Connector-Pin</th><th>Circuit</th></tr><tr><td>LH vanity mirror</td><td>C907-1</td><td>CLN09 (YE/GN)</td></tr></table></td><td>Yes
GO to I4 .

No
REPAIR circuit CLN09 (YE/GN) for an open. TEST the system for normal operation.</td></tr>

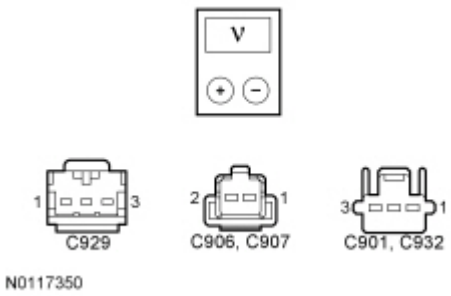
Rear interior/map	C932-3	CLN09 (YE/GN)

- **Is the voltage greater than 10 volts?**

I4 CHECK THE INOPERATIVE LAMP GROUND CIRCUIT FOR AN OPEN



- Measure the voltage between the inoperative lamp connector pins, harness side as follows:

Inoperative Lamp	Connector-Pin Circuit	Connector-Pin Circuit
LH vanity mirror	C907-1 CLN09 (YE/GN)	C907-2 GD139 (BK/YE)
RH vanity mirror	C906-1 CLN09 (YE/GN)	C906-2 GD139 (BK/YE)
Front interior (without overhead console)	C901-3 CLN09 (YE/GN)	C901-2 GD139 (BK/YE)
Front interior (with overhead console)	C929-3 CLN09 (YE/GN)	C929-1 GD139 (BK/YE)
Rear interior	C932-3 CLN09	C932-2 GD139

Yes
INSTALL a new lamp for the lamp in question. REFER to Interior Lamp in this section. TEST the system for normal operation.

No
REPAIR the ground circuit in question for an open. TEST the system for normal operation.

	(YE/GN)	(BK/YE)

- **Is the voltage greater than 10 volts?**

I5 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test J: The Battery Saver Does Not Deactivate After Time-Out

Refer to Wiring Diagrams Cell 89, Interior Lamps for schematic and connector information.

Normal Operation

The Body Control Module (BCM) controls the operation of the battery saver relay. The BCM deactivates the battery saver relay 10 minutes after the ignition is switched to off and no other inputs are detected by the BCM to energize the battery saver relay (such as a flash-to-pass request or a button is pressed on a Remote Keyless Entry (RKE) transmitter).

When the battery saver relay is energized, the BCM supplies voltage to the demand lamps.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- BCM

PINPOINT TEST J: THE BATTERY SAVER DOES NOT DEACTIVATE AFTER TIME-OUT

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

repair4less

Test Step	Result / Action to Take
J1 CHECK THE INTERIOR DEMAND LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280D. • Ignition ON. • Turn any demand lamp (map or vanity mirror) on. • **Does the demand lamp turn on?**	**Yes** REPAIR circuit CLN09 (YE/GN) for a short to voltage. TEST the system for normal operation. **No** GO to J2.
J2 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test K: The Ambient Lighting Is Inoperative

Refer to Wiring Diagrams Cell 89, Interior Lamps for schematic and connector information.

Normal Operation

The HVAC module provides voltage and ground to the LEDs. There are 3 LEDs (red, blue and green) housed within each LED assembly. By illuminating various color combinations, the LEDs are able to produce 7 different colors of ambient light.

The HVAC module receives input from the Accessory Protocol Interface Module (APIM) and the Body Control Module (BCM) over the communication network for color and brightness settings. The HVAC module retains the last color and brightness setting between uses.

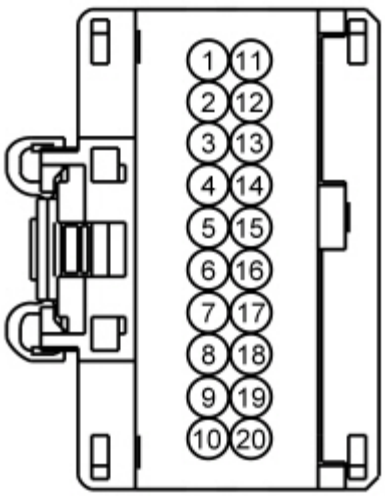
There ambient lighting system illuminates the following:

- Cupholders (located in the center console)
- Center console storage compartment
- Front footwells
- Rear footwells

The HVAC module has a separate ground circuit for the ambient lighting system.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- HVAC module



PINPOINT TEST K: THE AMBIENT LIGHTING IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

REPAIR circuit RLN44 (BN) for an open. TEST the system for normal operation.

K5 CHECK FOR CORRECT HVAC MODULE OPERATION

Yes

• Disconnect all the HVAC module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the HVAC module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	INSTALL a new HVAC module. REFER to Section 412-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Ambient Lighting Does Not Cycle Through All Color Combinations

Refer to Wiring Diagrams Cell 89 , Interior Lamps for schematic and connector information.

Normal Operation

The HVAC module provides voltage and ground to the LEDs. There are 3 LEDs (red, blue and green) housed within each LED assembly. By illuminating various color combinations, the LEDs are able to produce 7 different colors of ambient light.

The HVAC module receives input from the Accessory Protocol Interface Module (APIM) and the Body Control Module (BCM) over the communication network for color and brightness settings. The HVAC module retains the last color and brightness setting between uses.

There ambient lighting system illuminates the following:

- Cupholders (located in the center console)
- Center console storage compartment
- Front footwells
- Rear footwells

Based on input from the APIM and the BCM , the HVAC module provides voltage to the red, green and/or blue output circuits to produce the color selected.

DTC Description	Fault Trigger Conditions
• B127C:11 — Ambient Lighting Zone 2 Output Red LED: Circuit Short To Ground	A continuous and on-demand DTC that sets when the HVAC module detects a short to ground from the zone 2, red ambient lighting output circuit.
• B127C:12 — Ambient Lighting Zone 2 Output Red LED: Circuit Short To Battery	A continuous and on-demand DTC that sets when the HVAC module detects an open from the zone 2, red ambient lighting output circuit.
• B127C:13 — Ambient Lighting Zone 2 Output Red LED: Circuit Open	A continuous and on-demand DTC that sets when the HVAC module detects an open from the zone 2, red ambient lighting output circuit.
• B127F:11 — Ambient Lighting Zone 2 Output Green LED: Circuit Short To Ground	A continuous and on-demand DTC that sets when the HVAC module detects a short to ground from the zone 2, green ambient lighting output circuit.

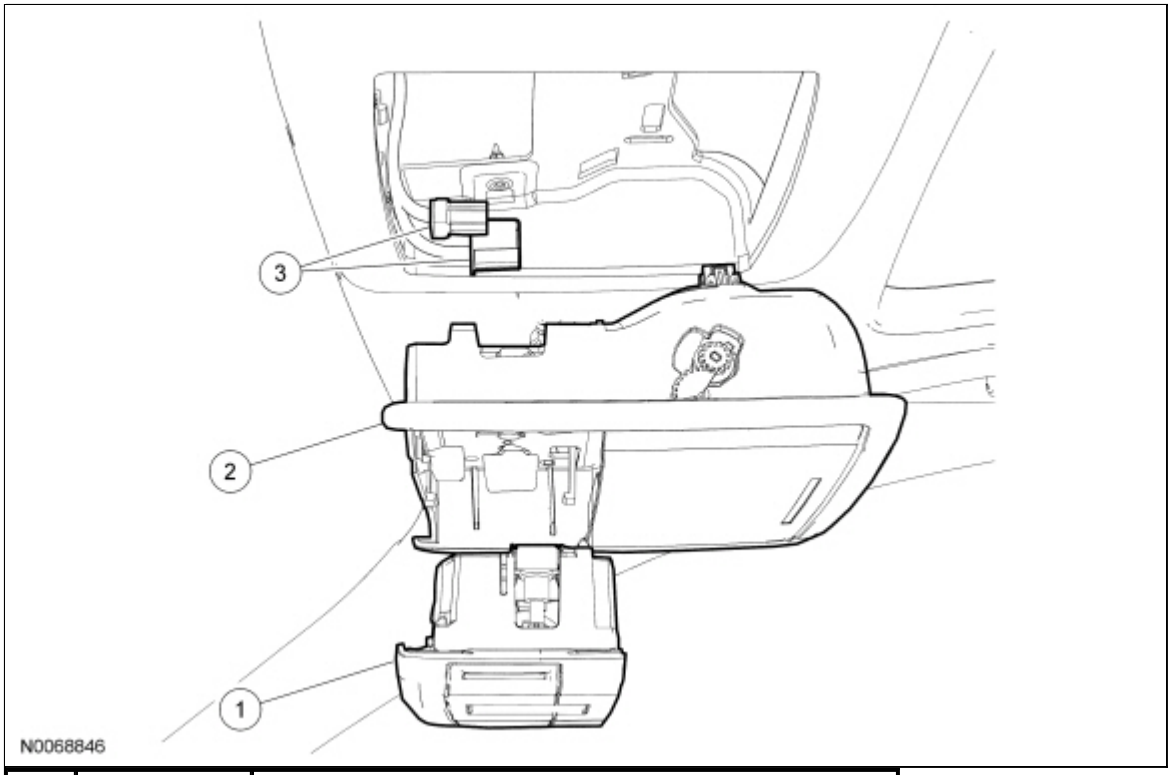
L3 CHECK FOR CORRECT HVAC MODULE OPERATION

repair4less

• Disconnect all the HVAC module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the HVAC module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new HVAC module. REFER to Section 412-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Ambient Lighting Switch

Item	Part Number	Description
1	045A76	Floor console upper finish panel
2	—	Ambient lighting switch electrical connector (part of harness 14E078)
3	13D806	Ambient lighting switch

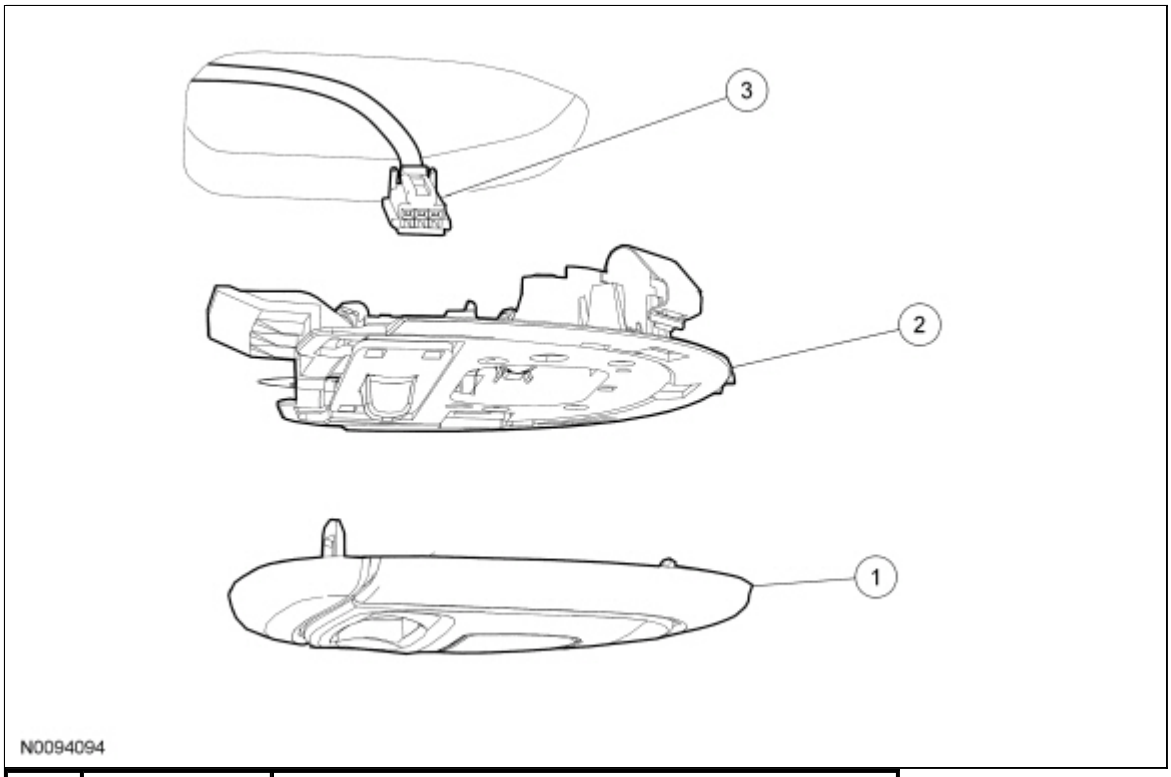


Removal and Installation

1. Remove the floor console upper finish panel.
   - Lift the floor console finish panel upward to release the retaining clips
2. Disconnect the electrical connector.
3. Release the tabs and remove the ambient lighting switch.
4. To install, reverse the removal procedure.

repair4less

Interior Lamp



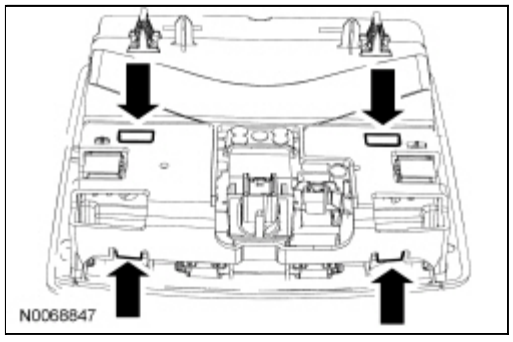
Front Lamp (Vehicles With Overhead Console)

Item	Part Number	Description
1	13776	Lamp assembly
2	54519A70	Overhead console
3	—	Overhead console electrical connectors (part of 14358)

Front Lamp (Vehicles Without Overhead Console) and Rear Lamp

repair4less

Item	Part Number	Description
1	13783	Interior lamp lens
2	13776	Interior lamp
3	—	Interior lamp electrical connector (part of 14358)

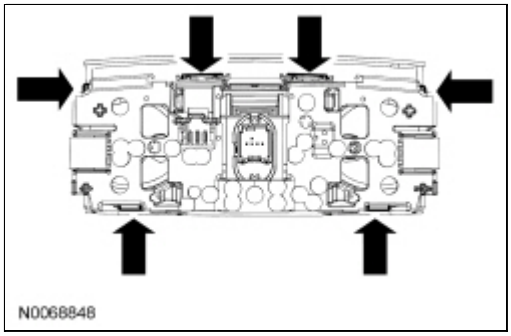


Removal

Front lamp (vehicles with overhead console)

1. **NOTE:** Do not pull-down on the front of the overhead console.

   Pull-down on the rear of the overhead console to release the overhead console from the retaining clips.
   - Disconnect the electrical connectors.

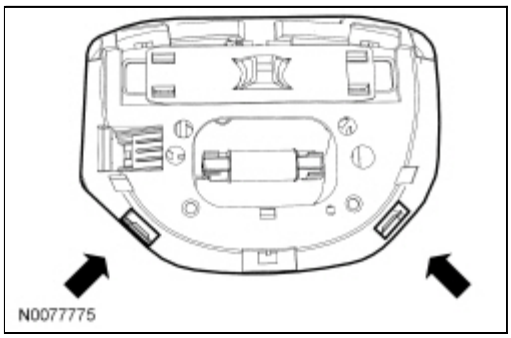


2. Release the 4 retaining clips, and remove the lamp assembly from the overhead console.

3. Release the 6 retaining clips, and remove the lens from the lamp assembly.

- **NOTE:** The bulbs are removed by pushing from the backside of the lamp assembly.

  Replace the bulb(s) as necessary.



Front lamp (vehicles without overhead console) or rear lamp

4. **NOTE:** The tabs (located just above the headliner) can be accessed with a small angled pick tool. They are released by pulling them away from the lamp assembly. Use care not to use too much pressure or the tabs may break.

   Release the 3 locking tabs and remove the interior lamp lens.

5. Release the 2 retaining clips (through the access holes) and remove the interior lamp.
   - Disconnect the electrical connector.

Installation

Front lamp (vehicles with overhead console)

1. Install the lens onto the lamp assembly.

repair4less

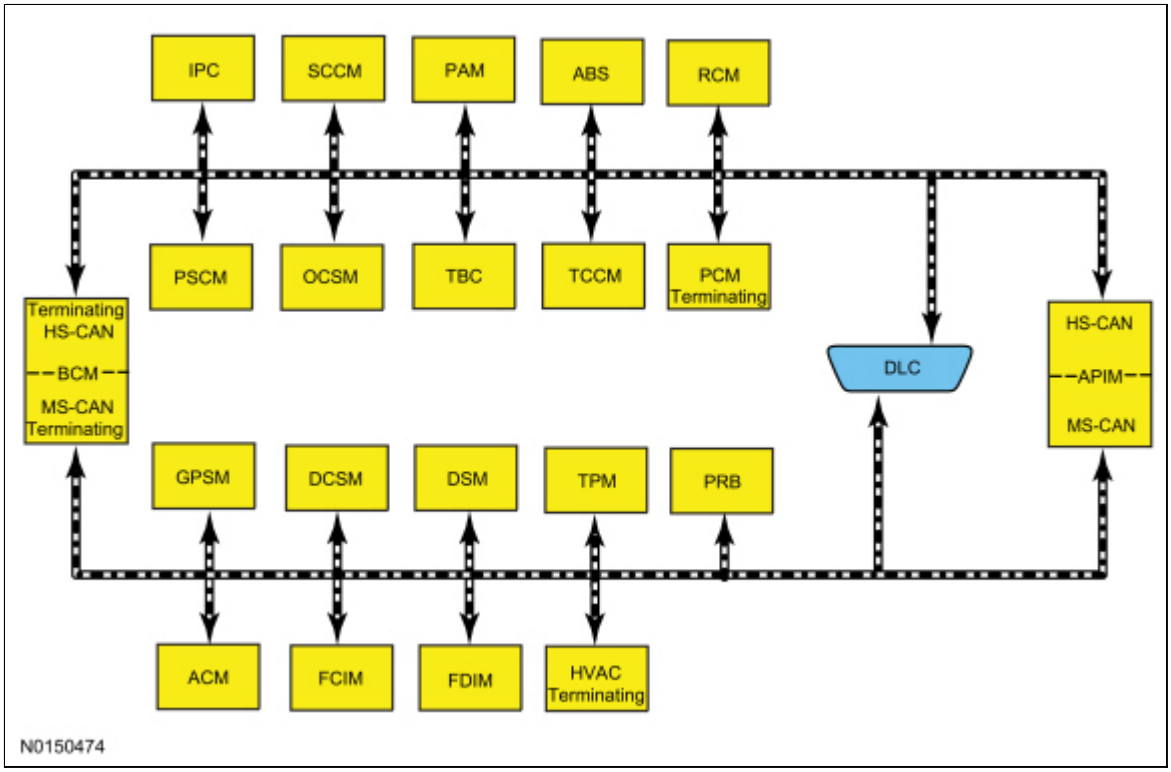
2. Install the lamp assembly into the overhead console.
3. Connect the electrical connectors and install the overhead console.

Front lamp (vehicles without overhead console) or rear lamp

4. Install the interior lamp lens.
5. Connect the electrical connector and install the interior lamp.

Communications Network

Multiplexing is a method of sending 2 or more signals simultaneously over a single circuit. Multiplexing allows 2 or more electronic modules (nodes) to communicate simultaneously over a twisted wire pair [data (+) and data (-)] network. The information or messages that can be communicated on these wires consists of commands, status or data. The advantage of using multiplexing is to reduce the weight of the vehicle by reducing the number of redundant components and electrical wiring.



The vehicle has 2 module communication networks which are connected to the Data Link Connector (DLC), located under the driver side instrument panel:

- High Speed Controller Area Network (HS-CAN)
- Medium Speed Controller Area Network (MS-CAN)

Vehicles with the optional 4.2-inch screen and 8-inch touchscreen audio units have an Infotainment Controller Area Network (I-CAN) that is **not** connected to the Data Link Connector (DLC). The Instrument Panel Cluster (IPC) operates as the gateway for modules on the I-CAN to communicate with the scan tool over the HS-CAN .

- Infotainment Controller Area Network (I-CAN)

Network Termination And Gateway Function

The Controller Area Network (CAN) uses network termination to improve communication reliability. Termination modules are located at both ends of the network. As network messages are broadcast in the form of voltage signals, the network voltage signals are stabilized by the termination resistors.

Each termination module has an internal 120 ohm resistor that bridges across the positive and negative bus connection. With two 120 ohm resistors located in a parallel circuit configuration, the total network impedance, or total resistance, is 60 ohms.

Network termination improves bus message reliability by stabilizing bus voltage and eliminating electrical interference.

The BCM is the gateway module, translating messages on the HS-CAN to the MS-CAN and vice versa, allowing a message to be distributed throughout both networks.

Vehicles equipped with the 4.2-inch screen or 8-inch touchscreen audio units use an I-CAN network for these modules. The IPC is the gateway module, translating messages on the HS-CAN to the modules on the I-CAN , and vice versa. This allows messages to be distributed throughout both networks, if required.

The BCM and IPC are the only modules on this vehicle that have this ability.

repair4less

Communications Network

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The vehicle has 3 module communication networks which are connected to the Data Link Connector (DLC), located under the instrument panel.

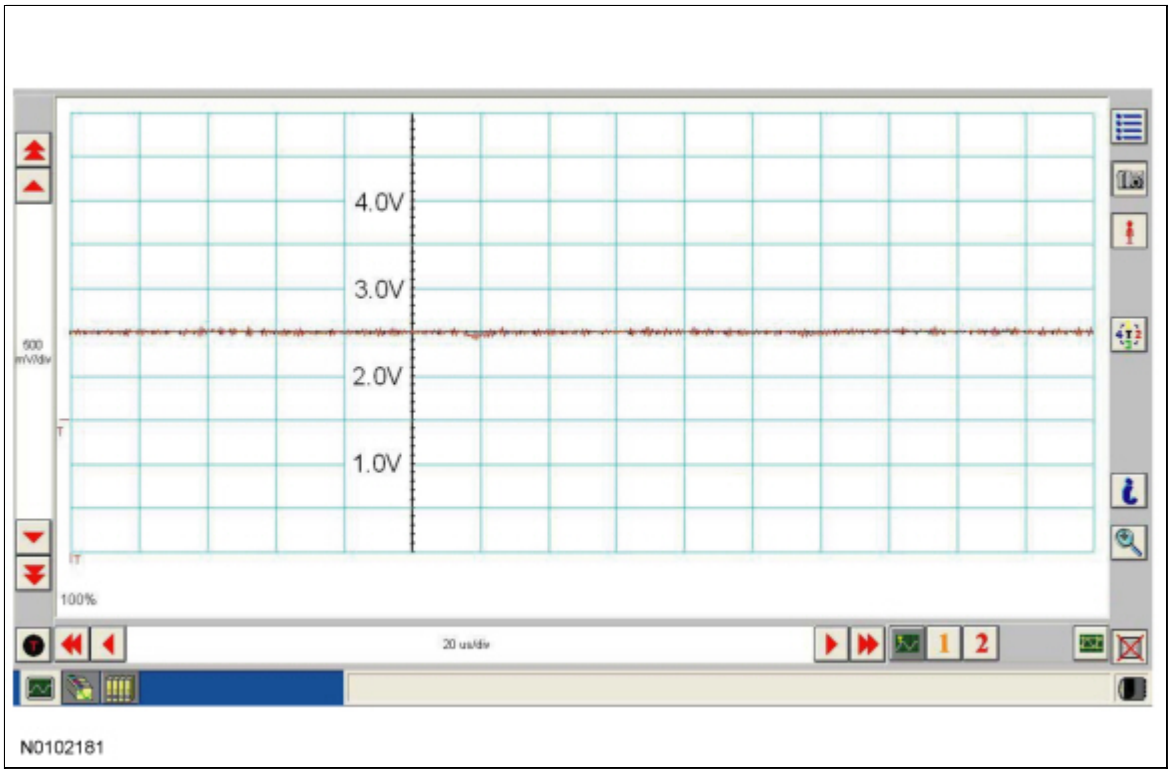
Both the HS-CAN and the MS-CAN use an unshielded twisted pair cable of data (+) and data (-) circuits. The HS-CAN operates at a maximum data transfer speed of 500 Kbps and is designed for real time information transfer and control. The MS-CAN operates at a maximum data transfer speed of 125 Kbps for bus messages and is designed for general information transfer.

The I-CAN is not connected to the DLC . The I-CAN modules communicate with the scan tool over the HS-CAN . The Instrument Panel Cluster (IPC) is used as a gateway for the messages to transfer between the scan tool and the modules on the I-CAN .

Controller Area Network (CAN) Fault Tolerance

NOTE: The oscilloscope traces below are from the Integrated Diagnostic System (IDS) oscilloscope taken using the CAN setup defaults. The traces are for both data (+) and data (-) taken simultaneously (2-channel) at a sample rate of 1 mega-sample per second (1MS/s) or greater and viewed at 20 microseconds (20µs) per division. Readings taken with a different oscilloscope will vary from those shown. Compare any suspect readings to a known good vehicle.

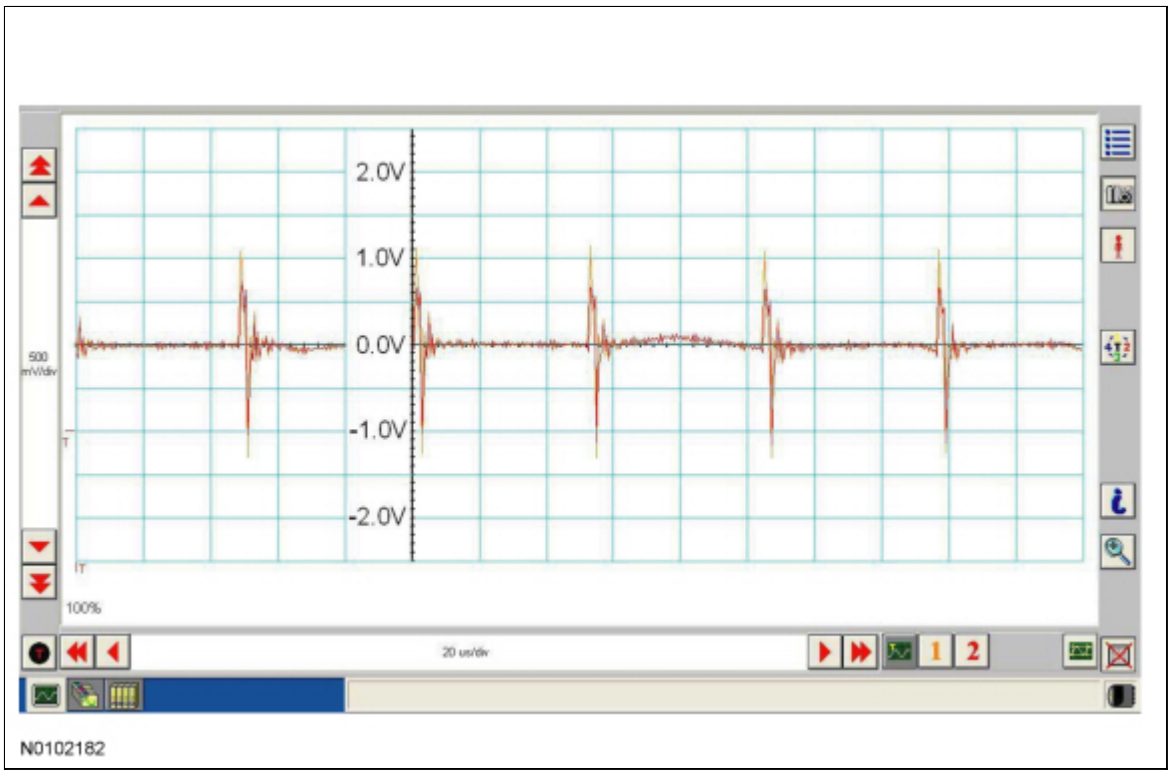
Normal CAN Operation



The data (+) and data (-) circuits are each regulated to approximately 2.5 volts during neutral or rested network traffic. As messages are sent on the data (+) circuit, voltage is increased by approximately 1.0 volt. Inversely, the data (-) circuit is reduced by approximately 1.0 volt when a message is sent.

Successful communication of a message can usually be identified by the slight spike at the end of a message transmission. This spike is a "positive acknowledge" signal from multiple modules confirming receipt of the message sent.

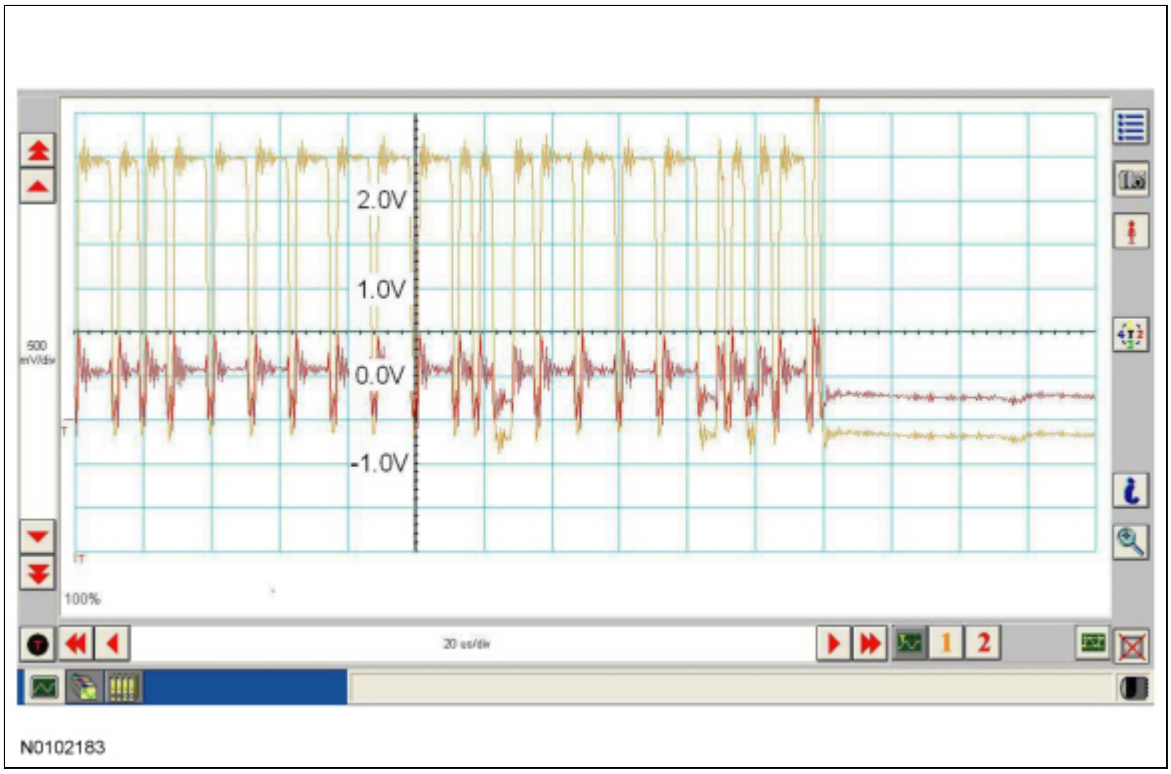
CAN Circuits Shorted Together



repair4less

N0102181

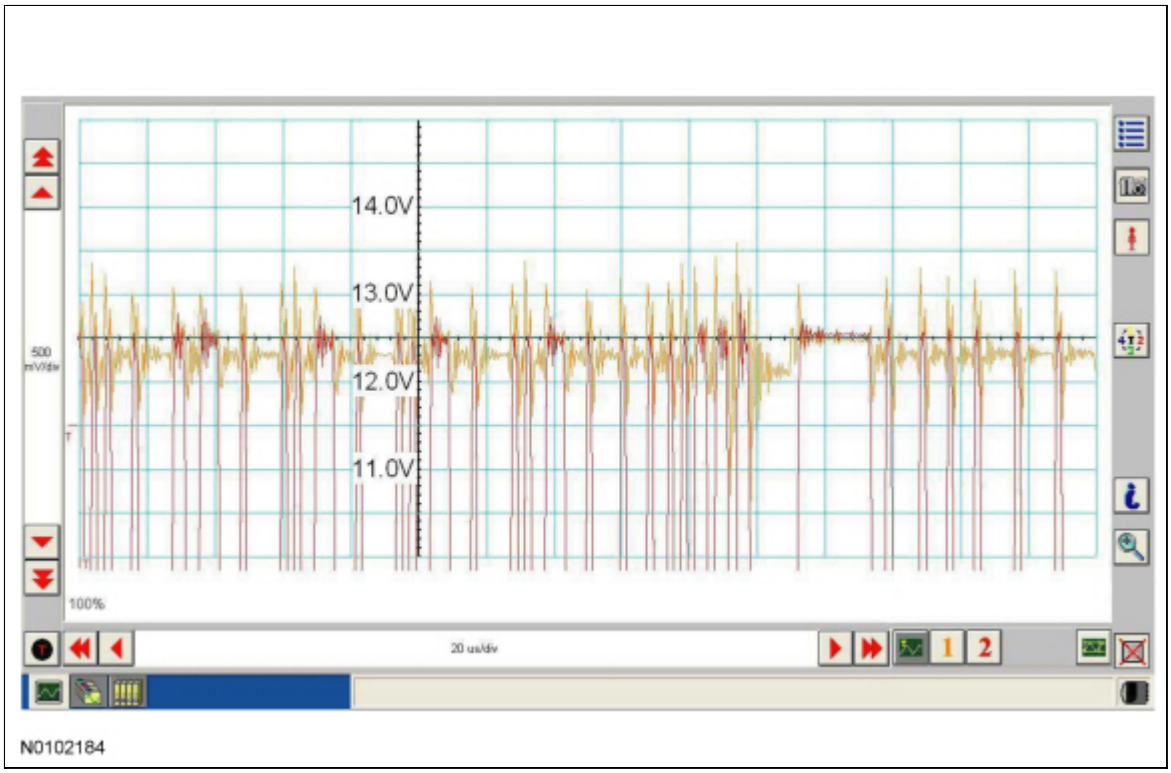
In the event the data (+) and data (-) circuits become shorted together, the signal stays at base voltage (2.5V) continuously and all communication capabilities are lost.



CAN (+) Circuit Shorted To Ground

N0102182

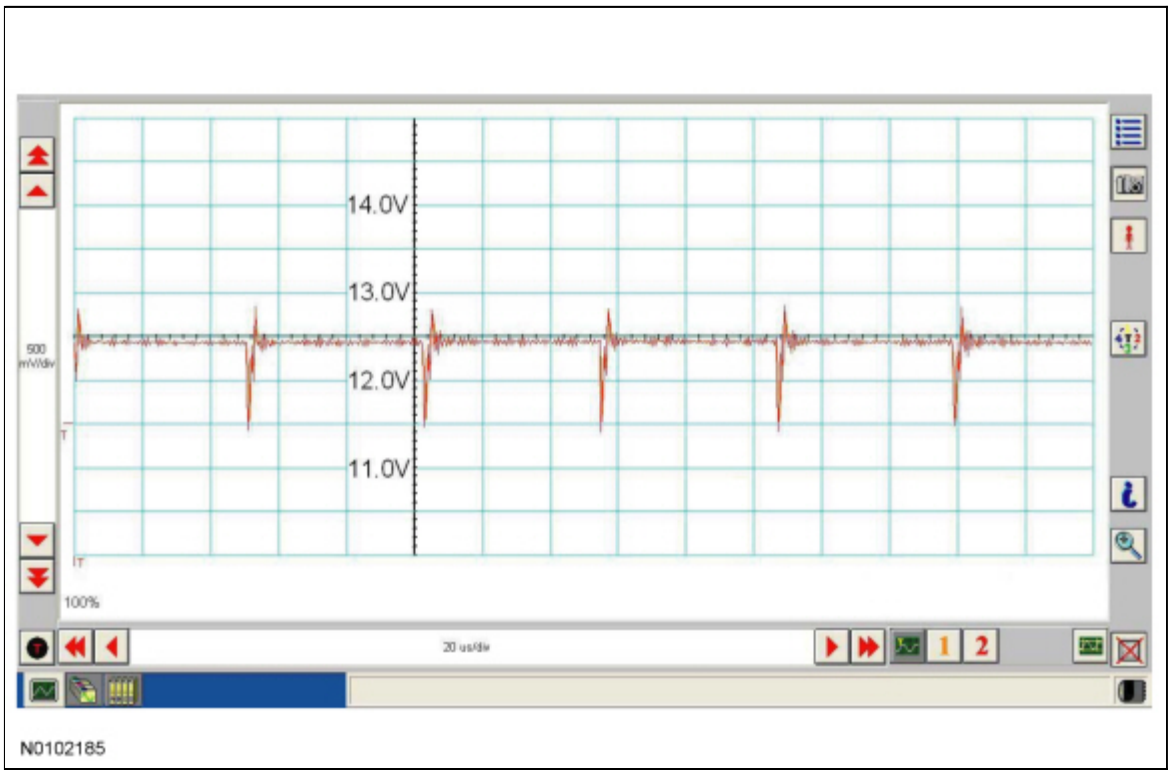
In the event the data (+) circuit becomes shorted to ground, both the data (+) and data (-) circuits are pulled low (0V) and all communication capabilities are lost.



CAN (-) Circuit Shorted To Ground

In the event the data (-) circuit becomes shorted to ground, the data (-) circuit is pulled low (0V) and the data (+) circuit reaches normal peak voltage (3.5V) during communication but falls to 0V instead of normal base voltage (2.5V). Communication can continue but at a degraded level.

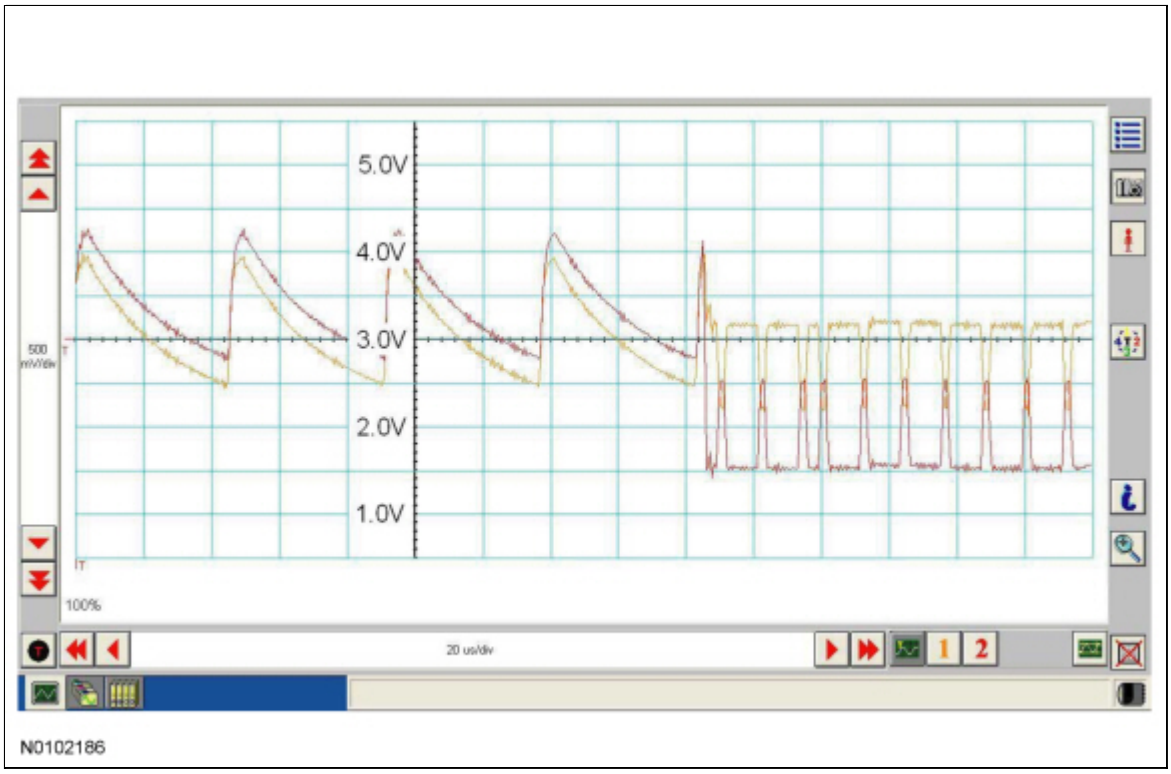
CAN (+) Circuit Shorted To Battery Voltage



repair4less

N0102184

In the event the data (+) circuit becomes shorted to battery voltage, the data (+) circuit is pulled high (12V) and the data (-) circuit falls to abnormally high voltage (above 5V) during communication and reaches battery voltage (12V) for peak voltage. Communication can continue but at a degraded level.



CAN (-) Circuit Shorted To Battery Voltage

N0102185

In the event the data (-) circuit becomes shorted to battery voltage, both the data (+) and data (-) circuits are pulled high (12V) and all communication capabilities are lost.

CAN Circuit Signal Corruption

Rhythmic oscillations, inductive spikes or random interference can corrupt the network communications. The corruption signal source may be outside electrical interference such as motors or solenoids or internal interference generated from a module on the network. In some cases, an open in either the data (+) or data (-) circuit to a network module may cause the module to emit interference on the one circuit which is still connected. The trace shown is an example of a "sawtooth" pattern transmitted from a module with one open network circuit.

Other corruptions may be present when a module is intermittently powered up and down. The module on power up can initiate communication out of sync with other modules on the network causing momentary communication outages. These types of message corruptions are referred to as a Negative-Acknowledge (NACK) message and lack an acknowledgement spike at the end of the transmitted message.

Controller Area Network (CAN) Multiplex Messages

Modules on the CAN utilize simultaneous communication of 2 or more messages on the same network circuits. The following chart summarizes the messages sent and received on the network.

CAN Module Communication Message Chart

NOTE: This chart describes the specific HS-CAN , MS-CAN and I-CAN messages broadcast by each module, and the module(s) that receive the message.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of electrical damage.
    - If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Visual Inspection Chart

Electrical

- Battery Junction Box (BJB) fuse(s):
  - High current 1 (125A) (PSCM)
  - 11 (30A) (PRB module)
  - 17 (30A) (TBC module)
  - 20 (20A) (TCCM ESOF)
  - 23 (15A) (SCCM)
  - 24 (15A) (SCCM)
  - 26 (10A) (PCM)
  - 36 (30A) (ABS module)
  - 45 (10A) BCM
  - 47 (60A) (ABS module)
  - 52 (5A) (PSCM)
  - 54 (5A) (TCCM , ABS module)
  - 68 (25A) (TCCM)
  - 69 (30A) (DCSM)
  - 75 (25A) (3.5L PCM)
  - 75 (15A) (3.7L, 5.0L and 6.2L PCM)
- Body Control Module (BCM) fuse(s):
  - 2 (15A) (APIM)
  - 7 (7.5A) (DSM)
  - 9 (10A) (FCIM , FDIM , GPSM)
  - 11 (10A) (IPC)
  - 19 (20A) (audio DSP module)
  - 24 (15A) (DLC)
  - 26 (5A) (TPM module)
  - 29 (20A) (ACM)
  - 34 (10A) (PAM)
  - 36 (10A) (RCM and OCSM)
  - 37 (10A) (TBC module)
  - 46 (10A) (HVAC module)
- Data Link Connector (DLC)
- Wiring harness
- Wiring, terminals or connectors

3. Connect the scan tool to the DLC .
   - **NOTE:** Make sure to use the latest scan tool software release.

     NOTE: The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

     If the Integrated Diagnostic System (IDS) does not communicate with the VCM :
     - check the VCM connection to the vehicle.
     - check the scan tool connection to the VCM .
     - GO to Pinpoint Test AA to diagnose No Power To The Scan Tool.

4. Establish a scan tool session.
   - **NOTE:** The scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the scan tool then attempts to communicate with all other modules on the vehicle.

     If an IDS session cannot be established with the vehicle, (IDS may state "No communication can be established with the PCM"):
     - Choose "NO" when the scan tool prompts whether or not to retry communication.
     - Enter either a PCM part number, tear tag or calibration number to identify the vehicle and start a session (the PCM part number and 4-character tear tag are printed on the PCM label).

repair4less

- GO to Pinpoint Test A to diagnose The PCM Does Not Respond To The Scan Tool.

5. Carry out the network test.
   - If the network test passes, retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) and proceed to Step 6.
   - If the network test fails, GO to Symptom Chart to diagnose the failed communication network.
   - If a module fails to communicate during the network test, GO to Symptom Chart .

6. Retrieve and review the DTCs.
   - If the DTCs retrieved are related to the concern, go to DTC Charts. Follow the non-network DTC diagnostics (B-codes, C-codes, P-codes) prior to the network DTC diagnostics (U-codes). For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .
   - If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

NOTE: Network DTCs (U-codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming often set network DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent repeat network DTC concerns, inspect all network wiring, especially connectors. Test the vehicle battery, refer to Section 414-01 .

NOTE: Some modules on this vehicle utilize a 5-character DTC followed by a 2-character failure-type code. The failure-type code provides information about specific fault conditions such as opens, or shorts to ground. Continuous memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

Communication Network DTC Chart

DTC	Description	Source	Action
U0001:88	High Speed CAN Communication Bus: Bus off	Power Steering Control Module (PSCM)	The module could not communicate on the network at a point in time. The fault is currently not present since the module is currently communicating with the scan tool reporting this DTC. CLEAR the DTC. REPEAT the network test with the scan tool. VERIFY the integrity of the connectors and wiring. Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.
U0028:08	Vehicle Communication Bus A: Bus Signal / Message Failures	Restraints Control Module (RCM)	The module could not communicate on the network at a point in time. The fault is currently not present since the module is currently communicating with the scan tool reporting this DTC. CLEAR the DTC. REPEAT the network test with the scan tool. VERIFY the integrity of the connectors and wiring. Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.
U0028:88	Vehicle Communication Bus A: Bus Off	Restraints Control Module (RCM)	The module could not communicate on the network at a point in time. The fault is currently not present since the module is currently communicating with the scan tool reporting this DTC. CLEAR the DTC. REPEAT the network test with the scan tool. VERIFY the integrity of the

			connectors and wiring. Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.
U0073	Vehicle Communication Bus A "Off"	ABS module	The module could not communicate on the network at a point in time. The fault is currently not present since the module is currently communicating with the scan tool reporting this DTC. CLEAR the DTC. REPEAT the network test with the scan tool. VERIFY the integrity of the connectors and wiring. Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.
U1900	CAN Communication Bus Fault - Receive Error	Power Running Board (PRB) module	CARRY out the network test. GO to Symptom Chart for the module that fails the network test.
U3000:88	Control Module: Bus Off	Accessory Protocol Interface Module (APIM)	The module could not communicate on the network at a point in time. The fault is currently not present since the module is currently communicating with the scan tool reporting this DTC. CLEAR the DTC. REPEAT the network test with the scan tool. VERIFY the integrity of the connectors and wiring. Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The vehicle does not start with the scan tool connected to the Data Link Connector (DLC) and/or multiple malfunction indicators are only on when the scan tool is connected to the DLC	• Wiring, terminals or connectors • Scan tool	• GO to Pinpoint Test AA .
• The PCM does not respond to the scan tool	• Wiring, terminals or connectors • PCM	• REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual, Section 5, pinpoint test QA before proceeding to Pinpoint Test A . If pinpoint test QA has been completed, GO to Pinpoint Test A .
• The ABS module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • ABS module	• GO to Pinpoint Test B .
• The Instrument Panel	• Fuse	• GO to Pinpoint Test C .

repair4less

Cluster (IPC) does not respond to the scan tool	• Wiring, terminals or connectors • IPC	
• The Restraints Control Module (RCM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • RCM	• GO to Pinpoint Test D .
• The OCSM does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • OCSM	• GO to Pinpoint Test E .
• The TCCM does not respond to the scan tool	• Fuse(s) • Wiring, terminals or connectors • TCCM	• GO to Pinpoint Test F .
• The Trailer Brake Control (TBC) module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • TBC module	• GO to Pinpoint Test G .
• The Power Steering Control Module (PSCM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • PSCM	• GO to Pinpoint Test H .
• The Body Control Module (BCM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • BCM	• GO to Pinpoint Test I .
• The HVAC module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • HVAC module	• GO to Pinpoint Test J .
• The Audio Front Control Module (ACM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • ACM	• GO to Pinpoint Test K .
• The audio Digital Signal Processing (DSP) module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • Audio DSP module	• GO to Pinpoint Test L .
• The Front Controls Interface Module (FCIM) does not respond to the	• Fuse • Wiring, terminals or	• GO to Pinpoint Test M .

scan tool	connectors • FCIM	
• The Front Display Interface Module (FDIM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • Front Display Interface Module (FDIM)	• GO to Pinpoint Test N .
• The FCDIM does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • FCDIM	• GO to Pinpoint Test O
• The Driver Seat Module (DSM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • DSM	• GO to Pinpoint Test P .
• The Dual Climate Controlled Seat Module (DCSM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • DCSM	• GO to Pinpoint Test Q .
• The Power Running Board (PRB) module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • PRB module	• GO to Pinpoint Test R .
• The Parking Aid Module (PAM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • PAM	• GO to Pinpoint Test S .
• The Global Positioning System Module (GPSM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • GPSM	• GO to Pinpoint Test T .
• The Accessory Protocol Interface Module (APIM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • APIM	• GO to Pinpoint Test U .
• The Steering Column Control Module (SCCM) does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • SCCM	• GO to Pinpoint Test V .
• The Tire Pressure Monitor (TPM) module does not respond to the scan tool	• Fuse • Wiring, terminals or	• GO to Pinpoint Test W .

repair4less

	connectors • TPM module	
• No Medium Speed Controller Area Network (MS-CAN) communication, all modules are not responding	• Wiring, terminals or connectors • APIM (if equipped) • ACM (if equipped) • BCM • DSM (if equipped) • DCSM (if equipped) • FCIM (if equipped) • FDIM (if equipped) • GPSM (if equipped) • HVAC module • PRB module (if equipped) • TPM module	• GO to Pinpoint Test X .
• No High Speed Controller Area Network (HS-CAN) communication, all modules are not responding	• Wiring, terminals or connectors • TCCM (if equipped) • ABS module • APIM (if equipped) • BCM • IPC • OCSM • PAM (if equipped) • PCM • PSCM (if equipped) • RCM • SCCM • TBC module (if equipped)	• GO to Pinpoint Test Y .

• No power to the scan tool	• Fuse • Wiring, terminals or connectors • DLC • Scan tool	• GO to Pinpoint Test AA .

Pinpoint Tests

Pinpoint Test A: The PCM Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 23 , Electronic Engine Controls - 3.7L for schematic and connector information.

Refer to Wiring Diagrams Cell 24 , Electronic Engine Controls - 5.0L for schematic and connector information.

Refer to Wiring Diagrams Cell 25 , Electronic Engine Controls - 3.5L for schematic and connector information.

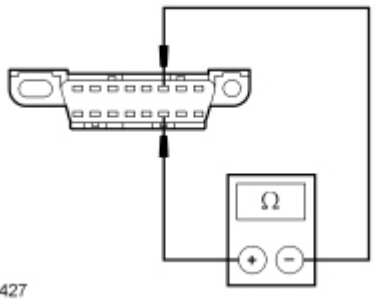
Refer to Wiring Diagrams Cell 26 , Electronic Engine Controls - 6.2L for schematic and connector information.

Normal Operation

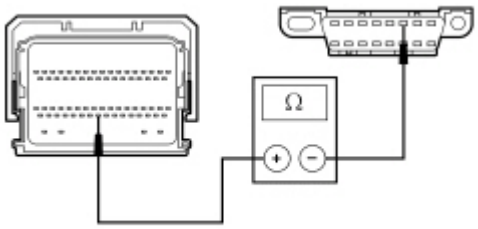
The PCM communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

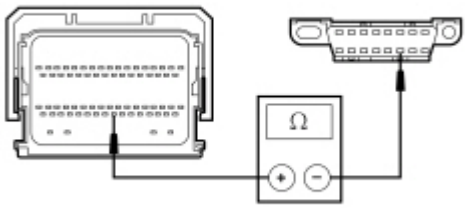
This pinpoint test is intended to diagnose the following:

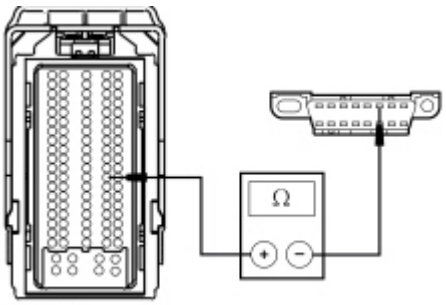
- Wiring, terminals or connectors
- PCM



PINPOINT TEST A: THE PCM DOES NOT RESPOND TO THE SCAN TOOL

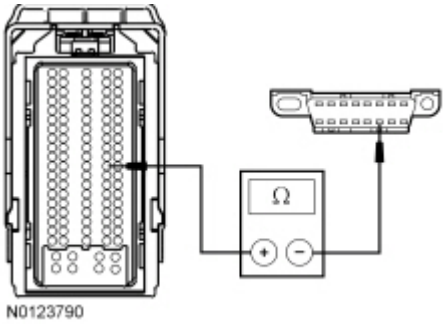






NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .



Test Step	Result / Action to Take
A1 VERIFY IF OTHER HS-CAN MODULES PASS THE NETWORK TEST	
• Enter the following diagnostic mode on the scan tool: Network Test . • In the LH pane of the IDS network test display screen, verify	**Yes** If "pass" or a DTC was

repair4less

whether any HS-CAN modules passed the network test. • **Is the text "pass" or a DTC listed next to any of the following modules (if equipped): TCCM , ABS module, Accessory Protocol Interface Module (APIM), Body Control Module (BCM), Instrument Panel Cluster (IPC), Occupant Classification System (OCS) module, Parking Aid Module (PAM), Power Steering Control Module (PSCM), Restraints Control Module (RCM), Steering Column Control Module (SCCM) or Trailer Brake Control (TBC) module or PCM?**	listed next to the PCM, a network fault is not currently present. If "pass" or a DTC was listed next to one or more modules other than the PCM, GO to A2 . **No** No modules are currently communicating on the HS-CAN . GO to Pinpoint Test Y to diagnose no HS-CAN communication.
A2 VERIFY THE PC/ED MANUAL PINPOINT TEST QA HAS BEEN CARRIED OUT	
• Verify that pinpoint test QA has been carried out. • **Has pinpoint test QA been carried out?**	**Yes** GO to A3 . **No** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual, Section 5, pinpoint test QA to diagnose no communication with the PCM.
A3 CHECK THE HS-CAN TERMINATION RESISTANCE	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0026427 • **Is the resistance between 54 and 66 ohms?**	**Yes** CONNECT the negative battery cable. GO to A6 . **No** For the 3.7L, 5.0L or 6.2L engine GO to A4 . For the 3.5L engine GO to A5 .
A4 CHECK THE HS-CAN CIRCUITS BETWEEN THE PCM AND THE DLC FOR AN OPEN	
• Disconnect: PCM C175B or C1381B . • Measure the resistance between the PCM C175B-59 or C1381B-59, circuit VDB04 (WH/BU), harness side and the DLC C251-6, circuit VDB04 (WH/BU), harness side.	**Yes** CONNECT the negative battery cable. GO to A6 . **No** REPAIR the circuit in

 N0077607 • Measure the resistance between the PCM C175B-58 or C1381B-58, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0113941 • **Are the resistances less than 5 ohms?**	question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
A5 CHECK THE HS-CAN CIRCUITS BETWEEN THE PCM AND THE DLC FOR AN OPEN • Disconnect: PCM C1551B . • Measure the resistance between the PCM C1551B-69, circuit VDB04 (WH/BU), harness side and the DLC C251-6, circuit VDB04 (WH/BU), harness side.  N0123791 • Measure the resistance between the PCM C1551B-68, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.	**Yes** CONNECT the negative battery cable. GO to A6 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 N0123790 • **Are the resistances less than 5 ohms?**	
A6 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

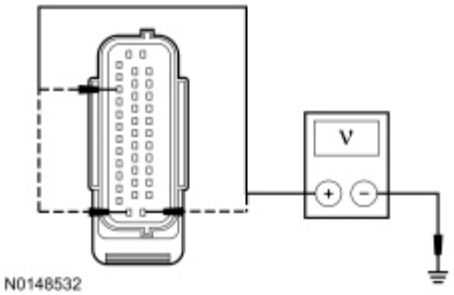
Pinpoint Test B: The ABS Module Does Not Respond To The Scan Tool

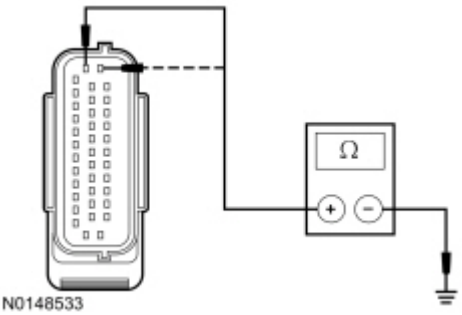
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 42 , Vehicle Dynamic Systems for schematic and connector information.

Normal Operation

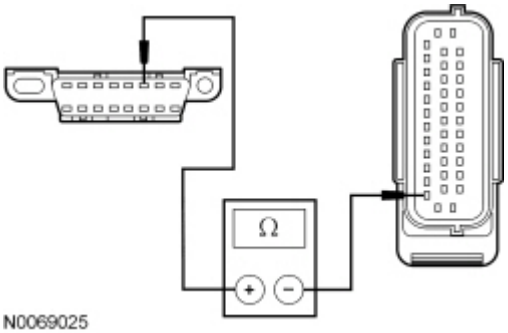
The ABS module communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

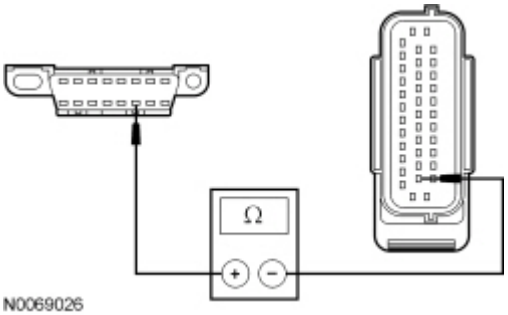




This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- ABS module





PINPOINT TEST B: THE ABS MODULE DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
B1 CHECK THE ABS MODULE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: ABS Module C135 . • Ignition ON. • Measure the voltage between the ABS module C135-1, circuit SBB47 (WH/RD), harness side and ground; between the ABS module C135-25, circuit SBB36 (GN/RD), harness side and ground; and between the ABS module C135-35, circuit CBB54 (VT/OG), harness side and ground.  N0148532 • **Is the voltage greater than 10 volts?**	**Yes** GO to B2 . **No** VERIFY the Battery Junction Box (BJB) fuse 36 (30A), 47 (60A) or 54 (5A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
B2 CHECK THE ABS MODULE GROUND CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the ABS module C135-38, circuit GD121 (BK/YE), harness side and ground; and between the ABS module C135-13, circuit GD121 (BK/YE), harness side and ground.  N0148533 • **Is the resistance less than 5 ohms?**	**Yes** GO to B3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
B3 CHECK THE HS-CAN CIRCUITS BETWEEN THE DLC AND THE ABS MODULE FOR AN OPEN • Measure the resistance between the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side and the ABS module C135-26, circuit VDB04 (WH/BU), harness side.	**Yes** CONNECT the negative battery cable. GO to B4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with

repair4less

 N0069025 • Measure the resistance between the DLC C251-14, circuit VDB05 (WH), harness side and the ABS module C135-14, circuit VDB05 (WH), harness side.  N0069026 • **Are the resistances less than 5 ohms?**	the scan tool.

B4 CHECK FOR CORRECT ABS MODULE OPERATION
• Disconnect the ABS module connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the ABS module connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ABS module. REFER to Section 206-09. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

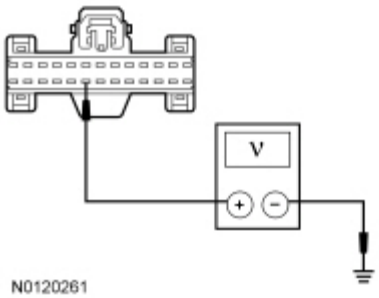
Pinpoint Test C: The Instrument Panel Cluster (IPC) Does Not Respond To The Scan Tool

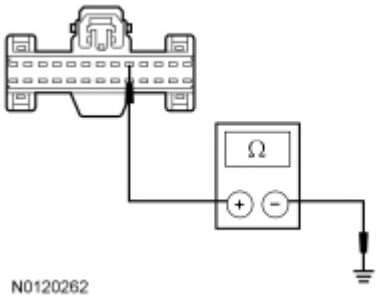
Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 60, Instrument Cluster for schematic and connector information.

Normal Operation

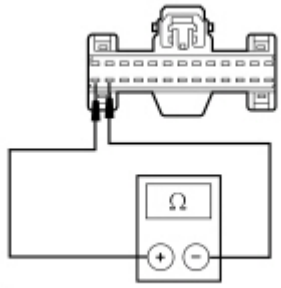
The Instrument Panel Cluster (IPC) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN). For vehicles equipped with a 4.2-inch screen or 8-inch touchscreen audio system, the IPC is a gateway for messages sent between the scan tool and the modules on the Infotainment Controller Area Network (I-CAN).

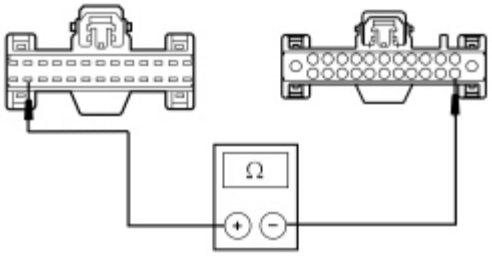


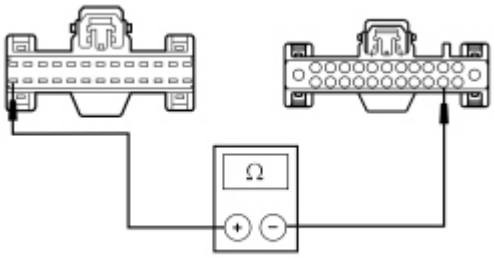


This pinpoint test is intended to diagnose the following:

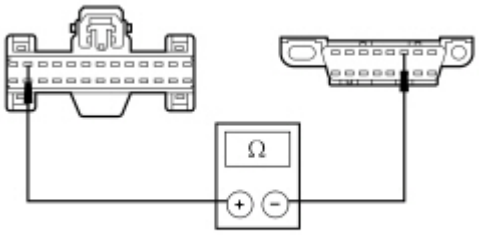
- Fuse
- Wiring, terminals or connectors
- IPC

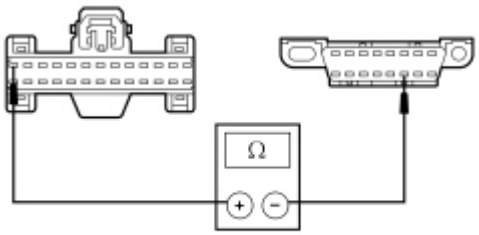






PINPOINT TEST C: THE IPC DOES NOT RESPOND TO THE SCAN TOOL





NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
C1 CHECK THE IPC VOLTAGE SUPPLY CIRCUITS FOR AN OPEN	
• Disconnect: IPC C220 . • Ignition ON. • Measure the voltage between the IPC C220-21, circuit SBP11 (BU/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C2 **No** VERIFY the Body Control Module (BCM) fuse 11 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
C2 CHECK THE IPC GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the IPC C220-5, circuit GD133 (BK), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** CONNECT the negative battery cable. If equipped with 4.2-inch screen or 8-inch touchscreen, GO to C3 . If not equipped with 4.2-inch screen or 8-inch touchscreen, GO to C5 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
C3 CHECK THE I-CAN TERMINATION RESISTANCE	
• Ignition OFF.	**Yes**

repair4less

• Disconnect: Negative Battery Cable . • Measure the resistance between the IPC C220-25, circuit VDB13 (BU/GY) and IPC C220-26, circuit VDB14 (VT/GY), harness side.  N0150481 • **Is the resistance between 54 and 66 ohms?**	CONNECT the battery cable. GO to C5 . **No** GO to C4
C4 CHECK THE I-CAN CIRCUITS BETWEEN IPC AND THE ACM FOR AN OPEN	
• Disconnect: ACM C240A . • Measure the resistance between the IPC C220-25, circuit VDB13 (BU/GY), harness side and the Audio Front Control Module (ACM) C240A-14, circuit VDB13 (BU/GY), harness side.  N0150482 • Measure the resistance between the IPC C220-26, circuit VDB14 (VT/GY), harness side and the ACM C240A-15, circuit VDB14 (VT/GY), harness side.  N0150483 • **Are the resistances less than 5 ohms?**	**Yes** GO to C5 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
C5 CHECK THE HS-CAN CIRCUITS BETWEEN IPC AND THE DLC FOR AN OPEN	
• Measure the resistance between the IPC C220-12, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU),	**Yes** CONNECT the negative battery cable. GO to C6 .

harness side.  N0120263 • Measure the resistance between the IPC C220-13, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0120264 • **Are the resistances less than 5 ohms?**	**No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
C6 CHECK FOR CORRECT IPC OPERATION • Disconnect the IPC connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the IPC connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new IPC . REFER to Section 413-01 . CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: The Restraints Control Module (RCM) Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

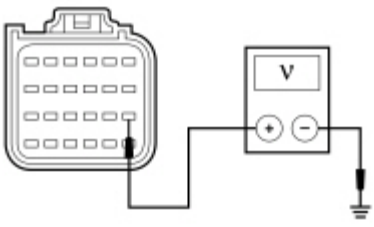
The Restraints Control Module (RCM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

This pinpoint test is intended to diagnose the following:

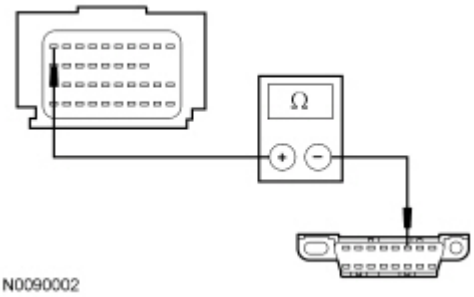
repair4less

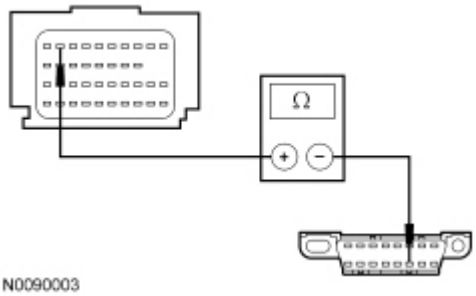
- Fuse
- Wiring, terminals or connectors
- RCM

PINPOINT TEST D: THE RCM DOES NOT RESPOND TO THE SCAN TOOL



WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.





WARNING: Never probe the electrical connectors on airbag, Safety Canopy or side air curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
D1 CHECK THE RCM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Depower the SRS . Refer to Section 501-20B . • Disconnect: RCM C310A . • Repower the SRS . Refer to Section 501-20B . • Ignition ON. • Measure the voltage between the RCM C310A-13, circuit CBP36 (BU/BN), harness side and ground.  N0117680 • **Is the voltage greater than 10 volts?**	**Yes** GO to D2 . **No** VERIFY the Body Control Module (BCM) fuse 36 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
D2 CHECK THE RCM CASE GROUND	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the RCM case and a	**Yes** GO to D3 .

good chassis ground. • **Is the resistance less than 5 ohms?**	**No** REPAIR the RCM case ground as necessary. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
D3 CHECK THE HS-CAN CIRCUITS BETWEEN THE RCM AND THE DLC FOR AN OPEN	
• Disconnect: RCM C310B . • Measure the resistance between the RCM C310B-10, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.  N0090002 • Measure the resistance between the RCM C310B-9, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0090003 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to D4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
D4 CHECK FOR CORRECT RCM OPERATION	

• Disconnect all the RCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the RCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new RCM . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The Occupant Classification System Module (OCSM) Does Not Respond To The Scan Tool

repair4less

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

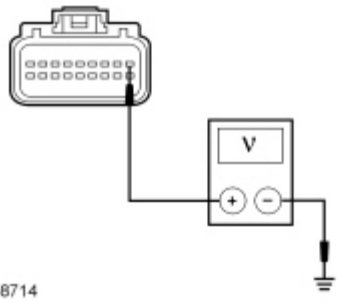
Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

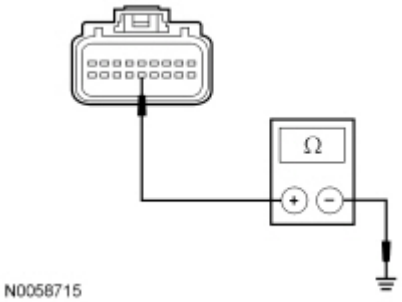
The Occupant Classification System Module (OCSM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

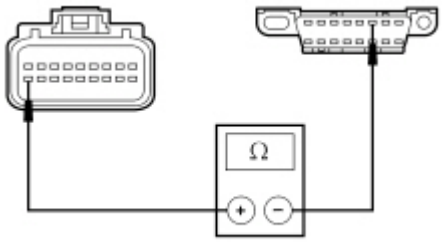
This pinpoint test is intended to diagnose the following:

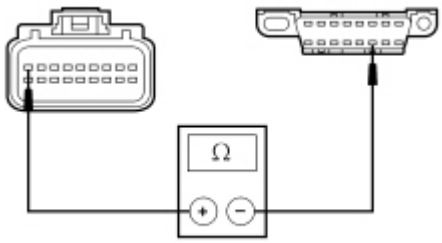
- Fuse
- Wiring, terminals or connectors
- OCSM



PINPOINT TEST E: THE OCSM DOES NOT RESPOND TO THE SCAN TOOL







NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
E1 CHECK THE OCSM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: OCSM C3159 . • Ignition ON. • Measure the voltage between the OCSM C3159-1, circuit CBX02 (BN/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to E2 . **No** VERIFY the Body Control Module (BCM) fuse 36 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CONNECT the OCSM . CLEAR the DTCs. REPEAT the network test with the scan tool.
E2 CHECK THE OCSM GROUND CIRCUIT FOR AN OPEN	

• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the OCSM C3159-14, circuit GD901 (BK), harness side and ground.  N0058715 • **Is the resistance less than 5 ohms?**	**Yes** GO to E3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
E3 CHECK THE HS-CAN CIRCUITS BETWEEN THE OCSM AND THE DLC FOR AN OPEN	
• Measure the resistance between the OCSM C3159-18, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.  N0026670 • Measure the resistance between the OCSM C3159-9, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0026671 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to E4 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
E4 CHECK FOR CORRECT OCSM OPERATION	
• Disconnect the OCSM connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins	**Yes** INSTALL a new OCSM . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

• Connect the OCSM connector and make sure it seats correctly. • Verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test F: The Transfer Case Control Module (TCCM) Does Not Respond To The Scan Tool

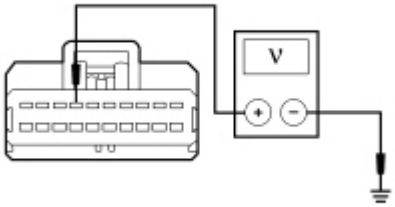
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 34 , All Wheel Drive (AWD) for schematic and connector information.

Normal Operation

The Transfer Case Control Module (TCCM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

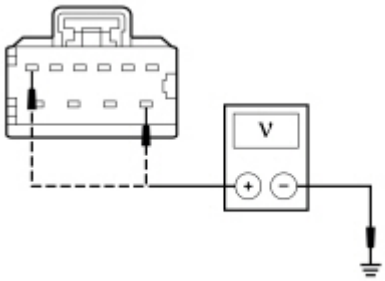
This pinpoint test is intended to diagnose the following:



- Fuse(s)
- Wiring, terminals or connectors
- TCCM

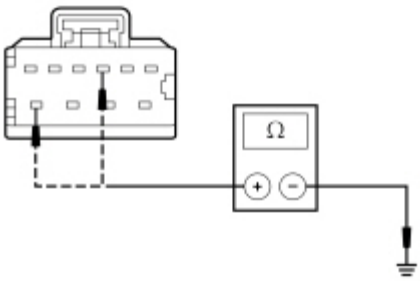
PINPOINT TEST F: THE TCCM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**



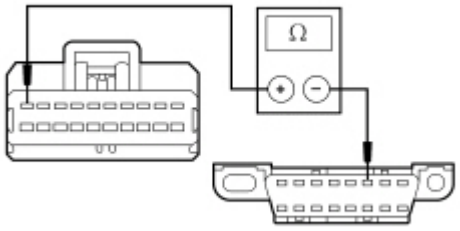
NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

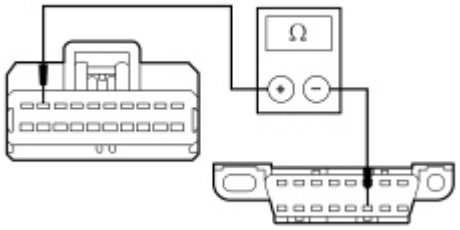
Test Step	Result / Action to Take
F1 CHECK THE TCCM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: TCCM C2371A . • Disconnect: TCCM C2371B . • Ignition ON. • Measure the voltage between the TCCM C2371A-7, circuit CBB54 (VT/OG), harness side and ground.	**Yes** GO to F2 . **No** VERIFY the Battery Junction Box (BJB) fuses 20 (20A) (ESOF only), 54 (5A) and 68 (25A) are OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.



N0090212

- Measure the voltage between the TCCM C2371B-6 (Electronic Shift-On-The-Fly (ESOF)), circuit SBB20 (GN/RD), harness side and ground; and between the TCCM C2371B-7, circuit SBB68 (GN/RD), harness side and ground.





N0122241

- **Are the voltages greater than 10 volts?**

F2 CHECK THE TCCM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the TCCM C2371B-3, circuit GD123 (BK/GY), harness side and ground; and between the TCCM C2371B-10, circuit GD123 (BK/GY), harness side and ground.  N0122242 • **Is the resistance less than 5 ohms?**	**Yes** GO to F3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
F3 CHECK THE HS-CAN CIRCUITS BETWEEN THE TCCM AND THE DLC FOR AN OPEN	
• Measure the resistance between the TCCM C2371A-10, circuit VDB04 (WH/BU), harness side and the DLC C251-6, circuit VDB04 (WH/BU), harness side.	**Yes** CONNECT the negative battery cable. GO to F4 . **No** REPAIR the circuit in question.

repair4less

 N0053241 • Measure the resistance between the TCCM C2371A-9, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0053242 • **Are the resistances less than 5 ohms?**	CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
F4 CHECK FOR CORRECT TCCM OPERATION	

• Disconnect all the TCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the TCCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new TCCM. REFER to Section 308-07A. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test G: The Trailer Brake Control (TBC) Module Does Not Respond To The Scan Tool

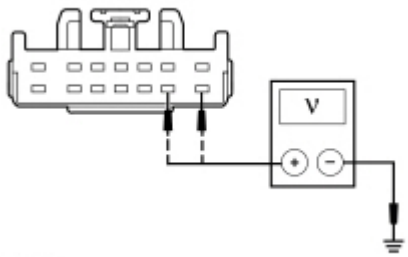
Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

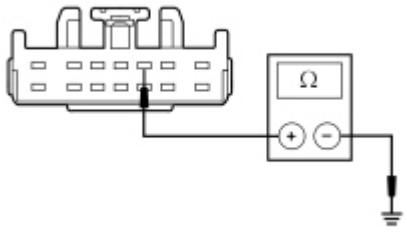
Refer to Wiring Diagrams Cell 95, Trailer/Camper Adapter for schematic and connector information.

Normal Operation

The Trailer Brake Control (TBC) module communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

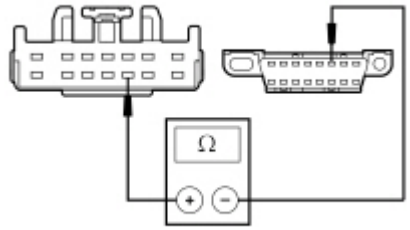
This pinpoint test is intended to diagnose the following:

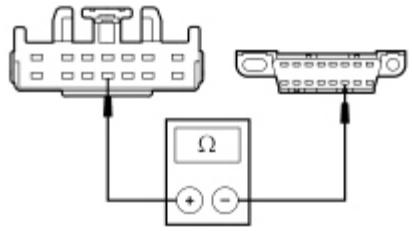




- Fuse

- Wiring, terminals or connectors
- TBC module





PINPOINT TEST G: THE TBC MODULE DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
G1 CHECK THE TBC MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: TBC Module C2142 . • Ignition ON. • Measure the voltage between the TBC module C2142-9, circuit CBP37 (WH), harness side and ground, and measure the voltage between the TBC module C2142-8, circuit SBB17 (RD), harness side and ground.  N0131577 • **Are the voltages greater than 10 volts?**	**Yes** GO to G2 . **No** VERIFY Body Control Module (BCM) fuse 37 (10A) and BJB fuse 17 (30A) are OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
G2 CHECK THE TBC MODULE GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the TBC module C2142-3, circuit GD138 (BK/WH), harness side and ground.  N0122244 • **Is the resistance less than 5 ohms?**	**Yes** GO to G3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

G3 CHECK THE HS-CAN CIRCUITS BETWEEN THE TBC MODULE AND THE DLC FOR AN OPEN	
• Measure the resistance between the TBC module C2142-10, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.  N0122245 • Measure the resistance between the TBC module C2142-11, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0090216 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to G4 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
G4 CHECK FOR CORRECT TBC MODULE OPERATION	
• Disconnect the TBC module connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the TBC module connector and make sure it seats correctly. • Verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new TBC module. REFER to Section 206-10 . CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

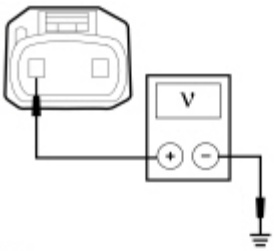
Pinpoint Test H: The Power Steering Control Module (PSCM) Does Not Respond To The Scan Tool

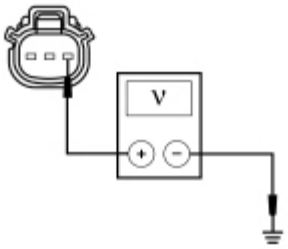
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 43 , Power Steering Controls for schematic and connector information.

Normal Operation

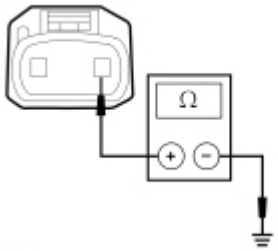
The Power Steering Control Module (PSCM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

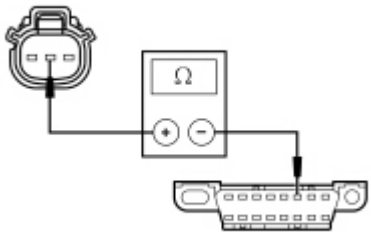


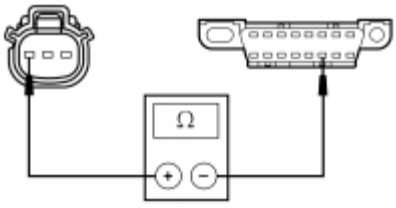


This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- PSCM







PINPOINT TEST H: THE PSCM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
H1 CHECK THE PSCM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Disconnect: PSCM C1463A and C1463B . • Ignition ON. • Measure the voltage between the PSCM C1463A-2, circuit SDC02 (RD), harness side and ground.  N0148536 • Measure the voltage between the PSCM C1463B-1, circuit CBB52 (GN/WH), harness side and ground.  N0122248 • **Is the voltage greater than 10 volts?**	**Yes** GO to H2 . **No** VERIFY the High Current Battery Junction Box (BJB) fuse 1 (125A) or BJB fuse 52 (5A) is OK. If OK, REPAIR the circuit. CLEAR the DTCs. REPEAT the network test with the scan tool. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
H2 CHECK THE PSCM GROUND CIRCUIT FOR AN OPEN	

repair4less

• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the PSCM C1463A-1, circuit GD108 (BK/VT), harness side and ground  N0113935 • **Are the resistances less than 1 ohms?**	**Yes** GO to H3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
H3 CHECK THE HS-CAN CIRCUITS BETWEEN THE PSCM AND THE DLC FOR AN OPEN	
• Measure the resistance between the PSCM C1463B-2, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.  N0122247 • Measure the resistance between the PSCM C1463B-3, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0122246 • **Are the resistances less than 5 ohms?**	**Yes** GO to H4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
H4 CHECK FOR CORRECT PSCM OPERATION	

• Disconnect all the PSCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
	Yes
	INSTALL a new EPAS steering gear. REFER to Section 211-02 . CLEAR the DTCs. REPEAT the network test with the scan tool.

• Connect all the PSCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the network test with the scan tool.

Pinpoint Test I: The Body Control Module (BCM) Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 13 , Power Distribution/BCM for schematic and connector information.

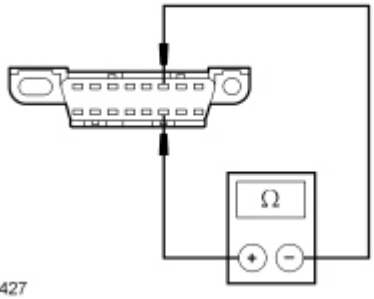
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Normal Operation

The Body Control Module (BCM) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).

This pinpoint test is intended to diagnose the following:

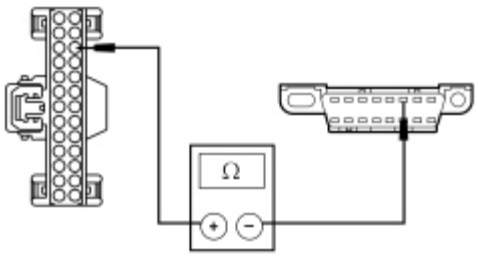
- Fuse
- Wiring, terminals or connectors
- BCM

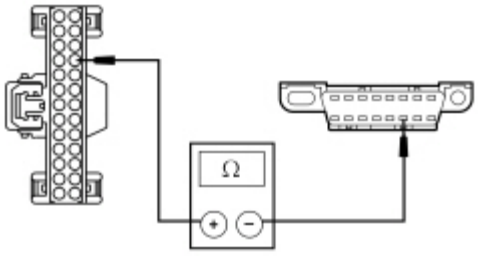


PINPOINT TEST I: THE BCM DOES NOT RESPOND TO THE SCAN TOOL

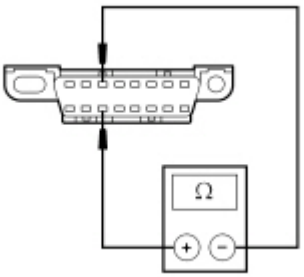
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .



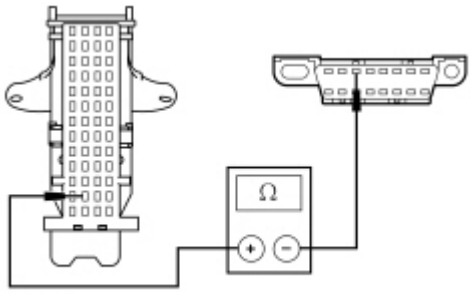


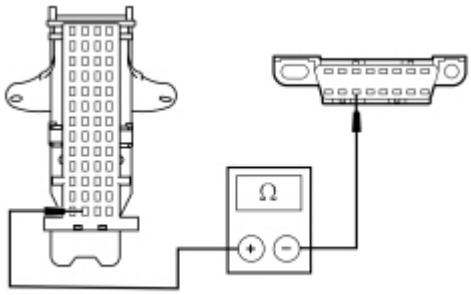
Test Step	Result / Action to Take
I1 CHECK THE HS-CAN TERMINATION RESISTANCE	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Disconnect the scan tool cable from the Data Link Connector (DLC). • Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.	**Yes** CONNECT the negative battery cable. GO to I3 . **No** GO to I2 .



repair4less

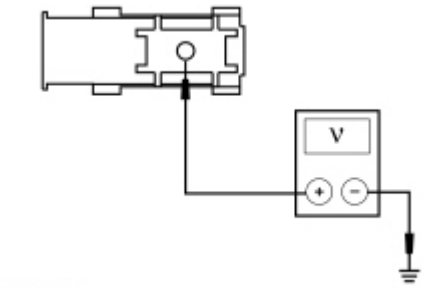
N0026427



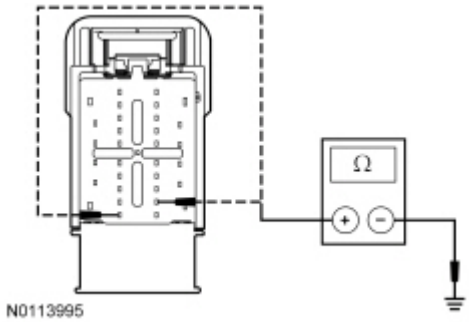


- **Is the resistance between 54 and 66 ohms?**

I2 CHECK THE HS-CAN CIRCUITS BETWEEN THE BCM AND THE DLC FOR AN OPEN • Disconnect: BCM C2280F . • Measure the resistance between the BCM C2280F-16, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.  N0115338 • Measure the resistance between the BCM C2280F-17, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0115339 • **Are the resistances less than 5 ohms?**	**Yes** GO to I7 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
I3 CHECK THE MS-CAN TERMINATION RESISTANCE • Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to I5 . **No** GO to I4 .



N0050701



- **Is the resistance between 54 and 66 ohms?**

I4 CHECK THE MS-CAN CIRCUITS BETWEEN THE BCM AND THE DLC FOR AN OPEN	
• Disconnect: BCM C2280B . • Measure the resistance between the BCM C2280B-38, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.  N0114057 • Measure the resistance between the BCM C2280B-39, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0114058 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to I7 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
I5 CHECK THE BCM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
NOTE: Measurements are taken with the fuse installed and probes placed at the terminals on the back of the fuse blade. • Disconnect: BCM C2280G . • Connect: Negative Battery Cable . • Ignition ON. • Measure the voltage between the BCM C2280G-1, SDC04 (RD), and ground.	**Yes** GO to I6 . **No** VERIFY the BJB fuse 45 (10A) is OK. If OK, GO to I6 .

repair4less

- **Is the voltage greater than 10 volts?**

I6 CHECK THE BCM GROUND CIRCUIT FOR AN OPEN	
• Disconnect: Negative Battery Cable . • Disconnect: BCM C2280D . • Measure the resistance between the BCM , harness side and ground as follows: **Connector-Pin** / **Circuit** C2280D-16 / GD139 (BK/YE) C2280D-25 / GD139 (BK/YE)  • **Are the resistances less than 5 ohms?**	**Yes** GO to I7 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
I7 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test J: The HVAC Module Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector

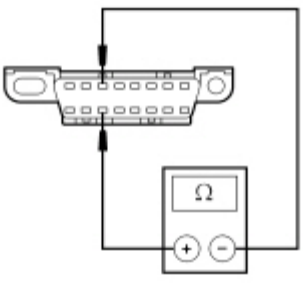
information.

Refer to Wiring Diagrams Cell 54 , Manual Climate Control System for schematic and connector information.

Refer to Wiring Diagrams Cell 55 , Automatic Climate Control System for schematic and connector information.

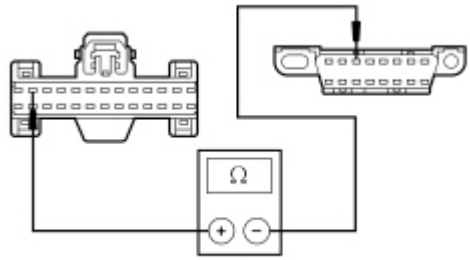
Normal Operation

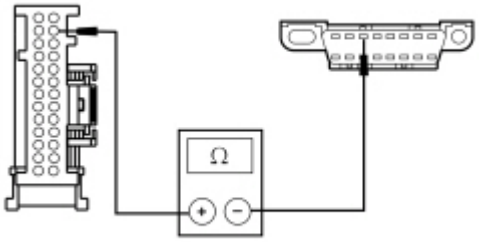
The HVAC module communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).

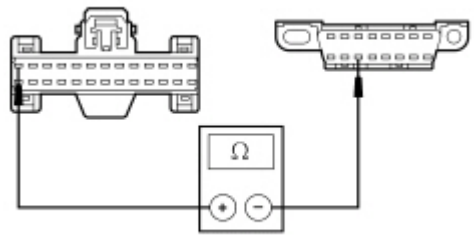


This pinpoint test is intended to diagnose the following:

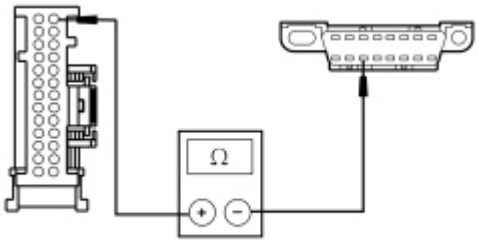
- Fuse
- Wiring, terminals or connectors
- HVAC module







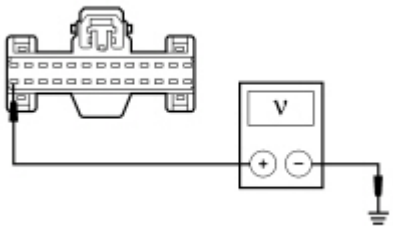
PINPOINT TEST J: THE HVAC MODULE DOES NOT RESPOND TO THE SCAN TOOL

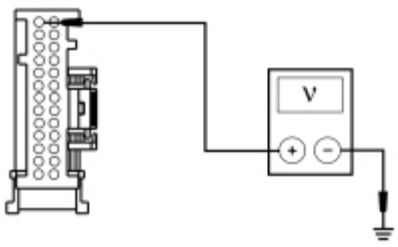


NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

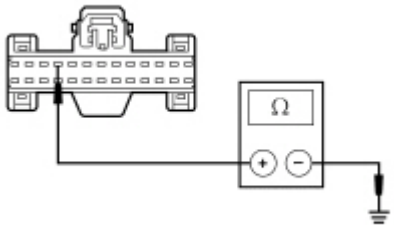
Test Step	Result / Action to Take
J1 CHECK THE MS-CAN TERMINATION RESISTANCE	
• Ignition OFF. • Disconnect: Negative battery cable . • Disconnect the scan tool cable from the DLC . • Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0050701 • **Is the resistance between 54 and 66 ohms?**	**Yes** CONNECT the negative battery cable. GO to J4 . **No** GO to J2 .
J2 CHECK THE MS-CAN (+) CIRCUIT BETWEEN THE HVAC MODULE AND THE DLC FOR AN OPEN	
• Ignition OFF. • Disconnect: HVAC Module C294A (Electronic Manual	**Yes** GO to J3 .

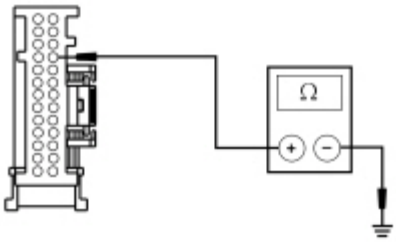




repair4less

Temperature Control (EMTC)) or C228A (EATC) . • For EMTC , measure the resistance between the HVAC module C294A-12, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.  N0104911 • For EATC , measure the resistance between the HVAC module C228A-25, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.  N0148816 • **Is the resistance less than 5 ohms?**	**No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
J3 CHECK THE MS-CAN (-) CIRCUIT BETWEEN THE HVAC MODULE AND THE DLC FOR AN OPEN • For EMTC , measure the resistance between the HVAC module C294A-13, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0104912 • For EATC , measure the resistance between the HVAC module C228A-26, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to J6 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.





N0148817

- **Is the resistance less than 5 ohms?**

J4 CHECK THE HVAC MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN	
• Disconnect: HVAC Module C294A (EMTC) or C228A (EATC . • Ignition ON. • For EMTC , measure the voltage between the HVAC module C294A-26, circuit SBP46 (BN/RD), harness side and ground.  N0104909 • For EATC , measure the voltage between the HVAC module C228A-13, circuit SBP46 (BN/RD), harness side and ground.  N0148818 • **Is the voltage greater than 10 volts?**	**Yes** GO to J5 . **No** VERIFY the Body Control Module (BCM) fuse 46 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
J5 CHECK THE HVAC MODULE GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • For EMTC , measure the resistance between the HVAC module C294A-10, circuit GD133 (BK), harness side and ground.	**Yes** GO to J6 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with

repair4less

 N0104910 • For EATC , measure the resistance between the HVAC module C228A-23, circuit GD133 (BK), harness side and ground.  N0148819 • **Is the resistance less than 5 ohms?**	the scan tool.
J6 CHECK FOR CORRECT HVAC MODULE OPERATION • Disconnect all the HVAC module connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the HVAC module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-01 . CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

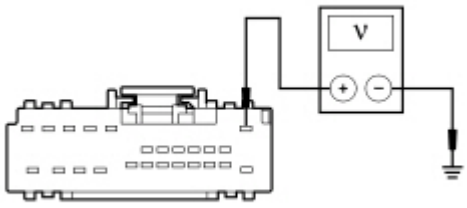
Pinpoint Test K: The Audio Front Control Module (ACM) Does Not Respond To The Scan Tool

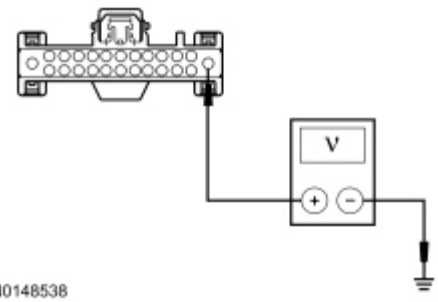
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation

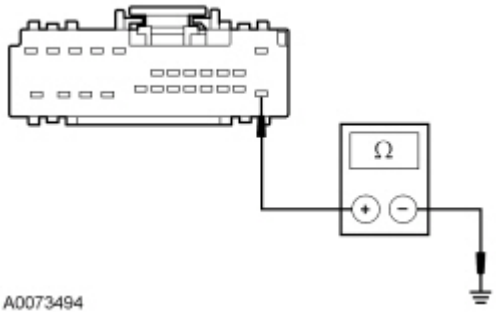
The base and premium audio system Audio Front Control Module (ACM) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN). For vehicles equipped with 4.2-inch screen or 8-inch touchscreen, the Audio Front Control Module (ACM) communicates with the scan tool through the IPC (gateway) on the HS-CAN .

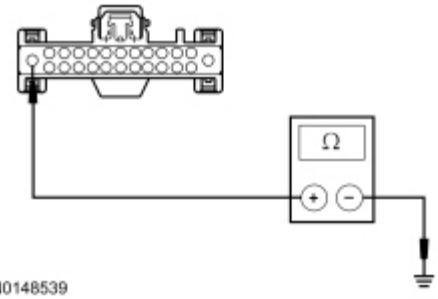


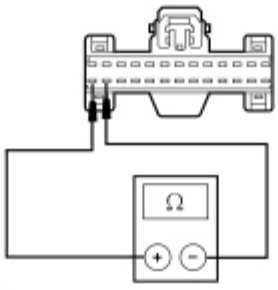


This pinpoint test is intended to diagnose the following:

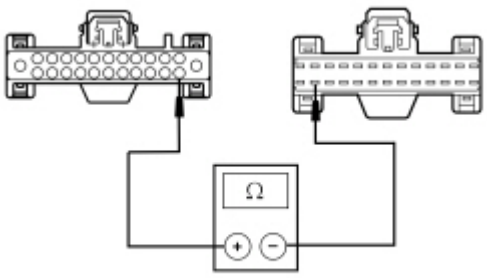
- Fuse
- Wiring, terminals or connectors
- ACM







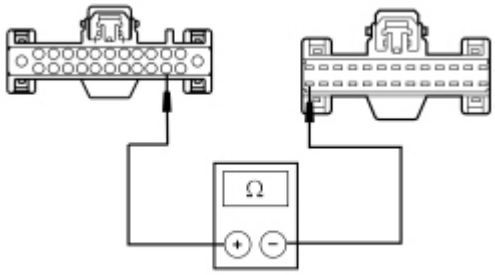
PINPOINT TEST K: THE ACM DOES NOT RESPOND TO THE SCAN TOOL



NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
K1 CHECK THE ACM VOLTAGE SUPPLY CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: ACM C290A or C240A (4.2-inch screen or 8-inch touchscreen) . • Ignition ON. • If equipped with AM/FM radio with single CD, measure the voltage between the ACM C290A-1, circuit SBP29 (GY/RD), harness side and ground.  N0058708 • If equipped with 4.2-inch screen or 8-inch touchscreen, measure the voltage between the ACM C240A-1, circuit SBP29 (GY/RD), harness side and ground.  N0148538 • **Is the voltage greater than 10 volts?**	**Yes** GO to K2 . **No** VERIFY the Body Control Module (BCM) fuse 29 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
K2 CHECK THE ACM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable .	**Yes** If equipped with AM/FM radio with

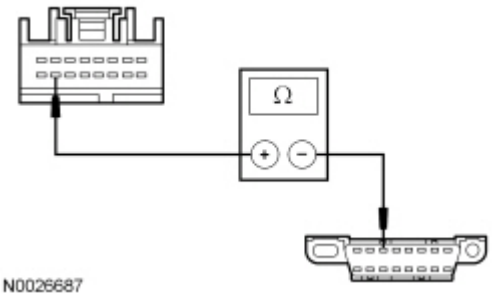


repair4less

• If equipped with AM/FM radio with single CD, measure the resistance between the ACM C290A-13, circuit GD114 (BK/BU), harness side and ground.  A0073494 • If equipped with 4-inch screen or 8-inch touchscreen, measure the resistance between the ACM C240A-13, circuit GD114 (BK/BU), harness side and ground.  N0148539 • **Is the resistance less than 5 ohms?**	single CD, GO to K5 . If equipped with 4-inch screen or 8-inch touchscreen, GO to K3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
K3 CHECK THE I-CAN TERMINATION RESISTANCE	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Disconnect: IPC C220 . • Measure the resistance between the IPC C220-25 and IPC C220-26, harness side.  N0150481 • **Is the resistance 120 ohms?**	**Yes** CONNECT the IPC and the battery cable. GO to K6 . **No** GO to K4 .
K4 CHECK THE I-CAN CIRCUITS BETWEEN THE ACM AND THE IPC FOR AN OPEN	
• Measure the resistance between the ACM C240A-14, circuit VDB13 (BU/GY), harness side and the Instrument Panel Cluster (IPC) C220-25, circuit VDB13 (BU/GY), harness side.	**Yes** GO to K6 . **No** REPAIR the circuit in question.

N0150484

- Measure the resistance between the ACM C240A-15, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.



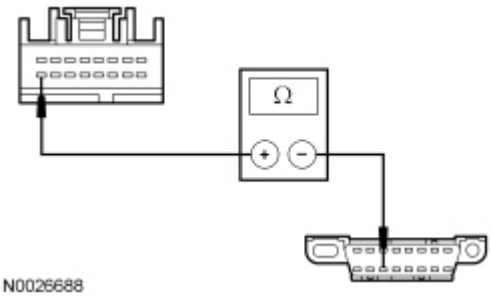
N0150485

- **Are the resistances less than 5 ohms?**

CONNECT the IPC and negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

K5 CHECK THE MS-CAN CIRCUITS BETWEEN THE ACM AND THE DLC FOR AN OPEN

- Disconnect: ACM C290B .
- Measure the resistance between the ACM C290B-15, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.



N0026687

- Measure the resistance between the ACM C290B-16, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.

Yes
CONNECT the negative battery cable. GO to K6 .

No
REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 N0026688 • **Are the resistances less than 5 ohms?**	
K6 CHECK FOR CORRECT ACM OPERATION	

• Disconnect all the ACM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the ACM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ACM . Refer to the appropriate section in Group 415 for the procedure. CLEAR the DTCs. REPEAT the network test with the scan tool. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Audio Digital Signal Processing (DSP) Module Does Not Respond To The Scan Tool

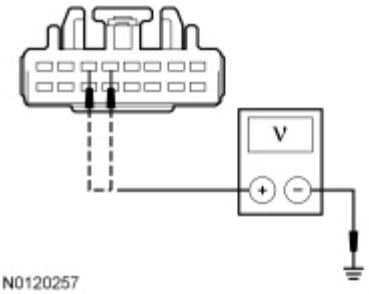
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

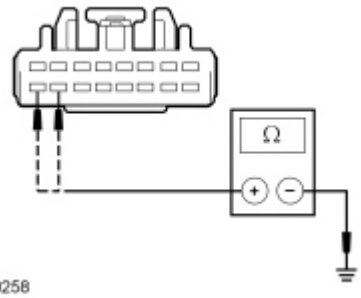
Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

Normal Operation

The audio Digital Signal Processing (DSP) module communicates with other modules on the I-CAN , but communicates with the scan tool through the IPC (gateway) on the HS-CAN .

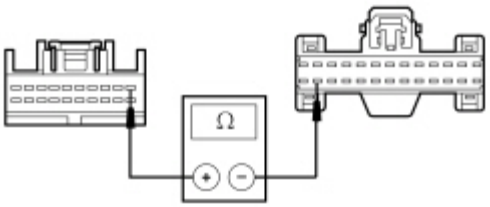
This pinpoint test is intended to diagnose the following:

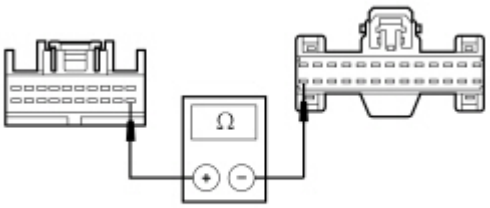




- Fuse
- Wiring, terminals or connectors
- Audio DSP module

PINPOINT TEST L: THE AUDIO DSP MODULE DOES NOT RESPOND TO THE SCAN TOOL





NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to

Section 414-01 .

Test Step	Result / Action to Take
L1 CHECK THE AUDIO DSP MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Audio DSP Module C3154C . • Ignition ON. • Measure the voltage between the audio DSP module, harness side and ground as follows: **Connector-Pin / Circuit** C3154C-5 — SBP19 (BU/RD) C3154C-6 — SBP19 (BU/RD)  N0120257 • **Are the voltages greater than 10 volts?**	**Yes** GO to L2 . **No** VERIFY the Body Control Module (BCM) fuse 19 (20A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
L2 CHECK THE AUDIO DSP MODULE GROUND CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the audio DSP module, harness side and ground as follows: **Connector-Pin / Circuit** C3154C-15 — GD148 (BK/YE) C3154C-16 — GD148 (BK/YE)  N0120258	**Yes** GO to L3 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

• **Are the resistances less than 5 ohms?**	
L3 CHECK THE I-CAN CIRCUITS BETWEEN THE AUDIO DSP MODULE AND THE IPC FOR AN OPEN • Disconnect: Audio DSP Module C3154A . • Disconnect: IPC C220 . • Measure the resistance between the audio DSP module C3154A-1, circuit VDB13 (BU/GY), harness side and the IPC C220-25, circuit VDB13 (BU/GY), harness side.  N0150486 • Measure the resistance between the audio DSP module C3154A-11, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.  N0150487 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to L4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
L4 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION • Disconnect all the audio DSP module connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the audio DSP module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new audio DSP module. REFER to Section 415-00E . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

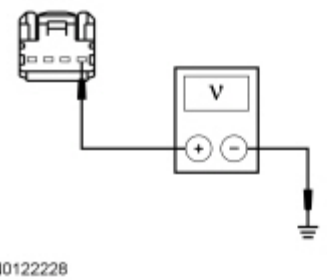
Pinpoint Test M: The Front Controls Interface Module (FCIM) Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

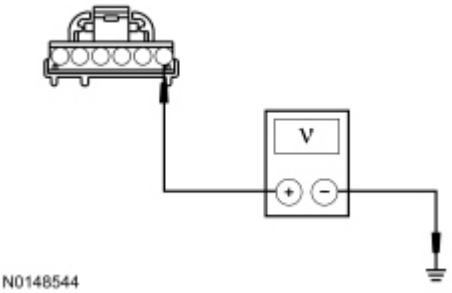
Normal Operation

For vehicles equipped with AM/FM radio with single CD, the Front Controls Interface Module (FCIM) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN). For vehicles equipped with 4.2-inch screen or 8-inch touchscreen, the Front Controls Interface Module (FCIM) communicates with other modules on the I-CAN , but communicates with the scan tool through the IPC (gateway) on the HS-CAN .



This pinpoint test is intended to diagnose the following:

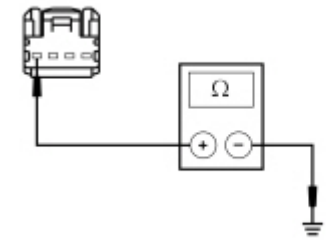
- Fuse
- Wiring, terminals or connectors
- FCIM

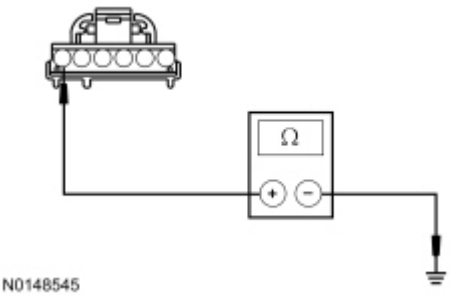


PINPOINT TEST M: THE FCIM DOES NOT RESPOND TO THE SCAN TOOL

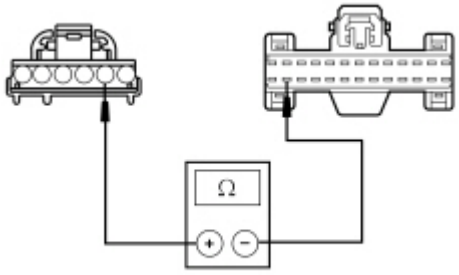
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .



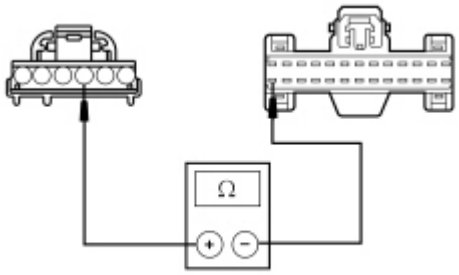


Test Step	Result / Action to Take
M1 CHECK THE FCIM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: FCIM C2402 . • Ignition ON. • If equipped with AM/FM radio with single CD, measure the voltage between the FCIM C2402-1, circuit SBP09 (RD), harness side and ground.  N0122228 • If equipped with 4.2-inch screen or 8-inch touchscreen, measure the voltage between the FCIM C2402-1, circuit SBP09 (RD), harness side and ground.	**Yes** GO to M2 . **No** VERIFY the Body Control Module (BCM) fuse 9 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.



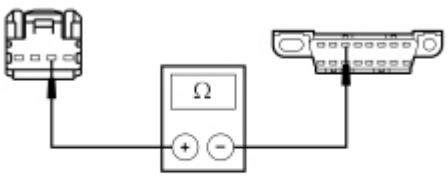
repair4less

N0148544



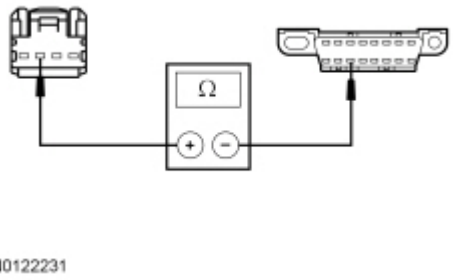
- **Is the voltage greater than 10 volts?**

M2 CHECK THE FCIM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • If equipped with AM/FM radio with single CD, measure the resistance between the FCIM C2402-4, circuit GD133 (BK), harness side and ground.  N0122229 • If equipped with 4.2-inch screen or 8-inch touchscreen, measure the resistance between the FCIM C2402-6, circuit GD133 (BK), harness side and ground.  N0148545 • **Is the resistance less than 5 ohms?**	**Yes** If equipped with 4.2-inch screen or 8-inch touchscreen, GO to M3 . If equipped with AM/FM radio with single CD, GO to M4 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
M3 CHECK THE I-CAN CIRCUITS BETWEEN THE FCIM AND THE IPC FOR AN OPEN	
• Disconnect: IPC C220 . • Measure the resistance between the FCIM C2402-2, circuit VDB13 (BU/GY), harness side and the IPC C220-25, circuit VDB13 (BU/GY), harness side.	**Yes** CONNECT the negative battery cable. GO to M5 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.



N0150488

- Measure the resistance between the FCIM C2402-3, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.



N0150489

- **Are the resistances less than 5 ohms?**

M4 CHECK THE MS-CAN CIRCUITS BETWEEN THE FCIM AND THE DLC FOR AN OPEN	
• Measure the resistance between the FCIM C2402-2, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.  N0122230 • Measure the resistance between the FCIM C2402-3, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to M5 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 N0122231 • **Are the resistances less than 5 ohms?**	
M5 CHECK FOR CORRECT FCIM OPERATION	

• Disconnect the FCIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the FCIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

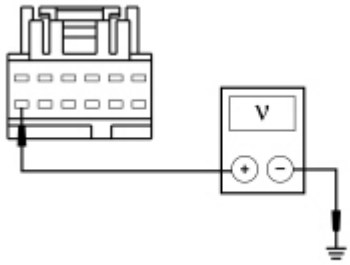
Pinpoint Test N: The Front Display Interface Module (FDIM) Does Not Respond To The Scan Tool

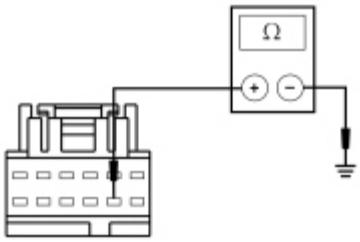
Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation

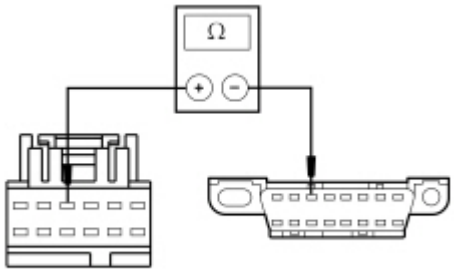
The Front Display Interface Module (FDIM) (vehicles not equipped with navigation) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).

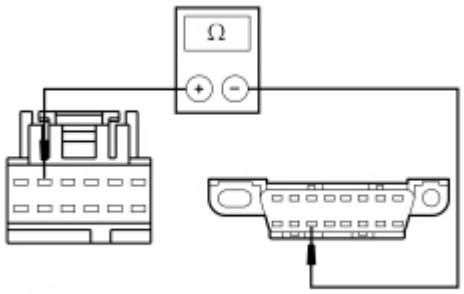




This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- FDIM





PINPOINT TEST N: THE FDIM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01.

Test Step	Result / Action to Take
N1 CHECK THE FDIM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: FDIM C2123 . • Ignition ON. • Measure the voltage between the FDIM C2123-12, circuit SBP09 (RD), harness side and ground.  N0122249 • **Is the voltage greater than 10 volts?**	**Yes** GO to N2 . **No** VERIFY the Body Control Module (BCM) fuse 9 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
N2 CHECK THE FDIM GROUND CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the FDIM C2123-8, circuit GD133 (BK), harness side and ground.  N0122251 • **Is the resistance less than 5 ohms?**	**Yes** GO to N3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
N3 CHECK THE MS-CAN CIRCUITS BETWEEN THE FDIM AND THE DLC FOR AN OPEN • Measure the resistance between the FDIM C2123-4, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to N4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 N0122252 • Measure the resistance between the FDIM C2123-5, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0122253 • **Are the resistances less than 5 ohms?**	

N4 CHECK FOR CORRECT FDIM OPERATION
• Disconnect the FDIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the FDIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FDIM. Refer to the appropriate section in Group 415 for the procedure.. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

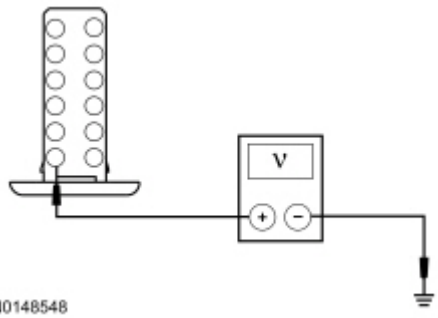
Pinpoint Test O: The Front Control/Display Interface Module (FCDIM) Does Not Respond To The Scan Tool

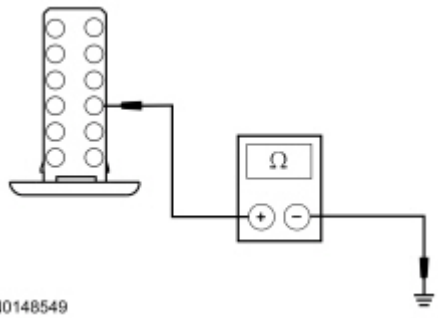
Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation

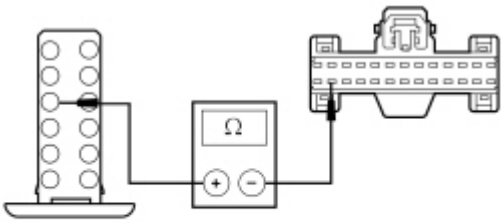
The FCDIM communicates with other modules on the I-CAN, but communicates with the scan tool through the IPC (gateway) on the HS-CAN.

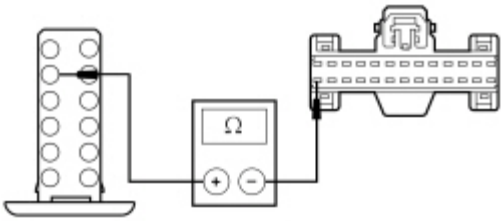




This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- FCDIM





PINPOINT TEST O: THE FCDIM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
O1 CHECK THE FCDIM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: FCDIM C2123 . • Ignition ON. • Measure the voltage between the FCDIM C2123-1, circuit SBP09 (RD), harness side and ground.  N0148548 • **Is the voltage greater than 10 volts?**	**Yes** GO to O2 . **No** VERIFY the Body Control Module (BCM) fuse 9 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
O2 CHECK THE FCDIM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the FCDIM C2123-9, circuit GD114 (BK/BU), harness side and ground.  N0148549 • **Is the resistance less than 5 ohms?**	**Yes** GO to O3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

O3 CHECK THE I-CAN CIRCUITS BETWEEN THE FCDIM AND THE IPC FOR AN OPEN	
• Disconnect: IPC C220 . • Measure the resistance between the FCDIM C2123-4, circuit VDB13 (BU/GY), harness side and the IPC C220-25, circuit VDB13 (BU/GY), harness side.  N0150490 • Measure the resistance between the FCDIM C2123-5, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.  N0150491 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the IPC and the negative battery cable. GO to O4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
O4 CHECK FOR CORRECT FCDIM OPERATION	

• Disconnect the FCDIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the FCDIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FCDIM . REFER to Section 415-00C . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

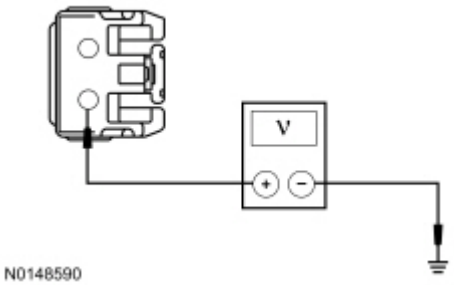
Pinpoint Test P: The Driver Seat Module (DSM) Does Not Respond To The Scan Tool

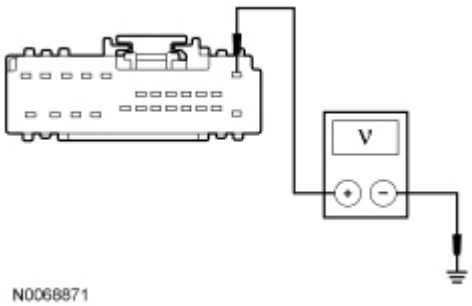
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 123 , Memory Seats for schematic and connector information.

Normal Operation

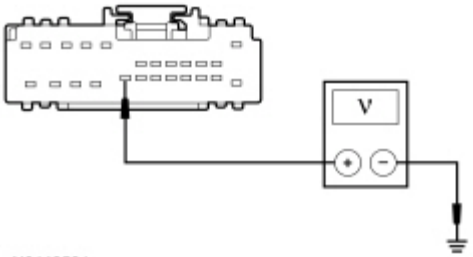
The Driver Seat Module (DSM) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).





This pinpoint test is intended to diagnose the following:

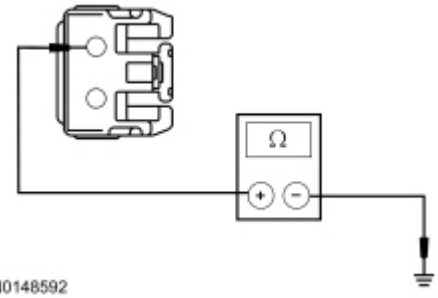
- Fuse
- Wiring, terminals or connectors
- DSM

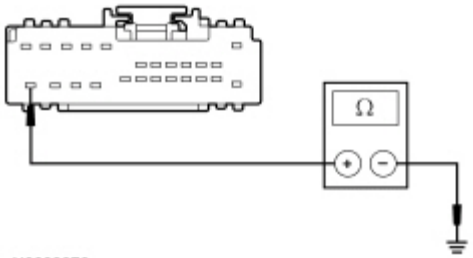


PINPOINT TEST P: THE DSM DOES NOT RESPOND TO THE SCAN TOOL

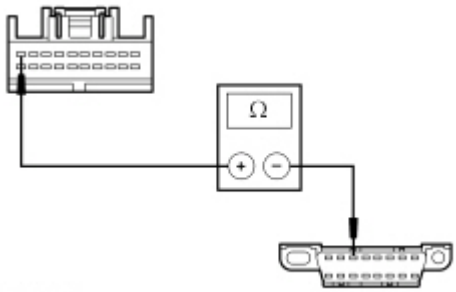
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

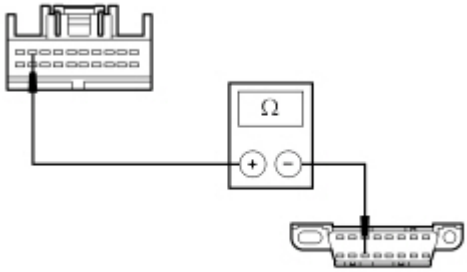
NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .





Test Step	Result / Action to Take
P1 CHECK THE DSM VOLTAGE SUPPLY CIRCUITS FOR AN OPEN • Ignition OFF. • Disconnect: DSM C341A, C341B and C341C . • Ignition ON. • Measure the voltage between the DSM C341A-1, circuit CBX05 (VT/RD), harness side and ground.  N0148590 • Measure the voltage between the DSM C341B-1, circuit CBX03 (BU/RD), harness side and ground.  N0068871 • Measure the voltage between the DSM C341C-20, circuit CPP14 (BN/WH), harness side and ground.	**Yes** GO to P2 . **No** VERIFY the BJB fuse 74 (30A) or Body Control Module (BCM) fuse 7 (7.5A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.





repair4less

N0148591

- **Are the voltages greater than 10 volts?**

P2 CHECK THE DSM GROUND CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the DSM C341A-2, circuit GD906 (BK/GY), harness side and ground.  N0148592 • Measure the resistance between the DSM C341B-24, circuit GD905 (BK/GN), harness side and ground.  N0068872 • **Are the resistances less than 5 ohms?**	**Yes** GO to P3 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
P3 CHECK THE MS-CAN CIRCUITS BETWEEN THE DSM AND THE DLC FOR AN OPEN	
• Disconnect: DSM C341D . • Measure the resistance between the DSM C341D-10, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to P4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

 N0090369 • Measure the resistance between the DSM C341D-9, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0090370 • **Are the resistances less than 5 ohms?**	
P4 CHECK FOR CORRECT DSM OPERATION	

• Disconnect all the DSM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the DSM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DSM. REFER to Section 501-10. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Q: The Dual Climate Controlled Seat Module (DCSM) Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 119, Climate Controlled Seats for schematic and connector information.

Normal Operation

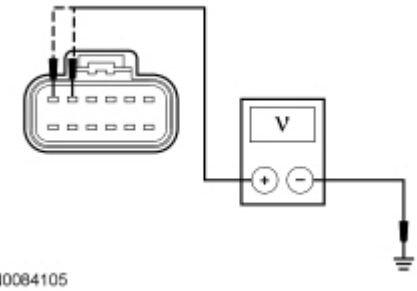
The Dual Climate Controlled Seat Module (DCSM) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).

This pinpoint test is intended to diagnose the following:

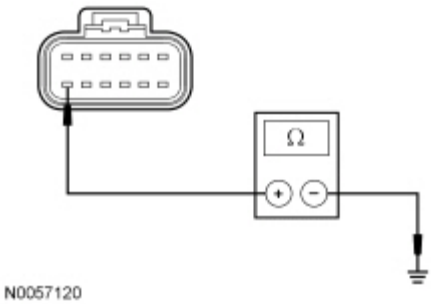
- Fuse

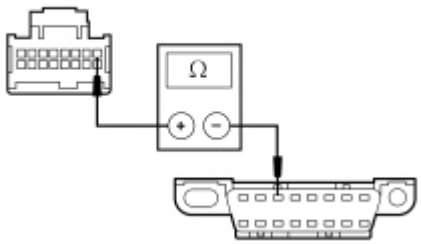
repair4less

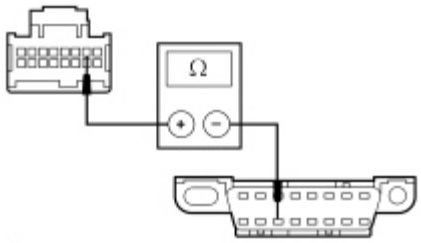
- Wiring, terminals or connectors
- DCSM



PINPOINT TEST Q: THE DCSM DOES NOT RESPOND TO THE SCAN TOOL







NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is on. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
Q1 CHECK THE DCSM VOLTAGE SUPPLY CIRCUITS FOR AN OPEN • Ignition OFF. • For vehicles with seat side air bags, carry out the following: ▪ Depower the SRS . Refer to Section 501-20B . ▪ Disconnect the driver seat side air bag module. ▪ Disconnect the passenger seat side air bag module. • **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any airbag when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Disconnect: DCSM C3265A . • Ignition ON. • Measure the voltage between the DCSM C3265A-E, circuit CBX01 (GN/RD), harness side and ground; and between the DCSM C3265A-F, circuit CBX01 (GN/RD), harness side and ground.  • **Are the voltages greater than 10 volts?**	**Yes** GO to Q2 . **No** VERIFY the Battery Junction Box (BJB) fuse 69 (30A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool. REPOWER the SRS . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the network test with the scan tool.

Q2 CHECK THE DCSM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the DCSM C3265A-M, circuit GD903 (BK/WH), harness side and ground.  N0057120 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q3 . **No** REPAIR the circuit. CONNECT the negative battery cable. REPOWER the SRS . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the network test with the scan tool.
Q3 CHECK THE MS-CAN CIRCUITS BETWEEN THE DCSM AND THE DLC FOR AN OPEN	
• Disconnect: DCSM C3265C . • Measure the resistance between the DCSM C3265C-1, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.  N0058709 • Measure the resistance between the DCSM C3265C-2, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0058710 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to Q4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. REPOWER the SRS . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the network test with the scan tool.
Q4 CHECK FOR CORRECT DCSM OPERATION	
• Disconnect all the DCSM connectors. • Check for:	**Yes** INSTALL a new DCSM . REFER to

repair4less

▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the DCSM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	Section 501-10 . CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test R: The Power Running Board (PRB) Module Does Not Respond To The Scan Tool

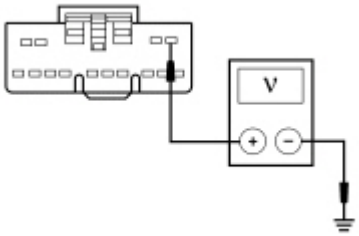
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 109 , Retractable Running Boards for schematic and connector information.

Normal Operation

The Power Running Board (PRB) module communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).

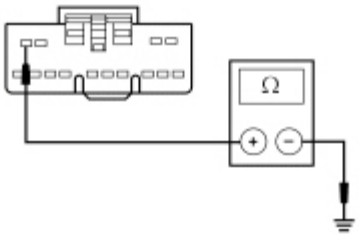
This pinpoint test is intended to diagnose the following:

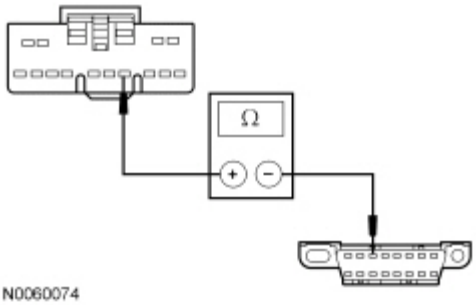


- Fuse
- Wiring, terminals or connectors
- PRB module

PINPOINT TEST R: THE PRB MODULE DOES NOT RESPOND TO THE SCAN TOOL

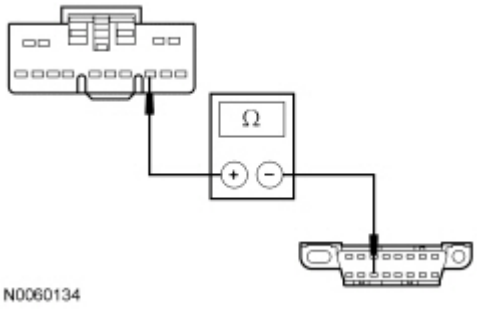
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**





NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
R1 CHECK THE PRB MODULE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: PRB Module C3313B . • Ignition ON. • Measure the voltage between the PRB module C3313B-1, circuit SBB11 (BU/RD), harness side and ground.	**Yes** GO to R2 . **No** VERIFY the Battery Junction Box (BJB) fuse 11 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.



N0060072

- **Is the voltage greater than 10 volts?**

R2 CHECK THE PRB MODULE GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the PRB module C3313B-4, circuit GD139 (BK/YE), harness side and ground.  N0060073 • **Is the resistance less than 5 ohms?**	**Yes** GO to R3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
R3 CHECK THE MS-CAN CIRCUITS BETWEEN THE PRB MODULE AND THE DLC FOR AN OPEN	
• Measure the resistance between the PRB module C3313B-8, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.  N0060074 • Measure the resistance between the PRB module C3313B-7, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to R4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 • **Are the resistances less than 5 ohms?**	
R4 CHECK FOR CORRECT PRB MODULE OPERATION	

• Disconnect all the PRB module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PRB module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PRB module. REFER to Section 501-08 . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

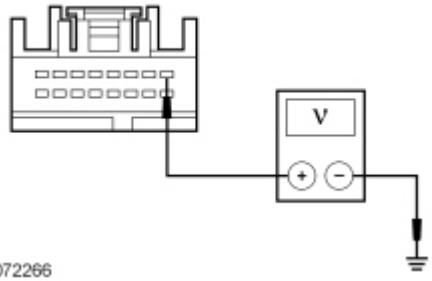
Pinpoint Test S: The Parking Aid Module (PAM) Does Not Respond To The Scan Tool

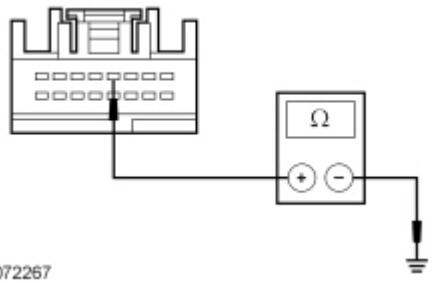
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 131 , Parking Aid for schematic and connector information.

Normal Operation

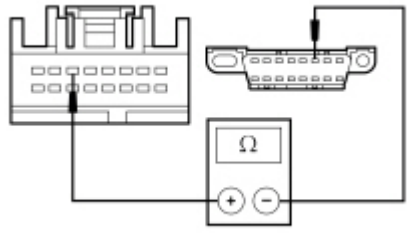
The Parking Aid Module (PAM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

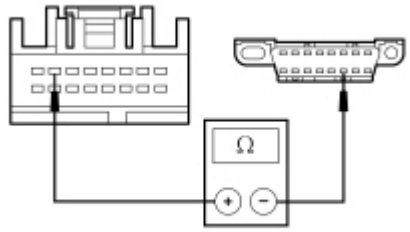




This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- PAM





PINPOINT TEST S: THE PAM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
S1 CHECK THE PAM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: PAM C2023 . • Ignition ON. • Measure the voltage between the PAM C2023-1, circuit CBP34 (VT/BN), harness side and ground.  A0072266 • **Is the voltage greater than 10 volts?**	**Yes** GO to S2 . **No** VERIFY the Body Control Module (BCM) fuse 34 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
S2 CHECK THE PAM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the PAM C2023-4, circuit GD134 (BK/VT), harness side and ground.  A0072267 • **Is the resistance less than 5 ohms?**	**Yes** GO to S3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
S3 CHECK THE HS-CAN CIRCUITS BETWEEN THE PAM AND THE DLC FOR AN OPEN	
• Measure the resistance between the PAM C2023-6, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.	**Yes** CONNECT the negative battery cable. GO to S4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 N0120214 ● Measure the resistance between the PAM C2023-7, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0120213 ● **Are the resistances less than 5 ohms?**	
S4 CHECK FOR CORRECT PAM OPERATION ● Disconnect the PAM connector. ● Check for: ■ corrosion ■ damaged pins ■ pushed-out pins ● Connect the PAM connector and make sure it seats correctly. ● Operate the system and verify the concern is still present. ● **Is the concern still present?**	**Yes** INSTALL a new PAM. REFER to Section 413-13. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

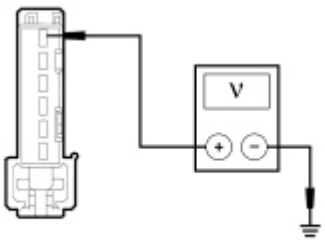
Pinpoint Test T: The Global Positioning System Module (GPSM) Does Not Respond To The Scan Tool

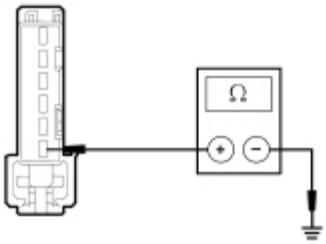
Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 130, Audio System/Navigation for schematic and connector information.

Normal Operation

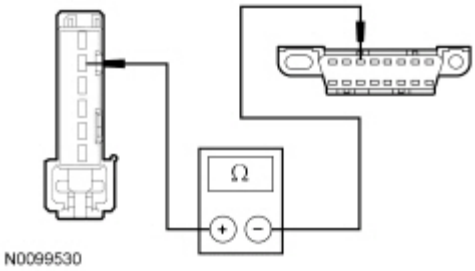
The Global Positioning System Module (GPSM) communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).

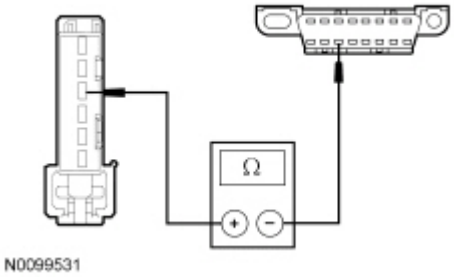




This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- GPSM





PINPOINT TEST T: THE GPSM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
T1 CHECK THE GPSM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: GPSM C2398 . • Ignition ON. • Measure the voltage between the GPSM C2398-1, circuit SBP09 (RD), harness side and ground.  N0094349 • **Is the voltage greater than 10 volts?**	**Yes** GO to T2 . **No** VERIFY the Body Control Module (BCM) fuse 9 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
T2 CHECK THE GPSM GROUND CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the GPSM C2398-6, circuit GD114 (BK/BU), harness side and ground.  N0094350 • **Is the resistance less than 5 ohms?**	**Yes** GO to T3 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
T3 CHECK THE MS-CAN CIRCUITS BETWEEN THE GPSM	

repair4less

AND THE DLC FOR AN OPEN	
• Measure the resistance between the GPSM C2398-2, circuit VDB06 (GY/OG), harness side and the Data Link Connector (DLC) C251-3, circuit VDB06 (GY/OG), harness side.  N0099530 • Measure the resistance between the GPSM C2398-3, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0099531 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to T4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
T4 CHECK FOR CORRECT GPSM OPERATION	

• Disconnect the GPSM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the GPSM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new GPSM . Refer to the appropriate section in Group 415 for the procedure.. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

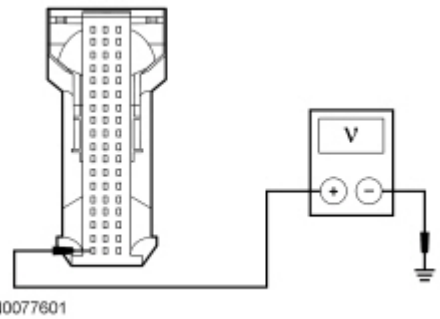
Pinpoint Test U: The Accessory Protocol Interface Module (APIM) Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Refer to Wiring Diagrams Cell 130 , Audio System/Navigation for schematic and connector information.

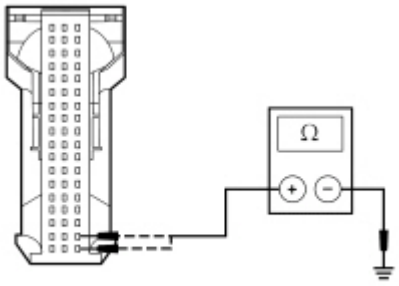
Normal Operation

The Accessory Protocol Interface Module (APIM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN). For vehicles equipped with 4.2-inch screen and 8-inch touchscreen, the APIM communicates on the Infotainment Controller Area Network (I-CAN).



This pinpoint test is intended to diagnose the following:

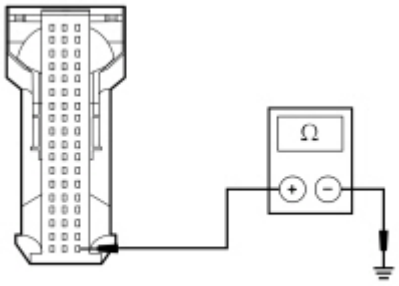
- Fuse
- Wiring, terminals or connectors
- APIM



PINPOINT TEST U: THE APIM DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

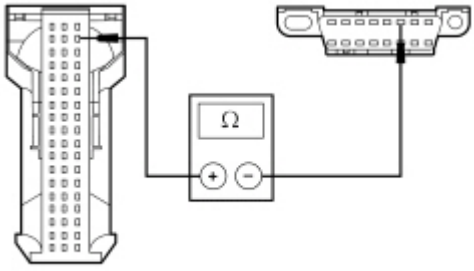


Test Step	Result / Action to Take
U1 CHECK THE APIM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Disconnect: APIM C2383 . • Ignition ON. • Measure the voltage between the APIM C2383-1, circuit SBP02 (YE/RD), harness side and ground.  N0077601 • **Is the voltage greater than 10 volts?**	**Yes** GO to U2 . **No** VERIFY the Body Control Module (BCM) fuse 2 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
U2 CHECK THE APIM GROUND CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • For 4.2-inch display, measure the resistance between the APIM C2383-37, circuit GD114 (BK/BU), harness side and ground; and between the APIM C2383-38, circuit GD114 (BK/BU), harness side and ground.	**Yes** CONNECT the negative battery cable. GO to U3 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

N0077602

- For 8-inch display, measure the resistance between the APIM C2383-37, circuit GD114 (BK/BU), harness side and ground.

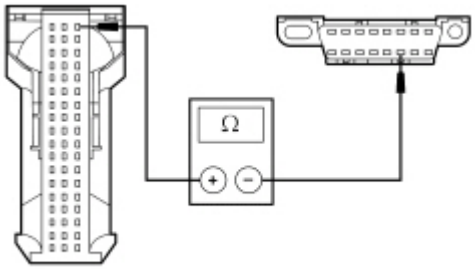


N0152486

- **Are the resistances less than 5 ohms?**

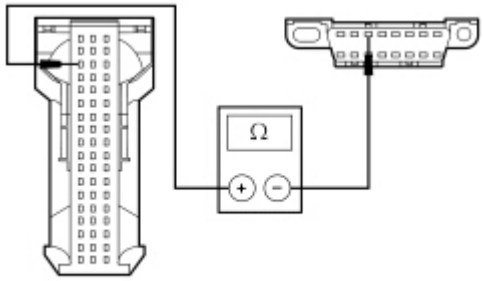
U3 CHECK THE HS-CAN CIRCUITS BETWEEN THE APIM AND THE DLC FOR AN OPEN

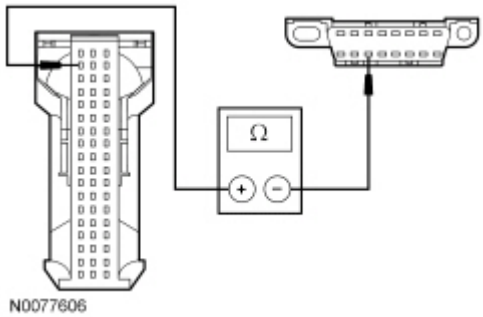
- Measure the resistance between the APIM C2383-53, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.



N0077603

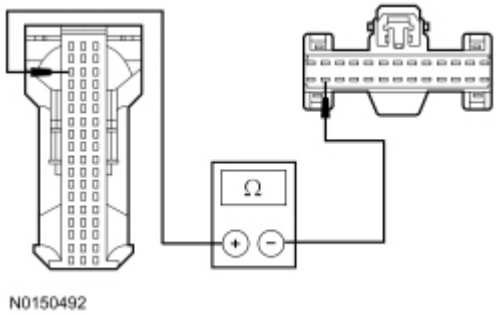
- Measure the resistance between the APIM C2383-54, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.

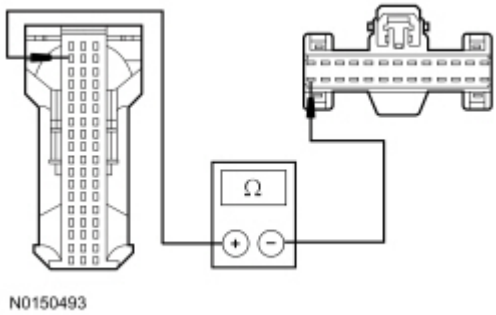


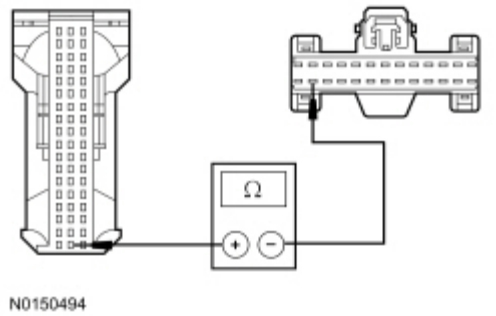


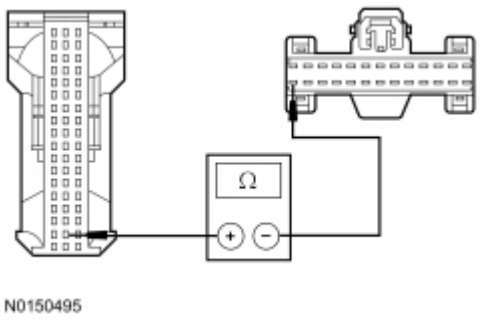
Yes
GO to U4 .

No
REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.









N0077604

- **Are the resistances less than 5 ohms?**

U4 CHECK THE MS-CAN CIRCUITS BETWEEN THE APIM AND THE DLC FOR AN OPEN	
NOTE: For vehicles equipped with AM/FM radio with single CD, 4.2-inch screen or 8-inch touchscreen. • Measure the resistance between the APIM C2383-16, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.  N0077605 • Measure the resistance between the APIM C2383-17, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0077606 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. If equipped with 4.2-inch screen, GO to U5 . If equipped with 8-inch touchscreen, GO to U6 . If not equipped with 4.2-inch screen or 8-inch touchscreen, GO to U7 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
U5 CHECK THE I-CAN CIRCUITS BETWEEN THE APIM AND THE IPC FOR AN OPEN	
NOTE: For vehicles equipped with 4.2-inch audio screen. • Disconnect: IPC C220 . • Measure the resistance between the APIM C2383-	**Yes** GO to U7 . **No** REPAIR the circuit in question.

repair4less

16, circuit VDB13 (BU/GY), harness side and the Instrument Panel Cluster (IPC) C220-25, circuit VDB13 (BU/GY), harness side.  N0150492 • Measure the resistance between the APIM C2383-17, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.  N0150493 • **Are the resistances less than 5 ohms?**	CONNECT the IPC and negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
U6 CHECK THE I-CAN CIRCUITS BETWEEN THE APIM AND THE IPC FOR AN OPEN **NOTE:** For vehicles equipped with 8-inch audio screen. • Disconnect: IPC C220 . • Measure the resistance between the APIM C2383-19, circuit VDB13 (BU/GY), harness side and the Instrument Panel Cluster (IPC) C220-25, circuit VDB13 (BU/GY), harness side.  N0150494 • Measure the resistance between the APIM C2383-20, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.	**Yes** GO to U7 . **No** REPAIR the circuit in question. CONNECT the IPC and negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

 N0150495 • **Are the resistances less than 5 ohms?**	
U7 CHECK FOR CORRECT APIM OPERATION	

• Disconnect the APIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the APIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test V: The Steering Column Control Module (SCCM) Does Not Respond To The Scan Tool

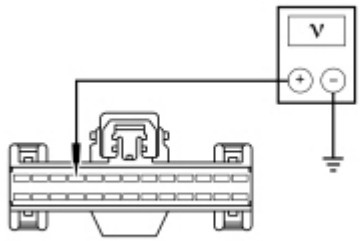
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

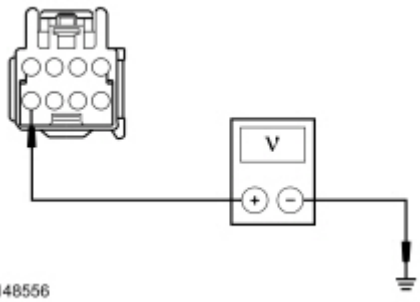
Refer to Wiring Diagrams Cell 44 , Horn/Cigar Lighter for schematic and connector information.

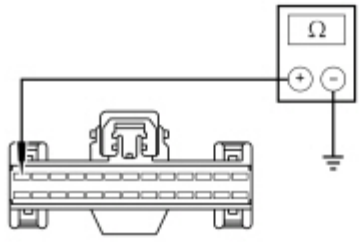
Normal Operation

The Steering Column Control Module (SCCM) communicates with the scan tool through the High Speed Controller Area Network (HS-CAN).

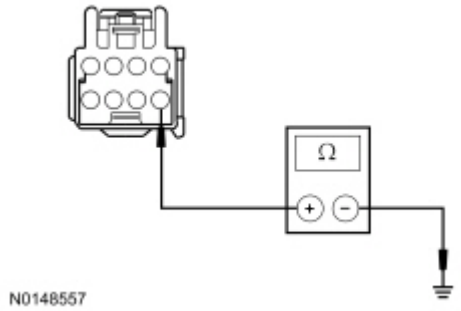
This pinpoint test is intended to diagnose the following:

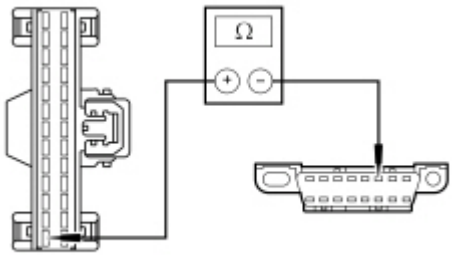


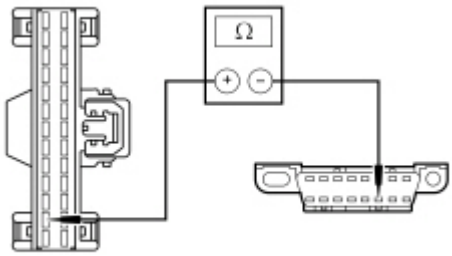




- Fuse
- Wiring, terminals or connectors
- SCCM







PINPOINT TEST V: THE SCCM DOES NOT RESPOND TO THE SCAN TOOL

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
V1 CHECK THE SCCM VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	

repair4less

• Disconnect: SCCM C2414A and C2414B . • Ignition ON. • Measure the voltage between the SCCM C2414A-10, circuit SBP23 (WH/RD), harness side and ground.  N0114048 • Measure the voltage between the SCCM C2414B-8, circuit SBP24 (VT/RD), harness side and ground.  N0148556 • **Are the voltages greater than 10 volts?**	**Yes** GO to V2 . **No** VERIFY the BJB fuse 23 (15A) or BJB fuse 24 (15A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
V2 CHECK THE SCCM GROUND CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the SCCM C2414A-13, circuit GD133 (BK), harness side and ground.  N0114050 • Measure the resistance between the SCCM C2414B-5, circuit GD138 (BK/WH), harness side and ground.	**Yes** GO to V3 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

 N0148557 • **Are the resistances less than 5 ohms?**	
V3 CHECK THE HS-CAN CIRCUITS BETWEEN THE SCCM AND THE DLC FOR AN OPEN	
• Measure the resistance between the SCCM C2414A-14, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB04 (WH/BU), harness side.  N0114053 • Measure the resistance between the SCCM C2414A-15, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0114054 • **Are the resistances less than 5 ohms?**	**Yes** GO to V4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
V4 CHECK FOR CORRECT SCCM OPERATION	
• Disconnect all the SCCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the SCCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SCCM . REFER to Section 211-05 . CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded

repair4less

	connector.

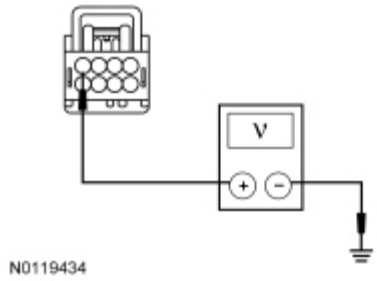
Pinpoint Test W: The Tire Pressure Monitor (TPM) Module Does Not Respond To The Scan Tool

Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

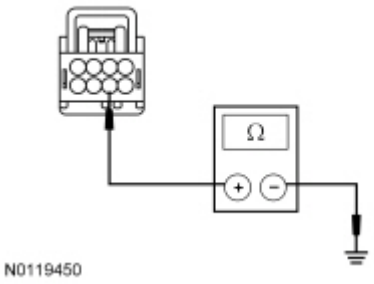
Refer to Wiring Diagrams Cell 118 , Tire Pressure Monitor System for schematic and connector information.

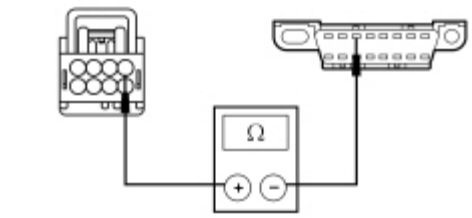
Normal Operation

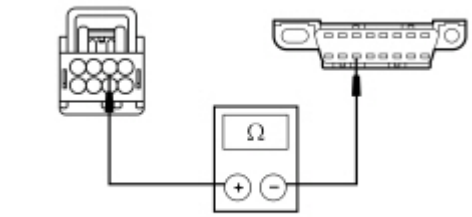
The Tire Pressure Monitor (TPM) module communicates with the scan tool through the Medium Speed Controller Area Network (MS-CAN).



This pinpoint test is intended to diagnose the following:







- Fuse
- Wiring, terminals or connectors
- TPM module

PINPOINT TEST W: THE TPM MODULE DOES NOT RESPOND TO THE SCAN TOOL

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
W1 CHECK THE TPM MODULE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: TPM C2415 . • Ignition ON. • Measure the voltage between the TPM module C2415-4, circuit SBP26 (YE/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to W2 . **No** VERIFY the Body Control Module (BCM) fuse 26 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the network test with the scan tool.
W2 CHECK THE TPM MODULE GROUND CIRCUITS FOR	

AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the TPM module C2415-6, circuit GD133 (BK), harness side and ground.  N0119450 • **Is the resistance less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to W3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the network test with the scan tool.
W3 CHECK THE MS-CAN CIRCUITS BETWEEN THE TPM MODULE AND THE DLC FOR AN OPEN	
• Measure the resistance between the TPM module C2415-1, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.  N0119451 • Measure the resistance between the TPM module C2415-2, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0119452 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to W4 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
W4 CHECK FOR CORRECT TPM MODULE OPERATION	
• Disconnect the TPM module connector. • Check for: ▪ corrosion	**Yes** INSTALL a new TPM module. REFER to Section 204-04 . CLEAR the DTCs.

repair4less

▪ damaged pins ▪ pushed-out pins • Connect the TPM module connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the network test with the scan tool.

Pinpoint Test X: No Medium Speed Controller Area Network (MS-CAN) Communication, All Modules Are Not Responding

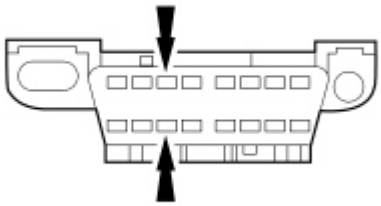
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

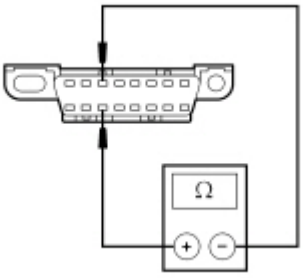
Normal Operation

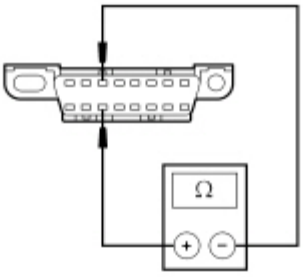
The Medium Speed Controller Area Network (MS-CAN) uses an unshielded twisted pair cable.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Accessory Protocol Interface Module (APIM) (if equipped)
- Audio Front Control Module (ACM)
- Body Control Module (BCM)
- Driver Seat Module (DSM) (if equipped)
- Dual Climate Controlled Seat Module (DCSM) (if equipped)
- Front Controls Interface Module (FCIM) (if equipped)
- Front Display Interface Module (FDIM) (if equipped)
- Global Positioning System Module (GPSM) (if equipped)
- HVAC module
- Power Running Board (PRB) module (if equipped)
- Tire Pressure Monitor (TPM) module

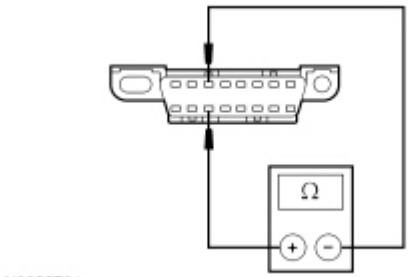


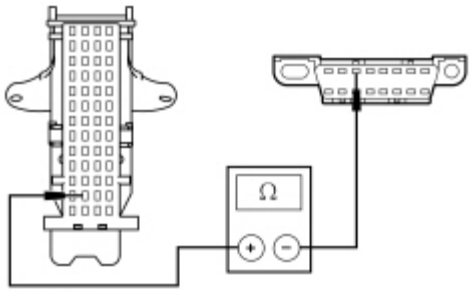


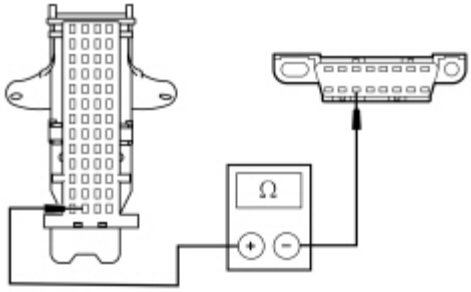


PINPOINT TEST X: NO MS-CAN COMMUNICATION, ALL MODULES ARE NOT RESPONDING

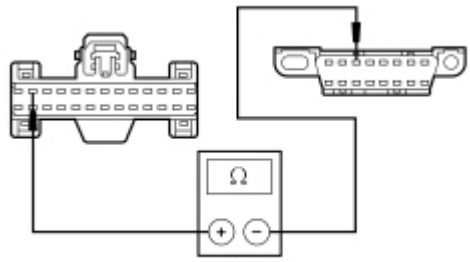
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

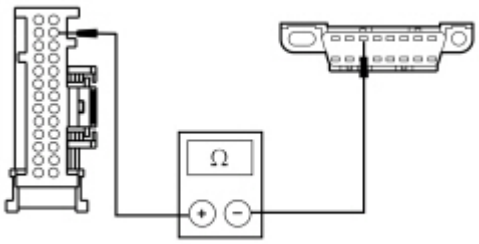


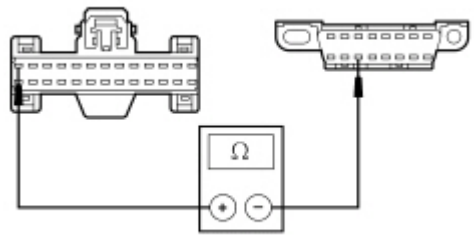




NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

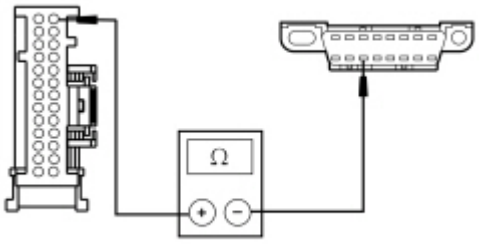


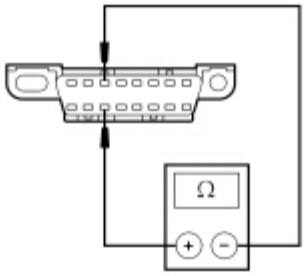


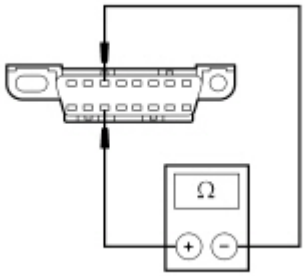


NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

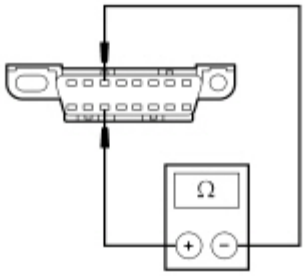
Test Step	Result / Action to Take
X1 CHECK THE DLC PINS FOR DAMAGE	

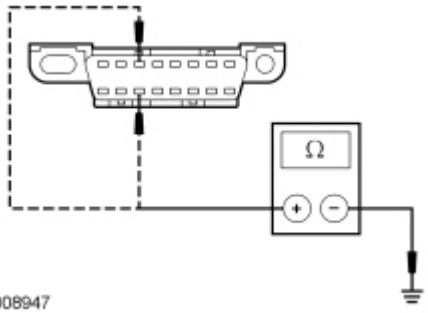






• Ignition OFF. • Disconnect the scan tool cable from the Data Link Connector (DLC). • Inspect DLC pins 3 and 11 for damage.  N0053178 • **Are DLC pins 3 and 11 OK?**	**Yes** GO to X2 . **No** REPAIR the DLC as necessary. CLEAR the DTCs. REPEAT the network test with the scan tool.
X2 CHECK THE MS-CAN TERMINATION RESISTANCE	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0050701 • **Is the resistance between 54 and 66 ohms?**	**Yes** GO to X11 . **No** GO to X3 .
X3 CHECK THE MS-CAN TERMINATION RESISTOR	
• Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0050701 • **Is the resistance between 108 and 132 ohms?**	**Yes** GO to X4 . **No** GO to X8 .
X4 CHECK THE MS-CAN TERMINATION RESISTOR WITH THE BCM DISCONNECTED	
• Disconnect: Body Control Module (BCM) C2280B .	**Yes**





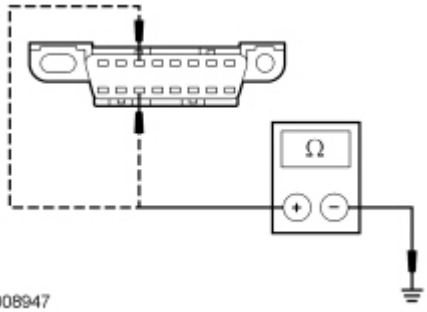
repair4less

• Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0050701 • **Is the resistance between 108 and 132 ohms?**	GO to X5 . **No** GO to X6 .
X5 CHECK THE MS-CAN CIRCUITS BETWEEN THE BCM AND THE DLC FOR AN OPEN	
• Measure the resistance between the BCM C2280B-38, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.  N0114057 • Measure the resistance between the BCM C2280B-39, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0114058 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to X29 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
X6 CHECK THE MS-CAN (+) CIRCUIT BETWEEN THE HVAC MODULE AND THE DLC FOR AN OPEN	
• For EMTC , measure the resistance between the HVAC module C294A-12, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to X7 . **No** REPAIR the circuit. CONNECT the

 N0104911 • For EATC , measure the resistance between the HVAC module C228A-25, circuit VDB06 (GY/OG), harness side and the DLC C251-3, circuit VDB06 (GY/OG), harness side.  N0148816 • **Is the resistance less than 5 ohms?**	negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
X7 CHECK THE MS-CAN (-) CIRCUIT BETWEEN THE HVAC MODULE AND THE DLC FOR AN OPEN • For EMTC , measure the resistance between the HVAC module C294A-13, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0104912 • For EATC , measure the resistance between the HVAC module C228A-26, circuit VDB07 (VT/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.	**Yes** CONNECT the negative battery cable. GO to X35 . **No** REPAIR the circuit. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.

repair4less

 N0148817 • **Is the resistance less than 5 ohms?**	
X8 CHECK THE MS-CAN (+) AND MS-CAN (-) CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0050701 • **Is the resistance less than 5 ohms?**	**Yes** GO to X10 . **No** GO to X9 .
X9 CHECK THE MS-CAN (+) AND MS-CAN (-) CIRCUITS FOR AN OPEN	
• Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side.  N0050701 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR the DLC or the circuit in question. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** A capacitor internal to a module may still be draining causing irregular resistance readings. WAIT 5 minutes. REPEAT the pinpoint test.
X10 CHECK THE MS-CAN (+) AND MS-CAN (-) CIRCUITS FOR A SHORT TOGETHER WITH MODULES DISCONNECTED	
• While measuring the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and the DLC C251-11, circuit VDB07 (VT/OG), harness side, disconnect the following modules one at a time until the resistance is greater than 5 ohms.	**Yes** CONNECT the negative battery cable. For the APIM , GO to X27 . For the ACM , GO to X28 . For the BCM , GO to X29 . For the DSM , GO to X30 . For the



■ APIM C2383 (if equipped) ■ ACM C290B (if equipped) ■ BCM C2280B ■ DSM C341D (if equipped) ■ DCSM C3265C (if equipped) ■ FCIM C2402 (if equipped) ■ FDIM C2123 (if equipped) ■ GPSM C2398 (if equipped) ■ HVAC module C294A (EMTC) or C228A (EATC) ■ PRB module C3313B (if equipped) ■ TPM module C2415  N0050701 • **Is the resistance less than 5 ohms?**	DCSM , GO to X31 . For the FCIM , GO to X32 . For the FDIM , GO to X33 . For the GPSM , GO to X34 . For the HVAC module, GO to X35 . For the PRB module, GO to X36 . For the TPM module, GO to X37 . **No** REPAIR circuits VDB06 (GY/OG) and VDB07 (VT/OG) for being shorted together. CONNECT all modules. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the Network Test with the scan tool.
X11 CHECK THE MS-CAN (+) AND MS-CAN (-) CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and ground; and between the DLC C251-11, circuit VDB07 (VT/OG), harness side and ground.  N0008947 • **Are the resistances greater than 1,000 ohms?**	**Yes** CONNECT the negative battery cable. GO to X12 . **No** GO to X13 .
X12 CHECK THE MS-CAN (+) AND MS-CAN (-) CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between the DLC C251-3, circuit VDB06 (GY/OG), harness side and ground; and between the DLC C251-11, circuit VDB07 (VT/OG), harness side and ground.	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** GO to X14 .

repair4less

- **Is the voltage greater than 6 volts?**

X13 CHECK THE MS-CAN (+) AND MS-CAN (-) CIRCUITS FOR A SHORT TO GROUND WITH MODULES DISCONNECTED	
• Measure the resistance between the DLC C251-3, circuit VDB06 (GY/OG), harness side and ground; and between the DLC C251-11, circuit VDB07 (VT/OG), harness side and ground. Check for the short to ground on both circuits after disconnecting each module. Disconnect the following modules one at a time until the resistance to ground is greater than 1,000 ohms. ▪ APIM C2383 (if equipped) ▪ ACM C290B (if equipped) ▪ BCM C2280B ▪ DSM C341D (if equipped) ▪ DCSM C3265C (if equipped) ▪ FCIM C2402 (if equipped) ▪ FDIM C2123 (if equipped) ▪ GPSM C2398 (if equipped) ▪ HVAC module C294A (EMTC) or C228A (EATC) ▪ PRB module C3313B (if equipped) ▪ TPM module C2415  N0008947 • **Is the resistance greater than 1,000 ohms?**	**Yes** CONNECT the negative battery cable. For the APIM , GO to X27 . For the ACM , GO to X28 . For the BCM , GO to X29 . For the DSM , GO to X30 . For the DCSM , GO to X31 . For the FCIM , GO to X32 . For the FDIM , GO to X33 . For the GPSM , GO to X34 . For the HVAC module, GO to X35 . For the PRB module, GO to X36 . For the TPM module, GO to X37 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the Network Test with the scan tool.
X14 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE BCM DISABLED	
• Disconnect: BCM Fuse 45 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test I . **No** INSTALL the removed fuse. GO to

	X15 .
X15 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE ACM DISABLED	
• Disconnect: BCM Fuse 29 (20A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test K . **No** INSTALL the removed fuse. GO to X16 .
X16 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE FCIM , FDIM AND GPSM DISABLED	
• Disconnect: BCM Fuse 9 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to X17 . **No** INSTALL the removed fuse. GO to X18 .
X17 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE FCIM , FDIM AND GPSM DISCONNECTED	
• Disconnect modules one at a time until other MS-CAN modules pass the network test. Skip to the end once network operation is restored. • Disconnect: GPSM C2398 (if equipped) . • Enter the following diagnostic mode on the scan tool: Network Test . • Disconnect: FDIM C2123 (if equipped) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • Disconnect: FCIM C2402 (if equipped) . • Enter the following diagnostic mode on the scan tool: Network Test . • **Do all other MS-CAN modules pass the network test?**	**Yes** CONNECT all modules. For restored operation with the FCIM disconnected, GO to Pinpoint Test M . For restored operation with the FDIM disconnected, GO to Pinpoint Test N . For restored operation with the GPSM disconnected, GO to Pinpoint Test T . **No** CONNECT all modules. The MS-CAN tests within specification. VERIFY the correct operation of the scan tool on a known good vehicle.
X18 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE HVAC MODULE DISABLED	
• Disconnect: BCM Fuse 46 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test J . **No** INSTALL the removed fuse. If the vehicle is equipped with an Accessory Protocol Interface Module (APIM), GO to X19 .

repair4less

	If the vehicle is not equipped with an APIM , GO to X20 .
X19 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE APIM DISABLED • Disconnect: BCM Fuse 2 (15A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test U . **No** INSTALL the removed fuse. GO to X20 .
X20 VERIFY VEHICLE EQUIPMENT — PRB MODULE • Verify whether the vehicle is equipped with a Power Running Board (PRB) module. • **Is the vehicle equipped with a PRB module?**	**Yes** GO to X21 . **No** GO to X22 .
X21 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE PRB MODULE DISABLED • Disconnect: Battery Junction Box (BJB) Fuse 11 (30A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test R . **No** INSTALL the removed fuse. GO to X22 .
X22 VERIFY VEHICLE EQUIPMENT — DSM • Verify whether the vehicle is equipped with a Driver Seat Module (DSM). • **Is the vehicle equipped with a DSM ?**	**Yes** GO to X23 . **No** GO to X24 .
X23 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE DSM DISABLED • Disconnect: BCM Fuse 74 (30A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test P . **No** INSTALL the removed fuse. GO to X24 .
X24 VERIFY VEHICLE EQUIPMENT — DCSM • Verify whether the vehicle is equipped with a Dual Climate Controlled Seat Module (DCSM). • **Is the vehicle equipped with a DCSM ?**	**Yes** GO to X25 . **No** GO to X26 .
X25 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE DCSM DISABLED • Disconnect: BJB Fuse 69 (30A) . • Enter the following diagnostic mode on the scan tool: Network Test .	**Yes** INSTALL the removed fuse. GO to Pinpoint Test Q .

• Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**No** GO to X26 .
X26 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE TPM MODULE DISABLED	
• Disconnect: BCM Fuse 26 (5A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other MS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test W . **No** INSTALL the removed fuse. The MS-CAN tests within specification. VERIFY the correct operation of the scan tool on a known good vehicle.
X27 CHECK FOR CORRECT APIM OPERATION	

• Disconnect the APIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the APIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

X28 CHECK FOR CORRECT ACM OPERATION	

• Disconnect all the ACM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the ACM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ACM . Refer to the appropriate section in Group 415 for the procedure.. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

X29 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

X30 CHECK FOR CORRECT DSM OPERATION	
• Disconnect all the DSM connectors. • Check for:	**Yes** INSTALL a new DSM . REFER to

repair4less

▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the DSM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	Section 501-10 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
X31 CHECK FOR CORRECT DCSM OPERATION	
• Disconnect all the DCSM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the DCSM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DCSM . REFER to Section 501-10 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
X32 CHECK FOR CORRECT FCIM OPERATION	
• Disconnect the FCIM connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the FCIM connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FCIM . Refer to the appropriate section in Group 415 for the procedure.. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
X33 CHECK FOR CORRECT FDIM OPERATION	
• Disconnect the FDIM connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the FDIM connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FDIM . Refer to the appropriate section in Group 415 for the procedure.. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
X34 CHECK FOR CORRECT GPSM OPERATION	
• Disconnect the GPSM connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the GPSM connector and make sure it seats correctly. • Operate the system and verify the concern is still	**Yes** INSTALL a new GPSM . Refer to the appropriate section in Group 415 for the procedure.. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No**

present. • **Is the concern still present?**	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
X35 CHECK FOR CORRECT HVAC MODULE OPERATION	

• Disconnect all the HVAC module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the HVAC module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new HVAC module. REFER to Section 412-01 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

X36 CHECK FOR CORRECT PRB MODULE OPERATION	

• Disconnect all the PRB module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PRB module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PRB module. REFER to Section 501-08 . CLEAR the DTCs. CONNECT all modules. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. CONNECT all modules. REPEAT the network test with the scan tool.

X37 CHECK FOR CORRECT TPM MODULE OPERATION	

• Disconnect the TPM module connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the TPM module connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new TPM module. REFER to Section 204-04 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Pinpoint Test Y: No High Speed Controller Area Network (HS-CAN) Communication, All Modules Are Not Responding

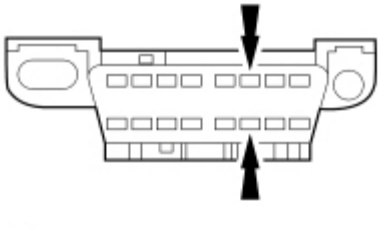
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Normal Operation

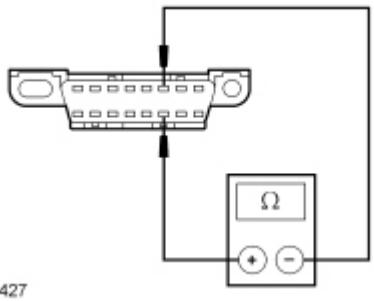
repair4less

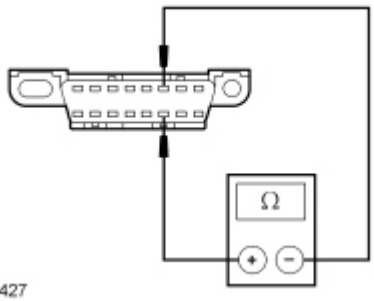
The High Speed Controller Area Network (HS-CAN) uses an unshielded twisted pair cable.

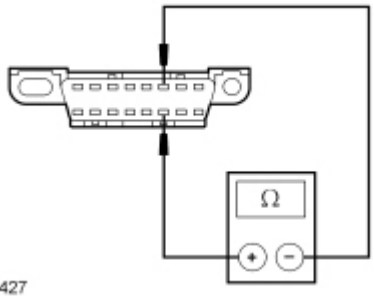
This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- TCCM (if equipped)
- ABS module
- Accessory Protocol Interface Module (APIM) (if equipped)
- Body Control Module (BCM)
- Instrument Panel Cluster (IPC)
- Occupant Classification System Module (OCSM)
- Parking Aid Module (PAM) (if equipped)
- PCM
- Power Steering Control Module (PSCM) (if equipped)
- Restraints Control Module (RCM)
- Steering Column Control Module (SCCM)
- Trailer Brake Control (TBC) module (if equipped)

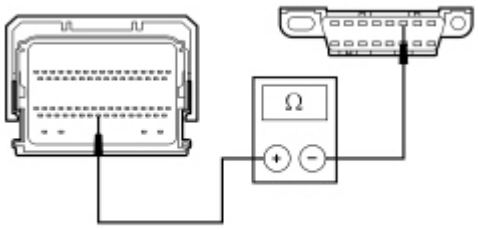


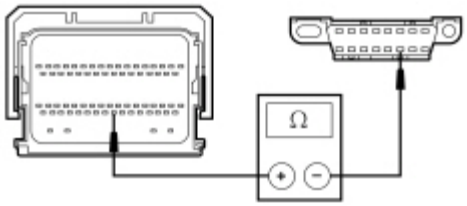


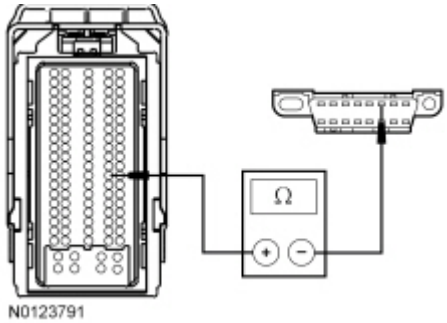


PINPOINT TEST Y: NO HS-CAN COMMUNICATION, ALL MODULES ARE NOT RESPONDING

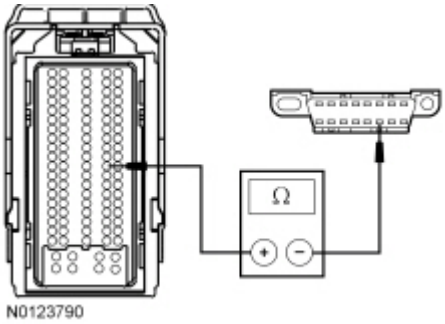
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**







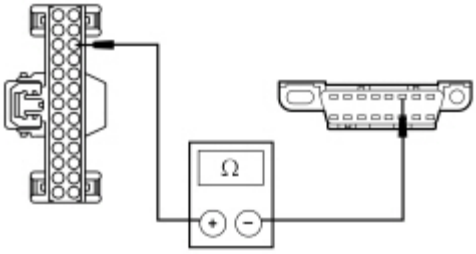
NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

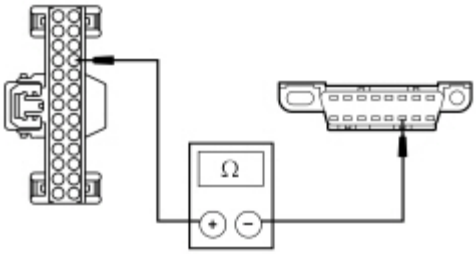


NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
Y1 CHECK THE DLC PINS FOR DAMAGE	
• Ignition OFF. • Disconnect the scan tool cable from the Data Link Connector (DLC). • Inspect the DLC pins 6 and 14 for damage.  A0093867 • **Are DLC pins 6 and 14 OK?**	**Yes** GO to Y2 . **No** REPAIR the DLC as necessary. CLEAR the DTCs. REPEAT the network test with the scan tool.
Y2 CHECK THE HS-CAN TERMINATION RESISTANCE	
• Ignition OFF.	**Yes**

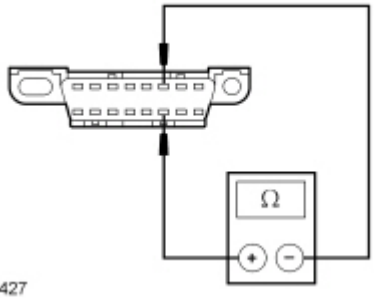
• Disconnect: Negative Battery Cable . • Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0026427 • **Is the resistance between 54 and 66 ohms?**	GO to Y11 . **No** GO to Y3 .
Y3 CHECK THE HS-CAN TERMINATION RESISTOR	
• Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0026427 • **Is the resistance between 108 and 132 ohms?**	**Yes** GO to Y4 . **No** GO to Y8 .
Y4 CHECK THE HS-CAN TERMINATION RESISTOR WITH THE PCM DISCONNECTED	
• Disconnect: PCM C175B (3.7L), C1551B (3.5L), or C1381B (5.0L and 6.2L) . • Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0026427 • **Is the resistance between 108 and 132 ohms?**	**Yes** For 3.7L, 5.0L or 6.2L, GO to Y5 . For 3.5L, GO to Y6 . **No** GO to Y7 .
Y5 CHECK THE HS-CAN CIRCUITS BETWEEN THE PCM AND THE DLC FOR AN OPEN	
• Measure the resistance between the PCM C175B-59	**Yes**

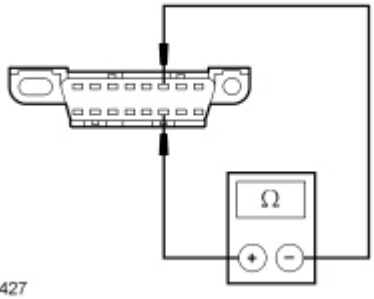


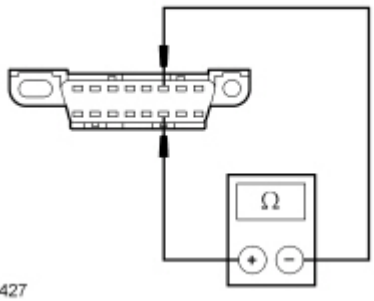


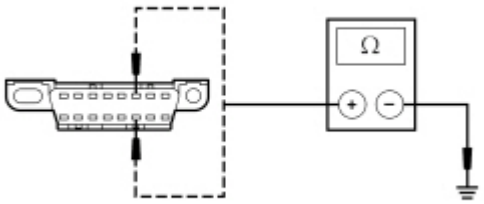
repair4less

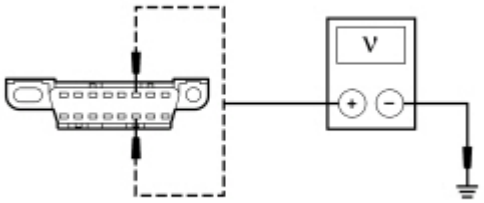
(3.7L) or C1381B-59 (5.0L and 6.2L), circuit VDB04 (WH/BU), harness side and the DLC C251-6, circuit VDB04 (WH/BU), harness side.  N0077607 • Measure the resistance between the PCM C175B-58 (3.7L) or C1381B-58 (5.0L and 6.2L), circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0113941 • **Are the resistances less than 5 ohms?**	CONNECT the negative battery cable. GO to Y34 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
Y6 CHECK THE HS-CAN CIRCUITS BETWEEN THE PCM AND THE DLC FOR AN OPEN • Measure the resistance between the PCM C1551B-69, circuit VDB04 (WH/BU), harness side and the DLC C251-6, circuit VDB04 (WH/BU), harness side.  N0123791 • Measure the resistance between the PCM C1551B-68, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.	**Yes** CONNECT the negative battery cable. GO to Y34 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.





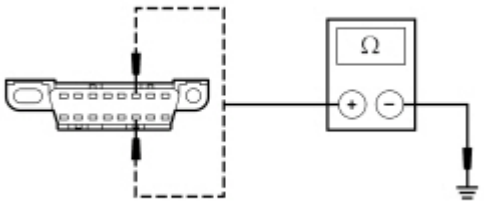






N0123790

- **Are the resistances less than 5 ohms?**



Y7 CHECK THE HS-CAN CIRCUITS BETWEEN THE DLC AND THE BCM FOR AN OPEN	
• Disconnect: BCM C2280F . • Measure the resistance between the BCM C2280F-16, circuit VDB04 (WH/BU), harness side and the Data Link Connector (DLC) C251-6, circuit VDB06 (WH), harness side.  N0115338 • Measure the resistance between the BCM C2280F-17, circuit VDB05 (WH), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0115339 • **Are the resistances less than 5 ohms?**	**Yes** CONNECT the negative battery cable. GO to Y29 . **No** REPAIR the circuit in question. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the network test with the scan tool.
Y8 CHECK THE HS-CAN (+) AND HS-CAN (-) CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.	**Yes** GO to Y10 . **No** GO to Y9 .

repair4less

 N0026427 • **Is the resistance less than 5 ohms?**	
Y9 CHECK THE HS-CAN (+) AND HS-CAN (-) CIRCUITS FOR AN OPEN	
• Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side.  N0026427 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR the DLC or the circuit in question. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** A capacitor internal to a module may still be draining, causing irregular resistance readings. WAIT 5 minutes. REPEAT the pinpoint test.
Y10 CHECK THE HS-CAN (+) AND HS-CAN (-) CIRCUITS FOR A SHORT TOGETHER	
• While measuring the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and the DLC C251-14, circuit VDB05 (WH), harness side, disconnect the following modules one at a time until the resistance is greater than 5 ohms. ▪ TCCM C2371A (if equipped) ▪ APIM C2383 (if equipped) ▪ ABS module C135 ▪ BCM C2280F ▪ IPC C220 ▪ OCSM C3159 ▪ PAM C2023 (if equipped) ▪ PSCM C1463B (if equipped) ▪ PCM C175B, C1381B or C1551B ▪ RCM C310B ▪ SCCM C2414A ▪ TBC module C2142 (if equipped)	**Yes** CONNECT the negative battery cable. For the TCCM, GO to Y26. For the APIM, GO to Y27. For the ABS module, GO to Y28. For the BCM, GO to Y29. For the IPC, GO to Y30. For the OCSM, GO to Y31. For the PAM, GO to Y32. For the PSCM, GO to Y33. For the PCM, GO to Y34. For the RCM, GO to Y35. For the SCCM, GO to Y36. For the TBC module, GO to Y37. **No** REPAIR circuits VDB04 (WH/BU) and VDB05 (WH) for being shorted together. CLEAR the DTCs. REPEAT the Network Test with the scan tool.

 N0026427 • **Is the resistance less than 5 ohms?**	
Y11 CHECK THE HS-CAN (+) AND HS-CAN (-) CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and ground; and between the DLC C251-14, circuit VDB05 (WH), harness side and ground.  N0002963 • **Are the resistances greater than 1,000 ohms?**	**Yes** CONNECT the negative battery cable. GO to Y12 . **No** GO to Y13 .
Y12 CHECK THE HS-CAN (+) AND HS-CAN (-) CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between the DLC C251-6, circuit VDB04 (WH/BU), harness side and ground; and between the DLC C251-14, circuit VDB05 (WH), harness side and ground.  N0002964 • **Are the voltages greater than 6 volts?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** GO to Y14 .
Y13 CHECK THE HS-CAN (+) AND HS-CAN (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED	
• While measuring the resistance between the DLC C251-6, circuit VDB04 (WH/BU), harness side and ground; and between the DLC C251-14, circuit	**Yes** CONNECT the negative battery cable. For the TCCM , GO to Y26 . For the

repair4less

VDB05 (WH), harness side and ground, check for the short to ground on both circuits after disconnecting each module. Disconnect the following modules one at a time until the resistance to ground is greater than 10,000 ohms. ■ TCCM C2371A (if equipped) ■ APIM C2383 (if equipped) ■ ABS module C135 ■ BCM C2280F ■ IPC C220 ■ OCSM C3159 ■ PAM C2023 (if equipped) ■ PSCM C1463B (if equipped) ■ PCM C175B, C1381B or C1551B ■ RCM C310B ■ SCCM C2414A ■ TBC module C2142 (if equipped)  N0002963 • **Are the resistances greater than 1,000 ohms?**	APIM, GO to Y27. For the ABS module, GO to Y28. For the BCM, GO to Y29. For the IPC, GO to Y30. For the OCSM, GO to Y31. For the PAM, GO to Y32. For the PSCM, GO to Y33. For the PCM, GO to Y34. For the RCM, GO to Y35. For the SCCM, GO to Y36. For the TBC module, GO to Y37. **No** REPAIR the circuit in question. CONNECT all modules. CONNECT the negative battery cable. CLEAR the DTCs. REPEAT the Network Test with the scan tool.
Y14 CHECK FOR RESTORED COMMUNICATION WITH THE PCM DISABLED	
• Disconnect: Battery Junction Box (BJB) Fuses 26 (10A) and 75 (15A) (25A for 3.5L engine). • Enter the following diagnostic mode on the scan tool: Network Test. • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuses. GO to Pinpoint Test A. **No** GO to Y15.
Y15 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE PSCM DISABLED	
• Disconnect: High Current Battery Junction Box (BJB) fuse 1 (125A) and Battery Junction Box (BJB) Fuse 52 (5A). • Enter the following diagnostic mode on the scan tool: Network Test. • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test H. **No** GO to Y16.
Y16 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE ABS MODULE AND TCCM DISABLED	
• Disconnect: BJB Fuses 20 (20A)(ESOF only), 36 (30A), 47 (60A), 54 (5A) and 68 (25A). • Enter the following diagnostic mode on the scan tool:	**Yes** INSTALL the removed fuses. GO to Y17.

Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**No** INSTALL the removed fuses. If the vehicle is equipped with a TCCM , GO to Y17 . If the vehicle is not equipped with a TCCM , GO to Y18 .
Y17 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE TCCM DISCONNECTED	
• Disconnect: TCCM . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuses. GO to Pinpoint Test F . **No** INSTALL the removed fuses. GO to Pinpoint Test B .
Y18 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE RCM AND OCSM DISABLED	
• Disconnect: Body Control Module (BCM) Fuse 36 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Y19 . **No** INSTALL the removed fuse. If the vehicle is equipped with a PAM , GO to Y20 . If the vehicle is not equipped with a PAM , GO to Y21 .
Y19 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE RCM AND OCSM DISCONNECTED	
• Disconnect: RCM C310B . • Enter the following diagnostic mode on the scan tool: Network Test . • Disconnect: OCSM C3159 . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** CONNECT all modules. For restored operation with the RCM disconnected, GO to Pinpoint Test D . For restored operation with the OCSM disconnected, GO to Pinpoint Test E . **No** CONNECT all modules. The HS-CAN tests within specification. VERIFY the correct operation of the scan tool on a known good vehicle.
Y20 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE PAM DISABLED	
• Disconnect: Body Control Module (BCM) Fuse 34 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test S . **No** GO to Y21 .
Y21 CHECK FOR RESTORED NETWORK	

repair4less

COMMUNICATION WITH THE SCCM DISABLED	
• Disconnect: BJB Fuses 23 (15A) and 24 (15A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test V . **No** INSTALL the removed fuse. If the vehicle is equipped with an Accessory Protocol Interface Module (APIM), GO to Y22 . If the vehicle is not equipped with an APIM , GO to Y23 .
Y22 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE APIM DISABLED	
• Disconnect: BCM Fuse 2 (15A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test U . **No** INSTALL the removed fuse. GO to Y23 .
Y23 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE BCM DISABLED	
• Disconnect: BJB Fuse 45 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test I . **No** INSTALL the removed fuse. If the vehicle is equipped with an Trailer Brake Control (TBC), GO to Y24 . If the vehicle is not equipped with a TBC , GO to Y25 .
Y24 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE TBC MODULE DISABLED	
• Disconnect: BCM Fuse 37 (10A), BJB Fuse 17 (30A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuses. GO to Pinpoint Test G . **No** INSTALL the removed fuses. GO to Y25 .
Y25 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE IPC DISABLED	
• Disconnect: BCM Fuse 11 (10A) . • Enter the following diagnostic mode on the scan tool: Network Test . • Repeat the network test. • **Do all other HS-CAN modules pass the network test?**	**Yes** INSTALL the removed fuse. GO to Pinpoint Test C . **No** INSTALL the removed fuse. The HS-CAN tests within specification. VERIFY the correct operation of the

	scan tool on a known good vehicle.
Y26 CHECK FOR CORRECT TCCM OPERATION	

• Disconnect all the TCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the TCCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new TCCM. REFER to Section 308-07A. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Y27 CHECK FOR CORRECT APIM OPERATION	

• Disconnect the APIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the APIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Y28 CHECK FOR CORRECT ABS MODULE OPERATION	

• Disconnect the ABS module connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the ABS module connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ABS module. REFER to Section 206-09. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Y29 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Y30 CHECK FOR CORRECT IPC OPERATION	
• Disconnect the IPC connector. • Check for: ▪ corrosion	**Yes** INSTALL a new IPC. REFER to Section 413-01. CONNECT all modules.

repair4less

▪ damaged pins ▪ pushed-out pins • Connect the IPC connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Y31 CHECK FOR CORRECT OCSM OPERATION	
• Disconnect the OCSM connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the OCSM connector and make sure it seats correctly. • Verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new OCSM . REFER to Section 501-20B . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Y32 CHECK FOR CORRECT PAM OPERATION	
• Disconnect the PAM connector. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the PAM connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new PAM . REFER to Section 413-13 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Y33 CHECK FOR CORRECT PSCM OPERATION	
• Disconnect all the PSCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the PSCM connectors and make sure they seat correctly. • Verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new EPAS steering gear. REFER to Section 211-02 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Y34 CHECK FOR CORRECT PCM OPERATION	
• Disconnect all the PCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the PCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present.	**Yes** INSTALL a new PCM. REFER to Section 303-14 . CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been

• **Is the concern still present?**	caused by a loose or corroded connector.
Y35 CHECK FOR CORRECT RCM OPERATION	

• Disconnect all the RCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the RCM connectors and make sure they seat correctly.
• Verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new RCM. REFER to Section 501-20B. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Y36 CHECK FOR CORRECT SCCM OPERATION	

• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the SCCM connectors and make sure they seat correctly.
• Verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new SCCM. REFER to Section 211-05. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Y37 CHECK FOR CORRECT TBC MODULE OPERATION	

• Disconnect the TBC module connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the TBC module connector and make sure it seats correctly.
• Verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new TBC module. REFER to Section 206-10. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

Pinpoint Test Z: No Infotainment Controller Area Network (I-CAN) Communication, All Modules Are Not Responding

Refer to Wiring Diagrams Cell 14, Module Communications Network for schematic and connector information.

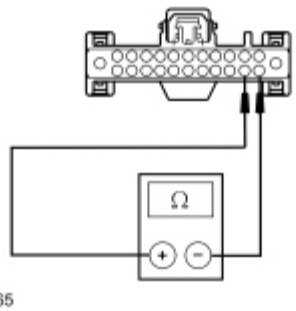
Normal Operation

The Infotainment Controller Area Network (I-CAN) uses an unshielded twisted pair cable.

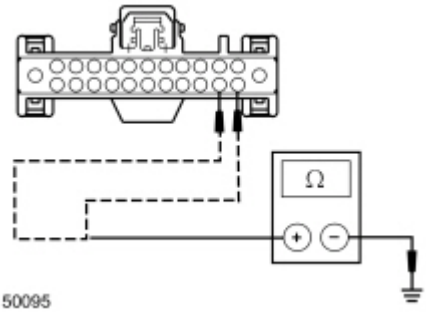
This pinpoint test is intended to diagnose the following:

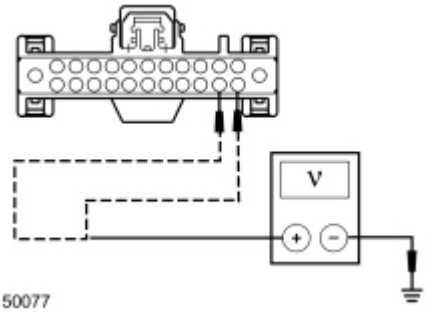
- Wiring, terminals or connectors

repair4less



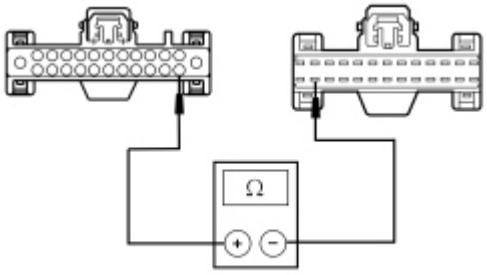
- Accessory Protocol Interface Module (APIM) (if equipped)
- Audio Front Control Module (ACM)
- Audio DSP module (if equipped)
- Front Controls Interface Module (FCIM) (if equipped)
- Front Control/Display Interface Module (FCDIM) (if equipped)
- Instrument Panel Cluster (IPC)





PINPOINT TEST Z: NO I-CAN COMMUNICATION, ALL MODULES ARE NOT RESPONDING

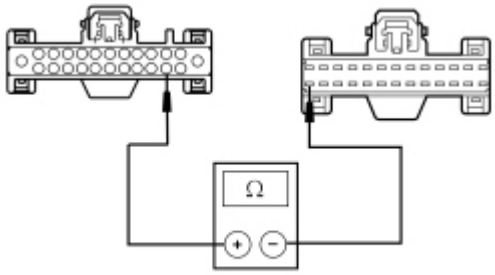
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**



NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

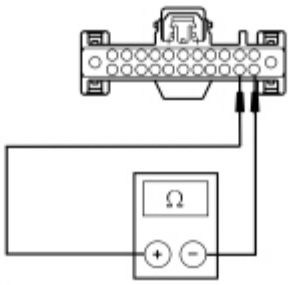
NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
Z1 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE ACM DISCONNECTED	
NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the previously run network test results. • Disconnect: ACM C240A . • Using a scan tool, perform a network test. • **Do all other I-CAN modules pass the network test?**	**Yes** GO to Z10 . **No** GO to Z2 .
Z2 CHECK THE I-CAN TERMINATION RESISTANCE	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the ACM C240A-14, circuit VDB13 (BU/GY), harness side and the ACM C240A-15, circuit VDB14 (VT/GY), harness side.  N0150065 • **Is the resistance between 108 and 132 ohms?**	**Yes** GO to Z3 . **No** GO to Z6 .
Z3 CHECK THE I-CAN (+) AND I-CAN (-) CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between the ACM C240A-14,	**Yes** GO to Z4 .

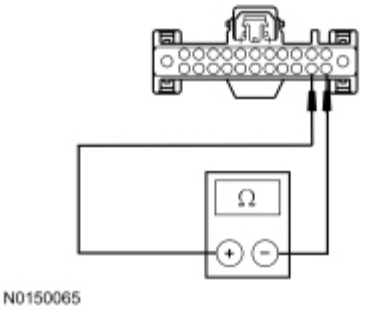


circuit VDB13 (BU/GY), harness side and ground; and between the ACM C240A-15, circuit VDB14 (VT/GY), harness side and ground.  N0150095 • **Are the resistances greater than 1,000 ohms?**	**No** REPAIR the circuit in question.
Z4 CHECK THE I-CAN (+) AND I-CAN (-) CIRCUITS FOR A SHORT TO VOLTAGE	
• Connect: negative battery cable . • Ignition ON. • Measure the voltage between the ACM C240A-14, circuit VDB13 (BU/GY), harness side and ground; and between the ACM C240A-15, circuit VDB14 (VT/GY), harness side and ground.  N0150077 • **Is any voltage present?**	**Yes** REPAIR the circuit in question. **No** GO to Z5 .
Z5 CHECK FOR RESTORED NETWORK COMMUNICATION	
NOTE: When re-running the network test, close the network test application first or the screen display reverts back to the previously run network test results. • Ignition OFF. • Connect all module(s). Make sure all connectors seat and latch correctly. • Ignition ON. • Using a scan tool, perform the network test. • **Do all other I-CAN modules pass the network test?**	**Yes** The I-CAN tests within specification. VERIFY the correct operation of the scan tool on a known good vehicle. **No** GO to Z14 .
Z6 CHECK THE I-CAN CIRCUITS BETWEEN THE ACM AND THE IPC FOR AN OPEN	
• Disconnect: IPC C220 . • Measure the resistance between the ACM C240A-14, circuit VDB13 (BU/GY), harness side and the IPC C220-25, circuit VDB13 (BU/GY), harness side.	**Yes** CONNECT the negative battery cable. GO to Z7 . **No** REPAIR the circuit in question.

repair4less



N0150484



- Measure the resistance between the ACM C240A-15, circuit VDB14 (VT/GY), harness side and the IPC C220-26, circuit VDB14 (VT/GY), harness side.

N0150485

- **Are the resistances less than 5 ohms?**

Z7 CHECK THE I-CAN (+) AND I-CAN (-) CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between the ACM C240A-14, circuit VDB13 (BU/GY), harness side and the ACM C240A-15, circuit VDB14 (VT/GY), harness side.  N0150065 • **Is the resistance greater than 1,000 ohms?**	**Yes** GO to Z8 . **No** REPAIR the circuit in question.
Z8 CHECK THE I-CAN (+) AND I-CAN (-) CIRCUITS FOR A SHORT TOGETHER WITH MODULES DISCONNECTED	
NOTE: Skip to the end of this test once the suspect module(s) has been identified. • Disconnect: negative battery cable . • While measuring the resistance between the ACM C290A-14, circuit VDB13 (BU/GY), harness side and the ACM C290A-15, circuit VDB14 (VT/GY), harness side, disconnect the following modules one at a time until the resistance is greater than 5 ohms. ▪ APIM C2298 (if equipped)	**Yes** CONNECT the negative battery cable. For the APIM , GO to Z9 . For the audio DSP module, GO to Z11 . For the FCIM , GO to Z12 . For the FCDIM , GO to Z13 . For the IPC , GO to Z14 . **No** REPAIR circuits in question for a short

■ Audio DSP module C3154 (if equipped) ■ FCIM C2402 (if equipped) ■ FCDIM C2123 (if equipped) ■ IPC C220  N0150065 • **Did the resistance change to between 108 and 132 ohms with one of the modules disconnected?**	together. CONNECT the modules. CONNECT the negative battery cable. CLEAR the DTCs.
Z9 CHECK FOR CORRECT APIM OPERATION • Disconnect the APIM connector. • Check for: ■ corrosion ■ damaged pins ■ pushed-out pins • Connect the APIM connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** For diagnosing and testing please refer to the on-line Workshop Manual. If you do not have an on-line subscription, go to www.motorcraftservice.com. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Z10 CHECK FOR CORRECT ACM OPERATION • Disconnect all the ACM connectors. • Check for: ■ corrosion ■ damaged pins ■ pushed-out pins • Connect all the ACM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new ACM . Refer to the appropriate section in Group 415 for the procedure. CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Z11 CHECK FOR CORRECT AUDIO DSP MODULE OPERATION • Disconnect the audio DSP module connector. • Check for: ■ corrosion ■ damaged pins ■ pushed-out pins • Connect the audio DSP module connector and make sure it seats correctly. • Operate the system and verify the concern is still present.	**Yes** INSTALL a new audio DSP module. REFER to Section 415-00E . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool. **No** The system is operating correctly at

repair4less

• **Is the concern still present?**	this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.
Z12 CHECK FOR CORRECT FCIM OPERATION	

• Disconnect the FCIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the FCIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FCIM . REFER to Refer to the appropriate section in Group 415 for the procedure. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Z13 CHECK FOR CORRECT FCDIM OPERATION	

• Disconnect the FCDIM connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the FCDIM connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FCDIM . REFER to Section 415-00C . CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Z14 CHECK FOR CORRECT IPC OPERATION	

• Disconnect the IPC connector.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the IPC connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new IPC . REFER to Section 413-01 . CONNECT all modules. CLEAR the DTCs. REPEAT the network test with the scan tool.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CONNECT all modules.

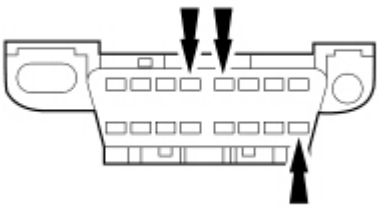
Pinpoint Test AA: No Power To The Scan Tool

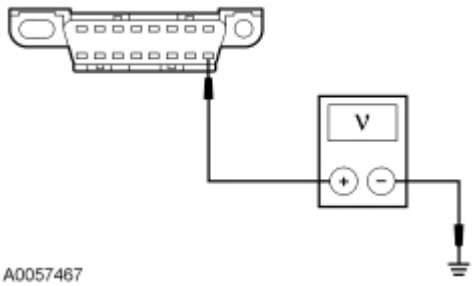
Refer to Wiring Diagrams Cell 14 , Module Communications Network for schematic and connector information.

Normal Operation

The scan tool is connected to the Data Link Connector (DLC) to communicate with the High Speed Controller Area Network (HS-CAN), Medium Speed Controller Area Network (MS-CAN) and Infotainment Controller Area Network (I-CAN) communications networks.

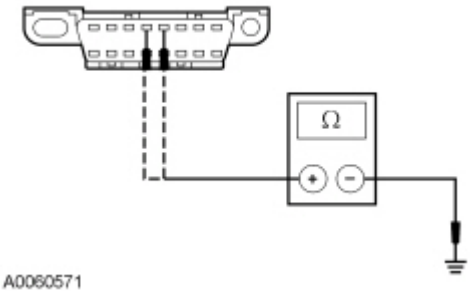
A loss of ground or poor ground at the DLC may result in HS-CAN , MS-CAN or I-CAN faults while the scan tool is connected.





This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Scan tool
- DLC



PINPOINT TEST AA: NO POWER TO THE SCAN TOOL

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
AA1 CHECK THE DLC PINS FOR DAMAGE	
• Disconnect the scan tool cable from the DLC . • Inspect the DLC pins 4, 5 and 16 for damage.  N0050767 • **Are DLC pins 4, 5 and 16 OK?**	**Yes** GO to AA2 . **No** REPAIR the DLC as necessary. CLEAR the DTCs. REPEAT the network test with the scan tool.
AA2 CHECK THE DLC VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Measure the voltage between the DLC C251-16, circuit SBP24 (VT/RD), harness side and ground.  A0057467 • **Is the voltage greater than 10 volts?**	**Yes** GO to AA3 . **No** VERIFY the Body Control Module (BCM) fuse 24 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPEAT the network test with the scan tool.
AA3 CHECK THE DLC GROUND CIRCUITS FOR AN OPEN	
• Disconnect: Negative Battery Cable . • Measure the resistance between the DLC C251-4, circuit	**Yes** REPAIR the scan tool. CONNECT

repair4less

GD133 (BK), harness side and ground; and between the DLC C251-5, circuit GD133 (BK), harness side and ground.  A0060571 • **Are the resistances less than 5 ohms?**	the negative battery cable. REPEAT the network test with the scan tool. **No** REPAIR the circuit in question. CONNECT the negative battery cable. REPEAT the network test with the scan tool.

Module Configuration

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

Configurable modules accommodate a variety of vehicle options, eliminating the need for many unique modules for one vehicle line. These modules must be configured when replaced as part of a repair procedure. Configurable modules should not be exchanged between vehicles since the settings are unique to each vehicle. Failure to configure a new module can result in improper operation and/or DTCs setting.

The following are the 3 different methods of configuration:

- Programmable Module Installation (PMI)
- Module reprogramming ("flashing")
- Programmable parameters

Some modules do not support all 3 methods.

Definition of Terms

The following are definitions of configuration terms:

Programmable Module Installation (PMI)

PMI is a scan tool process which configures settings in a new module. Data used for the PMI process is automatically downloaded from the original module and stored when a scan tool session is started. If this data cannot be retrieved from the module being replaced, the scan tool may prompt for As-Built data entry or display a list of parameter values that need to be manually selected. Some modules are reprogrammed during PMI when a strategy/calibration update is available. To carry out PMI , refer to Programmable Module Installation (PMI) in this section.

NOTE: It is important that the scan tool identifies the vehicle and obtains configuration data prior to removing any modules. The new module must be able to communicate with the scan tool in order to carry out PMI .

Module Reprogramming

Module reprogramming (also referred to as "flashing") is a scan tool process which updates the strategy/calibration in a module. Reprogramming a module with the same level of software does not improve module operation or repair a hardware failure. Module reprogramming is automatically carried out during

repair4less

PMI when a later strategy/calibration is available.

NOTE: Limit module reprogramming to circumstances where a published TSB procedure recommends doing so.

NOTE: A module cannot communicate with other modules on the communication network while being reprogrammed. After the reprogramming process, clear any network communication DTCs which may have been set in other modules.

NOTE: Some modules are reprogrammed in coordination with other modules. Follow the Integrated Diagnostic System (IDS) key cycling instructions carefully to avoid reprogramming errors, including failure of programming one or more of the coordinated modules.

Accessory Protocol Interface Module (APIM) Programming

APIM programming is a process that updates the APIM Consumer Interface Processor (CIP) and Vehicle Interface Processor (VIP) software. The VIP programming updates the calibration files in the portion of the APIM that interfaces with the Controller Area Network (CAN). The CIP programming updates calibration files in the portion of the APIM that interfaces with mobile phones and other customer devices.

APIM programming uses the VCM to read and program the VIP software through the Data Link Connector (DLC). A web-based On-Line Automotive Service Information System (OASIS) application reads and programs the CIP software via a Universal Serial Bus (USB) cable between the scan tool and vehicle USB port. Both the VCM and the Universal Serial Bus (USB) cable must remain connected, and OASIS application must be running on the scan tool during APIM programming. Carry out APIM programming. Refer to the appropriate section in Group 415 for the procedure.

Programmable Parameters

Programmable parameters are customer preference items that may be modified by the dealer via the scan tool, or in some cases, by the customer following a procedure listed in the vehicle Owner's Literature. While many configuration options may exist for a module, only a few of these options are programmable parameters.

Adaptive Learning and Calibration

Some modules require a separate learning procedure be carried out if replaced as part of a repair procedure. For adaptive learning and calibration instructions, refer to the specific module removal and installation procedures.

Vehicle Identification (VID) Block

Some PCMs contain a memory area called a Vehicle Identification (VID) block. The PCM VID block commonly stores powertrain configuration items such as Vehicle Identification Number (VIN), tire size, axle ratio, and whether or not the vehicle is equipped with speed control.

Module Address

A unique module address is assigned to each module on the network for identification.

As-Built Data

As-Built data is a VIN -specific module configuration record. During vehicle build, the configuration from all modules is downloaded and stored in the As-Built database. As-Built data does not reflect customer preference items that have been changed from the default state. These items need to be changed using programmable parameters after the module is configured.

NOTE: It is not necessary to obtain As-Built data unless directed to do so by the scan tool. This data may be accessed from the technician service publication web site.

Module Configuration and Parameter Chart

Module	Requires PMI	Reprogram/ Flash Capable	Requires Adaptive Learning or Calibration	Available Programmable Parameters
ABS module	Yes	Yes	• Stability control initialization	• Hill start assist enabled
Accessory Protocol Interface Module (APIM)	Yes	Yes	No	• Stereo in pass-through
Audio Front Control Module (ACM)	Yes	Yes	No	None
Audio Digital Signal Processing (DSP) module	Yes	Yes	No	None
Body Control Module (BCM)	Yes	Yes	No	• Axle ratio • Autolamps delay time • Front turn lamp outage configuration • Fog lamps present • Cruise control • Police dark car feature • Police rear door enable/disable • Smart unlocking • Rear turn lamp outage configuration • Tire placard pressure • Tire size • Daytime running lamps
Driver Seat Module (DSM)	Yes	Yes	No	None
Dual Climate Controlled Seat Module (DCSM)	Yes	Yes	No	None
Front Controls Interface Module (FCIM)	No	Yes	No	None
Front Control/Display Interface Module (FCDIM)	Yes	Yes	No	None
Front Display Interface Module (FDIM) (without navigation)	Yes	Yes	No	None
Global Positioning	No	Yes	No	None

repair4less

System Module (GPSM)				
HVAC module — DATC	Yes	Yes	No	None
HVAC module — EMTC	Yes	Yes	No	None
Instrument Panel Cluster (IPC)	Yes	Yes	No	• Trailer Brake Control (TBC) gain • Trailer sway • Fuel tank selection (3.5L only) • Fuel capacity
OCSM	No	Yes	• Seat weight sensor re-zero	None
Parking Aid Module (PAM)	No	Yes	No	None
Power Steering Control Module (PSCM)	Yes	Yes	No	None
PCM	Yes	Yes	• Adaptive airflow • Idle speed • Refueling event • Fuel trim	• Speed control
Power Running Board (PRB) module	No	Yes	No	None
Restraints Control Module (RCM)	Yes	Yes	• Seat weight sensor re-zero • Stability control initialization	• Driver seat Belt-Minder® activation
Steering Column Control Module (SCCM)	Yes	Yes	No	None
Trailer Brake Control (TBC) module	No	No	No	None
Transfer Case Control Module (TCCM)	No	No	No	None
Tire Pressure Monitor (TPM) module	No	Yes	No	None

Inspection and Verification

This section provides step-by-step module configuration procedures. Carry out the Programmable Module Installation (PMI) procedure in this section when another workshop manual section directs you to carry out configuration or when DTCs from the following chart are present:

DTC Chart

NOTE: Some modules on this vehicle utilize a 5-character DTC followed by a 2-character failure-type code. The failure-type code provides information about specific fault conditions such as opens, or shorts to ground. Continuous Memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

DTC	Description	Source	Action
B2477	Module Configuration Failure	• ABS module • Dual Climate Controlled Seat Module (DCSM) • Driver Seat Module (DSM) • Front Display Interface Module (FDIM)	CARRY OUT Programmable Module Installation (PMI). REFER to Programmable Module Installation (PMI) in this section.
B2900	VIN Mismatch	• ABS module	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
B6050	No Application Present	• DCSM	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
P0602	Powertrain Control Module Programming Error	• PCM	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
P0605	Internal Control Module Read Only Memory (ROM) Error	• PCM	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
P0630	VIN Not Programmed or Incompatible - ECM/PCM	• PCM	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
P1639	Vehicle ID Block Corrupted, Not Programmed	• PCM	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
U0300	Internal Control Module Software Incompatibility	• PCM	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.
U0300:00	Internal Control Module Software Incompatibility: No Sub Type Information	• Restraints Control Module (RCM)	CARRY OUT PMI. REFER to Programmable Module Installation (PMI) in this section.

Programmable Module Installation (PMI)

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Programmable Module Installation (PMI) Using the Integrated Diagnostic System (IDS) When the Original Module is Available

NOTE: Following module installation, some modules require a separate procedure be carried out. For instructions, refer to the specific module removal and installation procedures.

1. Connect the IDS and identify the vehicle as normal.
2. From the Toolbox icon, select Module Programming and press the check mark.
3. Select Programmable Module Installation.
4. Select the module that is being replaced.
5. Follow the on-screen instructions, turn the ignition key to the OFF position, and press the check mark.
6. Install the new module and press the check mark.
7. Follow the on-screen instructions, turn the ignition key to the ON position, and press the check mark.
8. The IDS downloads the data into the new module and displays Module Configuration Complete.
9. Test module for correct operation.

Programmable Module Installation (PMI) Using the Integrated Diagnostic System (IDS) When the Original Module is NOT Available

NOTE: Following module installation, some modules require a separate procedure be carried out. For instructions, refer to the specific module removal and installation procedures.

1. Install the new module.
2. Connect the IDS and identify the vehicle as normal.

repair4less

3. From the Toolbox icon, select Module Programming and press the check mark.
4. Select Programmable Module Installation.
5. Select the module that was replaced.
6. Follow the on-screen instructions, turn the ignition key to the OFF position, and press the check mark.
7. Follow the on-screen instructions, turn the ignition key to the ON position, and press the check mark.
8. If the data is not available, the IDS displays a screen stating to contact the As-Built Data Center. Retrieve the data from the technician service publication website at this time and press the check mark.
9. Enter the module data and press the check mark.
10. The IDS downloads the data into the new module and displays Module Configuration Complete.
11. Test module for correct operation.

Anti-Theft

The perimeter anti-theft alarm system consists of the following:

- Door ajar input
- Door lock control switch input
- Hood switch
- Horn
- Integrated Keyhead Transmitter (IKT) key
- Keyless entry keypad
- Passive Anti-Theft System (PATS) key read
- Turn signals
- Body Control Module (BCM)

The perimeter alarm system protects the vehicle from unauthorized entry by sounding the horn and flashing both the turn signals and courtesy lights when an unauthorized entry occurs. The horn and lights are active for 30 seconds. After 30 seconds, the horn stops sounding, but the lights continue to flash for up to 5 minutes.

The perimeter alarm only activates 10 times per arming cycle. After that the alarm does not activate. To enable the perimeter alarm again, disarm the perimeter alarm and then arm it again.

Arming the Perimeter Alarm

The perimeter alarm is ready to arm any time the ignition is off. Any of the following pre-arms the alarm system:

- pressing the LOCK button on an IKT .
- pressing the door lock control switch to the lock position with the door open, then closing the door.
- pressing the 7/8 and 9/0 buttons simultaneously on the keyless entry keypad.

Once the system is pre-armed, there is a 20-second countdown before the perimeter alarm is armed. Each entry point to the vehicle (hood or door) are armed separately and must be closed before that entry point begins the 20-second countdown to become armed. If all entry points are closed, the turn signals flash indicating that all entry points are entering the 20-second countdown.

Perimeter Alarm Activation

The perimeter alarm has a 12-second delay when the driver door is unlocked using a key in the door lock cylinder and then opened. During the delay, a chime sounds and "TO STOP ALARM START VEHICLE" is displayed in the message center. If the perimeter alarm is not disarmed within the 12-second delay, the alarm is activated.

The perimeter alarm is activated when:

- any passenger door or the hood is opened without first receiving an electronic unlock command from an IKT or keyless entry keypad.
- the driver door is opened without first receiving an unlock command from an IKT or keyless entry keypad and the 12-second delay has expired.

repair4less

- the ignition is turned to the RUN position without a valid PATS key read received.

Disarming the Perimeter Alarm

The perimeter alarm can be disarmed by:

- pressing the UNLOCK button on a programmed IKT .
- using a programmed IKT to transition the ignition to the RUN position.
- entering the correct vehicle unlock code on the keyless entry keypad.

The perimeter alarm can be deactivated by pressing the PANIC button on an IKT . All of the lamps stop flashing and the horn stops sounding, but the alarm is still armed.

Panic Alarm

The panic alarm operates similar to the perimeter alarm, but is only controlled by the panic button on the IKT . Refer to Section 501-14 for information on the panic alarm operation.

Anti-Theft

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The Body Control Module (BCM) controls the operation of the perimeter alarm based on inputs from all of the door ajar switch inputs, hood switch input, keyless entry keypad, door lock control switches, Passive Anti-Theft System (PATS) input, and the Remote Keyless Entry (RKE) transmitters. If the perimeter alarm is armed, and the BCM receives an input indicating an unauthorized entry into the vehicle or the ignition is turned to the RUN position without a programmed PATS key, the BCM activates the perimeter alarm. When the perimeter alarm is activated, the horn sounds and both the turn signals and courtesy lights flash in regular intervals.

If the driver door is unlocked by using a key in the door lock cylinder and then opened, the perimeter alarm starts a 12-second countdown. During the 12-second countdown there is a chime from the Instrument Panel Cluster (IPC) and the message center displays TO STOP ALARM START VEHICLE. If the alarm is not deactivated during this countdown, the perimeter alarm activates.

Battery Disconnect

If the battery is disconnected and then reconnected, the perimeter alarm remains in the same state (disarmed, pre-armed, armed, or activated) it was prior to the battery disconnect.

Alarm Event PIDs

The BCM has PIDs available that show what caused the last alarm events. The 4 BCM alarm event PIDs are ALARM_EVT_1 through 4. The cause for the most recent alarm activation is always listed in the first

repair4less

alarm event PID. These PIDs display what caused the alarm to activate and can be a very useful tool when trying to identify the cause of a false alarm activation.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Wiring, terminals or connectors • Hood switch • Body Control Module (BCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM.

9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10.

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart.

DTC Charts

Body Control Module (BCM) DTC Chart

DTC	Description	Action
B1305:01	Hood Switch: General Electrical Failure	GO to Pinpoint Test B.
All other DTCs	—	REFER to the Master DTC Chart in Section 419-10.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The alarm system does not activate from an unauthorized entry at the hood	• Wiring, terminals or connectors • Hood switch • Body Control Module (BCM)	• GO to Pinpoint Test A.
• The alarm system does not activate from an unauthorized entry at a door	• Door ajar input	• REFER to Section 417-02.
• The alarm system does not arm/no turn signal flash confirmation	• Door ajar input • Hood ajar input • Turn signals • Keyless entry keypad concern • Remote Keyless Entry (RKE) transmitter concern • BCM	• GO to Pinpoint Test C.
• No horn output during alarm activation	• Horn	• REFER to Section 413-06.
• No turn signal flash during alarm activation	• Turn signals	• REFER to Section 417-01.
• No courtesy lamp flash during alarm activation	• Courtesy lamps	• REFER to Section 417-02.
• False alarm activation	• Door ajar input • Hood switch input • Panic button pressed on an IKT • A valid Passive Anti-Theft System (PATS) key read is **NOT** received when	• An intermittent fault exists. MONITOR the BCM alarm event PIDs ALARM_EVT_1 through 4 to identify and isolate the cause of the last alarm activations.

repair4less

	the ignition is turned to RUN	
• All keys/ RKE transmitters lost, perimeter alarm activated, and unable to program new keys	• Customer lost all keys/ RKE transmitters	• PROGRAM an RKE transmitter. REFER to Section 501-14 . UNLOCK the doors with the programmed RKE transmitter. PROGRAM the new keys. REFER to Section 419-01B .

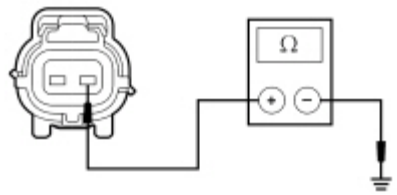
Pinpoint Tests

Pinpoint Test A: The Alarm System Does Not Activate From An Unauthorized Entry At The Hood

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

When the alarm system is armed, the Body Control Module (BCM) monitors the hood switch. If the hood is opened while the alarm is armed, the hood switch removes ground from the signal circuit. This signals the BCM that an unauthorized intrusion to the engine compartment has occurred and the BCM activates the alarm.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Hood switch
- BCM

PINPOINT TEST A: THE ALARM SYSTEM DOES NOT ACTIVATE FROM AN UNAUTHORIZED ENTRY AT THE HOOD

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
A1 RETRIEVE THE RECORDED DTCs IN THE BCM	
NOTE: DTC B1305:01 sets if the hood is open. Make sure the hood is closed prior to running the self-test. • Retrieve the recorded DTCs from the Body Control Module (BCM) self-test. • **Is DTC B1305:01 present?**	**Yes** GO to Pinpoint Test B . **No** GO to A2 .
A2 CHECK THE HOOD SWITCH (HOOD_SW) PID	
• Enter the following diagnostic mode on the scan tool: BCM DataLogger.	**Yes** INSTALL a new hood switch. TEST

• Disconnect: Hood Switch C127. • Monitor the BCM PID HOOD_SW while disconnecting the hood switch. • **Does the BCM PID read AJAR when the switch is disconnected?**	the system for normal operation. **No** GO to A3 .
A3 CHECK THE HOOD SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280F. • Measure the resistance between the hood switch C127-1, circuit CPL25 (BU/OG), harness side and ground.  N0056246 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A4 . **No** REPAIR circuit CPL25 (BU/OG) for a short to ground. TEST the system for normal operation.
A4 CHECK FOR CORRECT BCM OPERATION	

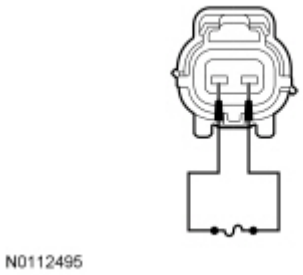
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

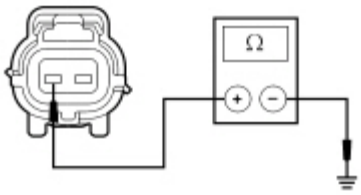
Pinpoint Test B: DTC B1305:01

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

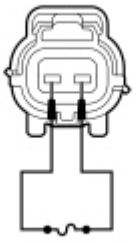
When the alarm system is armed, the Body Control Module (BCM) monitors the hood switch. If the hood is opened while the alarm is armed, the hood switch removes ground from the signal circuit. This signals the BCM that an unauthorized intrusion to the engine compartment has occurred and the BCM activates the perimeter alarm.

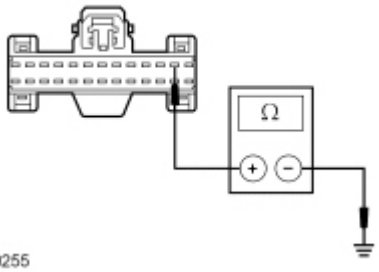
- DTC B1305:01 (Hood Switch: General Electrical Failure) — set by the BCM if it detects an open on the hood switch sense circuit. This DTC also sets if the hood is open during a BCM self-test.





This pinpoint test is intended to diagnose the following:





- Wiring, terminals or connectors
- Hood switch
- BCM

repair4less

PINPOINT TEST B: DTC B1305:01

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK THE HOOD SWITCH	
• Disconnect: Hood Switch C127. • Connect a fused jumper wire between the hood switch C127-1, circuit CPL25 (BU/OG), harness side and the hood switch C127-2, circuit GD120 (BK/GN), harness side.  N0112495 • Clear the BCM DTCs. • Repeat the BCM self-test. • **Is the BCM DTC B1305:01 retrieved?**	**Yes** REMOVE the jumper wire. GO to B2 . **No** REMOVE the jumper wire. INSTALL a new hood switch. TEST the system for normal operation.
B2 CHECK THE HOOD SWITCH GROUND CIRCUIT	
• Measure the resistance between the hood switch C127-2, circuit GD120 (BK/GN), harness side and ground.  N0082085 • **Is the resistance less than 5 ohms?**	**Yes** GO to B3 . **No** REPAIR circuit GD120 (BK/GN) for an open. TEST the system for normal operation.
B3 CHECK THE HOOD SWITCH SIGNAL CIRCUIT TO THE BCM FOR AN OPEN	
• Disconnect: BCM C2280F. • Connect a fused jumper wire between the hood switch C127-1, circuit CPL25 (BU/OG), harness side and the hood switch C127-2, circuit GD120 (BK/GN), harness side.	**Yes** GO to B4 . **No** REPAIR circuit CPL25 (BU/OG) for an open. TEST the system for normal operation.

 N0112495 • Measure the resistance between the BCM C2280F-2, circuit CPL25 (BU/OG), harness side and ground.  N0090255 • **Is the resistance less than 5 ohms?**	
B4 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM .
	REFER to Section 419-10 .
	TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test C: The Alarm System Does Not Arm/No Turn Signal Flash Confirmation

Normal Operation

The Body Control Module (BCM) controls the perimeter alarm system and based on inputs either arms, disarms or activates the alarm. When the alarm is activated, the BCM sounds the horn and flashes both the turn signals and courtesy lamps in regular intervals. The BCM receives inputs for the door lock status, hood ajar, door ajar and the keyless entry keypad. The BCM also receives signals from the Remote Keyless Entry (RKE) transmitters.

For the perimeter alarm to arm and provide a flash of the turn signals, the following conditions must be met:

- Ignition must be OFF
- The hood closed
- All doors closed

repair4less

- An electronic lock command received from an RKE transmitter, keyless entry keypad, or door lock control switch (front door opened and then shut after lock is pressed).

Once all the conditions are met, the alarm system enters a pre-arm phase and begins a 20-second countdown. After 20 seconds have passed and no unlock command is received or any hood or door is opened, the perimeter alarm arms.

The perimeter alarm is activated when:

- any passenger door or the hood is opened without an electronic unlock command from an RKE transmitter or keyless entry keypad received first.
- the driver door is opened without an unlock command from an RKE transmitter or keyless entry keypad received first and the 12 second countdown has expired.
- the ignition is turned to the RUN position without a valid Passive Anti-Theft System (PATS) key read received.

This pinpoint test is intended to diagnose the following:

- Door ajar input
- Hood switch input
- Turn signals
- Keyless entry keypad concern
- RKE transmitter concern
- BCM

PINPOINT TEST C: THE ALARM SYSTEM DOES NOT ARM/NO TURN SIGNAL FLASH CONFIRMATION

Test Step	Result / Action to Take
C1 RETRIEVE THE RECORDED DTCs IN THE BCM	
• Retrieve the recorded DTCs from the Body Control Module (BCM) self-test. • **Is DTC B1305:01 present?**	**Yes** GO to Pinpoint Test B . **No** GO to C2 .
C2 CHECK THE COURTESY LAMP OPERATION	
• Open and close all the doors while checking the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to C3 . **No** REFER to Section 417-02 to diagnose the door ajar inputs.
C3 VERIFY THE HAZARD LAMP OPERATION	
• Place the hazard switch in the ON position. • **Do the hazard lamps operate correctly?**	**Yes** GO to C4 . **No** REFER to Section 417-01 to diagnose the hazard

	lamps.
C4 CHECK THE RKE TRANSMITTER FUNCTION • Using the RKE transmitter, lock and unlock the doors and operate the panic function. • **Do the RKE transmitter functions operate correctly?**	**Yes** GO to C5 . **No** REFER to Section 501-14 to diagnose the RKE function.
C5 CHECK THE KEYLESS ENTRY KEYPAD FUNCTION • Lock the doors using the keyless entry keypad. • **Do all the doors lock using the keyless entry keypad?**	**Yes** GO to C6 . **No** REFER to Section 501-14 to diagnose the keyless entry keypad.
C6 CHECK FOR CORRECT BCM OPERATION • Disconnect all the BCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the BCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

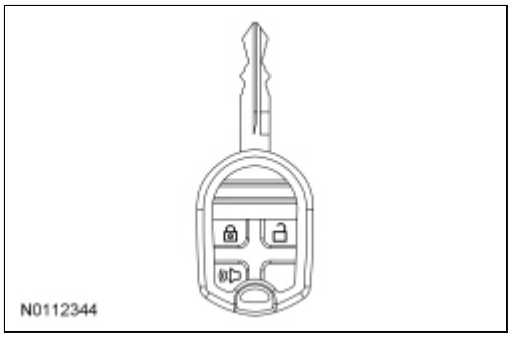
repair4less

Anti-Theft

Passive Anti-Theft System (PATS) consists of the following components:

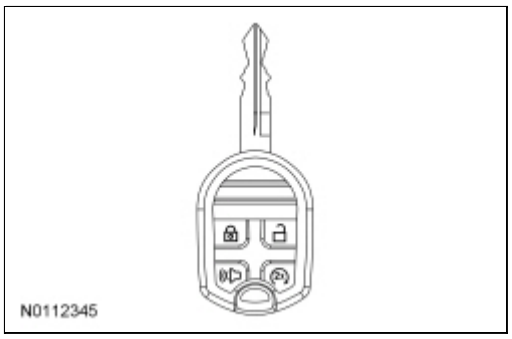
- Integrated Keyhead Transmitter (IKT)
- PATS transceiver
- Body Control Module (BCM)
- PCM

PATS protects the vehicle from theft by preventing the engine from starting unless a programmed key is used.



Passive Anti-Theft System (PATS) Operation

PATS prevents the engine from starting by disabling the starter relay and fuel injector operation. If an unprogrammed key is used or if there is a PATS system concern, STARTING SYSTEM FAULT is displayed in the message center and the engine does not start. PATS cannot disable an already running engine.



Passive Anti-Theft System (PATS) Keys

NOTE: The keys must have "HA" or "SA" stamped on the key blade.

IKT Without Remote Start

IKT With Remote Start

The vehicle comes equipped from the factory with two programmed IKTs . The IKT incorporates both the

PATS functions and the Remote Keyless Entry (RKE) transmitter functions in a single device. During key programming procedures, the PATS and RKE transmitter of an IKT are both programmed into the BCM. In addition to the IKTs, conventional PATS keys can also be programmed to the vehicle if requested by the customer. The BCM accepts the programming of up to 8 keys. Of those 8 keys a maximum of 4 IKTs can be programmed. If more than 4 IKTs are programmed, INT KEY COULD NOT PROGRAM is displayed in the message center during the key programming procedure and the RKE function of that IKT is non-functional.

MyKey® Feature

The MyKey® feature allows a restricted driving mode to be programmed into one (or more) key(s) supplied with the vehicle or into any PATS programmed spare key(s). The MyKey® is a restricted key for all consecutive key cycles until the MyKey® restricted key is cleared. The remaining key(s) is referred to as an administrator key or admin key. There must always be at least one admin key. The BCM does not allow the last admin key to be programmed into a MyKey® restricted key. Both the admin key and the MyKey® can be used to see how many admin keys and MyKey® restricted keys are programmed to the vehicle, and how many total miles have been driven with the MyKey® restricted key active.

When the MyKey® feature is programmed, several features are modified including:

Standard Restricted Features

- **NOTE:** The standard restricted features below cannot be configured in any way.

  Belt-Minder® chimes periodically with the audio system muted until the driver safety belt is buckled. If Belt-Minder® has been disabled when the admin key is in the vehicle, Belt-Minder® still functions for the MyKey® driver. Belt-Minder® cannot be disabled by the MyKey® driver.
- Audible and visual low fuel warnings are issued when the programmed Distance To Empty (DTE) value is reached (typically 75 miles).
- The parking aid system (if equipped) cannot be turned off.

Optional Restricted Features

- **NOTE:** The optional restricted features below can be configured to the customer preferences.

  The volume of the audio system can be programmed to limit the volume to 45% of the maximum volume.
- Vehicle speed can be programmed to be limited to 130 km/h (80 mph). Audible and visual warnings are issued when the vehicle speed of 130 km/h (80 mph) is attained.
- Audible and visual warnings are issued when the preselected vehicle speed of 75, 90 or 105 km/h (45, 55 or 65 mph) is attained.
- The AdvanceTrac® always on feature can be configured on or off. If configured to always on, the traction control cannot be disabled by the MyKey® driver.

Refer to Information and Message Center in the Description and Operation portion of Section 413-01 for all of the MyKey® system checks and system warning displays.

Refer to MyKey® Programming in this section or to the Owner's Literature for MyKey® programming information.

Check MyKey® System Status

The vehicle system check provides the status of the following MyKey® parameters:

- MYKEY DISTANCE — This odometer only tracks mileage when a MyKey® is used. If mileage does not accumulate, the intended MyKey® is not being used. The only way to reset this odometer to zero

repair4less

is by disabling the MyKey®. If this odometer is lower than the last time it was checked, the MyKey® system has been cleared.
- MYKEY(S) PROGRAMMED — Indicates how many MyKey® are programmed to the vehicle. It can also be used to determine if a MyKey® has been cleared.
- ADMIN KEYS PROGRAMMED — Indicates how many admin keys are programmed to the vehicle. It can also be used to determine if an additional spare key has been programmed to the vehicle.

Refer to the Owner's Literature for information on accessing the MyKey® system status in the message center.

Using MyKey® with Aftermarket Remote Start System

When using an aftermarket remote start system, the default settings recognize the remote start system as an additional admin key. If the remote start system has not been programmed as a MyKey® and the driver is a MyKey® driver, the driver could drive the vehicle using the remote start system as an admin key with no MyKey® restrictions. If requested by the customer to resolve this concern, the aftermarket remote start system needs to be programmed as a MyKey® . For information on programming the aftermarket remote start system as a MyKey® , refer to MyKey® Programming in this section.

Anti-Theft

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

Passive Anti-Theft System (PATS) Operation

The Passive Anti-Theft System (PATS) is controlled by the Body Control Module (BCM). There are 2 main checks that PATS carries out before allowing the engine to start. If either of these checks fail, PATS does not allow the engine to start and STARTING SYSTEM FAULT is displayed in the message center. These two checks are the BCM verifying the PCM ID to make sure it matches the PCM ID stored in memory and to verify that a programmed key was used to turn the ignition to the RUN or START position.

The first check is initiated by the BCM waking up the PCM by supplying voltage on the wake up control circuit. The BCM activates the wake up control circuit when:

- the driver door is opened.
- a remote start request is received (if equipped with factory remote start).
- the brake pedal is pressed.
- a key is inserted into the ignition.
- or when the ignition is in the RUN or START position.

Once the PCM is awake, the BCM sends the PCM a challenge message over the High Speed Controller Area Network (HS-CAN). When the PCM receives the challenge message, it generates a response and sends it back to the BCM . If the response from the PCM does not match the response in the BCM memory, this first check fails and the engine will not start.

repair4less

Once the PCM ID has been verified, PATS performs the second check to make sure a programmed key is in the ignition. When the BCM determines the ignition has been turned to the RUN or START position, it generates a challenge message. It sends the challenge message to the PATS transceiver on the transmit (TX) circuit. The transceiver in turn reads the key and generates a response message that is sent back to the BCM on the receive (RX) circuit. If the message received from the transceiver does not match a key stored in the BCM memory, the engine will not start.

If both the PCM ID and key verification pass, PATS is enabled and allows the engine to start. PATS cannot disable an engine that has already been started.

Spare Key Programming

The customer spare key programming allows spare keys to be programmed (up to a maximum of 8) to the BCM without having to use a scan tool. Two programmed keys are required to carry out the procedure. This procedure can be disabled so that spare keys can only be programmed to the vehicle using a scan tool. Refer to Key Programming — Program a Key Using Two Programmed Keys in this section for the customer spare key programming procedure or Key Programming — Enable/Disable Spare Key Programming in this section for the enable/disable procedure.

Unlimited Key Mode

Passive Anti-Theft System (PATS) contains a feature called unlimited key mode. This feature allows a customer to program more than 8 keys to their vehicle if they request it. Each vehicle in unlimited key mode is set up with a special unlimited transponder security key code. This allows all of the customer vehicles to share the same mechanically cut keys. For an individual customer, any randomly selected security key that has been previously mechanically cut and electronically programmed to the vehicle is acceptable. Refer to Key Programming — Unlimited Key Mode in this section.

Passive Anti-Theft System (PATS) PIDs

The PATS PIDs are a useful tool when diagnosing a PATS concerns. They can also be used to determine if unlimited key mode or customer spare key programming are enabled/disabled.

BCM PATS PID	PID Description	PID reading required for PATS to be enabled
PROGRMD_KEY	Determines if the key in the ignition lock cylinder is a programmed key.	Present
MIN_KEYS_RQD	Minimum number of programmed keys required. This PID always reads 2.	—
KEYS_PROGMD	Number of keys currently programmed into the BCM (If unlimited key mode is enabled, this PID will only read 2 regardless of how many keys are programmed).	2 to 8
START_ENABLD	Indicates if PATS will allow the engine to start	Enabled
PCM_ID	Indicates if there is a PCM ID currently stored into the BCM	Stored
PCM_VERIFY	Indicates if the PCM ID received by the BCM matches the PCM ID stored in the BCM memory	Yes
UNL_KEY_ID	Displays the unlimited key code 8 digit keycode (this PID is not available when unlimited key mode is enabled).	—
UNL_KEY_MODE	Indicates if unlimited key mode is enabled/disabled.	—

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that when used with module software can be used to monitor and control current flow on module outputs. The FET protection strategy is used to prevent module damage in the event of excessive current flow.

The BCM utilizes an FET protective circuit strategy for many of its outputs (for example, a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET circuit protection to allow the circuit to function. The next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection) and the circuit is still shorted, the FET protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by a command to clear the continuous DTCs. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand DTCs present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns.

When each level is reached, the DTC associated with the short circuit sets along with DTC U1000:00. These DTCs can be cleared using the module on-demand self-test, then the Clear DTC operation on the scan tool (if the on-demand test shows the fault corrected). The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the repair.

The BCM FET protected output circuit for PATS is the wake up control output.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Large metallic objects or electronic devices on the key ring that can be used to purchase gasoline or similar items	• Body Control Module (BCM) fuse 18 (10A)

repair4less

• Passive Anti-Theft System (PATS) key • Use of a non- PATS key or incorrect PATS key • More than one PATS key on key ring • Aftermarket remote start system installed	• Wiring, terminals or connectors • BCM • PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM and PCM.

9. If the DTCs retrieved are related to the concern, go to the BCM DTC Chart or the PCM DTC Chart. For all other BCM DTCs, refer to Section 419-10 . For all other PCM DTCs, refer to Section 303-14 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

Body Control Module (BCM) DTC Chart

DTC	Description	Action
B10D5:13	PATS Antenna: Circuit Open	The Body Control Module (BCM) received an incomplete or corrupt response from the transceiver. INSTALL a new transceiver. REFER to Passive Anti-Theft System (PATS) Transceiver in this section.
B10D7:05	PATS Key: System Programming Failure	GO to Pinpoint Test A .
B10D7:51	PATS Key: Not Programmed	There is an unprogrammed Passive Anti-Theft System (PATS) key. PROGRAM the PATS key. REFER to Key Programming —

		Program a Key Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section.
B10D7:55	PATS Key: Not Configured	**NOTE:** Once the BCM Programmable Module Installation (PMI) is complete, follow the scan tool on-screen instructions for carrying out the Configurable Engine Immobilizer (CEI) Lock Configuration. The BCM (CEI) was not configured after Programmable Module Installation (PMI). CARRY OUT the BCM PMI . REFER to Section 418-01 .
B10D7:87	PATS Key: Missing Message	GO to Pinpoint Test B .
B10D7:8F	PATS Key: Erratic	GO to Pinpoint Test B .
B10D8:00	PATS Key Less Than Minimum Programmed: No Sub Type Information	Less than 2 keys are programmed into the BCM . CYCLE the customer's second key in the ignition to program (when less than 2 keys are programmed, the BCM automatically programs the first 2 keys that are cycled in the ignition).
B10D9:87	PATS Transponder: Missing Message	GO to Pinpoint Test C .
B10DA:51	PATS Target Identifier: Not Programmed	There is no PCM ID stored in the BCM . CARRY OUT a parameter reset. REFER to Passive Anti-Theft System (PATS) Parameter Reset in this section. CLEAR the DTCs. REPEAT the self-test.
C113A:11	Wakeup Control: Circuit Short to Ground	GO to Pinpoint Test D .
C113A:15	Wakeup Control: Circuit Short to Battery or Open	GO to Pinpoint Test D .
U1000:00	Solid State Driver Protection Activated - Driver Disabled: No Sub Type Information	The BCM has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other DTCs first. After the cause of the concern is corrected, CLEAR the DTCs. REPEAT the self-test.
All other DTCs	—	REFER to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

PCM DTC Chart

DTC	Description	Action
P161A	Incorrect Response from Immobilizer Control Module	The BCM ID received by the PCM does not match the ID stored in the PCM memory. CARRY OUT a parameter reset. REFER to Passive Anti-Theft System (PATS) Parameter Reset in this section. CLEAR the DTCs. REPEAT the self-test.
All other DTCs	—	REFER to Section 303-14 .

Symptom Chart

repair4less

Symptom Chart

Condition	Possible Sources	Action
• The engine does not start	• Driveability concern • Passive Anti-Theft System (PATS) concern • Starting system concern	• GO to Pinpoint Test E .
• All keys/ RKE transmitters lost, perimeter alarm activated, and unable to program new keys	• Customer lost all keys/ RKE transmitters	• PROGRAM an RKE transmitter. REFER to Section 501-14 . UNLOCK the doors with the programmed RKE transmitter. ERASE all keys and PROGRAM two keys. REFER to Key Programming Using Diagnostic Equipment .

Pinpoint Tests

Pinpoint Test A: DTC B10D7:05

Normal Operation

When the Body Control Module (BCM) enters a key programming state, it activates the transceiver to read the key in the ignition. If a valid Passive Anti-Theft System (PATS) key is used and there are no concerns with the PATS the key is programed into the BCM memory.

- DTC B10D7:05 (PATS Key: System Programming Failure) — sets when a Passive Anti-Theft System (PATS) key is unsuccessfully programmed into the BCM .

This pinpoint test is intended to diagnose the following:

- PATS key

PINPOINT TEST A: DTC B10D7:05

Test Step	Result / Action to Take
A1 CHECK THE BCM DTCs FROM THE SELF-TEST	
• Check the recorded results from the BCM self-test. • **Is DTC B10D5:13, B10D7:87, B10D7:8F, or B10D9:87 retrieved?**	**Yes** REFER to the BCM DTC Chart in this section. RESOLVE these DTCs first. **No** GO to A2 .

A2 CHECK THE PATS KEY	
• **NOTE:** The keys must have "HA" or "SA" stamped on the key blade. • Check that the correct PATS keys are used with the vehicle. Compare the Integrated Keyhead Transmitters (IKTs) with the one shown in Anti-Theft in the Description and Operation portion of this section. • **Are the correct keys being used?**	**Yes** ATTEMPT to program the key again. If key programming fails, DISCARD the damaged key and PROGRAM a new key. REFER to Key Programming — Program a Key Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section. CLEAR the DTCs. REPEAT the self-test. **No** OBTAIN the correct key(s) for the vehicle. PROGRAM the new key(s). REFER to Key Programming — Program a Key Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: DTC B10D7:87 or B10D7:8F

Normal Operation

When the ignition is turned to the RUN or START position, the Body Control Module (BCM) activates the transceiver to read the key in the ignition. If the BCM does not receive a Passive Anti-Theft System (PATS) key code or if the code is invalid, PATS is disabled and the engine does not start.

- DTC B10D7:87 (PATS Key: Missing Message) — sets when there is no Passive Anti-Theft System (PATS) key read. This DTC sets if a non- PATS key is used to turn the ignition on.
- DTC B10D7:8F (PATS Key: Erratic) — sets when there is a partial or corrupt PATS key read.

This pinpoint test is intended to diagnose the following:

- PATS key
- PATS transceiver

PINPOINT TEST B: DTC B10D7:87 OR B10D7:8F

NOTE: Large metallic objects or electronic devices on the key ring that can be used to purchase gasoline or similar items, or a second key on the same key ring as the PATS key can cause vehicle starting concerns and record DTCs under certain conditions. If a fault cannot be identified, examine the customer key ring for such objects or devices. If present, inform the customer that they need to keep these objects from touching the PATS key while starting the engine. These objects and devices cannot damage the PATS key, but can cause a momentary concern if they are too close to the key during engine start. If a concern occurs, turn the ignition switch off and restart the engine with all other objects on the key ring held away from the ignition key.

NOTE: Aftermarket or dealer-installed remote start systems may adversely affect the PATS operation. Disconnect these systems before diagnosing any PATS concerns.

Test Step	Result / Action to Take
B1 CHECK THE PATS KEYS	
• **NOTE:** The keys must have "HA" or "SA"	**Yes**

repair4less

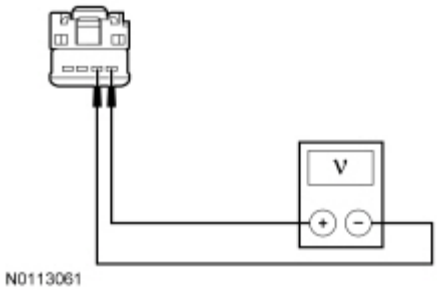
stamped on the key blade. • Check that the correct PATS keys are used with the vehicle. Compare the Integrated Keyhead Transmitters (IKTs) with the one shown in Anti-Theft in the Description and Operation portion of this section. • **Are the correct keys being used?**	GO to B2. **No** OBTAIN the correct key(s) for the vehicle. PROGRAM the new key(s). REFER to Key Programming — Program a Key Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section. CLEAR the DTCs. REPEAT the self-test.
B2 ISOLATE THE PATS KEYS • **NOTE:** Follow this procedure using both PATS keys (using one at a time). • Place a PATS key in the ignition and turn to the RUN position. • Enter the following diagnostic mode on the scan tool: Clear BCM Continuous DTCs. • Cycle the ignition from RUN to OFF and then back to the RUN position. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Is DTC B10D7:87 or B10D7:8F retrieved for both keys?**	**Yes** INSTALL a new PATS transceiver. REFER to Passive Anti-Theft System (PATS) Transceiver in this section. CLEAR the DTCs. REPEAT the self-test. **No** DISCARD the key in question and PROGRAM a new key. REFER to Key Programming — Program a Key Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section. CLEAR the DTCs. REPEAT the self-test.

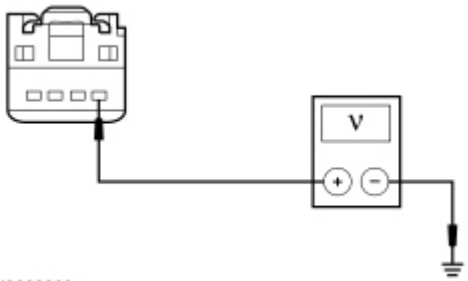
Pinpoint Test C: DTC B10D9:87

Refer to Wiring Diagrams Cell 112, Passive Anti-Theft System for schematic and connector information.

Normal Operation

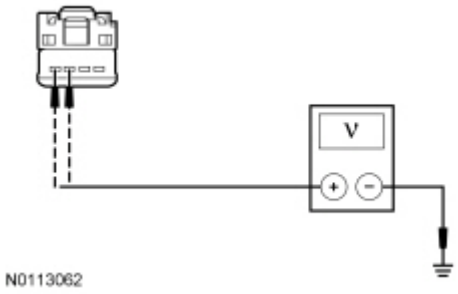
The Body Control Module (BCM) fuse 18 (10A) supplies voltage to the Passive Anti-Theft System (PATS) transceiver. When the ignition is turned to the RUN or START positions, the BCM initiates the key interrogation sequence. The BCM starts the interrogation sequence by generating a signal and sending that signal to the transceiver on the transmit (TX) circuit. When the transceiver receives the signal from the BCM, it reads the PATS key and generates a challenge response to the BCM signal. The transceiver sends the challenge response back to the BCM on the receive (RX) circuit.





- DTC B10D9:87 (PATS Transponder: Missing Message) — sets when the BCM does not receive a response from the PATS transceiver

This pinpoint test is intended to diagnose the following:

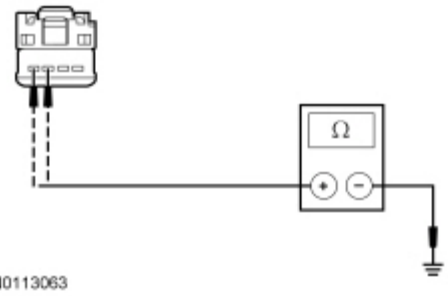


- Fuse
- Wiring, terminals or connectors
- PATS transceiver
- BCM

PINPOINT TEST C: DTC B10D9:87

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
C1 RETRIEVE THE BCM DTCs FROM THE SELF-TEST	
• Check the recorded results from the BCM self-test. • **Is DTC C113A:11 or DTC C113A:15 recorded?**	**Yes** GO to Pinpoint Test D . **No** GO to C2 .
C2 CHECK FOR VOLTAGE TO THE PATS TRANSCEIVER	
• Disconnect: PATS Transceiver C252. • Ignition ON. • Measure the voltage between the PATS transceiver C252-1, circuit CE436 (VT/OG), harness side and the PATS transceiver C252-2, circuit GD133 (BK).  N0113061 • **Is the voltage greater than 10 volts?**	**Yes** GO to C4 . **No** GO to C3 .
C3 CHECK THE PATS TRANSCEIVER VOLTAGE SUPPLY CIRCUIT	
• Measure the voltage between the PATS transceiver C252-1, circuit CE436 (VT/OG), harness side and ground.  N0002393 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit GD133 (BK) for an open. CLEAR the DTCs. REPEAT the self-test. **No** VERIFY the BCM fuse 18 (10A) is OK. If OK, REPAIR circuit CE436 (VT/OG) for an open. If not OK, REFER to the Wiring Diagrams Manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the self-test.
C4 CHECK THE PATS TRANSCEIVER CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280B. • Ignition ON. • Measure the voltage between the PATS transceiver C252-3, circuit VRT24 (YE/OG), harness side and ground; and between the PATS transceiver C252-4, circuit VRT23 (VT/GY), harness side and ground.	**Yes** REPAIR the circuit in question for a short to voltage. CLEAR the DTCs. REPEAT the self-test. **No** GO to C5 .



repair4less

- **Is any voltage present?**

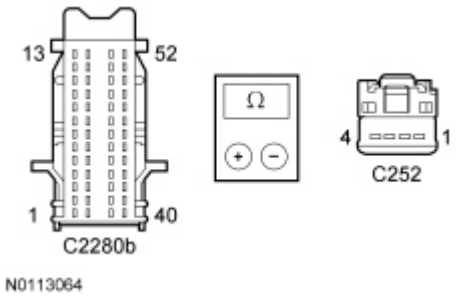
C5 CHECK THE PATS TRANSCEIVER CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the resistance between the PATS transceiver C252-3, circuit VRT24 (YE/OG), harness side and ground; and between the PATS transceiver C252-4, circuit VRT23 (VT/GY), harness side and ground.

- **Are the resistances greater than 10,000 ohms?**

Yes
GO to C6 .

No
REPAIR the circuit in question for a short to ground. CLEAR the DTCs. REPEAT the self-test.



C6 CHECK THE PATS TRANSCEIVER CIRCUITS FOR AN OPEN

- Measure the resistance between the BCM , harness side and the PATS transceiver, harness side as follows:

BCM Connector-Pin	Circuit	PATS Transceiver Connector-Pin
C2280B-36	VRT23 (VT/GY)	C252-4
C2280B-37	VRT24 (YE/OG)	C252-3

Yes
INSTALL a new PATS transceiver. REFER to Passive Anti-Theft System (PATS) Transceiver in this section. CLEAR the DTCs. REPEAT the self-test. If DTC B10D9:87 is retrieved again, GO to C7 .

No
REPAIR the circuit in question for an open. CLEAR the DTCs. REPEAT the self-test.

 • **Are the resistances less than 5 ohms?**	
C7 CHECK FOR CORRECT BCM OPERATION	

• Disconnect the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the BCM connectors and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: DTC C113A:11 or C113A:15

Refer to Wiring Diagrams Cell 112, Passive Anti-Theft System for schematic and connector information.

Normal Operation

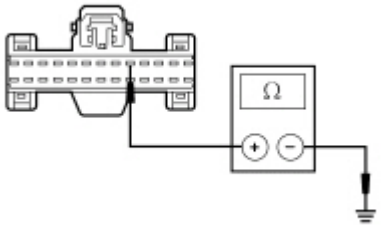
The wake up control circuit is used to wake up the PCM prior to engine cranking. The PCM needs to wake up prior to a crank request so that it has time to go through its initialization. The wake up control circuit is also used to power the Passive Anti-Theft System (PATS) transceiver. The wake up control circuit is controlled by the Body Control Module (BCM) and receives voltage from fuse 18 (10A).

The BCM activates the wake up control circuit when:

- the driver door is opened.
- a remote start request is received (if equipped with factory remote start).
- the brake pedal is pressed.
- a key is inserted into the ignition.
- or when the ignition is in the RUN or START position.

- DTC C113A:11 (Wakeup Control: Circuit Short To Ground) — sets when the BCM detects a short to ground on the wake up control circuit.
- DTC C113A:15 (Wakeup Control: Circuit Short To Battery or Open) — sets when the BCM detects a short to voltage or an open on the wake up control circuit.
- DTC U1000:00 (Solid State Driver Protection Activated - Driver Disabled: No Sub Type Information) — sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled the wake up control circuit because an excessive current draw exists (such as a short to ground). The BCM cannot enable the wake up control circuit until the cause of the short is corrected, the DTCs have been cleared and a successful self-test is run.

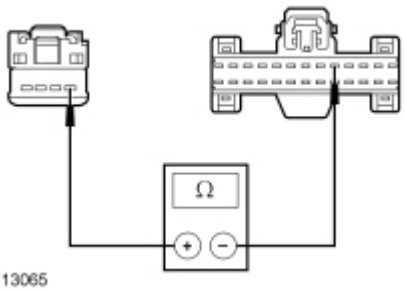
repair4less



This pinpoint test is intended to diagnose the following:

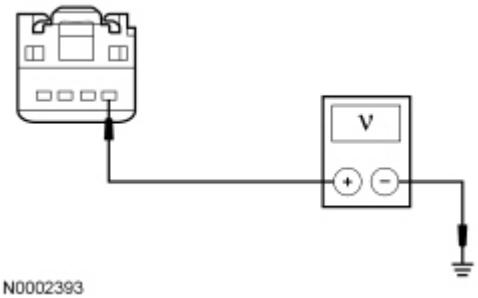
- Wiring, terminals or connectors
- PATS transceiver
- PCM
- BCM

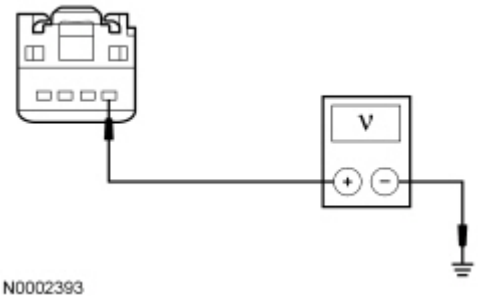
PINPOINT TEST D: DTC C113A:11 or C113A:15



NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
D1 RETRIEVE THE BCM DTCs FROM THE SELF-TEST • Check the recorded results from the BCM self-test. • **Is DTC C113A:11 recorded?**	**Yes** GO to D2. **No** For DTC C113A:15, GO to D5.
D2 CHECK THE PCM FOR A SHORT TO GROUND • Ignition OFF. • Disconnect: PCM C175B (3.7L) or C1381B (5.0/6.2L). • Ignition ON. • Enter the following diagnostic mode on the scan tool: Clear BCM Continuous DTCs. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Is DTC C113A:11 retrieved?**	**Yes** GO to D3. **No** GO to D9.
D3 CHECK THE PATS TRANSCEIVER FOR A SHORT TO GROUND • Disconnect: PATS Transceiver C252. • Enter the following diagnostic mode on the scan tool: Clear BCM Continuous DTCs. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Is DTC C113A:11 retrieved?**	**Yes** GO to D4. **No** INSTALL a new PATS transceiver. REFER to Passive Anti-Theft System (PATS) Transceiver in this section. TEST the system for normal operation.
D4 CHECK THE WAKEUP CONTROL CIRCUIT FOR A SHORT TO GROUND • Ignition OFF. • Disconnect: BCM C2280F. • Measure the resistance between the BCM C2280F-5, circuit CE436 (VT/OG), harness side and ground.	**Yes** GO to D10. **No** REPAIR circuit CE436 (VT/OG) for a short to ground. CLEAR the DTCs. REPEAT the self-test.





N0099635

- **Is the resistance greater than 10,000 ohms?**

D5 CHECK THE WAKEUP CONTROL CIRCUIT FOR AN OPEN OR SHORT TO VOLTAGE	
• Start the engine. • **Does the engine start?**	**Yes** GO to D7 . **No** GO to D6 .
D6 CHECK THE WAKEUP CONTROL CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: PATS Transceiver C252. • Disconnect: BCM C2280F. • Measure the resistance between the PATS transceiver C252-1, circuit CE436 (VT/OG), harness side and the BCM C2280F-5, circuit CE436 (VT/OG), harness side.  N0113065 • **Is the resistance less than 5 ohms?**	**Yes** GO to D10 . **No** REPAIR circuit CE436 (VT/OG) for an open. CLEAR the DTCs. REPEAT the self-test.
D7 CHECK THE WAKEUP CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: PATS Transceiver C252. • Disconnect: BCM C2280F. • Ignition ON. • Measure the voltage between the PATS transceiver C252-1, circuit CE436 (VT/OG), harness side and ground.	**Yes** GO to D8 . **No** GO to D10 .

repair4less

 N0002393 • **Is any voltage present?**	
D8 CHECK THE PCM FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: PCM C175B (3.7L) or C1381B (5.0/6.2L). • Ignition ON. • Measure the voltage between the PATS transceiver C252-1, circuit CE436 (VT/OG), harness side and ground.  N0002393 • **Is any voltage present?**	**Yes** REPAIR circuit CE436 (VT/OG) for a short to voltage. CLEAR the DTCs. REPEAT the self-test. **No** GO to D9.
D9 CHECK FOR CORRECT PCM OPERATION • Disconnect the PCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the PCM connectors and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new PCM. REFER to Section 303-14. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
D10 CHECK FOR CORRECT BCM OPERATION • Disconnect the BCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect the BCM connectors and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The Engine Does Not Start

Normal Operation

The Passive Anti-Theft System (PATS) disables the engine from starting by disabling the fuel injectors and starter. When the ignition is turned to the RUN or START position, the PATS reads the PATS key and checks the PCM ID. If an unprogrammed PATS key is used or an invalid PCM ID is received, the PATS disables the engine. If there is a PATS concern that caused the engine to be disabled, "STARTING SYSTEM FAULT" is displayed in the message center.

This pinpoint test is intended to diagnose the following:

- Driveability concern
- PATS concern
- Starting system concern

PINPOINT TEST E: THE ENGINE DOES NOT START

Test Step	Result / Action to Take
E1 CHECK FOR COMMUNICATION WITH THE PCM AND THE BCM • Carry out the network test using the scan tool. • **Does the scan tool establish communication with the PCM and the Body Control Module (BCM)?**	**Yes** GO to E2 . **No** REFER to Section 418-00 to diagnose the module that is not communicating with the scan tool.
E2 CHECK FOR BCM DTCs • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Are any BCM DTCs present?**	**Yes** REFER to the BCM DTC Chart in this section. **No** The no-start condition is not caused by PATS . REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to diagnose the cause of the no-start condition.

repair4less

MyKey® Restrictions on Vehicle Operation

Principles of Operation

The MyKey® feature allows a restricted driving mode to be programmed into one (or more) key(s) supplied with the vehicle or into any (Passive Anti-Theft System (PATS)) programmed spare key(s) to promote good driving habits. The MyKey® is a restricted key for all consecutive key cycles until the MyKey® restricted key is cleared. The remaining key(s) is referred to as an administrator key(s) or admin key(s). There must always be at least one admin key. The Body Control Module (BCM) does not allow the last administrator key to be programmed as a MyKey® restricted key. Both the admin key and the MyKey® can be used to see how many admin keys and MyKey® restricted keys are programmed to the vehicle, and how many total miles have been driven with the MyKey® active.

When the MyKey® feature is programmed, several features are modified for the MyKey® driver only.

Inspection and Verification

1. Verify the customer concern.
2. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
3. If the cause is not visually evident, verify the symptom. GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• No known admin key available	• The admin key is lost/stolen	• PURCHASE a new key and PROGRAM it to the Passive Anti-Theft System (PATS). REFER to Key Programming Using Diagnostic Equipment in this section.
	• Aftermarket remote start system has been programmed as the admin MyKey®	• REFER to MyKey® Programming in this section to clear all programmed MyKey®. PROGRAM the aftermarket remote start system as a MyKey®.
• No MyKey® messages available	• Unlimited key mode is enabled	• INFORM the customer of the normal vehicle operation. If the

repair4less

		customer desires MyKey® to be enabled, DISABLE the unlimited key mode. REFER to Key Programming — Unlimited Key Mode in this section.
• MyKey® acts as an admin key	• Aftermarket remote start system was used to start the vehicle	• REFER to MyKey® Programming in this section to clear all programmed MyKey®. PROGRAM the aftermarket remote start system as a MyKey®.
• Cannot locate the MyKey® restricted key	• The MyKey® restricted key is lost/stolen	• PURCHASE a new key and PROGRAM it to PATS. REFER to Key Programming Using Diagnostic Equipment or Key Programming — Program a Key Using Two Programmed Keys in this section. PROGRAM the new key to the MyKey® restricted key status. REFER to MyKey® Programming in this section.
• All keys have been programmed to a MyKey® restricted key status	• Aftermarket remote start system has been programmed as the admin MyKey®	• REFER to MyKey® Programming in this section to clear all programmed MyKey®. PROGRAM the aftermarket remote start system as a MyKey®.
• Total number of admin keys and MyKey® programmed includes one more key than customer has	• An unauthorized key has been programmed to the vehicle as a MyKey® restricted key or as an admin key • The vehicle has an aftermarket remote start system	• ERASE all keys and PROGRAM all of the customer's keys. REFER to Key Programming Using Diagnostic Equipment in this section. If necessary, PROGRAM the desired key to a MyKey® restricted key status. REFER to MyKey® Programming in this section. • INFORM the customer of the normal vehicle operation. RELEASE the vehicle to the customer. If necessary, REFER to Clear MyKey® Restricted Features in this section to clear all programmed MyKey®. This action also clears any MyKey® restrictions the remote start system may have.
• The MyKey® distance does not accumulate	• The MyKey® is not being used by the intended driver • The MyKey® system has recently been cleared	• MAKE SURE the key being used is a MyKey® restricted key by observing the message center messages when the vehicle is started using the MyKey®. VERIFY the MyKey® restricted key is being used by driving the vehicle using the MyKey® restricted key and checking the miles accumulated before and

		after the drive.
• Cannot create a MyKey®	• Engine was started using an aftermarket remote start system that is programmed as a MyKey® restricted key • MyKey® restricted key is already in the ignition lock cylinder	• REFER to MyKey® Programming in this section for the programming procedures.
	• Unlimited key mode is enabled	• INFORM the customer of the normal vehicle operation. If the customer desires MyKey® to be enabled, DISABLE the unlimited key mode. REFER to Key Programming — Unlimited Key Mode in this section.
	• Key in the ignition lock cylinder is the only one admin key left	• INFORM the customer of the normal vehicle operation. There must always be one admin key.
• Cannot configure/clear the MyKey® feature	• MyKey® restricted key in the ignition lock cylinder • Engine was started using an aftermarket remote start system that is programmed as a MyKey® restricted key	• INFORM the customer of the normal vehicle operation. An admin key must be used to configure or clear MyKey®.
	• No MyKey® restricted keys are programmed	• PROGRAM MyKey®. REFER to MyKey® Programming in this section for the programming procedures.

repair4less

Key Programming — Enable/Disable Spare Key Programming

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

NOTE: This procedure provides the capability to enable/disable the normal customer spare key programming procedure detailed in the Owner's Literature and Key Programming — Program a Key Using Two Programmed Keys . If spare key programming is disabled, spare keys can only be programmed by using the Key Programming Using Diagnostic Equipment procedure in this section.

1. Turn the key from the OFF position to the RUN position.
2. From the scan tool, enter TOOLBOX. Select BODY — SECURITY — PATS Functions and follow the Integrated Diagnostic System (IDS) on-screen instructions to ENTER SECURITY ACCESS.
3. From the scan tool menu select "Customer Spare Key Programming Enable" or "Customer Spare Key Programming Disable" and follow the IDS on-screen instructions.

repair4less

Key Programming — Program a Key Using Two Programmed Keys

NOTE: This procedure works only if 2 or more programmed keys are available. If 2 programmed keys are not available, refer to Key Programming Using Diagnostic Equipment in this section.

NOTE: This procedure works only if the customer spare key programming is enabled. If customer spare key programming is disabled, refer to Key Programming — Enable/Disable Spare Key Programming or Key Programming Using Diagnostic Equipment in this section.

1. Insert the first programmed Passive Anti-Theft System (PATS) key into the ignition and turn the key from the OFF position to the RUN position (maintain the key in the RUN position for approximately 6 seconds).

2. Turn the first key to the OFF position and remove the key from the ignition.

3. Within 10 seconds of turning the key to the OFF position, insert a second programmed PATS key into the ignition and turn the key from the OFF position to the RUN position (maintain the key in the RUN position for approximately 6 seconds).

4. Turn the second key to the OFF position and remove the key from the ignition.

5. **NOTE:** The doors lock and then unlock to confirm that each Integrated Keyhead Transmitter (IKT) is programmed.

   Within 10 seconds of turning the second key to the OFF position, insert the new, unprogrammed PATS key into the ignition and turn the key from the OFF position to the RUN position (maintain the key in the RUN position for approximately 6 seconds).

6. If it is desired to program additional key(s) (up to a total of 8 keys can be programmed), repeat Steps 1 - 5 for each additional key.

repair4less

Key Programming — Unlimited Key Mode

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Enabling Unlimited Key Mode

NOTE: When in the unlimited key mode, the KEYS_PROGMD PID in the Body Control Module (BCM) always reads 2, no matter how many keys are programmed to the vehicle (after the first 2 keys have been programmed to the vehicle).

NOTE: If the BCM PID UNL_KEY_ID is not available, unlimited key mode is turned on, and must be turned off before viewing the stored code. At this time, unlimited keys may be programmed to the vehicle. To view/disable/change the stored code, follow the procedure below for disabling the unlimited key mode.

1. The customer must choose an 8-digit number (except for 00000000, 00000001, or FFFFFFFF) to be programmed to all of their vehicles or, to all of the keys for one vehicle. Valid digits are 0-9 and the letters A-F.
2. From the scan tool, enter TOOLBOX. Select BODY — SECURITY — PATS Functions and follow the Integrated Diagnostic System (IDS) on-screen instructions to ENTER SECURITY ACCESS.
3. Once in security access, select "unlimited key mode ON" and follow the IDS on-screen instructions.
4. Select "program unlimited key code" and follow the IDS on-screen instructions. Enter the 8-digit code chosen by the customer in Step 1 of this procedure and follow the IDS on-screen instructions.
5. Select "Ignition Key Code Erase" and follow the IDS on-screen instructions.
6. Turn the key to the OFF position and disconnect the scan tool (the key does not need to be removed from the ignition at this time).
7. Turn the first PATS key to the RUN position for a minimum of 6 seconds.
8. Turn the first PATS key to the OFF position and remove the key from the ignition.
9. Insert the second PATS key into the ignition and turn the key to the RUN position for a minimum of 6 seconds.
10. The engine should now start with both PATS keys.
11. If it is desired to program additional key(s), refer to Key Programming — Program a Key Using Two Programmed Keys in this section.

Disabling Unlimited Key Mode

1. From the scan tool, enter TOOLBOX. Select BODY — SECURITY — PATS Functions and follow the IDS on-screen instructions to ENTER SECURITY ACCESS.
2. Select "unlimited key mode OFF" and follow the IDS on-screen instructions.
3. Select "Ignition Key Code Erase" and follow the IDS on-screen instructions.
4. Turn the key to the OFF position and disconnect the scan tool (the key does not need to be removed from the ignition at this time).
5. Turn the first PATS key to the RUN position for a minimum of 6 seconds.
6. Turn the first PATS key to the OFF position and remove the key from the ignition.
7. Insert the second PATS key into the ignition and turn the key to the RUN position for a minimum of 6 seconds.
8. The engine should now start with both PATS keys.
9. If it is desired to program additional key(s) (only a total of 8 keys can be programmed into the BCM), refer to Key Programming — Program a Key Using Two Programmed Keys in this section.

---

repair4less

Key Programming Using Diagnostic Equipment

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Erase All Keys And Program Two Keys

NOTE: This procedure erases all programmed ignition keys from the vehicle memory. The vehicle cannot start until a minimum of 2 keys are programmed into the Body Control Module (BCM).

NOTE: Two Passive Anti-Theft System (PATS) keys with the correct mechanical cut must be available to carry out this procedure.

1. Turn the key from the OFF position to the ON position.
2. From the scan tool, enter TOOLBOX. Select BODY — SECURITY — PATS Functions and follow the Integrated Diagnostic System (IDS) on-screen instructions to ENTER SECURITY ACCESS.
3. From the scan tool menu select "Ignition Key Code Erase" and follow the IDS on-screen instructions until the key erase procedure completes. The scan tool will then instruct you to program 2 keys to complete the process.
4. Turn the key to the OFF position and disconnect the scan tool (the key does not need to be removed from the ignition at this time).
5. **NOTE:** The doors lock and then unlock to confirm that each Integrated Keyhead Transmitter (IKT) is programmed.

   Turn the first PATS key to the RUN position for a minimum of 6 seconds.
6. Turn the first PATS key to the OFF position and remove the key from the ignition.
7. Insert the second PATS key into the ignition and turn the key to the RUN position for a minimum of 6 seconds.
8. The engine should now start with both PATS keys.
9. If it is desired to program additional key(s) (only a total of 8 keys can be programmed into the BCM), refer to Key Programming — Program a Key Using Two Programmed Keys in this section for each additional key that needs to be programmed.

Spare Key Programming

NOTE: If 8 keys are already programmed, this procedure does not allow any more Passive Anti-Theft System (PATS) keys to be programmed without erasing all stored key codes first.

1. Insert the unprogrammed PATS key into the ignition and turn the key from the OFF position to the RUN position.

2. From the scan tool, enter TOOLBOX. Select BODY — SECURITY — PATS Functions and follow the Integrated Diagnostic System (IDS) on-screen instructions to ENTER SECURITY ACCESS.

3. From the scan tool menu select "Program additional ignition key" and follow the IDS on-screen instructions.

4. The engine should now start with the new PATS key.

---

repair4less

MyKey® Programming

Program a MyKey®

With Base Message Center

NOTE: After a MyKey® has been programmed, the remaining standard key(s) (the key[s] that is not programmed with the MyKey® feature) is referred to as an "administrator key(s)" or "admin" key(s). There must always be at least one admin key.

NOTE: The MyKey® feature can be cleared within the same key cycle that it was programmed. Follow the Disable MyKey® procedure in this section to clear the key of any restricted MyKey® status. If the key has been cycled, an admin key is required to clear the MyKey® programming.

1. Insert a programmed Passive Anti-Theft System (PATS) key into the ignition and turn the key from the OFF to the RUN position. This key must be the one that is being programmed to the MyKey® restricted status.

2. Press the SETUP button until PRESS RESET TO CREATE MYKEY is displayed.

3. Press and release the RESET button. HOLD RESET TO CONFIRM MYKEY is displayed.

4. Press and hold the RESET button (for approximately 2 seconds) until MARK THIS KEY AS RESTRICTED is displayed.

5. Wait until KEY RESTRICTED AT NEXT START is displayed, then release the RESET button.

6. The MyKey® feature (standard restricted features) is successfully programmed into this particular key. Make sure it is labeled for easy identification. If you would like to customize the MyKey® with the audio volume limited, maximum speed limit, speed alert chimes, and AdvanceTrac® on/off restrictions, refer to Configuring MyKey® Optional Restricted Features in this section.
    - If the vehicle is equipped with an aftermarket remote start, also refer to Using MyKey® with Aftermarket Remote Start Systems in this section.

With Optional Message Center

NOTE: After a MyKey® has been programmed, the remaining standard key(s) (the key[s] that is not programmed with the MyKey® feature) is referred to as an "administrator key(s)" or "admin" key(s). There must always be at least one admin key.

NOTE: The MyKey® feature can be cleared within the same key cycle that it was programmed. Follow the Disable MyKey® procedure in this section to clear the key of any restricted MyKey® status. If the key has been cycled, an admin key is required to clear the MyKey® programming.

1. Insert a programmed Passive Anti-Theft System (PATS) key into the ignition and turn the key from the OFF to the RUN position. This key must be the one that is being programmed to the MyKey® restricted status.

2. From the message center main menu, use the up and down arrow buttons to scroll to and select Settings. Press the OK button.

3. Use the up and down arrow buttons to scroll to and select MyKey®. Press the OK button.

4. Use the up and down arrow buttons to scroll to and select Create MyKey®. Press the OK button.

5. Press and hold the OK button to create the MyKey®.

6. The MyKey® feature (standard restricted features) is successfully programmed into this particular key. Make sure it is labeled for easy identification. If you would like to customize the MyKey® with the audio volume limited, maximum speed limit, speed alert chimes, and AdvanceTrac® on/off restrictions, refer to Configuring MyKey® Optional Restricted Features in this section.
    - If the vehicle is equipped with an aftermarket remote start, also refer to Using MyKey® with Aftermarket Remote Start Systems in this section.

Configuring MyKey® Optional Restricted Features

With Base Message Center

NOTE: The following features can be restricted on a MyKey®:

- audio volume level set to a pre-determined level (45% of the maximum volume)
- maximum speed limit of 130 km/h (80 mph) on or off
- speed alert chimes set for 75, or 90 or 105 km/h (45, or 55 or 65 mph)
- AdvanceTrac® always on feature turned on or off

1. Insert an admin key into the ignition and turn the key to the RUN position.

2. Press the SETUP button until RESET FOR MYKEY SETUP is displayed.

3. Press and release the RESET button to display the MyKey® setup menus. The first programmable feature is: MYKEY MAX MPH OFF.
    - If you do not want to change the status of a feature that appears, press and release SETUP to accept the current setting and display the next programmable feature.
    - If you want to change the status of the feature that is displayed, press RESET to turn a feature on/off (or toggle between choices). After the feature selection has been made, press and release SETUP to accept the current setting and display the next programmable feature.

4. Repeat the process for the next features:
    - MYKEY MPH TONES 45 55 65 (choose the desired speed for the chime to sound)
    - MYKEY VOLUME LIMIT OFF (choose the audio volume to be limited to 45%)
    - MYKEY ADVTRAC CTRL ON (choose for the AdvanceTrac® to be automatically locked on or able to be turned on or off by the MyKey® driver)

With Optional Message Center

NOTE: The following features can be restricted on a MyKey®:

- audio volume level set to a pre-determined level (45% of the maximum volume)
- maximum speed limit of 130 km/h (80 mph) on or off
- speed alert chimes set for 75, or 90 or 105 km/h (45, or 55 or 65 mph)
- AdvanceTrac® always on feature turned on or off

1. Insert an admin key into the ignition and turn the key to the RUN position.

repair4less

2. From the message center main menu, use the up and down arrow buttons to scroll to and select Settings. Press the OK button.

3. Use the up and down arrow buttons to scroll to and select MyKey®. Press the OK button.

4. Use the up and down arrow buttons to scroll to and select AdvanceTrac®. Press the OK button.

5. Use the left and right arrow buttons to configure the AdvanceTrac® to be automatically locked on or able to be turned on or off by the MyKey® driver. Press the OK button.

6. Repeat steps 4 and 5 for the next features:
    - MAX MPH: 80 MPH or OFF
    - Speed Warning: 45 55 or 65 MPH (choose the desired speed for the chime to sound)
    - Volume Limiter ON or OFF (choose the audio volume to be limited to 45%)

Clear MyKey®

With Base Message Center

1. **NOTE:** This procedure is used to clear the MyKey® feature on all of the keys that are programmed to the vehicle. All of the keys then operate as normal (admin) keys with no restrictions.

   Insert an admin key into the ignition and turn the key to the RUN position.

2. Press SETUP until PRESS RESET TO CLEAR MYKEY is displayed.

3. Press and release the RESET button until HOLD RESET TO CONFIRM CLEAR is displayed.

4. Press and hold the RESET button until ALL MYKEYS CLEARED is displayed.
    - A MyKey® can also be cleared during the same key cycle that it was programmed by following Steps 2, 3 and 4 of this procedure.

With Optional Message Center

1. **NOTE:** This procedure is used to clear the MyKey® feature on all of the keys that are programmed to the vehicle. All of the keys then operate as normal (admin) keys with no restrictions.

   Insert an admin key into the ignition and turn the key to the RUN position.

2. From the message center main menu, use the up and down arrow buttons to scroll to and select Settings. Press the OK button.

3. Use the up and down arrow buttons to scroll to and select MyKey®. Press the OK button.

4. Use the up and down arrow buttons to scroll to and select Clear MyKey®. Press the OK button.

Using MyKey® with Aftermarket Remote Start System

Program Remote Start System as a MyKey®

1. Enter the vehicle and close all doors.

2. Remote start the vehicle using a remote start fob.

3. Follow Steps 1-6 of the Program a MyKey® procedure in this section.

Clear MyKey® with the Remote Start System

NOTE: It is possible to program all of the keys as MyKey®, with the remote start system being the only admin key. This procedure clears MyKey® in the event of the aftermarket remote start system being programmed as the only admin key.

1. Enter the vehicle and close all doors.

2. Remote start the vehicle using the remote start fob.

3. Follow Steps 1-4 of the Clear MyKey® procedure in this section.

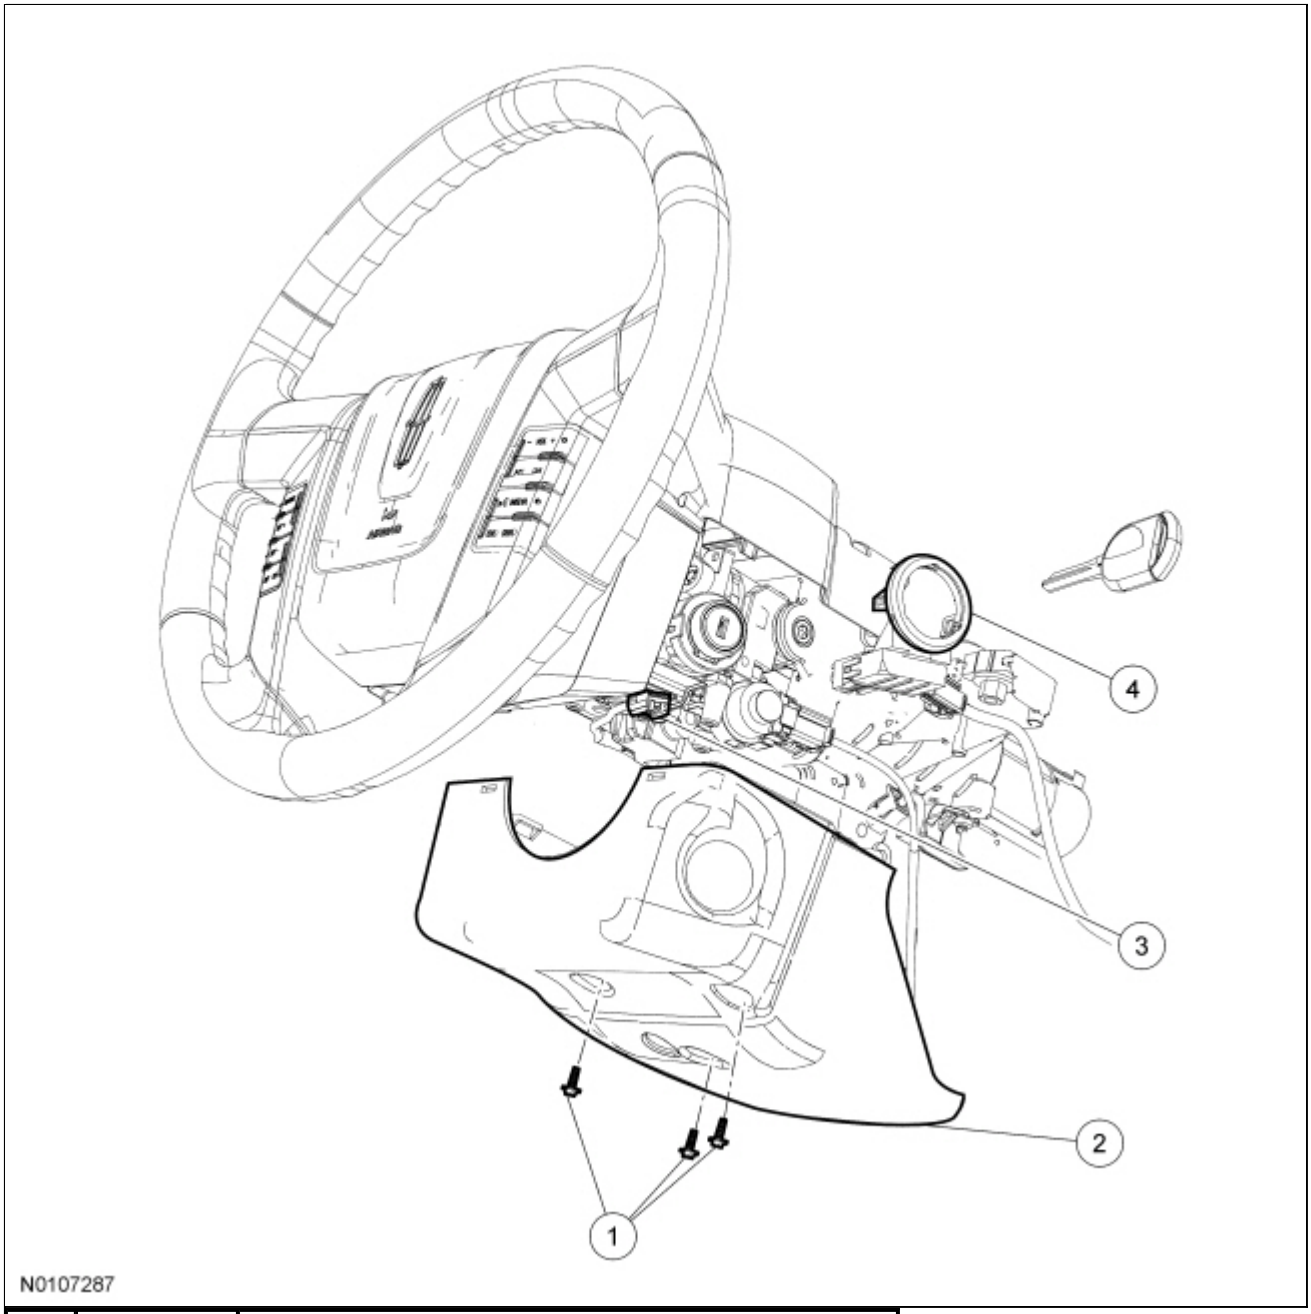
---

repair4less

Passive Anti-Theft System (PATS) Parameter Reset

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool



1. Turn the key from the OFF position to the RUN position.

2. From the scan tool, enter TOOLBOX. Select BODY — SECURITY — PATS Functions and follow the Integrated Diagnostic System (IDS) on-screen instructions to ENTER SECURITY ACCESS.

3. **NOTE:** If the Body Control Module (BCM) was replaced on vehicles equipped with PATS , at least two keys must be programmed to the BCM . After completing step 3, do not disconnect the scan tool and follow the Erase All Keys and Program Two Keys procedure.

   From the scan tool, select "Parameter Reset" and follow the IDS on-screen instructions.

Passive Anti-Theft System (PATS) Transceiver

Item	Part Number	Description
1	W710485-S	Steering column shroud screws (3 required)
2	3533	Steering column shroud, lower
3	—	Passive Anti-Theft System (PATS) transceiver electrical connector (part of 14401)

repair4less

4	15607	PATS transceiver

Removal and Installation

1. Remove the 3 screws and the lower steering column shroud.
2. Disconnect the Passive Anti-Theft System (PATS) transceiver electrical connector.
3. Using a suitable tool (such as a dentist pick), pry the PATS transceiver tangs outward and remove the PATS transceiver.
4. **NOTE:** Replacement of the PATS transceiver does not require the PATS keys to be programmed into the Instrument Cluster (IC) again.

   To install, reverse the removal procedure.

Universal Transmitter

Functional Components

The only functional component of the universal transmitter system is the universal transmitter, which is part of the LH sun visor.

System Operation

The universal transmitter provides a convenient way to substitute up to 3 hand-held transmitters with a single built-in device. The universal transmitter can learn the radio frequency codes of most current transmitters. The universal transmitter:

- operates garage doors, gates and home/office lighting and security systems.
- learns and transmits the radio frequency of up to 3 hand-held transmitters from any of the systems mentioned above.
- is powered by the vehicle battery and charging system.

repair4less

Universal Transmitter

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Universal transmitter	• Wiring, terminals or connectors

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom. GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The universal transmitter is inoperative	• Interior lamps concern • Universal transmitter (part of the LH sun visor)	• GO to Pinpoint Test A .

Pinpoint Tests

Pinpoint Test A: The Universal Transmitter is Inoperative

Normal Operation

The universal transmitter and LH vanity mirror lamp share the same circuits. Both components are part of the LH sun visor.

This pinpoint test is intended to diagnose the following:

- Interior lamps concern
- Universal transmitter (part of the LH sun visor)

PINPOINT TEST A: THE UNIVERSAL TRANSMITTER IS INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK FOR VOLTAGE TO THE UNIVERSAL TRANSMITTER • Check the illumination of the universal transmitter by pressing one of the buttons. • **Does the red indicator on the universal transmitter illuminate?**	**Yes** GO to A2 . **No** GO to A3 .
A2 PROGRAM A HAND-HELD TRANSMITTER TO THE UNIVERSAL TRANSMITTER • Program the universal transmitter. Refer to the Owner's Literature. • **Does the universal transmitter program successfully?**	**Yes** The universal transmitter is OK. VERIFY the receiver unit operates correctly. **No** INSTALL a new LH sun visor assembly. REFER to Headliner — Exploded View in Section 501-05 . TEST the system for normal operation.
A3 CHECK THE OPERATION OF THE LH VANITY MIRROR LAMP • Verify the operation of the LH vanity mirror lamp. Refer to Section 417-02 . • **Does the LH vanity mirror lamp operate correctly?**	**Yes** INSTALL a new LH sun visor assembly. REFER to Headliner — Exploded View in Section 501-05 . TEST the system for normal operation. **No** REFER to Section 417-02 to continue diagnosis.

repair4less

Universal Transmitter Programming

Lear Car2U® Transmitter Programming (Rolling Code)

WARNING: To avoid the risk of serious injury from the door closing, make sure that people and objects are clear of the garage door opener or security device that is being programmed. When programming a garage door, it is advised to park outside of the garage.

NOTE: Read the instructions completely before attempting to program the Lear Car2U® System. Because of the steps involved, it may be helpful to have an assistant when programming the universal transmitter. Programming the rolling code garage door opener involves time-sensitive actions. Read the entire procedure before beginning so the procedure can be carried out in a timely fashion. If the time-sensitive actions are not carried out in a timely fashion, the device times out and the procedure needs to be repeated.

NOTE: Make sure to keep the original remote control transmitter for use in other vehicles as well as for future Lear Car2U® System programming. It is only needed for fixed code device programming.

NOTE: In order to determine if you have a fixed code or a rolling code device, open the garage door opener transmitter and if there is a panel of coded dip switches present, the device is a fixed code device. Refer to Lear Car2U® Transmitter Programming (Fixed Code) procedure in this section. If there are no coded dip switches present, the device is a rolling code device and this procedure should be followed. If necessary, contact the Lear Car2U® Customer Service Center at 866-572-2728, or the customer support website at www.learcar2u.com .

1. Turn the ignition to the ON position.

2. Firmly press the 2 outside Lear Car2U® System buttons (at the same time) for 1-2 seconds, then release the buttons.

3. **NOTE:** Step 4 must be initiated within 30 seconds of pressing and releasing the "learn" or "smart" button.

   At the garage door opener receiver (the motor-head unit) in the garage, locate the "learn" or "smart" button. This can usually be found near where the hanging antenna wire is attached to the motor-head unit; or it may be under the light bulb cover of the motor-head unit. Press and release the "learn" or "smart" button.
   - For technical assistance, refer to the Owner's Literature. If necessary, contact the Lear Car2U® Customer Service Center at 866-572-2728, or the customer support website at www.learcar2u.com .

4. Return to the vehicle and firmly press and hold for 5-20 seconds the universal transmitter button that is desired to be programmed. During this time, the selected button red indicator light blinks slowly. Once the garage door begins to move, within one second, release the button. With the button released, the red indicator light begins to blink rapidly until programming is complete. Repeat the press/hold/release sequence a second time and depending on the brand of the garage door opener (or other rolling code equipped device), repeat this sequence a third time to complete the programming process.

5. After successful programming, the Lear Car2U® System operates the garage door opener using the

repair4less

button that was programmed. The red indicator light behind the programmed button illuminates to confirm the Lear Car2U® System is responding (and is programmed) to the button command.

Erasing the Lear Car2U® System Buttons (Rolling Code)

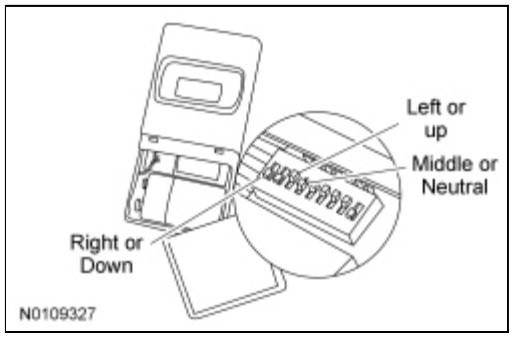
1. To erase the rolling code programming from the Lear Car2U® System, turn the ignition key to the ON position, firmly press and hold the 2 outside Lear Car2U® System buttons at the same time for approximately 20 seconds until the 3 red indicator lights begin to blink rapidly.

2. When the 3 red indicator lights begin to blink, release the buttons. The codes for all of the 3 buttons are erased.

Lear Car2U® Transmitter Programming (Fixed Code)

WARNING: To avoid the risk of serious injury from the door closing, make sure that people and objects are clear of the garage door opener or security device that is being programmed. When programming a garage door, it is advised to park outside of the garage.

NOTE: Do not use the Lear Car2U® System with any garage door opener that does not have a "stop and reverse" feature. This includes any garage door opener model manufactured before April 1, 1982.

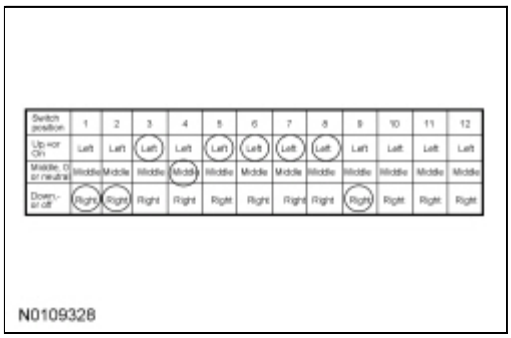


NOTE: Read the instructions completely before attempting to program the Lear Car2U® System. Because of the steps involved, it may be helpful to have an assistant when programming the universal transmitter.

NOTE: Make sure to keep the original remote control transmitter for use in other vehicles as well as for future Lear Car2U® System programming. It is only needed for fixed code device programming.

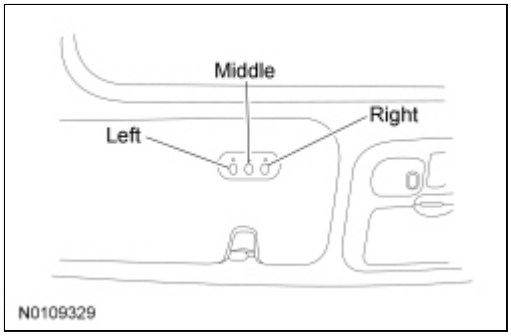
NOTE: In order to determine if you have a fixed code or a rolling code device, open the garage door opener transmitter and if there is a panel of coded dip switches present, the device is a fixed code device. If there are no coded dip switches present, the device is a rolling code device. Refer to Lear Car2U® Transmitter Programming (Rolling Code) procedure in this section.

NOTE: In order to program a fixed code device, paper and a pen (or pencil) is necessary. Use the Switch Settings chart in Specifications as a note pad.



1. Open the battery cover of the universal transmitter to reveal the coded dip switches and their associated settings.

2. **NOTE:** When a coded dip switch is in the up, +, or on position, circle "Left" on the chart under the



correct switch position number. When a switch is in the middle, 0 or neutral position, circle "Middle" on the chart. When a switch is in the down, -, or off position, circle "Right" on the chart.

Record the dip switch settings on the copy of the switch settings chart by circling the setting under the correct switch position number. Do this from left to right for all 8 to 12 switches (the number of switches varies between transmitter manufacturers). For additional information, refer to the chart below or to the Switch Settings chart in Specifications in this section.

3. Turn the ignition to the ON position.

4. To input the dip switch settings into the Lear Car2U® System, press (at the same time) all 3 Lear Car2U® System buttons for a few seconds and then release to put the device into the programming mode. The 3 red indicator lights blink slowly. Within 2.5 minutes, enter the corresponding dip switch settings from left to right (starting with number 1) into the Lear Car2U® System by pressing and releasing the buttons corresponding to the settings you circled.
    - For example, if the dip switch settings were switch 1 (Right), switch 2 (Right), switch 3 (Left), switch 4 (Middle) etc., press and release the right Lear Car2U® System button, then the right button, then the left button, then the middle button, etc.

5. After inputting the dip switch settings, press and release (at the same time) all 3 Lear Car2U® System buttons. The 3 red indicator lights are turned on continuously.

6. Press and hold the Lear Car2U® System button chosen to control the garage door.

7. Once the garage door starts to move, within one second, release the button. During this time, the selected button indicator light blinks slowly. Do not release the button until the garage door moves, which may take anywhere from 5-55 seconds, depending on the make/model of the garage door opener.

8. The 3 red indicator lights begin to blink rapidly until programming is complete. If the garage door opener does not operate, repeat Steps 1-7.
    - For technical assistance, refer to the Owner's Literature. If necessary, contact the Lear Car2U® Customer Service Center at 866-572-2728, or the customer support website at

repair4less

www.learcar2u.com .

9. After successful programming, the Lear Car2U® System operates the garage door opener using the button that was programmed. The red indicator light behind the programmed button turns on to confirm the Lear Car2U® System is responding (and is programmed) to the button command.

Erasing the Lear Car2U® System Buttons (Fixed Code)

1. To erase the fixed code programming from the Lear Car2U® System, turn the ignition key to the ON position, firmly press and hold the 2 outside Lear Car2U® System buttons at the same time for approximately 20 seconds until the 3 red indicator lights begin to blink rapidly.

2. When the 3 red indicator lights begin to blink, release the buttons. The codes for all of the 3 buttons are erased.

Cruise Control

The cruise control system consists of the following components:

- Cruise control switches (integral to the LH steering wheel switch)
- Cruise control indicator
- Clockspring
- Electronic Throttle Body (ETB)
- PCM
- Stoplamp switch
- Steering Column Control Module (SCCM) (located on the steering column)

During normal driving the vehicle speed can vary slightly from the set speed due to road conditions. The vehicle speed can fluctuate when driving up and down a steep hill. If the vehicle speed decreases more than 16 km/h (10 mph) below the set speed, the cruise control disengages.

When a My Key® is in use vehicle speed is limited to 130 km/h (80 mph).

repair4less

Cruise Control

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The cruise control system is controlled by the PCM. The cruise control system is designed to maintain a selected vehicle speed between 40 km/h (25 mph) and the maximum limited vehicle speed. The cruise control system is controlled by the cruise control switches (ON/OFF, SET+, SET-, and CNCL/RSM) that are integrated into the LH steering wheel switch, and by the brake pedal. The cruise control switches are hardwired to the Steering Column Control Module (SCCM). The SCCM sends High Speed Controller Area Network (HS-CAN) messages to the PCM to control the cruise control system.

The clockspring provides the electrical interface between the steering column wiring and the cruise control switches in the steering wheel.

The cruise control functions include:

- turning on the cruise control system.
- setting and maintaining the desired vehicle speed.
- accelerating the vehicle speed.
- coasting down to a lower speed.
- resuming the prior vehicle speed.
- turning off the cruise control system.

Pressing and releasing the ON/OFF switch turns the cruise control system on. The cruise control indicator located in the Instrument Panel Cluster (IPC) illuminates amber to indicate the cruise control system is in

standby mode. Pressing and releasing the SET+ or SET- switch while the vehicle is traveling at the desired speed activates the cruise control system. The cruise control indicator illuminates green to indicate the cruise control system is active.

Tapping the SET+ or the SET- switch while in the set mode, increases or decreases the maintained vehicle speed by 1.6 km/h (1 mph) per tap. If the respective switch is pressed and held, the vehicle speed continues to accelerate or decelerate until the switch is released.

Pressing and releasing the ON/OFF switch, or turning the ignition switch to the OFF position, turns the cruise control system off. Applying the brake pedal or pressing the CNCL/RSM switch while the cruise control system is active, puts the cruise control system into the standby mode. Pressing the CNCL/RSM switch when the cruise control system is in the standby mode causes the vehicle to accelerate to the last set speed. Resume does not function if the ON/OFF switch is pressed, the ignition switch is in the OFF position, or if the current vehicle speed is below the minimum operational speed.

The cruise control deactivator switch is an additional safety feature. Normally, when the brake pedal is applied, an electrical signal from the stoplamp circuit to the PCM deactivates the system. Under increased brake pedal effort, the cruise control deactivator switch opens and removes the ground signal (3.7L, 5.0L, 6.2L engine) or reference voltage (3.5L engine) from the PCM input circuit, and the PCM commands the throttle body closed.

The inputs to the PCM are:

- Output Shaft Speed (OSS) sensor
- Digital Transmission Range (TR) sensor
- Cruise control switch(es) (networked from SCCM)
- Cruise control deactivator switch (integral to the stoplamp switch)
- Stoplamp switch
- Accelerator Pedal Position (APP) sensor
- Vehicle speed (networked from ABS module)

The outputs of the PCM are:

- Cruise control indicator lamp request to the IPC
- Throttle body

The vehicle speed is controlled by the PCM through the Electronic Throttle Control (ETC) subsystem.

In the event of an ON/OFF switch command or a deactivation request from the deactivator switch, the cruise control system carries out a deactivation and immediately returns the throttle to the idle position.

The cruise control system provides self-diagnostics. Cruise control is disabled anytime an error is detected in the system. No IPC indicator or message center messages are displayed when faults occur. Fault codes are logged by the PCM or SCCM .

An ETC system fault also disables the cruise control system. In this case, an ETC system powertrain malfunction (wrench) warning indicator is displayed.

Additionally, the following conditions cause the cruise control system to deactivate:

- Transmission gear selector in a position other than D or OD
- Cruise control set speed is overridden with the accelerator pedal for a period longer than 5 minutes
- Vehicle speed loss from set speed of greater than 16 km/h (10 mph) occurs
- Vehicle speed falls below the minimum allowable limit of 40 km/h (25 mph)

repair4less

- Cruise control switch pressed or stuck longer than 2 minutes
- ABS fault

Cruise Control Deactivation Event PIDs

The PCM has PIDs available, through the powertrain DataLogger, that show what caused the cruise control deactivation during the current key cycle. The PCM has 24 cruise control deactivation event PIDs, identified as CRUISEOFF_00 through 24. All deactivation events that occur during active cruise operation are listed in the event PID. Switching the ignition off will erase all recorded deactivation events. These PIDs display what caused the cruise control deactivation to trigger and can be a very useful tool when trying to identify the cause of a deactivation or non-activation trigger. The event PIDs displays the deactivation or non-activation trigger based on when the cruise control is turned on and the fault condition exist. If the cruise control system is turned on or off prior to or in advance to the triggering condition, the events PIDs may display inaccurate deactivation conditions. The event PIDs should be read when the conditions of deactivation or non-activation exist.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Throttle body	• Battery Junction Box (BJB) fuse 46 (10A) • Wiring, terminals or connectors • Cruise control switch(es) (part of the LH steering wheel switch) • Stoplamp switch • PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.

- verify the scan tool operation with a known good vehicle.
- refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the PCM and SCCM .

9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

PCM DTC Chart

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure-type code. The failure-type code provides information about specific fault conditions such as opens, or shorts to ground. Continuous memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

DTCs	Description	Action
P0504:00	Brake Switch A / B Correlation: No Sub Type Information	GO to Pinpoint Test B .
P0572:00	Brake Switch A Circuit Low: No Sub Type Information	GO to Pinpoint Test B .
P0573:00	Brake Switch A Circuit High: No Sub Type Information	GO to Pinpoint Test B .
P0579:00	Cruise Control Multifunction Input "A" Circuit Range/Performance	GO to Pinpoint Test C .
P1703:00	Brake Switch Out Of Self-Test Range: No Sub Type Information	GO to Pinpoint Test B .
P193D:00	Cruise Control Multi-Function Input Signal: No Sub Type Information	GO to Pinpoint Test D .
All other DTCs	—	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

		cruise control normal operation with an administrator key.

Pinpoint Tests

Pinpoint Test A: The Cruise Control Is Inoperative

Normal Operation

The cruise control switches, which are integral to the LH steering wheel switch, use the Steering Column Control Module (SCCM) run/start voltage and the SCCM ground. The cruise control functionality is controlled through the cruise control switches, which are hardwired to the SCCM through signal and return circuits.

There are 4 cruise control switches with each switch operating a specific function that uses different resistance values. The SCCM sends out a reference voltage to the cruise control switches and monitors the voltage drop when a cruise control switch is pressed. The voltage drop varies depending upon the resistance of each switch, providing a specific indication to the SCCM of which switch is pressed. The SCCM sends a network message to the PCM over the High Speed Controller Area Network (HS-CAN), activating and controlling the cruise control system.

The stoplamp switch is a single plunger 2-stage switch with 2 inputs to the PCM. When the brake pedal is applied, the first stage, which is a normally open stoplamp switch, closes and sends a voltage signal to the PCM deactivating the cruise control, if engaged. The second stage is the normally closed cruise control deactivator switch (integral to the stoplamp switch), which opens and removes the ground signal to the PCM when the brake pedal is firmly applied. This is a redundant signal to the PCM. There is less than one millimeter in plunger travel between the first and second stage.

The PCM has cruise control deactivation event PIDs available, through the powertrain datalogger, that show what caused the cruise control deactivation during the current key cycle. Refer to Cruise Control Deactivation Event PIDs in this section.

This pinpoint test is intended to diagnose the following:

- Cruise control switches (part of the LH steering wheel switch)
- Stoplamp switch
- Cruise control deactivator switch (integral to the stoplamp switch)
- Digital Transmission Range (TR) sensor
- PCM
- SCCM
- ABS fault

PINPOINT TEST A: THE CRUISE CONTROL IS INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK FOR DTCs	
• Review the recorded DTCs from the PCM and SCCM self-test.	**Yes** REFER to DTC Charts in this section.

repair4less

- **Are any DTCs recorded?**

No
GO to A2.

A2 CHECK FOR ABS MODULE DTCs

- Review the recorded DTCs from the ABS module self-test.
- **Are any DTCs recorded?**

Yes
REFER to Section 206-09. REPAIR all ABS module DTCs and RETEST the system.

No
GO to A3.

A3 CHECK THE STOPLAMP SWITCH (BOO1 AND BOO2) PIDs

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: PCM DataLogger.
- Monitor the PCM PIDs BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal as follows:

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied lightly	On	Off
Applied firmly	On	On

- **Do the PID values agree with the brake pedal position?**

Yes
GO to A4.

No
GO to Pinpoint Test B.

A4 MONITOR THE PRNDL DISPLAY

- Monitor the PRNDL display in the Instrument Panel Cluster (IPC).
- Select DRIVE.
- **Does the PRNDL display agree with the TR selector lever position?**

Yes
GO to A5.

No
REFER to Section 413-01, to continue diagnosis of the PRNDL display.

A5 CHECK THE CRUISE CONTROL SWITCH

- Enter the following diagnostic mode on the scan tool: SCCM DataLogger.
- Press each cruise control switch button while monitoring the cruise control switch PID (SCCS).

Cruise Control Switch	SCCS PID Value
—	NONE Pressed
CNCL/RSM	RESUME/COAST
ON/OFF	Cruise Off or Cruise On
SET +	SET +
SET -	SET -

- **Does the PID value agree with the switch position?**

Yes
GO to A6.

No
If only one switch does not display the correct PID value, INSTALL a new cruise control switch. REFER to Section 211-05. TEST the system for normal operation.

Otherwise, GO to Pinpoint Test C.

A6 CHECK FOR CORRECT PCM OPERATION

• Disconnect all the PCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: DTC P0504:00, P0572:00, P0573:00 Or P1703:00

Refer to Wiring Diagrams Cell 31 , Cruise Control for schematic and connector information.

Normal Operation

The stoplamp switch is a single plunger 2-stage switch with 2 inputs to the PCM. When the brake pedal is applied, the first stage, which is a normally open stoplamp switch, closes and sends a voltage signal to the PCM deactivating the cruise control, if engaged. The second stage is the normally closed cruise control deactivator switch (integral to the stoplamp switch), which opens and removes the ground signal (3.7L, 5.0L and 6.2L engine) or reference voltage (3.5L engine) to the PCM when the brake pedal is firmly applied. This is a redundant signal to the PCM. There is less than one millimeter in plunger travel between the first and second stage.

DTC Description	Fault Trigger Conditions
P0504:00 — Brake Switch A / B Correlation: No Sub Type Information	A DTC that sets when the PCM does not sense the correct sequence of the brake pedal input signal from both the cruise control deactivator and stoplamp switches when the brake pedal is pressed and released.
P0572:00 — Brake Switch A Circuit Low: No Sub Type Information	A DTC that sets when the PCM detects an open in the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp BOO input during start and stop driving cycles. If the BOO input to the PCM is always off during start and stop driving cycles this DTC sets in continuous memory.
P0573:00 — Brake Switch A Circuit High: No Sub Type Information	A DTC that sets when the PCM detects an short to voltage on the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp BOO input during start and stop driving cycles. If the BOO input to the PCM is always on during start and stop driving cycles this DTC sets in continuous memory.
P1703:00 — Brake Switch Out Of Self -Test Range: No Sub Type Information	A DTC that sets in the PCM during the self-test, when the brake switch input signal is high or does not cycle high and low.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Stoplamp switch
- Cruise control deactivator switch (integral to the stoplamp switch)
- PCM

repair4less

- ABS module

PINPOINT TEST B: DTC P0504:00, P0572:00, P0573:00 Or P1703:00

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>B1 CHECK THE OPERATION OF THE STOPLAMPS
• Ignition ON.
• Operate the stoplamps.
• Do the stoplamps and high mounted stoplamp operate correctly?</td><td>Yes

 N0112631 • **Is the resistance less than 5 ohms?**	
B8 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH FOR CORRECT OPERATION (3.5L)	
• Ignition OFF. • Disconnect: PCM C1551B . • While firmly applying and releasing the brake pedal, measure the resistance between the PCM C1551B-93, circuit CES09 (VT/OG), harness side and the PCM C1551B-7, circuit RE407 (YE/VT), harness side.  N0123615 • **Is the resistance less than 5 ohms with the brake pedal released, and greater than 10,000 ohms with the brake pedal firmly applied?**	**Yes** GO to B9 . **No** GO to B10 .
B9 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Stoplamp Switch C278. • Ignition ON. • Measure the voltage between the PCM C1551B-93, circuit CES09 (VT/OG), harness side and ground; and the PCM C1551B-7, circuit RE407 (YE/VT), harness side and ground.  N0123616 • **Is any voltage present?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation. **No** GO to B12 .
B10 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH	

repair4less

SIGNAL CIRCUIT FOR AN OPEN OR SHORT TO GROUND • Ignition OFF. • Measure the resistance between the PCM C1551B-93, circuit CES09 (VT/OG), harness side and the stoplamp switch C278-3, circuit CES09 (VT/OG) harness side; and the PCM C1551B-93, circuit CES09 (VT/OG), harness side and ground.  N0123617 • **Is the resistance less than 5 ohms between the PCM and the stoplamp switch and greater than 10,000 ohms between the PCM and ground?**	**Yes** GO to B11 . **No** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.
B11 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL RETURN CIRCUIT FOR AN OPEN • Measure the resistance between the PCM C1551B-7, circuit RE407 (YE/VT), harness side and the stoplamp switch C278-2, circuit RE407 (YE/VT) harness side.  N0123618 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new stoplamp switch. REFER to Section 417-01 . CLEAR the DTCs. TEST the system for normal operation. **No** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

B12 CHECK FOR CORRECT PCM OPERATION
• Connect: All Disconnected Connectors.
• Disconnect all the PCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test C: The Cruise Control Switches Do Not Operate Correctly

Refer to Wiring Diagrams Cell 31 , Cruise Control for schematic and connector information.

Normal Operation

The cruise control switches, which are integral to the LH steering wheel controls, use the Steering Column Control Module (SCCM) run/start voltage and the SCCM ground. The cruise control functionality is controlled through the cruise control switches and is hardwired to the SCCM through a signal and return circuit.

There are 4 cruise control switches with each switch operating a specific function that uses different resistance values. The SCCM sends out a reference voltage to the cruise control switches and monitors the voltage drop when a cruise control switch is pressed. The voltage drop varies depending upon the resistance of each switch, providing a specific indication to the SCCM of which switch is pressed. The SCCM sends a network message to the PCM over the High Speed Controller Area Network (HS-CAN) relaying the switch status and requesting cruise control operation.

The PCM has cruise control deactivation event PIDs available, through the powertrain datalogger, that show what caused the cruise control deactivation during the current key cycle. Refer to Cruise Control Deactivation Event PIDs in this section.

Powertrain Control Module (PCM)

- P0579:00 (Cruise Control Multifunction Input "A" Circuit Range/Performance) — sets when the cruise control switch circuits are open, shorted to voltage or ground.

SCCM

- B137F:09 (Steering Wheel Left Switch Pack: Component Failure) — a continuous and on-demand DTC that sets when one or more of the cruise control switches are stuck.
- B137F:11 (Steering Wheel Left Switch Pack: Circuit Short To Ground) — a continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to ground.
- B137F:17 (Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold) — a continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to voltage.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Clockspring
- Cruise control switches (part of the LH steering wheel switch)
- SCCM
- PCM

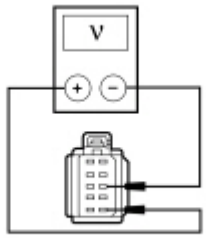
PINPOINT TEST C: THE CRUISE CONTROL SWITCHES DO NOT OPERATE CORRECTLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
C1 CHECK THE CRUISE CONTROL SWITCH	
• Enter the following diagnostic mode on the scan tool: SCCM DataLogger. • Press each cruise control switch button while monitoring the cruise control switch PID (SCCS).	**Yes** GO to C5 . **No**

repair4less

Cruise Control Switch	SCCS PID Value
—	NONE Pressed
CNCL/RSM	RESUME/COAST
ON/OFF	Cruise Off or Cruise On
SET +	SET +
SET -	SET -



- **Does the PID value agree with the switch position?**

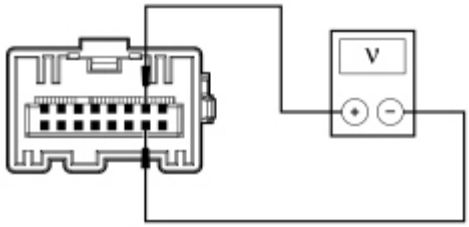
If only one switch does not display the correct PID value, INSTALL a new LH steering wheel switch. REFER to Section 211-05 . TEST the system for normal operation.

Otherwise, GO to C2 .

C2 CHECK FOR VOLTAGE TO THE CRUISE CONTROL SWITCHES

- Ignition OFF.
- Disconnect: LH Steering Wheel Controls C2998.
- Ignition ON.
- Measure the voltage between the LH steering wheel switch C2998-5, harness side and the LH steering wheel switch C2998-3, harness side.

N0120425



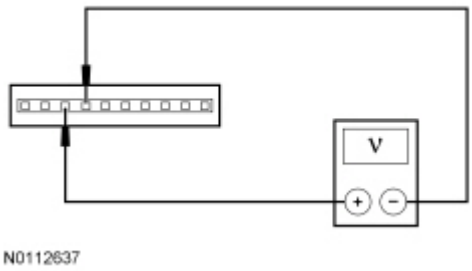
- **Is the voltage approximately 5 volts?**

Yes
INSTALL a new LH steering wheel controls. REFER to Section 211-05 . CLEAR the DTCs. TEST the system for normal operation.

No
GO to C3 .

C3 CHECK FOR VOLTAGE TO THE CLOCKSPRING

- Ignition OFF.
- Remove the driver air bag module. Refer to Section 501-20B .
- Disconnect: Clockspring C218B.
- Ignition ON.
- Measure the voltage between the clockspring connector C218B pin 7, component side and the clockspring C218B pin 15, component side.



N0120426

- **Is the voltage approximately 5 volts present?**

Yes
REPAIR the steering wheel harness or INSTALL a new steering wheel. REFER to Section 211-04 . INSTALL the driver air bag module. REFER to Section 501-20B . TEST the system for normal operation.

No
GO to C4 .

C4 CHECK FOR VOLTAGE AT THE SCCM

• Ignition OFF. • Remove the clockspring. Refer to Section 501-20B . • Ignition ON. • Measure the voltage between the SCCM C2414D-8 , component side and the SCCM C2414D-7, component side.  N0112637 • **Is the voltage approximately 5 volts?**	**Yes** INSTALL a new clockspring. REFER to Section 501-20B . TEST the system for normal operation. **No** GO to C5 .
C5 CHECK FOR CORRECT SCCM OPERATION	

• Disconnect all the SCCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the SCCM connectors and make sure they seat correctly.
• Connect: All Disconnected Connectors.
• Install the driver air bag module. Refer to Section 501-20B .
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new SCCM . REFER to Section 211-05 . INSTALL the driver air bag module. REFER to Section 501-20B . CLEAR the DTCs. TEST the system for normal operation.
	
	If DTC P0579 is still present, GO to C6 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

C6 CHECK FOR CORRECT PCM OPERATION	

• Connect: All Disconnected Connectors.
• Disconnect all the PCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: DTC P193D:00

Normal Operation

- DTC P193D:00 (Cruise Control Multi-Function Input Signal: No Sub Type Information) — sets when the PCM is not receiving the High Speed Controller Area Network (HS-CAN) signal from the Steering Column Control Module (SCCM) for the cruise control switches.

repair4less

This pinpoint test is intended to diagnose the following:

- PCM
- SCCM

PINPOINT TEST D: DTC P193D:00

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>D1 CHECK THE CRUISE CONTROL SWITCH PID IN THE PCM
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Powertrain DataLogger — Cruise Control.

REFER to Section 418-00.</td></tr>
<tr><td>D3 RECHECK THE PCM DTCs
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI) or the PMI may not have been carried out.
• Clear the DTCs. Repeat the PCM self-test.
• Is DTC P193D still present?</td><td>Yes
GO to D4.

No
The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.</td></tr>
<tr><td>D4 CHECK FOR CORRECT PCM OPERATION
• Connect: All Disconnected Connectors.
• Disconnect all the PCM connectors.
• Check for:
▪ corrosion
▪ damaged pins
▪ pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.</td><td>Yes
INSTALL a new PCM. REFER to Section 303-14.

TEST the system for normal operation.

No</td></tr>
</table>

• Operate the system and verify the concern is still present. • **Is the concern still present?**	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

repair4less

Torque Specifications

Description	Nm	lb-in
Driver Seat Module (DSM) screws	7	62
Smart Junction Box (SJB) bolts	2	18

Module Controlled Functions

Body Control Module (BCM)

The Body Control Module (BCM) is located behind the RH side cowl trim panel and controls the following:

- Interior lighting
- Exterior lighting
- Dimmable backlighting
- Battery saver function
- Delayed accessory relay function
- Horn
- Brake shift interlock
- Post crash alert function
- Power door locks
- Remote Keyless Entry (RKE) system
- Anti-theft system (perimeter and passive)
- Remote engine start
- Tire Pressure Monitoring System (TPMS)

Battery Saver

NOTE: Time-out is 1 minute if the vehicle has less than 80 km (50 miles).

The BCM provides automatic shut-off of some system controlled components after a time-out period in order to save battery voltage. A timer in the BCM is started when the ignition is turned off and all the doors are closed. When 10 minutes have elapsed, the voltage is automatically shut off by the BCM. While the BCM has voltage disabled, if the ignition state is changed to any position other than OFF, any door becomes ajar, the UNLOCK button of the RKE transmitter is pressed, a valid keypad code is entered, or the instrument panel dimmer switch is pressed, the BCM restores voltage and starts the timer again.

Post Crash Alert Function

The post crash alert function is controlled by the BCM. If the Restraints Control Module (RCM) determines an impact of enough severity (the air bags may or may not be deployed), the RCM sends a message to the BCM over the High Speed Controller Area Network (HS-CAN) and the post crash alert function is activated. The post crash alert function activates the hazard lamp function and cycles the horn on 3 times, then off for 4 seconds, and repeats this cycle until the battery is discharged or the function is turned off. The post crash alert function can be turned off by:

- pressing the hazard flasher lamp switch (which may need to be pressed more than once).
- pressing the RKE transmitter UNLOCK button.
- pressing the RKE transmitter PANIC button.

Upfitter System

The upfitter system consists of upfitter relays and switches. The upfitter switches are located on the center console.

repair4less

The upfitter switches each have an indicator that illuminates when the switch is in the ON position. The upfitter switches control relays for switching customer installed accessories on and off. The 4 upfitter switches can enable its corresponding relay only when the ignition is in run or accessory.

Upfitter relays 1 and 2 can support up to a 30A output each, upfitter relay 3 can support up to a 15A output and upfitter relay 4 can support up to a 10A output.

Disabling Transport or Factory Mode

Transport Mode

NOTE: During vehicle build, some vehicle modules (Instrument Panel Cluster (IPC), Body Control Module (BCM) and Remote Functions Receiver (RFR) module [if equipped]) are set in factory mode. While in the factory mode, the IPC displays FACTORY MODE CONTACT DEALER in the message center. If the vehicle is set in factory mode, the system does not automatically revert to another mode and must be manually set to either the transport or normal operation mode. When the vehicle build is complete, the vehicle is set to transport mode. While in transport mode, the IPC displays TRANSPORT MODE CONTACT DEALER in the message center. Transport mode is used to reduce the drain on the battery during longer periods where the vehicle is not used. Various systems may be altered or are disabled when in the transport mode. The vehicle automatically reverts to normal operation mode after being driven 201 km (125 mi).

1. Verify the battery is fully charged.

2. To disable or turn off the transport mode, carry out (within 10 seconds):
   - With ignition in RUN, press brake pedal 5 times.
   - Press hazard switch 4 times (on, off, on, off).

Factory Mode

NOTE: During vehicle build, some vehicle modules (IPC , BCM and Remote Functions Receiver (RFR) module [if equipped]) are set in factory mode. While in the factory mode, the IPC displays FACTORY MODE CONTACT DEALER in the message center. If the vehicle is set in factory mode, the system automatically reverts back to normal mode after 60 ignition cycles.

1. Verify the battery is fully charged.

2. Cycle the ignition 60 times.

repair4less

Body Control Module (BCM)

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

The Body Control Module (BCM) controls various systems by monitoring inputs from switches, sensors and messages sent from other modules. The BCM activates outputs based on the inputs received. For example, the Steering Column Control Module (SCCM) monitors the headlamp switch and transmits the headlamp switch position to the BCM over the network. Based on this input, the BCM may provide voltage to the exterior lamps.

Field-Effect Transistor (FET) Protection

A Field-Effect Transistor (FET) is a type of transistor that, when used with module software, monitors and controls current flow on module outputs. The FET protection strategy prevents module damage in the event of excessive current flow.

The BCM utilizes an FET protective circuit strategy for many of its outputs (for example, a headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the FET protection to allow the circuit to function. The next time the driver requests a circuit to activate that has been shut down by a previous short (FET protection) and the circuit is still shorted, the FET protection shuts off the circuit again and the cumulative counter advances.

repair4less

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each FET protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the FET and the ability of the FET to withstand it. A module lifetime level of fault events is established based upon the durability of the FET . If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each tolerance level is reached, DTC U1000:00 should set along with the short circuit DTC that was stored on the first failure. These DTCs cannot be cleared until the vehicle is repaired.

After the repair, it is necessary for the module successfully complete a self-test (the module no longer detects the fault), to clear the DTCs using the Clear DTC operation on the scan tool, and then cycling the ignition for the circuit function to return.

The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur. If the number of short circuit fault events reach the third level, then DTCs U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and the module must be replaced after the initial fault is repaired.

Gateway Function

The BCM acts as a gateway module by receiving information in one format and transmitting it to other modules using another format. For example, the BCM receives the vehicle speed data from the PCM over the High Speed Controller Area Network (HS-CAN), converts the data into a Medium Speed Controller Area Network (MS-CAN) message and sends (gateways) the message to other network modules such as the HVAC module and the Audio Front Control Module (ACM). This enables network communication between modules that do not communicate using the same network (HS-CAN or MS-CAN).

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Body Control Module (BCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).
5. **NOTE:** The Vehicle Communication Module (VCM) prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.

- check the scan tool connection to the VCM .
- refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is ON.
     - The air bag warning indicator prove-out confirms ignition ON (other indicators may not prove ignition ON). If the ignition does not turn on, refer to Section 211-05 to diagnose no power in RUN.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 , The PCM Does Not Respond To The Scan Tool, to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication with one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM .

9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

		TEST the system for normal operation.
U2200:55	Control Module Configuration Memory Corrupt: Not Configured	CARRY OUT PMI on the BCM. REFER to Section 418-01. CLEAR the DTCs. REPEAT the self-test. If DTC U2200:55 is retrieved again, INSTALL a new BCM. REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.
U3000:49	Control Module: Internal Electronic Failure	ADDRESS all other DTCs first. CLEAR the DTCs. REPEAT the self-test. If DTC U3000:49 is retrieved again, INSTALL a new BCM. REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test G.
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test H.
U300A:01	Ignition Switch: General Electrical Failure	REFER to Section 211-05.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• No communication with the Body Control Module (BCM)	• Wiring, terminals or connectors • BCM	• REFER to Section 418-00, The BCM Does Not Respond To The Scan Tool.

Pinpoint Tests

Pinpoint Test A: DTC U0100:00

Normal Operation

- DTC U0100:00 (Lost Communication With ECM/PCM "A": No Sub Type Information) — sets in the Body Control Module (BCM) if data messages received (vehicle speed) from the PCM are missing for more than 1 second.

This pinpoint test is intended to diagnose the following:

- Communication network concern
- PCM
- BCM

PINPOINT TEST A: DTC U0100:00

Test Step	Result / Action to Take
A1 VERIFY THE SCAN TOOL CAN COMMUNICATE WITH THE PCM • Connect the scan tool. • Check that a vehicle session can be established using the scan tool. • **Can a vehicle session be established?**	**Yes** GO to A2 . **No** REFER to Section 418-00 , The PCM Does Not Respond To The Scan Tool.
A2 CHECK THE BCM CONTINUOUS MEMORY DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test . • Clear the DTCs. Repeat the BCM self-test. • **Is DTC U0100:00 retrieved again?**	**Yes** GO to A3 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
A3 RETRIEVE THE RECORDED DTCs FROM THE BCM SELF-TEST • Check for recorded BCM DTCs from the self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test G . For DTC U3003:17, GO to Pinpoint Test H . **No** GO to A4 .
A4 CHECK FOR DTC U0100, U0100:00 OR U0100:87 SET IN OTHER MODULES • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test . • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0100, U0100:00 or U0100:87 set in any other module?**	**Yes** INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation. **No** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.

Pinpoint Test B: DTC U0121:00

Normal Operation

- DTC U0121:00 (Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information) — sets in the Body Control Module (BCM) if data messages received from the ABS module are missing.

This pinpoint test is intended to diagnose the following:

- Communication network concern
- ABS module
- BCM

repair4less

PINPOINT TEST B: DTC U0121:00

Test Step	Result / Action to Take
B1 VERIFY THE CUSTOMER CONCERN	
• Ignition ON. • Verify that there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to B2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
B2 CHECK THE COMMUNICATION NETWORK	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test . • Carry out the network test. • **Does the ABS module pass the network test?**	**Yes** GO to B3 . **No** REFER to Section 418-00 , The ABS Module Does Not Respond To The Scan Tool.
B3 RETRIEVE THE RECORDED DTCs FROM THE BCM AND SELF-TEST	
• Check for recorded BCM DTCs from the self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test G . For DTC U3003:17, GO to Pinpoint Test H . **No** GO to B4 .
B4 RECHECK THE BCM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the BCM self-test. • **Is DTC U0121:00 still present?**	**Yes** GO to B5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
B5 CHECK FOR DTC U0121, U0121:00 OR U0121:87 SET IN OTHER MODULES	
• Clear the DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test . • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0121, U0121:00 or U0121:87 set in any other module?**	**Yes** INSTALL a new ABS module. REFER to Section 206-09 . CLEAR the DTCs. REPEAT the BCM self-test. **No** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.

Pinpoint Test C: DTC U0131:00

Normal Operation

- DTC U0131:00 (Lost Communication With Power Steering Control Module: No Sub Type Information) — sets in the Body Control Module (BCM) if data messages received from the Power Steering Control Module (PSCM) are missing.

This pinpoint test is intended to diagnose the following:

- Communication network concern
- PSCM
- BCM

PINPOINT TEST C: DTC U0131:00

Test Step	Result / Action to Take
C1 VERIFY THE CUSTOMER CONCERN • Ignition ON. • Verify that there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to C2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
C2 CHECK THE COMMUNICATION NETWORK • Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test . • Carry out the network test. • **Does the PSCM pass the network test?**	**Yes** GO to C3 . **No** REFER to Section 418-00 , The PSCM Does Not Respond To The Scan Tool.
C3 RETRIEVE THE RECORDED DTCs FROM THE BCM SELF-TEST • Check for recorded BCM DTCs from the self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test G . For DTC U3003:17, GO to Pinpoint Test H . **No** GO to C4 .
C4 RECHECK THE BCM DTCs **NOTE:** If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the BCM self-test. • **Is DTC U0131:00 still present?**	**Yes** GO to C5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
C5 CHECK FOR DTC U0131, U0131:00 OR U0131:87 SET IN OTHER MODULES	

repair4less

• Clear the DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test . • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0131, U0131:00 or U0131:87 set in any other module?**	**Yes** INSTALL a new Electronic Power Assist Steering (EPAS) steering gear. REFER to Section 211-02 . CLEAR the DTCs. REPEAT the BCM self-test. **No** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.

Pinpoint Test D: DTC U0182:00

Normal Operation

- DTC U0182:00 (Lost Communication With Lighting Control Module - Front: No Sub Type Information) — sets in the Body Control Module (BCM) if headlamp switch data messages received from the Steering Column Control Module (SCCM) are missing.

This pinpoint test is intended to diagnose the following:

- Communication network concern
- SCCM
- BCM

PINPOINT TEST D: DTC U0182:00

Test Step	Result / Action to Take
D1 VERIFY THE CUSTOMER CONCERN	
• Ignition ON. • Verify that there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to D2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
D2 CHECK THE COMMUNICATION NETWORK	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test . • Carry out the network test. • **Does the SCCM pass the network test?**	**Yes** GO to D3 . **No** REFER to Section 418-00 , The SCCM Does Not Respond To The Scan Tool.
D3 RETRIEVE THE RECORDED DTCs FROM THE BCM SELF-TEST	
• Check for recorded BCM DTCs from the self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test G . For DTC U3003:17, GO to Pinpoint Test H .

	No GO to D4 .
D4 RECHECK THE BCM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the BCM self-test. • **Is DTC U0182:00 still present?**	**Yes** GO to D5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
D5 CHECK FOR DTC U0182, U0182:00 OR U0182:87 SET IN OTHER MODULES	
• Clear the DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test . • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0182, U0182:00 or U0182:87 set in any other module?**	**Yes** INSTALL a new SCCM . REFER to Section 211-05 . CLEAR the DTCs. REPEAT the BCM self-test. **No** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.

Pinpoint Test E: DTC U0212:00

Normal Operation

- DTC U0212:00 (Lost Communication With Steering Column Control Module: No Sub Type Information) — sets in the Body Control Module (BCM) if turn signal switch data messages received from the Steering Column Control Module (SCCM) are missing.

This pinpoint test is intended to diagnose the following:

- Communication network concern
- SCCM
- BCM

PINPOINT TEST E: DTC U0212:00

Test Step	Result / Action to Take
E1 VERIFY THE CUSTOMER CONCERN	
• Ignition ON. • Verify that there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to E2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

repair4less

E2 CHECK THE COMMUNICATION NETWORK	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test . • Carry out the network test. • **Does the SCCM pass the network test?**	**Yes** GO to E3 . **No** REFER to Section 418-00 , The SCCM Does Not Respond To The Scan Tool.
E3 RETRIEVE THE RECORDED DTCs FROM THE BCM SELF-TEST	
• Check for recorded BCM DTCs from the self-test. • **Is DTC U3003:16 or DTC U3003:17 recorded?**	**Yes** For DTC U3003:16, GO to Pinpoint Test G . For DTC U3003:17, GO to Pinpoint Test H . **No** GO to E4 .
E4 RECHECK THE BCM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the BCM self-test. • **Is DTC U0212:00 still present?**	**Yes** GO to E5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
E5 CHECK FOR DTC U0212, U0212:00 OR U0212:87 SET IN OTHER MODULES	
• Clear the DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test . • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0212, U0212:00 OR U0212:87 set in any other module?**	**Yes** INSTALL a new SCCM . REFER to Section 211-05 . CLEAR the DTCs. REPEAT the BCM self-test. **No** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.

Pinpoint Test F: DTC U1000:00

Normal Operation

The Body Control Module (BCM) controls the output of several vehicle systems using solid state drivers. A DTC sets when an overload occurs on any of these drivers. The module tracks the number of repetitive faults on each of these circuits and compares this number of overloads to 3 progressive thresholds established for each circuit.

At the each threshold, DTC U1000:00 sets along with the DTC associated with the affected circuit.

- DTC U1000:00 (Solid State Driver Protection Activated - Driver Disabled: No Sub Type Information) — sets when the BCM has disabled a circuit due to a repetitive circuit overload and a progressive threshold is met.

This pinpoint test is intended to diagnose the following:

- Output circuit short
- BCM

PINPOINT TEST F: DTC U1000:00

Test Step	Result / Action to Take
F1 REVIEW THE DTCs	**Yes** CORRECT the DTCs. REFER to the Body Control Module (BCM) DTC chart in this section. After the repair, GO to F2 . **No** GO to F2 .
NOTICE: **First follow the necessary diagnostics to resolve DTC U1000:00 and any other present DTCs (ignoring U3000:49). DTC U1000:00 is only present when there is another DTC due to software or circuitry issues that must be resolved before another self-test is run. DTC U3000:49 is only present once the final threshold has been met. Failure to correct the fault condition first may cause damage to the new BCM , resulting in a repeat repair.** • Review the DTCs from the BCM self-test. • **Are any other DTCs present, besides U1000:00 or U3000:49?**	
F2 REPEAT THE BCM SELF-TEST	**Yes** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The circuit short has been repaired.
• Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test . • Clear the DTCs and repeat the BCM self-test. • **Is DTC U3000:49 present?**	

Pinpoint Test G: DTC U3003:16

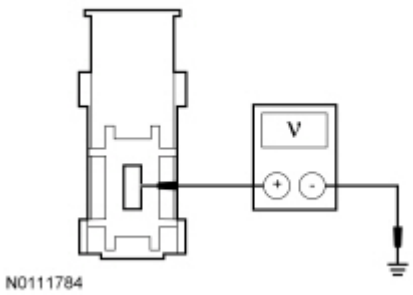
Refer to Wiring Diagrams Cell 13 , Power Distribution/SJB for schematic and connector information.

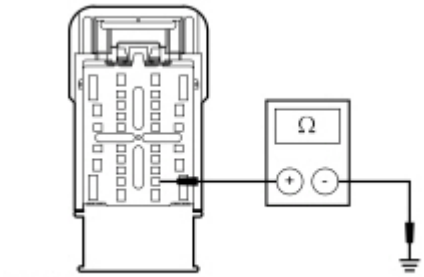
Normal Operation

- DTC U3003:16 (Battery Voltage: Circuit Voltage Below Threshold) — sets in the Body Control Module (BCM) when the BCM detects that battery voltage has dropped below 9 volts on the voltage supply circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- High circuit resistance
- BCM





repair4less

PINPOINT TEST G: DTC U3003:16

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
G1 RECHECK THE BCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test . • Clear the DTCs. Repeat the BCM self-test. • **Is DTC U3003:16 still present?**	**Yes** GO to G2 . **No** The system is operating normally at this time. The DTC may have been set due to a previous low battery voltage condition.
G2 CHECK FOR CHARGING SYSTEM DTCs IN THE PCM • Enter the following diagnostic mode on the scan tool: PCM Self-Test . • Carry out the PCM Key ON Engine OFF (KOEO) self-test. • Retrieve the continuous memory DTCs from the PCM. • **Is DTC P0620, P0622, P0625, P0626 or P065B set in the PCM?**	**Yes** REFER to Section 414-00 . **No** GO to G3 .
G3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE • Check the battery condition and verify the battery is fully charged. Refer to Section 414-01 . • **Is the battery OK and fully charged?**	**Yes** GO to G4 . **No** REFER to Section 414-00 .
G4 CHECK THE BCM VOLTAGE PID • Ignition ON. • Measure and record the voltage at the battery. • Enter the following diagnostic mode on the scan tool: BCM DataLogger . • Monitor the BCM voltage PID (V_BATT). • **Is the voltage within 0.2 volt of the recorded battery voltage?**	**Yes** GO to G7 . **No** GO to G5 .
G5 CHECK THE BCM VOLTAGE SUPPLY • Ignition OFF. • Disconnect: BCM C2280G . • Ignition ON. • Measure the voltage between the BCM C2280G-1, circuit SDC04 (RD), harness side and ground.	**Yes** GO to G6 . **No** REPAIR circuit SDC04 (RD) for high resistance. CLEAR the DTC. REPEAT the self-test.

 N0111784 • **Is the voltage within 0.2 volt of the recorded battery voltage?**	
G6 CHECK THE BCM GROUND CIRCUIT FOR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Disconnect: BCM C2280D . • Measure the resistance between the BCM C2280D-25, circuit GD139 (BK/YE), harness side and ground.  N0111785 • **Is the resistance less than 5 ohms?**	**Yes** GO to G7 . **No** REPAIR circuit GD139 (BK/YE) for high resistance. CLEAR the DTC. REPEAT the self-test.
G7 CHECK FOR CORRECT BCM OPERATION	

• Disconnect the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: DTC U3003:17

Refer to Wiring Diagrams Cell 13 , Power Distribution/SJB for schematic and connector information.

Normal Operation

- DTC U3003:17 (Battery Voltage: Circuit Voltage Above Threshold) — sets in the Body Control Module (BCM) when the BCM detects that battery voltage is more than 16 volts on the voltage supply circuit.

repair4less

This pinpoint test is intended to diagnose the following:

- Charging system concern
- BCM

PINPOINT TEST H: DTC U3003:17

NOTE: DTC U3003:17 may be stored in the module memory due to previous battery charging or vehicle jump starting events.

Test Step	Result / Action to Take
H1 CHECK FOR DTC B1317, B1676, P0563 (PCM) OR U3003:17 SET IN OTHER MODULES	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test . • Retrieve the continuous memory DTCs from all modules. • **Is DTC B1317, B1676, P0563 (PCM) or U3003:17 set in more than one module?**	**Yes** REFER to Section 414-00 to diagnose an overcharging condition. **No** GO to H2 .
H2 CHECK THE BATTERY VOLTAGE	
• Turn off all interior/exterior lights and accessories. • Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	**Yes** REFER to Section 414-00 to diagnose an overcharging condition. **No** GO to H3 .
H3 RECHECK FOR DTC U3003:17	
• Turn the engine off. • Ignition ON. • Enter the following diagnostic mode on the scan tool: BCM Self-Test . • Clear the continuous memory DTCs. • Carry out the BCM self-test. • **Is DTC U3003:17 present?**	**Yes** INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation. **No** The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

repair4less

Diagnostic Trouble Code (DTC) Chart

Each module has a comprehensive DTC chart listed in an appropriate section. Refer to the table below for the appropriate section.

Master DTC Chart Index

ABS Module	REFER to Section 206-09 .
Audio Front Control Module (ACM)	• For vehicles with AM/FM/CD, REFER to Section 415-00B . • For vehicles with 4.2-inch (107 mm) display, REFER to Section 415-00C . • For vehicles with 8-inch (203 mm) touchscreen, REFER to Section 415-00D . • For vehicles with Sony® 8-inch (203 mm) touchscreen, REFER to Section 415-00E .
Accessory Protocol Interface Module (APIM)	• For vehicles with AM/FM/CD, REFER to Section 415-00B . • For vehicles with 4.2-inch (107 mm) display, REFER to Section 415-00C . • For vehicles with 8-inch (203 mm) touchscreen, REFER to Section 415-00D . • For vehicles with Sony® 8-inch (203 mm) touchscreen, REFER to Section 415-00E .
Body Control Module (BCM)	REFER to Section 419-10 .
Driver Seat Module (DSM)	REFER to Section 501-10 .

repair4less

Upfitter Relay Box

Principles of Operation

When the ignition is in run or accessory, the upfitter switch assembly receives voltage from the Body Control Module (BCM). The upfitter switches control the 4 upfitter relays in the upfitter relay box. When the relay is energized, voltage is supplied to the customer installed accessories.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical

• Battery Junction Box (BJB) fuse(s):
  ▪ 18 (30A) (upfitter relay 1)
  ▪ 19 (30A) (upfitter relay 2)
  ▪ 28 (10A) (upfitter relay 4)
  ▪ 44 (15A) (upfitter relay 3)
• Body Control Module (BCM) fuse 41 (7.5A) (upfitter switches)
• Wiring, terminals or connectors
• Upfitter relay(s)
• Upfitter switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and GO to Symptom Chart .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The upfitter switch controlled component is inoperative	• Fuse • Wiring, terminals or connectors	• GO to Pinpoint Test I .

	• Customer installed accessory • Upfitter relay • Upfitter switch • Body Control Module (BCM)	
• An upfitter switch on indicator is inoperative	• Upfitter switch	• INSTALL a new upfitter switch. REFER to Upfitter Switch in this section. TEST the system for normal operation.

Pinpoint Tests

Pinpoint Test I: The Upfitter Switch Controlled Component is Inoperative

Refer to Wiring Diagrams Cell 140 , Customer Access for schematic and connector information.

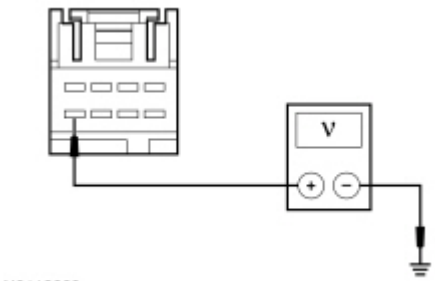
Normal Operations

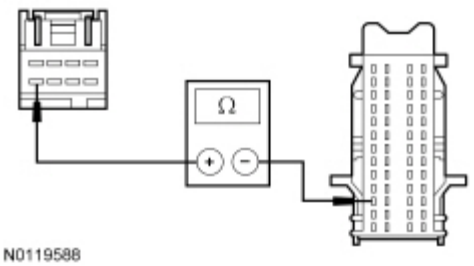
With the ignition is in run or accessory, voltage is supplied to the upfitter switches from the Body Control Module (BCM). When an upfitter switch is activated (moved to the on position), voltage is routed to the coil side of the corresponding upfitter relay.

Each of the upfitter relays (switch side) are supplied voltage at all times from the Battery Junction Box (BJB). When the upfitter relay is switched activated, the relay energizes and supplies voltage to the customer supplied accessory.

All of the upfitter relays share the same ground circuit.

This pinpoint is intended to diagnose the following:





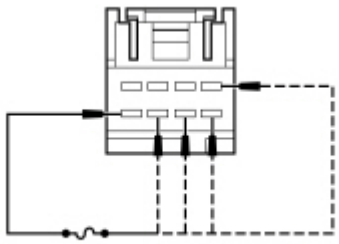
- Fuse
- Wiring, terminals or connectors
- Customer installed accessory
- Upfitter relay
- Upfitter switch
- BCM

PINPOINT TEST I: THE UPFITTER SWITCH CONTROLLED COMPONENT IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
I1 CHECK THE UPFITTER SYSTEM	
• Ignition ON.	**Yes**

repair4less



• Operate all the upfitter accessories. • **Are all the upfitter accessories inoperative?**	VERIFY the BCM fuse 41 (7.5A) is OK. If OK, GO to I2 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short circuit. **No** GO to I5 .
I2 CHECK THE UPFITTER SWITCH ON INDICATORS	
• Place the upfitter switches to the ON position. • **Do the on indicators illuminate?**	**Yes** REPAIR circuit GD138 (BK/WH) between the relays and ground for an open. TEST the system for normal operation. **No** GO to I3 .
I3 CHECK FOR VOLTAGE TO THE UPFITTER SWITCH	
• Ignition OFF. • Disconnect: Upfitter Switch C3389 . • Ignition ON. • Measure the voltage between the upfitter switch C3389-8, circuit CBP41 (BU), harness side and ground.  N0112003 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new upfitter switch. REFER to Upfitter Switch in this section. TEST the system for normal operation. **No** GO to I4 .
I4 CHECK THE UPFITTER SWITCH VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: BCM C2280B . • Measure the resistance between the upfitter switch C3389-8, circuit CBP41 (BU), harness side and the BCM C2280B-3, circuit CBP41 (BU), harness side.  N0119588	**Yes** GO to I11 . **No** REPAIR circuit CBP41 (BU) for an open. TEST the system for normal operation.

- **Is the resistance less than 5 ohms?**

I5 BYPASS THE UPFITTER SWITCH

- Ignition OFF.
- Disconnect: Upfitter Switch C3389 .
- Ignition ON.
- Connect a fused jumper wire between the upfitter switch connector, harness side as follows:

Inoperative Switch	Connector-Pin Circuit	Connector-Pin Circuit
Switch 1	C3389-8 CBP41 (BU)	C3389-7 CAC01 (GN/BU)
Switch 2	C3389-8 CBP41 (BU)	C3389-6 CAC02 (GY/BN)
Switch 3	C3389-8 CBP41 (BU)	C3389-5 CAC03 (WH/VT)
Switch 4	C3389-8 CBP41 (BU)	C3389-1 CAC04 (WH/BU)

N0112005

- **Does the upfitter accessory operate?**

Yes
REMOVE the jumper wire. INSTALL a new upfitter switch. REFER to Upfitter Switch in this section. TEST the system for normal operation.

No
REMOVE the jumper wire. VERIFY the BJB fuse 18 (30A) (relay 1), fuse 19 (30A) (relay 2), fuse 44 (15A) (relay 3) or fuse 28 (10A) (relay 4) is OK. If OK, GO to I6 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short circuit.

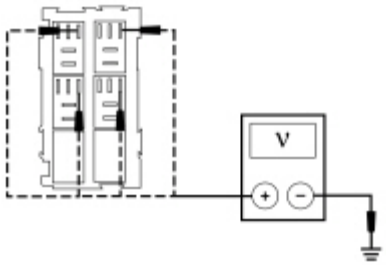
I6 CHECK THE UPFITTER RELAY

- Ignition OFF.
- Connect: Upfitter Switch C3389 .
- Disconnect: Suspect Upfitter Relay .
- Substitute a known good relay.
- Ignition ON.
- Place the upfitter switch in question to the ON position.
- **Does the upfitter accessory operate?**

Yes
REMOVE the known good relay. INSTALL a new upfitter relay. TEST the system for normal operation.

No
REMOVE the known good relay. GO to I7 .

I7 CHECK FOR VOLTAGE TO THE UPFITTER RELAY



repair4less

COIL

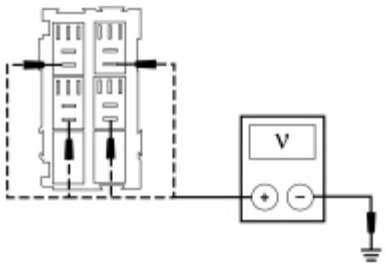
NOTE: Make sure the upfitter switch and the ignition are on.

- Measure the voltage between the suspect upfitter relay, relay box face side and ground as follows:

Upfitter Relay	Cavity	Circuit
Relay 1	1	CAC01 (GN/BU)
Relay 2	1	CAC02 (GY/BN)
Relay 3	1	CAC03 (WH/VT)
Relay 4	1	CAC04 (WH/BU)

N0119591

- **Is the voltage greater than 10 volts?**



Yes
GO to I8 .

No
REPAIR the circuit in question for an open. TEST the system for normal operation.

I8 CHECK THE UPFITTER RELAY VOLTAGE SUPPLY CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Measure the voltage between the suspect upfitter relay, relay box face side and ground as follows:

Upfitter Relay	Cavity	Circuit
Relay 1	3	SBB18 (YE/RD)
Relay 2	3	SBB19 (BU/RD)
Relay 3	3	SBB44 (GN/RD)
Relay 4	3	SBB28 (GN/RD)

N0119592

Yes
GO to I9 .

No
REPAIR the voltage supply circuit in question for an open. TEST the system for normal operation.

- **Is the voltage greater than 10 volts?**

I9 CHECK THE UPFITTER RELAY GROUND CIRCUIT FOR AN OPEN

- Measure the voltage between the suspect upfitter relay, relay box face side and ground as follows:

Upfitter Relay	Cavity Circuit	Cavity Circuit
Relay 1	3 SBB18 (YE/RD)	2 GD120 (BK/GN)
Relay 2	3 SBB19 (BU/RD)	2 GD120 (BK/GN)
Relay 3	3 SBB44 (GN/RD)	2 GD120 (BK/GN)
Relay 4	3 SBB28 (GN/RD)	2 GD120 (BK/GN)

- **Is the voltage greater than 10 volts?**

Yes
GO to I10 .

No
REPAIR the upfitter relay ground circuit in question for an open. TEST the system for normal operation.

I10 CHECK THE UPFITTER RELAY OUTPUT CIRCUIT

- Measure the resistance between the upfitter relay in question and the customer access point as follows:

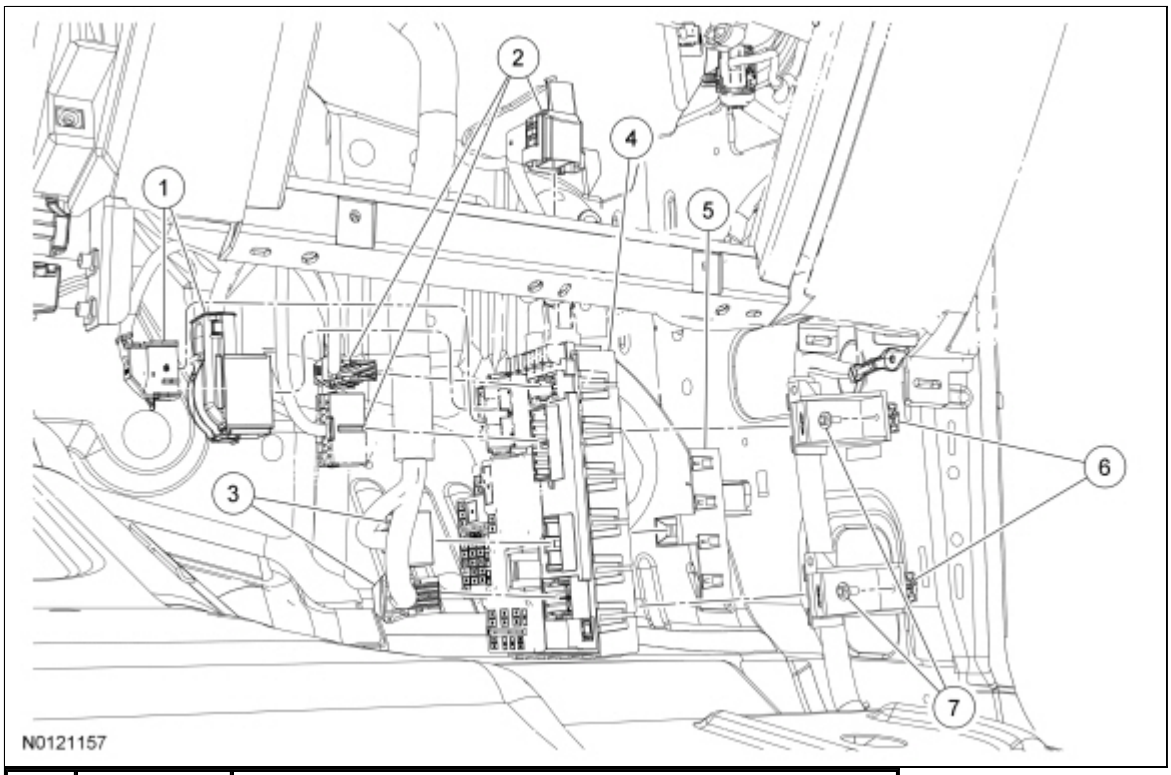
Upfitter Relay	Cavity	Output Circuit
Relay 1	5	CAC05 (YE)
Relay 2	5	CAC06 (GN/BN)
Relay 3	5	CAC07 (VT/GN)
Relay 4	5	CAC08 (BN)

- **Is the resistance less than 5 ohms?**

Yes
The vehicle is operating correctly. REPAIR or INSTALL a new customer installed accessory.

No
REPAIR the upfitter relay output circuit in question for an open. TEST the system for normal operation.

I11 CHECK FOR CORRECT BCM OPERATION



- Disconnect all the BCM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the BCM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

Yes
INSTALL a new BCM . REFER to Body Control Module (BCM) in this section. TEST the system for normal operation.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

repair4less

Body Control Module (BCM)

Item	Part Number	Description
1	—	Body Control Module (BCM) electrical connectors (2 required) (part of 14A005)
2	—	BCM electrical connectors (3 required) (part of 12A581)
3	—	BCM electrical connectors (2 required) (part of 14401)
4	15604	BCM
5	—	BCM front bracket
6	—	BCM bracket (2 required)
7	—	BCM bolt (2 required)

Removal

NOTICE: **Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.**

NOTE: Prior to the replacement of the Body Control Module (BCM), it is necessary to upload the module configuration information to the appropriate scan tool. This information must be downloaded into the new BCM after installation. For additional information, refer to Section 418-01 . In the event that As-Built data entry is required (BCM will not communicate), all Integrated Keyhead Transmitters (IKTs) devices must be programmed. A minimum of 2 devices are necessary to complete the configuration and turn off the flashing

repair4less

interior lights.

1. **NOTE:** This step is necessary only if the BCM is being replaced.

   NOTE: If installing a new BCM, all vehicle keys are erased during the parameter reset procedure. Verify at least 2 of the vehicle keys are available prior to carrying out this procedure.

   Upload the module configuration information from the BCM. For additional information, refer to Section 418-01.

2. Remove the passenger cowl side trim panel. For additional information, refer to Section 501-05.

3. **NOTE:** The upper 12A581 harness BCM (B+) connector may be more easily removed after the BCM brackets and bolts are removed and the BCM can be positioned lower and away from the body in order for the connector release tangs to be accessed and pressed.

   Disconnect the 7 BCM electrical connectors.

4. Remove the in-line connector wiring harness push pins (2) from the BCM.

5. Remove the 2 bolts and the BCM.

6. Remove the BCM front bracket and the 2 BCM brackets from the BCM.

Installation

1. Install the 2 bolts and the BCM.
   - Tighten to 2 Nm (18 lb-in).

2. Install the in-line connector wiring harness push-pins (2) on the BCM.

3. Connect the 7 BCM electrical connectors.

4. **NOTE:** If the BCM was not replaced, this is the last step that is necessary.

   Install the passenger cowl side trim panel. For additional information, refer to Section 501-05.

5. **NOTE:** Once the BCM Programmable Module Installation (PMI) is complete, follow the scan tool's on-screen instructions for performing the Configurable Engine Immobilizer (CEI) Lock Configuration.

   Download the BCM configuration information from the scan tool. For additional information, refer to Section 418-01.

6. **NOTE:** If a new BCM is installed, the BCM and the PCM require a parameter reset to allow the BCM and the PCM to recognize each other.

   NOTE: If equipped, the vehicle's IKTs must be programmed to the new BCM.

   If installing a new BCM, carry out the parameter reset and key programming procedure. For additional information, refer to Section 419-01B.

7. Carry out the BCM on-demand self-test to confirm all DTCs have been cleared.

repair4less

Upfitter Switch

Item	Part Number	Description
1	13D730	Upfitter switch

Removal and Installation

All vehicles

1. Remove the instrument panel center finish panel. For additional information, refer to Section 501-12 .

Vehicles with trailer brakes

2. Using a suitable tool (such as a small screwdriver), press the retaining tab at the top and remove the Trailer Brake Control (TBC) module.

Vehicles without trailer brakes

3. Using a suitable tool (such as a small screwdriver), press the 4 retaining tabs and remove the storage bin.

All vehicles

4. Using a suitable tool (such as a small screwdriver), press the 4 retaining tabs and remove the upfitter switch.

5. To install, reverse the removal procedure.

Inspection and Verification

Dust and Water Leaks

Most dust and water leaks occur due to missing or mis-installed body sealer or components. The source of the leak is detected by:

- pressurizing the vehicle and testing with soapy water.
  - Locate and tape off the body vents.
  - Turn the blower motor on the high position.
  - Turn the air recurculation to the off mode.
  - Close the windows and doors.
  - Open the hood and spray soapy water along body seams and grommets. Make sure to test the areas arround the A-pillar at the fender and the hood hinge area.
  - Check for bubbles.
- inspecting for a dust pattern or water path near and above the area in question.
- removing any trim or carpet in the general area of the leak.
- road testing or water-hose testing the vehicle.
- placing a bright light under the vehicle, removing any necessary trim or carpet and inspecting the interior of the body at joints and weld lines.

Wind Noise

Most wind noise leaks occur at the corners of the windows or in the doors. Wind noise is detected by driving the vehicle at highway speeds or at speeds as specified by the customer. The vehicle should be driven in 4 different directions, with all the windows CLOSED, the radio OFF and the A/C blower motor OFF.

Squeak and Rattle

Squeak and rattle noises are generally caused by loose parts, contact or relative movement between 2 surfaces or loose wires and connectors. The source of the noise can be detected by stopping movement of the suspect part by hand or by using dampening or low friction materials.

Symptom Chart — NVH

Symptom Chart — NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible that any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

Condition	Possible Sources	Action
• Draft/wind noise and water leak around door perimeter	• Loose fit seal	• PINCH seal carrier to improve retention on seal flange.
	• Seal installed incorrectly	• REINSTALL the seal.
	• Door misaligned	• REALIGN the door. CHECK door gaps and fit in door opening and ADJUST as necessary. REFER to Section 501-03 .
	• Scuff plate installed incorrectly	• REINSTALL the scuff plate.
	• Seal or seal pushpins damaged	• INSTALL a new seal/pushpins.
	• Sheet metal joints in door or door opening	• SEAL leaks with silicone gasket and sealant.
• Draft/wind noise and water leak around glass run	• Door glass misaligned	• ADJUST door glass.
	• Glass run installed incorrectly	• REINSTALL glass run. INSERT foam in glass run carrier if necessary.
	• Leak path behind glass run	• INSTALL foam rope behind glass run.
	• Glass run channel spread wide	• PINCH glass run channel to reduce size of opening.
	• Glass run damaged	• INSTALL a new glass run.
• Draft/wind noise and water leak at inner belt line	• Belt line seal installed incorrectly on flange	• ADJUST seal. (Do not bend the flange.)
	• No contact with side glass	• ADJUST door glass.
	• No contact with glass runs at both ends of belt line seal	• ADJUST belt line seal or ADD foam at seal ends.
	• Belt line seal damaged	• INSTALL a new seal.
• Draft/wind noise and water leak at outer belt line	• Belt line seal installed incorrectly on flange (no glass contact)	• ADJUST seal.
	• Belt line seal does not	• ADJUST door glass.

	contact the glass • No contact with glass runs at both ends of belt line seal • Belt line seal damaged	• ADJUST belt line seal or ADD foam at seal ends. • INSTALL a new seal.
• Draft/wind noise at inner door handle/speaker opening	• Hole in weathershield • Weathershield misaligned • Exterior door handle seal misaligned/damaged • Speaker or speaker seal missing or damaged	• SEAL hole with suitable tape. • REALIGN weathershield. INSTALL a new weathershield if pressure sensitive adhesive fails. • REALIGN or INSTALL a new seal as necessary. REFER to Section 501-14 . • REPAIR speaker seal or INSTALL a new door speaker.
