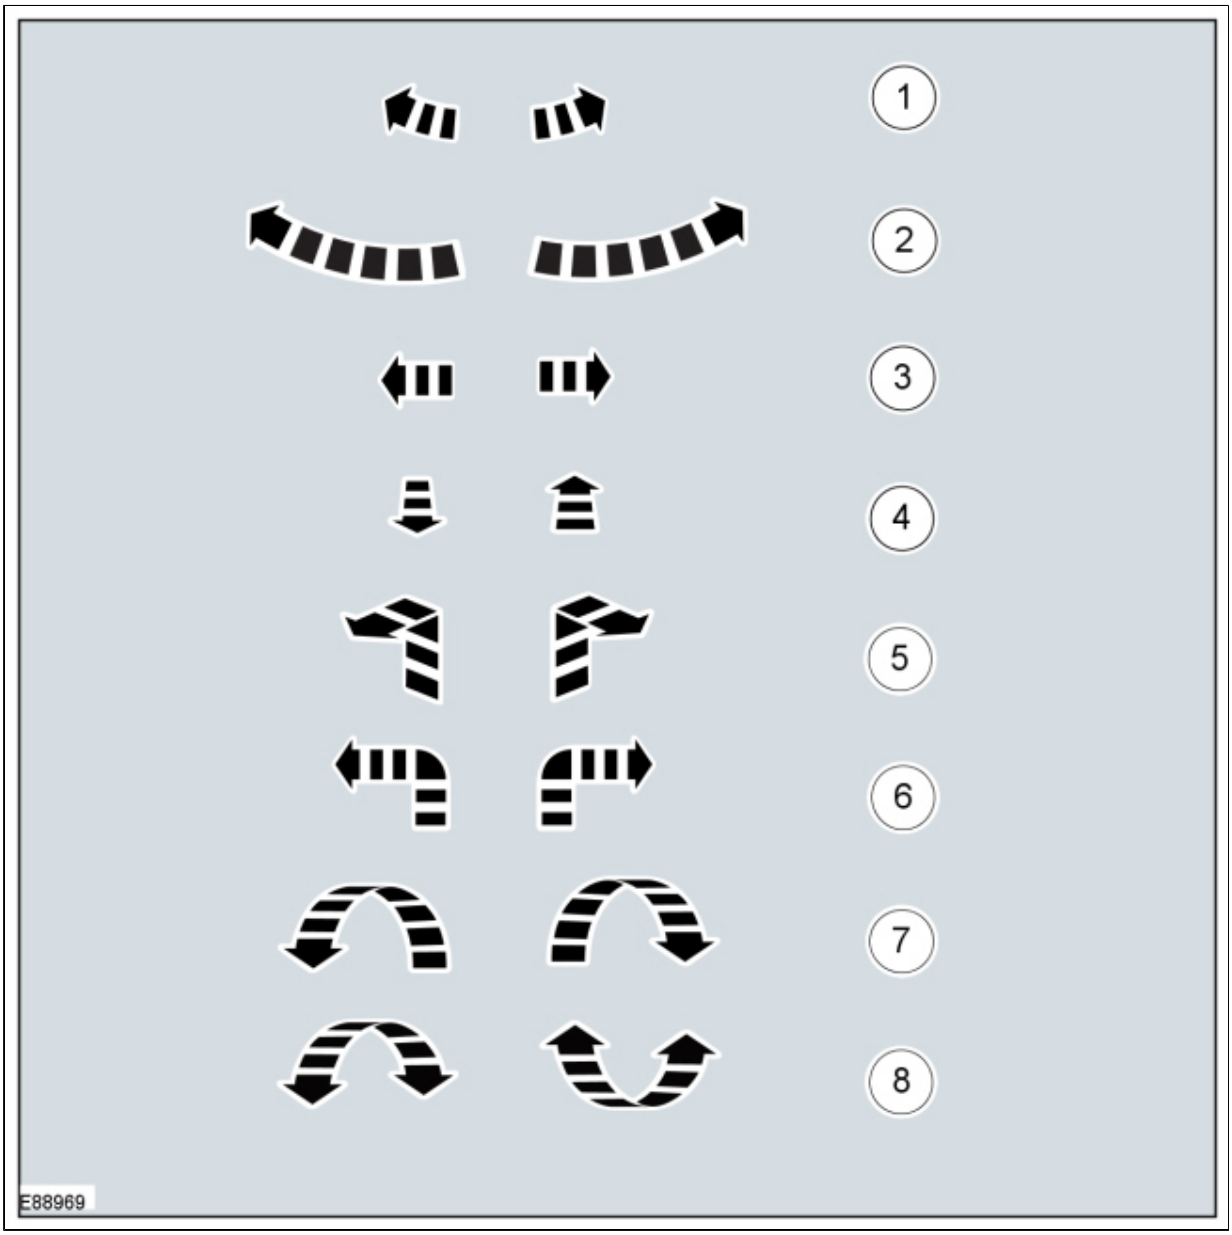
Symbols Glossary

Symbols are used inside the graphics and in the text area to enhance the information.

Movement Symbols

Movement symbols provide detailed information to a required component movement. These component movements can be rotational or 1-3 dimensional movements.

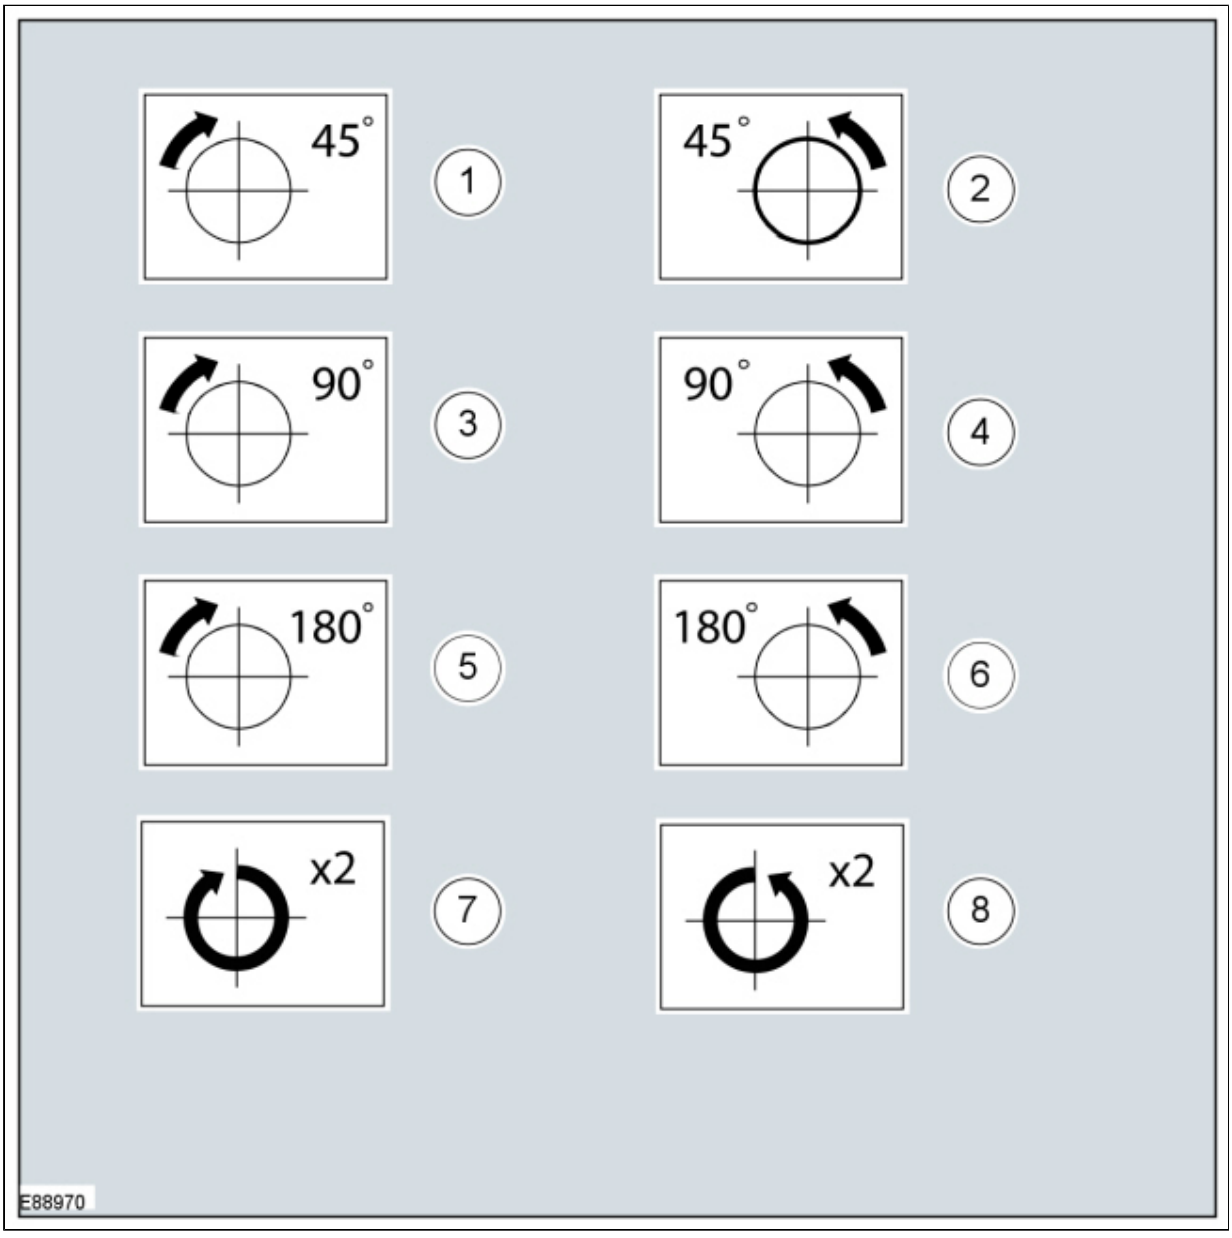


Item	Description
1	Minor component movement clockwise or counterclockwise
2	Major component movement clockwise or counterclockwise
3	Component movement to the left, right, up, or down
4	Component movement towards or away

5	3 dimensional component movement
6	2 dimensional component movement
7	3 dimensional component rotation
8	3 dimensional component cycling

Turn Symbols

Turn symbols are used to provide further information on the direction or angle of component turns.

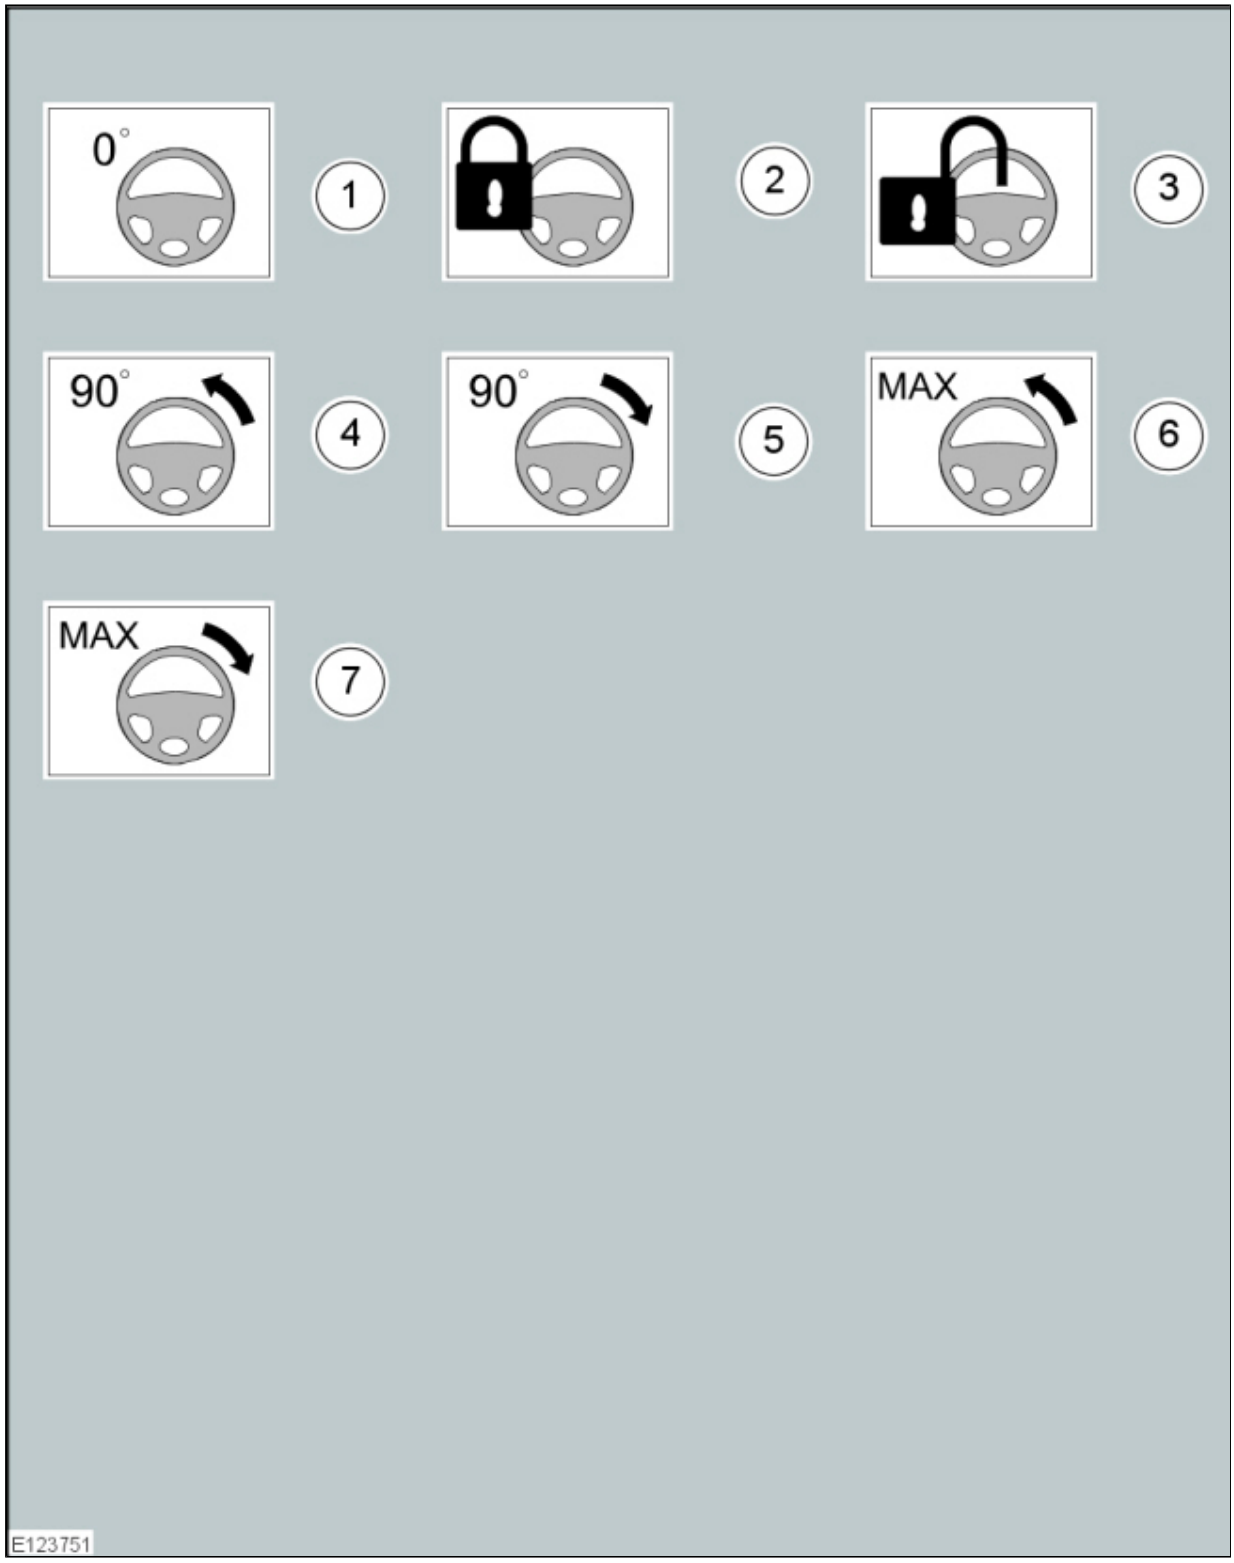


Item	Description
1	Turn the component clockwise through 45°
2	Turn the component counterclockwise through 45°
3	Turn the component clockwise through 90°
4	Turn the component counterclockwise through 90°
5	Turn the component clockwise through 180°
6	Turn the component counterclockwise through 180°

7	Turn the component clockwise through 2 complete turns
8	Turn the component counterclockwise through 2 complete turns

Steering Wheel Symbols

Steering wheel symbols are used to provide further information to a required steering wheel position or steering column lock status.

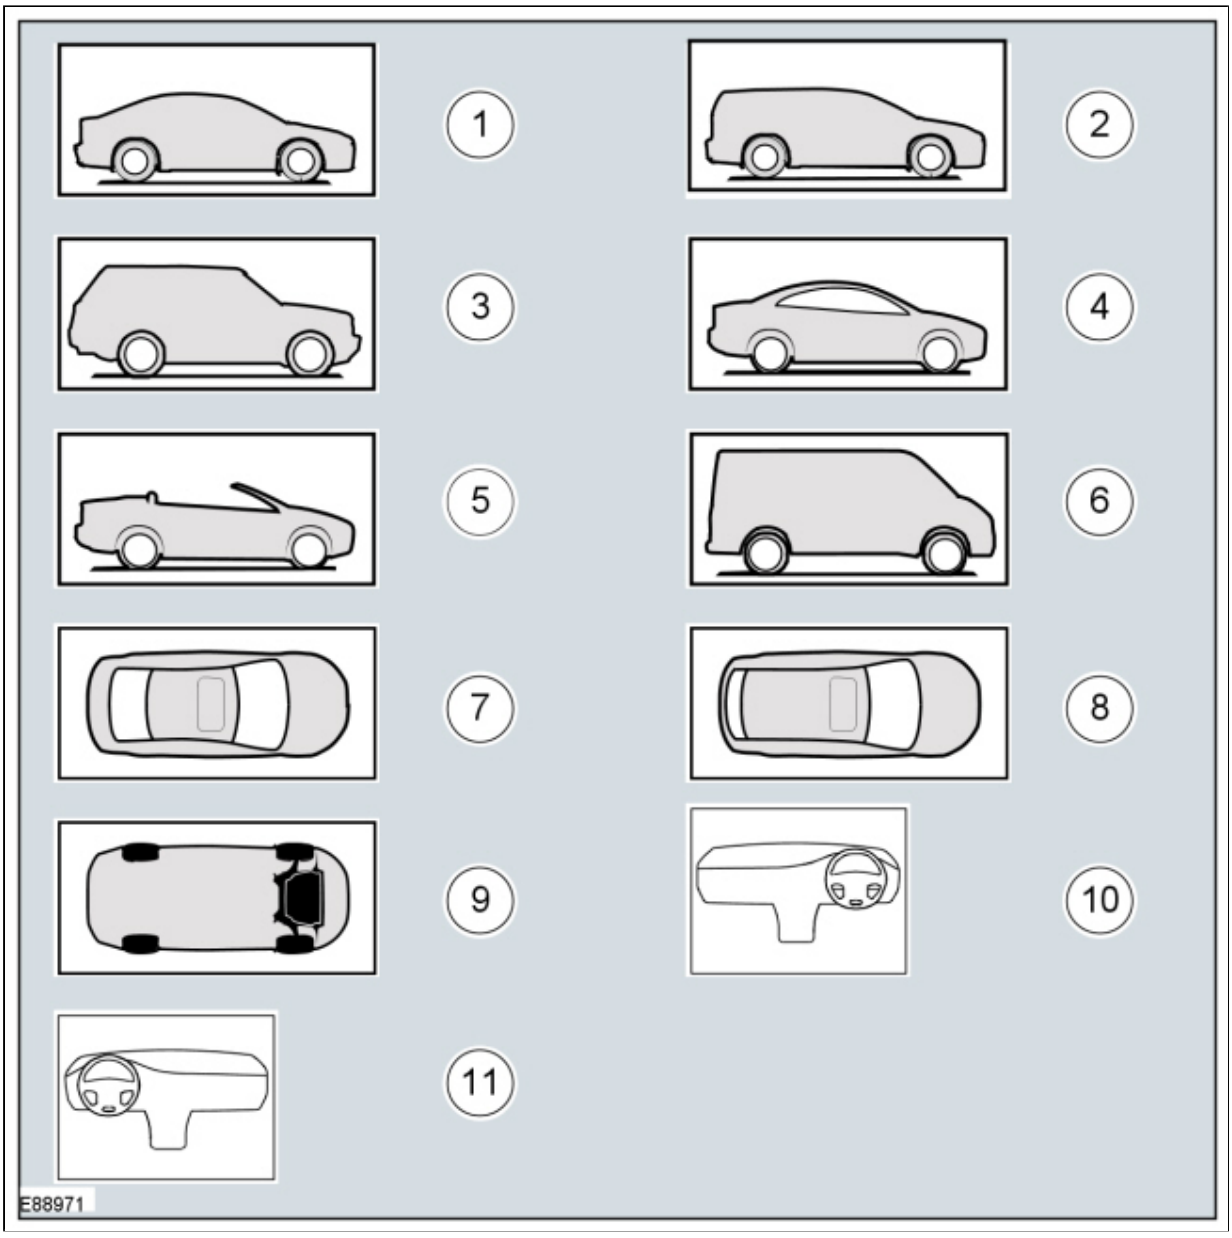


Item	Description

1	Steering wheel in straight ahead position
2	Steering column locked
3	Steering column unlocked
4	Rotate steering wheel 90° left from center
5	Rotate steering wheel 90° right from center
6	Turn steering wheel fully counterclockwise to stop
7	Turn steering wheel fully clockwise to stop

Body Types

Body type symbols are used to identify different body configurations.

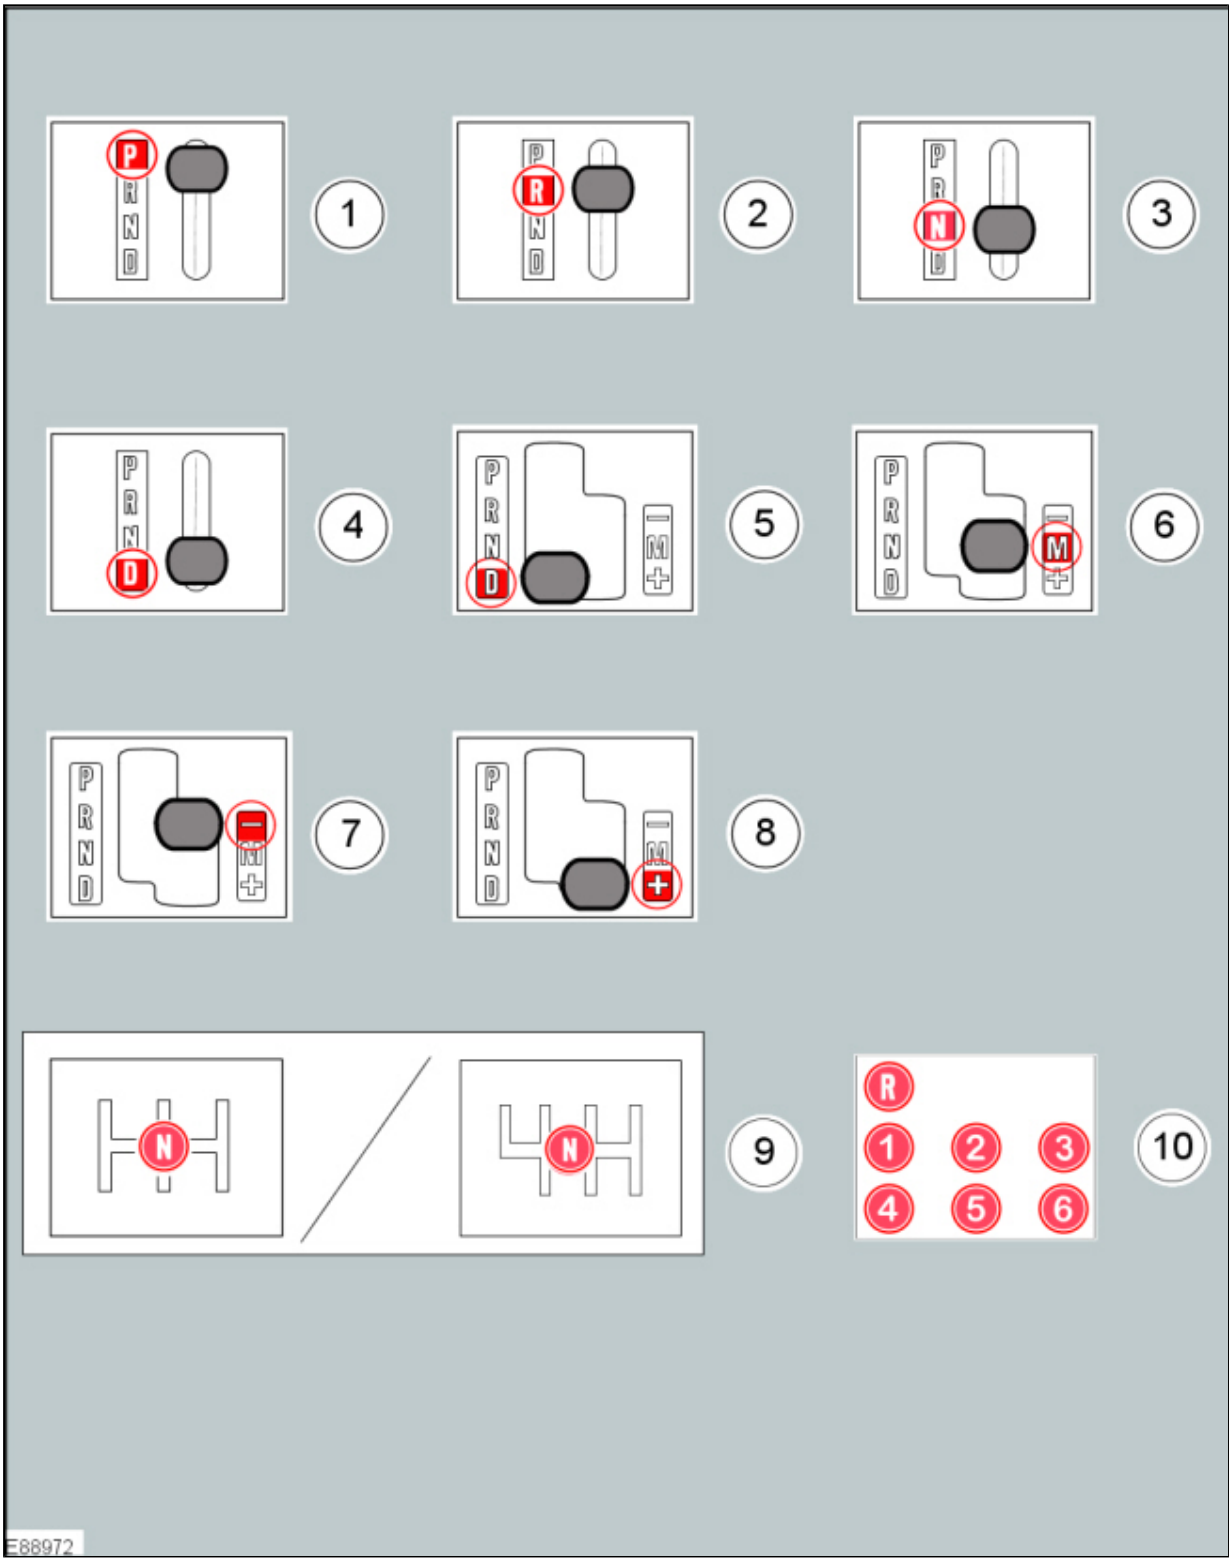


Item	Description
1	3, 4, 5-door body style
2	Wagon body style
3	Sport Utility Vehicle (SUV) body style

4	Coupe body style
5	Convertible body style
6	Van body style
7	3, 4, 5-door body style - Top View
8	Wagon body style - Top View
9	Underbody view
10	Right-hand drive (RHD) vehicle
11	Left-hand drive (LHD) vehicle

Gearshift Lever Position Symbols

Gearshift lever position symbols are used to show the gear position required for the procedure.

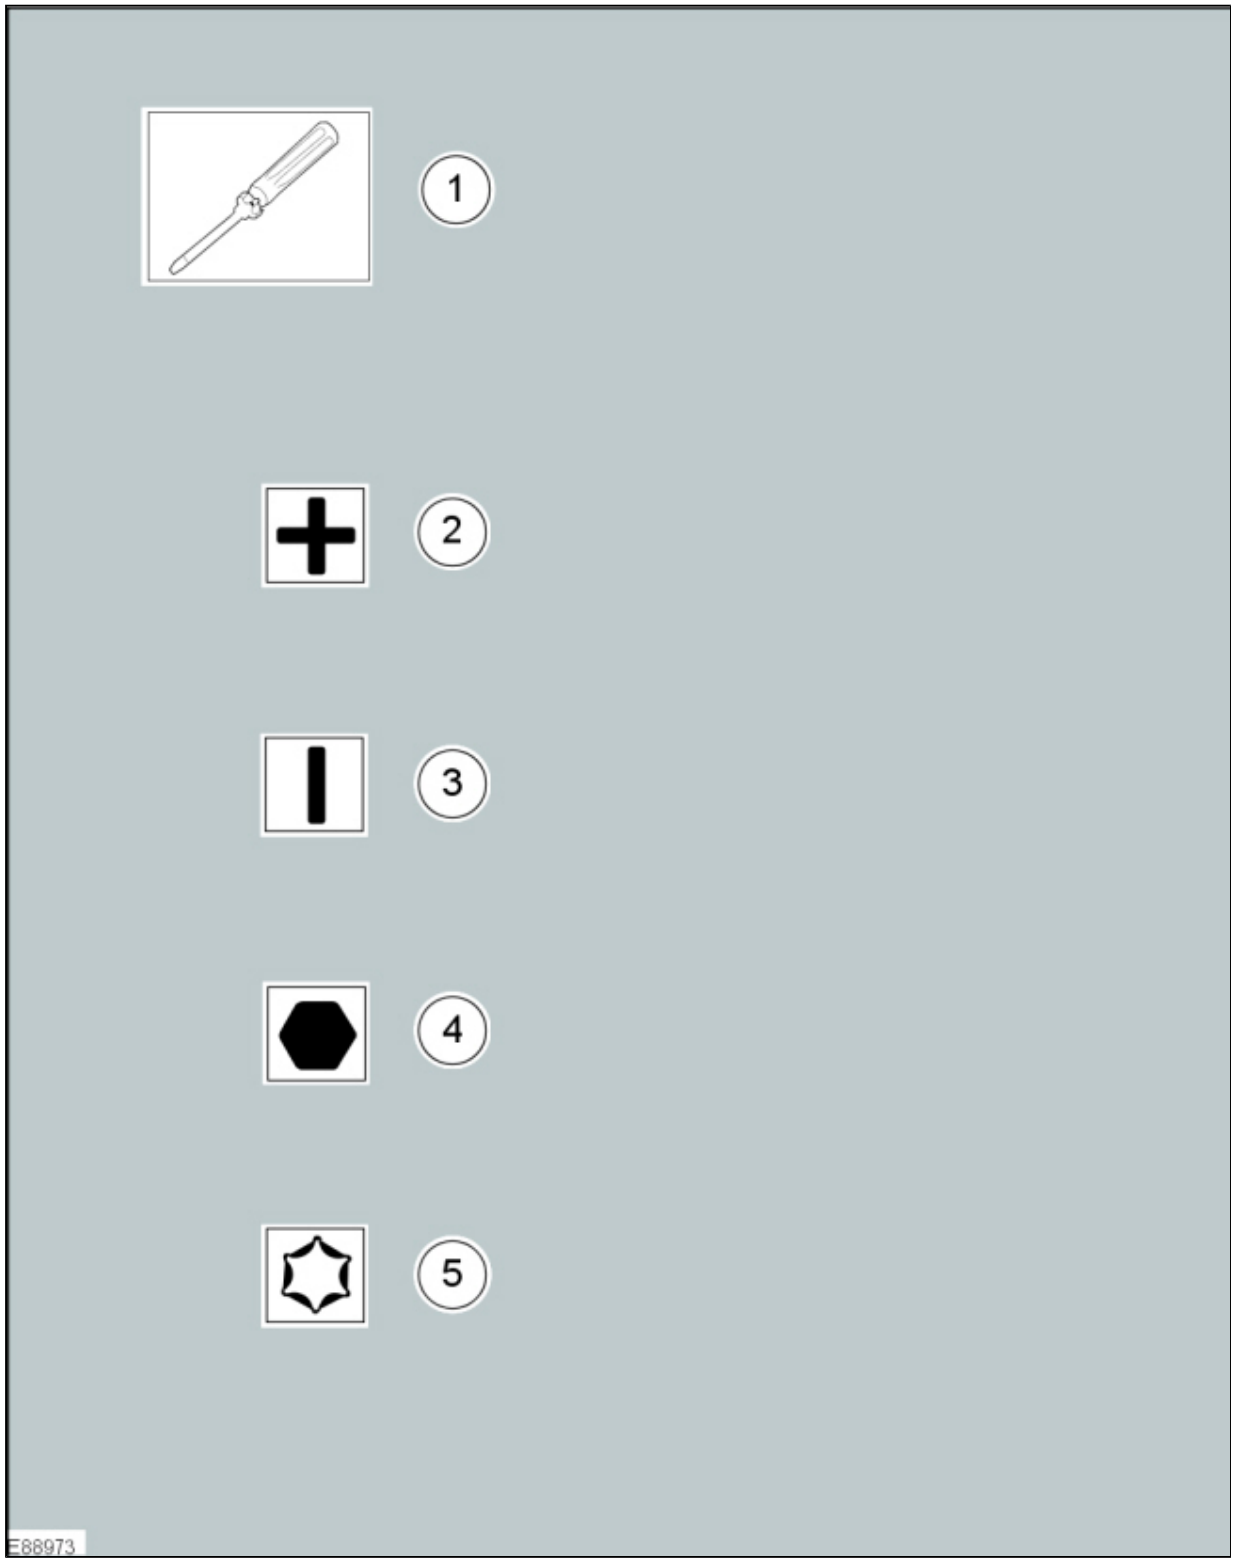


Item	Description
1	Set the selector lever to the park (P) position
2	Set the selector lever to the reverse (R) position
3	Set the selector lever to the neutral (N) position
4	Set the selector lever to the drive (D) position
5	Set the selector lever with manual shift option to the drive (D) position
6	Set the selector lever with manual shift option to the manual (M) position

7	Set the selector lever with manual shift option to the shift down (-) position
8	Set the selector lever with manual shift option to the shift up (+) position
9	Set the manual shift lever to the neutral (N) position
10	Set the manual shift lever to indicated gear position (all possible gears shown here)

Screwdriver Symbols

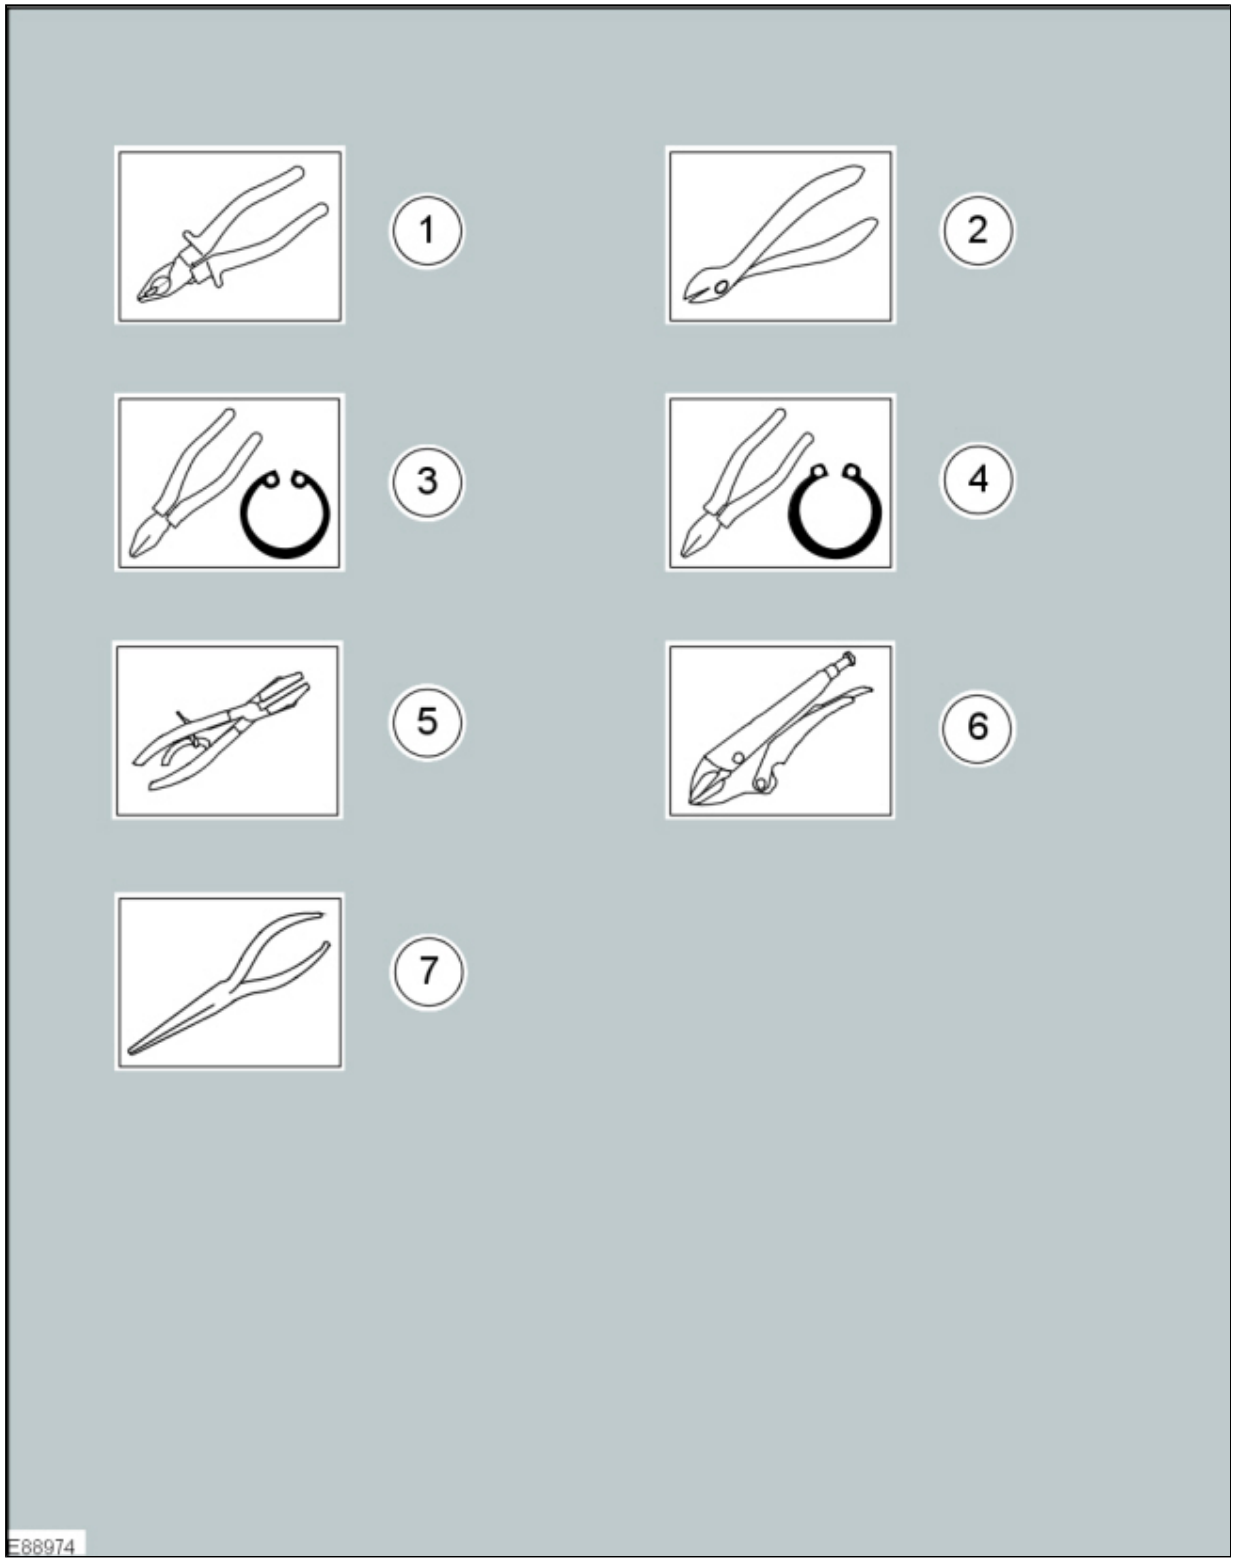
The screwdriver symbols are used to indicate which screwdriver bit is required for the procedure step.



Item	Description
1	Screwdriver
2	Phillips or cross-bladed screwdriver
3	Flat-bladed screwdriver
4	Hexagonal or Allen screwdriver
5	TORX screwdriver

Plier Symbols

The plier symbols are used to indicate which plier is required for the procedure step.

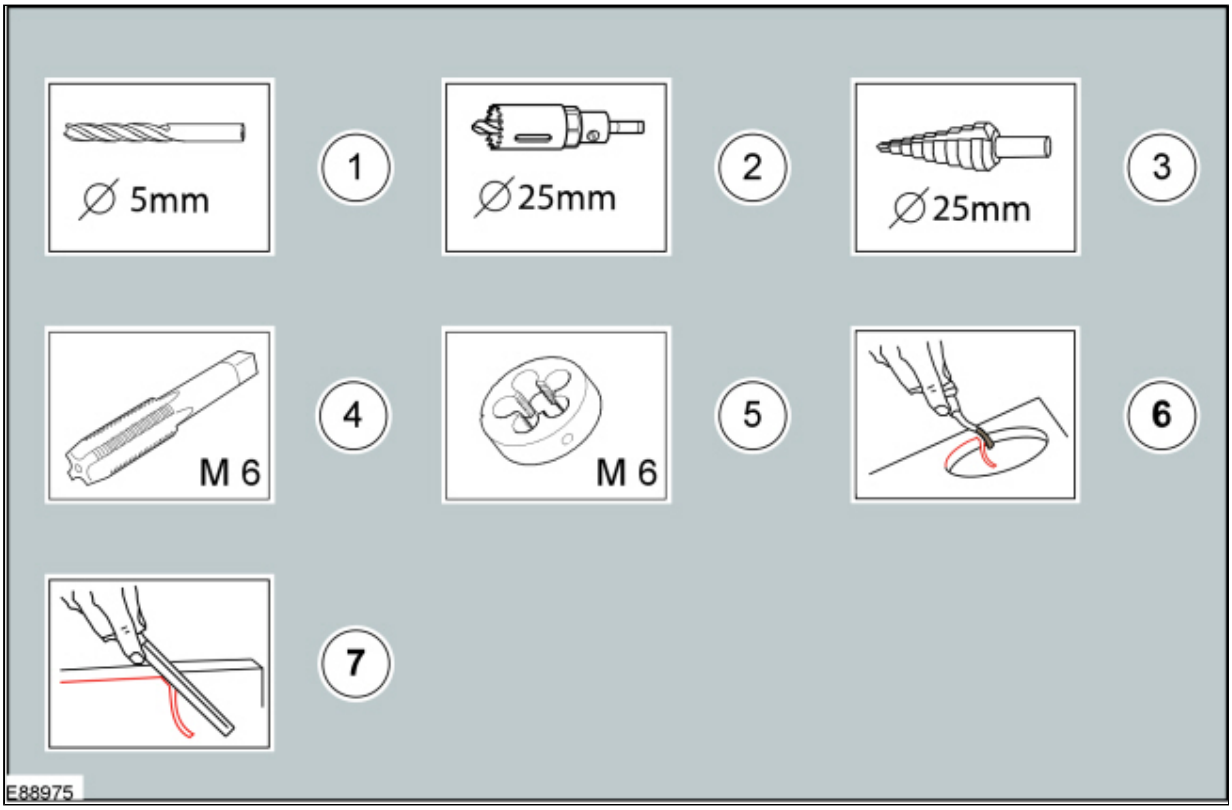


Item	Description
1	Combination pliers
2	Side cutter pliers
3	Internal snap-ring pliers
4	External snap-ring pliers
5	Hose clamping pliers
6	Locking pliers

7	Long or Needle-nosed pliers

Drilling and Threading Tool Symbols

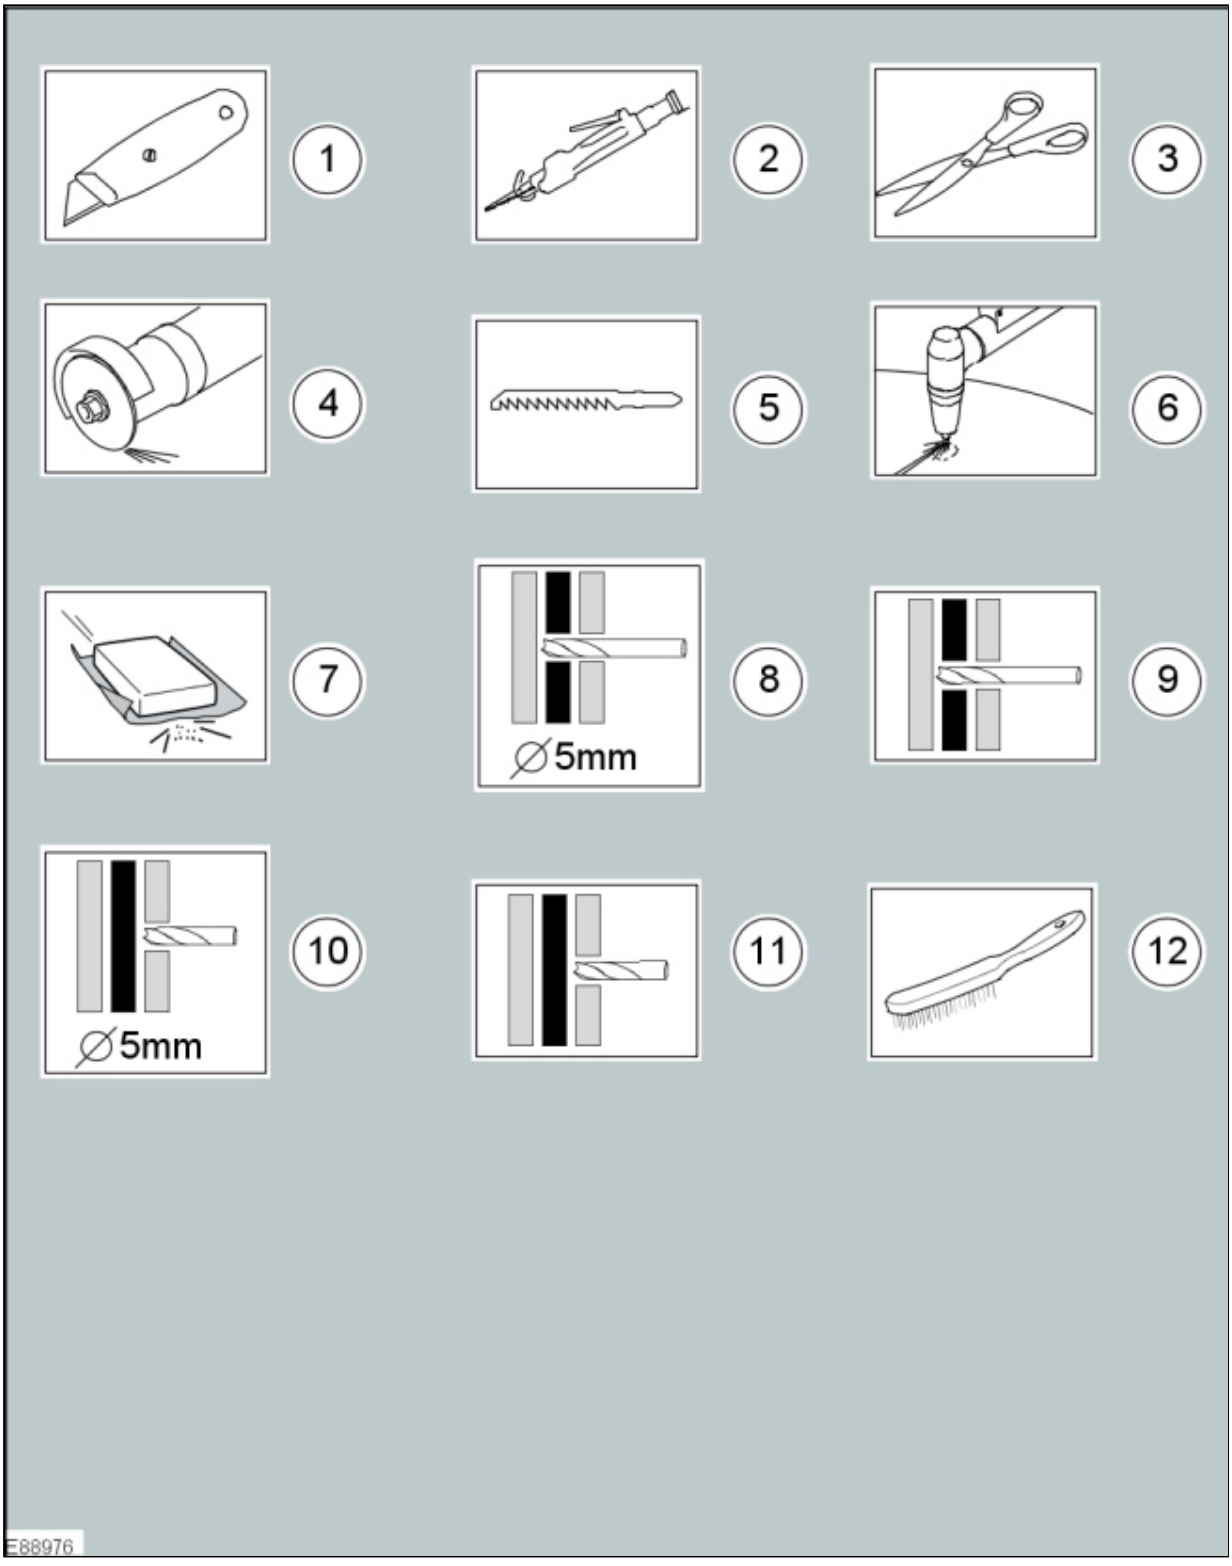
The drilling or threading tool symbols are used to indicate which type and size drill, thread-cutting device, or file is required for the procedure.



Item	Description
1	Drill bit with a specified diameter
2	Hole saw with a specified diameter
3	Stepped drill bit using a specified step diameter
4	Tap with a specified diameter
5	Die with a specified diameter
6	File or de-burring tool for circular holes
7	File or de-burring tool

Cutting Tool Symbols

The cutting tool symbols are used to indicate which type of cutting tool is used for the procedure.

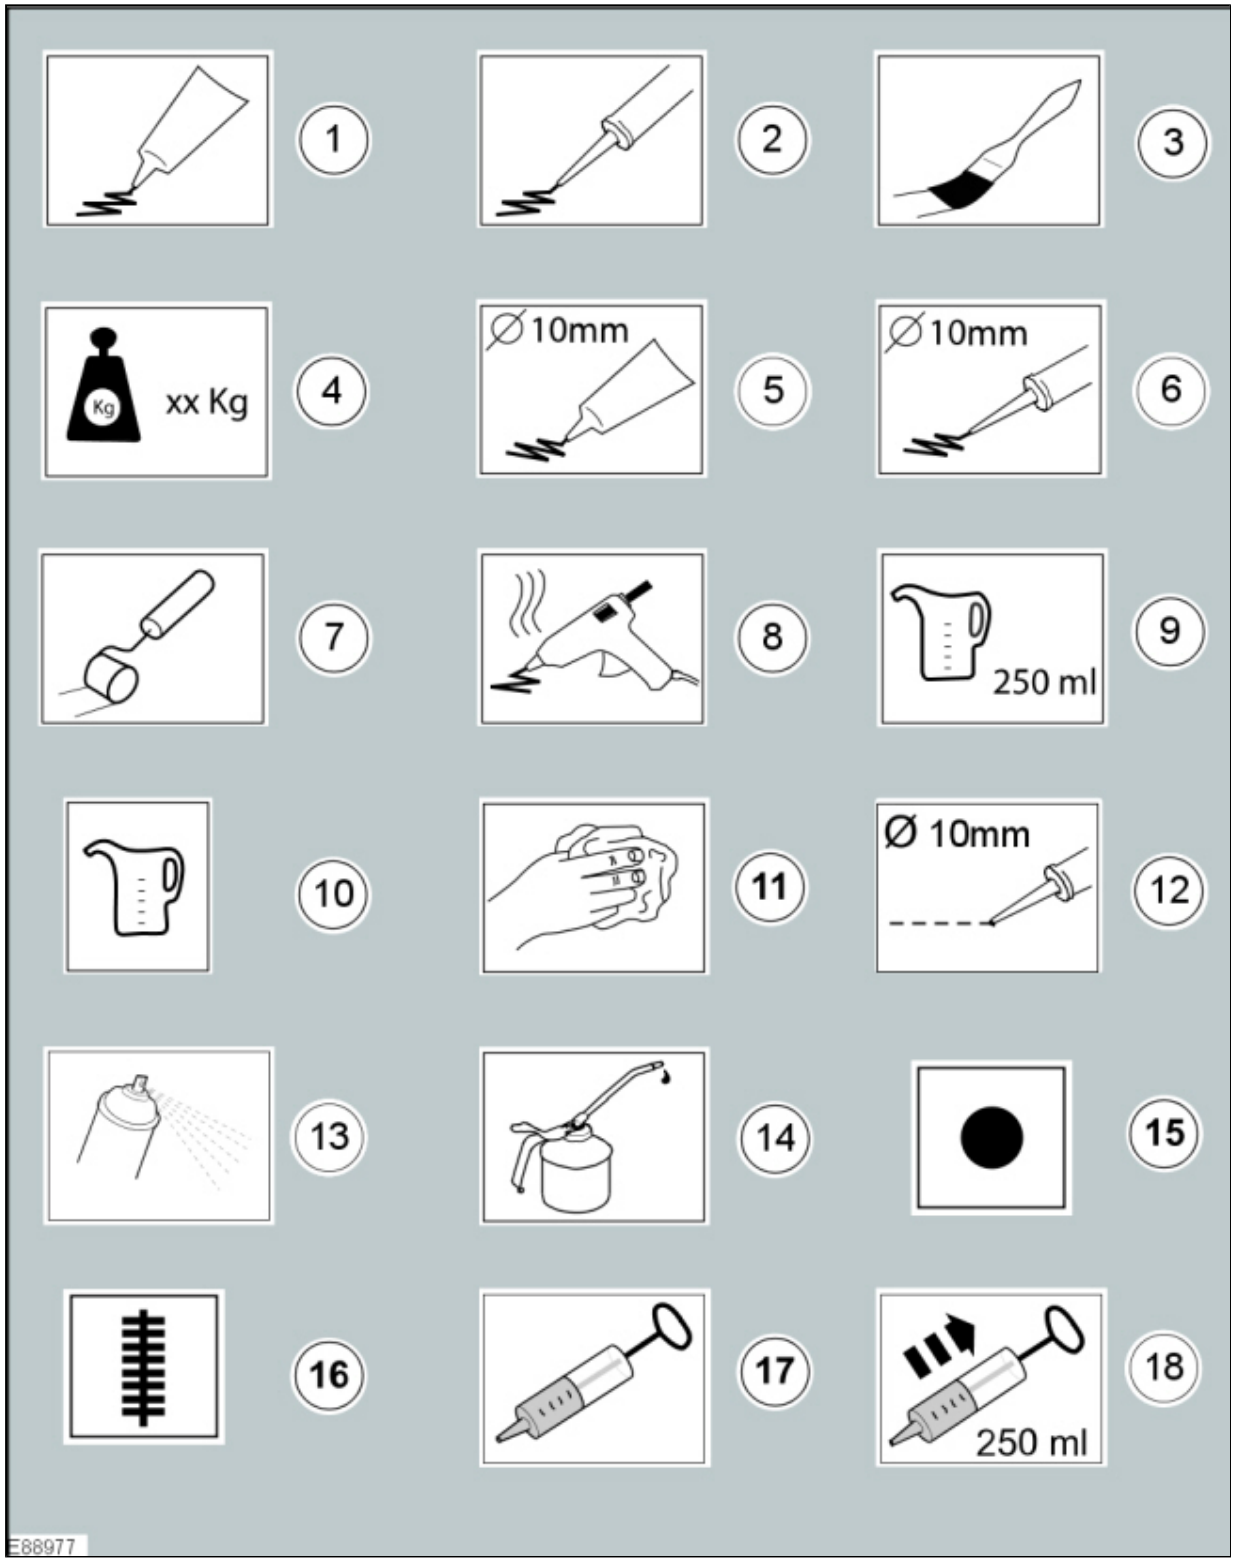


Item	Description
1	Box-cutter or cutting knife
2	Pneumatic body saw
3	Scissors
4	Grinder
5	Jig saw
6	Plasma cutter

7	Sanding block or paper
8	Drill through the indicated number of body layers with the specified diameter drill bit
9	Drill through the indicated number of body layers with an appropriate size drill bit
10	Drill through first body layer with the specified diameter drill bit
11	Drill through first body layer with an appropriate size drill bit
12	Wire brush

Apply Chemicals, Lubricants, or Clamping Load Symbols

The apply chemicals, lubricants or clamping load symbols are used to direct the application of chemicals, lubricants, or loads for the procedure.

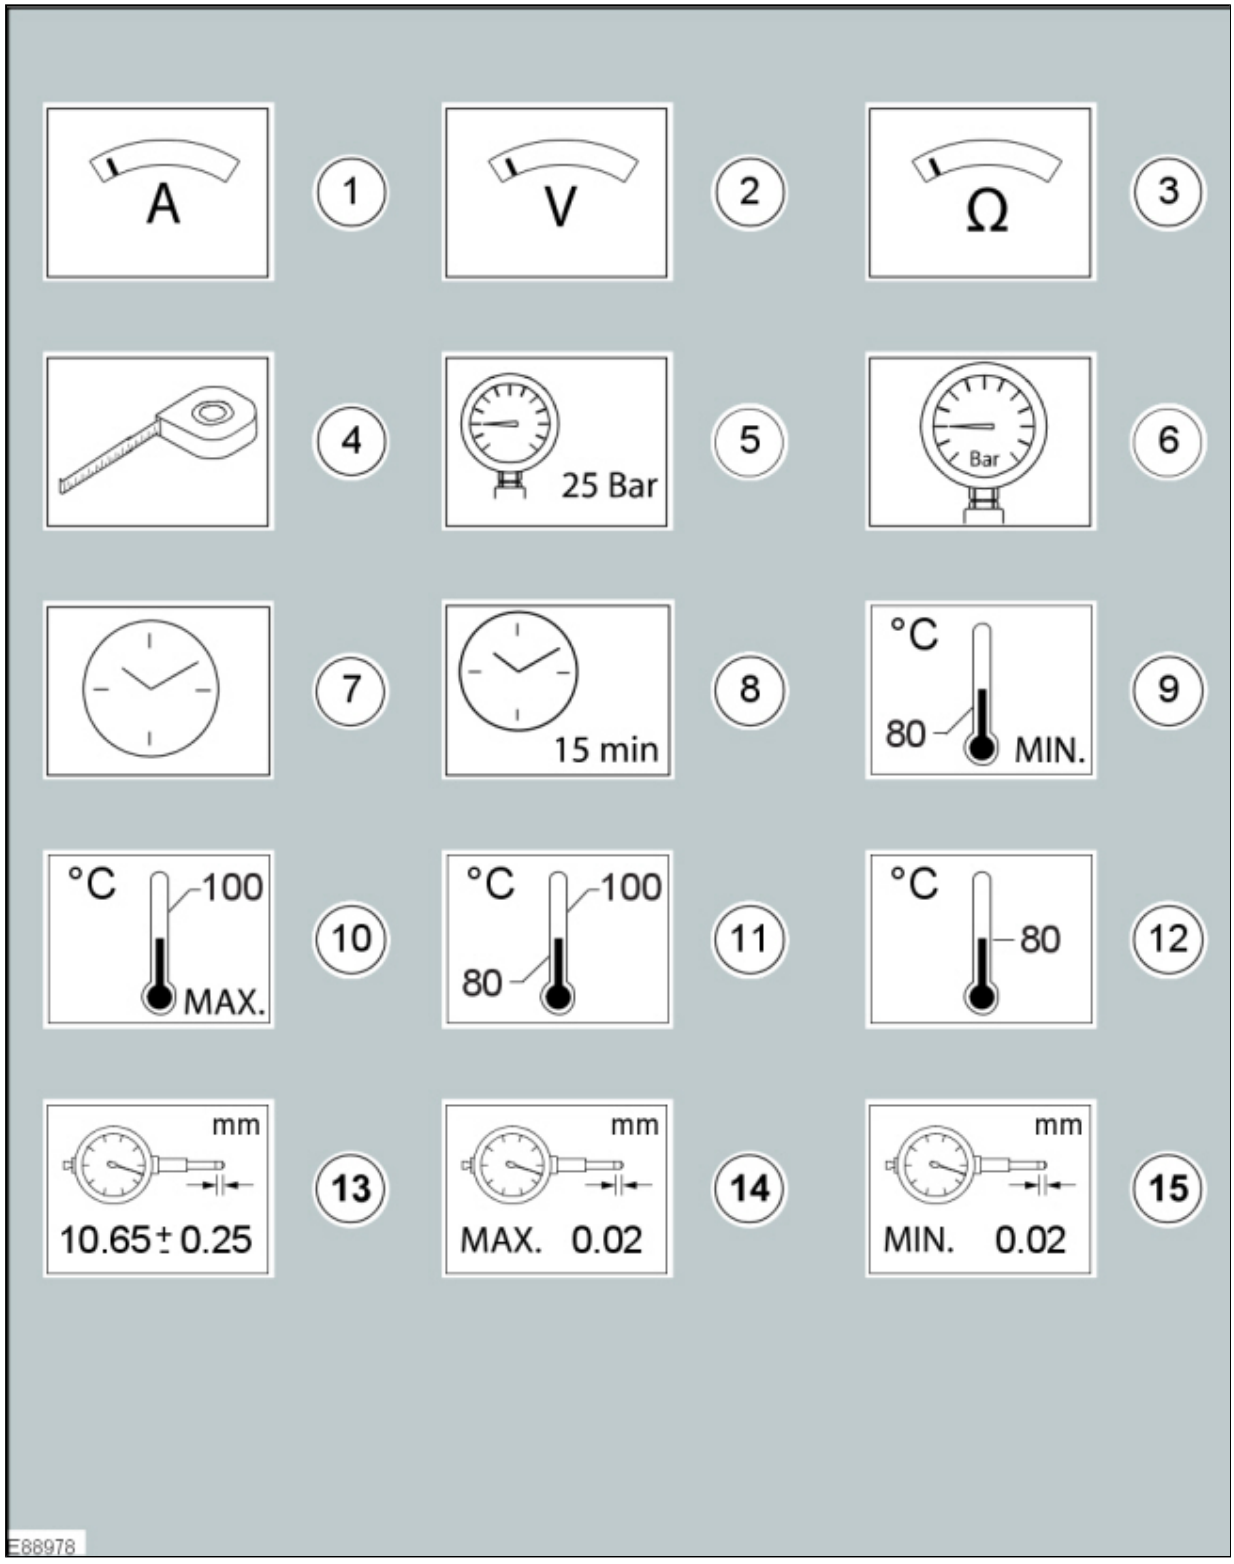


Item	Description
1	Apply a bead from the specified tube
2	Apply a bead from the specified cartridge
3	Apply the specified chemical with a brush
4	Apply the specified clamping load to the specified component
5	Apply the specified diameter bead from the specified tube
6	Apply the specified diameter bead from the specified cartridge

7	Apply the specified chemical with a roller
8	Apply hot glue to the specified component
9	Apply the specified amount of fluid
10	Apply the fluid
11	Clean the specified component with the specified material
12	Apply a broken bead of the specified diameter
13	Apply the specified chemical with a spray can
14	Apply the specified lubricant to the specified component
15	Spot weld the specified component
16	Apply a continuous line of weld to the specified component
17	Apply the fluid with a syringe
18	Extract the fluid with a syringe

Measurement Symbols

The measurement symbols are used to show which measurement will be made at a specified point.

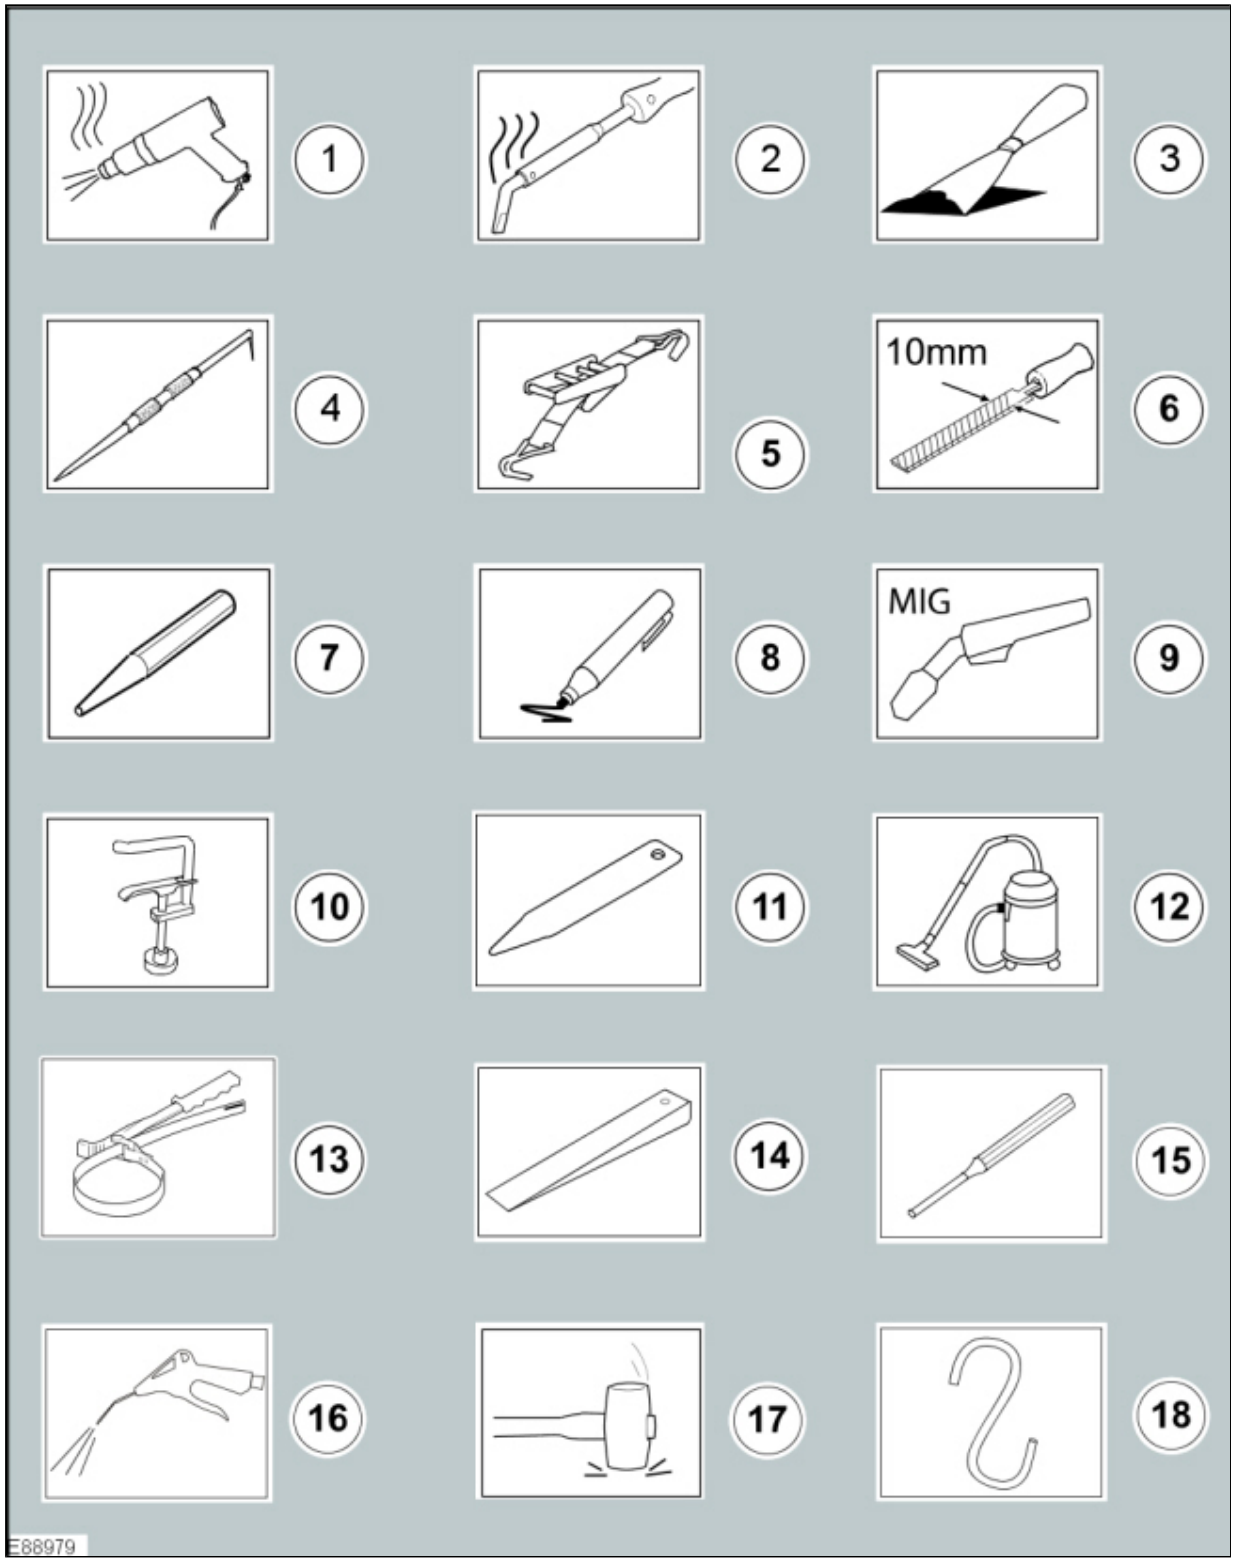


Item	Description
1	Measure the amperage using a digital multimeter
2	Measure the voltage using a digital multimeter
3	Measure the resistance using a digital multimeter
4	Measure the length or distance
5	Check that the specified pressure is available using a suitable pressure gauge
6	Measure the pressure at the specified port using a suitable pressure gauge

7	Measure the time with a stopwatch
8	Wait for the indicating amount of time
9	The minimum temperature for the specified task
10	The maximum temperature for the specified task
11	The allowable temperature range for the specified task
12	The required temperature for the task
13	Measure for the specified movement
14	Measure for movement not to exceed specified amount
15	Measure for the miniumum-specified movement

General Equipment Symbols

The general equipment symbols specify which general equipment is used to carry out the procedure.

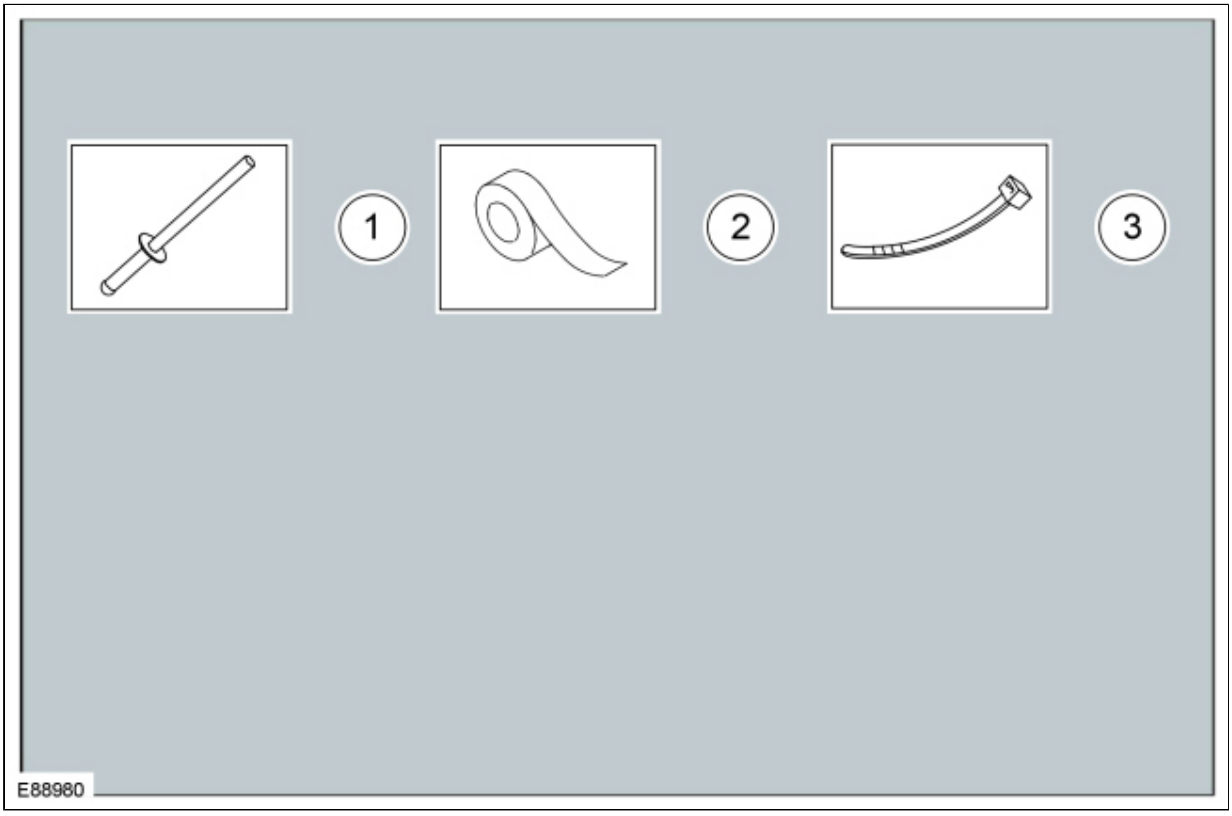


Item	Description
1	Hot air gun
2	Soldering iron
3	Putty knife or scraper
4	Awl or scriber
5	Hold-down or securing strap
6	File with specified size

7	Center punch
8	Marker
9	Metal Inert Gas (MIG) welder
10	Hose clamp
11	Trim tool
12	Shop vacuum
13	Strap wrench
14	Wedge
15	Pin punch

Material Symbols

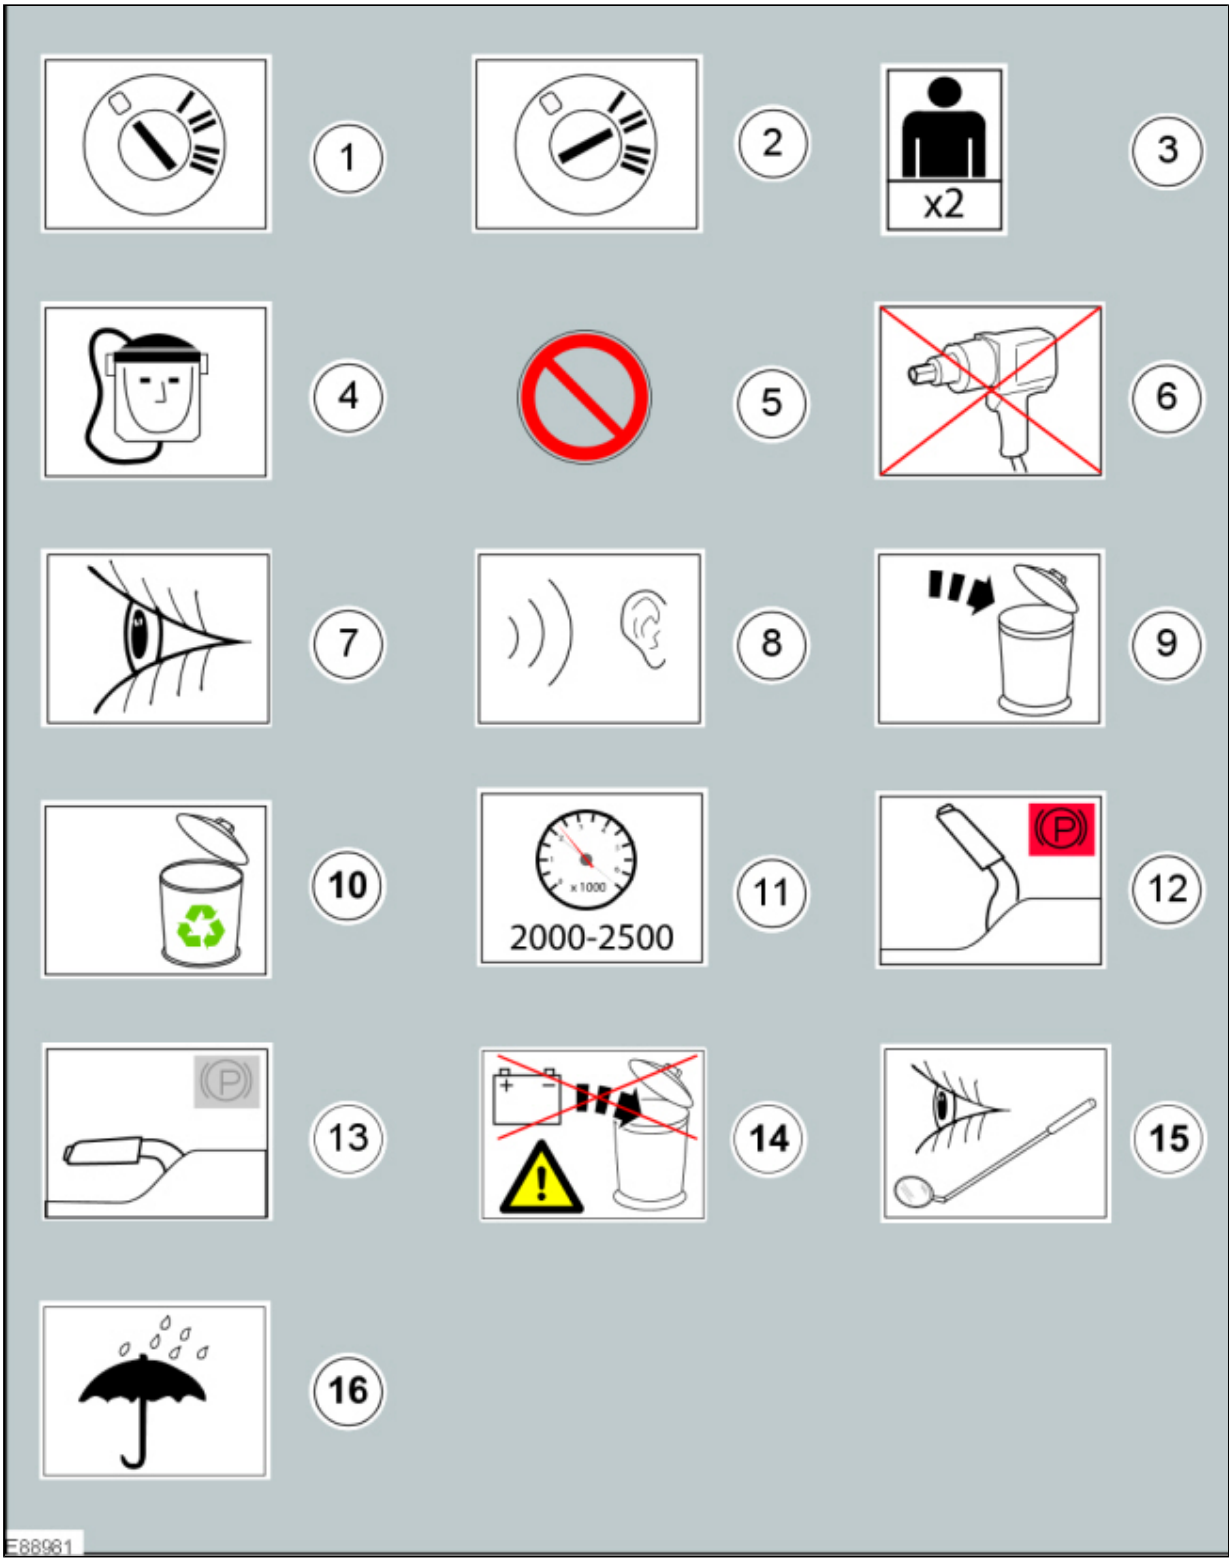
The material symbols are used to indicate where to use the specified material.



Item	Description
1	Remove or install a pop-rivet
2	Apply tape to specified area
3	Remove or install a cable tie

Miscellaneous Symbols

These symbols provide miscellaneous information required for the procedure.

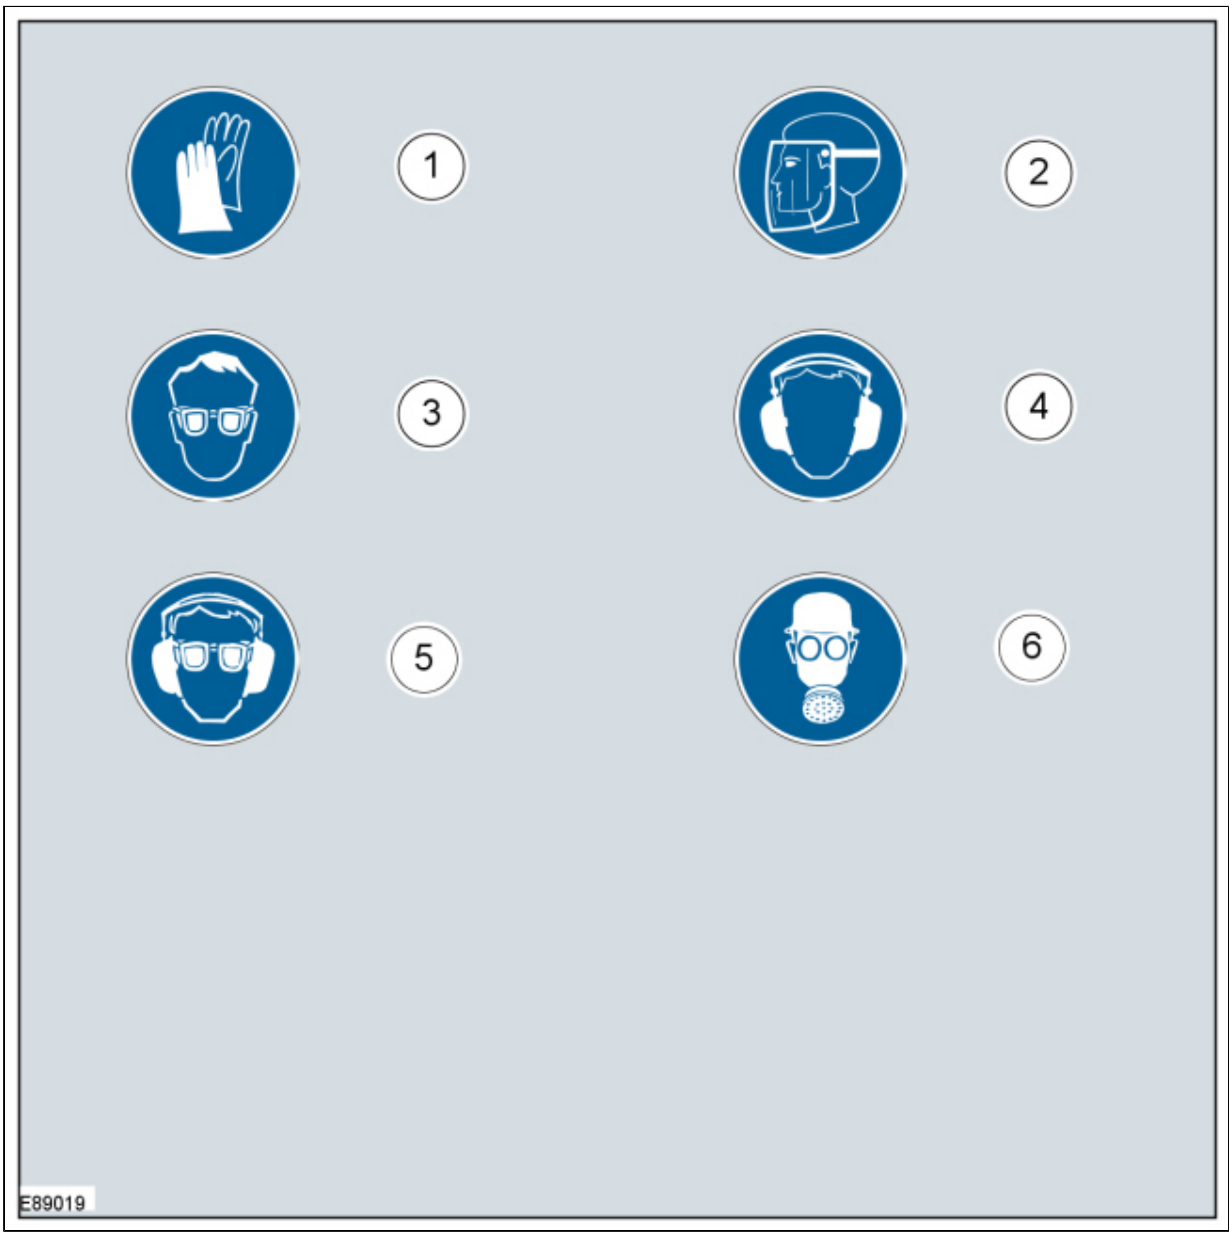


Item	Description
1	Turn Ignition off
2	Turn Ignition on (run position)
3	This procedure requires the specified number of technicians
4	Respirator or self-contained breathing apparatus
5	Prohibited action used in combination with another symbol
6	Do not use power tools

7	Visual inspection
8	Noise check
9	Dispose the specified component
10	Dispose the specified component
11	Set engine speed to the specified RPM
12	Firmly apply the parking brake
13	Fully release the parking brake
14	Special disposal required
15	Visually inspect using a mirror
16	Area or component must be dry

Mandatory Protective Equipment

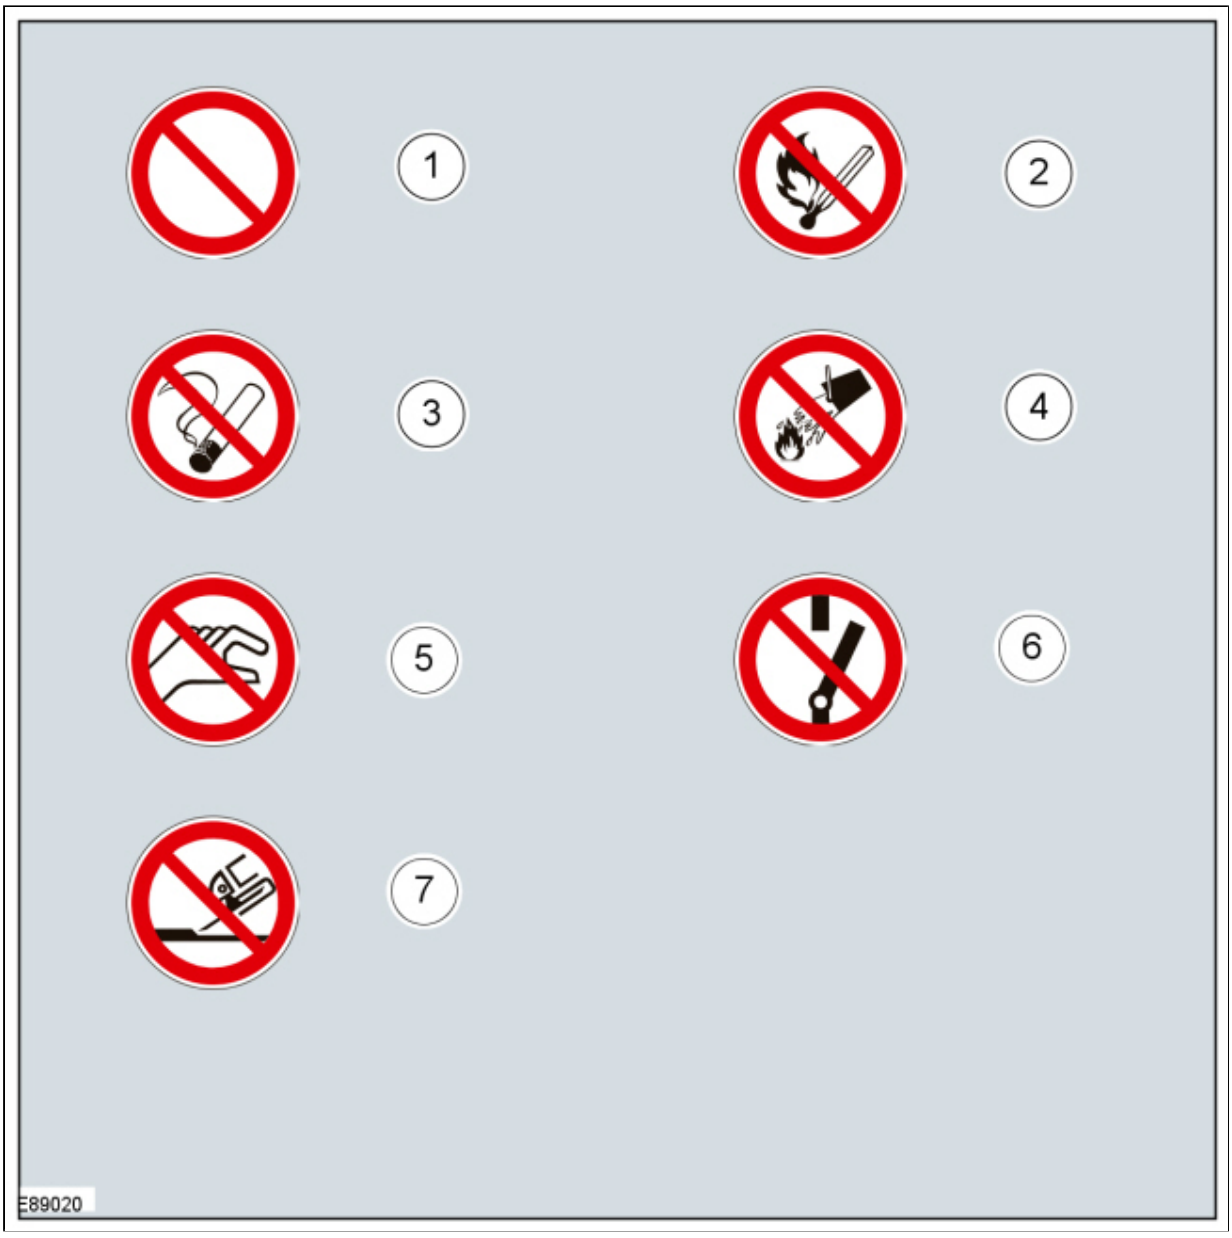
The protective equipment symbols indicate required safety equipment to avoid or reduce health and safety risks.



Item	Description
1	Wear protective gloves
2	Wear face shield
3	Wear safety goggles
4	Wear ear protection
5	Wear safety goggles and ear protection
6	Wear a respirator

Prohibition Symbols — Health, Safety, and Component Care

The prohibition symbols are used to prohibit specified actions to avoid safety hazards or component damage.

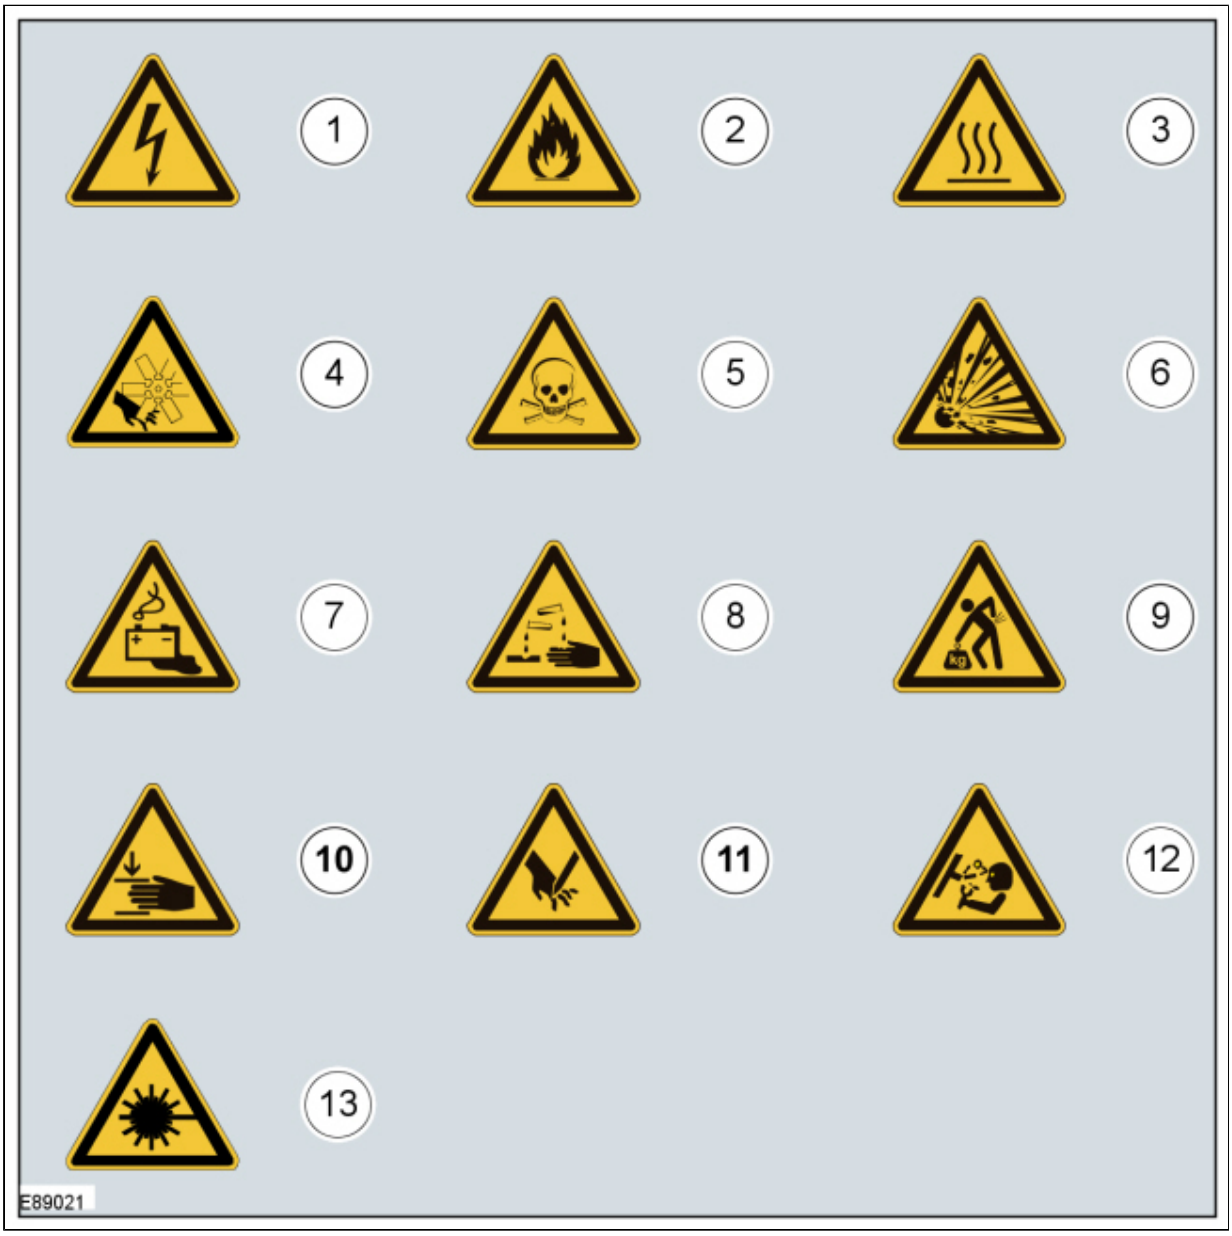


Item	Description
1	Prohibited action used in combination with another symbol
2	No open flames
3	No smoking

4	No water
5	Do not touch
6	Do not switch
7	No grinding

Warning Symbols — Health and Safety Warnings or Component Care

The warning symbols are used to avoid hazardous conditions and to avoid component damage.

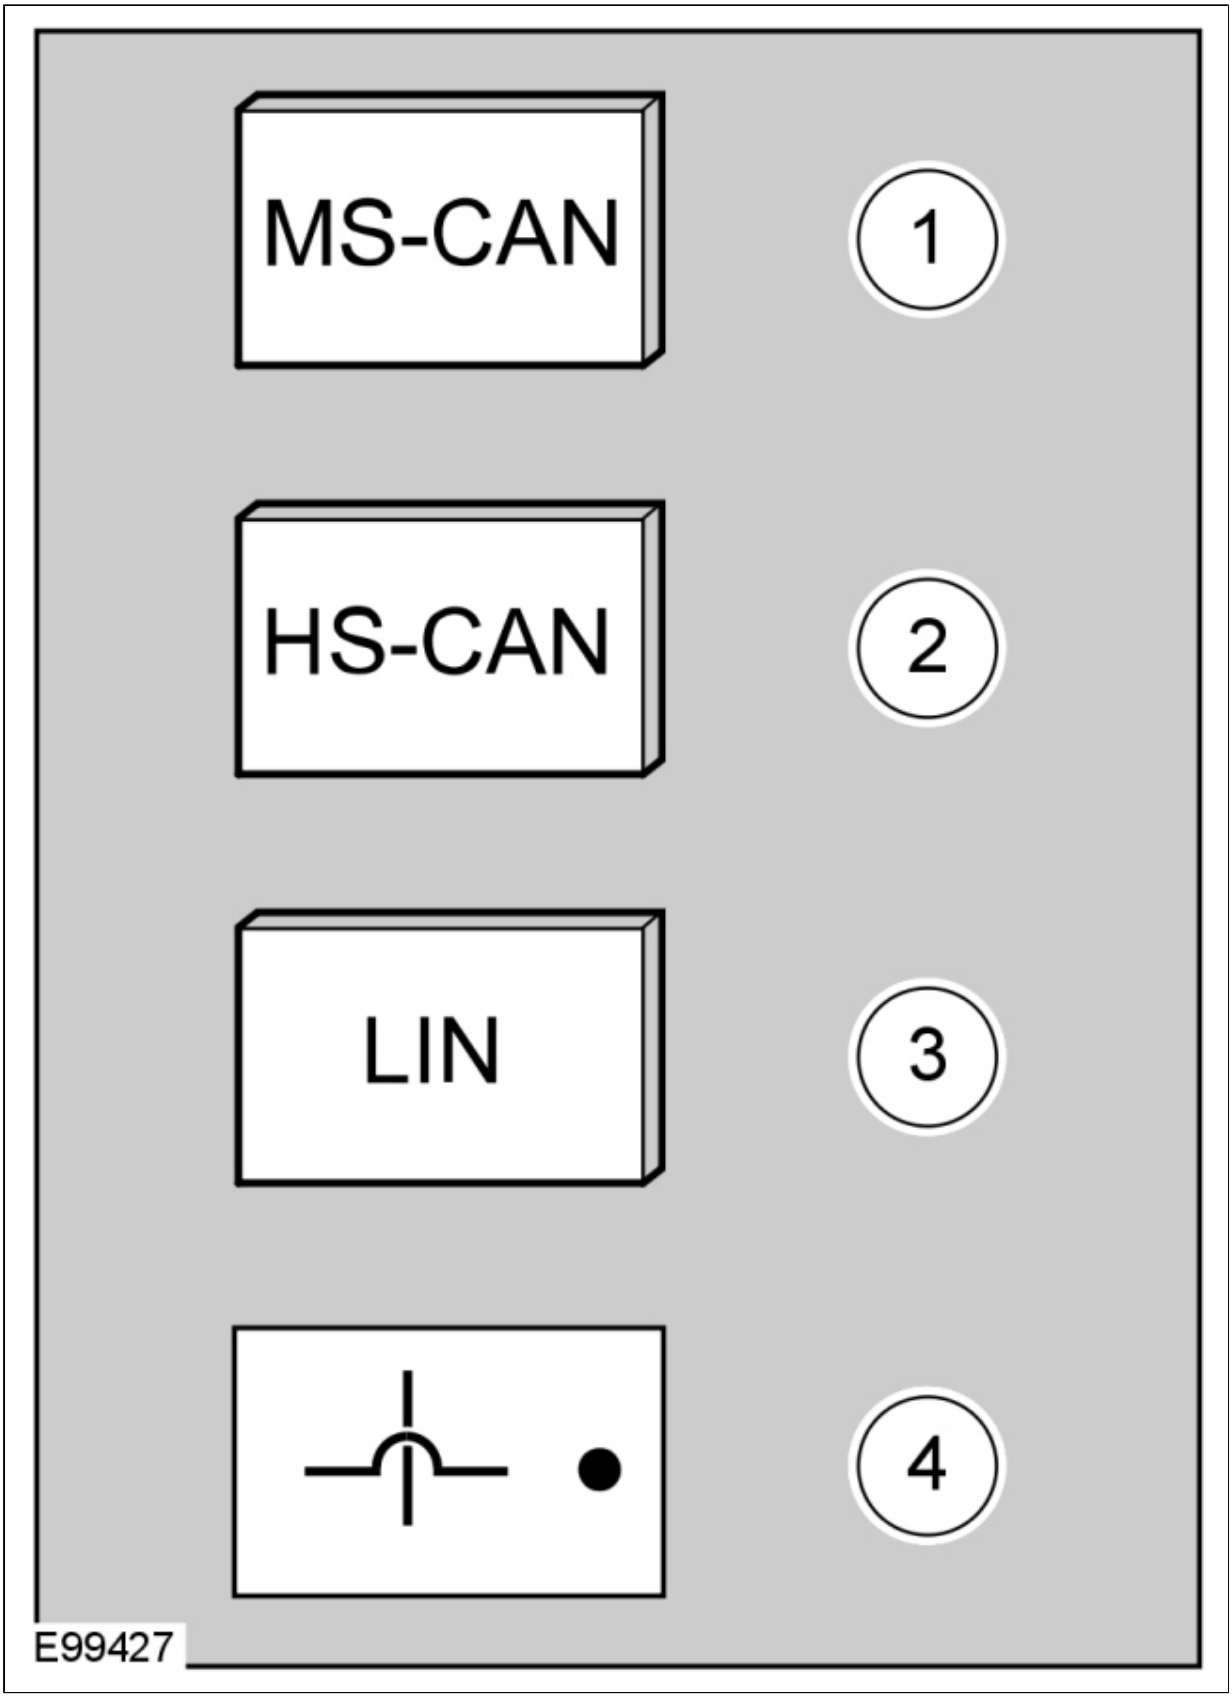


Item	Description
1	Hazardous voltage or Electrical shock or Electrocution danger
2	Fire hazard or highly flammable
3	Burn hazard or hot surface
4	Device has automatic start-up
5	Toxic
6	Explosive material

7	Battery hazard
8	Corrosive material
9	Lifting hazard
10	Hand crush or force from above hazard
11	Cutting of fingers or hand hazard
12	Pressure hazard
13	Invisible laser radiation. Do not view directly with optical instruments (magnifiers). Class 1M laser product.

System Diagram Symbols

The symbols provide Information about networks or wiring.



Item	Description
1	Medium Speed Controller Area Network
2	High Speed Controller Area Network
3	Local Interconnect Network

4	Wires cross but are not connected

Using This Manual

Introduction

This manual describes and directs repair procedures for this vehicle model year. It includes diagnostics for all vehicle systems except driveability and emission control. Refer to the separate Powertrain Control/Emissions Diagnosis (PC/ED) manual for driveability and emission control diagnostics.

Information is organized into groups, with sections that have subsections dividing them.

Warnings, Notices, and Notes in This Manual

Warnings provide information to avoid personal injury and to make sure service actions on critical safety systems are performed correctly.

Notices provide information to avoid damage to the vehicle or a component.

Notes provide information critical for a complete and effective repair.

Warnings that apply to an entire system or workshop manual section are located in section 100-00 Description and Operation Safety Warnings .

Warnings, Notices, or Notes that apply to an entire procedure will be placed at the beginning of the procedure.

Warnings, Notices, or Notes that apply to a single step are placed at the beginning of the step. Those that apply to a group of steps will be placed at the first step requiring it.

Vehicle and Engine Orientation Identifiers

LH and RH vehicle designations are oriented from the driver's seat position looking forward. LH and RH engine designations are oriented from the flywheel position looking towards the crankshaft pulley.

How to Use Diagnostic Information

DTC and Symptom Charts

Module DTC Charts are used to begin and direct the diagnosis of a DTC. Symptom Charts contain concern symptoms and direct solutions either in the chart or in a linked Diagnostic Routine. Both DTC and Symptom Charts may provide the solution within the chart, or provide a link to the appropriate Diagnostic Routine.

In some sections, the Symptom Chart is preceded by a Preliminary Inspection which must be followed prior to using the Symptom Chart

Using Module DTC Charts

This Workshop Manual contains diagnostics for DTCs set by vehicle modules. Driveability and emission DTCs are covered in the separate Powertrain Control/Emissions Diagnosis (PC/ED) manual. If a PCM-set DTC is not listed in the Workshop Manual, it is serviced in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

DTC diagnostics are found in both on-line and printed publications and are used as follows:

- On-line publications: Using the left side menu, click on the Master DTC Chart link to view the vehicle module DTC charts. Each module has a chart with links or in-chart solutions for all DTCs diagnosed in the Workshop Manual.
- Printed publications: Use the DTC index in the rear of the book.

Diagnostic Methods

Diagnostic Methods provides information to support diagnosing Ford vehicles. Diagnostic strategies, diagnostic tool support information, and advanced circuit testing methods are included. REFER to Diagnostic Methods .

Diagnostic Routines

Diagnostic Routines provide information to determine the root cause of concerns addressed in either a DTC Chart or Symptom Chart. Each Diagnostic Routine contains:

- Diagnostic Overview
  - Wiring Diagram References (as applicable)
  - Normal Operation and Fault Conditions
  - Visual Inspection and Diagnostic Pre-checks
- Tool Table (as applicable)
- Material Table (as applicable)
- Pinpoint Test Steps

Component Tests

Component Tests are used to separately analyze a single common component in a system. The test will determine if the part is functioning correctly.

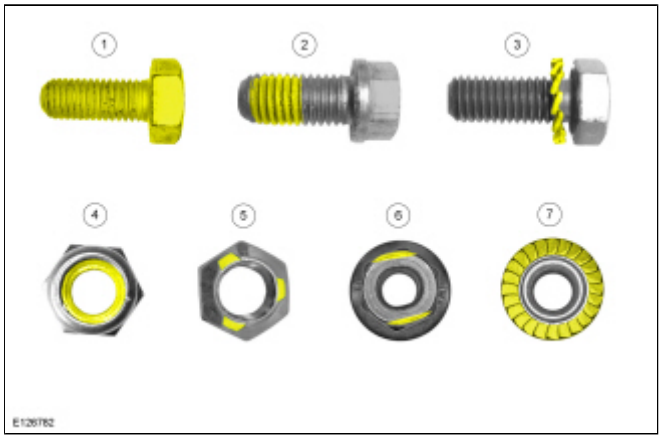
Mechanical Procedures Such As Removal and Installation

Reuse Of Fasteners, Seals, Or Gaskets

The following is a list of assumptions made in the reuse of fasteners, seals, or gaskets.

- Seals and gaskets must be replaced unless otherwise specified.
- Standard fasteners are reused unless otherwise specified.
- Fasteners with self-locking features must be replaced unless otherwise noted. Reminder text may or may not be included with the procedure step. Examples of fastener coatings or fasteners with mechanical locking (with the locking features highlighted yellow) are shown in illustration 1.
- Torque to yield bolts (bolts with more than one stage of tightening torque and a final torque angle specification) must be discarded and new torque to yield bolts installed unless otherwise stated within the procedure.

Illustration 1 - self-locking coatings or locking feature are highlighted yellow



Graphics

Illustrations in this manual may be used to replace written step instructions. Color-coding (see color scheme in this document) is used to communicate the required step action or actions. Service action icons (see Symbols Glossary) are used to add additional information regarding the required action.

- The color scheme in a step graphic (an illustration used in removal or installation steps) indicates servicing information as follows:
  - Fasteners (including panel retainers) or electrical connectors — Magenta (Purple)
  - Target component that is to be removed — Blue
  - Components that must be removed prior to the target component shown in blue — Brown or Green
  - Components placed aside for access, but not removed; highlighted areas such as inspection areas, adjustments or measurements — Yellow
  - Essential Special Service Tools (ESSTs) and other tools — Pale Blue
  - Chemical or Sealer apply areas — Alternating blue and white dashes (see illustration 4)
  - Sectioned or cut-away areas — Red
  - Remaining components — Grey

Callouts in graphics indicate removal (or tightening) order, or identify individual instructions in substeps of the same number (such as different torque values).

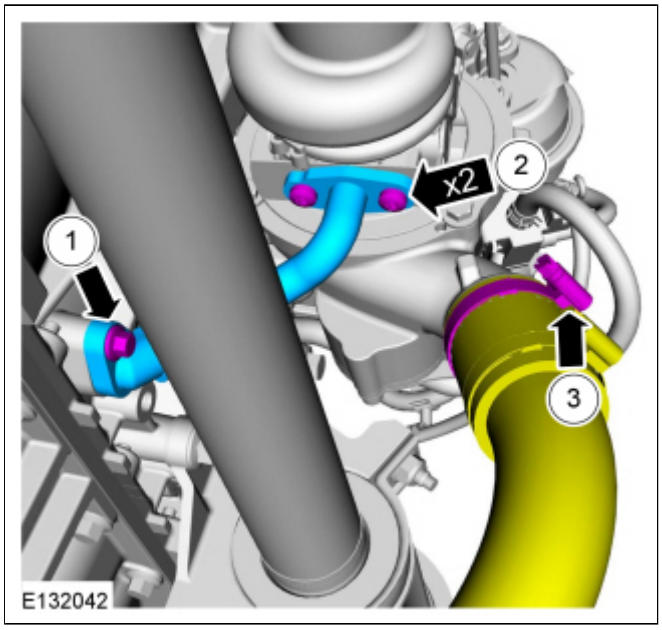
Arrows containing x numbers (Illustration 2) indicate the number of identical fasteners or connectors to be removed or installed in the graphic.

In Illustration 2, two identical fasteners are indicated by the x2 arrow, with another arrow illustrating a third fastener of a different type. Because the different fasteners require different torques, callouts are used to identify those two torque values in the associated step text. The hose clamp is another fastener to be removed. The yellow coloring of the hose indicates it is to be moved aside (not removed).

The following written steps would be necessary if the illustration did not have color coding:

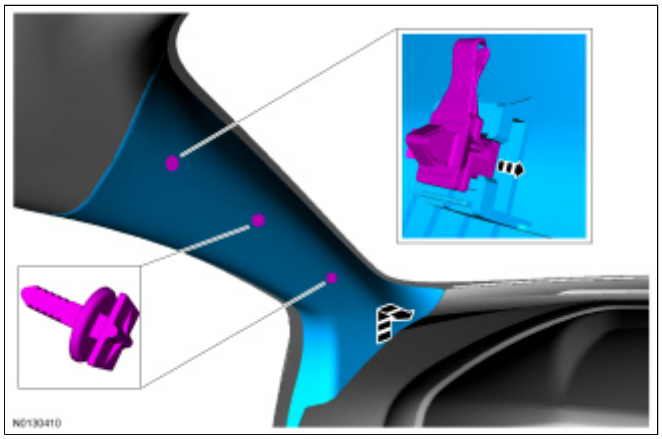
1. Remove the engine oil pipe fastener at the engine connection.
2. Remove the two engine oil pipe fasteners from the turbocharger and remove the pipe.
3. Remove the air inlet hose from the turbocharger and position aside.

Illustration 2



Hidden fasteners, such as panel retainers, are identified in the illustration by a magenta disc. An inset detail view illustrating the fastener type may be included (Illustration 3).

Illustration 3 — Note motion arrow at panel bottom; it indicates to lift panel up, then move inward to remove



Symbols

Symbols may be used inside graphics or in the text area to communicate service actions. The following examples demonstrate the use of some of these symbols. REFER to Symbols Glossary for a complete symbols list with explanations.

In the Illustration 4 example, service action symbols are shown as used to direct the application of sealer, lubricant, weight, tape or cleaning detergent to a component. In this example a bead diameter of “xx” millimeters is prescribed. The blue and white dashes indicate where the material is applied.

Illustration 4

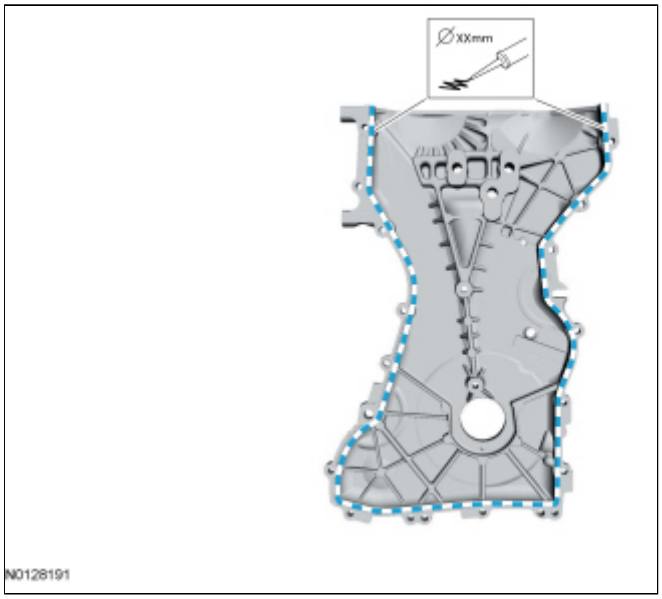


Illustration 5 is an example of location symbols used to show the location of a component or system within the vehicle.

Illustration 5

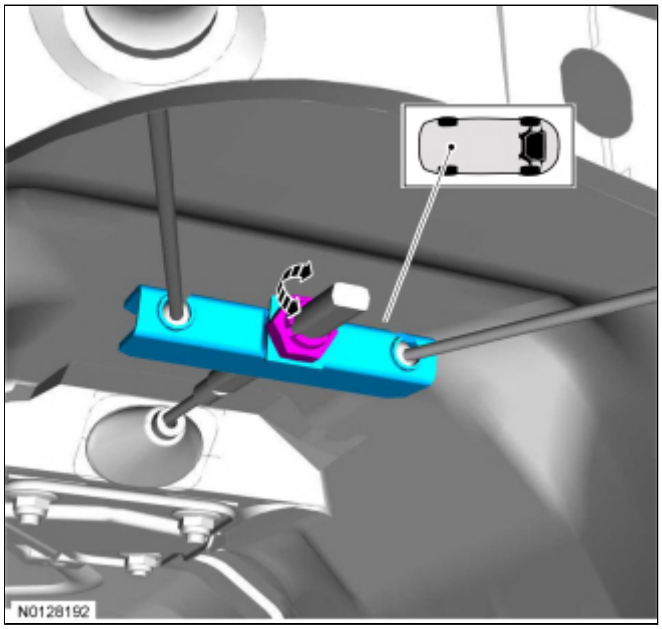

Illustration 6 shows how gearshift lever or selector lever position symbols may be used to indicate the gearshift lever or selector lever position required. The required Essential Special Service Tool to align the shift mechanism is shown in pale blue and identified by ESST number.

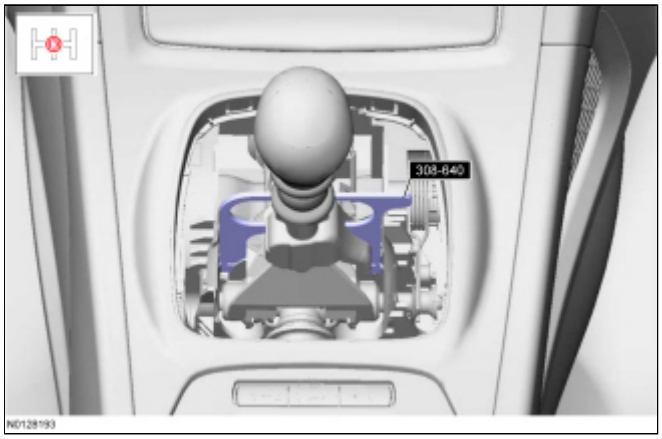
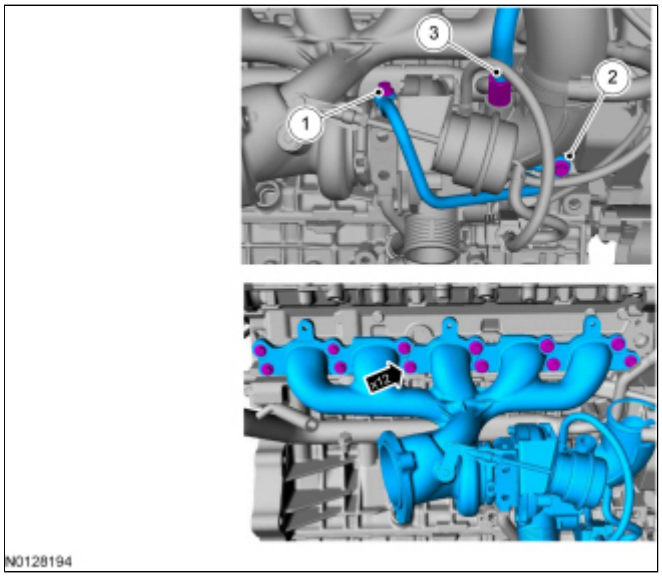
Illustration 6



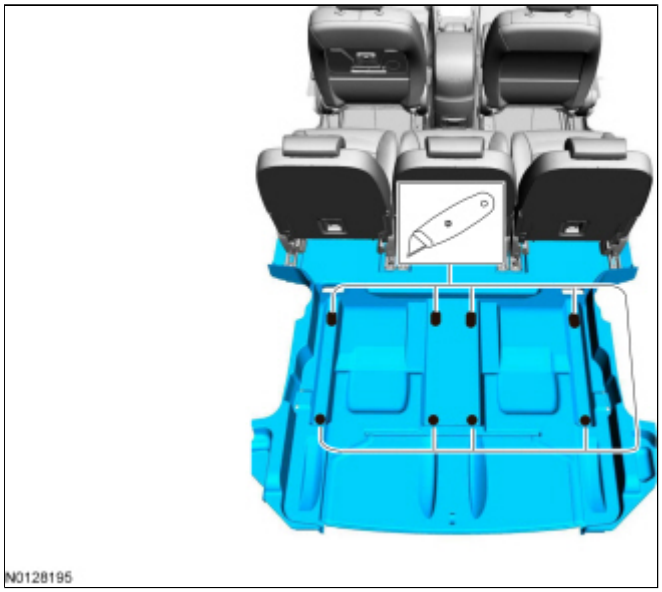
Callouts or arrows may be used to identify components for supporting special information, such as a required sequence or to indicate a number of identical components. Illustration 7 shows a removal order in the top graphic and the bottom graphic indicates 12 identical bolts.

Illustration 7



Standard tool symbols direct the use of standard tools to perform a service action, such as the cutting of carpet shown in Illustration 8. Tool symbols may include dimensional values (for example, a drill with a specified diameter).

Illustration 8



N0128195

Safety Warnings

Heating, Ventilation and Air Conditioning Safety Warnings

WARNING: Take the following precautions when repairing an air conditioning system containing R-134a:

- **Always wear safety goggles.**
- **Avoid contact with liquid refrigerant R-134a. R-134a vaporizes at approximately -25°C (-13° F) under atmospheric pressure and will freeze skin tissue.**
- **Never allow refrigerant R-134a gas to escape in quantity in an occupied space. It will displace the oxygen needed to support life.**
- **Never use a torch in an atmosphere containing R-134a gas. R-134a is non-toxic at all normal conditions, but it decomposes when exposed to high temperatures such as a torch flame. During decomposition it releases irritating and toxic gasses (as described in the MSDS sheet from the manufacturer). Decomposition products are hydrofluoric acid, carbon dioxide and water.**

Failure to follow these instructions may result in serious personal injury.

WARNING: Before disconnecting any heater water hoses, shut OFF the engine and wait until engine is fully cool. Failure to comply with this warning may result in serious injury or burns from hot liquid escaping from the engine cooling system.

WARNING: Use extreme care and observe all safety and service precautions related to the use of refrigerants as outlined on refrigerant tank and on recovery and charging equipment. Failure to follow these instructions may result in serious personal injury.

Battery System Service Warnings

WARNING: Always disconnect the battery ground cable at the battery before disconnecting the starter motor battery terminal lead. If a tool is shorted at the starter motor battery terminal, the tool can quickly heat enough to cause a skin burn. Failure to follow this instruction may result in serious personal injury.

WARNING: Before carrying out maintenance on the starting system, disconnect the battery ground cable from the frame to completely isolate the starter from the dual frame-mounted batteries. Failure to follow this instruction may result in serious personal injury.

WARNING: Batteries contain sulfuric acid and produce explosive gases. Work in a well-ventilated area. Do not allow the battery to come in contact with flames, sparks or burning substances. Avoid contact with skin, eyes or clothing. Shield eyes when working near the battery to protect against possible splashing of acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes, then get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in serious personal injury.

WARNING: Always lift a plastic-cased battery with a battery carrier or with hands on opposite corners. Excessive pressure on the battery end walls may cause acid to flow through the vent caps, resulting in personal injury and/or damage to the vehicle or battery.

WARNING: Do not get underneath the frame-mounted battery when disconnecting or connecting the auxiliary battery safety straps. The battery is heavy and could fall. Failure to follow this instruction may result in serious personal injury.

WARNING: Battery posts, terminals and related accessories contain lead and lead components. Wash hands after handling. Failure to follow these instructions may result in serious personal injury.

Brake System Service Warnings

WARNING: Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.

WARNING: Do not use any brake fluid other than DOT 3 for Hydro-Boost® and DOT 4 for Hydro-Max®. Incorrect fluid may result in permanent damage to brake components and an inoperative brake system. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Do not breathe dust or use compressed air to blow dust from storage containers or friction components. Remove dust using government-approved techniques. Friction component dust may be a cancer and lung disease hazard. Exposure to potentially hazardous components may occur if dusts are created during repair of friction components, such as brake pads and clutch discs. Exposure may also cause irritation to skin, eyes and respiratory tract, and may cause allergic reactions and/or may lead to other chronic health effects. If irritation persists, seek medical attention or advice. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove air pressure from the air brake system prior to servicing the system. Attempting to service the air brake system while it is under pneumatic pressure may result in serious injury from unexpected hose whip, component movement or component propulsion.

WARNING: Always install new brake shoes or pads at both ends of an axle to reduce the possibility of brakes pulling vehicle to one side. Failure to follow this instruction may result in uneven braking and serious personal injury.

Body and Frame Service Warnings

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

WARNING: On vehicles equipped with Safety Canopy® options, prior to carrying out any sectioning repairs near the roof line or sail panel areas of the vehicle, remove the Safety Canopy® module and related components. Failure to comply may result in accidental deployment or damage to the Safety Canopy®. Refer to Section 501-20B . Failure to follow these instructions may result in serious injury to technician or vehicle occupant(s).

WARNING: Do not cut or grind body side components within 50 mm (1.96 in) of restraint anchoring points. Welding within 50 mm (1.96 in) of restraint anchoring points may result in incorrect operation of restraint devices. For additional restraints anchoring location information, refer to Section 501-20A and Section 501-20B . Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Do not carry out body side sectioning repairs in areas of laser welds. Factory laser welds cannot be duplicated with conventional welding equipment and structural integrity may be compromised. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

WARNING: Do not permanently remove the trailer hitch. The trailer hitch is an integral part of the vehicle frame. Always reinstall the hitch before delivery of the vehicle to the customer. Failure to follow this instruction may compromise vehicle crash integrity and increase the risk of personal injury in a rear end collision.

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

Engine Cooling System Service Warnings

WARNING: Always allow the engine to cool before opening the cooling system. Do not unscrew the coolant pressure relief cap when the engine is operating or the cooling system is hot. The cooling system is under pressure; steam and hot liquid can come out forcefully when the cap is loosened slightly. Failure to follow these instructions may result in serious personal injury.

Fuel System Service Warnings

WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Clean all fuel residue from the engine compartment. If not removed, fuel residue may ignite when the engine is returned to operation. Failure to follow this instruction may result in serious personal injury.

WARNING: Contact with exposed fuel injector wiring, if energized, may result in electric

shock. Use care when working on or around energized fuel injector wiring. Fuel injector wiring supplies high voltage to operate the fuel injectors. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Always disconnect the battery ground cable at the battery when working on an evaporative emission (EVAP) system or fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not work on the fuel system until the pressure has been released and the engine has cooled. Fuel in the high-pressure fuel system is hot and under very high pressure. High-pressure fuel may cause cuts and contact with hot fuel may cause burns. Failure to follow these instructions may result in serious personal injury.

WARNING: Avoid contact with fuel during a visual inspection for fuel leaks with the engine running. Do not work on the fuel system until the pressure has been released and the engine has cooled. Fuel in the high-pressure fuel system is hot and under very high pressure. High-pressure fuel may cause cuts and contact with hot fuel may cause burns. Failure to follow these instructions may result in serious personal injury.

General Service Warnings

WARNING: Never get underneath a vehicle that is supported only by a jack. The jack could unintentionally lower. Always support vehicle with floor stands. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not apply heat or flame to the shock absorber or strut tube. The shock absorber and strut tube are gas pressurized and could explode if heated. Failure to follow this instruction may result in serious personal injury.

WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety

Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.

WARNING: Use tools, not fingers, to hold flagnuts. Flagnuts may slip or spin unexpectedly when removing fasteners. Failure to follow this instruction may result in injured fingers.

WARNING: Keep solvents away from ignition sources. Solvents may be flammable and can ignite or explode if not handled correctly. Failure to follow this instruction may result in serious personal injury.

WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.

WARNING: Use only a type-D fire extinguisher to extinguish magnesium fires. Never attempt to use a type-A, -B, -C extinguisher, or water, as these items are ineffective and may accelerate a magnesium fire. Failure to follow these instructions may result in serious personal injury.

WARNING: Only raise the vehicle when positioned on a hard, level surface. Attempting to raise the vehicle on an uneven or soft surface may result in vehicle slipping or falling from the jack or jackstand. Failure to follow this instruction may result in serious personal injury.

WARNING: Identify the correct jacking points by locating the triangle stamped into the uni-body sheet metal or vehicle frame. Raising a vehicle in any other location may result in vehicle shifting or falling. Failure to follow this instruction may result in serious personal injury.

WARNING: Install only FCC-approved radio transmitting equipment. See your authorized radio dealer for the correct transmitter. Use of incorrect transmitting equipment may cause the vehicle to malfunction or stall, resulting in loss of power brake and power steering assist. Failure to follow these instructions may result in serious personal injury to vehicle occupant(s).

WARNING: Vehicle may have multiple drive wheels. Do not use engine to power the driveline unless all drive wheels are elevated off the ground. Drive wheels in contact with ground could cause unexpected vehicle movement. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not operate the engine with the hood open until the fan blade has been examined for possible cracks and separation. A damaged fan can separate during operation. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not stand in line with or near the engine cooling fan blade when revving the engine. A damaged fan can separate during operation. Failure to follow this instruction may result in serious personal injury.

WARNING: When jacking or lifting the vehicle, block all wheels remaining on the ground. Set the parking brake if the rear wheels will remain on the ground. These actions help prevent unintended vehicle movement. Failure to follow these instructions may result in serious personal injury.

WARNING: Turn OFF the ignition switch for a minimum of 5 minutes before removing high-

voltage cables. High-voltage cables and wiring are orange in color. The nominal high-voltage traction battery voltage (HVTB) is 330 V DC. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Vehicles with engine auto start-stop technology may start automatically with the ignition on. Make sure the ignition is off when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Wear high-voltage insulated safety gloves and a face shield when working with high-voltage batteries or cables. The high-voltage insulated safety gloves should be of the appropriate safety and protection rating. Inspect the gloves before use and always wear them with the leather outer glove. Any hole in the rubber insulating glove is a potential entry point for high-voltage. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Depower the high-voltage traction battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Failure to follow this instruction may result in serious personal injury or death.

WARNING: Secure the torque converter in the transmission during removal or installation. The torque converter is heavy and may result in injury if it falls out of the transmission. Failure to follow this instruction may result in serious personal injury.

WARNING: When using compressed air, never let air pressure exceed 172 kPa (25 psi) and always wear safety glasses. Compressed air may cause foreign material or parts to become airborne. Failure to follow this instruction may result in serious personal injury.

WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

WARNING: Turn off (disable) the power running boards (if equipped) before jacking, lifting or placing any object under the vehicle.

Never place your hand between the power running board and the vehicle. Extended power running boards will retract when doors are closed.

Failure to follow these instructions may result in serious personal injury.

WARNING: Disconnect the window regulator motor connector before working inside the vehicle doors. Service actions inside the door (such as door latch, handle or lock cylinder service) or operating the remote keyless entry (RKE) fob may activate the windows on vehicles equipped with global open/close. Serious injury to hands or arms may occur if a window motor is activated during service. Failure to follow these instructions may result in serious personal injury.

Safety Restraints Service Warnings

WARNING: Anytime the Safety Canopy® or side air curtain module has deployed, a new headliner and new A-, B- and C-pillar upper trim panels and attaching hardware must be installed. Remove any other damaged components and hardware and install new components and hardware as needed. Failure to follow these instructions may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9.14 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

WARNING: The fire suppression system backup power supply must be depleted before lifting the vehicle or when repairing or replacing any of the following:

- **Fire suppression system components**
- **Components located near the fire suppression manual switch**
- **Fuel tank and components located near the fuel tank**
- **Rear axle and components located near the rear axle**

To deplete the backup power supply, disconnect the battery and wait at least 1 minute. Be sure to disconnect all auxiliary batteries and power supplies (if equipped). Failure to follow these instructions may result in serious personal injury.

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never put any type of fastener or tie strap around any part of a Safety Canopy® module, side air curtain module or interior trim panel. This will prevent the Safety Canopy® or side air curtain module from deploying correctly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.

WARNING: Always carry or place a live Safety Canopy®, or side air curtain module, with the module and tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

WARNING: Always deplete the backup power supply before repairing or installing any new front or side air bag supplemental restraint system (SRS) component and before servicing, removing, installing, adjusting or striking components near the front or side impact sensors or the restraints control module (RCM). Nearby components include doors, instrument panel, console, door latches, strikers, seats and hood latches.

Refer to the Description and Operation portion of Section 501-20B for location of the RCM and impact sensor(s).

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Failure to follow these instructions may result in serious personal injury or death in the event of an accidental deployment.

WARNING: Always install new brake shoes or pads at both ends of an axle to reduce the possibility of brakes pulling vehicle to one side. Failure to follow this instruction may result in uneven braking and serious personal injury.

WARNING: Do not paint any air bag module trim covers or deployment doors. Paint may cause the air bag to deploy incorrectly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

Tire and Wheel Service Warnings

WARNING: Tires degrade over time depending on many factors such as weather, storage conditions, and conditions of use (load, speed, inflation pressure, etc.) the tires experience throughout their lives. In general, new tires should be installed after 6 years regardless of tread wear. However, heat caused by hot climates or frequent high loading conditions may accelerate the aging process and may require new tires to be installed more frequently. You should install a new spare tire when you install new road tires or after six years even if it has not been used.

WARNING: Replacement wheels must be equivalent to the original equipment wheels in:

- **load carrying capacity.**
- **diameter, width and offset.**
- **pilot hole and bolt circle.**

Combined load carrying capacity of replacement wheels for a given axle, must be equal to or greater than that axle's gross axle weight rating (GAWR) identified on the vehicle's Safety Compliance Certification label. All other specifications should be evaluated by measurement of both the original wheel and the replacement wheel. If specifications are not equivalent, the safety and handling of the vehicle may be degraded, which may result in serious injury to the vehicle occupant(s).

WARNING: Never inflate a tire that has been run flat without first removing the tire from the wheel to inspect for damage. A damaged tire can fail during inflation. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not hit the wheel or tire with a metallic hammer. This action may damage the wheel or tire, resulting in tire or wheel failure. Failure to follow this instruction may result in serious personal injury to the technician or vehicle occupant(s).

WARNING: When a wheel is installed, always remove any corrosion, dirt or foreign material present on the mounting surface of the wheel and the mounting surface of the wheel hub, brake drum or brake disc. Make sure that any fasteners that attach the rotor to the hub are secured so they do not interfere with the mounting surfaces of the wheel. Failure to follow these instructions when installing wheels may result in the wheel nuts loosening and the wheel coming off while the vehicle is in motion, which could result in loss of control, leading to serious injury or death to

vehicle occupant(s).

WARNING: Inflating tires to pressures that exceed maximum tire inflation rating on tire sidewall may result in tire failure and serious personal injury to the technician or vehicle occupant(s).

WARNING: Only use replacement tires that are the same size, load index, speed rating and type (such as P-metric versus LT-metric or all-season versus all-terrain) as those originally provided by Ford. The recommended tire and wheel size may be found on either the Safety Compliance Certification Label or the Tire Label, which is located on the B-pillar or edge of the driver's door. If the information is not found on these labels, consult a Ford dealer. Use of any tire or wheel not recommended by Ford can affect the safety and performance of the vehicle, which could result in an increased risk of loss of vehicle control, vehicle rollover, personal injury and death. Additionally, the use of non-recommended tires and wheels could cause steering, suspension, axle or transfer case/power transfer unit failure.

WARNING: Do not mount tube-type tires on tubeless wheels or tubeless tires on tube-type wheels. Incorrect combinations could result in tire separation from wheel and may result in serious injury to vehicle occupant(s).

WARNING: Cracked wheels can be dangerous. Deflate tires on cracked wheels prior to removal of wheels from the vehicle. Failure to follow this instruction may result in serious personal injury.

WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. For dual rear wheel (DRW) only, a second retightening is required within 800 km (500 mi). Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Always match the tire size to the wheel size during assembly. Incorrect matching can result in tire bead damage or tire separation from the wheel. Failure to follow this instruction may result in serious personal injury to technician or vehicle occupant(s).

WARNING: Keep eyes away from valve stem when deflating tires. Reduce air pressure in tire as much as possible by pushing in valve core plunger prior to removing the core. Escaping air can carry particles that can injure the eyes. Failure to follow these instructions may result in serious personal injury.

WARNING: Never use wheels different than the original equipment. Additionally, never use wheel nuts different than the original equipment. Failure to follow these instructions may result in damage to the wheel or mounting system. This damage could cause the wheel to come off while the vehicle is being driven, which could result in serious personal injury or death to vehicle occupant(s).

WARNING: Do not weld or peen wheels. A wheel needing such repairs must have a new wheel installed. Failure to follow these instructions may result in wheel failure and serious personal injury.

WARNING: The tire pressure monitoring system (TPMS) sensor battery may release hazardous chemicals if exposed to extreme mechanical damage. If these chemicals contact the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If any part of the battery is swallowed, contact a physician immediately. When disposing of TPMS sensors, follow the correct procedures for hazardous material disposal. Failure to follow these instructions may result in serious personal injury.

Diagnostic Methods

Effective Diagnostic Techniques

The following diagnostic process is critical for consistently successful diagnoses. Random methods work inconsistently and often lead to multiple repairs and the accompanying frustration.

- Understand and verify the **symptom** .
  - Understanding a symptom requires understanding normal operation.
  - Duplicate the concern. Re-create the same conditions that demonstrated the original concern (road testing may be necessary).
- Determine the responsible **system** .
  - Gather data, such as a visual inspection and an OASIS report.
  - Perform system tests, such as pressure tests or DTC retrieval.
- Identify the responsible **component** .
  - Test the suspect component and related parts.
- Determine the root **cause**
  - Examine related components (wiring faults, misalignments, incorrect adjustments) that may be the actual cause or may have caused the component failure.
  - Repair all related faults to avoid repeat failures.
  - Verify the repair has corrected the concern (and not created any new ones) using the identical conditions that demonstrated the original concern.

Diagnostic Scan Tool Testing

Network Test

Performing a network test is always recommended for analysis of electronic system concerns. Always solve network issues before addressing individual symptoms or DTCs.

Recommended Practice: REFER to Symptom Chart in Section 418-00 to diagnose a network outage or no response from an individual module (or modules).

DTC Retrieval

Generally, a good diagnostic strategy is to resolve all on-demand codes related to the system concern. Retrieving all continuous DTCs can also be beneficial to understand historic issues or issues outside of the suspect system that may be affecting your concern. On-demand testing should be done to ensure the fault represented by a continuous DTC is still present.

Continuous Memory Diagnostic Trouble Codes (CMDTCs)

Modules that produce diagnostic trouble codes have a program that evaluates system conditions, normally while the vehicle or system is in use. Module inputs can be checked for values indicating an electrical fault with the monitoring circuit or component. Module outputs can be monitored for correct function. Codes are stored when predefined limits are exceeded and retained even if the ignition is turned off (generally DTC-retention is for 40+ ignition cycles). Not all continuous codes have a matching on-demand code - and vice versa; this varies with different modules. For example, some network communication codes are continuous only. It is important to note that the presence of a continuous DTC does not guarantee that the fault currently exists.

Ford On-Demand DTCs

Ford Motor Company modules have a unique feature that performs a special diagnostic program at the request of the technician (using a scan tool). This "On-demand" diagnostic program can exercise system outputs not normally running when the car is parked and record observed faults. These diagnostic codes are communicated to the scan tool; they are not recorded in module memory. An on-demand test is an effective tool for evaluating real input and output conditions during module activity – activity that might not normally be occurring during service bay conditions. For example, an air suspension module on-demand test can run the compressor, vent the system, and observe the report from the height sensor even when the car is already at correct trim height and not requiring height adjustment.

Network Communication DTCs

Network DTCs (U-prefix codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures (such as module reprogramming or diagnostics with modules disconnected) often set network DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent recurrence of intermittent network concerns, inspect all network wiring, especially in-line and module connectors; test the vehicle battery.

Recommended practice: Clear the DTC and retest. If the DTC repeats, test the vehicle communication network.

DTC Nomenclature (SAE J2012 and ISO 14229)

Many modules use 5-character DTCs followed by a 2-character failure-type code. The failure-type (sometimes called "fault byte") digits provide information about specific fault conditions such as opens or shorts to ground. Continuous memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

Integrated Diagnostic System (IDS) Scan Tool Usage

If The IDS Scan Tool Does Not Communicate With The VCM

1. Check the VCM power; examine the connection to the vehicle.
   - The VCM LED illumination prove-out confirms power and ground from the DLC are provided to the VCM .
   - **Recommended Practice:** REFER to Section 418-00 , No Power to the Scan Tool, to diagnose no power to the VCM .

2. Check the scan tool connection to the VCM .

3. Follow scan tool instructions to retry.

If The IDS Scan Tool Does Not Communicate With The Vehicle

The IDS scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the scan tool then attempts to communicate with all other modules on the vehicle.

1. Verify the scan tool operation with a known good vehicle.

2. Verify the ignition is ON.

3. If an IDS session cannot be established with the vehicle (IDS may state "No communication can be established with the PCM"):
   - Choose "NO" when the scan tool prompts to retry communication.
   - Enter either a PCM part number, tear tag, or calibration number to identify the vehicle and start a session.
     - The PCM part number can be determined from OASIS -- choose “HVBoM” from the OASIS page and search for the PCM part number
     - The PCM part number and 4-character tear tag are printed on the PCM label.
   - Establish a session based on the PCM information (above).

4. Using the tool box menu, run the network test.
    - Determine if all modules on the network are unresponsive or if only the PCM does not communicate.
    - **Recommended practice:** REFER to Symptom Chart in Section 418-00 to diagnose the network outage or no response from the PCM.

Measuring Automotive Circuits

Wiring Pin (Terminal) Fit And The Use Of Rotunda Flex Probes

- To avoid wiring pin (terminal) damage, Rotunda Flex Probes NUD105-R025D must be used to connect test equipment or jumper wires to pins (terminals).
- Male to female pin (terminal) fit is critical for connection reliability.
    - Pin (terminal) fit may be checked by using the mating pin (terminal) to test for normal separation force (a damaged pin or terminal will have very low separation force from the mating pin or terminal)
    - Correctly checking the separation force of small pins (terminals) may require removal of the connector terminal guide/retainer if it adds drag to the pin (terminal) insertion or removal
- Replace damaged connectors or pins (terminals).
    - Use the Wiring Diagram connector view (cell 150) to identify the correct replacement connector with pigtail.
    - Use the Wire Harness Terminal Repair Guide to identify and order the correct replacement pin and pigtail. Available through Ford Dealers, REFER to FMC dealer website, or REFER to www.fcs.dealersonnection.com/wire .

Checking Power-Providing Circuits

- Measuring a power wire with the intended load disconnected using a DMM will only find open circuits (open fuse or wire).
- **Recommended practice:** Circuits carrying approximately 200-1000 mA* may be loaded with the specified test light SGT27000. Measure circuit voltage with a DMM while the test light is connected and illuminated. A reduction in the voltage present during test-light-loading indicates excessive circuit resistance.
- **Recommended practice:** Circuits carrying more than one ampere* should be loaded with a device requiring similar current (e.g., a headlamp bulb may be effective). A reduction in the voltage present during loading indicates excessive resistance.
- *Circuit current is matched to wire gauge/size; Examples:
    - Conductor sizes of 24 gauge (.5 mm) or smaller are generally used to carry approximately 1 ampere (1000 mA) or less. Use of the test light to load these circuits is appropriate.
    - Conductor sizes of 20 gauge (.8 mm) or larger are generally used to carry approximately 5 amperes (5000 mA) or more. Match the substitute load (measure substitute load current first as necessary) to this current level.

Checking Ground-Providing Circuits

- The best method of checking ground circuits is to measure the circuit voltage drop during component operation (or attempted operation).
- An ohmmeter may be accurately used if the battery has been disconnected.
- **Recommended practice:** Expect less than 2 ohms for most small diameter (18 gauge and smaller) wires.
- Ohmmeter low-resistance resolution (approximately 0.1 ohm) limits its use to circuits carrying less than approximately 5 amperes (this is due to the fact that very small resistances, undetectable by a DMM , cause significant voltage loss in higher current circuits).
- DMM ohmmeter readings are easily corrupted by the normal voltage present (battery connected) in many ground circuits.
    - **Recommended practice:** Reverse the leads and check for changes in the measurement. Reversing the DMM lead connections should never change the resistance measurement

(unless the circuit contains a semi-conductor). Measurement (non-semi-conductor) differences when leads are interchanged at the test points indicate invalid test results. The presence of voltage corrupts the reading, and causes the meter reading to change when the leads are reversed.

Checking Circuit Continuity

- **Recommended practice:** Expect less than 2 ohms of resistance for most wires.
- Ohmmeter low-resistance resolution (approximately 0.1 ohm) limits its use to circuits carrying less than approximately 5 amperes. This is due to the fact that very small resistances, below the resolution of a DMM , cause significant voltage loss in higher current circuits.
- The DMM applies a small amount of voltage to the circuit or component to calculate resistance. As a result, DMM ohmmeters are very sensitive to any level of voltage present. Voltage present in the circuit will corrupt the DMM reading.

Checking For Unintended Continuity (Shorts) To Other Circuits

- A DMM ohmmeter may be used to detect undesired circuit connections to:
  - Ground
  - Other unpowered circuits
- **Recommended practice:** Expect greater than 10,000 ohms of resistance between two separate circuits; the best result is an open circuit DMM indication (no detected resistance).
- Shorts to voltage are checked with a DMM voltmeter
- **Recommended practice:** Turn ignition on (with battery connected) and measure the circuit for any voltage present (none should be present)

Checking Circuits By Back-Probing A Connector

- Back-probing should be a testing method of last resort. It should only be employed where a diagnostic step requires a circuit to be tested under actual operating conditions. Back-probing is a risky testing method due to the uncertainty of the probe connection and the possibility of damaging terminals.
- Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors and subsequent electrical faults.
  - Use Rotunda Back-Probe Pins POMA6411 to assist in making a good test connection and to prevent connector or terminal damage during back-probing.
- Do not test for the presence of voltage at a single point where zero volts is a possible result (you cannot tell the difference between a bad probe contact and a zero volt result).
- Do not test for continuity/opens (using a DMM ohmmeter) between two points (you cannot tell the difference between bad probe contacts and an open circuit).
- Back-probing may be used where the circuit must be analyzed with the voltage-drop method (if the circuit carries greater than 5 amperes and no other means of testing will definitively eliminate circuit resistance as a possible fault). A zero-volt result indicates incorrect test conditions (no current flow) or bad back-probe connections.
- Occasionally, module failure mode behavior will change the operation of a circuit when it is opened for testing. Back-probing is an acceptable remedy for these testing dilemmas.

Circuit Analysis Using Jumper Wires (Creating Substitute Circuits)

- Jumper wires may be employed for circuit analysis.
- **Cautions:**
  - Always use fused jumper wires — the recommended universal-testing jumper wire fuse is 2-5 amperes; larger fuse ratings should be used only in special circumstances.
  - Use flex probes or equivalent to prevent connector terminal damage (flex probes are not intended to carry higher currents necessary to operate motors such as a cooling fan or blower motor).

- Follow workshop manual testing directions when using jumper wires to avoid component or harness damage due to incorrect jumper connections.
- Never repair a circuit by adding a new wire in parallel to the old one (overlaying the circuit) without fully understanding what caused the circuit to fail. Always find, examine, and repair the fault to correct the root cause and to repair any adjacent wiring that has been damaged.

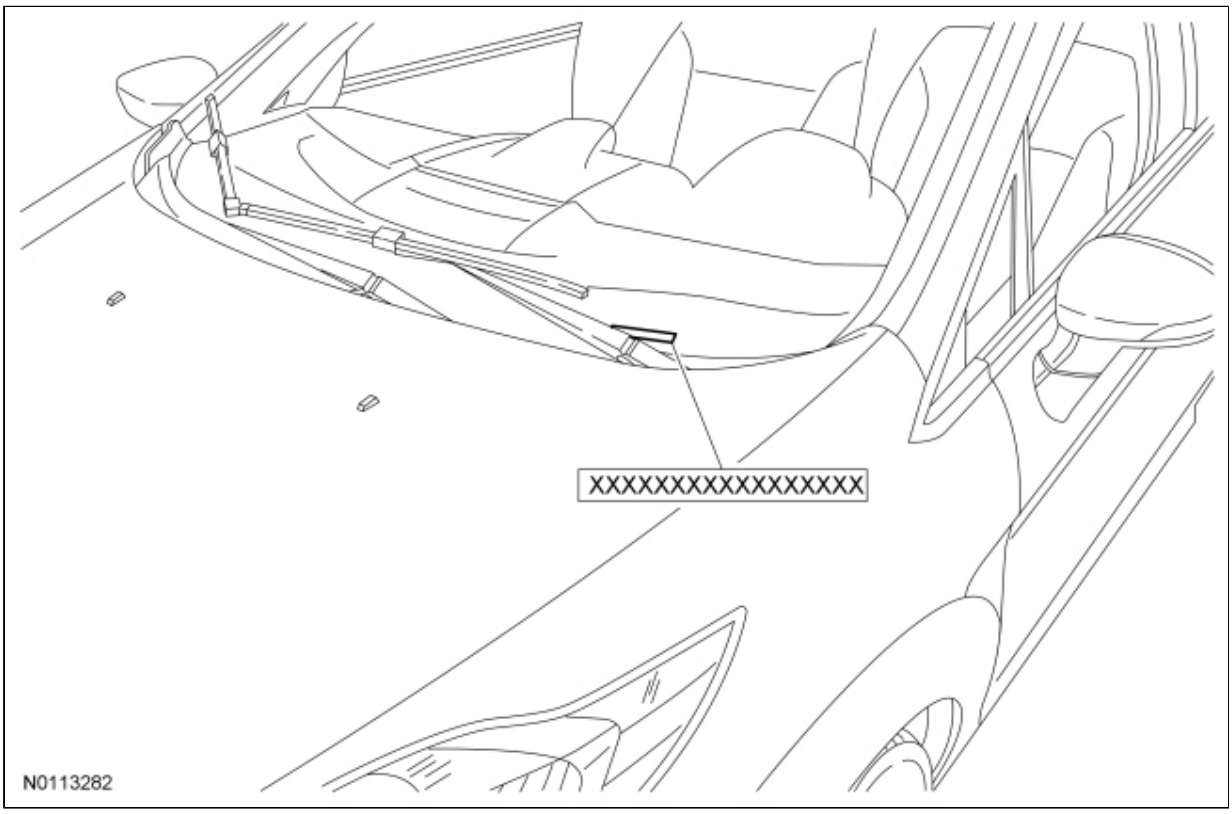
Checking Modules

- Generally, module failure rate is very low and therefore replacement modules usually do not resolve the root cause. Incorrect replacement of a module is often the result of inadequate testing.
  - Understand the correct module function.
  - Make sure programmable parameters are set correctly for the function in question (see the list in Section 418-01).
  - Resolve DTCs first — as directed by Diagnostic Routines.
  - Test all inputs, both hard-wired and networked.
  - Test outputs (see "Checking module switching circuits" below).
  - Check applicable TSBs for module software changes (flash programming).
- Checking module switching circuits.
  - Using the scan tool module-output command function (e.g., IDS Output State Control) to activate components is a fast way to confirm an output is capable of being switched on by the module. Testing that reveals normal module-output function confirms the need to analyze the module inputs.
  - Don't apply ground or power directly to module-switched components with jumper wires (unless directed by a workshop manual procedure), as the component can be damaged by a direct connection to ground/power.

Identification Codes

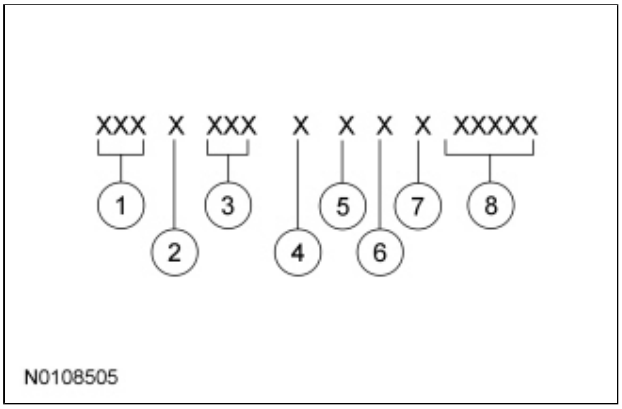
Vehicle Identification Number (VIN)

Vehicle Identification Number (VIN) Locator



The Vehicle Identification Number (VIN) is a 17-digit combination of letters and numbers. The VIN is stamped on a metal tab riveted to the instrument panel, top upper left of the dash. The VIN is also found on the Vehicle Certification (VC) label.

If the VIN plate requires replacement, authorized dealers must contact their respective regional office.



Item	Description

1	World Manufacturer Identifier (WMI)
2	Restraint-type code
3	Vehicle line, series, body-type code
4	Engine-type code
5	Computer-generated check digit
6	Model year code
7	Assembly plant code
8	Production sequence number

World Manufacturer Identifier (WMI)

The first 3 VIN positions are the World Manufacturer Identifier (WMI).

- 3FA — Ford Motor Company, Cuatitlian, Mexico, passenger car

Restraint Type

The fourth VIN position is the vehicle restraint type code.

- D — Active safety belts — all positions, driver and front passenger air bags with driver and front passenger side impact air bags
- K — Active safety belts — all positions, no air bags (Mexico only)

Vehicle Line, Series and Body Type

Positions 5 through 7 indicate vehicle line, series and body type.

- P4A — 4-door sedan — S
- P4B — 4-door sedan — SE
- P4C — 4-door sedan — SEL
- P4E — 5-door hatchback — SE
- P4F — 5-door hatchback — SES

Engine Type

The eighth VIN position identifies the engine displacement and number of cylinders.

- J — 1.6L, in-line 4-cylinder, SIGMA
- K — 1.6L, in-line 4-cylinder, SIGMA (flex-fuel)

Additional engine information can be obtained from the engine tag. Refer to Section 303-01.

Check Digit

The ninth VIN position is a government-assigned, computer-generated check digit.

Model Year

The tenth VIN position is the model year code.

- B — 2011

Assembly Plant

The eleventh VIN position is the assembly plant code.

- M — Cuautitlan Assembly, Cuautitlan, Mexico

Production Sequence Number

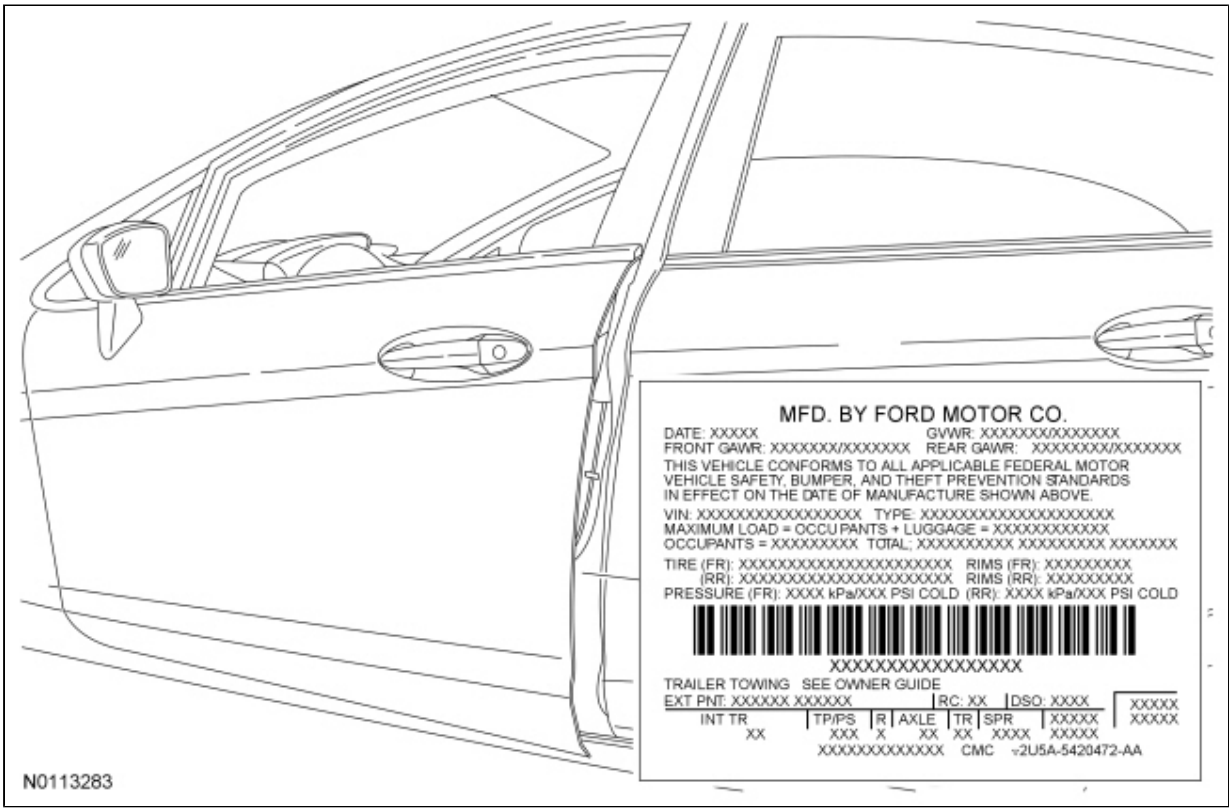
The last 6 VIN positions are a numeric code for the vehicle build sequence. This is also the vehicle serial and warranty number.

The serial number can also be found on the engine block, transmission and frame.

- 100001-999999 — Ford Motor Company vehicle

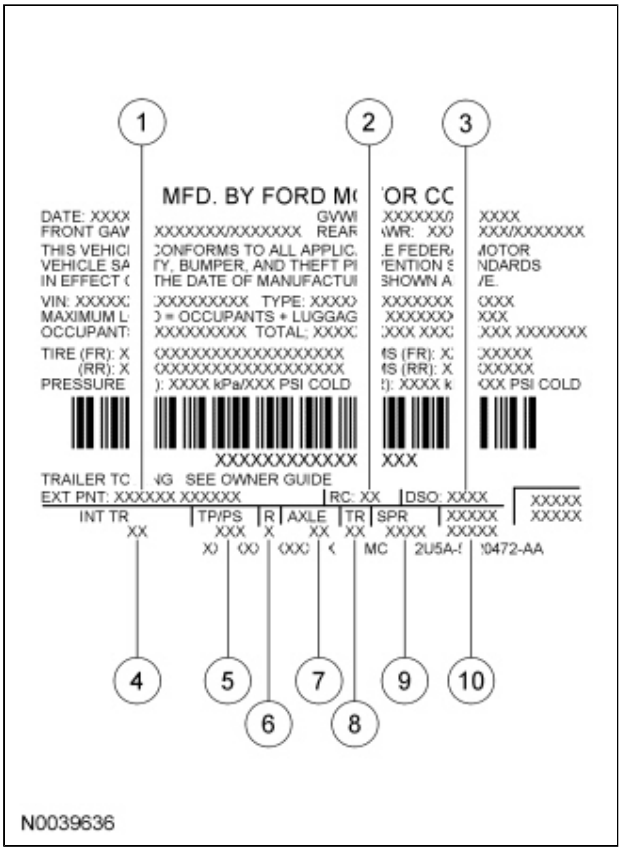
Vehicle Certification (VC) Label

Vehicle Certification (VC) Label Locator



The Vehicle Certification (VC) label contains the manufacturer name, the month and year of manufacture, the certification statement and the Vehicle Identification Number (VIN). It also includes Gross Vehicle Weight Rating (GVWR) and tire information.

If a vehicle requires replacement of the VC label and is 4 years old or less, an authorized dealer must submit the VIN to their respective regional office. The regional office will submit a web form to the assembly plant for the replacement label. Once the label has been printed, a representative from the regional office will deliver the label to the dealer and witness installation on the vehicle. If a vehicle is more than 4 years old and requires a replacement label, the dealer must submit a request to the Department of Motor Vehicles.



Item	Description
1	Exterior paint code
2	Region code
3	Domestic special order code
4	Interior trim code
5	Tape/paint stripe code
6	Radio code
7	Axle code
8	Transmission code
9	Spring code
10	Powertrain calibration code

Paint Code

Paint codes may be listed as a 2-part code. The first set of paint code numbers/letters indicate the vehicle primary body color. The second set of letters/numbers (if applicable) indicate a 2-tone or accent body color. All paint codes are a base coat/clear coat finish.

- L7 — Bright Magenta
- NQ — Yellow Blaze (tri-coat)
- SQ — Lime Squeeze Metallic
- SZ — Blue Flame Metallic
- T9 — Monterrey Gray
- U6 — Red Candy Tint
- UH — Tuxedo Black Metallic
- UX — Ingot Silver Metallic
- YZ — Oxford White

Interior Trim Codes

The interior trim codes are listed as a 2-part code. The first digit listed indicates the seat and fabric style. The second digit listed indicates the interior trim color.

Trim Codes

- C — Greenwich cloth
- D — Crossroad cloth
- L — Soho leather

Interior Trim Color Codes

- B — Black/Black
- C — Black/Cashmere Tan
- L — Charcoal Black/Light Stone
- R — Ebony/Red
- U — Black/Blue

Tape/Paint Stripe Codes

Tape and paint stripe codes do not apply.

Radio Codes

Available radio codes are as follows.

- A — AM/FM stereo with CD player and MP3 enabled
- D — Electronic AM/FM stereo

Axle Codes

Available axle ratios are as follows.

- GG — 4.07 ratio (automatic transmission)
- MM — 4.07 ratio (manual transmission)

Additional axle information can be obtained from the axle tag. Refer to Section 205-00 .

Transmission Codes

Available transmission type codes are as follows.

- A — 6-speed automatic
- C — 5-speed manual

Additional transmission information can be obtained from the transmission tag. Refer to Section 307-11 or Section 308-00 .

Spring Codes

Spring codes are listed as a 2-part code. The first set of characters identify the front springs. The second set of characters identify the rear springs.

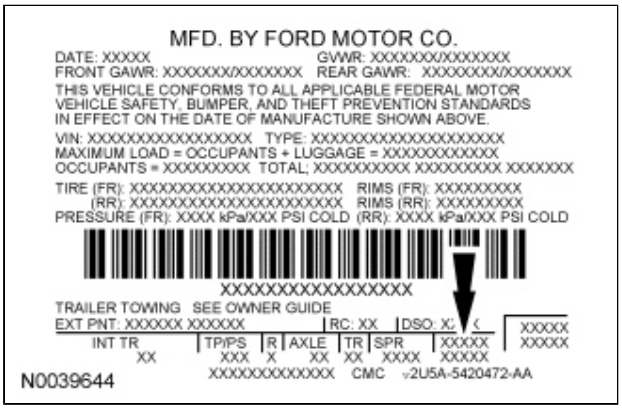
Front Springs

- Base part number — 5310

Rear Springs

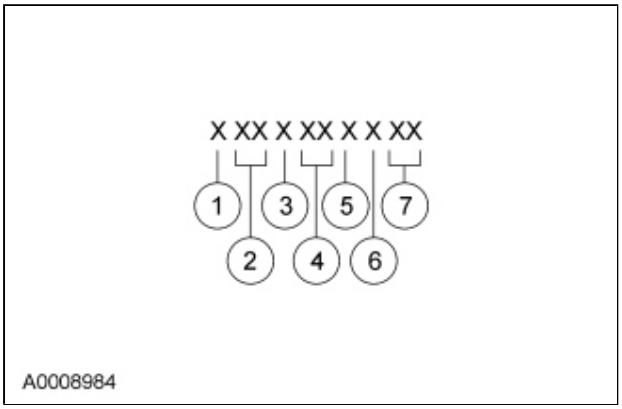
- Base part number — 5560

Powertrain Calibration Information



NOTE: Powertrain calibration information is limited to a maximum of 5 characters per line on the VC label. Because of this, calibration identification consisting of more than 5 characters will wrap to the second line on the VC label.

Powertrain calibration information is printed in the lower right corner of the VC label. Only the base calibration information is printed. Revision levels will not appear, however, they can be obtained through a scan tool using the most current software revision.



Item	Description
1	Model year (year in which the calibration strategy was first introduced).
2	Vehicle code
3	Transmission code
4	Unique calibrations (designates different hardware to similar vehicles), example: tires or drive ratios
5	Fleet code (describes fleet to which the vehicle belongs), example: 6 — Evaporative Emission (EVAP)
6	Certification region (lead region where multiple regions are included in one calibration), example: A — US federal
7	Revision level (will advance as revisions occur), obtained through scan tool

Model Year

- B — 2011

Vehicle Code

- CH — Fiesta

Transmission Code

- A — Automatic transmission
- C — Manual transmission

Unique Calibration

The Emission/Corporate Average Fuel Economy/CO2 Compliance Department is responsible for assigning these calibration numbers. Unique identifications are assigned to cover similar vehicles to differentiate between tires, drive configurations, final drive ratios and other calibration-significant factors.

These 2 characters are chosen by the analyst to provide identifiable information unique to each calibration. For example, using the number 2 to denote a 2-valve engine versus using the number 4 to denote a 4-valve engine provides an easily identifiable difference.

Fleet Coding

- 0 — Certification (US 4K, final sale in export markets)
- 1 — Heavy duty gas engine/Dyno
- 2 — Fast Automobile Manufacturers' Association, US
- 3 — Alternative durability protocol, US
- 4 — Not assigned
- 5 — Not assigned
- 6 — Evaporative Emission (EVAP)
- 7 — Mileage accumulation aging endurance durability
- 8 — On-Board Diagnostic (OBD)
- 9 — Not assigned

Certification Region

- 5 — US 50 states
- A — US federal, including altitude, may include Canada and/or Mexico
- B — US California standard, includes US green states
- C — Canada
- D — China
- E — European Community (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and United Kingdom)
- F — European Extended Community (E-plus Croatia, Czech Republic, Estonia, Hungary, Norway, Poland, Romania, Russian Federation, Slovakia, Slovenia, Switzerland and Yugoslavia)
- G — Gulf Cooperative Council (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and United Arab Emirates)
- H — Hong Kong
- J — Japan
- K — Korea
- L — Malaysia
- M — Mexico
- N — New Zealand
- P — Australia
- Q — South America (Brazil)
- S — Singapore
- T — Taiwan
- U — South America (unleaded fuel regions)
- V — Vietnam
- X — Rest Of World (ROW)
- Y — Military
- Z — Israel

Revision Level (not printed on label)

- 91-99 — Hardware and certification levels
- 01-04 — Preliminary levels
- 00 — Job 1 production (initial certification)
- 05-09 — Pre-job 1 revisions to calibrations
- 10-89 — Post-job 1 revisions to calibrations
- 0B — Durability test level
- BD — OBD intermediate level (pre-05)

Jacking and Lifting

WARNING: Never get underneath a vehicle that is supported only by a jack. The jack could unintentionally lower. Always support vehicle with floor stands. Failure to follow these instructions may result in serious personal injury.

WARNING: Only raise the vehicle when positioned on a hard, level surface. Attempting to raise the vehicle on an uneven or soft surface may result in vehicle slipping or falling from the jack or jackstand. Failure to follow this instruction may result in serious personal injury.

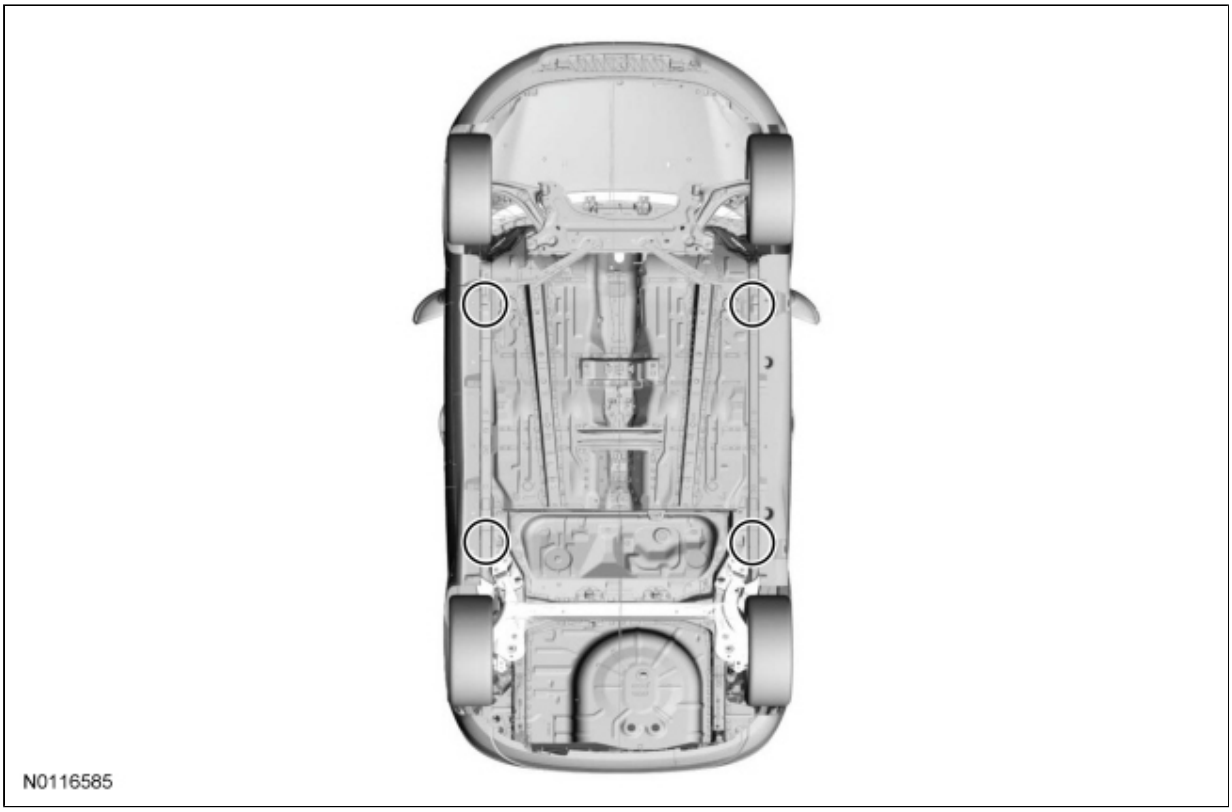
WARNING: Position the hoist lift arms as shown in the illustration. Incorrect positioning could result in vehicle slipping or falling from the hoist. Failure to follow this instruction may result in serious personal injury.

WARNING: When jacking or lifting the vehicle, block all wheels remaining on the ground. Set the parking brake if the rear wheels will remain on the ground. These actions help prevent unintended vehicle movement. Failure to follow these instructions may result in serious personal injury.

NOTICE: **It is not recommended that the vehicle is jacked or lifted on the rear suspension crossmember. If the vehicle must be lifted on the crossmember, make sure that the jack or lift is positioned centrally. Failure to follow these instructions will result in deformation of the closing plate which will weaken the crossmember.**

NOTICE: **Damage to the suspension, exhaust or steering linkage components may occur if care is not exercised when positioning the hoist adapters prior to lifting the vehicle.**

Jacking and Lifting Locations



Maintenance Schedules — Gasoline Engines

For Maintenance Schedule information, refer to the Scheduled Maintenance Guide chapter in the Owner's Guide.

Also available at:

- www.motorcraftservice.com and select Owner Guides.

Noise, Vibration and Harshness (NVH)

Noise is any undesirable sound, usually unpleasant in nature. Vibration is any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down. Harshness is a ride quality issue where the vehicle's response to the road transmits sharply to the customer. Harshness normally describes a firmer than usual response from the suspension system. NVH is a term used to describe these conditions, which result in varying degrees of dissatisfaction. Although a certain level of NVH caused by road and environmental conditions is normal, this section is designed to aid in the diagnosis, testing and repair of NVH symptoms.

Acceptable NVH

All internal combustion engines and drivelines produce some noise and vibration; operating in a real world environment adds noise that is not subject to control. Vibration isolators, mufflers and dampers reduce these to acceptable levels. A driver who is unfamiliar with a vehicle can think that some sounds are abnormal when actually the sounds are normal for the vehicle type. As a technician, it is very important to be familiar with vehicle features and know how they relate to NVH symptoms and their diagnosis. For example, if the vehicle has automatic overdrive, it is important to test drive the vehicle both in and out of overdrive mode.

Glossary of Terms

Amplitude

The quantity or amount of energy produced by a vibrating component (G-force). An extreme vibration has a high amplitude. A mild vibration has a low amplitude. See Intensity.

Boom

Low frequency or low pitched noise often accompanied by a vibration. Also refer to Drumming.

Buffet/Buffeting

Strong noise fluctuations caused by gusting winds. An example would be wind gusts against the side glass.

Buzz

A low-pitched sound like that from a bee. Often a metallic or hard plastic humming sound. Also describes a high-frequency vibration. Vibration feels similar to an electric razor.

Chatter

A pronounced series of rapidly repeating rattling or clicking sounds.

Chirp

A short-duration, high-pitched noise associated with a slipping drive belt.

Chuckle

A repetitious, low-pitched sound. A loud chuckle is usually described as a knock.

Click

A sharp, brief, non-resonant sound, similar to actuating a ball point pen.

Clonk

A hydraulic knocking sound. Sound occurs with air pockets in a hydraulic system. Also described as hammering.

Clunk/Driveline Clunk

A heavy or dull, short-duration, low-frequency sound. Occurs mostly on a vehicle that is accelerating or decelerating abruptly. Also described as a thunk.

Conductor

The components that carry (transmit) a vibration frequency from the originator to the reactor.

Cycles Per Second

Cycles per second. Same as hertz (Hz).

Cracks

A mid-frequency sound, related to squeak. Sound varies with temperature conditions.

Creak

A metallic squeak.

Cycle

The process of a vibrating component going through a complete range of motion and returning to the starting point.

Decibel (dB)

A unit of measurement, referring to sound pressure level, abbreviated dB.

Drone

A low-frequency, steady sound, like a freezer compressor. Also described as a moan.

Drumming

A cycling, low-frequency, rhythmic noise often accompanied by a sensation of pressure on the ear drums. Also described as a low rumble, boom or rolling thunder.

Flutter

Mid to high intermittent sound due to air flow. Similar to a flag flapping in the wind.

Frequency

The rate at which a cycle occurs within a given time.

G-force

The additional load or weight produced in an object during acceleration. When measuring the level or amplitude of a vibration without sound, the unit G is added to associate the force of the vibration to gravity. This is similar to measuring the weight of an object, which is also a function of gravity.

Gravelly Feel

A grinding or growl in a component, similar to the feel experienced when driving on gravel.

Grind

An abrasive sound, similar to using a grinding wheel, or rubbing sand paper against wood.

Hertz (Hz)

A unit of measure used to describe noise and vibration concerns expressed in cycles per second.

Hiss

Steady, high-frequency noise. Vacuum leak sound.

Hoot

A steady, low-frequency tone, sounds like blowing over a long neck bottle.

Howl

A mid-range frequency noise between drumming and whine. Also described as a hum.

Hum

Mid-frequency steady sound, like a small fan motor. Also described as a howl.

Intensity

The physical quality of sound that relates to the strength of the vibration (measured in decibels). The higher the sound's amplitude, the higher the intensity and vice versa. See Amplitude.

Knock

A heavy, loud, repetitious sound, like a knock on the door.

Moan

A constant, low-frequency tone. Also described as a hum.

Ping

A short-duration, high-frequency sound, which has a slight echo.

Pitch

The physical quality of sound that relates to its frequency. Pitch increases as frequency increases and vice versa.

Pumping Feel

A slow, pulsing movement.

Rattle

A random and momentary or short-duration noise.

Reactor

The component, or part, that receives a vibration from an originator and conductor and reacts to the vibration by moving.

Roughness

A medium-frequency vibration. A slightly higher frequency than a shake. This type of vibration is usually related to drivetrain components.

Rustling

Intermittent sound of varying frequency, sounds similar to shuffling through leaves.

Shake

A low-frequency vibration, usually with visible component movement. Usually relates to tires, wheels, brake drums or brake discs if it is vehicle speed sensitive, or engine if it is engine speed sensitive. Also referred to as a shimmy or wobble.

Shimmy

An abnormal vibration or wobbling, felt as a side-to-side motion of the steering wheel in the driveshaft rotation. Also described as waddle.

Shudder

A low-frequency vibration that is felt through the steering wheel or seat during light brake application.

Slap

A resonance from flat surfaces, such as safety belt webbing or door trim panels.

Squeak

A high-pitched transient sound, similar to rubbing fingers against a clean window.

Squeal

A long-duration, high-pitched noise.

Tap

A light, rhythmic or intermittent hammering sound, similar to tapping a pencil on a table edge.

Thump

A dull beat caused by 2 items striking together.

Tick

A rhythmic tap, similar to a clock noise.

Tip-In Moan

A light moaning noise heard during light vehicle acceleration, usually between 40-100 km/h (25-65 mph).

Transient

A noise or vibration that is momentary, a short duration.

Vibration

Any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down.

Whine

A constant, high-pitched noise. Also described as a screech.

Whistle

High-pitched noise with a very narrow frequency band. Examples of whistle noises are a turbocharger or air flow around an antenna.

Wind Noise

Any noise caused by air movement in, out or around the vehicle.

Noise, Vibration and Harshness (NVH)

Special Tool(s)

ST2311-A	Electronic Vibration Analyzer (EVA) 100-F027 (014-00344) or equivalent

ST3108-A	Squeak and Rattle Repair Kit 164-R4900
ST2314-A	Ultrasonic Leak Detector 134-R0135 or equivalent

Diagnostic Theory

The shortest route to an accurate diagnosis results from:

- system knowledge, including comparison with a known good system.
- system history, including repair history and usage patterns.
- condition history, especially any relationship to repairs or sudden change.
- knowledge of possible sources.
- using a systematic diagnostic method that divides the system into related areas.

The diagnosis and correction of NVH symptoms requires:

- a road or system test to determine the exact nature of the symptom.
- an analysis of the possible causes.
- testing to verify the cause.
- repairing any symptoms found.
- a road test or system test to make sure the cause has been corrected or brought back to within an acceptable range.

Diagnostic Procedure Overview

Qualifying the symptom by the particular sensation present can help narrow down the cause. Always use the "symptom" to "system" to "component" to "cause" diagnosis technique. This diagnostic method divides the problem into related areas to correct the customer concern.

- Verify the "symptom".
- Determine which "system(s)" can cause the "symptom" using the diagnostic tools described in this section.
- After determining the possible "system(s)", refer to the appropriate section in this manual to identify the worn or damaged "components".
- After identifying the "components", identify the "cause" of the failure.

Tools and Techniques

The diagnostic tools allow for a systematic collection of information that is necessary to accurately diagnose and repair NVH problems. Remember that the vibrating source component (originator) may only generate a small vibration. This small vibration can in turn cause a larger vibration/noise to emanate from another receiving component (reactor), due to contact with other components (transfer path). For the best results, carry out the test as follows:

a. Test drive the vehicle with the vibration sensor inside the vehicle.
b. Place the sensor in the vehicle according to feel.
    - If the condition is felt through the steering wheel, the source is most likely in the front of the vehicle.
    - A vibration that is felt in the seat or floor only will most likely be found in the driveline, drive axle or rear wheels and tires.
c. Record the readings. Also note when the condition begins, when it reaches maximum intensity and if it tends to diminish above/below a certain speed.
    - If a vibration symptom is vehicle speed related, the tire and wheel rpm/frequency and driveshaft frequency should be calculated.
    - If a vibration symptom is engine speed related, the engine, engine accessory and engine firing frequencies should be calculated.
    - Frequencies with an amplitude reading of 0.06 Gs or less are barely perceptible NVH levels. No corrective action is necessary.
d. Place the vibration sensor on or near the suspect area outside the vehicle.
e. Continue the road test, driving the vehicle at the speed the symptom occurs and take another reading.
f. Compare the readings.
    - A match in frequency indicates the problem component or area.
    - An unmatched test could indicate the symptom is caused by the engine, torque converter or engine accessory. Use the diagnostic tools in the rpm mode and check if symptom is rpm related.

The following diagnostic tools and techniques can be used separately or in conjunction with each other to aid in the diagnosis of NVH symptoms. They are listed in order of preference for ease in their use for locating these symptoms.

NVH Analyzer (Vetronix)

The Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) and the MTS 4100 NVH analyzers are tools to aid in the identification and isolation of a noise, vibration or harshness symptom in a vehicle. They measure noise and vibration data and compare it with data obtained from the vehicle's PCM as

well as vehicle variants that were entered by the user such as pulley size, axle ratio and tire size in order to provide possible sources. The Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) and the MTS 4100 have the following characteristics:

- Interface with the vehicle's computer system
- Support and store vibration data input from 1 or 2 accelerometers
- Support and store noise data input from 2 microphones
- Provide a photo-tachometer for operation of the driveshaft balancing function
- Provide a strobe output capable of driving a standard timing light
- Contain a real-time clock circuit that provides time and date information which is used for tagging test data
- Have the capability to print to an external printer and interface with a PC
- Can be powered from a variety of power sources: cigarette lighter, AC power or the internal battery pack

The Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) and the MTS 4100 NVH analyzers have 4 main operating modes. The first is for vibration diagnosis. This mode measures data from 1 or 2 accelerometers simultaneously while obtaining data from the vehicle. Then it carries out a frequency analysis on the accelerometer information and compares the vibration frequencies with the frequencies associated with various rotating components within the vehicle. The data can be presented in 4 different display modes: principle component, bar chart, frequency spectrum or waterfall. All display mode formats contain the same common elements, such as amplitude.

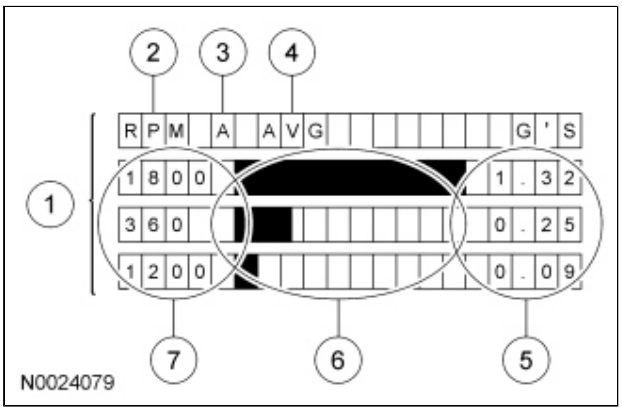
The second is for noise diagnosis. This mode measures noise from 1 or 2 microphones simultaneously. All noise measurements are in decibels (dBs). All frequency bands used for noise measurements are the same as for the vibration measurements, up to 1,000 Hz.

The third is driveshaft balancing. Driveshaft balancing is done using 1 or 2 accelerometers and a photo-tachometer. The accelerometers measure the vibration at both ends of the driveshaft, while the photo-tachometer measures the rotation speed and position reference. Refer to Section 205-00 .

The fourth is the strobe. A strobe or standard timing light can be connected to an analyzer, to provide a means for measuring rotation speed. The strobe function is used for isolating the source of a vibration.

Electronic Vibration Analyzer (EVA)

The Electronic Vibration Analyzer (EVA) is a hand-held electronic scan tool which will assist in locating the source of unacceptable vibrations. The vibration sensor can be remotely mounted anywhere in the vehicle for testing purposes. The unit displays the 3 most common vibration frequencies and their corresponding amplitudes simultaneously. A bar graph provides a visual reference of the relative signal strength (amplitude) of each vibration being displayed and its relative G-force. The keypad is arranged to make the EVA simple to program and use. Some of the functions include the ability to average readings as well as record, play back and freeze readings. The EVA has a strobe balancing function that can be used to detect imbalance on rotating components such as a driveshaft or engine accessories.



Item	Description
1	Electronic Vibration Analyzer (EVA) screen
2	Frequency mode displayed in rpm or Hz

3	Active sensor input (A or B)
4	Current active mode
5	G-force indicators or the strongest frequencies in descending strength of each vibration
6	Strength of each vibration
7	Frequency in rpm/Hz of each vibration

Record the readings taken with the diagnostic tool.

- Frequencies should be read in the "average" mode.
- Frequencies have a range of plus or minus 2 Hz. A reading of 10 Hz can be displayed as an 8 Hz through 12 Hz.

Vibrate Software®

Vibrate Software® (Rotunda tool number 215-00003) is a diagnostic aid which will assist in pinpointing the source of unacceptable vibrations. The engine's crankshaft is the point of reference for vibration diagnosis. Every rotating component will have an angular velocity that is faster, slower or the same as the engine's crankshaft. Vibrate Software® calculates the angular velocity of each component and graphically represents these velocities on a computer screen and on a printed vibration worksheet. The following steps outline how Vibrate Software® helps diagnose a vibration symptom:

- Enter the vehicle information. Vibrate will do all the calculations and display a graph showing tire, driveshaft and engine vibrations.
- Print a Vibration Worksheet graph. The printed graph is to be used during the road test.
- Road test the vehicle at the speed where the vibration is most noticeable. Record the vibration frequency rpm and the engine rpm on the worksheet graph. The point on the graph where the vibration frequency rpm reading and the engine rpm reading intersect indicates the specific component group causing the symptom.
    - A frequency measurement tool capable of measuring vibration frequency and engine rpm will be needed.
- Provides graphics of diagnostic procedures to aid in testing components.

Reed Tachometer

The Reed tachometer is a hand-held vibration sensor which will assist in locating the source of unacceptable vibrations. The vibration sensor can be placed anywhere in the vehicle for testing purposes. The Reed tachometer contains several reeds that are tuned to vibrate or resonate at different frequencies ranging from 10 to 80 Hz or 600 to 4,800 rpm. Though the Reed tachometer is able to measure multiple frequencies, it does not measure amplitude.

Sirometer

The Sirometer measures frequency in hertz and rpm. To use the Sirometer, place it on any vibrating component and slowly scroll the wire out by turning the knob. As the length of wire changes, so does its natural frequency. Find the length of wire that vibrates with the highest amplitude. This frequency will match that of the vibrating component. Read the frequency for that length of wire.

Combination EngineEAR/ChassisEAR

An electronic listening device used to quickly identify noise and the location under the chassis while the vehicle is being road tested. The ChassisEARs can identify the noise and location of damaged/worn wheel bearings, CV joints, brakes, springs, axle bearings or driveshaft carrier bearings.

EngineEAR Basic Unit

An electronic listening device used to detect even the faintest noises. The EngineEARs can detect the noise of damaged/worn bearings in generators, coolant pumps, A/C compressors and power steering pumps. They are also used to identify noisy lifters, exhaust manifold leaks, chipped gear teeth and for detecting wind noise. The EngineEAR has a sensing tip, amplifier and headphones. The directional sensing tip is used to listen to the various components. Point the sensing tip at the suspect component and adjust the volume with the amplifier. Placing the tip in direct contact with a component will reveal structure-borne noise and vibrations, generated by

or passing through, the component. Various volume levels can reveal different sounds.

Mechanic's Stethoscope

A mechanic's stethoscope is an inexpensive tool for locating noises in engines and other moving parts. It can be used to help diagnose piston slap, worn gears, faulty valves, coolant pump failure, damaged gaskets, defective bearings and body squeaks.

Squeak and Rattle Repair Kit

The Squeak and Rattle Repair Kit (Rotunda tool number 164-R4900) contains lubricants and self-adhesive materials that can be used to eliminate interior and exterior squeaks and rattles. The kit consists of the following materials:

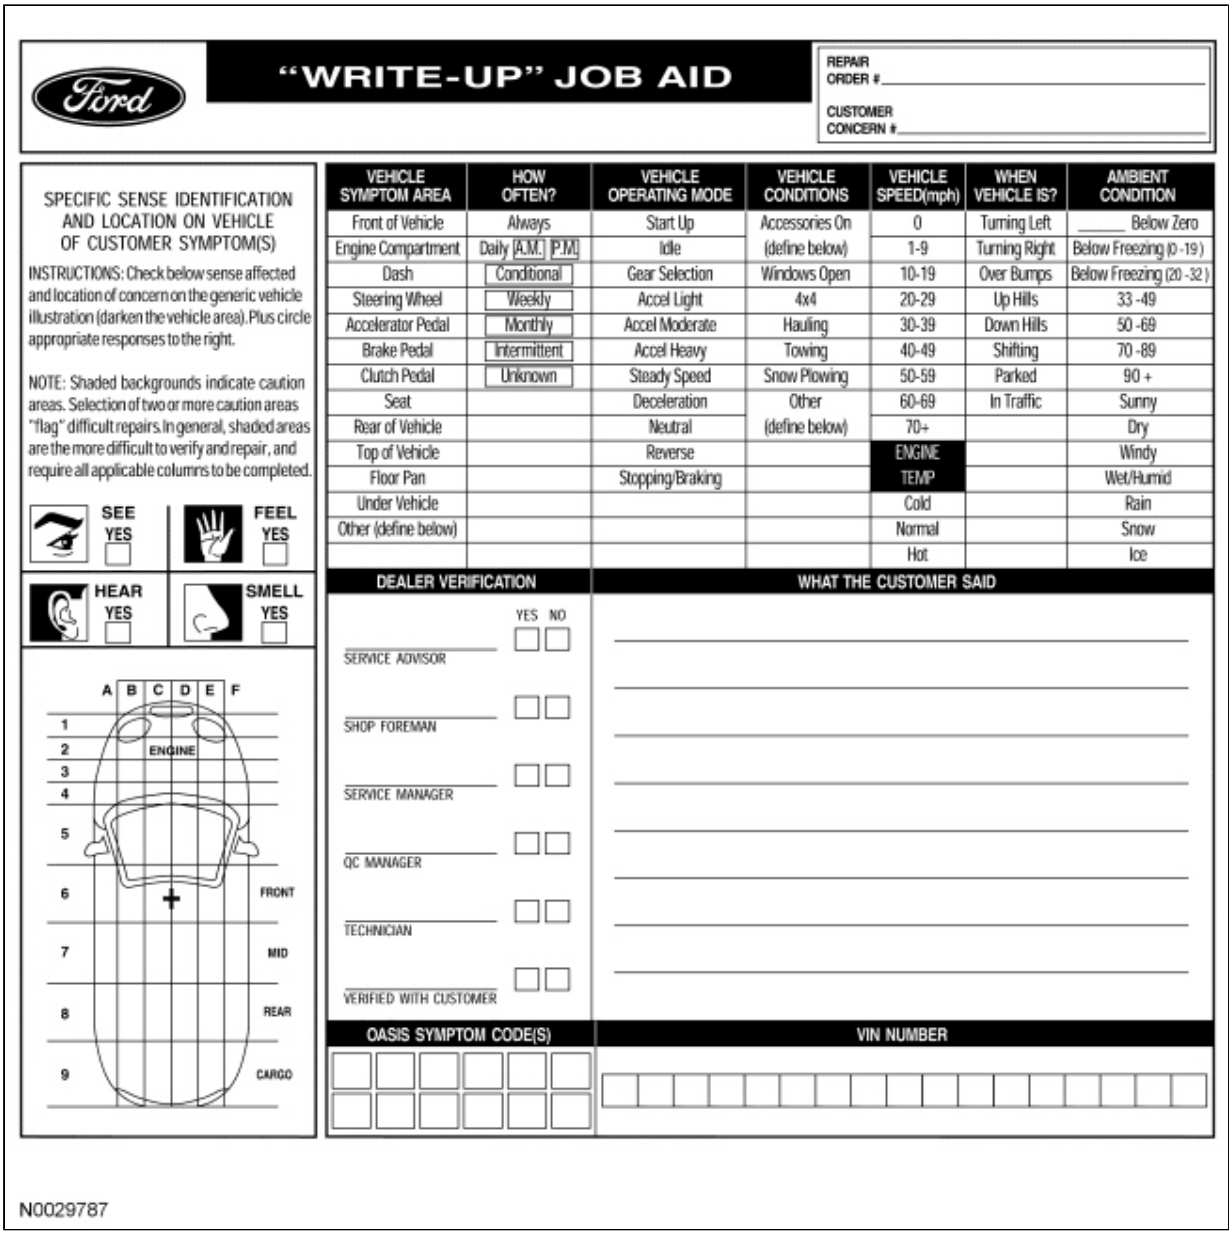
- PVC (soft foam) tape
- Urethane (hard foam) tape
- Flocked (black fuzzy) tape
- UHMW (frosted) tape
- Squeak and rattle oil tube
- Squeak and rattle grease tube

Ultrasonic Leak Detector

The Ultrasonic Leak Detector is used to detect wind noises caused by leaks and gaps in areas where there is weatherstripping or other sealing material. It is also used to identify A/C leaks, vacuum leaks and evaporative emission noises. The Ultrasonic Leak Detector includes a multi-directional transmitter (operating in the ultrasonic range) and a hand-held detector. The transmitter is placed inside the vehicle. On the outside of the vehicle, the hand-held detector is used to sweep the area of the suspected leak. As the source of the leak is approached, a beeping sound is produced which increases in both speed and frequency.

Write-Up Job Aid

To assist the service advisor and the technician, a Write-Up Job Aid used during the interview process is included with this material. The Write-Up Job Aid serves as a place to record all important symptom information.



"WRITE-UP" JOB AID

REPAIR ORDER #_____

CUSTOMER CONCERN #_____

SPECIFIC SENSE IDENTIFICATION AND LOCATION ON VEHICLE OF CUSTOMER SYMPTOM(S)

INSTRUCTIONS: Check below sense affected and location of concern on the generic vehicle illustration (darken the vehicle area). Plus circle appropriate responses to the right.

NOTE: Shaded backgrounds indicate caution areas. Selection of two or more caution areas "flag" difficult repairs. In general, shaded areas are the more difficult to verify and repair, and require all applicable columns to be completed.

WHAT THE CUSTOMER SAID

OASIS SYMPTOM CODE(S)

VIN NUMBER

N0029787

1: Customer Interview

The diagnostic process starts with the customer interview. The service advisor must obtain as much information as possible about the symptom and take a test drive with the customer. There are many ways a customer will describe NVH symptoms and this will help minimize confusion arising from descriptive language differences. It is important that the symptom is correctly interpreted and the customer descriptions are recorded. During the interview, complete the write-up job aid and ask the following questions:

- When was it first noticed?
- Did it appear suddenly or gradually?
- Did any abnormal occurrence coincide with or precede its appearance?

Use the information gained from the customer to accurately begin the diagnostic process.

2: Pre-Drive Check

It is important to do a pre-drive check before road testing the vehicle. A pre-drive check verifies that the vehicle is relatively safe to drive and eliminates any obvious faults on the vehicle.

The pre-drive check consists of a brief visual inspection. During this brief inspection, take note of anything that will compromise safety during the road test and make those repairs/adjustments before taking the vehicle on the road.

3: Preparing for the Road Test

Observe the following when preparing for the road test:

- Review the information recorded on the write-up job aid. It is important to know the specific symptom the customer has with the vehicle.
- Do not be misled by the reported location of the noise/vibration. The cause can actually be some distance away.
- Conduct the road test on a quiet street where it is safe to duplicate the vibration/noise. The ideal testing route is an open, low-traffic area where it is possible to operate the vehicle at the speed in which the condition occurs.
- While observing that they are not related to the symptom, eliminate the following:
    - If possible, lower the radio antenna in order to minimize turbulence.
    - Identify anything that could potentially make noise or be a source of wind noise.
    - Inspect the vehicle for add-on items that create vibration/noise.
    - Turn off the radio and the heating and cooling system blower.
- The engine speed is an important factor in arriving at a final conclusion. Therefore, connect a diagnostic tool, Vetronix, or an accurate tachometer to the engine, even if the vehicle has a tachometer. This will make sure of an exact engine speed reading.

4: Verify the Customer Concern

Verify the customer concern by carrying out a road test, an engine run-up test or both.

The decision to carry out a road test, an engine run-up test or both depends on the type of NVH symptom. A road test may be necessary if the symptom relates to the suspension system or is sensitive to torque. A Drive Engine Run-Up (DERU) or a Neutral Engine Run-Up (NERU) test identifies noises and vibrations relating to engine and drivetrain rpm. Remember, a condition will not always be identifiable by carrying out these tests, however, they will eliminate many possibilities if carried out correctly.

5: Road Test

NOTE: It may be necessary to have the customer ride along or drive the vehicle to point out the symptom. During the road test, take into consideration the customer's driving habits and the driving conditions. The customer's concern just may be an acceptable operating condition for that vehicle.

The following is a brief overview of each test in the order in which it appears. A review of this information helps to quickly identify the most appropriate process necessary to make a successful diagnosis. After reviewing this information, select and carry out the appropriate test(s), proceeding to the next step of this process.

- The Slow Acceleration Test is normally the first test to carry out when identifying an NVH symptom, especially when a road test with the customer is not possible.
- The Heavy Acceleration Test helps to determine if the symptom is torque-related.
- The Neutral Coast Down Speed Test helps to determine if the symptom is vehicle speed-related.
- The Downshift Speed Test helps to determine if the symptom is engine speed-related.
- The Steering Input Test helps to determine how the wheel bearings and other suspension components contribute to a vehicle speed-related symptom.
- The Brake Test helps to identify vibrations or noise that are brake related.
- The Road Test Over Bumps helps isolate a noise that occurs when driving over a rough or bumpy surface.
- The Engine Run-Up Tests consist of the Neutral Engine Run-Up (NERU) Test and the Drive Engine Run-Up (DERU) Load Test. These tests help to determine if the symptom is engine speed-related.

- The Neutral Engine Run-Up (NERU) Test is used as a follow-up test to the Downshift Speed Test when the symptom occurs at idle.
- The Drive Engine Run-Up (DERU) Load Test helps to identify vibration/noise sensitive to engine load or torque. It also helps to reproduce engine speed-related symptoms that cannot be duplicated when carrying out the Neutral Engine Run-Up (NERU) Test or the Neutral Coast Down Test.
- The Engine Accessory Test helps to locate faulty belts and accessories that cause engine speed-related symptoms.
- The Vehicle Cold Soak Procedure helps to identify symptoms occurring during initial start-up and when an extended time lapse occurs between vehicle usage.

Slow Acceleration Test

To carry out this test, proceed as follows:

- Slowly accelerate to the speed where the reported symptom occurs. Note the vehicle speed, the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify from what part of the vehicle the symptom is coming.
- Attempt to identify the source of the symptom.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Heavy Acceleration Test

To carry out this test, proceed as follows:

- Accelerate hard from 0-64 km/h (0-40 mph).
- Decelerate in a lower gear.
- The symptom is torque-related if duplicated while carrying out this test.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Neutral Coast Down Speed Test

To carry out this test, proceed as follows:

- Drive at a higher rate of speed than where the symptom occurred when carrying out the Slow Acceleration Test.
- Place the transmission in NEUTRAL and coast down past the speed where the symptom occurs.
- The symptom is vehicle speed-related if duplicated while carrying out this test. This eliminates the engine and the torque converter as sources.
- If the symptom was not duplicated while carrying out this test, carry out the Downshift Speed Test to verify if the symptom is engine speed related.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Downshift Speed Test

To carry out this test, proceed as follows:

- Shift into a lower gear than the gear used when carrying out the Slow Acceleration Test.
- Drive at the engine rpm where the symptom occurs.
- The symptom is engine speed related if duplicated while carrying out this test. This eliminates the tires,

wheels, brakes and the suspension components as sources.
- If necessary, repeat this test using other gears and NEUTRAL to verify the results.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Steering Input Test

To carry out this test, proceed as follows:

- Drive at the speed where the symptom occurs, while making sweeping turns in both directions.
- If the symptom goes away or gets worse, the wheel bearings, hubs, U-joints (contained in the axles of Four-Wheel Drive (4WD) applications), and tire tread wear are all possible sources.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Brake Test

To carry out this test, proceed as follows:

- With the brake released, accelerate the vehicle. While coasting (brake pedal released) to a stop in NEUTRAL, note any abnormal rate of deceleration. Abnormal deceleration could indicate a parking brake or service brake that is not fully releasing.
- Warm the brakes by slowing the vehicle a few times from 80-32 km/h (50-20 mph) using light braking applications.
- Accelerate to 89-97 km/h (55-60 mph). Moderately apply the brakes and slow the vehicle to a stop.
- A brake vibration can be felt in the steering wheel, seat or brake pedal. A brake noise can be heard upon brake application and should diminish when the brake is released. For vehicles with separate park brake shoes, noise or vibration from the parking brake system will not be affected by applying the hydraulic brakes. On these systems, the parking brake system requires inspection if a parking brake concern is suspected.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate brake section(s) for further diagnosis and repair. If the source has not been identified, continue with the road test.

Road Test Over Bumps

To carry out this test, proceed as follows:

- Drive the vehicle over a bump or rough surface one wheel at a time to determine if the noise is coming from the front or the back and the left or the right side of the vehicle.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Neutral Engine Run-Up (NERU) Test

To carry out this test, proceed as follows:

- Install a tachometer.
- Place the vehicle in PARK on Front Wheel Drive (FWD) vehicles with automatic transmissions, or in NEUTRAL for all other vehicles.
- Slowly increase the engine rpm from idle to fuel cutoff or redline. When the symptom occurs, note the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify what part of the vehicle the symptom is coming from.

- Attempt to identify the source of the symptom.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Drive Engine Run-Up (DERU) Load Test

To carry out this test, proceed as follows:

WARNING: Block all wheels, set the parking brake and firmly apply the service brake to reduce the risk of vehicle movement during this procedure. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Do not carry out the Engine Load Test for more than 5 seconds or damage to the transmission or transaxle may result.**

- Block the front and rear wheels.
- Apply the parking brake and the service brake.
- Install a tachometer.
- Shift the transmission into DRIVE, and slowly increase and decrease the engine rpm between an idle to approximately 2,000 rpm. When the symptom occurs, note the engine rpm and, if possible, determine the vibration frequency.
- Repeat the test in REVERSE.
- If the vibration/noise is duplicated when carrying out this test, inspect the engine and transmission or transaxle mounts.
- If the symptom is definitely engine speed-related, carry out the Engine Accessory Test to narrow down the source.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Engine Accessory Test

To carry out this test, proceed as follows:

WARNING: Block all wheels, set the parking brake and firmly apply the service brake to reduce the risk of vehicle movement during this procedure. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Limit engine running time to one minute or less with belts removed or serious engine damage will result.**

NOTE: Use a frequency measurement tool to pinpoint accessory vibrations. A listening device, such as an EngineEAR, will also help to identify noises from specific accessories.

- Remove the accessory drive belt(s).
- Slowly increase the engine rpm to where the symptom occurs.
- If the vibration/noise is duplicated when carrying out this test, the belt(s) and accessories are not sources.
- If the vibration/noise was not duplicated when carrying out this test, install the accessory belt(s), one at a time, to locate the source.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Vehicle Cold Soak Procedure

To carry out this procedure, proceed as follows:

- Test preparations include matching customer conditions (if known). If not known, document the test conditions: gear selection and engine rpm. Monitor the vibration/noise duration with a watch for up to 3 minutes.
- Park the vehicle where testing will occur. The vehicle must remain at or below the symptom temperature (if known) for 6-8 hours.
- Before starting the engine, conduct a visual inspection under the hood.
- Turn the key on, but do not start the engine. Listen for the fuel pump, ABS and air suspension system noises.
- Start the engine.
- Isolate the vibration/noise by carefully listening. Move around the vehicle while listening to find the general location of the vibration/noise. Then, search for a more precise location by using a stethoscope or EngineEAR.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Classify NVH Symptom

For NVH concerns, it is necessary to classify the customer's concern into one of the 3 categories: noise, vibration or harshness. The reason for this is that a customer concern may consist of a combination of symptoms involving noise and vibration, or vibration and harshness. In cases where there are combination symptoms, determine which diagnostic path to follow: noise, vibration or harshness. For example, if a customer has a concern involving a noise and a vibration, and it is determined that it is vehicle speed-related, follow the vibration diagnostic path.

Noise Symptoms

Once a symptom is classified as a noise, the particular conditions under which the noise occurs need to be identified. These conditions are identified and verified during the road test. For example, a noise may only occur while turning. The next step is to determine which systems on the vehicle are related to that condition. In this case, the steering system and wheel/tire system may be suspect. After identifying possible systems, a preliminary inspection of these systems should be done. If the source of noise is still unidentified, use a listening device (such as the ChassisEAR) to pinpoint the source. Once the source has been identified, determine if this source is related to the suspected system previously identified. If it is related, then complete the repair to resolve the customer concern. If it is unrelated, then it is possible that the source of the noise is a reactor to a noise being transmitted through a transfer path. If this is the case, repairing the reactor will not resolve the customer concern. The transfer path must be identified and a determination made if the noise is normal, but accentuated by the transfer path (conductor), or if the originator is the fault causing excessive noise to transfer to another component through a conductor. There is a relationship between systems identified as related to conditions and the noise transfer path. In some cases, the condition under which the noise occurs has nothing to do with the identified source. This relationship is important in the diagnosis of noise concerns. It is the first clue that the identified source of noise might be a reactor and that further investigation is needed to diagnose a possible noise transfer path concern. Based on the results from the road test, make a determination of which action in the symptom chart to take first.

Vibration Symptoms

Most vibrations consist of movements back and forth or up and down that repeat. Every time the vibrating component goes through its complete range of motion and returns to the starting point is called a cycle. The rate at which these cycles occur within a given time is called the frequency. Frequency is measured in cycles per second or Hertz (Hz). One cycle per second equals one Hz. Once the frequency of a vibration is known, calculations can be done to determine the system that is the source of the concern.

Order of Vibration

The order of a vibration refers to how often the vibration is present in one revolution of the component. For example, a vibration that is present once each revolution of a component would be a first order vibration. A vibration present twice each revolution of the component would be a second order vibration. Vibration orders do not have to be whole numbers, they can have decimal values such as 1.5 order vibration or 3.08 order vibration.

The concept of order of vibration is important to remember when the measured frequency of a vibration does not seem to match the frequency calculations of any of the likely systems or components. As the order increases, the frequency of the vibration will also increase by a multiple of that number.

For example, vibration may be present where the frequency is measured at 14 Hz. After doing the necessary calculations it is determined the first order tire and wheel frequency is 7 Hz and the first order driveshaft frequency is 22 Hz. Based on this information it can be determined the vibration is most likely a second order tire and wheel vibration: 7 Hz (first order tire and wheel frequency) multiplied by 2 (second order) equals 14 Hz (second order tire and wheel frequency).

Relationship of Vibration Frequency to Order of Vibration

After carrying out the road test as described in this section, the vibration was determined to be either vehicle-speed related or engine-speed related. That determination will identify the vibration frequency calculations that should be done.

Vibration Type	Calculate
Vehicle-speed related	Tire-speed vibration frequency Driveshaft-speed vibration frequency
Engine-speed related	Engine vibration frequency Engine accessory vibration frequency Engine firing vibration frequency

In calculating and using frequency readings, it is important to remember the direct relationship between Hz and rpm. One Hz is equal to 60 rpm. This is easy to remember; think of Hz as cycles per second. There are 60 seconds in a minute, therefore multiply Hz reading by 60 to get rpm. Conversely, divide rpm by 60 to get Hz.

Use the Frequency and RPM Calculations Worksheet to calculate system/component frequencies. The worksheet provides the necessary steps to determine each system/component group frequency.

Frequency Calculations

Calculating Tire and Wheel Frequency

For a vibration concern, use the vehicle speed to determine tire/wheel frequency and rpm. Calculate tire and wheel rpm and frequency by carrying out the following:

- Measure the diameter of the tire.
- Record the speed at which the vibration occurs.
- Obtain the corresponding tire and wheel rpm and frequency from the Tire Speed and Frequency Chart.
- If the vehicle speed is not listed, calculate the tire and wheel frequency as follows:
    - Divide the vehicle speed at which the vibration occurs by 16 km/h (10 mph). Multiply that number by the 16 km/h (10 mph) tire rpm listed for that tire diameter in the chart. Then divide that number by 60.

- For example, if calculating the frequency based on vehicle speed in km/h for a 64 km/h vibration with 835 mm tires, divide 64 km/h by 16 km/h = 4. Multiply 4 by 105 rpm = 420. Divide 420 by 60 seconds = 7 Hz at 64 km/h.
- If calculating the frequency based on vehicle speed in mph for a 40 mph vibration with 33 inch tires, divide 40 mph by 10 mph = 4. Multiply 4 by 105 rpm = 420. Divide 420 by 60 seconds = 7 Hz at 40 mph.
- The calculated frequency of 7 Hz is the first order tire and wheel vibration; the second order tire and wheel vibration would be twice this number at 14 Hz; the third order tire and wheel vibration would be 21 Hz; and so on.

Tire Speed and Frequency Chart

Tire Diameter	Tire RPM/Hz	Tire RPM/Hz	Tire RPM/Hz	Tire RPM/Hz
mm (in)	@ 16 km/h (10 mph)	@ 80 km/h (50 mph)	@ 97 km/h (60 mph)	@ 113 km/h (70 mph)
483 (19)	182	910/15	1,092/18	1,274/21
508 (20)	173	865/14	1,038/17	1,211/20
533 (21)	165	825/14	990/16	1,155/19
560 (22)	158	790/13	948/16	1,106/18
585 (23)	151	755/13	906/15	1,057/18
610 (24)	145	725/12	870/14	1,015/17
635 (25)	139	695/12	834/14	973/16
660 (26)	134	670/11	804/13	938/16
685 (27)	129	645/11	774/13	903/15
710 (28)	124	620/10	744/12	868/14
735 (29)	119	595/10	714/12	833/14
760 (30)	115	575/10	690/11	805/13
785 (31)	111	555/9	666/11	777/13
810 (32)	108	540/9	648/11	756/13
835 (33)	105	525/9	630/10	735/12
864 (34)	102	510/8	612/10	714/12

Calculating Driveshaft Frequency

Knowing the tire and wheel frequency allows for easy calculation of driveshaft frequency. The driveshaft drives the tires through the rear axle. Therefore, to determine driveshaft frequency, multiply tire and wheel frequency by the ratio of the rear axle. Calculate driveshaft frequency by performing the following steps:

- Obtain the axle ratio of the vehicle. Suppose the vehicle has a vibration problem at 64 km/h (40 mph) and a rear axle ratio of 2.93:1.
- Multiply the tire and wheel frequency of 7 Hz (calculated previously) with the rear axle ratio of 2.93:1. This results in a driveshaft frequency of 21 Hz at a vehicle speed of 64 km/h (40 mph).

The calculated frequency of 21 Hz is the first order driveshaft frequency; the second order frequency of the driveshaft is twice this number, or 42 Hz; and so on.

Calculating Engine Frequency

Use the engine rpm where the vibration symptom occurs to determine engine frequency. Calculate engine

frequency by dividing the engine rpm by 60 (the number of seconds in a minute). For example, if the corresponding engine rpm of a vibration concern on a vehicle is 2,400 rpm, the resulting engine frequency is 40 Hz. Therefore, a 40 Hz vibration is a first order engine vibration. For purposes of vibration diagnosis, the engine also includes the torque converter and exhaust system.

Calculating Engine Accessory Frequency

Belt-driven engine accessories often produce vibrations at different frequencies than the engine itself. This is because the drive ratio created by the different size pulleys causes them to rotate at different speeds. Determining engine accessory frequency is comparable to calculating driveshaft frequency.

Calculate engine accessory frequency by performing the following steps:

- Determine the size ratio factor between the accessory pulley and the crankshaft pulley. For example, if the diameter of the crankshaft pulley is 6 inches and the accessory pulley diameter is 2 inches, the accessory pulley rotates 3 times for every crankshaft rotation (6 divided by 2).
- Multiply the engine rpm where the vibration condition occurs by the number of times the accessory pulley is rotating per crankshaft revolution. For example, if the engine rpm is 2,400 rpm, the accessory is rotating at 7,200 rpm (2,400 rpm multiplied by 3).
- Divide the accessory rpm by 60 (the number of seconds in a minute). In this example, the engine accessory frequency is 120 Hz (7,200 divided by 60).

Calculating Engine Firing Frequency

Engine firing frequency is a term used to describe the pulses an engine creates from the firing of the cylinders. Engine firing frequency depends on how many cylinders an engine has. The number of times an engine fires a cylinder with each crankshaft revolution is equal to one-half the number of cylinders. A 4-cylinder engine fires 2 cylinders with each crankshaft revolution. Two revolutions of the crankshaft fire all 4 cylinders. A 6-cylinder engine fires 3 cylinders with each crankshaft revolution. An 8-cylinder engine fires 4 cylinders for each crankshaft revolution.

Calculate engine firing frequency by performing the following steps:

- Multiply the engine rpm where the vibration symptom occurs by the number of cylinders fired with each crankshaft revolution. For example, a vehicle with a 6-cylinder engine experiences a vibration concern at 2,400 rpm. The engine is firing the cylinders at 7,200 times per minute (3 multiplied by 2,400).
- Divide this number by 60 (the number of seconds in a minute) to obtain the engine firing frequency. In this example, the engine firing frequency is 120 Hz (7,200 divided by 60) at 2,400 rpm.

Frequency and RPM Calculations Worksheet

FREQUENCY AND RPM CALCULATIONS

TIRE AND WHEEL

Vibration occurs at _____ mph (km/h)

Tire diameter _____

Tire speed RPM and frequency from chart	_____ RPM	_____ Hz

DRIVESHAFT

Tire/wheel frequency _____ x axle ratio =	_____ Hz
Tire/wheel RPM _____ x axle ratio =	_____ RPM

ENGINE FREQUENCIES AND ASSOCIATED RPMS

Engine RPM divided by 60 equals 1st order frequency	_____ Hz
1st order RPM x 2 = 2nd order RPM (normal for 4 cylinder engines) Cylinders fired per engine revolutions	_____ RPM
1st order Hz x 2 = 2nd order Hz (normal for 4 cylinder engines)	_____ Hz

1st order RPM x 3 = 3rd order RPM (normal for 6 cylinder engines)

1st order Hz x 3 = 3rd order Hz (normal for 6 cylinder engines)
x 4 = 4th order vibrations (normal for 8 cylinder engines)
x 5 = 5th order, x 6 = 6th order, etc.

Order of vibration x engine RPM equals cylinders fired per minute	_____ RPM
Order of vibration (2nd, 3rd, 4th etc.) x 1st order Hz equals	_____ Hz

ENGINE ACCESSORY FREQUENCIES AND RPMS

Crankshaft pulley diameter _____ divided by accessory pulley diameter _____ = _____ pulley size ratio

Engine speed _____ RPM x pulley ratio = accessory _____ RPM

Accessory pulley _____ RPM divided by 60 = _____ Hz

Harshness Symptoms

Harshness is customer perception which gives the impression of no isolation from the tire/wheel and suspension system. Harshness may be caused by road conditions, temperature changes, component damage and/or incorrect customer modifications on original components/specifications. Customers usually experience harshness when the vehicle is driving over bumps or potholes and in cold weather conditions. Harshness can also be experienced with excessive tire pressure, sporty tires, heavy-duty springs and shocks, or other vehicle modifications. Some aftermarket tires, even with the correct size, may change vehicle behavior and produce customer concerns. The first step in diagnosing a harshness concern is to determine if the concern was experienced only in certain specific operating conditions, such as large potholes or extremely cold weather. In these cases, harshness should be considered normal. A known good vehicle can be driven under the same

conditions and the rides can be compared to determine whether the concern is normal or vehicle specific. The second step is to check tire pressure and make sure it was set within vehicle specifications. The third step is to inspect for aftermarket or modified components and determine if they are the cause of the harshness complaint. If the harshness concern persists after the above steps, it is possible that some components are damaged. Based on the results from the road test, make a determination of which action in the symptom chart to take first.

NVH Symptom Chart Categories

A good diagnostic process is a logical sequence of steps that lead to the identification of a causal system. Use the symptom and possible system categories as follows:

- Identify the operating condition that the vehicle is exhibiting.
- Match the operating condition to the symptom.
- Verify the symptom.
- Calculate the frequency and order of the symptom.
- Identify which category or system(s) could cause the symptom.
- Refer to the section indicated to identify and diagnose the symptom or confirm that the system is not the source of the condition.

Use the diagnostic instructions in this section along with the necessary listed tools to identify the vibration order and to isolate the symptom and the possible systems associated with that symptom. Then based on the results from the road test, make a determination of which action in the symptom chart to take first. Since it is possible any one of multiple systems may be the cause of the symptom, it may be necessary to use a process of elimination type diagnostic approach to pinpoint the concern. Refer to the section(s) indicated to identify and isolate the cause or rule that system out as being the causal system for the symptom.

Vehicle-Speed Related Vibrations

NOTE: Any assembly that is out of balance will only cause a first order vibration, it will not cause a higher order vibration.

When a vehicle-speed related vibration is present, both tire-speed related vibration and driveshaft-speed related vibration calculations should be carried out.

Symptom Chart — Tire-Speed Related Vibrations

Material

Item	Specification	Fill Capacity
3M™ Strip Caulk - Black 051135-08578	WSB-M4G32-C	—
Seam Sealer TA-2	—	—
Clear Silicone Rubber TA-32	ESB-M4G92-A	—
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4	—
Silicone Spray Lubricant XL-6	ESR-M13P4-A	—
Trim and Weatherstrip Adhesive TA-14-A	—	—

Insulation

Body insulation is comprised of urethane, Polyvinyl Chloride (PVC), foam and recycled felt. Insulation is used as a sound deadener to reduce exterior road and powertrain noises from the interior of the vehicle. Baffles are located in the bottom of the A-, B- and C-pillars. Mastic insulators are also used as insulation. For information on the location of the mastic insulators, refer to Section 501-35 . Insulation is installed:

- above and below the instrument panel.
- at the cowl side panels.
- over the front and rear floor pan areas.
- over the luggage compartment floor.

Body Sealer Types And Applications

Seam Sealer

Seam Sealer TA-2 or equivalent:

- is a heavy-bodied, non-sag adhesive/sealer for use on standing cosmetic seams, truck bed seams, tooled door skin seams and floor pans.
- can be used on water leaks and noise concerns.

Clear Silicone Rubber

Clear Silicone Rubber TA-32 or equivalent meeting Ford Specification ESB-M4G92-A:

- does not run.
- is fast drying.
- remains semi-elastic.
- can be used for sealing water leaks, noise concerns, remounting trim and repairing torn weatherstripping.

Silicone Gasket and Sealant

Silicone Gasket and Sealant TA-30 or equivalent meeting Ford specification WSE-M4G323-A4:

- is a form-in-place gasket and multi-purpose adhesive/sealant.
- is a room temperature curing silicone rubber.

Caulking Cord

3M™ Strip Caulk-Black 051135-08578 or equivalent meeting Ford specification WSB-M4G32-C:

- is a heavy-bodied, plastic base with a filler.
- is commonly known as perma-gum.
- is used on spot-weld holes and between surfaces not sealed with a gasket.

Weatherstrip Adhesive

Trim and Weatherstrip Adhesive TA-14-A or equivalent:

- is a quick drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

Silicone Lubricant

Silicone Spray Lubricant XL-6 or equivalent meeting Ford specification ESR-M13P4-A:

- is used to keep the door and the window weatherstrip pliable and soft.
- makes the door easier to close.
- retards weatherstrip squeaks.
- retards weatherstrip wear.
- helps retain door window alignment by reducing friction between the glass frame and the rubber

weatherstrip.
- should not be used prior to painting.

Silicone Gasket and Sealant TA-30	WSE-M4G323-A4

Inspection and Verification

Dust and Water Leaks

Most dust and water leaks occur due to missing or incorrectly installed body sealer or components. The source of the leak is detected by:

- pressurizing the vehicle and testing with soapy water.
  - Locate and tape off the body vents.
  - Turn the blower motor to HIGH.
  - Turn the air recirculation to OFF.
  - Close the windows and doors.
  - Open the hood and spray soapy water along body seams and grommets. Make sure to test the areas around the A-pillar at the fender and hood hinge area.
  - Check for bubbles.
- inspecting for a dust pattern or water path near and above the area in question.
- removing any trim or carpet in the general area of the leak.
- road testing or water hose testing the vehicle.
- placing a bright light under the vehicle, removing any necessary trim or carpet and inspecting the interior of the body at joints and weld lines.

Wind Noise

Most wind noise leaks occur at the corners of the windows or in the doors. Wind noise is detected by driving the vehicle at highway speeds or at speeds as specified by the customer. Drive the vehicle in 4 different directions, with all of the windows closed, the radio off and the A/C blower motor off.

Squeak and Rattle

Squeak and rattle noises are generally caused by loose parts, contact or relative movement between 2 surfaces or loose wires and connectors. Detect the source of the noise by stopping movement of the suspect part by hand or using dampening or low friction materials.

Symptom Chart — NVH

Symptom Chart — NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible that any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

Condition	Possible Sources	Action
• Draft/wind noise and water leak around door perimeter	• Loose fit seal	• PINCH seal carrier to improve retention on seal flange.
	• Seal installed incorrectly	• REINSTALL the seal.
	• Door misaligned	• REALIGN the door. CHECK door gaps and fit in door opening and ADJUST as necessary. REFER to Section 501-03 .
	• Scuff plate trim panel installed incorrectly	• REINSTALL the scuff plate trim panel.
	• Seal or seal pushpins damaged	• INSTALL a new seal/pushpins.
	• Sheet metal joints in door or door opening	• SEAL leaks with sealant.
• Draft/wind noise and water leak around glass run	• Door glass misaligned	• ADJUST door glass.
	• Glass run installed incorrectly	• REINSTALL glass run.
	• Leak path behind glass run	• INSTALL foam rope behind glass run.
	• Glass run channel spread wide	• PINCH glass run channel to reduce size of opening.
	• Glass run damaged	• INSTALL a new glass run.
• Draft/wind noise and water leak at inner belt line	• Belt line seal installed incorrectly on flange	• ADJUST seal (do not bend the flange).
	• No contact with side glass	• ADJUST door glass.
	• No contact with glass runs at both ends of belt line seal	• ADJUST belt line seal or ADD foam at seal ends.
	• Belt line seal damaged	• INSTALL a new seal.
• Draft/wind noise and water leak at outer belt line	• Belt line seal installed incorrectly on flange (no glass contact)	• ADJUST seal.
	• Belt line seal does not contact the glass	• ADJUST door glass.
	• No contact with glass runs at both ends of belt line seal	• ADJUST belt line seal or ADD foam at seal ends.
	• Belt line seal damaged	• INSTALL a new seal.
• Draft/wind noise	• Hole in weathershield	• SEAL hole with suitable

at inner door handle/speaker opening		tape.
	• Weathershield misaligned	• REALIGN weathershield. INSTALL a new weathershield if pressure sensitive adhesive fails.
	• Exterior door handle seal misaligned/damaged	• REALIGN or INSTALL a new seal as necessary. REFER to Section 501-14 .
	• Speaker or speaker seal missing or damaged	• INSTALL a new door speaker.
• Draft/wind noise and water leaks at floor pan and grommets	• Missing or damaged plugs/grommets	• CHECK plugs/grommets for correct installation or damage. INSTALL new plugs/grommets if necessary.
• Road noise	• Missing mastic insulators	• CHECK for missing mastic insulators. REFER to Section 501-35 .
	• Missing body insulators	• CHECK for missing body insulators.
• Rattles in body/doors and instrument panel	• Loose wires/cables	• CHECK that all wires/cables are correctly routed and inserted in correct retainers.
	• Loose objects/components in door wells, pillars quarter trim panels	• CHECK doors by carefully striking underside of doors with a rubber mallet while listening for rattles in doors and pillars. REMOVE or TIGHTEN loose objects/components.
	• Buzz from instrument panel components	• IDENTIFY which components of the instrument panel are buzzing. SECURE/FASTEN components as necessary, ADD foam or felt as needed if rattle persists.
• Door drain holes collecting water	• Holes clogged with mud or road tar	• CLEAN drain holes of foreign material with a punch or screwdriver. CHECK drain holes regularly.
• Wind noise from exterior rear view mirror	• Exterior mirror housing misaligned	• REALIGN with edges shingled to airflow, with no gaps.
	• Mirror sail gasket folded/misaligned	• REINSTALL with gasket unfolded and aligned correctly.
	• Mirror housing trim cap installed incorrectly	• REINSTALL with edges shingled to airflow.
	• Air leak through mirror housing hinge	• Fully ENGAGE mirror into its operating position. USE foam to block air path

		through hinge.
	• Inner sail trim installed incorrectly	• REINSTALL sail trim. ADJUST door trim.
	• Inner sail gasket/barrier installed incorrectly	• REINSTALL trim cover with gasket/barrier aligned correctly.
	• Air path through wiring bundle/fastener access holes	• BLOCK air path(s) with foam/tape.
	• Exposed fastener access hole on mirror housing/sail	• INSTALL a new cap if missing.
• Rattle/vibration from exterior rear view mirror	• Mirror glass adjustment screws loose	• REMOVE mirror glass and TIGHTEN mirror glass adjustment motor screws. REFER to Section 501-09 .
	• Mirror mounting nuts loose	• TIGHTEN mirror mounting nuts. REFER to Section 501-09 .
	• Aftermarket air deflector/stone shields	• If possible, REMOVE aftermarket air deflector/stone shield, then ROAD TEST vehicle. If concern is no longer present, ADVISE customer that aftermarket component was causing concern.
• Draft/wind noise and water leak around perimeter of all fixed glass	• Gaps in the sealant bead	• APPLY approved sealant.
	• Air traveling up windshield molding along A-pillar	• INSTALL foam rope full length of the A-pillar.
	• Gaps in sealant bead of windshield/rear glass	• RESEAL windshield/rear glass. REFER to Section 501-11 .
	• Windshield/rear glass misaligned or not installed correctly	• REINSTALL windshield/rear glass. REFER to Section 501-11 .
	• Rear hood seal at base of windshield misaligned/damaged	• REALIGN or INSTALL a new seal as necessary.
• Draft noise at cowl	• Cowl seal misaligned/damaged	• REALIGN or INSTALL a new seal as necessary.
• Draft/water leak or noise from roof opening panel	• Roof opening panel/components	• REFER to Section 501-17 for diagnosis.
• Wind noise created by airflow over or behind body panels	• Fender splash shield misaligned	• REALIGN fender splash shield.
	• Body panel misaligned (exposed edge)	• REALIGN appropriate body panel.
	• Hood misaligned (front margin)	• CHECK hood gaps and fit. ADJUST hood as

		necessary.
	• Front grille edge noise	• APPLY foam in hollow areas behind louvers.
• Wind noise created by grille opening panel	• Grille relationship to leading edge on hood	• If possible, ADJUST grille opening panel forward to eliminate wind noise.
	• Sharp edges due to material imperfections	• REMOVE sharp edges (no damage to visible surface).
• Wind noise from air extractor (body vent)	• Air extractor housing seated incorrectly	• REINSTALL air extractor housing.
	• Air extractor housing or flaps damaged	• INSTALL a new air extractor.
• Wind noise from bug shield/exterior windshield sun visor	• Turbulence created by location and shape	• DETERMINE if an OEM part or aftermarket. If aftermarket ADVISE customer accordingly. If OEM, VERIFY correctly installed. If noise is abnormal, REPAIR or INSTALL new as required.
• Draft/wind noise and water leak around liftgate perimeter	• Loose fit seal	• PINCH seal carrier to improve retention on seal flange or INSERT foam in carrier.
	• Seal misaligned or installed incorrectly	• REINSTALL seal.
	• Seal misaligned or installed incorrectly	• REINSTALL seal.
	• Liftgate misaligned	• REALIGN liftgate. CHECK liftgate fit in body opening and ADJUST as necessary.
	• Scuff plate misaligned	• REINSTALL scuff plate.
	• Seal or seal pushpins damaged	• INSTALL a new seal.

Torque Specifications

Description	Nm	lb-ft	lb-in
Fender bolts	6	—	53
Hood hinge-to-body bolts	25	18	—
Hood hinge-to-hood nuts	11	—	97
Front bumper-to-radiator support bolts	9	—	80
Radiator support front bracket-to-front bumper bolt	9	—	80
Radiator support upper bolts	25	18	—
Radiator support rear bracket bolts	9	—	80

Hood Alignment

1. **NOTE:** To adjust the hood, the hood latch must be removed.

   Remove the hood latch. For additional information, refer to Section 501-14 .

2. **NOTE:** It is not possible to adjust the rear of the hood to the height of the fender.

   Loosen the 4 hood hinge-to-hood nuts and the 4 hood hinge-to-body bolts until the hood will slightly move.

3. Adjust the hood to align the hood-to-fender gaps. For additional information on body margins, refer to Section 501-35 .

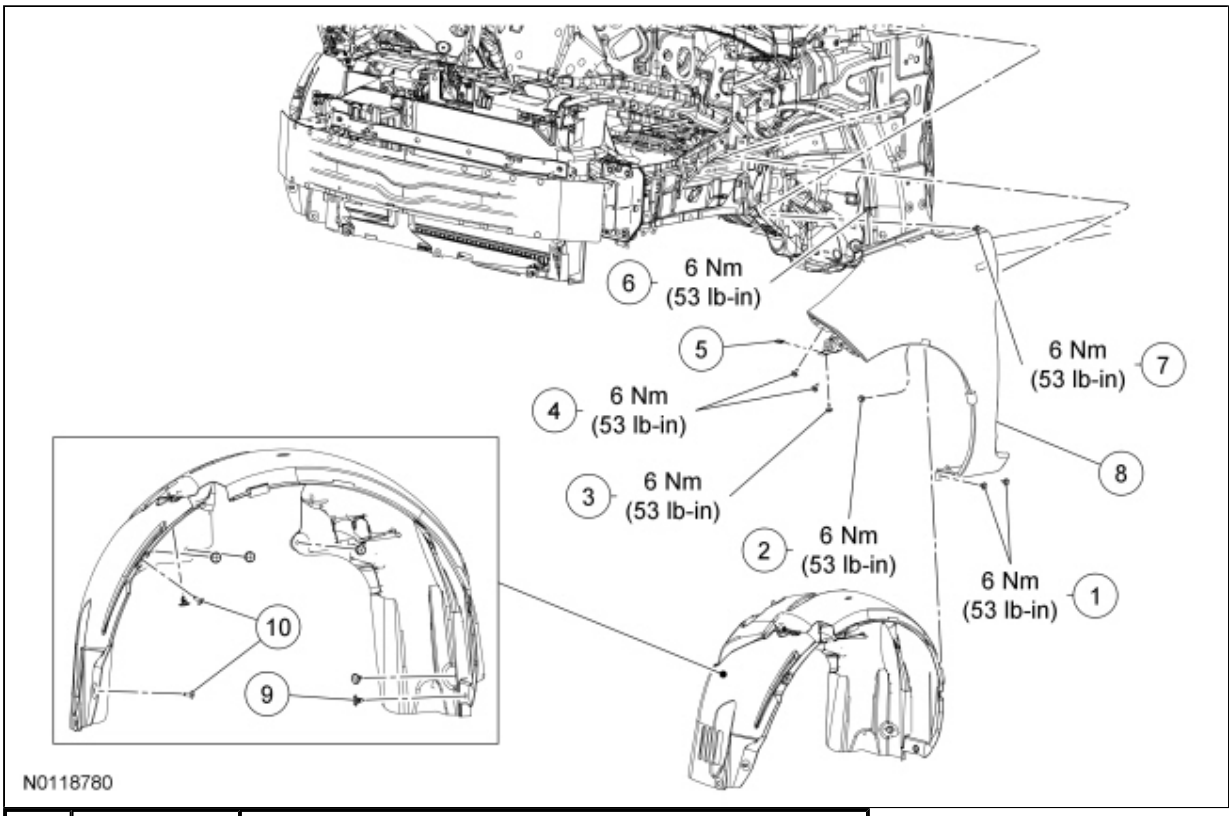
4. Tighten the 4 hood hinge-to-body bolts.
   - Tighten to 25 Nm (18 lb-ft).

5. Tighten the 4 hood hinge-to-hood nuts.
   - Tighten to 11Nm (97 lb-in).

6. **NOTE:** NOTE: The clearances and edge alignment must be correct before the hood latch is installed.

   Install the hood latch. For additional information, refer to Section 501-14 .
   - The hood latch must be installed so that the hood engages without stress and the clearances on the LH and RH sides are not changed.

Front End Body Panels — Exploded View



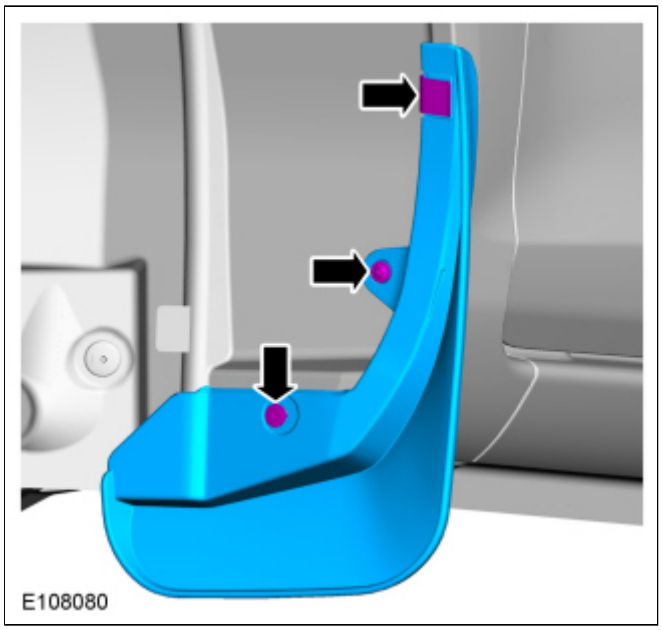
Item	Part Number	Description
1	W702704	Front fender lower bolts (2 required)
2	W702704	Front fender inner rear bolt
3	W702704	Front fender front middle bolt
4	W702704	Front fender front outer bolts (2 required)
5	W702704	Front fender front middle nut
6	W702704	Front fender upper front bolt
7	W702704	Front fender upper rear bolt
8	16005/ 16606	Front fender (RH/LH)
9	W715537	Front fender splash shield pin-type retainer (7 required)
10	W706169	Front fender splash shield retainers

1. For additional information, refer to the procedures in this section.

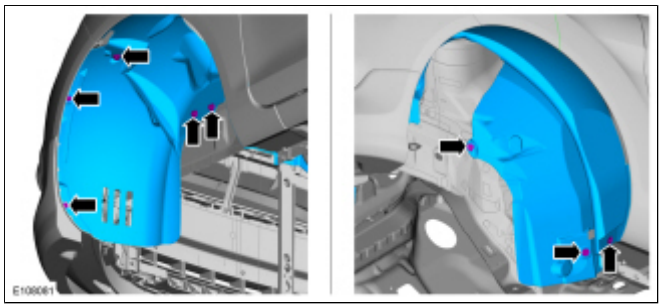
Fender Splash Shield

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the wheel and tire. For additional information, refer to Section 204-04 .
3. If equipped, remove the front mudflaps.



4. Remove the 8 front fender splash shield retainers and the front fender splash shield.



5. To install reverse the removal procedure.

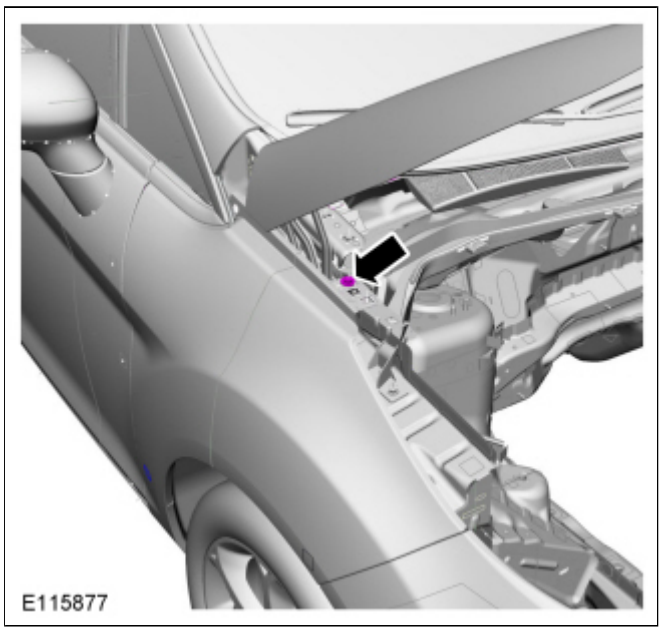
Fender

Removal

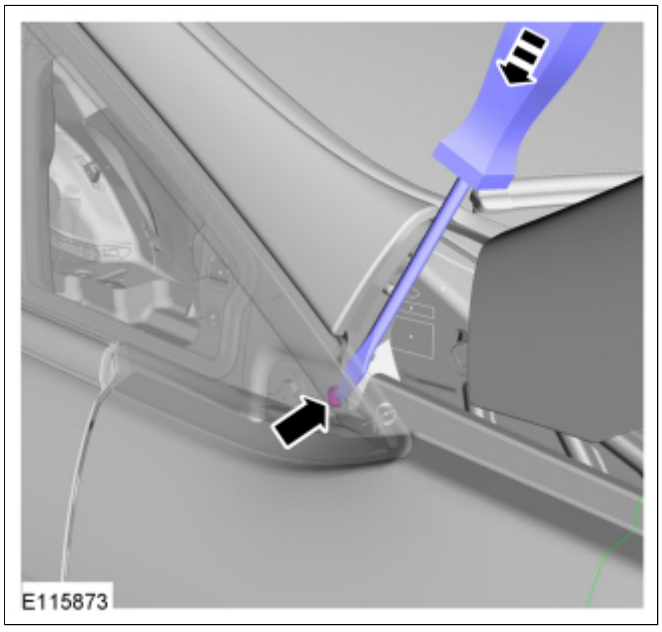
1. With the vehicle in NEUTRAL, position it on the hoist. For additional information, refer to Section 100-02 .

2. Remove the headlamp assembly. For additional information, refer to Section 417-01 .

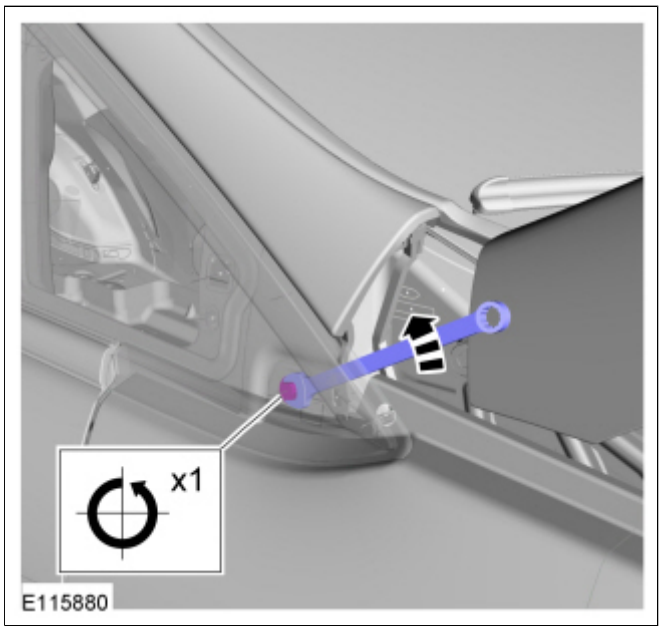
3. Remove the front fender upper bolt.
   - To install, tighten to 6 Nm (53 lb-in).



4. Gently pry out on the fixed front corner glass to gain access to the front fender upper rear bolt.

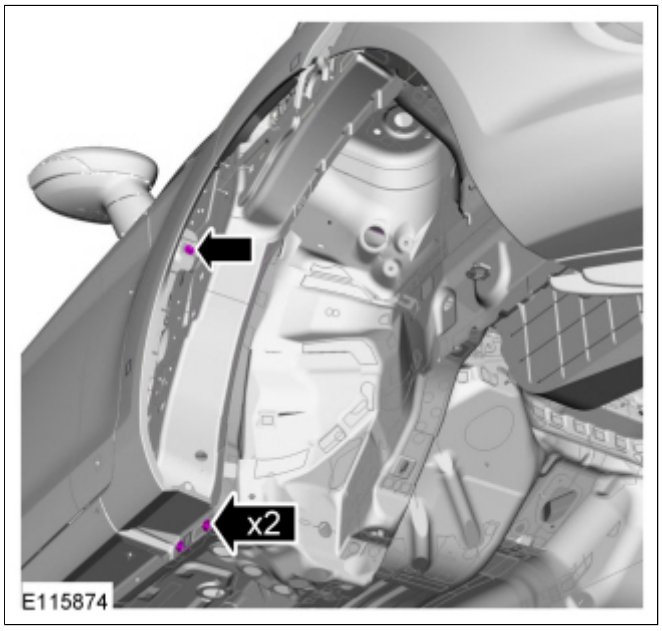


5. Loosen the front fender upper rear bolt.
    - Calculate the correct torque wrench setting for the following torque. Refer to the Torque Wrench Adapter Formulas in the Appendix.
    - To install, tighten to 6 Nm (53 lb-in).

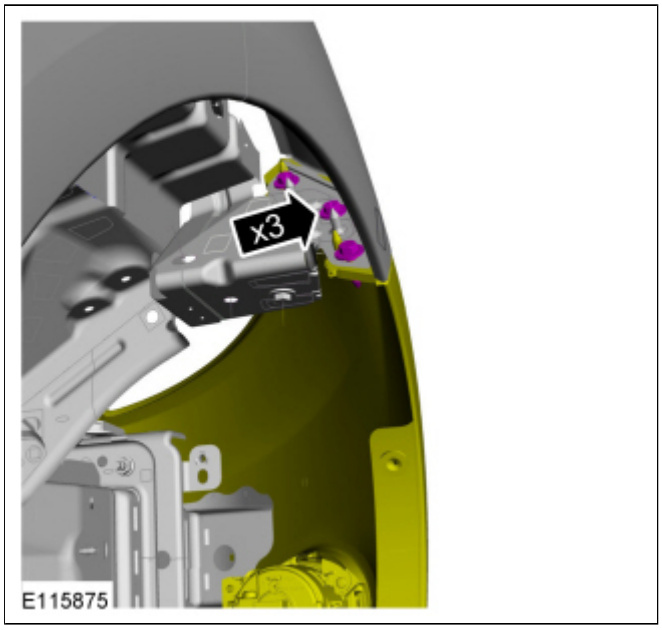


6. Remove the front fender splash shield. For additional information, refer to Fender Splash Shield in this section.

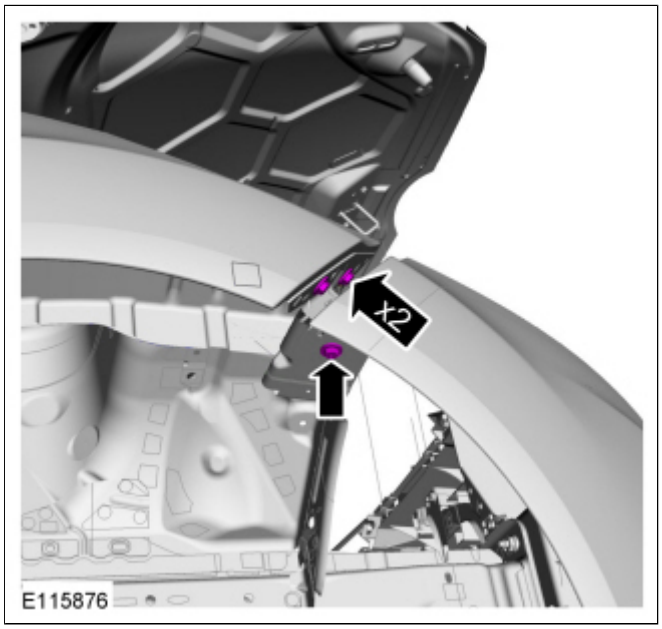
7. Remove the front fender inner rear bolt and the 2 front fender lower bolts.
    - To install, tighten to 6 Nm (53 lb-in).



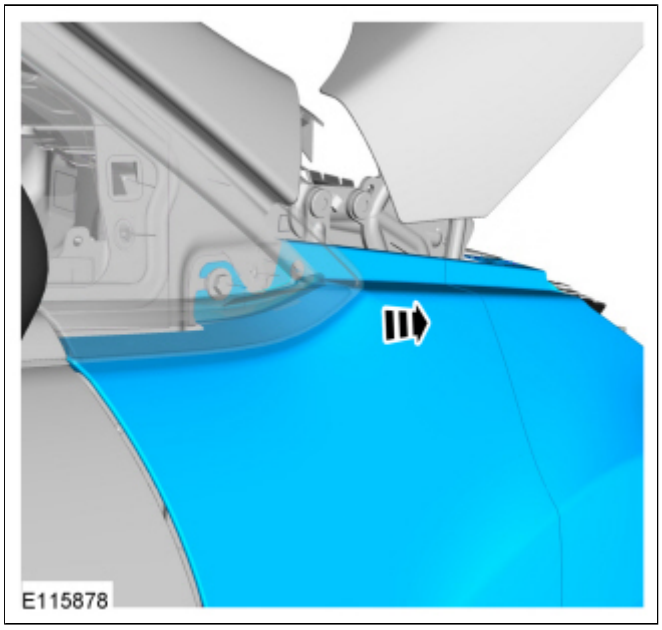
8. Remove the 3 front bumper cover-to-front bumper cover bracket upper bolts and disconnect the front bumper cover from the front fender.
    - To install, tighten to 8 Nm (71 lb-in).



9. Remove the 3 front fender bracket bolts.
    - To install, tighten to 6 Nm (53 lb-in).

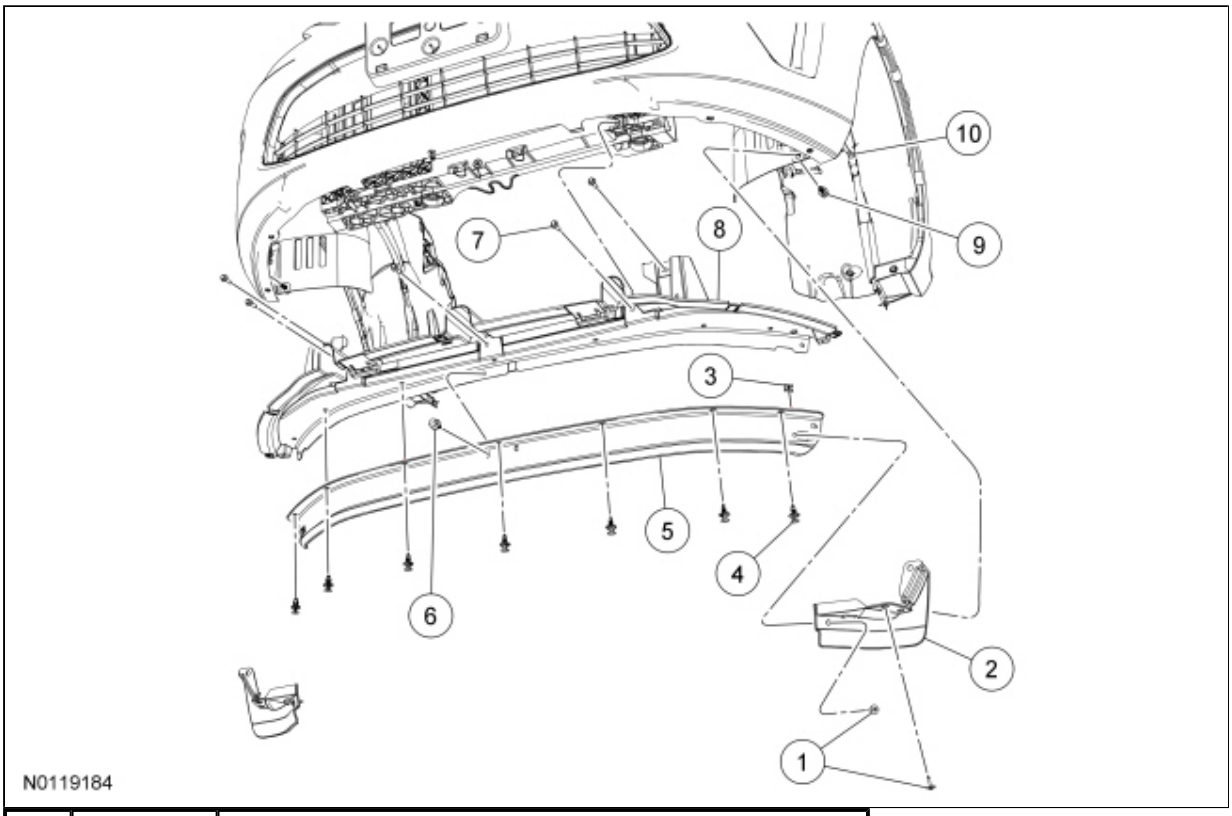


10. Slide the front fender towards the front of the vehicle and remove.



11. To install, reverse the removal procedure.

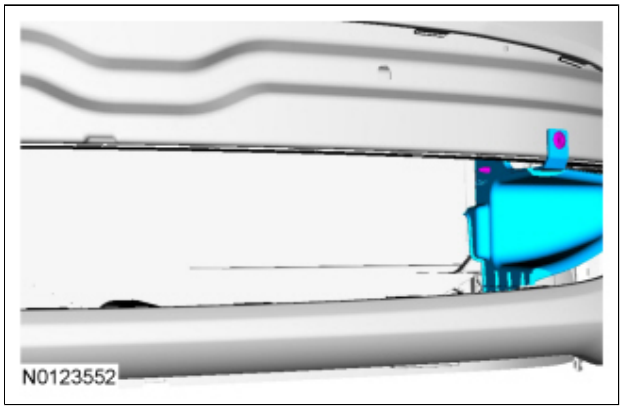
Air Deflector — Lower, Radiator



Item	Part Number	Description
1	W710763	Front stone deflector extension bolts (4 required)
2	16184/ 16185	Front stone deflector extension (RH/LH)
3	W704277	Front stone deflector extension nut (2 required)
4	W712196	Front stone deflector-to-lower radiator air deflector pin-type retainer (6 required)
5	17808	Front stone deflector
6	W712196	Front stone deflector-to-lower radiator air deflector pin-type retainer
7	W500214	Lower radiator air deflector bolt (5 required)
8	8327	Lower radiator air deflector
9	—	Front fender splash shield retainer (2 required and serviced as part of the front fender splash shield)
10	W701054	Front fender splash shield pin-type retainer (2 required)

Removal and Installation

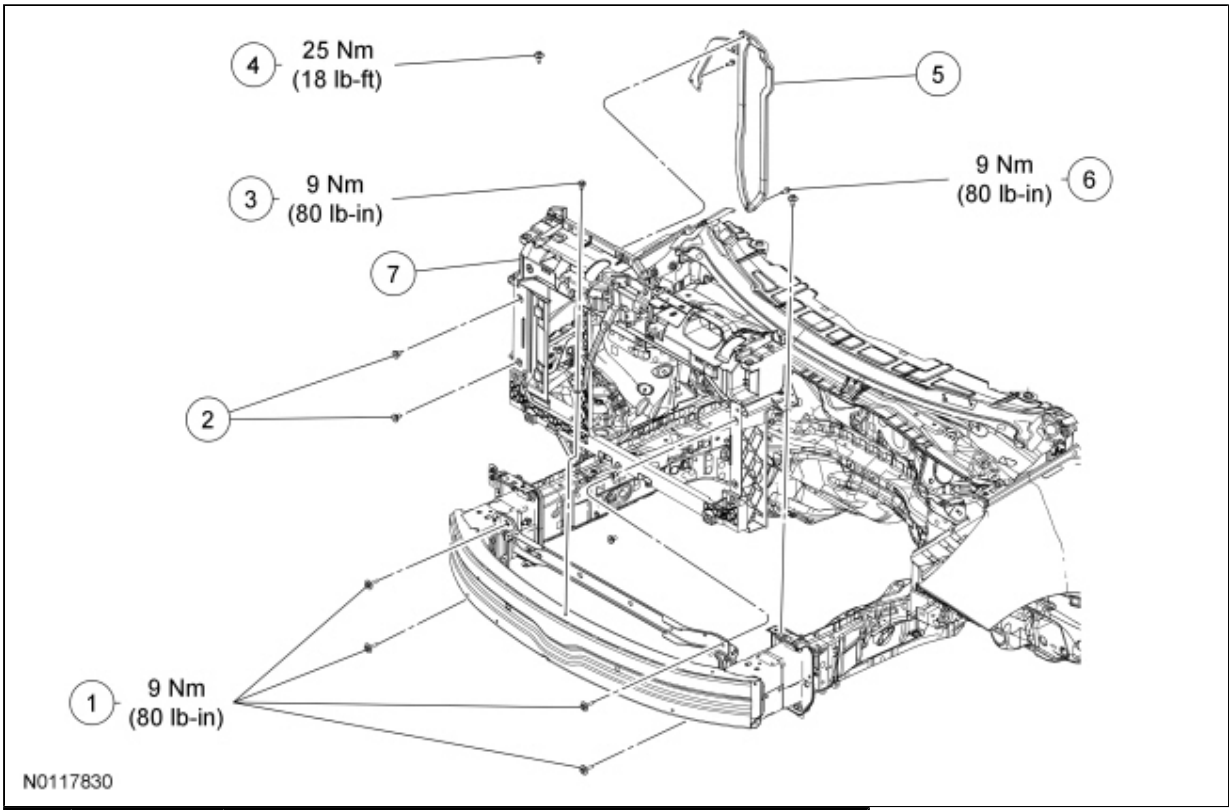
1. Remove the front bumper cover. For additional information, refer to Section 501-19 .
2. If equipped, remove the 2 scrivet retainers and both front lower side radiator air deflectors.



3. Remove the 5 lower radiator air deflector bolts and the lower radiator air deflector.

4. To install, reverse the removal procedure.
    - Transfer parts as necessary.

Radiator Grille Opening Panel Reinforcement



Item	Part Number	Description
1	W701121	Front bumper-to-radiator grille opening panel reinforcement (4 required)
2	—	Radiator grille opening panel reinforcement nut (part of 16138)
3	W702928	Radiator grille opening panel reinforcement support-to-front bumper bolt
4	W713533	Radiator grille opening panel reinforcement upper bolt (2 required)
5	54101A02	Radiator grille opening panel reinforcement rear support bracket
6	W500213	Radiator grille opening panel reinforcement rear support bracket bolt (2 required)
7	16138	Radiator grille opening panel reinforcement

Removal and Installation

1. Remove the radiator lower air deflector. For addition information, refer to Air Deflector — Lower, Radiator in this section.

2. Drain the cooling system. For additional information, refer to Section 303-03 .

3. Remove both headlamp assemblies.
    1. Remove the 3 headlamp assembly bolts.
        - To install, tighten to 5 Nm (44 lb-in).
    2. Disconnect and remove both headlamp assemblies.

4. Disconnect the hood release cable at the hood latch and position aside.

5. Release the degas bottle hose from the upper right side of the radiator grille opening panel reinforcement.

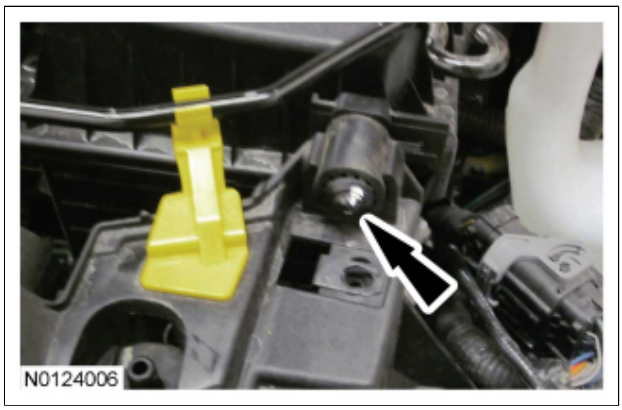
6. Recover the refrigerant. For additional information, refer to Section 412-00 .

7. Remove the A/C condenser inlet and outlet line nuts and disconnect both lines.
   - To install, tighten to 8 Nm (71 lb-in).

8. Disconnect the A/C pressure transducer electrical connector and disconnect the wiring harness from the radiator grille opening panel reinforcement.

9. If equipped, remove the 2 scrivets and both side radiator air deflectors.

10. Remove the air cleaner housing-to-radiator grille opening panel reinforcement retainer.



11. Remove the 4 front bumper-to-radiator grille opening panel reinforcement bolts.
    - To install, tighten to 9 Nm (80 lb-in).

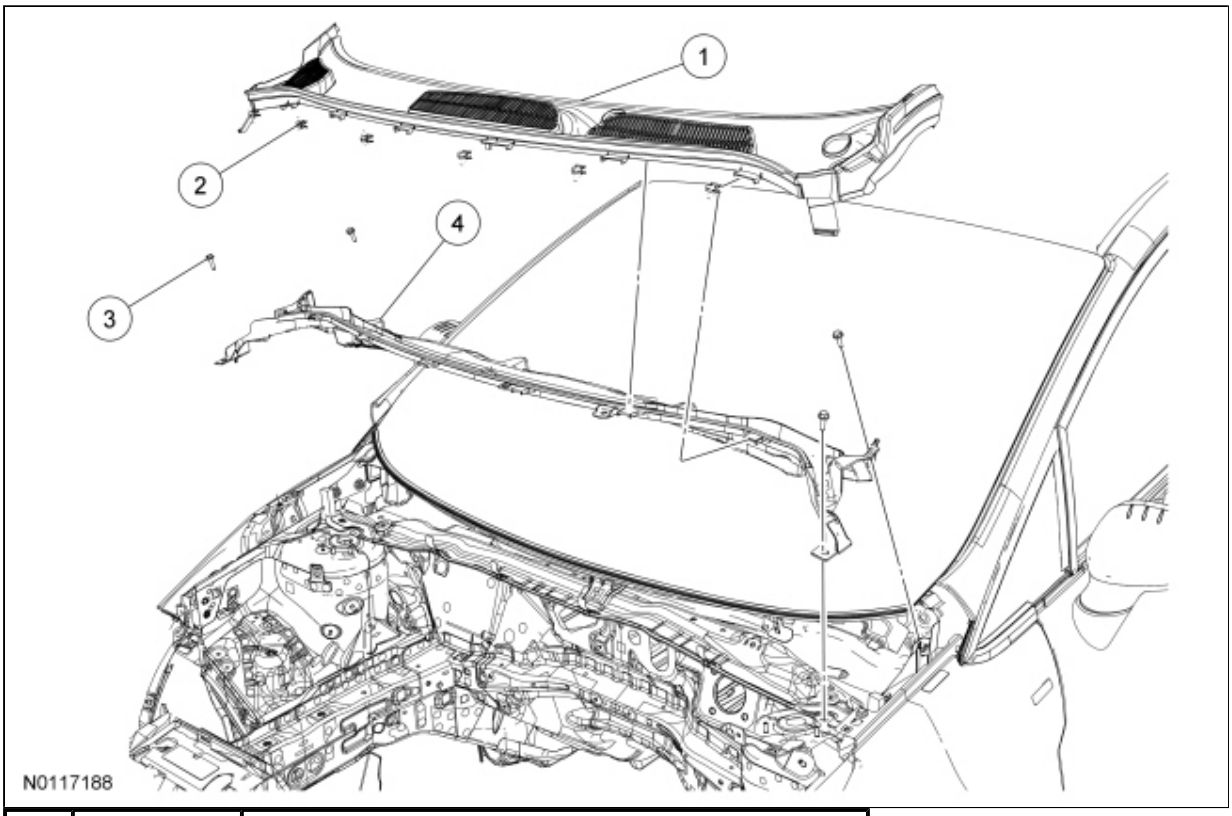
12. Remove the radiator grille opening panel reinforcement support-to-front bumper bolt.
    - To install, tighten to 9 Nm (80 lb-in).

13. Remove the 2 radiator grille opening panel reinforcement upper bolts.
    - To install, tighten to 25 Nm (18 lb-ft).

14. Remove the radiator grille opening panel reinforcement.

15. To install, reverse the removal procedure.
    - Transfer parts as necessary.

Cowl Panel Grille



Item	Part Number	Description
1	018A16	Upper cowl panel
2	14197	Upper cowl panel-to-lower cowl panel clip (6 required)
3	W700133	Lower cowl panel bolt (4 required)
4	016B26	Lower cowl panel

Removal and Installation

Upper Cowl Panel and Lower Cowl Panel

1. Remove the wiper blade arms. For additional information, refer to Section 501-16 .
2. Remove the 6 upper cowl panel-to-lower cowl panel clips.
3. Remove the upper cowl panel.

Lower Cowl Panel

4. Remove the headlamp assemblies. For additional information, refer to Section 417-01 .
5. Remove the 4 lower cowl panel bolts.
6. Release the brake booster vacuum hose from the clip on the lower cowl panel.
7. Remove the lower cowl panel.

All

8. To install, reverse the removal procedure.

Material

Item	Specification	Fill Capacity
Multi-Purpose Grease XG-4 and/or XL-5, or equivalents	ESB-M1C93-B	—

Torque Specifications

Description	Nm	lb-ft	lb-in
Door check arm-to-body bolts	25	18	—
Door check arm-to-door nuts	10	—	89
Door hinge-to-body bolts	24	18	—
Door hinge-to-door bolts	24	18	—
Lifgate hinge bolts	11	—	97
Luggage compartment hinge-to-luggage compartment lid bolts	11	—	97

Luggage Compartment Lid Alignment

1. Loosen the 4 luggage compartment lid bolts.

2. Adjust the luggage compartment lid as necessary. For additional information on body margins, refer to Section 501-35 .

3. Tighten the 4 luggage compartment lid hinge bolts.
   - Tighten to 11Nm (97 lb-in).

Liftgate Alignment

1. Loosen the 4 liftgate hinge-to-liftgate bolts just enough to permit movement of the liftgate.

2. **NOTE:** The liftgate should be adjusted for even and parallel fit with the liftgate opening and the surrounding panels.

   Adjust the liftgate as necessary. For additional information on body margins, refer to Section 501-35 .

3. Tighten the 4 liftgate hinge-to-liftgate bolts.
   - Tighten to 11 Nm (97 lb-in).

Striker Adjustment

Material

Item	Specification
Multi-Purpose Grease XG-4 and/or XL-5, or equivalents	ESB-M1C93-B

NOTE: Before adjusting the door latch striker plate, verify that the door can be closed easily and fits tightly.

1. Loosen the door latch striker bolts.

2. Reposition the door latch striker plate from side to side or up and down as necessary.

3. Tighten the door striker plate bolts.
   - Tighten to 25 Nm (18 lb-ft).

4. Check the adjustment of the door. For additional information on body margins, refer to Section 501-35 .
   - Repeat the procedure as necessary.
   - Lubricate the door latch using the specified lubricant.

Door Alignment — Front

Material

Item	Specification
Multi-Purpose Grease XG-4 and/or XL-5, or equivalents	ESB-M1C93-B

All alignments

1. Remove the door latch striker plate.

Front door in and out, up and down alignment

2. Loosen, but do not remove, the front door hinge-to-front door fasteners enough to allow door alignment.

Front door fore, aft and tilt alignment

3. Loosen, but do not remove, the front door hinge-to-body fasteners enough to allow door alignment.

All alignments

4. Adjust the door. For additional information on body margins, refer to Section 501-35 .

5. Tighten the door fasteners.
   - Tighten the front door hinge-to-front door fasteners to 24 Nm (18 lb-ft).
   - Tighten the front door hinge-to-body fasteners to 25 Nm (18 lb-ft).

6. Install and adjust the door striker as necessary. For additional information, refer to Striker Adjustment in this section.
   - Lubricate the door latch using the specified lubricant.

Door Alignment — Rear

Material

Item	Specification
Multi-Purpose Grease XG-4 and/or XL-5, or equivalents	ESB-M1C93-B

All alignments

1. Remove the door latch striker plate.

Rear door in and out, up and down alignment

2. Loosen, but do not remove, the rear door hinge-to-door fasteners enough to allow door alignment.

Front door fore, aft and tilt alignment

3. Loosen, but do not remove, the rear door hinge-to-body fasteners enough to allow door alignment.

All alignments

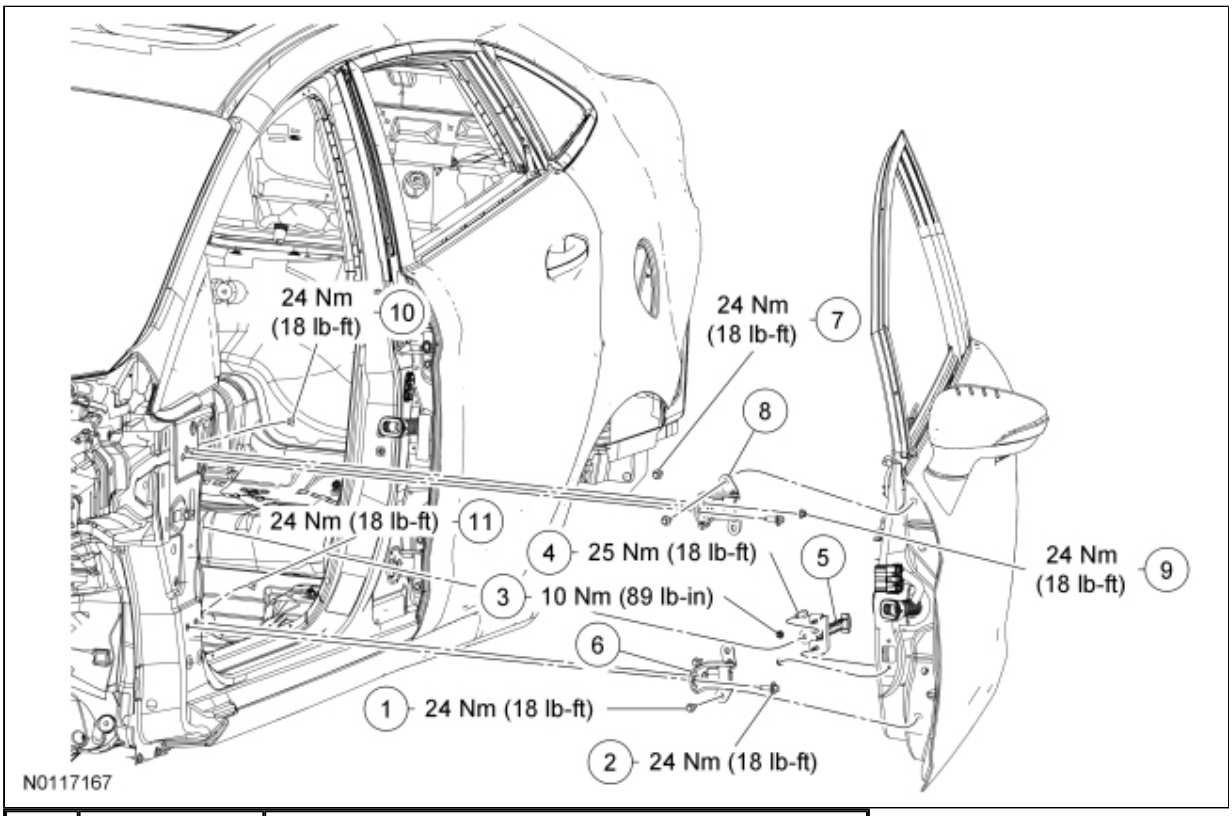
4. Adjust the door. For additional information on body margins, refer to Section 501-35 .

5. Tighten the door fasteners.
   - Tighten the rear door hinge-to-door fasteners to 24Nm (18 lb-ft).
   - Tighten the rear door hinge-to-body fasteners 25 Nm (18 lb-ft).

6. Install and adjust the door striker as necessary. For additional information, refer to Striker Adjustment in this section.
   - Lubricate the door latch using the specified lubricant.

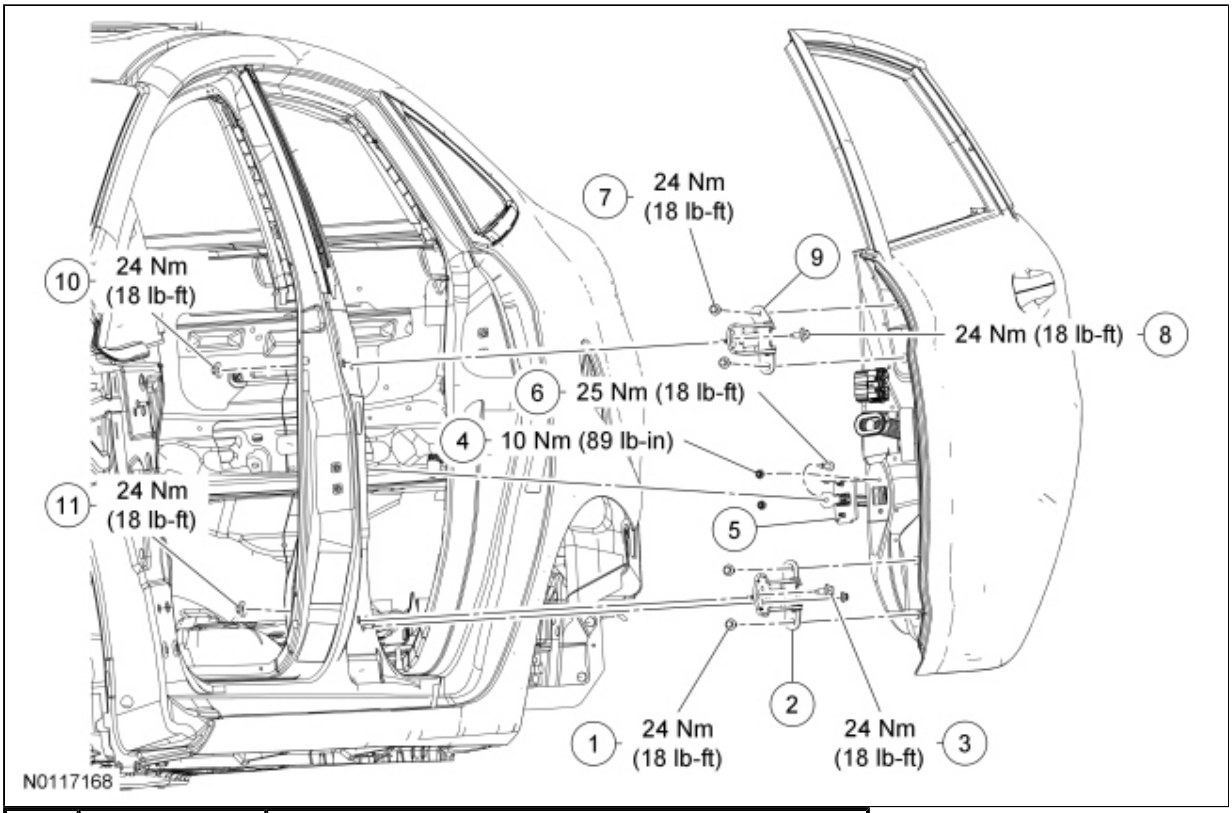
Door

Front Door



Item	Part Number	Description
1	W713332	Front door lower hing-to-door bolt (4 required)
2	W711806	Front door lower hinge-to-body bolt (2 required)
3	W520101	Front door check nut (4 required)
4	W713778	Front door check bolt (2 required)
5	23504	Front door check
6	22810/ 22811	Front door lower hinge (RH/LH)
7	W713332	Front door upper hinge-to-door bolt (4 required)
8	22810/ 22811	Front door upper hinge (RH/LH)
9	W711806	Front door upper hinge-to-body bolt (2 required)
10	W709923	Front door upper hinge nut (2 required)
11	W709923	Front door lower hing nut (2 required)

Rear Door



Item	Part Number	Description
1	W713332	Rear door lower hinge-to-door bolt (4 required)
2	26810/ 26811	Rear door lower hinge (RH/LH)
3	W702368	Rear door lower hinge-to-body bolt (2 required)
4	W520101	Rear door check nut (4 required)
5	27204	Rear door check
6	W713778	Rear door check bolt (2 required)
7	W713332	Rear door upper hinge-to-door bolt (4 required)
8	W702368	Rear door upper hinge-to-body bolt (2 required)
9	26800/ 26801	Rear door upper hinge (RH/LH)
10	W709923	Rear door upper hinge nut (2 required)
11	W709923	Rear door lower hinge nut (2 required)

Removal and Installation

1. Disconnect the door bulk head connector at the body.
    1. Carefully pull the rubber grommet around the bulk head connector back away from the body to gain access to the 3 clips on the bulk head connector.
    2. Release the upper clip and the 2 lower clips and pull the door bulk head connector from the body.
    3. Disconnect the electrical connectors from the door bulk head connector.

2. Remove the door check arm-to-body bolt.
    - To install, tighten to 26 Nm (19 lb-in).

3. Remove the 2 upper hinge-to-door bolts.
    - To install, tighten to 24 Nm (18 lb-ft).

4. **NOTE:** The aid of an assistant is required to hold the door up while removing the lower hinge-to-door bolts.

   Remove the 2 lower hinge-to-door bolts.

- To install, tighten to 24 Nm (18 lb-ft).

5. To install, reverse the removal procedure.
   - If necessary, adjust the door. For additional information, refer to Door Alignment — Front or Door Alignment — Rear in this section.

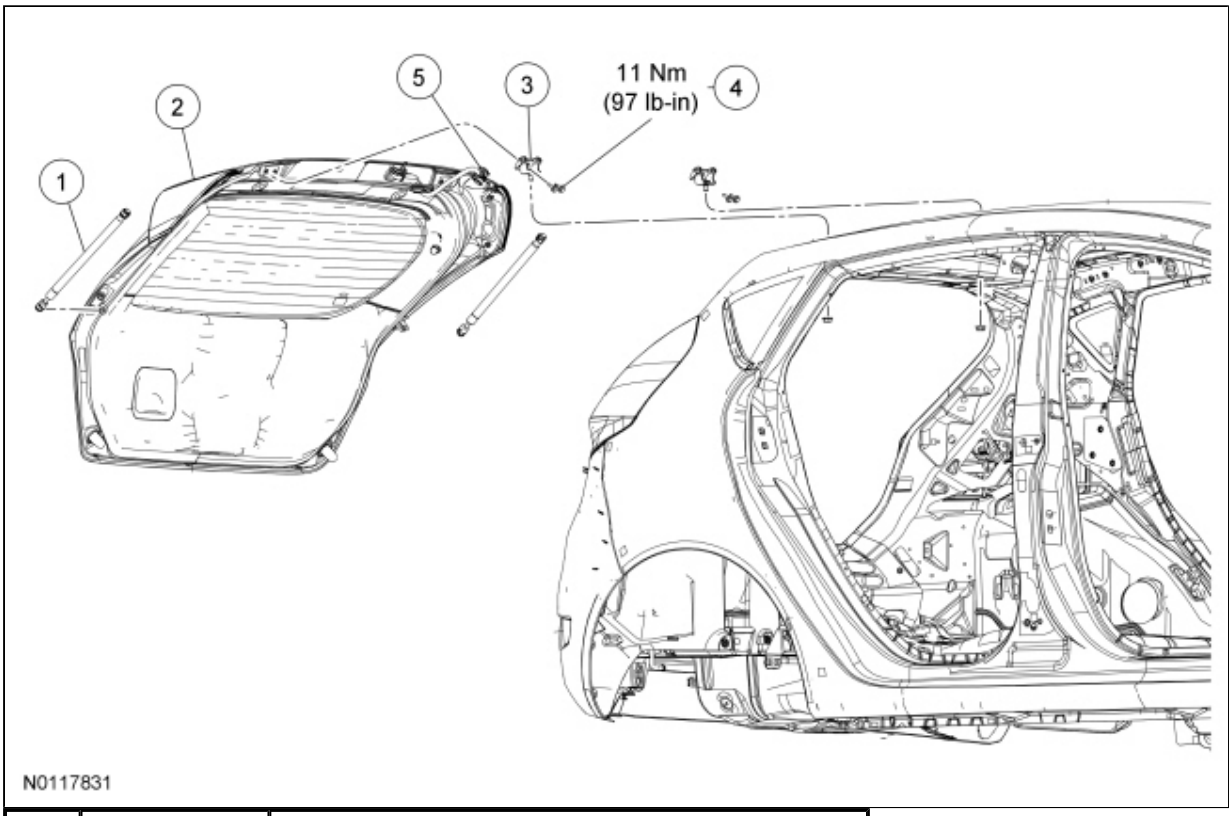
Door Check Arm

Removal and Installation

NOTE: Front and rear door check arms are removed in the same manner. For additional information on location, refer to the exploded view in Door in this section.

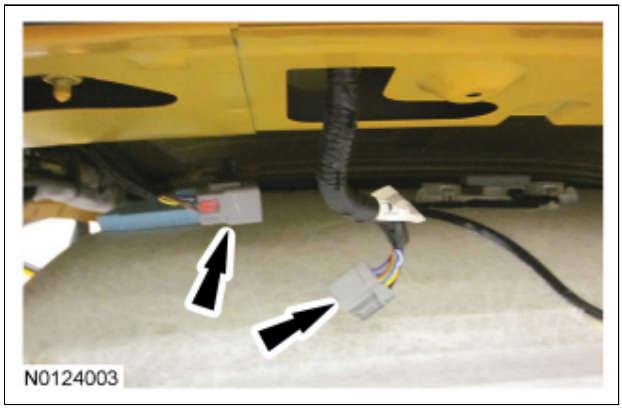
1. Remove the door check arm-to-body bolt.
   - To install, tighten to 26 Nm (19 lb-ft).
2. Remove the 2 door check arm-to-door nuts.
   - To install, tighten to 10 Nm (89 lb-in).
3. Remove the door speaker. For additional information, refer to Section 415-00 .
4. Remove the front door check arm.
5. To install, reverse the removal procedure.

Liftgate



Item	Part Number	Description
1	406A10	Rear liftgate shock (RH/LH)
2	40110	Rear liftgate
3	42900	Rear liftgate hinge (RH/LH)
4	W702434	Rear liftgate hinge bolt (4 required)
5	—	Liftgate electrical connector (part of 14B562A)

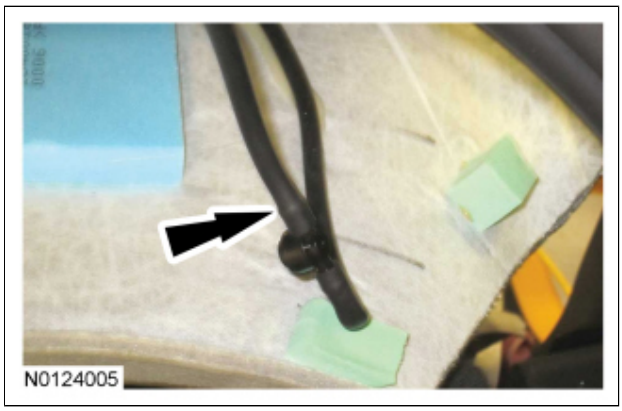
1. Remove both upper B-pillar trim panels. For additional information, refer to Section 501-05 .
2. Remove both upper C-pillar trim panels. For additional information, refer to Section 501-05 .
3. Gently drop down the headliner in the rear to access the liftgate bulkhead electrical connector and the rear washer hose.
    1. Remove the 2 rear headliner pin-type retainers.
    2. Release the headliner from the liftgate weather strip and gently let drop down.
4. Disconnect the liftgate bulkhead connector located under LH rear of headliner.



5. Release the wiring harness locator and position the harness outside of the vehicle.

6. ***NOTICE:*** **Plug washer hose after disconnecting. Failure to do so will result in damage to headliner due to fluid leakage.**

   Disconnect the rear washer hose located under the right rear of headliner.



7. Release the washer hose grommet and position outside of the vehicle.

8. With the help of an assistant, disconnect both liftgate shocks at the liftgate.

9. ***NOTICE:*** **To minimize the possibility of the cross threading, hand-start all fasteners during the installation.**

   With the help of an assistant, mark the position of each hinge with a wax pencil or suitable non staining marker and remove the 4 liftgate hinge-to-liftgate bolts.
   - To install, tighten to 11 Nm (97 lb-in).

10. To install, reverse the removal procedure.

- If necessary, adjust the liftgate. For additional information, refer to Liftgate Alignment in this section.

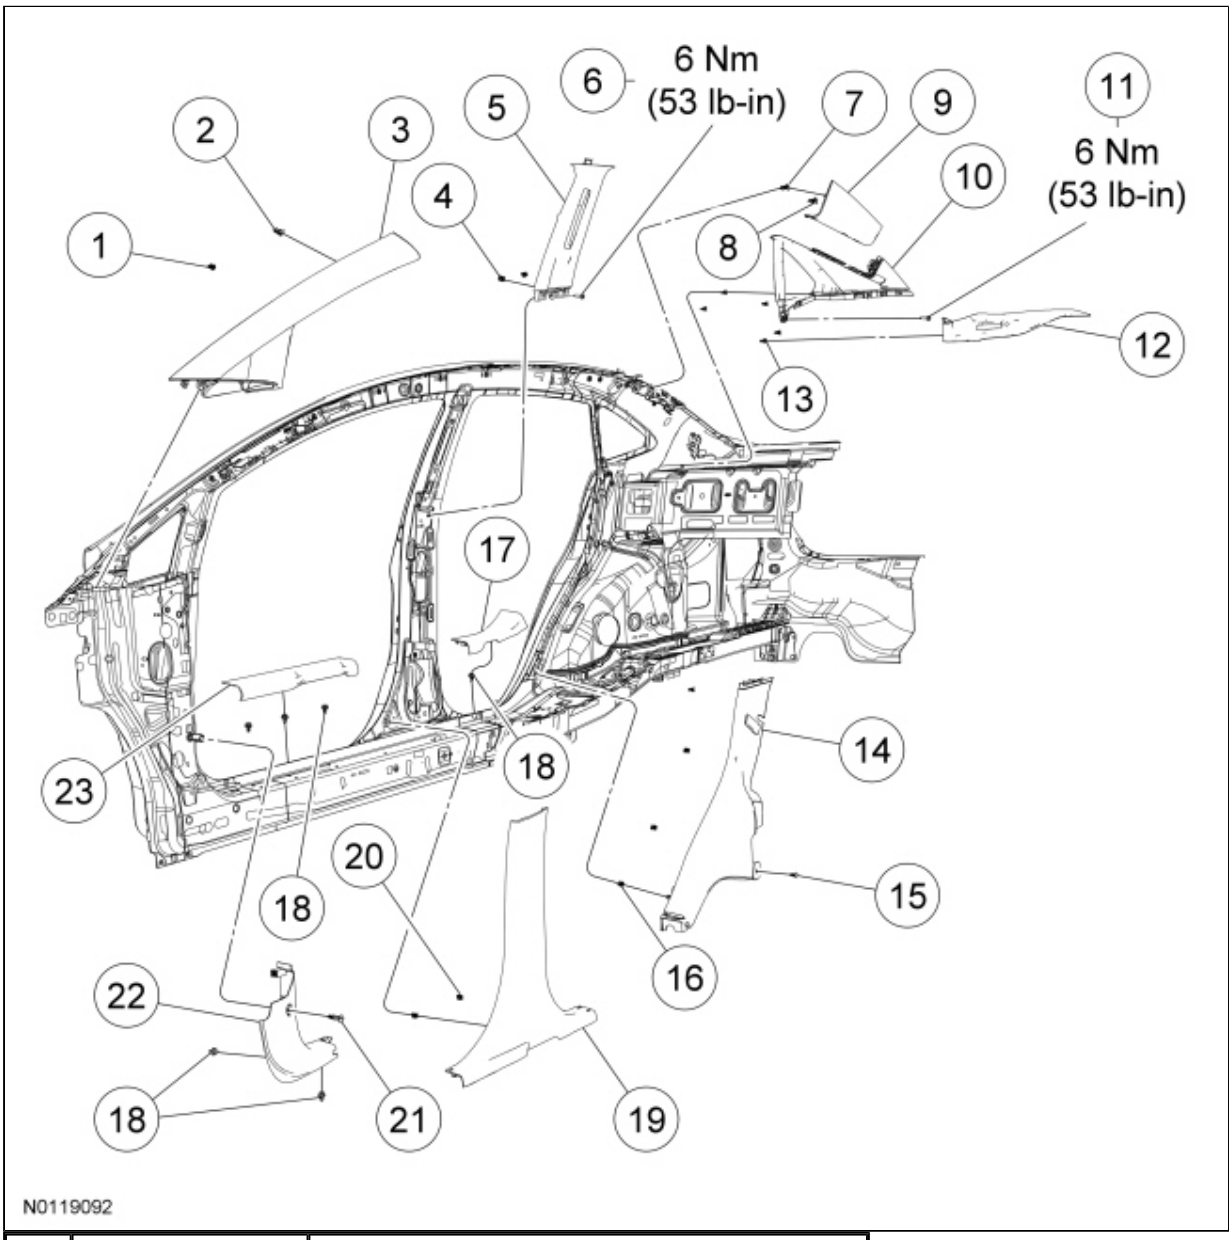
Torque Specifications

Description	Nm	lb-ft	lb-in
Front safety belt D-ring bolt	40	30	—
Rear door pull handle screw	3	—	27
Rear safety belt lower anchor bolt	48	35	—
Upper B-pillar trim panel screw	6	—	53
Upper C-pillar trim panel screw - 4 door sedan	6	—	53

Interior Trim — Exploded View

4 Door Sedan

NOTE: RH side shown, LH side similar.



Item	Part Number	Description
1	W713688	A-pillar trim panel retaining clip
2	W715667	A-pillar trim panel 2-stage high-retention retaining clip
3	03598 (RH)/ 03599 (LH)	A-pillar trim panel
4	W713688	B-pillar upper trim panel retaining clip (2 required)

5	24356(RH)/ 24357 (LH)	B-pillar upper trim panel
6	W712518	B-pillar upper trim panel bolt
7	W715667	C-pillar upper trim panel 2-stage high-retention retaining clip
8	W713688	C-pillar upper trim panel retaining clip (4 required)
9	—	C-pillar upper trim panel cover (part of 31004 (RH)/ 31005 (LH))
10	31004 (RH)/ 31005 (LH)	C-pillar upper trim panel
11	W712518	C-pillar upper trim panel bolt
12	46808 (RH) / 46809 (LH)	Parcel shelf upper trim panel
13	W710338	Retaining clip (5 required) (2 required)
14	31012 (RH) / 31013 (LH)	C-pillar lower trim panel
15	W703198	Pushpin
16	W710338	C-pillar lower trim panel retaining clip (4 required)
17	13288 (RH) / 13289 (LH)	Rear scuff plate
18	W714848	Pushpin with foam seal (6 required)

19	W714848	Pushpin with foam seal (6 required)
20	24346 (RH) / 24347 (LH)	B-pillar lower trim panel
21	W713688	B-pillar lower trim panel retaining clip (2 required)
22	—	Cowl side trim panel retainer pin (part of 02344 (RH) / 02345 (LH))
23	02344 (RH) / 02345 (LH)	Cowl side trim panel
24	13208 (RH) / 13209 (LH)	Front scuff plate

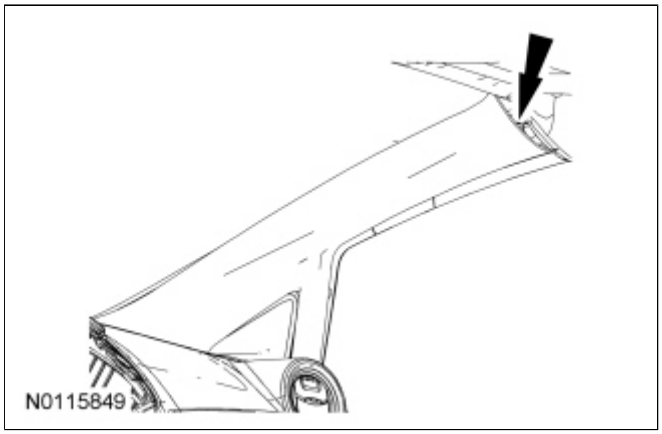
1. For additional information, refer to the procedures in this section.

A-Pillar Trim Panel

Removal and Installation

NOTICE: **To avoid damage to the A-pillar trim panel, remove any retaining clips from the body and attach them to the A-pillar trim panel before installing.**

1. Position the door opening weatherstrip aside.
2. Gently pull the upper A-pillar trim panel toward the center of the vehicle to release the A-pillar trim panel retaining clips.



3. To install, reverse the removal procedure.

B-Pillar Trim Panel

Removal and Installation

Lower and upper

1. Position the front and rear weatherstrips aside.

2. Remove the front scuff plate trim panel. For additional information, refer to Scuff Plate Trim Panel — Front in this section.

3. Remove the rear scuff plate trim panel. For additional information, refer to Scuff Plate Trim Panel — Rear in this section.

4. Position the seats in the full forward position.

5. Gently pull the B-pillar lower trim panel toward the center of the vehicle to release the 2 B-pillar lower trim panel retaining clips.

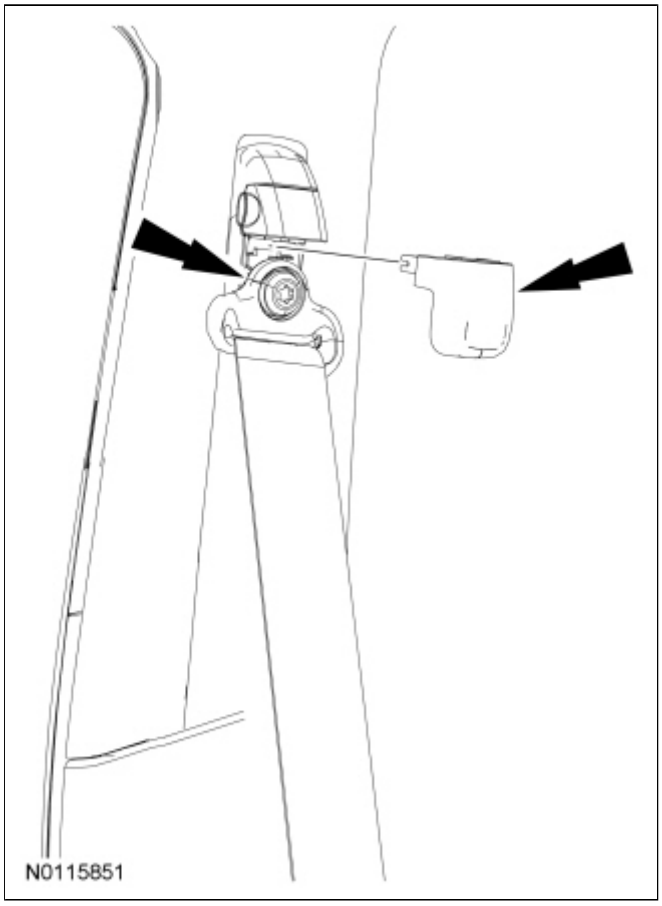
6. ***NOTICE:*** **To avoid damage to the B-pillar lower trim panel, remove any retaining clips from the body and attach them to the B-pillar lower trim panel before installing.**

   Remove the B-pillar lower trim panel.

Upper

7. **NOTE:** Inspect the safety belt D-ring cover for damage and replace D-ring cover if damaged.

   Remove the bolt cover and safety belt D-ring bolt and position the safety belt aside.
   1. To install, tighten to 40 Nm (30 lb-ft).



8. Remove the B-pillar upper trim panel bolt.

9. Remove the B-pillar upper trim panel.
   - Pull the B-pillar upper trim panel toward the center of the vehicle to release the 2 B-pillar upper trim panel retaining clips.

10. ***NOTICE:*** **To avoid damage to the B-pillar upper trim panel, remove any retaining clips from the body and attach them to the B-pillar upper trim panel before installing.**

    To install, reverse the removal procedure.
    - To install, align the trim panel retaining clips to the retaining clip holes in the body.

C-Pillar Trim Panel — 4-Door Sedan

Removal and Installation

Upper

1. Position the rear seat backrest down.

Lower and upper

2. Position the rear door opening weatherstrip aside.

3. Gently pull the parcel shelf upper trim panel toward the center of the vehicle to release the 4 parcel shelf upper trim panel retaining clips and position the parcel shelf upper trim panel aside.

Upper

4. Gently pull the C-pillar upper trim panel cover toward the center of the vehicle to release the 4 C-pillar upper trim panel cover retaining clips.
   - Remove the C-pillar upper trim panel cover.

5. Gently pull the C-pillar lower trim panel toward the center of the vehicle to release the 3 C-pillar upper retaining clips.

6. Remove the C-pillar upper trim panel screw.
   - To install, tighten the screw to 6 Nm (53 lb-In).

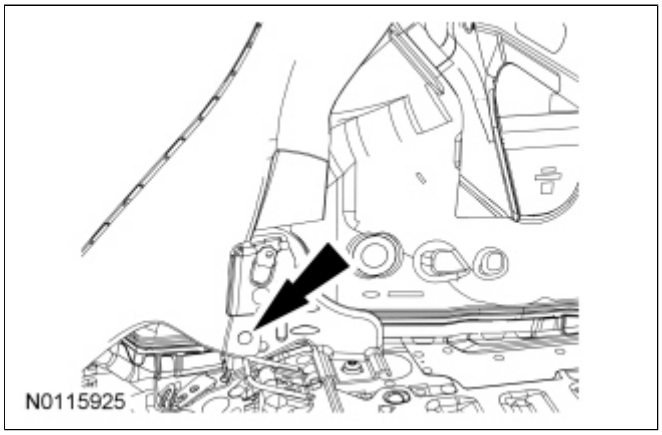
7. Remove the C-pillar upper trim panel.
   - Pull the C-pillar upper trim panel toward the center of the vehicle to release the 4 C-pillar upper trim panel retaining clips.

Lower

8. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

9. Remove the rear door scuff plate.

10. Remove the C-pillar lower trim panel pushpin.
    - Lower the rear seat back as necessary for access to pushpin.



11. Gently pull the C-pillar lower trim panel toward the center of the vehicle to release the 4 C-pillar upper retaining clips and remove the C-pillar lower trim panel.

Lower and upper

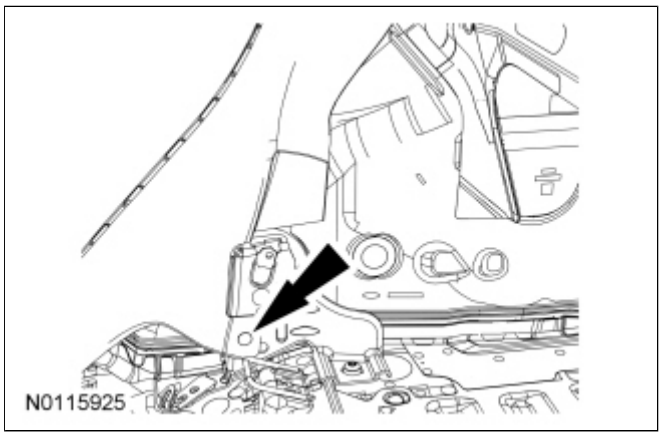
12. ***NOTICE:*** **To avoid damage to the trim panels, remove any retaining clips from the body and attach them to the trim panels before installing.**

    To install, reverse the removal procedure.
    - To install, align the trim panel retaining clips to the retaining clip holes in the body.

C-Pillar Trim Panel — 5-Door Hatchback

Upper and lower

1. Position the rear door opening weatherstrip aside.
2. Remove the rear seat cushion. For additional information, refer to Section 501-10 .
3. Remove the C-pillar lower trim panel pushpin.
   - Lower the rear seat back as necessary for access to pushpin.



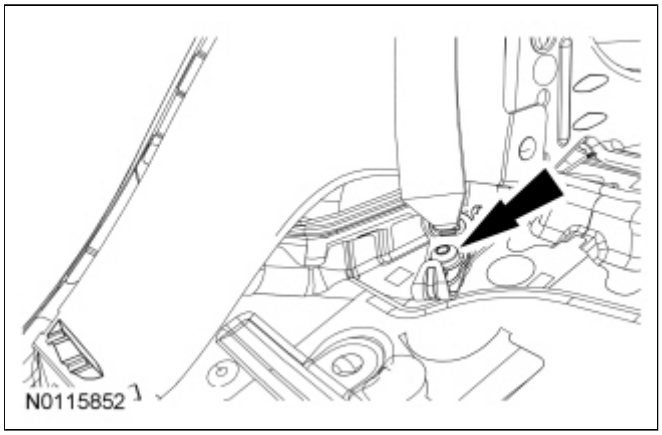
4. Remove the rear door scuff plate.
5. Gently pull the C-pillar lower trim panel toward the center of the vehicle to release the 4 C-pillar lower retaining clips.
6. ***NOTICE:*** **To avoid damage to the C-pillar lower trim panel, remove any retaining clips from the body and attach them to the C-pillar lower trim panel before installing.**

   Remove the C-pillar lower trim panel.

Upper

NOTE: The rear seat is removed for clarity.

7. Remove the safety belt anchor bolt.
   - To install, tighten to 48 Nm (35 lb-ft).



8. Remove the C-pillar upper trim panel.
    - Pull the C-pillar upper trim panel toward the center of the vehicle to release the 5 C-pillar upper trim panel retaining clips.
    - Route the shoulder safety belt through the C-pillar upper trim panel.

Upper and lower

9. ***NOTICE:*** **To avoid damage to the C-pillar lower trim panel, remove any retaining clips from the body and attach them to the C-pillar lower trim panel before installing.**

    To install, reverse the removal procedure.
    - To install, align the trim panel retaining clips to the retaining clip holes in the body.

Quarter Trim Panel — 5-Door Hatchback

Removal and Installation

1. Remove the C-pillar upper and lower trim panel. For additional information, refer to C-Pillar Trim Panel — 5-Door Hatchback in this section.

2. ***NOTICE:*** **To avoid damage to the rear hatch scuff plate trim panel, remove any retaining clips from the body and attach them to the rear hatch scuff plate trim panel before installing.**

   Remove the rear hatch scuff plate trim panel.
   - Remove the 2 pushpin retainers.
   - Pull the rear hatch scuff plate trim panel upwards to release the retaining clips.
   - To install, align the rear hatch scuff plate trim panel retaining clips to the holes in the body.

3. Position the rear hatch weatherstrip aside.

4. Remove the rear package tray trim panel.

5. Remove the cargo cover support panel screw.

6. Gently pull the cargo cover support panel toward the center of the vehicle to release the 3 cargo center support panel retaining clips.

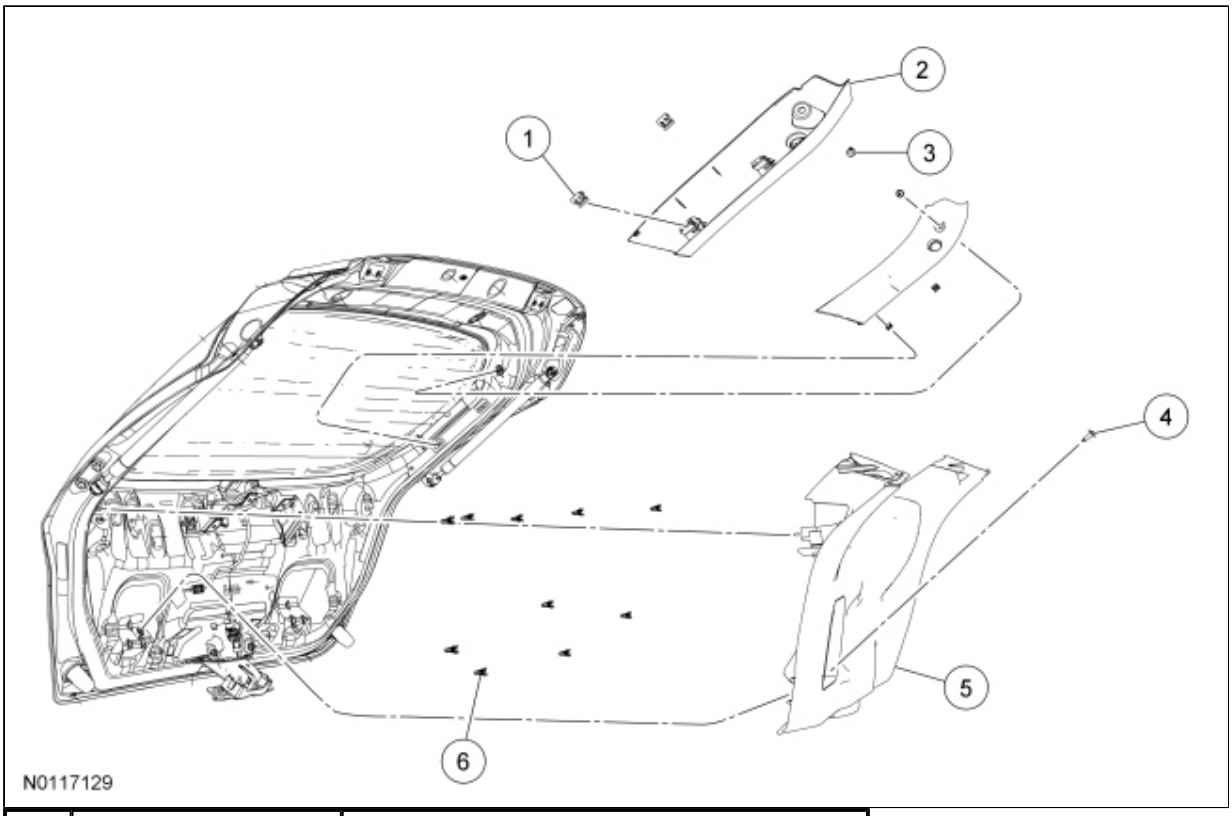
7. Remove the cargo cover support panel.
   - Disconnect the cargo panel light.

8. Remove the pushpin retainer.

9. Remove the quarter trim panel.

10. To install, reverse the removal procedure.

Liftgate Trim Panel



Item	Part Number	Description
1	W712474	Upper liftgate trim panel retaining clip (4 required)
2	42906 (RH) / 42907 (LH)	Upper liftgate trim panel
3	W700426	Upper liftgate trim panel screw (2 required)
4	W700426	Lower liftgate trim panel screw
5	46404	Lower liftgate trim panel
6	W712474	Lower liftgate trim panel retaining clip (10 required)

Upper liftgate trim panel

1. Remove the upper liftgate trim panel retaining screw.

2. Remove the upper liftgate trim panel.
   - Pull the upper liftgate trim panel toward the center of the vehicle and release the 2 upper liftgate trim panel retaining clips.

3. ***NOTICE:*** **To avoid damage to the upper liftgate trim panel, remove any retaining clips from the body and attach them to the upper liftgate trim panel before installing.**

   To install, reverse the removal procedure.
   - To install, align the upper liftgate trim panel retaining clips to the retaining clip holes in the body

Lower liftgate trim panel

4. Remove the lower liftgate trim panel.
    - Remove the lower liftgate trim panel retaining screw.
    - Pull the lower liftgate trim panel toward the front of the vehicle and release the 10 lower liftgate trim panel retaining clips.

5. ***NOTICE:*** **To avoid damage to the lower liftgate trim panel, remove any retaining clips from the body and attach them to the lower liftgate trim panel before installing.**

    To install, reverse the removal procedure.
    - To install, align the lower liftgate trim panel retaining clips to the retaining clip holes in the body

Scuff Plate Trim Panel — Front

NOTICE: **To avoid damage to the front scuff plate trim panel, remove any pushpins from the body and attach them to the front scuff plate trim panel before installing.**

1. Pull the front scuff plate trim panel upwards to release the pushpins. For additional information on the pushpin location, refer to Interior Trim — Exploded View in this section.
    - To install, align the trim panel pushpins to the pushpin holes in the body.

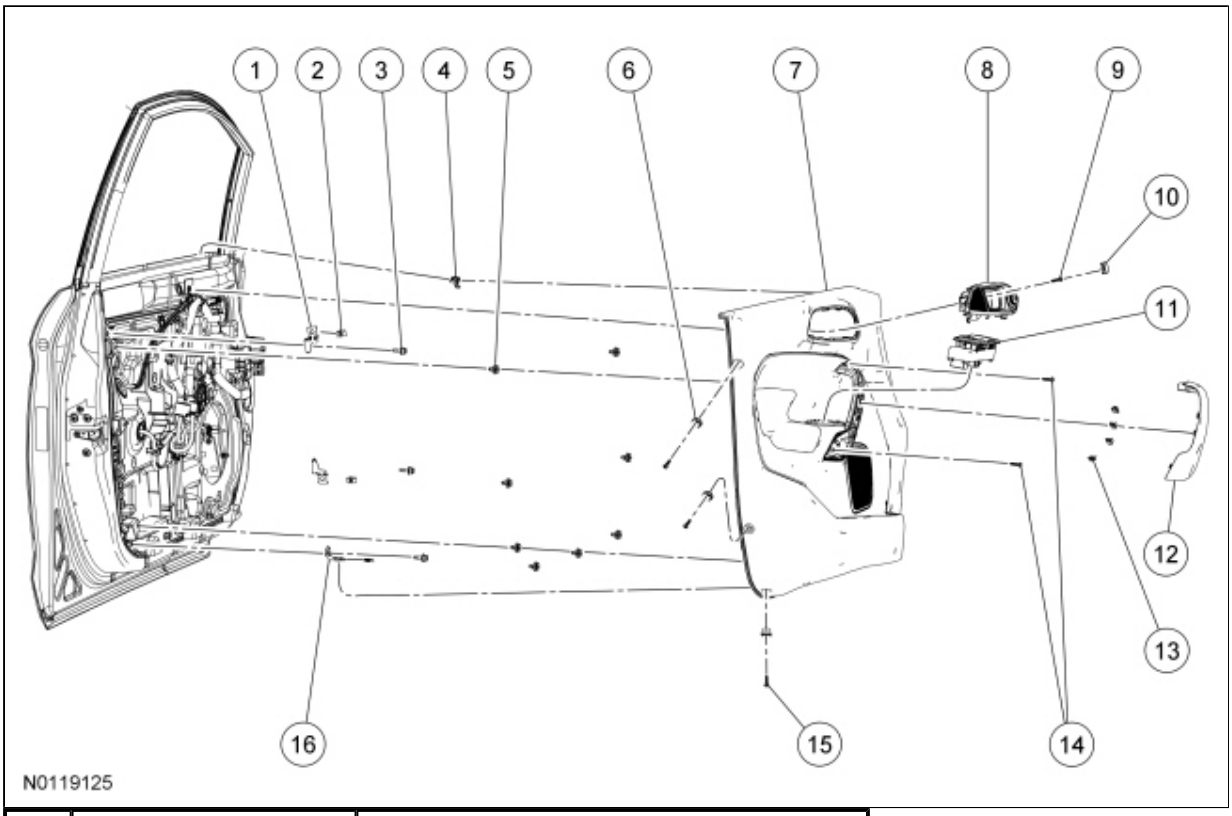
Scuff Plate Trim Panel — Rear

Removal and Installation

NOTICE: **To avoid damage to the rear scuff plate trim panel, remove any pushpins from the body and attach them to the rear scuff plate trim panel before installing.**

1. Pull the rear scuff plate trim panel upwards to release the pushpins. For additional information on the pushpin location, refer to Interior Trim — Exploded View in this section.
    - To install, align the trim panel pushpins to the pushpin holes in the body.

Door Trim Panel — Front



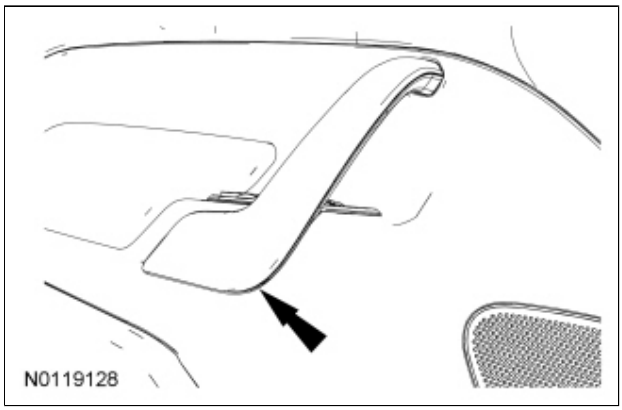
Item	Part Number	Description
1	23834 RH/ 23835 LH	Front door panel bracket
2	W707291	Front door panel bracket nut (3 required)
3	W709931	Front door module bolt (3 required)
4	W790227	Front door panel clip
5	—	Pushpin (8 required)
6	219B00	Grommet (3 required)
7	23942 RH/23943 LH	Front door trim panel
8	22600 (RH)/22601 (LH)	Front door latch inside handle assembly
9	4605B01	Front door latch inside handle assembly screw
10	W10A02	Door latch inside handle assembly screw cover
11	14529 (RH)/14A132 (LH)	Window switch assembly
12	24184 (RH) / 24185 (LH)	Grab handle cover
13	—	Grab handle cover S-clips (4 required)
14	W719311	Door pull handle screw (2 required)
15	W710836	Front door trim panel screw (3 required)
16	23834 RH/ 23835 LH	Front door panel bracket (2 required)

Removal and Installation

All vehicles

1. ***NOTICE:*** **To avoid damage to the grab handle cover, remove any grab handle cover S-clips from the front door trim panel and attach them to the grab handle cover before installing.**

   Using a suitable tool, pry from the lower corner and remove the grab handle cover.



2. Remove the 2 door pull handle screws.

3. Remove the screw cover, screw and remove the front door latch inside handle assembly.
   - Disconnect the door latch cable.

Manual windows

4. Using a suitable tool, pry the window regulator handle and remove the window regulator handle.

All vehicles

5. Remove the 3 front door trim panel screws.

6. ***NOTICE:*** **To avoid damage to the front door trim panel, remove any pushpins from the front door module and attach them to the front door trim panel before installing.**

   Working from the bottom of the front door trim panel, Disengage the 8 pushpins from the door.
   - Using a pushpin removal tool, pull the front door trim panel outward to release the retaining pushpins.

7. Lift the front door trim panel and remove the front door trim panel.

Power Windows

8. Disconnect the power window switch.

All Vehicles

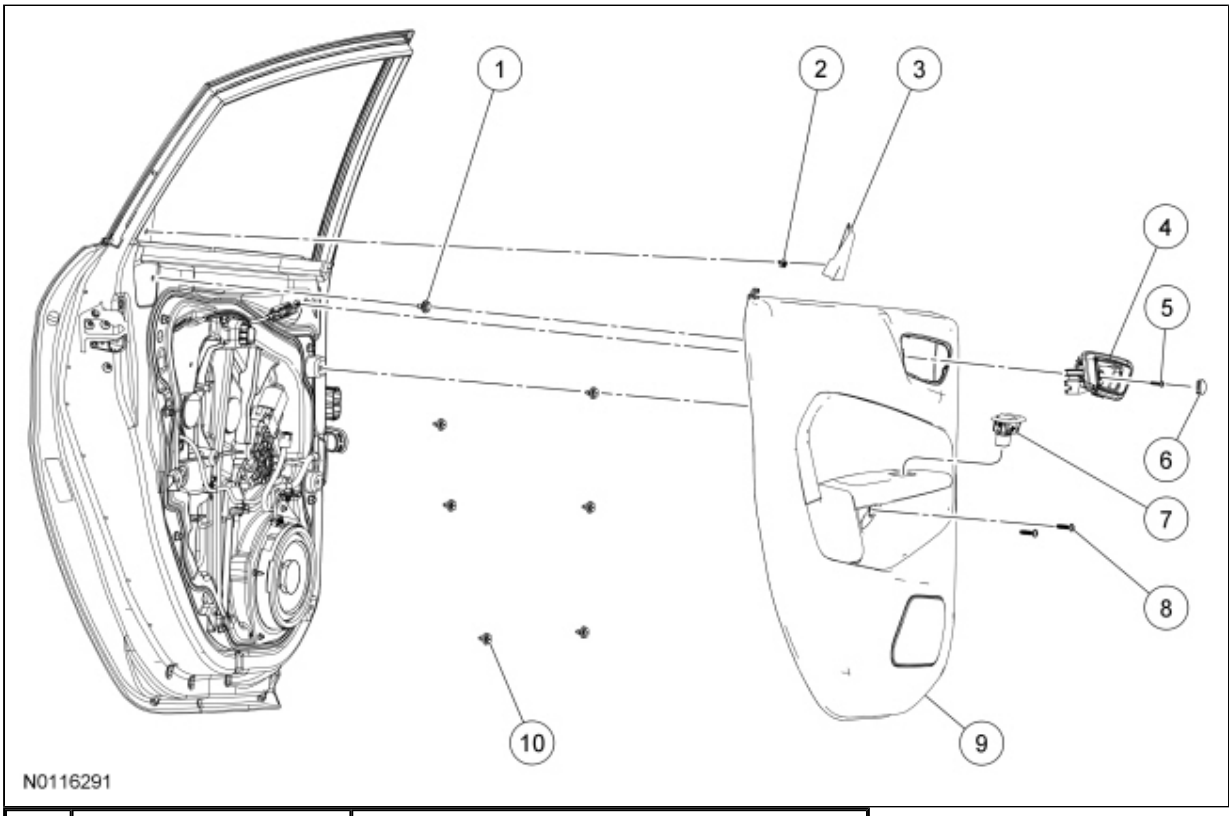
9. If required, remove the front door panel clip from the front door trim panel.

10. To install, reverse the removal procedure.

Door Trim Panel — Rear

NOTE: Click here or refer to the on-line Workshop Manual to view this illustration as an interactive exploded view, requires Adobe® Acrobat® 8.0 or higher.

NOTE: LH side shown, RH side similar.



Item	Part Number	Description
1	W713651	Pushpin
2	W709011	Pushpin
3	254K06 RH/ 254K07 LH	Rear door sail panel (5 door hatchback)
3	254K05 RH/ 254K06 LH	Rear door sail panel (4 door sedan)
4	22600 RH/ 22601 LH	Rear door latch inside handle assembly
5	05B01	Rear door latch inside handle assembly screw
6	W10A02	Screw cover
7	14529	Rear window control switch
8	W713911	Rear door trim panel screw (2 required)
9	27406 RH/ 27407 LH	Rear door trim panel
10	—	Pushpin (6 required)

All vehicles

1. ***NOTICE:*** **To avoid damage to the rear door sail panel, remove the pushpin from the rear door and attach them to the rear door sail panel before installing.**

Remove the rear door sail panel.

2. Remove the door handle screw cover and screw.

3. Remove the 2 rear door trim panel screws.

Manual windows

4. Use a suitable tool to pry the window regulator handle to remove the window regulator handle.

Power windows

5. Remove the window control switch. For additional information, refer to Section 501-11 .

All vehicles

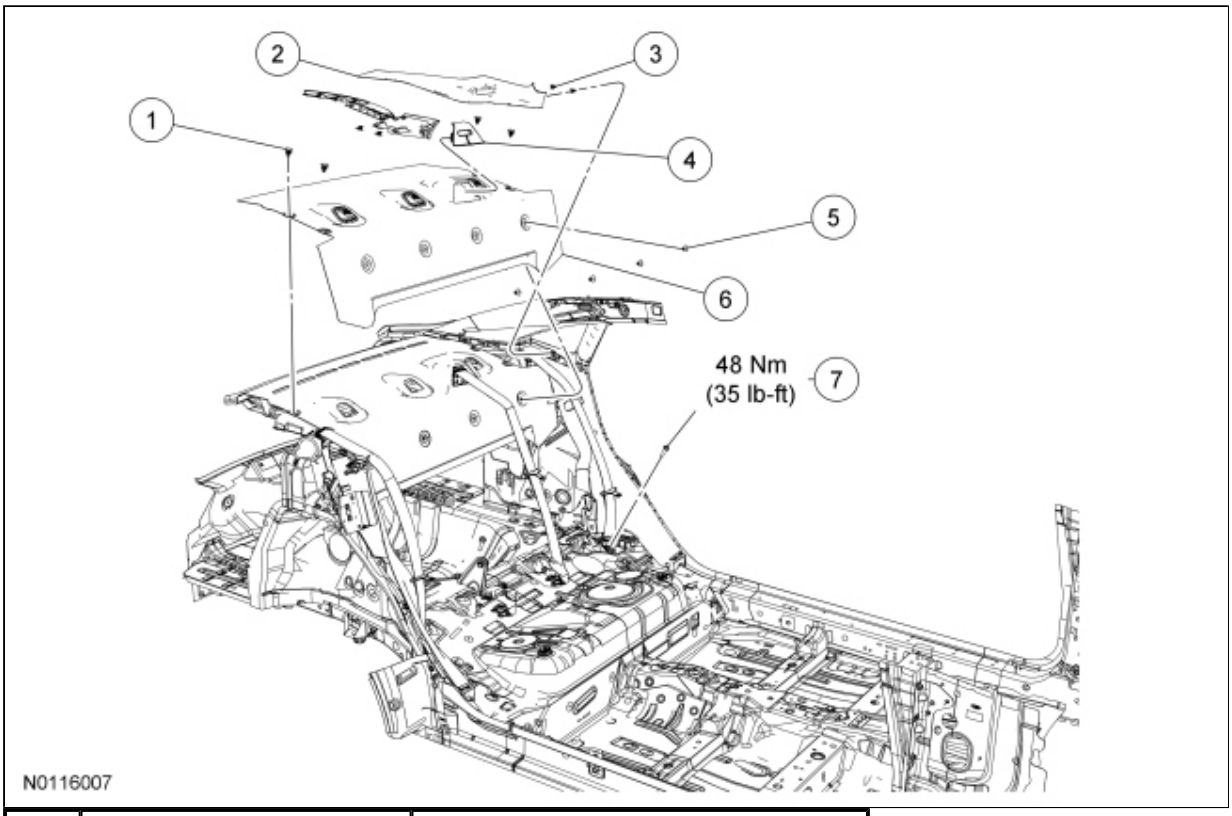
6. ***NOTICE:*** **To avoid damage to the rear door trim panel, remove any pushpins from the rear door module and attach them to the rear door trim panel before installing.**

   Working from the bottom of the rear door trim panel, disengage the 7 pushpins from the door.

7. Pull the rear door trim panel away from the door to release the rear door trim panel retaining clips and rear door trim panel.
   - Disconnect the door latch cable.

8. To install, reverse the removal procedure.
   - To install, align the trim panel pushpins to the pushpin holes in the rear door module.

Parcel Shelf — 4-Door Sedan



Item	Part Number	Description
1	F46668	Retaining clip (4 required)
2	46808 (RH) / 46809 (LH)	Parcel shelf upper trim panel
3	W710338	Parcel shelf side clip (4 required)
4	611B90	Center safety belt bezel
5	W700673	Pin-type retainers (4 required)
6	46668A	Parcel shelf trim panel
7	W703708	Safety belt anchor bolt (3 required)

Removal and Installation

1. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

2. Remove the 3 safety belt anchor bolts.
   - To install, tighten to 48 Nm (35 lb-ft).

3. Remove the RH and LH parcel shelf upper trim panels.
   - Gently pull the parcel shelf upper trim panel toward the center of the vehicle to release the 4 parcel shelf upper trim panel retaining clips.
   - Pull the RH and LH safety belts through the parcel shelf upper trim panel openings.
   - Remove the parcel shelf upper trim panel.

4. Remove the RH and LH C-pillar trim panels. For additional information, refer to C-Pillar Trim Panel — 4-Door Sedan in this section.

5. Remove the safety belt retractor bezel.

- Pull the safety belt retractor bezel toward the front of the vehicle.
- Remove the safety belt retractor bezel from the safety belt.

6. Remove the 4 parcel shelf pin-type retainers.

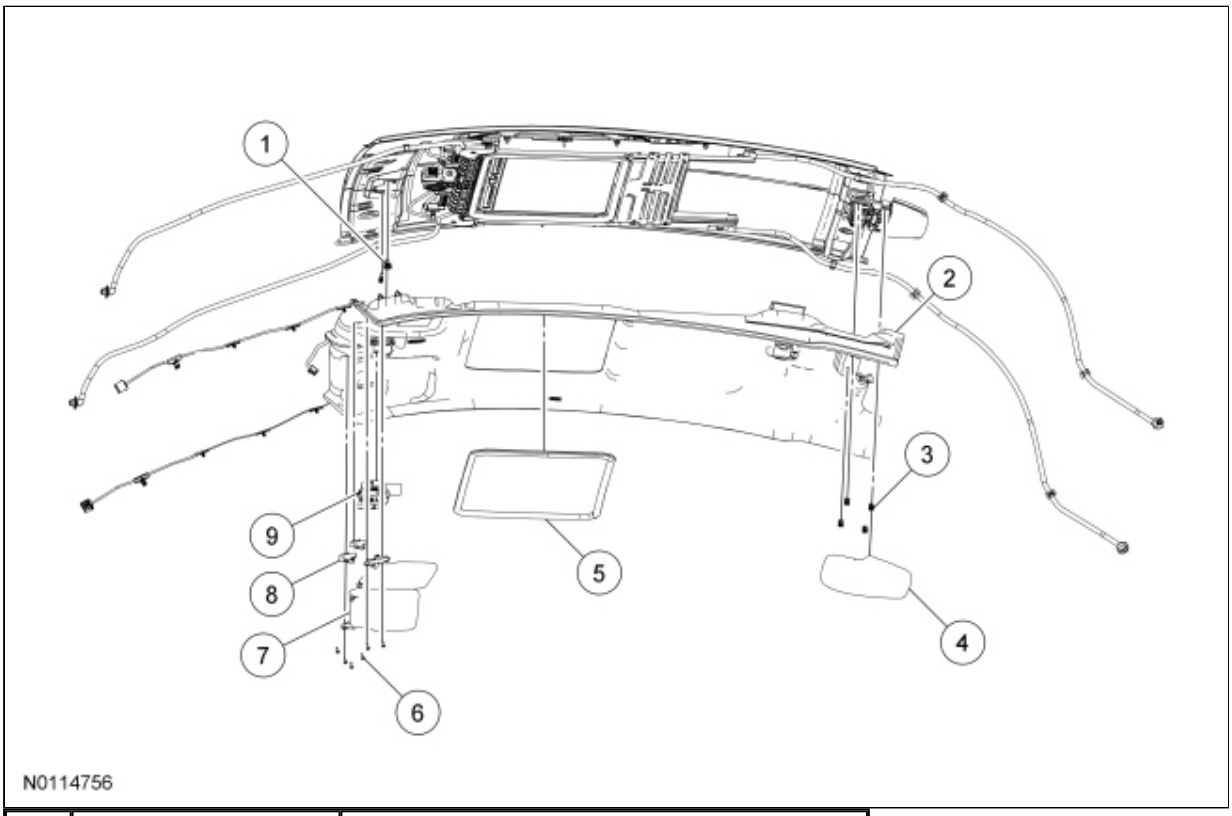
7. Remove the parcel shelf.
   - Pull the parcel shelf toward the front of the vehicle.
   - Pull the center safety belt rearward through the center retractor opening.

8. ***NOTICE:*** **To avoid damage to the parcel shelf upper trim panel, remove any retaining clips from the body and attach them to the parcel shelf upper trim panel before installing.**

   To install, reverse the removal procedure.
   - To install, align the trim panel retaining clips to the retaining clip holes in the body.

Headliner — 4-Door Sedan

NOTE: Headliner with roof opening panel shown, all others similar.



Item	Part Number	Description
1	W711521	Trim pin (2 required)
2	51916	Headliner
3	W712427	Retaining clip (4 required)
4	040A06	Center high mounted stop lamp (CHIMSL) cover
5	52124	Headliner retainer (if equipped)
6	W502660	Screw (6 required)
7	04104 (RH)/04104 (LH)	Sun visor assembly
8	04132	Sun visor clip (2 required)
9	519A70	Overhead console assembly (if equipped)

Removal and Installation

1. Remove the front passenger seat. For additional information, refer to Section 501-10 .

2. Remove the LH and RH sun visors.
   - Remove the 4 sun visor screws.

3. Remove the LH and RH sun visor clips.
   - Remove the 2 sun visor clip screws.

4. Remove the LH and RH A-pillar trim panels. For additional information, refer to A-Pillar Trim Panel in this section.

5. Remove the LH and RH B-pillar trim panels. For additional information, refer to B-Pillar Trim Panel in this section.

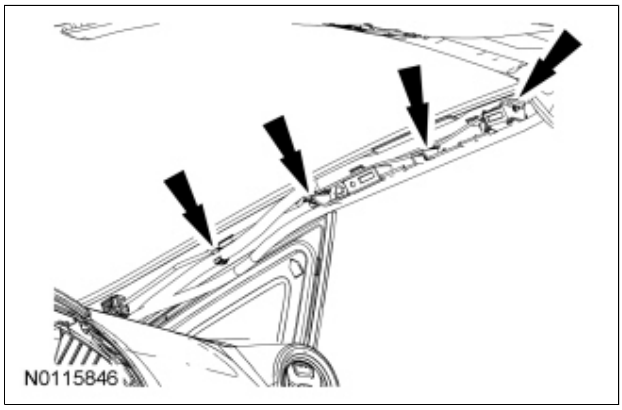
6. Remove the LH and RH C-pillar upper trim panels. For additional information, refer to C-Pillar Trim Panel — 4-Door Sedan in this section.

7. Remove the CHIMSL cover.

8. Remove 2 screws and the CHIMSL retainer plate.

9. **NOTE:** RH A-pillar shown, LH A-pillar similar.

   Disconnect the 2 electrical connectors located at the A-pillars.
   - Detach the 8 wire harness pin-type retainers.



10. If equipped, release the 2 wiring harness guides from the roof opening panel drain tubes.

11. If equipped, remove the roof opening panel headliner retainer.

12. Disconnect the rear view mirror electrical connector.

13. If equipped, disconnect the roof opening panel motor electrical connector.

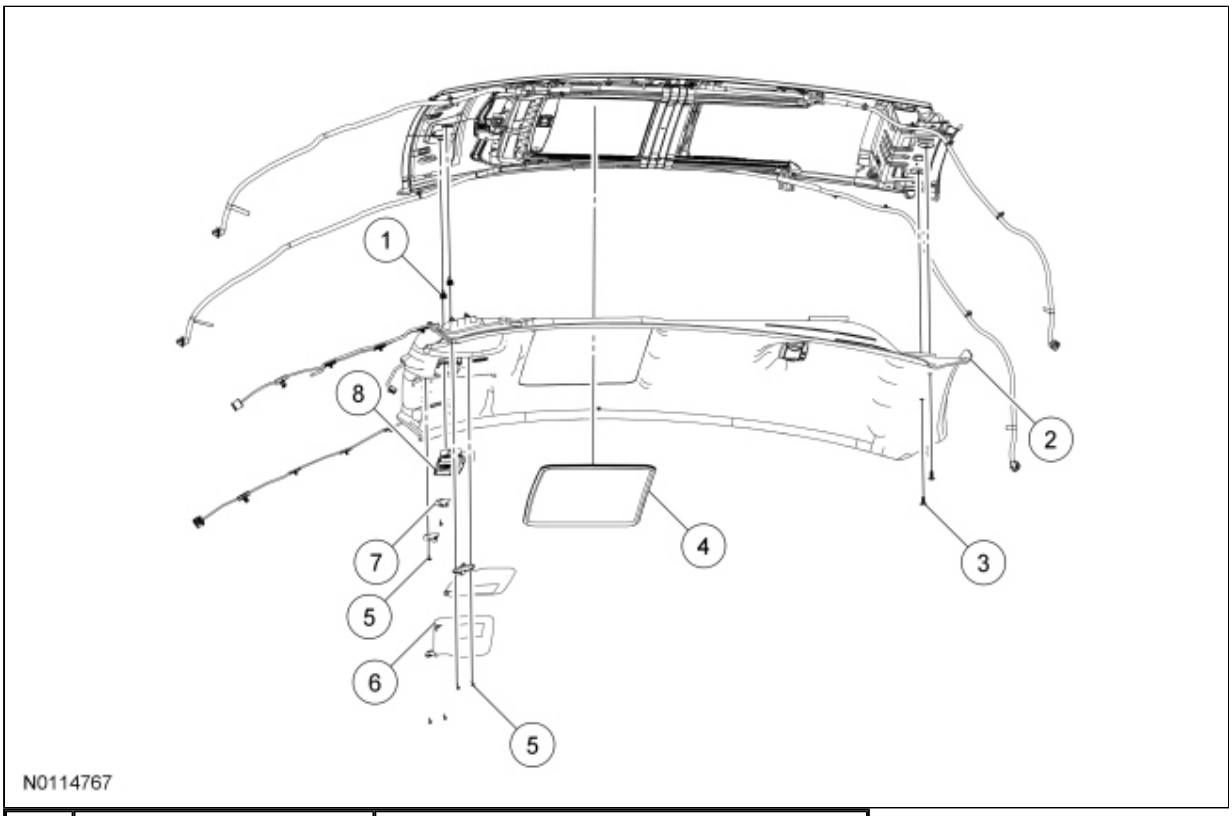
14. ***NOTICE:*** **An assistant is required when removing the headliner from the vehicle to avoid damage to the headliner.**

    Remove the headliner.
    - Remove the headliner through the RH front door opening.

15. To install, reverse the removal procedure.

Headliner — 5-Door Hatchback

NOTE: Headliner with roof opening panel shown, all others similar.



Item	Part Number	Description
1	W711521	Trim pin (2 required)
2	51916	Headliner
3	W709571	Trim pin (2 required)
4	52124	Headliner retainer (if equipped)
5	W502660	Screw (6 required)
6	04104 (RH) / 04105 (LH)	Sun visor assembly
7	04132	Sun visor clip (2 required)
8	519A70	Overhead console assembly (if equipped)

Removal and Installation

1. Remove the LH and RH sun visors.
   - Remove the 4 sun visor screws.

2. Remove the LH and RH sun visor clips.
   - Remove the 2 sun visor clip screws.

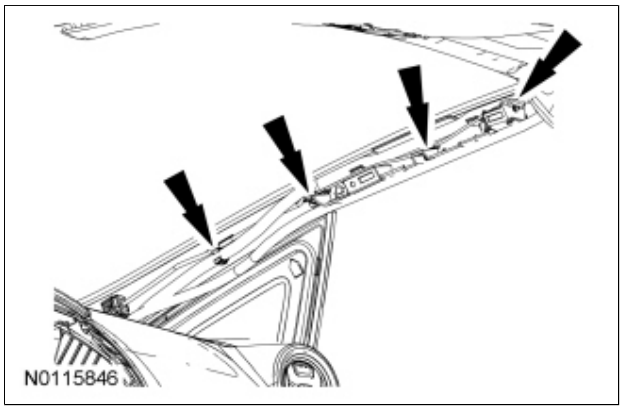
3. Remove the LH and RH A-pillar trim panels. For additional information, refer to A-Pillar Trim Panel in this section.

4. Remove the LH and RH B-pillar upper and lower trim panels. For additional information, refer to B-Pillar Trim Panel in this section.

5. Position aside the LH and RH C-pillar upper trim panels.

6. **NOTE:** RH A-pillar shown, LH A-pillar similar.

   Disconnect the 2 electrical connectors located at the A-pillars.
   - Detach the 8 wire harness pin-type retainers.
   - Disconnect the rear glass washer hose at the LH A-pillar.



7. If equipped, release the 2 wiring harness guides from the roof opening panel drain tubes.

8. If equipped, remove the roof opening panel headliner retainer.

9. Disconnect the rear view mirror electrical connector.

10. If equipped, disconnect the roof opening panel motor electrical connector.

11. Disconnect the rear glass washer hose at the RH C-pillar.

12. Lower the rear seat backs.

13. ***NOTICE:*** **An assistant is required when removing the headliner from the vehicle to avoid damage to the headliner.**

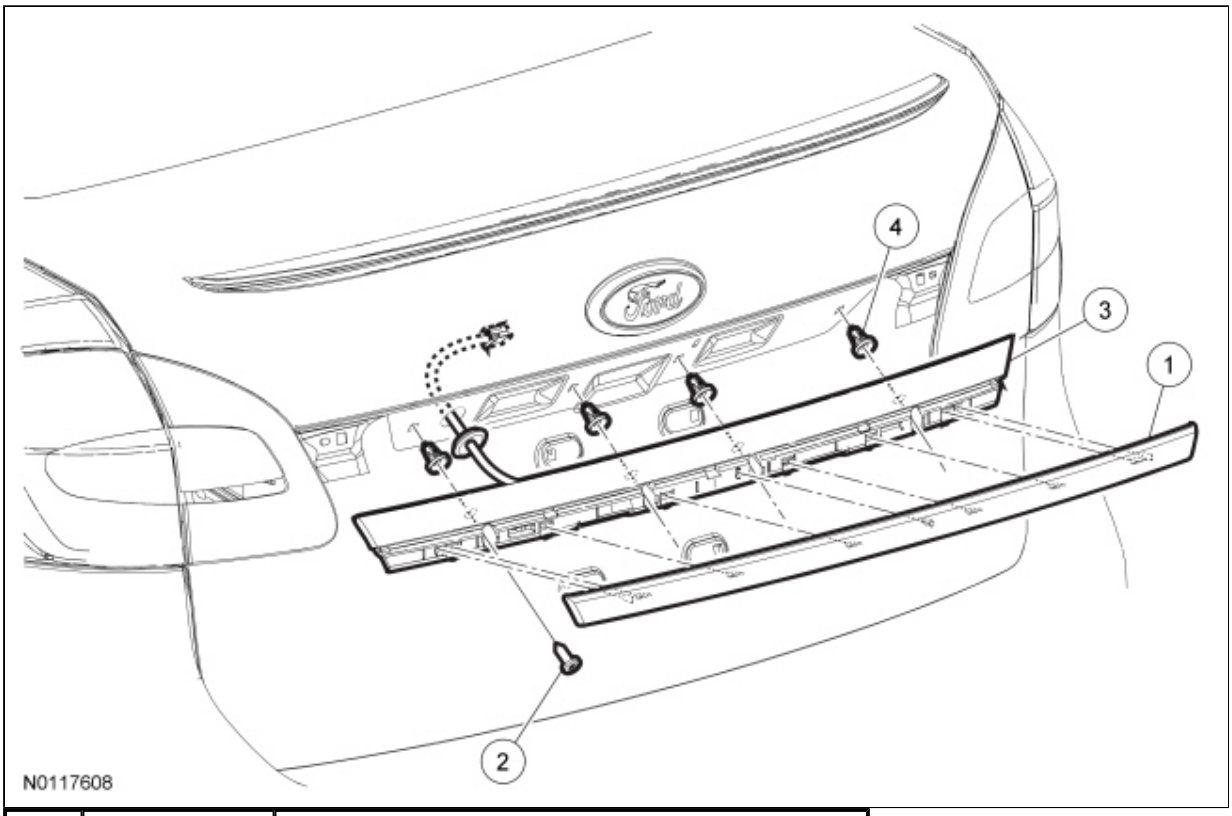
    Remove the headliner.
    - Remove the 2 pushpins.
    - Remove the headliner through the rear hatch opening.

14. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-in
Roof-mounted spoiler bolts	8	71

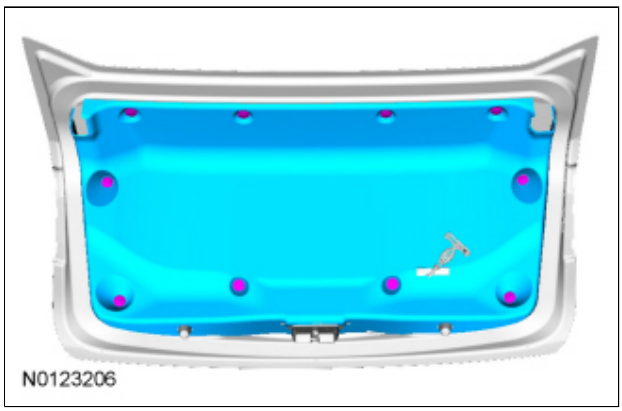
Applique — Decklid



Item	Part Number	Description
1	5442512	Decklid lower applique
2	W713090	Decklid upper applique retainers (4 required)
3	5443400	Decklid upper applique
4	W707977	Decklid upper applique nut (4 required)

NOTE: A new decklid lower applique must be installed.

1. Remove the 10 pin-type retainers and the decklid trim panel.



2. ***NOTICE:*** **Use care not to damage the paint when prying on the decklid applique.**

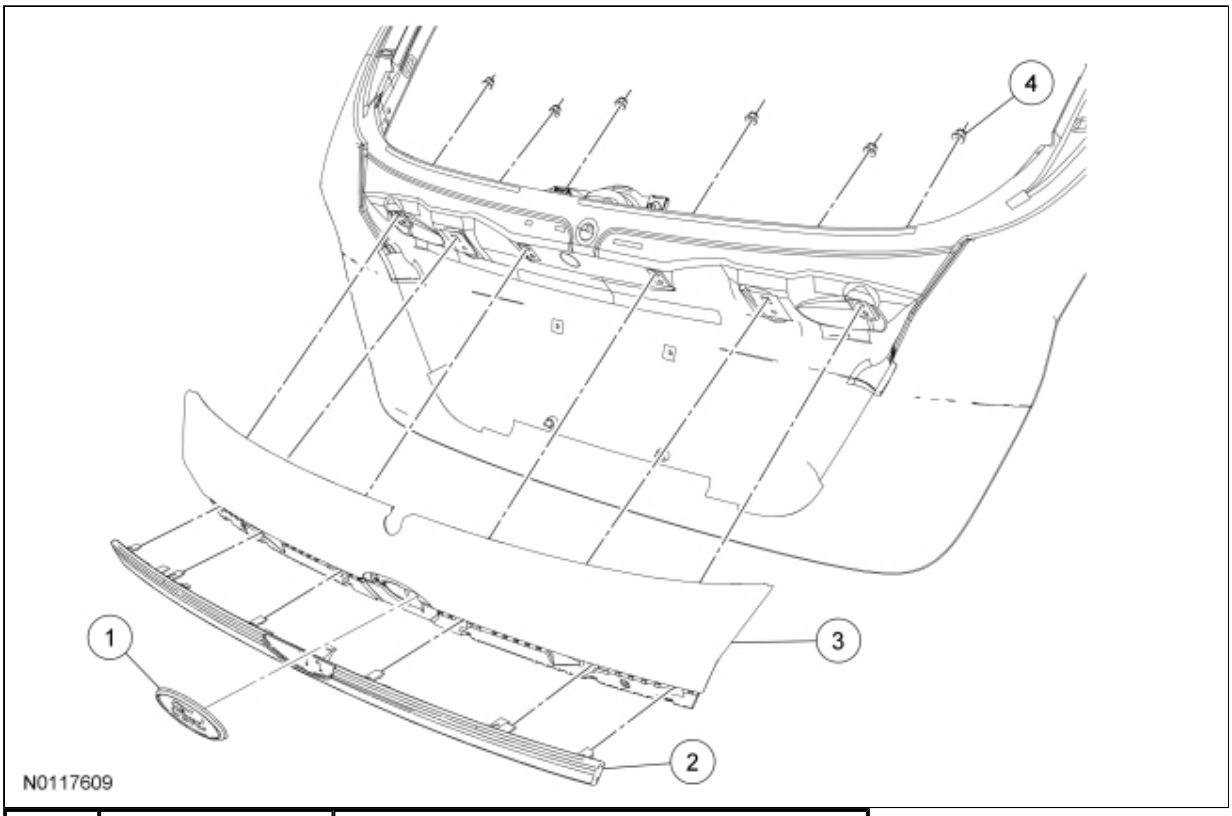
   NOTE: A new decklid lower applique must be installed.

Use a non-marring tool, and pry the decklid lower applique off.

3. Remove the decklid upper applique.
    1. Remove the 4 decklid upper applique screws.
    2. Disconnect the decklid latch electrical connector and remove the decklid upper applique.

4. To install, reverse the removal procedure.

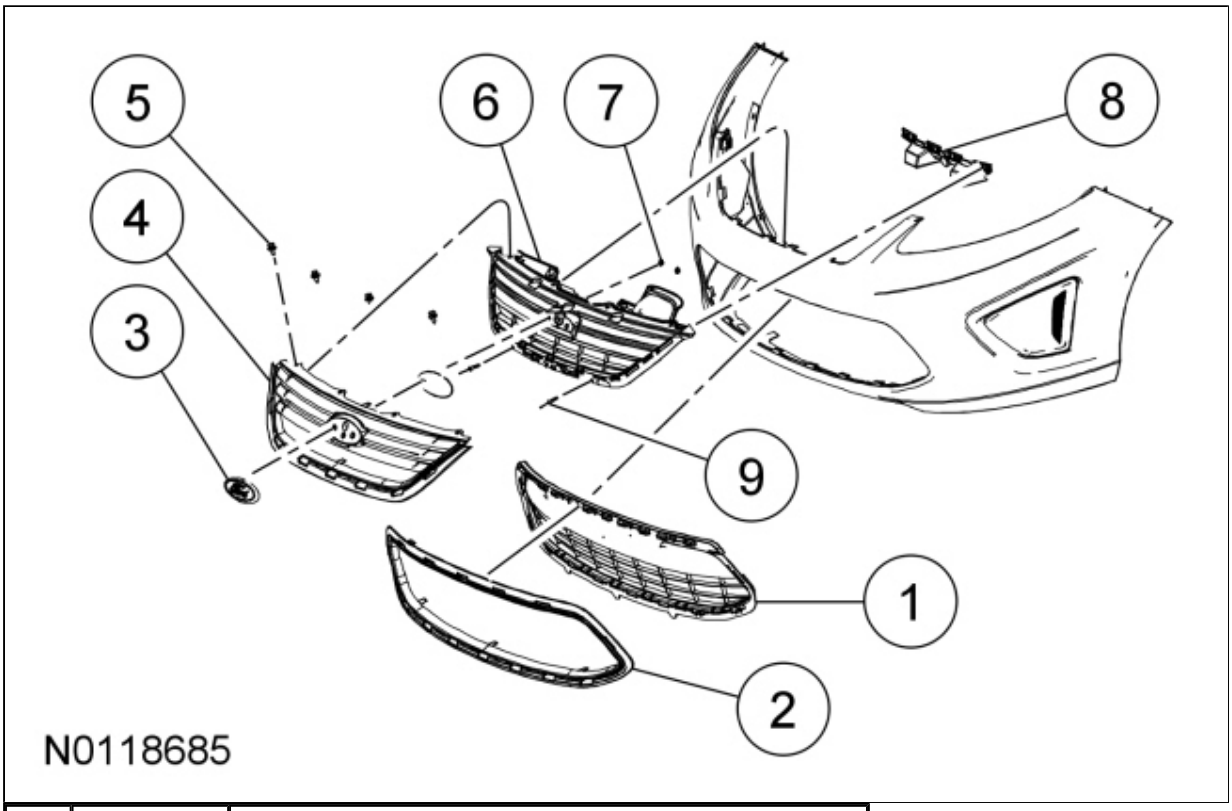
Applique — Liftgate



Item	Part Number	Description
1	V425A52	Rear liftgate emblem
2	5825510	Lower liftgate applique
3	5843400	Upper liftgate applique
4	W520201	Liftgate applique nut (6 required)

1. Remove the liftgate trim panel. For additional information, refer to Section 501-05 .
2. Remove the 6 liftgate applique nuts.
3. Remove the liftgate applique.
   - Remove the license plate lamp bulbs.
   - Disconnect the luggage compartment lid/liftgate latch switch and disconnect the wiring harness from the liftgate applique.
4. To install, reverse the removal procedure.

Radiator Grille



Item	Part Number	Description
1	8200	Lower radiator grille
2	8200	Lower radiator grille outer frame
3	8213	Emblem
4	8200	Upper radiator grille
5	N807389	Upper radiator grille pin-type retainer (4 required)
6	8A284	Upper radiator grille reinforcement
7	W520822	Emblem nut (2 required)
8	8A284	Upper radiator grille lower reinforcement bracket
9	W706737	Upper radiator grille lower reinforcement bracket rivet (4 required)

Removal and Installation

Upper Radiator Grille and Lower Radiator Grille

1. Remove the front bumper cover. For additional information, refer to Section 501-19 .

Upper Radiator Grille

2. Remove the 4 upper radiator grille pin-type retainers.

3. Disconnect the upper radiator grille reinforcement from the front bumper cover and remove the upper radiator grille and reinforcement.

4. Disconnect the upper radiator grille from the reinforcement and remove.

Lower Radiator Grille

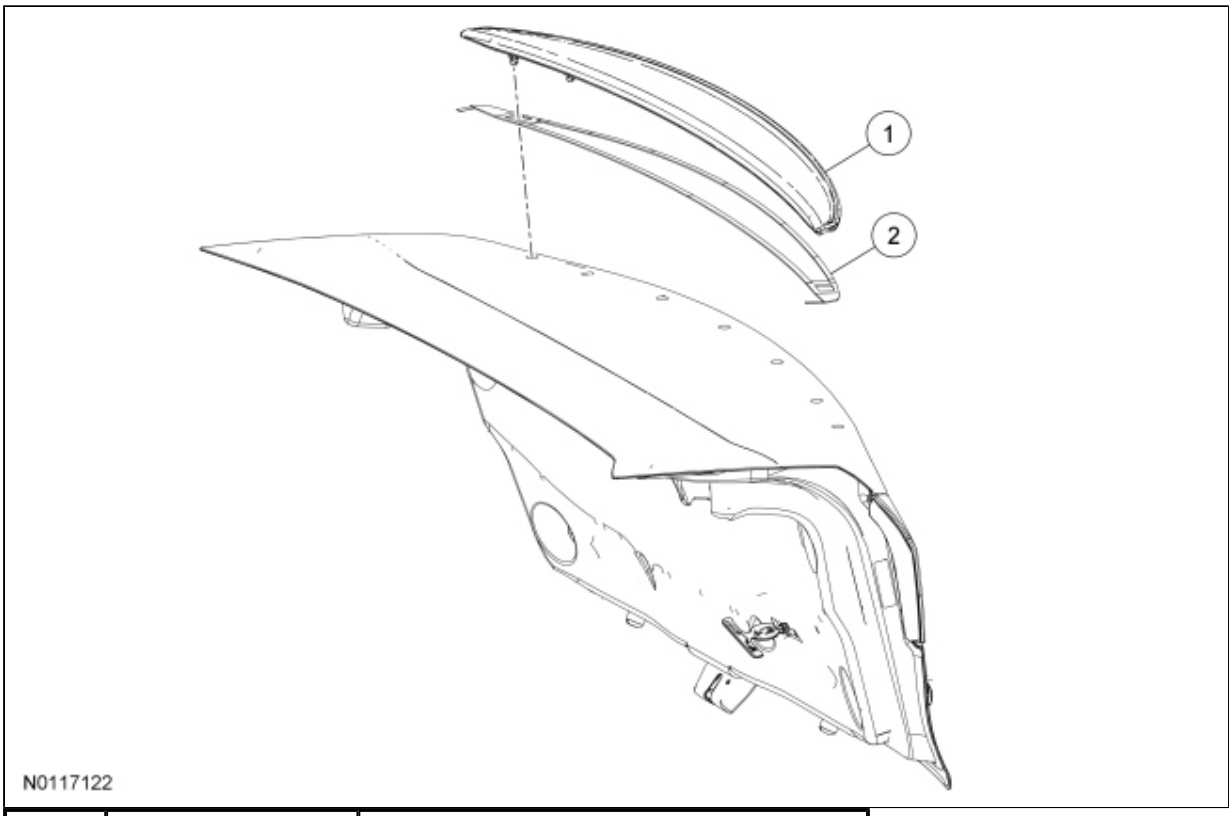
5. From the back side of the front bumper cover disconnect the lower radiator grille and remove.

6. Disconnect the outer frame from the bumper cover and remove.

Upper Radiator Grille and Lower Radiator Grille

7. To install, reverse the removal procedure.
    - Transfer parts as necessary.

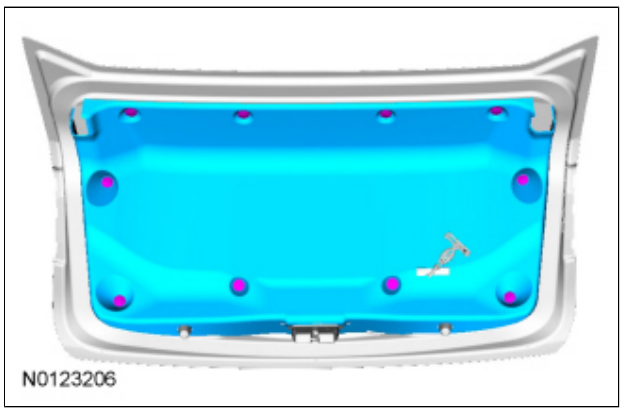
Spoiler — Decklid



Item	Part Number	Description
1	5444210	Spoiler
2	—	Foam tape (part of 5444210)

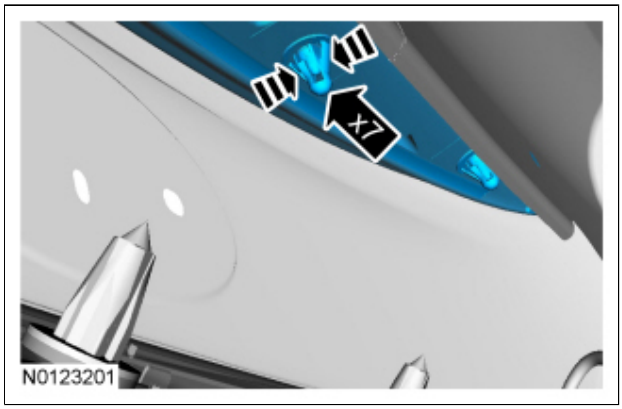
Removal and Installation

1. Remove the 10 pin-type retainers and the decklid trim panel.



2. **NOTE:** Use an 11mm, 12 point socket or wrench to compress the 2 locking tabs on the clips.

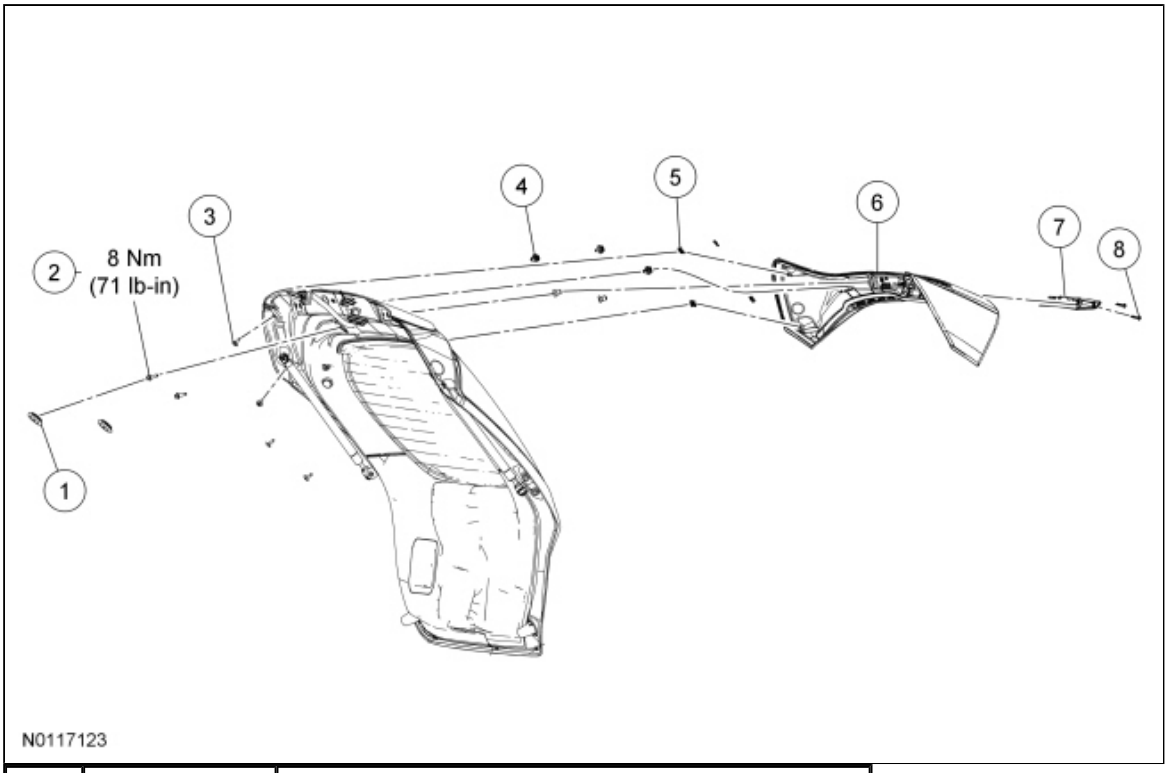
   Release the 7 clips and remove the decklid spoiler.



Installation

1. Clean the rear spoiler mounting surfaces.
2. Install the decklid spoiler and connect the 7 clips.
3. Install the decklid trim panel and the 10 pin-type retainers.

Spoiler — Roof

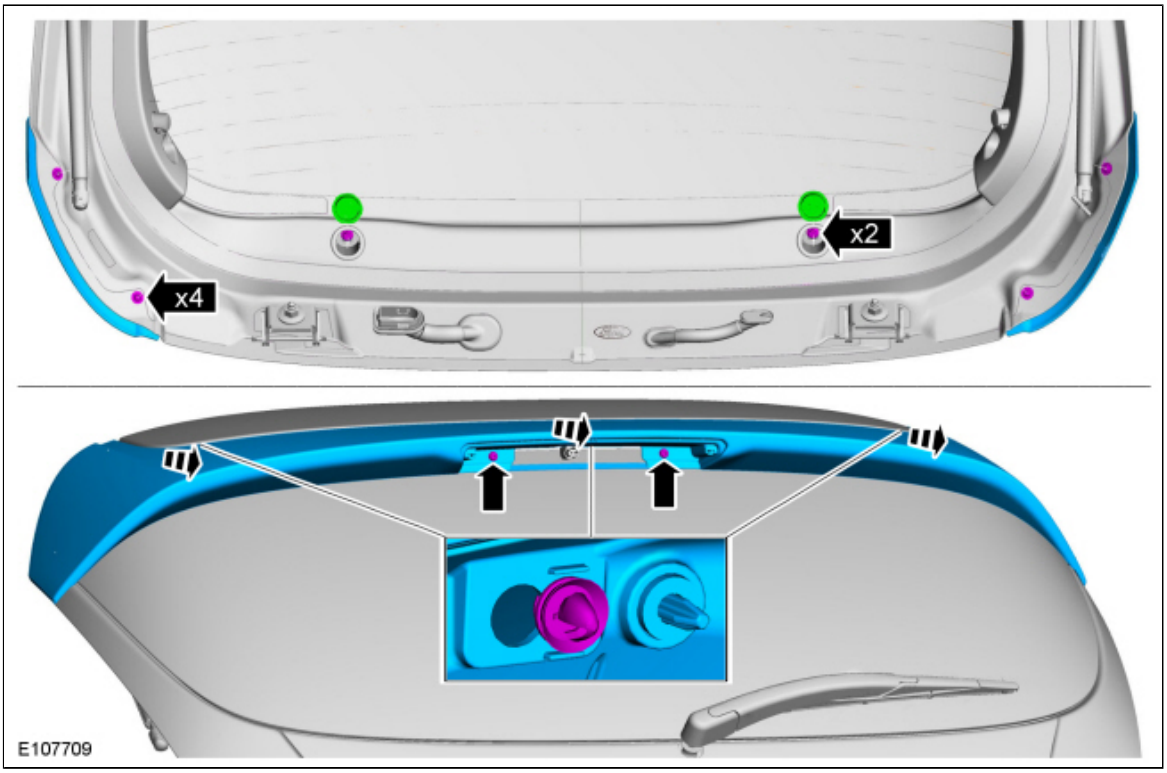


Item	Part Number	Description
1	W702351	Roof-mounted spoiler bolt cover (2 required)
2	W500213	Roof-mounted spoiler bolt (2 required)
3	W706169	Roof-mounted spoiler screw (4 required)
4	W713489	Roof-mounted spoiler clip (3 required)
5	W714205	Roof-mounted spoiler nut (4 required)
6	44210	Roof-mounted spoiler
7	13A613	High mounted stop lamp
8	46058	High mounted stop lamp screws (2 required)

Removal and Installation

1. Remove the high mounted stoplamp. For additional information, refer to Section 417-01 .

2. Remove the roof mounted spoiler.
    1. Remove the roof mounted spoiler bolt covers.
    2. Remove the 2 roof mounted spoiler bolts.
        - To install, tighten to 8 Nm (71 lb-in).
    3. Remove the 4 roof mounted spoiler screws.
    4. Remove the 2 roof mounted spoiler screws behind the high mounted stoplamp.
    5. Disconnect the 3 roof mounted spoiler clips and remove the roof mounted spoiler.
        - Press down slightly on the front corner of the roof mounted spoiler to cause the rear corner to raise up slightly.
        - With your fingers behind the raised corner release the pressure on the front corner and pull gently out towards the rear of the vehicle to disconnect the clips and remove the spoiler.



3. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-in
Exterior mirror nuts	14	124

Rear View Mirrors

Exterior Mirror

The exterior mirror consists of the following serviceable components:

- Exterior mirror glass (heated glass optional)
- Exterior mirror cover
- Exterior mirror housing
- Exterior mirror control switch
- Exterior mirror motor
- Turn signal (if equipped)

Exterior Heated Mirror (If equipped)

The exterior heated mirrors self actuate when the ambient air temperature is less than 5° C (41° F) and engine coolant temperature is less than 60° C (140° F). The rear window defroster LED indicator does not illuminate when the exterior heated mirrors self actuate.

Interior Mirror

This vehicle is equipped with either a non-dimming or auto-dimming interior rear view mirror.

Rear View Mirrors — Exterior

Special Tool(s)

ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Principles of Operation

LH and RH exterior rear view mirror glass movement is controlled by the exterior rear view mirror switch and the LH and RH exterior rear view mirror motors. Adjusting the exterior rear view mirror switch to the LH or RH position determines which exterior rear view mirror motor to control.

Heated Exterior Mirror

The rear window defrost switch controls the operation of the heated exterior rear view mirrors. The heated exterior rear view mirrors only operate when the rear window defrost system is operating. The heated exterior rear view mirror voltage is supplied by the rear defrost relay output from the Body Control Module (BCM) and Central Junction Box (CJB) fuse 25 (7.5A), which isolates the heated exterior rear view mirrors from the rear window defrost system in the event of a fault.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Exterior rear view mirror • Exterior rear view mirror switch • Exterior rear view mirror glass	• Battery Junction Box (BJB) fuse 26 (7.5A) (vehicles built up to 1/14/2011) • Central Junction Box (CJB) fuse 16 (7.5A) (vehicles build after 1/14/2011) • CJB fuse 25 (7.5A) • Exterior rear view mirror switch • Exterior rear view mirror motor • Exterior rear view mirror

	• Heated exterior rear view mirror glass • Loose or corroded connections

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, verify the symptom and GO to Symptom Chart - Exterior Mirrors or GO to Symptom Chart - NVH .

Symptom Chart — Exterior Mirrors

Symptom Chart — Exterior Mirrors

Condition	Possible Sources	Action
• The exterior rear view mirrors are inoperative	• Fuse • Wiring, terminals or connectors • Exterior rear view mirror switch	• GO to Pinpoint Test A .
• A single exterior rear view mirror is inoperative	• Wiring, terminals or connectors • Exterior rear view mirror switch • Exterior rear view mirror motor • Exterior rear view mirror	• GO to Pinpoint Test B .
• A single exterior rear view mirror does not operate correctly with switch logic	• Wiring, terminals or connectors • Exterior rear view mirror switch • Exterior rear view mirror motor • Exterior rear view mirror	• GO to Pinpoint Test C .
• The heated exterior rear view mirror is inoperative	• Fuse • Wiring, terminals or connectors • Exterior rear view mirror glass	• GO to Pinpoint Test D .

Symptom Chart — NVH

Symptom Chart — NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

Condition	Possible Sources	Action

• Exterior rear view mirror vibrates/loose	• Exterior rear view mirror mounting nuts loose • Exterior rear view mirror glass loose • Aftermarket air deflector/stone shields	• TIGHTEN the exterior rear view mirror fasteners to the specified value located in the Specifications table. • PRESS the center of the exterior rear view mirror glass up, down, left and right to make sure the glass is seated correctly. If the glass is still loose, REMOVE the glass and INSPECT the exterior rear view mirror backing plate for damage. If the backing plate is damaged, INSTALL a new exterior rear view mirror glass. REFER to Exterior Mirror Glass in this section. • If possible, REMOVE aftermarket air deflector/stone shield, then ROAD TEST the vehicle. If concern is no longer present, ADVISE customer that aftermarket components were causing undesired vibration.
• Wind noise	• Foam gasket between the exterior rear view mirror and door frame is missing or damaged • Exterior rear view mirror is not correctly fitted to the door • Exterior rear view mirror cover	• VERIFY the foam gasket is present and in good condition. If necessary, REPOSITION the foam gasket between the exterior rear view mirror and door frame. • VERIFY there are no gaps between the exterior rear view mirror and the door frame . If necessary, LOOSEN the exterior rear view mirror nuts and REPOSITION the mirror. • VERIFY the exterior rear view mirror cover is not loose or broken. If necessary, INSTALL a new exterior rear view mirror cover. REFER to Exterior Mirror Cover in this section.

Pinpoint Tests

Pinpoint Test A: The Exterior Rear View Mirrors are Inoperative

Refer to Wiring Diagrams Cell 124 , Power Mirrors for schematic and connector information.

Normal Operation

The exterior rear view mirror switch receives voltage at all times from the Battery Junction Box (BJB) (vehicles built up to 1/14/2011) or CJB (vehicles built after 1/14/2011). The exterior rear view mirror switch has only one ground circuit. The exterior rear view mirrors share a common circuit for both up/down and right/left movements.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Exterior rear view mirror switch

PINPOINT TEST A: THE EXTERIOR REAR VIEW MIRRORS ARE INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK FOR VOLTAGE TO THE EXTERIOR REAR VIEW MIRROR SWITCH	
• Disconnect: Exterior Rear View Mirror Switch C527. • Measure the voltage between exterior rear view mirror switch C527-6, circuit SBB26 (YE/RD) (vehicles built up to 1/14/2011) or SBP16 (VT/RD) (vehicles built after 1/14/2011), harness side and ground.  N0115735 • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** VERIFY that BJB fuse 26 (7.5A) (vehicles built up to 1/14/2011) or CJB fuse 16 (7.5A) (vehicles built after 1/14/2011) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
A2 CHECK FOR GROUND TO THE EXTERIOR REAR VIEW MIRROR SWITCH	
• Measure the resistance between exterior rear view mirror switch C527-4, circuit GD143 (BK/VT), harness side and ground.  N0115736 • **Is the resistance less than 5 ohms?**	**Yes** GO to A3 . **No** REPAIR the circuit for an open. TEST the system for normal operation.
A3 CHECK THE EXTERIOR REAR VIEW MIRRORS COMMON CIRCUIT FOR AN OPEN	
• Disconnect: LH Exterior Rear View Mirror Switch C521. • Measure the resistance between exterior rear view mirror switch C527-3, circuit CPM18 (GN/BN), harness side and LH exterior rear view mirror C521-6, circuit CPM18 (GN/BN)	**Yes** INSTALL a new exterior rear view mirror switch. REFER to Exterior Mirror

harness side.  N0115739 • **Is the resistance less than 5 ohms?**	Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit for an open. TEST system for normal operation.

Pinpoint Test B: A Single Exterior Rear View Mirror is Inoperative

Refer to Wiring Diagrams Cell 124 , Power Mirrors for schematic and connector information.

Normal Operation

Under normal operation, the exterior rear view mirror switch uses a common circuit to control the up/down and right/left movements of both exterior rear view mirrors.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Exterior rear view mirror switch
- Exterior rear view mirror motor
- Exterior rear view mirror

PINPOINT TEST B: A SINGLE EXTERIOR REAR VIEW MIRROR IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK THE LH EXTERIOR REAR VIEW MIRROR OPERATION	
• Operate the LH exterior rear view mirror using the exterior rear view mirror switch. • **Does the LH exterior rear view mirror operate?**	**Yes** GO to B2 . **No** GO to B4 .
B2 CHECK THE EXTERIOR REAR VIEW MIRROR SWITCH	
• Ignition OFF. • Disconnect: Exterior Rear View Mirror Switch C527. • Carry out the exterior rear view mirror switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Did the exterior mirror control switch pass the component**	**Yes** GO to B3 . **No** INSTALL a new exterior rear view mirror switch. REFER to Exterior Mirror

test?	Control Switch in this section. TEST the system for normal operation.
B3 CHECK THE EXTERIOR REAR VIEW MIRRORS COMMON CIRCUIT FOR AN OPEN	
• Disconnect: RH Exterior Rear View Mirror C601. • Measure the resistance between exterior rear view mirror switch C527-3, circuit CPM18 (GN/BN), harness side and RH exterior rear view mirror C601-6, circuit CPM18 (GN/BN), harness side.  N0115739 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new exterior rear view mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** REPAIR the circuit for an open. TEST the system for normal operation.
B4 CHECK THE EXTERIOR REAR VIEW MIRROR SWITCH	
• Ignition OFF. • Disconnect: Exterior Rear View Mirror Switch C527. • Carry out the Exterior Rear View Mirror Switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Did the exterior mirror control switch pass the component test?**	**Yes** GO to B5. **No** INSTALL a new exterior rear view mirror switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation.
B5 CHECK THE EXTERIOR REAR VIEW MIRRORS COMMON CIRCUIT FOR AN OPEN	
• Disconnect: LH Exterior Rear View Mirror Switch C521. • Measure the resistance between exterior rear view mirror switch C527-3, circuit CPM18 (GN/BN), harness side and LH exterior rear view mirror C521-6, circuit CPM18 (GN/BN), harness side.  N0115739	**Yes** INSTALL a new exterior rear view mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	

Pinpoint Test C: A Single Exterior Rear View Mirror Does Not Operate Correctly with Switch Logic

Refer to Wiring Diagrams Cell 124 , Power Mirrors for schematic and connector information.

Normal Operation

Under normal operation, the exterior rear view mirror switch supplies voltage and ground to the LH and RH exterior rear view mirrors to control movement. Each mirror contains a horizontal and a vertical motor. The exterior rear view mirror switch controls movement by reversing polarity of the voltage and ground circuits being supplied to each motor.

This pinpoint test is intended to diagnose the following:

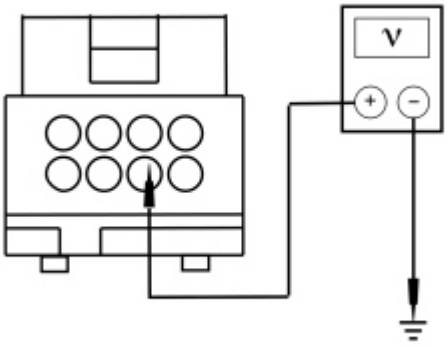
- Wiring, terminals or connectors
- Exterior rear view mirror switch
- Exterior rear view mirror motor
- Exterior rear view mirror

PINPOINT TEST C: A SINGLE EXTERIOR REAR VIEW MIRROR DOES NOT FUNCTION WITH SWITCH LOGIC

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

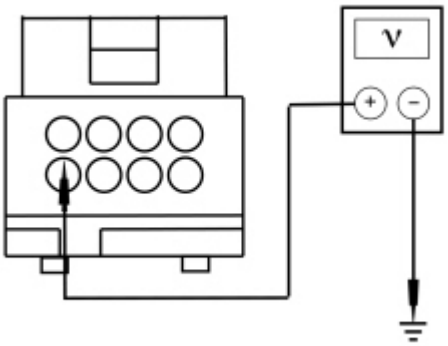
Test Step	Result / Action to Take
C1 CHECK THE EXTERIOR REAR VIEW MIRROR MOVEMENT (LEFT/RIGHT)	
• Operate the RH and LH exterior rear view mirrors in the right and left direction using the exterior rear view mirror switch. • **Do the exterior rear view mirrors move left and right?**	**Yes** GO to C2 . **No** GO to C3 .
C2 CHECK THE EXTERIOR REAR VIEW MIRROR MOVEMENT (UP/DOWN)	
• Operate the RH and LH exterior rear view mirrors in the up and down direction using the exterior rear view mirror switch. • **Do the exterior rear view mirrors move up and down?**	**Yes** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation. **No** GO to C4 .
C3 CHECK THE VOLTAGE TO THE INOPERATIVE EXTERIOR REAR VIEW MIRROR LEFT/ RIGHT CIRCUIT	
• Disconnect: Inoperative Exterior Rear View Mirror C521 (LH) or C601 (RH). • **NOTE:** Position the exterior rear view mirror switch to the LH or RH	**Yes** INSTALL a new exterior rear view

position. • **LH exterior rear view mirror:** While operating the exterior rear view mirror switch in the rightward position, measure the voltage between the LH exterior rear view mirror C521-5, circuit CPM18 (GN/BN), harness side and ground.  N0115904 • **RH exterior rear view mirror:** While operating the exterior rear view mirror switch in the rightward position, measure the voltage between the RH exterior rear view mirror C601-7, circuit CPM17 (BU/GN), harness side and ground.  N0115905 • **Is the voltage greater than 10 volts?**	mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** GO to C5.
C4 CHECK THE VOLTAGE TO THE INOPERATIVE EXTERIOR REAR VIEW MIRROR UP/DOWN CIRCUIT	
• Disconnect: Inoperative Exterior Rear View Mirror C521 (LH) or C601 (RH). • **NOTE:** Position the exterior rear view mirror switch to the LH or RH position. • **LH exterior rear view mirror:** While operating the exterior rear view mirror switch in the upward position, measure the voltage between the LH exterior rear view mirror C521-7, circuit CPM21 (YE/VT), harness side and ground.	**Yes** INSTALL a new exterior rear view mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** GO to C6.



N0115905

- **RH exterior rear view mirror:** While operating the exterior rear view mirror switch in the upward position, measure the voltage between the RH exterior rear view mirror C601-5, circuit CPM14 (GY/BN), harness side and ground.

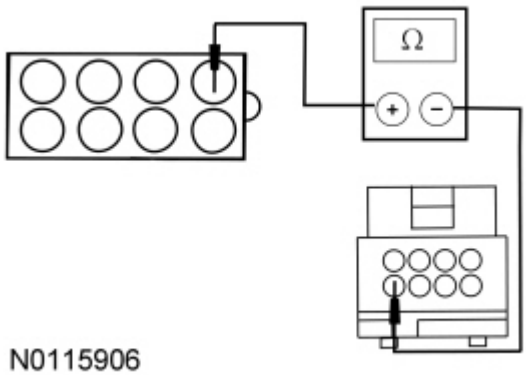


N0115904

- **Is the voltage greater than 10 volts?**

C5 CHECK THE INOPERATIVE EXTERIOR REAR VIEW MIRROR LEFT/RIGHT CIRCUIT FOR AN OPEN

- Disconnect: Exterior Rear View Mirror Switch C527.
- **LH exterior rear view mirror:** Measure the resistance between exterior rear view mirror switch C527-7, circuit CPM18 (GN/BN), harness side and LH exterior rear view mirror C521-5, circuit CPM18 (GN/BN), harness side.



N0115906

- **RH exterior rear view mirror:** Measure the resistance between exterior rear view mirror switch C527-5, circuit CPM17 (BU/GN), harness side and RH exterior rear view mirror C601-7, circuit CPM17 (BU/GN), harness side.

Yes
INSTALL a new exterior rear view mirror switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation.

No
REPAIR the circuit. TEST the system for normal operation.

 N0115907 • **Is the resistance less than 5 ohms?**	
C6 CHECK THE INOPERATIVE EXTERIOR REAR VIEW MIRROR UP/DOWN CIRCUIT FOR AN OPEN • Disconnect: Exterior Rear View Mirror Switch C527. • **LH exterior rear view mirror:** Measure the resistance between exterior rear view mirror switch C527-1, circuit CPM21 (YE/VT), harness side and LH exterior rear view mirror C521-7, circuit CPM21 (YE/VT), harness side.  N0115906 • **RH exterior rear view mirror:** Measure the resistance between exterior rear view mirror switch C527-2, circuit CPM14 (GY/BN), harness side and RH exterior rear view mirror C601-5, circuit CPM14 (GY/BN), harness side.  N0115907 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new exterior rear view mirror switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test D: The Heated Exterior Rear View Mirror is Inoperative

Refer to Wiring Diagrams Cell 56 , Heated Window for schematic and connector information.

Refer to Wiring Diagrams Cell 124 , Power Mirrors for schematic and connector information.

Normal Operation

Under normal operation, when the rear window defrost switch is pressed to the ON position, the rear window defrost relay closes and voltage is supplied to Central Junction Box (CJB) fuse 25 (7.5A) to power the LH and RH exterior rear view mirrors. The exterior rear view mirrors do not share a common ground.

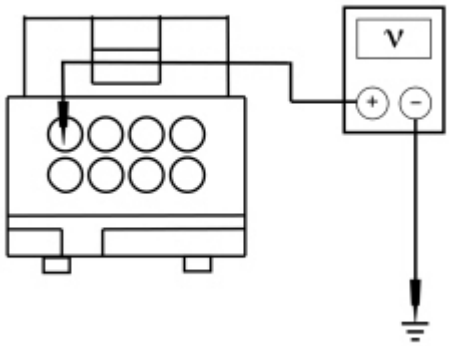
This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Exterior rear view mirror glass

PINPOINT TEST D: THE HEATED EXTERIOR REAR VIEW MIRROR IS INOPERATIVE

Test Step	Result / Action to Take
D1 CHECK THE OPERATION OF THE REAR WINDOW DEFROST SYSTEM	
• With the engine running, activate the rear window defrost switch to the ON position. • Using a infrared temperature gun or equivalent measure the temperature of the rear window glass for approximately 30 seconds noting changes in temperature. • **Does the temperature of the rear window glass rise?**	**Yes** GO to D2 . **No** REFER to Section 501-11 to diagnose the rear window defrost system.
D2 CHECK THE OPERATION OF THE HEATED EXTERIOR REAR VIEW MIRRORS	
• With the rear window defrost switch in the ON position, using a infrared temperature gun or equivalent measure the temperature of the RH and LH exterior rear view mirror glass for approximately 30 seconds noting changes in temperature. • **Does at least one heated mirror glass operate correctly?**	**Yes** GO to D3 . **No** VERIFY that CJB fuse 25 (7.5A) is OK. If OK, REPAIR circuit CRD06 (BN/YE) for an open. If not OK, REPAIR circuit CBP25 (WH/OG) harness side for a short to ground. TEST the system for normal operation.
D3 CHECK THE VOLTAGE TO THE INOPERATIVE HEATED EXTERIOR REAR VIEW MIRROR GLASS	
• Ignition ON. • Disconnect: Inoperative Heated Exterior Rear View Mirror C521 (LH) or C601 (RH). • **NOTE:** The rear window defrost system activates for 10 minutes. • With the engine running, press the rear window defrost switch to the ON position. • Measure the voltage between: ▪ **LH exterior rear view mirror** C521-1, circuit CBP25	**Yes** GO to D4 . **No** REPAIR the circuit for an open. TEST the system for normal operation.

(WH/OG), harness side and ground.
- **RH exterior rear view mirror** C601-1, circuit CBP25 (WH/OG), harness side and ground.



N0115908

- **Is the voltage greater than 10 volts?**

D4 CHECK THE INOPERATIVE EXTERIOR REAR VIEW MIRROR GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between: ▪ **LH exterior rear view mirror** C521-2, circuit GD143 (BK/VT), harness side and ground. ▪ **RH exterior rear view mirror** C601-2, circuit GD145 (BK/BU), harness side and ground.  N0115909 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new exterior rear view mirror glass. REFER to Exterior Mirror Glass in this section. TEST the system for normal operation. **No** REPAIR the circuit for an open. TEST the system for normal operation.

Rear View Mirrors — Interior

Special Tool(s)

ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent

Principles of Operation

Interior Auto-Dimming Rear View Mirror

The interior auto-dimming rear view mirror automatically reduces the glare caused by headlamps reflecting in the interior rear view mirror. Voltage is supplied to the interior auto-dimming mirror when the ignition is in the RUN or ACC position. The auto-dimming feature is disabled when the vehicle is in REVERSE.

The interior auto-dimming rear view mirror has 2 photoelectric sensors, a forward facing sensor and a rearward facing sensor, that detect forward and rearward light conditions. Based on these inputs, the automatic dimming feature adjusts the reflectance level of the interior rear view mirror glass to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rear glare in relation to ambient light conditions in front of the interior mirror.

When the forward sensor detects daytime conditions, the rearward sensor is inactive and the mirror stays in a high reflectance mode. When the forward sensor detects nighttime conditions, the rearward sensor is active and detects glare from the headlights of vehicles approaching from the rear or other glare-producing light sources. To provide increased visibility when backing up, the interior rear view mirror automatically returns to a high reflectance mode whenever the vehicle is in REVERSE.

If the forward or rearward sensors are blocked, the interior auto-dimming rear view mirror might not work correctly.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Interior rear view mirror	• Central Junction Box (CJB) fuse 2 (10A) • Interior auto-dimming rear view mirror • Loose or corroded connections • Wiring harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern is not visually evident, verify the symptom and GO to Symptom Chart - Interior Mirror or GO to Symptom Chart - NVH .

Symptom Chart — Interior Mirror

Symptom Chart — Interior Mirror

Condition	Possible Sources	Action
• The interior mirror is blemished	• Interior mirror glass/housing is dirty	• **NOTE:** Do not clean the housing or glass of any mirror with harsh abrasives, fuel or other petroleum-based cleaning products. CLEAN the affected interior mirror surface.
	• The interior mirror is damaged.	• INSPECT the interior mirror damage. If needed, INSTALL a new interior mirror. REFER to Interior Rear View Mirror in this section.

• The auto-dimming mirror does not operate correctly	• Obstructed rearward-facing sensor
	  ▪ Stickers, window decals, tags
	  ▪ Non-OEM window tinting
	• Obstructed forward-facing sensor
	  ▪ Stickers, window decals, tags
	  ▪ Non-OEM window tinting
		• If possible, REMOVE the obstruction. If the obstruction cannot be removed, GO to Pinpoint Test E to TEST the interior auto-dimming mirror for correct function.

	• Light source near or inside vehicle	• None. Any light source the rearward-facing sensor is exposed to can be considered glare.
	• Vehicle inside garage or tunnel	• None. Ambient light conditions are similar to nighttime conditions.
	• Fuse • Interior auto-dimming mirror • Wiring, terminals or connectors	• GO to Pinpoint Test E .

Symptom Chart — NVH

Symptom Chart — NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

Condition	Possible Sources	Action
• The interior mirror vibrates/loose	• Interior mirror mounting loose	• If the mirror is still on the windshield **do not remove.** ATTEMPT to fully seat the mirror first. If the mirror is still loose or vibrates, REMOVE and REINSTALL the mirror. REFER to Interior Rear View Mirror in this section. If the condition still exists, INSTALL a new mirror.

Pinpoint Tests

Pinpoint Test E: The Auto-Dimming Mirror Does Not Operate Correctly

Refer to Wiring Diagrams Cell 124 , Power Mirrors for schematic and connector information.

Normal Operation

The interior auto-dimming mirror contains 2 photoelectric sensors: one in the front of the interior rear view mirror and one mounted on the glass side of the mirror. If the sensors are blocked, the auto-dimming feature may not operate correctly. Always verify both sensors are not physically blocked before attempting to diagnose auto-dimming mirror concerns. Whenever the gear selector lever is placed in REVERSE, the interior auto-dimming mirror temporarily disables the auto-dimming feature. The auto-dimming feature is enabled again when the gear selector lever is moved out of REVERSE.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Obstructed rearward facing sensor
- Obstructed forward facing sensor
- Interior auto-dimming mirror

PINPOINT TEST E: THE AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY

NOTE: If the Transmission Range (TR) sensor is malfunctioning and the backup lamps are on all the time or do not turn on, the interior auto-dimming mirror will not darken or return to normal view.

Test Step	Result / Action to Take
E1 CHECK THE OPERATION OF THE BACKUP LAMPS	
• Ignition ON.	**Yes**

• Move the selector lever through the entire range. • **Do the backup lamps illuminate and only in REVERSE?**	GO to E2 . **No** REFER to Section 417-01 to diagnose the backup lamps.
E2 VERIFY THE FORWARD AND REARWARD FACING SENSORS ARE NOT BLOCKED	

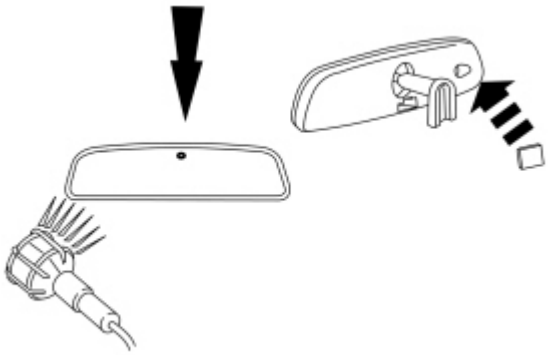
• Visually verify the forward and rearward facing sensors are not blocked. Sources of blockage can include:
  ▪ stickers, window decals or tags.
  ▪ non-OEM window tinting.
• **Were either of the sensors blocked?**
	Yes
	If possible, REMOVE the blockage. TEST the system for normal operation. If it is not possible to remove the blockage, REVIEW the operation of the interior auto-dimming mirror with the customer.
	
	No
	GO to E3 .

E3 CHECK OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR — DAYLIGHT CONDITIONS	
• Ignition ON. • Use a bright lamp to illuminate the forward facing sensor. The mirror should adjust to a high reflectance mode (mirror will be clear).  N0116951 • **Does the mirror adjust to the high reflectance (clear) mode?**	**Yes** GO to E4 **No** INSTALL a new interior auto-dimming mirror. REFER to Interior Rear View Mirror in this section. TEST the system for normal operation.
E4 CHECK OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR — NIGHTTIME CONDITIONS WITH GLARE	

• Ignition ON.
• **NOTE:** Covering the sensor with a finger or hand is not adequate.
• Simulate nighttime conditions with glare:
  ▪ cover the forward sensor with black electrical tape or other dark material.
  ▪ illuminate the rearward facing sensor. The mirror should darken to a lower reflectance mode.
	Yes
	GO to E5 .
	
	No
	GO to E7 .

 N0115902 • **Did the mirror darken to a lower reflectance (darker) mode?**	
E5 CHECK OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR — NIGHTTIME CONDITIONS WITHOUT GLARE	
• Ignition ON. • **NOTE:** Covering the sensor with a finger or hand is not adequate. • Simulate nighttime conditions without glare: ▪ cover the rearward facing sensor. The mirror should adjust to the high reflectance mode.  N0116353 • **Did the mirror adjust to the high reflectance (clear) mode?**	**Yes** GO to E6 . **No** GO to E7 .
E6 CHECK OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR — NIGHTTIME CONDITIONS WITH THE VEHICLE IN REVERSE	

• Ignition ON.
• **NOTE:** Covering the sensor with a finger or hand is not adequate.
• Simulate nighttime conditions with glare:
  ▪ cover the forward sensor with black electrical tape or other dark material.
  ▪ illuminate the rearward facing sensor. (mirror should darken at this time)
	Yes
	The system is operating normally at this time. REVIEW operation of the interior auto-dimming mirror feature with the customer.
	
	No
	GO to E7 .



N0115902

- Select REVERSE.
- **Did the mirror adjust to a high reflectance (clear) mode?**

E7 CHECK FOR VOLTAGE TO THE INTERIOR AUTO-DIMMING MIRROR	
• Ignition OFF. • Disconnect: Interior Auto-Dimming Mirror C911. • Ignition ON. • Measure the voltage between interior auto-dimming mirror C911-1, circuit CPB02 (GN), harness side and ground.  N0070730 • **Is the voltage greater than 10 volts?**	**Yes** GO to E8 . **No** VERIFY that Central Junction Box (CJB) fuse 2 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
E8 CHECK FOR GROUND TO THE INTERIOR AUTO-DIMMING MIRROR	
• Ignition OFF. • Measure the resistance between interior auto-dimming mirror C911-4, circuit GD143 (BK/VT), harness side and ground.  N0112428 • **Is the resistance less than 5 ohms?**	**Yes** GO to E9 . **No** REPAIR the circuit for an open. TEST the system for normal operation.

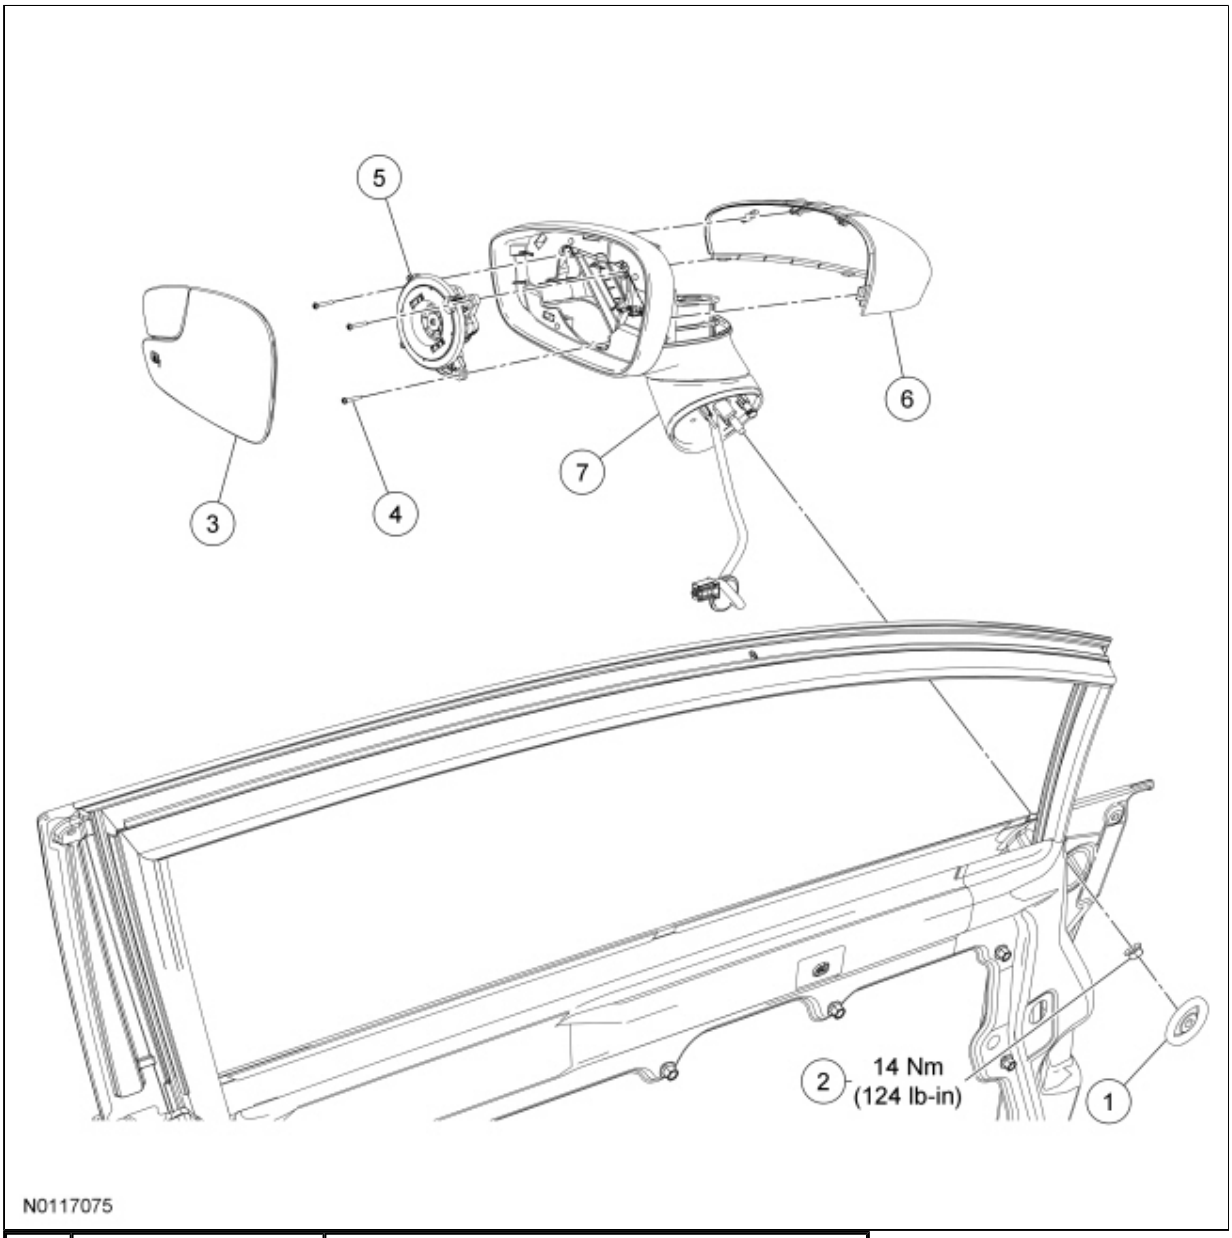
E9 CHECK FOR VOLTAGE TO THE INTERIOR AUTO-DIMMING MIRROR REVERSE CIRCUIT	
• Ignition ON. • Select REVERSE. • Measure the voltage between interior auto-dimming mirror C911-9, circuit CET47 (BU), harness side and ground.  N0115903 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new interior auto-dimming mirror. REFER to Interior Rear View Mirror in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Exterior Mirrors — Exploded View

NOTE: Click here or refer to the on-line Workshop Manual to view this illustration as an interactive exploded view, requires Adobe® Acrobat® 8.0 or higher.

NOTE: Click here or refer to the on-line Workshop Manual to learn about using an Interactive Illustration.

NOTE: LH side shown, RH side similar.



Item	Part Number	Description
1	—	Exterior mirror nut cover
2	W520202	Exterior mirror nut
3	17K707	Exterior mirror glass
4	—	Exterior mirror motor screw (3 required) (part of 17D696)

5	17D696	Exterior mirror motor
6	17D742 RH/ 17D743 LH	Exterior mirror cover
7	17682 RH/ 17683 LH	Exterior mirror

1. For additional information, refer to the procedures in this section.

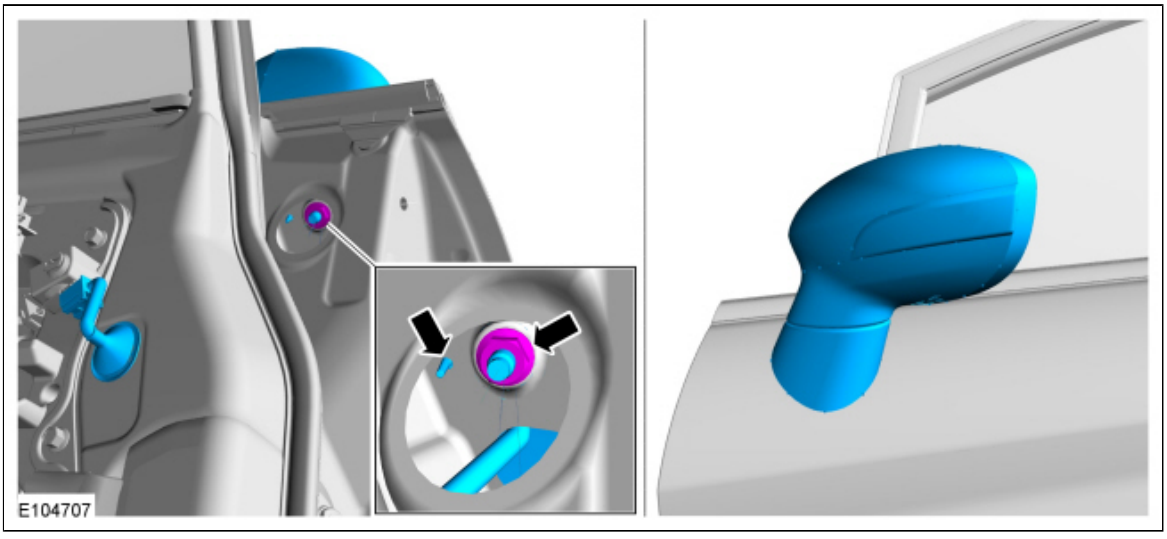
Exterior Mirror

Removal and Installation

1. Remove the door speaker. For additional information, refer to Section 415-00 .
2. Disconnect the electrical connector.

3. Remove the exterior mirror nut cover.
4. **NOTE:** When installing the mirror, make sure to align the locating pin to the locating hole.

   Remove the exterior mirror nut.
   - To install, tighten to 14 Nm (124 lb-in).



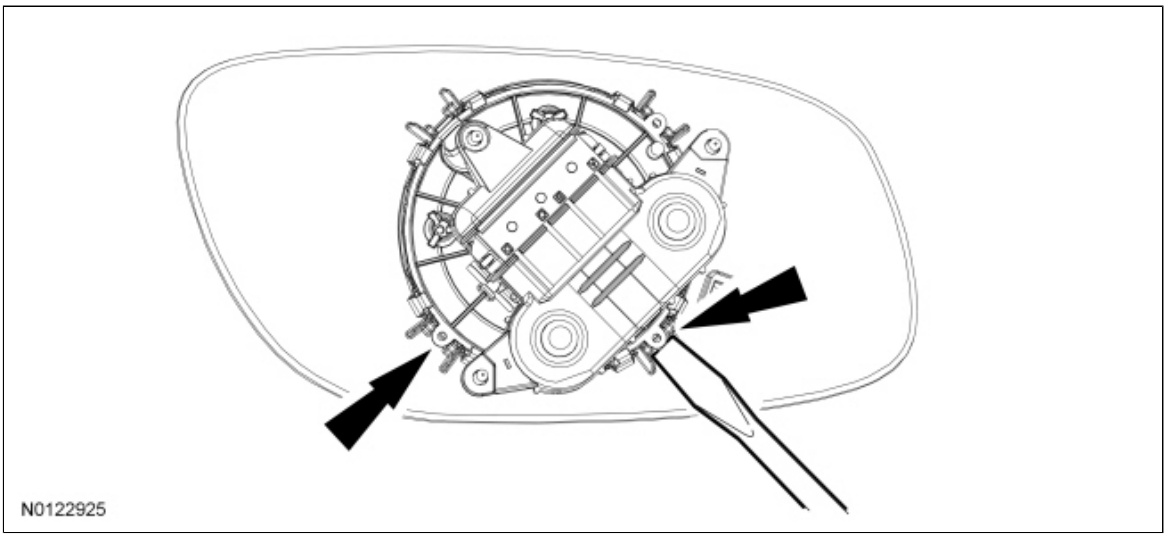
5. Remove the exterior mirror.
   - Route the electrical wiring harness through the door.
6. To install, reverse the removal procedure.

Exterior Mirror Glass

Removal

1. **NOTE:** Exterior mirror glass and motor removed from the housing and viewed from the back to show location of clips and placement of screwdriver.

   Disengage the exterior mirror glass from the exterior mirror motor in the following sequence:
   1. Position the exterior mirror glass to the full upper outboard position.
   2. Insert a flat-blade screwdriver between the lower inboard retaining tab and the exterior mirror glass backing plate.
   3. Twist the flat-blade screwdriver to release the retaining tab from the exterior mirror glass backing plate.
   4. Position the exterior mirror glass to the full upper inboard position.
   5. Insert a flat-blade screwdriver between the upper outboard retaining tab and the exterior mirror glass backing plate.
   6. Twist the flat-blade screwdriver to release the retaining tab from the exterior mirror glass backing plate.



2. **WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.**

   Remove the exterior mirror glass from the exterior mirror motor by gently pulling the exterior mirror glass outward
   - If equipped, disconnect the electrical connectors.

Installation

1. If equipped, connect the electrical connectors.

2. Position the exterior mirror glass onto the exterior mirror motor.

3. **WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.**

   NOTICE: **Apply hand pressure directly over the center of the mirror. Failure to follow this instruction may result in glass breakage.**

   Install the exterior mirror glass by pressing firmly in the center of the exterior glass until it snaps onto the exterior mirror motor.

Exterior Mirror Motor

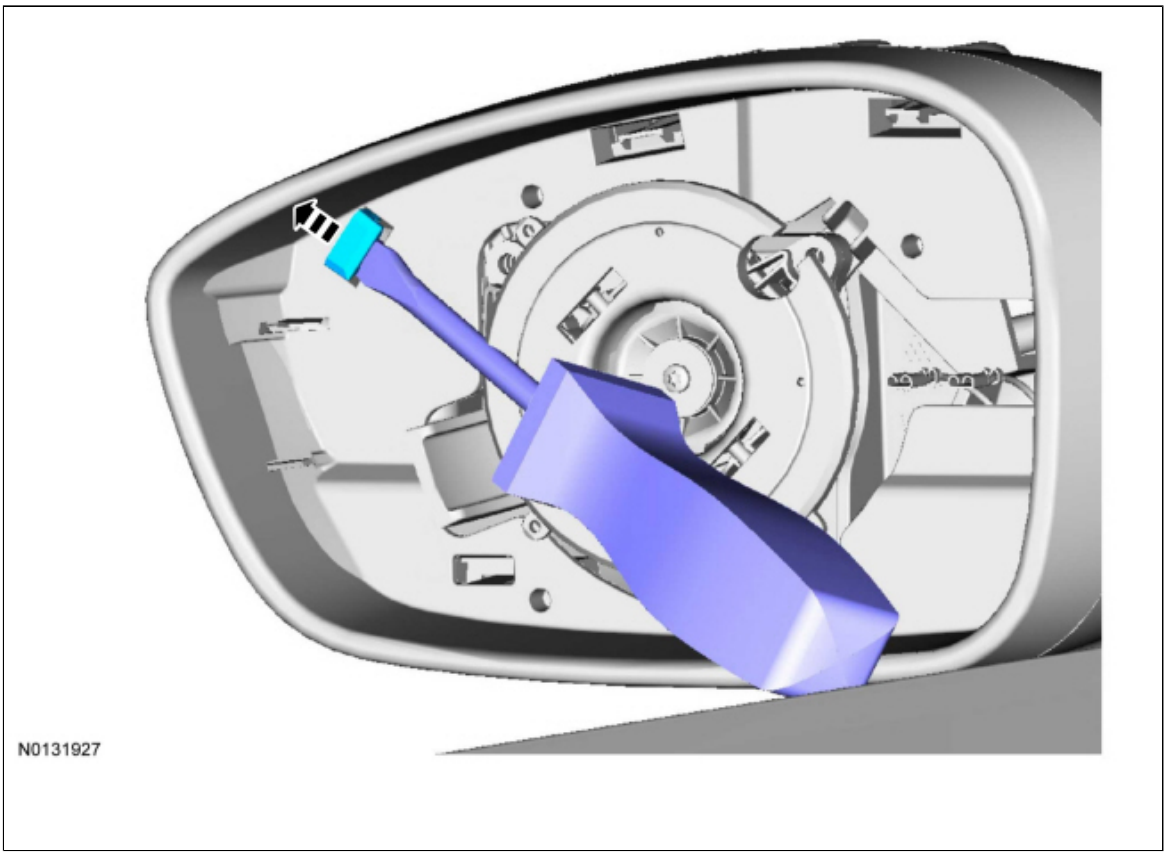
Removal and Installation

1. Remove the exterior mirror glass. For additional information, refer to Exterior Mirror Glass In this section.
2. Remove the 3 exterior mirror motor screws.
3. Disconnect the exterior mirror motor electrical connector.
4. Remove the exterior mirror motor.
5. To install, reverse the removal procedure.

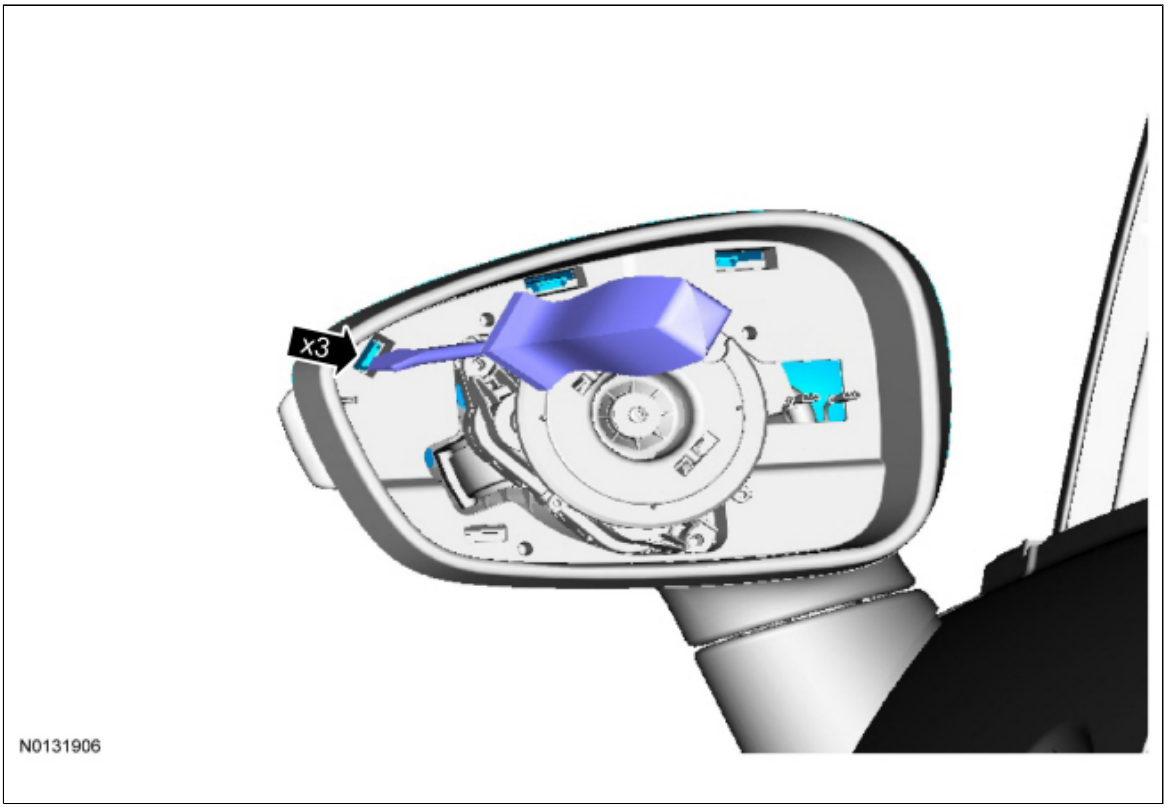
Exterior Mirror Cover

Removal

1. Remove the exterior mirror glass. For additional information, refer to Exterior Mirror Glass In this section.
2. If equipped, remove the exterior mirror cover retainer.

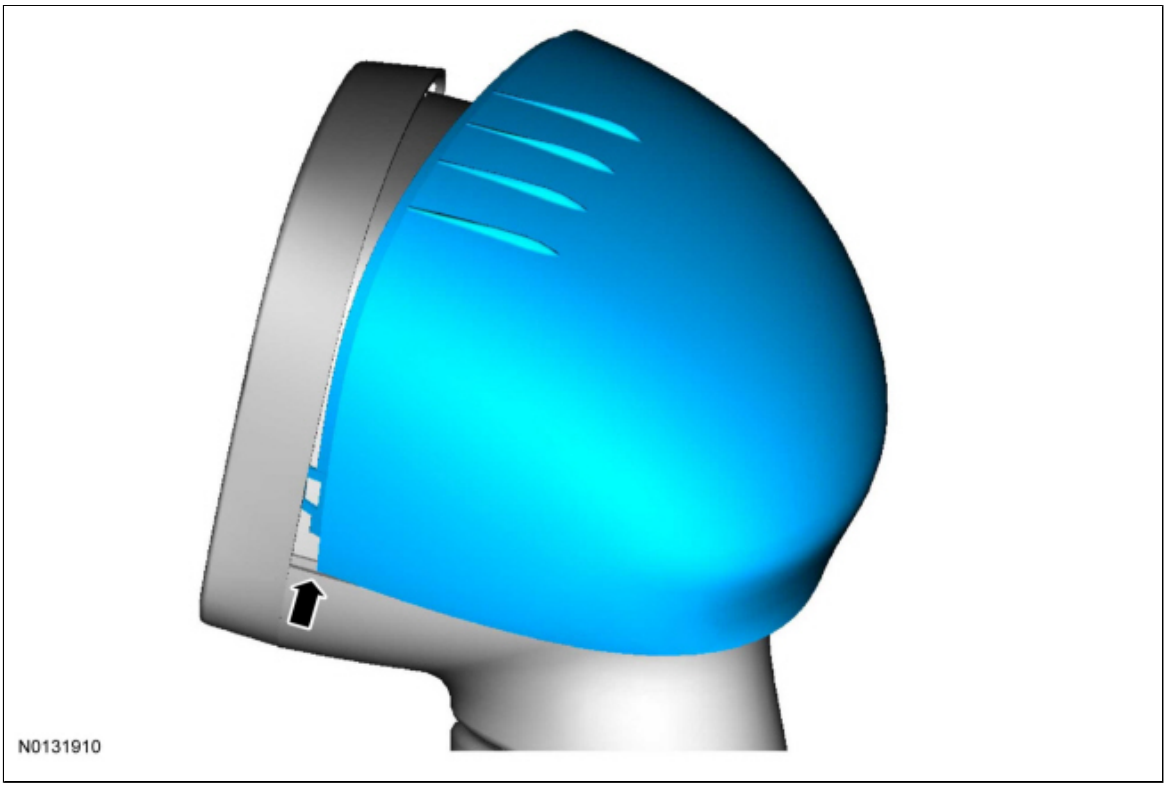


3. Remove the exterior mirror cover.
   - Using a flat-blade screwdriver, release the 3 retaining tabs while pulling the exterior mirror cover toward the front of the vehicle.

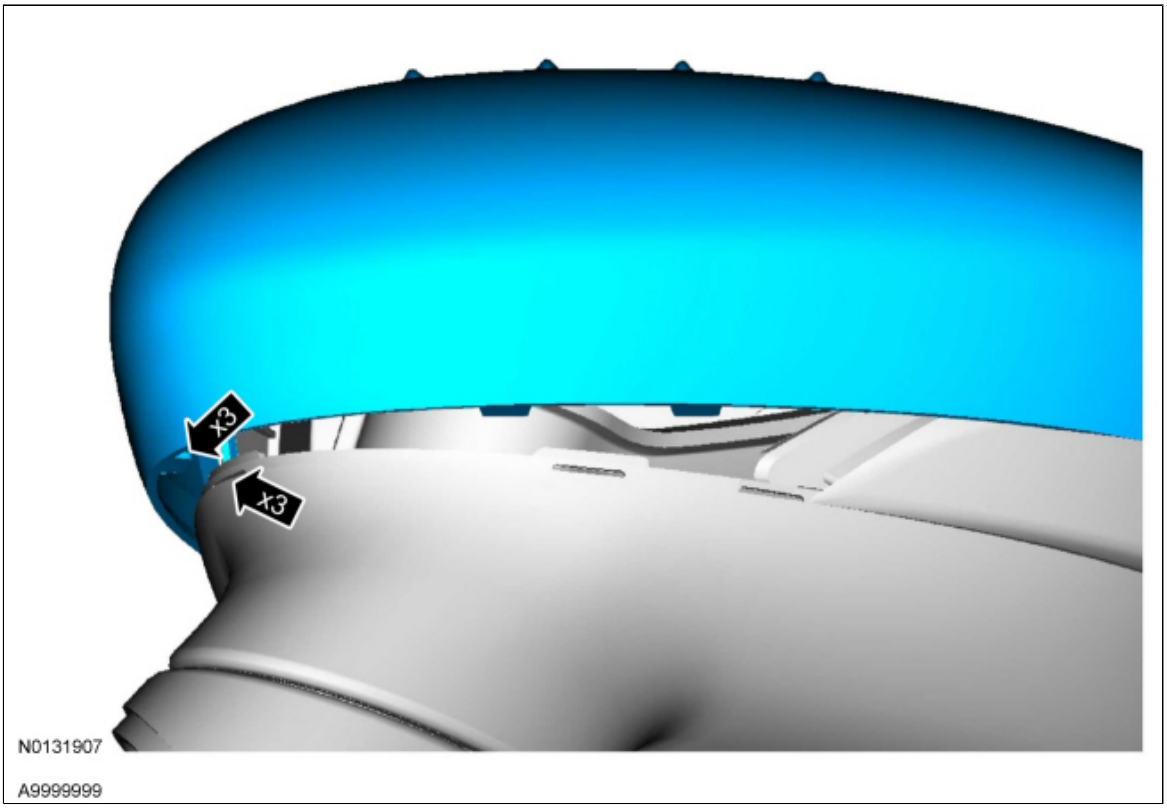


Installation

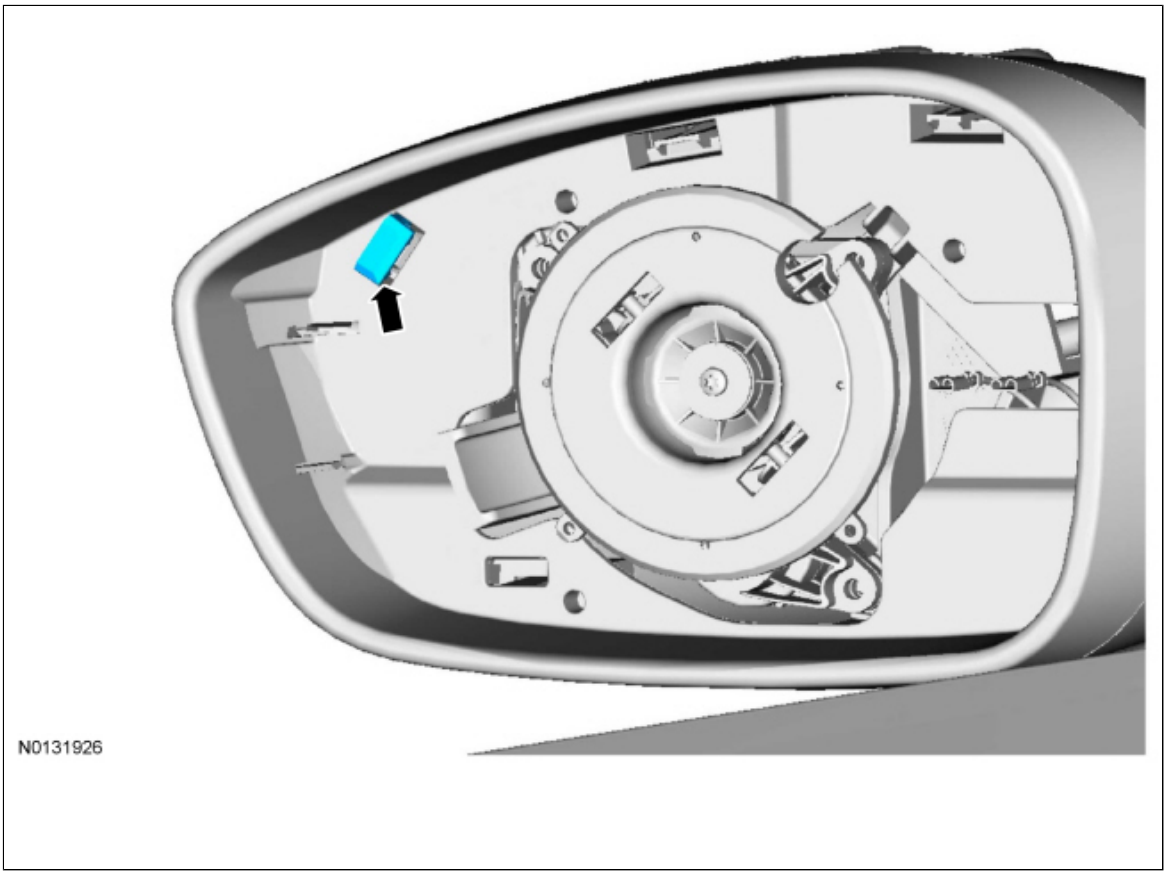
1. Align the inner lower corner of the mirror cover with the groove in the mirror frame.



2. Align the 3 mirror cover tabs with the slots on the mirror frame and install the mirror cover.
    - Press the mirror cover into place and the 3 lock tabs are fully seated.

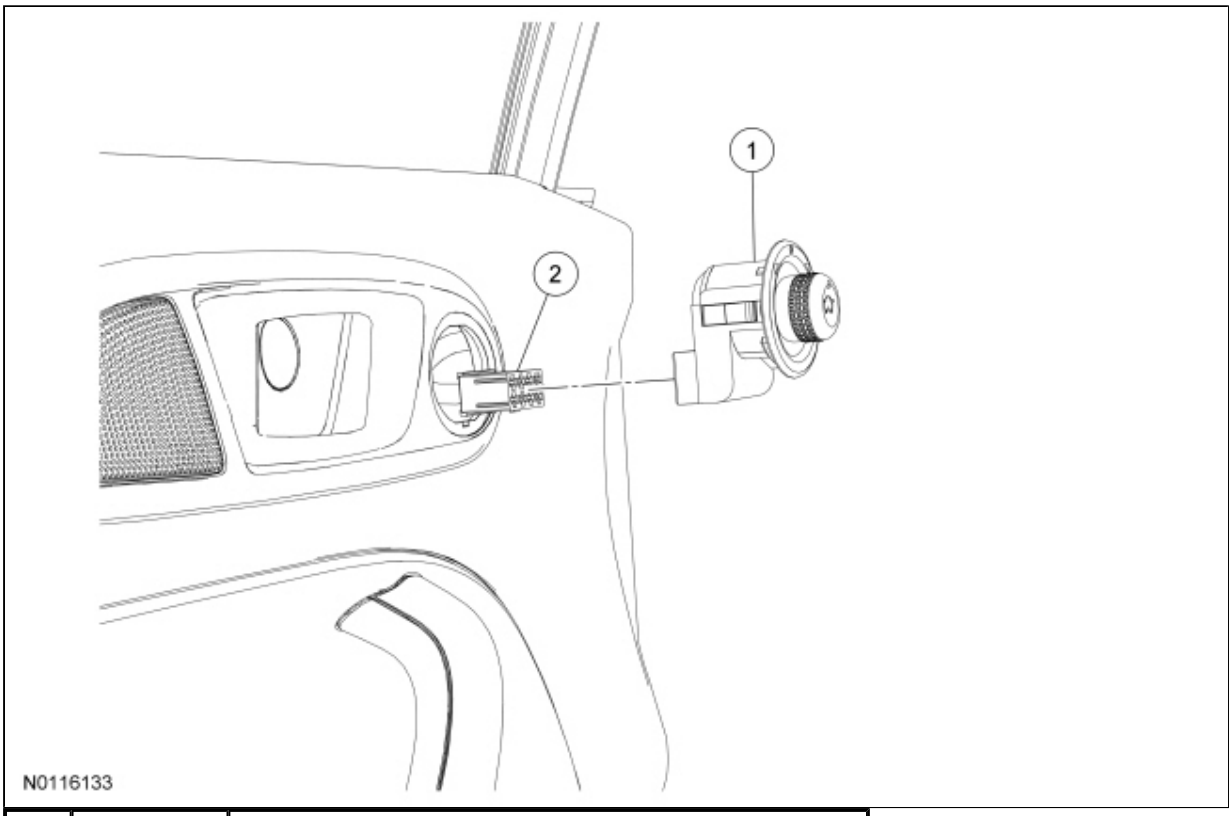


3. If equipped, install the exterior mirror cover retainer.



4. Install the exterior mirror glass. For additional information, refer to Exterior Mirror Glass In this section.

Exterior Mirror Control Switch



Item	Part Number	Description
1	17B676	Exterior mirror control switch
2	—	Exterior mirror control switch electrical connector (part of 14631)

Removal and Installation

1. ***NOTICE:*** **Make sure to use a non-marring tool when removing the exterior mirror switch. Otherwise, damage to the door trim panel may occur.**

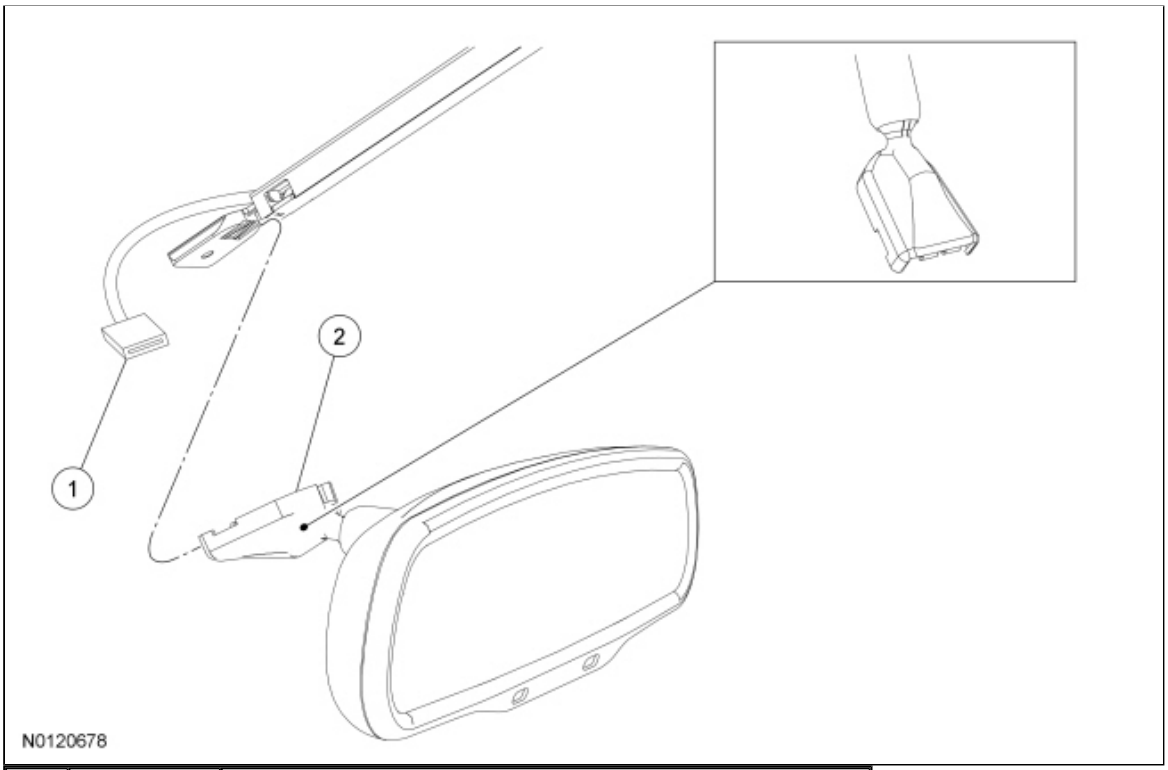
   Remove the exterior mirror control switch.
   - Insert a non-marring tool between the door trim panel and the exterior mirror control switch and gently pry outward.

Interior Rear View Mirror

Special Tool(s)

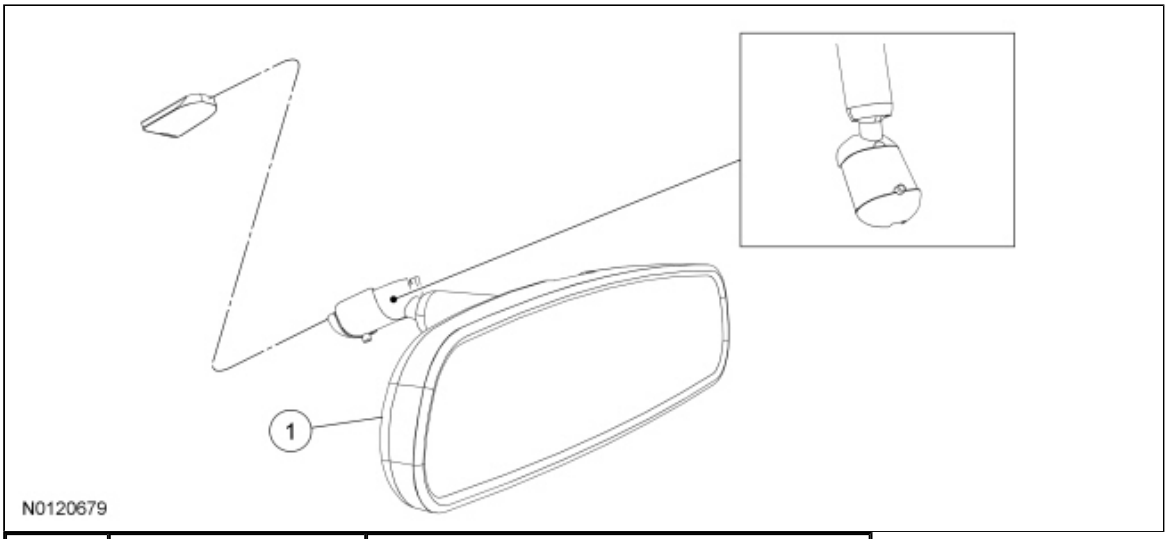
ST1793-A	Installer, Rear View Mirror 501-025 (T94P-17700-AH)
ST3250-A	Mirror Remover 501-D118A

Interior auto-dimming mirror with top access mount



Item	Part Number	Description
1	—	Interior auto-dimming mirror electrical connector (part of 14A005)
2	17700	Interior auto-dimming mirror

Interior auto-dimming mirror with bottom access mount



Item	Part Number	Description
1	17700	Interior auto-dimming mirror

Removal

Interior mirror with top access mirror mount

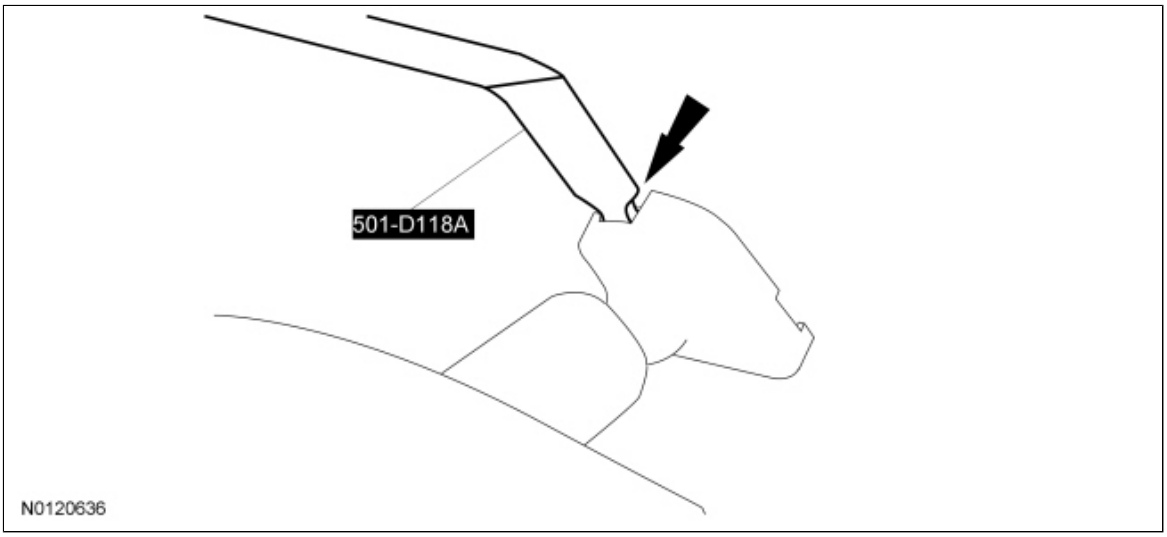
NOTICE: **This procedure should be used only for an interior rear view mirror with the top access mount. Otherwise, damage to the windshield glass may occur.**

NOTICE: **The windshield must be at room temperature. Otherwise, damage to the windshield glass may occur.**

NOTE: Use only steps 1 - 4 for the removal of this style of interior rear view mirror.

1. Disconnect the electrical connector.
2. Position the interior rear view mirror to the full downward position.
3. ***NOTICE:*** **Make sure the Mirror Remover is fully inserted into the interior rear view mirror mount access hole. Otherwise, damage to the windshield glass may occur.**

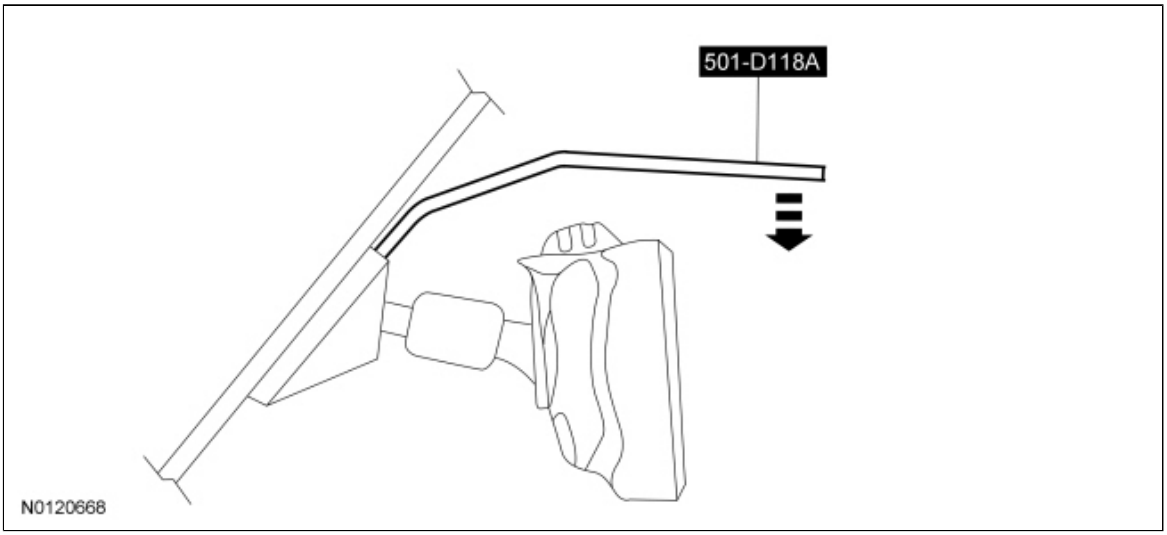
   Insert the Mirror Remover between the interior rear view mirror mount and windshield bracket, located at the top of the interior rear view mirror mount.



4. ***NOTICE:*** **Twisting the interior rear view mirror mount from right to left may cause a stress fracture to the windshield.**

NOTICE: **Make sure to use the windshield bracket as the pivot point. Otherwise, damage to the windshield will occur.**

Release the interior rear view mirror mount from the windshield bracket by pulling the Mirror Remover downward and away from the windshield.



Interior mirror with bottom access mirror mount

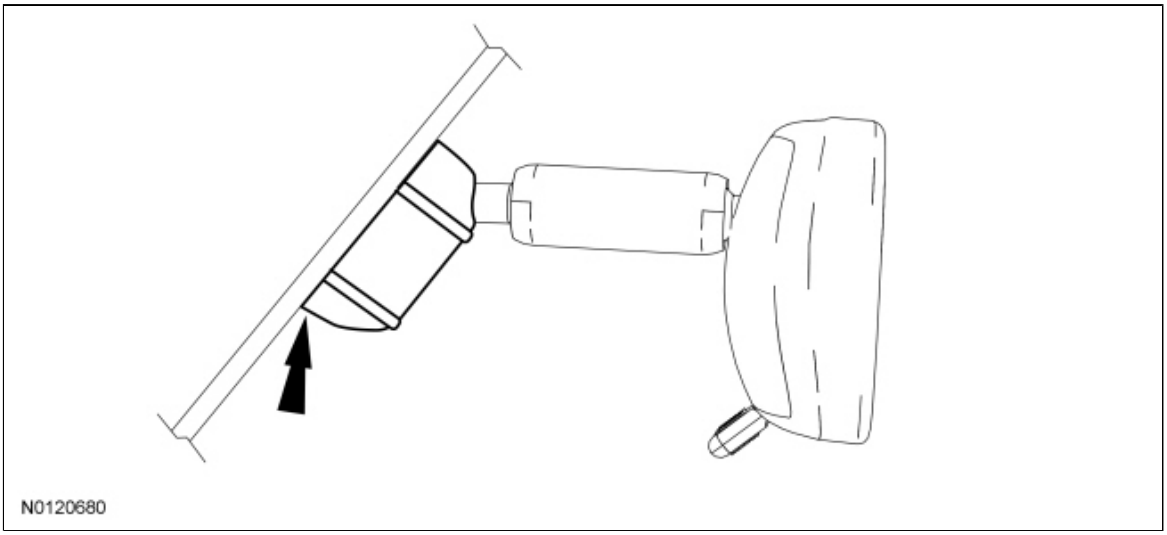
NOTICE: **This procedure should be used only for an interior rear view mirror with the bottom access mount. Otherwise, damage to the windshield glass may occur.**

NOTICE: **The windshield must be at room temperature. Otherwise, damage to the windshield glass may occur.**

NOTE: Use only steps 5 - 7 for the removal of this style of interior rear view mirror.

5. Disconnect the electrical connector.

6. Insert the Mirror Remover between the interior rear view mirror mount and windshield bracket located at the bottom of the mirror mount.

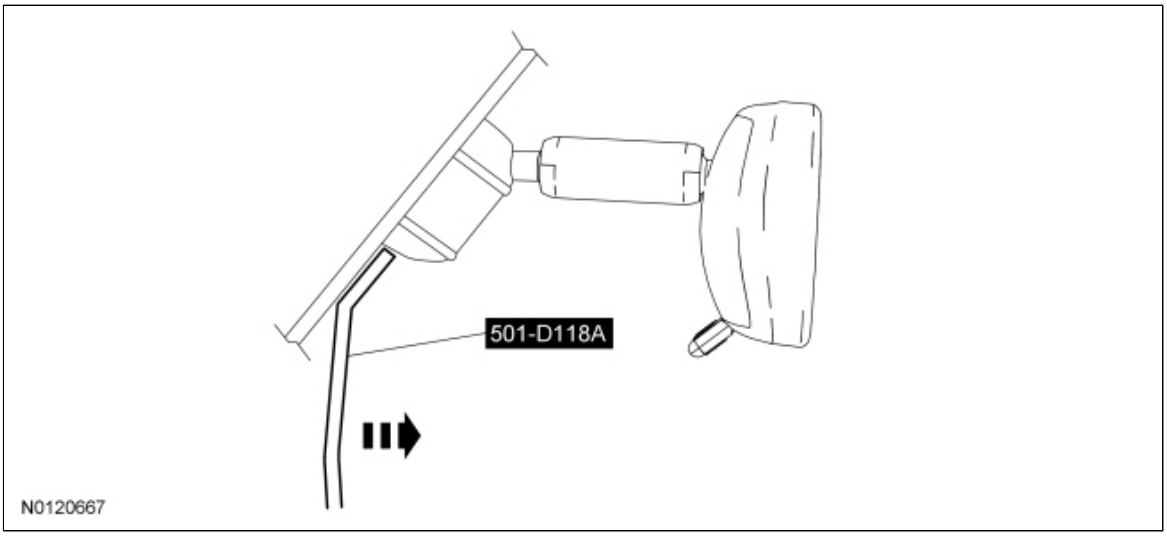


7. ***NOTICE:*** **Twisting the interior rear view mirror mount from right to left may cause a stress fracture to the windshield.**

   NOTICE: **Make sure to use the windshield bracket as the pivot point. Otherwise, damage to the windshield will occur.**

   Release the interior rear view mirror mount from the windshield bracket by pulling the Mirror Remover away

from the windshield.

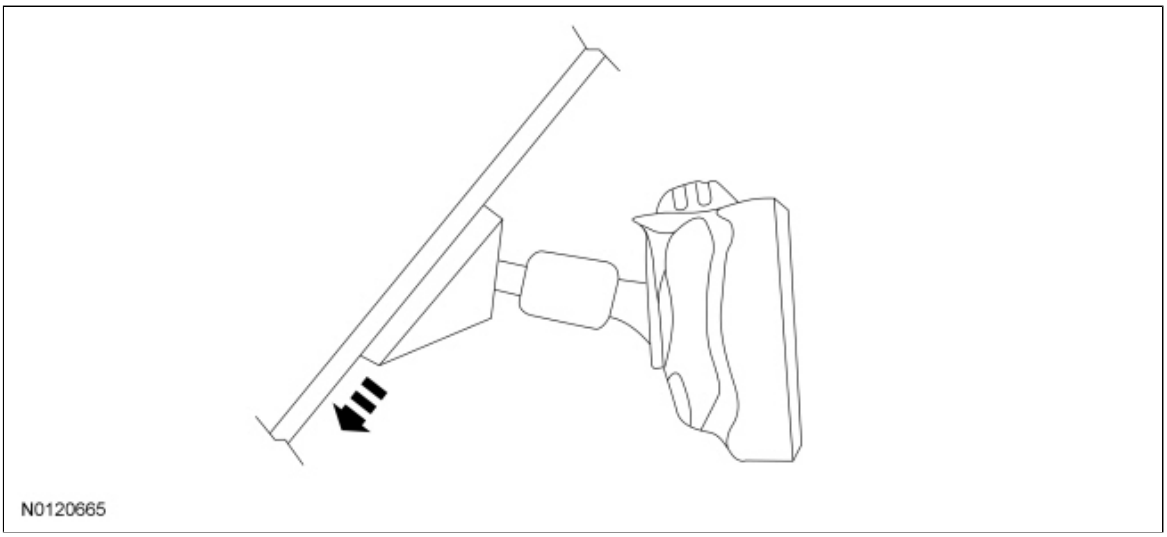


Installation

Interior mirror with top access mirror mount

NOTE: Use only steps 1 - 4 for the installation of this style of interior rear view mirror.

1. Slide the interior rear view mirror mount over the windshield bracket from the top.



2. Press the interior rear view mirror mount downward along the windshield bracket until a click is felt. The click indicates that the mirror mount is engaged onto the windshield bracket.

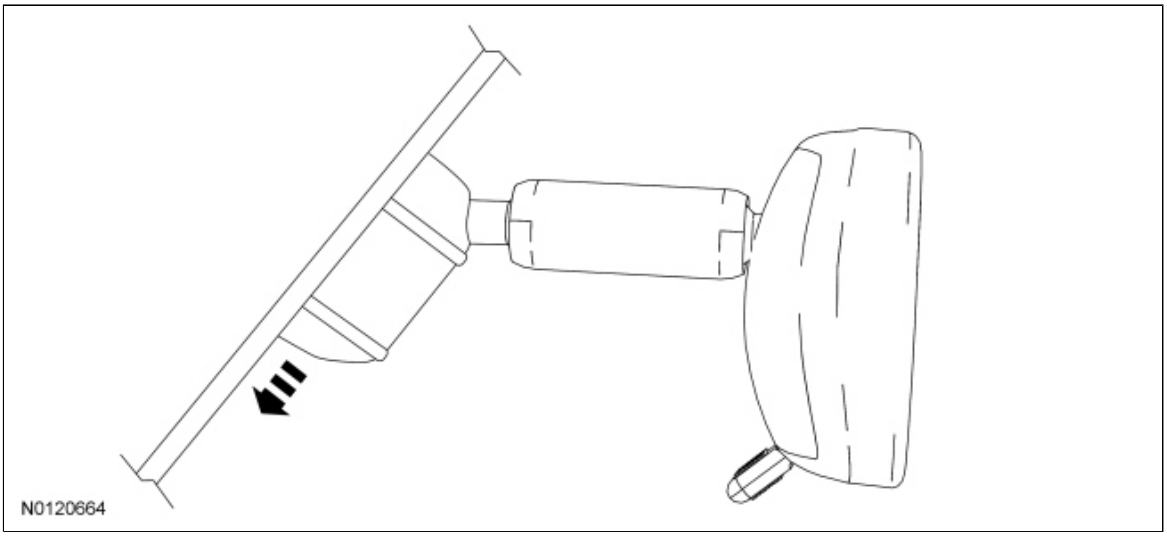
3. Connect the electrical connector.

4. If equipped, check the compass zone and calibration. For additional information, refer to Section 413-01 .

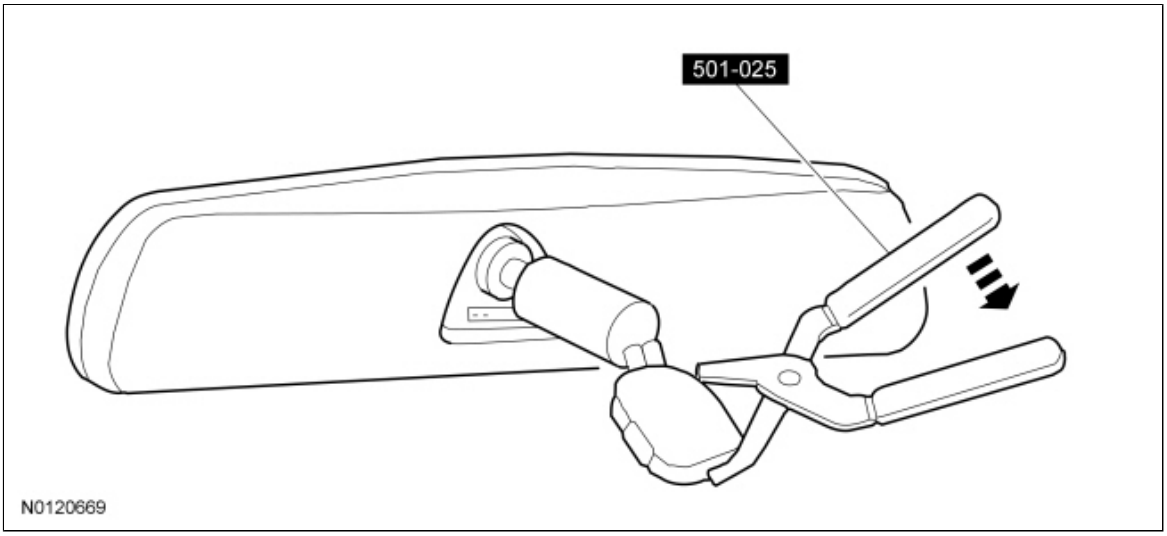
Interior mirror with bottom access mirror mount

NOTE: Use only steps 5 - 8 for the installation of this style of interior rear view mirror.

5. Slide the interior rear view mirror mount over the windshield bracket from the top.



6. Using the Rear View Mirror Installer, press the interior rear view mirror mount downward along the windshield bracket until the mirror mount is fully seated onto the windshield mounting button.



7. Connect the electrical connector.
8. If equipped, check the compass zone and calibration. For additional information, refer to Section 413-01 .

Seats

Front Seats

The front seats are equipped with the following serviceable systems:

- 2-way seat track (passenger only)
- 4-way seat track (driver only)
- Manual recliners (serviced with backrest frame)
- Heated seats (if equipped)
- Occupant Classification System (OCS) (passenger seat only, if equipped)
- Seat side air bags (in seat backrests) (if equipped)
- Safety belt buckles
- Seat track position sensors (if equipped)

Seat Backrests

The recliner mechanism is part of the seat backrest frame and is not serviced separately.

Seat Tracks

Front seats are equipped with a 2-way manual passenger seat track and 4-way manual driver seat track which includes a height adjust handle that ratchets to raise and lower the seat. Both seat tracks are serviced as complete assemblies which include the cushion frames and seat mounting feet.

Heated Seats

The heated seat system includes the following serviceable components:

- Cushion heater mats (attached to seat cushion foam pads)
- Heated seat relays (located in the Central Junction Box (CJB))
- Heated seat switches (located on the instrument panel)
- Thermostats (serviced only as part of each cushion heater mat)
- Body Control Module (BCM)

NOTE: If a new heater mat is needed on a front passenger seat cushion equipped with an Occupant Classification System (OCS) system, install a new OCS service kit with a heater mat already adhered to the cushion foam pad.

The cushion heater mats are serviceable separately. A heater mat can be peeled away from a foam pad and a new one adhered in its place providing excessive foam is not removed from the foam pad. If excessive foam is removed during removal, a new foam pad must be installed. A heater mat cannot be reused; the 2-way tape adhesive will no longer hold the heater mat position on the foam pad causing it to shift or bunch up.

Occupant Classification System (OCS) System

NOTE: OCS system components [seat wiring harness, seat cushion foam pad, bladder with pressure sensor and Occupant Classification System Module (OCSM)] are calibrated to each other and are serviced as an assembly. If new OCS system components are needed, an OCS system service kit must be installed as an assembly.

For information on diagnosing or servicing the OCS system, refer to Section 501-20B .

Seat Side Air Bags

Driver and passenger seat side air bags are attached to the seat backrest frame. For diagnostic information, or if the seat side air bag has deployed, refer to Section 501-20B .

Rear Seats

The rear seat cushion and 60/40 fold flat backrests are equipped with the following serviceable components:

- Backrest and cushion trim covers and foam pads
- Backrest hinges (attached to floor pan)
- Backrest latches (attached to backrest frame)
- Backrest latch strikers (attached to quarter panel)
- Cushion latches (located underneath cushion front edge attached to floor pan)
- Head restraints and head restraint guides (attached to the backrests)

Seats

Special Tool(s)

ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation — Heated Seats

Heated Seats

The heated seat system only operates when the engine is running. When the heated seat switch(es) (located on the instrument panel) is activated, it supplies a ground signal to the Body Control Module (BCM). When the BCM receives the heated seat switch signal, it activates the appropriate (driver or passenger) heated seat relay, (located in the Central Junction Box (CJB). When the heated seat relay is activated, voltage is supplied to the cushion heater mat. The cushion heater mats are directly connected to ground to complete the electrical circuit to heat the seat.

Each cushion heater mat contains a non-serviceable internal thermostatic switch that closes when cold to complete the heater grid circuit and heat the seat. When hot, the thermostatic switch opens the heater grid circuit and allows the seat to cool. During normal operation, several minutes may be required before seat temperature is increased and several more minutes of cooling before the heater mats continue with heating. The heated seat indicator illuminates continuously while the thermostatic switch cycles between open and closed.

The seat should be occupied to correctly test for normal operation. Temperature measuring devices do not provide an accurate method for testing heated seat operation as surface temperatures are subject to human and environmental characteristics. Correct testing requires heater mat resistance measurements which have tight tolerances affecting heat cycle time length.

The heated seat system does not time-out. A heated seat remains on until it is turned off by the heated seat switch or the ignition is switched OFF.

Inspection and Verification

1. Verify the customer concern by operating the heated seat functions.

2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Seat cushion trim cover damaged (heated seat heater mats)	• Central Junction Box (CJB) fuse 17 (7.5A) • Wiring harness • Loose or corroded connector(s) • Heated seat switch (located on the instrument panel) • Heated seat relay • Cushion heater mat • Body Control Module (BCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the concern is with the heated seat and the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is ON.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record on-demand and Continuous Memory Diagnostic Trouble Codes (CMDTCs).

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM.

9. If the DTCs retrieved are related to the concern, go to the Body Control Module (BCM) DTC Chart. For all other DTCs, refer to Section 419-10.

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart.

DTC Chart

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. Continuous Memory Diagnostic Trouble Codes (CMDTCs) have an additional 2-character DTC status code suffix to assist in determining DTC history.

Body Control Module (BCM) DTC Chart

DTC	Description	Action
B1034:12	Left Front Seat Heater Element: Circuit Short To Battery	GO to Pinpoint Test B .
B1034:14	Left Front Seat Heater Element: Circuit Short To Ground or Open	If the heated seat is inoperative, GO to Pinpoint Test B . If the heated seat is on all the time, GO to Pinpoint Test D .
B1036:12	Right Front Seat Heater Element: Circuit Short To Battery	GO to Pinpoint Test C .
B1036:14	Right Front Seat Heater Element: Circuit Short To Ground or Open	If the heated seat is inoperative, GO to Pinpoint Test C . If the heated seat is on all the time, GO to Pinpoint Test D .
B115A:23	Front Passenger Seat Heater: Signal Stuck Low	GO to Pinpoint Test C .
B115B:23	Front Driver Seat Heater: Signal Stuck Low	GO to Pinpoint Test B .
All Other DTCs	—	REFER to the Master DTC Chart in Section 419-10 .

Symptom Chart

Symptom Chart

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

Condition	Possible Sources	Action
• The heated seats are inoperative — driver and passenger	• Fuse • Wiring, terminals or connectors • BCM	• GO to Pinpoint Test A .
• The heated seat is inoperative/does not operate correctly — driver	• Heated seat relay • Heated seat switch • Wiring,	• GO to Pinpoint Test B .

	terminals or connectors • Heater mat • BCM	
• The heated seat is inoperative/does not operate correctly — passenger	• Heated seat relay • Heated seat switch • Wiring, terminals or connectors • Heater mat • BCM	• GO to Pinpoint Test C .
• The heated seat does not operate correctly — driver or passenger seat heats when the system is off	• Heated seat relay • Wiring, terminals or connectors • BCM	• GO to Pinpoint Test D .
• The heated seat does not operate correctly — driver seat does heat but the heated seat indicator does not illuminate when pressed	• Heated seat switch • Wiring, terminals or connectors	• The driver heated seat switch LED is powered from the same circuit providing the voltage for the heater mat. CHECK circuit CHS11 (VT/GN) for an open between the driver heated seat relay and the driver heated seat switch. If the circuit is OK, INSTALL a new driver heated seat switch. TEST the system for normal operation.
• The heated seat does not operate correctly — passenger seat does heat but the heated seat indicator does not illuminate when pressed	• Heated seat switch • Wiring, terminals or connectors	• The passenger heated seat switch LED is powered from the same circuit providing the voltage for the heater mat. CHECK circuit CHS12 (YE/GN) for an open between the passenger heated seat relay and the passenger heated seat/ambient lighting switch. If the circuit is OK, INSTALL a new passenger heated seat/ambient lighting switch. TEST the system for normal operation.

Pinpoint Tests

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Refer to Inspection and Verification and the Symptom Chart for direction to the appropriate Pinpoint Test.

Pinpoint Test A: The Heated Seats are Inoperative — Driver and Passenger Seats

Refer to Wiring Diagrams Cell 119 , Climate Controlled Seats for schematic and connector information.

Normal Operation

The heated seat system only operates when the engine is running. When the driver or passenger heated seat switch (located on the instrument panel) is activated, it supplies a ground signal to the Body Control Module (BCM). When the BCM receives the heated seat switch signal, it activates the appropriate (driver or passenger) heated seat relay (located in the Central Junction Box (CJB). When the heated seat relay is activated, voltage is supplied to the cushion heater mat. The cushion heater mats are directly connected to ground to complete the electrical circuit to heat the seat.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- BCM

PINPOINT TEST A: THE HEATED SEATS ARE INOPERATIVE — DRIVER AND PASSENGER SEATS

Test Step	Result / Action to Take
A1 CHECK FOR VOLTAGE TO THE DRIVER HEATED SEAT RELAY	
• Disconnect: Driver Heated Seat Relay. • Ignition ON. • Measure the voltage between driver heated seat relay socket pin 1, circuit CBP17 (BN/GN), and ground.  N0115890 • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** VERIFY Central Junction Box (CJB) fuse 17 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
A2 CHECK THE HEATED SEAT SWITCH GROUND CIRCUIT	
• Ignition OFF. • Disconnect: Driver Heated Seat Switch C2400. • Measure the resistance between driver heated switch	**Yes** GO to A3 .

C2400-4, circuit GD115 (BK/GY), harness side and ground.  N0115868 • **Is the resistance less than 5 ohms?**	**No** REPAIR the circuit. TEST the system for normal operation.

A3 CHECK THE BCM FOR CORRECT OPERATION
• Disconnect all of the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all of the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test B: The Heated Seat is Inoperative/Does Not Operate Correctly — Driver

Refer to Wiring Diagrams Cell 119, Climate Controlled Seats for schematic and connector information.

Normal Operation

The heated seat system only operates when the engine is running. When the driver heated seat switch (located on the instrument panel) is activated, it supplies a ground signal to the Body Control Module (BCM). When the BCM receives the heated seat switch signal, it activates the driver heated seat relay (located in the Central Junction Box (CJB)) by grounding the relay control circuit. When the heated seat relay is activated, voltage is supplied to the driver cushion heater mat. The driver cushion heater mat is directly connected to ground to complete the electrical circuit to heat the seat.

- DTC B1034:12 (Left Front Seat Heater Element: Circuit Short To Battery) — if the driver heated seat relay drive circuit CHS02 (YE/BU) is shorted to voltage and the BCM attempts to activate the driver heated seat relay, this DTC sets and the seat fails to heat.
- DTC B1034:14 (Left Front Seat Heater Element: Circuit Short To Ground or Open) — if the driver heated seat relay drive circuit CHS02 (YE/BU) is open or shorted to ground and the BCM attempts to activate the driver heated seat relay, this DTC sets and the seat fails to heat (circuit open) or may be on at all times (circuit shorted to ground) until the ignition is turned OFF.
- DTC B115B:23 (Front Driver Seat Heater: Signal Stuck Low) — sets when the BCM detects the driver heated seat switch is active during on-demand self-test or has been active for more than 2 minutes.

This pinpoint test is intended to diagnose the following:

- Heated seat relay
- Heated seat switch
- Wiring, terminals or connectors
- Heater mat
- BCM

PINPOINT TEST B: THE HEATED SEAT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY — DRIVER

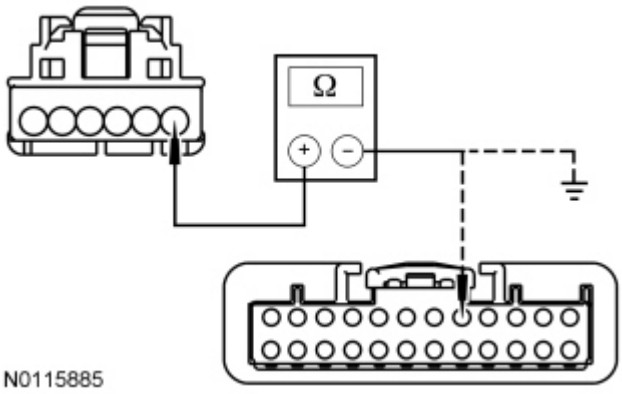
NOTE: If a seat equipped with a seat mounted side air bag is being serviced, depower the Supplemental Restraint System (SRS). Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
B1 CHECK THE BCM FOR DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — BCM . • **Is DTC B1034:12, B1034:14 or B115B:23 retrieved?**	**Yes** If DTC B1034:14 is present, GO to B7 . If DTC B1034:12 is present, GO to B6 . If DTC B115B:23 is present, GO to B4 . For all other BCM DTCs, REFER to the Master DTC Chart in Section 419-10 . **No** GO to B2 .
B2 CHECK THE BCM DRIVER HEATED SEAT (CC_SW_D_HSEATS) PID OPERATION • Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • While monitoring the BCM CC_SW_D_HSEATS PID, press and release the driver heated seat switch. • **Does the PID agree with the driver heated switch status?**	**Yes** GO to B9 . **No** GO to B3 .
B3 CHECK THE DRIVER HEATED SEAT SWITCH GROUND CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: Driver Heated Seat Switch C2400. • Measure the resistance between driver heated seat switch C2400-4, circuit GD115 (BK/GY), harness side and ground.	**Yes** GO to B4 . **No** REPAIR the circuit. TEST the system for normal operation.

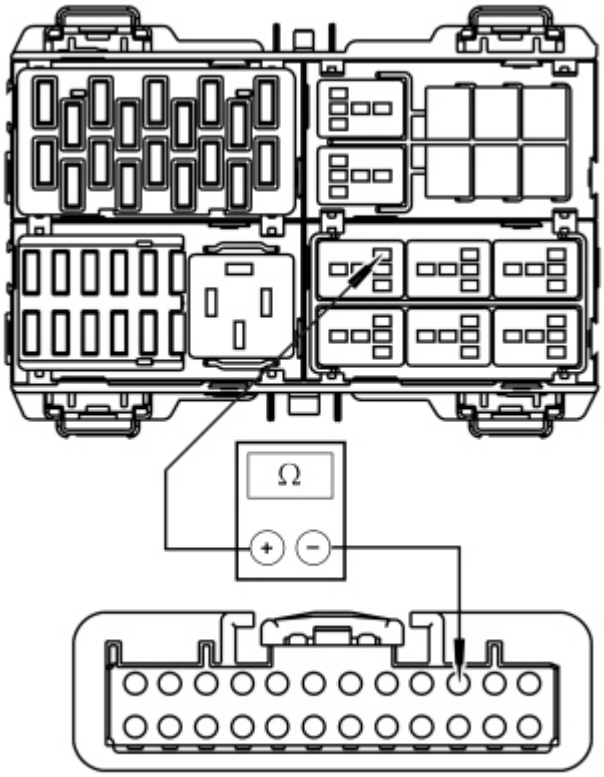
 N0115868 • **Is the resistance less than 5 ohms?**	
B4 CHECK THE BCM DRIVER HEATED SEAT (CC_SW_D_HSEATS) PID OPERATION • Ignition OFF. • Disconnect: Driver Heated Seat Switch C2400. • Connect a fused jumper wire between driver heated seat switch C2400-4, circuit GD115 (BK/GY), harness side and driver heated seat switch C2400-1, circuit CHS32 (BN), harness side.  N0115869 • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • Observe the BCM CC_SW_D_HSEATS PID status. • Remove the fused jumper wire. • Observe the BCM CC_SW_D_HSEATS PID status. • **Did the PID state change when the fused jumper wire was removed?**	**Yes** INSTALL a new driver heated seat switch. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** GO to B5 .
B5 CHECK THE DRIVER HEATED SWITCH SIGNAL CIRCUIT FOR AN OPEN OR SHORT TO GROUND • Ignition OFF. • Disconnect: BCM C2280G. • Measure the resistance between driver heated seat switch C2400-1, circuit CHS32 (BN), harness side and BCM C2280G-8, harness side; and between driver heated seat switch C2400-1, circuit CHS32 (BN), harness side and ground.	**Yes** GO to B13 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.



- **Is the resistance less than 5 ohms between the heated seat switch and the BCM ; and greater than 10,000 ohms between the heated seat switch and ground?**

B6 CHECK THE RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: Driver Heated Seat Relay. • Ignition ON. • Measure the voltage between driver heated seat relay socket pin 2, circuit CHS02 (YE/BU), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** INSTALL a new driver heated seat relay. RECONNECT all connectors and REPEAT the self-test. If the DTC is retrieved again, GO to B13 .
B7 CHECK THE RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: Driver Heated Seat Relay. • Disconnect: BCM C2280D.	**Yes** GO to B8 .

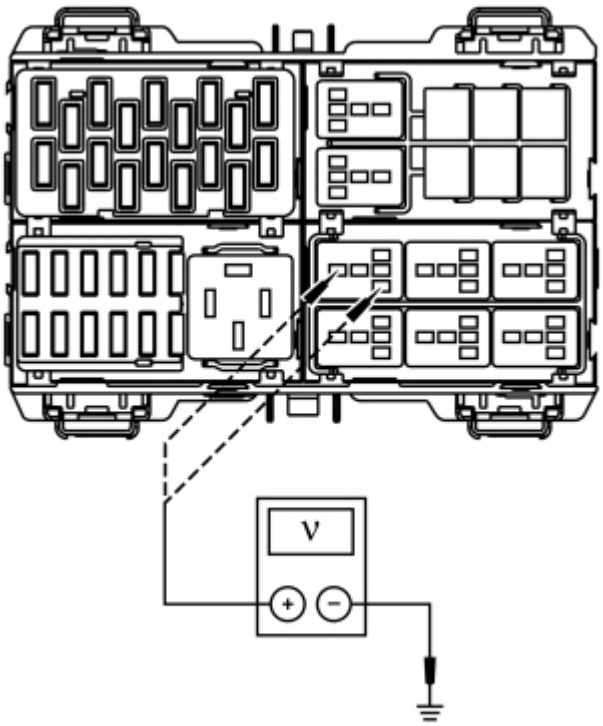
• Measure the resistance between driver heated seat relay socket pin 2, circuit CHS02 (YE/BU), harness side and ground.  N0115892 • **Is the resistance greater than 10,000 ohms?**	**No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
B8 CHECK THE RELAY CONTROL CIRCUIT FOR AN OPEN	
• Measure the resistance between driver heated seat relay socket pin 2, circuit CHS02 (YE/BU), harness side and BCM C2280D-10, circuit CHS02 (YE/BU), harness side.	**Yes** INSTALL a new driver heated seat relay. RECONNECT all connectors and REPEAT the self-test. If the DTC is retrieved again, GO to B13 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.



N0115893

- **Is the resistance less than 5 ohms?**

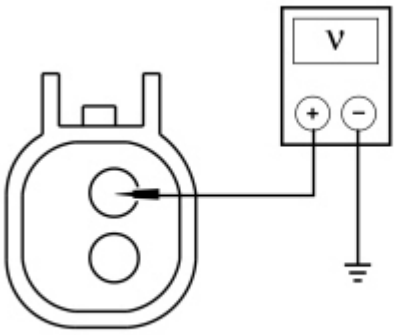
B9 CHECK FOR VOLTAGE TO THE DRIVER HEATED SEAT RELAY	
• Ignition OFF. • Disconnect: Driver Heated Seat Relay. • Ignition ON. • Measure the voltage between driver heated seat relay socket pin 1, circuit CBP17 (BN/GN) and ground; and between driver heated seat relay socket pin 3, circuit CBP17 (BN/GN) and ground.	**Yes** GO to B10 . **No** VERIFY Central Junction Box (CJB) fuse 17 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.



N0115894

- **Is the voltage greater than 10 volts for both measurements?**

B10 CHECK THE HEATER MAT CIRCUIT FOR VOLTAGE	
• Ignition OFF. • Connect: Driver Heated Seat Relay. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C367. • Disconnect: Driver Seat Cushion Heater C364. • **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Start the engine. • Activate the driver heated seat switch and measure the voltage between driver seat cushion heater C364-1, circuit CHS11 (VT/GN), harness side and ground.	**Yes** GO to B12 . **No** GO to B11 .



N0115899

- **Is the voltage greater than 10 volts?**

B11 CHECK THE HEATER CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: Driver Heated Seat Relay. • Measure the resistance between driver heated seat relay socket pin 5, circuit CHS11 (VT/GN), harness side and driver seat cushion heater C364-1, circuit CHS11 (VT/GN), harness side.  N0115897 • **Is the resistance less than 5 ohms?**	**Yes** GO to B14 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C367. REPOWER the SRS . REFER to Section 501-20B .
B12 CHECK THE HEATER MAT GROUND CIRCUIT FOR AN OPEN • Ignition OFF. • Measure the resistance between driver seat cushion heater C364-2, circuit GD143 (BK/VT), harness side and ground.	**Yes** CHECK for loose or damaged connector pins and wiring damage. If OK, INSTALL a new driver seat cushion heater mat. REFER to

 N0115898 • **Is the resistance less than 5 ohms?**	Seat Cushion — Front in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C367. REPOWER the SRS. REFER to Section 501-20B. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C367. REPOWER the SRS. REFER to Section 501-20B.

B13 CHECK THE BCM FOR CORRECT OPERATION
• Ignition OFF.
• Disconnect all of the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all of the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

B14 CHECK THE BCM FOR CORRECT OPERATION
• Ignition OFF.
• Disconnect all of the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all of the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C367.

	REPOWER the SRS . REFER to Section 501-20B . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C367. REPOWER the SRS . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test C: The Heated Seat is Inoperative/Does Not Operate Correctly — Passenger

Refer to Wiring Diagrams Cell 119 , Climate Controlled Seats for schematic and connector information.

Normal Operation

The heated seat system only operates when the engine is running. When the passenger heated seat switch (located on the instrument panel) is activated, it supplies a ground signal to the Body Control Module (BCM). When the BCM receives the heated seat switch signal, it activates the passenger heated seat relay (located in the Central Junction Box (CJB)) by grounding the relay control circuit. When the heated seat relay is activated, voltage is supplied to the passenger cushion heater mat. The passenger cushion heater mat is directly connected to ground to complete the electrical circuit to heat the seat.

- DTC B1036:12 (Right Front Seat Heater Element: Circuit Short To Battery) — if the passenger heated seat relay drive circuit CHS07 (GY/BU) is shorted to voltage and the BCM attempts to activate the passenger heated seat relay, this DTC sets and the seat fails to heat.
- DTC B1036:14 (Right Front Seat Heater Element: Circuit Short To Ground or Open) — if the passenger heated seat relay drive circuit CHS07 (GY/BU) is open or shorted to ground and the BCM attempts to activate the passenger heated seat relay, this DTC sets and the seat fails to heat (circuit open) or may be on at all times (circuit shorted to ground) until the ignition is turned OFF.
- DTC B115A:23 (Front Passenger Seat Heater: Signal Stuck Low) — sets when the BCM detects the passenger heated seat switch is active during on-demand self-test or has been active for more than 2 minutes.

This pinpoint test is intended to diagnose the following:

- Heated seat relay
- Heated seat switch
- Wiring, terminals or connectors
- Heater mat
- BCM

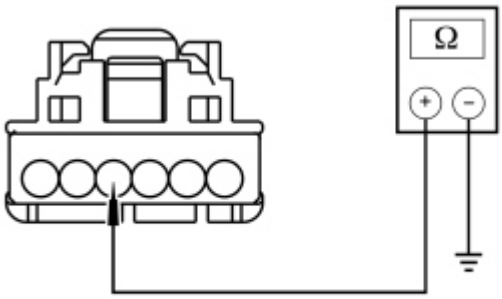
PINPOINT TEST C: THE HEATED SEAT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY — PASSENGER

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, depower the Supplemental Restraint System (SRS). Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

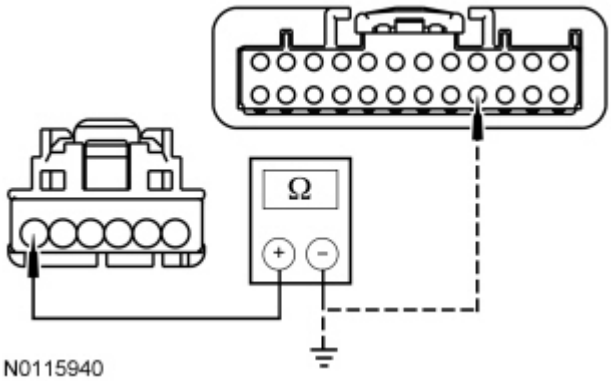
Test Step	Result / Action to Take
C1 CHECK THE BCM FOR DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — BCM . • **Is DTC B1036:12, B1036:14 or B115A:23 retrieved?**	**Yes** If DTC B1036:14 is present, GO to C7 . If DTC B1036:12 is present, GO to C6 . If DTC B115A:23 is present, GO to C4 . For all other BCM DTCs, REFER to the Master DTC Chart in Section 419-10 . **No** GO to C2 .
C2 CHECK THE BCM PASSENGER HEATED SEAT (CC_SW_P_HSEATS) PID OPERATION	
• Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • While monitoring the BCM CC_SW_P_HSEATS PID, press and release the passenger heated seat switch. • **Does the PID agree with the passenger heated switch status?**	**Yes** GO to C9 . **No** GO to C3 .
C3 CHECK THE PASSENGER HEATED SEAT SWITCH GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Passenger Heated Seat/Ambient Lighting Switch C2401. • Measure the resistance between passenger heated seat/ambient lighting switch C2401-4, circuit GD115 (BK/GY), harness side and ground.	**Yes** GO to C4 . **No** REPAIR the circuit. TEST the system for normal operation.



N0115868

- **Is the resistance less than 5 ohms?**

C4 CHECK THE BCM PASSENGER HEATED SEAT (CC_SW_P_HSEATS) PID OPERATION	
• Ignition OFF. • Disconnect: Passenger Heated Seat/Ambient Lighting Switch C2401. • Connect a fused jumper wire between passenger heated seat/ambient lighting switch C2401-4, circuit GD115 (BK/GY), harness side and passenger heated seat/ambient lighting switch C2401-6, circuit CHS30 (GY/YE), harness side.  N0115939 • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — BCM. • Observe the BCM CC_SW_P_HSEATS PID status. • Remove the fused jumper wire. • Observe the BCM CC_SW_P_HSEATS PID status. • **Did the PID state change when the fused jumper wire was removed?**	**Yes** INSTALL a new passenger heated seat/ambient lighting switch. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** GO to C5.
C5 CHECK THE PASSENGER HEATED SWITCH SIGNAL CIRCUIT FOR AN OPEN OR SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280G. • Measure the resistance between passenger heated seat/ambient lighting switch C2401-6, circuit CHS30 (GY/YE), harness side and BCM C2280G-21, harness side; and between passenger heated seat/ambient lighting switch C2401-6, circuit CHS30 (GY/YE), harness side and ground.	**Yes** GO to C13. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.



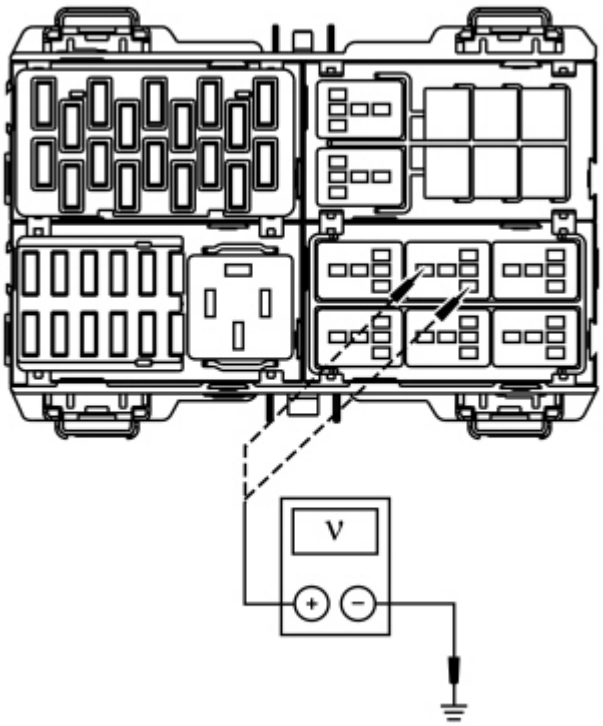
N0115940

- **Is the resistance less than 5 ohms between the heated seat switch and the BCM ; and greater than 10,000 ohms between the heated seat switch and ground?**

C6 CHECK THE RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: Passenger Heated Seat Relay. • Ignition ON. • Measure the voltage between passenger heated seat relay socket pin 2, circuit CHS07 (GY/BU), harness side and ground.  N0115941 • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** INSTALL a new passenger heated seat relay. RECONNECT all connectors and REPEAT the self-test. If the DTC is retrieved again, GO to C13 .
C7 CHECK THE RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: Passenger Heated Seat Relay. • Disconnect: BCM C2280D.	**Yes** GO to C8 .

• Measure the resistance between passenger heated seat relay socket pin 2, circuit CHS07 (GY/BU), harness side and ground.  N0115942 • **Is the resistance greater than 10,000 ohms?**	**No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
C8 CHECK THE RELAY CONTROL CIRCUIT FOR AN OPEN	
• Measure the resistance between passenger heated seat relay socket pin 2, circuit CHS07 (GY/BU), harness side and BCM C2280D-4, circuit CHS07 (GY/BU), harness side.	**Yes** INSTALL a new passenger heated seat relay. RECONNECT all connectors and REPEAT the self-test. If the DTC is retrieved again, GO to C13 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

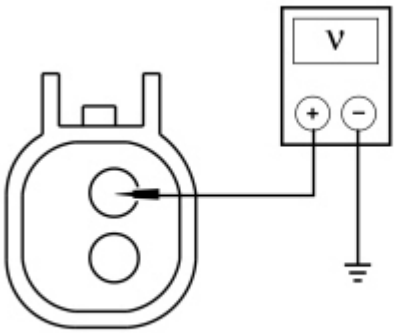
 N0115943 • **Is the resistance less than 5 ohms?**	
C9 CHECK FOR VOLTAGE TO THE PASSENGER HEATED SEAT RELAY	
• Ignition OFF. • Disconnect: Passenger Heated Seat Relay. • Ignition ON. • Measure the voltage between passenger heated seat relay socket pin 1, circuit CBP17 (BN/GN) and ground; and between passenger heated seat relay socket pin 3, circuit CBP17 (BN/GN) and ground.	**Yes** GO to C10 . **No** VERIFY Central Junction Box (CJB) fuse 17 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.



N0115944

- **Is the voltage greater than 10 volts for both measurements?**

C10 CHECK THE HEATER MAT CIRCUIT FOR VOLTAGE	
• Ignition OFF. • Connect: Passenger Heated Seat Relay. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C337. • Disconnect: Passenger Seat Cushion Heater C334. • **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Start the engine. • Activate the passenger heated seat switch and measure the voltage between passenger seat cushion heater C334-1, circuit CHS12 (YE/GN), harness side and ground.	**Yes** GO to C12 . **No** GO to C11 .



N0115899

- **Is the voltage greater than 10 volts?**

C11 CHECK THE HEATER CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Passenger Heated Seat Relay. • Measure the resistance between passenger heated seat relay socket pin 5, circuit CHS12 (YE/GN), harness side and passenger seat cushion heater C334-1, circuit CHS12 (YE/GN), harness side.  N0115947 • **Is the resistance less than 5 ohms?**	**Yes** GO to C14 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C337. REPOWER the SRS . REFER to Section 501-20B .
C12 CHECK THE HEATER MAT GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between passenger seat cushion heater C334-2, circuit GD145 (BK/BU), harness side and ground.	**Yes** CHECK for loose or damaged connector pins and wiring damage. If OK, INSTALL a new passenger seat cushion

 N0115898 • **Is the resistance less than 5 ohms?**	heater mat. REFER to Seat Cushion — Front in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C337. REPOWER the SRS. REFER to Section 501-20B. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C337. REPOWER the SRS. REFER to Section 501-20B.

C13 CHECK THE BCM FOR CORRECT OPERATION
• Ignition OFF.
• Disconnect all of the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all of the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

C14 CHECK THE BCM FOR CORRECT OPERATION
• Ignition OFF.
• Disconnect all of the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all of the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C337.

	REPOWER the SRS . REFER to Section 501-20B . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C337. REPOWER the SRS . REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test D: The Heated Seat Does Not Operate Correctly — Driver or Passenger Seat Heats When the System is Off

Refer to Wiring Diagrams Cell 119 , Climate Controlled Seats for schematic and connector information.

Normal Operation

The heated seat system only operates when the engine is running. When the driver or passenger heated seat switch (located on the instrument panel) is activated, it supplies a ground signal to the Body Control Module (BCM). When the BCM receives the heated seat switch signal, it activates the appropriate (driver or passenger) heated seat relay (located in the Central Junction Box (CJB)). When the heated seat relay is activated, voltage is supplied to the cushion heater mat. The cushion heater mats are directly connected to ground to complete the electrical circuit to heat the seat.

- DTC B1034:14 (Left Front Seat Heater Element: Circuit Short To Ground or Open) — if the driver heated seat relay drive circuit CHS02 (YE/BU) is open or shorted to ground and the BCM attempts to activate the driver heated seat relay, this DTC sets and the seat fails to heat (circuit open) or may be on at all times (circuit shorted to ground) until the ignition is turned OFF.
- DTC B1036:14 (Right Front Seat Heater Element: Circuit Short To Ground or Open) — if the passenger heated seat relay drive circuit CHS07 (GY/BU) is open or shorted to ground and the BCM attempts to activate the passenger heated seat relay, this DTC sets and the seat fails to heat (circuit open) or may be on at all times (circuit shorted to ground) until the ignition is turned OFF.

This pinpoint test is intended to diagnose the following:

- Heated seat relay
- Wiring, terminals or connectors
- BCM

PINPOINT TEST D: THE HEATED SEAT DOES NOT OPERATE CORRECTLY — DRIVER OR

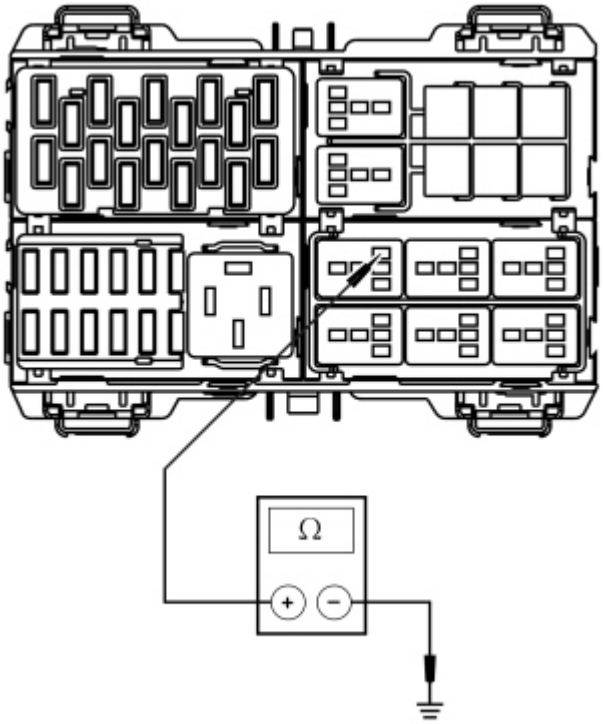
PASSENGER SEAT HEATS WHEN THE SYSTEM IS OFF

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, depower the Supplemental Restraint System (SRS). Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

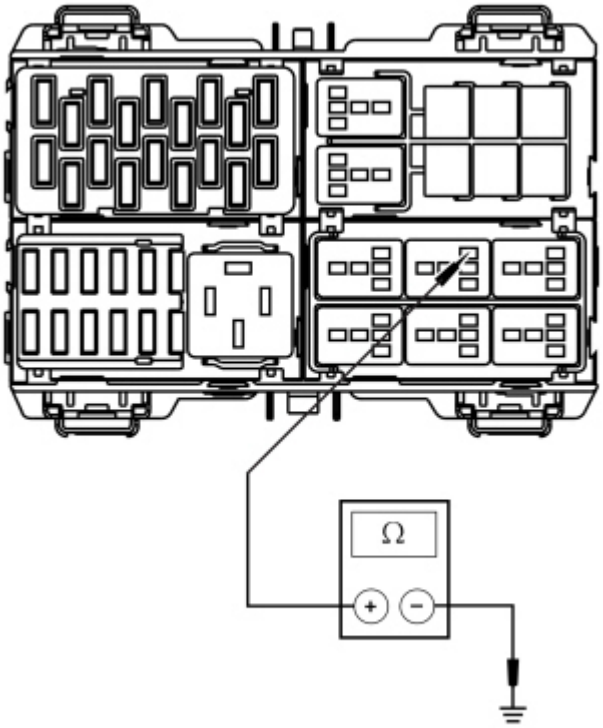
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
D1 CHECK THE AFFECTED HEATED SEAT OPERATION WITH THE RELAY REMOVED	
• Ignition OFF. • Disconnect: Driver or Passenger Heated Seat Relay. • Ignition ON. • Observe the affected driver or passenger heated seat switch. • **Is the affected driver or passenger heated seat switch indicator illuminated?**	**Yes** REPAIR circuit CHS11 (VT/GN) (driver seat) or CHS12 (YE/GN) (passenger seat) for a short to voltage. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** GO to D2 .
D2 CHECK THE RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280D. • For driver heated seat, measure the resistance between driver heated seat relay socket pin 2, circuit CHS02 (YE/BU), harness side and ground.	**Yes** INSTALL a new driver heated seat relay or passenger heated seat relay. RECONNECT all connectors. TEST the system for normal operation. If the concern is still present, GO to D3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.



N0115892

- For passenger heated seat, measure the resistance between passenger heated seat relay socket pin 2, circuit CHS07 (GY/BU), harness side and ground.



N0115942

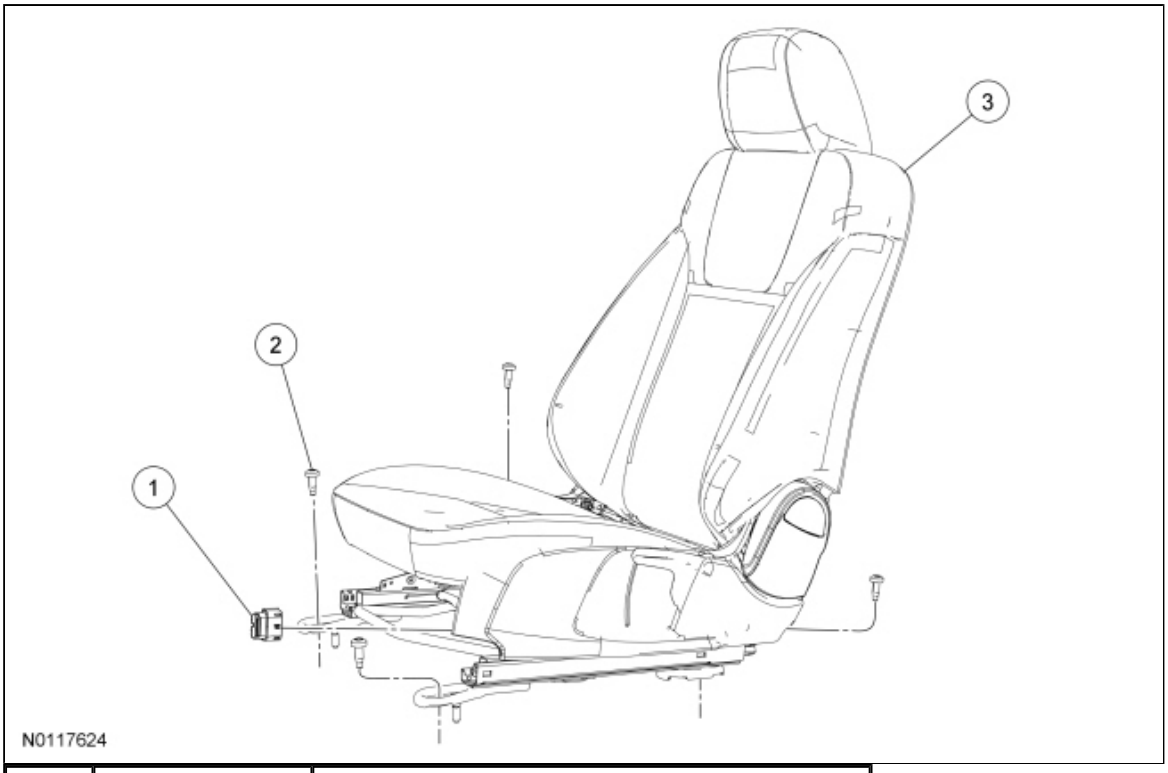
• **Is the resistance greater than 10,000 ohms?**	

D3 CHECK THE BCM FOR CORRECT OPERATION
• Disconnect all of the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all of the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Seat — Front

NOTE: Refer to the installation steps in this procedure for seat track-to-floor retainer tightening sequence and specification.

NOTE: Always install new seat track-to-floor bolts.



Item	Part Number	Description
1	—	Electrical connector (part of 14A005)
2	W700883	Seat track-to-floor bolt (4 required)
3	—	Seat assembly

Removal and Installation

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

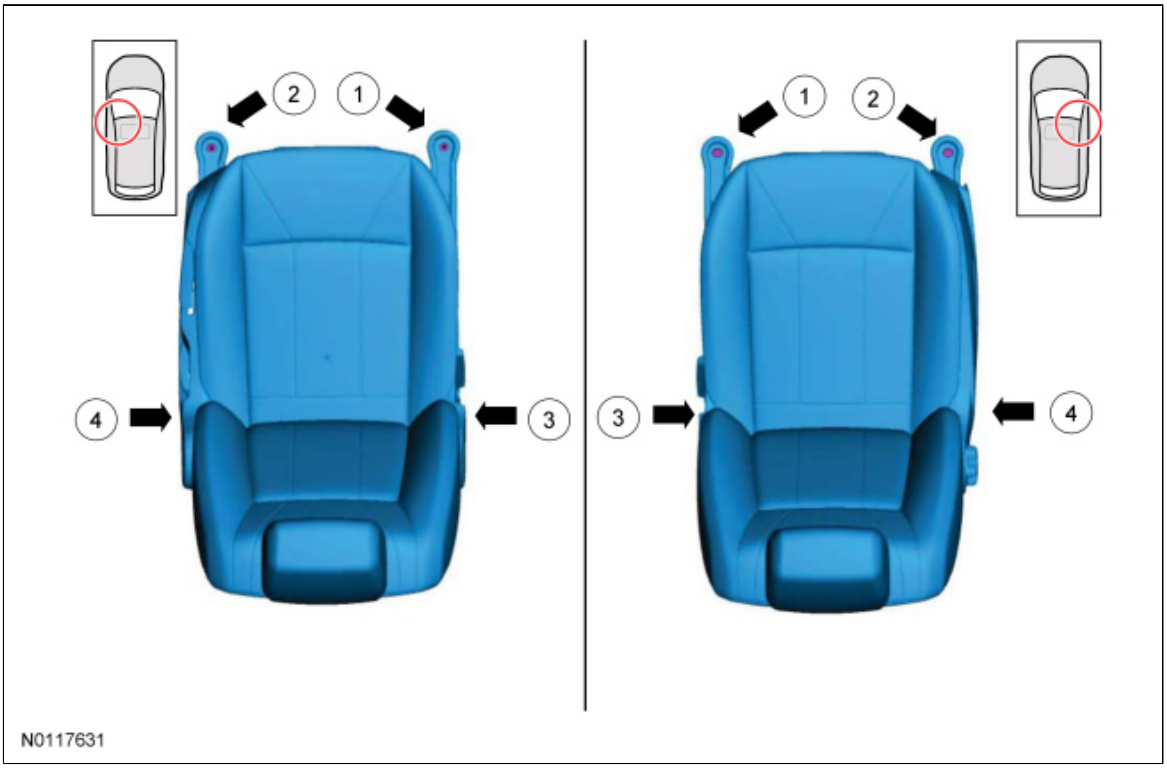
1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

2. Complete the removal by referring to the exploded view.
   - Note the wire harness routing and retainer locations.
   - Discard the seat-to-floor bolts.

Installation

1. Install 4 new seat-to-floor bolts by hand.

2. Install the new seat-to-floor bolts in the sequence shown.
   - Tighten to 35 Nm (26 lb-ft).



3. Connect the wire harness.
   - Route the wire harness as noted in removal.
   - Attach the retainers.

4. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

Seat — Exploded View, Front

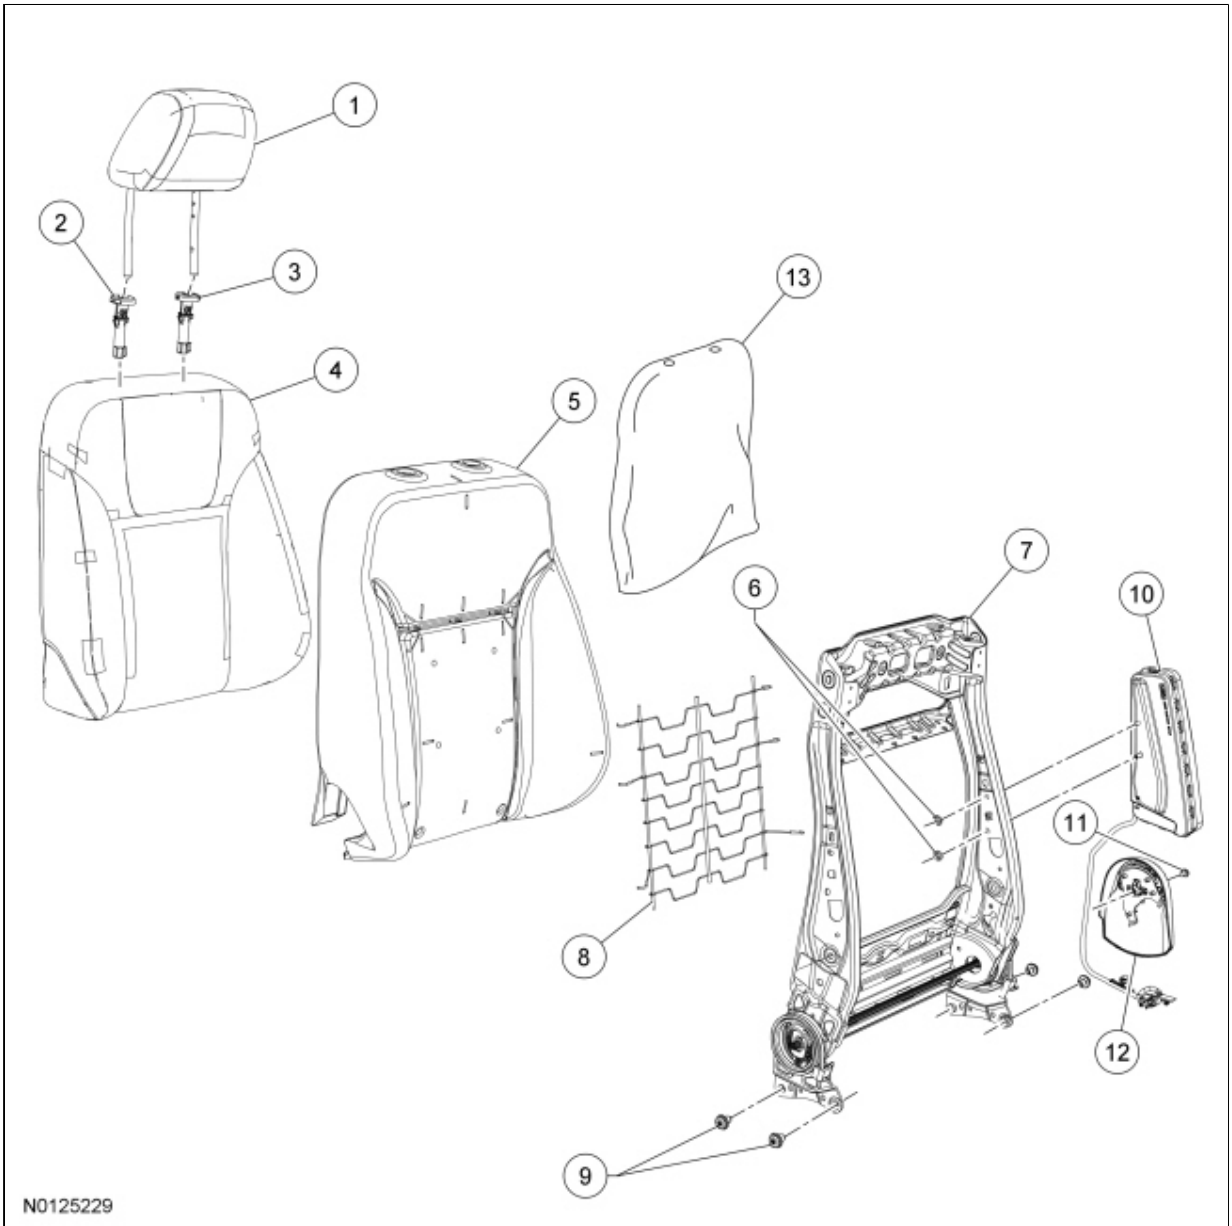
Seat Backrest

NOTE: Driver side shown, passenger similar.

NOTE: Refer to Seat Backrest — Front in this section for recliner-to-seat track bolt and side air bag module nut tightening sequence and torque specification.

NOTE: Click here or refer to the on-line Workshop Manual to view this illustration as an interactive exploded view, requires Adobe® Acrobat® 8.0 or higher.

NOTE: Click here or refer to the on-line Workshop Manual to learn about using an Interactive Illustration.



Item	Part Number	Description

1	611A08	Head restraint
2	610A18	Head restraint guide sleeve (non-lockable)
3	610A16	Head restraint guide sleeve (lockable)
4	64416/RH 64417/LH	Backrest cover
5	64810/LH 64811/RH	Backrest foam pad
6	W790242	Side air bag module nut (2 required)
7	61018/RH 61019/LH	Backrest frame
8	64842	Static lumbar
9	W790240	Recliner-to-seat track bolt (4 required)
10	611D10/RH 611D11/LH	Side air bag module
11	W790244	Recliner handle screw
12	61198/RH 61199/LH	Recliner handle and screw cover
13	—	Anti-squeak bag

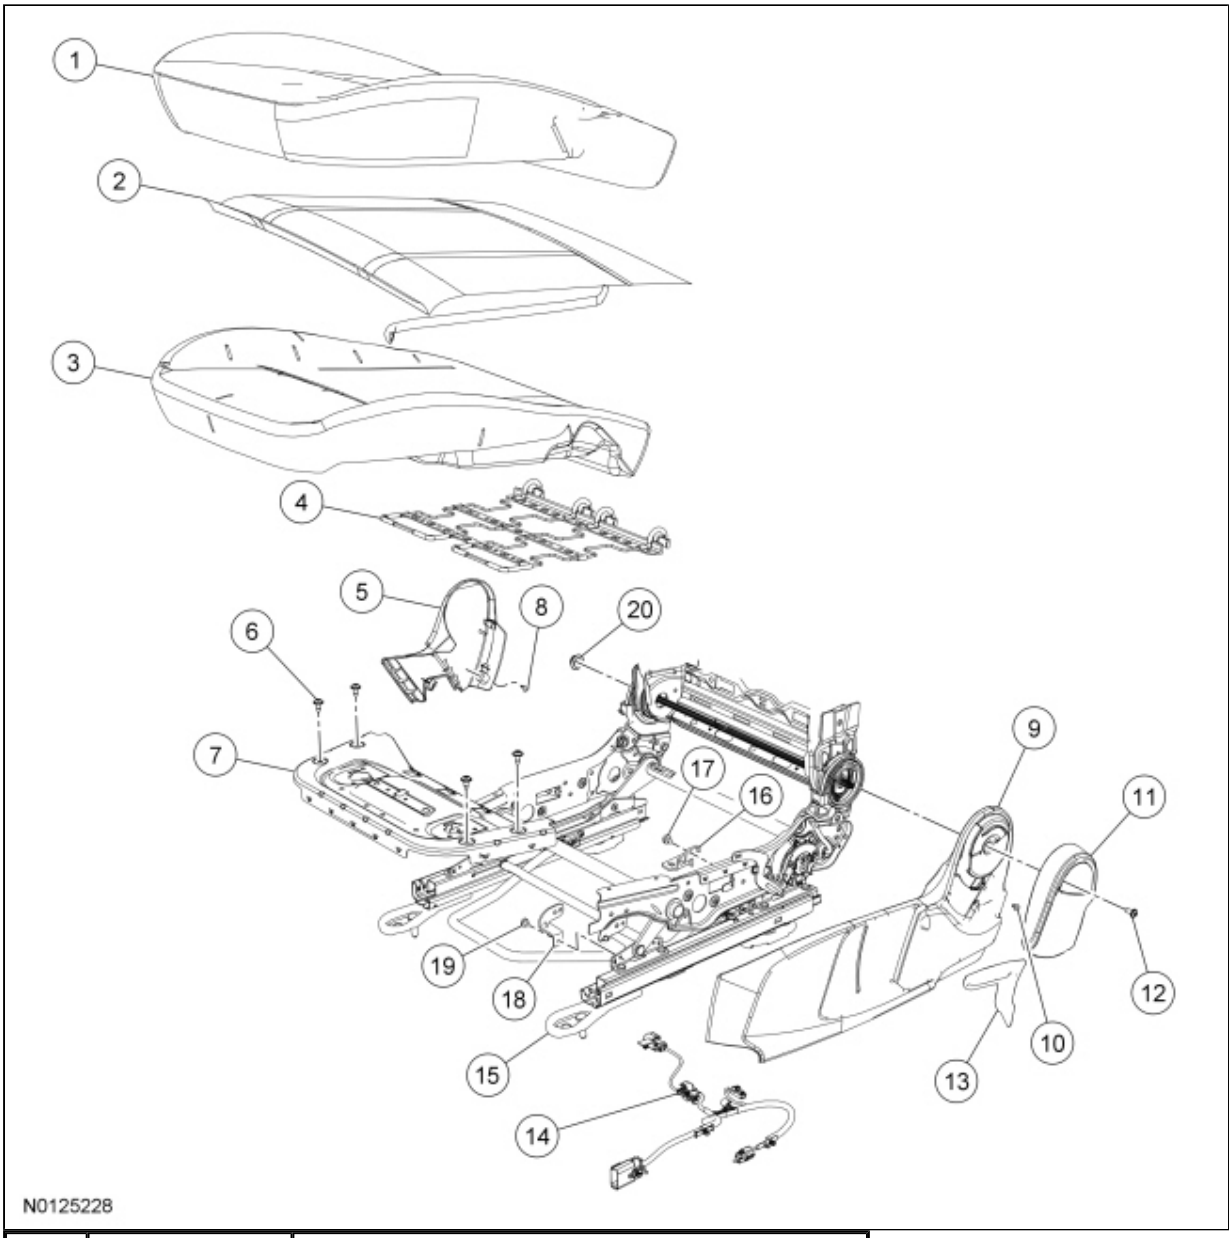
Seat Cushion — Driver

NOTICE: **The heater mats are serviceable separately. A heater mat can be peeled away from a foam pad and a new one adhered in its place providing the foam is not damaged. If foam is removed during removal, a new foam pad must be installed. A heater mat cannot be reused; the 2-way tape adhesive will no longer hold the heater mat position on the foam pad causing it to shift or bunch up.**

NOTE: Refer to Seat Cushion — Front in this section for tightening sequence and torque specifications.

NOTE: Click here or refer to the on-line Workshop Manual to view this illustration as an interactive exploded view, requires Adobe® Acrobat® 8.0 or higher.

NOTE: Click here or refer to the on-line Workshop Manual to learn about using an Interactive Illustration.



Item	Part Number	Description
1	62901	Cushion cover
2	14D696	Heater mat
3	632A23	Cushion foam pad
4	64646	Cushion support spring
5	62187	Recliner cover
6	W790245	Cushion pan bolts (4 required)
7	60326	Cushion pan
8	W790246	Recliner cover screw
9	62187	Cushion side shield
10	W790246	Cushion side shield screw
11	61199	Recliner handle and screw cover
12	W790244	Recliner handle screw
13	61753	Seat height adjust handle
14	14A699	Seat wiring harness
15	61705	Seat track

16	610E34	Seat track position sensor bracket
17	W790243	Seat track position sensor bracket screw
18	60328	Wire harness bracket
19	W790243	Wire harness bracket screw
20	W623455	Push nut

Seat Cushion — Passenger

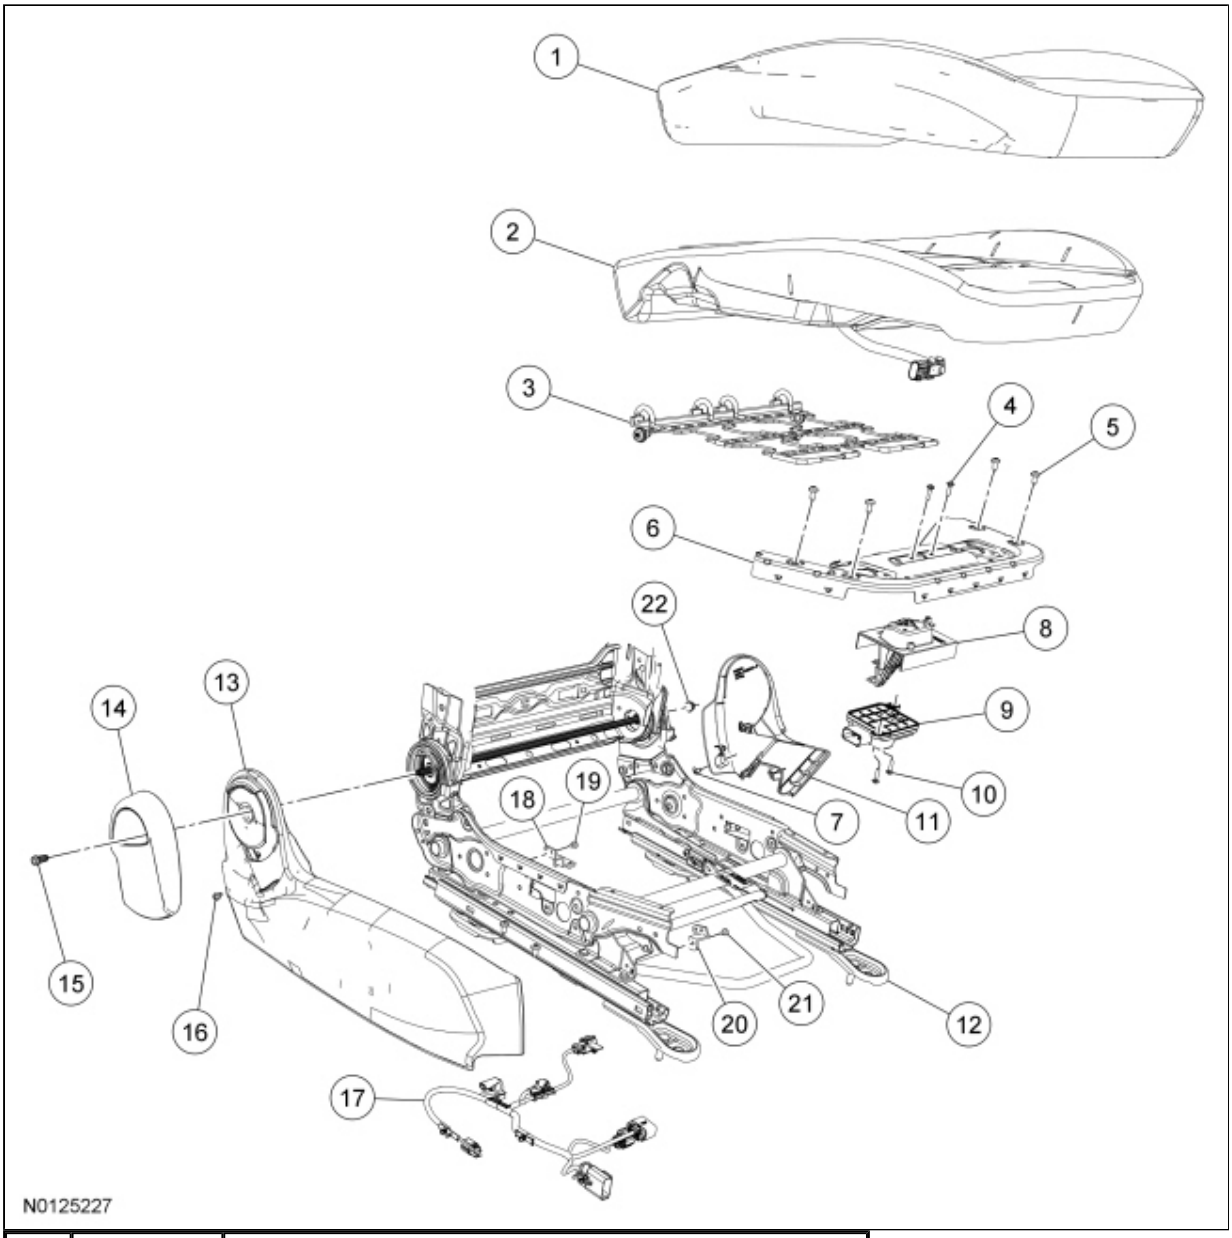
NOTE: Refer to Seat Cushion — Front in this section for tightening sequence and torque specifications.

NOTE: For passenger seat cushion Occupant Classification System (OCS) system components, refer to Section 501-20B .

NOTE: The heater mats are serviceable separately. A heater mat can be peeled away from a foam pad and a new one adhered in its place providing the foam is not damaged. If foam is removed during removal, a new foam pad must be installed. A heater mat cannot be reused; the 2-way tape adhesive will no longer hold the heater mat position on the foam pad causing it to shift or bunch up.

NOTE: Click here or refer to the on-line Workshop Manual to view this illustration as an interactive exploded view, requires Adobe® Acrobat® 8.0 or higher.

NOTE: Click here or refer to the on-line Workshop Manual to learn about using an Interactive Illustration.



Item	Part Number	Description
1	62900	Cushion cover
2	632A22	OCS (with and without heat)
3	64646	Cushion support spring
4	W790241	Occupant Classification System Module (OCSM) bracket screws (2 required)
5	W790245	Cushion pan bolts (4 required)
6	60326	Cushion pan
7	W790246	Recliner cover screw
8	610E34	OCSM bracket
9	—	OCSM (part of 632A22)
10	—	OCSM screws (part of 632A22)
11	62186	Recliner cover
12	61704	Seat track
13	62186	Cushion side shield

14	61198	Recliner handle and screw cover
15	W790244	Recliner handle screw
16	W790246	Cushion side shield screw
17	—	Seat wiring harness (part of 632A22)
18	610E34	Seat track position sensor bracket
19	W790243	Seat track position sensor bracket screw
20	60328	Wire harness bracket
21	W790243	Wire harness bracket screw
22	W623455	Push nut

1. Refer to the procedures and/or exploded views in this section for any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Seat Backrest — Front

Removal

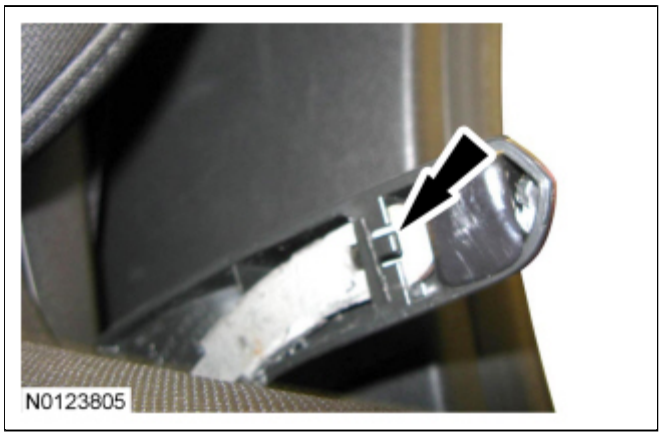
NOTE: For parts identification and location, refer to Seat — Exploded View, Front in this section.

NOTE: Note all harness routing for correct installation.

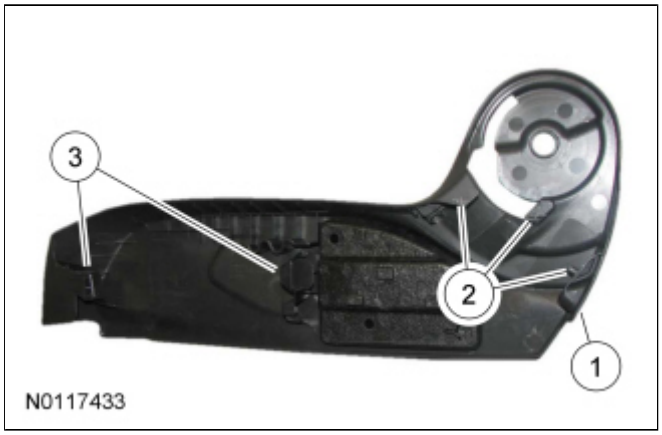
1. Remove the seat. For additional information, refer to Seat — Front in this section.
2. **NOTE:** Passenger seat shown, driver seat similar.

   Remove the recliner handle bolt cover, the bolt and the recliner handle.

3. If equipped, release the tab and remove the height adjust handle.
   - Lift height adjust handle.
   - Release the tab and slide the handle from the lever.



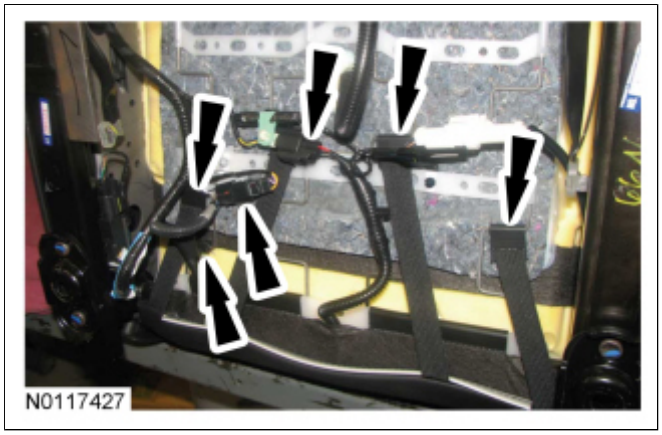
4. Remove the cushion side shield.
   1. Remove the screw at the rear of the cushion side shield.
   2. Pull out at the back of the cushion side shield to release the locator pins and tab.
   3. Slide the cushion side shield forward to disengage the brackets and remove the cushion side shield.



5. Remove the screw and the inner recliner cover.

6. **NOTE:** Passenger seat shown, driver seat similar.

   From under the seat, carry out the following.
   - Disconnect the side air bag module electrical connector and detach the wire harness retainer.
   - Disengage the 4 backrest cover elastic strap retainers attached to the bottom rear of the seat.



7. Remove the 4 recliner-to-seat track bolts and the backrest.

Installation

1. Position the backrest to the cushion frame and install the 4 backrest mounting bolts.
   - Tighten to 48Nm (35 lb-ft).

2. From under the seat, carry out the following.
   - Engage the 4 backrest cover elastic strap retainers attach to the bottom rear of the seat.
   - Connect the side air bag module electrical connector and attach the wire harness retainer.

3. Install the cushion side shield in the following sequence.
   1. Position and slide the cushion side shield rearward to engage the brackets.
   2. Install the screw at the rear of the cushion side shield.

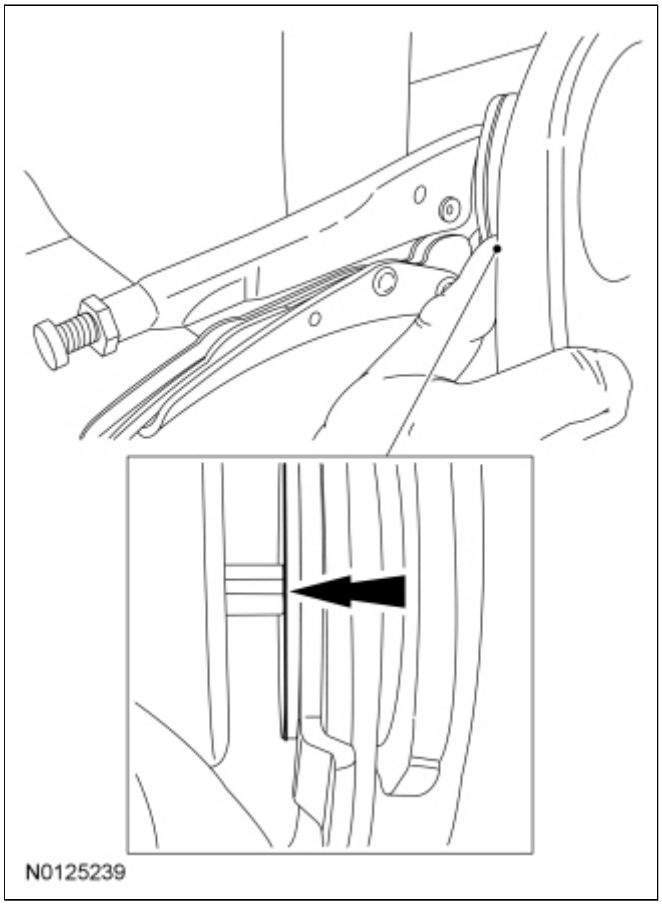
4. If equipped install the height adjust handle.

5. Install the recliner handle and bolt.

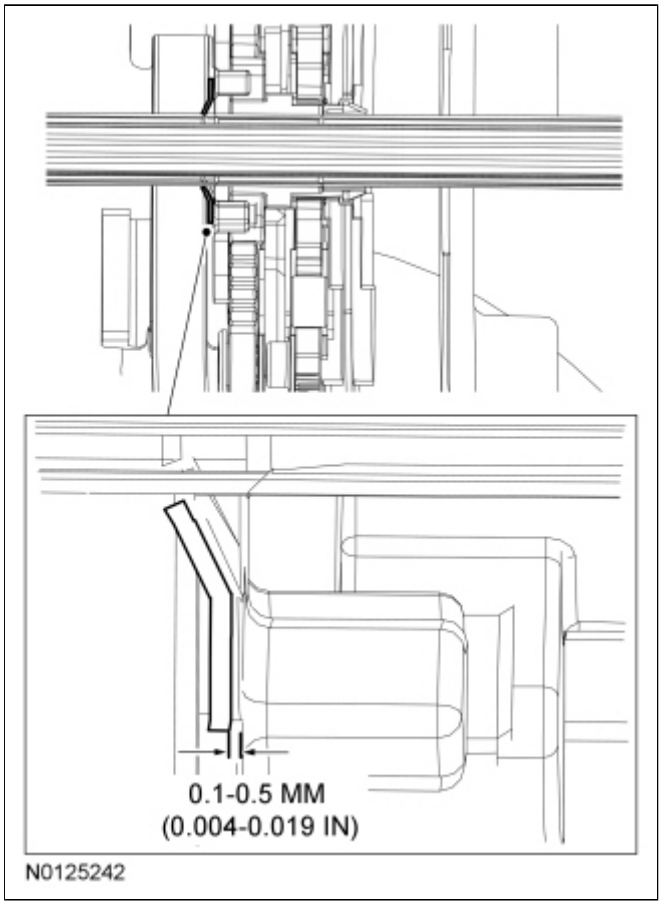
6. Push the recliner handle fully toward the inboard side of the seat then release the pressure on the recliner handle.

7. **NOTE:** RH recliner plate is shown, LH recliner plate is similar.

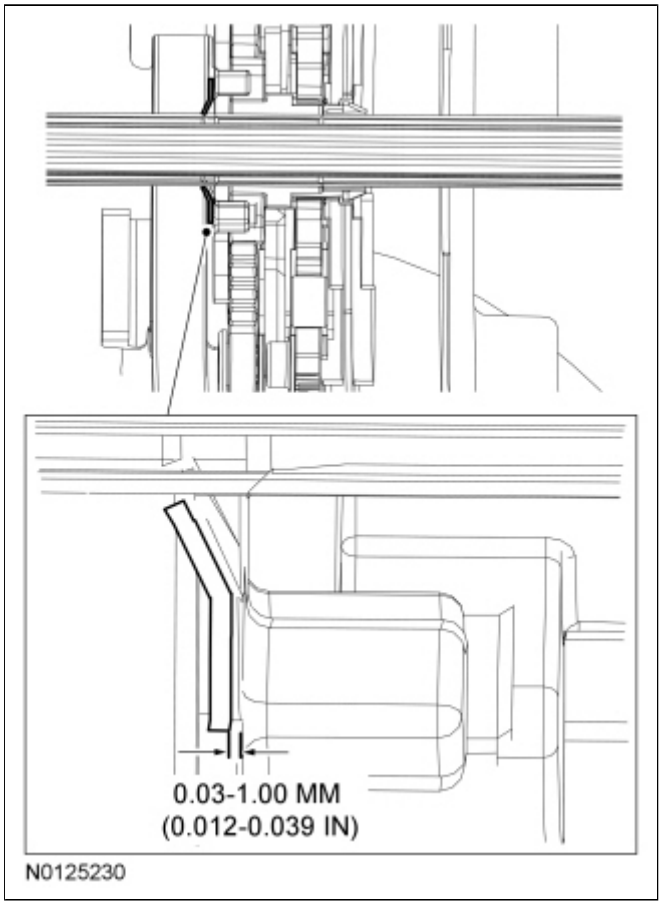
   Immobilize the recliner shaft by using 2 long nose locking pliers clamped to the shaft, flush to the inside edges of both recliner plates.



8. Measure the clearance between the inboard push nut and bushing.
   - If the clearance between the inboard push nut and the bushing exceeds 0.5 mm (0.019 in), install a 0.5 mm (0.019 in) feeler gauge or shim between the inboard push nut and the bushing and slide the inboard push nut tight against the feeler gauge or shim.



9. Remove the feeler gauge or shim.
10. Remove the recliner handle.
11. Push the outboard push nut (located behind the recliner handle) flush to the outboard bushing.
12. Remove the long nose locking pliers.
13. Slide the recliner shaft outward until the inboard push nut contacts the bushing.
14. Verify the clearance between the outboard push nut and bushing is between 0.3 mm and 1.0 mm (0.011 in and 0.039 in).



15. Install the recliner handle and bolt.
16. Install the inner recliner cover and screw.
17. Install the seat. For additional information, refer to Seat — Front in this section.

Seat Backrest Cover — Front

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Removal

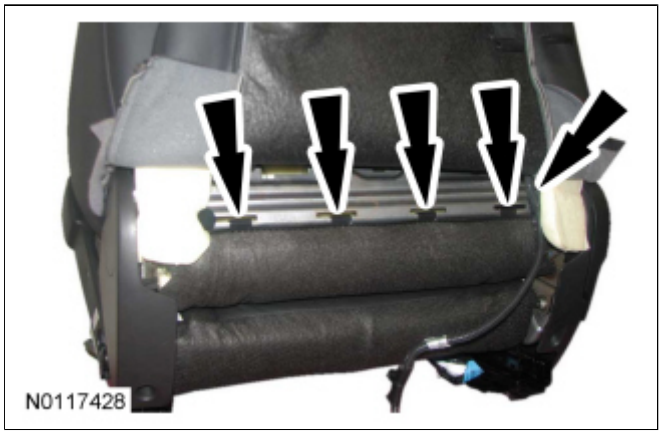
WARNING: Front seat backrest trim covers installed on seats equipped with seat side air bags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: For parts identification and location, refer to Seat — Exploded View, Front in this section.

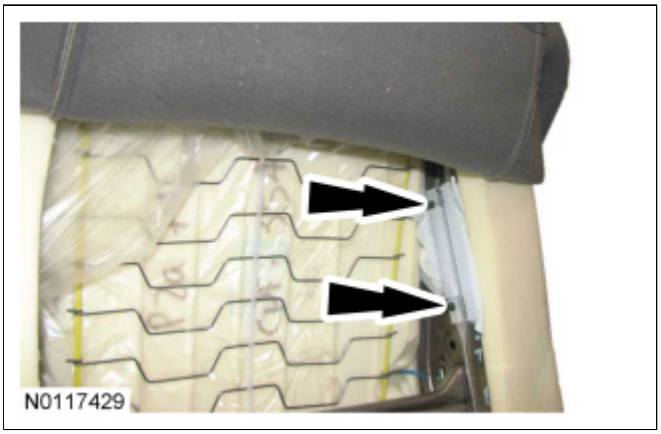
NOTE: Note all harness routing for correct installation.

1. Remove the front seat backrest. For additional information, refer to Seat Backrest — Front in this section.
2. Remove the 2 head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section.
3. Detach the backrest cover retainers.



4. Invert the backrest cover up enough to expose the side air bag deployment chute.
5. Remove the rivets from the deployment chute J-clip retainers.

- From the back of the rivet, push the rivet stud end in and pull the head out from the other side.



6. Slide the 2 deployment chute J-clip retainers apart.

7. Pull the side air bag module deployment chute and J-clips through the opening in the backrest foam pad.
   - Note positioning of the deployment chute for correct installation.

8. Invert the backrest cover and remove row of hog rings.

9. Release the J-clip from the backrest frame.

10. Remove the backrest cover.

Installation

1. Install the backrest cover. Roll down the cover and install 3 hog rings.

2. Attach the J-clip to the backrest frame.

3. **WARNING: Before installing the seat side air bag module/deployment chute assembly:**
   - **Inspect the side air bag module and mounting surfaces for any damage or foreign material.**
   - **Remove any foreign material from the mounting surfaces of the deployment chute, the seat backrest frame mounting bracket and the air bag module cavity in the seat backrest foam pad.**
   - **Install new parts if damaged.**

   Failure to follow these instructions may result in the seat side air bag deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

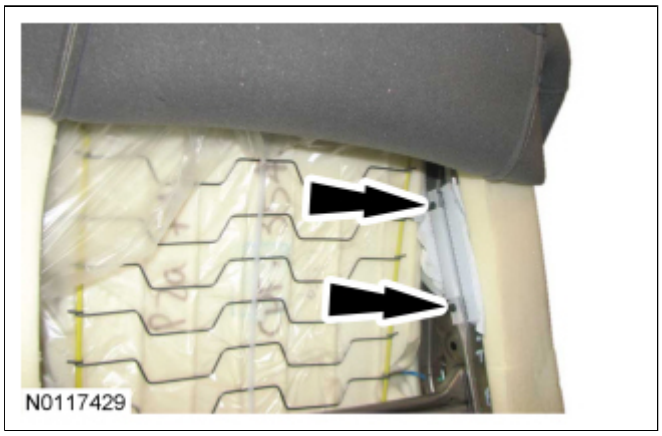
   WARNING: Check the seat side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, a new seat back trim cover and deployment chute must be installed as a unit. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

   WARNING: If the seat side air bag module deployment chute is not correctly positioned and closed, the seat side air bag module may not deploy correctly. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

Wrap the deployment chute around the side air bag module and backrest frame.

1. Position the outboard side of the air bag deployment chute around the outboard side of the backrest frame and pad.
2. Insert the inboard side of the air bag deployment chute between the seat backrest frame and pad.

4. Engage the deployment chute J-clip retainers and install plastic rivets at the top and bottom of the J-clip retainers.



5. Roll the backrest cover down around the backrest frame.

6. Attach the backrest cover retainers to the rear of the backrest frame.

7. Install the 2 head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section

8. Install the head restraint.

9. Install the front seat backrest. For additional information, refer to Seat Backrest — Front in this section.

Seat Cushion Cover — Front

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Removal and Installation

WARNING: Make sure the front passenger seat repair is complete, the seat and all attached components (head restraint, seat side shield, etc.) are correctly assembled, and the seat is correctly installed to the vehicle before carrying out the System Reset. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.

NOTICE: **To prevent system failure, it is necessary to carry out the Occupant Classification System (OCS) reset when a front passenger seat cushion is disassembled, a new trim cover installed or an OCS service kit is installed. A scan tool is used to carry out the OCS system reset command.**

NOTE: For component identification and locations, refer to Seat — Exploded View, Front .

All seats

1. Remove the seat. For additional information, refer to Seat — Front in this section.

Passenger seat with a service kit Occupant Classification System (OCS)

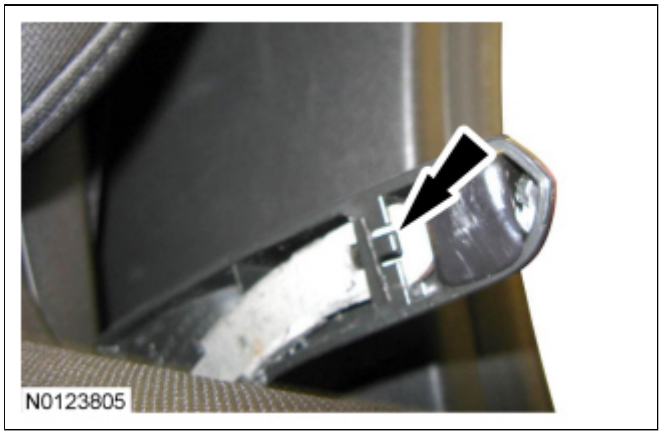
2. Remove the Occupant Classification System (OCS) sensor. For additional information, refer to Section 501-20B .

Driver seat and passenger seat with Original Equipment (OE) OCS

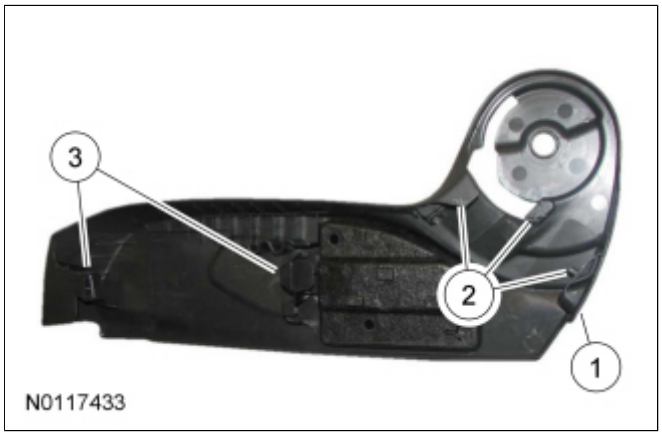
3. **NOTE:** Passenger seat shown, driver seat similar.

   Remove the recliner handle bolt cover, the bolt and the recliner handle.

4. If equipped, release the tab and remove the height adjust handle.
    - Lift height adjust handle.
    - Release the tab and slide the handle from the lever.



5. Remove the cushion side shield.
    1. Remove the screw at the rear of the cushion side shield.
    2. Pull out at the back of the cushion side shield to release the locator pins and tab.
    3. Slide the cushion side shield forward to disengage the brackets and remove the cushion side shield.



6. Remove the screw and the inner recliner cover.

7. **NOTE:** Passenger seat shown, driver seat similar.

   From under the seat, carry out the following.
    - Disconnect the side air bag module electrical connector and detach the wire harness

retainer.
- Disengage the 4 backrest cover elastic strap retainers attached to the bottom rear of the seat.

8. Remove the cushion and cover from the seat track and seat cushion frame.

All seats

9. Remove the cushion cover.
   - Release the hook -and-loop strip.
   - Remove the hog rings and the cushion cover.

Installation

All seats

1. Attach the cushion cover to the cushion.
   - Secure using new hog rings.
   - Secure the hook -and-loop strip.

Passenger seat with a service kit OCS

2. Install the Occupant Classification System (OCS) sensor. For additional information, refer to Section 501-20B .

Driver seat and passenger seat with OE OCS

3. Install the cushion and cover as an assembly.

4. From under the seat, carry out the following.
   - Engage the 4 backrest cover elastic strap retainers attach to the bottom rear of the seat.
   - Connect the side air bag module electrical connector and attach the wire harness retainer.

5. Install the inner recliner cover and screw.

6. Install the cushion side shield in the following sequence.
   1. Position and slide the cushion side shield rearward to engage the brackets.
   2. Install the screw at the rear of the cushion side shield.

7. If equipped install the height adjust the handle.

8. Install the recliner handle, bolt and cover.

All seats

9. Install the seat. For additional information, refer to Seat — Front in this section.

Passenger Seat

10. **WARNING: Occupant classification system(OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.**

    NOTICE: **To prevent system failure, take the following precautions before carrying out the Occupant Classification System (OCS) system reset:**
    - **Make sure the voltage to the Occupant Classification System Module (OCSM) is greater than 8 volts and less than 18 volts.**
    - **Make sure the OCS system is not at a temperature below 6°C (42°F) or above 36°C (97°F) when initiating the OCS system reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature between 6°C to 36°C (42°F to 97°F) for a minimum of 30 minutes.**
    - **Make sure nothing is present on the passenger seat before and during the OCS system reset process.**
    - **Prior to carrying out the OCS system reset, make sure a minimum of 8 seconds has elapsed after cycling the ignition switch ON.**

    Carry out the OCS system reset.

11. If the first system reset attempt was unsuccessful, carry out a thorough visual inspection of the following and repair any concerns found.
    - OCS system connector and wiring for damage.
    - Pressure sensor hose for kinks and/or damage.
    - Seat-related wiring harness and body wiring harness terminals and connectors for damage.

12. **NOTE:** Cycle the ignition switch after the OCS system reset.

    Carry out a second OCS system reset. If the second attempt is unsuccessful, install a new OCS system service kit. For additional information, refer to Occupant Classification System in Section 501-20B .

13. Prove out the SRS as follows:
    Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
    - fail to light.
    - remain lit continuously.
    - flash at a 5 Hz rate (RCM not configured).

    The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
    Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

Seat Cushion Heater Mat

Removal

NOTE: For parts identification and location, refer to Seat — Exploded View, Front in this section.

Passenger seat

1. ***NOTICE:*** **Do not install a new heater mat on a front passenger seat cushion. If a new cushion heater mat is needed on the front passenger seat, an Occupant Classification System (OCS) service kit equipped with a heater mat must be installed. Failure to follow this instruction may result in incorrect operation of the OCS .**

   Install a new OCS service kit. For additional information, refer to Section 501-20B .

Driver seat

2. Remove the driver seat cushion cover. For additional information, refer to Seat Cushion Cover — Front in this section.

3. ***NOTICE:*** **Do not reinstall any heater mat after removal. The adhesive will not adhere correctly to the foam pad, causing it to bunch up or shift out of place. A new heater mat must be installed. Failure to follow these instructions can result in heated seat component damage and system failure.**

   Carefully peel and remove the cushion heater mat from the seat cushion foam pad and route the wire harness through the cushion foam pad opening.
   - It is acceptable for a thin layer of foam to peel away with the old heater mat. The new heater mat will adhere to the foam pad, but if foam tearing occurs or if any pieces of foam are removed, install a new foam pad.

Installation

1. Install a new heater mat straight on the foam pad and without any wrinkles that may show through the cover after installation.

2. Install the seat cushion cover. For additional information, refer to Seat Cushion Cover — Front in this section.

Seat Track

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Disassembly and Assembly

NOTICE: **To prevent system failure, it is necessary to carry out the Occupant Classification System (OCS) system reset when a front passenger seat cushion is disassembled, a new cushion cover is installed or an OCS service kit is installed.**

NOTICE: **Do not install a new heater mat on a front passenger seat cushion, it is not serviceable separately. If a new cushion heater mat is needed on the front passenger seat, an Occupant Classification System (OCS) service kit equipped with a heater mat must be installed. Failure to follow this instruction may result in incorrect operation of the OCS . Refer to Section 501-20B for the OCS removal and installation.**

NOTE: Occupant Classification System (OCS) components, seat cushion foam pad, bladder with pressure sensor and Occupant Classification System Module (OCSM) are calibrated to each other and are serviced as an assembly. The OCS components are not to be installed separately. If a new OCS , OCS component or seat cushion foam pad are needed, a new OCS service kit (seat cushion foam pad, bladder with pressure sensor and OCSM) must be installed as an assembly.

NOTE: For component identification and locations, refer to Seat — Exploded View, Front in this section.

All seats

1. Remove the backrest. For additional information refer to Seat Backrest — Front in this section.

Passenger seat

2. Remove the OCS sensor. For additional information, refer to Section 501-20B .

Driver seat

3. Remove seat cushion and cover from the seat track and seat cushion frame.

4. **NOTE:** Note the wire harness routing for installation.

   Remove the seat wire harness.
   - Release the retainers.

Passenger seat

5. Remove 2 screws and the OCSM bracket.

All seats

6. Remove the safety belt buckle.
    - Disconnect the safety belt buckle electrical connector.
    - Remove the bolt and the safety belt buckle assembly.

7. Remove the seat position sensor.
    - Remove the retaining clip.
    - Slide sensor rearward to remove.

8. Remove the screw and the wire harness bracket.

9. Remove the screw and the seat track position sensor bracket.

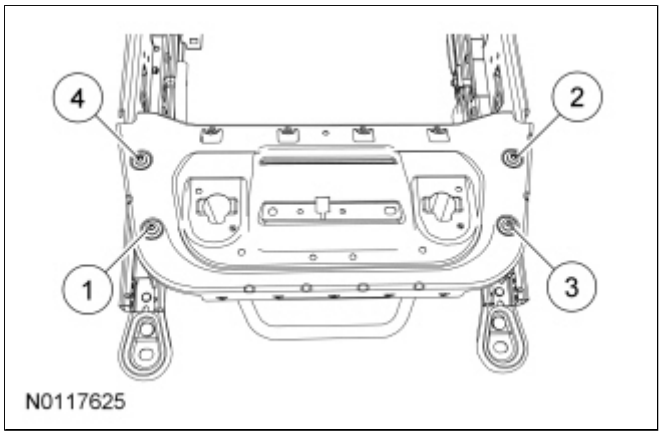
10. Remove the cushion support spring.
    - Release the cushion spring from the seat track and cushion pan.

11. Remove the 4 retainers and the cushion pan.

Assembly

All seats

1. Position the cushion pan and install the 4 screws in the sequence shown.
    - Tighten to 4 Nm (35 lb-in).



2. Install the cushion support spring.

3. Position the seat track position sensor bracket and install the screw.

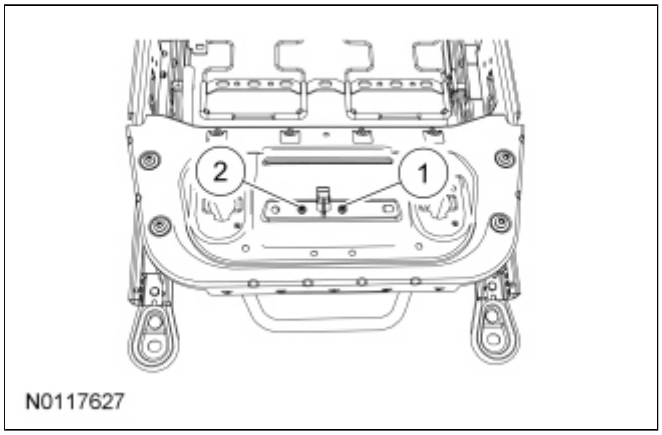
4. Position the wire harness bracket and install the screw.

5. Install the seat position sensor.
    - Secure the lock tab.

6. Position the safety belt buckle and install the bolt.
    - Tighten to 48 Nm (35 lb-ft).

Passenger seat

7. Position the OCSM bracket and install the 2 screws in the sequence shown.
    - Tighten to 3 Nm (27 lb-in).



8. Install the OCS . For additional information, refer to Section 501-20B .

Driver seat

9. Install the seat wire harness.
   - Attach retainers.

10. Install seat cushion and cover from the seat track and seat cushion frame.

All seats

11. Position the backrest to the cushion frame and install the 4 backrest mounting bolts.
    - Tighten to 48Nm (35 lb-ft).

12. From under the seat, carry out the following.
    - Engage the 4 backrest cover elastic strap retainers attach to the bottom rear of the seat.
    - Connect the side air bag module electrical connector and attach the wire harness retainer.

13. Install the cushion side shield in the following sequence.
    1. Position and slide the cushion side shield rearward to engage the brackets.
    2. Install the screw at the rear of the cushion side shield.

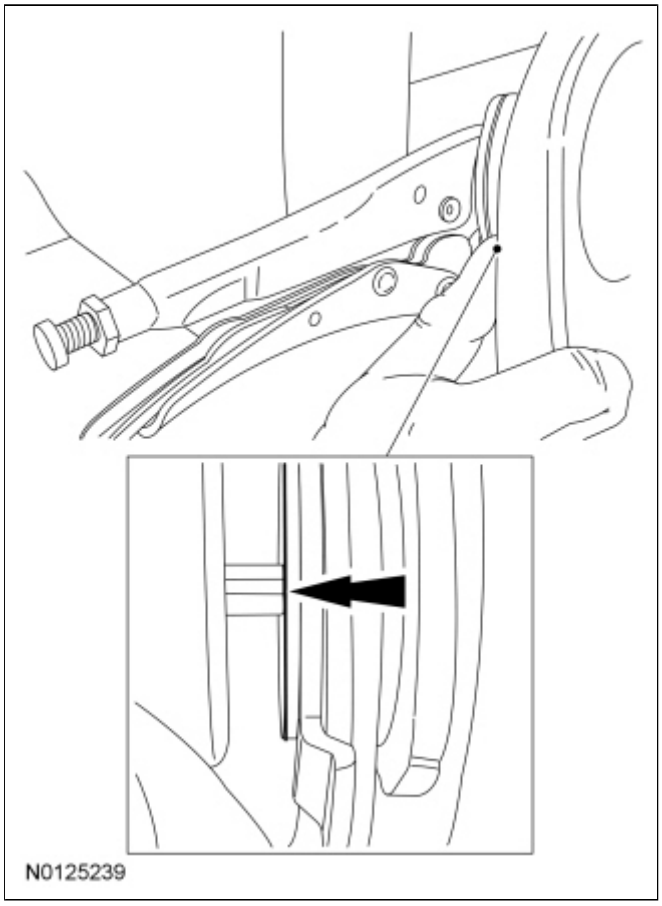
14. If equipped install the height adjust handle.

15. Install the recliner handle and bolt.

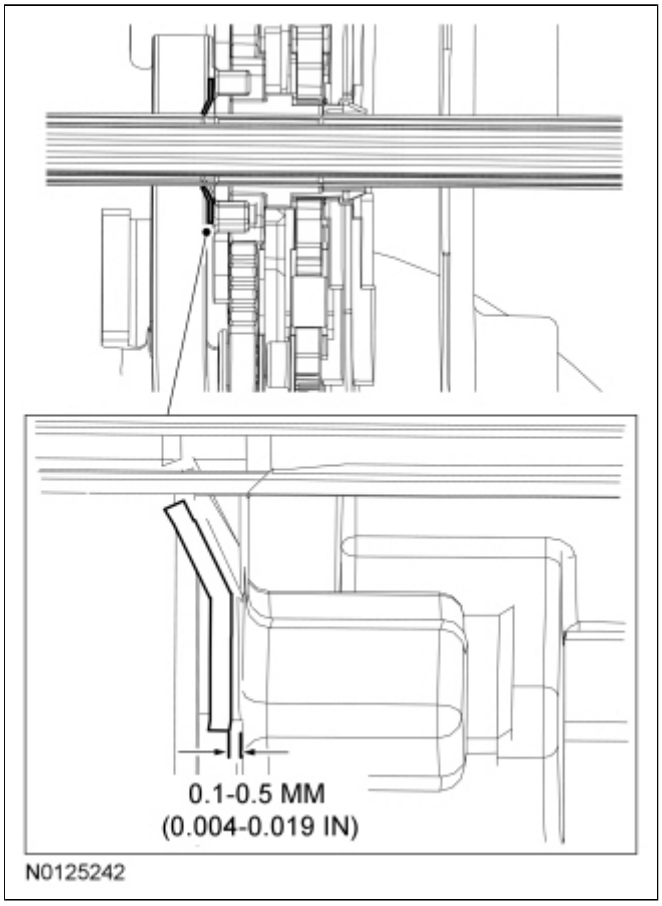
16. Push the recliner handle fully toward the inboard side of the seat then release the pressure on the recliner handle.

17. **NOTE:** RH recliner plate is shown, LH recliner plate is similar.

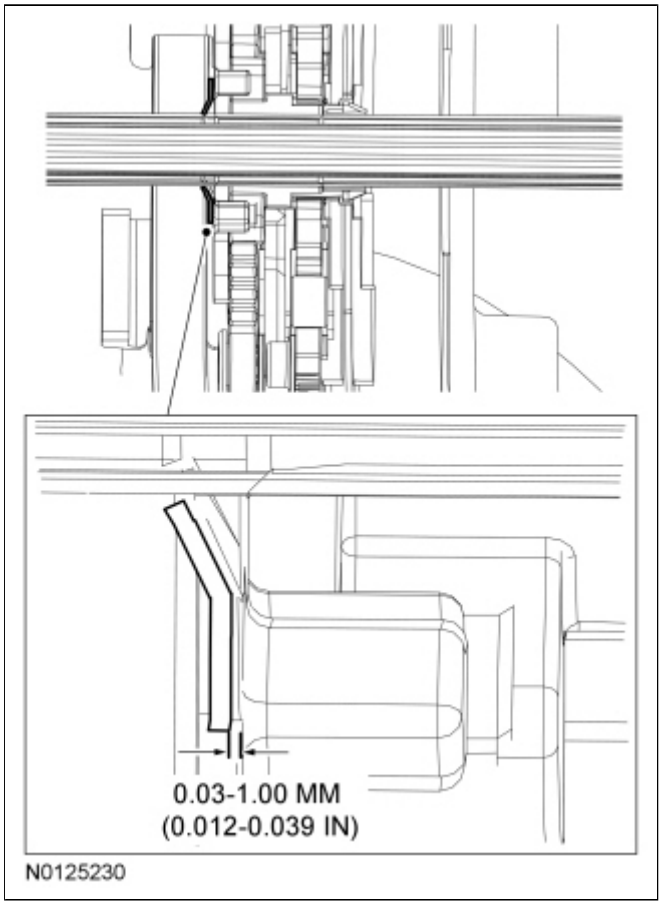
    Immobilize the recliner shaft by using 2 long nose locking pliers clamped to the shaft, flush to the inside edges of both recliner plates.



18. Measure the clearance between the inboard push nut and bushing.
    - If the clearance between the inboard push nut and the bushing exceeds 0.5 mm (0.019 in), install a 0.5 mm (0.019 in) feeler gauge or shim between the inboard push nut and the bushing and slide the inboard push nut tight against the feeler gauge or shim.
    - If the clearance between the inboard push nut and the bushing is less than 0.5 mm (0.019 in), remove and discard the push nut. Install a new push nut, using a 0.5 mm (0.019 in) feeler gauge or shim between the inboard push nut and the bushing, slide the inboard push nut tight against the feeler gauge or shim.



19. Remove the feeler gauge or shim.
20. Remove the recliner handle.
21. Push the outboard push nut (located behind the recliner handle) flush to the outboard bushing.
22. Remove the long nose locking pliers.
23. Slide the recliner shaft outward until the inboard push nut contacts the bushing.
24. Verify the clearance between the outboard push nut and bushing is between 0.3 mm and 1.0 mm (0.011 in and 0.039 in).



25. Install the recliner handle and bolt.

26. Install the inner recliner cover and screw.

Passenger seat with an OCS

27. **WARNING: Occupant classification system(OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.**

    NOTICE: **To prevent system failure, take the following precautions before carrying out the Occupant Classification System (OCS) system reset:**
    - **Make sure the voltage to the Occupant Classification System Module (OCSM) is greater than 8 volts and less than 18 volts.**
    - **Make sure the OCS system is not at a temperature below 6°C (42°F) or above 36°C (97°F) when initiating the OCS system reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature between 6°C to 36°C (42°F to 97°F) for a minimum of 30 minutes.**
    - **Make sure nothing is present on the passenger seat before and during the OCS system reset process.**
    - **Prior to carrying out the OCS system reset, make sure a minimum of 8 seconds has elapsed after cycling the ignition switch ON.**

    Carry out the OCS system reset.

28. If the first system reset attempt was unsuccessful, carry out a thorough visual inspection of the following and repair any concerns found.
    - OCS system connector and wiring for damage.

- Pressure sensor hose for kinks and/or damage.
- Seat-related wiring harness and body wiring harness terminals and connectors for damage.

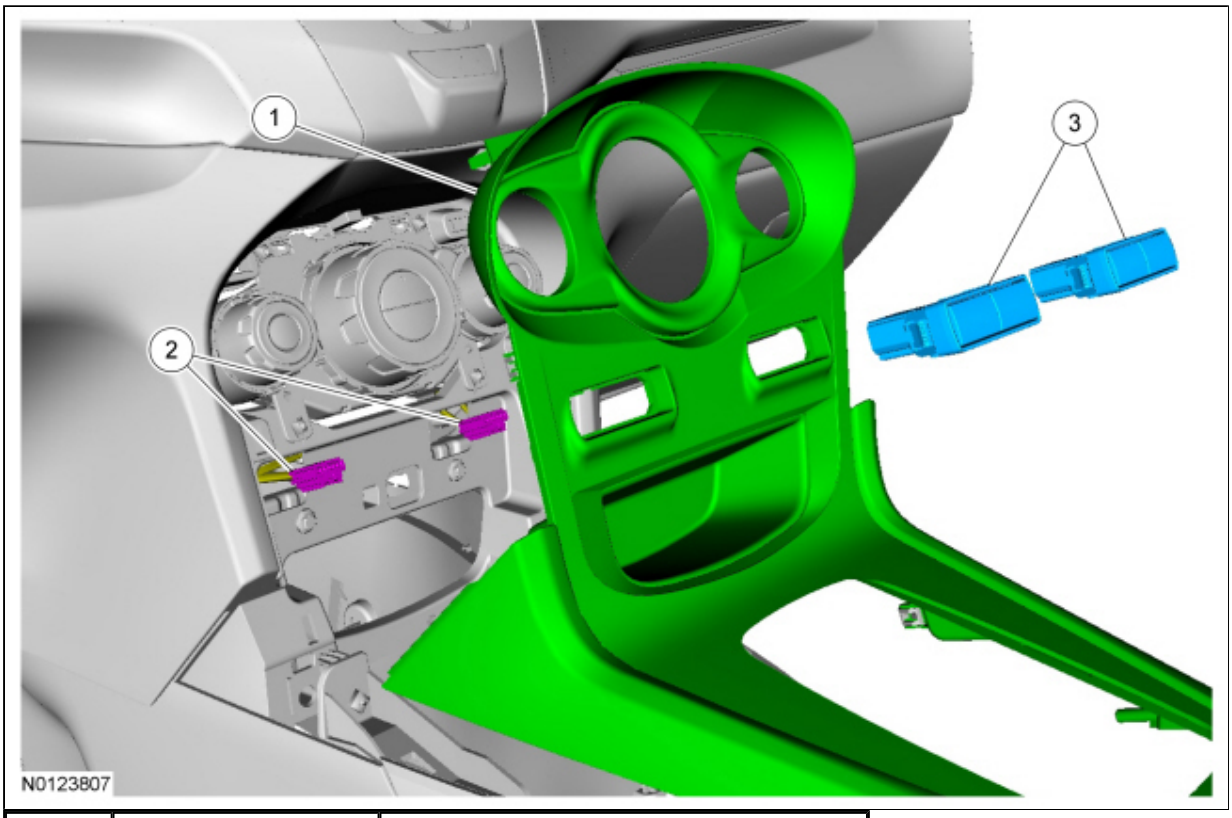
29. **NOTE:** Cycle the ignition switch after the OCS system reset.

    Carry out a second OCS system reset. If the second attempt is unsuccessful, install a new OCS system service kit. For additional information, refer to Occupant Classification System in Section 501-20B .

30. Prove out the SRS as follows:
    Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
    - fail to light.
    - remain lit continuously.
    - flash at a 5 Hz rate (RCM not configured).

    The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
    Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

Heated Seat Switch



Item	Part Number	Description
1	5404644	Lower finish panel
2	—	Connector (part of 14401)
3	14D694	Heated seat switch

Removal and Installation

1. Remove the lower instrument panel finish panel. For additional information, refer to Section 501-12 .
2. Release the tabs and remove the heated seat switch.

Installation

1. Install the heated seat switch.
2. Install the lower instrument panel finish panel. For additional information, refer to Section 501-12 .

Head Restraint Guide Sleeve

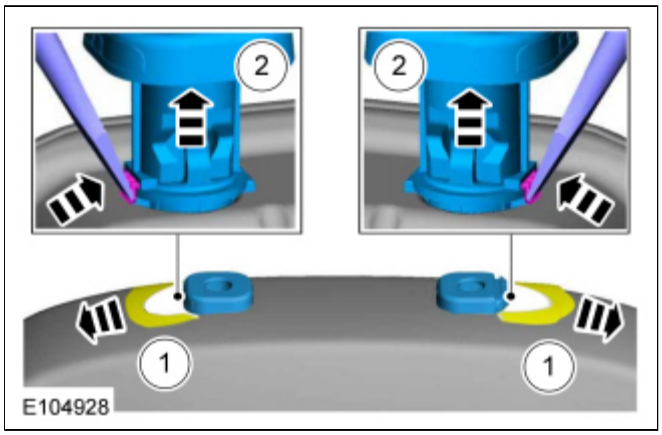
Removal

NOTE: Typical head restraint guide sleeve shown, others similar.

1. Push in on the 2 head restraint guide sleeve release buttons and remove the head restraint.

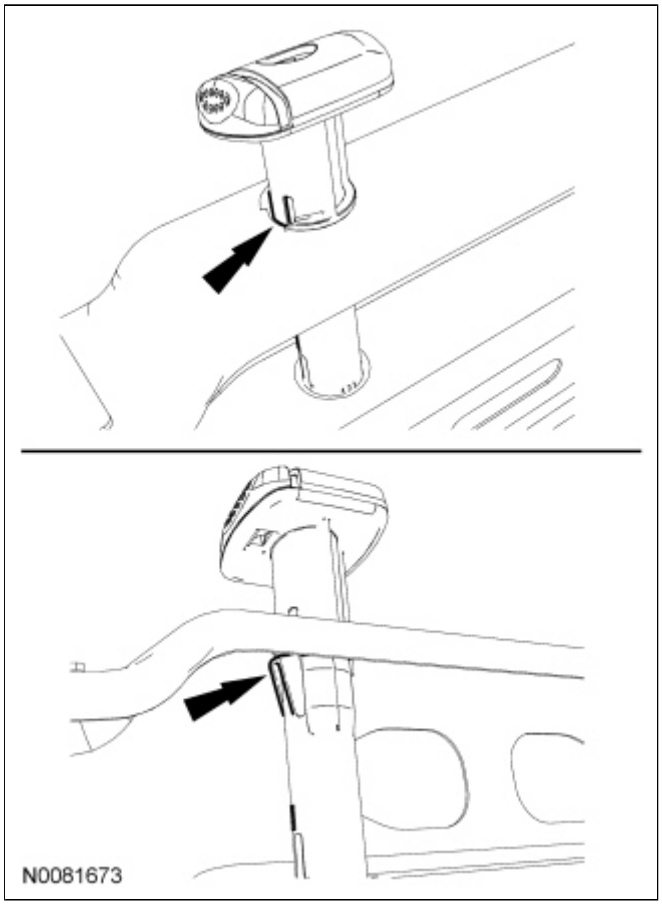
2. Obtain a flat-head screwdriver with a width of 4 mm (0.157 in) to 7 mm (0.275 in) and a thickness of approximately 1 mm (0.039 in).

3. Locate the lock feature on the head restraint guide sleeve.
    1. Position the screwdriver between the head restraint guide sleeve neck and backrest trim cover and foam pad.
    2. Locate the screwdriver on the lock feature and position at a 45-degree angle.

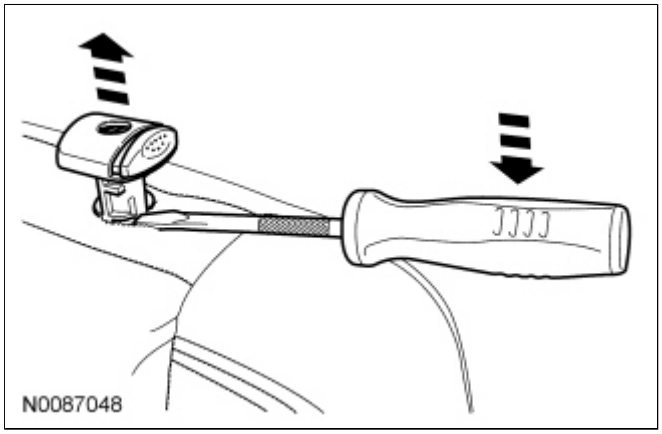


4. **NOTE:** For retainer clarity, backrest trim cover and foam pad are removed.

    Push in the screwdriver, bending the lock feature on the head restraint guide sleeve in.



5. While bending the lock feature in, push down on the screwdriver handle, prying the head restraint guide sleeve up and disengaging it from the backrest frame crossmember.



6. Remove the head restraint guide sleeve.
    - Discard the head restraint guide sleeve.

7. Repeat these steps for the head restraint guide sleeve on the opposite side.

Installation

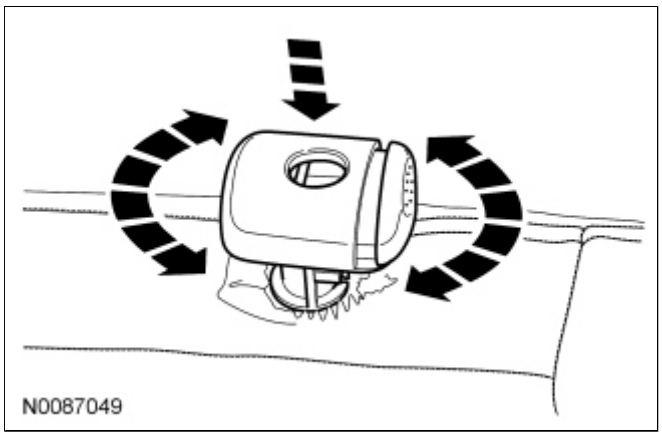
NOTICE: **Always install new head restraint guide sleeves. Difficult adjustment of the head restraint may occur. Failure to follow these instructions may result in component failure.**

NOTICE: **The head restraint guide sleeves are not interchangeable. Failure to install the correct head restraint guide sleeve at the correct position may result in component failure.**

1. Make sure the holes in the backrest foam pad and backrest trim cover are aligned to the holes in the backrest frame.

2. **NOTE:** The guide sleeve will only fit into the backrest frame when the guide sleeve alignment tabs align with the keyway opening in the backrest frame.

   To allow the head restraint guide sleeve to slide freely through the backrest foam pad and backrest trim cover, twist the head restraint guide sleeve to align the keyway tabs while pushing it into the backrest frame hole as far as it will go with hand pressure.



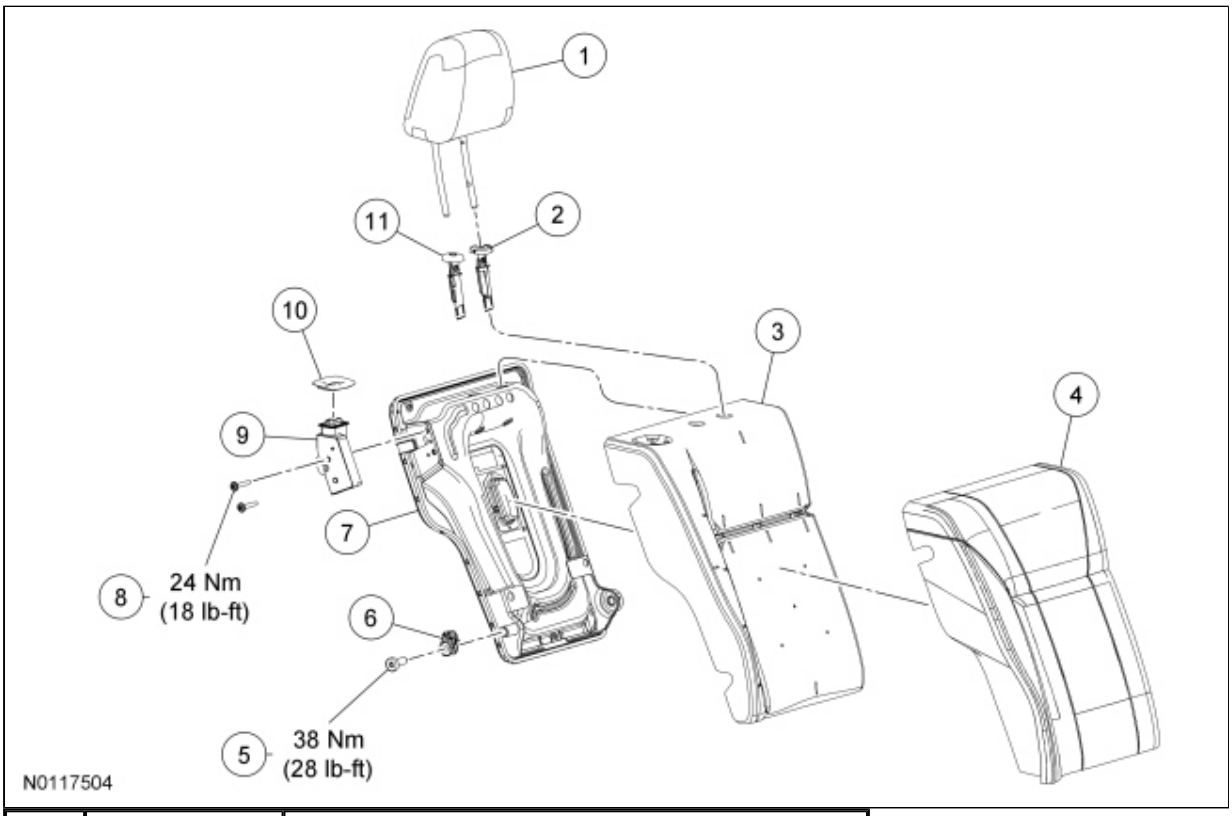
3. Inspect the head restraint guide sleeve.
   - Pull the head restraint guide sleeve out by hand, making sure it is locked in place. If the head restraint guide sleeve can be removed by hand, repeat the installation procedure. If the head restraint guide sleeve can be removed again after installing a second time, install a new head restraint guide sleeve.

4. Repeat these steps for the head restraint guide sleeve on the opposite side.

5. After installation of 2 new head restraint guide sleeves, install the head restraint in the following sequence.
   1. Position the head restraint rods to the head restraint guide sleeve holes.
   2. Push the head restraint down, guiding the rods into the head restraint guide sleeve holes.
   3. Make sure the head restraint adjusts without excessive effort and locks in place.

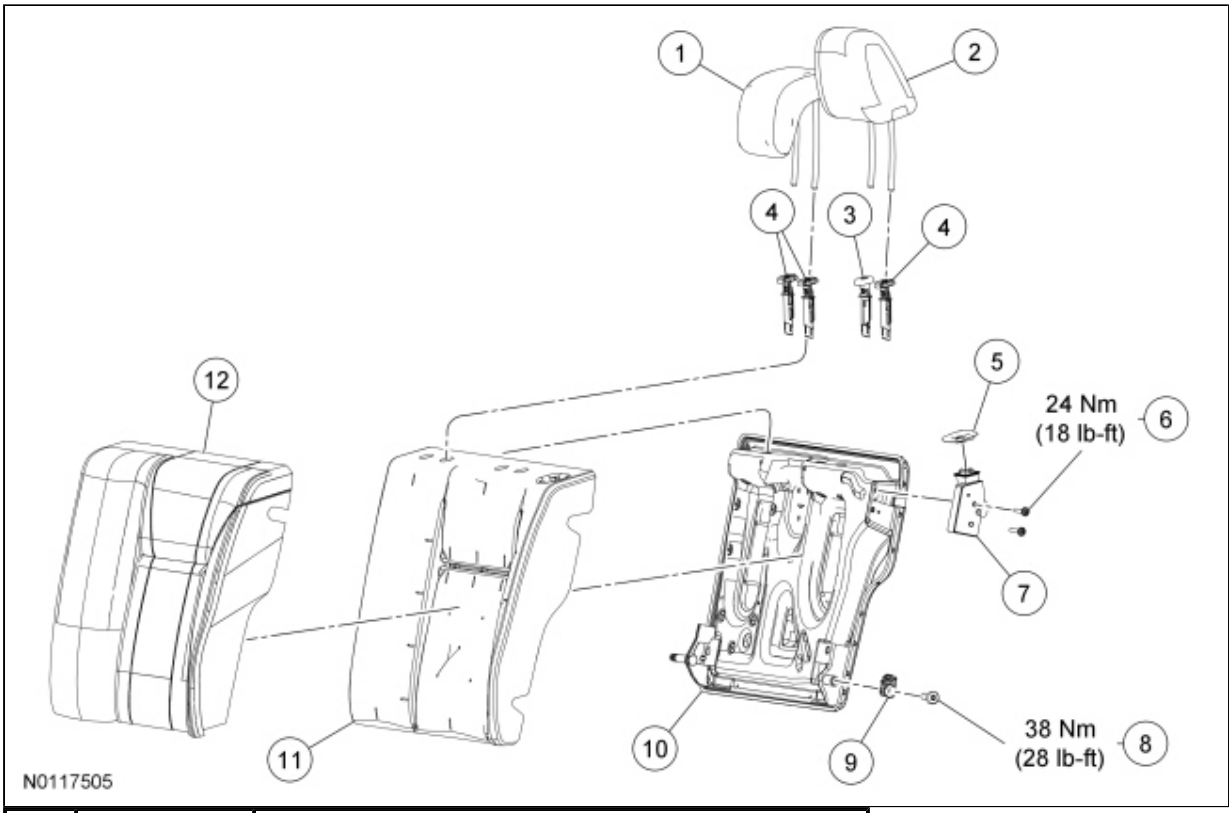
Seat — Exploded View, Rear

Seat Backrest — 40 Percent



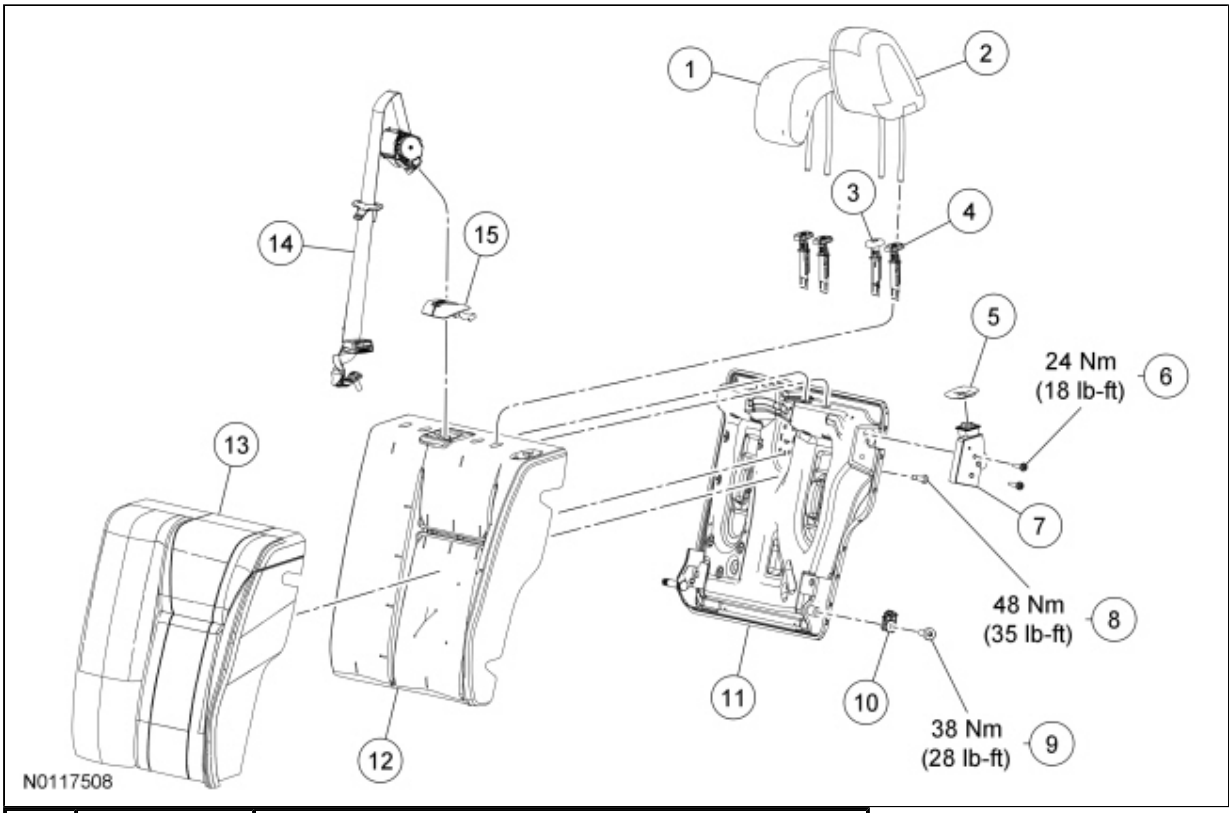
Item	Part Number	Description
1	611A08	Head restraint
2	610A16	Head restraint guide sleeve (lockable)
3	66800	Backrest foam pad
4	66600	Backrest cover
5	—	Hinge pin bolt (part of 613B48)
6	613B48	Hinge pin
7	60508	Backrest frame
8	W790247	Backrest latch bolt (2 required)
9	61382	Backrest latch
10	624A08	Backrest latch bezel
11	610A18	Head restraint guide sleeve (non-lockable)

Seat Backrest — 60 Percent, 4-Door Sedan



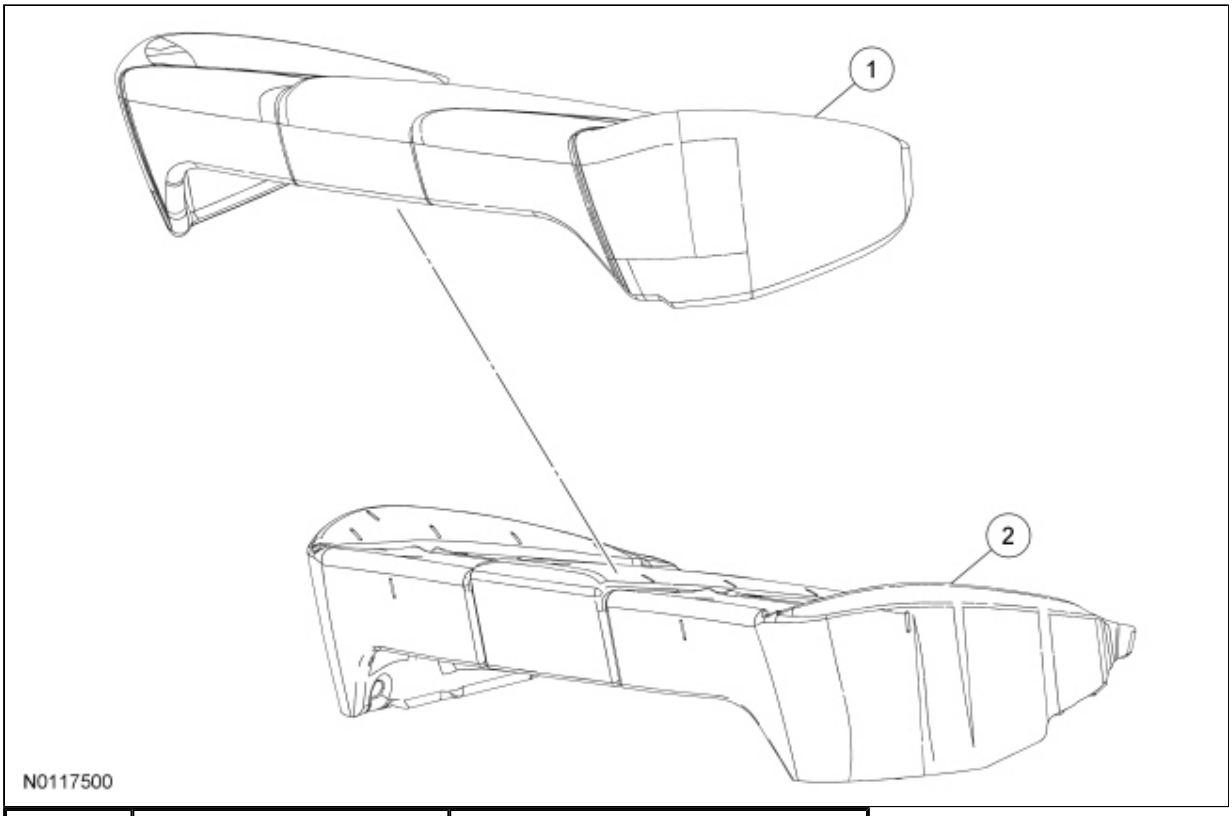
Item	Part Number	Description
1	611A08	Head restraint (center)
2	611A08	Head restraint (LH)
3	610A18	Head restraint guide sleeve (non-lockable)
4	610A16	Head restraint guide sleeve (3 required) (lockable)
5	624A08	Backrest latch bezel
6	W790247	Backrest latch bolt (2 required)
7	61383	Backrest latch
8	—	Hinge pin bolt (part of 613B48)
9	613B48	Hinge pin
10	60509	Backrest frame
11	66801	Backrest foam pad
12	66601	Backrest cover

Seat Backrest — 60 Percent, 5-Door Hatchback



Item	Part Number	Description
1	611A08	Head restraint (center)
2	611A08	Head restraint (LH)
3	610A18	Head restraint guide sleeve (non-lockable)
4	610A16	Head restraint guide sleeve (3 required) (lockable)
5	624A08	Backrest latch bezel
6	W790247	Backrest latch bolt (2 required)
7	61383	Backrest latch
8	—	Safety belt retractor bolt (part of 611B66)
9	—	Hinge pin bolt (part of 613B48)
10	613B48	Hinge pin
11	60509	Backrest frame
12	66801	Backrest foam pad
13	66601	Backrest cover
14	611B66	Safety belt retractor
15	611A70	Safety belt retractor bezel

Seat Cushion



Item	Part Number	Description
1	63804	Cushion cover
2	63840	Cushion foam pad

1. For additional information, refer to the procedures in this section.

Seat Backrest — Rear

Seat Backrest — Rear, 40 Percent

NOTE: Some parts removed for clarity.

	Part	

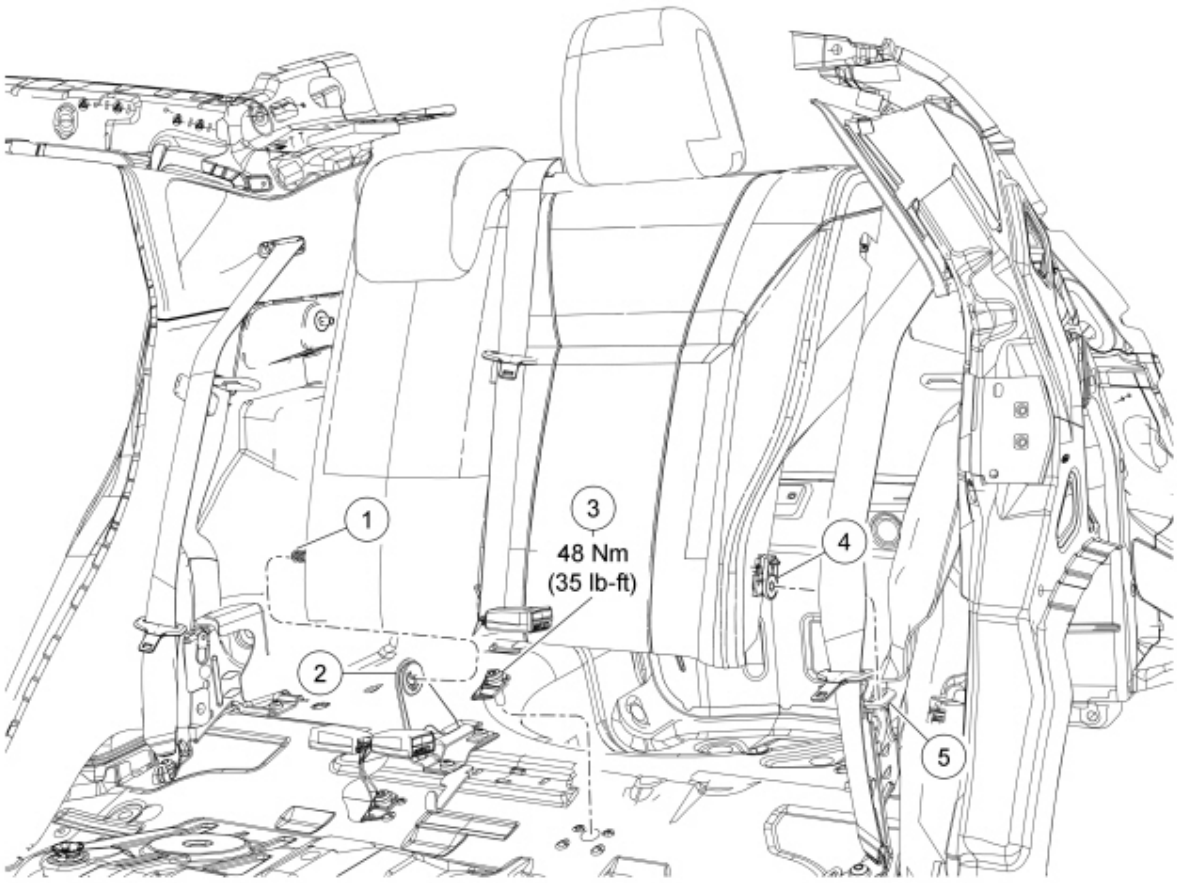
Item	Number	Description
1	60508	Backrest frame, 40 percent
2	—	Backrest frame mounting pin, 60 percent (part of 60509)
3	613B90	RH outboard backrest hinge
4	613B48	Hinge pin and bolt

Seat Backrest — Rear, 60 Percent

NOTE: The 40 percent backrest must be removed before the 60 percent backrest can be removed.

NOTE: 5 door hatchback is shown, 4 door sedan is similar.

NOTE: Some parts removed for clarity.



N0117733

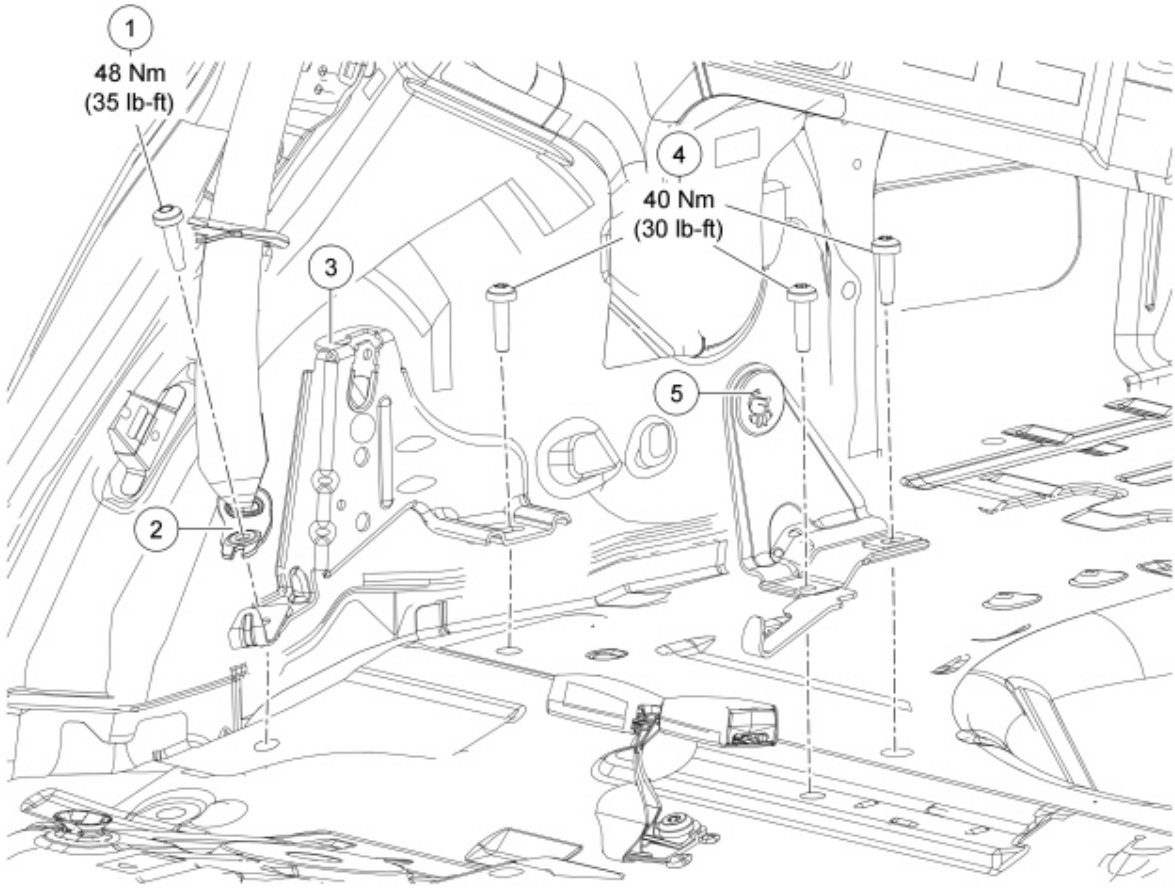
Item	Part Number	Description
1	—	Backrest frame mounting pin, 60 percent (part of 60509)

2	60615	Center backrest hinge
3	—	Safety belt anchor bolt (part of 611B66) (5-door hatchback only)
4	613B48	Hinge pin and bolt
5	613B91	Outboard backrest hinge

Seat Backrest Hinges — Rear

NOTE: RH outboard backrest hinge shown, LH similar.

NOTE: Always install new backrest hinge and safety belt anchor bolts.



Item	Part Number	Description
1	W703708	Safety belt anchor bolt
2	—	Safety belt anchor (part of 611B68/RH 611B69/LH)
3	613B90 (RH) / 613B91 (LH)	Outboard backrest hinge

4	W707941	Backrest hinge bolt (3 required)
5	60615	Center backrest hinge

Removal and Installation

5 - Door hatchback - 60 Percent backrest

1. Remove the rear seat cushion assembly. For additional information, refer to Seat Cushion — Rear in this section.

2. Remove the safety belt anchor bolt.
   - Tighten to 48 Nm (35 lb-ft).

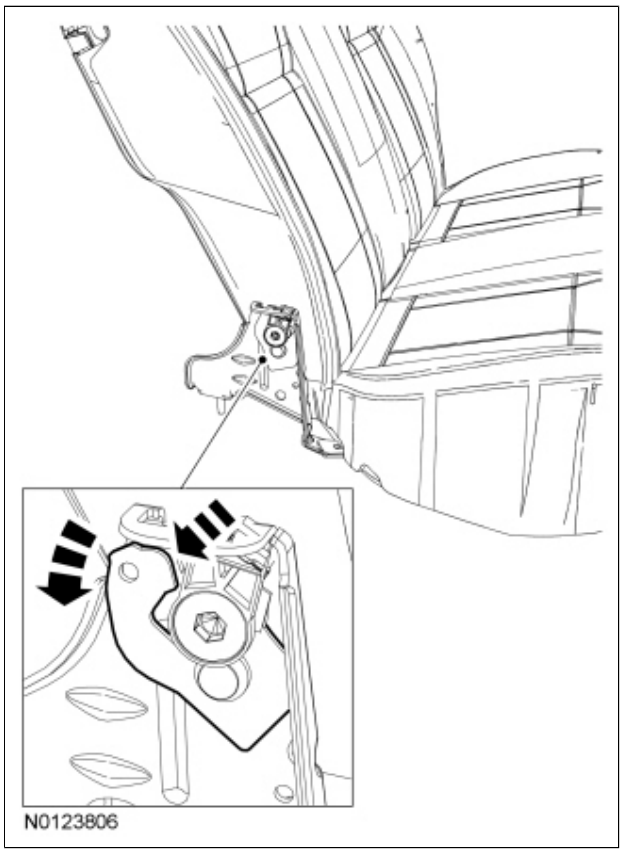
All backrests

NOTE: The 40 percent seat backrest has to be removed before the 60 percent seat backrest.

3. Push the backrest release button at the top of the seat backrest and fold the seat down.

4. **NOTE:** The latch hook is identified with a white paint mark.

   Tap the latch to unlock the outboard hook latch.
   - Pivot the outboard latch hook rearward to disengage.
   - To install, push the seat backrest hinge into the latch bracket until the hook latch is fully seated.



5. Remove the seat backrest.
   1. Pull the outboard side of the backrest up out of the latch bracket.
   2. Position the 40 percent outboard backrest hinge pin bolt to the rear of the outboard backrest hinge.
   3. Pull the seat backrest outward and slightly twist forward while removing from the center mounting bracket.

All hinges

6. Remove the rear seat cushion assembly. For additional information, refer to Seat Cushion — Rear in this section.

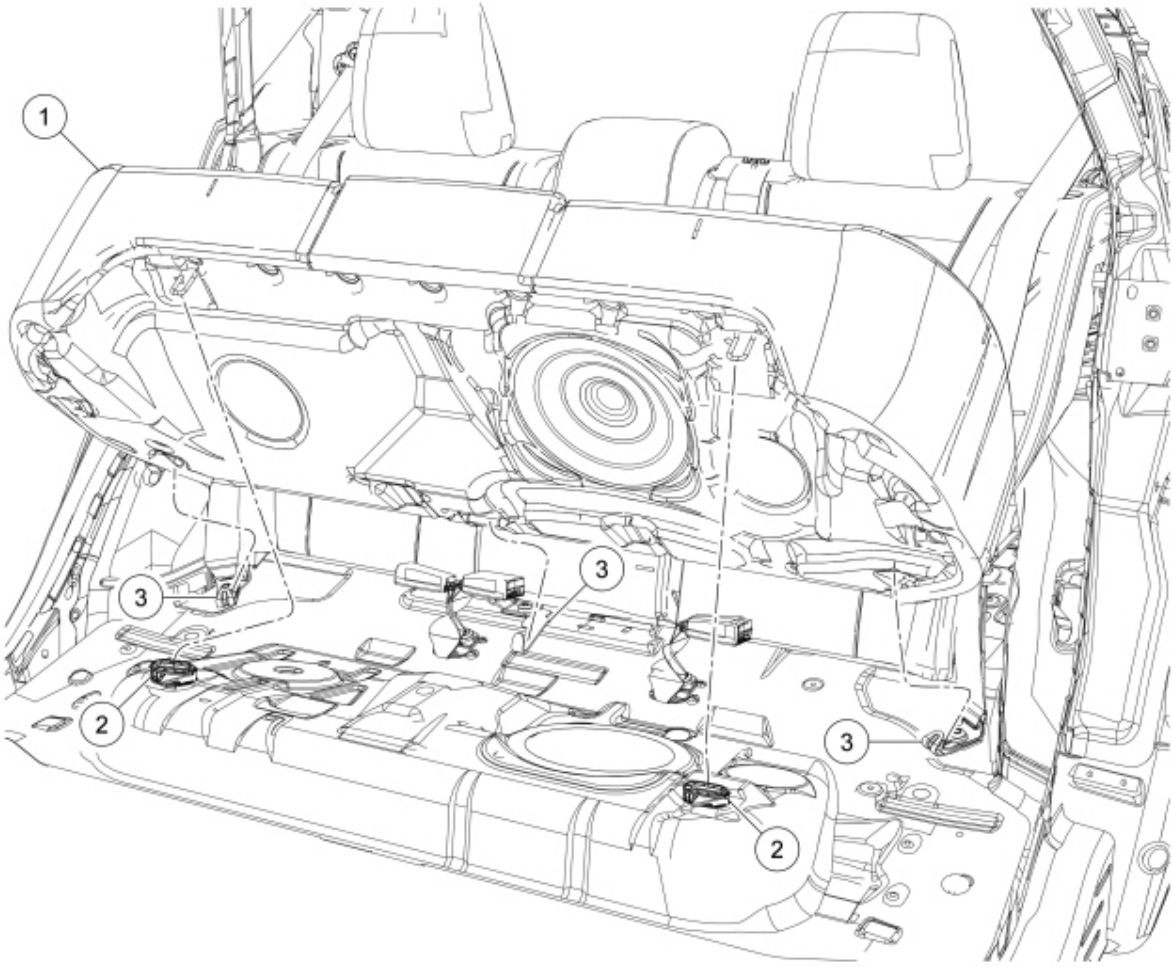
7. Remove the seat backrest(s) for the affected hinge.

8. Remove and discard the bolts of the affected hinge.
    - Install a new backrest hinge bolt(s) and tighten to 40 Nm (30 lb-ft).
    - Install a new safety belt anchor bolt and tighten to 48 Nm (35 lb-ft), if equipped.

All brackets and hinges

9. To install, reverse the removal procedure.

Seat Cushion — Rear

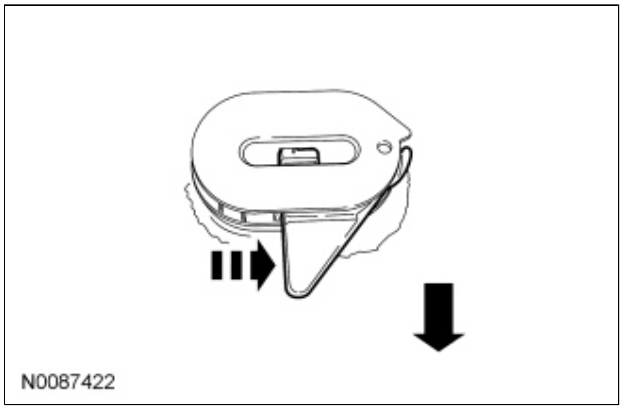


N0118529

Item	Part Number	Description
1	—	Cushion assembly
2	624A14	Seat cushion anchors (2 required)
3	—	Retainer hooks (3 required) (part of 613B90/RH, 613B91/LH and 60615/center)

Removal and Installation

1. From under the front of the cushion assembly, push the 2 seat cushion anchor latch release levers toward the driver side, while lifting up to disengage the front of the cushion assembly.



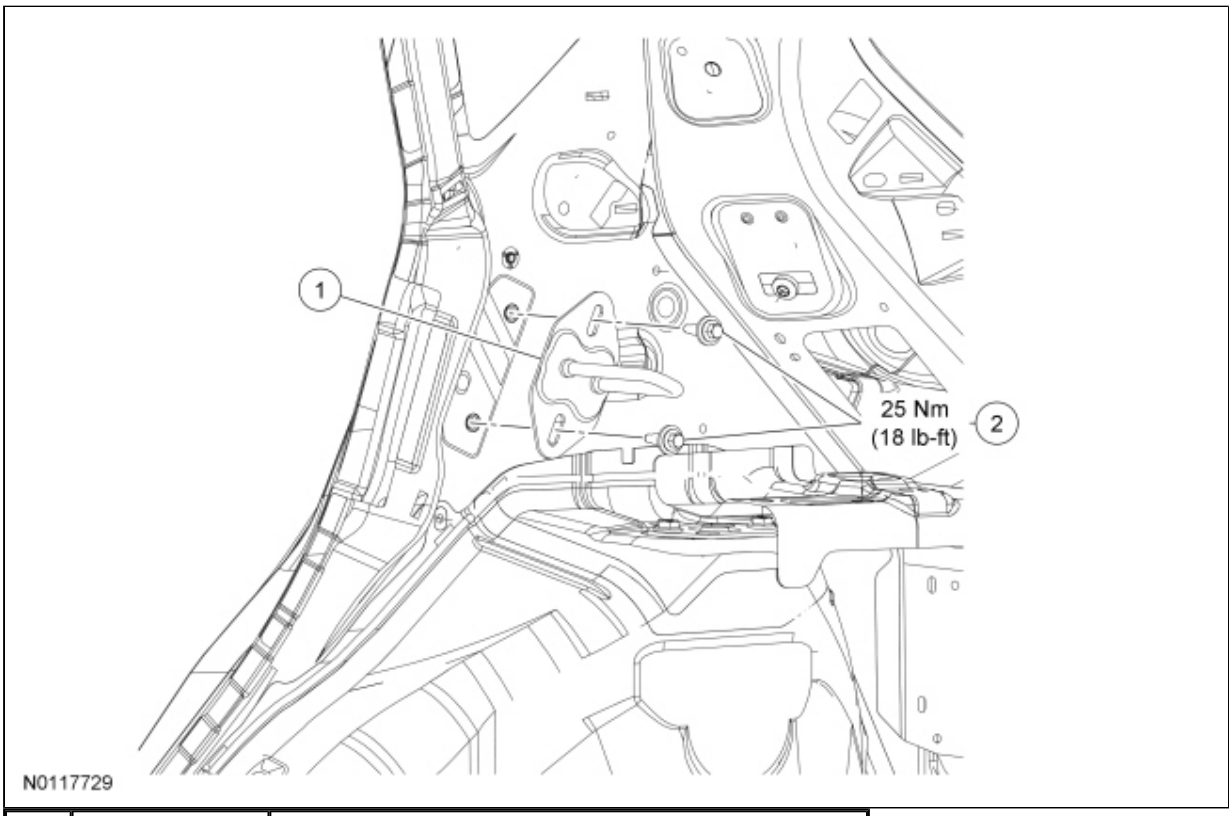
2. Remove the cushion assembly in the following sequence.
    1. Push the cushion back as far as possible.
    2. Lift up and pull forward at the rear outboard ends of the cushion, disengaging the wires from the retainer hooks.
        - Remove the cushion.

3. **NOTE:** Before installation, make sure the safety belts and buckles are accessible to the occupants.

   To Install, reverse the removal procedure.

Seat Latch Striker — Rear

NOTE: RH shown, LH similar.



Item	Part Number	Description
1	62542 RH/62543LH	Backrest striker
2	W701802	Backrest striker bolts (2 required without backrest retractor, 3 required with backrest retractor)

Removal and Installation

1. Remove the lower C-pillar trim panel. For additional information, refer to Section 501-05 .
2. Remove the bolts and the backrest striker.
   - To install, tighten to 25 Nm (18 lb-ft).
3. To install, reverse the removal procedure.

Seat Backrest — Front

Disassembly

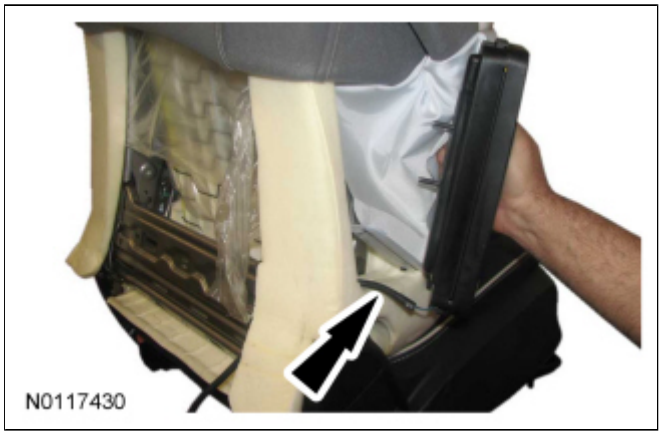
NOTE: For component identification and locations, refer to Seat — Exploded View, Front in this section.

1. Remove the front seat backrest. For additional information, refer to Seat Backrest — Front in this section.
2. Remove the front seat backrest cover. For additional information, refer to Seat Backrest Cover — Front in this section.
3. Detach the side air bag module wire harness retainer from the rear of the backrest frame.
4. Remove the 2 side air bag module nuts.
5. Remove the side air bag module in the following sequence:
    1. Pull the side air bag module mounting studs back through the backrest frame.
    2. Position the side air bag module away from the backrest frame.
    3. Route out the wire harness.
6. Remove the backrest foam pad.
7. Remove the anti-squeak bag from the backrest frame.
8. Remove the 2 backrest foam retainer clips from the backrest frame.
9. Remove the static lumbar support.

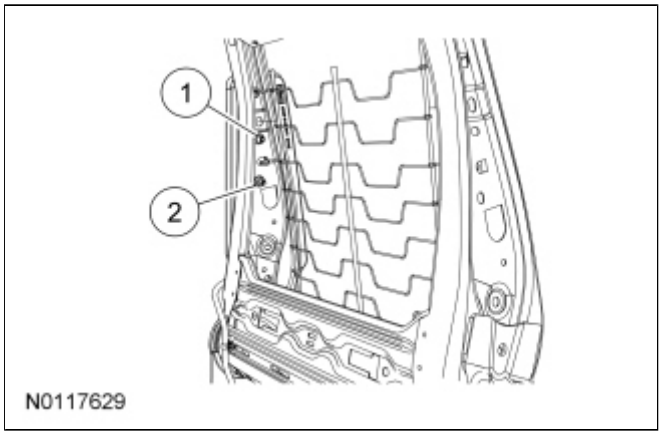
Assembly

1. Install the static lumbar support.
2. Install the 2 backrest foam retainer clips to the backrest frame.
3. Install the anti-squeak bag to the backrest frame.
4. Install the backrest foam pad.
5. **NOTE:** Passenger seat shown, driver seat similar.

   Route the side air bag module wire harness through the backrest foam pad opening.



6. Position the side air bag module studs through the backrest frame holes and install the nuts in the sequence shown.
    - Tighten to 9 Nm (80 lb-in).



7. Attach the side air bag module wire harness retainer to the rear of the backrest frame.

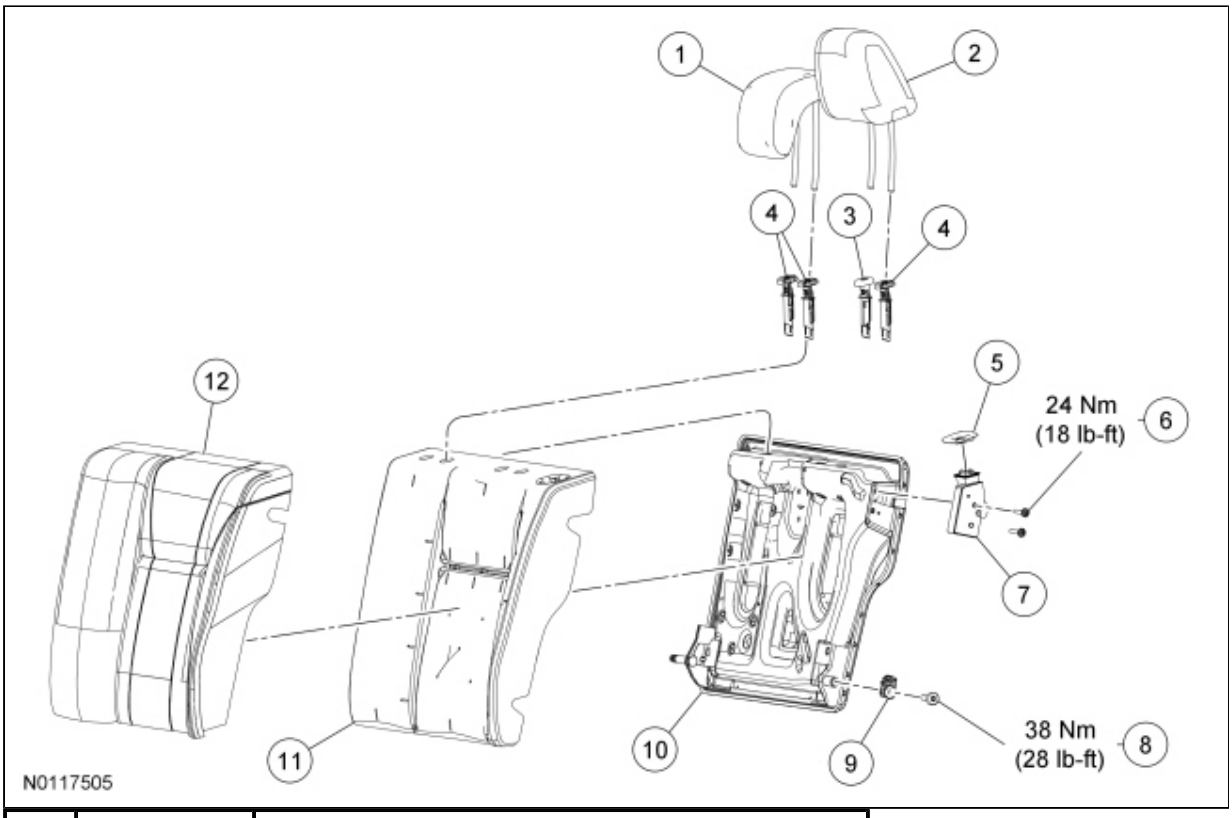
8. Install the seat backrest cover. For additional information, refer to Seat Backrest Cover — Front in this section.

9. Install the front seat backrest. For additional information, refer to Seat Backrest — Front in this section.

Seat Backrest — Rear, 60 Percent

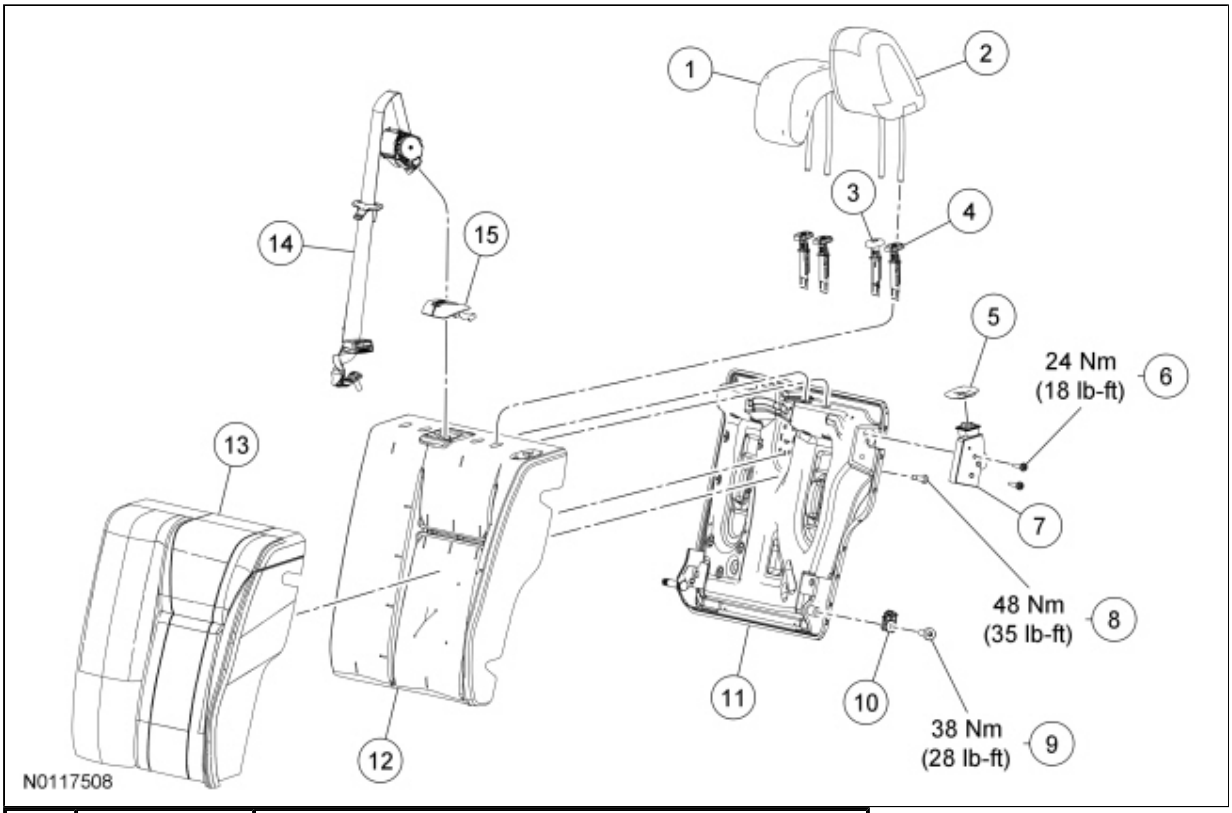
Disassembly

Seat Backrest — 60 Percent, 4-Door Sedan



Item	Part Number	Description
1	611A08	Head restraint (center)
2	611A08	Head restraint (LH)
3	610A18	Head restraint guide sleeve (non-lockable)
4	610A16	Head restraint guide sleeve (3 required) (lockable)
5	624A08	Backrest latch bezel
6	W790247	Backrest latch bolt (2 required)
7	61383	Backrest latch
8	—	Hinge pin bolt (part of 613B48)
9	613B48	Hinge pin
10	60509	Backrest frame
11	66801	Backrest foam pad
12	66601	Backrest cover

Seat Backrest — 60 Percent, 5-Door Hatchback



Item	Part Number	Description
1	611A08	Head restraint (center)
2	611A08	Head restraint (LH)
3	610A18	Head restraint guide sleeve (non-lockable)
4	610A16	Head restraint guide sleeve (3 required) (lockable)
5	624A08	Backrest latch bezel
6	W790247	Backrest latch bolt (2 required)
7	61383	Backrest latch
8	—	Safety belt retractor bolt (part of 611B66)
9	—	Hinge pin bolt (part of 613B48)
10	613B48	Hinge pin
11	60509	Backrest frame
12	66801	Backrest foam pad
13	66601	Backrest cover
14	611B66	Safety belt retractor
15	611A70	Safety belt retractor bezel

WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- **Retractors**
- **Buckles**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

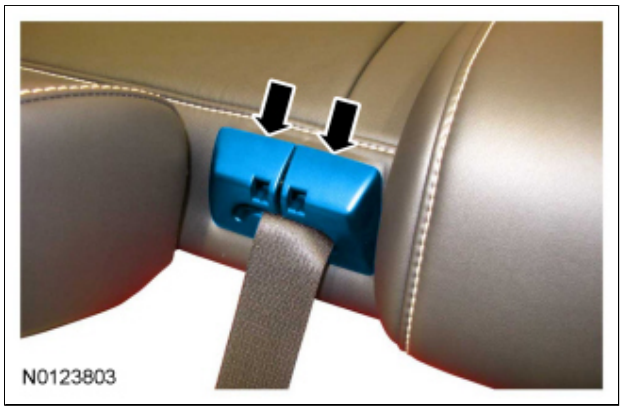
Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

1. Remove the rear seat backrest. For additional information, refer to Seat Backrest — Rear in this section.

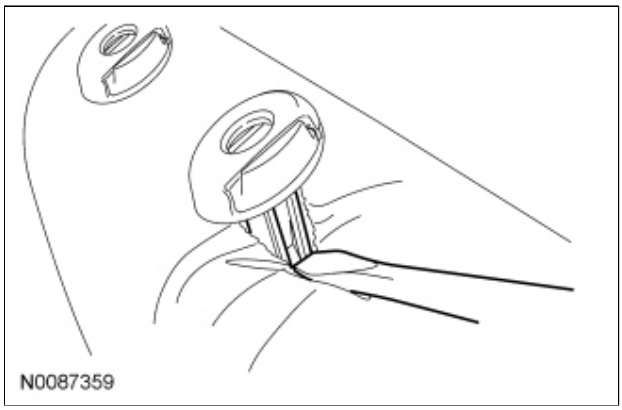
2. Detach the safety belt retractor bezel from the backrest frame wire and remove the bezel.
   - Pull where shown to unsnap the safety belt bezel from the backrest frame wire.



3. Push the buttons on the head restraint guide sleeves and remove the head restraint(s).

4. **NOTE:** If the locking tab on the head restraint guide is damaged during removal, a new head restraint guide must be installed.

   Remove the headrest guide sleeves.
   - Insert an appropriate flat-blade screwdriver along side the head restraint guide below the backrest cover and release button.
   - Release the locking tab and pry upward to remove.



5. Detach the backrest latch bezel from the backrest latch and remove the bezel.

6. Remove the hinge pin and bolt.

7. Detach the backrest cover retainer from the backrest frame at the rear of the backrest.

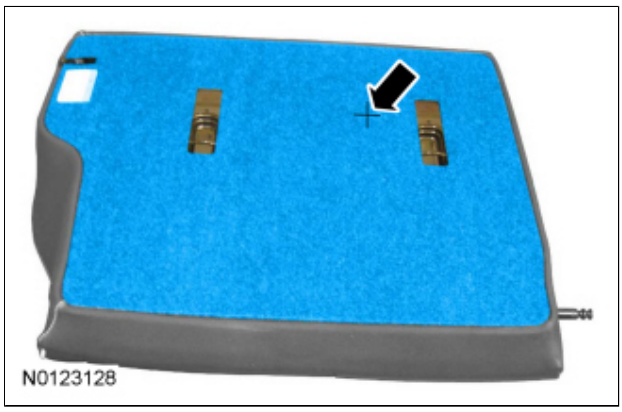
8. Remove the backrest cover and foam pad as an assembly.
    - Route the safety belt and tongue out of the backrest cover.

9. Remove the backrest cover.
    - Remove the hog rings and separate the foam pad from the Backrest cover.

10. Mark the backrest latch alignment prior to removing the backrest latch to assist in installing and aligning the backrest latch.

11. Remove the backrest latch.
    - Remove the 2 retainers and the backrest latch.

12. Make a small cross cut into the carpet above the safety belt retractor bolt.
    - Push into the carpet on the rear of the backrest and feel for the safety belt retractor bolt.



13. Remove the safety belt retractor.
    1. Remove the safety belt retractor bolt.
    2. Route the safety belt and tongue out of the backrest cover.
    3. Remove the safety belt retractor.

Assembly

1. Install the safety belt retractor.
    1. Install the safety belt retractor.
    2. Route the safety belt and tongue through the backrest cover.
    3. Install the safety belt retractor bolt.
        - Tighten to 48 Nm (35 lb-ft).

2. Position the backrest latch to the marks in the backrest frame and install the bolts.
    - Tighten to 24 Nm (18 lb-ft).

3. Install the backrest cover.
    - Assemble the foam pad to the Backrest cover, secure using hog rings.

4. Install the backrest cover and foam pad as an assembly.
    - Route the safety belt and tongue through the backrest cover.

5. Attach the backrest cover retainer to the backrest frame at the rear of the backrest.

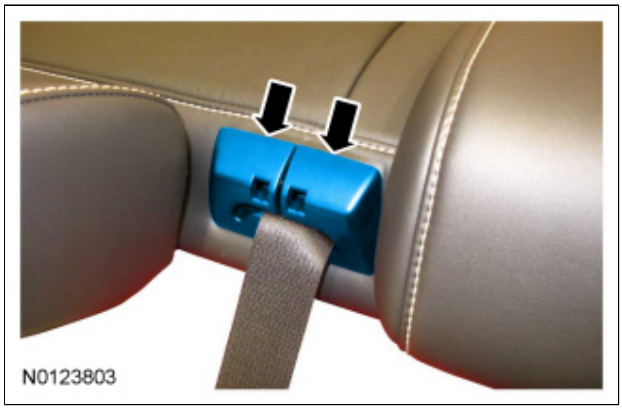
6. Install the hinge pin and bolt.
    - Tighten to 38 Nm (28 lb-ft).

7. Attach the backrest latch bezel to the backrest latch.

8. **NOTE:** If the locking tab on the head restraint guide is damaged during removal, a new head restraint guide must be installed.

Install the headrest guide sleeves.

9. Attach the safety belt retractor bezel to the backrest frame wire.



10. Install the rear seat backrest. For additional information, refer to Seat Backrest — Rear in this section.

Seat Cushion — Front

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Disassembly and Assembly

NOTICE: **To prevent system failure, it is necessary to carry out the Occupant Classification System (OCS) system reset when a front passenger seat cushion is disassembled, a new cushion cover is installed or an OCS service kit is installed.**

NOTICE: **Do not install a new heater mat on a front passenger seat cushion, it is not serviceable separately. If a new cushion heater mat is needed on the front passenger seat, an Occupant Classification System (OCS) service kit equipped with a heater mat must be installed. Failure to follow this instruction may result in incorrect operation of the OCS . Refer to Section 501-20B for the OCS removal and installation.**

NOTE: Occupant Classification System (OCS) components, seat cushion foam pad, bladder with pressure sensor and Occupant Classification System Module (OCSM) are calibrated to each other and are serviced as an assembly. The OCS components are not to be installed separately. If a new OCS , OCS component or seat cushion foam pad are needed, a new OCS service kit (seat cushion foam pad, bladder with pressure sensor and OCSM) must be installed as an assembly.

NOTE: For component identification and locations, refer to Seat — Exploded View, Front in this section.

All seats

1. Remove the seat backrest. For additional information refer to Seat Backrest — Front in this section.

Passenger seat

2. Remove the OCS sensor. For additional information, refer to Section 501-20B .

Driver seat

3. Remove seat cushion cover. For additional information, refer to Seat Cushion Cover — Front in this section.

4. **NOTE:** Note the wire harness routing for installation.

   Remove the seat wire harness.
   - Release retainers.

Passenger seat

5. Remove 2 screws and the OCSM bracket.

All seats

6. Remove the safety belt buckle.
    - Disconnect the safety belt buckle electrical connector.
    - Remove the bolt and the safety belt buckle assembly.

7. Remove the seat position sensor.
    - Remove the retaining clip.
    - Slide sensor rearward to remove.

8. Remove the screw and the wire harness bracket.

9. Remove the screw and the seat track position sensor bracket.

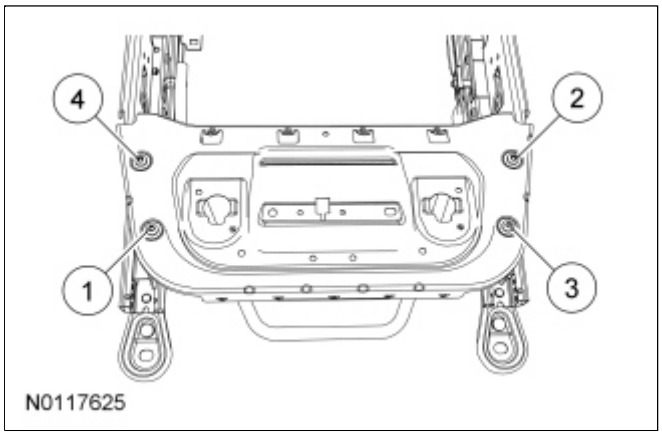
10. Remove the cushion support spring.
    - Release the cushion spring from the seat track and cushion pan.

11. Remove the 4 retainers and the cushion pan.

Assembly

All seats

1. Position the cushion pan and install the screws in the sequence shown.
    - Tighten to 4 Nm (35 lb-in).



2. Install the cushion support spring.

3. Position the seat track position sensor bracket and install the screw.

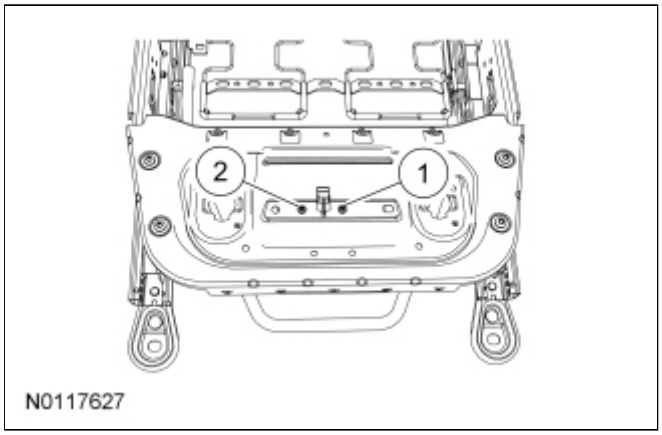
4. Position the wire harness bracket and install the screw.

5. Install the seat position sensor.
    - Secure the lock tab.

6. Position the safety belt buckle and install the bolt.
    - Tighten to 48 Nm (35 lb-ft).

Passenger seat

7. Position the OCSM bracket and install the screws in the sequence shown.
    - Tighten to 3 Nm (27 lb-in).



8. Install the OCS . For additional information, refer to Section 501-20B .

Driver seat

9. Install the seat wire harness.
   - Attach retainers.

10. Install the seat cushion cover. For additional information, refer to Seat Cushion Cover — Front in this section.

All seats

11. Position the backrest to the cushion frame and install the 4 backrest mounting bolts.
    - Tighten to 48 Nm (35 lb-ft).

12. From under the seat, carry out the following.
    - Engage the 4 backrest cover elastic strap retainers attach to the bottom rear of the seat.
    - Connect the side air bag module electrical connector and attach the wire harness retainer.

13. Install the cushion side shield in the following sequence.
    1. Position and slide the cushion side shield rearward to engage the brackets.
    2. Install the screw at the rear of the cushion side shield.

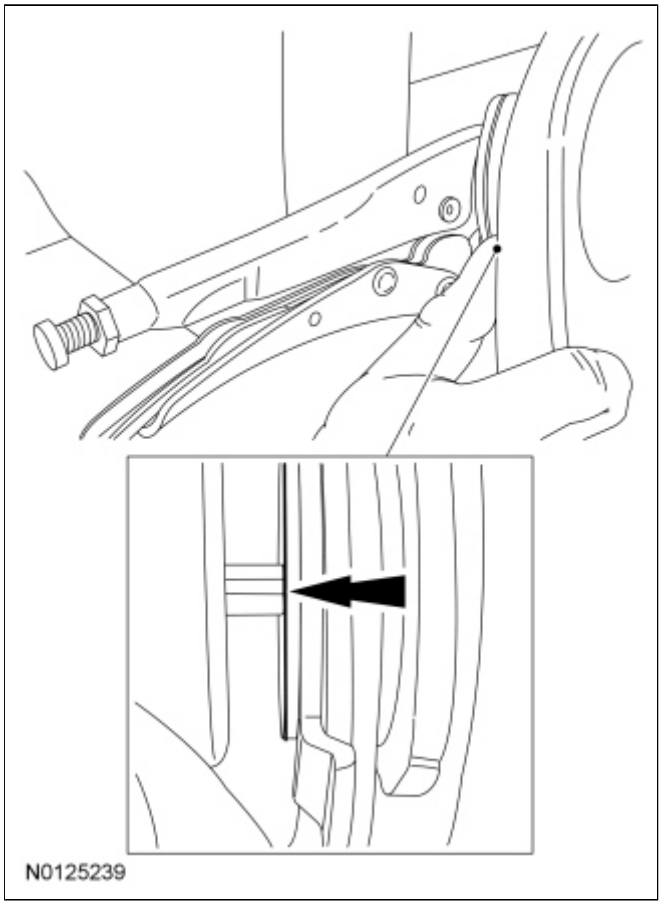
14. If equipped install the height adjust handle.

15. Install the recliner handle and bolt.

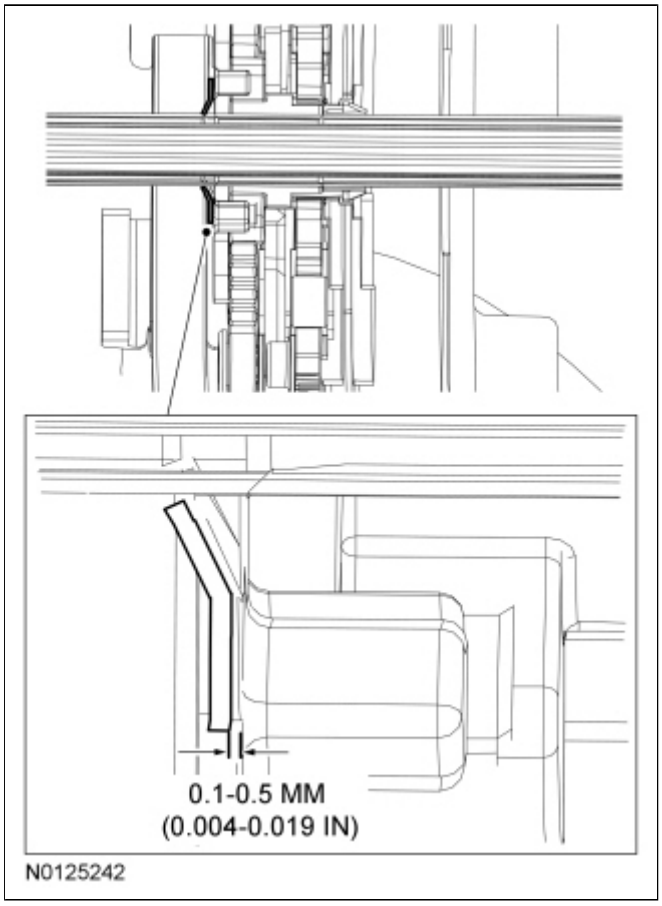
16. Push the recliner handle fully toward the inboard side of the seat then release the pressure on the recliner handle.

17. **NOTE:** RH recliner plate is shown, LH recliner plate is similar.

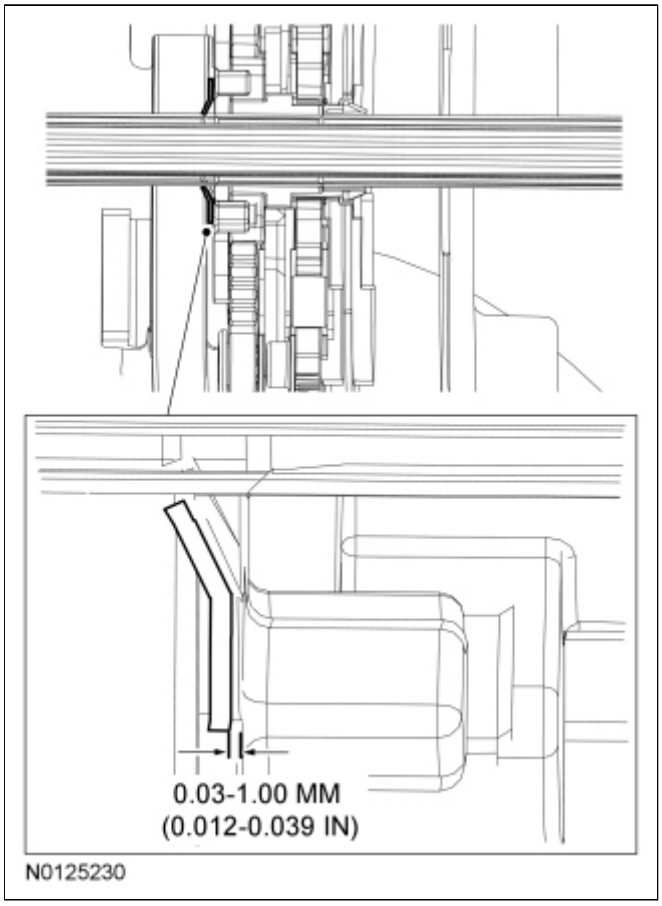
    Immobilize the recliner shaft by using 2 long nose locking pliers clamped to the shaft, flush to the inside edges of both recliner plates.



18. Measure the clearance between the inboard push nut and bushing.
    - If the clearance between the inboard push nut and the bushing exceeds 0.5 mm (0.019 in), install a 0.5 mm (0.019 in) feeler gauge or shim between the inboard push nut and the bushing and slide the inboard push nut tight against the feeler gauge or shim.
    - If the clearance between the inboard push nut and the bushing is less than 0.5 mm (0.019 in), remove and discard the push nut. Install a new push nut, using a 0.5 mm (0.019 in) feeler gauge or shim between the inboard push nut and the bushing, slide the inboard push nut tight against the feeler gauge or shim.



19. Remove the feeler gauge or shim.
20. Remove the recliner handle.
21. Push the outboard push nut (located behind the recliner handle) flush to the outboard bushing.
22. Remove the long nose locking pliers.
23. Slide the recliner shaft outward until the inboard push nut contacts the bushing.
24. Verify the clearance between the outboard push nut and bushing is between 0.3 mm and 1.0 mm (0.011 in and 0.039 in).



25. Install the recliner handle and bolt.

26. Install the inner recliner cover and screw.

Passenger seat with an OCS

27. **WARNING: Occupant classification system(OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.**

    NOTICE: **To prevent system failure, take the following precautions before carrying out the Occupant Classification System (OCS) system reset:**
    - **Make sure the voltage to the Occupant Classification System Module (OCSM) is greater than 8 volts and less than 18 volts.**
    - **Make sure the OCS system is not at a temperature below 6°C (42°F) or above 36°C (97°F) when initiating the OCS system reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature between 6°C to 36°C (42°F to 97°F) for a minimum of 30 minutes.**
    - **Make sure nothing is present on the passenger seat before and during the OCS system reset process.**
    - **Prior to carrying out the OCS system reset, make sure a minimum of 8 seconds has elapsed after cycling the ignition switch ON.**

    Carry out the OCS system reset.

28. If the first system reset attempt was unsuccessful, carry out a thorough visual inspection of the following and repair any concerns found.
    - OCS system connector and wiring for damage.

- Pressure sensor hose for kinks and/or damage.
- Seat-related wiring harness and body wiring harness terminals and connectors for damage.

29. **NOTE:** Cycle the ignition switch after the OCS system reset.

    Carry out a second OCS system reset. If the second attempt is unsuccessful, install a new OCS system service kit. For additional information, refer to Occupant Classification System in Section 501-20B .

30. Prove out the SRS as follows:
    Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
    - fail to light.
    - remain lit continuously.
    - flash at a 5 Hz rate (RCM not configured).

    The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
    Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

Torque Specifications

Description	Nm	lb-in
Door carrier bolts	9	80
Door window glass clamp bolts	9	80

Glass, Frames and Mechanisms

The glass, frames and mechanisms consist of the following:

- Body Control Module (BCM)
- Door glass top run
- Door window glass
- Door window regulator
- Door window regulator motor
- Rear quarter glass
- Rear window defrost switch (integral to the HVAC module)
- Rear window glass
- Window control switches
- Windshield glass

The power window system only operates if the ignition is in the RUN position.

The master window control switch:

- disables operation of the rear passenger windows when the lock-out switch is in the UNLOCK position.
- automatically raises/lowers the driver window when activated momentarily to the second detent position.

The power window system can be operated from either the master window control switch or from the window control switches located on each door panel.

Rear Window Defrost

The engine must be running for the rear window defrost system to operate. The rear window defrost system is controlled by the BCM . When the rear window defrost switch (integral to the HVAC module) is pressed, the BCM supplies voltage to the rear window defrost grid. An LED indicator illuminates when the rear window defrost is activated. The rear defrost self actuates when the ambient air temperature is less than 5° C (41° F) and engine coolant temperature is less than 60° C (140° F). The rear window defroster LED indicator does not illuminate when the rear defroster self actuates.

Glass, Frames and Mechanisms

Special Tool(s)

ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

LH Front Window Operation

NOTE: The master window control switch and the LH front window motor each contains integral electronics which must be initialized whenever:

- a new window control switch is installed.
- a new window regulator and motor is installed.
- a new window glass is installed.
- a glass top run removal and installation.
- carrying out any operation in which grease or lubricants are applied to the window system.
- battery voltage has been removed from the LH front window control switch for more than 3 minutes (for example, battery or window control switch disconnected).

For additional information, refer to Window Motor Initialization in this section.

The master window control switch contains electronics that control the one-touch up/down operation. The master window control switch receives feedback from the Hall-effect sensors which are integral to the LH front window motor. If the Hall-effect sensors or any associated circuitry fails, the window still operates but the one-touch up/down and obstacle detection is inoperative.

If an obstacle has been detected in the window opening as the window glass is moving upward, the window motor automatically reverses direction and moves the glass toward the bounce-back position.

To override a bounce-back condition (for example, to overcome the resistance of ice on the window or seals), close the window glass twice until it reaches the resistance and allow it to reverse to the bounce-

back position. On the third attempt, activate and hold the master window control switch in the UP position. The window travels up with no bounce-back protection.

Rear Window Defrost

The engine must be running for the rear window defrost system to operate. When the rear window defrost switch (integral to the HVAC module) is pressed, a ground signal is sent to the Body Control Module (BCM). When the BCM receives the defrost request signal, it supplies voltage to the rear window defrost grid. The rear defrost self actuates when the ambient air temperature is less than 5° C (41° F) and engine coolant temperature is less than 60° C (140° F). The rear window defroster LED indicator does not illuminate when the rear defroster self actuates.

The BCM deactivates the rear window defrost grid when one of the following conditions is met:

- The rear window defrost switch is pressed when the feature is active
- The ignition state is changed from ON to OFF/LOCK
- The 14-minute timing function is complete

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical

• Window run weatherstrip
• Window glass
• Rear window defrost grid
	• Central Junction Box (CJB) fuse(s):
	  ▪ 16 (7.5A) (vehicles built after 1/14/2011)
	  ▪ 31 (30A)
	  ▪ 34 (30A)
	• Battery Junction Box (BJB) fuse(s):
	  ▪ 26 (7.5A) (vehicles built up to 1/14/2011)
	  ▪ 33 (30A)
	• Window motor
	• Window control switch
	• Wiring, terminals or connectors

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00 No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
    - verify the ignition key is in the ON position.
    - verify the scan tool operation with a known good vehicle.
    - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
    - If the scan tool responds with no communication from one or more modules, refer to Section 418-00 .
    - If the network test passes, retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs).

8. Clear the CMDTCs and carry out the self-test diagnostics for the BCM .

9. If the DTCs retrieved are related to the concern, go to the Body Control Module (BCM) DTC Chart. For all other DTCs, refer to Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Chart

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. Continuous Memory Diagnostic Trouble Codes (CMDTCs) have an additional 2-character DTC status code suffix to assist in determining DTC history.

Body Control Module (BCM) DTC Chart

DTC	Description	Action
B1013:23	Heater Rear Defog Switch: Signal Stuck Low	GO to Pinpoint Test J .
All Other DTCs	—	REFER to the Master DTC Chart in Section 419-10 .

Symptom Chart

Symptom Chart

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

Condition	Possible Sources	Action
• All power windows are inoperative	• Wiring, terminals or connectors • Window control switch	• GO to Pinpoint Test A .

• The RH front, LH rear and RH rear power windows are inoperative	• Wiring, terminals or connectors • Window control switch	• GO to Pinpoint Test B .
• The LH front and RH front power windows are inoperative	• Wiring, terminals or connectors • Window control switch	• GO to Pinpoint Test C .
• The LH rear and RH rear power windows are inoperative	• Wiring, terminals or connectors • Window control switch	• GO to Pinpoint Test D .
• A single power window is inoperative — LH front window	• Fuse(s) • Wiring, terminals or connectors • Window control switch • Window regulator motor	• GO to Pinpoint Test E .
• A single power window is inoperative — RH front window	• Wiring, terminals or connectors • Window control switch • Window regulator motor	• GO to Pinpoint Test F .
• A single power window is inoperative — LH rear window	• Wiring, terminals or connectors • Window control switch • Window regulator motor	• GO to Pinpoint Test G .
• A single power window is inoperative — RH rear window	• Wiring, terminals or connectors • Window control switch • Window regulator motor	• GO to Pinpoint Test H .
• The one-touch up/down feature is inoperative	• LH front window motor not initialized • Wiring,	• GO to Pinpoint Test I .

• The defrost system is inoperative	• Fuse • Wiring, terminals or connectors • Rear window defrost grid • HVAC module • Body Control Module (BCM)	• GO to Pinpoint Test J .
• The defrost system will not shut off automatically	• Wiring, terminals or connectors • BCM	• GO to Pinpoint Test K .
• The defrost system LED does not illuminate when the defrost system is active	• Wiring, terminals or connectors • HVAC module • BCM	• **NOTE:** The rear defrost self actuates when the ambient air temperature is less than 5° C (41° F) and engine coolant temperature is less than 60° C (140° F). The rear window defroster LED indicator does not illuminate when the rear defroster self actuates. GO to Pinpoint Test L .

Pinpoint Tests

Pinpoint Test A: All Power Windows are Inoperative

Refer to Wiring Diagrams Cell 100 , Power Windows for schematic and connector information.

Normal Operation

There are two high current voltage circuits to the master window control switch. One of these circuits provides voltage for front window operation, the other provides voltage for rear window operation. The master window control switch supplies ground for all window motor operation.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch

PINPOINT TEST A: ALL POWER WINDOWS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
A1 CHECK ALL WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	**Yes** GO to Symptom Chart to diagnose the inoperative window(s). **No** GO to A2.
NOTE: Make sure the window lock-out switch is in the UNLOCK position. • Ignition ON. • Attempt to operate each window from the master window control switch. • **Do any of the windows operate from the master window control switch?**	
A2 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
• Ignition OFF. • Disconnect: Master Window Control Switch C504A. • Measure the resistance between master window control switch C504A-2, circuit GD143 (BK/VT), harness side and ground.  N0116378 • **Is the resistance less than 5 ohms?**	

Pinpoint Test B: The RH Front, LH Rear and RH Rear Power Windows are Inoperative

Refer to Wiring Diagrams Cell 100, Power Windows for schematic and connector information.

Normal Operation

There are two high current voltage circuits to the master window control switch. One of these circuits provides voltage for front window operation, the other provides voltage for rear window operation. The master window control switch supplies ground for all window motor operation through two different circuits. One of the circuits provides ground only to the LH front window, the other provides ground for the RH front, LH rear and RH rear window motor operation.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch

PINPOINT TEST B: THE RH FRONT, LH REAR AND RH REAR POWER WINDOWS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK ALL WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	**Yes** GO to Symptom Chart to diagnose the inoperative window(s). **No** GO to B2.
NOTE: Make sure the window lock-out switch is in the UNLOCK position. • Ignition ON. • Attempt to operate each window from the master window control switch. • **Does the RH front, LH rear or RH rear window operate from the master window control switch?**	
B2 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
• Ignition OFF. • Disconnect: Master Window Control Switch C504C. • Measure the resistance between master window control switch C504C-4, circuit GD143 (BK/VT), harness side and ground.  N0116379 • **Is the resistance less than 5 ohms?**	

Pinpoint Test C: The LH Front and RH Front Power Windows are Inoperative

Refer to Wiring Diagrams Cell 100, Power Windows for schematic and connector information.

Normal Operation

There are two high current voltage circuits to the master window control switch. One of these circuits provides voltage for front window operation, the other provides voltage for rear window operation. The master window control switch supplies ground for all window motor operation through two different circuits. One of the circuits provides ground only to the LH front window, the other provides ground for the RH front, LH rear and RH rear window motor operation.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch

PINPOINT TEST C: THE LH FRONT AND RH FRONT POWER WINDOWS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
C1 CHECK FOR VOLTAGE TO THE MASTER WINDOW CONTROL SWITCH • Ignition OFF. • Disconnect: Master Window Control Switch C504A. • Ignition ON. • Measure the voltage between master window control switch C504A-7, circuit CBP34 (VT/BN), harness side and ground.  N0116388 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** VERIFY Central Junction Box (CJB) fuse 34 (30A) is OK, If OK, REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test D: The LH Rear and RH Rear Power Windows are Inoperative

Refer to Wiring Diagrams Cell 100 , Power Windows for schematic and connector information.

Normal Operation

There are two high current voltage circuits to the master window control switch. One of these circuits provides voltage for front window operation, the other provides voltage for rear window operation when the master window lock-out switch is in the UNLOCK position. The master window control switch supplies ground for all window motor operation through two different circuits. One of the circuits provides ground only to the LH front window, the other provides ground for the RH front, LH rear and RH rear window motor operation.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch

PINPOINT TEST D: THE LH REAR AND RH REAR POWER WINDOWS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take

D1 CHECK FOR VOLTAGE TO THE MASTER WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: Master Window Control Switch C504C. • Ignition ON. • Measure the voltage between master window control switch C504C-2, circuit CBP31 (BU/OG), harness side and ground.  N0117882 • **Is the voltage greater than 10 volts?**	**Yes** GO to D2 . **No** VERIFY Central Junction Box (CJB) fuse 31 (30A) is OK, If OK, REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
D2 CHECK FOR AN OPEN CIRCUIT BETWEEN THE MASTER WINDOW CONTROL SWITCH AND THE REAR WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: LH Rear Window Control Switch C701. • Measure the resistance between master window control switch C504C-1, circuit CPW01 (BN/BU), harness side and LH rear window control switch C701-2, circuit CPW01 (BN/BU), harness side.  N0116390 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test E: A Single Power Window is Inoperative — LH Front Window

Refer to Wiring Diagrams Cell 100 , Power Windows for schematic and connector information.

Normal Operation

There are two voltage supplies to the master window control switch for LH front window operation. One circuit powers the integral electronics, the other provides high current voltage for the LH front window motor. The master window control switch and LH front window motor are grounded through the same circuit. The master window control switch provides voltage and ground to the LH front window motor. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

This pinpoint test is intended to diagnose the following:

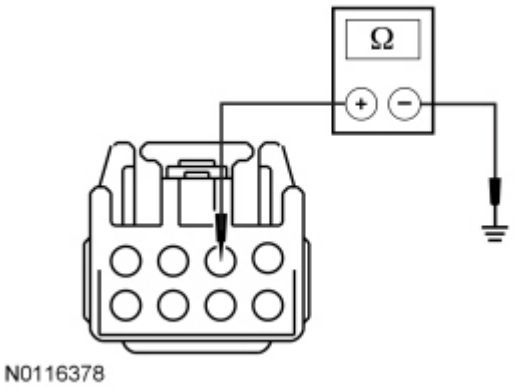
- Fuse(s)
- Wiring, terminals or connectors
- Window control switch
- Window regulator motor

PINPOINT TEST E: A SINGLE POWER WINDOW IS INOPERATIVE — LH FRONT WINDOW

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
E1 CHECK FOR VOLTAGE TO THE MASTER WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: Master Window Control Switch C504A. • Ignition ON. • Measure the voltage between master window control switch C504A-7, circuit CBP34 (VT/BN), harness side and ground; and between master window control switch C504A-8, circuit SBB26 (YE/RD) (vehicles built up to 1/14/2011) or SBP16 (VT/RD) (vehicles built after 1/14/2011), harness side and ground.  N0116392 • **Is the voltage greater than 10 volts for both measurements?**	**Yes** GO to E2 . **No** VERIFY Central Junction Box (CJB) fuse 34 (30A) and Battery Junction Box (BJB) fuse 26 (7.5A) (vehicles built up to 1/14/2011) or fuse 16 (7.5A) (vehicles built after 1/14/2011) are OK. If OK, REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the circuit (s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
E2 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN	

- Ignition OFF.
- Measure the resistance between master window control switch C504A-2, circuit GD143 (BK/VT), harness side and ground.



N0116378

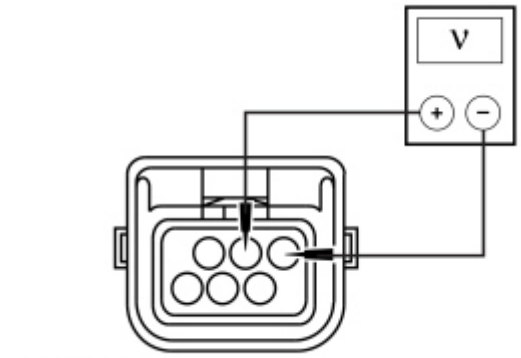
- **Is the resistance less than 5 ohms?**

Yes
GO to E3 .

No
REPAIR the circuit. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

E3 CHECK FOR VOLTAGE AND GROUND TO THE WINDOW MOTOR

- Ignition OFF.
- Connect: Master Window Control Switch C504A.
- Disconnect: LH Front Power Window Motor C524.
- Ignition ON.
- **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the window control switch is activated.
- Measure the voltage between LH front power window motor C524-1, circuit CPW11 (BU/GY), harness side and LH front power window motor C524-2, circuit CPW10 (YE/VT), harness side while operating the master window control switch in the down then up positions.



N0116394

- **Is the voltage greater than 10 volts when the window control switch is operated and 0 volt in the rest position?**

Yes
INSTALL a new LH front window regulator motor. REFER to Window Regulator Motor — Front Door in this section. TEST the system for normal operation.

No
GO to E4 .

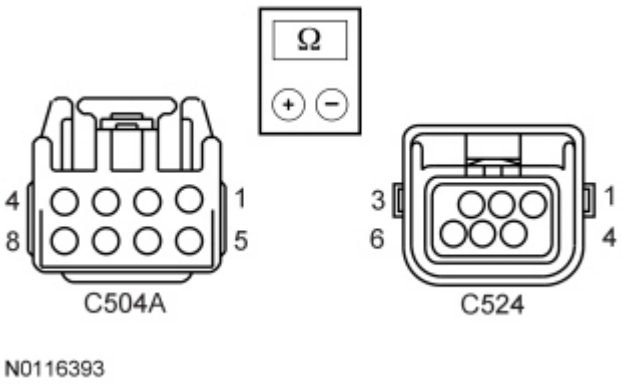
E4 CHECK FOR AN OPEN CIRCUIT BETWEEN THE MASTER WINDOW CONTROL SWITCH AND THE WINDOW MOTOR

- Ignition OFF.
- Disconnect: Master Window Control Switch C504A.
- Measure the resistance between master window control switch C504A, harness side and LH front power window motor C524, harness side using the following chart:

Master Window Control Switch	Circuit	LH Front Power Window Motor

Yes
INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

C504A-3	CPW11 (BU/GY)	C524-1
C504A-5	CPW10 (YE/VT)	C524-2



N0116393

- **Are the resistances less than 5 ohms?**

No
REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test F: A Single Power Window is Inoperative — RH Front Window

Refer to Wiring Diagrams Cell 100, Power Windows for schematic and connector information.

Normal Operation

The RH front window control switch receives power from the Central Junction Box (CJB). Ground is provided to the RH front window control switch through the master window control switch. The RH front window control switch transfers power and ground to the RH front window motor. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

When operating the RH front window from the master window control switch, power and ground is sent from the master window control switch through the normally closed contacts within the RH front window control switch to operate the RH front window. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch
- Window regulator motor

PINPOINT TEST F: A SINGLE POWER WINDOW IS INOPERATIVE — RH FRONT WINDOW

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
F1 CHECK THE RH FRONT WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	
• Ignition ON.	**Yes**

• Operate the RH front window from the master window control switch. • **Does the RH front window operate from the master window control switch?**	GO to F2 . **No** GO to F3 .
F2 CHECK FOR VOLTAGE TO THE RH FRONT WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: RH Front Window Control Switch C604. • Ignition ON. • Measure the voltage between RH front window control switch C604-2, circuit CBP34 (VT/BN), harness side and ground.  N0116420 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
F3 CHECK FOR VOLTAGE AND GROUND TO THE WINDOW MOTOR	
• Ignition OFF. • Disconnect: RH Front Power Window Motor C608. • Ignition ON. • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the window control switch is activated. • Measure the voltage between RH front power window motor C608-1, circuit CPW19 (VT), harness side and RH front power window motor C608-2, circuit CPW20 (WH/OG), harness side while operating the master window control switch in the down then up positions.  N0116421 • **Is the voltage greater than 10 volts when the window control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new RH front window regulator motor. REFER to Window Regulator Motor — Front Door in this section. TEST the system for normal operation. **No** GO to F4 .
F4 CHECK THE RH FRONT WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: RH Front Window Control Switch C604. • Carry out the window control switch component test on the RH front	**Yes** GO to F5 .

window control switch.

Refer to Wiring Diagrams Cell 149 for component testing.

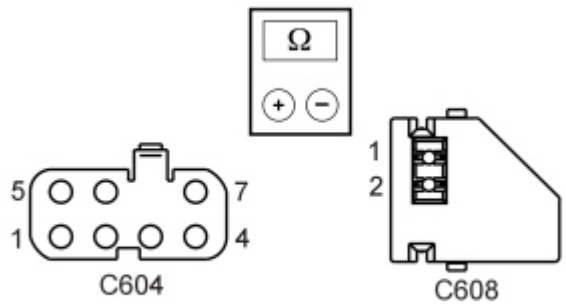
- **Did the RH front window control switch pass the component test?**

No
INSTALL a new RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

F5 CHECK FOR AN OPEN CIRCUIT BETWEEN THE RH WINDOW CONTROL SWITCH AND THE WINDOW MOTOR

- Measure the resistance between RH front window control switch C604, harness side and RH front power window motor C608, harness side, using the following chart:

RH Front Window Control Switch	Circuit	RH Front Power Window Motor
C604-1	CPW20 (WH/OG)	C608-2
C604-7	CPW19 (VT)	C608-1



N0116422

- **Are the resistances less than 5 ohms?**

Yes
GO to F6.

No
REPAIR the circuit(s). TEST the system for normal operation.

F6 CHECK FOR AN OPEN CIRCUIT BETWEEN THE RH WINDOW CONTROL SWITCH AND THE MASTER WINDOW CONTROL SWITCH

- Disconnect: Master Window Control Switch C504A.
- Measure the resistance between master window control switch C504A, harness side and RH front window control switch C604, harness side using the following chart:

Master Window Control Switch	Circuit	RH Front Window Control Switch
C504A-1	CPW12 (GN/OG)	C604-3
C504A-4	CPW13 (BN/YE)	C604-6

Yes
INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

No
REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	

Pinpoint Test G: A Single Power Window is Inoperative — LH Rear Window

Refer to Wiring Diagrams Cell 100 , Power Windows for schematic and connector information.

Normal Operation

The LH rear window control switch receives power from the master window control switch when the lock-out switch is in the UNLOCK position. Ground is provided to the LH rear window control switch through the master window control switch. The LH rear window control switch transfers power and ground to the LH rear window motor. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

When operating the LH rear window from the master window control switch, power and ground is sent from the master window control switch through the normally closed contacts within the LH rear window control switch to operate the LH rear window. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch
- Window regulator motor

PINPOINT TEST G: A SINGLE POWER WINDOW IS INOPERATIVE — LH REAR WINDOW

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
G1 CHECK THE LH REAR WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	
• Ignition ON. • Operate the LH rear window from the master window control switch. • **Does the LH rear window operate from the master window control switch?**	**Yes** GO to G2 . **No** GO to G3 .
G2 CHECK FOR VOLTAGE TO THE LH REAR WINDOW CONTROL SWITCH	

• Ignition OFF. • Disconnect: LH Rear Window Control Switch C701. • Ignition ON. • **NOTE:** Make sure the window lock-out switch is in the UNLOCK position. • Measure the voltage between LH rear window control switch C701-2, circuit CPW01 (BN/BU), harness side and ground.  N0116420 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new LH rear window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
G3 CHECK FOR VOLTAGE AND GROUND TO THE WINDOW MOTOR	
• Ignition OFF. • Disconnect: LH Rear Power Window Motor C703. • Ignition ON. • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the window control switch is activated. • Measure the voltage between LH rear power window motor C703-1, circuit CPW22 (GN/VT), harness side and LH rear power window motor C703-2, circuit CPW21 (BN), harness side while operating the master window control switch in the down then up positions.  N0116431 • **Is the voltage greater than 10 volts when the window control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new LH rear window regulator motor. REFER to Window Regulator Motor — Rear Door in this section. TEST the system for normal operation. **No** GO to G4 .
G4 CHECK THE LH REAR WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: LH Rear Window Control Switch C701. • Carry out the window control switch component test on the LH rear window control switch. Refer to Wiring Diagrams Cell 149 for component testing. • **Did the LH rear window control switch pass the component**	**Yes** GO to G5 . **No** INSTALL a new LH rear window control switch. REFER to Window Control Switch in this section.

test?	TEST the system for normal operation.
G5 CHECK FOR AN OPEN CIRCUIT BETWEEN THE REAR WINDOW CONTROL SWITCH AND THE WINDOW MOTOR • Measure the resistance between LH rear window control switch C701, harness side and LH rear power window motor C703, harness side, using the following chart: **LH Rear Window Control Switch** / **Circuit** / **LH Rear Power Window Motor** C701-1 / CPW22 (GN/VT) / C703-1 C701-7 / CPW21 (BN) / C703-2  N0116471 • **Are the resistances less than 5 ohms?**	**Yes** GO to G6 . **No** REPAIR the circuit(s). TEST the system for normal operation.
G6 CHECK FOR AN OPEN CIRCUIT BETWEEN THE LH REAR WINDOW CONTROL SWITCH AND THE MASTER WINDOW CONTROL SWITCH • Disconnect: Master Window Control Switch C504C. • Measure the resistance between master window control switch C504C, harness side and LH rear window control switch C701, harness side using the following chart: **Master Window Control Switch** / **Circuit** / **LH Rear Window Control Switch** C504C-8 / CPW15 (YE) / C701-3 C504C-7 / CPW16 (BU/OG) / C701-6	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	

Pinpoint Test H: A Single Power Window is Inoperative — RH Rear Window

Refer to Wiring Diagrams Cell 100 , Power Windows for schematic and connector information.

Normal Operation

The RH rear window control switch receives power from the master window control switch when the lock-out switch is in the UNLOCK position. Ground is provided to the RH rear window control switch through the master window control switch. The RH rear window control switch transfers power and ground to the RH rear window motor. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

When operating the RH rear window from the master window control switch, power and ground is sent from the master window control switch through the normally closed contacts within the RH rear window control switch to operate the RH rear window. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Window control switch
- Window regulator motor

PINPOINT TEST H: A SINGLE POWER WINDOW IS INOPERATIVE — RH REAR WINDOW

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
H1 CHECK THE RH REAR WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	
• Ignition ON. • Operate the RH rear window from the master window control switch. • **Does the RH rear window operate from the master window control switch?**	**Yes** GO to H2 . **No** GO to H3 .
H2 CHECK FOR VOLTAGE TO THE RH REAR WINDOW CONTROL SWITCH	

• Ignition OFF. • Disconnect: RH Rear Window Control Switch C801. • Ignition ON. • **NOTE:** Make sure the window lock-out switch is in the UNLOCK position. • Measure the voltage between RH rear window control switch C801-2, circuit CPW01 (BN/BU), harness side and ground.  N0116420 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new RH rear window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
H3 CHECK FOR VOLTAGE AND GROUND TO THE WINDOW MOTOR	
• Ignition OFF. • Disconnect: RH Rear Power Window Motor C803. • Ignition ON. • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the window control switch is activated. • Measure the voltage between RH rear power window motor C803-1, circuit CPW24 (WH/VT), harness side and RH rear power window motor C803-2, circuit CPW23 (GY), harness side while operating the master window control switch in the down then up positions.  N0116421 • **Is the voltage greater than 10 volts when the window control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new RH rear window regulator motor. REFER to Window Regulator Motor — Rear Door in this section. TEST the system for normal operation. **No** GO to H4 .
H4 CHECK THE RH REAR WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: RH Rear Window Control Switch C801. • Carry out the window control switch component test on the RH rear window control switch. Refer to Wiring Diagrams Cell 149 for component testing. • **Did the RH rear window control switch pass the component**	**Yes** GO to H5 . **No** INSTALL a new RH rear window control switch. REFER to Window Control Switch in this section.

test?	TEST the system for normal operation.
H5 CHECK FOR AN OPEN CIRCUIT BETWEEN THE REAR WINDOW CONTROL SWITCH AND THE WINDOW MOTOR • Measure the resistance between RH rear window control switch C801, harness side and RH rear power window motor C803, harness side, using the following chart: **RH Rear Window Control Switch** / **Circuit** / **RH Rear Power Window Motor** C801-1 / CPW24 (WH/VT) / C803-1 C801-7 / CPW23 (GY) / C803-2  N0116473 • **Are the resistances less than 5 ohms?**	**Yes** GO to H6 . **No** REPAIR the circuit(s). TEST the system for normal operation.
H6 CHECK FOR AN OPEN CIRCUIT BETWEEN THE RH REAR WINDOW CONTROL SWITCH AND THE MASTER WINDOW CONTROL SWITCH • Disconnect: Master Window Control Switch C504C. • Measure the resistance between master window control switch C504C, harness side and RH rear window control switch C801, harness side using the following chart: **Master Window Control Switch** / **Circuit** / **RH Rear Window Control Switch** C504C-5 / CPW17 (BN/GN) / C801-3 C504C-6 / CPW18 (GY/VT) / C801-6	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	

Pinpoint Test I: The One-Touch Up/Down Feature is Inoperative

Refer to Wiring Diagrams Cell 100 , Power Windows for schematic and connector information.

NOTE: The master window control switch and the LH front window motor each contain integral electronics which must be initialized whenever:

- a new window control switch is installed.
- a new window regulator and motor is installed.
- a new window glass is installed.
- a glass top run removal and installation.
- carrying out any operation in which grease or lubricants are applied to the window system.
- battery voltage has been removed from the LH front window control switch for more than 3 minutes (for example, battery or window control switch disconnected).

For additional information, refer to Window Motor Initialization in this section.

Normal Operation

The master window control switch contains the electronics which controls the one-touch up/down operation of the LH front window. The master window control switch determines window position based upon feedback from two Hall-effect sensors (integral to the LH front window motor). Voltage and ground is supplied to the Hall-effect sensors from the master window control switch. If any fault occurs in the Hall-effect sensor circuits, the LH front window still operates (only the one-touch operation and obstacle detection is inoperative).

This pinpoint test is intended to diagnose the following:

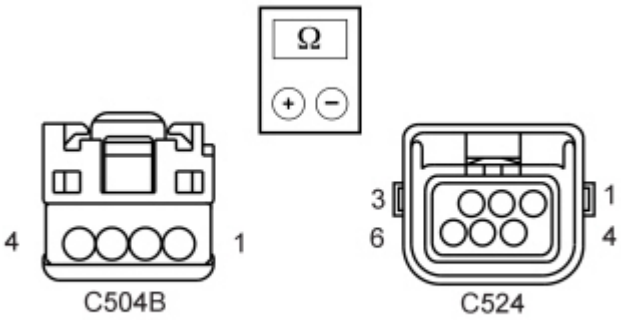
- LH front window motor not initialized
- Wiring, terminals or connectors
- Window control switch
- Window regulator motor

PINPOINT TEST I: ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take

I1 INITIALIZE THE LH FRONT WINDOW • Ignition ON. • Carry out the window motor initialization procedure. Refer to Window Motor Initialization in this section. • **Is the one-touch up/down feature operating correctly?**	**Yes** The system is operating normally at this time. The front window motor lost initialization. **No** GO to I2.
I2 CHECK THE HALL-EFFECT VOLTAGE SUPPLY AND GROUND CIRCUIT OUTPUTS FROM THE MASTER WINDOW CONTROL SWITCH • Ignition OFF. • Disconnect: LH Front Power Window Motor C524. • Ignition ON. • Measure the voltage between LH front power window motor C524-3, circuit RCA17 (WH/BN), harness side and LH front power window motor C524-4, circuit RPW37 (VT/GN), harness side.  N0116520 • **Is the voltage greater than 10 volts?**	**Yes** GO to I5. **No** GO to I3.
I3 CHECK THE HALL-EFFECT VOLTAGE SUPPLY AND GROUND CIRCUITS FOR AN OPEN • Ignition OFF. • Disconnect: Master Window Control Switch C504B. • Measure the resistance between master window control switch C504B, harness side and LH front power window motor C524, harness side using the following chart: **Master Window Control Switch** / **Circuit** / **LH Front Power Window Motor** C504B-1 / RCA17 (WH/BN) / C524-3 C504B-2 / RPW37 (VT/GN) / C524-4	**Yes** GO to I4. **No** REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.



N0116524

- **Are the resistances less than 5 ohms?**

I4 CHECK THE HALL-EFFECT VOLTAGE SUPPLY AND GROUND CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between master window control switch C504B-1, circuit RCA17 (WH/BN), harness side and ground; and between master window control switch C504B-2, circuit RPW37 (VT/GN), harness side and ground.  N0117883 • **Is the resistance greater than 10,000 ohms for both measurements?**	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
I5 CHECK THE HALL-EFFECT SIGNAL CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Master Window Control Switch C504B. • Measure the resistance between master window control switch C504B, harness side and LH front power window motor C524, harness side using the following chart: **Master Window Control Switch** / **Circuit** / **LH Front Power Window Motor** C504B-3 / VPW38 (YE/BU) / C524-6 C504B-4 / VPW39 (BU/WH) / C524-5	**Yes** GO to I6 . **No** REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 N0116524 • **Are the resistances less than 5 ohms?**	
I6 CHECK THE HALL-EFFECT SIGNAL CIRCUITS FOR A SHORT TO GROUND • Measure the resistance between master window control switch C504B-3, circuit VPW38 (YE/BU), harness side and ground; and between master window control switch C504B-4, circuit VPW39 (BU/WH), harness side and ground.  N0117884 • **Is the resistance greater than 10,000 ohms for both measurements?**	**Yes** INSTALL a new LH front window regulator motor. REFER to Window Regulator Motor — Front Door in this section. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation. If the concern is still present, INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit(s). CARRY OUT the window motor initialization procedure. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test J: The Defrost System is Inoperative

Refer to Wiring Diagrams Cell 56 , Heated Window for schematic and connector information.

Normal Operation

The engine must be running for the rear window defrost system to operate. When the rear window defrost switch (integral to the HVAC module) is pressed, a ground signal is sent to the Body Control Module (BCM). When the BCM receives the defrost request signal, it supplies voltage to the rear window defrost grid. When the rear window defrost is active, the BCM supplies voltage through a dedicated feedback circuit to the HVAC module to illuminate the LED indicator.

- DTC B1013:23 (Heater Rear Defog Switch: Signal Stuck Low) — sets if the rear window defrost switch is active during self-test, or if the rear window defrost switch has been active for more than 2 minutes.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Rear window defrost grid
- HVAC module
- BCM

PINPOINT TEST J: THE DEFROST SYSTEM IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
J1 CHECK THE BCM REAR DEFROST SWITCH (R_DEFRST_SW) PID OPERATION	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — BCM. • While monitoring the BCM R_DEFRST_SW PID, press and release the rear window defrost switch. • **Does the PID agree with the rear window defrost switch status?**	**Yes** GO to J5. **No** If DTC B1013:23 is present, GO to J3. If DTC B1013:23 is not present, GO to J2.
J2 CHECK THE HVAC MODULE (REAR WINDOW DEFROST SWITCH) GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: HVAC Module C228A. • Measure the resistance between HVAC module C228A-13, circuit GD115 (BK/GY), harness side and ground.  N0116548 • **Is the resistance less than 5 ohms?**	**Yes** GO to J3. **No** REPAIR the circuit. TEST the system for normal operation.

J3 CHECK THE BCM REAR DEFROST SWITCH (R_DEFRST_SW) PID OPERATION	
• Ignition OFF. • Disconnect: HVAC Module C228A. • Connect a fused jumper wire between HVAC module C228A-13, circuit GD115 (BK/GY), harness side and HVAC module C228A-16, circuit CRD09 (BU/GY), harness side.  N0116549 • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • Observe the BCM R_DEFRST_SW PID status. • Remove the fused jumper wire. • Observe the BCM R_DEFRST_SW PID status. • **Did the PID state change when the fused jumper wire was removed?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-00 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** GO to J4 .
J4 CHECK THE REAR WINDOW DEFROST SWITCH CIRCUIT FOR AN OPEN OR SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280E. • Measure the resistance between BCM C2280E-10, circuit CRD09 (BU/GY), harness side and HVAC module C228A-16, circuit CRD09 (BU/GY), harness side; and between BCM C2280E-10, circuit CRD09 (BU/GY), harness side and ground.  N0116551 • **Is the resistance less than 5 ohms between the BCM and the HVAC module; and greater than 10,000 ohms between the BCM and ground?**	**Yes** GO to J9 . **No** REPAIR the circuit. CLEAR all DTCs. TEST the system for normal operation.
J5 CHECK FOR VOLTAGE TO THE REAR WINDOW DEFROST GRID	
• Ignition OFF. • Disconnect: Rear Window Defrost Grid C402A.	**Yes** If the rear window

• Start the engine. • Activate the rear window defrost switch. • Measure the voltage between rear window defrost grid C402A-1, circuit CRD06 (BN/YE), harness side and ground.  N0116562 • **Is the voltage greater than 10 volts?**	defrost switch LED is illuminated, GO to J8 . If the rear window defrost switch LED is not illuminated, GO to Pinpoint Test L to diagnose the LED circuit. **No** GO to J6 .
J6 CHECK THE BCM VOLTAGE FEED FOR AN OPEN	
• Ignition OFF. • Measure the voltage between BCM C2280A-1, circuit SBB33 (RD), harness side and ground.  N0116565 • **Is the voltage greater than 10 volts?**	**Yes** GO to J7 . **No** VERIFY BJB fuse 33 (30A) is OK, If OK, REPAIR the circuit. CLEAR all DTCs. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the circuit. CLEAR all DTCs. TEST the system for normal operation.
J7 CHECK THE REAR WINDOW DEFROST GRID VOLTAGE CIRCUIT FOR AN OPEN OR SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280C. • Measure the resistance between BCM C2280C-10, circuit CRD06 (BN/YE), harness side and rear window defrost grid C402A-1, circuit CRD06 (BN/YE), harness side; and between BCM C2280C-10, circuit CRD06 (BN/YE), harness side and ground.	**Yes** GO to J9 . **No** REPAIR the circuit. CLEAR all DTCs. TEST the system for normal operation.

 N0116567 • **Is the resistance less than 5 ohms between the BCM and the rear window defrost grid; and greater than 10,000 ohms between the BCM and ground?**	
J8 CHECK THE REAR WINDOW DEFROST GRID GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Rear Window Defrost C402B. • Measure the resistance between rear window defrost grid C402B-1, circuit GD143 (BK/VT), harness side and ground.  N0116569 • **Is the resistance less than 5 ohms?**	**Yes** CARRY OUT the Grid Wire component test in this section. REPAIR the rear window defrost grid or INSTALL a new rear window glass as necessary. REFER to Window Grid Wire Repair or Window Glass — Rear in this section. TEST the system for normal operation. **No** REPAIR the circuit. CLEAR all DTCs. TEST the system for normal operation.
J9 CHECK FOR CORRECT BCM MODULE OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR all DTCs. TEST the system for normal operation.

Pinpoint Test K: The Defrost System Will Not Shut Off Automatically

Refer to Wiring Diagrams Cell 56, Heated Window for schematic and connector information.

Normal Operation

The engine must be running for the rear window defrost system to operate. When the rear window defrost switch (integral to the HVAC module) is pressed, a ground signal is sent to the Body Control Module (BCM). When the BCM receives the defrost request signal, it supplies voltage to the rear window defrost grid. When the rear window defrost is active, the BCM supplies voltage through a dedicated feedback circuit to the HVAC module to illuminate the LED indicator.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- BCM

PINPOINT TEST K: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
K1 CHECK FOR VOLTAGE TO THE REAR WINDOW DEFROST GRID WITH BCM DISCONNECTED	
• Ignition OFF. • Disconnect: BCM C2280C. • Ignition ON. • Measure the voltage between BCM C2280C-10, circuit CRD06 (BN/YE), harness side and ground.  N0116575 • **Is any voltage present?**	**Yes** REPAIR the short to voltage in circuit CRD06 (BN/YE). TEST the system for normal operation. **No** GO to K2.
K2 CHECK FOR A SHORT TO VOLTAGE ON THE SWITCH ILLUMINATION CIRCUIT	
• Ignition OFF. • Disconnect: BCM C2280F. • Disconnect: HVAC Module C228A. • Ignition ON. • Measure the voltage between HVAC module C228A-15, circuit CRD04 (BN/GN), harness side and ground.	**Yes** REPAIR the short to voltage in circuit CRD04 (BN/GN). TEST the system for normal operation. **No** GO to K3.

 N0117890 • **Is any voltage present?**	
K3 CHECK FOR CORRECT BCM MODULE OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM.
	REFER to Section 419-10.
	TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR all DTCs. TEST the system for normal operation.

Pinpoint Test L: The Defrost System LED Does Not Illuminate When the Defrost System is Active

Refer to Wiring Diagrams Cell 100, Power Windows for schematic and connector information.

Normal Operation

The engine must be running for the rear window defrost system to operate. When the rear window defrost switch (integral to the HVAC module) is pressed, a ground signal is sent to the Body Control Module (BCM). When the BCM receives the defrost request signal, it supplies voltage to the rear window defrost grid. When the rear window defrost is active, the BCM supplies voltage through a dedicated feedback circuit to the HVAC module to illuminate the LED indicator. The rear defrost self actuates when the ambient air temperature is less than 5° C (41° F) and engine coolant temperature is less than 60° C (140° F). The rear window defroster LED indicator does not illuminate when the rear defroster self actuates.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- HVAC module
- BCM

PINPOINT TEST L: THE DEFROST SYSTEM LED DOES NOT ILLUMINATE WHEN THE DEFROST SYSTEM IS ACTIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
L1 CHECK FOR VOLTAGE SIGNAL TO THE REAR WINDOW DEFROST SWITCH LED • Ignition OFF. • Disconnect: HVAC Module C228A. • Start the engine. • Momentarily connect a fused jumper wire between HVAC module C228A-13, circuit GD115 (BK/GY), harness side and HVAC module C228A-16, circuit CRD09 (BU/GY), harness side.  N0116549 • Remove the fused jumper wire. • Measure the voltage between HVAC module C228A-15, circuit CRD04 (BN/GN), harness side and ground.  N0116839 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-00 . TEST the system for normal operation. **No** GO to L2 .
L2 CHECK THE REAR WINDOW DEFROST SWITCH LED CIRCUIT FOR AN OPEN OR SHORT TO GROUND • Ignition OFF. • Disconnect: BCM C2280F. • Measure the resistance between HVAC module C228A-15, circuit CRD04 (BN/GN), harness side and BCM C2280F-11, circuit CRD04 (BN/GN), harness side; and between HVAC module C228A-15, circuit CRD04 (BN/GN), harness side and ground.	**Yes** GO to L3 . **No** REPAIR the circuit. TEST the system for normal operation.

 N0116850 • **Is the resistance less than 5 ohms between the HVAC module and the BCM ; and greater than 10,000 ohms between the HVAC module and ground?**	

L3 CHECK FOR CORRECT BCM MODULE OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion.
  ▪ pushed-out pins.
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 .
	TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR all DTCs. TEST the system for normal operation.

Component Test

Grid Wire Test

1. Using a bright lamp inside the vehicle, inspect the wire grid from the outside. A broken grid wire appears as a brown spot.

2. Run the engine at idle. Set the rear window defrost switch to ON. The indicator light should illuminate.

3. Working inside the vehicle with a voltmeter, contact the broad, red-brown stripes of the back glass window grid (positive lead to B+ side and negative lead to ground side). The meter should read 10-13 volts. A lower voltage reading may indicate a loose grid connection.

4. Contact a good ground point with the negative lead of the meter. The voltage reading should not change. If the voltage increases, this indicates a loose ground connection. A voltage reading of less than 10 volts indicates a loose B+ side connection.

5. With the negative lead of the meter grounded, touch each grid line of the rear window defrost glass at its midpoint with the positive lead. A reading of approximately 6 volts indicates the line is good. A reading of 0 volt indicates the line is broken between the midpoint and the B+ side of the grid line. A reading of 12 volts indicates the circuit is broken between the midpoint of the grid line and ground.

6. Pinpointing the exact position of the break can be accomplished (if the voltmeter reads 0 volt when the midpoint of the grid line is touched with the positive lead of the voltmeter) by moving the positive lead of the voltmeter toward the B+ side of the grid line and touching the grid line until the voltmeter reads 12 volts. If the voltmeter reads 12 volts when the midpoint of the grid line is touched with the positive lead of the voltmeter, simply move the positive lead of the voltmeter toward the ground connection of the grid line and touch the grid line until the voltmeter reads 0 volt.

Window Motor Initialization

NOTE: Initialization is required to learn both the full UP and full DOWN positions and the profile of the glass as it travels through the glass channel. Once initialized, obstacle detection is enabled. This procedure is only required for the LH front window motor.

NOTE: The master window control switch and the LH front window motor each contain integral electronics which must be initialized whenever:

- a new window control switch is installed.
- a new window regulator and motor is installed.
- a new window glass is installed.
- a glass top run removal and installation.
- carrying out any operation in which grease or lubricants are applied to the window system.
- battery voltage has been removed from the LH front window control switch for more than 3 minutes (for example, battery or window control switch disconnected).

NOTE: Before carrying out the initialization procedure, make sure all window components (window glass, window regulator, window motor, seals and glass top run) are installed and tightened to specifications.

1. Turn the ignition ON.

2. Activate and hold the window control switch in the UP position at the second detent until the window glass stalls for 2 seconds into the glass top run and release the switch. While the window is up, repeat this step 2 more times.

3. Activate and hold the window control switch in the DOWN position at the second detent until the window glass stalls for 2 seconds at the bottom of its travel and release the switch.

4. Test for correct window operation by carrying out the one-touch up/down feature.

Window Glass Adjustment

1. If needed, remove the door trim panel. For additional information, refer to Section 501-05 .
2. If needed, remove the 2 access hole plugs.
3. If needed, connect the window control switch, or install the window regulator handle.
4. If needed, position the window glass in order to access the window glass clamp bolts.
5. If needed, loosen the 2 window glass clamp bolts.
6. **NOTE:** Make sure the window glass is correctly installed in door glass top run.

   Manually lift the window glass by hand, to the top of the door.
7. **NOTE:** Make sure to lower the window glass evenly.

   NOTE: Make sure the window glass is seated in the bottom of the window glass clamps.

   Shift the glass rearward until it stops against the rear of the door glass top run while manually lowering the glass back down into the window glass clamps.
8. Tighten the 2 window glass clamp bolts to 9 Nm (80 lb-in).
9. Using the window control switch, fully raise the window glass and check that the window glass seats correctly in the upper door glass top run.
10. If the window glass does not seat correctly, repeat steps 4 - 8.
11. If this procedure was performed on the LH front window glass, the LH window motor must be initialized. For additional information, refer to Window Motor Initialization in this section.

Window Grid Wire Repair

General Equipment

Polypropylene Film Fine Line Tape (Commercially available)

Material

Item	Specification
Motorcraft® Lacquer Touch-Up Paint (match color to exterior grid wire) PMP-19500-XXXXX	ESR-M2P100-C
Rear Window Defroster Repair PM-11 (US); CPM-11 (Canada)	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

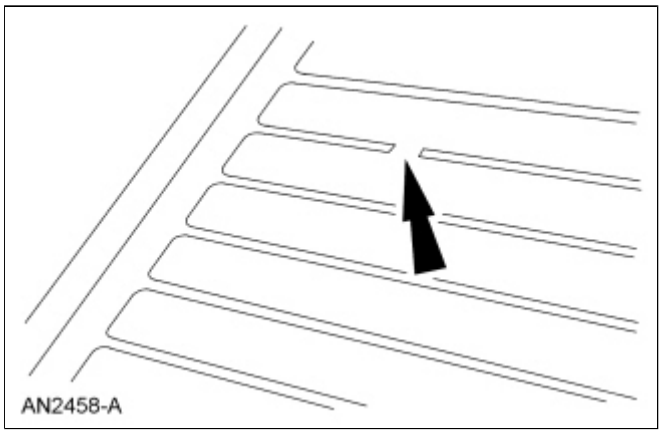
NOTE: The grid line material is not embedded into the glass, but is baked to the glass surface and consequently can be scraped off. An undamaged grid line will have small ridges that project above the surface of the glass and can easily be felt when running a fingernail across them. Grid lines that have been "razor bladed" will feel smooth when a fingernail is dragged across the affected area. Inoperative lines may appear to the eye to be undamaged due to residue remaining on the glass and will require diagnosis with a voltmeter or 12V test lamp. For additional information, refer to Diagnosis and Testing in this section.

1. Bring the vehicle up to a room temperature of at least 16°C (60°F) or above.

2. ***NOTICE:*** **Do not use scrapers, sharp instruments or abrasive window cleaners on the interior surface of the rear window glass as this may cause damage to the grid lines.**

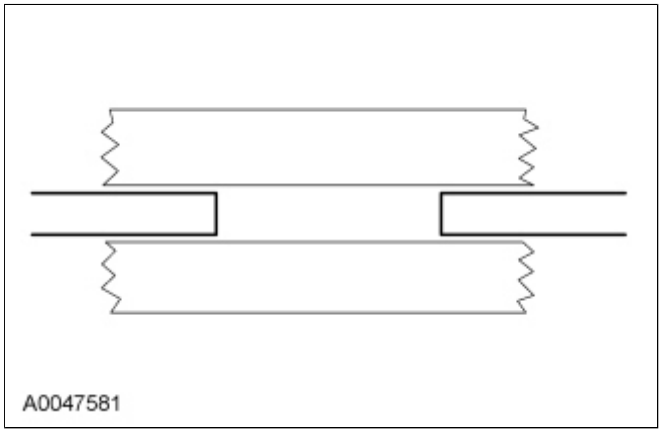
   Clean the entire grid line repair area with glass cleaner and 0000 steel wool to remove all dirt, wax, grease, oil or other foreign material.

3. Mark the location of the grid break on the exterior of the rear window glass.



4. Using a polypropylene film fine line tape, mask the area directly above and below the grid break

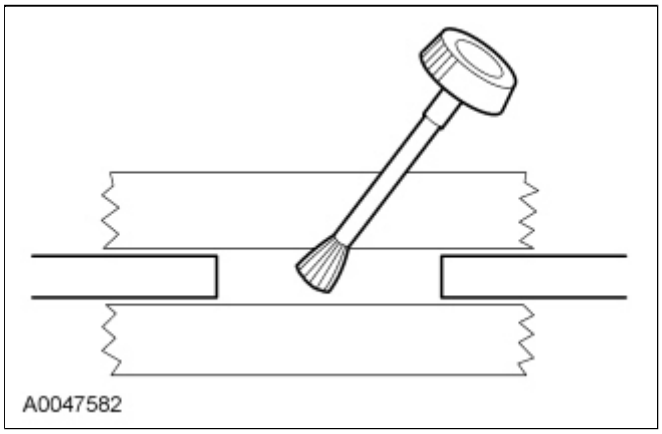
extending the tape 26 mm (1.02 in) beyond the concern area in both directions. The break area should be at the center of the mask.



5. **NOTE:** If the brown layer is not broken or missing, apply only the silver grid repair compound to the break. If both the brown and silver layers of the grid are broken or missing, apply a coating of the lacquer touch up paint across the break in the grid line prior to applying the rear window defroster repair compound. Do not overlap the silver grid line with the paint. Several applications may be necessary to achieve a color match.

   NOTE: Allow at least 5 minutes of drying time between applications for the touch up paint or the silver repair coating. Applying fewer coats or not allowing adequate drying time between coats will produce repaired resistance that is greater than OEM resistance, resulting in poor defrost performance and excessive localized heating.

   Apply the repair coating to the grid break area in several smooth, continuous strokes. Extend the silver repair coating at least 6.35 mm (0.25 in) on both sides of the break area.
   Apply a minimum of 6 applications of the grid repair compound.



6. **NOTE:** The repair coating air-dries in approximately one minute and can be energized after 5 minutes. Optimum adhesion occurs after approximately 24 hours.

   Allow the repair area to dry completely and remove the mask.

7. ***NOTICE:*** **Be careful not to damage the grid line with the razor blade. If this occurs, additional repair may be necessary.**

   Remove any excess repair compound above or below the grid line with a razor blade.

8. **NOTE:** The interior side of the grid lines are not painted, but due to the silver tarnishing will tend to change the grid to a gold or brown color. The repair area will be bright silver and will also tarnish over time to match the rest of the grid.

Test the system for normal operation.

Lead Terminal Repair

General Equipment

Terminal Kit — Back Glass 4F1Z-14421-AA

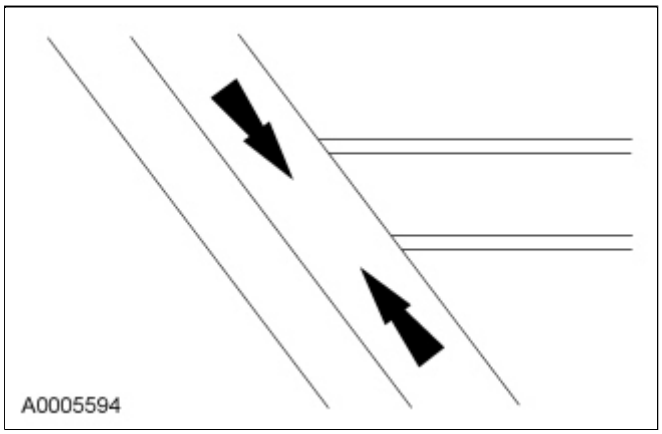
Material

Item	Specification
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

1. Bring the vehicle up to room temperature of at least 16°C (60°F) or above.

2. **NOTE:** The new terminal will cover the original terminal location, but it must be placed so that the terminal conductive areas will be placed on a good conductive base.

   Clean the bus bar in the area to be repaired with steel wool (000 to 0000 grade), and then with glass cleaner to remove all dirt, wax, grease, oil or other foreign material.



3. ***NOTICE:*** **Do not use any type of flame torch or flame-heated soldering gun for this procedure. Use of these tools provide inadequate heat generation at the tip and the exhaust heat can cause damage to plastic trim parts in the area. Use only an electric soldering gun with 100 watts or more of power. Before using the soldering gun, be sure to melt a small amount of rosin core solder to the tip. The solder will assist in achieving better heat transfer from the soldering gun tip to the new terminal.**

   NOTE: Depending on the original terminal location, and whether the terminal is covered by pillar trim, will determine where to locate the new terminal. Some grid line bus bars may only allow the placement of the terminal above or below the original tab location due to space limitations. For most vehicle applications, the replacement tab location will cover the original tab location, but still allow the replacement tab to attach to the bus bar on good conductive material.

   Place the replacement terminal type A over the original tab location, making sure the conductive areas of the terminal will be on a good conductive area. Do not place the terminal tab foot on the original location, which does not have conductive material.

4. Hold the terminal in place with an item such as a regular lead pencil at a 90 degree angle from the terminal. (Holding at other than a 90 degree angle may allow the terminal to slip when the

solder liquefies.)

5. **NOTE:** The new terminal has pre-applied solder, flux and temperature-sensitive paint. The paint provides a visual indication when the terminal has reached the correct temperature to melt solder on the terminal. When the correct temperature is achieved, the temperature paint will liquefy and change color.

   Place the soldering gun tip on the top of the terminal, but not on the painted areas of the tab. Energize the soldering gun and watch for the painted area of the terminal to liquefy and change color. The paint should liquefy in approximately 25-45 seconds after heating. As soon as the paint color completely changes on either side of the terminal, de-energize the soldering gun and continue to hold the terminal in place with the soldering gun and pencil for an additional 30 seconds.

6. Remove the soldering gun and pencil from the terminal. The terminal should be allowed to cool for another 2 minutes before the wiring lead is attached to the terminal.

7. Attach the electrical lead connection to this terminal, turn on the heated rear window and verify the operation.

Glass Reseal — Windshield

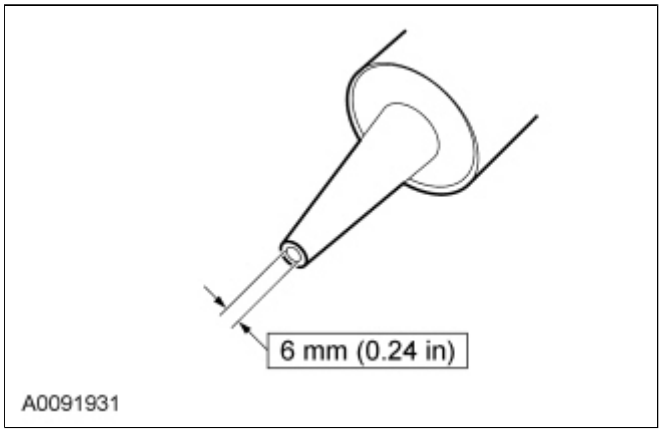
Special Tool(s)

ST3109-A	Air Caulking Gun AST405 or equivalent

Material

Item	Specification
Dow Urethane Adhesive Betaseal™ Express	—
Sika Urethane Adhesive Sika Tack ASAP	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

1. Remove the cowl panel grille. For additional information, refer to Section 501-02 .
2. Remove the LH and RH A-pillar trim panels. For additional information, refer to Section 501-05 .
3. If equipped, remove the overhead console.
4. If equipped, disconnect the automatic-dimming interior rear view mirror electrical connector.
5. Remove the 4 screws and LH and RH sun visors.
6. Remove the RH and LH sun visor clips.
7. Lower the front portion of the headliner and block with a suitable material.
8. Clean the edge formed by the existing urethane adhesive and the glass on the inside at the top and sides and outside on the bottom of the windshield with glass cleaner.
9. Cut the urethane adhesive applicator tip to specification.



10. **NOTE:** Use either a Air Caulking Gun or a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and a continuous bead.

    NOTE: Make sure there are no gaps in the urethane adhesive bead.

    Apply urethane adhesive over the top of the existing urethane adhesive.
    - Apply the urethane adhesive to the top and sides of the windshield from the interior of the vehicle.
    - Apply the urethane adhesive to the bottom of the windshield from the exterior of the vehicle.

11. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

    After the urethane adhesive has cured, check the windshield seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

12. Position the front portion of the headliner.

13. Install the RH and LH sun visor clips.

14. Install the LH and RH sun visors and the 4 screws.

15. If equipped, connect the automatic-dimming interior rear view mirror electrical connector.

16. If equipped, install the overhead console.

17. Install the LH and RH A-pillar trim panels. For additional information, refer to Section 501-05 .

18. Install the cowl panel grille. For additional information, refer to Section 501-02 .

19. Clean the interior and exterior windshield glass with glass cleaner.

Glass Reseal — Rear

Special Tool(s)

ST3109-A	Air Caulking Gun AST405 or equivalent

Material

Item	Specification
Dow Urethane Adhesive Betaseal™ Express	—
Sika Urethane Adhesive Sika Tack ASAP	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

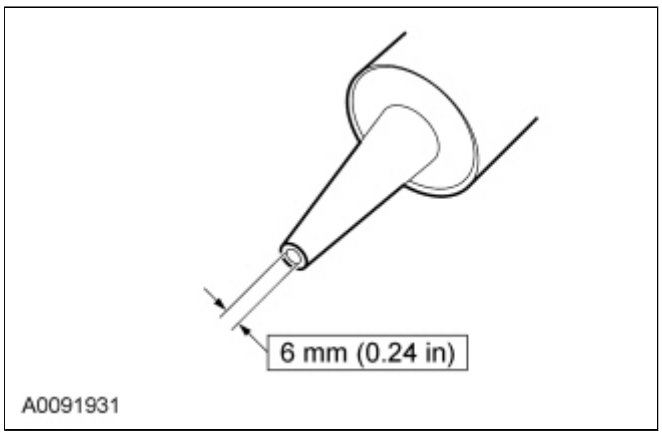
1. **4-door vehicles:** Remove the C-pillar trim panel, parcel shelf, high mounted stoplamp and lower the headliner. For additional information, refer to Section 501-05 and Section 417-01 .

2. **5-door vehicles:** Remove the liftgate trim panel. For additional information, refer to Section 501-05 .

3. Disconnect the rear window glass electrical connectors.

4. Clean the interior and exterior of the rear window glass surface with glass cleaner.

5. Cut the urethane adhesive applicator tip to specification.



6. **NOTE:** Use either a Air Caulking Gun or a high-ratio, electric or battery-operated caulk gun that applies the urethane adhesive with less effort and continuous bead.

   NOTE: Make sure there are no gaps in the urethane adhesive bead.

Apply the urethane adhesive over the top of the existing urethane adhesive.

- Apply the urethane adhesive to the top and sides of the rear window glass from the interior of the vehicle.
- **4-door vehicles:** Apply the urethane adhesive to the bottom of the rear window glass from the exterior of the vehicle.
- **5-door vehicles:** Apply the urethane adhesive to the bottom of the rear window glass from the interior of the vehicle.

7. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

   After the urethane adhesive cures, check the rear window glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

8. Connect the rear window glass electrical connectors.

9. **4-door vehicles:** Install the high mounted stoplamp, headliner, parcel shelf and C-pillar trim panels. For additional information, refer to Section 417-01 and Section 501-05 .

10. **5-door vehicles:** Install the liftgate trim panel. For additional information, refer to Section 501-05 .

Windshield Glass

Special Tool(s)

 ST3109-A	Air Caulking Gun AST405 or equivalent
ST3274-A	Deluxe Air Windshield Knife 300-AST1770E or equivalent
 ST2085-A	The Pumper 164-R2459 or equivalent

Material

Item	Specification

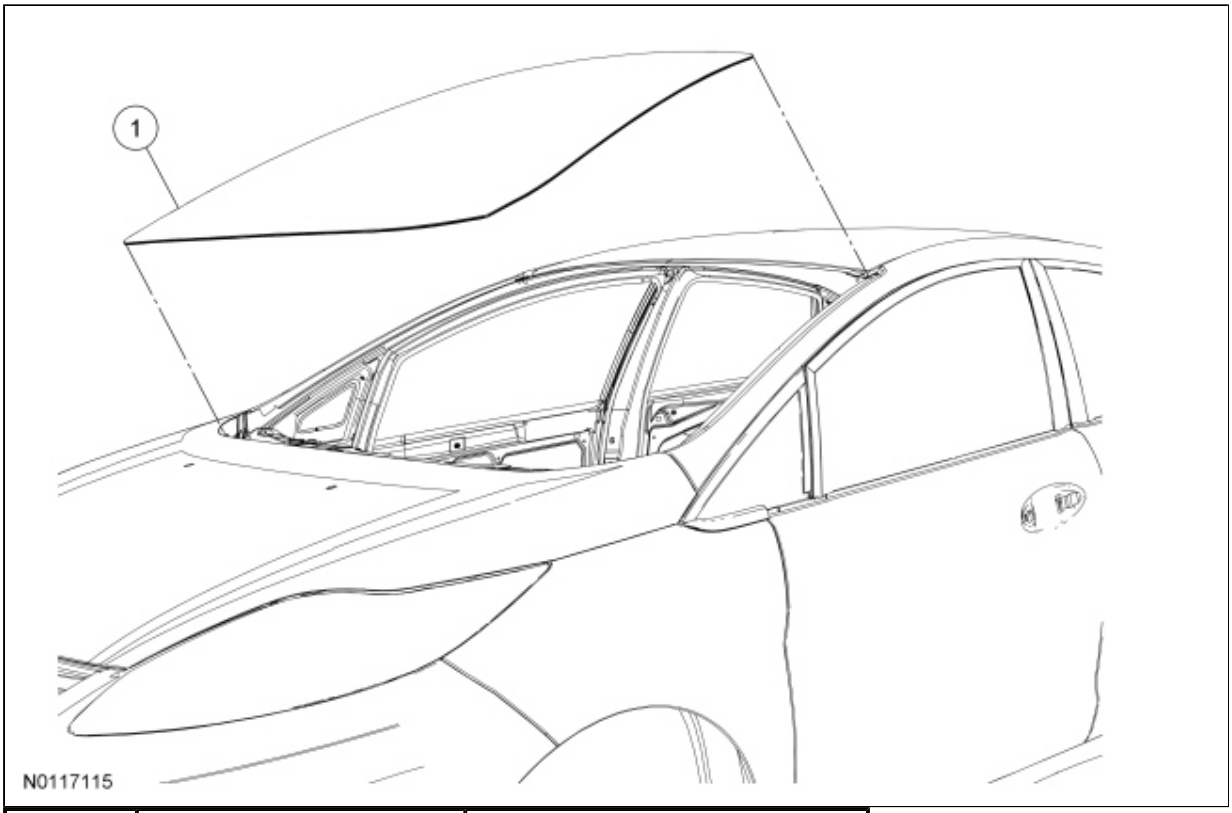
Dow Urethane One Step Glass Primer Betaprime™ 5500 / 5500A / 5500SA	—
Sika Urethane Adhesive Sika Tack ASAP	—
Sika Urethane Metal and Glass Primer Sika 206 G+P	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A



Item	Part Number	Description
1	03100	Windshield glass

Removal

NOTE: If the windshield glass is being removed to repair a dust/water leak, remove and reinstall the existing windshield glass.

1. Remove the A-pillar trim panels. For additional information, refer to Section 501-05 .
2. Remove the 4 screws and LH and RH sun visors.
3. Remove the RH and LH sun visor clips.
4. Remove the interior rear view mirror. For additional information, refer to Section 501-09 .
5. Partially lower the front portion of the headliner near the windshield header and block with suitable material.
6. Remove the cowl panel grille. For additional information, refer to Section 501-02 .
7. Before cutting the urethane adhesive, remove dirt and other foreign material from the windshield pinchweld area.
   - Use a clean shop towel or oil-free, compressed air.
8. **NOTE:** Refer to manufacturer's instructions before using the Deluxe Air Windshield Knife.

   Lubricate the urethane adhesive with water to aid the Deluxe Air Windshield Knife when cutting.
9. **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

   WARNING: Wear protective gloves when handling components or parts that have pointed or

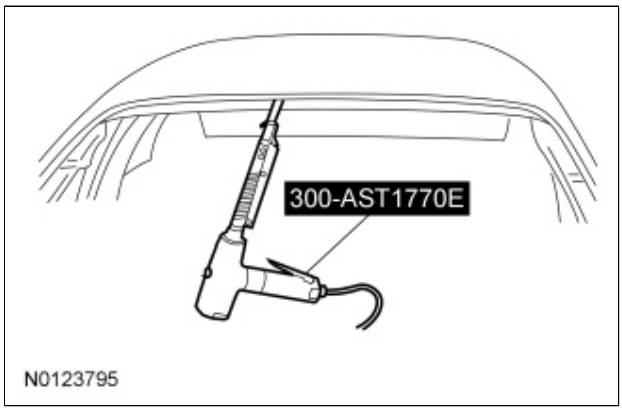
sharp edges. Failure to follow this instruction may result in serious personal injury.

NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer or otherwise damage the pinchweld during glass removal.**

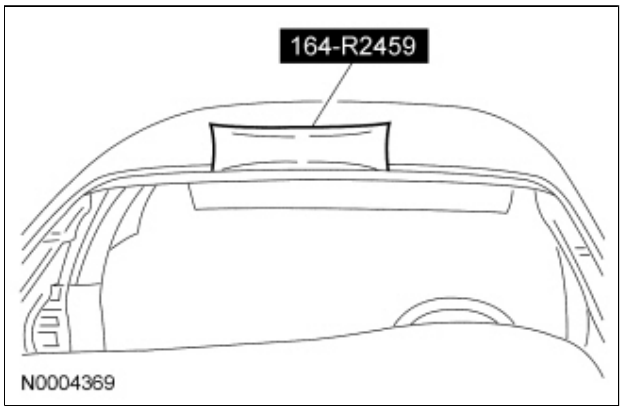
NOTE: Insert the blade into the Deluxe Air Windshield Knife so that the flat side is against the glass. This will leave the entire urethane adhesive bead on the pinchweld and allow a dry fit of the replacement windshield glass.

NOTE: Support the windshield glass to prevent the glass from dropping while cutting the urethane adhesive.

Working from inside the vehicle, insert the Deluxe Air Windshield Knife at the upper center of the windshield glass and work toward the bottom corners.



10. Using The Pumper, distance the windshield glass from the body.



11. Insert the Deluxe Air Windshield Knife into the bottom of the urethane adhesive and cut from corner to corner.

12. Carefully remove the windshield glass from the vehicle and place on a stable work surface.

Installation

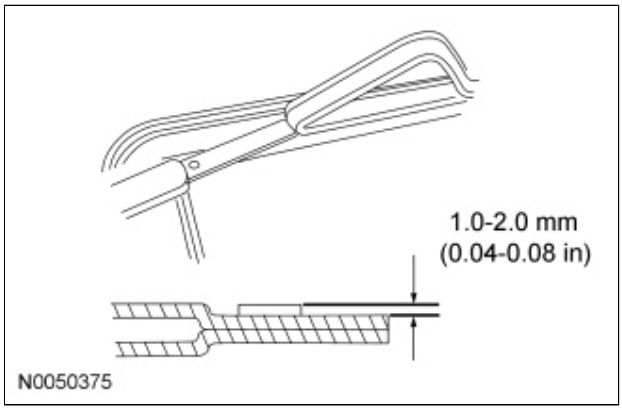
1. Dry-fit the windshield glass on the existing urethane adhesive bead on the pinch weld.
    - Position the windshield glass on the pinch weld.
    - Center the glass in the opening.
    - Adjust the windshield glass stop blocks (if equipped) as needed for best fit.
    - Make alignment marks with tape or non-staining grease pencil (preferably at the windshield glass stop blocks) on the windshield glass and the body.

2. After the dry-fit alignment, remove the glass from the body opening and place on a stable work surface with the interior side of the glass facing upward.

3. **WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

   NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions. Use the same brand pinch weld primer, glass primer and urethane adhesive.

   Using an appropriate tool, trim the urethane adhesive leaving a 1-2 mm (0.04-0.08 in) base of original equipment urethane adhesive on the pinchweld.



4. Using a clean shop towel, brush or oil-free, compressed air, clean the pinch weld area around the existing urethane adhesive. Remove any foreign material or water that may have entered during glass removal.

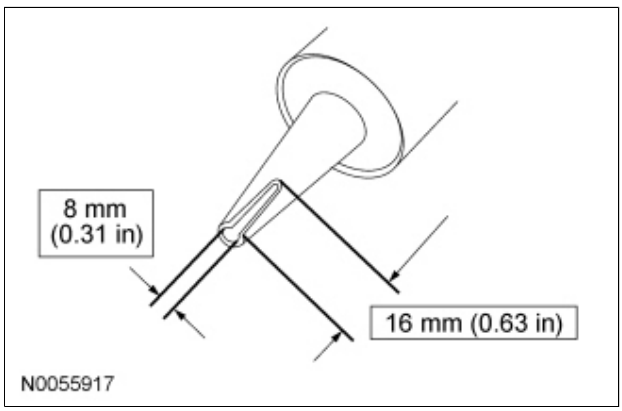
5. If reinstalling the same windshield glass, remove the remaining urethane adhesive from the glass leaving a thin layer to bond with the new urethane adhesive bead.

6. Clean the inside of the windshield glass surface with glass cleaner.
   - Make sure to thoroughly clean the surface of the blackened border area where the urethane adhesive will be applied.

7. **NOTE:** Be sure to use the same brand and cure-rate products for the urethane adhesive and glass primer. Do not mix different brands of urethane adhesive and glass primer. Refer to the Material Chart in this procedure.

   If installing a new windshield glass, apply glass primer according to manufacturer's instructions. Allow at least 6 minutes to dry.

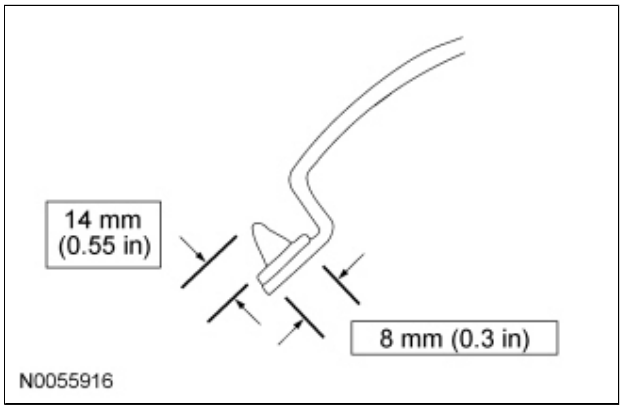
8. Cut the urethane adhesive applicator tip to specification.



9. **NOTE:** Use a Air Caulking Gun or a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and a continuous bead.

NOTE: The windshield glass must be positioned within 10 minutes of applying the urethane adhesive.

Apply a uniform bead of urethane adhesive on top of the existing trimmed urethane adhesive bead on the pinch weld, starting and ending at the bottom of the windshield glass near the center, making sure there are no gaps in the bead.



10. **WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).**

    NOTICE: **Before positioning the windshield glass, open vehicle windows to prevent the air pressure of closing doors from affecting the urethane adhesive bond.**

    Using the alignment marks made previously, position the windshield glass on the pinch weld.

11. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

    After the urethane adhesive has cured, check the windshield glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

12. Install the cowl panel grille. For additional information, refer to Section 501-02 .

13. Install the headliner. For additional information, refer to Section 501-05 .

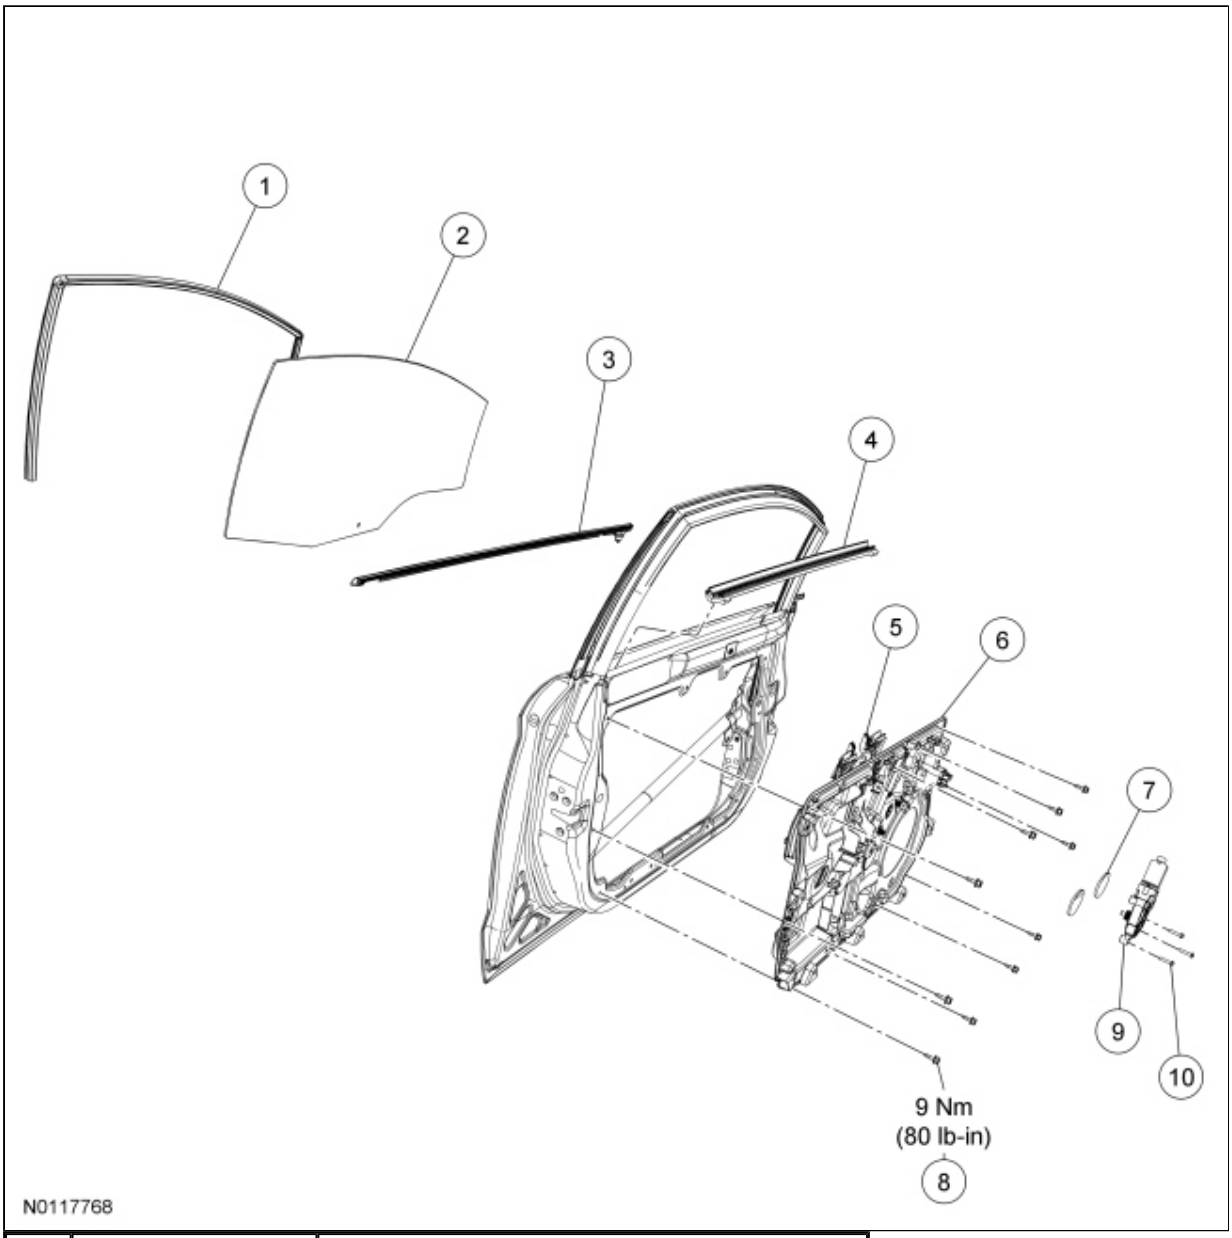
14. Install the interior rear view mirror. For additional information, refer to Section 501-09 .

15. Install the RH and LH sun visor clips.

16. Install the LH and RH sun visors and the 4 screws.

17. Install the A-pillar trim panels. For additional information, refer to Section 501-05 .

Glass, Frames and Mechanisms — Exploded View, Front Door



Item	Part Number	Description
1	21456 RH / 21457 LH	Door window glass top run
2	21410 RH/ 21411 LH	Door window glass
3	20562 RH/ 20563 LH	Exterior door window glass belt moulding
4	21456 RH/ 21457 LH	Interior door window glass belt moulding
5	23208 RH/ 23209 LH	Window regulator
6	235A86 RH/ 235A87 LH	Door carrier

7	202A84	Access hole plug (2 required)
8	W706127	Door carrier bolt (10 required)
9	23394	Window regulator motor
10	—	Window regulator motor screws (part of 23394) (3 required)

1. For additional information, refer to the procedures in this section.

Window Glass — Front Door

Removal and Installation

1. Fully lower the front door window glass.
2. Remove the front door trim panel. For additional information, refer to Section 501-05 .
3. Remove the interior door window glass belt moulding.
4. Remove and discard the exterior door window glass belt moulding.
5. Remove the 2 access hole plugs.
6. Connect the window control switch, or install the window regulator handle.
7. Position the window glass in order to access the window glass clamp bolts.
8. Loosen the 2 window glass clamp bolts.
9. Tilt the window glass forward and lift upward to remove the window glass from the door.

Installation

1. Install the window glass into the door.
2. **NOTE:** The window glass clamp bolts will be tightened when performing this step.

   Before tightening the window glass clamp bolts, make sure window glass is adjusted correctly. For additional information, refer to Window Glass Adjustment in this section.
3. Install the 2 access hole plugs.
4. Fully lower the front door window glass.
5. Install a new exterior door window glass belt moulding.
6. Install the interior door window glass belt moulding.
7. Install the front door trim panel. For additional information, refer to Section 501-05 .
8. If installing a new LH front window glass, the LH window motor must be initialized. For additional information, refer to Window Motor Initialization in this section.

Window Regulator Motor — Front Door

Removal and Installation

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .
2. Disconnect the window regulator motor electrical connector.
3. Secure the window glass in position with tape.
4. Remove the 3 window regulator motor screws.
5. Remove the window regulator motor.
6. To install, reverse the removal procedure.
    - If installing a new LH front window regulator motor, it must be initialized. For additional information, refer to Window Motor Initialization in this section.

Window Regulator — Front Door

Removal and Installation

All vehicles

1. Remove the front door window glass. For additional information, refer to Window Glass — Front Door in this section.

2. **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Ignition must remain OFF until repair is complete. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**

   Turn the ignition OFF and wait at least one minute.

3. Disconnect the speaker, window regulator motor and side impact sensor electrical connectors.

4. Remove the 9 wire harness retainers.

5. Remove the 10 door carrier bolts.
   - To install, tighten to 9 Nm (80 lb-in).

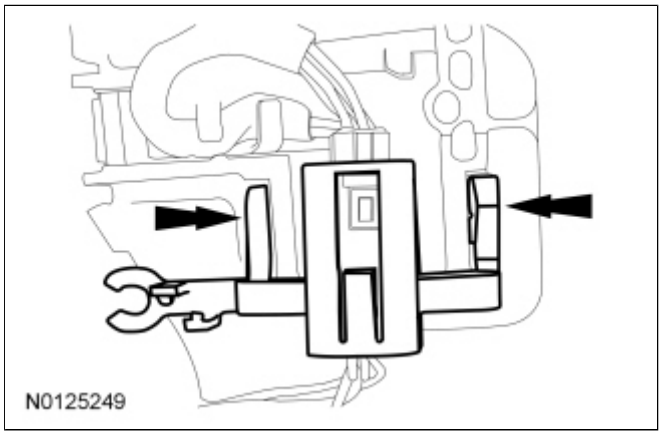
6. Slide the door carrier toward the front of the vehicle to release the door carrier retainers.

7. Position aside the door carrier and disconnect the door lock actuator electrical connector.

8. Route the interior door handle cable and door lock actuator electrical connector through the door carrier.

Vehicles equipped with Intelligent Access (IA)

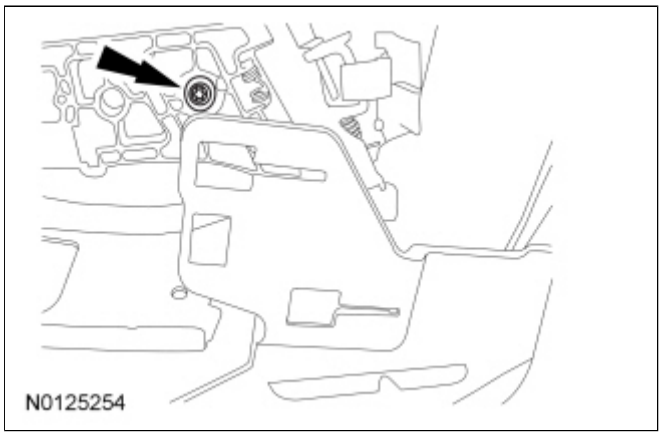
9. Remove the door handle electrical connector carrier from the exterior door handle reinforcement.



10. Using a flat-blade screwdriver, release the retaining tabs and press the electrical connector upward to separate the door handle electrical connector from the door handle electrical connector carrier.

11. Disconnect the door handle electrical connector.

12. Remove the exterior door handle reinforcement cover bolt.



13. Remove the exterior door handle reinforcement cover.

14. Detach the wire harness from the remove the exterior door handle reinforcement cover and the door carrier.

All vehicles

15. Remove the 2 window regulator bolts from the door carrier.

16. Depress the retaining tabs and remove the window regulator from the door carrier.

17. To install, reverse the removal procedure.
    - If installing a new LH front window regulator, the LH window motor must be initialized. For additional information, refer to Window Motor Initialization in this section.

Door Glass Top Run — Front

Removal and Installation

1. Remove the front door window glass. For additional information, refer to Window Glass — Front Door in this section.

2. Remove the 3 door speaker screws and the door speaker.
   - Disconnect the electrical connector.

3. Remove the front door glass top run.

4. To install, reverse the removal procedure.
   - If installing a new LH front door glass top run, the LH window motor must be initialized. For additional information, refer to Window Motor Initialization in this section.

Window Glass — Front Quarter

Special Tool(s)

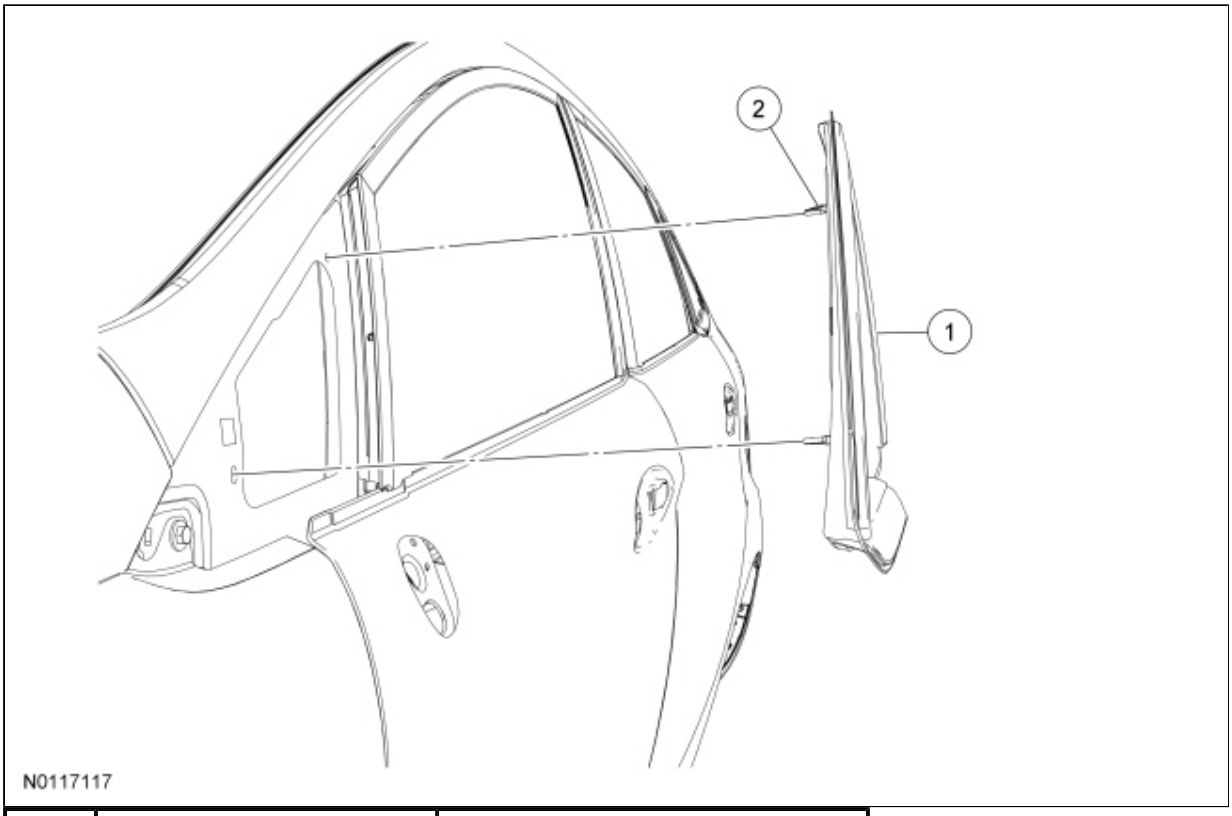
Sika Urethane Metal and Glass Primer Sika 206 G+P	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A



Item	Part Number	Description
1	29710 RH/ 29711 LH	Front quarter window glass

Removal

1. Remove the A-pillar upper trim panel. For additional information, refer to Section 501-05 .

2. Before cutting the urethane adhesive, remove dirt and other foreign material from the front quarter window glass pinch weld area.
   - Use a clean shop towel or oil-free compressed air.

3. **NOTE:** Refer to manufacturer's instructions before using the Deluxe Air Windshield Knife.

   Lubricate the urethane adhesive with water to aid the Deluxe Air Windshield Knife when cutting the urethane adhesive.

4. **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

   WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

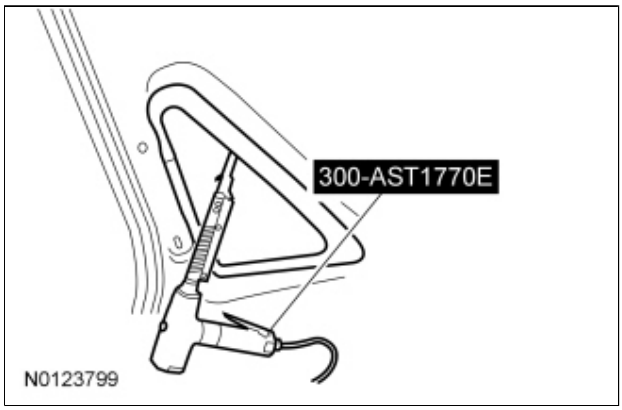
   NOTICE: **Make sure the cutting blades are changed where the cutting depth changes to avoid damage to the body and trim panels.**

   NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer, or otherwise damage the pinch weld during glass removal.**

   NOTE: Insert the blade into the Deluxe Air Windshield Knife so that the flat side is against the glass.

   NOTE: Some resistance may be encountered when cutting through the glass locating pegs in the upper right and lower left corners of the glass.

Working from inside the vehicle, insert the Deluxe Air Windshield Knife at the upper of the front quarter window glass and work towards the corners and remove the front quarter window glass.



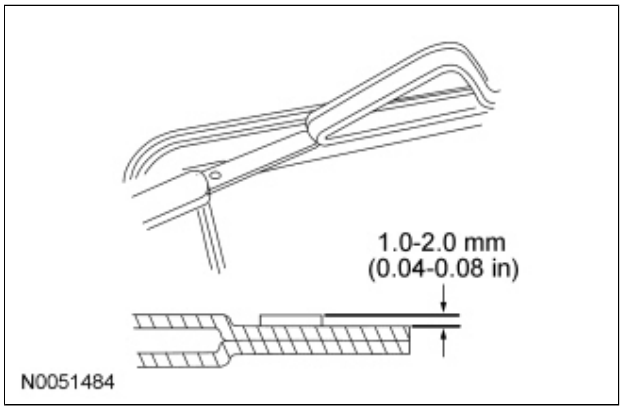
Installation

NOTE: For additional material guidelines, refer to the manufacturer's installation information.

1. **WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

   NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions. Use the same brand pinch weld primer, glass primer and urethane adhesive.

   Using an appropriate tool, trim the urethane adhesive leaving a 1 mm to 2 mm (0.04 in to 0.08 in) base of original equipment urethane adhesive on the pinch weld.



2. Using a clean shop towel, brush or oil-free compressed air, clean the pinch weld area around the existing urethane adhesive. Remove any foreign material or water that may have entered during glass removal.

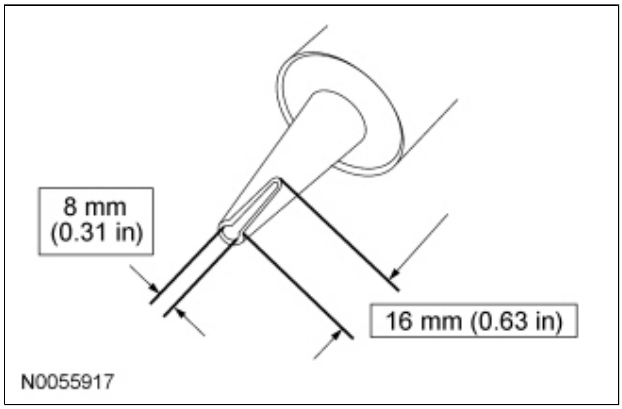
3. If installing the original front quarter window glass, remove the excess urethane adhesive.

4. Clean the inside of the front quarter window glass with glass cleaner.

5. **NOTE:** Be sure to use the same brand of cure-rate products for the urethane adhesive and glass primer. Do not mix different brands of urethane adhesive and glass primer. Refer to the Material Chart in this procedure.

   If installing a new front quarter window glass, apply glass primer according to the manufacturer's instructions. Allow at least 6 minutes to dry.

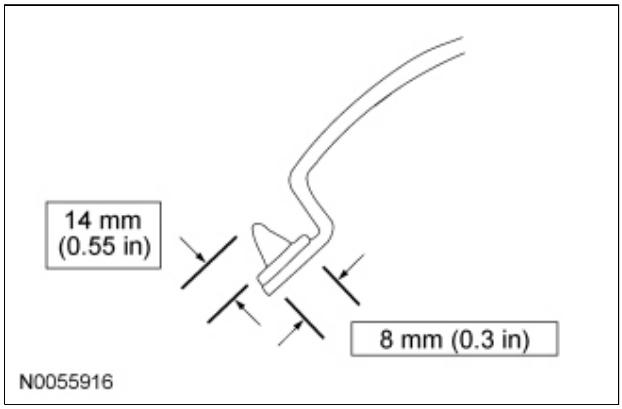
6. Cut the urethane adhesive applicator tip to specification.



7. **NOTE:** The front quarter window glass must be positioned within 10 minutes of applying the urethane adhesive.

   NOTE: Use either a Air Caulking Gun or a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and a continuous bead.

   Apply urethane adhesive on top of the existing trimmed urethane adhesive bead on the pinch weld, starting and ending at the bottom of the front quarter window glass near the center, making sure there are no gaps in the bead.



8. **WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).**

   NOTICE: **Before positioning the front quarter window glass, open vehicle windows to prevent the air pressure of closing doors from affecting the urethane adhesive bond.**

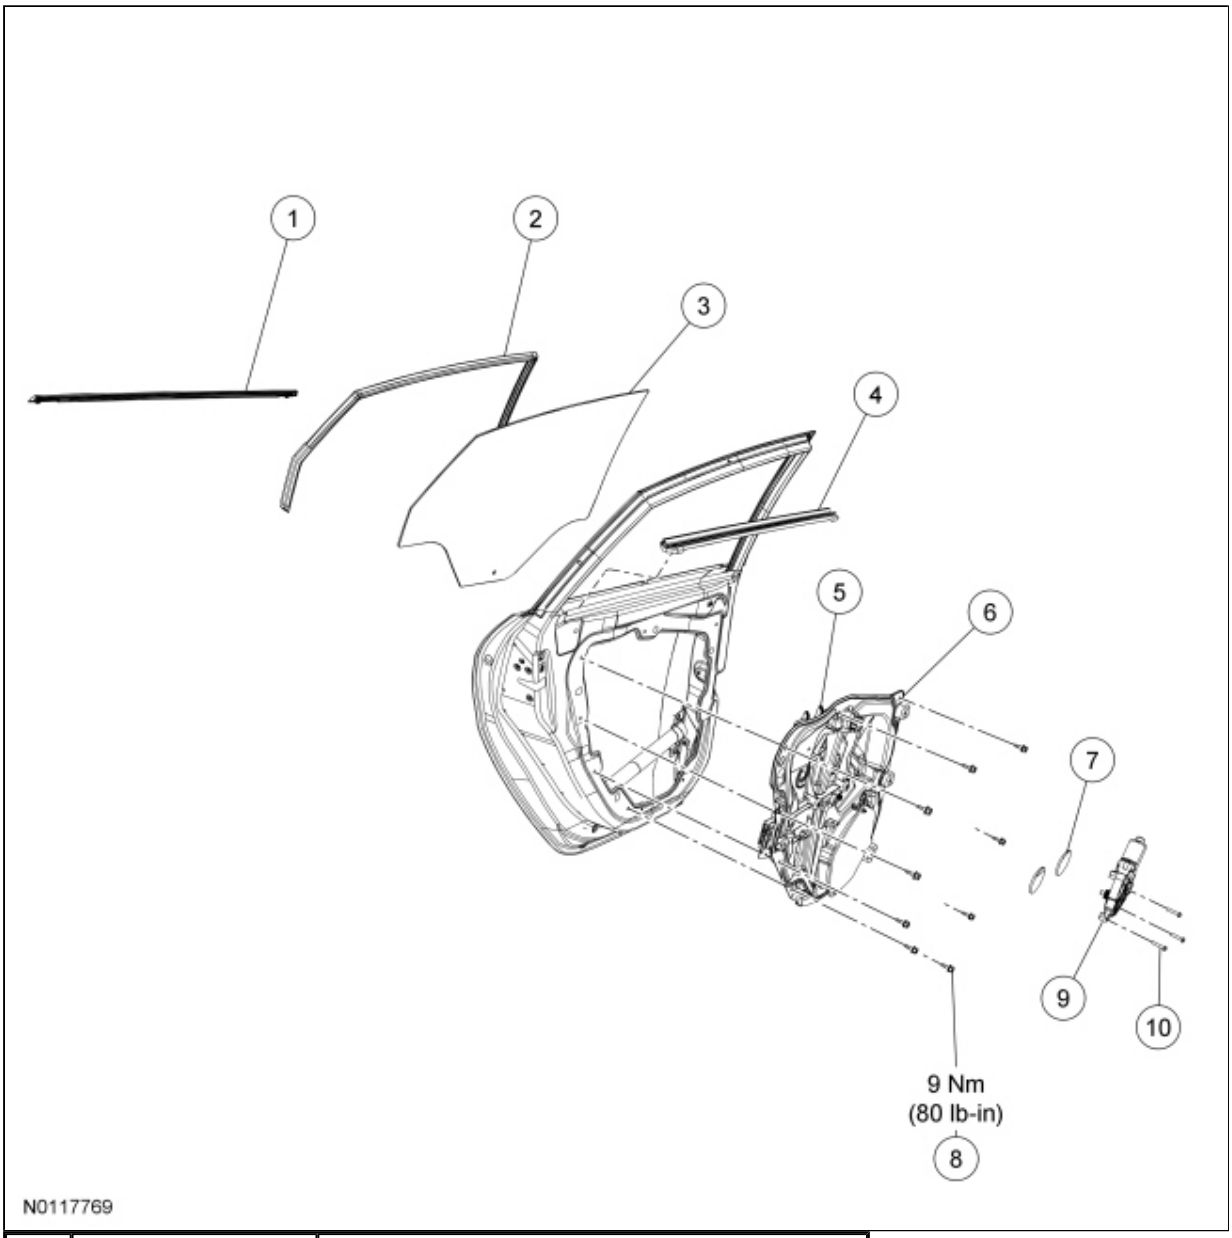
   Install the front quarter window glass.
   - Position the front quarter window glass to the flange, and press the retaining tabs into the flange to engage.

9. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

   After the urethane adhesive has cured, check the front quarter window glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

10. Install the A-pillar upper trim panel. For additional information, refer to Section 501-05 .

Glass, Frames and Mechanisms — Exploded View, Rear Door



Item	Part Number	Description
1	253A10	Exterior door window glass belt moulding
2	25766 RH / 25767 LH	Door glass top run
3	25712 RH/ 25713 LH	Door window glass
4	25860 RH/ 25861 LH	Interior door window glass belt moulding
5	27008 RH/ 27009 LH	Window regulator
6	235A88 RH/ 235A89 LH	Door carrier
7	202A84	Access hole plug (2 required)

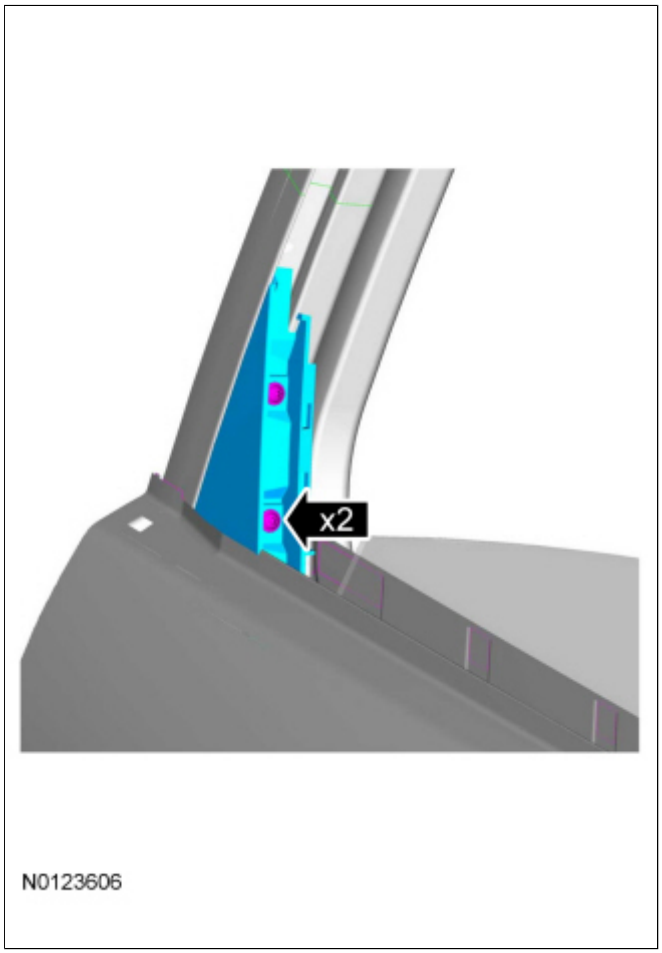
8	W706127	Door carrier bolt (10 required)
9	23394	Window regulator motor
10	—	Window regulator motor screws (part of 23394) (3 required)

1. For additional information, refer to the procedures in this section.

Window Glass — Rear Door

Removal

1. Fully lower the rear door window glass.
2. Remove the rear door trim panel. For additional information, refer to Section 501-05 .
3. Remove the interior door window glass belt moulding.
4. Remove and discard the exterior door window glass belt moulding.
5. Position aside the lower rear portion of the rear door glass top run.
6. Remove the 2 window extension screws and the window extension.

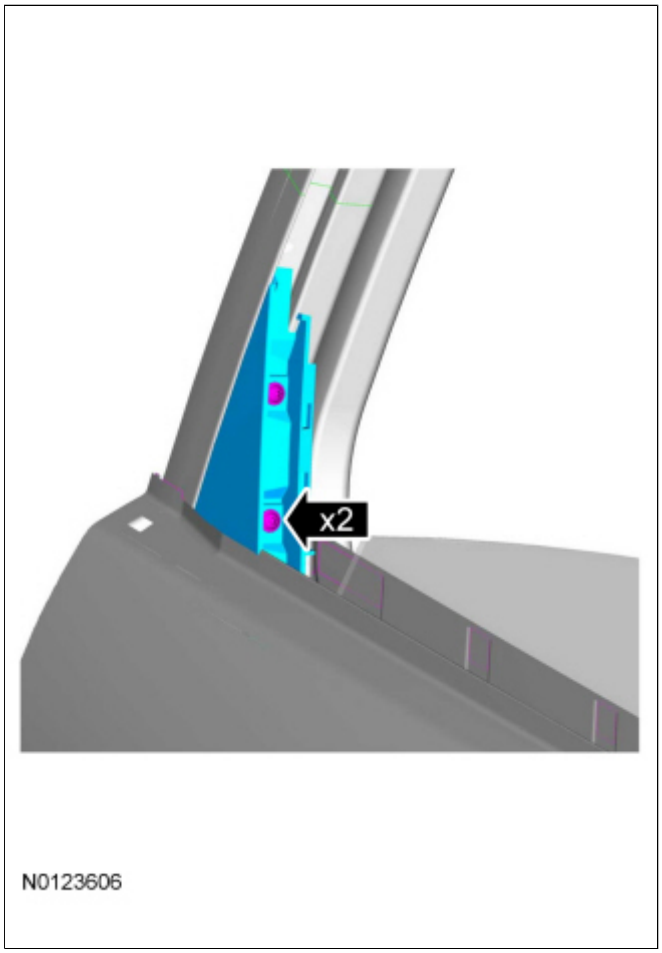


7. Remove the 2 access hole plugs.
8. Connect the window control switch, or install the window regulator handle.
9. Position the window glass in order to access the window glass clamp bolts.
10. Loosen the 2 window glass clamp bolts.

11. Tilt the window glass forward and lift upward to remove the window glass from the door.

Installation

1. Install the window glass into the door, but do not tighten the window glass clamps bolts.
2. Position the window glass downward.
3. Install the window extension and the tighten the 2 window extension screws.



4. Install the lower rear portion of the rear door glass top run.
5. **NOTE:** The window glass clamp bolts will be tightened when performing this step.

   Before tightening the window glass mounting bolts, make sure window glass is adjusted correctly. For additional information, refer to Window Glass Adjustment in this section.
6. Install the 2 access hole plugs.
7. Fully lower the rear door window glass.
8. Install a new exterior door window glass belt moulding.
9. Install the interior door window glass belt moulding.
10. Install the rear door trim panel. For additional information, refer to Section 501-05 .

Window Regulator Motor — Rear Door

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to Section 501-05 .
2. Disconnect the window regulator motor electrical connector.
3. Secure the window glass in position with tape.
4. Remove the 3 window regulator motor screws.
5. Remove the window regulator motor.
6. To install, reverse the removal procedure.

Window Regulator — Rear Door

Removal and Installation

1. Remove the rear door window glass. For additional information, refer to Window Glass — Rear Door in this section.
2. Disconnect the speaker and window regulator motor electrical connectors.
3. Remove the 3 wire harness retainers and the door latch cable retainer.
4. Remove the 3 window regulator motor bolts and the window regulator motor.
5. Remove the 9 door carrier bolts.
   - To install, tighten to 9 Nm (80 lb-in).
6. Slide the door carrier toward the front of the vehicle to release the door carrier retainers.
7. Position aside the door carrier and disconnect the door lock actuator electrical connector.
8. Route the interior door handle cable and door lock actuator electrical connector through the front door carrier.
9. Remove the 2 window regulator bolts from the door carrier.
10. Depress the retaining tabs and remove the window regulator from the door carrier.
11. To install, reverse the removal procedure.

Door Glass Top Run — Rear

Removal and Installation

1. Remove the rear door window glass. For additional information, refer to Window Glass — Rear Door in this section.

2. Remove the 9 rear door carrier bolts.
   - To install, tighten to 9 Nm (80 lb-in).

3. Slide the rear door carrier toward the front of the vehicle to release the door carrier retainers and position it aside.

4. Remove the rear door glass top run.

5. To install, reverse the removal procedure.

Window Glass — Rear Quarter

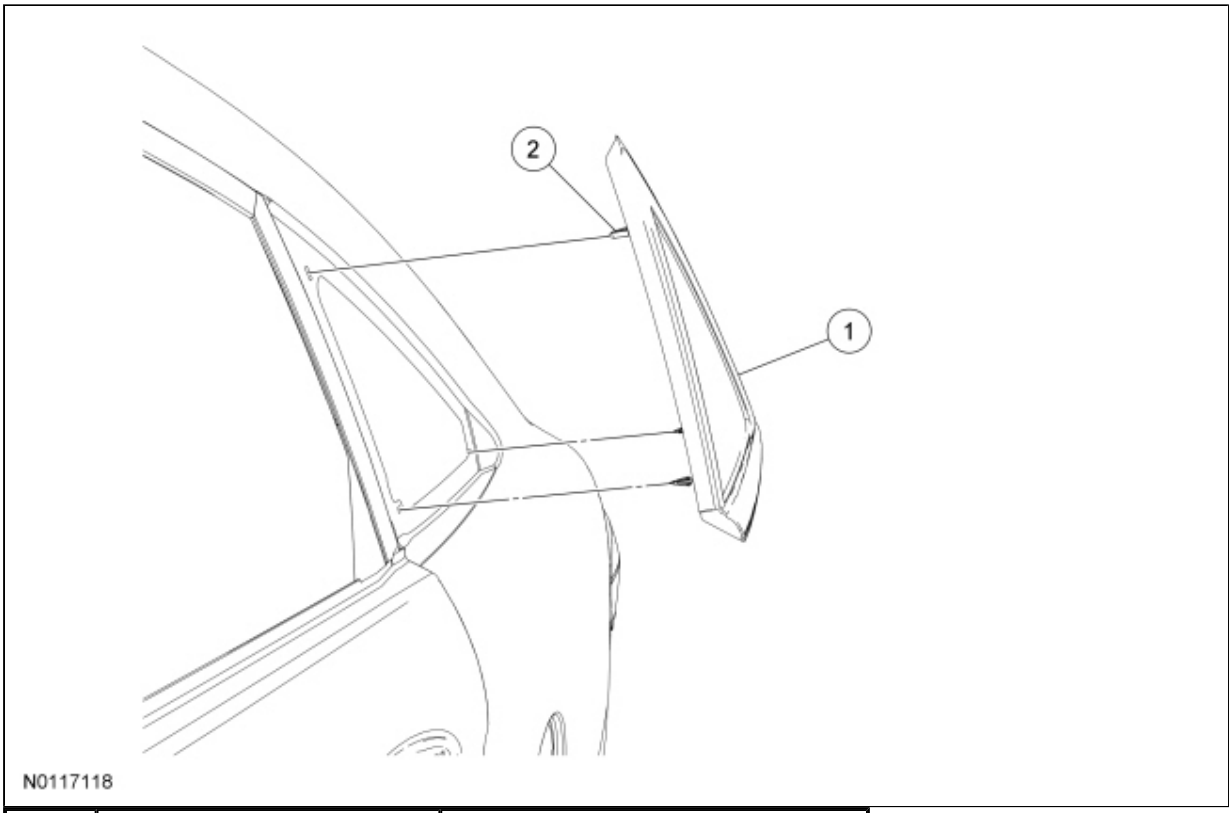
Special Tool(s)

 ST3109-A	Air Caulking Gun AST405 or equivalent
ST3274-A	Deluxe Air Windshield Knife 300-AST1770E or equivalent
ST1109-A	Pneumatic Knife with Offset Blade 107-R1511 or equivalent

Material

Item	Specification
Dow Urethane Adhesive Betaseal™ Express	—
Dow Urethane One Step Glass Primer Betaprime™ 5500 / 5500A / 5500SA	—
Sika Urethane Adhesive Sika Tack ASAP	—
Sika Urethane Metal and Glass Primer Sika 206 G+P	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

NOTE: 4-door shown, 5-door similar.



Item	Part Number	Description
1	29710 RH/ 29711 LH	Rear quarter window glass

Removal

1. Remove the C-pillar upper trim panel. For additional information, refer to Section 501-05 .

2. Before cutting the urethane adhesive, remove dirt and other foreign material from the rear quarter window glass pinch weld area.
   - Use a clean shop towel or oil-free compressed air.

3. **NOTE:** Refer to manufacturer's instructions before using the Deluxe Air Windshield Knife.

   Lubricate the urethane adhesive with water to aid the Deluxe Air Windshield Knife when cutting the urethane adhesive.

4. **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

   WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

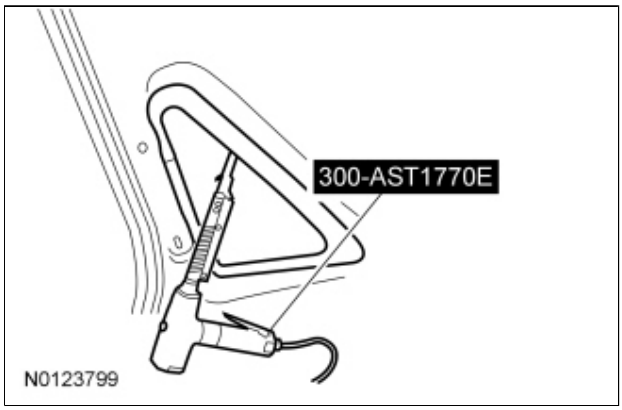
   NOTICE: **Make sure the cutting blades are changed where the cutting depth changes to avoid damage to the body and trim panels.**

   NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer, or otherwise damage the pinch weld during glass removal.**

   NOTE: Insert the blade into the Deluxe Air Windshield Knife so that the flat side is against the glass.

   NOTE: Some resistance may be encountered when cutting through the glass locating pegs in the upper right and lower left corners of the glass.

Working from inside the vehicle, insert the Deluxe Air Windshield Knife at the upper of the rear quarter window glass and work towards the corners and and remove the rear quarter window glass.



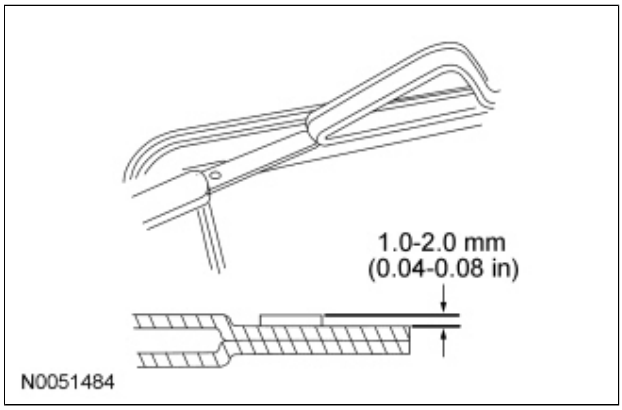
Installation

NOTE: For additional material guidelines, refer to the manufacturer's installation information.

1. **WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

   NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions. Use the same brand pinch weld primer, glass primer and urethane adhesive.

   Using an appropriate tool, trim the urethane adhesive leaving a 1 mm to 2 mm (0.04 in to 0.08 in) base of original equipment urethane adhesive on the pinch weld.



2. Using a clean shop towel, brush or oil-free compressed air, clean the pinch weld area around the existing urethane adhesive. Remove any foreign material or water that may have entered during glass removal.

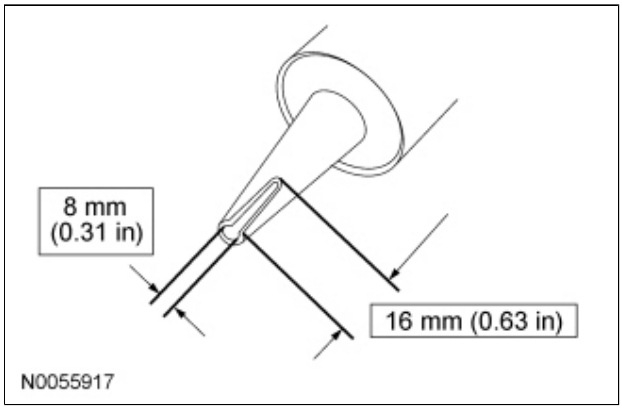
3. If installing the original rear quarter window glass, remove the excess urethane adhesive.

4. Clean the inside of the rear quarter window glass with glass cleaner.

5. **NOTE:** Be sure to use the same brand of cure-rate products for the urethane adhesive and glass primer. Do not mix different brands of urethane adhesive and glass primer. Refer to the Material Chart in this procedure.

   If installing a new rear quarter window glass, apply glass primer according to the manufacturer's instructions. Allow at least 6 minutes to dry.

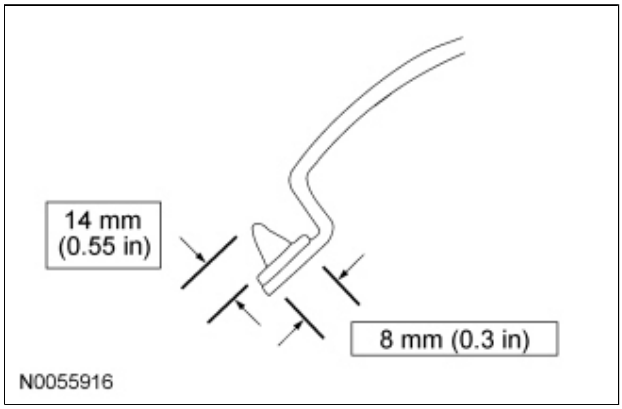
6. Cut the urethane adhesive applicator tip to specification.



7. **NOTE:** The rear quarter window glass must be positioned within 10 minutes of applying the urethane adhesive.

   NOTE: Use either a Air Caulking Gun or a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and a continuous bead.

   Apply urethane adhesive on top of the existing trimmed urethane adhesive bead on the pinch weld, starting and ending at the bottom of the rear quarter window glass near the center, making sure there are no gaps in the bead.



8. **WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).**

   NOTICE: **Before positioning the rear quarter window glass, open vehicle windows to prevent the air pressure of closing doors from affecting the urethane adhesive bond.**

   Install the rear quarter window glass.
   - Position the rear quarter window glass to the flange, and press the retaining tabs into the flange to engage.

9. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

   After the urethane adhesive has cured, check the rear quarter window glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

10. Install the C-pillar upper trim panel. For additional information, refer to Section 501-05 .

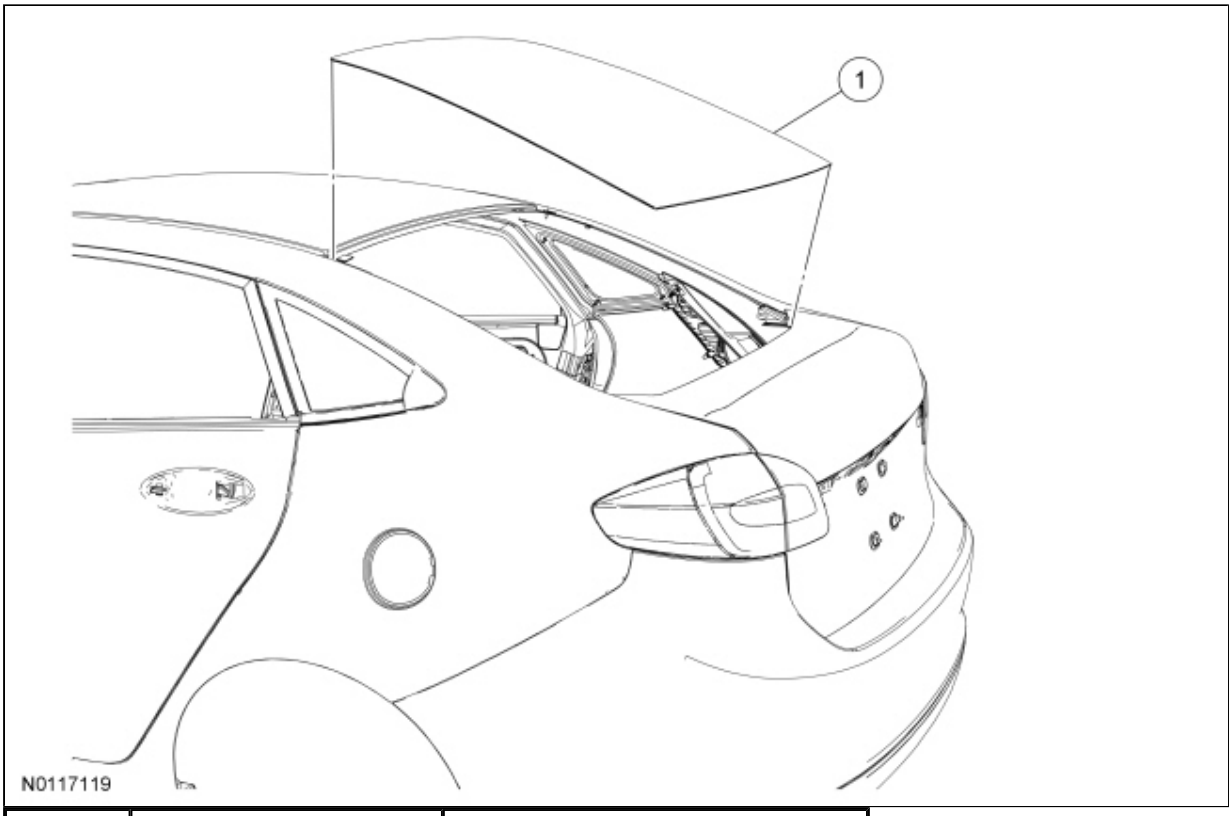
Window Glass — Rear

Special Tool(s)

 ST3109-A	Air Caulking Gun AST405 or equivalent
ST3274-A	Deluxe Air Windshield Knife 300-AST1770E or equivalent
 ST2085-A	The Pumper 164-R2459 or equivalent

Material

Item	Specification
Dow Urethane Adhesive Betaseal™ Express	—
Dow Urethane One Step Glass Primer Betaprime™ 5500 / 5500A / 5500SA	—
Sika Urethane Adhesive Sika Tack ASAP	—
Sika Urethane Metal and Glass Primer Sika 206 G+P	—
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A



Item	Part Number	Description
1	42006	Rear window glass

Removal

NOTE: If the rear window glass is being removed to repair a dust/water leak, remove and reinstall the existing rear window glass.

4-door vehicles

1. Remove the C-pillar trim panel and parcel shelf, and lower the headliner. For additional information, refer to Section 501-05 .

2. Remove the high mounted stoplamp. For additional information, refer to Section 417-01 .

5-door vehicles

3. Remove the liftgate trim panel. For additional information, refer to Section 501-05 .

4. Remove the roof-mounted spoiler. For additional Information, refer to Section 501-08

All vehicles

5. Disconnect the 2 rear window defrost electrical connectors.

6. Before cutting the urethane adhesive, remove dirt and other foreign material from the rear window glass pinchweld area.
   - Use a clean shop towel or oil-free, compressed air.

7. **NOTE:** Refer to manufacturer's instructions before using the Deluxe Air Windshield Knife.

   Lubricate the urethane adhesive with water to aid the Deluxe Air Windshield Knife when cutting.

4 Door vehicles

8. **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

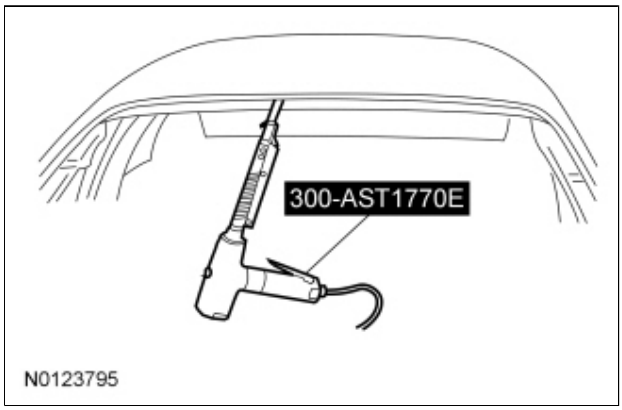
   WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

   NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer or otherwise damage the pinchweld during glass removal.**

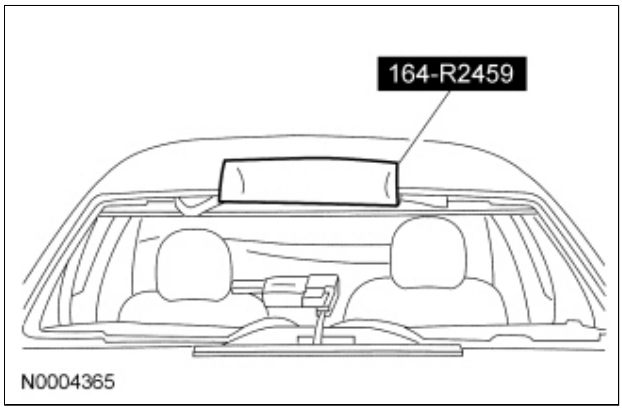
   NOTE: Insert the blade into the Deluxe Air Windshield Knife so that the flat side is against the glass. This will leave the entire urethane adhesive bead on the pinchweld and allow a dry fit of the replacement rear window glass.

   NOTE: Support the rear window glass to prevent the glass from dropping while cutting the urethane adhesive.

   Working from inside the vehicle, insert the Deluxe Air Windshield Knife at the upper center of the rear window glass and work toward the bottom corners.



9. Using The Pumper, distance the rear window glass from the body.



10. Insert the Deluxe Air Windshield Knife into the bottom of the urethane adhesive and cut from corner to corner.

5 Door vehicles

11. **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

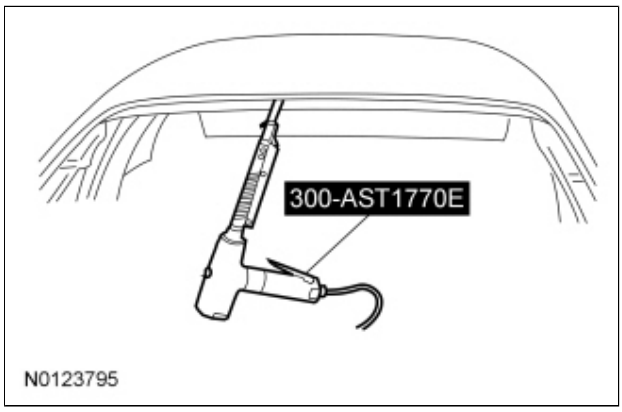
    WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer or otherwise damage the pinchweld during glass removal.**

NOTE: Insert the blade into the Deluxe Air Windshield Knife so that the flat side is against the glass. This will leave the entire urethane adhesive bead on the pinchweld and allow a dry fit of the replacement rear window glass.

NOTE: Support the rear window glass to prevent the glass from dropping while cutting the urethane adhesive.

Working from inside the vehicle, insert the Deluxe Air Windshield Knife at the upper center of the rear window glass and work toward the upper corners.



12. Working from the outside of the vehicle, insert the Deluxe Air Windshield Knife at the upper corners of the rear window glass and cut the remainder of the urethane adhesive.

All vehicles

13. Carefully remove the rear window glass from the vehicle and place on a stable work surface.

Installation

All vehicles

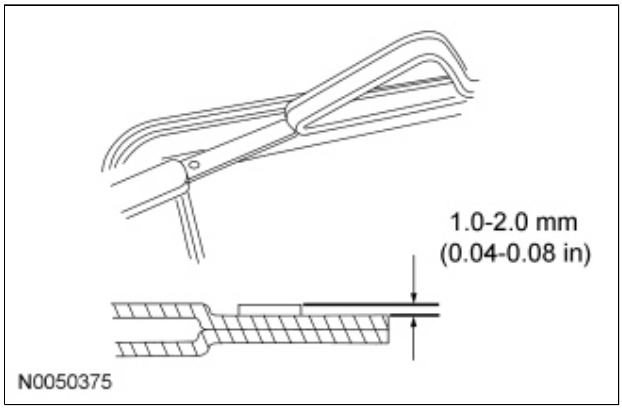
1. Dry-fit the rear window glass on the existing urethane adhesive bead on the pinch weld.
   - Position the glass on the pinch weld.
   - Center the glass in the opening.
   - Make alignment marks with tape or non-staining grease pencil on the rear window glass and the body.

2. After the dry-fit alignment, remove the glass from the body opening and place on a stable work surface with the interior side of the glass facing upward.

3. **WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

   NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions. Use the same brand pinch weld primer, glass primer and urethane adhesive.

   Using an appropriate tool, trim the urethane adhesive leaving a 1-2 mm (0.04-0.08 in) base of original equipment urethane adhesive on the pinchweld.



4. Using a clean shop towel, brush or oil-free, compressed air, clean the pinch weld area around the existing urethane adhesive. Remove any foreign material or water that may have entered during glass removal.

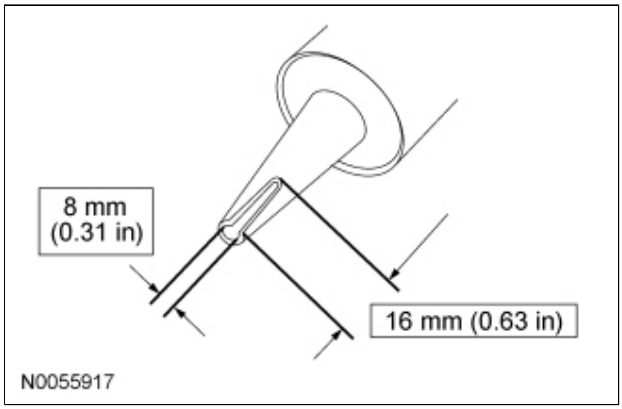
5. If reinstalling the same rear window glass, remove the remaining urethane adhesive from the glass leaving a thin layer to bond with the new urethane adhesive bead.

6. Clean the inside of the new rear window glass surface with glass cleaner.

7. **NOTE:** Be sure to use the same brand and cure-rate products for the urethane adhesive and glass primer. Do not mix different brands of urethane adhesive and glass primer. Refer to the Material Chart in this procedure.

   If installing a new rear window glass, apply glass primer according to manufacturer's instructions. Allow at least 6 minutes to dry.

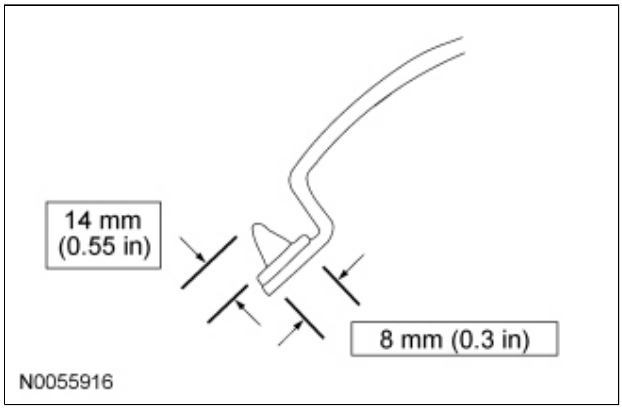
8. Cut the urethane adhesive applicator tip to specification.



9. **NOTE:** Use either a Air Caulking Gun or a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and a continuous bead.

   NOTE: The rear window glass must be positioned within 10 minutes of applying the urethane adhesive.

   Apply urethane adhesive on top of the existing trimmed urethane adhesive bead on the pinch weld, starting and ending at the bottom of the rear window glass near the center, making sure there are no gaps in the bead.



10. **WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).**

    NOTICE: **Before positioning the rear window glass, open vehicle windows to prevent the air pressure of closing doors from affecting the urethane adhesive bond.**

    Using the alignment marks made previously, position the rear window glass on the pinch weld.

11. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

    After the urethane adhesive has cured, check the rear window glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

12. Connect the LH and RH heated rear window electrical connector.

4-door vehicles

13. Install the C-pillar trim panel and parcel shelf, and raise the headliner. For additional information, refer to Section 501-05 .

14. Install the high mounted stoplamp. For additional information, refer to Section 417-01 .

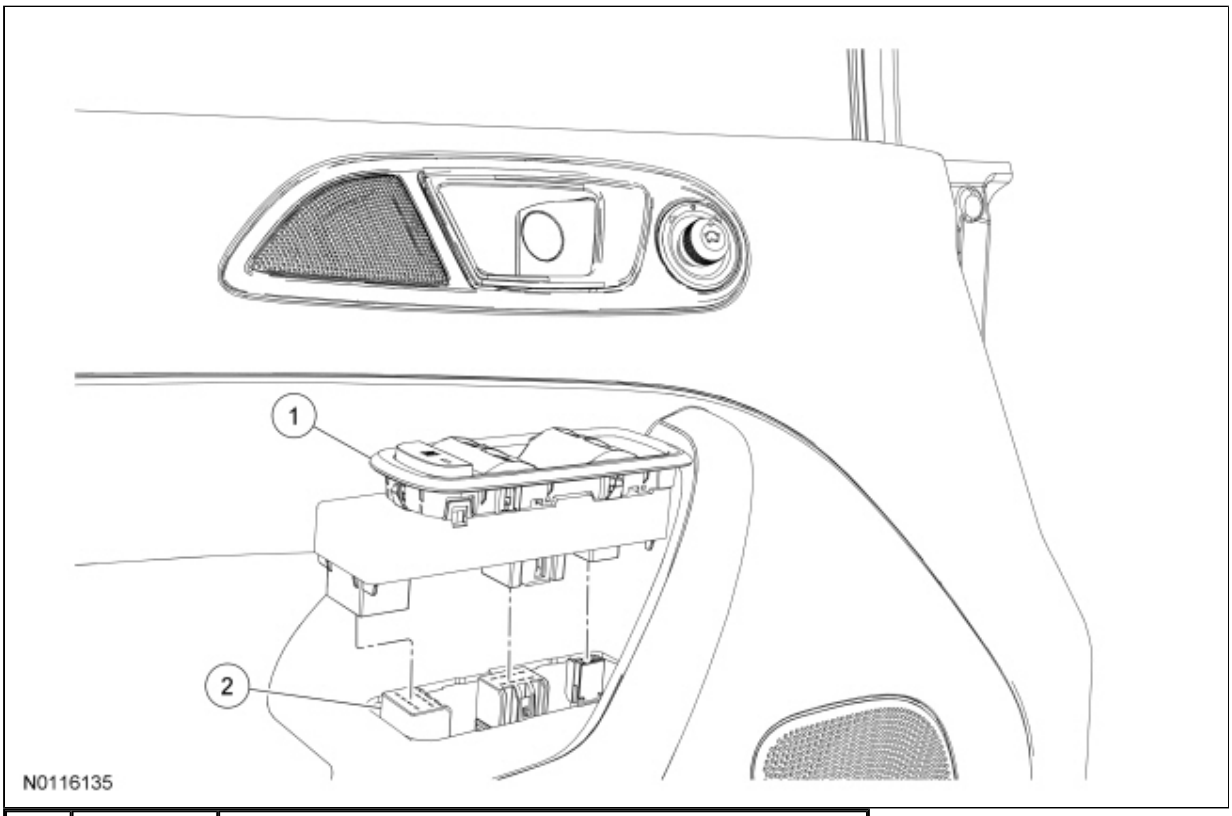
5-door vehicles

15. Install the liftgate trim panel. For additional information, refer to Section 501-05 .

16. Install the roof-mounted spoiler. For additional Information, refer to Section 501-08

Window Control Switch

NOTE: Driver window control switch shown, all others similar.



Item	Part Number	Description
1	14529	Master window control switch
2	—	Master window control switch electrical connector (Part of 14631 LH/ 14630 RH)

Removal and Installation

Passenger window control switch

1. Insert a non-marring tool under the window control switch bezel and pry upward.
2. Remove the window control switch from the door trim panel.

Master window control switch

3. Remove the front door trim panel. For additional information, refer to Section 501-05 .
4. Release the window control switch retaining tabs and remove the master window control switch from the door trim panel.

All window control switches

5. Disconnect the electrical connector(s).
6. To install, reverse the removal procedure.

- The master window control switch and the LH window motor must be initialized whenever battery voltage has been removed from the driver window control switch for greater than 3 minutes (for example, the battery or the master window switch is disconnected) or if a new driver window control switch is installed. For additional information, refer to Window Motor Initialization in this section.

Torque Specifications

Description	Nm	lb-ft	lb-in

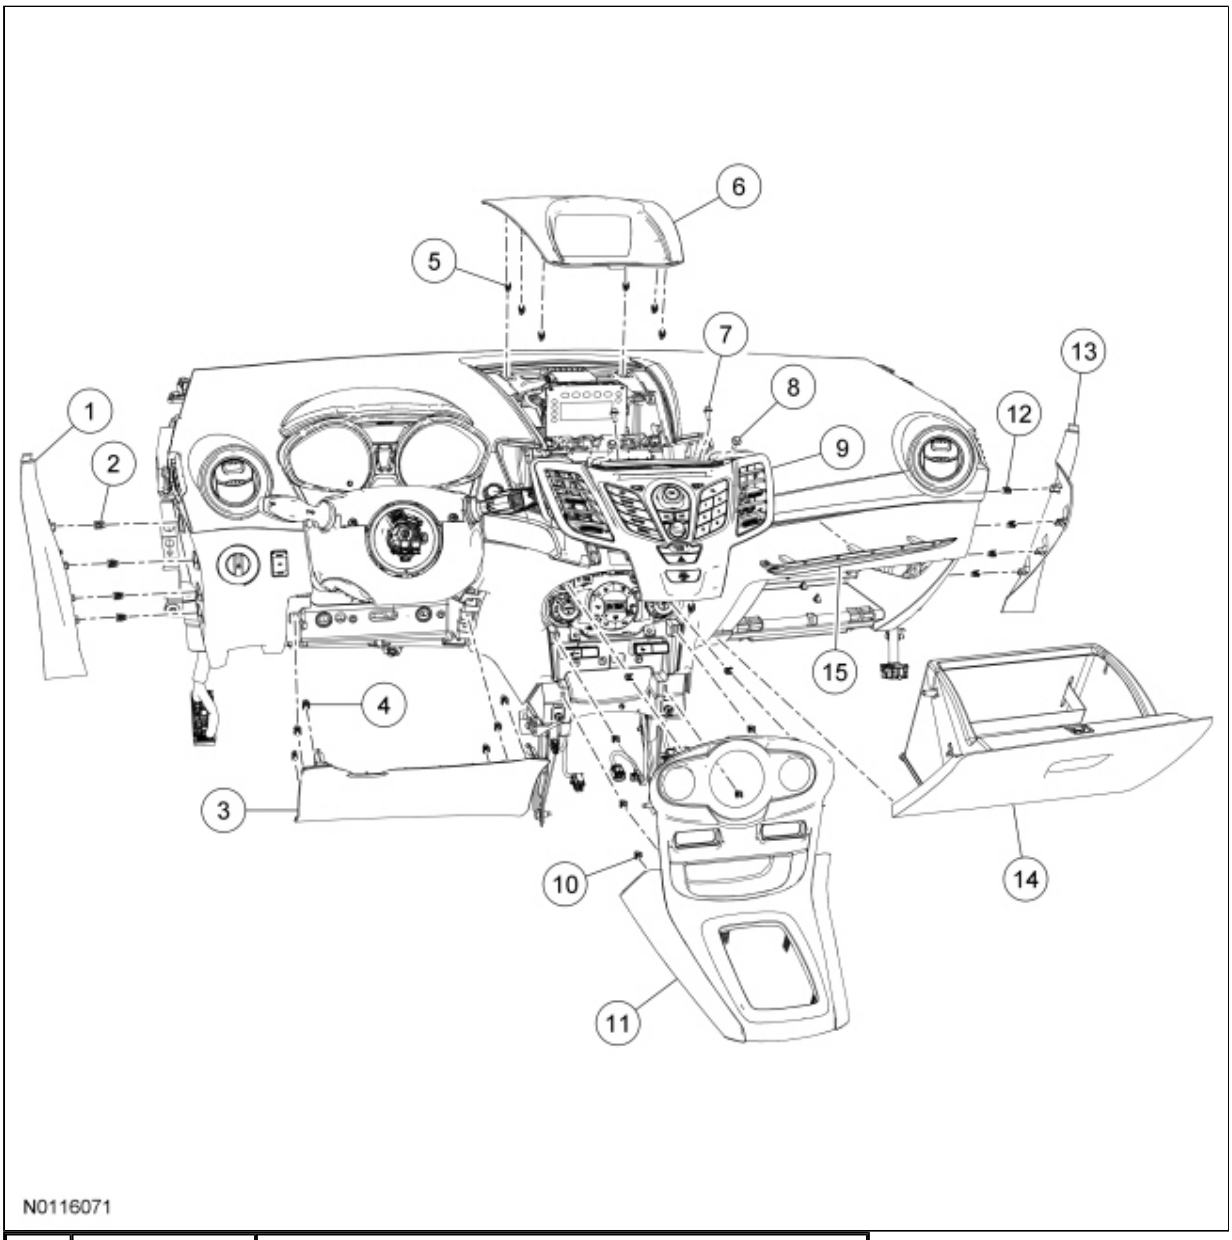
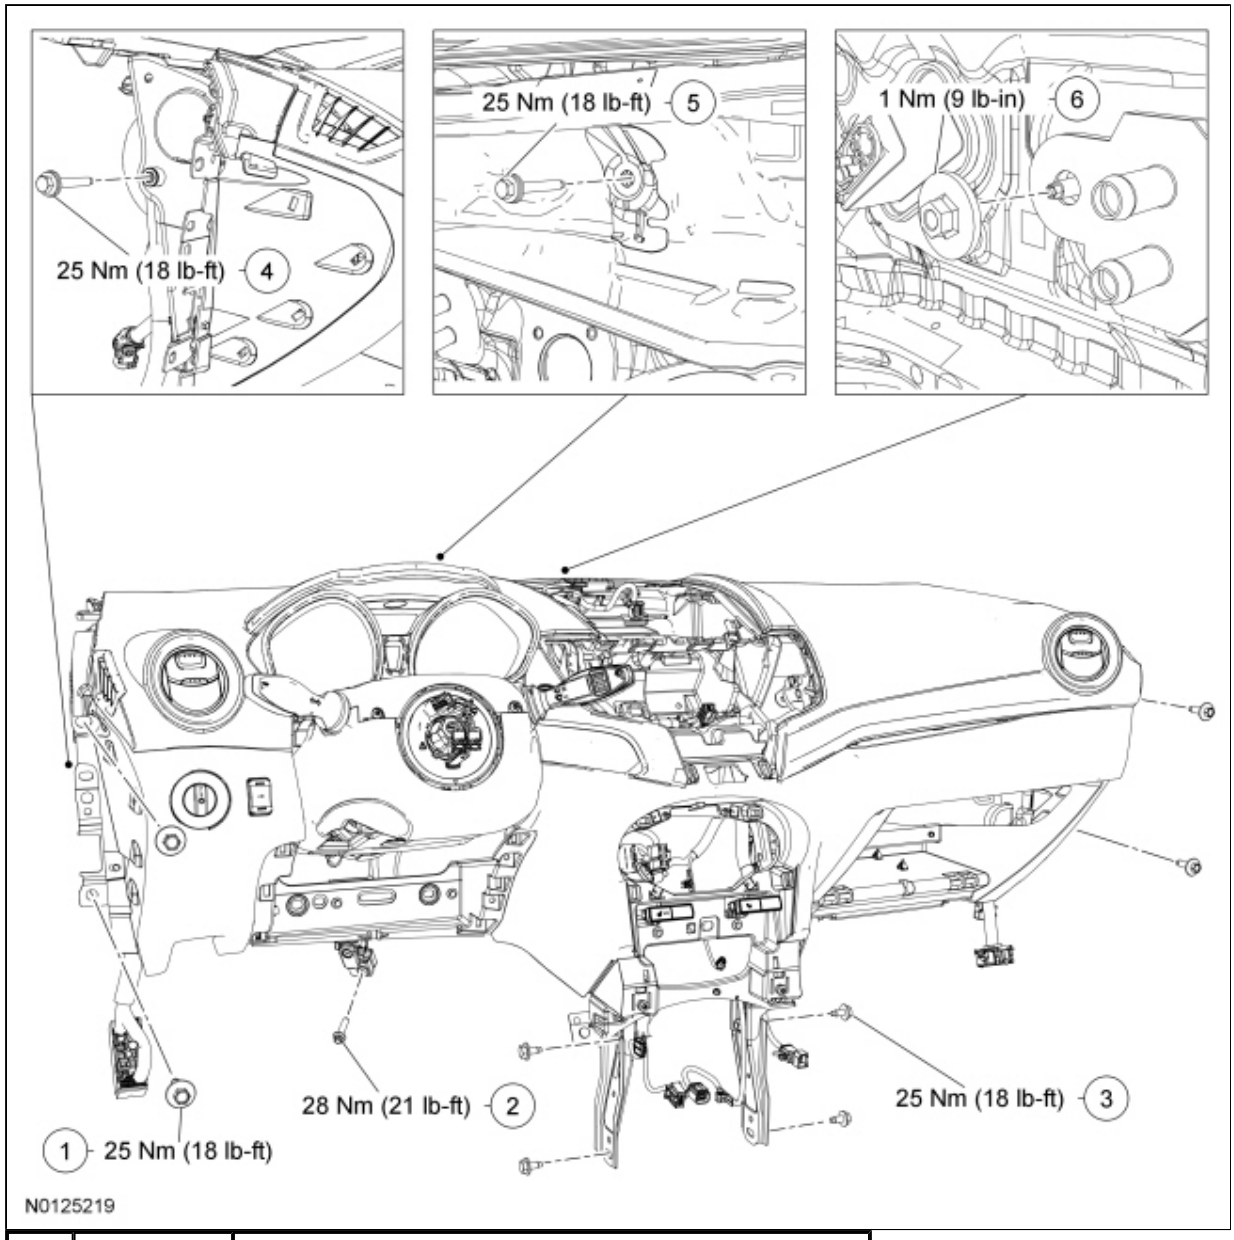
Instrument Panel Finish Panels



Item	Part Number	Description
1	044C61	LH instrument panel side cover
2	W714972	LH instrument panel side cover clips (4 required)
3	045N68	Steering column opening trim panel
4	W714972	Steering column opening trim panel clips (6 required)
5	W714972	Upper finish panel clips (6 required)
6	58042A82	Upper finish panel
7	W505142	Front Controls Interface Module (FCIM) finish panel screws (2 required)
8	W707628	FCIM finish panel screws (2 required)

9	18A802	Finish panel
10	W714972	Lower finish panel clips (8 required)
11	18498	Lower finish panel
12	W714972	RH instrument panel side cover clips (4 required)
13	044C60	RH instrument panel side cover
14	06010	Glove compartment
15	13E002 / 13E726	Close out bezel non-ambient / Ambient light pipe

Instrument Panel Mounting Fasteners



Item	Part Number	Description
1	W711557	Instrument panel screw (4 required)
2	3R827	Steering column shaft-to-steering column bolt
3	W701096	In-vehicle cross car beam to floor pan brace screw (2 required)

4	W711563	LH instrument panel bolt
5	W711563	Instrument panel-to-front of dash bolt
6	18N316	Exterior heater core housing nut

1. For additional information, refer to the procedures in this section.

Instrument Panel

Removal and Installation

Vehicles with air conditioning

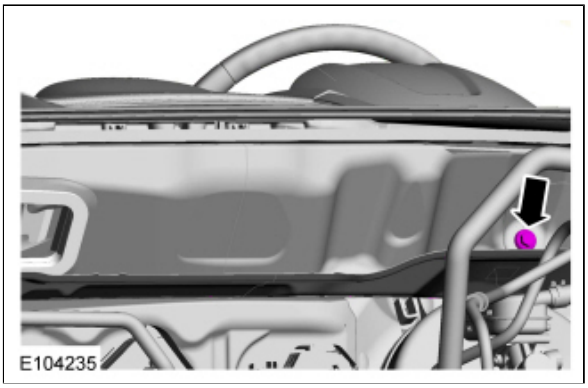
1. Recover the refrigerant. For additional information, refer to Section 412-00 .

All vehicles

2. Remove the upper and lower cowl panel grille. For additional information, refer to Section 501-02 .

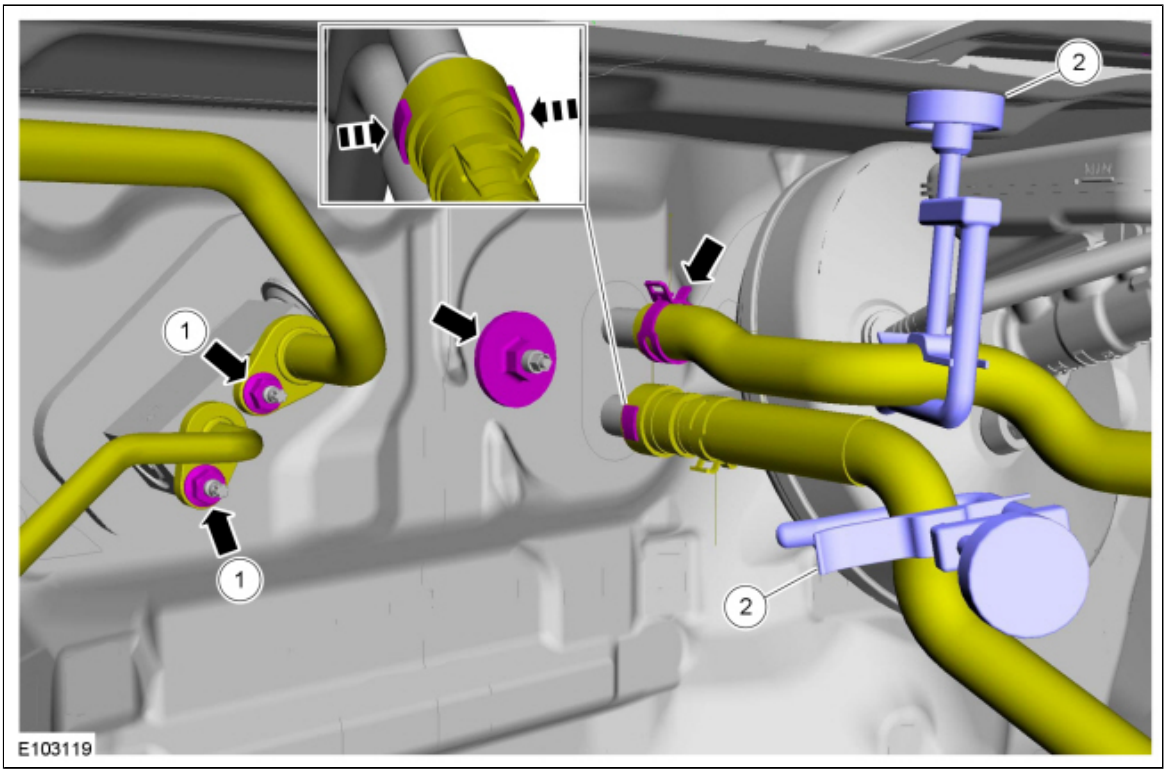
3. Remove the windshield wiper mounting arm and pivot shaft assembly and the windshield wiper motor. For additional information, refer to Section 501-16 .

4. Remove the instrument panel-to-front of dash bolt.
   - To install, tighten to 25 Nm (18 lb-ft).



NOTICE: **Make sure all the coolant openings are sealed, or coolant may leak into the vehicle when the instrument panel is removed.**

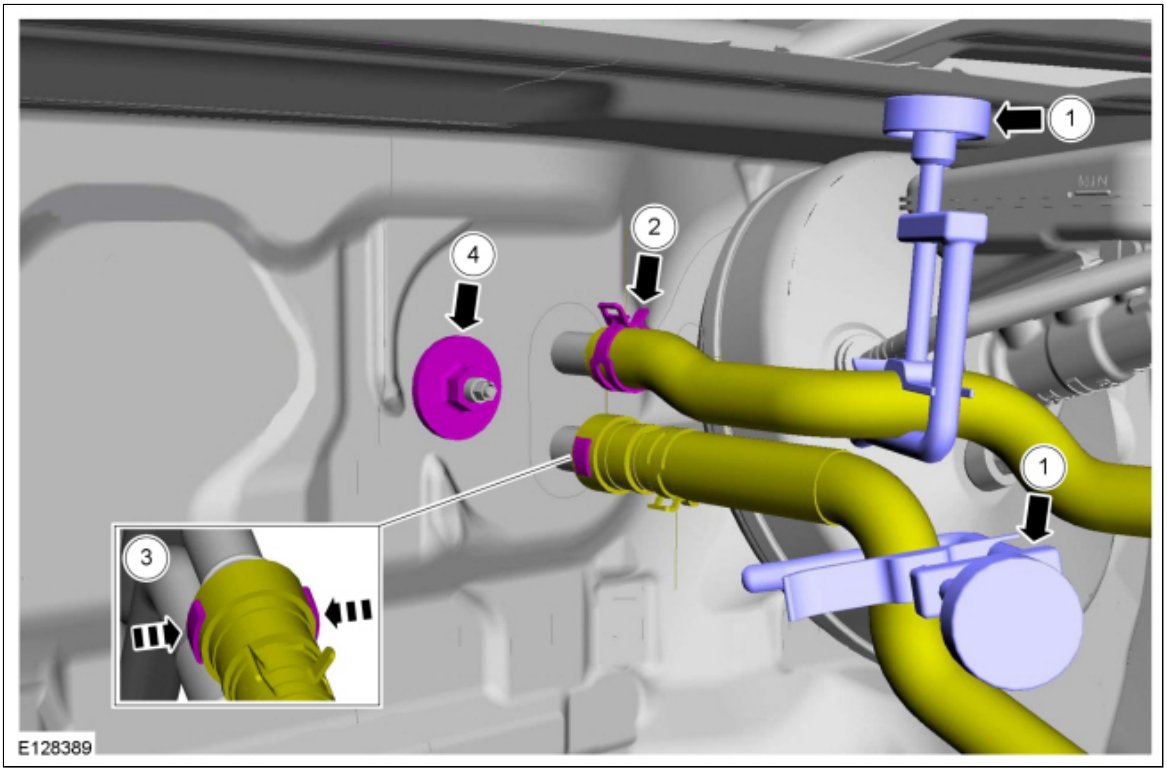
5. Crimp the two heater hoses and remove the hoses from the heater core. Remove the Thermostatic Expansion Valve (TXV) fitting nuts. Remove exterior heater core housing nut.
   - To install, tighten to 1 Nm (9 lb-in).



Vehicles without air conditioning

NOTICE: **Make sure all the coolant openings are sealed, or coolant may leak into the vehicle when the instrument panel is removed.**

6. Crimp the two heater hoses and remove the hoses from the heater core. Remove exterior heater core housing nut.
    - To install, tighten to 1 Nm (9 lb-in).



All vehicles

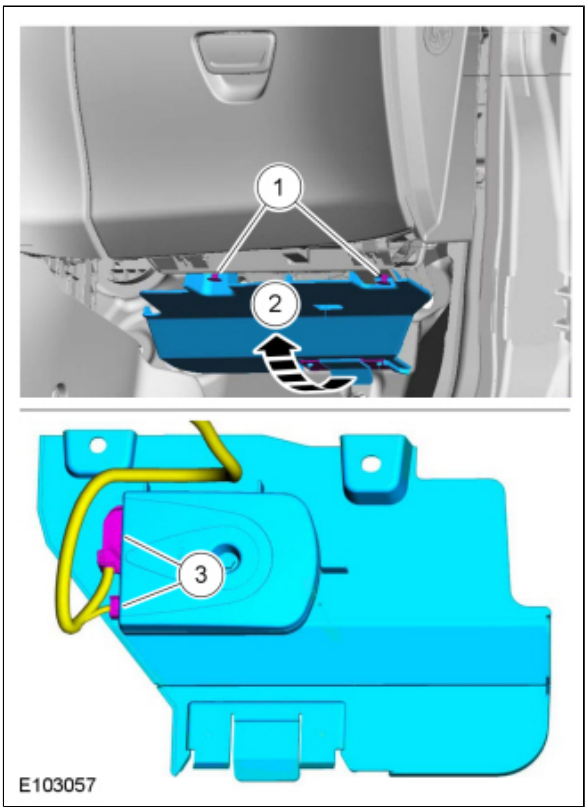
7. Remove the drivers side front door. For additional information, refer to Section 501-03 .
8. Remove the drivers seat. For additional information, refer to Section 501-10 .
9. Remove the transmission selector lever assembly. For additional information, refer to Section 307-05 .

Vehicles with manual transmission

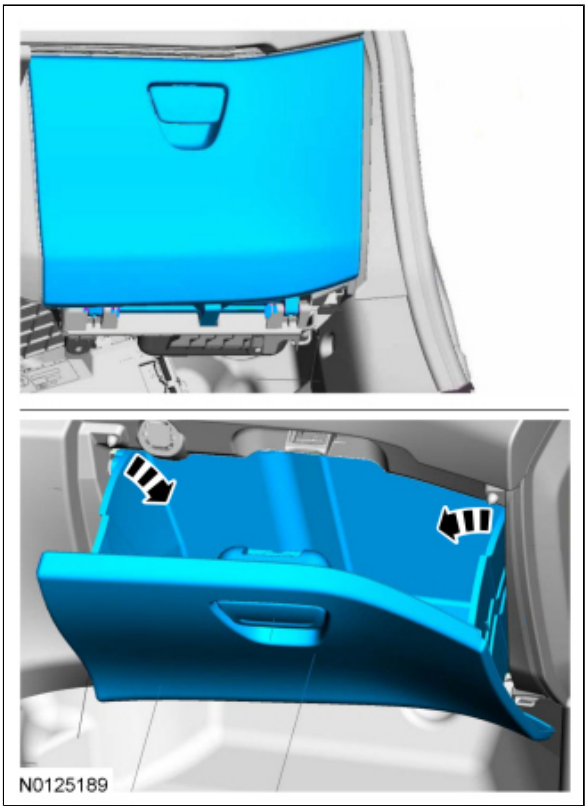
10. Remove the gear shift lever. For additional information, refer to Section 308-06 .

All vehicles

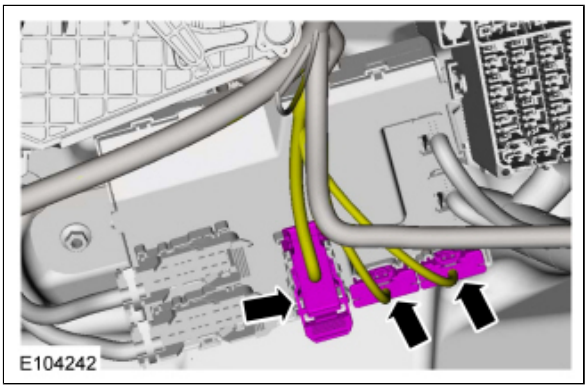
11. Remove the 2 push pins and remove the hush panel from the lower right side of the instrument panel.
    - Disconnect the electrical connector.



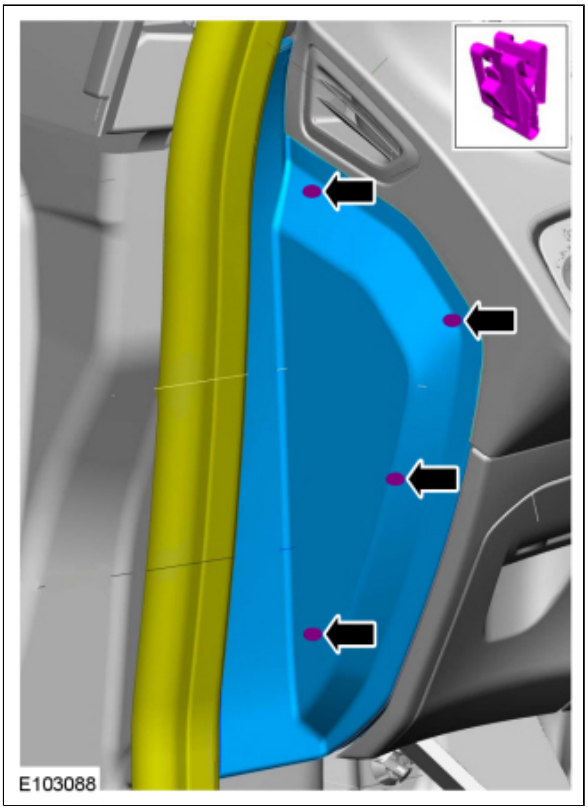
12. Remove the glove compartment.



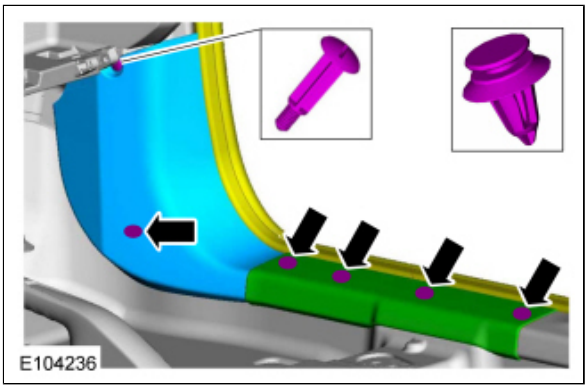
13. Disconnect the 3 electrical connecters at the lower RH side of the cowl.



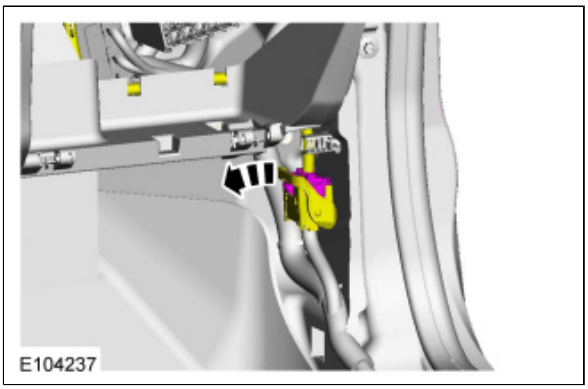
14. Remove the RH and LH instrument panel side covers.



15. Remove the RH and LH front scuff plates and the RH and LH cowl side trim panels.

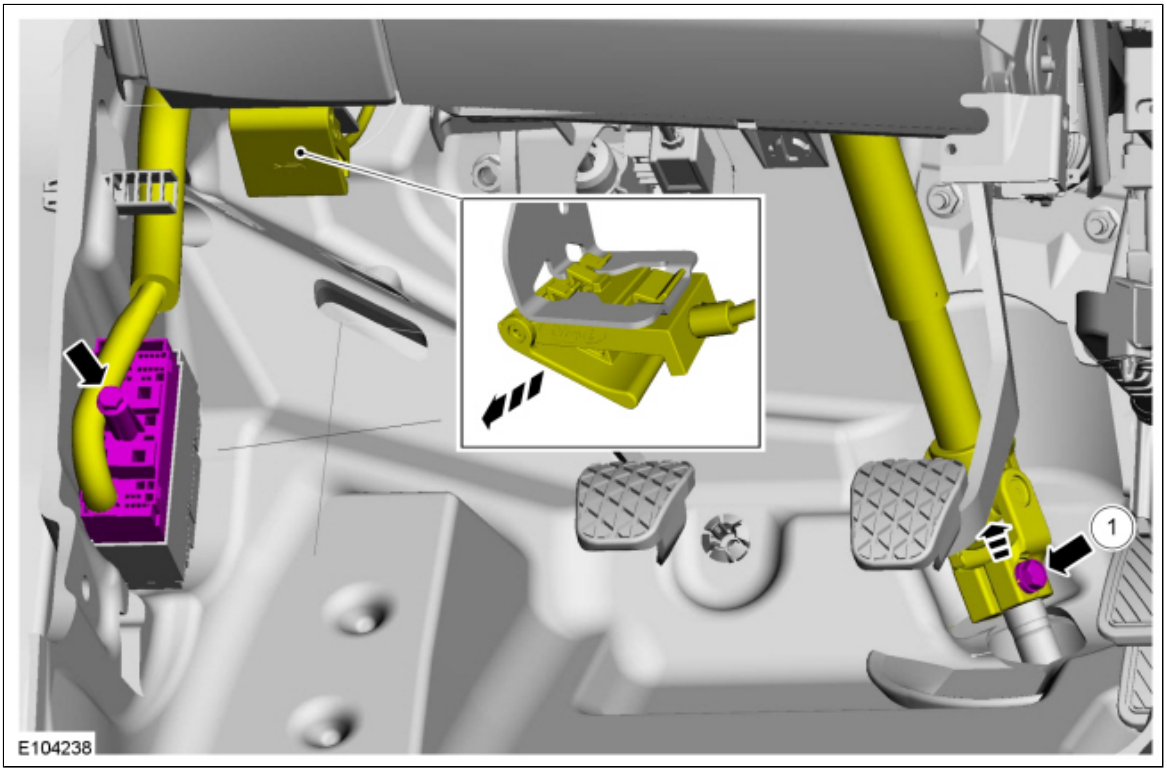


16. Disconnect the lever lock electrical connector and push pin at the lower RH side cowl. Disconnect the yellow connector and push pin at the lower RH side cowl.

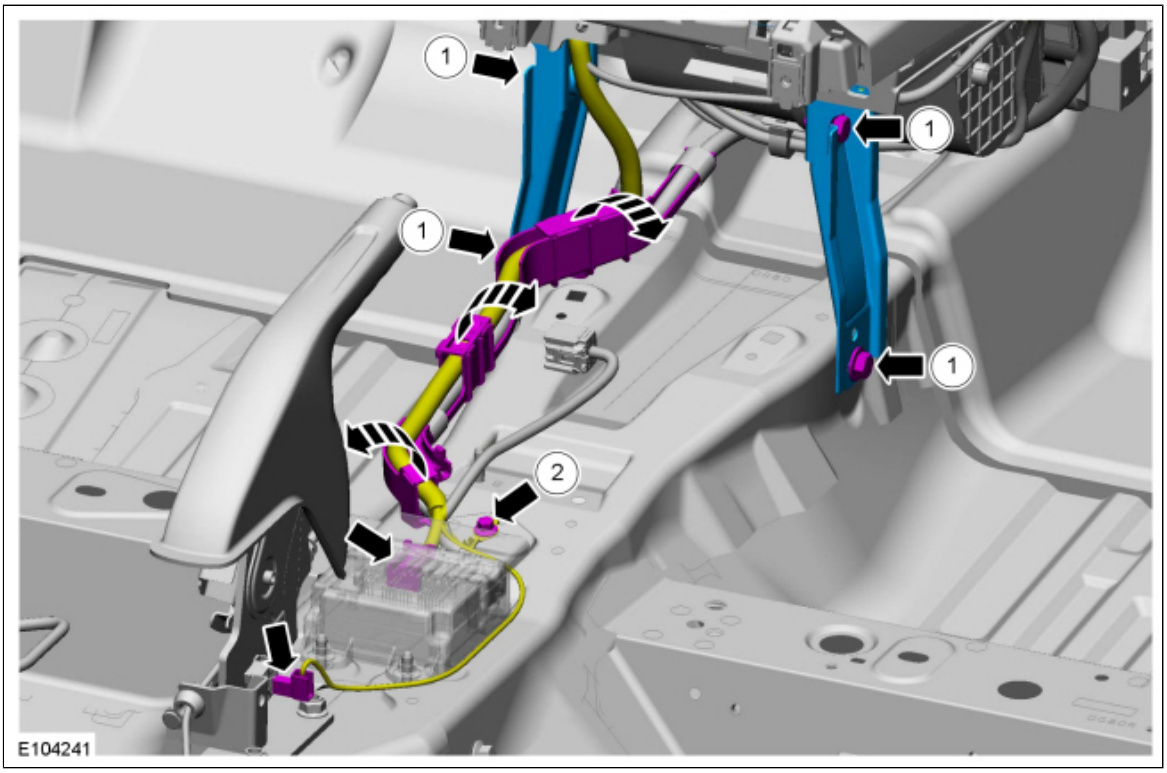


NOTICE: **Do not allow the steering wheel to rotate while the steering column shaft is disconnected, or damage to the clockspring may result. If there is evidence that the shaft has rotated, remove and recenter the clockspring. For additional information, refer to Section 501-20B .**

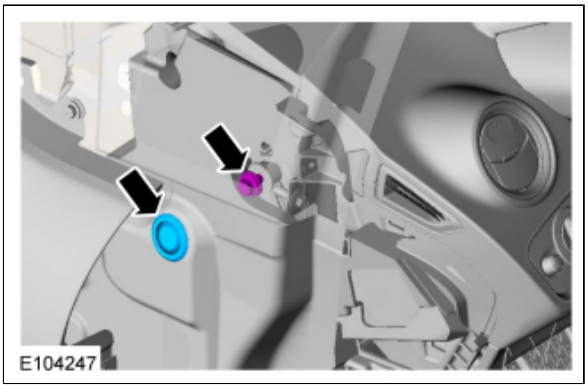
17. Remove the bolt-in electrical connector at the lower LH side cowl. Disconnect the hood release lever from bracket. Remove and discard the steering column shaft-to-steering column pinch bolt.
    - To install, use a new steering column shaft-to-steering column pinch bolt and tighten to 28 Nm (21 lb-ft).



18. Disconnect the 2 Restraints Control Module (RCM) electrical connectors. Remove the RCM harness from the plastic channel. Remove the ground strap bolt. Disconnect the parking brake electrical connector. Remove the 2 RH and the 2 LH instrument panel bolts and remove the instrument panel braces.
    - To install, tighten to 25 Nm (18 lb-ft).



19. Remove the LH instrument panel side bolt.
    - To install, tighten to 25 Nm (18 lb-ft).

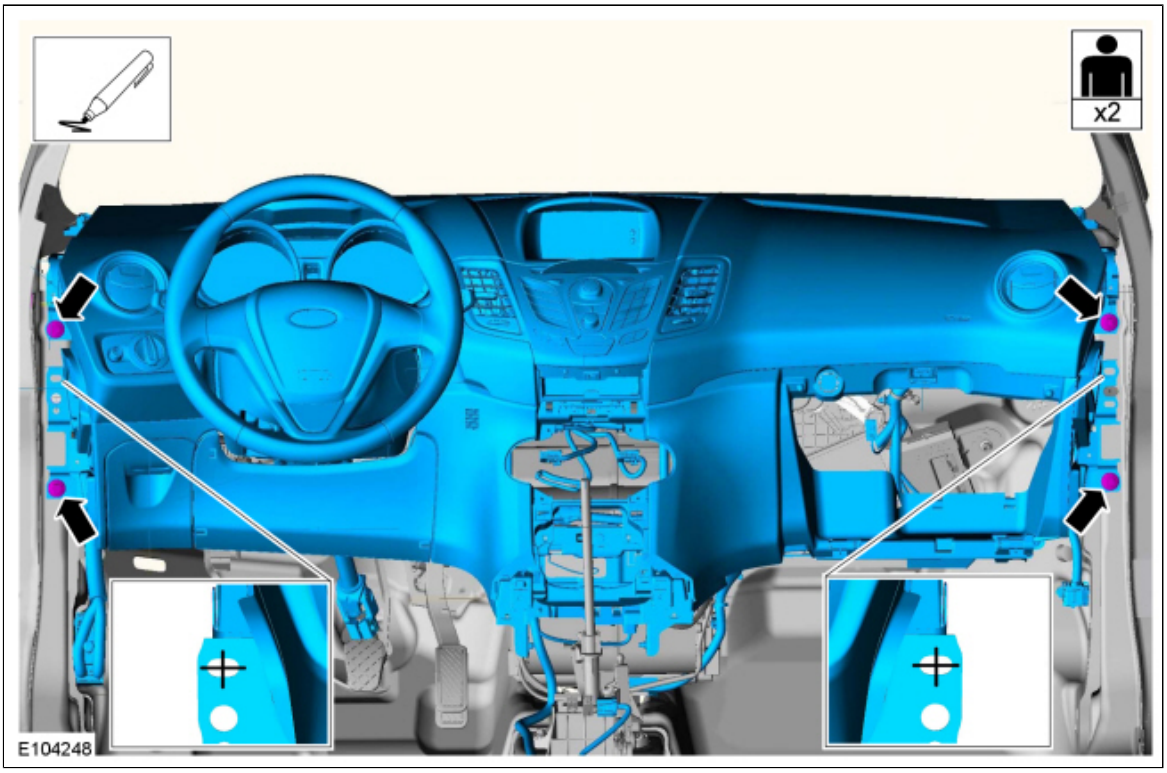


NOTICE: **To avoid damage to the instrument panel, this step requires the help of an assistant.**

NOTICE: **Make sure that all electrical connectors and wiring are not hindered before removing the instrument panel or damage to the components may occur.**

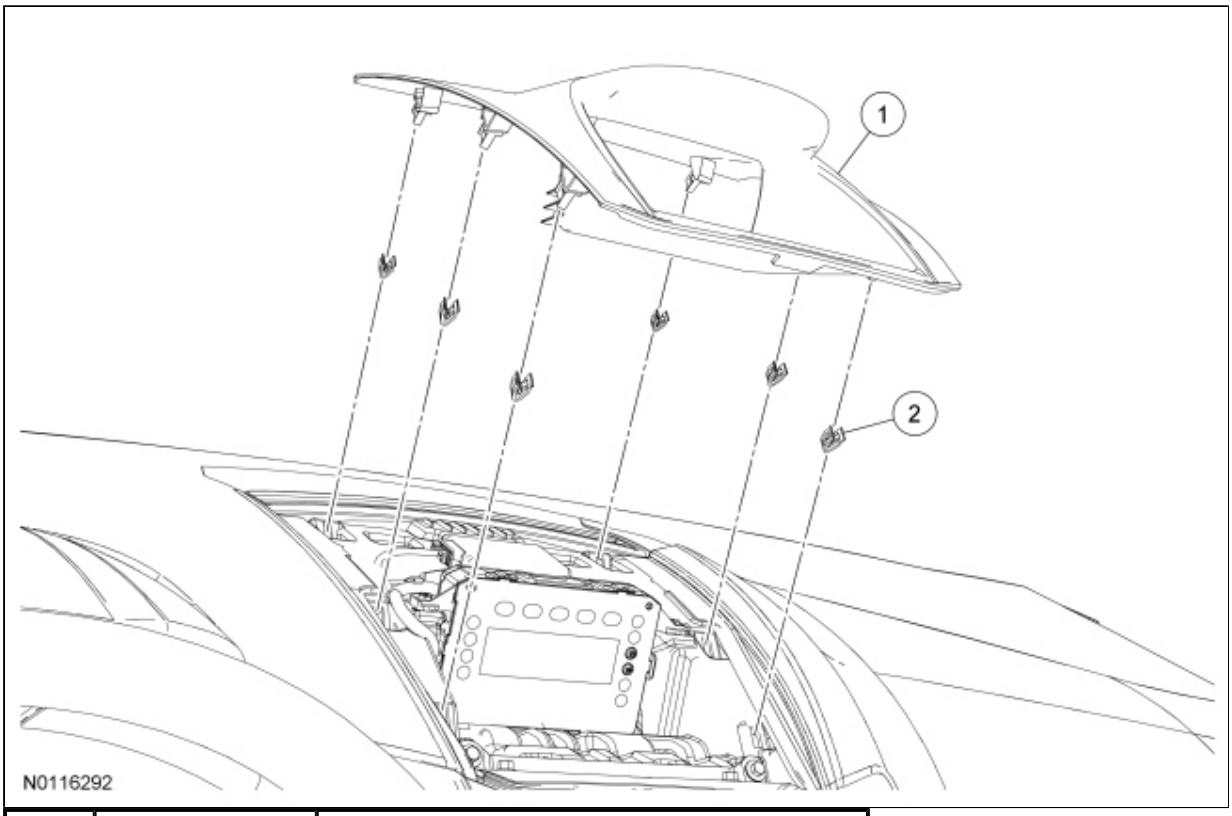
NOTE: Rotate the instrument panel as necessary to remove from the vehicle.

20. Remove the 2 RH and the two LH instrument panel bolts and remove the instrument panel.
    - To install, tighten to 25 Nm (18 lb-ft).



21. To install, reverse the removal procedure.

Instrument Panel Finish Panel — Upper



Item	Part Number	Description
1	58042A82	Upper finish panel
2	W714972	Upper finish panel clips (6 required)

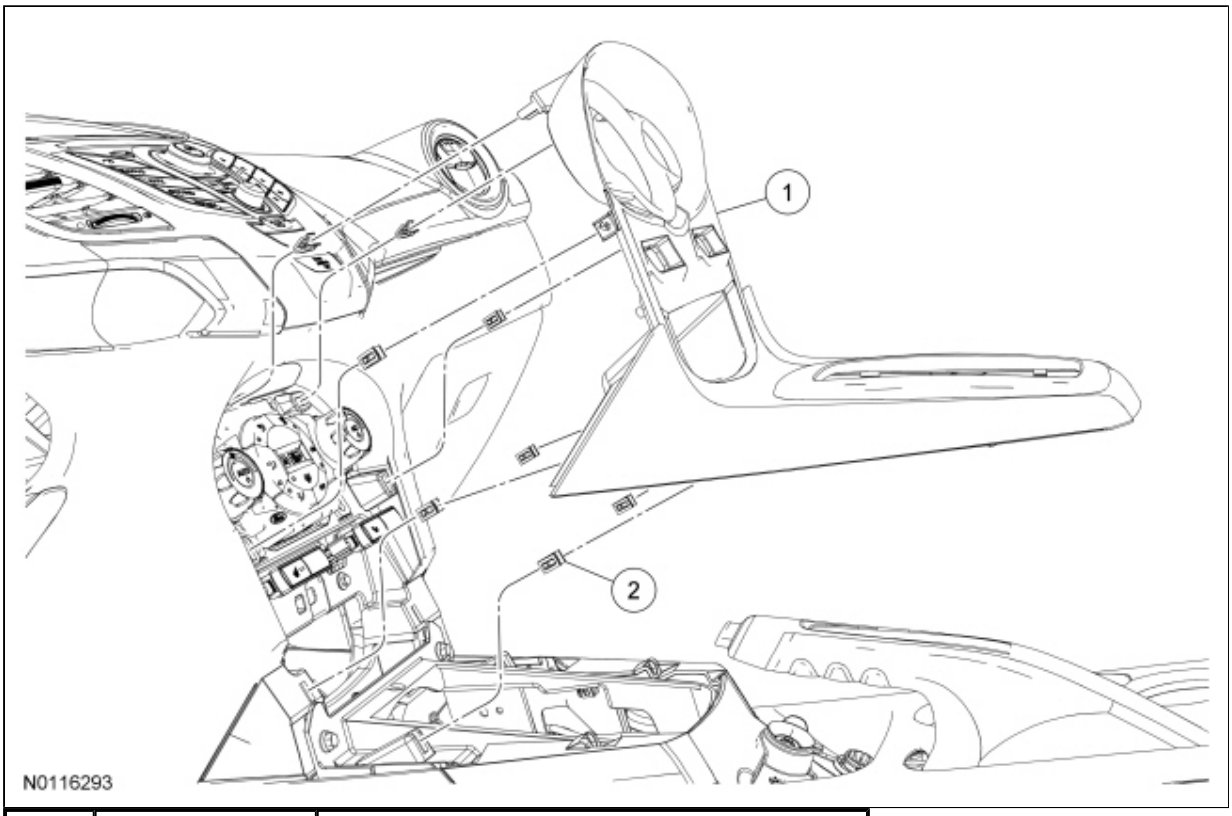
Removal and Installation

1. With a non-marring tool, lift the corners of the instrument panel upper finish panel upward to release the retaining clips.

2. ***NOTICE:*** **To avoid damage to the upper finish panel, remove any retaining clips from the instrument panel and attach them to the upper finish panel before installing.**

   To install, reverse the removal procedure.
   - Make sure to align the finish panel retaining clips to the adjacent retaining clip holes.

Instrument Panel Finish Panel — Lower



Item	Part Number	Description
1	5404644	Lower finish panel
2	W714972	Lower finish panel clips (8 required)

Removal and Installation

1. On vehicles equipped with automatic transmission, remove the selector lever trim ring using a non-marring tool.

2. Using a non-marring tool, lift the corners of the instrument panel lower finish panel upward to release the retaining clips.
   - Disconnect the electrical connectors.

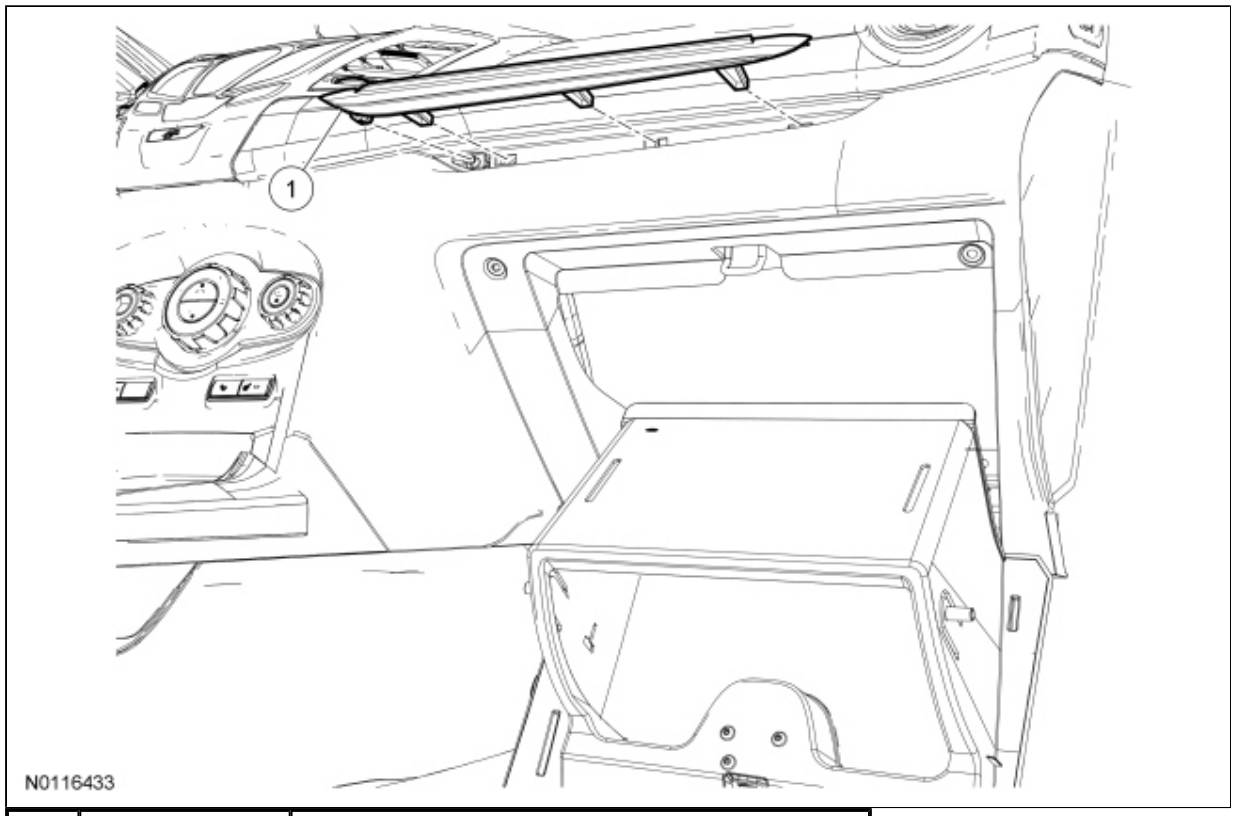
3. ***NOTICE:*** **To avoid damage to the lower finish panel, remove any retaining clips from the**

instrument panel and attach them to the lower finish panel before installing.

To install, reverse the removal procedure.

- Make sure to align the finish panel retaining clips to the adjacent retaining clip holes.

Instrument Panel Finish Panel — RH



Item	Part Number	Description
1	13E002/13E726	Close out bezel-not ambient/Ambient light pipe

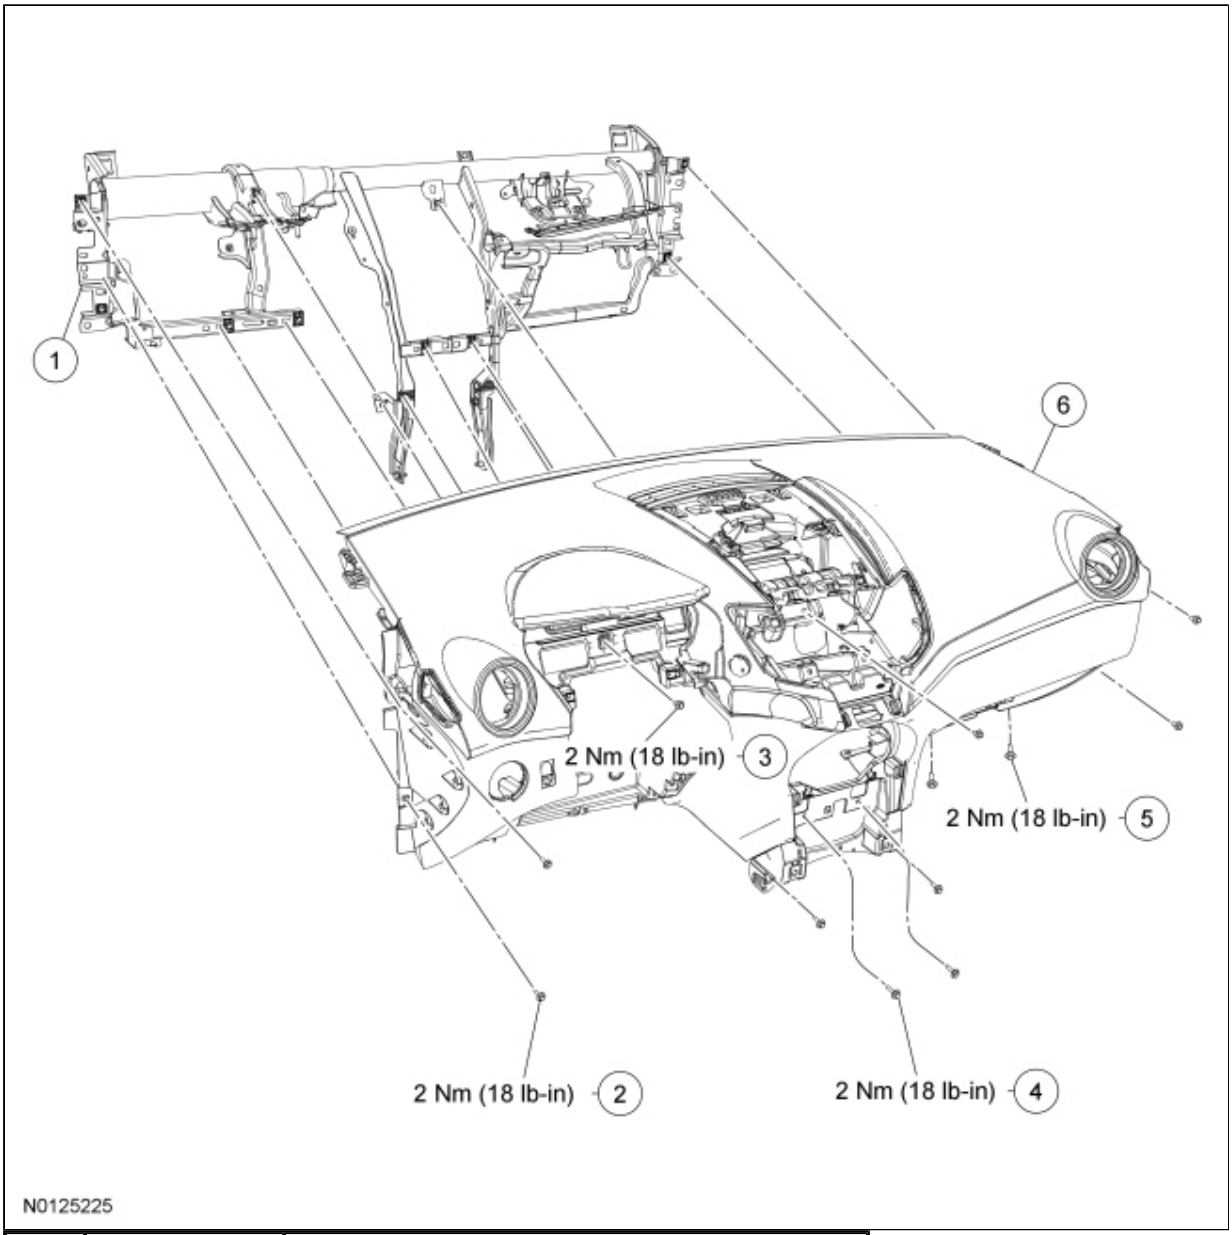
Removal and Installation

1. Lower the glove compartment door completely.

2. Release the 3 RH instrument panel finish panel retaining tabs by reaching through the glove compartment opening.
   - For vehicles equipped with the ambient light pipe, disconnect the electrical connector.

3. To install, reverse the removal procedure.
   - Make sure to align the finish panel retaining clips to the adjacent retaining clip holes.

Instrument Panel Upper Section

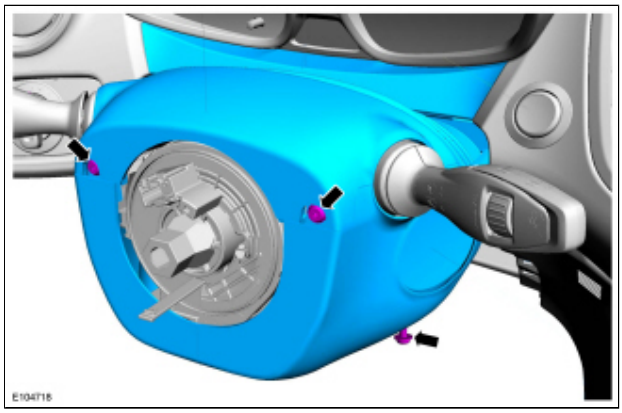


Item	Part Number	Description
1	04545	In-vehicle cross car beam
2	W711557	Instrument panel screw (4 required)
3	W711557	Instrument panel front screw (2 required)
4	W711557	Instrument panel screw (4 required)
5	W711557	Lower instrument panel screw (2 required)
6	04302	Upper instrument panel

Removal and Installation

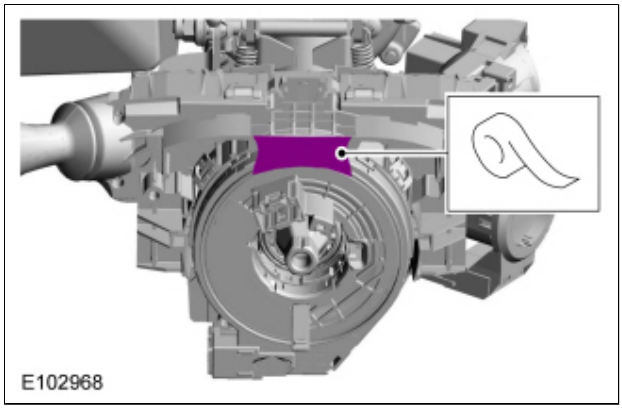
1. Remove the knee air bag module. For additional information, refer to Section 501-20B .
2. Remove the steering wheel. For additional information, refer to Section 211-04 .

3. Remove the 3 torx screws and remove the steering column shroud.

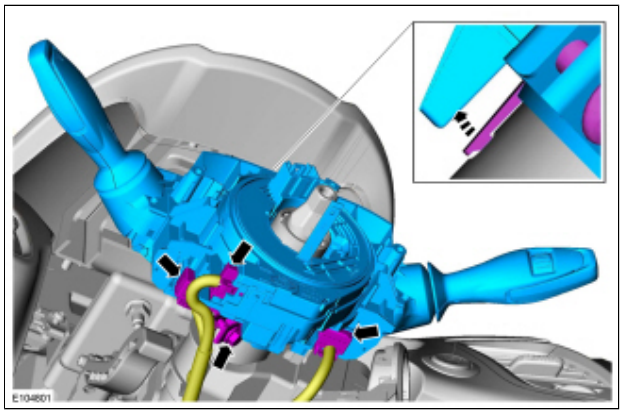


NOTICE: **Make sure the clockspring rotor does not rotate.**

4. Secure the clockspring.



5. Remove the steering column switch carrier.

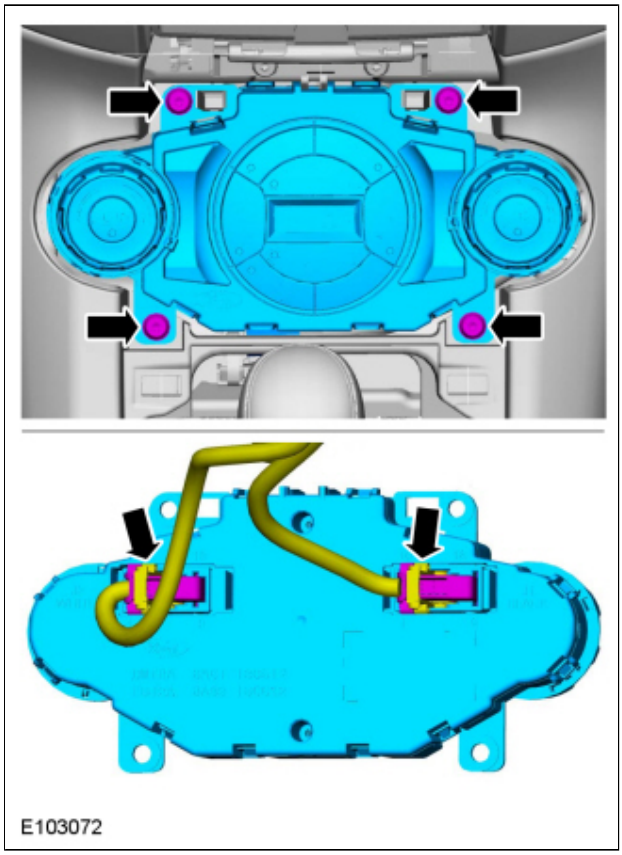


6. Remove the instrument cluster. For additional information, refer to Section 413-01 .
7. Remove the headlamp switch. For additional information, refer to Section 417-01 .
8. Remove the instrument panel dimmer swtich. For additional information, refer to Section 413-00 .
9. Remove the instrument panel upper finish panel. For additional information, refer to Instrument Panel Finish Panel — Upper in this section.
10. Remove the Front Controls Interface Module (FCIM), the Audio Control Module (ACM), the Front Control/Display Interface Module (FCDIM), and disconnect the Global Positioning System Module

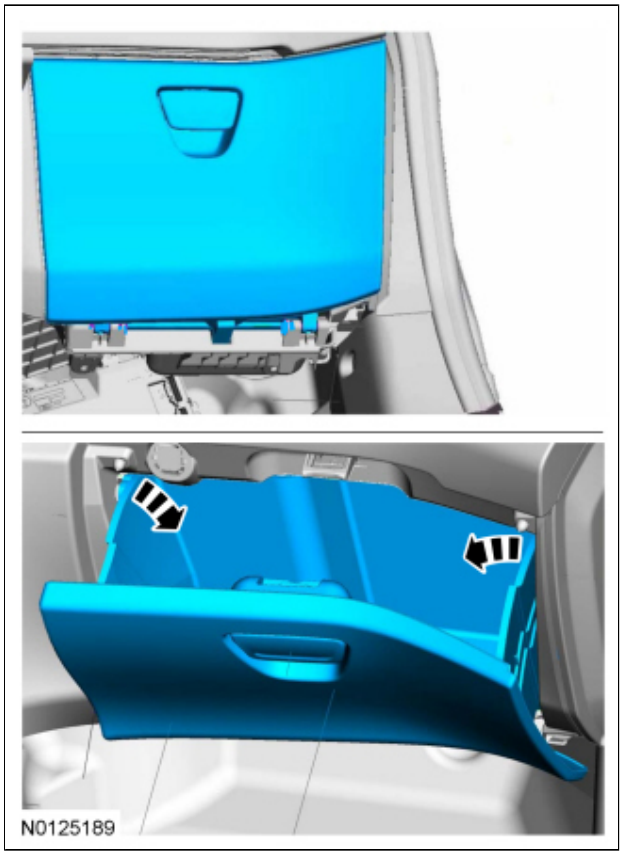
(GPSM). For additional information, refer to Section 415-00 .

11. Remove the floor console. For additional information, refer to Console — Floor in this section.

12. Remove the 4 Heating Ventilation Air Conditioning (HVAC) module screws and remove the HVAC module.
    - Disconnect the electrical connector.



13. Remove the glove box.



14. Remove the Accessory Protocol Interface Module (APIM). For additional information, refer to Section 415-00 .

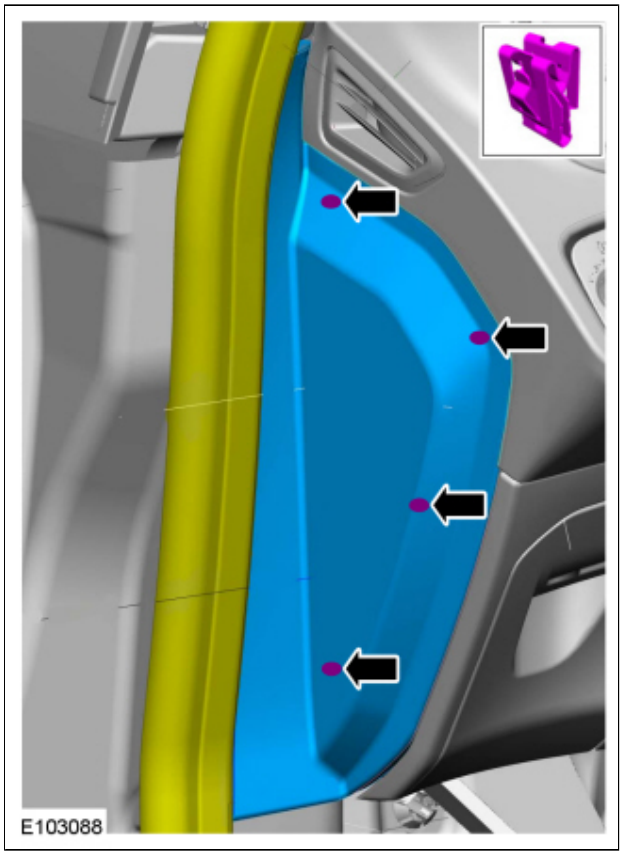
15. Disconnect the RH finish panel ambient light pipe electrical connector. For additional information on connector location, refer to exploded view in Instrument Panel Finish Panel — RH in this section.

16. Disconnect and remove the LH and RH Light Emitting Diode (LED) connectors.

17. Remove the passenger side air bag module bracket. For additional information, refer to Section 501-20B .

18. Remove the LH and RH A-Pillar trim panels. For additional information, refer to Section 501-05 .

19. Remove the LH and RH instrument panel side covers.

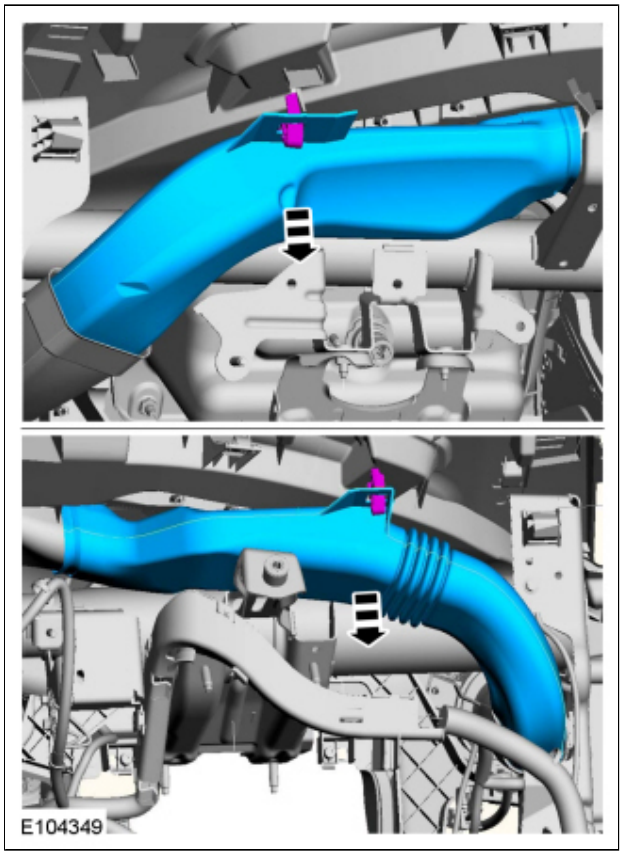


20. Position both front seats fully rearward.

21. Remove the 12 upper instrument panel screws.
    - To install, tighten to 2 Nm (18 lb-in).

22. **NOTE:** The RH and LH defroster ducts stay in the vehicle when the upper instrument panel is removed.

    With the upper instrument panel loose release the RH and LH defroster duct clips.



23. Gently pull the upper instrument panel outward and release the 12 harness push pins and 6 metal harness retaining clips.

24. ***NOTICE:*** **To avoid damage to the instrument panel, an assistant is required when carrying out this step.**

    NOTICE: **Note the harness routing and make sure that all electrical connectors and wiring are not hindered before removing the instrument panel or damage to the components may occur.**

    Remove the upper instrument panel.

25. ***NOTICE:*** **To avoid damaging the instrument panel, use an assistant when positioning the instrument panel to the vehicle.**

    NOTICE: **Make sure that all electrical connectors and wiring are correctly routed when installing the instrument panel or damage to the components may occur.**

    To install, reverse the removal procedure.

Console — Floor

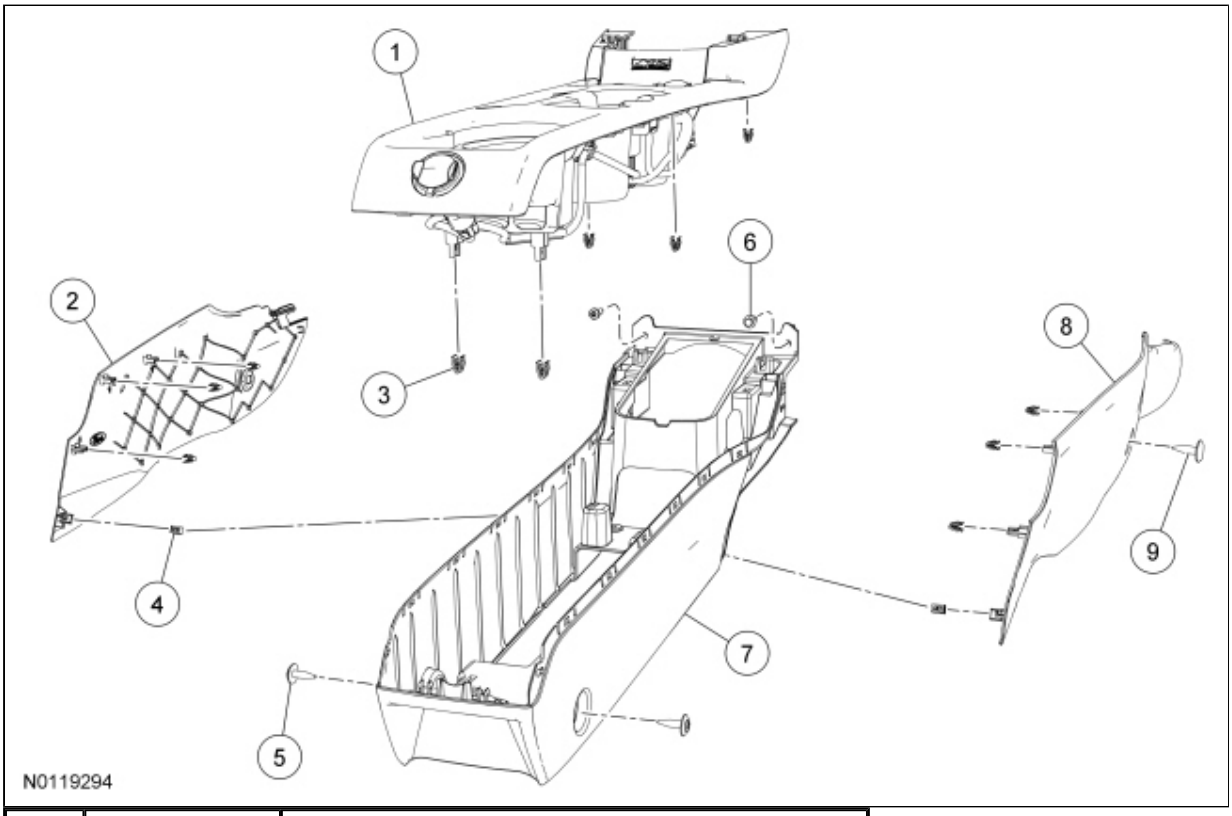
NOTE: Click here or refer to the on-line Workshop Manual to learn about using an Interactive Illustration.



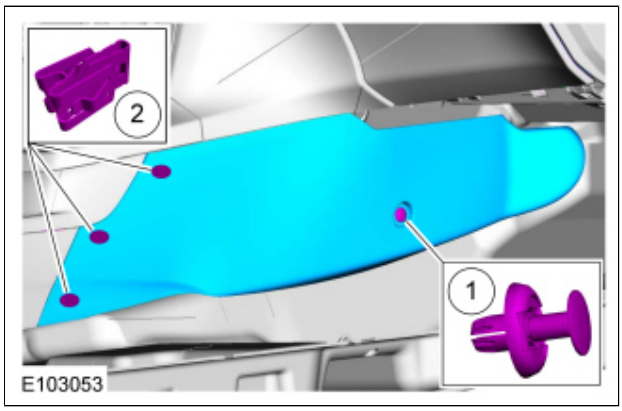
Item	Part Number	Description
1	045A76	Floor console finish panel
2	04608	RH floor console side panel
3	W714972	Floor console finish panel clips (6 required)
4	W714972	Floor console side panel clips (4 required)
5	N808720	Floor console rear screws (2 required)
6	W500214	Floor console front screws (2 required)
7	045A36	Floor console assembly
8	04609	LH floor console side panel
9	W707068	Side panel push pin (2 required)

Removal and Installation

1. On vehicles equipped with automatic transmission, remove the selector lever trim ring using a non-marring tool.

2. Using a non-marring tool, lift the corners of the instrument panel lower finish panel upward to release the retaining clips.
    - Disconnect the electrical connectors.

3. Remove the RH and LH floor console side trim panels.
    1. Remove the side panel push pins.
    2. Pull outward to release the floor console side panel clips.



4. Apply the parking brake handle in the full upright position.

5. Position the seats fully forward and remove the 2 floor console rear screws.

6. Remove the 2 floor console front screws.

7. Disconnect the 2 console electrical connectors on the right side and the 2 console electrical connectors on the left side. Separate the data cable pin type retainer from the console on the right side.

8. Remove the floor console assembly.

9. To install, reverse the removal procedure.

Power Point

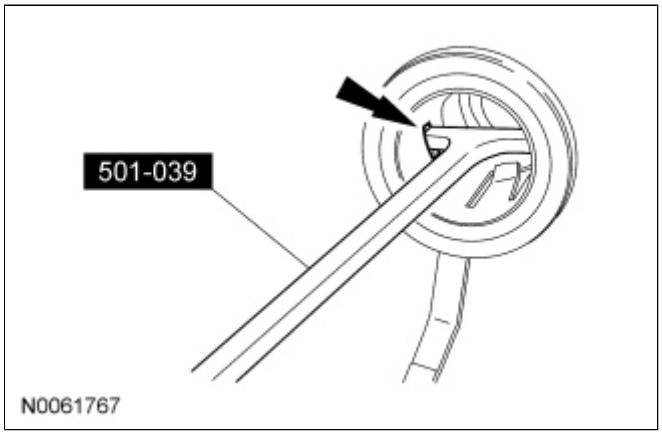
Special Tool(s)

ST3024-A	Remover, Power Point Socket 501-039 or equivalent

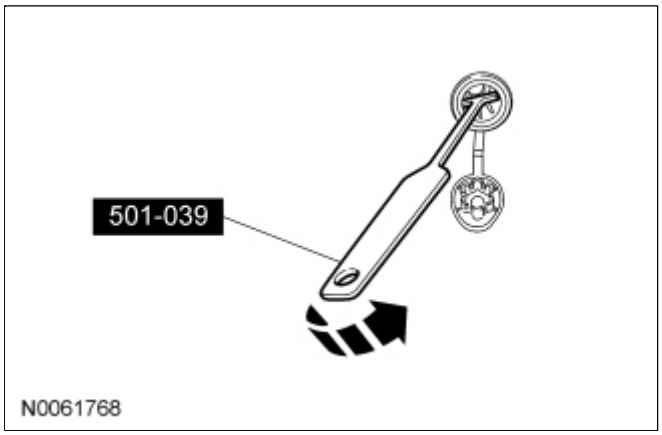
Removal

NOTE: Power point cover may differ depending on location.

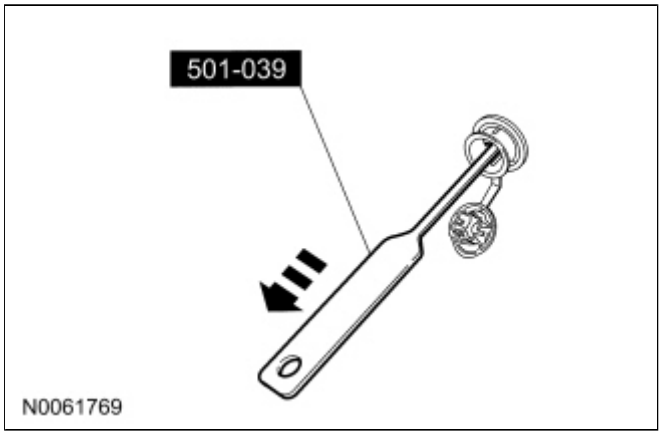
1. Open the power point cover.
2. Install the Power Point Socket Remover in one of the power point socket slots.



3. Position the Power Point Socket Remover so that it engages in the adjacent slot.



4. Using the Power Point Socket Remover, pull the power point socket out of the retainer.



5. Disconnect the electrical connector.

Installation

1. Connect the electrical connector.
2. Slide the power point socket into the retainer.

Material

Item	Specification	Fill Capacity
Multi-Purpose Grease XG-4 and/or XL-5	ESB-M1C93-B	—
Penetrating and Lock Lubricant (US); Penetrating Fluid (Canada) XL-1 (US); CXC-51-A (Canada)	—	—

Torque Specifications

Description	Nm	lb-ft	lb-in
Door latch screws	8	—	71
Door striker bolts	20	—	177
Exterior door handle reinforcement screws	2	—	18
Exterior door handle bolts	1	—	9
Hood latch bolts	9	—	80
Hood striker bolts	10	—	89
Interior door handle screws	1	—	9
Luggage compartment lid/liftgate latch bolts	10	—	89
Luggage compartment lid/liftgate latch striker bolts	24	18	—

Handles, Locks, Latches and Entry Systems

Hood Latch

The hood latch system consists of the hood latch and the hood latch release handle and cable.

Front Door

The front door consists of the following components:

- Door ajar switch (part of the front door latch)
- Door lock cylinder
- Exterior front door handle (contains an antenna and lock button on Intelligent Access (IA)-equipped vehicles)
- Exterior front door handle actuating cable
- Exterior front door handle reinforcement
- Front door latch
- Front door lock actuator (part of the front door latch)
- Interior door handle actuating cable
- Interior door handle

Rear Door

The rear door consists of the following components:

- Door ajar switch (part of the rear door latch)
- Exterior rear door handle
- Exterior rear door handle actuating cable
- Exterior rear door handle reinforcement
- Interior door handle actuating cable
- Interior door handle
- Rear door latch
- Rear door lock actuator (part of the rear door latch)

Luggage Compartment Lid/Liftgate

The luggage compartment lid/liftgate consists of the following components:

- Luggage compartment lid/liftgate latch
- Luggage compartment lid/liftgate release switch (located on the luggage compartment lid/liftgate trim)
- Mechanical emergency release cable and handle (part of the luggage compartment lid latch)
- Luggage compartment/liftgate IA antenna (IA -equipped vehicles) (located behind the rear bumper cover)

Manual Door Lock

In the event of a failure of the power door locks, the doors can be individually locked through the manual door lock. The manual door lock is located on the rear edge of the door just above the door latch opening. For the doors on the driver side of the vehicle, insert a key and turn the key clockwise to lock. For the doors on the passenger side of the vehicle, insert a key and turn the key counterclockwise to lock.

Power Lock/Unlock

The power lock/unlock feature requests all of the vehicle doors locked or unlocked upon a customer request from the door lock control switch (part of the Front Controls Interface Module (FCIM)) in the vehicle. The power door locking system functions independently of ignition status or vehicle speed.

Door Lock Indicator

The door lock indicator provides visual indication of the door lock status. When the light on the door lock control switch is illuminated it indicates that all of the doors are locked. When the light is off it indicates that one or more doors are unlocked.

Central Locking/Unlocking

The central locking/unlocking feature allows all of the doors to be locked or unlocked from a key in the driver door lock cylinder. To unlock the driver door with stepped unlock enabled, turn the key once to the unlock position. To unlock all of the doors with stepped unlock enabled, turn the key a second time to unlock all of the doors. To unlock all of the doors with stepped unlock disabled, turn the key once to the unlock position. Refer to Stepped Unlock Programming in this section for programming information.

To lock all of the doors, turn the key to the LOCK position.

Autolock

The autolock feature (when enabled) locks all the doors when the following conditions are met:

- All the doors are closed
- The ignition is in the RUN mode
- The vehicle is shifted into any gear putting the vehicle in motion
- The vehicle reaches a speed greater than 7 km/h (5 mph)

The autolock feature repeats when:

- any door is opened then closed with the ignition in the RUN mode.
- the vehicle reaches a speed greater than 7 km/h (5 mph).

Refer to Autolock and Auto-Unlock Programming in this section for programming information.

Auto-Unlock

NOTE: The doors will not auto-unlock if the vehicle has been electronically locked before the driver door is opened.

The auto-unlock feature (when enabled) unlocks all the doors when the following conditions are met:

- The ignition is in the RUN mode
- All the doors are closed
- The vehicle has been in motion at a speed greater than 20 km/h (12 mph)
- The vehicle then comes to a stop
- The ignition is switched to the OFF or ACC mode
- The driver door is opened within 10 minutes of the ignition being switched to the OFF mode.

Refer to Autolock and Auto-Unlock Programming in this section for programming information.

Smart Unlock

Without Intelligent Access (IA)

The smart unlock feature prevents the doors from locking with the key in the ignition lock cylinder. When the vehicle is locked from the central lock control switch and the key is in the ignition lock cylinder with one of the front doors open, the doors lock and then unlock.

The vehicle can still be locked with the key in the ignition lock cylinder by locking the doors with another key in the driver door lock cylinder.

With Intelligent Access (IA)

NOTE: The IA smart unlock feature iIs only available on late build vehicles.

The smart unlock feature prevents the doors from electronically locking when an IA key is left inside the vehicle. When a door becomes ajar, the interior of the vehicle is scanned for an IA key. If an IA key is inside the vehicle when a door is ajar and a lock command is received the doors lock and then unlock.

The vehicle can still be locked with an IA key inside the vehicle by locking the doors with another key in the driver door lock cylinder or the lock button pressed on another key.

Luggage Compartment/Liftgate Smart Unlock Feature — Intelligent Access (IA)

The luggage compartment/liftgate smart unlock feature prevents the luggage compartment/liftgate from latching when an IA key is detected inside the luggage compartment area. When the luggage compartment lid/liftgate is closed when the doors are locked, the luggage compartment is searched for an IA key. If an IA key is detected inside the luggage compartment, the luggage compartment lid/liftgate releases.

An IA key can still be locked inside a luggage compartment/ liftgate area by closing the luggage compartment lid/liftgate when the doors are unlocked and then locking the doors after the luggage compartment lid/ liftgate is closed with the key inside. Or if a second IA key is in range of the luggage compartment/ liftgate IA antenna when the luggage compartment lid/liftgate is closed.

Driver/Passenger Door Intelligent Access (IA) Feature

The driver/passenger door IA feature allows the doors to be locked or unlocked without having to use the door lock cylinder or the Remote Keyless Entry (RKE) transmitter feature. With a programmed IA key within 1 m (3 ft) outside the driver or passenger front door, press the lock button on the exterior door handle. The doors lock or unlock depending upon their current state (locked/unlocked).

Driver Door Intelligent Access (IA)

The driver door IA feature either unlocks just the driver door or all four doors. If stepped unlock Is enabled, the driver door Is the only door that unlocks from the driver door IA feature. If stepped unlock Is disabled, then all four doors unlock. The driver door IA feature always locks all four doors. Refer to Stepped Unlock Programming in this section for programming information.

Passenger Door Intelligent Access (IA)

The passenger door IA feature always locks or unlocks all four doors.

Luggage Compartment/Liftgate Intelligent Access (IA) Feature

The luggage compartment IA feature allows the luggage compartment lid to be released without having to use the interior luggage compartment lid release switch or the keyless entry keypad. With a programmed IA key within 1 m (3 ft) outside the luggage compartment lid/liftgate, press the release button, and the luggage compartment lid/liftgate latch releases.

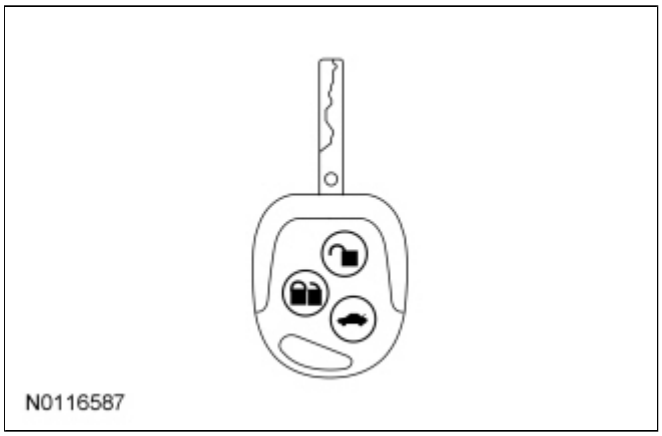
Remote Keyless Entry (RKE)

The RKE transmitter carries out the following functions:

- Unlocks the driver door
- Unlocks all doors
- Locks all doors
- Releases the luggage compartment lid or liftgate latch
- Arms/disarms the perimeter alarm (if equipped)
- Commands the interior lamps on (when unlocking) and off (when locking)
- Provides a long flash of the turn signals when UNLOCK is pressed
- Sounds the horn once and flashes the turn signals when LOCK is pressed twice within 3 seconds, and the doors are closed
- Sounds the horn twice when LOCK is pressed twice within 3 seconds, and any door is ajar

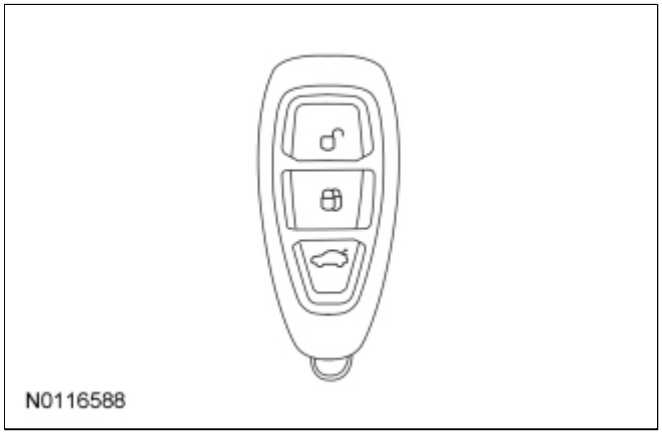
The RKE transmitter has a normal operating range of 20 m (66 ft).

Without Intelligent Access (IA)



This RKE system uses an Integrated Keyhead Transmitter (IKT). The IKT incorporates both the Passive Anti-Theft System (PATS) functions and the RKE transmitter functions in a single device. The key programming is a two step procedure, the PATS information is programmed into the IPC and then the RKE transmitter Transmitter Identification Code (TIC) is programmed into the Body Control Module (BCM). The vehicle accepts the programming of up to 8 keys. Refer to the key programming procedures in Section 419-01B for the PATS programming, and then refer to Remote Keyless Entry (RKE) Transmitter Programming in this section to program the RKE transmitter.

With Intelligent Access (IA)



This RKE system uses an IA key. The IA key incorporates both the PATS functions and the RKE transmitter functions in a single device. The RKE transmitter is programmed automatically during IA key programming. During IA key programming, the Remote Function Actuator (RFA) module obtains the TIC from the IA key. The RFA module accepts programming of up to 8 IA keys. Refer to the key programming procedures in Section 419-01B for the for key programming information.

Remote Keyless Entry (RKE) Lock/Unlock Control — Unlock

The RKE feature provides a stepped (if enabled) process for unlocking the doors. Upon receipt of the first request for unlocking the doors, the RKE control feature requests the BCM to unlock the driver door only and provides a long flash of the turn signals. If another unlock request is received within 3 seconds of the first, the RKE feature requests the BCM to unlock all of the doors. This feature can be disabled so that all of the doors unlock on the first press of the unlock button. Refer to Stepped Unlock Programming in this section.

Remote Keyless Entry (RKE) Lock/Unlock Control — Lock

The RKE feature requests that all of the doors be locked when the lock button is pressed. On any press of the lock button with all doors closed, the BCM flashes the turn signals once. If any door is ajar, no flash occurs. As soon as the last door is closed, the BCM provides the flash of the turn signals. If 2 presses of the lock button are received within 3 seconds, the horn chirps once and the turn signals flash twice (once for each button press) to indicate that all of the doors are closed and locked. If any door is ajar when the second lock request is received within 3 seconds of the first, the RKE transmitter feature requests the BCM chirp the horn twice without flashing the turn signals to indicate it locked all the doors but one or more doors are ajar.

Remote Keyless Entry (RKE) Luggage Compartment Lid/Liftgate Release

The RKE feature provides luggage compartment lid/liftgate release function. The luggage compartment lid release system is inhibited when the ignition is on and vehicle speed exceeds 7 km/h (5 mph).

Handles, Locks, Latches and Entry Systems

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
ST2574-A	Flex Probe Kit NUD105-R025D or equivalent

Penetrating and Lock Lubricant (US); Penetrating Fluid (Canada) XL-1 (US); CXC-51-A (Canada)	—

Principles of Operation — Without Intelligent Access (IA)

Power Door Locks

The Body Control Module (BCM) monitors the door lock control switch and the driver door lock cylinder. When the BCM receives an unlock/lock command from either the door lock control switch or the driver door lock cylinder, the BCM energizes a relay (internal to the SJB) to supply the correct power and grounds for the door lock actuators. The power door locks function independently of ignition status or vehicle speed.

Door Lock Indicator

For a visual indication of the door lock status, the BCM controls the door lock indicator on the door lock control switch. If all four doors are locked, the indicator is illuminated. If any one door is unlocked, the indicator turns off. The BCM monitors the door lock status through the unlock switches inside each of the 4 door latches. The BCM uses the input from the unlock switches to determine if the indicator should be illuminated or off.

Luggage Compartment Lid/Liftgate Release

The luggage compartment lid/liftgate release system is inhibited when the vehicle speed exceeds 8 km/h (5 mph) and when the vehicle doors are locked. The luggage compartment lid/liftgate latch releases the luggage compartment lid/liftgate when the release switch on the luggage compartment lid/liftgate or on the Remote Keyless Entry (RKE) transmitter is pressed. When the BCM receives a signal to release the luggage compartment lid/liftgate, the BCM supplies voltage to the latch. The luggage compartment lid/liftgate latch then

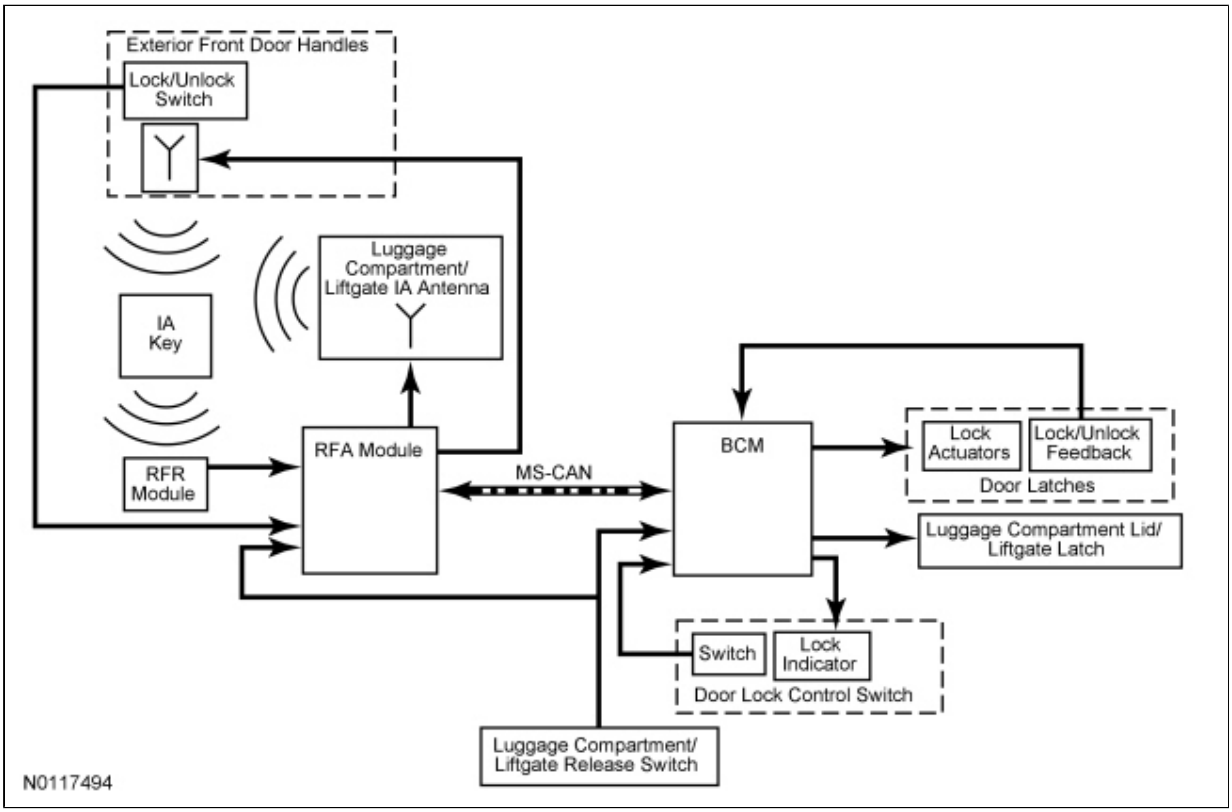
actuates to release the luggage compartment lid/liftgate.

Remote Keyless Entry (RKE)

The BCM interprets radio frequency signals from the RKE transmitters. The BCM requests the illuminated entry feature to turn the interior lamps on when an unlock command is received. If a lock command is received, the illuminated entry feature turns off.

The RKE transmitter supplies a signal to the antenna internal to the BCM when any button is pressed. The BCM then supplies voltage to the appropriate door lock actuator(s) to lock or unlock the doors or release the luggage compartment lid/liftgate.

Principles of Operation — WithIntelligent Access (IA)



Intelligent Access (IA) Components

Exterior Front Door Handles

The exterior front door handles both contain an Intelligent Access (IA) antenna and a lock switch. The antennas and lock switches are hardwired to the Remote Function Actuator (RFA) module. When a lock switch is pressed, it signals the RFA module there is an IA request. When the RFA module receives the request it activates the IA antenna in the corresponding door handle. The low frequency signal from the IA antenna activates an IA key.

Luggage Compartment/Liftgate Intelligent Access (IA) Antenna

The luggage compartment/liftgate IA antenna is hardwired to the RFA module and, when activated by the RFA module, it transmits a low frequency signal that activates an IA key.

Remote Functions Receiver (RFR) Module

The Remote Functions Receiver (RFR) module is hardwired to the RFA module and is a receiving antenna that receives the high frequency signals from an IA key. It also receives the signals from an RKE command.

Intelligent Access (IA) Key

The IA key receives the low frequency signals from the IA antennas. When the IA key is activated by one of the low frequency signals, it sends out a high frequency signal that is received by the RFR module. The IA key also contains a key blade that is used to enter the vehicle as a backup.

Power Door Locks

The BCM monitors the door lock control switch and the driver door lock cylinder. When the BCM receives an unlock/lock command from either the door lock control switch or the driver door lock cylinder, the BCM energizes a relay (internal to the SJB) to supply the correct power and grounds for the door lock actuators. The power door locks function independently of ignition status or vehicle speed.

Door Lock Indicator

For a visual indication of the door lock status, the BCM controls the door lock indicator on the door lock control switch. If all 4 doors are locked, the indicator is illuminated. If any one door is unlocked, then the indicator turns off. The BCM monitors the door lock status through the unlock switches inside each of the four door latches. The BCM uses the input from the unlock switches to determine if the indicator should be illuminated or off.

Luggage Compartment Lid/Liftgate Release

The luggage compartment lid/liftgate release system is inhibited when the vehicle speed exceeds 8 km/h (5 mph) and when the vehicle doors are locked. The luggage compartment lid/liftgate latch releases the luggage compartment lid/liftgate when the release switch on the luggage compartment lid/liftgate or on the Remote Keyless Entry (RKE) transmitter is pressed. When the BCM receives a signal to release the luggage compartment lid/liftgate, the BCM supplies voltage to the latch. The luggage compartment lid/liftgate latch then actuates to release the luggage compartment lid/liftgate.

Driver/Passenger Door Intelligent Access (IA) Feature

The driver/passenger door IA feature allows the doors to be locked or unlocked without having to use the door lock cylinder or the RKE transmitter. With a programmed IA key within 1 m (3 ft) of either front door handle outside of the door, press the lock button on the exterior door handle and, depending upon their current state, the doors either lock or unlock. The IA feature from the driver door only unlocks the driver door and the IA feature from the passenger door unlocks all four doors. The IA feature from either front door locks all four doors.

When the RFA module detects that a lock button is pressed on a front exterior door handle, it activates the low frequency antenna in the corresponding exterior front door handle. The low frequency antenna sends out a signal to the IA key. The low frequency signal activates the IA key and the IA key then sends a high frequency signal back to the RFR module. The RFR module interprets the high frequency signal from the IA key and sends the information to the RFA module. If the RFA module determines that it is a programmed key, it sends a message over the Medium Speed Controller Area Network (MS-CAN) to the BCM . Depending upon the signal received from the RFA module, the BCM either unlocks the driver door, unlocks all 4 doors, or locks all 4 doors.

Luggage Compartment/Liftgate Intelligent Access (IA) Feature

The luggage compartment/liftgate IA feature allows the luggage compartment lid to be released without using an RKE transmitter. With a programmed IA key within 1 m (3 ft) outside of the luggage compartment lid/liftgate, press the release button on the luggage compartment lid/liftgate, and the luggage compartment lid/liftgate latch releases.

The luggage compartment/liftgate release switch is connected to both the BCM and the RFA module. When the doors are unlocked, the BCM receives the signal from the switch and releases the luggage compartment lid/liftgate. When the doors are locked, the BCM ignores the input from the switch and only releases the luggage compartment lid/liftgate if it receives a signal from the RFA module for the luggage compartment/liftgate IA feature.

When the RFA module detects a signal from the luggage compartment lid/liftgate release switch, it activates the low frequency antenna in the rear bumper cover. The low frequency antenna sends out a signal to the IA key. The low frequency signal activates the IA key and the IA key then sends a high frequency signal back to the RFR module. The RFR module interprets the high frequency signal from the IA key and sends the information to the RFA module. If the RFA module determines that it is a programmed key, it sends a message over the MS-CAN to the BCM to release the luggage compartment lid/liftgate.

Remote Keyless Entry (RKE)

The IA key transmitter supplies a signal to the RFR module when any button is pressed. The RFR module interprets the information from the IA key and sends a signal to the RFA module. If the RFA module determines that it is a programmed key, it sends a message over the MS-CAN to the BCM. Depending upon the signal received from the RFA module, the BCM either unlocks the driver door, unlocks all 4 doors, locks all 4 doors, or releases the luggage compartment lid/liftgate.

The BCM requests the illuminated entry feature to turn the interior lamps on when an unlock command is received. If a lock command is received, the illuminated entry feature turns off.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Binding latch mechanisms • Door handles	• Battery Junction Box (BJB) fuse 6 (30A) • Wiring, terminals or connectors • Remote Keyless Entry (RKE) transmitter • Door lock control switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is ON.
     - the air bag warning indicator prove-out (other indicators may NOT prove ignition is ON) confirms ignition ON. If ignition does not turn ON, refer to Section 211-05 to diagnose no power in RUN.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00, Inspection and Verification to establish a scan tool session.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Carry out the self-test diagnostics for the RFA module and Body Control Module (BCM).

9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10.

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

Symptom Charts

Symptom Chart — Electrical

Condition	Possible Sources	Action
• All door locks are inoperative	• Fuse • Wiring, terminals or connectors • Anti-theft alarm (if equipped) • Luggage compartment lid/liftgate latch	• GO to Pinpoint Test A .

	• Body Control Module (BCM)	
• A single/more than one door lock is inoperative	• Wiring, terminals or connectors • Door lock actuator (part of the door latch) • BCM	• GO to Pinpoint Test B.
• All door locks are inoperative from the door lock control switch	• Wiring, terminals or connectors • Door lock control switch (part of the Front Controls Interface Module (FCIM)) • BCM	• GO to Pinpoint Test C.
• The central locking/unlocking does not operate correctly	• Wiring, terminals or connectors • Driver door latch • BCM	• REFER to Section 419-01A to diagnose the perimeter alarm does not arm/disarm from the driver door lock cylinder.
• The door lock control switch indicator is inoperative/always on	• Wiring, terminals or connectors • Door lock control switch (part of the FCIM) • Door latches • BCM	• GO to Pinpoint Test D.
• The luggage compartment lid/liftgate latch release is inoperative/does not operate correctly	• Wiring, terminals or connectors • Luggage compartment lid/liftgate latch • Luggage compartment lid/liftgate release switch • BCM • Remote Function Actuator (RFA) module (if equipped)	• GO to Pinpoint Test E.
• The Remote Keyless Entry (RKE) transmitter is inoperative — without Intelligent Access (IA)	• RKE transmitter battery • RKE transmitter programming • RKE transmitter • BCM	• GO to Pinpoint Test F.
• The Remote Keyless Entry (RKE) transmitter is inoperative — with Intelligent Access (IA)	• RKE transmitter battery • RKE transmitter programming • RKE transmitter button pressed a substantial amount of times while outside the range of the vehicle • RKE transmitter • BCM • Medium Speed Controller Area Network (MS-CAN) • Remote Functions Receiver (RFR) module • RFA module	• GO to Pinpoint Test G.
• An individual button/feature is inoperative from the Remote Keyless Entry (RKE) transmitter	• Door locks • Luggage compartment lid/liftgate release • RKE transmitter	• GO to Pinpoint Test H.
• The Remote Keyless Entry (RKE) transmitter has poor range	• RKE transmitter • RKE transmitter battery • Aftermarket systems	• GO to Pinpoint Test I.

performance	• High power devices • TV/radio transmission towers • RFR module • BCM	
• The Intelligent Access (IA) feature is inoperative from a front door	• Wiring, terminals or connectors • External antenna (part of the exterior front door handle) • Lock button (part of the exterior front door handle) • IA key • RFR module • RFA module	• GO to Pinpoint Test J.
• The luggage compartment/liftgate Intelligent Access (IA) is inoperative	• Wiring, terminals or connectors • Luggage compartment/liftgate IA antenna • IA key • RFR module • RFA module	• GO to Pinpoint Test K.
• The autolock is inoperative	• Programming • Door ajar switches • Vehicle speed input	• GO to Pinpoint Test L.
• The auto-unlock is inoperative	• Programming • Door ajar switches • Ignition switch • Vehicle speed input	• GO to Pinpoint Test M.
• The smart unlock is inoperative	• Key-in-ignition switch (vehicles without IA) • Door ajar switch input • IA key	• GO to Pinpoint Test N.
• The luggage compartment/liftgate smart unlock is inoperative	• Luggage compartment lid/liftgate ajar switch input • Rear passive start antenna • IA key	• GO to Pinpoint Test O.
• The 2-step door unlocking does not operate correctly	• 2-step door unlocking is disabled	• PROGRAM the 2-step door unlocking. REFER to Stepped Unlock Programming in this section. TEST the system for normal operation.

Symptom Chart — Mechanical

Condition	Possible Sources	Action
• Hard to open/close door from either door handle	• Door alignment • Door hinges • Striker adjustment • Door latch	• GO to Pinpoint Test P.
• A door is difficult/does not open from the exterior door handle	• Binding cable • Exterior door handle reinforcement • Door latch	• GO to Pinpoint Test Q.
• A door is difficult/does not open from the interior door handle	• Broken or binding cable/linkage • Door latch	• GO to Pinpoint Test R.
• Exterior door release handle sticks	• Binding cable	• GO to

	• Broken handle return spring • Door latch	Pinpoint Test S.
• Interior door release handle sticks	• Binding cable • Broken handle return spring • Door latch	• GO to Pinpoint Test T.
• Squeak/rattle/chucking noise from door	• Door alignment • Striker adjustment • Door latch	• GO to Pinpoint Test U.
• Manual door lock cylinder inoperative	• Bent or binding lock rod and lever • Door lock cylinder • Door latch	• GO to Pinpoint Test V.
• Ignition key cannot be returned to OFF position	• Wiring, terminals or connectors • Transmission selector lever • Binding steering column components • Ignition lock cylinder • Ignition switch	• GO to Pinpoint Test W.

Pinpoint Tests

Pinpoint Test A: All Door Locks Are Inoperative

Refer to Wiring Diagrams Cell 117, Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Battery Junction Box (BJB) fuse 6 (30A) provides voltage for the power lock/unlock system, the luggage compartment/liftgate release and the anti-theft alarm horn (if equipped). The BCM has a dedicated ground for the power lock/unlock system. The BCM contains internal relays that are energized depending on input received from the door lock control switch, driver door lock cylinder and the Remote Keyless Entry (RKE) transmitters. Upon a lock request, the BCM supplies voltage on the all door lock circuit and ground on the driver and passenger door unlock circuits. Upon an unlock request, the voltage and ground are reversed on the previously listed circuits.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Anti-theft alarm horn (if equipped)
- Luggage compartment lid/liftgate latch
- BCM

PINPOINT TEST A: ALL DOOR LOCKS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
A1 VERIFY THE DOOR LOCK OPERATION FROM THE RKE TRANSMITTER AND SWITCH	

• Press the LOCK and UNLOCK buttons on a RKE transmitter and also press the door lock control switch on the dash. • **Are the door locks inoperative from the RKE transmitter and door lock control switch?**	**Yes** VERIFY the BJB fuse 6 (30A) is OK. If OK, GO to A2. If the fuse has failed, GO to A5. **No** If the door locks are inoperative from the door lock control switch, GO to Pinpoint Test C. If the door locks are inoperative from the RKE transmitter (vehicles without IA), GO to Pinpoint Test F. If the door locks are inoperative from the RKE transmitter (vehicles with IA), GO to Pinpoint Test G.
A2 CHECK THE BCM POWER CIRCUIT FOR VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280A. • Measure the voltage between the BCM C2280A-8, circuit SBB06 (BN/RD), harness side and ground.  N0116853 • **Is the voltage greater than 10 volts?**	**Yes** GO to A3. **No** REPAIR circuit SBB06 (BN/RD) for an open. TEST the system for normal operation.
A3 CHECK THE BCM GROUND	
• Disconnect: BCM C2280B. • Measure the voltage between the BCM C2280A-8, circuit SBB06 (BN/RD), harness side and the BCM C2280B-16, circuit GD115 (BK/GY), harness side.  N0116854 • **Is the voltage greater than 10 volts?**	**Yes** GO to A4. **No** REPAIR circuit GD115 (BK/GY) for an open. TEST the system for normal operation.
A4 CHECK THE LOCK CIRCUIT FOR AN OPEN	

• Disconnect: BCM C2280C. • Disconnect: RH Front Door Latch C609. • Measure the resistance between the RH front door latch C609-2, circuit CPL11 (GY/BN), harness side and the BCM C2280C-2, circuit CPL11 (GY/BN), harness side.  N0116855 • **Is the resistance less than 5 ohms?**	**Yes** GO to A11 . **No** REPAIR circuit CPL11 (GY/BN) for an open. TEST the system for normal operation.
A5 CHECK THE VEHICLE FOR THE OPTIONAL ANTI-THEFT ALARM HORN	
• Check the vehicle to see if it is equipped with an anti-theft alarm horn. Refer to Section 419-01A for the location of the anti-theft alarm horn. • **Is the vehicle equipped with an anti-theft alarm horn?**	**Yes** GO to A6 . **No** GO to A8 .
A6 CHECK THE ANTI-THEFT ALARM HORN OUTPUT CIRCUIT FOR A SHORT TO GROUND	
NOTE: If BJB fuse 6 (30A) fails immediately upon installation, repair circuit SBB06 (BN/RD) for a short to ground. • Install a new BJB fuse 6 (30A). • Select the BCM PID (ANTITHFT_HRN) and active command the anti-theft alarm horn to sound. • **Is BJB fuse 6 (30A) OK?**	**Yes** GO to A8 . **No** GO to A7 .
A7 CHECK THE ANTI-THEFT ALARM HORN USING THE BCM PID ANTI-THEFT HORN STATUS (ANTITHFT_HRN)	
• Disconnect: Anti-Theft Alarm Horn C4380. • Install a new BJB fuse 6 (30A). • Select the BCM PID ANTITHFT_HRN and active command the anti-theft alarm horn to sound. • **Is BJB fuse 6 (30A) OK?**	**Yes** INSTALL a new anti-theft alarm horn. REFER to Section 419-01A . TEST the system for normal operation. **No** REPAIR circuit CRT02 (GY/VT) for a short to ground. TEST the system for normal operation.
A8 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT CIRCUIT FOR A SHORT TO GROUND	
NOTE: If BJB fuse 6 (30A) fails immediately upon installation, repair circuit SBB06 (BN/RD) for a short to ground. • Install a new BJB fuse 6 (30A). • Operate the luggage compartment/liftgate release by pressing the luggage compartment/liftgate release button on an RKE transmitter. • **Is BJB fuse 6 (30A) OK?**	**Yes** GO to A10 . **No** GO to A9 .
A9 CHECK THE LUGGAGE COMPARTMENT LID/LIFTGATE ACTUATOR FOR A SHORT	
• Disconnect: Luggage Compartment/Liftgate Latch C4223.	**Yes**

• Install a new BJB fuse 6 (30A). • Operate the luggage compartment/liftgate release by pressing the luggage compartment/liftgate release button on an RKE transmitter. • **Is BJB fuse 6 (30A) OK?**	INSTALL a new luggage compartment lid/liftgate latch. REFER to Liftgate Latch or Luggage Compartment Lid Latch in this section. TEST the system for normal operation. **No** REPAIR circuit CPL20 (BU/OG) for a short to ground. TEST the system for normal operation.
A10 CHECK THE LOCK CIRCUIT FOR A SHORT TO GROUND	
• Operate the door lock actuators by pressing the lock button on an RKE transmitter. • **Is BJB fuse 6 (30A) OK?**	**Yes** REPAIR circuit CPL13 (BN/GN) or CPL51 (BU/GN) for a short to ground. TEST the system for normal operation. **No** REPAIR circuit CPL11 (GY/BN) for a short to ground. TEST the system for normal operation.
A11 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: A Single/More Than One Door Lock Is Inoperative

Refer to Wiring Diagrams Cell 117, Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Battery Junction Box (BJB) fuse 6 (30A) provides voltage for the power lock/unlock system and the luggage compartment/liftgate release. The BCM has a dedicated ground for the power lock/unlock system. The BCM contains internal relays that are energized depending on input received from the door lock control switch, driver door lock cylinder and the Remote Keyless Entry (RKE) transmitters. Upon a lock request, the BCM supplies voltage on the all door lock circuit and ground on the driver and passenger door unlock circuits. Upon an unlock request, the voltage and ground are reversed on the previously listed circuits.

This pinpoint test is intended to diagnose the following:

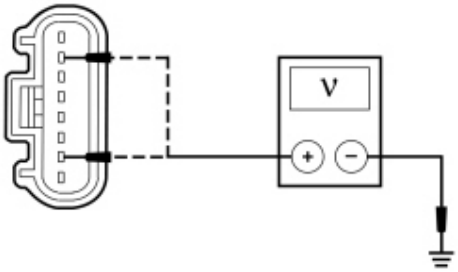
- Wiring, terminals or connectors
- Door lock actuator (part of the door latch)
- BCM

PINPOINT TEST B: A SINGLE/MORE THAN ONE DOOR LOCK IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>B1 CHECK THE ALL LOCK OUTPUT CIRCUIT FOR VOLTAGE

• Ignition OFF.
• Disconnect: Inoperative Door Lock Actuator.
• NOTE: The BCM only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch.
• While pressing the door lock control switch in the lock position, measure the voltage between the inoperative door lock actuator, harness side and ground as follows:

<table>
<tr><th>Inoperative Door Lock Actuator</th><th>Connector-Pin</th><th>Circuit</th></tr>
<tr><td>LH front</td><td>C525-7</td><td>CPL11 (GY/BN)</td></tr>
<tr><td>RH front</td><td>C609-2</td><td>CPL11 (GY/BN)</td></tr>
<tr><td>LH rear</td><td>C705-7</td><td>CPL11 (GY/BN)</td></tr>
<tr><td>RH rear</td><td>C805-2</td><td>CPL11 (GY/BN)</td></tr>
</table>


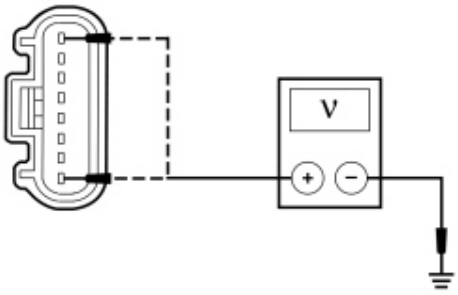
N0116856
• Is the voltage momentarily greater than 10 volts?</td><td>Yes
GO to B2 .

No
REPAIR circuit CPL11 (GY/BN) for an open. TEST the system for normal operation.</td></tr>
<tr><td>B2 CHECK THE UNLOCK OUTPUT CIRCUIT FOR VOLTAGE

• NOTE: The BCM only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch.
• While pressing the door lock control switch in the unlock position, measure the voltage between the inoperative door lock actuator, harness side and ground as follows:

<table>
<tr><th>Inoperative Door Lock Actuator</th><th>Connector-Pin</th><th>Circuit</th></tr>
<tr><td>LH front</td><td>C525-8</td><td>CPL51 (BU/GN)</td></tr>
<tr><td>RH front</td><td>C609-1</td><td>CPL13 (BN/GN)</td></tr>
<tr><td>LH rear</td><td>C705-8</td><td>CPL13 (BN/GN)</td></tr>
<tr><td>RH rear</td><td>C805-1</td><td>CPL13 (BN/GN)</td></tr>
</table></td><td>Yes
INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.

No
GO to B3 .</td></tr>
</table>



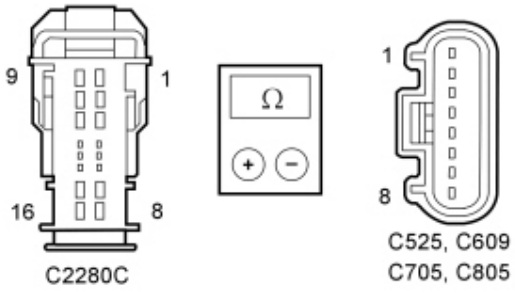
N0116857

- **Is the voltage momentarily greater than 10 volts?**

B3 CHECK THE UNLOCK OUTPUT CIRCUIT FOR AN OPEN

- Disconnect: BCM C2280C.
- Measure the resistance between the BCM, harness side and the inoperative door lock actuator, harness side as follows:

BCM Connector-Pin	Inoperative Door Lock Actuator Connector-Pin	Circuit
C2280C-7	LH front C525-8	CPL51 (BU/GN)
C2280C-3	RH front C609-1	CPL13 (BN/GN)
C2280C-3	LH rear C705-8	CPL13 (BN/GN)
C2280C-3	RH rear C805-1	CPL13 (BN/GN)



N0116858

- **Is the resistance less than 5 ohms?**

Yes
GO to B4.

No
REPAIR the circuit in question for an open. TEST the system for normal operation.

B4 CHECK FOR CORRECT BCM OPERATION

- Disconnect all the BCM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the BCM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

Yes
INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test C: All Door Locks Are Inoperative From The Door Lock Control Switch

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Body Control Module (BCM) sends a voltage signal to the door lock control switch. When the door lock control switch is pressed, the voltage signal is routed to ground, signaling the BCM to lock or unlock the doors. The BCM monitors the door lock actuator positions and either locks or unlocks the doors depending upon their current state. If the doors are locked and the switch is pressed, the BCM unlocks the doors. If the doors are unlocked and the switch is pressed, the BCM locks the doors. The door lock control switch is part of the Front Controls Interface Module (FCIM) and shares the same ground.

- DTC B108F:23 (Cabin Lock/Unlock Switch: Signal Stuck Low) — a continuous and on-demand DTC that sets when the BCM detects a short to ground from the door lock control switch input circuit. This DTC may also set if the door lock control switch is pressed for longer than 2 minutes.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door lock control switch (part of the FCIM)
- BCM

PINPOINT TEST C: ALL DOOR LOCKS ARE INOPERATIVE FROM THE DOOR LOCK CONTROL SWITCH

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
C1 CHECK THE OPERATION OF THE FCIM • Operate the radio through the FCIM . • **Does the FCIM operate the radio?**	**Yes** GO to C2 . **No** REFER to Section 415-00 to DIAGNOSE the FCIM .
C2 CHECK THE RECORDED BCM DTCs FROM THE SELF-TEST • Check the recorded results from the BCM self-test. • **Is DTC B108F:23 present?**	**Yes** GO to C3 . **No** GO to C5 .
C3 CHECK THE DOOR LOCK CONTROL SWITCH FOR A SHORT TO GROUND • Disconnect: FCIM C2402. • Enter the following diagnostic mode on the scan tool: Clear BCM DTCs. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Is DTC B108F:23 retrieved again?**	**Yes** GO to C4 . **No** INSTALL a new FCIM . REFER to Section 415-00 . TEST the system for normal operation.
C4 CHECK THE INPUT CIRCUIT FOR A SHORT TO GROUND • Ignition OFF. • Disconnect: BCM C2280F. • Measure the resistance between the FCIM C2402-6, circuit CPL75 (BN/WH), harness side and ground	**Yes** GO to C7 . **No**

 N0116859 • **Is the resistance greater than 10,000 ohms?**	REPAIR circuit CPL75 (BN/WH) for a short to ground. CLEAR the DTCs. REPEAT the self-test.
C5 CHECK THE DOOR LOCK CONTROL SWITCH	
• Ignition OFF. • Disconnect: FCDIM C2402. • Listen to the door locks while momentarily connecting a fused jumper wire between the FCIM C2402-6, circuit CPL75 (BN/WH), harness side and the FCIM C2402-5, circuit GD115 (BK/GY), harness side.  N0116860 • **Do the doors lock and unlock with the jumper wire connected?**	**Yes** INSTALL a new FCIM. REFER to Section 415-00. TEST the system for normal operation. **No** GO to C6.
C6 CHECK THE INPUT CIRCUIT FOR AN OPEN	
• Disconnect: BCM C2280F. • Measure the resistance between the BCM C2280F-8, circuit CPL75 (BN/WH), harness side and the FCIM C2402-6, circuit CPL75 (BN/WH), harness side.  N0116861 • **Is the resistance less than 5 ohms?**	**Yes** GO to C7. **No** REPAIR circuit CPL75 (BN/WH) for an open. TEST the system for normal operation.
C7 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system

▪ pushed-out pins • Connect all the BCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: The Door Lock Control Switch Indicator Is Inoperative/Always On

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Body Control Module (BCM) controls the door lock control switch indicator. The door lock control switch is illuminated when the doors are locked and off when the doors are unlocked. The BCM provides voltage to the door lock control switch indicator and the indicator uses a common ground in the Front Controls Interface Module (FCIM). When the ignition is in the RUN mode, the indicator is always on as long as the doors are locked. When the ignition is in the OFF mode, the indicator illuminates for approximately 30 seconds when a lock command is received and then it turns off.

The BCM monitors the lock/unlock monitor circuit to determine the status of the door locks and to turn the indicator on or off. All 4 door latches have an internal switch that are connected to ground when the door is unlocked and open when the door is locked.

- DTC B1108:92 (Driver Door Central Locking Motor: Performance or Incorrect Operation) — an on-demand DTC that sets when the BCM detects the incorrect feedback on the door lock/unlock monitor circuit. During the BCM self-test, the BCM energizes the internal lock and unlock relays to lock and unlock all of the doors. When the BCM commands the doors to lock, it checks for an open on the lock/unlock monitor circuit. When the BCM commands the doors to unlock, it checks for a short to ground on the lock/unlock monitor circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door lock control switch (part of the FCIM)
- Door latches
- BCM

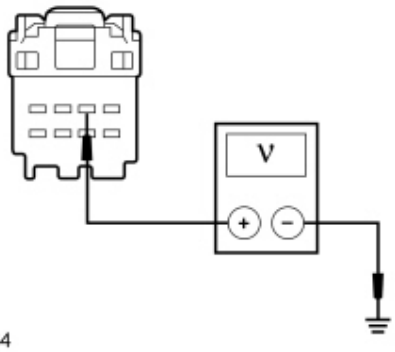
PINPOINT TEST D: THE DOOR LOCK CONTROL SWITCH INDICATOR IS INOPERATIVE/ALWAYS ON

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
D1 CHECK THE DOOR LOCK ACTUATOR OPERATION	
• Close all 4 doors and the liftgate/luggage compartment lid. • Press the lock button on a Remote Keyless Entry (RKE) transmitter. • Attempt to open each door using the outside door handle. • Press the unlock button on an RKE transmitter. • Attempt to open each door using the outside door handle. • **Is there a door that can be opened when the doors are locked or that cannot be opened when the doors are unlocked?**	**Yes** GO to Pinpoint Test B . **No** GO to D2 .
D2 CHECK THE DOOR AJAR INPUT	
• Open and close the doors while checking the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to D3 .

	No REFER to Section 417-02 to DIAGNOSE the door ajar inputs.
D3 CHECK THE DOOR LOCK INDICATOR OPERATION FROM EACH DOOR **NOTE:** Make sure the child safety lock is off before performing this pinpoint test. • Lower the window glass in all 4 doors. • Press the lock button on an RKE transmitter to lock all 4 doors. • Observe the door lock indicator while pulling on the interior LH front door handle to unlock the LH front door. • Press the lock button on an RKE transmitter to lock all 4 doors. • Observe the door lock indicator while pulling on the interior RH front door handle to unlock the RH front door. • Press the lock button on an RKE transmitter to lock all 4 doors. • Observe the door lock indicator while pulling on the interior LH rear door handle to unlock the LH rear door. • Press the lock button on an RKE transmitter to lock all 4 doors. • Observe the door lock indicator while pulling on the interior RH rear door handle to unlock the RH rear door. • **Is the door lock indicator inoperative/always on from all 4 doors?**	**Yes** GO to D5 . **No** GO to D4 .
D4 CHECK THE LATCH SWITCH FOR AN OPEN • Disconnect: Suspect Door Latch. • Connect a fused jumper wire between the suspect door latch, harness side as follows: **Suspect Door Lock Actuator Connector-Pin / Circuit** — **Suspect Door Lock Actuator Connector-Pin / Circuit** LH front C525-4 / CPL30 (BU/BN) — LH front C525-5 / GD143 (BK/VT) RH front C609-5 / CPL30 (BU/BN) — RH front C609-4 / GD145 (BK/BU) LH rear C705-4 / CPL30 (BU/BN) — LH rear C705-5 / GD143 (BK/VT) RH rear C805-5 / CPL30 (BU/BN) — RH rear C805-4 / GD145 (BK/BU)  N0116862 • **Does the door lock indicator turn off with the jumper wire**	**Yes** INSTALL a new door latch for the latch in question. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** REPAIR circuit CPL30 (BU/BN) for an open. TEST the system for normal operation.

connected?	
D5 CHECK THE RECORDED BCM DTCs FROM THE SELF-TEST	
• Check the recorded results from the BCM self-test. • **Is DTC B1108:92 present?**	**Yes** GO to D11. **No** GO to D6.
D6 CHECK THE ILLUMINATION OF THE INDICATOR	
• Ignition ON. • Observe the illumination of the door lock indicator with the doors unlocked. • **Is the indicator always illuminated?**	**Yes** GO to D7. **No** GO to D8.
D7 CHECK THE INDICATOR OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280E. • Ignition ON. • Observe the illumination of the door lock indicator. • **Is the indicator still illuminated?**	**Yes** REPAIR circuit CPL22 (GN/VT) for a short to voltage. TEST the system for normal operation. **No** GO to D17.
D8 CHECK THE OPERATION OF THE FCIM	
• Operate the radio through the FCIM. • **Does the FCIM operate the radio?**	**Yes** GO to D9. **No** REFER to Section 415-00 to DIAGNOSE the FCDIM.
D9 BYPASS THE BCM	
NOTE: If the fuse in the jumper wire fails, REPAIR circuit CPL22 (GN/VT) for a short to ground. • Ignition OFF. • Disconnect: BCM C2280A. • Disconnect: BCM C2280E. • Connect a fused jumper wire between the BCM C2280A-8, circuit SBB06 (BN/RD), harness side and the BCM C2280E-23, circuit CPL22 (GN/VT), harness side.  N0116863 • **Does the indicator illuminate?**	**Yes** REMOVE the jumper wire. GO to D17. **No** LEAVE the jumper wire connected. GO to D10.
D10 CHECK FOR VOLTAGE TO THE FCIM	
• Disconnect: FCIM C2402. • Measure the voltage between the FCIM C2402-2, circuit CPL22 (GN/VT), harness side and ground.	**Yes** INSTALL a new FCIM. REFER to Section 415-00. TEST the system for normal operation.



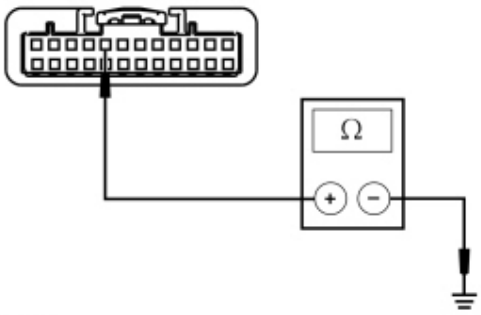
N0116864

- **Is the voltage greater than 10 volts?**

No
REPAIR circuit CPL22 (GN/VT) for an open. TEST the system for normal operation.

D11 CHECK THE LOCK/UNLOCK MONITOR CIRCUIT FOR AN OPEN

- Ignition OFF.
- Press the unlock button twice on an RKE transmitter to unlock all doors.
- Disconnect: BCM C2280G.
- Measure the resistance between the BCM C2280G-5, circuit CPL30 (BU/BN), harness side and ground.



N0116865

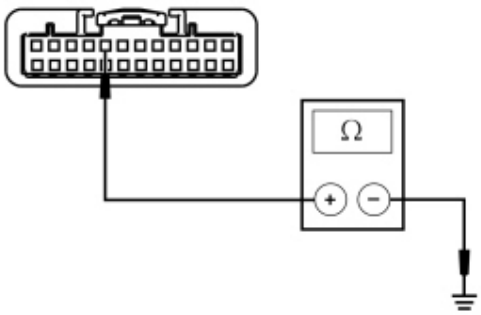
- **Is the resistance less than 5 ohms?**

Yes
GO to D12.

No
REPAIR circuit CPL30 (BU/BN) for an open. CLEAR the DTCs. REPEAT the self-test.

D12 CHECK THE LOCK/UNLOCK MONITOR CIRCUIT FOR A SHORT TO GROUND

- Press the lock button on an RKE transmitter to lock all doors.
- Measure the resistance between the BCM C2280G-5, circuit CPL30 (BU/BN), harness side and ground.



N0116865

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to D17.

No
GO to D13.

D13 CHECK THE LH FRONT DOOR LATCH FOR A SHORT TO GROUND

- Disconnect: LH Front Door Latch C525.
- Measure the resistance between the BCM C2280G-5, circuit CPL30 (BU/BN), harness side and ground.

Yes
INSTALL a new LH front door latch. REFER to Front

 N0116865 • **Is the resistance greater than 10,000 ohms?**	Door Latch in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to D14.
D14 CHECK THE RH FRONT DOOR LATCH FOR A SHORT TO GROUND	
• Disconnect: RH Front Door Latch C609. • Measure the resistance between the BCM C2280G-5, circuit CPL30 (BU/BN), harness side and ground.  N0116865 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new RH front door latch. REFER to Front Door Latch in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to D15.
D15 CHECK THE LH REAR DOOR LATCH FOR A SHORT TO GROUND	
• Disconnect: LH Rear Door Latch C705. • Measure the resistance between the BCM C2280G-5, circuit CPL30 (BU/BN), harness side and ground.  N0116865 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new LH rear door latch. REFER to Rear Door Latch in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to D16.
D16 CHECK THE RH REAR DOOR LATCH FOR A SHORT TO GROUND	
• Disconnect: RH Rear Door Latch C805. • Measure the resistance between the BCM C2280G-5, circuit CPL30 (BU/BN), harness side and ground.	**Yes** INSTALL a new RH rear door latch. REFER to Rear Door Latch in this section.

 N0116865 • **Is the resistance greater than 10,000 ohms?**	CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit CPL30 (BU/BN) for a short to ground. CLEAR the DTCs. REPEAT the self-test.
D17 CHECK FOR CORRECT BCM OPERATION	

• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The Luggage Compartment Lid/Liftgate Latch Release Is Inoperative/Does Not Operate Correctly

Refer to Wiring Diagrams Cell 113, Luggage Compartment for schematic and connector information.

Normal Operation

When the Body Control Module (BCM) receives an open request from the luggage compartment lid/liftgate switch or a Remote Keyless Entry (RKE) transmitter, the BCM supplies voltage to the luggage compartment lid/liftgate latch which releases the latch. The luggage compartment lid/liftgate latch has a dedicated ground circuit.

The BCM sends a voltage signal to the luggage compartment lid/liftgate release switch through the input circuit. When the luggage compartment lid/liftgate release switch is pressed, the voltage signal is routed to ground, signaling the BCM to release the luggage compartment lid/liftgate. The luggage compartment lid/liftgate release switch has a dedicated ground circuit. The BCM disregards the input from the switch and does not release the luggage compartment lid/liftgate if the doors are locked.

The luggage compartment lid/liftgate release switch is also hardwired to the Remote Function Actuator (RFA) module on vehicles with Intelligent Access (IA). The RFA module uses the switch input for the luggage compartment lid/liftgate IA feature.

- DTC B113E:23 (External Boot/Trunk Release Switch: Signal Stuck Low) — a continuous and on-demand DTC that sets if the BCM detects a short to ground on the luggage compartment lid/liftgate release switch input circuit. This DTC also sets if the switch is pressed for longer than 2 minutes.
- DTC B113E:24 (External Boot/Trunk Release Switch: Signal stuck high) — a DTC that sets if the RFA module detects a short to ground on the luggage compartment lid/liftgate release switch input circuit.
- DTC B1187:92 (Trunk Motor: Performance or Incorrect Operation) — an on-demand DTC that sets if the BCM detects a short to ground on the luggage compartment lid/liftgate ajar switch input circuit. During the BCM self-test, the BCM energizes the internal luggage compartment lid/liftgate relay to release the latch. When the BCM commands the luggage compartment lid/liftgate relay to release, it checks for an open on the luggage compartment lid/liftgate ajar input circuit, indicating the luggage compartment lid/liftgate opened.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Luggage compartment lid/liftgate latch
- Luggage compartment lid/liftgate release switch
- BCM
- RFA module (if equipped)

PINPOINT TEST E: THE LUGGAGE COMPARTMENT LID/LIFTGATE LATCH RELEASE IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
E1 CHECK THE DOOR LOCK OPERATION • Lock and unlock the doors using the door lock control switch. • **Do the door locks operate correctly?**	**Yes** GO to E2. **No** GO to Pinpoint Test A.
E2 CHECK THE LUGGAGE COMPARTMENT/LIFTGATE AJAR INPUT • For 4-door sedans, open the luggage compartment lid while observing the luggage compartment lamps. • For 5-door hatchbacks, open the liftgate while observing the courtesy lamps. • **Do the luggage compartment or courtesy lamps illuminate?**	**Yes** GO to E3. **No** REFER to Section 417-02 to DIAGNOSE the luggage compartment lid/liftgate ajar input.
E3 RETRIEVE THE RECORDED BCM DTCs FROM THE SELF-TEST • Check for recorded BCM DTCs from the self-test. • **Is DTC B113E:23 present?**	**Yes** Vehicles equipped with IA, GO to E4. Vehicles equipped without IA, GO to E5. **No** GO to E7.
E4 CHECK THE RFA MODULE • Disconnect: RFA Module C3503B. • Enter the following diagnostic mode on the scan tool: Clear BCM DTCs. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Is DTC B113E:23 retrieved?**	**Yes** GO to E5. **No** GO to E17.
E5 REPEAT THE BCM SELF-TEST • Disconnect: Luggage Compartment Lid/Liftgate Release Switch C4224. • Enter the following diagnostic mode on the scan tool: Clear BCM DTCs. • Enter the following diagnostic mode on the scan tool: BCM Self-Test. • **Is DTC B113E:23 retrieved?**	**Yes** GO to E6. **No** INSPECT the jumper harness for any shorts to ground. REPAIR as necessary. TEST the system for normal operation.

	If the jumper harness is OK, INSTALL a new luggage compartment lid/liftgate release switch. REFER to Luggage Compartment Lid Release Switch in this section. TEST the system for normal operation.
E6 CHECK THE LUGGAGE COMPARTMENT LID/LIFTGATE RELEASE INPUT CIRCUIT FOR A SHORT TO GROUND • Ignition OFF. • Disconnect: BCM C2280G. • Measure the resistance between the luggage compartment lid release switch C4224-3, circuit CPL10 (GN/WH), harness side and ground.  N0116866 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to E16 . **No** REPAIR circuit CPL45 (BN) for a short to ground. CLEAR the DTCs. REPEAT the self-test.
E7 CARRY OUT THE BCM TRUNK/LIFTGATE RELEASE OUTPUT (TRNK/LG_RLS) ACTIVE COMMAND USING THE SCAN TOOL • Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM PID TRNK/LG_RLS and active command the luggage compartment lid/liftgate to release. • **Does the luggage compartment lid/liftgate release?**	**Yes** GO to E8 . **No** GO to E11 .
E8 CHECK THE RELEASE SWITCH • Disconnect: Luggage Compartment Lid/Liftgate Release Switch C4224. • Connect a fused jumper wire between the luggage compartment lid/liftgate release switch C4224-3, circuit CPL10 (GN/WH), harness side and the luggage compartment lid/liftgate release switch C4224-4, circuit GD143 (BK/VT), harness side.  N0116867 • **Does the luggage compartment lid release?**	**Yes** INSPECT the jumper harness for any opens. REPAIR as necessary. TEST the system for normal operation. If the jumper harness is OK, INSTALL a new luggage compartment lid/liftgate release switch. REFER to Luggage Compartment Lid Release Switch in this section. TEST the system for normal operation. **No** GO to E9 .
E9 CHECK THE RELEASE SWITCH GROUND CIRCUIT FOR AN OPEN	

• Ignition OFF. • Connect a fused jumper wire between the luggage compartment lid/liftgate release switch C4224-3, circuit CPL10 (GN/WH), harness side and ground.  N0116868 • **Does the luggage compartment lid release?**	**Yes** GO to E10 . **No** INSPECT the jumper harness for any opens. REPAIR as necessary. TEST the system for normal operation. If the jumper harness is OK, REPAIR circuit GD143 (BK/VT) for an open. TEST the system for normal operation.
E10 CHECK THE RELEASE SWITCH INPUT CIRCUIT FOR AN OPEN	
• Disconnect: BCM C2280G . • Measure the resistance between the luggage compartment lid/liftgate release switch C4224-3, circuit CPL10 (GN/WH), harness side and the BCM C2280G-20, circuit CPL10 (GN/WH), harness side.  N0116869 • **Is the resistance less than 5 ohms?**	**Yes** GO to E16 . **No** REPAIR circuit CPL10 (GN/WH) for an open. TEST the system for normal operation.
E11 CHECK FOR A SHORT TO VOLTAGE TO THE LATCH	
• Disconnect: Luggage Compartment Lid/Liftgate Latch C4223. • Ignition ON. • Measure the voltage between the luggage compartment lid/liftgate latch C4223-1, circuit CPL20 (BU/OG), harness side and ground.  N0116870 • **Is any voltage present?**	**Yes** GO to E12 . **No** GO to E13 .

E12 CHECK THE LATCH RELEASE OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: BCM C2280C. • Ignition ON. • Measure the voltage between the luggage compartment lid/liftgate latch C4223-1, circuit CPL20 (BU/OG), harness side and ground.  N0116870 • **Is any voltage present?**	**Yes** REPAIR circuit CPL20 (BU/OG) for a short to voltage. TEST the system for normal operation. **No** GO to E16.
E13 CHECK FOR VOLTAGE TO THE LUGGAGE COMPARTMENT LID LATCH USING THE BCM PID TRUNK/LIFTGATE RELEASE OUTPUT (TRNK/LG_RLS)	
• Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM PID TRNK/LG_RLS and command the luggage compartment lid/liftgate release relay. • **NOTE:** The BCM only supplies voltage to the luggage compartment lid/liftgate latch momentarily. It is important to monitor the meter while active commanding the latch to release. • Measure the voltage between the luggage compartment lid/liftgate latch C4223-1, circuit CPL20 (BU/OG), harness side and ground.  N0116870 • **Is the voltage momentarily greater than 10 volts?**	**Yes** GO to E14. **No** GO to E15.
E14 CHECK THE LATCH GROUND CIRCUIT FOR AN OPEN USING THE BCM PID TRUNK/LIFTGATE RELEASE OUTPUT (TRNK/LG_RLS)	
• Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM PID TRNK/LG_RLS and command the luggage compartment lid/liftgate release relay. • **NOTE:** The BCM only supplies voltage to the luggage compartment lid/liftgate latch momentarily. It is important to monitor the meter while active commanding the latch to release. • Measure the voltage between the luggage compartment lid/liftgate latch C4223-1, circuit CPL20 (BU/OG), harness side and the luggage compartment lid/liftgate latch C4223-2, circuit GD143 (BK/VT), harness side.	**Yes** INSTALL a new luggage compartment/liftgate lid latch. REFER to Luggage Compartment Lid Latch or Liftgate Latch in this section. TEST the system for normal operation. **No** REPAIR circuit GD143

 N0116871 • **Is the voltage momentarily greater than 10 volts?**	(BK/VT) for an open. TEST the system for normal operation.
E15 CHECK THE LATCH RELEASE OUTPUT CIRCUIT FOR AN OPEN • Ignition OFF. • Disconnect: BCM C2280C. • Measure the resistance between the BCM C2280C-15, circuit CPL20 (BU/OG), harness side and the luggage compartment lid/liftgate latch C4223-1, circuit CPL20 (BU/OG), harness side.  N0116872 • **Is the resistance less than 5 ohms?**	**Yes** GO to E16 . **No** REPAIR circuit CPL20 (BU/OG) for an open. TEST the system for normal operation.
E16 CHECK FOR CORRECT BCM OPERATION • Disconnect all the BCM connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the BCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
E17 CHECK FOR CORRECT RFA MODULE OPERATION • Disconnect all the RFA module connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the RFA module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new RFA module. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test F: The Remote Keyless Entry (RKE) Transmitter Is Inoperative — Without Intelligent Access (IA)

Normal Operation

Remote locking and unlocking of the doors and releasing the luggage compartment lid/liftgate is accomplished by the Body Control Module (BCM) receiving a command message from the Remote Keyless Entry (RKE) transmitter. The BCM processes the command and provides the appropriate output. The RKE feature operates only when the ignition is off.

If the vehicle has been inactive for 28 days or longer, the RKE feature is switched off in the BCM to conserve battery power. The RKE feature is enabled again when the ignition is switched to RUN.

This pinpoint test is intended to diagnose the following:

- RKE transmitter battery
- RKE transmitter programming
- RKE transmitter
- BCM

PINPOINT TEST F: THE RKE TRANSMITTER IS INOPERATIVE — WITHOUT IA

NOTE: Aftermarket or dealer-installed systems may adversely affect the RKE system operation. Disconnect these systems before diagnosing any RKE concerns.

Test Step	Result / Action to Take
F1 CHECK FOR THE CORRECT RKE TRANSMITTERS • **NOTE:** All RKE transmitters must be present to begin diagnosis of the RKE system. • **NOTE:** Make sure the RKE transmitters are those provided with the OEM system and not from an aftermarket system, or a dealer-installed system that may have been installed on the vehicle. • Verify the correct RKE transmitters are used with the vehicle. Compare the RKE transmitters with the one shown in the Handles, Locks, Latches and Entry Systems portion of this section. • **Are all the correct RKE transmitters present?**	**Yes** GO to F2. **No** The system cannot be tested without all of the RKE transmitters. INFORM the customer that all of the correct RKE transmitters must be present to proceed with diagnosis of the system.
F2 CHECK THE OPERATION OF THE RKE TRANSMITTER WITH THE KEY IN THE OFF POSITION • Ignition OFF. • Check the operation of the RKE transmitter. • **Does the system operate correctly now?**	**Yes** The system is operating correctly. INFORM the customer of the correct vehicle behavior. **No** GO to F3.
F3 CHECK THE FUNCTIONALITY OF THE RKE TRANSMITTER • Press each button on the transmitter. • **Does any button operate correctly?**	**Yes** GO to Pinpoint Test H.

	No GO to F4.
F4 CHECK THE RKE SYSTEM FOR NORMAL OPERATION WITH A SECOND TRANSMITTER • Using the customer's second RKE transmitter that is correct for the vehicle, attempt to lock and unlock the doors. • **Do the doors lock and unlock with the second transmitter?**	**Yes** GO to F5. **No** GO to F7.
F5 CHECK THE INOPERATIVE RKE TRANSMITTER BATTERY • Open the inoperative RKE transmitter. • Do not clean off any grease from the battery terminals on the back surface of the circuit board. • Verify the correct battery is used (CR2032). • Remove the RKE transmitter battery and measure the voltage. • **Is the voltage greater than 2.5 volts?**	**Yes** GO to F6. **No** INSTALL a new battery. DO NOT reprogram the RKE transmitters (weak or dead batteries do not erase Transmitter Identification Codes (TICs) from memory). TEST the system for normal operation.
F6 CHECK IF THE RKE TRANSMITTER IS PROGRAMMED • Program all of the RKE transmitters. Refer to Remote Keyless Entry (RKE) Transmitter Programming in this section. • Check the inoperative RKE transmitter for correct operation. • **Does the inoperative RKE transmitter operate now?**	**Yes** The concern was caused by an unprogrammed RKE transmitter. INFORM the customer that any RKE transmitters not present need to be programmed. **No** REPLACE the inoperative RKE transmitter. PROGRAM all RKE transmitters. REFER to Remote Keyless Entry (RKE) Transmitter Programming in this section. INFORM the customer that any RKE transmitters not present need to be programmed. TEST the system for normal operation.
F7 PROGRAM ALL OF THE RKE TRANSMITTERS • Program all of the RKE transmitters. Refer to Remote Keyless Entry (RKE) Transmitter Programming in this section. • Check the RKE transmitters for correct operation. • **Do any of the RKE transmitters operate now?**	**Yes** The concern was caused by unprogrammed RKE transmitters. INFORM the customer that any RKE transmitters not present need to be programmed. **No** GO to F8.

F8 CHECK THE BCM FOR CORRECT OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test G: The Remote Keyless Entry (RKE) Transmitter Is Inoperative — With Intelligent Access (IA)

Refer to Wiring Diagrams Cell 117, Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

When an Remote Keyless Entry (RKE) button is pressed on a Intelligent Access (IA) key, the IA key sends a radio signal to the Remote Functions Receiver (RFR) module based on the user selected RKE transmitter button. The RFR module then communicates the RKE command to the Remote Function Actuator (RFA) module over a dedicated single circuit network. Once the RFA module receives the RKE command, it sends the command to the Body Control Module (BCM) over the Medium Speed Controller Area Network (MS-CAN). The BCM receives the RKE command and either locks or unlocks the doors or releases the luggage compartment lid/liftgate. The RKE transmitters and RFA module use a rolling code to prevent the code from being captured by a code grabber. The system advances the counter in the RKE transmitter and RFA module every time an RKE transmitter button is pressed.

The RFR module receives voltage from Central Junction Box (CJB) fuse 7 (7.5A) and has a dedicated ground circuit. The RFR module sends all RKE and IA key information and requests to the RFA module through a dedicated single circuit network.

- DTC U201F:00 (External Receiver: No Sub Type Information) — sets when the RFA module has lost communication with the RFR module.
- DTC U201F:13 (External Receiver: Circuit Open) — sets when the RFA module has lost communication with the RFR module with an open communication circuit.

This pinpoint test is intended to diagnose the following:

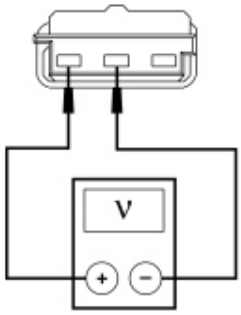
- RKE transmitter
- RKE transmitter battery
- RKE transmitter button pressed a substantial amount of times while outside the range of the vehicle
- RKE transmitter programming
- MS-CAN
- BCM
- RFR module
- RFA module

PINPOINT TEST G: THE RKE TRANSMITTER IS INOPERATIVE — WITH IA

NOTE: Aftermarket or dealer-installed systems may adversely affect the RKE system operation. Disconnect these systems before diagnosing any RKE concerns.

Test Step	Result / Action to Take
G1 CHECK FOR THE CORRECT RKE TRANSMITTERS • **NOTE:** Make sure the IA keys are those provided with the OEM system and not from an aftermarket system, or a dealer-installed system that may have been installed on the vehicle. • Verify the correct IA keys are used with the vehicle. Compare the IA keys with the one shown in Handles, Locks, Latches and Entry Systems in the Description and Operation portion of this section. • **Are all the correct IA keys present?**	**Yes** GO to G2. **No** The system cannot be tested without the correct IA keys. INFORM the customer that all of the correct IA keys must be present to proceed with diagnosis of the system.
G2 CHECK THE FUNCTIONALITY OF THE RKE TRANSMITTER • Press each button on the IA key. • **Does any button operate correctly?**	**Yes** GO to Pinpoint Test H. **No** GO to G3.
G3 CHECK FOR COMMUNICATION WITH THE BCM AND RFA MODULE • Enter the following diagnostic mode on the scan tool: Network Test.	**Yes**

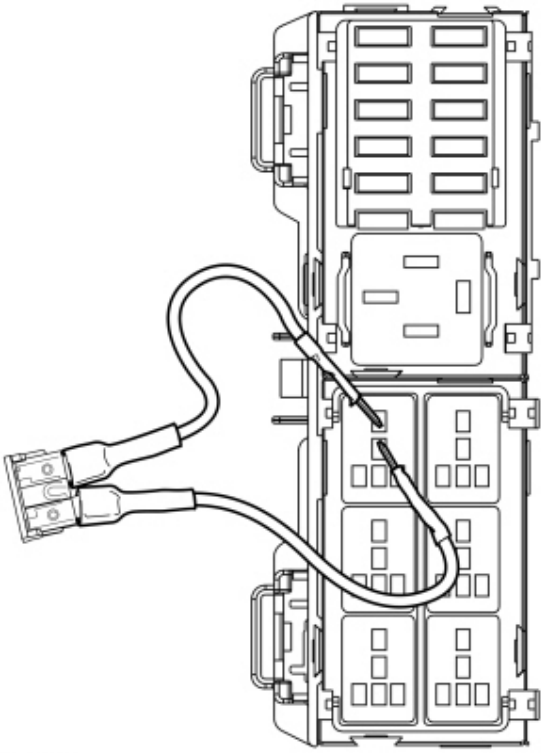
• **Does the BCM or RFA module fail the network test?**	REFER to Section 418-00 to DIAGNOSE the module with no communication. **No** GO to G4.
G4 CHECK THE RECORDED RFA MODULE DTCs FROM THE SELF-TEST	
• Check the recorded results from the RFA module self-test. • **Are any DTCs recorded?**	**Yes** For DTC U201F:00 or U201F:13, GO to G9. For all other RFA module DTCs, REFER to the RFA module DTC Chart in this section. **No** GO to G5.
G5 RESYNCHRONIZE THE INOPERATIVE IA KEY	
• Ignition OFF. • Within 30 seconds, press any button on the inoperative IA key 4 times consecutively. • **Does the IA key operate correctly now?**	**Yes** The system is now OK. TEST the system for normal operation. **No** GO to G6.
G6 RESYNCHRONIZE THE INOPERATIVE IA KEY USING THE SECOND IA KEY	
• Ignition OFF. • Press any button on the operational IA key. • Within 30 seconds, press any button on the inoperative IA key. • Check the inoperative IA key for correct operation. • **Does the inoperative IA key operate now?**	**Yes** The system is now OK. TEST the system for normal operation **No** GO to G7.
G7 CHECK THE IA KEY	
• Place the IA key next to the steering column shroud by the Passive Anti-Theft System (PATS)/backup transceiver. • Start the engine. • **Does the engine start?**	**Yes** GO to G8. **No** REFER to Section 419-01B to continue diagnosis of the IA key.
G8 CHECK THE IA KEY BATTERY	
• Open the IA key. • Do not clean off any grease from the battery terminals on the back surface of the circuit board. • Verify the correct battery is used (CR2032). • Remove the IA key battery and measure the voltage. • **Is the voltage greater than 2.5 volts?**	**Yes** GO to G9. **No** INSTALL a new battery. DO NOT reprogram the IA key (damaged or dead batteries do not erase IA keys from memory). TEST the system for normal operation.
G9 CHECK FOR VOLTAGE TO THE RFR MODULE	
• Disconnect: RFR Module C9026. • Measure the voltage between the RFR module C9026-3, circuit SBP07 (WH/RD), harness side and the RFR module C9026-2, circuit GD143 (BK/VT).	**Yes** GO to G11. **No** GO to G10.



N0116873

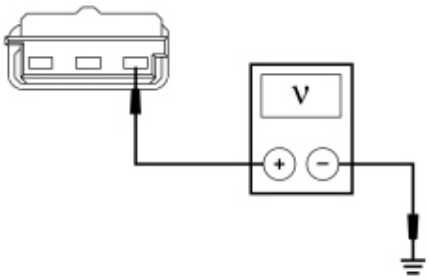
- **Is the voltage greater than 10 volts?**

G10 CHECK THE RFR MODULE VOLTAGE SUPPLY CIRCUIT	
• Measure the voltage between the RFR module C9026-3, circuit SBP07 (WH/RD), harness side and ground.  N0116874 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit GD143 (BK/VT) for an open. CLEAR the DTCs. REPEAT the self-test. **No** VERIFY CJB fuse 7 (7.5A) is OK. If OK, REPAIR circuit SBP07 (WH/RD) for an open. If not OK, REFER to the Wiring Diagrams mannual to identify the possible causes of the circuit short. CLEAR the DTCs. REPEAT the self-test.
G11 CHECK THE RFR MODULE COMMUNICATION CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: RFA Module C3503B. • Disconnect: Smart Keyless Entry Ignition Relay. • Connect a fused jumper wire between the smart keyless entry ignition relay pin 3, circuit SBP01 (RD), Central Junction Box (CJB) face side and the smart keyless entry ignition relay pin 5, circuit CDC32 (BN/YE), CJB face side.	**Yes** REMOVE the jumper wire. INSTALL the smart keyless entry ignition relay. REPAIR circuit VDB10 (GY) for a short to voltage. CLEAR the DTCs. REPEAT the self-test. **No** REMOVE the jumper wire. INSTALL the smart keyless entry ignition relay. GO to G12.



N0116586

- Measure the voltage between the RFR module C9026-1, circuit VDB10 (GY), harness side and ground.



N0116875

- **Is any voltage present?**

G12 CHECK THE RFR MODULE COMMUNICATION CIRCUIT FOR AN OPEN OR SHORT TO GROUND	
• Measure the resistance between the RFR module C9026-1, circuit VDB10 (GY), harness side and the RFA module C3503B-3, circuit VDB10 (GY), harness side; and between the RFR module C9026-1, circuit VDB10 (GY), harness side and ground.	**Yes** INSTALL a new RFR module. REFER to Section 419-01B. CLEAR the DTCs. REPEAT the self-test. If the concern is still present, GO to G13. **No** REPAIR circuit VDB10 (GY) for an open or short to ground. CLEAR the DTCs. REPEAT the self-test.

 N0116876 • **Is the resistance less than 5 ohms between the RFR module and the RFA module; and greater than 10,000 ohms between the RFR module and ground?**	
G13 CHECK FOR CORRECT RFA MODULE OPERATION	

• Disconnect all the RFA module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the RFA module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new RFA module. REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: An Individual Button/Feature Is Inoperative From The Remote Keyless Entry (RKE) Transmitter

Normal Operation

For vehicles without Intelligent Access (IA) the remote locking and unlocking of the doors and releasing the luggage compartment lid/liftgate latch is accomplished by the Body Control Module (BCM) receiving a command message from the Remote Keyless Entry (RKE) transmitter. The BCM processes the command and provides the appropriate output.

For vehicles with IA , when an RKE button is pressed on a IA key, it sends a radio signal to the Remote Functions Receiver (RFR) module based on the user selected RKE transmitter button. The RFR module then communicates the RKE command to the Remote Function Actuator (RFA) module over a dedicated single circuit network. Once the RFA module receives the RKE command, it sends the command to the BCM over the Medium Speed Controller Area Network (MS-CAN). The BCM receives the RKE command and either locks or unlocks the doors or releases the luggage compartment lid/liftgate.

This pinpoint test is intended to diagnose the following:

- Door locks
- Luggage compartment lid/liftgate release
- RKE transmitter

PINPOINT TEST H: AN INDIVIDUAL BUTTON/FEATURE IS INOPERATIVE FROM THE RKE TRANSMITTER

Test Step	Result / Action to Take
H1 VERIFY THE DOOR LOCK OPERATION	

• Press the door lock control switch twice while observing the door lock operation. • **Do the door locks operate correctly?**	**Yes** GO to H2 . **No** IDENTIFY the correct symptom and GO to Symptom Chart - Electrical .
H2 VERIFY THE LUGGAGE COMPARTMENT LID/LIFTGATE LATCH OPERATION USING THE BCM PID TRUNK/LIFTGATE RELEASE OUTPUT (TRNK/LG_RLS)	
• Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Select the BCM PID TRNK/LG_RLS and active command the luggage compartment lid/liftgate to release. • **Does the luggage compartment lid/liftgate release?**	**Yes** REPLACE and REPROGRAM the inoperative key. REFER to Section 419-01B for the key programming procedures. INFORM the customer that any keys not present need to be programmed. TEST the system for normal operation. **No** GO to Pinpoint Test E .

Pinpoint Test I: The Remote Keyless Entry (RKE) Transmitter Has Poor Range Performance

Normal Operation

For vehicles without Intelligent Access (IA) the Remote Keyless Entry (RKE) transmitter sends a radio signal to the Body Control Module (BCM) internal antenna based on the user selected RKE transmitter button. The BCM then carries out the selected action. The RKE transmitter has a normal operating range of 20 m (66 ft).

For vehicles with IA the RKE transmitter sends a radio signal to the Remote Functions Receiver (RFR) module based on the user selected RKE transmitter button.

This pinpoint test is intended to diagnose the following:

- RKE transmitter
- RKE transmitter battery
- Aftermarket systems
- High power devices
- TV/radio transmission towers
- RFR module
- BCM

PINPOINT TEST I: THE RKE TRANSMITTER HAS POOR RANGE PERFORMANCE

NOTE: All RKE transmitters must be present to begin diagnosis of the RKE system.

NOTE: Aftermarket or dealer-installed systems can adversely affect RKE system operation. Disconnect these systems before diagnosing any RKE concerns.

Test Step	Result / Action to Take
I1 CHECK FOR THE CORRECT RKE TRANSMITTERS	
• **NOTE:** Make sure the RKE transmitters are those provided with the OEM system and not from an aftermarket system, or a dealer-installed system, that may have been installed on the vehicle. • Verify the correct RKE transmitters are used with the vehicle. Compare the RKE transmitters with	**Yes** GO to I2 . **No** The system cannot be tested without the correct RKE transmitters. INFORM the customer that all the correct RKE transmitters

the one shown in Handles, Locks, Latches and Entry Systems in the Description and Operation portion of this section. • **Are all the correct RKE transmitters present?**	must be present to proceed with diagnosis of the system.
I2 CHECK ALL RKE TRANSMITTERS FOR POOR RANGE PERFORMANCE • **NOTE:** The 20m (66 ft) measurement of range is not the standard but a guideline that clearly indicates a vehicle is experiencing normal range performance. • Check all RKE transmitters for normal range performance (less than 20 m [66 ft]). • **Do all RKE transmitters experience poor range?**	**Yes** GO to I4. **No** GO to I3.
I3 CHECK THE RKE TRANSMITTER BATTERY • Open the RKE transmitter. • Do not clean off any grease from the battery terminals on the back surface of the circuit board. • Verify the correct battery is used (CR2032). • Remove the RKE transmitter battery and measure the voltage. • **Is the voltage greater than 2.5 volts?**	**Yes** REPLACE and REPROGRAM the inoperative key. REFER to Section 419-01B for the key programming procedures. INFORM the customer that any keys not present need to be programmed. TEST the system for normal operation. **No** INSTALL a new battery. DO NOT reprogram the RKE transmitters (weak or dead batteries do not erase Transmitter Identification Codes (TICs) from memory). TEST the system for normal operation.
I4 CHECK THE LOCATION OF THE VEHICLE AND THE APPROACH ANGLES AROUND THE VEHICLE • Make sure the poor performance is consistent in nature and is not from one approaching angle. • The RKE transmitter range performance may be degraded in certain locations. For example, if the vehicle is within 0.8 km (0.5 miles) of high-power devices or radio/TV towers, the operating distance of the transmitters may be reduced. • **Is the poor range performance consistent around the vehicle?**	**Yes** For vehicles without IA, GO to I5. For vehicles with IA, INSTALL a new RFR module. REFER to Section 419-01B. TEST the system for normal operation. **No** The system is operating correctly at this time. The range may have been affected by environmental interference.

I5 CHECK FOR CORRECT BCM OPERATION
• Disconnect all the BCM connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the BCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test J: The Intelligent Access (IA) Feature Is Inoperative From A Front Door

Refer to Wiring Diagrams Cell 117, Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Remote Function Actuator (RFA) module controls the unlocking and locking of the doors when requested

by the Intelligent Access (IA) feature. When the lock button is pressed on either front door exterior door handle, the RFA module activates the external antenna (located in the front exterior door handles), which sends out a low frequency signal. If an IA key is within 1 m (3 ft) of the front exterior door handle, the low frequency signal activates the IA key. When the IA key is activated, it sends a high frequency signal back to the Remote Functions Receiver (RFR) module. Once the RFR module receives the IA key information, it sends it to the RFA module. If the RFA module determines that it was a programmed IA key, it sends the lock or unlock request to the Body Control Module (BCM) over the Medium Speed Controller Area Network (MS-CAN). Once the unlock request is received the BCM unlocks the driver door if stepped unlock is enabled, or all doors if stepped unlock is disabled.

- DTC B10D1:24 (Left Front Lock Button: Signal Stuck High) — a DTC that sets when the RFA module detects a short to ground on the driver door lock button input circuit.
- DTC B10D3:24 (Right Front Lock Button: Signal Stuck High) — a DTC that sets when the RFA module detects a short to ground on the passenger door lock button input circuit.
- DTC B11FD:1F (Left Front Exterior Antenna: Circuit Intermittent) — a DTC that sets when an open or short is detected on one of the circuits for the driver door external antenna.
- DTC B1210:1F (Right Front Exterior Antenna: Circuit Intermittent) — a DTC that sets when an open or short is detected on one of the circuits for the passenger door external antenna.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- External antenna (part of the exterior front door handle)
- Lock button (part of the exterior front door handle)
- IA key
- RFR module
- RFA module

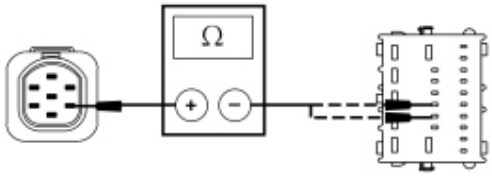
PINPOINT TEST J: THE IA FEATURE IS INOPERATIVE FROM A FRONT DOOR

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
J1 CHECK THE RKE OPERATION	
• Press the unlock button on an IA key. • **Does the driver door unlock?**	**Yes** GO to J2. **No** GO to Pinpoint Test G.
J2 CHECK THE DOOR LOCK OPERATION	
• Lock and unlock the doors using the door lock control switch. • **Does the doors lock and unlock?**	**Yes** GO to J3. **No** IDENTIFY the correct symptom and GO to Symptom Chart - Electrical.
J3 CHECK THE IA KEY	
• Place the IA key on the center console and start the engine. • **Does the engine start?**	**Yes** GO to J4. **No** REFER to Section 419-01B to DIAGNOSE the IA

	key.
J4 RETRIEVE THE RECORDED RFA MODULE DTCs FROM THE SELF-TEST • Check for recorded RFA module DTCs from the self-test. • **Are any DTCs present?**	**Yes** For DTC B10D1:24 or B10D3:24, GO to J5. For DTC B11FD:1F or B1210:1F, GO to J11. **No** GO to J7.
J5 REPEAT THE RFA MODULE SELF-TEST • Disconnect: LH Front Exterior Door Handle C543 (if DTC B10D1:24 is present). • Disconnect: RH Front Exterior Door Handle C645 (if DTC B10D3:24 is present). • Enter the following diagnostic mode on the scan tool: Clear RFA Module DTCs. • Enter the following diagnostic mode on the scan tool: RFA Module Self-Test. • **Is DTC B10D1:24 or B10D3:24 present?**	**Yes** GO to J6. **No** INSTALL a new exterior door handle for the handle in question. REFER to Exterior Front Door Handle in this section. TEST the system for normal operation.
J6 CHECK THE LOCK SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND • Ignition OFF. • Disconnect: RFA Module C3503B. • Measure the resistance between the LH front exterior door handle C543-4 (DTC B10D1:24), circuit CPL27 (WH/BN), harness side and ground; or between the RH front exterior door handle C645-4 (DTC B10D3:24), circuit CPL32 (GY/BU), harness side and ground.  N0116877 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to J14. **No** REPAIR the circuit in question for a short to ground. CLEAR the DTCs. REPEAT the self-test.
J7 CHECK THE RFA MODULE PIDs LEFT FRONT LOCK BUTTON (FL_LK_BUT) AND RIGHT FRONT LOCK BUTTON (FR_LK_BUT) • Enter the following diagnostic mode on the scan tool: RFA DataLogger. • Press both of the lock switches while monitoring the RFA module PIDs FL_LK_BUT and FR_LK_BUT. • **Do the PIDs indicate that the switches are being pressed?**	**Yes** GO to J11. **No** GO to J8.
J8 CHECK THE LOCK SWITCH PIDs LEFT FRONT LOCK BUTTON (FL_LK_BUT) AND RIGHT FRONT LOCK BUTTON (FR_LK_BUT) • Disconnect: Suspect Front Exterior Door Handle. • Enter the following diagnostic mode on the scan tool: RFA Module DataLogger.	**Yes** INSTALL a new exterior door handle

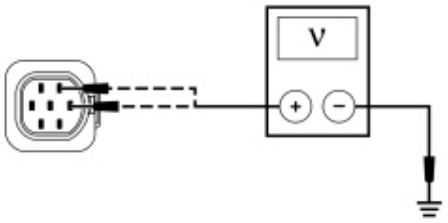
• While monitoring the RFA module PID FL_LK_BUT, connect a fused jumper wire between the LH front exterior door handle C543-4, circuit CPL27 (WH/BN), harness side and the LH front exterior door handle C543-7, circuit GD143 (BK/VT), harness side; or while monitoring the RFA module PID FR_LK_BUT, connect a fused jumper wire between the RH front exterior door handle C645-4, circuit CPL32 (GY/BU), harness side and the RH front exterior door handle C645-7, circuit GD145 (BK/BU), harness side.  N0118051 • **Does the PID indicate that the switch is being pressed?**	for the handle in question. REFER to Exterior Front Door Handle in this section. TEST the system for normal operation. **No** GO to J9.
J9 CHECK THE LOCK SWITCH GROUND CIRCUIT FOR AN OPEN USING THE RFA MODULE PIDs LEFT FRONT LOCK BUTTON (FL_LK_BUT) AND RIGHT FRONT LOCK BUTTON (FR_LK_BUT)	
• Enter the following diagnostic mode on the scan tool: RFA Module DataLogger. • While monitoring the RFA module PID FL_LK_BUT, connect a fused jumper wire between the LH front exterior door handle C543-4, circuit CPL27 (WH/BN), harness side and ground; or while monitoring the RFA module PID FR_LK_BUT, connect a fused jumper wire between the RH front exterior door handle C645-4, circuit CPL32 (GY/BU), harness side and ground.  N0116879 • **Does the PID indicate that the switch is being pressed?**	**Yes** GO to J10. **No** REPAIR circuit GD143 (BK/VT) or GD145 (BK/BU) for an open. TEST the system for normal operation.
J10 CHECK THE LOCK SWITCH INPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: RFA Module C3503B. • Measure the resistance between the LH front exterior door handle C543-4, circuit CPL27 (WH/BN), harness side and the RFA module C3503B-12, circuit CPL27 (WH/BN), harness side; or between the RH front exterior door handle C645-4, circuit CPL32 (GY/BU), harness side and the RFA module C3503B-11, circuit CPL32 (GY/BU), harness side	**Yes** GO to J14. **No** REPAIR the circuit in question for an open. TEST the system for normal operation.



N0116880

- **Is the resistance less than 5 ohms?**

J11 CHECK THE EXTERNAL ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: LH Front Exterior Door Handle C543 (if DTC B11FD:1F is present). • Disconnect: RH Front Exterior Door Handle C645 (if DTC B1210:1F is present). • Disconnect: RFA Module C3503E. • Disconnect: Smart Keyless Entry Ignition Relay. • Connect a fused jumper wire between the smart keyless entry ignition relay pin 3, circuit SBP01 (RD), Central Junction Box (CJB) face side and the smart keyless entry ignition relay pin 5, circuit CDC32 (BN/YE), CJB face side.  N0116586 • Measure the voltage between the LH front exterior door handle C543-2, circuit VPK01 (BN/YE), harness side and ground, and between the LH front exterior door handle C543-3, circuit RPK01 (WH/GN), harness side and ground; or between the RH front exterior door handle C645-2, circuit VPK02 (VT/WH), harness side and ground, and between the RH front exterior door handle C645-3, circuit RPK02 (GY/YE), harness side and ground.	**Yes** REMOVE the jumper wire. INSTALL the smart keyless entry ignition relay. REPAIR the circuit in question for a short to voltage. CLEAR the DTCs. REPEAT the self-test. **No** REMOVE the jumper wire. INSTALL the smart keyless entry ignition relay. GO to J12 .



N0116881

- **Is any voltage present?**

J12 CHECK THE EXTERNAL ANTENNA CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between the LH front exterior door handle C543-2, circuit VPK01 (BN/YE), harness side and ground, and between the LH front exterior door handle C543-3, circuit RPK01 (WH/GN), harness side and ground; or between the RH front exterior door handle C645-2, circuit VPK02 (VT/WH), harness side and ground, and between the RH front exterior door handle C645-3, circuit RPK02 (GY/YE), harness side and ground.  N0116882 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to J13 . **No** REPAIR the circuit in question for a short to ground. CLEAR the DTCs. REPEAT the self-test.
J13 CHECK THE EXTERNAL ANTENNA CIRCUITS FOR AN OPEN	
• Measure the resistance between the suspect exterior door handle, harness side and the RFA module, harness side as follows:	**Yes** INSTALL a new exterior door handle for the handle in question. REFER to Exterior Front Door Handle in this section. CLEAR the DTCs. REPEAT the self-test. If the concern is still present, GO to J14 . **No** REPAIR the circuit in question for an open. CLEAR the DTCs. REPEAT the self-test.

RFA Module Connector-Pin	Suspect Front Exterior Door Handle Connector-Pin	Circuit
C3503E-8	LH front exterior door handle C543-2	VPK01 (BN/YE)
C3503E-1	LH front exterior door handle C543-3	RPK01 (WH/GN)
C3503E-10	RH front exterior door handle C645-2	VPK02 (VT/WH)
C3503E-3	RH front exterior door handle C645-3	RPK02 (GY/YE)

 N0118052 • **Are the resistances less than 5 ohms?**	
J14 CHECK FOR CORRECT RFA MODULE OPERATION	

• Disconnect all the RFA module connectors.
• Check for:
  ▪ corrosion
  ▪ damaged pins
  ▪ pushed-out pins
• Connect all the RFA module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new RFA module. REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test K: The Luggage Compartment/Liftgate Intelligent Access (IA) Is Inoperative

Refer to Wiring Diagrams Cell 113 , Luggage Compartment Lid Release for schematic and connector information.

Refer to Wiring Diagrams Cell 117 , Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Remote Function Actuator (RFA) module controls the release of the luggage compartment/liftgate when requested by the Intelligent Access (IA) feature. When the luggage compartment/liftgate button is pressed on the luggage compartment lid/liftgate, the RFA module activates the external antenna (located behind the rear bumper cover), which sends out a low frequency signal. If an IA key is within 1 m (3 ft) of the antenna, the low frequency signal activates the IA key. When the IA key is activated, it sends a high frequency signal back to the Remote Functions Receiver (RFR) module. Once the RFR module receives the IA key information, it sends it to the RFA module. If the RFA module determines that it was a programmed IA key, it sends the release request to the Body Control Module (BCM) over the Medium Speed Controller Area Network (MS-CAN). Once the BCM receives the request, it releases the luggage compartment lid/liftgate.

- DTC B10C6:1F (Exterior Trunk Antenna: Circuit Intermittent) — a DTC that sets when an open or short is detected on one of the circuits for the luggage compartment/liftgate external antenna.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Luggage compartment/liftgate IA antenna
- IA key
- RFR module
- RFA module

PINPOINT TEST K: THE LUGGAGE COMPARTMENT/LIFTGATE IA IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
K1 CHECK THE RKE OPERATION	
• Press the unlock button on an IA key. • **Does the driver door unlock?**	**Yes** GO to K2. **No** GO to Pinpoint Test G.
K2 CHECK THE LUGGAGE COMPARTMENT LID/LIFTGATE LATCH RELEASE OPERATION	
• Press the luggage compartment lid/liftgate release switch located on the luggage compartment lid/liftgate. • **Does the luggage compartment lid/liftgate latch release?**	**Yes** GO to K3. **No** GO to Pinpoint Test E.
K3 CHECK THE IA KEY	
• Place the IA key on the center console and start the engine. • **Does the engine start?**	**Yes** GO to K4. **No** REFER to Section 419-01B to DIAGNOSE the IA key.
K4 CHECK THE RFA MODULE TRUNK/LIFTGATE RELEASE SWITCH (TR_UNLK_H_SW) PID	
• Enter the following diagnostic mode on the scan tool: RFA DataLogger. • Press the external luggage compartment lid/liftgate release switch while monitoring the RFA module PID TR_UNLK_H_SW. • **Does the PID indicate the switch is being pressed?**	**Yes** GO to K6. **No** GO to K5.
K5 CHECK THE LUGGAGE COMPARTMENT LID/LIFTGATE RELEASE SWITCH INPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: RFA Module C3503B. • Disconnect: BCM C2280G. • Measure the resistance between the BCM C2280G-20, circuit CPL10 (GN/WH), harness side and the RFA module C3503B-9, circuit CPL10 (GN/WH), harness side.  N0116884 • **Is the resistance less than 5 ohms?**	**Yes** GO to K9. **No** REPAIR circuit CPL10 (GN/WH) for an open. TEST the system for normal operation.
K6 CHECK THE LUGGAGE COMPARTMENT ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF. • Disconnect: RFA Module C3503E. • Disconnect: Luggage Compartment/Liftgate IA Antenna C4082. • Disconnect: Smart Keyless Entry Ignition Relay. • Connect a fused jumper wire between the smart keyless entry ignition relay pin 3, circuit SBP01 (RD), Central Junction Box (CJB) face side and the smart keyless entry ignition relay pin 5, circuit CDC32 (BN/YE), CJB face side.  N0116586 • Measure the voltage between the luggage compartment/liftgate IA antenna C4082-1, circuit VPK07 (VT), harness side and ground, and between the luggage compartment/liftgate IA antenna C4082-2, circuit RPK07 (GN/OG), harness side and ground.  N0084066 • **Is any voltage present?**	**Yes** REMOVE the jumper wire. INSTALL the smart keyless entry ignition relay. REPAIR the circuit in question for a short to voltage. CLEAR the DTCs. REPEAT the self-test. **No** REMOVE the jumper wire. INSTALL the smart keyless entry ignition relay. GO to K7 .
K7 CHECK THE LUGGAGE COMPARTMENT/LIFTGATE ANTENNA CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between the luggage compartment/liftgate IA antenna C4082-1, circuit VPK07 (VT), harness side and ground, and between the luggage compartment/liftgate IA antenna C4082-2, circuit RPK07 (GN/OG), harness side and ground.	**Yes** GO to K8 . **No** REPAIR the circuit in question for a short to ground. CLEAR

 N0084067 • **Is the resistance greater than 10,000 ohms?**	the DTCs. REPEAT the self-test.
K8 CHECK THE ANTENNA CIRCUITS FOR AN OPEN	
• Measure the resistance between the luggage compartment/liftgate antenna, harness side and the RFA module, harness side as follows: **RFA Module Connector-Pin** / **Luggage Compartment/Liftgate IA Antenna Connector-Pin** / **Circuit** C3503E-16 / C4082-1 / VPK07 (VT) C3503E-7 / C4082-2 / RPK07 (GN/OG)  N0116885 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new luggage compartment/liftgate IA antenna. REFER to Intelligent Access (IA) Antenna in this section. CLEAR the DTCs. REPEAT the self-test. If the concern is still present, GO to K9. **No** REPAIR the circuit in question for an open. CLEAR the DTCs. REPEAT the self-test.
K9 CHECK FOR CORRECT RFA MODULE OPERATION	
• Disconnect all the RFA module connectors. • Check for: ▪ corrosion ▪ damaged pins ▪ pushed-out pins • Connect all the RFA module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new RFA module. REFER to Section 419-10. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Autolock Is Inoperative

Normal Operation

The Body Control Module (BCM) energizes the lock relay based on input from the ajar switches, the ignition mode, and the vehicle speed signal. The BCM locks the doors when the following conditions are met:

- All of the doors are closed
- The ignition is in the RUN mode
- The vehicle is shifted into any gear putting the vehicle in motion
- The vehicle reaches a speed greater than 7 km/h (5 mph)

This pinpoint test is intended to diagnose the following:

- Programming
- Door ajar switches
- Vehicle speed input

PINPOINT TEST L: THE AUTOLOCK IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK THE COURTESY LAMP OPERATION • Open and close the doors while checking the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to L2 . **No** REFER to Section 417-02 to DIAGNOSE the door ajar inputs.
L2 CHECK THE OPERATION OF THE SPEEDOMETER • Observe the speedometer while driving the vehicle. • **Does the speedometer operate correctly?**	**Yes** ENABLE the autolock feature. REFER to Autolock and Auto-Unlock Programming in this section. TEST the system for normal operation. **No** REFER to Section 413-01 to DIAGNOSE the speedometer.

Pinpoint Test M: The Auto-Unlock Is Inoperative

Normal Operation

The Body Control Module (BCM) energizes the unlock relay based upon input from the door ajar switches and the vehicle speed signal. The BCM unlocks the doors when the following conditions are met:

- The vehicle speed has exceeded 20 km/h (12 mph), then dropped to 0 km/h (0 mph)
- The ignition is in the OFF mode
- The LH front door is opened within 10 minutes of the ignition being turned to the OFF mode

This pinpoint test is intended to diagnose the following:

- Programming
- Door ajar switches
- Ignition switch
- Vehicle speed input

PINPOINT TEST M: THE AUTO-UNLOCK IS INOPERATIVE

Test Step	Result / Action to Take
M1 CHECK THE COURTESY LAMP OPERATION	
• Open and close the doors while checking the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to M2 . **No** REFER to Section 417-02 to DIAGNOSE the door ajar inputs.
M2 CHECK THE BCM IGNITION STATUS PID	
• Enter the following diagnostic mode on the scan tool: BCM DataLogger. • Monitor the BCM PID (IGN_SW_RUN). • **Does the ignition status PID indicate RUN?**	**Yes** GO to M3 . **No** REFER to Section 211-05 to continue diagnosis of the ignition outputs.
M3 CHECK THE OPERATION OF THE SPEEDOMETER	
• Observe the speedometer while driving the vehicle. • **Does the speedometer operate correctly?**	**Yes** ENABLE the autolock feature. REFER to Autolock and Auto-Unlock Programming in this section. TEST the system for normal operation. **No** REFER to Section 413-01 to DIAGNOSE the speedometer.

Pinpoint Test N: The Smart Unlock Is Inoperative

Normal Operation

For vehicles without Intelligent Access (IA), when the key is in the ignition lock cylinder and the door lock control switch is pressed to lock the doors with any door ajar the Body Control Module (BCM) automatically unlocks all the doors. This feature helps prevent the keys from being locked in the vehicle by unlocking the doors if the key is in the ignition and either front door is ajar.

NOTE: For vehicles with IA , the smart unlock feature is only available on late build vehicles.

For vehicles with IA , the Remote Function Actuator (RFA) module sends a message over the Medium Speed Controller Area Network (MS-CAN) to the BCM to command all doors to unlock to prevent an IA key from being inadvertently locked inside the vehicle. When the vehicle is locked using the door lock control switch with the door ajar and then closed, the RFA module searches the interior of the vehicle for an IA key. The RFA module searches the interior of the vehicle by activating all 3 low frequency passive start antennas. If an IA key is inside the vehicle the signal from the passive start antennas activate the IA key, and it sends a signal back to the RFA module through the Remote Functions Receiver (RFR) module. If the RFA module detects there is an IA key inside the vehicle, it sends a command to the BCM to unlock all of the doors.

The vehicle can still be locked with the key in the ignition (vehicles without IA) or a key inside the vehicle (vehicles with IA), a key in the door lock cylinder, or the lock button on another Remote Keyless Entry (RKE) transmitter.

This pinpoint test is intended to diagnose the following:

- Key-in-ignition switch (vehicles without IA)
- Door ajar switch input
- IA key

PINPOINT TEST N: THE SMART UNLOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
N1 CHECK THE DOOR LOCK OPERATION	
• Check the operation of the door locks from the door lock control switch. • **Do all of the doors lock and unlock?**	**Yes** GO to N2 . **No** IDENTIFY the correct symptom and GO to Symptom Chart - Electrical .
N2 CHECK THE COURTESY LAMP OPERATION	
• Open and close the left and right front doors while checking the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** For vehicles without IA , REFER to Section 413-01 to DIAGNOSE the key-in-ignition warning chime. For vehicles with IA , REFER to Section 419-01B to DIAGNOSE the IA key and passive start antennas. **No** REFER to Section 417-02 to DIAGNOSE the door ajar inputs.

Pinpoint Test O: The Luggage Compartment/Liftgate Smart Unlock Is Inoperative

Normal Operation

The luggage compartment/liftgate smart unlock feature prevents the luggage compartment/liftgate from latching when an Intelligent Access (IA) key is detected inside the luggage compartment. When the Remote Function Actuator (RFA) module detects the luggage compartment lid/liftgate is closed with the doors locked, it searches the luggage compartment using the low frequency passive start antenna located behind the rear seat for an IA key. If an IA key is inside the luggage compartment the signal from the passive start antenna activates the IA key, and it sends a signal back to the RFA module through the Remote Functions Receiver (RFR) module. If an IA key is detected, the luggage compartment lid/liftgate releases. To override the luggage compartment/liftgate smart unlock and intentionally latch the luggage compartment lid/liftgate, unlock the doors and then close the luggage compartment lid with the IA key inside.

This pinpoint test is intended to diagnose the following:

- Luggage compartment lid/liftgate ajar switch input
- Rear passive start antenna
- IA key

PINPOINT TEST O: THE LUGGAGE COMPARTMENT/LIFTGATE SMART UNLOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
O1 CHECK THE LUGGAGE COMPARTMENT AJAR MESSAGE IN THE MESSAGE CENTER	
• Ignition ON. • Observe the message center while opening and closing the luggage compartment lid. • **Does the ajar message in the message center operate correctly?**	**Yes** REFER to Section 419-01B to DIAGNOSE the IA key and the rear passive start antenna. **No** REFER to Section 413-01 to DIAGNOSE the ajar indicator.

Pinpoint Test P: Hard To Open/Close Door From Either Door Handle

Normal Operation

The door latch can be actuated from the interior or exterior door handle. When actuated, the door latch releases and allows the door to open. If the door latch or the door hinges have insufficient lubrication or if the striker or door are misaligned, it causes extra force to be used when opening or closing the door.

This pinpoint test is intended to diagnose the following:

- Door alignment
- Door hinges
- Striker adjustment
- Door latch

PINPOINT TEST P: HARD TO OPEN/CLOSE DOOR FROM EITHER DOOR HANDLE

Test Step	Result / Action to Take
P1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES • Open the door using both the interior and exterior door handles. • **Does the door open normally from one of the door handles?**	**Yes** If the door is difficult/does not open from the exterior door handle, GO to Pinpoint Test Q . If the door is difficult/does not open from the interior door handle, GO to Pinpoint Test R . **No** If the door is hard to open from both door handles, GO to P2 .
P2 CHECK THE LATCH OPERATION • Open the door. • Using a screwdriver, fully close the latch (2 clicks).  N0094195 • Verify the latch releases easily while pulling on the interior/exterior door handle. • **Does the latch release easily?**	**Yes** GO to P4 . **No** GO to P3 .
P3 CHECK THE LATCH OPERATION AFTER LUBRICATION • Lubricate the door latch. Refer to Latch Lubrication in this section. • Using a screwdriver, fully close the latch (2 clicks).	**Yes** The concern was caused by an insufficiently lubricated door latch. **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the

 N0094195 • Verify the latch releases easily while pulling on the interior/exterior door handle. • **Does the latch release easily?**	system for normal operation.
P4 CHECK THE STRIKER ADJUSTMENT	**Yes** GO to P5 . **No** ADJUST the striker as necessary. TEST the system for normal operation.
• Check the adjustment of the striker. Refer to Section 501-03 . • **Is the striker adjusted correctly?**	
P5 CHECK THE DOOR ALIGNMENT	**Yes** LUBRICATE the door hinges. TEST the system for normal operation. **No** ADJUST the door as necessary. TEST the system for normal operation.
• Check the alignment of the door. Refer to Section 501-03 . • **Is the door aligned correctly?**	

Pinpoint Test Q: A Door Is Difficult/Does Not Open From The Exterior Door Handle

Normal Operation

The exterior door handle is connected to the door latch with an actuating cable. When the exterior door handle is pulled it causes the cable to pull on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open.

This pinpoint test is intended to diagnose the following:

- Binding cable
- Exterior door handle reinforcement
- Door latch

PINPOINT TEST Q: A DOOR IS DIFFICULT/DOES NOT OPEN FROM THE EXTERIOR DOOR HANDLE

Test Step	Result / Action to Take
Q1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES	**Yes** If the door is difficult/does not open from only the exterior door handle, GO to Q2 .
NOTE: The rear door interior door handle has to be pulled twice to unlock and unlatch.	

• Open and close the door using both the interior and exterior door handles. • **Does the door open normally from one of the door handles?**	If the door is difficult/does not open from only the interior door handle, GO to Pinpoint Test R . **No** If the door does not operate correctly from both door handles, GO to Pinpoint Test P .
Q2 CHECK THE EXTERIOR DOOR HANDLE AND CABLE OPERATION	
• Disconnect the exterior door handle actuating cable from the door latch. • Operate the exterior door handle while observing the linkage and cable. • **Are any of the exterior door handle components or linkages binding or broken?**	**Yes** GO to Q3 . **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.
Q3 CHECK THE EXTERIOR DOOR HANDLE REINFORCEMENT	
• Disconnect the exterior door handle actuating cable from the exterior door handle reinforcement. • Pull and release the exterior door handle. • **Does the exterior door handle operate correctly?**	**Yes** INSTALL a new exterior door handle cable. TEST the system for normal operation. **No** INSTALL a new exterior door handle reinforcement. REFER to Door Handle Reinforcement — Exterior, Front or Door Handle Reinforcement — Exterior, Rear in this section. TEST the system for normal operation.

Pinpoint Test R: A Door Is Difficult/Does Not Open From The Interior Door Handle

Normal Operation

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled it causes the cable to pull on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open.

This pinpoint test is intended to diagnose the following:

- Broken or binding cable/linkage
- Door latch

PINPOINT TEST R: A DOOR IS DIFFICULT/DOES NOT OPEN FROM THE INTERIOR DOOR HANDLE

Test Step	Result / Action to Take
R1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES	
NOTE: The rear door interior door handle has to be pulled twice to unlock and unlatch. • For the rear doors, make sure the childlock is in the unlock position. • Open the door using both the interior and exterior door handles. • **Does the door open normally from one of the door handles?**	**Yes** If the door is difficult/does not open from only the interior door handle, GO to R2 . If the door is difficult/does not open from only the exterior door handle, GO to Pinpoint Test Q . **No** If the door does not operate correctly from both door handles, GO to Pinpoint Test P .
R2 CHECK THE INTERIOR DOOR HANDLE	

AND CABLE/LINKAGE OPERATION	
• Remove the door trim panel. Refer to Section 501-05 . • Install the interior door handle back onto the release cable. • Operate the interior door handle while observing the cable/linkage. • **Are any of the interior door handle components or cable/linkages binding or broken?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.

Pinpoint Test S: Exterior Door Release Handle Sticks

Normal Operation

The exterior door handle is connected to the door latch with an actuating cable. When the exterior door handle is pulled it causes the cable to pull on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

This pinpoint test is intended to diagnose the following:

- Binding cable
- Broken handle return spring
- Door latch

PINPOINT TEST S: EXTERIOR DOOR RELEASE HANDLE STICKS

Test Step	Result / Action to Take
S1 CHECK THE EXTERIOR DOOR HANDLE AND LINKAGE OPERATION	
• Disconnect the exterior door handle actuating cable from the door latch. • Operate the exterior door handle while observing the linkage. • **Are any of the exterior door handle components or linkages binding?**	**Yes** GO to S2 . **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.
S2 CHECK FOR A BROKEN RETURN SPRING	
• Disconnect the exterior door handle actuating cable from the exterior door handle reinforcement. • Pull and release the exterior door handle • **Does the exterior door handle return to a closed position once released?**	**Yes** INSTALL a new exterior door handle cable. TEST the system for normal operation. **No** INSTALL a new exterior door handle reinforcement. REFER to Door Handle Reinforcement — Exterior, Front or Door Handle Reinforcement — Exterior, Rear in this section. TEST the system for normal operation.

Pinpoint Test T: Interior Door Release Handle Sticks

Normal Operation

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled it causes the cable to pull on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

This pinpoint test is intended to diagnose the following:

- Binding cable
- Broken handle return spring
- Door latch

PINPOINT TEST T: INTERIOR DOOR RELEASE HANDLE STICKS

Test Step	Result / Action to Take
T1 CHECK FOR A BROKEN RETURN SPRING	
• Remove the interior door handle. Refer to Interior Door Handle — Front or Interior Door Handle — Rear in this section. • Pull and release the interior door handle. • **Does the interior door handle return to a closed position once released?**	**Yes** GO to T2. **No** INSTALL a new interior door handle. REFER to Interior Door Handle — Front or Interior Door Handle — Rear in this section. TEST the system for normal operation.
T2 CHECK THE INTERIOR DOOR HANDLE CABLE OPERATION	
• Remove the interior door latch release cable. • Observe the door latch release cable for any damage or binding. • **Is the door latch release cable OK?**	**Yes** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** INSTALL a new interior door handle cable. TEST the system for normal operation.

Pinpoint Test U: Squeak/Rattle/Chucking Noise From Door

This pinpoint test is intended to diagnose the following:

- Door alignment
- Striker adjustment
- Door latch

PINPOINT TEST U: SQUEAK/RATTLE/CHUCKING NOISE FROM DOOR

Test Step	Result / Action to Take
U1 CHECK FOR ANY LOOSE COMPONENTS	
• Remove the door trim panel. Refer to Section 501-05. • Inspect inside the door for any loose components. • **Are there any loose components inside the door?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** GO to U2.
U2 CHECK THE STRIKER ADJUSTMENT	
• Check the adjustment of the striker. Refer to Section 501-03. • **Is the striker adjusted correctly?**	**Yes** GO to U3. **No** ADJUST the striker as necessary. TEST the system for normal operation.

U3 CHECK THE DOOR ALIGNMENT	
• Check the alignment of the door. Refer to Section 501-03 . • **Is the door aligned correctly?**	**Yes** GO to U4 . **No** ADJUST the door as necessary. TEST the system for normal operation.
U4 CHECK THE LATCH OPERATION AFTER LUBRICATION	
• Lubricate the door latch. Refer to Latch Lubrication in this section. • Using a screwdriver, fully close the latch (2 clicks).  N0094195 • Operate the door latch and listen for the noise. • **Is the original noise still present after the latch is lubricated?**	**Yes** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** The concern was caused by an insufficiently lubricated door latch.

Pinpoint Test V: Manual Door Lock Cylinder Inoperative

Normal Operation

The door lock cylinder is connected to the door latch via a lock rod and can be used to manually lock/unlock a door.

This pinpoint test is intended to diagnose the following:

- Bent or binding lock rod and lever
- Door lock cylinder
- Door latch

PINPOINT TEST V: MANUAL DOOR LOCK CYLINDER INOPERATIVE

Test Step	Result / Action to Take
V1 CHECK THE LOCK AND UNLOCK OPERATION	
• Insert a key into the lock cylinder and rotate the lock cylinder to the lock and unlock positions. • **Does the door lock cylinder freely rotate without locking and unlocking the door?**	**Yes** GO to V2 . **No** GO to V3 .
V2 CHECK THE DOOR LOCK CYLINDER	
	Yes

• Remove the door lock cylinder. Refer to Door Lock Cylinder in this section. • Operate the door lock cylinder with the key while holding the lever on the lock cylinder. • **Does the key in the door lock cylinder rotate freely while the lever is stationary?**	INSTALL a new door lock cylinder. REFER to Door Lock Cylinder in this section. TEST the system for normal operation. **No** GO to V5.
V3 CHECK THE LOCK CYLINDER OPERATION AFTER LUBRICATION	
• Spray a lock lubricant such as Motorcraft™ XL-1 into the lock cylinder opening for a couple seconds. • Operate the door lock cylinder with the key. • **Does the door lock and unlock using the door lock cylinder?**	**Yes** The concern was caused by an insufficiently lubricated lock cylinder. SPRAY a multi-purpose grease such as Motorcraft™ XL-5 into the lock cylinder for a couple seconds to provide long term lubrication. **No** GO to V4.
V4 CHECK THE DOOR LOCK CYLINDER	
• Remove the door lock cylinder. Refer to Door Lock Cylinder in this section. • Operate the door lock cylinder with the key. • **Does the door lock cylinder rotate freely?**	**Yes** GO to V5. **No** INSTALL a new door lock cylinder. REFER to Door Lock Cylinder in this section. TEST the system for normal operation.
V5 CHECK THE DOOR LOCK CYLINDER LINKAGE	
• Operate the door lock cylinder while observing the linkage. • **Is the door lock cylinder rod and lever bent or binding?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** INSTALL a new door latch. REFER to Front Door Latch in this section. TEST the system for normal operation.

Pinpoint Test W: Ignition Key Cannot Be Returned To OFF Position

Refer to Wiring Diagrams Cell 37, Shift Interlock for schematic and connector information.

Normal Operation

The ignition switch contains a key removal inhibit solenoid. The solenoid prevents the ignition lock cylinder to be turned to lock and the key removed any time the transmission selector lever is in any position except PARK (P) (automatic transaxle only). The inhibit solenoid receives voltage at all times from Central Junction Box (CJB) fuse 1 (15A). When the transmission selector lever is in any gear except PARK (P), the selector switch closes, supplying ground to the solenoid.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Transmission selector lever
- Binding steering column components
- Ignition lock cylinder
- Ignition switch

PINPOINT TEST W: IGNITION KEY CANNOT BE RETURNED TO OFF POSITION

Test Step	Result / Action to Take
W1 CHECK FOR AN ENERGIZED KEY REMOVAL INHIBIT SOLENOID	
• Remove CJB fuse 1 (15A). • Attempt to turn the ignition key to the RUN position and then back to the LOCK position and remove the key. • **Does the ignition lock cylinder turn to the lock position and can the key be removed?**	**Yes** REFER to Section 211-05 to continue diagnosis of the key removal inhibit solenoid system. **No** GO to W2 .
W2 CHECK THE IGNITION LOCK CYLINDER FOR BINDING	
• Remove the ignition lock cylinder. Refer to Ignition Lock Cylinder in this section. • Rotate the ignition lock cylinder through all positions using the key. • **Does the ignition lock cylinder freely rotate through all positions and can the key be removed from the lock cylinder?**	**Yes** REFER to Section 211-05 to continue diagnosis of the steering column for any binding steering column components or ignition switch. **No** INSTALL a new ignition lock cylinder. REFER to Ignition Lock Cylinder in this section. TEST the system for normal operation.

Autolock and Auto-Unlock Programming

NOTE: Make sure the ignition is in the OFF mode and the doors are closed and unlocked.

NOTE: When programming the autolock feature, carry out the following steps within 30 seconds or the procedure needs to be repeated. If the procedure needs to be repeated, wait 30 seconds between programming sessions.

1. Turn the ignition from OFF to RUN mode.
2. Press the door lock control switch 3 times.
3. Turn the ignition from RUN to OFF mode.
4. Press the door lock control switch 3 times.
5. **NOTE:** A chime sounds as acknowledgement that programming mode has been entered. The safety belt must be engaged otherwise the Belt-Minder® chime will take priority over other chimes.

   Turn the ignition to the RUN position. The module is now in programming mode.
6. Once in programming mode, the autolock or auto-unlock feature can be programmed independently of each other.
   - To program the autolock feature, press the door lock control switch for **greater than 2 seconds** and release. Each long press of the door lock control switch toggles the state of the autolocking feature between enabled and disabled. A chime sounds when the feature is enabled or disabled.
   - To program the auto-unlock feature, press the door lock control switch for **less than 1 second** and release. Each short press of the door lock control switch toggles the state of the auto-unlocking feature between enabled and disabled. A chime sounds when the feature is enabled or disabled.
7. Turn the ignition to the OFF mode to exit programming. If a setting was toggled, a chime will be heard.

Remote Keyless Entry (RKE) Transmitter Programming

NOTE: A maximum of 8 Remote Keyless Entry (RKE) transmitters can be programmed to the vehicle. Programming must be done at the same time for all the RKE transmitters.

NOTE: This procedure is for programming the RKE transmitter portion of the Integrated Keyhead Transmitter (IKT). The RKE transmitter for an Intelligent Access (IA) key is programmed automatically during key programming. Refer to the key programming procedures in Section 419-01B .

NOTE: There is an audible feedback chime heard indicating that the programming mode for the RKE transmitter portion of the Integrated Keyhead Transmitter (IKT) has been initiated. The chime is also heard for every key that is programmed and when programming of a RKE transmitter was successful. The chime is not heard if the vehicle has not been transitioned from transport to NORMAL mode.

1. Close all doors.

2. Buckle the front safety belts.

3. Use the door lock control switch to electronically unlock all door locks.

4. Turn the ignition from the OFF to RUN position 4 times in rapid succession (within 6 seconds), with the fourth turn ending in OFF.

5. **NOTE:** If no action is taken within 10 seconds after a transmitter has been programmed, the programming sequence ends.

   Within 10 seconds, press any button on the RKE transmitter to be programmed. After the first RKE transmitter is programmed, press a button on each subsequent RKE transmitter to be programmed (each within 10 seconds of each other).

6. **NOTE:** If programming mode is exited and no key is learned, all keys (if one or two were programmed) are erased for RKE transmitter operation.

   Exiting the programming mode is accomplished if one of the following occurs:
   - The key transitions to the RUN position.
   - 10 seconds have passed since entering programming mode or since the last RKE transmitter was programmed.
   - The maximum number (8) of RKE transmitters have been programmed.

7. Check the operation of the transmitter. If the door locks do not respond for the programmed RKE transmitter(s), wait several seconds and press the button again. If the door locks still fail to respond, refer to Handles, Locks, Latches and Entry Systems in this section.

Stepped Unlock Programming

1. With the ignition switch in the OFF position, press the LOCK and UNLOCK buttons on the Remote Keyless Entry (RKE) transmitter simultaneously for 4 seconds.
    - The turn signals flash twice to indicate the mode change.

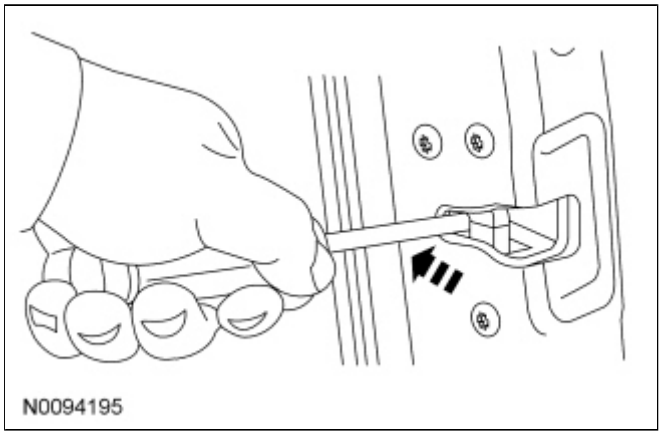
2. Repeat Step 1 to enable/disable the stepped unlocking feature.

Latch Lubrication

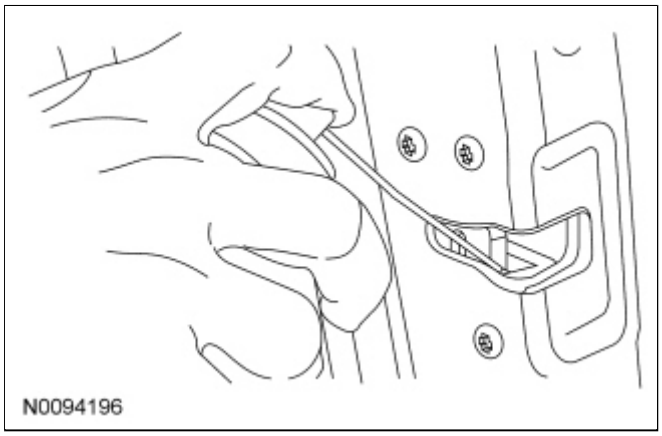
Material

Item	Specification
Multi-Purpose Grease XG-4 and/or XL-5	ESB-M1C93-B

1. Open the door.
2. Using a screwdriver, fully close the latch (2 clicks).

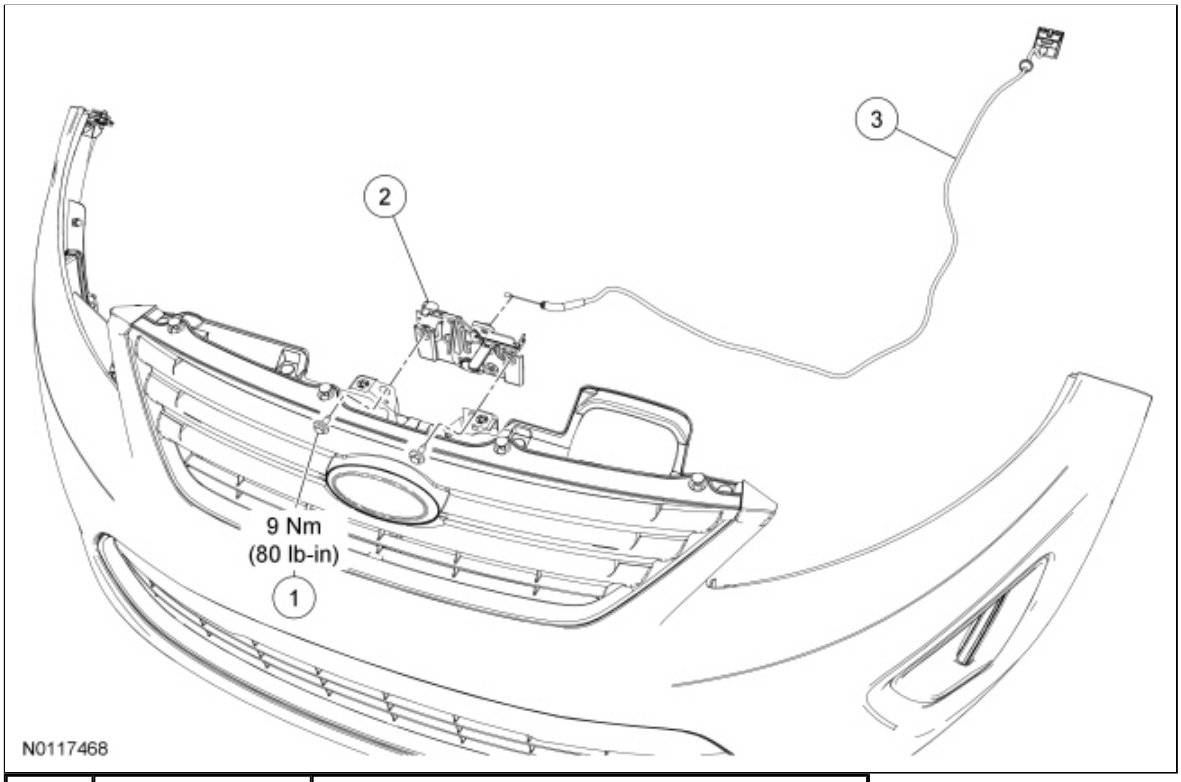


3. Spray the multi-purpose grease into the opening on the door latch for approximately 5 seconds.



4. Open the latch using either the interior or exterior door handle.
5. Open and close the door several times to circulate the lubricant inside the latch.
6. Wipe off any excess grease.

Hood Latch and Components — Exploded View



Item	Part Number	Description
1	W702928	Hood latch bolts (2 required)
2	16700	Hood latch
3	16916	Hood latch release handle and cable

1. For additional information, refer to the procedures in this section.

Hood Latch

Removal and Installation

1. **NOTE:** Mark the hood latch position prior to removal of the hood latch bolts.

   Remove the 2 hood latch bolts.
   - To install, tighten to 9 Nm (80 lb-in).

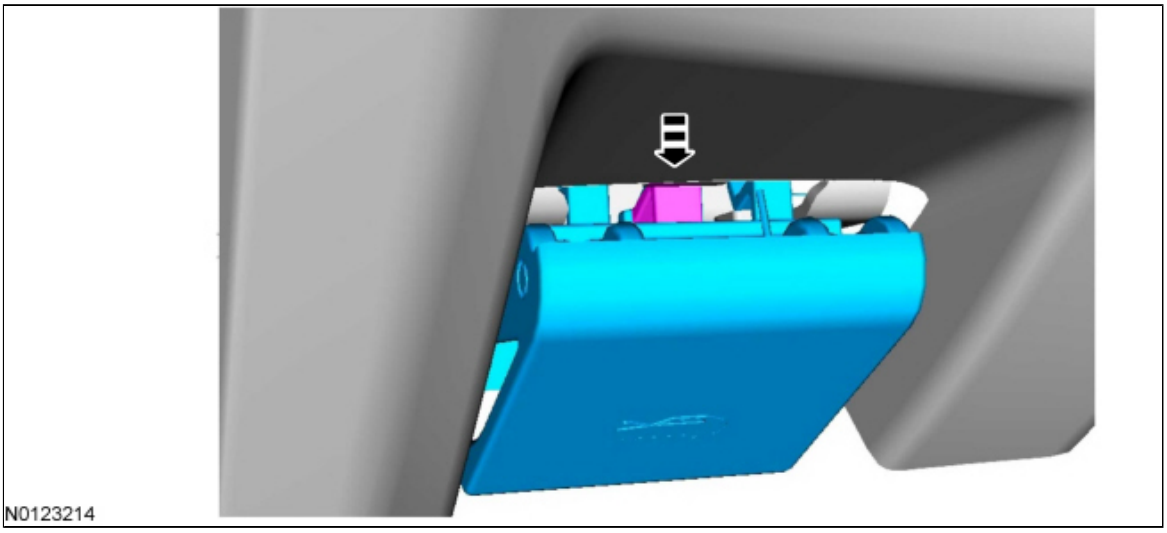
2. Remove the hood latch.
   - Disconnect the hood latch from the hood latch cable.

3. To install, reverse the removal procedure.
   - When the hood latch is installed, the latch adjustment must be checked to make sure the latch is installed and aligned correctly.

Hood Latch Release Handle

Removal and Installation

1. Using a suitable tool, depress the hood latch release handle retaining tab.

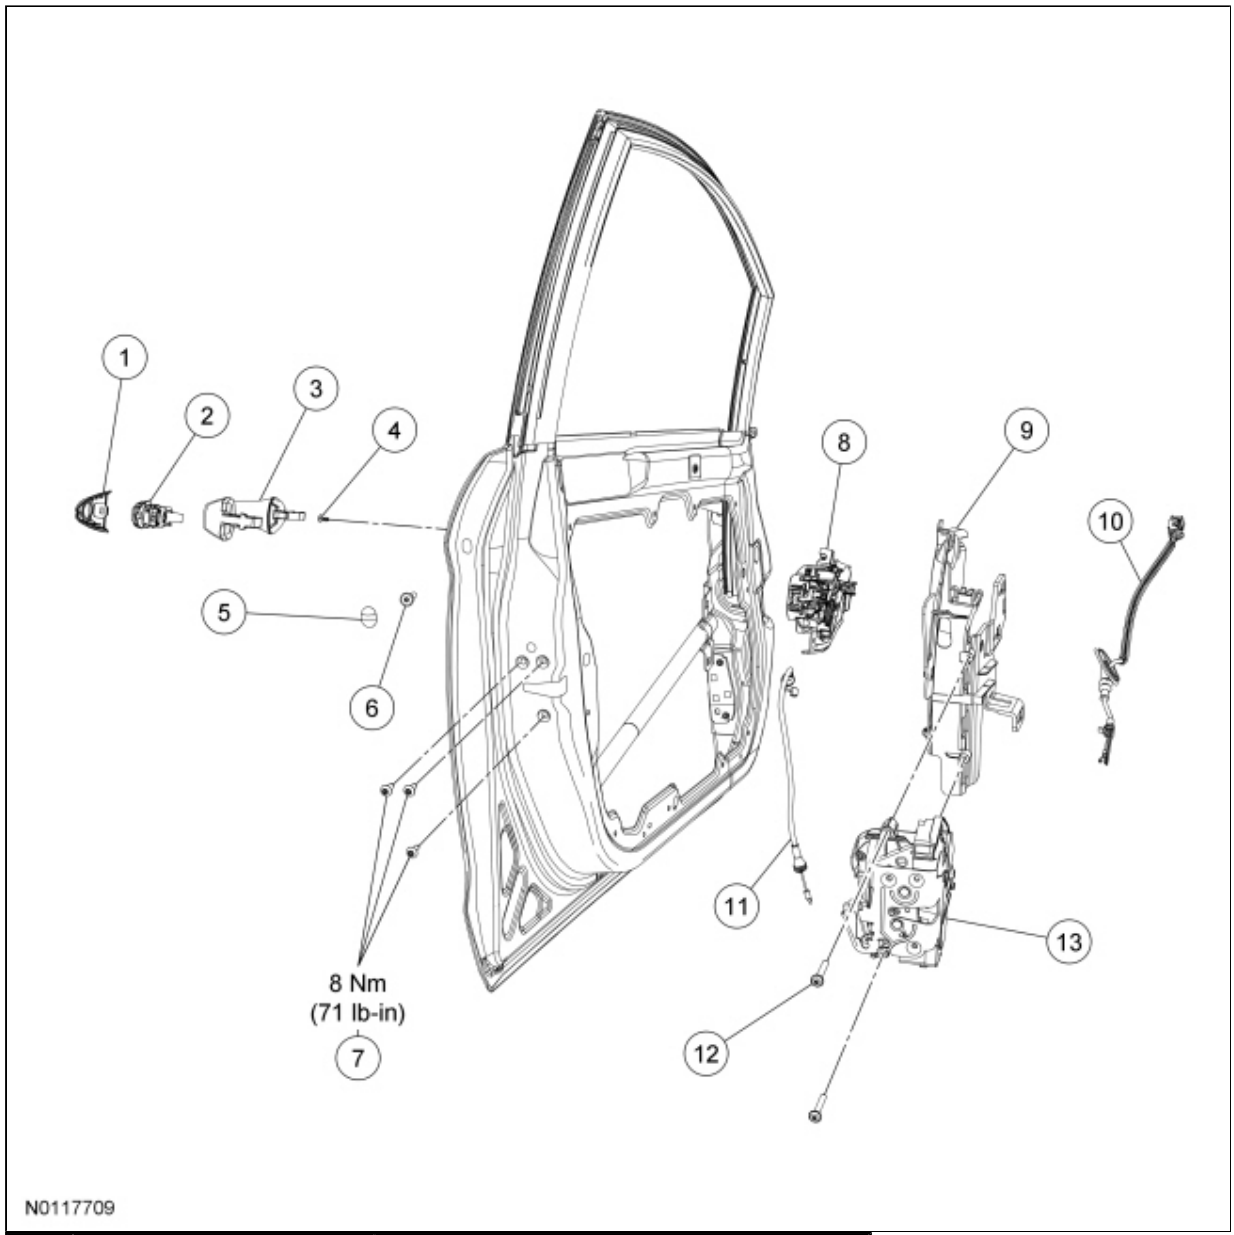


2. Remove the hood latch release handle.
   - Pull the hood latch release handle rearward.
3. Disconnect the hood release cable from the hood latch release handle.
4. To install, reverse the removal procedure.

Front Door Handles, Locks and Latches — Exploded View

NOTE: Vehicle without Intelligent Access (IA) shown, Vehicle with IA similar.

NOTE: LH side shown, RH side similar.



Item	Part Number	Description
1	224A44 RH/ 224A45 LH	Exterior front door handle bezel
2	21990 RH (if equipped)/ 21991LH	Door lock cylinder
3	22404 (non-PEPS)/ 26604 (PEPS)	Exterior front door handle

11	218B26	Exterior front door handle actuating cable
12	—	Front door latch mounting screw (2 required)
13	218812 RH/ 218813 LH	Front door latch

1. For additional information, refer to the procedures in this section.

Front Door Latch

Removal and Installation

1. Remove the exterior front door handle reinforcement. For additional information, refer to Door Handle Reinforcement — Exterior, Front in this section.

2. Remove the 2 screws and separate the front door latch from the exterior front door handle reinforcement carrier.

3. Detach the exterior front door handle cable from the front door latch and separate the front door latch from the exterior front door handle reinforcement carrier.

4. To install, reverse the removal procedure.

Exterior Front Door Handle

Removal and Installation

All vehicles

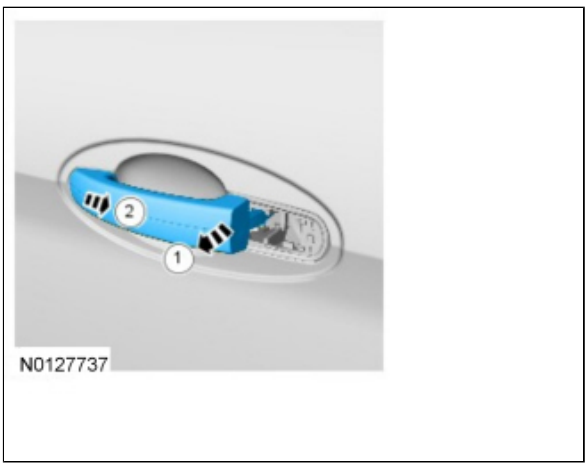
1. Remove the exterior front door handle bezel bolt cover.

2. ***NOTICE:*** **Overtightening the exterior front door handle bezel bolt will result in the increased opening effort of the door handle and possible damage to the exterior front door handle bezel.**

   Loosen, but do not remove, the exterior front door handle bezel bolt.
   - To install, tighten the exterior front door handle bezel bolt by hand, until the exterior front door handle bezel is no longer loose.

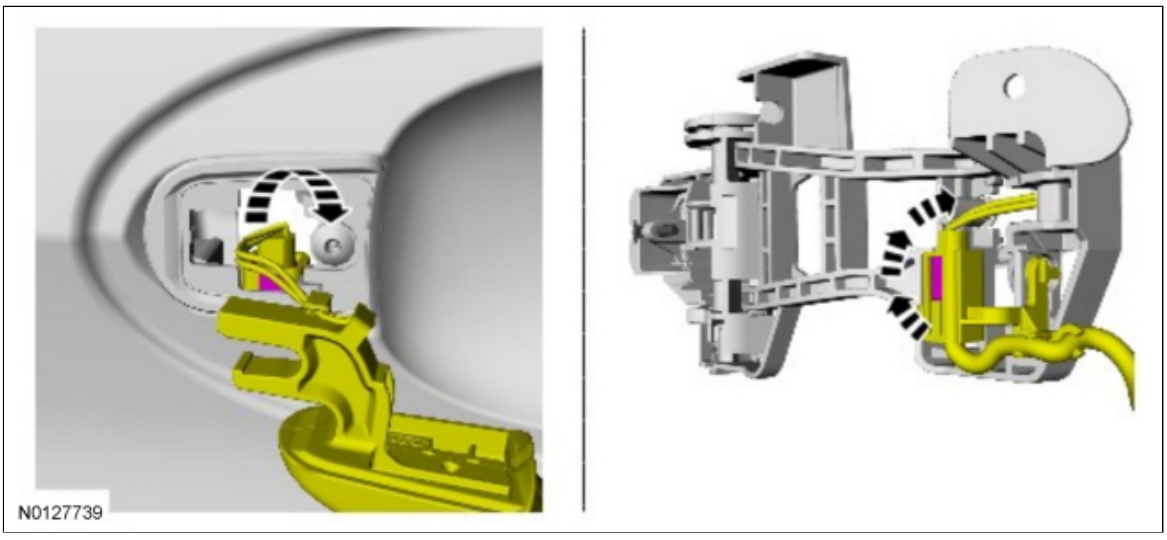
3. Pull outward and remove the exterior front door handle bezel.

4. Remove the exterior front door handle.
   - Pull the exterior front door handle rearward and then outward.

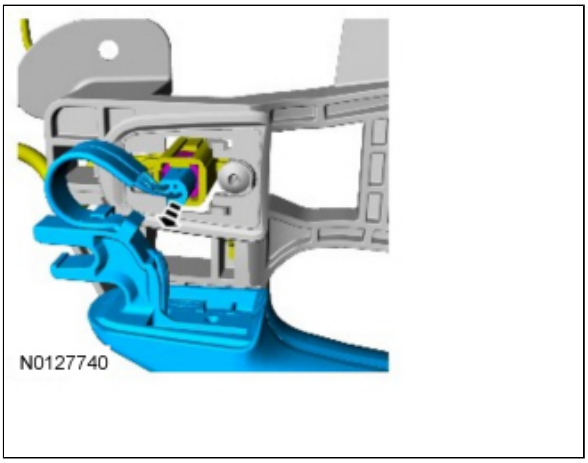


Vehicles with Intelligent Access (IA)

5. Position the exterior door handle electrical connector carrier in order to access the exterior door handle electrical connector.



6. Disconnect the exterior door handle electrical connector.



All vehicles

7. To install, reverse the removal procedure.

Door Handle Reinforcement — Exterior, Front

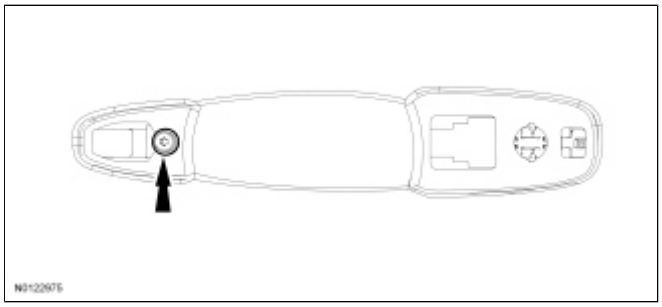
Removal and Installation

1. **NOTE:** Do not separate the window regulator or window regulator motor from the front door carrier.

   Remove the window regulator. For additional information, refer to Section 501-11 .

2. Remove the exterior front door handle. For additional information, refer to Exterior Front Door Handle in this section.

3. Loosen, but do not remove, the exterior front door handle reinforcement screw.



4. Remove the 3 front door latch screws.
   - To install, tighten to 8 Nm (71 lb-in).

5. Remove the door latch, carrier, and reinforcement assembly from vehicle.
   - Pull the front edge of the door latch, carrier, and reinforcement assembly inward and then toward the front of the vehicle.

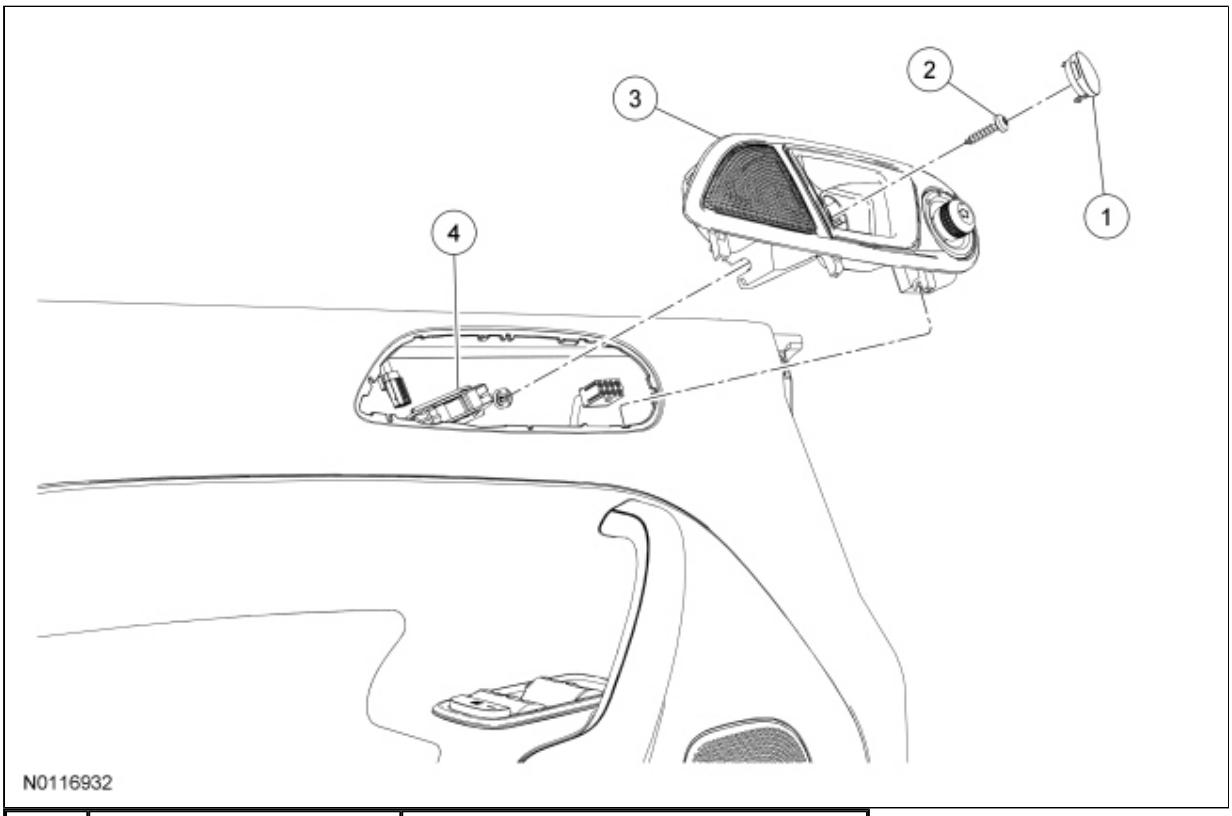
6. Disconnect exterior front door handle cable from the exterior front door handle reinforcement.

7. Separate the exterior front door handle reinforcement from the exterior front door handle reinforcement carrier.

8. To install, reverse the removal procedure.

Interior Door Handle — Front

NOTE: LH side shown, RH side similar.



Item	Part Number	Description
1	237W10	Interior door handle screw cover
2	46058	Interior door handle screw
3	22600 RH/ 22601 LH	Interior door handle
4	221A00	Interior door handle cable

Removal and Installation

1. Remove the interior door handle screw cover.
2. Remove the interior door handle screw.
3. ***NOTICE:*** **Do not pry outward at the bottom of the front interior door handle. Otherwise, damage to the front interior door handle may occur.**

   Using a non-marring tool, pry outward at the top of the front interior door handle.
4. Disconnect door latch cable from the front interior door handle.
5. If equipped, disconnect the electrical connector.
6. To install, reverse the removal procedure.

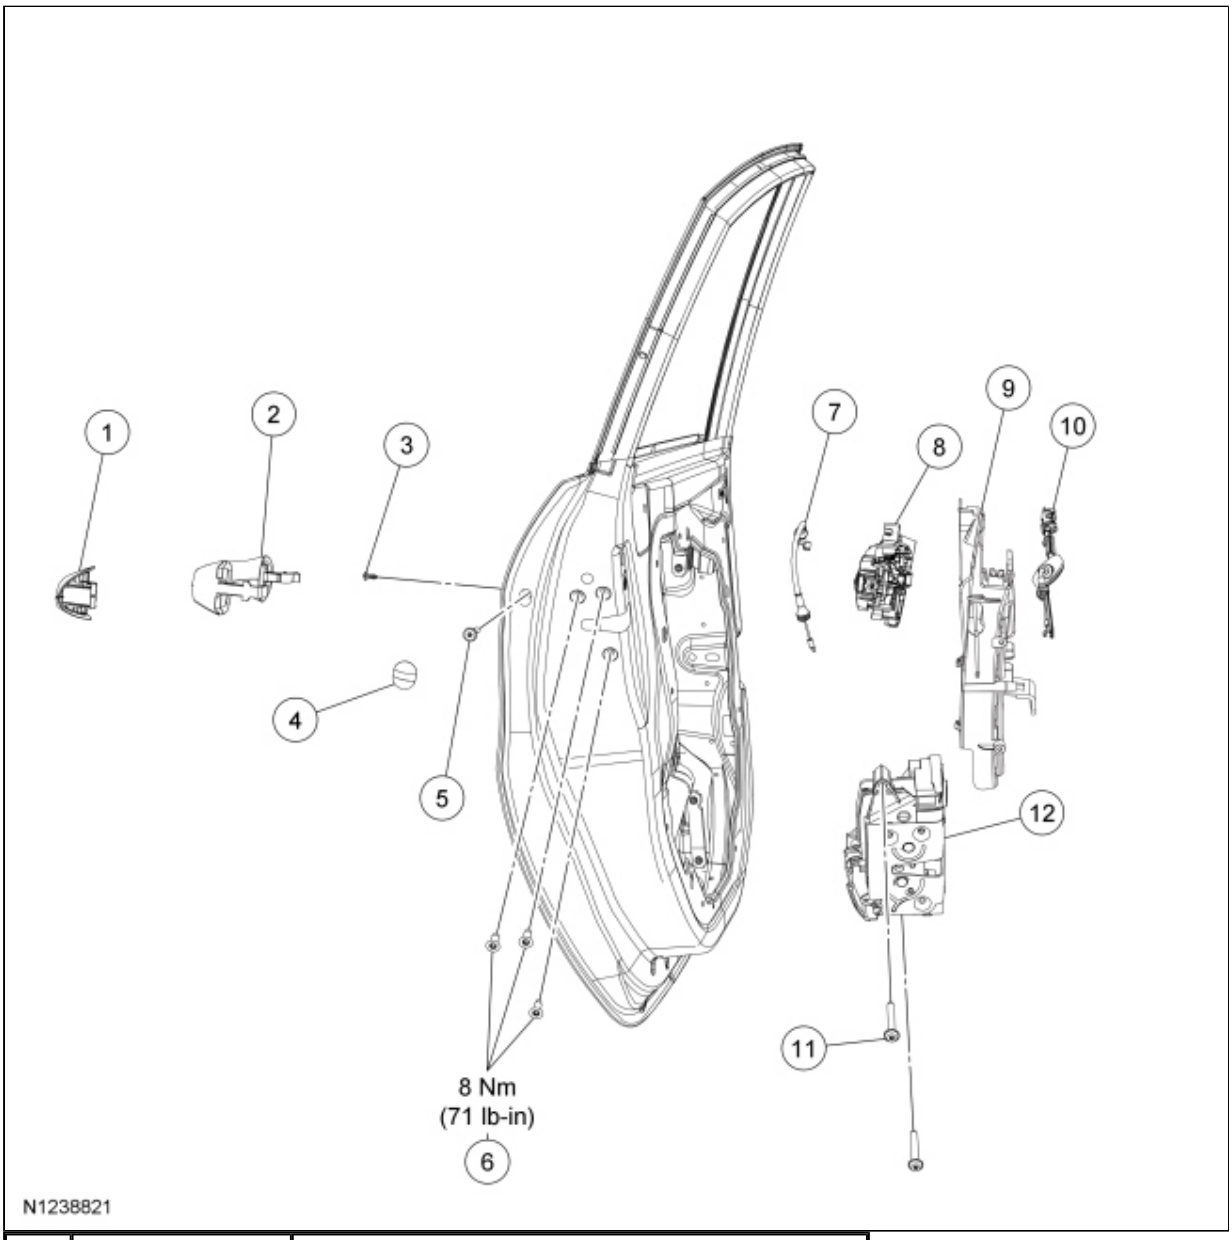
Door Lock Cylinder

Removal and Installation

1. Remove the exterior front door handle bezel bolt cover.
2. Loosen, but do not remove, the exterior front door handle bezel bolt.
3. Pull outward and remove the exterior front door handle bezel.
4. Separate the door lock cylinder from the exterior front door handle.
5. To install, reverse the removal procedure.

Rear Door Handles, Locks and Latches — Exploded View

NOTE: LH side shown, RH side similar.



Item	Part Number	Description
1	224A44	Exterior rear door handle bezel

9	224A52 RH/ 224A53 LH	Exterior rear door handle reinforcement carrier
10	264B58	Interior rear door handle actuating cable
11	—	Rear door latch mounting screw (2 required)
12	26412 RH/ 26413 LH	Rear door latch

1. For additional information, refer to the procedures in this section.

Rear Door Latch

Removal and Installation

1. Remove the exterior rear door handle reinforcement. For additional information, refer to Door Handle Reinforcement — Exterior, Rear .
2. Remove the 2 screws and separate the rear door latch from the exterior rear door handle reinforcement carrier.
3. Detach the exterior rear door handle cable from the rear door latch and separate the rear door latch from the exterior rear door handle reinforcement carrier.
4. To install, reverse the removal procedure.

Exterior Rear Door Handle

Removal and Installation

1. Remove the exterior rear door handle bezel bolt cover.

2. ***NOTICE:*** **Overtightening the exterior front door handle bezel bolt will result in the increased opening effort of the door handle and possible damage to the exterior front door handle bezel.**

   Loosen, but do not remove, the exterior rear door handle bezel bolt.
   - To install, tighten the exterior front door handle bezel bolt by hand, until the exterior front door handle bezel is no longer loose.

3. Pull outward and remove the exterior rear door handle bezel.

4. Remove the exterior rear door handle.
   - Pull the exterior rear door handle rearward and then outward.

5. To install, reverse the removal procedure.

Door Handle Reinforcement — Exterior, Rear

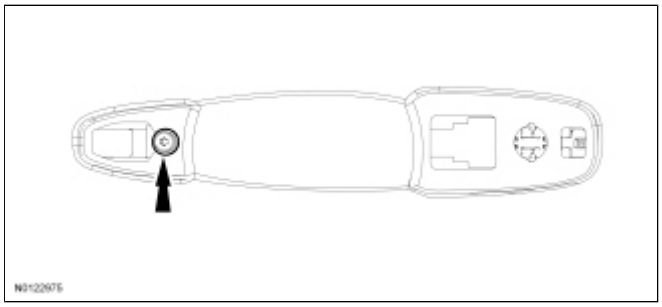
Removal and Installation

1. **NOTE:** Do not separate the window regulator or window regulator motor from the front door carrier.

   Remove the window regulator. For additional information, refer to Section 501-11 .

2. Remove the exterior rear door handle. For additional information, refer to Exterior Rear Door Handle in this section.

3. Loosen, but do not remove, the exterior rear door handle reinforcement screw.



4. Remove the 3 front door latch screws.
   - To install, tighten to 8 Nm (71 lb-in).

5. Remove the door latch, door carrier, and reinforcement assembly from vehicle.
   - Pull the front edge of the latch, carrier, and reinforcement assembly inward and then toward the front of the vehicle.

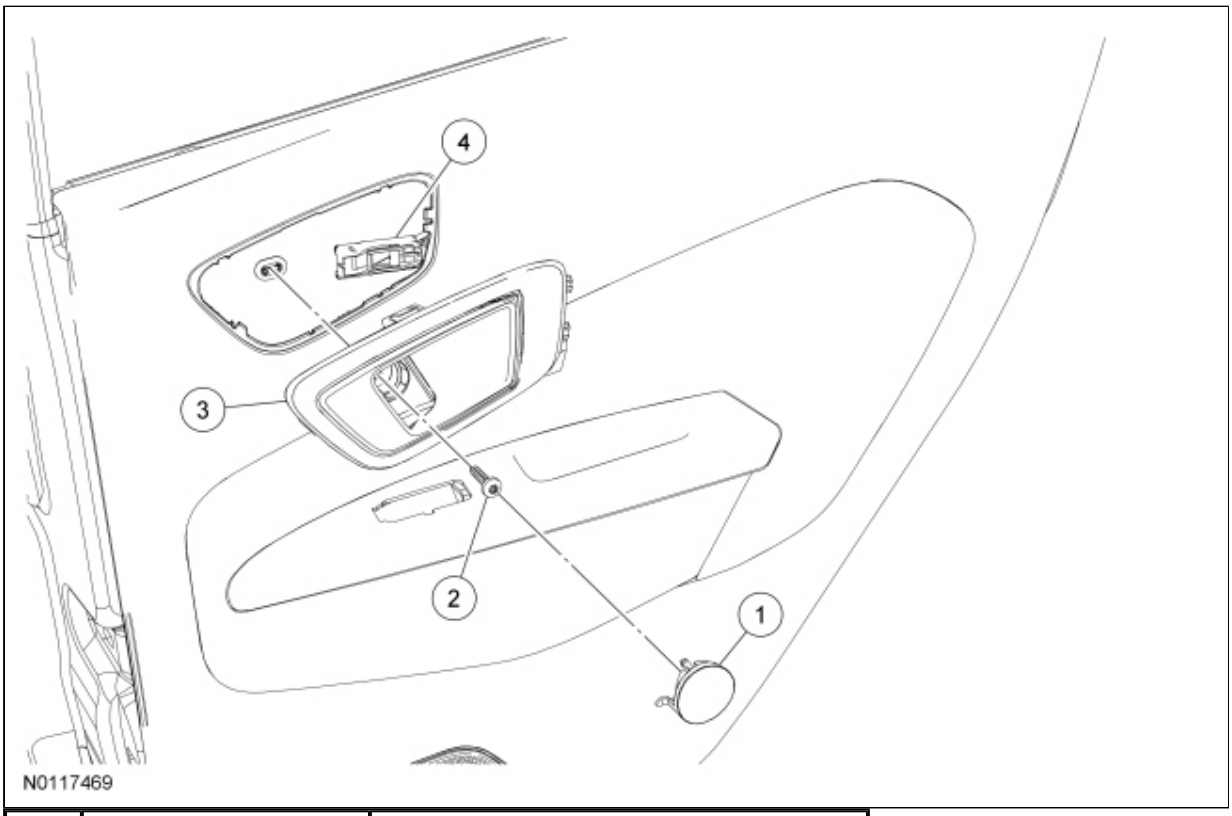
6. Disconnect exterior rear door handle cable from the exterior rear door handle reinforcement.

7. Separate the exterior rear door handle reinforcement from the exterior rear door handle reinforcement carrier.

8. To install, reverse the removal procedure.

Interior Door Handle — Rear

NOTE: RH side shown, LH side similar.

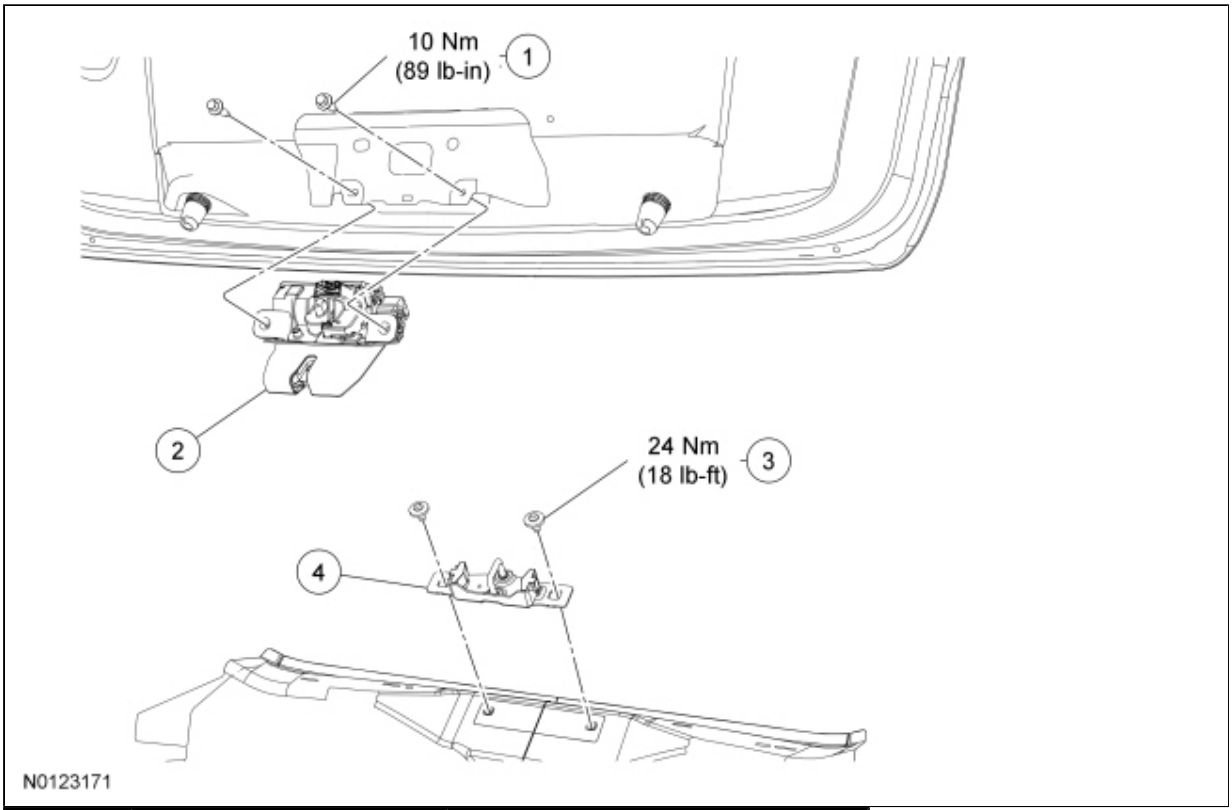


Item	Part Number	Description
1	237W10	Rear interior door handle screw cover
2	46058	Rear interior door handle screw
3	22600 RH/ 2260 1LH	Rear interior door handle
4	264B58	Rear interior door handle cable

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to Section 501-05 .
2. Release the 3 retaining tabs and remove the rear interior door handle from the rear door trim panel.
3. To install, reverse the removal procedure.

Liftgate Latch



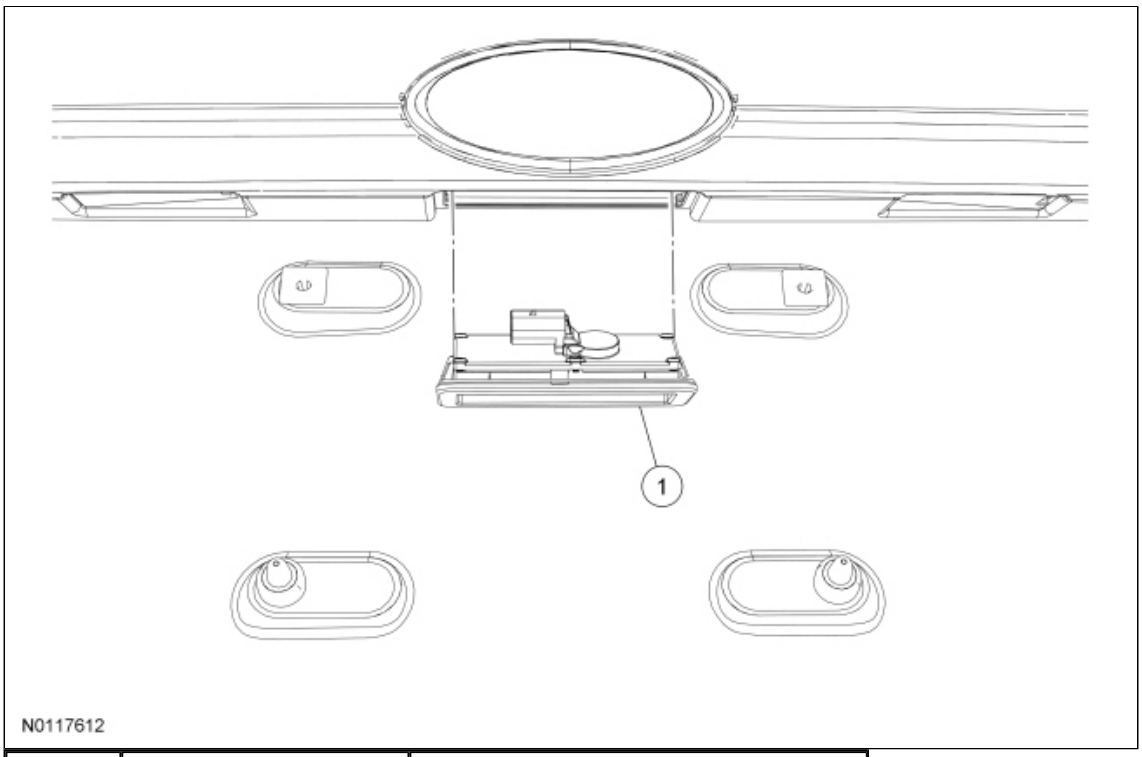
Item	Part Number	Description
1	W705125	Liftgate latch bolt
2	442A66	Liftgate latch
3	W500212	Liftgate striker bolt
4	404B12	Liftgate striker

Removal and Installation

1. Remove the liftgate trim panel. For additional information, refer to Section 501-05 .

2. Refer to exploded view(s) and any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Liftgate Release Switch



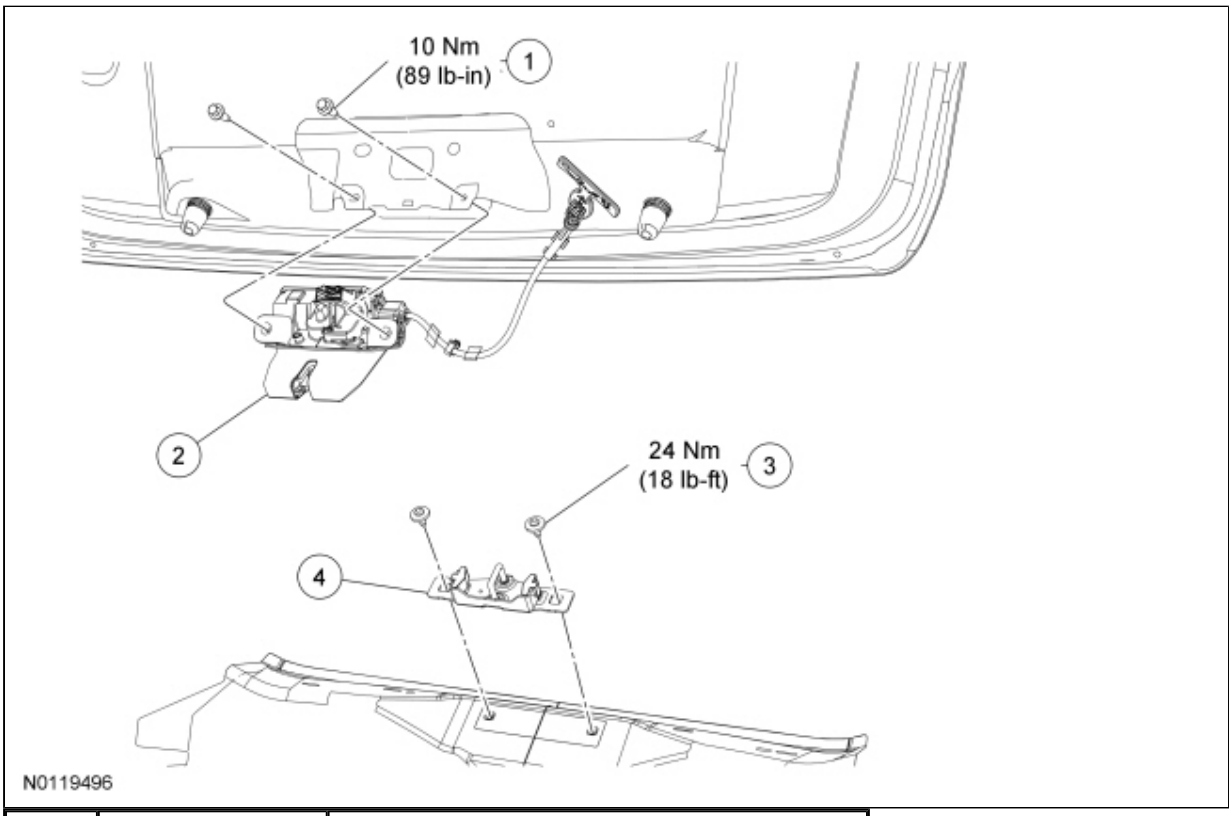
Item	Part Number	Description
1	14018	Liftgate release switch

Removal and Installation

1. Remove the liftgate applique. For additional information, refer to Section 501-08 .
2. Refer to exploded view(s) and any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Luggage Compartment Lid Latch

Removal and Installation

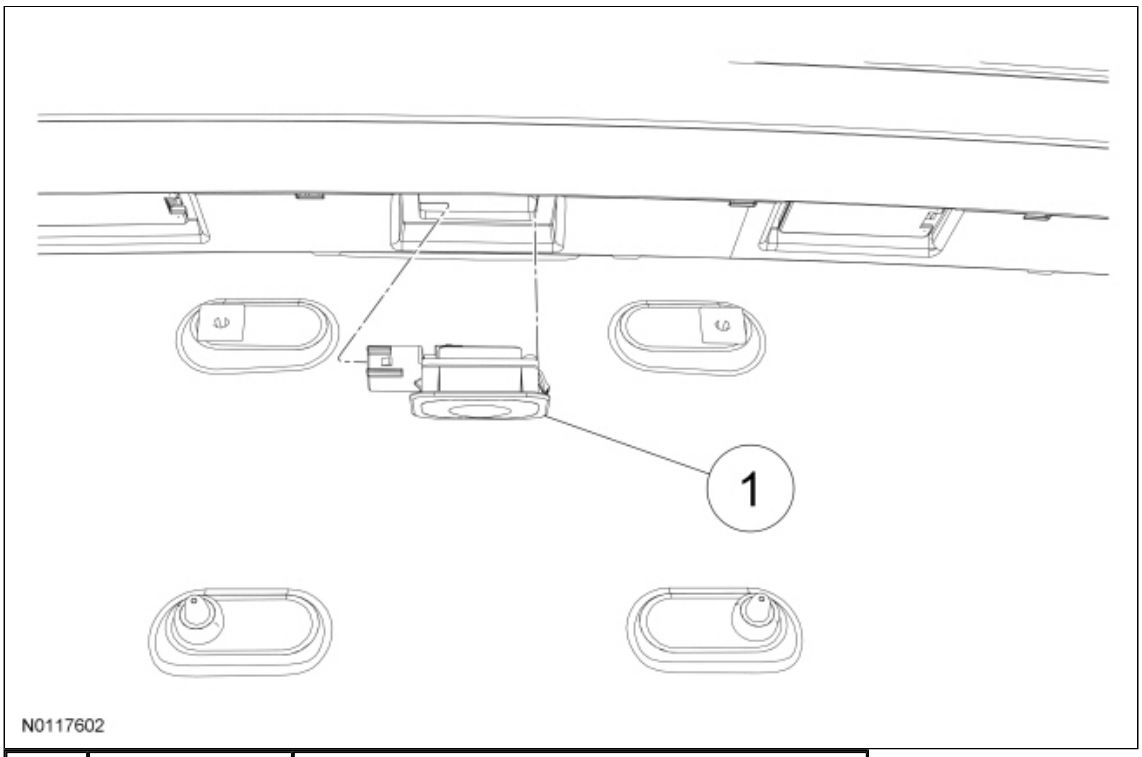


Item	Part Number	Description
1	W705125	Luggage compartment latch bolt
2	442A66	Luggage compartment latch
3	W500212	Luggage compartment striker bolt
4	404B12	Luggage compartment striker

1. Remove the 10 pin-type retainers and the luggage compartment lid trim panel.

2. Refer to exploded view(s) and any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Luggage Compartment Lid Release Switch

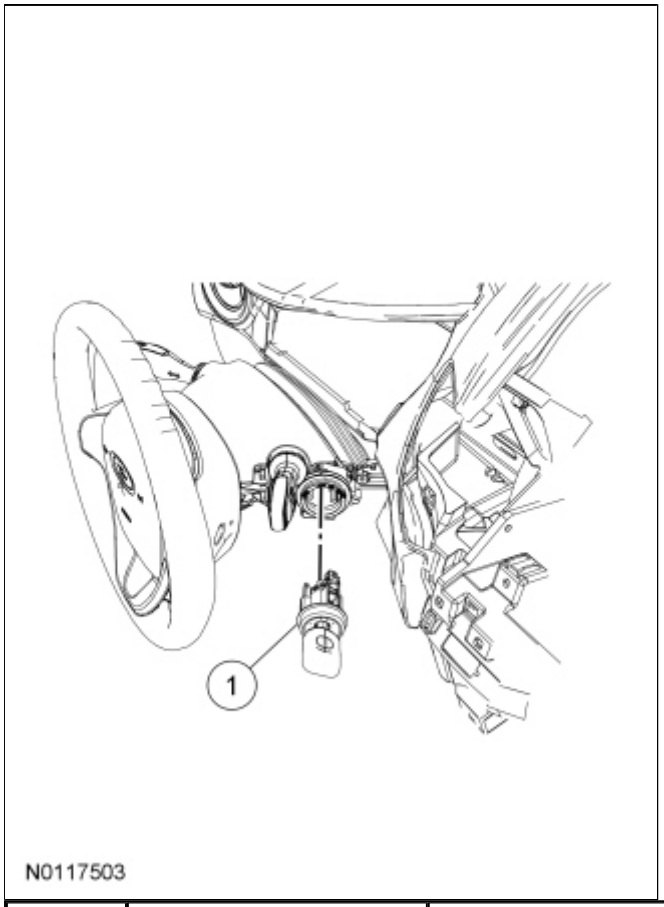


Item	Part Number	Description
1	19B514	Luggage compartment lid release switch

Removal and Installation

1. Remove the luggage compartment lid applique. For additional information, refer to Section 501-08 .
2. Refer to exploded view(s) and any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Ignition Lock Cylinder

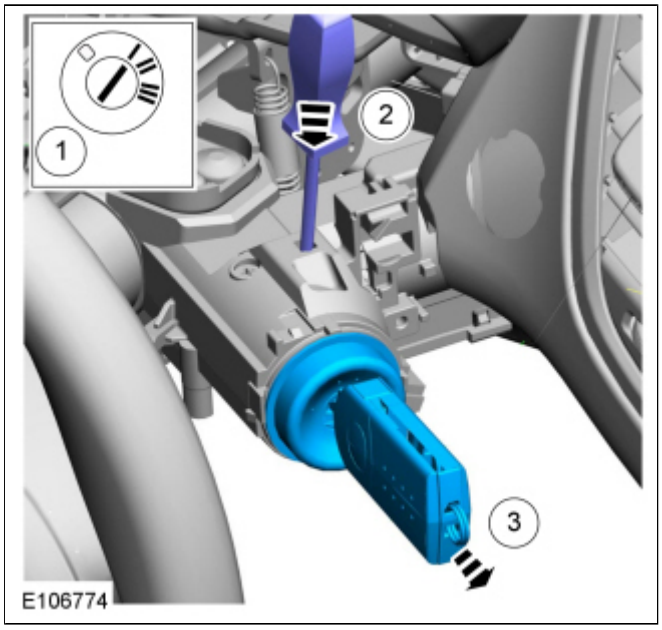


Item	Part Number	Description
1	11582	Ignition lock cylinder

Removal and Installation

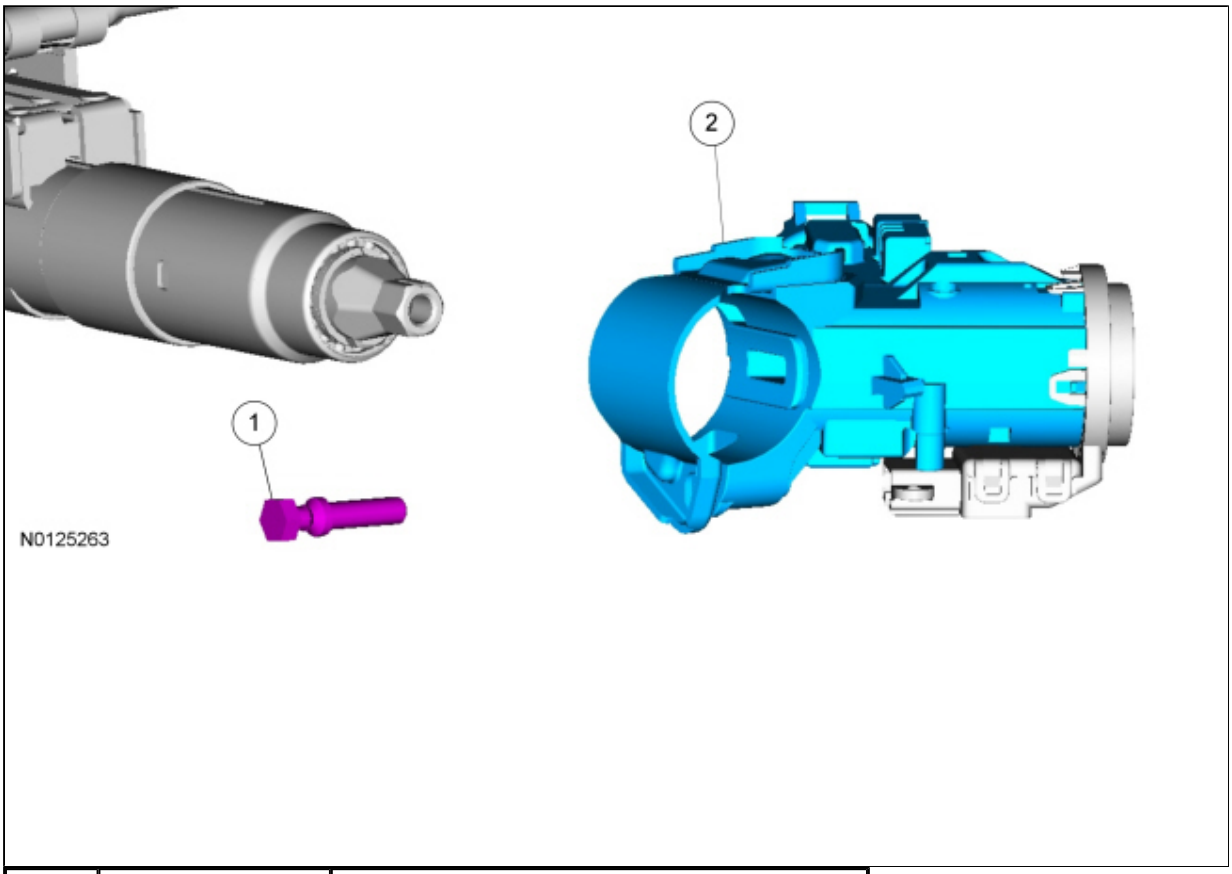
1. Remove the PATS transceiver. For additional information, refer to Section 419-01B .

2. Remove the ignition lock cylinder.
    1. Position the ignition key to the ACC position.
    2. Inset a suitable tool into the ignition lock cylinder release access hole and depress the ignition lock cylinder release button.
    3. Pull outward on the ignition key and remove the ignition lock cylinder.



3. To install, reverse the removal procedure.

Ignition Lock Cylinder Housing



Item	Part Number	Description
1	W709942	Ignition lock cylinder housing bolt
2	3F527	Ignition lock cylinder housing

Removal and Installation

1. Remove the steering wheel and steering column shrouds. For additional information, refer to Section 211-04 .
2. Remove the Passive Anti-Theft System (PATS) transceiver. For additional information, refer to Section 419-01B .
3. Remove the ignition lock cylinder. For additional information, refer to Ignition Lock Cylinder in this section.
4. Remove the ignition switch and the steering column multifunction switch. For additional information, refer to Section 211-05 .
5. Remove the wiper/washer switch. For additional information, refer to Section 501-16 .
6. Remove the steering column switch carrier. For additional information, refer to the steering column exploded view in Section 211-05 .
7. **NOTE:** Clean all metal shavings and foreign material after cutting a slot into the ignition lock cylinder housing bolt.

Cut a slot into the head of the ignition lock cylinder housing bolt.

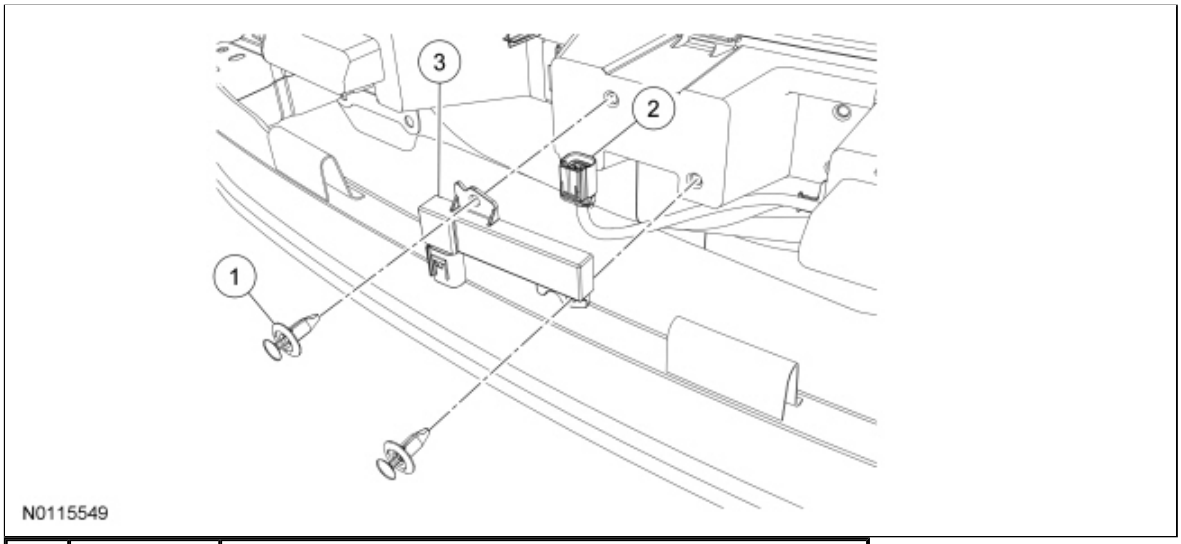
8. Remove and discard the ignition lock cylinder housing bolt.
    - To install, tighten the new bolt until the head of the bolt shears off.
9. Remove the ignition lock cylinder housing.
10. To install, reverse the removal procedure.

Door Lock Control Switch

Removal and Installation

1. The door lock control switch is integrated into the FCIM . For additional information, refer to Section 415-00 .

Intelligent Access (IA) Antenna



Item	Part Number	Description
1	16K262	Pin-type retainers (2 required)
2	—	Intelligent Access (IA) antenna electrical connector (part of 14D559)
3	15K603	IA antenna

Removal and Installation

1. Remove the rear bumper cover. For additional information, refer to Section 501-19 .
2. Refer to exploded view(s) and any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Wipers and Washers

The wiper and washer system consists of the following components:

- Front/rear washer pump and reservoir (located in the front right corner of the engine compartment)
- Front and rear wiper pivot arms
- Windshield and rear window wiper motors
- Windshield wiper mounting arm and pivot shaft assembly
- Wiper/washer switch
- Front and rear wiper blades
- Body Control Module (BCM)

The wiper and washer system functions are activated by the wiper/washer switch which provides an input to the BCM . The BCM then provides an output to operate the desired wiper system feature. The windshield and rear window wiper systems share the window washer pump and cannot be used simultaneously.

The windshield wiper system offers 4 wipe modes:

- Single
- Intermittent (6 settings)
- Normal
- Fast

When activated by the wiper/washer switch, the rear wiper offers 3 wipe modes which are based on the windshield wiper mode selected.

- 4 second rest between wipes (windshield wiper system in off or normal modes)
- Intermittent (6 settings based on windshield wiper system setting)
- Continuously (windshield wiper system in fast mode)

Wipers and Washers

Special Tool(s)

ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
ST3093-A	Fluke 77-IV Digital Multimeter FLU77-IV or equivalent
ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

Windshield Wiper System

The wiper and washer system functions are activated by the wiper/washer switch which provides an input to the Body Control Module (BCM). The BCM then provides an output to operate the desired wiper system feature. The windshield and rear window wiper systems share the window washer pump and cannot be used simultaneously. The windshield wiper system only operates when the ignition is ON.

The windshield wiper system offers 4 wipe modes:

- Single
- Intermittent (6 settings)
- Normal
- Fast

The wiper system setting of the wiper/washer switch is transmitted to the BCM to actuate the wiper motor and set the wiper speed. Normal wipe speed remains available in the event of BCM failure.

Windshield Intermittent Wipe

The windshield intermittent wipe setting of the wiper/washer switch is transmitted to the BCM to actuate the wiper motor and set the wiper delay interval. The wiper/washer switch has 6 intermittent wiper delay settings ranging from a short to a long delay:

- Level 1 delay = 1.2 seconds
- Level 2 delay = 4 seconds
- Level 3 delay = 8 seconds
- Level 4 delay = 12 seconds
- Level 5 delay = 17.5 seconds
- Level 6 delay = 25 seconds

Windshield Wiper Motor

The integrated park switch is directly connected to the BCM . The windshield wiper motor park switch contacts are open in all wiper motor positions except PARK. When the windshield wiper motor park switch contacts are open, the windshield wiper motor remains switched on even if a signal from the BCM requests the wipers to stop. In PARK position, the windshield wiper motor park switch contacts create a ground connection. The BCM recognizes this ground connection and switches the windshield wiper motor off.

Front Washer System

When the front washer system is switched ON, the BCM switches the window washer pump ON. The windshield and rear window wiper systems share the window washer pump and cannot be used simultaneously. The BCM delays wiper operation for 360 ms after operation of the wiper/washer switch washer setting. If the wiper/washer switch washer setting is not operated for at least 360 ms, the BCM does not switch the windshield wiper motor ON. The BCM activates the windshield wiper motor for as long as the wiper/washer switch washer setting is operated, up to 10 seconds maximum. After the washer pump is turned OFF, the BCM allows the windshield wipers to wipe 4 more times. An additional courtesy wipe follows the 4 wipes after a brief pause.

Rear Window Wiper System

The rear window wiper system only operates if the ignition is ON. The position that the wiper/washer switch is in for the front windshield wipers determines the action of the rear wiper:

- When the wiper/washer switch is in a position that commands the rear wiper ON and the front windshield wipers are in the OFF position, the rear wiper is activated by the BCM with a 4 second delay between wipes.
- When the front windshield wipers are being operated in the intermittent mode, the rear wiper also operates in the intermittent mode. The rear wiper reacts along with the front windshield wipers to changes in the position of the rotary interval switch. When the rotary switch is positioned for a long delay between wipes, the rear wiper also operates with a long delay between wipes. The same is true for a short delay between wipes.
- When the front windshield wipers are operated at normal speed, the rear wiper operates with a 4 second delay between wipes when switched on.
- When the front windshield wipers are operated at high speed, the rear wiper operates continuously when switched on.

Rear Washer System

When the rear wash system is switched ON, the BCM supplies power to the washer pump. Reversing the polarity of the pump enables the washing fluid to flow to the rear washer jet instead of the front washer jets. The BCM activates the window wiper for as long as the window washer switch is operated. The window washer pump is switched OFF after a maximum of 10 seconds. After clearance from the switch, the BCM allows the wiper to wipe 2 or 3 more times.

Rear Wiper Motor

The integrated park switch is directly connected to the BCM . The rear window wiper motor park switch contacts are closed in all rear window wiper motor positions except PARK. When the rear window wiper

motor park switch contacts are closed, the rear window wiper motor is supplied with a voltage by the BCM . When the rear window wiper motor reaches the PARK position, the park switch contacts open and the power supply is interrupted by the BCM . While the wiper/washer switch remains in the rear washer position, the rear window wiper motor is again supplied with a voltage by the BCM and continues to run. This process is repeated during every revolution of the rear window wiper motor.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical

• Wiper/washer switch
• Wiper linkage
• Windshield washer pump hoses
• Windshield washer nozzles
• Rear window washer pump hoses
• Rear window washer nozzles
• Washer reservoir
	• Central Junction Box (CJB) fuses:
	  ▪ 11 (20A)
	  ▪ 13 (15A)
	  ▪ 15 (15A)
	  ▪ 21 (10A)
	• Body Control Module (BCM)
	• Wiring, terminals or connectors
	• Wiper/washer switch
	• Windshield wiper motor
	• Rear window wiper motor
	• Washer pump

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** The windshield wiper motor does not communicate on the network. The windshield wiper motor provides wiper on/off status directly to the Body Control Module (BCM).

   NOTE: Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is in ON.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the BCM .

7. Carry out the network test.
   - If the scan tool responds with no communication from one or more modules, refer to Section 418-00 .

- If the network test passes, retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs).

8. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM .
9. If the DTCs retrieved are related to the concern, go to the Body Control Module (BCM) DTC Chart. For all other DTCs, refer to Section 419-10 .
10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Chart

Body Control Module (BCM) DTC Chart

DTC	Description	Action
B1008:92	Wiper Mode Switch: Performance or Incorrect Operation	GO to Pinpoint Test E .
B1051:92	Front Washer Switch: Performance or Incorrect Operation	GO to Pinpoint Test G .
B1052:92	Rear Washer Switch: Performance or Incorrect Operation	GO to Pinpoint Test G .
B11DC:92	Rear Wiper Mode Switch: Performance or Incorrect Operation	GO to Pinpoint Test D .
B1C45:24	Front Wiper Park Position Switch: Signal Stuck High	GO to Pinpoint Test I .
B1C53:13	Front Wiper Intermittent Data: Circuit Open	GO to Pinpoint Test E .
All other DTCs	—	REFER to Section 419-10 .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The wipers are inoperative — windshield	• Fuse(s) • Wiring, terminals or connectors • Wiper/washer switch • Windshield wiper motor • Body Control Module (BCM)	• GO to Pinpoint Test A .
• The wipers are inoperative — rear window	• Fuse(s) • Wiring, terminals or connectors • Wiper/washer switch • Rear window wiper motor • BCM	• GO to Pinpoint Test B .
• The wipers stay ON continuously — windshield	• Wiring, terminals or connectors • Wiper/washer	• GO to Pinpoint Test C .

	switch • Windshield wiper motor • BCM	
• The wipers stay ON continuously — rear window	• Wiring, terminals or connectors • Wiper/washer switch • Rear window wiper motor • BCM	• GO to Pinpoint Test D .
• The high/low/intermittent wiper speeds do not operate correctly — windshield	• Wiring, terminals or connectors • Wiper/washer switch • Windshield wiper motor • BCM	• GO to Pinpoint Test E .
• The continuous or intermittent wiper speeds do not operate correctly — rear window	• Wiring, terminals or connectors • Wiper/washer switch • Rear window wiper motor • BCM	• GO to Pinpoint Test F .
• The washer pump is inoperative — front/rear	• Wiring, terminals or connectors • Wiper/washer switch • Washer pump • BCM	• GO to Pinpoint Test G .
• The wipers will not PARK at the correct position — windshield	• Wiring, terminals or connectors • Windshield wiper motor • Linkage • BCM	• GO to Pinpoint Test H .
• The wipers will not PARK at the correct position — rear window	• Wiring, terminals or connectors • Rear window wiper motor • BCM	• GO to Pinpoint Test I .

Pinpoint Tests

Pinpoint Test A: The Wipers Are Inoperative — Windshield

Refer to Wiring Diagrams Cell 81 , Wipers and Washers for schematic and connector information.

Normal Operation

Power is supplied from the Central Junction Box (CJB) to the Body Control Module (BCM) for the front wiper system when the ignition is in the ON position. The BCM supplies a signal voltage(s) to the wiper/washer switch for the HIGH speed, LOW speed, and INTERMITTENT functions. Each function has its own dedicated signal (sense) voltage. The wiper/washer switch physically grounds the signal voltage(s) when a function is selected. The BCM then reacts to the grounded signal voltage(s) and its

integral electronics make a decision on which wiper system function to carry out. Ground is supplied to the wiper motor through a circuit that is shared by the BCM windshield wiper return circuit.

This pinpoint test is intended to diagnose the following:

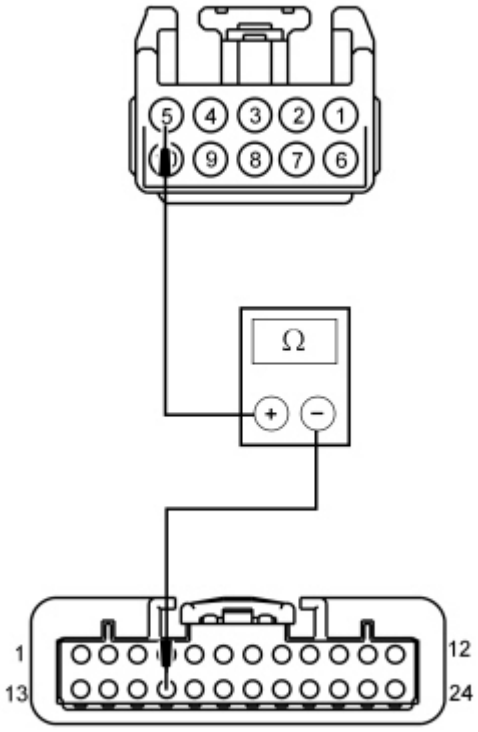
- Fuse(s)
- Wiring, terminals or connectors
- Windshield wiper motor
- Wiper/washer switch
- BCM

PINPOINT TEST A: THE WIPERS ARE INOPERATIVE — WINDSHIELD

Test Step	Result / Action to Take
A1 CHECK FOR BCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM. • **Are any BCM DTCs present?**	**Yes** REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to A2.
A2 CHECK THE BCM WINDSHIELD WIPER SWITCH PIDs	

• Enter the following diagnostic mode on the scan tool: DataLogger — BCM.
• Monitor the BCM PIDs listed below while operating the wiper/washer switch in the INTERMITTENT, LOW and HIGH positions.
  ▪ Front Wiper Interval/Auto Wiper Switch (FRNWIPER_Int)
  ▪ Front Wiper Command Low Speed (FRNWIPER_Lo)
  ▪ Front Wiper Command High Speed (FRNWIPER_Hi)
• **Does the status of each PID match the wiper/washer switch setting?**
	Yes
	GO to A6.
	
	No
	GO to A3.

A3 CHECK THE WIPER/WASHER SWITCH	
• Ignition OFF. • Disconnect: Wiper/Washer Switch C2081. • Carry out the wiper/washer switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Does the wiper/washer switch pass the component test?**	**Yes** GO to A4. **No** INSTALL a new wiper/washer switch. REFER to Section 211-05. TEST the system for normal operation.
A4 CHECK THE WIPER GROUND CIRCUIT FROM THE BCM	
• Disconnect: BCM C2280F. • Measure the resistance between the wiper/washer switch C2081-5, circuit CRW17 (GN/VT), harness side and BCM C2280F-16, circuit CRW17 (GN/VT), harness side.	**Yes** GO to A5. **No** REPAIR the circuit. TEST the system for normal operation.

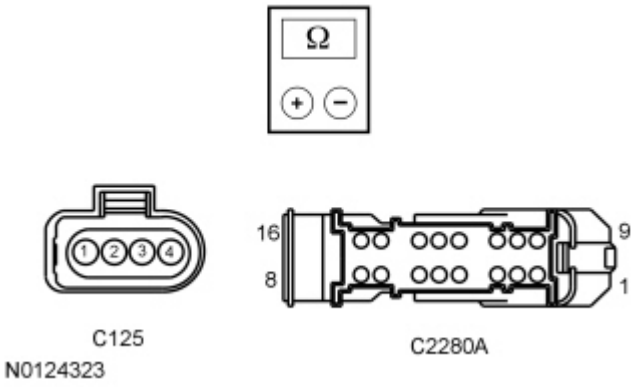


N0124319

- **Is the resistance less than 5 ohms?**

A5 CHECK THE WINDSHIELD WIPER MOTOR GROUND FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: Windshield Wiper Motor C125. • Measure the resistance between windshield wiper motor C125-4, circuit GD133 (BK), harness side and ground.  N0124320 • **Is the resistance less than 5 ohms?**	**Yes** GO to A6 . **No** REPAIR the circuit. TEST the system for normal operation.
A6 CHECK THE BCM VOLTAGE	
• Disconnect: BCM C2280B. • Ignition ON. • Measure the voltage between BCM C2280B-10, circuit CBP11 (BN), harness side and ground and between BCM C2280B-15, circuit CBP13 (GY/BN), harness side and ground.	**Yes** GO to A7 . **No** If circuit CBP11 (BN) was less than 10 volts, VERIFY CJB fuse 11

 N0124321 • **Are the voltages greater than 10 volts?**	(20A) is OK. If OK, REPAIR circuit CBP11 (BN) for an open or high resistance. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short to ground. If circuit CBP13 (GY/BN) was less than 10 volts, VERIFY Central Junction Box (CJB) fuse 13 (15A) is OK. If OK, REPAIR circuit CBP13 (GY/BN) for an open or high resistance. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short to ground.
A7 CHECK THE BCM GROUND CIRCUIT FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: BCM C2280A. • Measure the resistance between BCM C2280A-16, circuit GD156 (BK/VT), harness side and ground.  N0125564 • **Is the resistance less than 5 ohms?**	**Yes** GO to A8 . **No** REPAIR the circuit. TEST the system for normal operation.
A8 CHECK WINDSHIELD WIPER MOTOR LOW AND HIGH RELAY OUTPUT CIRCUITS FOR AN OPEN OR HIGH RESISTANCE	
• Measure the resistance between windshield wiper motor C125-1, circuit CRW15 (BN/WH), harness side and BCM C2280A-10, circuit CRW15 (BN/WH), harness side and between windshield wiper motor C125-2, circuit CRW16 (GY/BN), harness side and BCM C2280A-9, circuit CRW16 (GY/BN), harness side.	**Yes** GO to A9 . **No** REPAIR the affected circuit. TEST the system for normal operation.

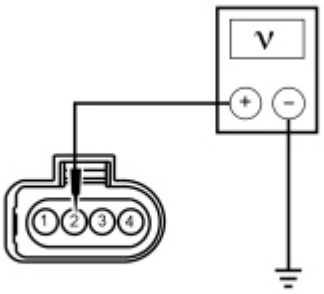


N0124323

- **Are the resistances less than 5 ohms?**

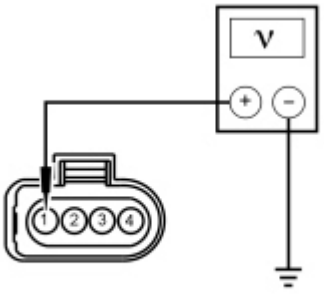
A9 CHECK FOR VOLTAGE TO THE WINDSHIELD WIPER MOTOR USING THE BCM PIDs FRONT WIPER RELAY - LOW SPEED (WPR_RLY_F_Lo) AND FRONT WIPER RELAY - FAST SPEED (WPR_RLY_F_Hi)

- Connect: BCM C2280A.
- Connect: BCM C2280B.
- Connect: BCM C2280F (if previously disconnected).
- Connect: Wiper/Washer Switch C2081 (if previously disconnected).
- Ignition ON.
- Command the BCM PID WPR_RLY_F_Lo on.
- Measure the voltage between windshield wiper motor C125-2, circuit CRW16 (GY/BN), harness side and ground.



N0124324

- Command the BCM PID WPR_RLY_F_Hi on.
- Measure the voltage between windshield wiper motor C125-1, circuit CRW15 (BN/WH), harness side and ground.



N0124325

- **Are the voltages greater than 10 volts?**

Yes
GO to A10 .

No
GO to A11 .

A10 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Ignition OFF.
• Inspect windshield wiper motor C125 for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the windshield wiper motor C125 and make sure it seats correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new windshield wiper motor. REFER to Wiper Motor — Windshield in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

A11 CHECK FOR CORRECT BCM OPERATION	

• Ignition OFF.
• Inspect the BCM connectors for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the BCM connectors and make sure they seat correctly.
• Connect: Windshield Wiper Motor C125.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test B: The Wipers are Inoperative — Rear Window

Refer to Wiring Diagrams Cell 81, Wipers and Washers for schematic and connector information.

Normal Operation

Power is supplied from the Central Junction Box (CJB) to the Body Control Module (BCM) for the rear window wiper system when the ignition is in the ON position. The BCM supplies a signal voltage(s) to the wiper/washer switch for the CONTINUOUS and INTERMITTENT wiper functions. Both functions share a dedicated signal (sense) line. The wiper/washer switch physically grounds the signal voltage(s) when a function is selected. The BCM then reacts to the grounded signal voltage(s) and its integral electronics make a decision on which wiper system function to carry out (depending on the windshield wiper setting). Ground is supplied to the rear window wiper motor through its own dedicated circuit.

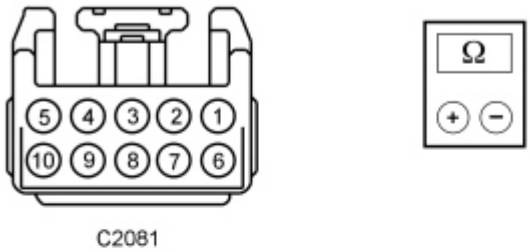
This pinpoint test is intended to diagnose the following:

- Fuse(s)
- Wiring, terminals or connectors
- Wiper/washer switch
- Rear window wiper motor
- BCM

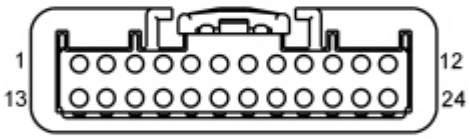
PINPOINT TEST B: THE WIPERS ARE INOPERATIVE — REAR WINDOW

Test Step	Result / Action to

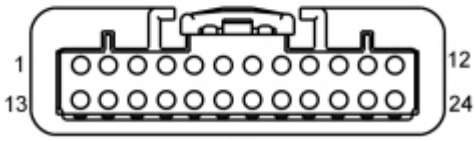
	Take
B1 CHECK FOR BCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM . • **Are any BCM DTCs present?**	**Yes** REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to B2 .
B2 CHECK THE BCM PID REAR WIPER INPUT SWITCH STATUS (R_WP-SW)	
• Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • Monitor the BCM PID R_WP-SW while operating the wiper/washer switch in the rear wiper mode. • **Does the status of the PID match the wiper/washer switch setting?**	**Yes** GO to B5 . **No** GO to B3 .
B3 CHECK THE WIPER/WASHER SWITCH	
• Ignition OFF. • Disconnect: Wiper/Washer Switch C2081. • Carry out the wiper/washer switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Does the wiper/washer switch pass the component test?**	**Yes** GO to B4 . **No** INSTALL a new wiper/washer switch. REFER to Section 211-05 . TEST the system for normal operation.
B4 CHECK THE WIPER GROUND CIRCUIT FROM THE BCM AND THE REAR WIPER INTERVAL CIRCUIT	
• Disconnect: BCM C2280E. • Disconnect: BCM C2280F. • Measure the resistance between wiper/washer switch C2081-4, circuit CRW20 (GY/YE), harness side and BCM C2280E-5, circuit CRW20 (GY/YE), harness side and between wiper/washer switch C2081-5, circuit CRW17 (GN/VT), harness side and BCM C2280F-16, circuit CRW17 (GN/VT), harness side.	**Yes** GO to B5 . **No** REPAIR the affected circuit. TEST the system for normal operation.



C2081



C2280E



C2280F

N0124326

- **Are the resistances less than 5 ohms?**

B5 CHECK THE REAR WINDOW WIPER MOTOR GROUND FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: Rear Window Wiper Motor C4218. • Measure the resistance between rear window wiper motor C4218-3, circuit GD143 (BK/VT), harness side and ground.  N0124327 • **Is the resistance less than 5 ohms?**	**Yes** GO to B6 . **No** REPAIR the circuit. TEST the system for normal operation.
B6 CHECK THE BCM VOLTAGE	
• Disconnect: BCM C2280B. • Ignition ON. • Measure the voltage between BCM C2280B-15, circuit CBP13 (GY/BN), harness side and ground.	**Yes** GO to B7 . **No** VERIFY Central Junction Box (CJB) fuse 13 (15A) is OK. If

 N0124328 • **Is the voltage greater than 10 volts?**	OK, REPAIR circuit CBP13 (GY/BN) for an open or high resistance. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short to ground.
B7 CHECK REAR WINDOW WIPER MOTOR SUPPLY AND RELAY OUTPUT CIRCUITS FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: BCM C2280C. • Measure the resistance between rear window wiper motor C4218-1, circuit CRW02 (GY/BU), harness side and BCM C2280C-11, circuit CRW02 (GY/BU), harness side and between rear window wiper motor C4218-2, circuit CRW05 (BU), harness side and BCM C2280C-9, circuit CRW05 (BU), harness side.  N0124329 • **Are the resistances less than 5 ohms?**	**Yes** GO to B8 . **No** REPAIR the affected circuit. TEST the system for normal operation.
B8 CHECK FOR VOLTAGE TO THE REAR WINDOW WIPER MOTOR USING THE BCM PID REAR WIPER RELAY (WPR_RLY_REAR)	
• Connect: BCM C2280B. • Connect: BCM C2280C. • Connect: BCM C2280E. • Connect: BCM C2280F. • Connect: Wiper/Washer Switch C2081. • Ignition ON. • Command the BCM PID WPR_RLY_REAR on. • Measure the voltage between rear window wiper motor C4218-1, circuit CRW02 (GY/BU), harness side and ground and between rear window wiper motor C4218-2, circuit CRW05 (BU), harness side and ground.	**Yes** GO to B9 . **No** GO to B10 .

 N0124330 • **Are the voltages greater than 10 volts?**	

B9 CHECK FOR CORRECT WIPER MOTOR OPERATION
• Ignition OFF.
• Inspect rear window wiper motor C4218 for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the rear window wiper motor C4218 and make sure it seats correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new rear window wiper motor. REFER to Wiper Motor — Rear Window in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

B10 CHECK FOR CORRECT BCM OPERATION
• Ignition OFF.
• Inspect the BCM connectors for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the BCM connectors and make sure they seat correctly.
• Connect: Rear Window Wiper Motor C4218.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test C: The Wipers Stay ON Continuously — Windshield

Refer to Wiring Diagrams Cell 81, Wipers and Washers for schematic and connector information.

Normal Operation

The Body Control Module (BCM) supplies a signal voltage(s) to the wiper/washer switch for the HIGH speed, LOW speed, and INTERMITTENT functions. Each function has its own dedicated signal (sense) line. The wiper/washer switch physically grounds the signal voltage(s) when a function is selected. The BCM then reacts to the grounded signal voltage(s) and its integral electronics make a decision on which wiper system function to carry out.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper/washer switch
- Windshield wiper motor
- BCM

PINPOINT TEST C: THE WIPERS STAY ON CONTINUOUSLY — WINDSHIELD

Test Step	Result / Action to Take
C1 CHECK FOR BCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM. • **Are any BCM DTCs present?**	**Yes** REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to C2.

C2 CHECK THE BCM WINDSHIELD WIPER SWITCH PIDs
• Enter the following diagnostic mode on the scan tool: DataLogger — BCM.
• Monitor the BCM PIDs listed below while operating the wiper/washer switch in the INTERMITTENT, LOW and HIGH positions.
  ▪ Front Wiper Interval/Auto Wiper Switch (FRNWIPER_Int)
  ▪ Front Wiper Command Low Speed (FRNWIPER_Lo)
  ▪ Front Wiper Command High Speed (FRNWIPER_Hi)
• **Does the status of each PID match the wiper/washer switch setting?**
	Yes
	GO to C4.
	
	No
	GO to C3.

C3 CHECK THE WIPER/WASHER SWITCH • Ignition OFF. • Disconnect: Wiper/Washer Switch C2081. • Carry out the wiper/washer switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Does the wiper/washer switch pass the component test?**	**Yes** GO to C5. **No** INSTALL a new wiper/washer switch. REFER to Section 211-05. TEST the system for normal operation.
C4 CHECK WINDSHIELD WIPER MOTOR LOW AND HIGH RELAY OUTPUT CIRCUITS FOR A SHORT TO VOLTAGE • Ignition OFF. • Disconnect: Windshield Wiper Motor C125. • Disconnect: BCM C2280A. • Ignition ON. • Measure the voltage between windshield wiper motor C125-1, circuit CRW15 (BN/WH), harness side and ground and between windshield wiper motor C125-2, circuit CRW16 (GY/BN), harness side and ground.	**Yes** REPAIR the affected circuit. TEST the system for normal operation. **No** GO to C5.

 N0124344 • **Is voltage present on either circuit?**	

C5 CHECK FOR CORRECT BCM OPERATION
• Ignition OFF.
• Inspect the BCM connectors for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the BCM connectors and make sure they seat correctly.
• Connect: Windshield Wiper Motor C125.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test D: The Wipers Stay ON Continuously — Rear Window

Refer to Wiring Diagrams Cell 81, Wipers and Washers for schematic and connector information.

Normal Operation

The Body Control Module (BCM) supplies a signal voltage(s) to the wiper/washer switch for the CONTINUOUS and INTERMITTENT wiper functions. Both functions share a dedicated signal (sense) line. The wiper/washer switch physically grounds the signal voltage(s) when a function is selected. The BCM then reacts to the grounded signal voltage(s) and its integral electronics make a decision on which wiper system function to carry out (depending on windshield wiper setting).

- DTC B11DC:92 (Rear Wiper Mode Switch: Performance or Incorrect Operation) — sets during self-test when the rear wiper interval switch circuit is grounded.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper/washer switch
- Rear window wiper motor
- BCM

PINPOINT TEST D: THE WIPERS STAY ON CONTINUOUSLY — REAR WINDOW

Test Step	Result / Action to

	Take
D1 CHECK FOR BCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM . • **Are any BCM DTCs present?**	**Yes** REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to D2 .
D2 CHECK THE BCM PID REAR WIPER INPUT SWITCH STATUS (R_WP-SW)	
• Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • Monitor the BCM PID R_WP-SW while operating the wiper/washer switch in the rear wiper mode. • **Does the status of the PID match the wiper/washer switch setting?**	**Yes** GO to D5 . **No** GO to D3 .
D3 CHECK THE WIPER/WASHER SWITCH	
• Ignition OFF. • Disconnect: Wiper/Washer Switch C2081. • Carry out the wiper/washer switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Does the wiper/washer switch pass the component test?**	**Yes** GO to D4 . **No** INSTALL a new wiper/washer switch. REFER to Section 211-05 . TEST the system for normal operation.
D4 CHECK THE REAR WIPER INTERVAL CIRCUIT FOR A SHORT TO GROUND	
• Disconnect: BCM C2280E. • Measure the resistance between wiper/washer switch C2081-4, circuit CRW20 (GY/YE), harness side and ground.  N0124331 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to D6 . **No** REPAIR the affected circuit. TEST the system for normal operation.
D5 CHECK REAR WINDOW WIPER SUPPLY AND WIPER MOTOR RELAY OUTPUT CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: Rear Window Wiper Motor C4218. • Measure the voltage between rear window wiper motor C4218-1, circuit CRW02 (GY/BU), harness side and ground and between rear window wiper motor C4218-2, circuit CRW05 (BU), harness side and ground.	**Yes** REPAIR the affected circuit. TEST the system for normal operation.

 N0124330 • **Is any voltage present?**	**No** GO to D6 .
D6 CHECK FOR CORRECT BCM OPERATION • Ignition OFF. • Inspect the BCM connectors for the following conditions: ▪ corrosion ▪ damaged or pushed out pins • Connect the BCM connectors and make sure they seat correctly. • Connect: Wiper/Washer Switch C2081. • Connect: Rear Window Wiper Motor C4218. • Operate the system and verify if the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The HIGH/LOW/INTERMITTENT Wiper Speeds Do Not Operate Correctly — Windshield

Refer to Wiring Diagrams Cell 81 , Wipers and Washers for schematic and connector information.

Normal Operation

The Body Control Module (BCM) supplies a signal voltage(s) to the wiper/washer switch for the HIGH speed, LOW speed, and INTERMITTENT functions. Each function has its own dedicated signal (sense) line. The wiper/washer switch physically grounds the signal voltage(s) when a function is selected. The BCM reacts to the grounded signal voltage(s) and its integral electronics make a decision on which wiper system function to carry out. The wiper/washer switch has a rheostat (variable resistor) which, when moved, changes the time delay between wipes. The BCM monitors the position of the rheostat through a sense line.

- DTC B1008:92 (Wiper Mode Switch: Performance or Incorrect Operation) — sets when the INTERMITTENT mode is grounded at the same time as the LOW and/or HIGH speed functions for more than 2 seconds.
- DTC B1C53:13 (Front Wiper Intermittent Data: Circuit Open) — sets when the front interval potentiometer input circuit is open.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper/washer switch
- Windshield wiper motor
- BCM

PINPOINT TEST E: THE HIGH/LOW/INTERMITTENT WIPER SPEEDS DO NOT OPERATE CORRECTLY — WINDSHIELD

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>E1 CHECK FOR BCM DTCs

• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self-Test — BCM.
• Are any BCM DTCs present?</td><td>Yes
For DTC B1008:92, GO to E5.

For DTC B1C53:13, GO to E4.

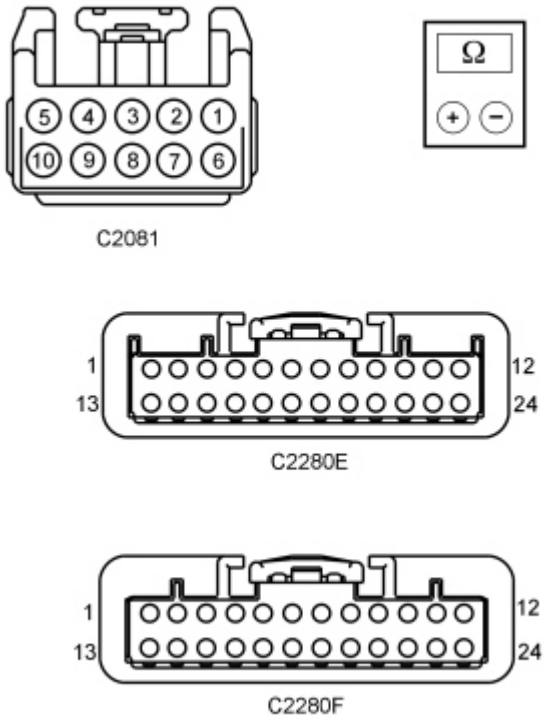
C2081-10	CRW18 (VT/WH)	C2280F-6

Yes
GO to E5 .

No
REPAIR the affected circuit. TEST the system for normal operation.



- **Are the resistances less than 5 ohms?**

E5 CHECK WIPER/WASHER SWITCH WINDSHIELD WIPER CIRCUITS FOR A SHORT TO GROUND

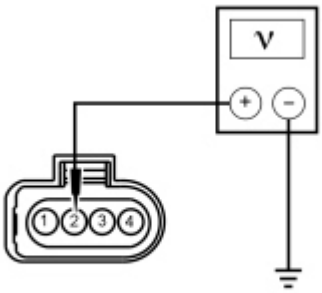
- Ignition OFF.
- Disconnect: Wiper/Washer Switch C2081 (if not previously disconnected).
- Disconnect: BCM C2280E (if not previously disconnected).
- Disconnect: BCM C2280F (if not previously disconnected).
- Measure the resistance between wiper/washer switch C2081, harness side and ground as follows:

Wiper/Washer Switch	Circuit
C2081-3	CRW10 (BU/GN)
C2081-8	CRW08 (VT/OG)
C2081-9	VRW11 (GN/BN)
C2081-10	CRW18 (VT/WH)

Yes
GO to E9 .

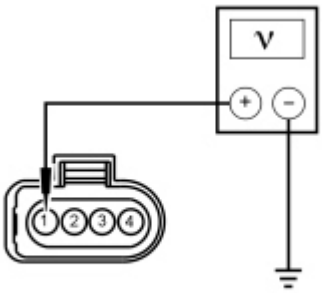
No
REPAIR the affected circuit. TEST the system for normal operation.

 N0124332 • **Are the resistances greater than 10,000 ohms?**	
E6 CHECK WINDSHIELD WIPER MOTOR LOW AND HIGH RELAY OUTPUT CIRCUITS FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: Windshield Wiper Motor C125. • Disconnect: BCM C2280A. • Measure the resistance between windshield wiper motor C125-1, circuit CRW15 (BN/WH), harness side and BCM C2280A-10, circuit CRW15 (BN/WH), harness side and between windshield wiper motor C125-2, circuit CRW16 (GY/BN), harness side and BCM C2280A-9, circuit CRW16 (GY/BN), harness side.  C125 C2280A N0124323 • **Are the resistances less than 5 ohms?**	**Yes** GO to E7 . **No** REPAIR the affected circuit. TEST the system for normal operation.
E7 CHECK FOR VOLTAGE TO THE WINDSHIELD WIPER MOTOR USING THE BCM PIDs FRONT WIPER RELAY - LOW SPEED (WPR_RLY_F_Lo) AND FRONT WIPER RELAY - FAST SPEED (WPR_RLY_F_Hi)	
• Connect: BCM C2280A. • Ignition ON. • Command the BCM PID WPR_RLY_F_Lo on. • Measure the voltage between windshield wiper motor C125-2, circuit CRW16 (GY/BN), harness side and ground.	**Yes** GO to E8 . **No** GO to E9 .



N0124324

- Command the BCM PID WPR_RLY_F_Hi on.
- Measure the voltage between windshield wiper motor C125-1, circuit CRW15 (BN/WH), harness side and ground.



N0124325

- **Are the voltages greater than 10 volts?**

E8 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION
• Ignition OFF.
• Inspect windshield wiper motor C125 for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the windshield wiper motor C125 and make sure it seats correctly.
• Connect: BCM C2280E.
• Connect: BCM C2280F.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new windshield wiper motor. REFER to Wiper Motor — Windshield in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

E9 CHECK FOR CORRECT BCM OPERATION
• Ignition OFF.
• Inspect the BCM connectors for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
	Yes
	INSTALL a new BCM. REFER to Section 419-

• Connect the BCM connectors and make sure they seat correctly. • Connect: Wiper/Washer Switch C2081 (if previously disconnected). • Connect: Windshield Wiper Motor C125 (if previously disconnected). • Operate the system and verify if the concern is still present. • **Is the concern still present?**	10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test F: The CONTINUOUS or INTERMITTENT Wiper Speeds Do Not Operate Correctly — Rear Window

Refer to Wiring Diagrams Cell 81 , Front Wipers and Washers for schematic and connector information.

Normal Operation

The Body Control Module (BCM) supplies a signal voltage(s) to the wiper/washer switch for CONTINUOUS and INTERMITTENT wiper functions. Both functions share a dedicated signal (sense) line. The wiper/washer switch physically grounds the signal voltage(s) when a function is selected. The BCM reacts to the grounded signal voltage(s) and its integral electronics make a decision on which wiper system function to carry out (depending on the windshield wiper setting).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper/washer switch
- Rear window wiper motor
- BCM

PINPOINT TEST F: THE CONTINUOUS OR INTERMITTENT WIPER SPEEDS DO NOT OPERATE CORRECTLY — REAR WINDOW

Test Step	Result / Action to Take
F1 CHECK FOR BCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM . • **Are any BCM DTCs present?**	**Yes** REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to F2 .
F2 CHECK OPERATION OF THE WINDSHIELD WIPERS	
• Operate the windshield wipers in LOW, HIGH and in each INTERMITTENT mode. • **Do the windshield wipers operate correctly?**	**Yes** GO to F3 . **No** IDENTIFY the

	windshield wiper system symptom and GO to Symptom Chart for further diagnosis.
F3 CHECK THE BCM PID REAR WIPER INPUT SWITCH STATUS (R_WP-SW)	
• Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • Monitor the BCM PID R_WP-SW while operating the wiper/washer switch in the rear wiper mode. • **Does the status of the PID match the wiper/washer switch setting?**	**Yes** GO to F5 . **No** GO to F4 .
F4 CHECK THE WIPER/WASHER SWITCH	
• Ignition OFF. • Disconnect: Wiper/Washer Switch C2081. • Carry out the wiper/washer switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Does the wiper/washer switch pass the component test?**	**Yes** GO to F8 . **No** INSTALL a new wiper/washer switch. REFER to Section 211-05 . TEST the system for normal operation.
F5 CHECK THE REAR WINDOW WIPER MOTOR GROUND FOR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: Rear Window Wiper Motor C4218. • Measure the resistance between rear window wiper motor C4218-3, circuit GD143 (BK/VT), harness side and ground.  N0124327 • **Is the resistance less than 5 ohms?**	**Yes** GO to F6 . **No** REPAIR the circuit. TEST the system for normal operation.
F6 CHECK FOR VOLTAGE TO THE REAR WINDOW WIPER MOTOR USING THE BCM PID REAR WIPER RELAY (WPR_RLY_REAR)	
• Ignition ON. • Command the BCM PID WPR_RLY_REAR on. • Measure the voltage between rear window wiper motor C4218-1, circuit CRW02 (GY/BU), harness side and ground and between rear window wiper motor C4218-2, circuit CRW05 (BU), harness side and ground.	**Yes** GO to F7 . **No** GO to F8 .

 N0124330 • **Are the voltages greater than 10 volts?**	

F7 CHECK FOR CORRECT WIPER MOTOR OPERATION
• Ignition OFF.
• Inspect rear window wiper motor C4218 for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the rear window wiper motor C4218 and make sure it seats correctly.
• Connect: Wiper/Washer Switch C2081.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new rear window wiper motor. REFER to Wiper Motor — Rear Window in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

F8 CHECK FOR CORRECT BCM OPERATION
• Ignition OFF.
• Inspect the BCM connectors for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the BCM connectors and make sure they seat correctly.
• Connect: Wiper/Washer Switch C2081.
• Connect: Rear Window Wiper C4218.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test G: The Washer Pump is Inoperative — Front/Rear

Refer to Wiring Diagrams Cell 81 , Wipers and Washers for schematic and connector information.

Normal Operation

The front and rear washer systems share the same washer pump motor. The Body Control Module (BCM) supplies a signal voltage(s) to the wiper/washer switch for the front/rear wash functions. Each function has its own dedicated signal (sense) line. The wiper/washer switch physically grounds the signal voltage when a wash function is selected. The BCM reacts to the grounded signal voltage(s) and its integral electronics make a decision on what polarity to supply the washer pump motor with. The

BCM changes the polarity to the washer pump motor in reaction to a front or rear wash selection, changing the rotational direction of the motor.

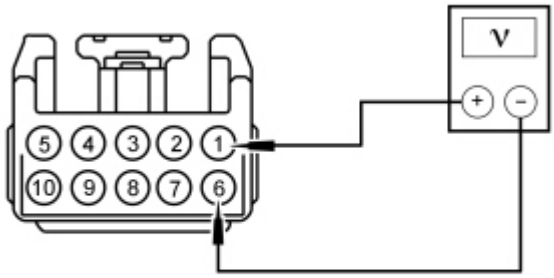
- DTC B1051:92 (Front Washer Switch: Performance or Incorrect Operation) — sets during self-test when the wiper/washer switch front washer circuit to the BCM or the front washer pump circuit is grounded.
- DTC B1052:92 (Rear Washer Switch: Performance or Incorrect Operation) — sets during self-test when the wiper/washer switch rear washer circuit to the BCM or rear washer pump circuit is grounded.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper/washer switch
- Washer pump
- BCM

PINPOINT TEST G: THE WASHER PUMP IS INOPERATIVE — FRONT/REAR

Test Step	Result / Action to Take
G1 CHECK THE BCM PIDs FRONT WASHER SWITCH (FRNWIPER_Wsh) AND REAR WASHER SWITCH INPUT (RWASH_SW)	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — BCM. • **NOTE:** The rear window washer feature is only available on 5-door hatchback vehicles. • Monitor the BCM PIDs FRNWIPER_Wsh and RWASH_SW while operating the wiper/washer switch front and rear washer modes. • **Does the status of each PID match the wiper/washer switch setting?**	**Yes** GO to G7. **No** GO to G2.
G2 CHECK THE WIPER/WASHER SWITCH	
• Ignition OFF. • Disconnect: Wiper/Washer Switch C2081. • Carry out the wiper/washer switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Does the wiper/washer switch pass the component test?**	**Yes** GO to G3. **No** INSTALL a new wiper/washer switch. REFER to Section 211-05. TEST the system for normal operation.
G3 CHECK VOLTAGE AND GROUND CIRCUITS TO THE WIPER/WASHER SWITCH	
• Ignition ON. • Measure the voltage between wiper/washer switch C2081-1, circuit CBP15 (BN/BU), harness side and C2081-6, circuit GD115 (BK/GY), harness side.	**Yes** GO to G5. **No** GO to G4.



N0124333

- **Is the voltage greater than 10 volts?**

G4 CHECK THE VOLTAGE CIRCUIT TO THE WIPER/WASHER SWITCH FOR AN OPEN OR HIGH RESISTANCE	
• Measure the voltage between wiper/washer switch C2081-1, circuit CBP15 (BN/BU), harness side and ground.  N0124334 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit GD115 for an open or high resistance. TEST the system for normal operation. **No** VERIFY Central Junction Box (CJB) fuse 15 (15A) is OK. If OK, REPAIR circuit CBP15 (BN/BU). If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short to ground.
G5 CHECK THE WIPER/WASHER SWITCH WASHER PUMP MOTOR REQUEST CIRCUITS TO THE BCM FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: BCM C2280B. • Measure the resistance between wiper/washer switch C2081-2, circuit CRW07 (GY/BN), harness side and BCM C2280B-12, circuit CRW07 (GY/BN), harness side and between wiper/washer switch C2081-7, circuit CRW12 (GY/OG), harness side and BCM C2280B-14, circuit CRW12 (GY/OG), harness side  N0124335 • **Are the resistances less than 5 ohms?**	**Yes** GO to G6 . **No** REPAIR the affected circuit. TEST the system for normal operation.

G6 CHECK THE WIPER/WASHER SWITCH WASHER PUMP MOTOR REQUEST CIRCUITS TO THE BCM FOR A SHORT TO GROUND	
• Measure the resistance between wiper/washer switch C2081-2, circuit CRW07 (GY/BN), harness side and ground and between wiper/washer switch C2081-7, circuit CRW12 (GY/OG), harness side and ground.  N0125565 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to G10. **No** REPAIR the affected circuit. CLEAR the BCM DTCs. REPEAT the self-test. TEST the system for normal operation.
G7 CHECK FOR VOLTAGE AND GROUND TO THE WASHER PUMP MOTOR	
• Disconnect: Washer Pump Motor C137. • **NOTE:** On 5-door hatchback vehicles, make sure to operate both the front and rear washer modes. • While using the wiper/washer switch to activate the washer pump motor, measure the voltage between washer pump motor C137-2, circuit CRW23 (VT/GN), harness side and washer pump motor C137-1, circuit CRW14 (BU/WH), harness side.  N0124337 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new washer pump motor. REFER to Washer Pump in this section. TEST the system for normal operation. **No** GO to G8.
G8 CHECK THE WASHER PUMP MOTOR CIRCUITS FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: BCM C2280B. • Measure the resistance between BCM C2280B-4, circuit CRW23 (VT/GN), harness side and washer pump motor C137-2, circuit CRW23 (VT/GN), harness side and between BCM C2280B-13, circuit CRW14 (BU/WH), harness side and washer pump motor C137-1, circuit CRW14 (BU/WH), harness side.	**Yes** GO to G9. **No** REPAIR the affected circuit. TEST the system for normal operation.

 N0124338 • **Are the resistances less than 5 ohms?**	
G9 CHECK THE WASHER PUMP MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: BCM C2280A. • Measure the resistance between washer pump motor C137-1, circuit CRW14 (BU/WH), harness side and ground and between washer pump motor C137-2, circuit CRW23 (VT/GN), harness side and ground.  N0124339 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to G10 . **No** REPAIR the affected circuit. CLEAR the BCM DTCs. REPEAT the self-test. TEST the system for normal operation.
G10 CHECK FOR CORRECT BCM OPERATION	
• Ignition OFF. • Inspect the BCM connectors for the following conditions: ▪ corrosion ▪ damaged or pushed out pins • Connect the BCM connectors and make sure they seat correctly. • Connect: Wiper/Washer Switch C2081 (if previously disconnected). • Connect: Windshield Wiper Motor C125 (if previously disconnected). • Operate the system and verify if the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new BCM . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test H: The Wipers Will Not PARK at the Correct Position — Windshield

Refer to Wiring Diagrams Cell 81 , Wipers and Washers for schematic and connector information.

Normal Operation

Integral to the wiper motor is a set of contacts that only close when the wipers are in the PARK position. When closed the contacts supply ground to the Body Control Module (BCM) which uses the ground to sense when the wipers are in the PARK position. If the wipers are in use, the BCM continues to supply power to the wiper motor after the wipers are commanded OFF and in a NON-PARK position. Once the wipers are in the PARK position, the BCM removes power from the wiper motor and the wipers remain PARKED.

- DTC B1C45:24 (Front Wiper Position Switch: Signal Stuck High) — sets during self-test when the wipers are not initially PARKED or are still PARKED after 500 ms with the wiper/washer switch set to LOW SPEED. Also sets while being continuously monitored when the wiper/washer switch is set to SINGLE WIPE or INTERMITTENT and the wipers remain PARKED for longer than 1.5 seconds or when the wiper/washer switch is set to OFF and the wipers remain in a NON-PARKED position for longer than 12 seconds.

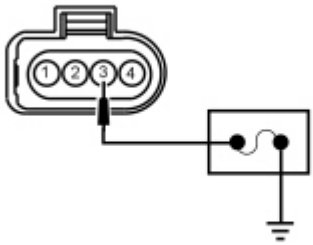
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Linkage
- Windshield wiper motor
- BCM

PINPOINT TEST H: THE WIPERS WILL NOT PARK AT THE CORRECT POSITION — WINDSHIELD

Test Step	Result / Action to Take
H1 INSPECT THE WINDSHIELD WIPERS • Inspect the wiper pivot arms and wiper mounting arm and pivot shaft assembly for damage or obstructions. • **Are any parts damaged or is an obstruction present?**	**Yes** REMOVE any damaged parts and INSTALL new. REMOVE any debris or obstructions. TEST the system for normal operation. **No** GO to H2.
H2 CHECK FOR BCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM. • **Are any BCM DTCs present?**	**Yes** For DTC B1C45:24, GO to H4. For all other BCM DTCs, REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to H3.
H3 CHECK THE BCM PID FRONT WIPER PARK SWITCH (FRNWIPER_Prk) WHILE OPERATING THE WINDSHIELD WIPERS • Enter the following diagnostic mode on the scan tool: DataLogger — BCM. • Monitor the BCM PID FRNWIPER_Prk while operating the windshield wipers in LOW mode. • **Does the status of the PID alternate between Wipe and**	**Yes** GO to H7. **No** GO to H4.

Parked?	
H4 CHECK THE FRONT WIPER PARK SWITCH CIRCUIT FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: Windshield Wiper Motor C125. • Disconnect: BCM C2280D. • Measure the resistance between windshield wiper motor C125-3, circuit CRW09 (BN/BU), harness side and BCM C2080D-3, circuit CRW09 (BN/BU), harness side.  N0124340 • **Is the resistance less than 5 ohms?**	**Yes** GO to H5 . **No** REPAIR the circuit. TEST the system for normal operation.
H5 CHECK THE FRONT WIPER PARK SWITCH CIRCUIT FOR A SHORT TO GROUND	
• Measure the resistance between windshield wiper motor C125-3, circuit CRW09 (BN/BU), harness side and ground.  N0124341 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H6 . **No** REPAIR the circuit. TEST the system for normal operation.
H6 CHECK THE BCM PID FRONT WIPER PARK SWITCH (FRNWIPER_Prk)	
• Connect: BCM C2280D. • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — BCM . • With the windshield wiper motor C125 disconnected, monitor the BCM PID FRNWIPER_Prk. • Connect a fused jumper wire between windshield wiper motor C125-3, circuit CRW09 (BN/BU), harness side and ground.	**Yes** GO to H8 . **No** GO to H9 .



N0124342

- With the front wiper park switch circuit shorted to ground, monitor the BCM PID FRNWIPER_Prk.
- **Does the status of the PID read Wipe with the windshield wiper motor disconnected and Parked with the wiper park switch circuit shorted to ground?**

H7 CHECK THE FRONT WIPER RETURN CIRCUIT FOR AN OPEN OR HIGH RESISTANCE	
• Ignition OFF. • Disconnect: BCM C2280A. • Measure the resistance between BCM C2080A-12, circuit GD133 (BK), harness side and ground.  N0124343 • **Is the resistance less than 5 ohms?**	**Yes** GO to H9 . **No** REPAIR the circuit. TEST the system for normal operation.
H8 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Ignition OFF.
• Inspect windshield wiper motor C125 for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the windshield wiper motor C125 and make sure it seats correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new windshield wiper motor. REFER to Wiper Motor — Windshield in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

H9 CHECK FOR CORRECT BCM OPERATION	
• Ignition OFF.	**Yes**

• Inspect the BCM connectors for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the BCM connectors and make sure they seat correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	INSTALL a new BCM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Pinpoint Test I: The Wipers Will Not PARK at the Correct Position — Rear Window

Refer to Wiring Diagrams Cell 81, Wipers and Washers for schematic and connector information.

Normal Operation

Integral to the wiper motor is a set of contacts that only close when the wipers are in a NON-PARK position. The Body Control Module (BCM) supplies power to the wiper motor as long as the contacts are closed or the wipers are in a NON-PARK position. When the wipers are commanded OFF during use, the BCM continues to supply the wiper motor with power until the contacts open when the PARK position is reached.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Rear window wiper motor
- BCM

PINPOINT TEST I: THE WIPERS WILL NOT PARK AT THE CORRECT POSITION — REAR WINDOW

Test Step	Result / Action to Take
I1 CHECK FOR BCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self-Test — BCM. • **Are any BCM DTCs present?**	**Yes** REFER to the Body Control Module (BCM) DTC Chart for further diagnosis. **No** GO to I2.
I2 CHECK OPERATION OF THE WINDSHIELD WIPERS	
• Operate the windshield wipers in LOW, HIGH and in each INTERMITTENT mode. • **Do the windshield wipers operate correctly?**	**Yes** GO to I3. **No** IDENTIFY the windshield wiper system symptom and GO to Symptom Chart for further diagnosis.
I3 CHECK OPERATION OF THE REAR WINDOW WIPER	
• Operate the windshield wipers in HIGH and turn the rear window wiper ON. • **Does the rear window wiper**	**Yes** GO to I4. **No**

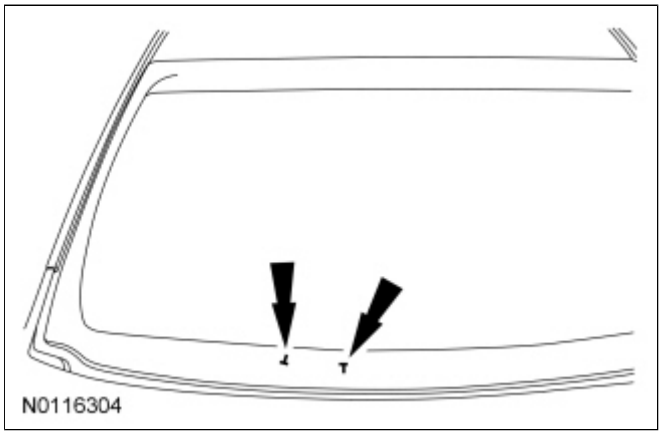
operate continuously and correctly?	GO to Pinpoint Test F .
I4 CHECK FOR CORRECT WIPER MOTOR OPERATION	

• Ignition OFF.
• Inspect the rear window wiper motor C4218 for the following conditions:
  ▪ corrosion
  ▪ damaged or pushed out pins
• Connect the rear window wiper motor C4218 and make sure it seats correctly.
• Connect: Rear Window Wiper Motor C4218.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new rear window wiper motor. REFER to Wiper Motor — Rear Window in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

Wiper Blade and Pivot Arm Adjustment — Windshield

1. Cycle and park the windshield wipers.

2. Verify that the RH and LH wiper blade tips are aligned to the "T" marks on the lower windshield glass.

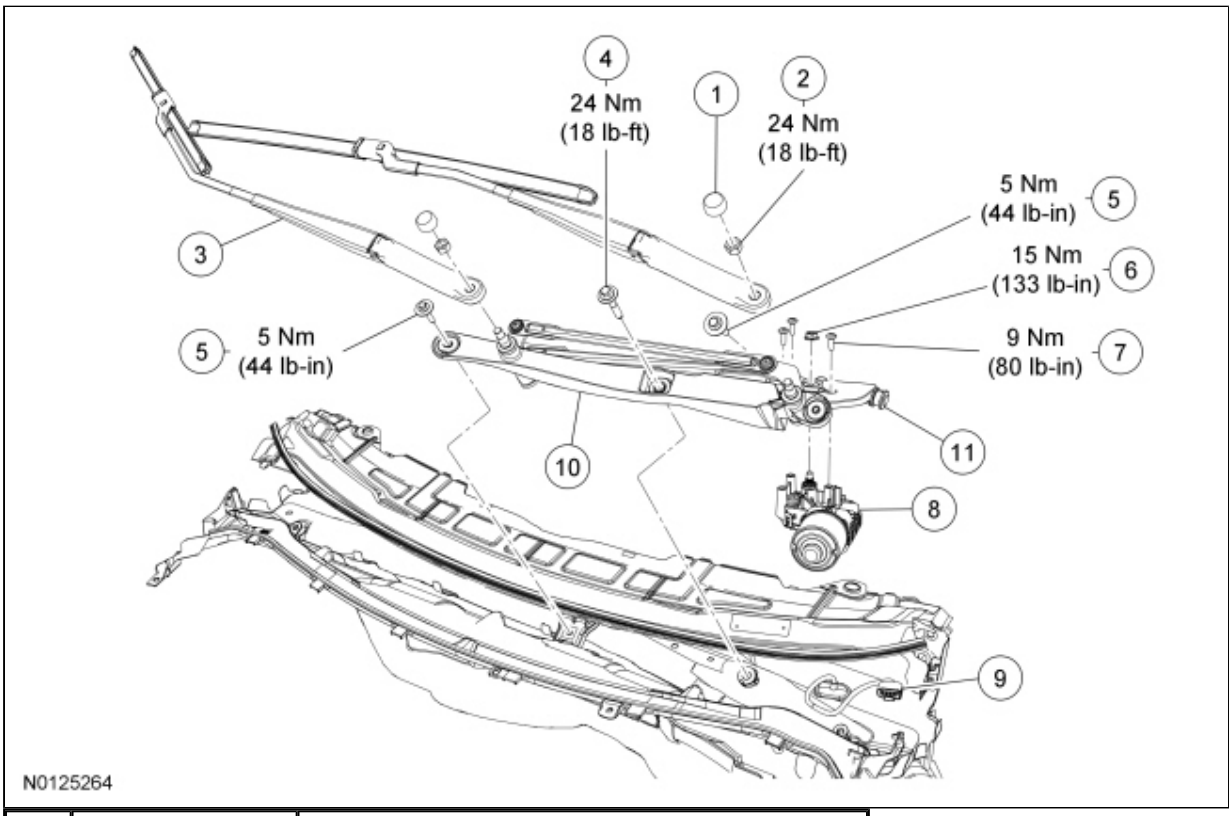


3. **NOTE:** Make sure there is no mechanical binding in the linkage preventing the wiper arms from returning to the full PARK position.

   If not within specification, remove the wiper pivot arms and reposition to the correct location. For additional information, refer to Wiper Pivot Arm — Front In this section.

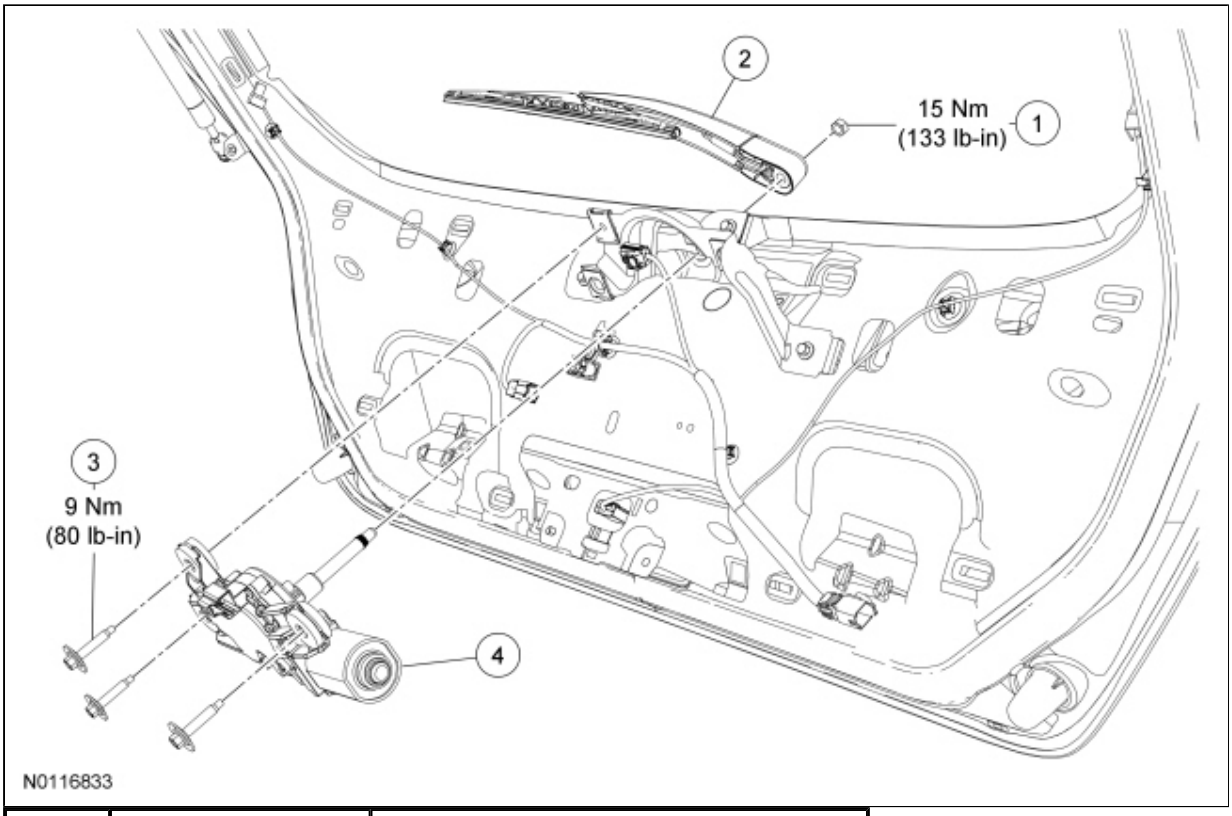
Wiper and Washer System — Exploded View

Windshield Wipers



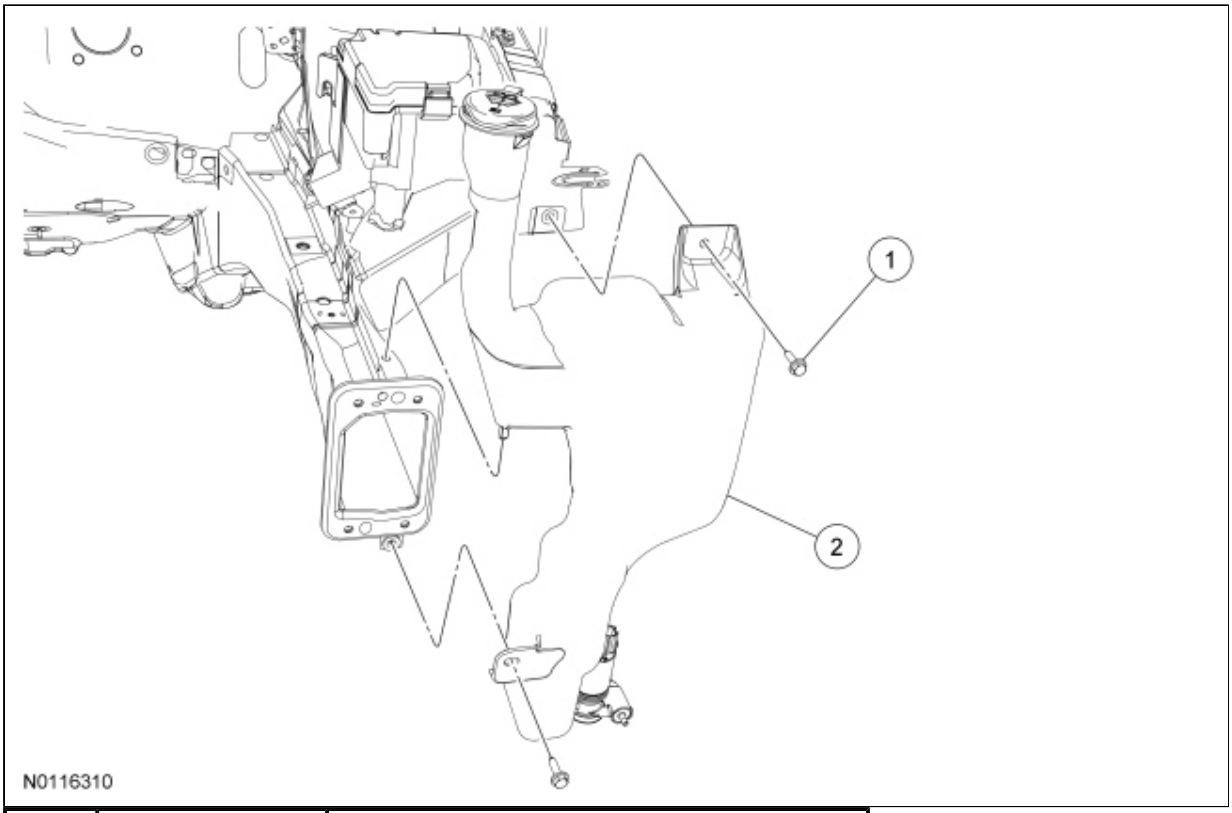
Item	Part Number	Description
1	W710461	Front wiper pivot arm nut cover (2 required)
2	W520404	Front wiper pivot arms nut (2 required)
3	17526 RH/ 17527 LH	Front wiper pivot arm
4	W714182	Wiper mounting arm and pivot shaft center bolt
5	W701121	Wiper mounting arm and pivot shaft end bolt (2 required)
6	—	Windshield wiper motor pivot arm nut (part of 17566)
7	—	Windshield wiper motor bolt (part of 17566) (3 required)
8	17508	Windshield wiper motor
9	—	Windshield wiper motor electrical connector (part of 14290)
10	17566	Wiper mounting arm and pivot shaft assembly
11	—	Wiper mounting arm and pivot shaft mount (part of 17566)

Rear Window Wipers



Item	Part Number	Description
1	W520403	Rear wiper pivot arm nut
2	17526	Rear wiper pivot arm
3	W701389	Rear wear wiper motor bolt
4	17508	Rear wear wiper motor

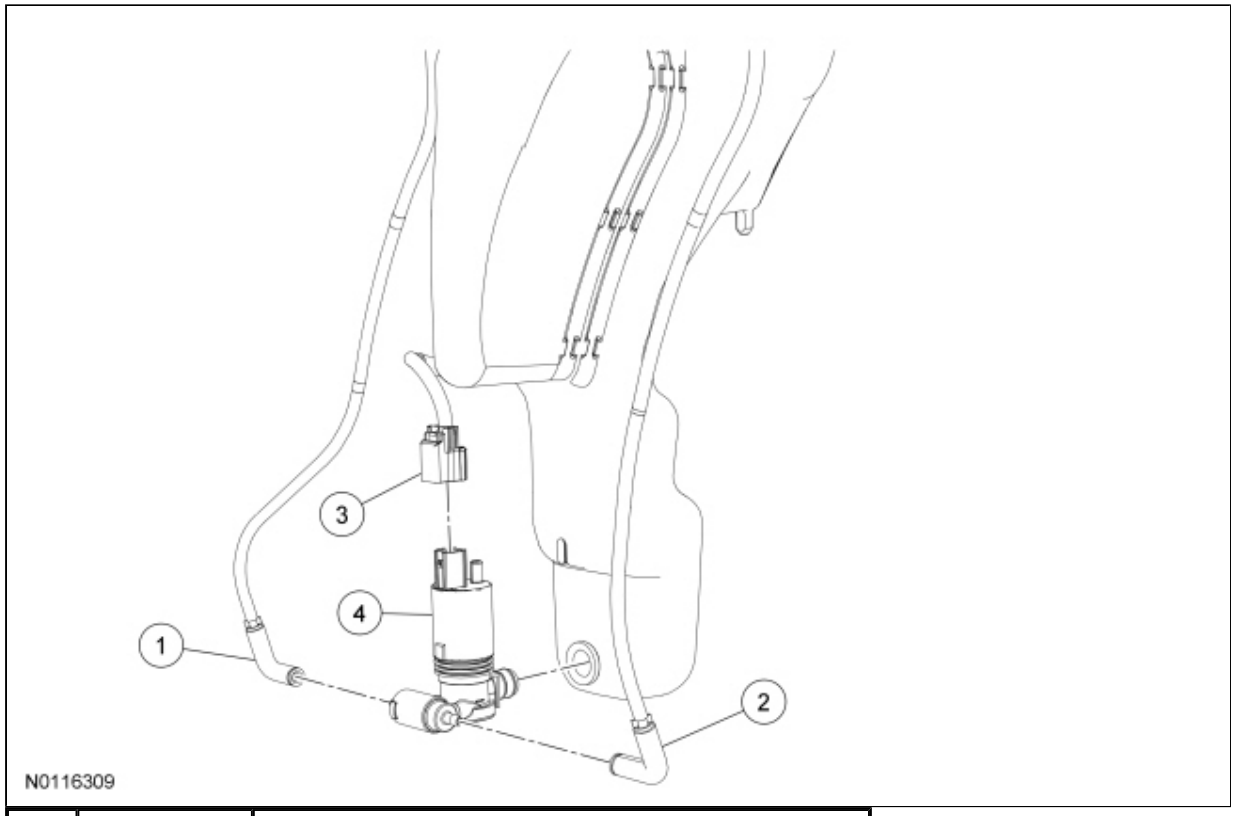
Washer Reservoir



Item	Part Number	Description
1	W700133	Washer reservoir bolt (2 required)
2	17618	Washer reservoir

Washer Pump

NOTE: 5 door washer pump shown, 4 door washer pump similar.



Item	Part Number	Description
1	—	Windshield washer hose (part of 17618)
2	—	Rear window washer hose (part of 17618)
3	—	Washer pump electrical connector (part of 14K012)
4	17664	Washer pump

1. For additional information, refer to the procedures in this section.

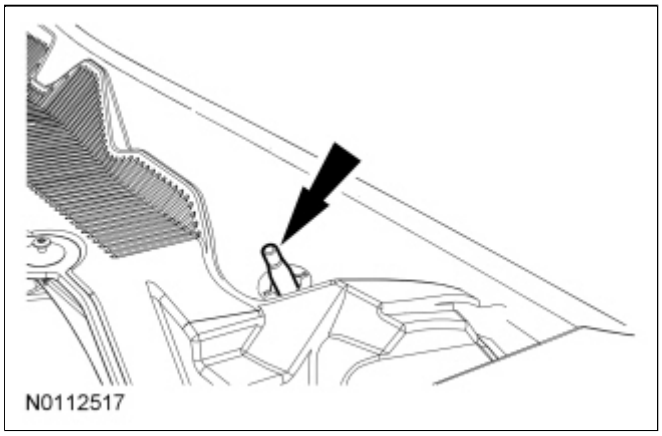
Wiper Pivot Arm — Front

Removal

1. Remove the front wiper pivot arm nut cover.
2. Remove the front wiper pivot arm nut.
3. Using a suitable 2 jaw puller, remove the front wiper pivot arm.

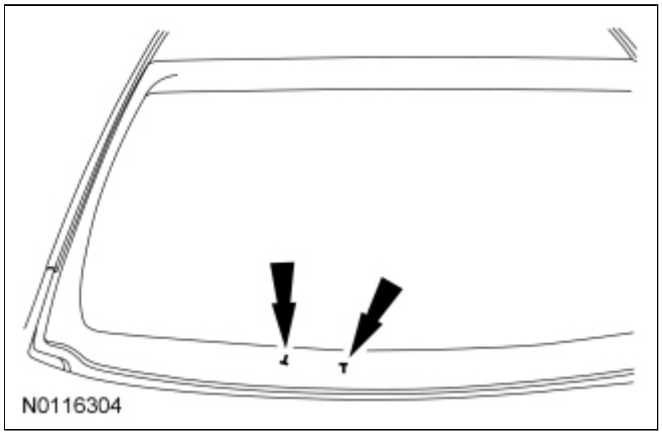
Installation

1. Using a wire brush, clean the front wiper pivot arm shaft.



2. **NOTE:** Make sure the wiper motor is in the full PARK position before installing the wiper pivot arms.

   Install the front wiper pivot arm so that the wiper blade tip is aligned to the "T" marks on the lower windshield glass.



3. Install the front wiper pivot arm nut.
   - To install, tighten to 24 Nm (18 lb-ft).
4. Install the front wiper pivot arm nut cover.

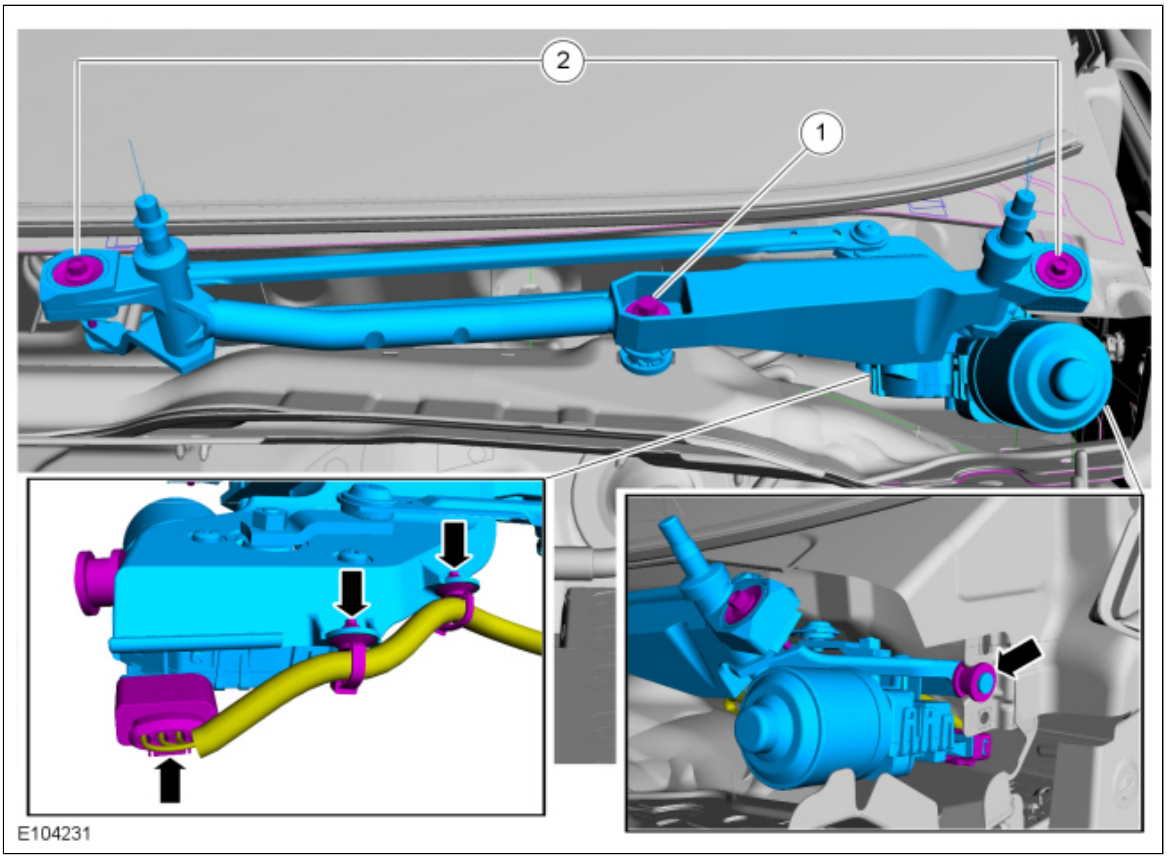
Wiper Mounting Arm and Pivot Shaft

Removal and Installation

1. Remove the cowl panel grilles. For additional information, refer to Section 501-02 .

2. **NOTE:** Make sure to align the wiper mounting arm pivot shaft mount to the body when installing the wiper mounting arm pivot shaft.

   Remove the wiper mounting arm pivot shaft in the following sequence:
   1. Remove the wiper mounting arm pivot shaft center bolt.
      - To install, tighten to 24 Nm (18 lb-ft).
   2. Remove the wiper mounting arm pivot shaft end bolts.
      - To install, tighten to 5 Nm (44 lb-in).
   - Detach the electrical wiring harness retainers and disconnect the electrical connector.



3. To install, reverse the removal procedure.

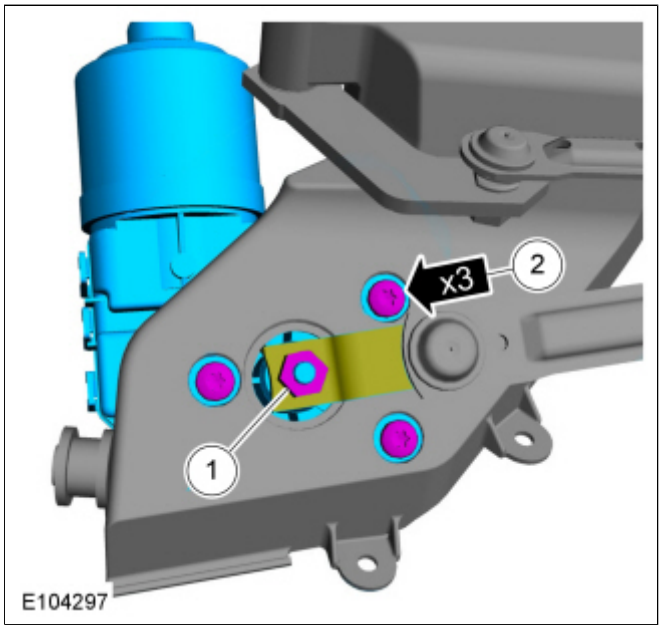
Wiper Motor — Windshield

Removal and Installation

1. Remove the wiper mounting arm and pivot shaft. For additional information, refer to Wiper Mounting Arm and Pivot Shaft in this section.

2. **NOTE:** Note the position of the component before removal.

   Remove the windshield wiper motor.
   1. Remove the windshield wiper pivot arm nut.
      - To install, tighten to 15 Nm (133 lb-in).
   2. Remove the 3 windshield wiper motor bolts.
      - To install, tighten to 9 Nm (80 lb-in).

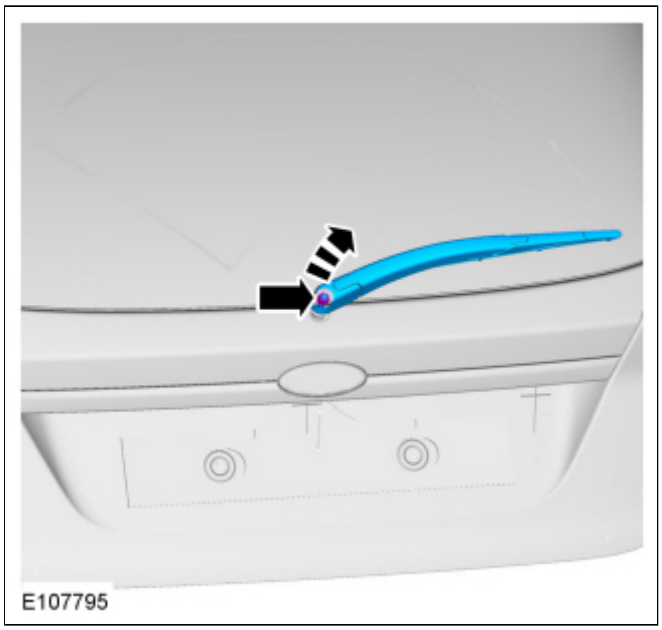


3. To install, reverse the removal procedure.

Wiper Pivot Arm — Rear

Removal and Installation

1. Lift the rear wiper pivot arm nut cover upwards and remove the rear wiper pivot arm nut.
    - To install, tighten to 15 Nm (133 lb-in).



2. Remove the rear pivot wiper arm.

3. To install, reverse the removal procedure.

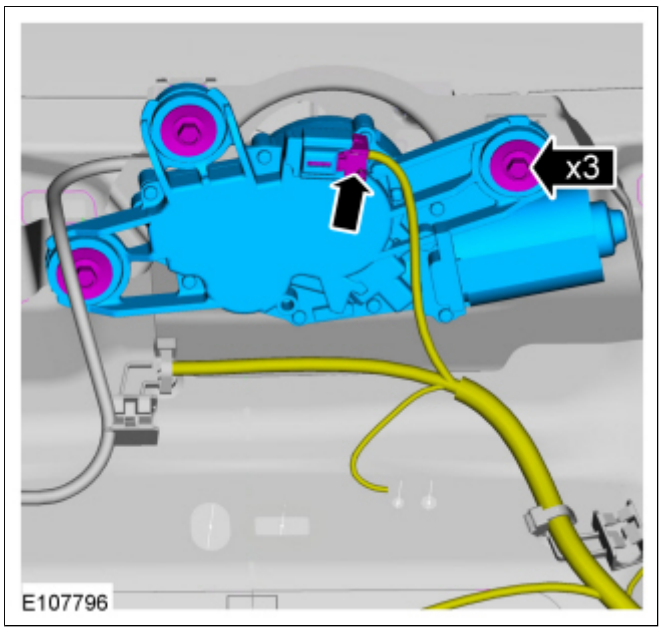
Wiper Motor — Rear Window

Removal and Installation

1. Remove the rear wiper pivot arm. For additional information, refer to Wiper Pivot Arm — Rear in this section.

2. Remove the lower liftgate trim panel. For additional information, refer to Section 501-05 .

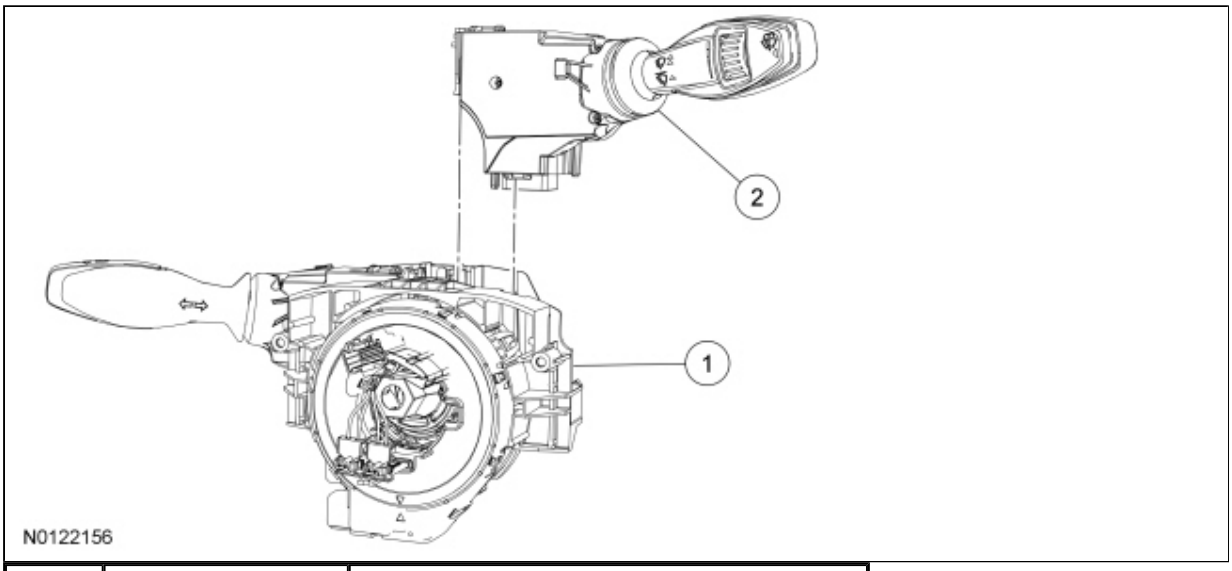
3. Remove the 3 rear wiper motor bolts.
   - To install, tighten to 9 Nm (80 lb-in).
   - Disconnect the electrical connector.



4. Remove the rear wiper motor.

5. To install, reverse the removal procedure.

Wiper/Washer Switch

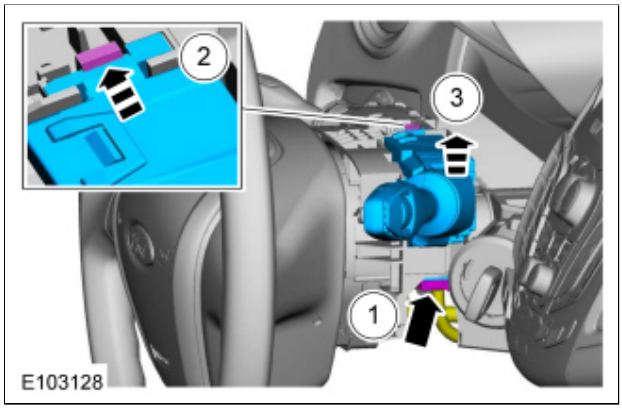


Item	Part Number	Description
1	17A553	Steering column switch carrier
2	6475	Wiper/washer switch

Removal and Installation

1. Remove the steering column shrouds. For additional information, refer to the exploded view in Section 211-05 .

2. Remove the wiper/washer switch.
   1. Disconnect the electrical connector.
   2. Release the wiper/washer switch retaining tab.
   3. Lift upward and remove the wiper/washer switch.



3. To install, reverse the removal procedure.

Washer Pump

Material

Item	Specification
Motorcraft® Premium Quality Windshield Washer Fluid (Canada) CXC-37-(A, B, D, and F) (Canada)	—
Motorcraft® Premium Windshield Washer Concentrate (US) ZC-32-A or B (US)	WSB-M8B16-A2

Removal and Installation

WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.

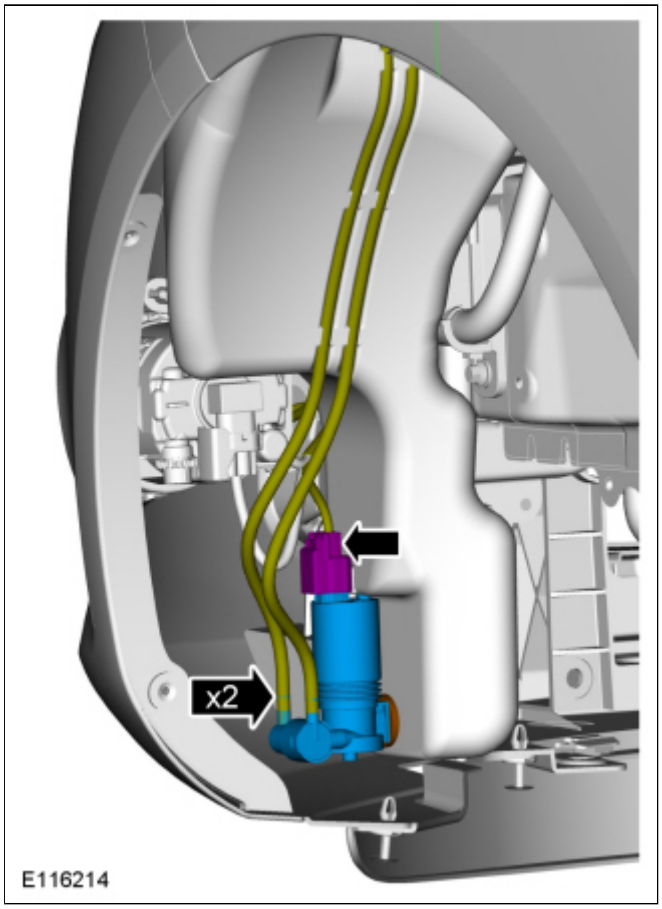
NOTICE: **Do not operate the washer pump prior to filling the windshield washer reservoir. Failure to follow these instructions may result in premature pump failure.**

1. Remove the LF fender splash shield. For additional information, refer to Section 501-02 .

2. ***NOTICE:*** **When replacing the washer pump, be careful not to damage the rubber grommet.**

   NOTE: To prevent spilling windshield washer fluid, drain the washer reservoir before washer pump removal.

   Remove the washer pump in the following sequence:
   1. Disconnect the electrical connector.
   2. Disconnect the 2 washer hoses.
   3. Remove the washer pump.



3. To install, reverse the removal procedure.
    - Fill the washer reservoir with windshield washer fluid.

Washer Pump and Reservoir

Material

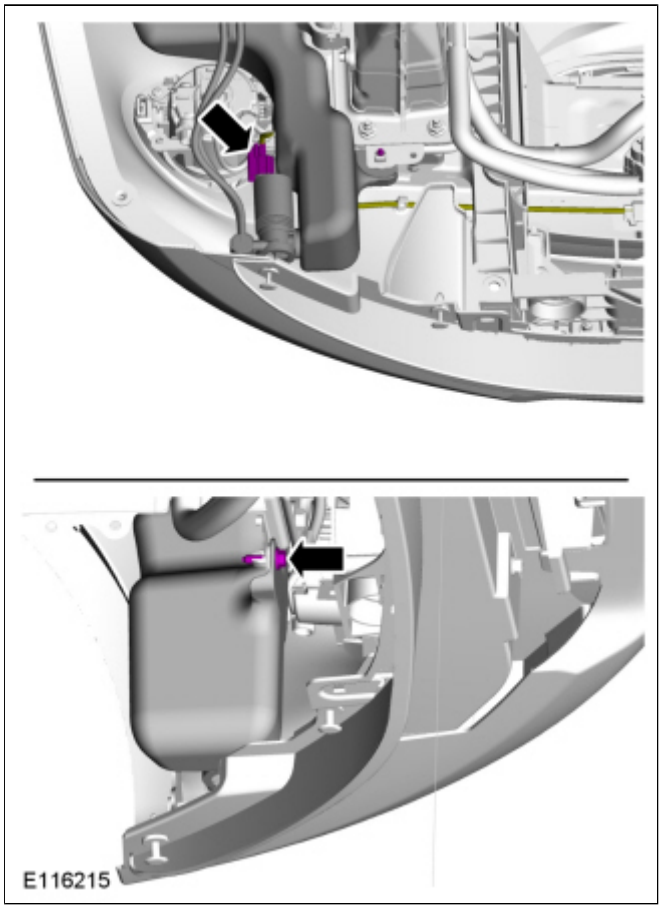
Item	Specification
Motorcraft® Premium Quality Windshield Washer Fluid (Canada) CXC-37-(A, B, D, and F) (Canada)	—
Motorcraft® Premium Windshield Washer Concentrate (US) ZC-32-A or B (US)	WSB-M8B16-A2

Removal and Installation

WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Do not operate the washer pump prior to filling the windshield washer reservoir. Failure to follow these instructions may result in premature pump failure.**

1. Remove the LF headlamp assembly. For additional information, refer to Section 417-01 .
2. Remove the upper washer reservoir bolt.
3. Disconnect the washer reservoir hose(s).
4. Remove the LH fender splash shield. For additional information, refer to Section 501-02 .
5. Remove the lower washer reservoir bolt and disconnect the electrical connector.



6. To remove the washer reservoir, lift the washer reservoir slightly upward and then lower the washer reservoir.

7. To install, reverse the removal procedure.

General Specifications

Item	Specification
Roof opening panel glass clearance — front edge	-1.0 - 0.0 mm (-0.04 - 0.0 in) flush at front
Roof opening panel glass clearance — rear edge	0.0 - 1.0 mm (0.0 - 0.04 in) flush at rear

Torque Specifications

Description	Nm	lb-in
Roof opening panel frame bolts	9	80
Roof opening panel frame bracket bolts	9	80
Roof opening panel glass screws	3	27
Roof opening panel motor bolts	3	27

Roof Opening Panel

The roof opening panel consists of the following components:

- Air deflector
- Control switch
- Drain hoses
- Frame
- Glass
- Motor/Module
- Shield
- Trim lace
- Trough assembly
- Weatherstrip

Roof Opening Panel Operation

The roof opening panel is an electronically operated glass panel with one-touch open and one-touch vent features. The roof opening panel assembly uses an integrated motor and module to operate the roof opening panel.

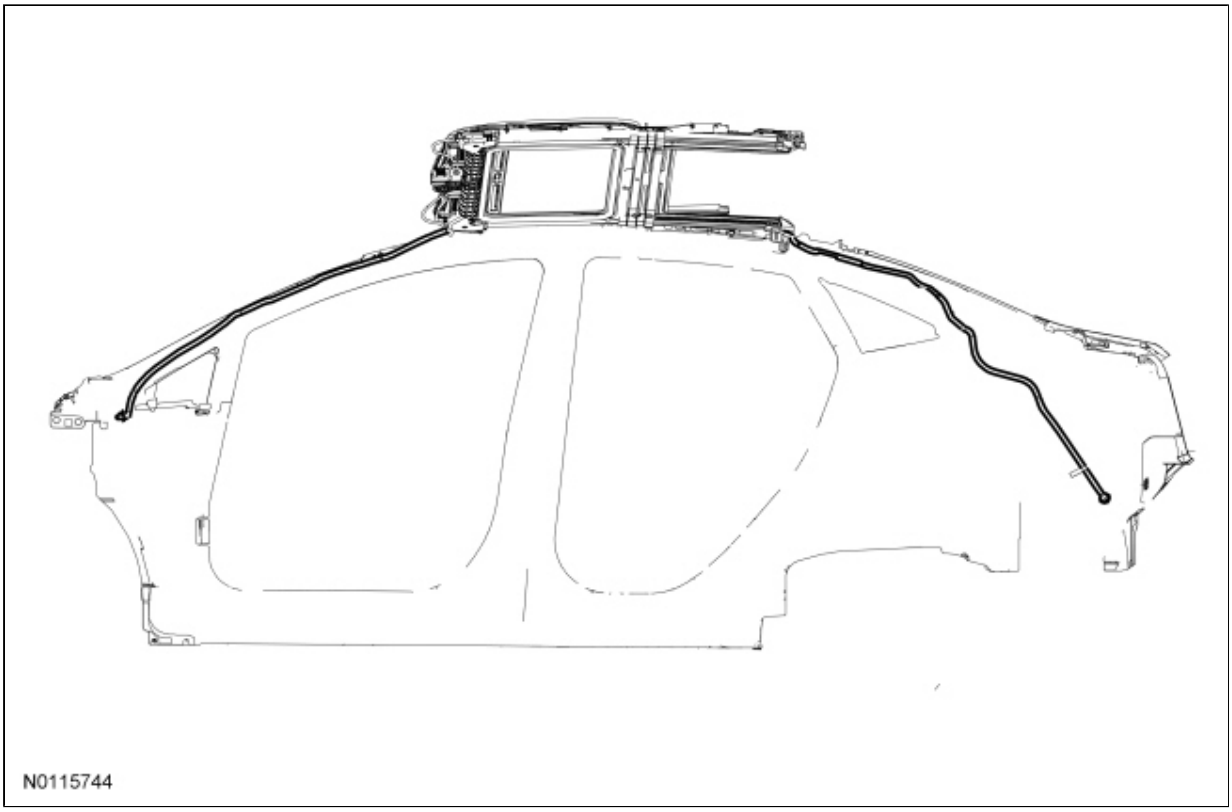
To open the roof opening panel, press and release the rear of the SLIDE control switch. The roof opening panel opens automatically. Press the SLIDE control switch at any time to stop roof opening panel movement.

To vent the roof opening panel, the roof opening panel must be in the CLOSED position. Press and release the rear of the TILT control switch. The roof opening panel automatically moves to the VENT position.

To close the roof opening panel from the VENT (or any other open position), press and hold the front of the TILT or SLIDE control switch until the glass panel stops moving.

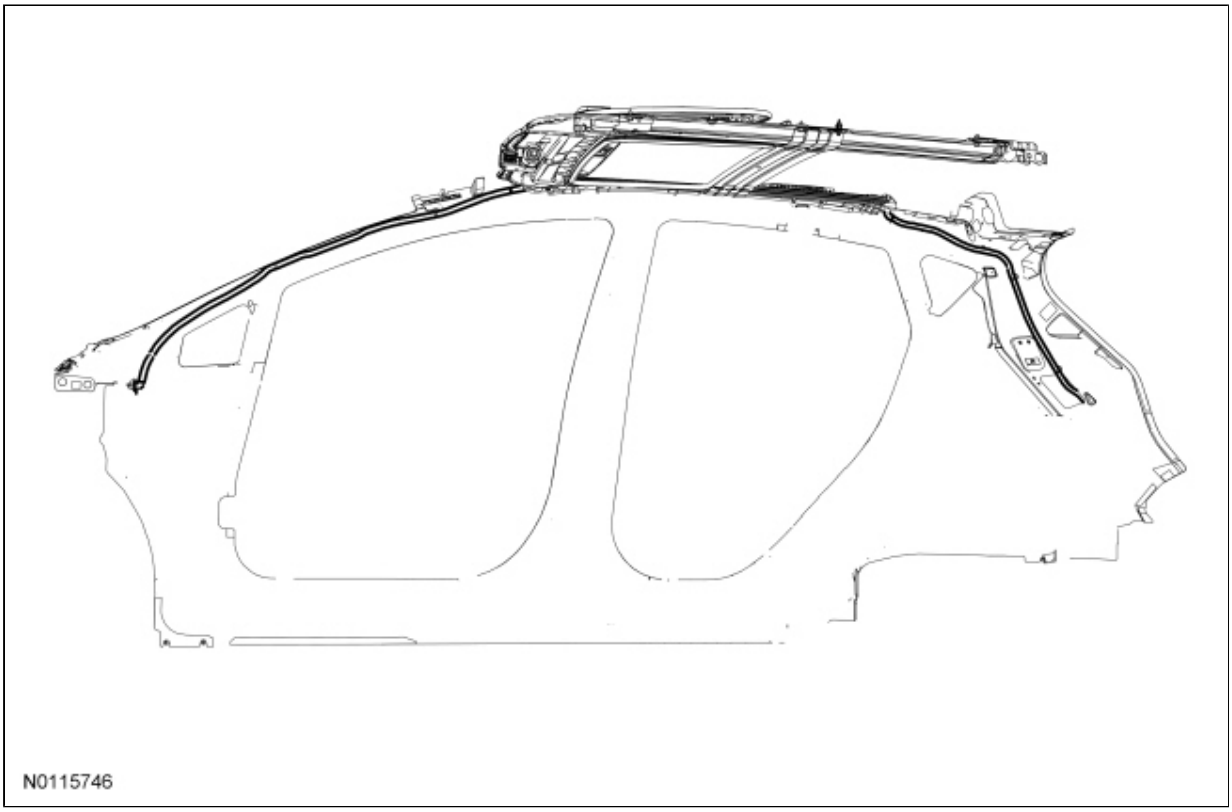
Roof Opening Panel Drain Hose Routing — 4-Door Sedan

NOTE: Passenger side shown, driver side similar.



Roof Opening Panel Drain Hose Routing — 5-Door Hatchback

NOTE: Passenger side shown, driver side similar.



Roof Opening Panel

Special Tool(s)

ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent

Principles of Operation

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including:

- whenever the roof opening panel motor has been removed from the roof opening panel system.
- whenever the roof opening panel glass has been removed from the roof opening panel system.
- whenever the roof opening panel assembly has been removed from the vehicle.
- whenever a new roof opening panel motor has been installed.
- whenever a new roof opening panel glass has been installed.
- whenever a new roof opening panel assembly has been installed.

The roof opening panel is an electronically operated glass panel that can be opened, closed or vented by the roof opening panel switch. The roof opening panel assembly uses an integrated motor and module to operate the roof opening panel. The roof opening panel motor and module are installed new as an assembly.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Roof opening panel glass • Roof opening panel air deflector • Roof opening panel alignment	• Central Junction Box (CJB) fuse(s): ▪ 24 (7.5A)

• Roof opening panel shield • Trough assembly • Roof opening panel weatherstrip (part of the roof opening panel glass)	▪ 35 (20A) • Wiring, terminals or connectors • Roof opening panel switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern is not visually evident, determine the symptom. GO to Symptom Chart - Roof Opening Panel or GO to Symptom Chart - NVH .

Symptom Chart — Roof Opening Panel

Symptom Chart — Roof Opening Panel

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

Condition	Possible Sources	Action
• The roof opening panel leaks	• Roof opening panel alignment • Drain tube attachment points • Roof opening panel drain hose(s) • Roof opening panel weatherstrip • Trough assembly	• GO to Pinpoint Test B .
• The roof opening panel does not open or close	• Roof opening panel motor not initialized • Fuse • Wiring, terminals or connectors • Roof opening panel switch • Roof opening pane motor/module • Roof opening pane lifter assemblies • Roof opening panel alignment	• GO to Pinpoint Test E .
• The roof opening panel does not open or close in VENT position	• Wiring, terminals or connectors • Roof opening panel switch	• GO to Pinpoint Test F .

	• Roof opening panel motor/module	
• The express open is inoperative	• Roof opening panel motor not initialized • Roof opening panel motor/module	• INITIALIZE the roof opening panel motor/module. REFER to Roof Opening Panel Initialization in this section. If concern is still present after initialization, INSTALL a new roof opening panel motor/module. REFER to Roof Opening Panel — Exploded View and Roof Opening Panel Motor in this section. TEST the system for normal operation.
• The roof opening panel does not stop in FLUSH from any position	• Roof opening panel alignment	• REFER to Roof Opening Panel Alignment in this section.

Symptom Chart — NVH

Symptom Chart — NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

Condition	Possible Sources	Action
• The roof opening panel has excessive wind noise	• Roof opening panel alignment • Roof opening panel weatherstrip • Roof opening panel air deflector	• GO to Pinpoint Test A .
• The roof opening panel rattles	• Roof opening panel glass • Roof opening panel air deflector • Roof opening panel shield • Roof opening panel frame • Trough assembly	• GO to Pinpoint Test C .
• The roof opening panel is noisy during operation	• Roof opening panel alignment • Roof opening panel frame • Roof opening panel shield • Roof opening panel motor/module	• GO to Pinpoint Test D .

Pinpoint Tests

Pinpoint Test A: The Roof Opening Panel Has Excessive Wind Noise

Normal Operation

When the roof opening panel glass is completely closed, it is flush with the roof panel.

This pinpoint test is intended to diagnose the following:

- Roof opening panel alignment
- Roof opening panel weatherstrip
- Roof opening panel motor/module

PINPOINT TEST A: THE ROOF OPENING PANEL HAS EXCESSIVE WIND NOISE

Test Step	Result / Action to Take
A1 VERIFY ROOF OPENING PANEL NOISE • Road test the vehicle with the roof opening panel in the CLOSED and OPEN positions. • **Is the wind noise present only in the OPEN position?**	**Yes** GO to A4. **No** GO to A2.
A2 CHECK THE ROOF OPENING PANEL WEATHERSTRIP **NOTE:** Make sure the weatherstrip is secured to the glass, not cut, cracked, pinched, loose or obstructed in CLOSED, VENT and OPEN positions. • Check the roof opening panel weatherstrip. • **Is the roof opening panel weatherstrip OK?**	**Yes** GO to A3. **No** INSTALL a new roof opening panel glass. REFER to Roof Opening Panel Glass in this section. TEST the system for normal operation.
A3 CHECK ROOF OPENING PANEL ALIGNMENT • Check the roof opening panel alignment. • **Is the alignment OK?**	**Yes** CHECK for correct installation of the roof opening panel and motor/module. REFER to Roof Opening Panel — Exploded View, Roof Opening Panel and Roof Opening Panel Motor in this section. TEST the system for normal operation. **No** ALIGN the roof opening panel. REFER to Roof Opening Panel Alignment in this section. TEST the system for normal operation.
A4 CHECK THE AIR DEFLECTOR • Make sure the air deflector is securely attached and check for damaged or unsecured springs. • **Is the air deflector OK?**	**Yes** Partially CLOSE the roof opening panel until the noise is eliminated. If the noise is eliminated, INFORM the customer that changing glass location will eliminate the wind noise. If the wind noise is not eliminated, RE-ALIGN panel. TEST the system for normal operation.

	No INSTALL new air deflector. REFER to Air Deflector in this section. TEST the system for normal operation.

Pinpoint Test B: The Roof Opening Panel Leaks

Normal Operation

When the roof opening panel glass is completely closed, it should be within specifications. Refer to Specifications in this section.

This pinpoint test is intended to diagnose the following:

- Roof opening panel alignment
- Roof opening panel drain hose(s)
- Roof opening panel seal/weatherstrip
- Roof opening panel frame
- Trough assembly

PINPOINT TEST B: THE ROOF OPENING PANEL LEAKS

Test Step	Result / Action to Take
B1 CHECK THE ROOF OPENING PANEL WEATHERSTRIP AND GLASS ALIGNMENT	
• **NOTE:** Make sure the roof opening panel weatherstrip is not cracked or loose. • Check the roof opening panel weatherstrip condition and verify the roof opening panel glass is aligned properly. • **Is the roof opening panel glass aligned and weatherstrip sealing correctly?**	**Yes** GO to B2. **No** INSTALL a new roof opening panel glass and/or ALIGN the roof opening panel. REFER to Roof Opening Panel Glass and/or Roof Opening Panel Alignment in this section. TEST the system for normal operation.
B2 CHECK THE ROOF OPENING PANEL DRAIN HOSES	
• **NOTE:** Make sure the roof opening panel drain hoses are not cracked, slit, pinched or obstructed. • Check the 4 roof opening panel drain hoses for correct operation. • **Are the roof opening panel drain hoses OK?**	**Yes** GO to B3. **No** REPAIR or INSTALL a new roof opening panel drain hose(s). TEST the system for normal operation.
B3 CHECK THE ROOF OPENING PANEL DRAIN HOSE ATTACHMENT POINTS	
• **NOTE:** Make sure the roof opening panel drain hose attachment points are not damaged or obstructed. • Check the roof opening panel drain hose attachment points for correct attachment. • **Are the roof opening panel drain**	**Yes** GO to B4. **No** REPAIR or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation.

hose attachment points OK?	
B4 CHECK THE ROOF OPENING PANEL TROUGH ASSEMBLY CONDITION	
• Check the roof opening panel trough assembly for damage. • **Is the roof opening panel trough assembly OK?**	**Yes** GO to B5 . **No** REPAIR or INSTALL a new roof opening panel trough assembly. REFER to Trough Assembly in this section. TEST the system for normal operation.
B5 CHECK THE CONDITION OF THE ROOF OPENING GLASS	
• Check the roof opening panel frame for damage that may cause the roof opening panel glass seal to seat incorrectly. • **Is the roof opening panel frame OK?**	**Yes** INSTALL a new roof opening panel glass. REFER to Roof Opening Panel Glass in this section. TEST the system for normal operation. **No** REPAIR or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation.

Pinpoint Test C: The Roof Opening Panel Rattles

Normal Operation

When the roof opening panel glass is completely closed, it should be within specifications. Refer to Specifications in this section. Make sure all components are properly secured.

This pinpoint test is intended to diagnose the following:

- Roof opening panel glass
- Roof opening panel air deflector
- Roof opening panel shield
- Roof opening panel frame
- Trough assembly

PINPOINT TEST C: THE ROOF OPENING PANEL RATTLES

Test Step	Result / Action to Take
C1 CHECK THE ROOF OPENING PANEL TIGHTNESS	
• With the roof opening panel in the CLOSED position, manually push up and fore/aft on the glass panel. • **Is the roof opening panel glass loose?**	**Yes** ALIGN and TIGHTEN the roof opening panel glass fasteners to specification. REFER to Roof Opening Panel Alignment in this section. TEST the system for normal operation. **No** GO to C2 .
C2 CHECK THE ROOF OPENING PANEL TRACKS	

• Open the roof opening panel. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to C3 . **No** REMOVE all the roof opening panel track obstructions and REPAIR the roof opening panel tracks. If the roof opening panel tracks cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation.
C3 CHECK THE ROOF OPENING PANEL SHIELD	
• Check the roof opening panel shield for correct installation. • **Is the roof opening panel shield installed correctly?**	**Yes** GO to C4 . **No** INSTALL the roof opening panel shield correctly. REFER to Roof Opening Panel Shield in this section. TEST the system for normal operation.
C4 CHECK THE AIR DEFLECTOR	
• Check the air deflector for obstructions and damage. • **Is the air deflector OK?**	**Yes** GO to C5 . **No** REMOVE all obstructions and REPAIR or INSTALL a new air deflector. REFER to Air Deflector in this section. TEST the system for normal operation.
C5 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Verify the roof opening panel lifter assemblies are free from obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to C6 . **No** REMOVE all obstructions from the roof opening panel lifter assemblies and REPAIR any damage. If the roof opening panel lifter assemblies cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel — Exploded View and Roof Opening Panel in this section. TEST the system for normal operation.
C6 CHECK ROOF OPENING PANEL FRAME INSTALLATION	
• Lower the headliner and check all roof opening fasteners for correct torque and verify correct installation of the roof opening panel frame. Refer to Roof Opening Panel — Exploded View and Roof Opening Panel in this section. • **Is the roof opening panel frame correctly installed and tightened to specification?**	**Yes** GO to C7 . **No** TIGHTEN the loose fasteners to the correct specifications or INSTALL the roof opening panel frame correctly. REFER to Roof Opening Panel — Exploded View and Roof Opening Panel in this section. TEST the system for normal operation.
C7 CHECK THE ROOF OPENING PANEL TROUGH ASSEMBLY FOR RATTLES	
• Check the roof opening panel trough assembly for any loose parts or for any condition that will cause rattles. • **Is the trough assembly installed**	**Yes** GO to C8 . **No**

securely and free from any condition that will cause rattles?	REPAIR or INSTALL a new roof opening panel trough assembly. REFER to Trough Assembly in this section. TEST the system for normal operation.
C8 CHECK THE ROOF OPENING PANEL FRAME FOR RATTLES	
• Check the roof opening panel frame assembly for any loose parts or for any condition that will cause rattles. • **Is there a condition that will cause rattles?**	**Yes** INSTALL a suitable sound damper material to correct the condition. If the rattle still persists, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel — Exploded View and Roof Opening Panel in this section. TEST the system for normal operation. **No** INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation.

Pinpoint Test D: The Roof Opening Panel is Noisy During Operation

Normal Operation

The roof opening panel operates smoothly and quietly while opening and closing.

This pinpoint test is intended to diagnose the following:

- Roof opening panel alignment
- Roof opening panel frame
- Roof opening panel shield
- Roof opening panel motor/module

PINPOINT TEST D: THE ROOF OPENING PANEL IS NOISY DURING OPERATION

Test Step	Result / Action to Take
D1 CHECK THE ROOF OPENING PANEL FOR OBSTRUCTIONS OR DAMAGE	
• Check the roof opening panel for any obstructions and damage. • **Are there any obstructions and/or damage?**	**Yes** REMOVE all obstructions. REPAIR any damage. If the damage cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation. **No** GO to D2.
D2 CHECK THE ROOF OPENING PANEL OPERATION	
• Check the roof opening panel during operation. • **Is the roof opening panel glass loose or incorrectly aligned?**	**Yes** ALIGN the roof opening panel. REFER to Roof Opening Panel Alignment in this section. TEST the system for normal operation.

	No GO to D3 .
D3 CHECK THE ROOF OPENING PANEL TRACKS • Open the roof. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to D4 . **No** REMOVE all obstructions and REPAIR any damage. If the roof opening panel tracks cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation.
D4 CHECK THE ROOF OPENING PANEL SHIELD • Check the roof opening panel shield for correct movement. • **Is the roof opening panel shield moving correctly?**	**Yes** GO to D5 . **No** REMOVE and REINSTALL the roof opening panel shield. If necessary, INSTALL a new roof opening panel shield. REFER to Roof Opening Panel Shield in this section. TEST the system for normal operation.
D5 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES • Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to D6 . **No** REMOVE all obstructions and REPAIR any damage. If the roof opening panel lifter assemblies cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. TEST the system for normal operation.
D6 CHECK THE ROOF OPENING PANEL MOTOR/MODULE • Remove the roof opening panel motor/module and leave the electrical connector connected. • Operate the roof opening panel to the fully OPEN and CLOSED position. • **Does the motor/module make excessive noise?**	**Yes** INSTALL a new roof opening panel motor/module. REFER to Roof Opening Panel Motor in this section. TEST the system for normal operation. **No** REINSTALL the roof opening panel motor/module. TEST the system for normal operation. If the roof opening panel is still noisy, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel in this section. If the roof opening panel is no longer noisy, the system is operating correctly. The concern may have been caused by an incorrectly installed roof opening panel motor.

Pinpoint Test E: The Roof Opening Panel Does Not Open or Close

Refer to Wiring Diagrams Cell 101 , Roof Opening Panel for schematic and connector information.

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including:

- whenever the roof opening panel motor has been removed from the roof opening panel system.
- whenever the roof opening panel glass has been removed from the roof opening panel system.
- whenever the roof opening panel assembly has been removed from the vehicle.
- whenever a new roof opening panel motor has been installed.
- whenever a new roof opening panel glass has been installed.
- whenever a new roof opening panel assembly has been installed.

Refer to Roof Opening Panel Motor Initialization in this section.

Normal Operation

The roof opening panel uses an integrated motor and module to operate the roof opening panel. A new roof opening panel motor/module is installed as an assembly.

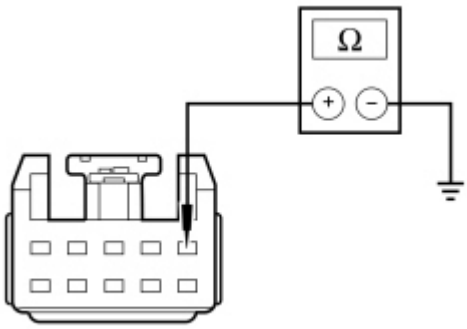
The roof opening panel motor/module and switch receive voltage from the Central Junction Box (CJB) when the ignition is in the RUN position. The roof opening panel switch supplies voltage signals to the roof opening panel motor/module to operate the roof opening panel.

This pinpoint test is intended to diagnose the following:

- Fuse(s)
- Wiring, terminals or connectors
- Roof opening panel switch
- Roof opening panel motor/module

PINPOINT TEST E: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE

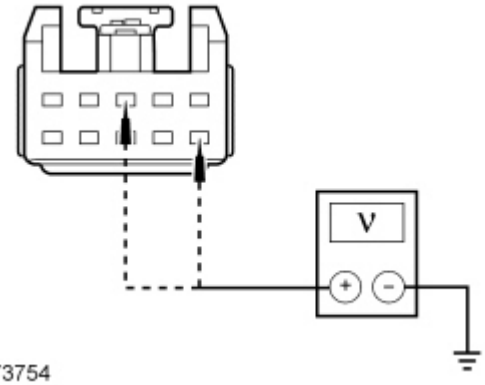
Test Step	Result / Action to Take
E1 CHECK THE ROOF OPENING PANEL SWITCH	
• Ignition OFF. • Disconnect: Roof Opening Panel Switch C912. • Carry out the roof opening panel switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Is the roof opening panel switch OK?**	**Yes** GO to E2. **No** INSTALL a new roof opening panel switch. TEST the system for normal operation.
E2 CHECK THE ROOF OPENING PANEL MODULE GROUND CIRCUIT FOR AN OPEN	
• Disconnect: Roof Opening Panel Module C921. • Measure the resistance between roof opening panel module C921-1, circuit GD145 (BK/BU), harness side and ground.	**Yes** GO to E3. **No** REPAIR the circuit. TEST the system for normal operation.



N0129203

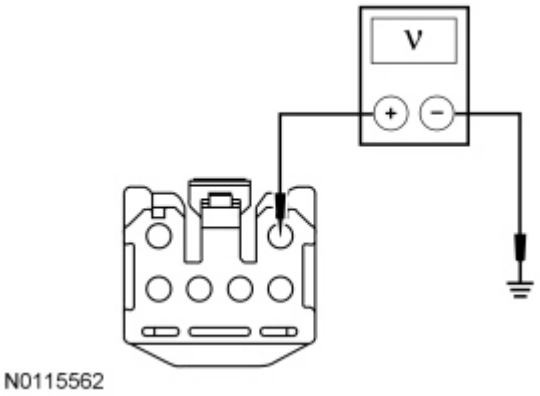
- **Is the resistance less than 5 ohms?**

E3 CHECK VOLTAGE TO THE ROOF OPENING PANEL MODULE	

• Ignition ON.
• Measure the voltage between ground and
  ▪ roof opening panel module C921-3, circuit CBP08 (GY/YE)
  ▪ roof opening panel module C921-6, circuit SBP35 (BU/RD)
  	


A0073754
• **Are the voltages greater than 10 volts?**
	Yes
	GO to E4 .
	
	No
	VERIFY CJB fuses 24 (7.5A) and 35 (20A) are OK. If OK, REPAIR the affected circuit(s). TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.

E4 CHECK VOLTAGE TO THE ROOF OPENING PANEL SWITCH	
• Ignition OFF. • Connect: Roof Opening Panel Module C921. • Ignition ON. • Measure the voltage between roof opening panel switch C912-1, circuit CBP24 (VT/GN), harness side and ground.	**Yes** GO to E5 . **No** GO to E8 .



N0115562

- **Is the voltage greater than 10 volts?**

E5 CHECK THE ROOF OPENING PANEL TILT UP CIRCUIT FOR AN OPEN	
• Measure the resistance between roof opening panel switch C912-3, circuit CPR38 (WH/BU), and roof opening panel module C921-4, circuit CPR38 (WH/BU) harness side.  N0115565 • **Is the resistance less than 5 ohms?**	**Yes** GO to E6 . **No** REPAIR the circuit. TEST the system for normal operation.
E6 CHECK THE ROOF OPENING PANEL CLOSE/DOWN CIRCUIT FOR AN OPEN	
• Measure the resistance between roof opening panel module C921-10, circuit CPR40 (YE/OG), harness side and: ▪ roof opening panel switch C912-2, circuit CPR40 (YE/OG), harness side. ▪ roof opening panel switch C912-5, circuit CPR40 (YE/OG), harness side.  N0129434 • **Is the resistance less than 5 ohms?**	**Yes** GO to E7 . **No** REPAIR the affected circuit (s). TEST the system for normal operation.

E7 CHECK THE ROOF OPENING PANEL OPEN CIRCUIT FOR AN OPEN	
• Measure the resistance between roof opening panel switch C912-4, circuit CPR31 (VT/BN), and roof opening panel module C921-5, circuit CPR31 (VT/BN), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to E9 . **No** REPAIR the circuit. TEST the system for normal operation.
E8 CHECK THE ROOF OPENING PANEL SWITCH VOLTAGE CIRCUIT FOR AN OPEN	
• Measure the resistance between roof opening panel switch C912-1, circuit CPR39 (VT/WH), and roof opening panel module C921-2, circuit CPR39 (VT/WH), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to E9 . **No** REPAIR the circuit. TEST the system for normal operation.
E9 CHECK THE ROOF OPENING PANEL MOTOR/MODULE FOR CORRECT OPERATION	

• Inspect the roof opening panel motor/module electrical connector.
• Check for:
  ▪ corrosion.
  ▪ bent pins.
  ▪ pushed-out pins.
• Connect the roof opening panel motor/module connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new roof opening panel motor/module. REFER to Roof Opening Panel Motor in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal

	operation.

Pinpoint Test F: The Roof Opening Panel Does Not Open or Close in VENT Position

Refer to Wiring Diagrams Cell 101 , Roof Opening Panel for schematic and connector information.

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including:

- whenever the roof opening panel motor has been removed from the roof opening panel system.
- whenever the roof opening panel glass has been removed from the roof opening panel system.
- whenever the roof opening panel assembly has been removed from the vehicle.
- whenever a new roof opening panel motor has been installed.
- whenever a new roof opening panel glass has been installed.
- whenever a new roof opening panel assembly has been installed.

Refer to Roof Opening Panel Motor Initialization in this section.

Normal Operation

The roof opening panel uses an integrated motor and module to operate the roof opening panel. A new roof opening panel motor/module is installed as an assembly.

The roof opening panel motor/module and switch receive voltage from the Central Junction Box (CJB) when the ignition is in the RUN position. The roof opening panel switch supplies voltage signals to the roof opening panel motor/module to operate the roof opening panel.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Roof opening panel switch
- Roof opening panel motor/module

PINPOINT TEST F: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE IN VENT POSITION

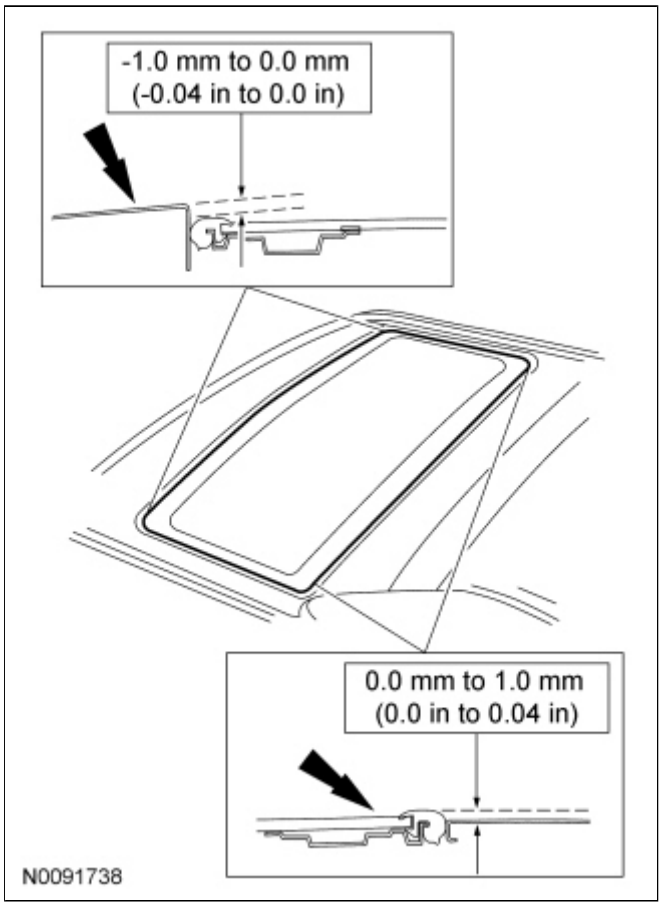
Test Step	Result / Action to Take
F1 CHECK THE ROOF OPENING PANEL SWITCH	
• Ignition OFF. • Disconnect: Roof Opening Panel Switch C912. • Carry out the roof opening panel switch component test. Refer to Wiring Diagrams Cell 149 for component testing. • **Is the roof opening panel switch OK?**	**Yes** GO to F2 . **No** INSTALL a new roof opening panel switch. TEST the system for normal operation.
F2 CHECK THE ROOF OPENING PANEL CONTROL CIRCUIT FOR AN OPEN	
• Disconnect: Roof Opening Panel Motor/Module C921. • Measure the resistance between roof opening panel switch C912-3, circuit CPR38 (WH/BU), and roof opening panel motor/module C921-4, circuit CPR38 (WH/BU) harness side.	**Yes** GO to F3 . **No** REPAIR the circuit. TEST the system for

 N0115565 • **Is the resistance less than 5 ohms?**	normal operation.
F3 CHECK THE ROOF OPENING PANEL CONTROL CIRCUIT FOR AN OPEN	
• Measure the resistance between roof opening panel module C921-10, circuit CPR40 (YE/OG), harness side and: ▪ roof opening panel switch C912-2, circuit CPR40 (YE/OG), harness side. ▪ roof opening panel switch C912-5, circuit CPR40 (YE/OG), harness side.  N0129434 • **Is the resistance less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR the affected circuit(s). TEST the system for normal operation.
F4 CHECK THE ROOF OPENING PANEL MOTOR/MODULE FOR CORRECT OPERATION	
• Inspect the roof opening panel motor/module electrical connector. • Check for: ▪ corrosion. ▪ bent pins. ▪ pushed-out pins. • Connect the roof opening panel motor/module connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new roof opening panel motor/module. REFER to Roof Opening Panel Motor in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Roof Opening Panel Alignment

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including: whenever the roof opening panel motor has been removed from the roof opening panel system, the roof opening panel glass has been removed from the roof opening panel system, the roof opening panel assembly has been removed from the vehicle, a new roof opening panel motor has been installed, a new roof opening panel glass has been installed or a new roof opening panel assembly has been installed. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

1. Position the roof opening panel to the CLOSED position.
2. Place a suitable 1.0-1.2 mm (0.040-0.050 in) thick, 150 mm (5.9 in) long plastic spacer between the rear edge of the roof opening panel glass and the roof panel opening.
3. Loosen the 4 roof opening panel glass screws.
4. Make sure the roof opening panel is centered in the roof opening. Adjust the roof opening panel glass height to specification.



5. Tighten the 4 roof opening panel glass screws to 3 Nm (27 lb-in).
6. **NOTE:** Remove the plastic spacer.

   Initialize the roof panel opening motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Motor Initialization

WARNING: Keep objects and body parts clear of the glass panel when carrying out the initialization procedure. During the initialization procedure, the glass panel closes with high force and cannot detect objects in its path. Failure to follow this instruction may result in serious personal injury.

NOTE: A new roof opening panel motor only moves towards the VENT position until it is initialized.

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including:

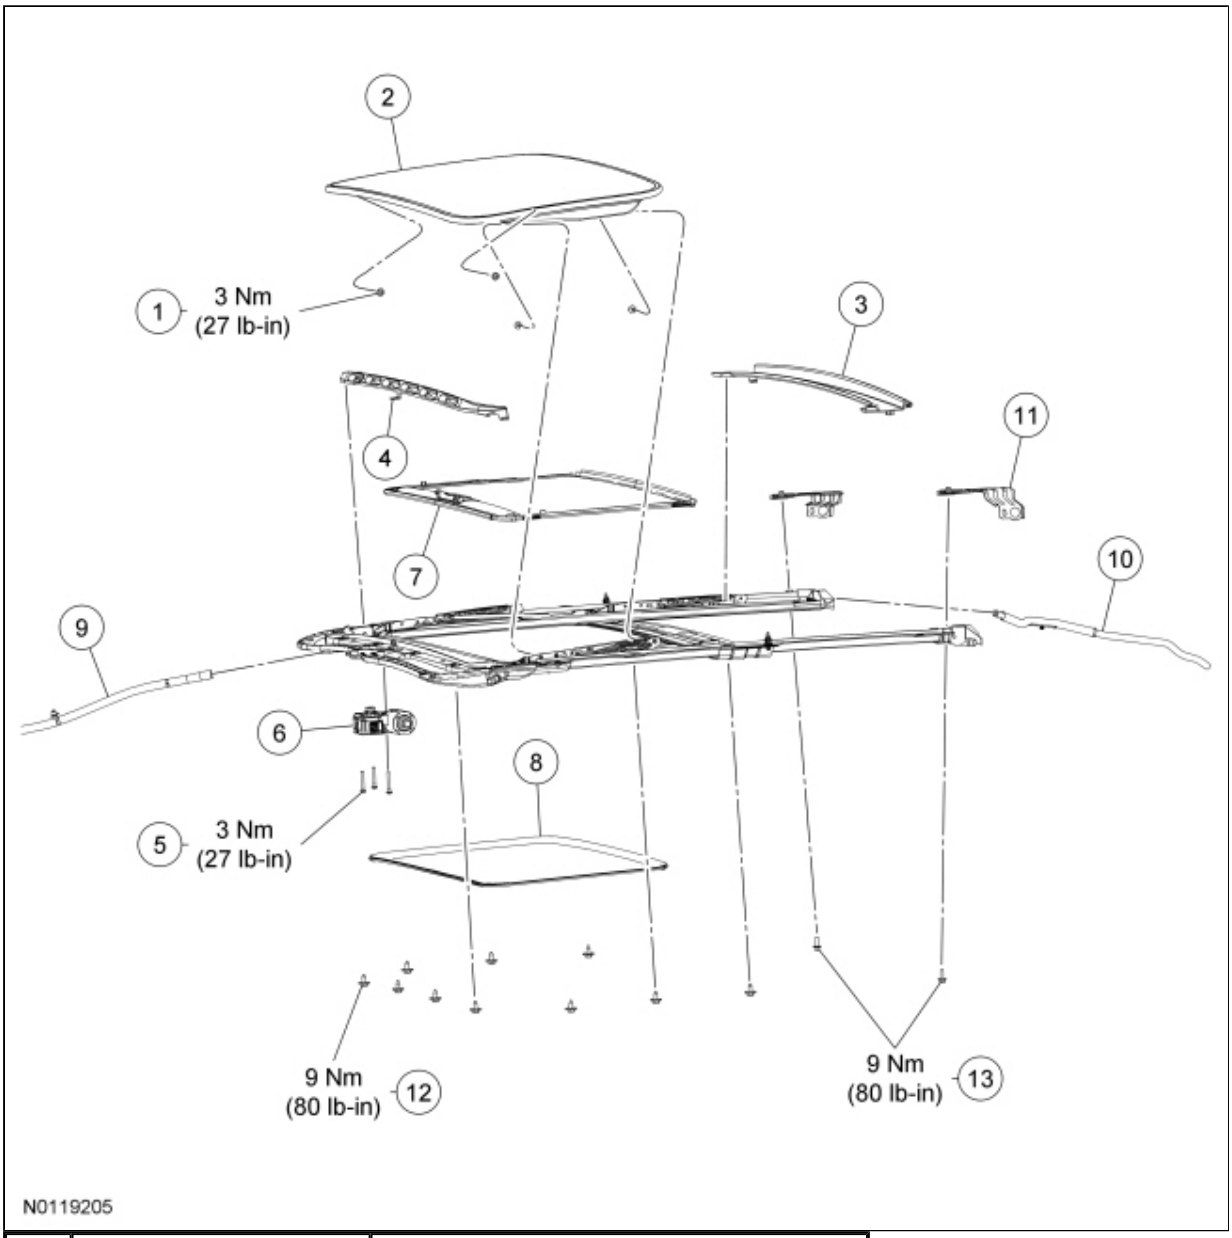
- whenever the roof opening panel motor has been removed from the roof opening panel system.
- whenever the roof opening panel glass has been removed from the roof opening panel system.
- whenever the roof opening panel assembly has been removed from the vehicle.
- whenever a new roof opening panel motor has been installed.
- whenever a new roof opening panel glass has been installed.
- whenever a new roof opening panel assembly has been installed.

1. Turn the ignition OFF. **For a new roof opening panel motor** , only carry out Step 2. **For an existing roof opening panel motor** , only carry out Step 3.

2. **For a new roof opening panel motor:**
    1. Turn the ignition ON.
    2. Press and hold the front of the SLIDE control switch until the roof opening panel glass moves slightly past the full VENT position and suddenly returns back to the full VENT position.
    3. Release and quickly press and hold the front of the SLIDE control switch while the roof opening panel glass moves to the full OPEN position and then back to fully CLOSED position (movement starts approximately 3 seconds after the switch is pressed).
    4. Release the switch and verify successful initialization by performing one-touch open and one-touch VENT operations

3. **For an existing roof opening panel motor:**
    1. Turn the ignition ON.
    2. Using the SLIDE and/or TILT control switch, position the roof opening panel into the full VENT position.
    3. Press and hold the front of the SLIDE control switch (for approximately 10 seconds) until the roof opening panel glass moves slightly past the full VENT position and suddenly returns back to the full VENT position.
    4. Release the switch and quickly press and hold the front of the SLIDE control switch while the roof opening panel glass moves to the full OPEN position and then back to fully CLOSED position (movement starts approximately 3 seconds after the switch is pressed).
    5. Release the switch and verify successful initialization by performing one-touch open and one-touch VENT operations

Roof Opening Panel — Exploded View



Item	Part Number	Description
1	31014	Roof opening panel glass screws (4 required)
2	500A18	Roof opening panel glass
3	518A30	Trough assembly
4	500A26	Air deflector
5	38682	Roof opening panel motor bolts (3 required)
6	15B1689	Roof opening panel motor
7	519A02	Roof opening panel shield
8	5450980	Headliner retainer
9	502C52	Front drain hose (2 required)

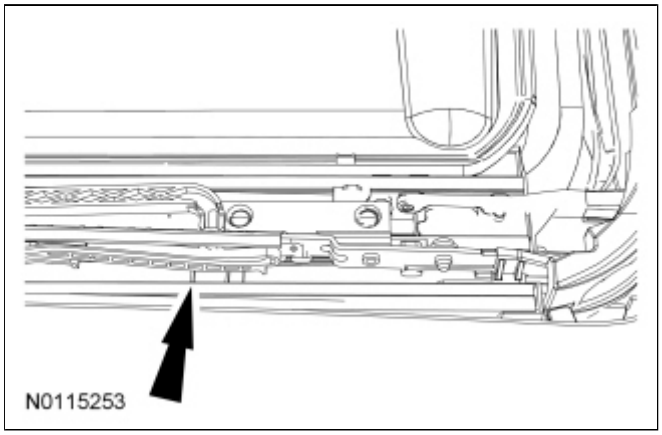
10	502C53	Rear drain hose (2 required)
11	2919891 (RH) / 2929892 (LH)	Roof opening panel frame brackets
12	W505253	Roof opening panel frame bracket bolts (2 required)
13	W702704	Roof opening panel frame bolts (10 required)

1. For additional information, refer to the procedures in this section.

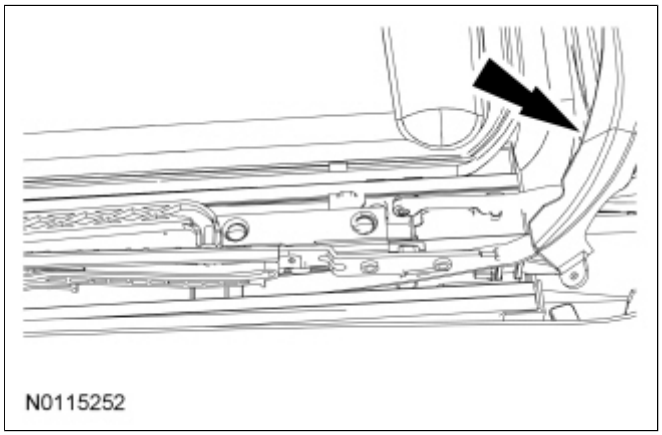
Air Deflector

Removal and Installation

1. Place the roof opening panel in the full OPEN position.
2. From the top of the vehicle and using a flat-blade screwdriver, press the spring steel locating tab down on each side while pushing the deflector toward the rear of the vehicle.



3. Tilt the air deflector upward and pull forward to remove.



4. To install, reverse the removal procedure.
   - Make sure the locating tabs are locked firmly in place.
   - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel

Removal

1. **NOTE:** Make sure the roof opening panel is in the CLOSED position.

   Remove the headliner. For additional information, refer to Section 501-05 .

2. Disconnect the 2 front and the 2 rear drain hoses from the roof opening panel.

3. Disconnect the roof opening panel motor electrical connector.

4. Remove the 10 roof opening panel frame bolts, the 2 roof opening panel frame bracket bolts and the roof opening panel.
   - With the aid of an assistant, compress the legs of the roof opening panel retaining clip and lower the roof opening panel.

5. If installing a new roof opening panel frame, transfer components as necessary.

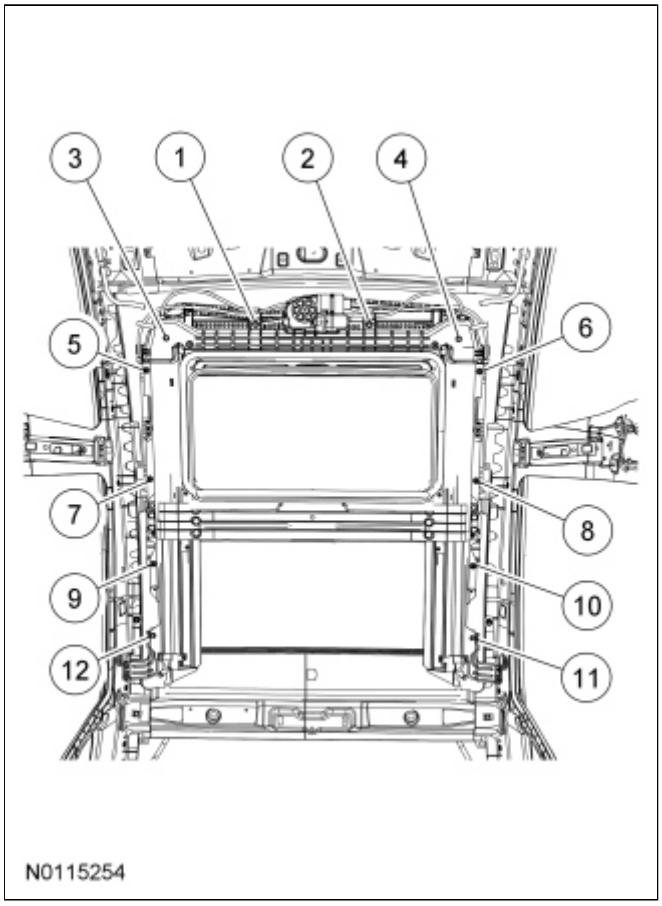
Installation

1. **NOTE:** Make sure the roof opening panel is positioned correctly on the retaining clip before tightening the roof opening panel bolts.

   NOTE: Do not fully tighten the roof opening panel frame bolts at this stage.

   Compress the legs of the roof opening panel retaining clip and install the roof opening panel.
   - Loosely install the 10 roof opening panel frame bolts and the 2 roof opening panel frame bracket bolts.

2. Tighten the 10 roof opening panel frame bolts and the 2 roof opening panel frame bracket bolts in the sequence shown.
   - Tighten to 9 Nm (80 lb-in).



3. Connect the roof opening panel motor electrical connector.
4. Connect the 2 front and the 2 rear drain hoses to the roof opening panel.
5. Install the headliner. For additional information, refer to Section 501-05 .
6. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Glass

Removal

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including: whenever the roof opening panel motor has been removed from the roof opening panel system, the roof opening panel glass has been removed from the roof opening panel system, the roof opening panel assembly has been removed from the vehicle, a new roof opening panel motor has been installed, a new roof opening panel glass has been installed or a new roof opening panel assembly has been installed. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

1. Position the roof opening panel to the CLOSED position.
2. Remove the 4 roof opening panel glass screws.
3. Remove the roof opening panel glass.

Installation

1. **NOTE:** Do not fully tighten the roof opening panel glass screws at this stage.

   Position the roof opening panel glass and loosely install the 4 screws.
2. Align the roof opening panel glass. For additional information, refer to Roof Opening Panel Alignment in this section.
3. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

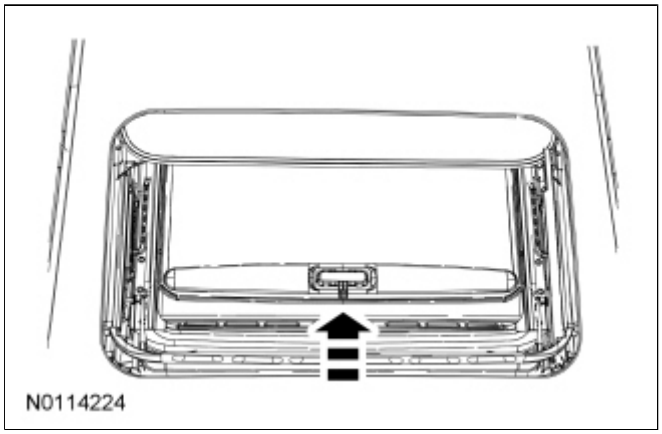
Roof Opening Panel Shield

Removal and Installation

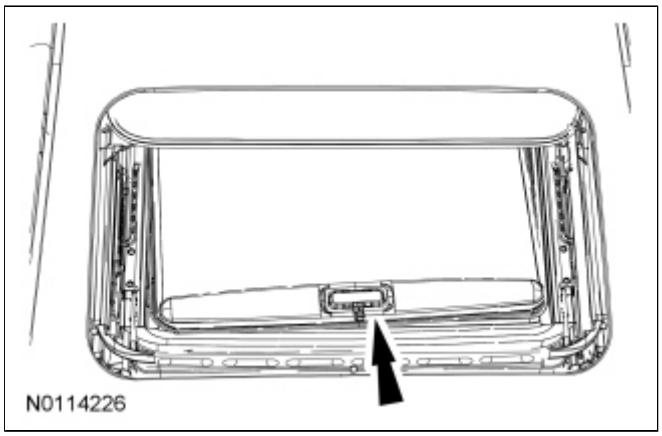
1. Remove the roof opening panel glass. For additional information, refer to Roof Opening Panel Glass in this section.

2. Slide the roof opening panel shield forward halfway.

3. Disengage the roof opening panel shield guide feet.
   - Lift the front portion of the roof opening panel shield upward at center until able to disengage one of the front guide feet.



4. With one of the guide feet released, carefully rotate the roof opening panel to disengage the remaining guide feet.



5. To install, reverse the removal procedure.

Roof Opening Panel Motor

Removal

NOTE: The roof opening panel motor must be initialized when repairs are carried out on any part of the roof opening panel system, including: whenever the roof opening panel motor has been removed from the roof opening panel system, the roof opening panel glass has been removed from the roof opening panel system, the roof opening panel assembly has been removed from the vehicle, a new roof opening panel motor has been installed, a new roof opening panel glass has been installed or a new roof opening panel assembly has been installed. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

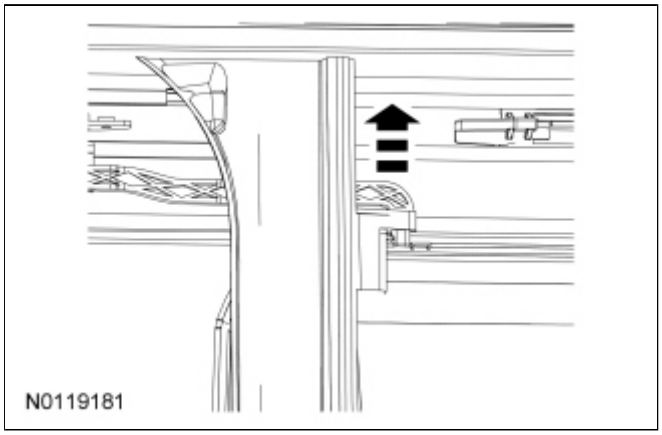
1. Remove the LH and RH A- and B-pillar trim panels. For additional information, refer to Section 501-05 .
2. Remove the roof opening panel headliner retainer (trim ring).
3. Remove the LH and RH sun visors.
4. Position aside the front door weatherstrip as necessary and lower the front portion of the headliner.
5. Disconnect the roof opening panel motor electrical connector.
6. Remove the 3 bolts and the roof opening panel motor.

Installation

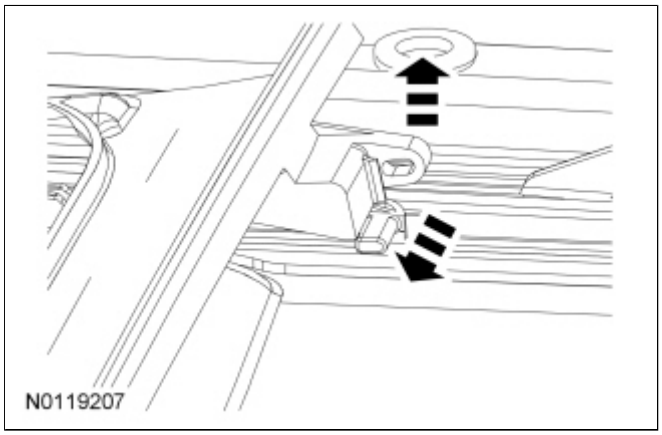
1. Install the roof opening panel motor and the 3 bolts.
    - Tighten to 3 Nm (27 lb-in).
2. Connect the roof opening panel motor electrical connector.
3. Raise the front of the headliner and reposition the front door weatherstrip.
4. Install the LH and RH sun visors.
5. Install the roof opening panel headliner retainer (trim ring).
6. Install the LH and RH A- and B-pillar trim panels. For additional information, refer to Section 501-05 .
7. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Trough Assembly

1. Remove the roof opening panel glass. For additional information, refer to Roof Opening Panel Glass .
2. Remove the roof opening panel, For additional information, refer to Roof Opening Panel .
3. Using a suitable tool, pry the trough assembly guides from the trough assembly.

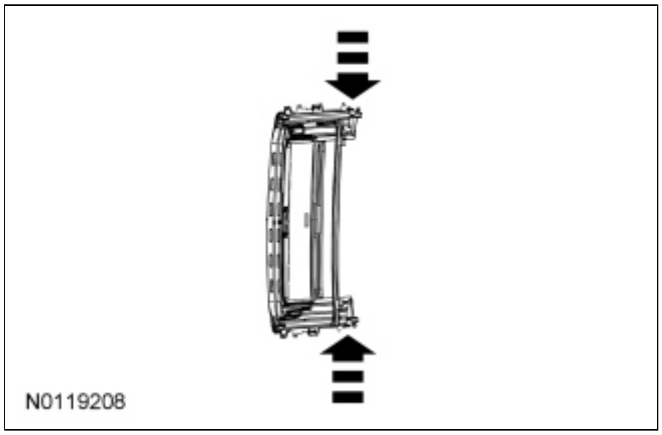


4. Gently raise the trough assembly and slide the trough assembly guides under the trough assembly.



5. Slide the trough assembly rearward until the trough assembly is approximately 76.2 mm (3 in) from the roof opening panels rear edge.
6. ***NOTICE:*** **Use care when disconnecting the trough assembly from the roof opening panel tracks to prevent damage to the trough assembly.**

   Gently flex the roof opening panel tracks and release the trough assembly from the tracks.



7. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-ft	lb-in

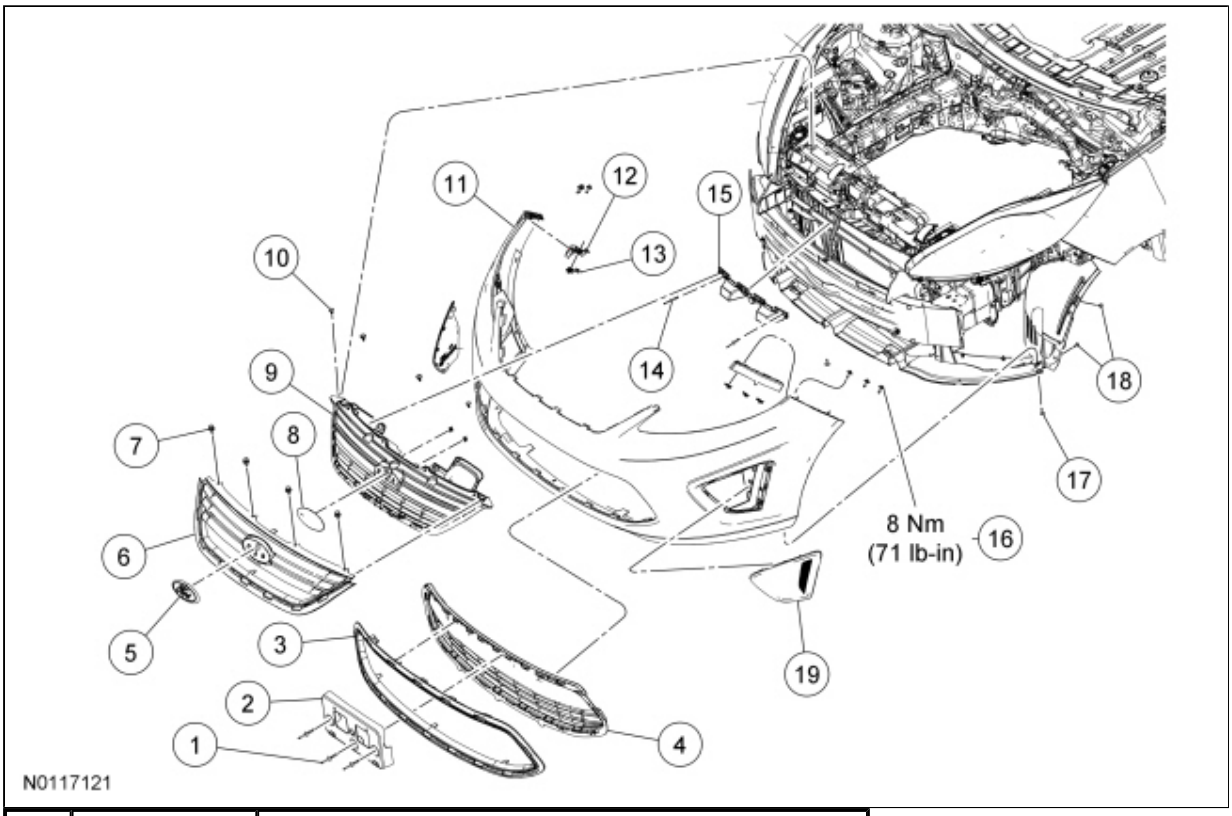
Bumper — Exploded View, Front



Item	Part Number	Description
1	W705297	License plate bracket rivet (3 required)
2	17A385	License plate bracket
3	8200	Lower radiator grille outer frame
4	8200	Lower radiator grille
5	8213	Emblem
6	8200	Upper radiator grille
7	N807389	Upper radiator grille pin-type retainer (4 required)
8	8213	Emblem base (5-door hatchback only)
9	8A284	Upper radiator grille reinforcement
10	W714040	Upper radiator grille reinforcement pin-type retainer (4 required)
11	17D957	Front bumper cover
12	17E856/ 17E857	Front bumper cover bracket (RH/LH)
13	W520822	Front bumper cover bracket nut (6 required)
14	W706737	Upper radiator grille lower reinforcemnet bracket rivet
15	8A284	Upper radiator grille lower reinforcement bracket
16	W503924	Front bumper cover screw (6 required)
17	W710763	Radiator lower air deflector retainer (3 required)
18	W701054	Front fender splash shield retainers (4 required)
19	17E810/	Supplemental parking lamps cover (RH/LH)

	17E811	

1. For additional information, refer to the procedures in this section.

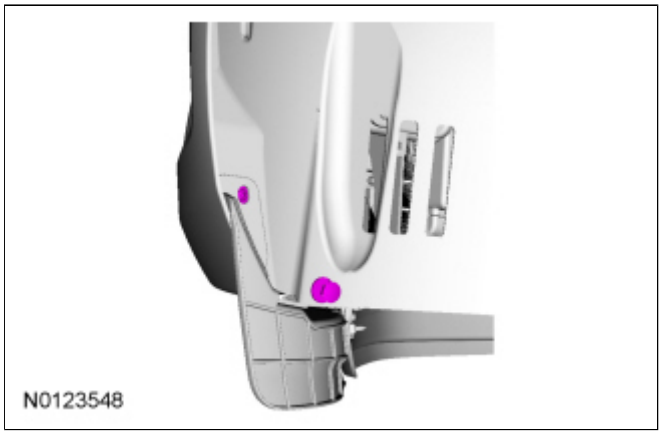
Bumper Cover — Front

Removal and Installation

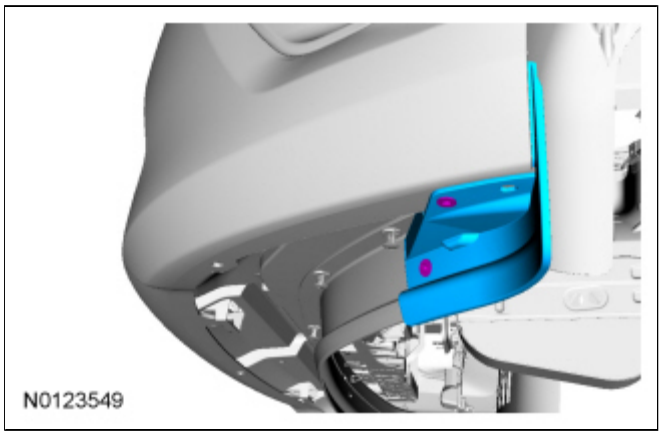
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the front wheels and tires. For additional information, refer to Section 204-04 .

3. If equipped, remove the 2 front stone deflector extension retainers on both sides from inside the front wheel wells.

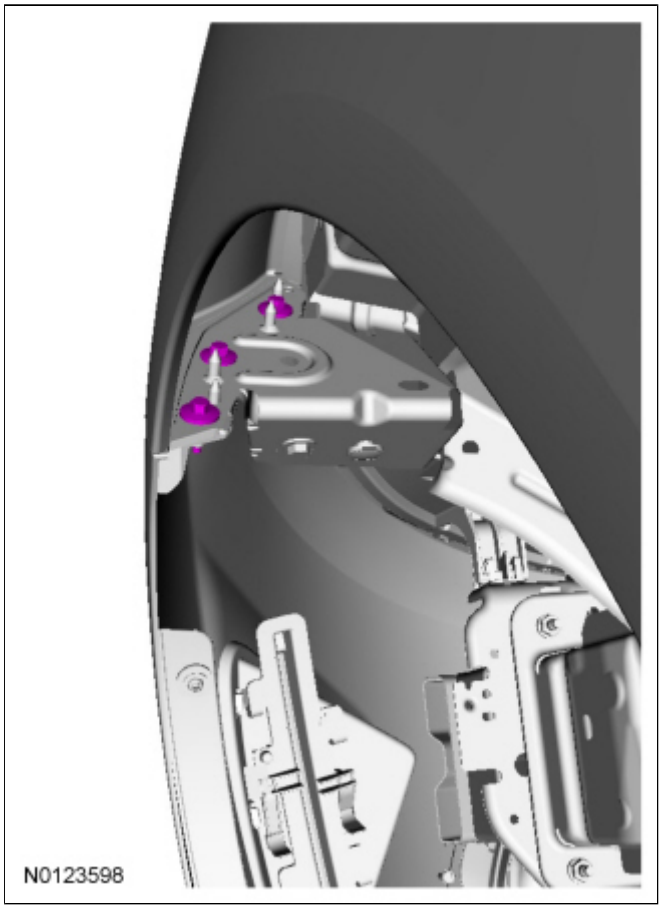


4. If equipped, remove the 2 bolts and both of the front stone deflector extension.



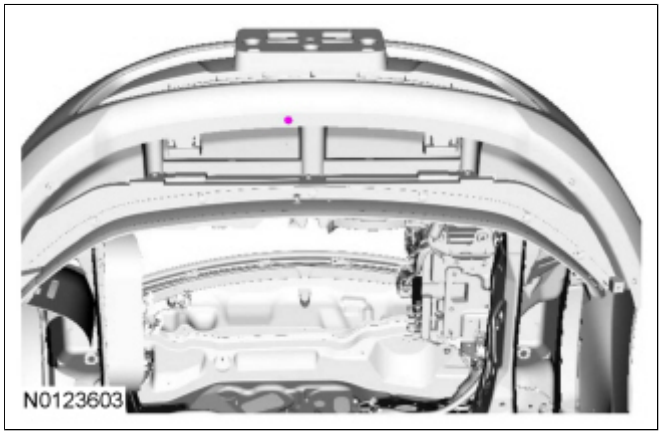
5. Remove both front fender splash shields. For additional information, refer to Section 501-02 .

6. Disconnect the front bumper cover from the bumper cover brackets.
    1. Remove the 3 front bumper cover-to-front bumper cover bracket bolts on both sides.
        - To install, tighten to 8 Nm (71 lb-in).
    2. Gently pull down on the front bumper cover to disconnect it from the bumper cover brackets on both sides.

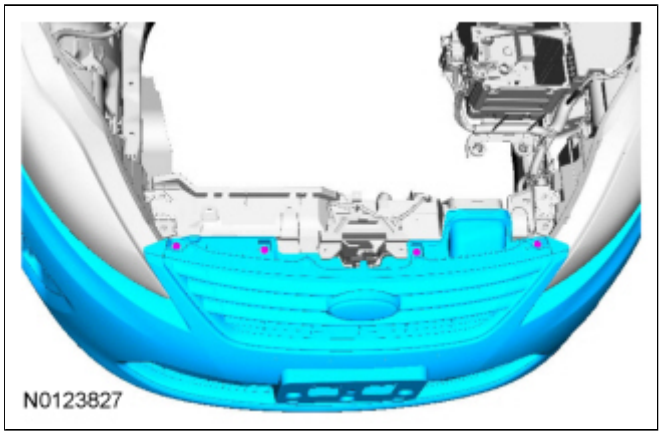


7. If equipped, disconnect the auxiliary parking lamp electrical connectors.

8. Remove the front bumper cover bolt on the underside of vehicle.

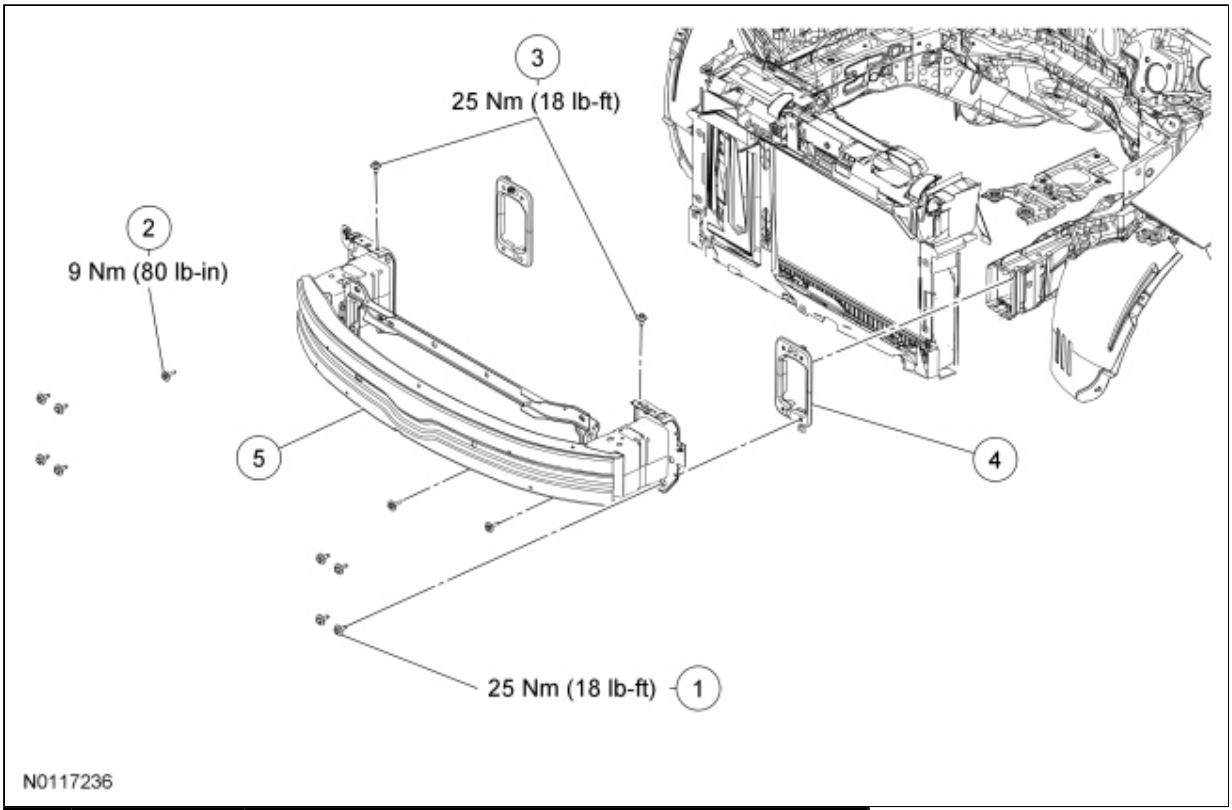


9. Remove the 4 upper radiator grille reinforcement-to-radiator support pin-type retainers and remove the front bumper cover assembly.



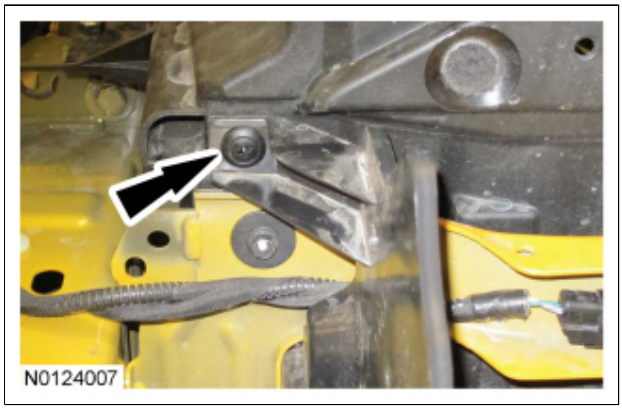
10. To install, reverse the removal procedure.
    - Transfer all necessary components.

Bumper — Front

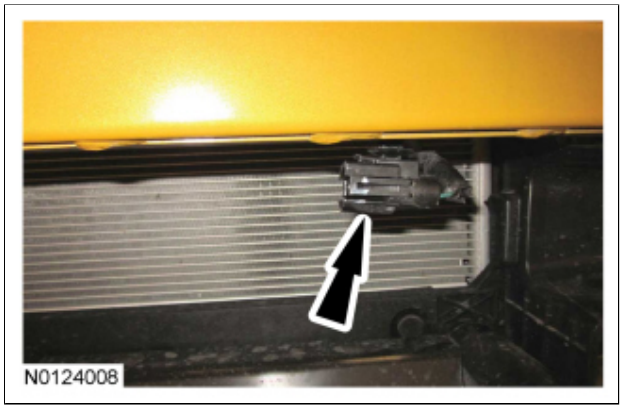


Item	Part Number	Description
1	W709933	Front bumper bolt (8 required)
2	W701121	Front bumper-to-radiator grille opening panel reinforcement bolt (4 required)
3	W713533	Radiator grille opening panel reinforcement-to-front bumper bolts (2 required)
4	17B749/ 17B750	Front bumper mounting bracket (RH/LH)
5	17757	Front bumper

1. Remove the front severity sensors. For additional information, refer to Section 501-20B .
2. Disconnect the front severity sensors wiring harness retainers from the front bumper.
3. Remove the both headlamp assemblies.
    1. Remove the 3 headlamp assembly bolts.
        - To install, tighten to 5 Nm (44 lb-in).
    2. Disconnect and remove both headlamp assemblies.
4. Disconnect the horn electrical connector.
5. Disconnect the wiring harnesses attached to the front bumper.
    - 3 on the RH side.
    - 4 on the LH side.
6. If equipped, remove the 2 radiator side air deflector upper retainers.



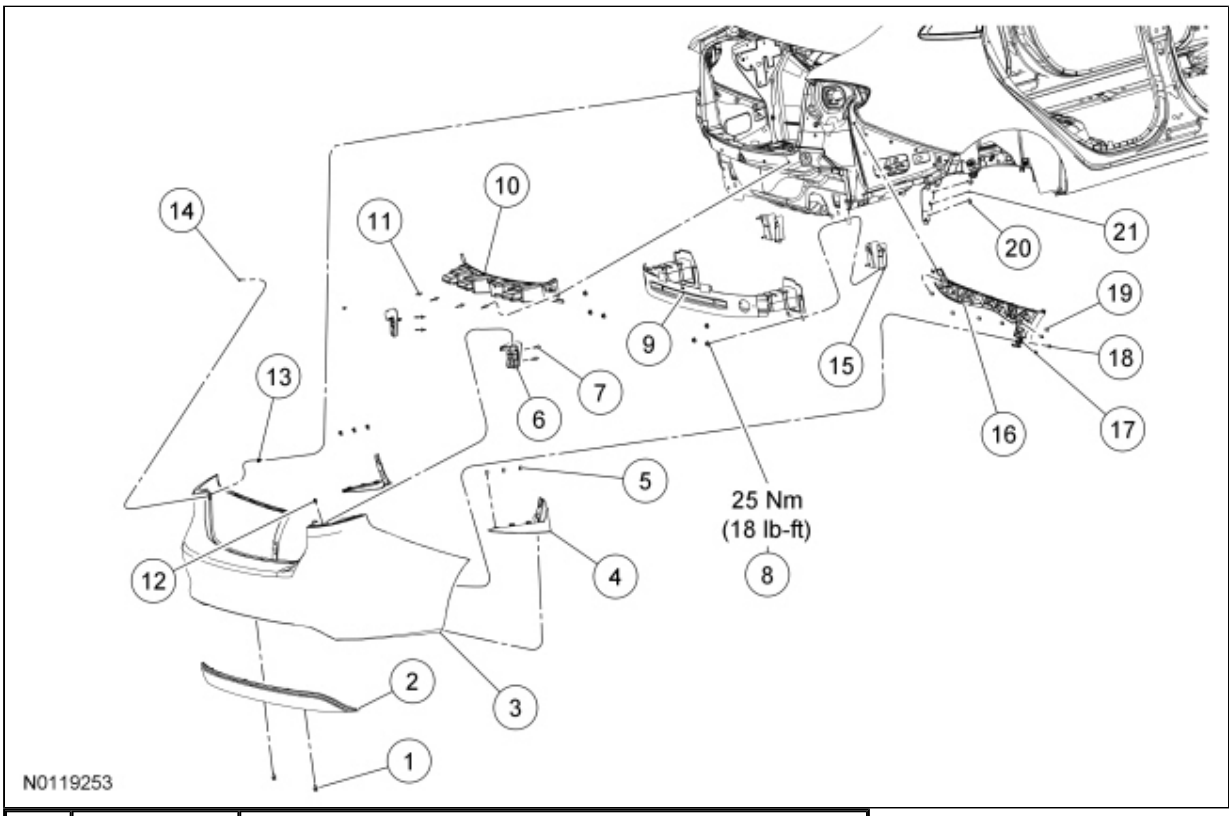
7. If equipped, remove the 2 retainers and the both lower air deflectors.
8. Disconnect and remove the ambient temperature sensor from the bottom of the front bumper.



9. Support the underside of the radiator support housing prior to removing the front bumper bolts.
10. Remove the 2 radiator grille opening panel reinforcement-to-front bumper bolts.
    - To install, tighten to 25 Nm (18 lb-ft).
11. Remove the 4 front bumper-to-radiator grille opening panel reinforcement bolts.
    - To install, tighten to 9 Nm (80 lb-in).
12. Remove the radiator grille opening panel reinforcement support-front bumper bolt.
    - To install, tighten to 9 Nm (80 lb-in).
13. With the help of an assistant, remove the 8 front bumper bolts and remove the front bumper.
    - To install, tighten to 25 Nm (18 lb-ft).
14. To install, reverse the removal procedure.

Bumper — Exploded View, Rear

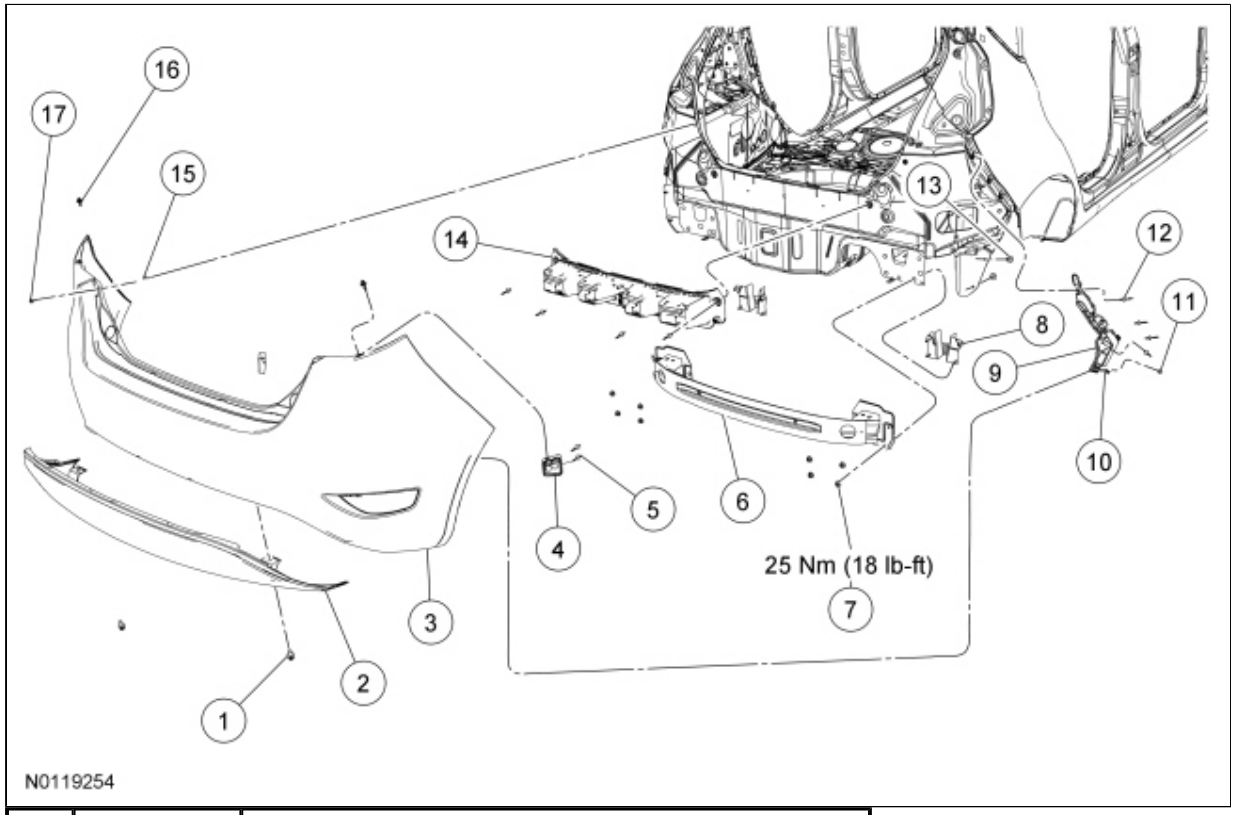
4-Door Sedan



Item	Part Number	Description
1	W711035	Rear stone deflector pin-type retainer (2 required)
2	17808	Rear stone deflector
3	17K835	Rear bumper cover
4	16A550	Rear mudflap (RH/LH)
5	W710754	Rear mudflap clip (6 required)
6	17D942/ 17D943	Rear bumper cover mounting bracket (RH/LH)
7	W709095	Rear bumper cover mounting bracket rivet (4 required)
8	W706817	Rear bumper nut (6 required)
9	17906	Rear bumper
10	17D995	Rear bumper cover center reinforcement
11	W709095	Rear bumper cover center reinforcement rivet (4 required)
12	16K262	Rear bumper cover-to-rear bumper cover mounting bracket pin-type retainer (2 required)
13	W707977	Rear bumper cover retainer nut (2 required)
14	W713090	Rear bumper cover screw (2 required)
15	17A750	Rear bumper mounting bracket (RH/LH)
16	17D942/ 17D943	Rear bumper cover reinforcement (RH/LH)

17	W708590	Rear bumper cover reinforcement retainer nut (2 required)
18	W700092	Rear bumper cover-to-rear bumper cover reinforcement retainer (2 required)
19	W709095	Rear bumper cover reinforcement rivet (12 required)
20	W701054	Rear wheel splash shield pin-type retainer (2 required)
21	W707433	Rear mudflap retainer (2 required)

5-Door Hatchback



Item	Part Number	Description
1	W711035	Rear stone deflector pin-type retainer (2 required)
2	17808	Rear stone deflector
3	17K835	Rear bumper cover
4	17D942/ 17D943	Rear bumper cover mounting bracket (RH/LH)
5	W709095	Rear bumper cover mounting bracket rivet (4 required)
6	17906	Rear bumper
7	W706817	Rear bumper nut (8 required)
8	17A750	Rear bumper mounting bracket (RH/LH)
9	17D942/ 17D943	Rear bumper cover reinforcement (RH/LH)
10	W708590	Rear bumper cover reinforcement retainer nut (2 required)
11	W700092	Rear bumper cover-to-rear bumper cover reinforcement retainer (2 required)
12	W709095	Rear bumper cover reinforcement rivet (8 required)

13	W701054	Rear wheel splash shield pin-type retainer (4 required)
14	17D995	Rear bumper cover center reinforcement
15	W707977	Rear bumper cover retainer nut (2 required)
16	16K262	Rear bumper cover-to-rear bumper cover mounting bracket pin-type retainer (2 required)
17	W713090	Rear bumper cover screw (2 required)

1. For additional information, refer to the procedures in this section.

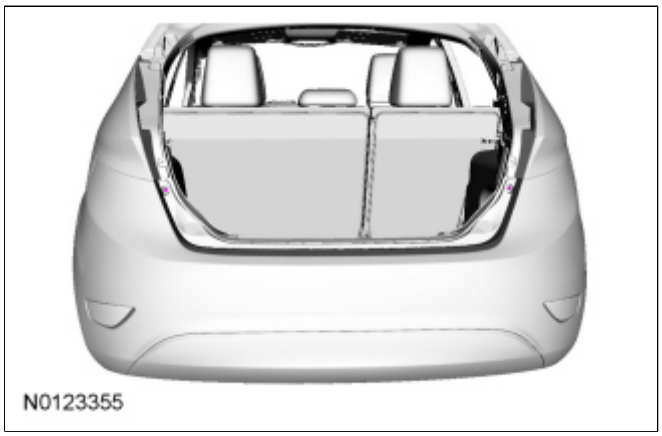
Bumper Cover — Rear

Removal and Installation

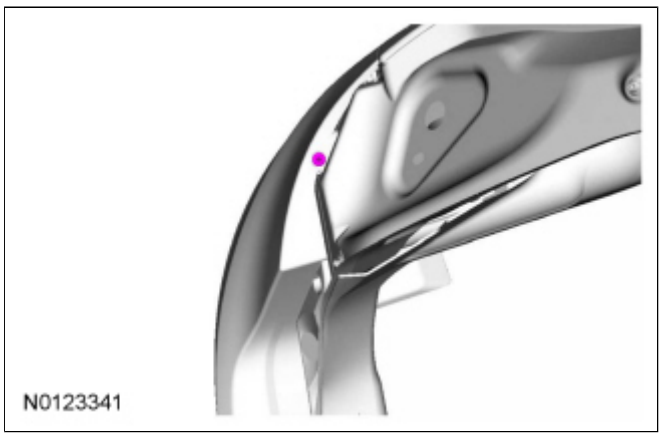
4-Door Sedan and 5-Door Hatchback

NOTE: Illustrations are from a 5-door hatchback, 4-door sedan similar.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the 2 rear bumper screws.



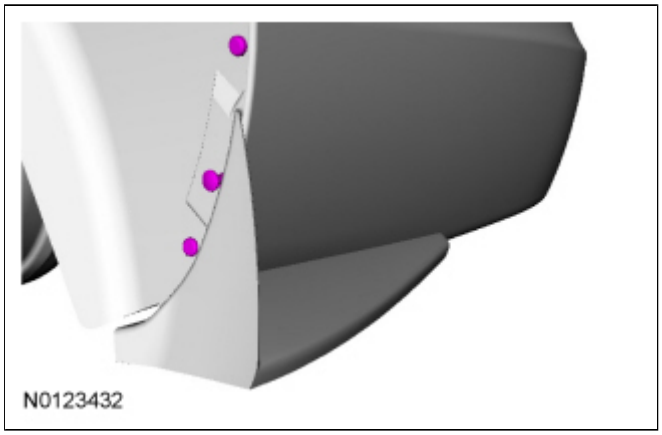
3. Remove the rear lamp assembly. For additional information, refer to Section 417-01 .
4. Remove the rear bumper cover-to-rear bumper cover mounting bracket pin-type retainer.



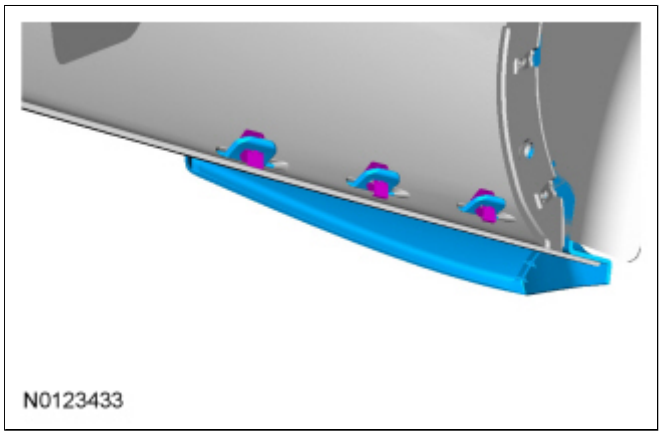
5. Remove both rear wheels and tires. For additional information, refer to Section 204-04 .

4-Door Sedan

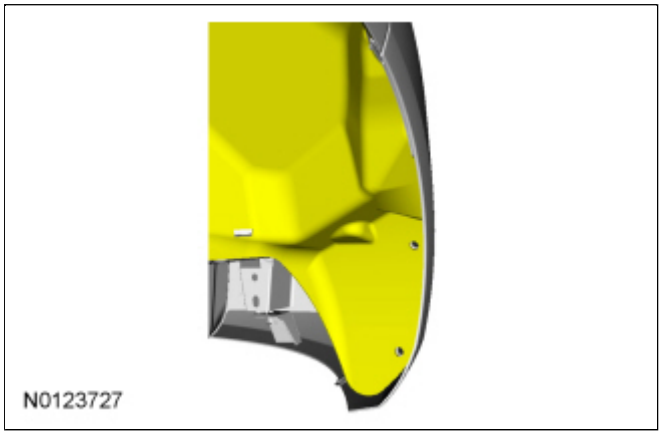
6. If equipped, remove the 3 rear mudflap retainers.



7. If equipped, disconnect the 3 clips and remove the rear mudflaps.

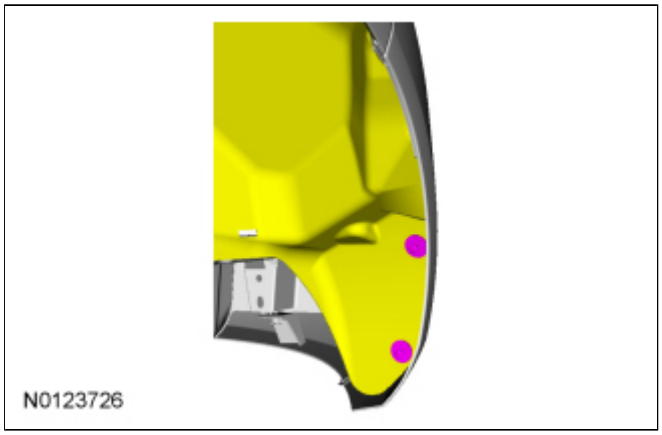


8. Position both rear wheel splash shields aside.



5-Door Hatchback

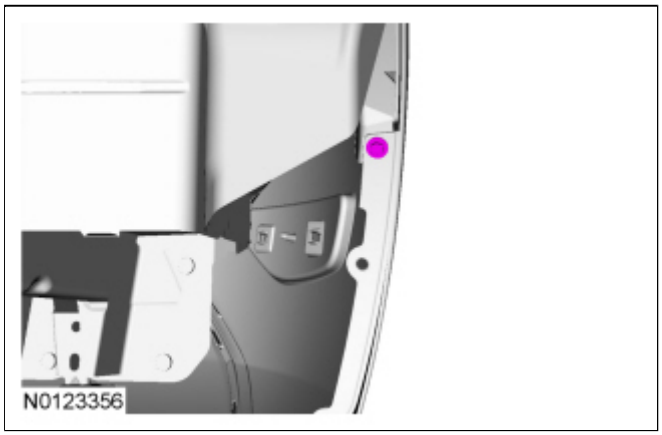
9. Remove the 2 pin-type retainers and position both rear wheel splash shields.



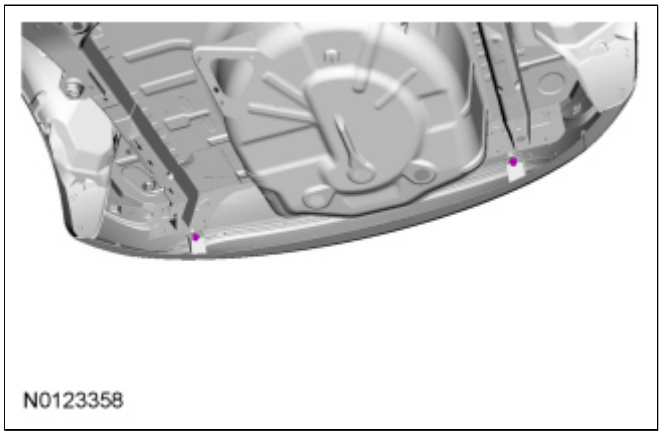
4-Door Sedan and 5-Door Hatchback

NOTE: 5-door hatchback shown, 4-door sedan similar.

10. Remove the rear bumper cover-to-bumper cover bracket bolt.

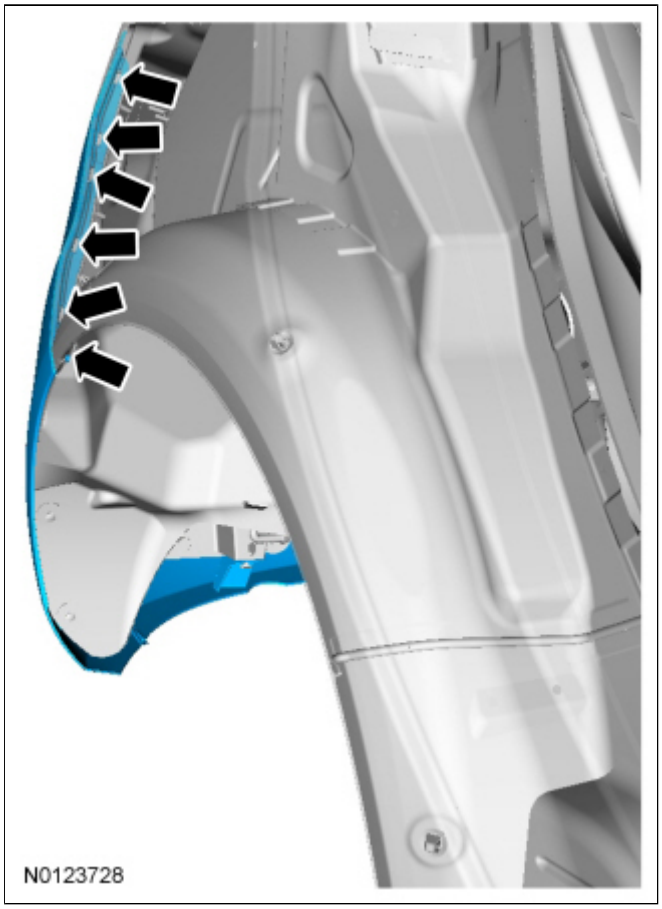


11. Remove the 2 rear stone deflector-to-rear bumper bracket pin-type retainers.



12. **NOTE:** The rear bumper cover is attached to the rear bumper cover brackets by 6 clips on each side.

    Release the 6 clips on each side and remove the rear bumper cover.



13. Inspect the rear bumper cover mounting brackets for damage at the attaching points. If necessary, install new bumper cover mounting reinforcements before installation.

14. To install, reverse the removal procedure.
    - Transfer parts as necessary.

Bumper — Rear

Removal and Installation

1. Remove the rear bumper cover. For additional information, refer to Bumper Cover — Rear in this section.

2. Remove the rear bumper nuts.
   - 4-door sedan has 6 nuts (3 each side).
   - 5-door hatchback has 8 nuts (4 each side).
   - To install, tighten to 25 Nm (18 lb-ft).

3. Remove the rear bumper.

4. To install, reverse the removal procedure.

Safety Belt System

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

Use only the replacement parts specified in the Ford Catalog Advantage™ or equivalent when installing new safety belt buckles and/or retractor assemblies.

Active Restraint System Components

The active restraint system consists of the following serviceable items:

- Front safety belt shoulder height adjusters
- Front safety belt buckles attached to the inboard side of the seats
- Front safety belt retractors and pretensioners (pretensioner feature available only on vehicles equipped with Supplemental Restraint System (SRS)) located behind the lower B-pillar trim panels
- Rear center safety belt retractor attached to the parcel shelf sheet metal (4-door sedan) or LR seat frame (5-door hatchback) and LH safety belt buckle assembly attached to the floor pan under the rear seat cushion
- Rear safety belt retractors (outboard) attached to the parcel shelf sheet metal (4-door sedan) or C-pillars (5-door hatchback)
- Rear dual safety belt buckle assembly (RH and center safety belt buckles) attached to the floor pan
- Child safety seat tether anchors located on the parcel shelf (4-door sedan) or on the back of the second row seat back rest (5-door hatchback), at all 3 seating positions
- Lower Anchors and Tethers for CHildren (LATCH) attached to the floor pan

Safety Belt Retractors

The safety belt retractors consist of the following components:

- Safety belt retractor pretensioner (front only), on vehicles equipped with SRS
- Adaptive load limiting (front passenger only), on vehicles equipped with SRS
- Dual locking mode
  - Emergency Locking Retractor (ELR)
  - Automatic Locking Retractor (ALR) (all except driver seat)
- Belt Tension Sensor (BTS) (front passenger only), on vehicles equipped with SRS

Automatic Locking Retractor (ALR)

The ALR mode is used when locking a child seat in any passenger seating position. The ALR mode automatically activates when the safety belt webbing is fully extracted from the retractor and then allowed to retract. As the safety belt webbing retracts back onto the spool, an audible clicking sound is made indicating the safety belt retractor is in ALR mode and the safety belt webbing will not pull back out of the safety belt retractor. The ALR mode disengages when the webbing is allowed to fully retract back into the retractor. For testing, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Retractor Pretensioner

The safety belt retractor pretensioner is a pyrotechnic device that removes excess webbing from the safety belt system when deployed by the SRS. When the pretensioner deploys, the retractor spools in the safety belt webbing, removing excess webbing from the lap and shoulder safety belts.

If the vehicle is involved in a crash resulting in pretensioner deployment, install a new safety belt retractor pretensioner. For safety belt retractor pretensioner diagnosis and disposal information, refer to Section 501-20B.

If the ignition is ON with the safety belt retractor pretensioner electrical connector(s) disconnected, a DTC sets.

The pretensioner feature is only available on the front safety belt retractors of SRS-equipped vehicles.

Adaptive Load Limiting

Adaptive load limiting safety belt retractors are pyrotechnic devices integrated with the front passenger safety belt retractor assembly. The adaptive load limiting safety belt retractor works in conjunction with the safety belt pretensioner to control the tension of the front passenger safety belt. The Restraints Control Module (RCM) monitors the readiness of the adaptive load limiting safety belt retractor. The RCM uses this information and all other information provided by the restraints system to determine what action is to be taken.

The adaptive load limiting pyrotechnic device feature is only available on the front passenger safety belt retractors of SRS-equipped vehicles.

Emergency Locking Retractor (ELR)

The ELR is a vehicle-sensitive feature designed to activate and lock the safety belt webbing during hard braking, cornering hard or in an impact of approximately 24 km/h (15 mph). The ELR feature helps reduce the forward movement of the driver and passengers. For testing, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Belt Tension Sensor (BTS)

The BTS is located at the front passenger safety belt retractor anchor point and operates as part of the Occupant Classification System (OCS) system on the front passenger seat. To diagnose the BTS, refer

to Section 501-20B .

Safety Belt Buckles

Front Safety Belt Buckles

The front seat safety belt buckles are attached to the front seat tracks.

On vehicles equipped with an SRS , the front safety belt buckles have a switch indicating buckle status to the RCM . To diagnose the buckle switch, refer to Section 501-20B .

Rear Safety Belt Buckles

The rear seat safety belt buckles are attached to the floor pan under the rear seat cushion. The LH safety belt buckle is part of the rear center safety belt retractor and is serviced as an assembly. The rear dual safety belt buckle assembly (RH and center buckle) is also serviced as an assembly.

Child Safety Seat Restraints

The child safety seat restraints include the following items:

- Serviceable child safety seat tether anchor located at the rear seating positions, bolted to the parcel shelf sheet metal on 4-door sedans. On 5-door hatchbacks, the child safety seat tether anchors are part of the second row seat back and are not serviced separately from the seat back.
- Non-serviceable Lower Anchors and Tethers for CHildren (LATCH), welded to the floor pan.

If a child safety seat was in use during a collision, inspect the vehicle structure at the child safety seat component mounting areas, repair any damage and restore the vehicle to the original production configuration.

Safety Belt System

Principles of Operation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

Safety Belt Warning System

The safety belt warning system is present only on vehicles equipped with a Supplemental Restraint System (SRS). The conditions of operation for the safety belt warning indicator and chime are as follows:

- If the driver safety belt is not buckled when the ignition is ON, the safety belt warning indicator illuminates for 1 to 2 minutes and the warning chime sounds for 4 to 8 seconds.
- If the driver safety belt is buckled while the warning indicator is illuminated and the chime is sounding, the warning indicator and warning chime turn OFF.
- If the driver safety belt is buckled before the ignition is turned ON, the warning indicator and chime remain off.

Belt-Minder®

The Belt-Minder® feature is present only on vehicles equipped with an SRS and is a supplemental warning to the safety belt warning function. This feature provides additional reminders that the driver and/or front passenger safety belt is unbuckled by intermittently sounding a chime and illuminating the safety belt warning indicator in the Instrument Panel Cluster (IPC).

Either the driver or front passenger safety belt systems may activate the Belt-Minder®. If the Belt-Minder® warnings have expired (warnings last for approximately 5 minutes) for one occupant (driver or front passenger), the other occupant can still activate the Belt-Minder® feature.

The passenger Belt-Minder® feature is activated only when the Occupant Classification System (OCS) system detects a passenger in the right front seat and the passenger weight exceeds a programmed limit. For information on the OCS system, refer to Section 501-20B .

To activate or deactivate the Belt-Minder® feature, refer to Section 413-01 .

If...	Then...
the driver or front passenger safety belt is not buckled when the vehicle has reached at least 5 km/h (3 mph) and 1 to 2 minutes have elapsed since the ignition has been turned ON...	the Belt-Minder® feature is activated, safety belt warning indicator illuminates and warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until the safety belt(s) is buckled.
the driver or front passenger safety belt becomes unbuckled for approximately 1 minute while the vehicle is traveling at least 5 km/h (3 mph) and more than 1 to 2 minutes have elapsed since the ignition has been turned ON...	the Belt-Minder® feature is activated, the safety belt warning indicator illuminates and warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until the safety belt(s) is buckled.
the driver and/or passenger safety belt is buckled before the ignition is turned ON or less than 1 to 2 minutes have elapsed since the ignition has been turned ON...	the Belt-Minder® feature will not activate.

Inspection and Verification

1. Verify the customer concern by operating the active restraint system to duplicate the condition.

2. Inspect to determine if any of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
• Safety belt webbing integrity (torn, frayed, cut or stretched) • Safety belt buckle and tongue • Safety belt retractor	• Wiring, terminals or connectors • Safety belt warning indicator burned out or broken • High Speed Controller Area Network (HS-CAN) concern

3. If the inspection reveals an obvious concern(s) that can be readily identified, service as required. With the exception of removing a twist from the safety belt webbing, do not attempt to repair a component of the safety belt system; new components must be installed.

4. If the concern remains after the inspection, determine the symptom. GO to Symptom Chart .

5. To check the active restraint system for correct operation, carry out the appropriate Functional Test procedure(s). Refer to Component Test in this section.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The safety belt warning indicator does not operate	• Burned-out indicator • Wiring, terminals or connectors • Instrument Panel Cluster (IPC) • Restraints Control Module (RCM)	• If the air bag warning indicator is illuminated, REFER to Section 501-20B . If the air bag warning indicator is not illuminated, REFER to Section 413-01 .
• The safety belt warning chime does not operate	• Wiring, terminals or connectors • Safety belt buckle switch • IPC • RCM	• If the air bag warning indicator is illuminated, REFER to Section 501-20B . If the air bag warning indicator is not illuminated, REFER to Section 413-01 .
• The safety belt retractor webbing does not extract or exhibits excessive pressure on the occupant during use	• Safety belt retractor is in Automatic Locking Retractor (ALR) mode • Safety belt retractor binding internally	• CARRY OUT the Functional Test — Safety Belt Retractor and Functional Test — Safety Belt Retractor, ALR Mode. REFER to Component Test in this section. INSTALL new components as directed.
• The safety belt retractor webbing does not retract or has excessive slack during use	• Twisted or incorrectly routed safety belt webbing • Safety belt retractor binding internally • Safety belt retractor	• CORRECT the twisted safety belt webbing. REFER to Safety Belt Tongue Rotated on Belt or Safety Belt Twisted at the Safety Belt Guide in this section. CARRY OUT the appropriate Functional Test procedure. REFER to Component Test in this section. • INSTALL a new safety belt retractor. REFER to Safety Belt Retractor — Front , Safety Belt Retractor — Rear, Center, 4-Door Sedan , Safety Belt Retractor — Rear, Center, 5-Door Hatchback , Safety Belt Retractor — Rear, Outboard, 4-Door Sedan , or Safety Belt Retractor — Rear, Outboard, 5-Door Hatchback in this section.
• The Belt-Minder® feature is inoperative	• Belt-Minder® feature is deactivated • Wiring, terminals or connectors	• REFER to Section 413-01 or the Seating and Safety Restraints section of the Owner's Literature to activate the Belt-Minder® feature. If the Belt-Minder® is activated, REFER to Section 413-01 to diagnose.

• The safety belt tongue is rotated on the safety belt webbing	• Twisted or incorrectly routed safety belt webbing	• REFER to Safety Belt Tongue Rotated on Belt in this section.
• The safety belt webbing is twisted at the safety belt guide	• Twisted or incorrectly routed safety belt webbing	• REFER to Safety Belt Twisted at the Safety Belt Guide in this section.
• The safety belt webbing is dirty or soiled	• Dirty or soiled safety belt webbing	• REFER to Safety Belt Cleaning in this section.

Component Test

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

Carry out the appropriate Functional Test(s) as determined in Inspection and Verification.

Functional Test — Safety Belt Buckle and Tongue

The safety belt buckle and tongue assembly must operate freely during the latching and unlatching function. Fasten the safety belt by inserting the tongue (male portion) into the buckle (female portion).

1. Verify the following during the latching sequence:
   - Tongue insertion is not hindered by excessive effort.
   - A click is heard when the safety belt buckle latches the tongue.
2. Verify the system integrity by forcefully pulling on the safety belt webbing.
3. Unlatch the safety belt by fully pressing the safety belt buckle release button and allowing the safety belt to release and retract.

4. Verify the following during the unlatching process:
    - Pressing the push-button does not require excessive effort.
    - The tongue can be removed easily from the buckle.

5. Repeat the above steps 3 times.

6. If the functional test reveals a concern(s), install a new safety belt buckle or safety belt retractor as required.

Functional Test — Safety Belt Retractor

The safety belt retractor must be freely operational for extraction and retraction of the safety belt webbing between full extension and in-vehicle stowed positions.

1. Extract and retract the safety belt between the full extension and stowed positions.

2. Verify the safety belt retractor operates without excessive effort or binding.

3. Install a new safety belt retractor if any concern is found or the complaint has been verified.

Functional Test — Safety Belt Retractor, Automatic Locking Retractor (ALR) Mode

1. Position the seat backrest fully upright (if adjustable).

2. Position the safety belt shoulder height adjuster (if equipped) in the full down position.

3. Fasten the safety belt.

4. Pull out the safety belt webbing until the Automatic Locking Retractor (ALR) feature is activated.

5. Allow the safety belt webbing to retract until it stops.

6. Pull on the safety belt webbing to check that the safety belt retractor has remained in the ALR mode. If the safety belt retractor is not locked, install a new safety belt retractor.

7. Unfasten the safety belt and allow the safety belt webbing to retract to its stowed position.

8. Pull out and retract the safety belt webbing to verify the safety belt retractor has converted automatically out of ALR mode. If the safety belt retractor remains locked in the ALR mode, install a new safety belt retractor.

Functional Test — Safety Belt Retractor, Road Test Inspection

WARNING: The driver and passenger must be prepared to brace themselves in the event the safety belt retractor does not lock. Failure to follow this instruction may result in serious personal injury.

NOTE: Make sure there is no excessive slack in the safety belt webbing across the torso during testing.

NOTE: Do not jerk on the safety belt webbing when carrying out this test.

1. Test the safety belts in the following sequence:
    1. Fasten the safety belts and proceed to a safe area.
    2. Reach a speed of 24 km/h (15 mph).
    3. **WARNING: Apply maximum brake force only on dry concrete or equivalent hard surface, NEVER on wet pavement or gravel. Failure to follow this instruction may result in serious personal injury.**

       Grasp the shoulder harness, lean forward and apply the brakes, making a maximum braking application without a skid.
    4. The safety belts should lock up with minimum webbing extension.
    5. If there is a lockup of all safety belt retractors being tested, the safety belt retractors are functioning correctly. If any safety belt retractor fails to lock up, install a new safety belt retractor(s).

Safety Belt Cleaning

1. **WARNING: Do not bleach or re-dye the safety belt webbing, as the webbing may weaken. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.**

   Clean the safety belt webbing only with a mild soap solution recommended for cleaning upholstery or carpets. Follow the instructions provided with the soap.

Safety Belt Maintenance

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. The safety belt assemblies should be periodically inspected to make sure that they have not become damaged and that they remain in correct operating condition, particularly if they have been subjected to severe stress.

2. Before installing the new safety belt assembly; the safety belt retaining areas must be inspected for damage and distortion. If the retaining points are damaged and distorted, the sheet metal must be reworked back to its original shape and structural integrity.

3. Install the new safety belt(s) using the appropriate instructions. Carry out the Functional Test Procedures. For additional information, refer to Safety Belt System in this section.

Safety Belt Procedure After a Collision

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

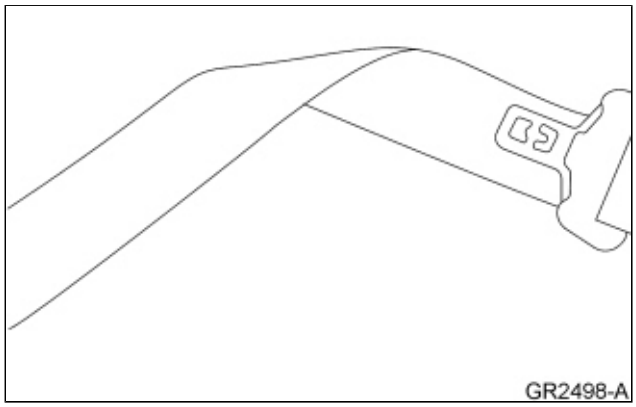
After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Before installing a new safety belt assembly, the safety belt attaching areas must be inspected for damage and distortion. If the attaching points are damaged and distorted, the sheet metal must be worked back to its original shape and structural integrity.

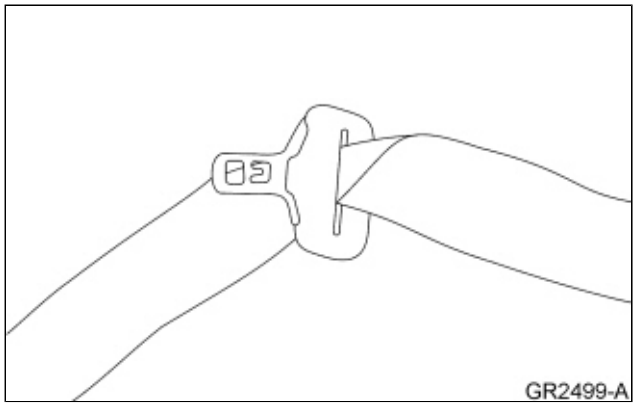
2. Install the new safety belt(s). For additional information, refer to the procedure in this section. Carry out the Functional Test. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Tongue Rotated on Belt

1. Fold the safety belt as indicated.



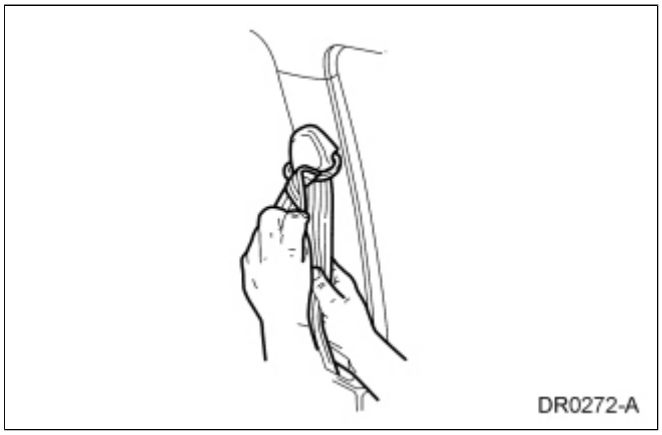
2. Pull the safety belt tongue over the fold in the safety belt.



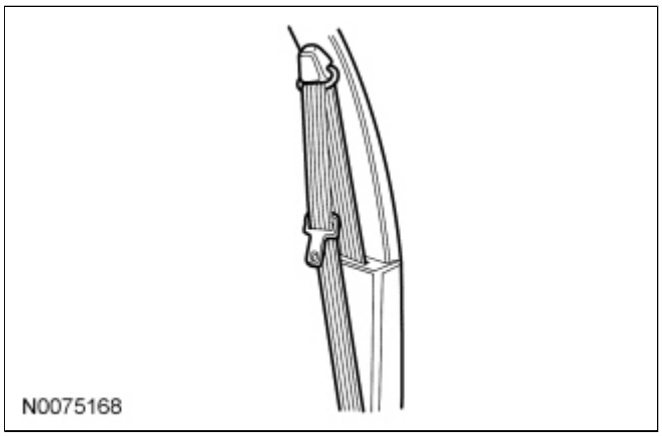
Safety Belt Twisted at the Safety Belt Guide

NOTE: These procedures apply to both wire-formed and stamped D-ring designs.

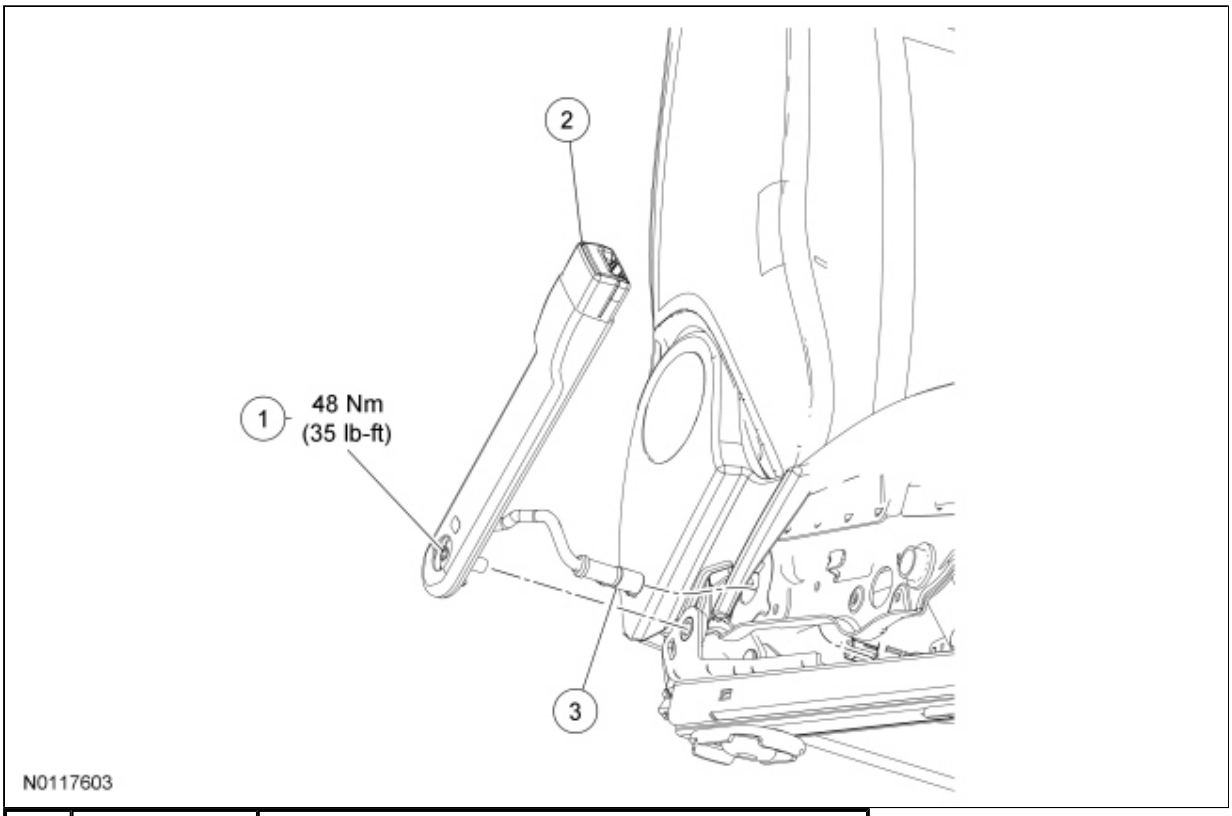
1. Grasp the safety belt webbing at the D-ring and fold the twisted portion of the belt webbing over itself.



2. Feed the folded portion of the safety belt webbing through the safety belt guide (D-ring) to remove the twist from the belt webbing.



Safety Belt Buckle — Front



Item	Part Number	Description
1	—	Safety belt buckle bolt (part of 61202 RH/ 61203 LH)
2	61202 RH/ 61203 LH	Safety belt buckle assembly
3	—	Safety belt buckle switch electrical connector (part of 61202 RH/ 61203 LH) (if equipped)

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the front seat. For additional information, refer to Section 501-10 .

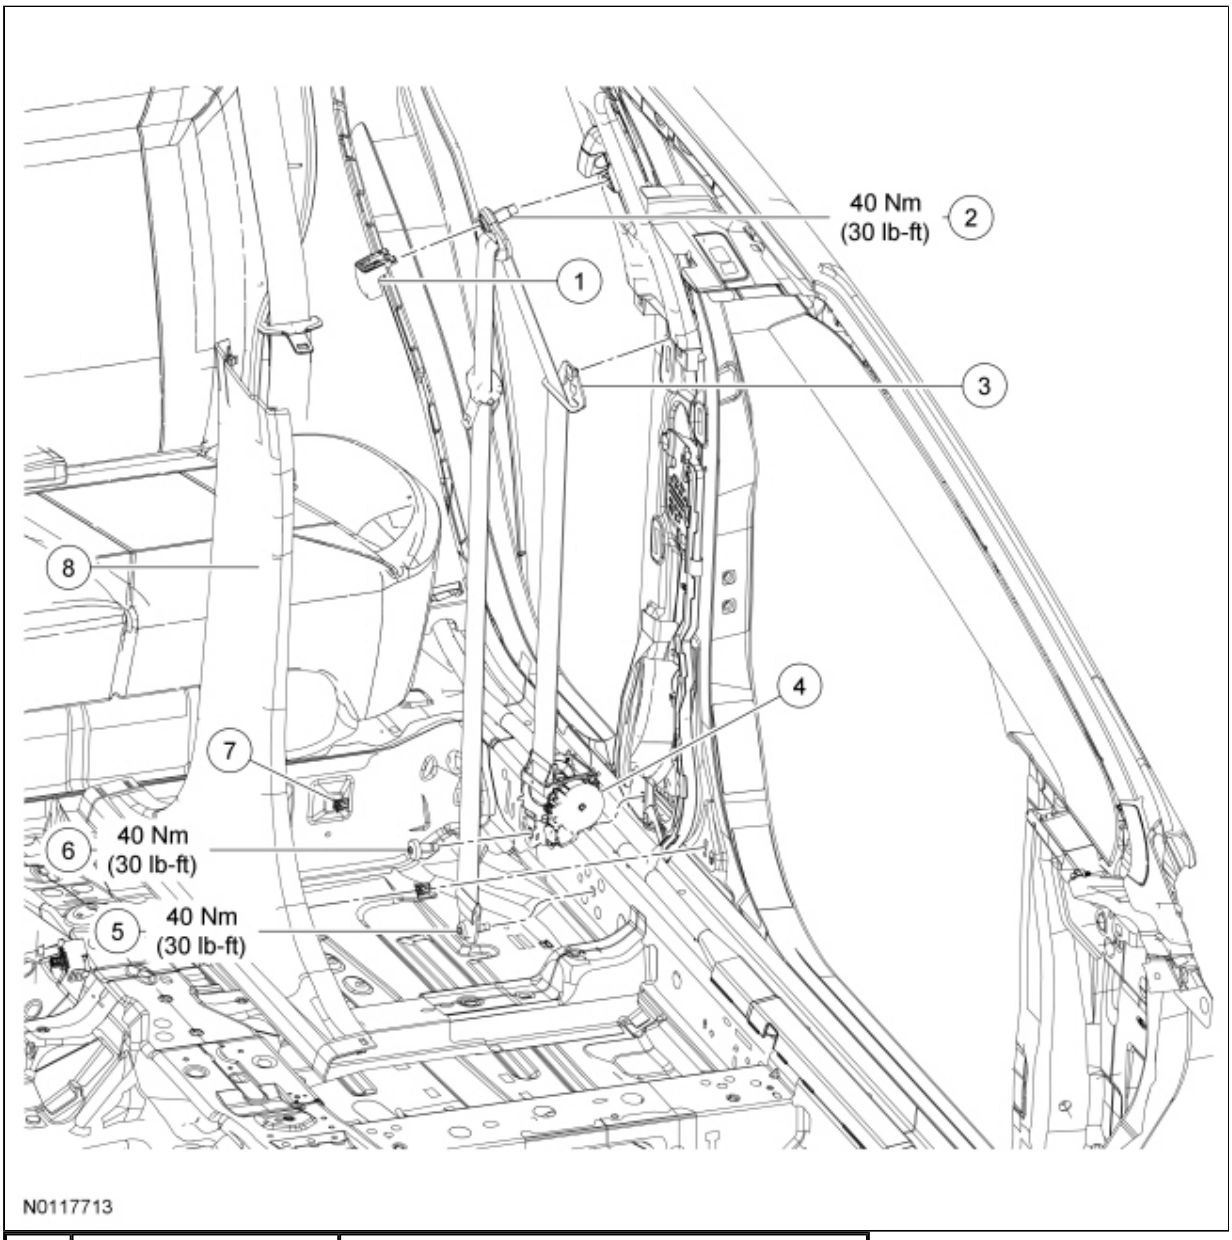
2. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Complete the removal by referring to the exploded view.

3. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Retractor — Front

NOTE: LH shown, RH similar.



Item	Part Number	Description
1	60262	D-ring cover
2	—	Safety belt D-ring bolt (part of 611B08 (RH) / 611B09 (LH))
3	—	Safety belt guide (part of 611B08 (RH) / 611B09 (LH))
4	611B08 (RH) / 611B09 (LH)	Safety belt retractor
5	—	Safety belt anchor bolt (part of 611B08 (RH) / 611B09 (LH))
6	W712015	Safety belt retractor bolt

7	63918	B-pillar lower trim panel retaining clip (2 required)
8	24346 (RH) / 24347 (LH)	B-pillar lower trim panel

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the lower B-pillar trim panel. For additional information, refer to Section 501-05 .

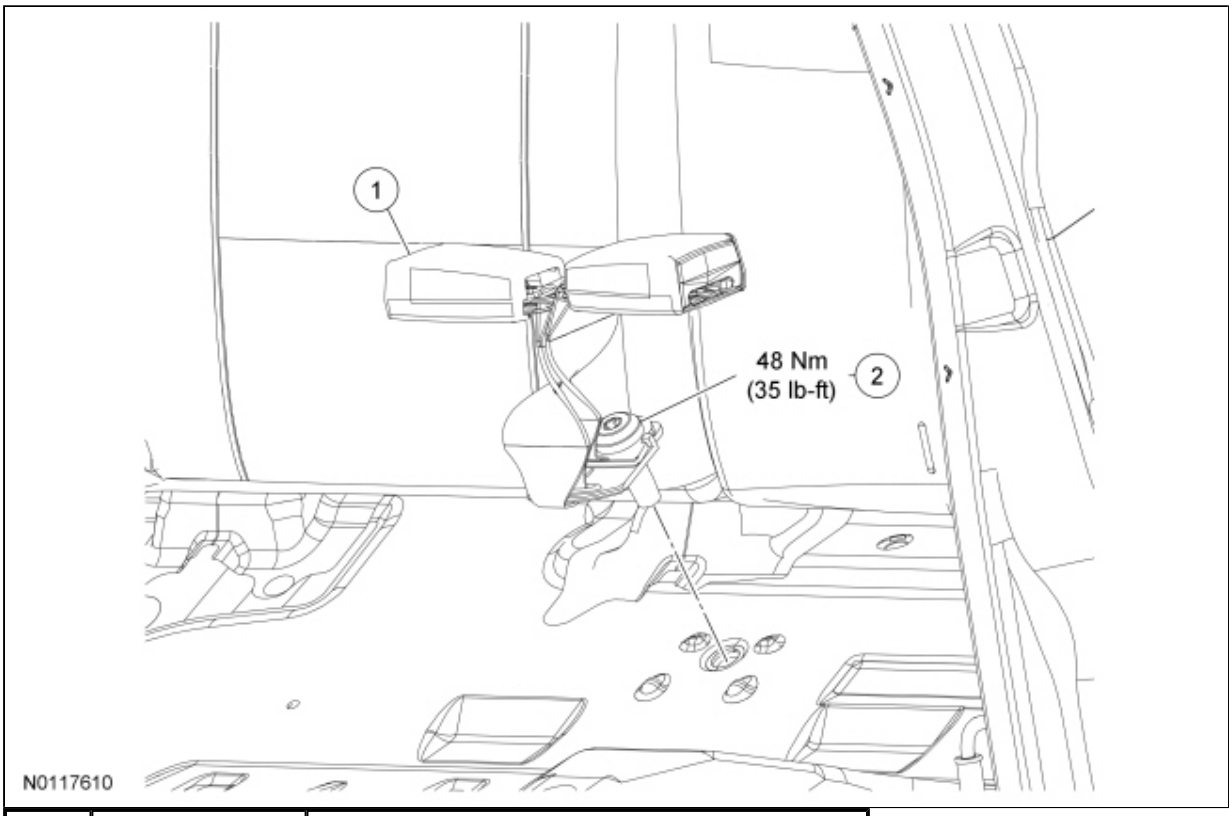
2. Pull straight out on the D-ring cover and remove.

3. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Complete the removal by referring to the exploded view.

4. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Buckle — Rear



Item	Part Number	Description
1	60045	Safety belt buckle assembly
2	—	Safety belt buckle bolt (part of 60045)

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors,

buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

NOTE: The LH safety belt buckle is a part of the rear center safety belt retractor and is not serviced separately. To remove the LH safety belt buckle, refer to Safety Belt Retractor — Rear, Center, 4-Door Sedan or Safety Belt Retractor — Rear, Center, 5-Door Hatchback In this section.

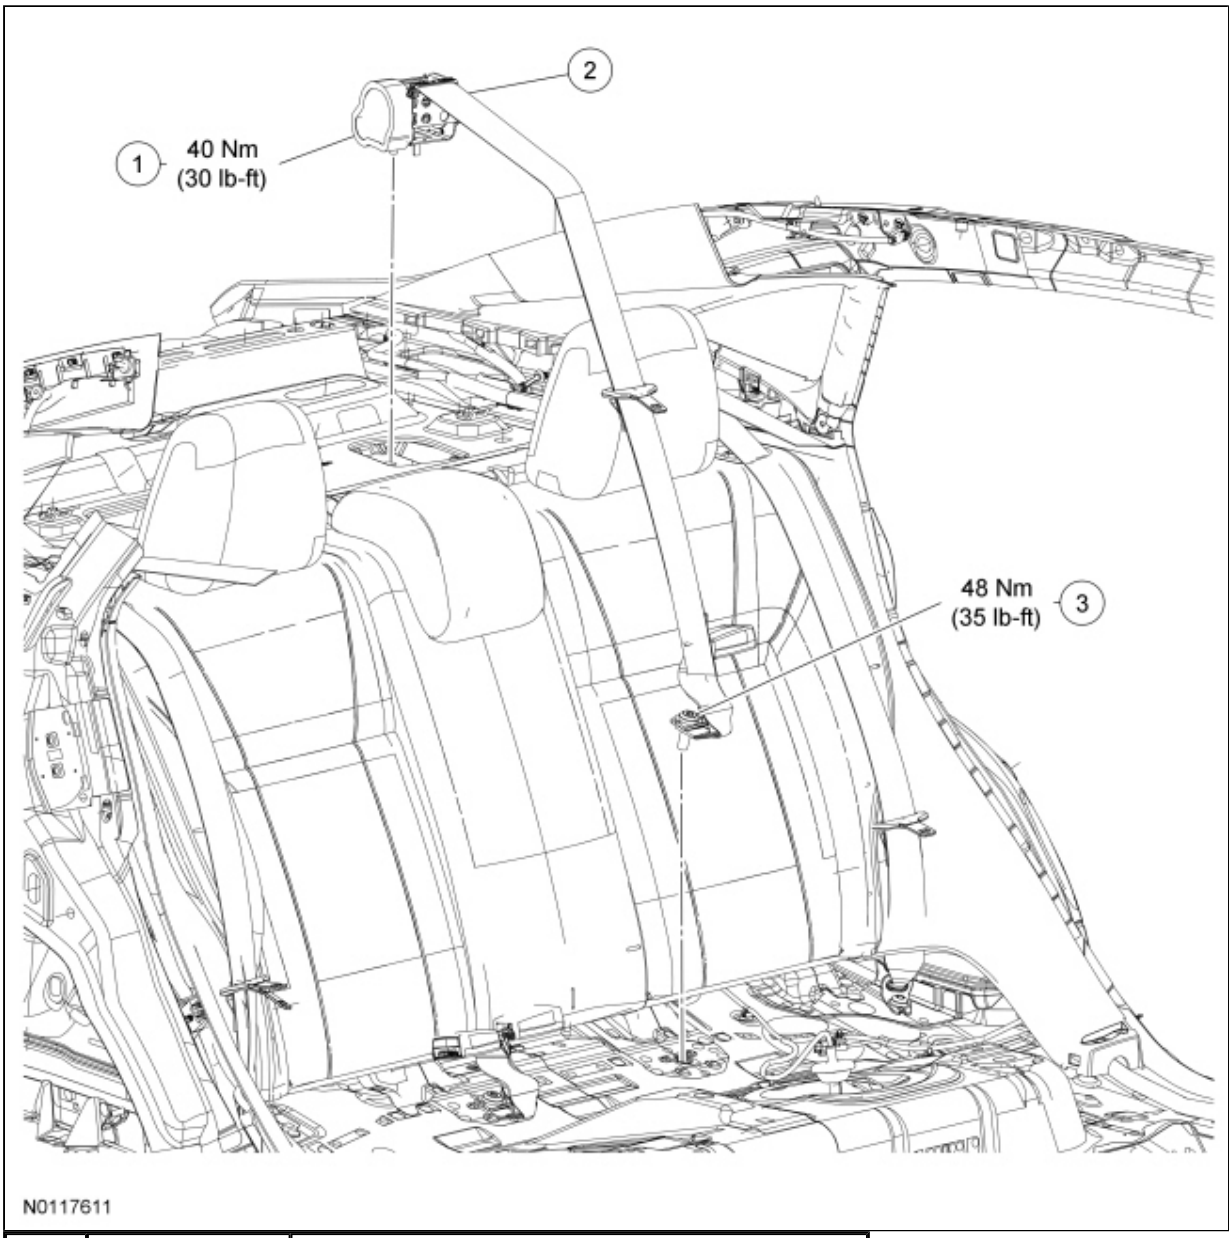
1. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

2. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Complete the removal by referring to the exploded view.

3. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Retractor — Rear, Center, 4-Door Sedan



Item	Part Number	Description
1	—	Safety belt retractor bolt (part of 611B66)
2	611B66	Safety belt retractor
3	W703708	Safety belt anchor bolt

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**

- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the parcel shelf. For additional information, refer to Section 501-05 .

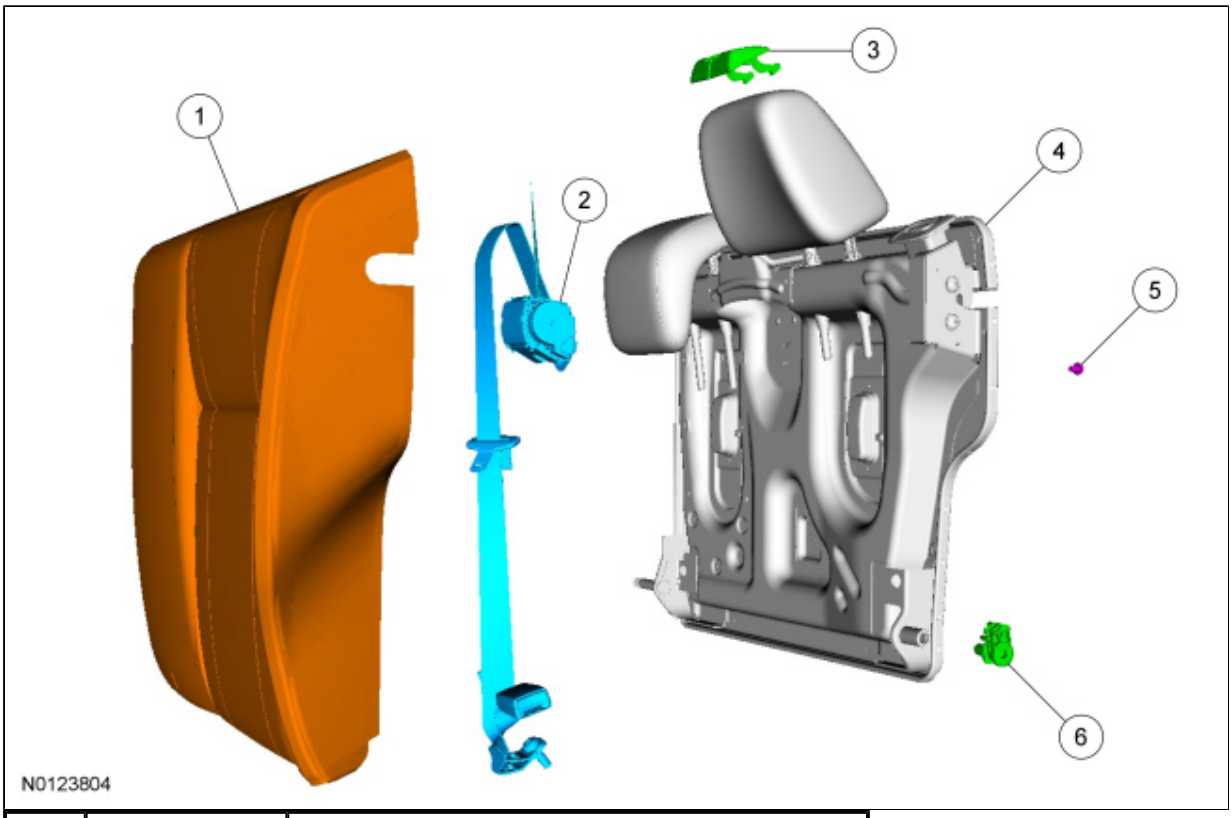
2. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

3. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Complete the removal by referring to the exploded view.

4. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Retractor — Rear, Center, 5-Door Hatchback



Item	Part Number	Description
1	66601/66801	Backrest cover/backrest foam pad
2	611B66	Safety belt retractor assembly
3	611A70	Safety belt bezel
4	60509	Seatback panel assembly
5	W790240	Safety belt retractor bolt - 48 Nm (35 lb-ft)
6	613B48	Hinge pin and bolt - 38 Nm (28 lb-ft)

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

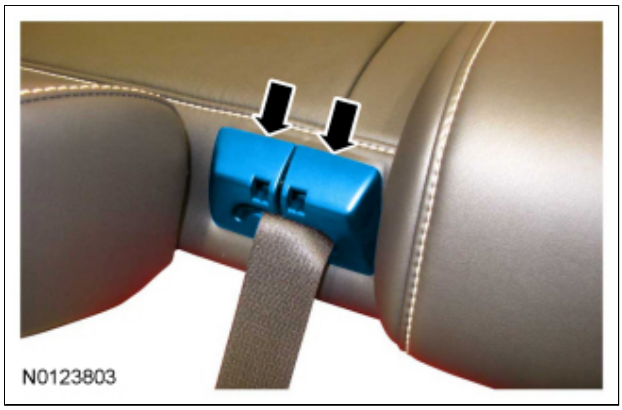
If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored

to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the 60 percent rear seat backrest. For additional information, refer to Section 501-10 .

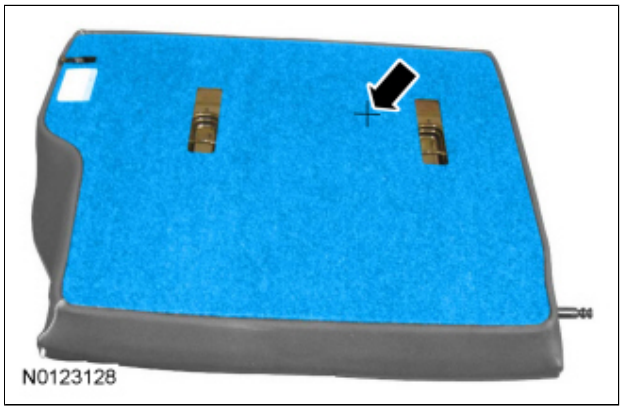
2. Detach the safety belt retractor bezel from the backrest frame wire and remove the bezel.
   - Pull where shown to unsnap the safety belt bezel from the backrest frame wire.



3. Remove the hinge pin and bolt.

4. Detach the backrest cover retainer from the backrest frame at the rear of the backrest.

5. Make a small cross cut into the carpet above the safety belt retractor bolt.
   - Push into the carpet on the rear of the backrest and feel for the safety belt retractor bolt.



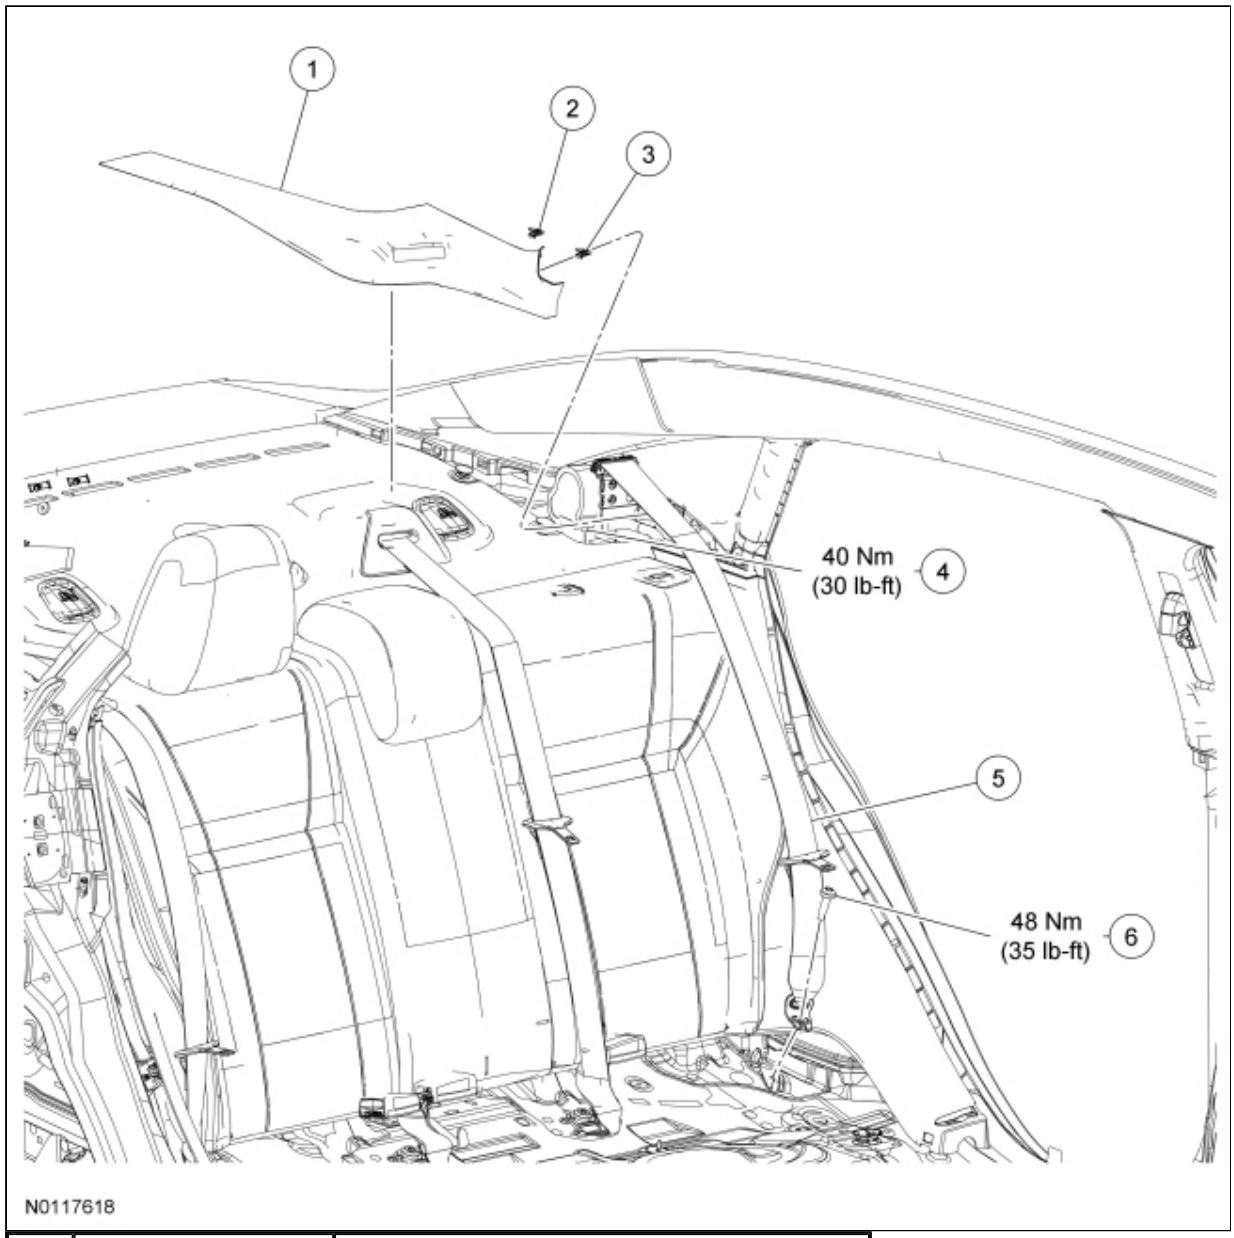
6. Remove the safety belt retractor.
   1. Remove the safety belt retractor bolt.
   2. Lift the backrest foam pad and cover.
   3. Route the safety belt and tongue out of the backrest cover.
   4. Remove the safety belt retractor.

7. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   To install, reverse the removal procedure.

8. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Retractor — Rear, Outboard, 4-Door Sedan



Item	Part Number	Description
1	52018 (RH) / 52016 (LH)	Parcel shelf upper trim panel
2	W714232	Parcel shelf upper trim panel retaining clip (2 required)
3	W710338	Parcel shelf upper trim panel retaining clip
4	—	Safety belt retractor bolt (part of 611B68)
5	611B68	Safety belt retractor
6	W703708	Safety belt anchor bolt

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the parcel shelf upper trim panel. For additional information, refer to Section 501-05 .

2. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

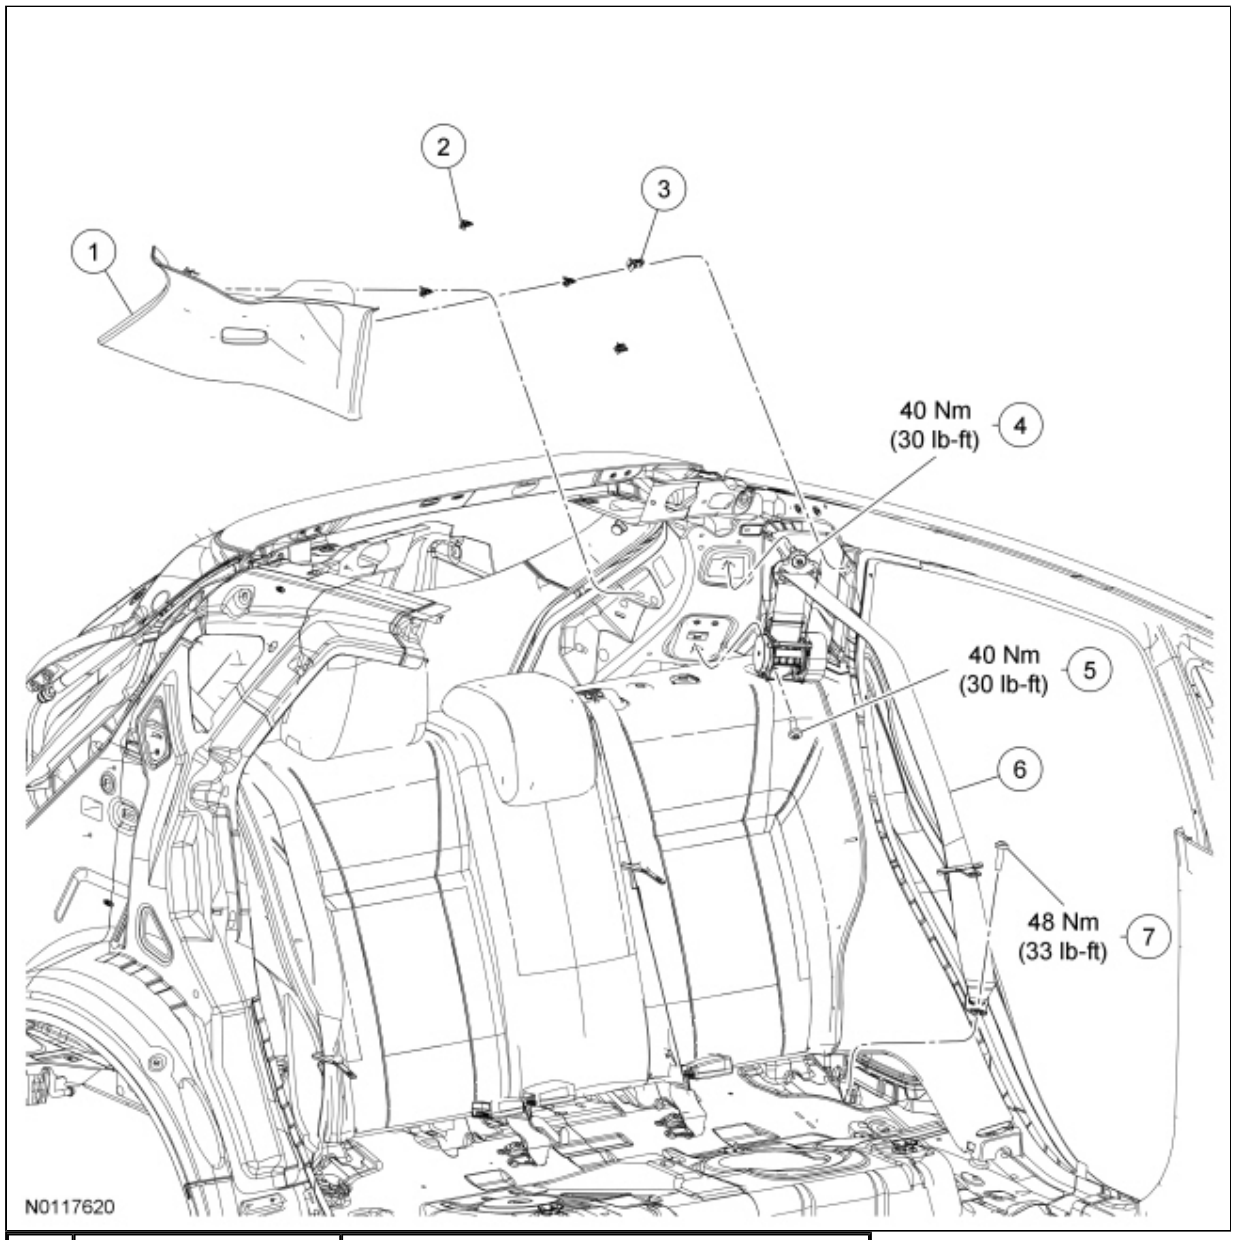
3. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Complete the removal by referring to the exploded view.

4. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Retractor — Rear, Outboard, 5-Door Hatchback

NOTE: LH shown, RH similar.



Item	Part Number	Description
1	31010 (RH)/31011 (LH)	C-pillar upper trim panel
2	W710338	C-pillar upper trim panel retaining clip (4 required)
3	W714232	C-pillar upper trim panel 2-stage high-retention retaining clip
4	—	D-ring bolt (part of 611B68)
5	W504775	Safety belt retractor bolt
6	611B68 (RH)/611B69 (LH)	Safety belt retractor

7	W703708	Rear safety belt anchor bolt

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

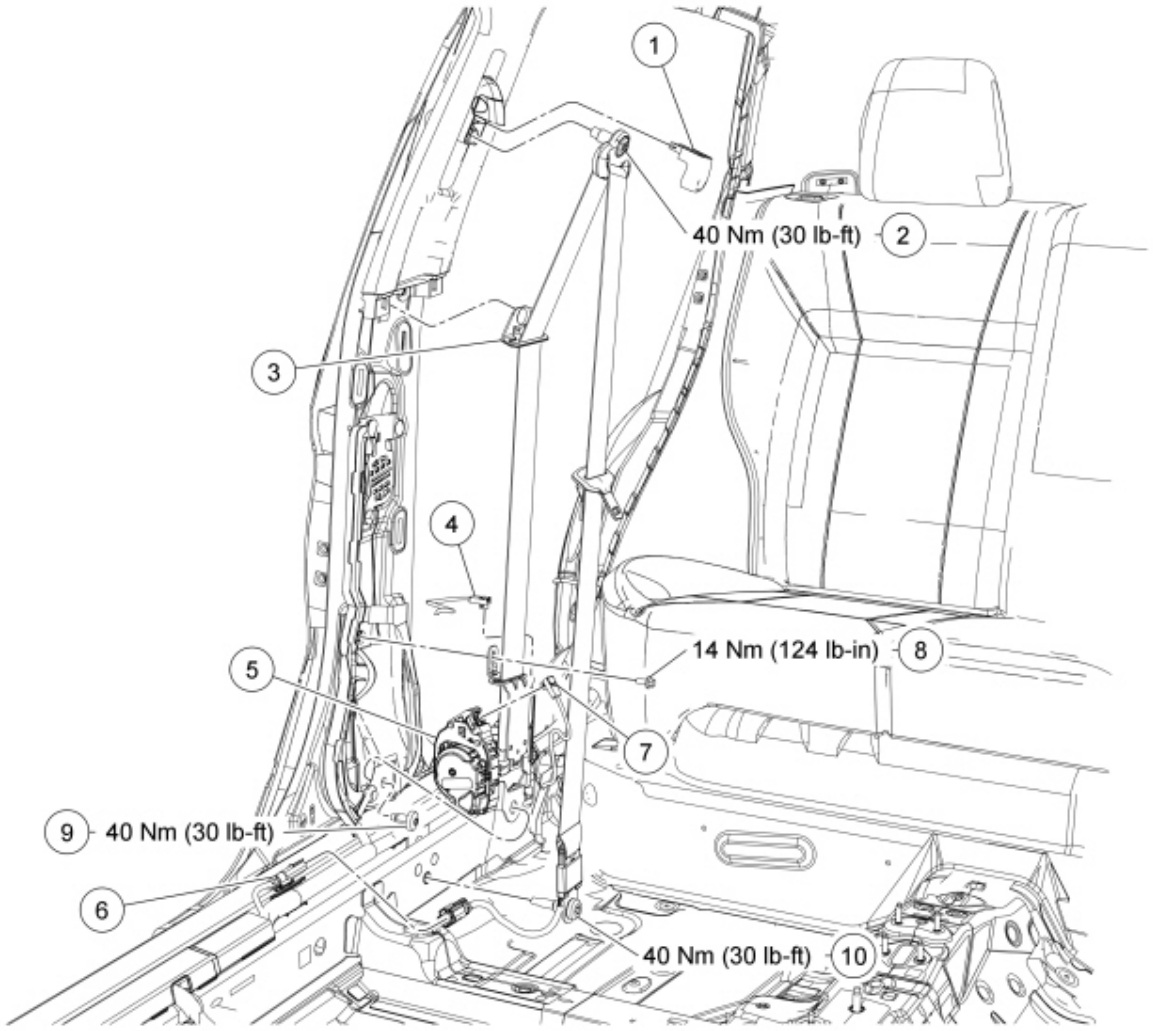
After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the quarter trim panel. For additional information, refer to Section 501-05 .
2. Remove the rear seat cushion. For additional information, refer to Section 501-10 .
3. Complete the removal by referring to the exploded view.
4. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   To install, reverse the removal procedure.
5. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Retractor and Pretensioner

NOTE: RH shown, LH similar.



Item	Part Number	Description
1	60262	D-ring cover
2	—	Safety belt D-ring bolt (part of 611B08 (RH) / 611B09 (LH))
3	—	Safety belt guide (part of 611B08 (RH) / 611B09 (LH))
4	—	Safety belt retractor and pretensioner electrical connector (part of 14A005)
5	611B08 (RH) / 611B09 (LH)	Safety belt retractor and pretensioner
6	—	Belt Tension Sensor (BTS) electrical connector

		(part of 14A005) (passenger side only)
7	—	Safety belt retractor and pretensioner load limiting electrical connector (part of 14A005) (passenger side only)
8	W505252	Safety belt retractor and pretensioner bolt
9	W712015	Safety belt retractor and pretensioner bolt
10	—	Safety belt anchor bolt (part of 611B08 (RH) / 611B09 (LH))

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**
- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners or adaptive load limiting retractors or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners or adaptive load limiting retractors which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

2. Remove the lower B-pillar trim panel. For additional information, refer to Section 501-05 .

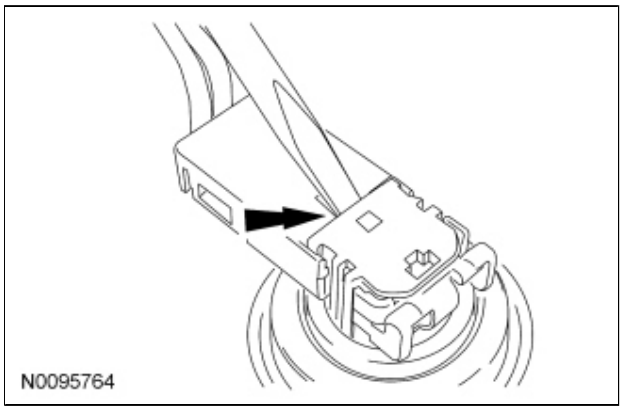
3. **NOTE:** Inspect the D-ring cover for damage. If the cover is damaged or does not remain closed, install a new D-ring cover.

   Remove the D-ring cover and D-ring bolt.
   - Pull straight out on the D-ring cover to remove.

4. Remove the safety belt anchor bolt.
   - For passenger seat, disconnect the Belt Tension Sensor (BTS) electrical connector.

5. ***NOTICE:*** **Do not pull the electrical connector out by the locking button. Damage to the locking button can occur.**

   Disconnect the safety belt retractor and pretensioner electrical connector(s).
   - Lift up and release the locking button and disconnect the electrical connector.
     - For driver and passenger sides, disconnect the pretensioner electrical connector.
     - For passenger side, disconnect the load limiter electrical connector.



6. Detach the safety belt guide from the B-pillar.

7. Remove the 2 bolts and the safety belt retractor and pretensioner.

Installation

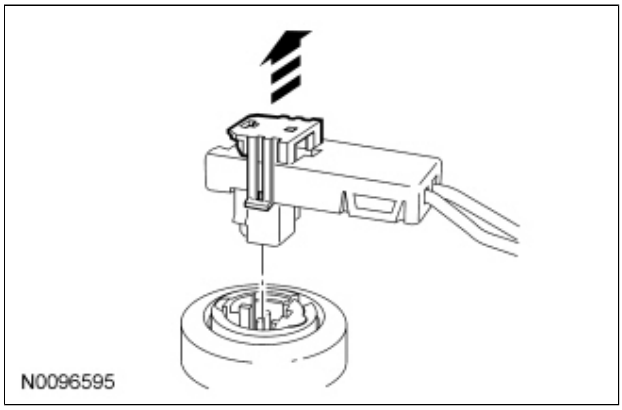
NOTE: Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

1. Position the safety belt retractor and pretensioner and install the bolts.
   - Tighten the large bolt to 40 Nm (30 lb-ft).
   - Tighten the small bolt to 14 Nm (124 lb-in).

2. Attach the safety belt guide to the B-pillar.

3. ***NOTICE:*** **The locking button must be in the released position before installing the connector into the safety belt retractor and pretensioner. Failure to have the locking button in the released position may break the tabs on the locking button causing Diagnostic Trouble Codes (DTCs) to set in the Restraints Control Module (RCM).**

   Connect the safety belt retractor and pretensioner electrical connector(s).
   - With the locking button released, install the electrical connector fully into the safety belt retractor and pretensioner and seat the locking button.
     - For driver and passenger sides, connect the pretensioner electrical connector.
     - For passenger side, connect the load limiter electrical connector.



4. Install the safety belt anchor bolt.
    - Tighten to 40 Nm (30 lb-ft).
    - For passenger seat, connect the Belt Tension Sensor (BTS) electrical connector.

5. Install the lower B-pillar trim panel. For additional information, refer to Section 501-05 .

6. **NOTE:** If the D-ring cover is damaged or does not remain closed, install a new D-ring cover.

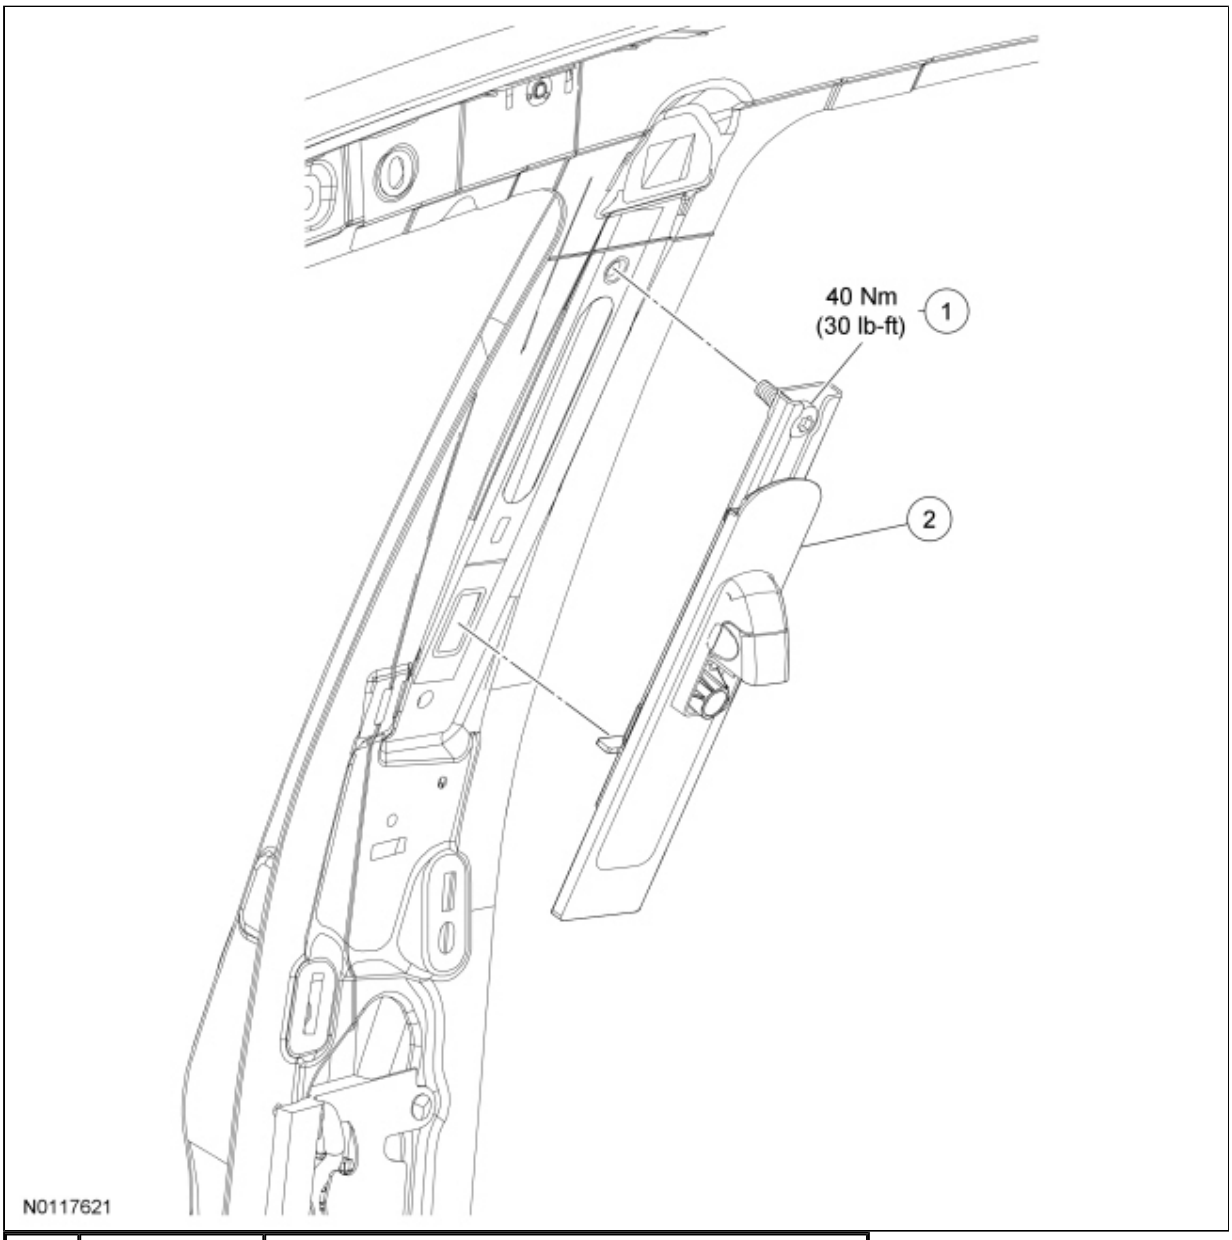
   Install the D-ring bolt and cover.
    - Tighten to 40 Nm (30 lb-ft).

7. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

8. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt Shoulder Height Adjuster

NOTE: RH shown, LH similar.



Item	Part Number	Description
1	—	Safety belt height adjuster bolt (part of 602B82)
2	602B82	Safety belt shoulder height adjuster

Removal and Installation

WARNING: After any crash, all of the following safety belt assemblies and attaching hardware must be inspected to verify correct function:

- **Retractors**
- **Buckles**

- **Belt tension sensor (BTS) (if equipped)**
- **Front safety belt buckle support assemblies (slide bar) (if equipped)**
- **Safety belt shoulder belt height adjusters (if equipped)**
- **Child safety seat tether bracket assemblies**
- **Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)**

If any safety belt assembly is damaged, does not operate correctly or does not pass all of the Functional Tests in the Component Tests of this section, a new safety belt assembly must be installed. If any safety belt assembly attaching areas are damaged or distorted, the sheet metal must be restored to its original structural integrity and new safety belt assembly and attaching hardware must be installed. Failure to install new safety belt assemblies and attaching hardware may increase the risk of serious personal injury or death in a crash.

After any crash that results in deployment of the driver and/or front outboard passenger safety belt pretensioners, new driver and/or front outboard passenger safety belt systems (including retractors, buckles and height adjusters) must be installed. Failure to install new safety belt systems increases the risk of serious personal injury or death in a crash.

1. Remove the upper B-pillar trim panel. For additional information, refer to Section 501-05 .

2. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Complete the removal by referring to the exploded view.

3. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Torque Specifications

Description	Nm	lb-ft	lb-in
Front impact severity sensor nut	11	—	97
Ignition switch housing bolt	8	—	71
Knee air bag module nuts	8	—	71
Passenger air bag module nuts	6	—	53
Passenger air bag module bracket nuts	6	—	53
Restraints Control Module (RCM) nuts	11	—	97
Side air bag module nuts [a]	—	—	—
Side air curtain module bolts	9	—	80
Side air curtain roof bracket bolts (5-door hatchback)	9	—	80
Side impact sensor bolts (front door)	2	—	18
Side impact sensor bolt (second row)	11	—	97
Steering wheel bolt	40	30	—

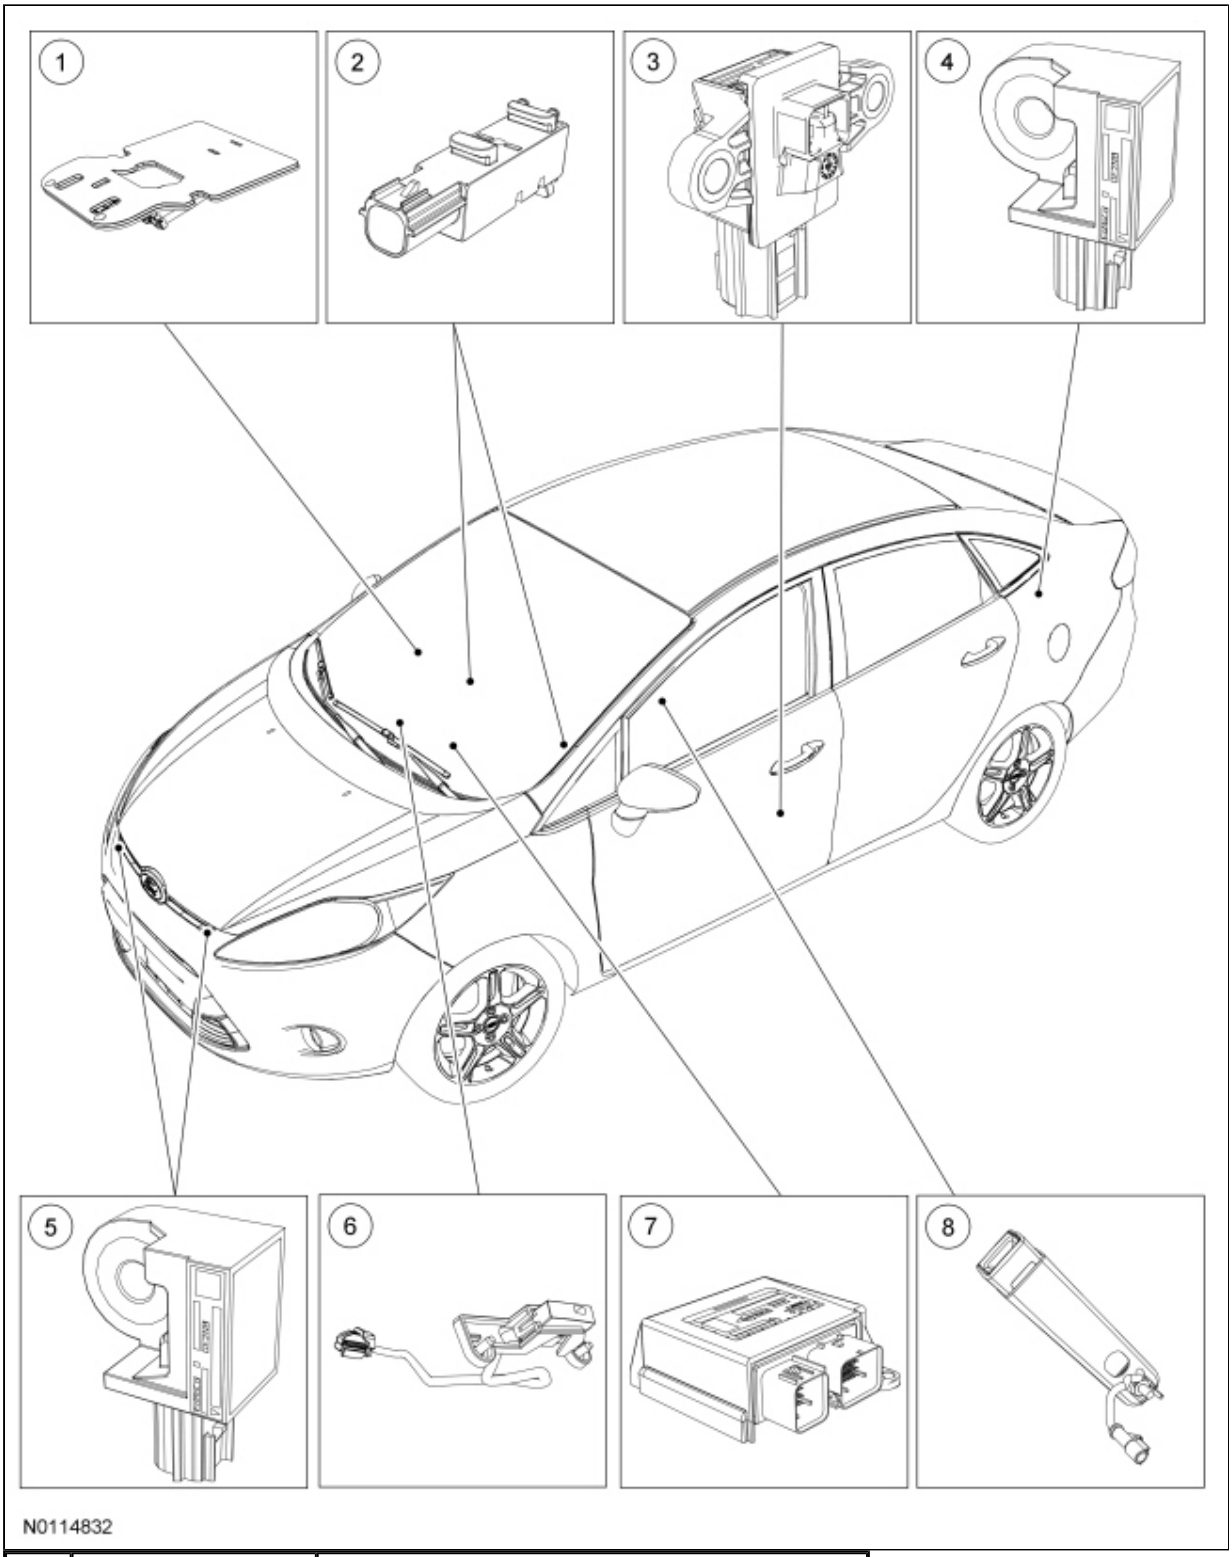
[a] Refer to the procedure in this section.

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

The air bag Supplemental Restraint System (SRS) is designed to provide increased collision protection for front and rear seat occupants in addition to the collision protection provided by the 3-point safety belt system. Safety belt use is necessary to obtain the best occupant protection and to receive the full advantage of the SRS .

The serviceable air bag and safety belt pretensioner SRS components are shown in the following illustrations.

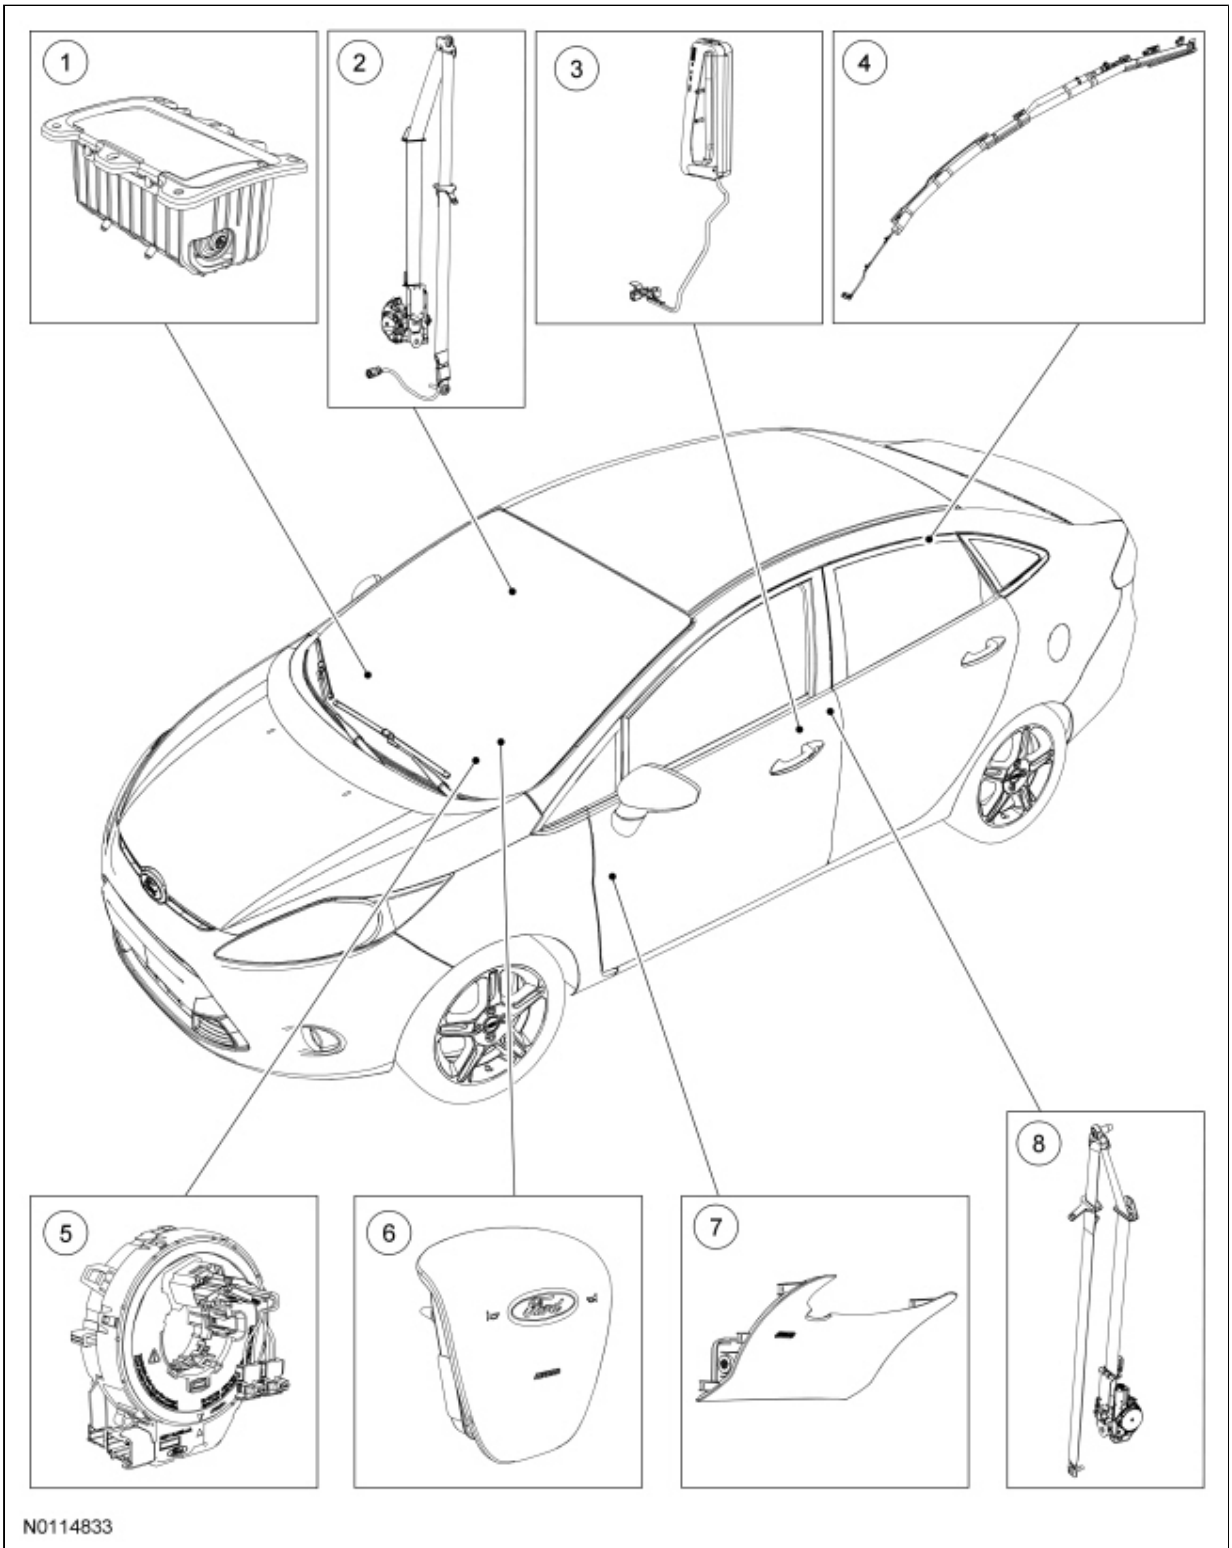
Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Components — Illustration 1 of 2



Item	Part Number	Description
1	54632A22	Occupant Classification System (OCS) system
2	14B416	Driver/passenger seat track position sensor
3	14B345	Driver/passenger first row side impact sensor (pressure sensor) (located in front door)
4	14B004	Driver/passenger second row side impact sensor (C-pillar)
5	14B004	LH/RH front impact severity sensor
6	10A936	Passenger Air Bag Deactivation (PAD) indicator

7	14B321	Restraints Control Module (RCM)
8	5461202 (RH)/5461203 (LH)	Safety belt buckle (includes safety belt buckle switch)

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Components — Illustration 2 of 2



Item	Part Number	Description
1	54044A74	Passenger air bag module
2	54611B08	Passenger safety belt retractor and pretensioner (includes deployable load limiter and Belt Tension Sensor (BTS))
3	54611D10 (LH)/54611D11 (RH)	Driver/passenger seat side air bag module
4	54042D94 (RH)/54042D95 (LH)	Driver/passenger side air curtain module
5	14A664	Clockspring
6	54043B13	Driver air bag module
7	54045J77	Driver knee air bag module
8	54611B09	Driver safety belt retractor and pretensioner

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

Special Tool(s)

ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

The Restraints Control Module (RCM) continuously receives/monitors all inputs from the following Supplemental Restraint System (SRS) components:

- LH and RH front impact severity sensors
- Driver and passenger front door side impact sensor
- Driver and passenger second row side impact sensors (C-pillar)
- Safety belt buckle switches (driver and passenger)
- Seat track position sensors (driver and passenger)
- Occupant Classification System Module (OCSM)
- Safing sensors internal to the RCM

If the RCM detects sudden vehicle deceleration and/or lateral deceleration based on the information received from all sensors and switches and determines that deployment is required, the RCM sends voltage and current to deploy the appropriate SRS components.

During a frontal or side crash, the RCM may deploy the following SRS components, based on crash severity and sensor input.

- Safety belt retractor pretensioner(s)
- Safety belt load limiter (passenger side only)
- Seat side air bag(s)
- Side air curtain(s)
- Driver and passenger dual-stage air bag(s) (one or both stages)
- Driver knee air bag

The fact that the safety belt retractor pretensioner, safety belt load limiter, side air curtain, or air bags did not activate for both front seat occupants in a crash does not mean that something is wrong with the system.

The RCM performs a self-test of the complete SRS during each start up. If a SRS fault exists, the air bag warning indicator illuminates and remains illuminated for the rest of the ignition cycle. In addition to the self-test at start up, the RCM continuously monitors all of its SRS components and circuitry for correct operation.

Air Bag Warning Indicator

The air bag warning indicator:

- located in the Instrument Panel Cluster (IPC), proves out by illuminating for 6 seconds and then turning off.
- flashes and/or illuminates based on the message the IPC receives from the RCM .
- illuminates if the IPC does not receive a message from the RCM .

Air Bag Module Second Stage Deployment Check

Because the driver and passenger front air bags each have 2 deployment stages, it is possible that stage 1 has deployed and stage 2 has not.

If a front air bag module has deployed, it is **mandatory** the front air bag module be remotely deployed using the appropriate air bag disposal procedure.

- For information on driver air bag module and/or passenger air bag module remote deployment, refer to Pyrotechnic Device Disposal in this section.

Clockspring

The clockspring allows for continuous electrical connections between the driver air bag module and the RCM when the steering wheel is turned.

Driver Air Bag Module

The driver air bag module is a dual-stage air bag, upon receiving a flow of current from the RCM , deploying at 1 of 2 different rates depending upon vehicle impact severity and sensor input.

High Speed Controller Area Network (HS-CAN)

This vehicle utilizes a communication system called a High Speed Controller Area Network (HS-CAN). The RCM communicates with various modules for required information about the vehicle. Refer to Section 418-00 for additional information about the HS-CAN .

Occupant Classification System (OCS) System

The Occupant Classification System (OCS) system is found only on the front passenger seat. The OCS system classifies the size of front passenger seat occupant and provides this information to the Restraints Control Module (RCM). The RCM uses this information (and other inputs) in determining the deployment strategy of the passenger air bag and safety belt pretensioner.

The OCS system is also used for operation of the passenger Belt-Minder®. For information on the passenger Belt-Minder® feature, refer to Section 413-01 or the Owner's Literature.

The OCS system consists of:

- a silicone gel-filled bladder mounted between the seat cushion foam and pan
- a pressure sensor that is mounted to the seat frame
- an OCSM mounted to the seat frame

Pressure is applied to the OCS system bladder when weight of any occupant or object in the front passenger seat is present. The pressure is then transferred through a tube, sensed by the OCS system pressure sensor, then electronically communicated to the OCSM . The components of an OCS bladder system (bladder, pressure sensor and tube, OCSM) are serviced as an assembly.

Belt Tension Sensor (BTS)

The Belt Tension Sensor (BTS):

- is a 3-wire Hall-effect sensor located at the safety belt anchor point and is part of the front passenger safety belt and retractor assembly.
- is used in conjunction with the OCS system.

The BTS is used by the OCS system to identify the presence of a child safety seat on the front passenger seat. The BTS senses the tension on the safety belt assembly then provides an output to the OCSM , indicating the safety belt assembly is cinched. After sensing the weight applied to the seat by the occupant and using the BTS input, the OCSM determines how the occupant should be classified and communicates this information to the RCM . If the occupant is classified as a child, the RCM automatically deactivates the passenger air bag module and illuminates the Passenger Air Bag Deactivation (PAD) indicator.

Passenger Air Bag Deactivation (PAD) Indicator

The RCM controls the state of the PAD indicator through a direct, hard-wired connection, based on information provided by the OCS system. The PAD indicator illuminates to indicate the passenger air bag module is disabled. An exception to this is when the front passenger seat is determined to be empty and indication of a deactivated passenger air bag module is not necessary. In all other cases, the PAD indicator is off when the passenger air bag module is enabled.

The RCM briefly activates the PAD indicator to prove-out the indicator function and verify to the front occupants that the PAD indicator is operating correctly.

The following table indicates the passenger air bag and PAD indicator status based on the size of the front passenger occupant.

Passenger Air Bag and Passenger Air Bag Deactivation (PAD) Indicator Status

Occupant Size	Passenger Safety Belt Buckle Status	Pass. Air Bag Status	PAD Ind. Status
Empty	Unbuckled	Disabled	Unlit
Empty	Buckled	Disabled	Lit
Small	Buckled/ Unbuckled	Disabled	Lit
Large	Buckled/ Unbuckled	Enabled	Unlit

Passenger Air Bag Module

The passenger air bag module is a dual-stage air bag, deploying at 1 of 2 different rates depending upon vehicle impact severity and sensor input.

Restraints Control Module (RCM)

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: This vehicle may be equipped with the SYNC® feature which contains the 911 assist option. For additional information, refer to Owner's Literature.

The RCM carries out the following functions:

- deploys the air bag(s)/safety curtains in the event of a deployable collision
- activates the safety belt retractor pretensioners to remove slack from the safety belts in the event of a deployable collision
- activates the passenger retractor to control the tension of the passenger safety belt in the event of a deployable collision
- monitors the SRS for faults
- sends a message to the IPC to illuminate the air bag warning indicator if a fault is detected

The RCM monitors the SRS for possible faults. If a fault is detected, the RCM requests the IPC to illuminate the air bag warning indicator. When the ignition is turned OFF and then ON, the IPC proves out the air bag warning indicator by illuminating it for 6 seconds. If no faults are detected by the RCM , the IPC turns the air bag warning indicator off and it remains off. If the RCM detects a fault, it sends a message to the IPC to illuminate the air bag warning indicator and it remains illuminated for the rest of the ignition cycle. If the RCM requests illumination of the air bag warning indicator and the air bag warning indicator does not function, the IPC automatically activates an audible chime. The chime is a series of 5 sets of 5 tone bursts. If the chime is heard, the SRS and the air bag warning indicator require repair.

The RCM includes a backup power supply. This feature provides sufficient backup power to deploy the air bags in the event the ignition circuit is lost or damaged during impact. The backup power supply depletes its stored energy approximately one minute after power and/or ground has been removed from the RCM .

Event Notification Signal

The deployment event notification signal provides other vehicle subsystems with information pertaining to restraint system deployment or fuel cutoff status. Signal communication between the RCM and fuel pump relay allows the PCM to initiate fuel cut-off to disable the fuel system in the event of a crash.

The RCM does not monitor the event notification signal circuit for faults and **will not set** a DTC if a fault occurs.

Safety Belt Buckle Switches

The safety belt buckles contain integrated circuits called Hall-effect switches. The safety belt buckle switches indicate to the RCM whether the safety belts are buckled or unbuckled.

The RCM also communicates the status of each safety belt buckle switch to the IPC , which monitors the information to control the safety belt warning indicator. For information on the safety belt warning indicator, refer to Section 413-01 .

Safety Belt Retractor Pretensioners

The safety belt retractor pretensioners remove excess slack from the safety belt webbing. The pretensioners are activated by the RCM when the module detects a crash event force exceeding a programmed limit.

Safety Belt Retractor

The front passenger safety belt retractor is equipped with the adaptive load limiting feature that controls the tension of the front passenger safety belt in the event of a crash. The adaptive load limiter is activated by the RCM . The driver safety belt retractor is equipped with a non-deployable (mechanical) load limiter. The front safety belt retractor may also be referred to as a seatbelt load limiter.

Side Air Curtain Modules

WARNING: Anytime the Safety Canopy® or side air curtain module has deployed, a new headliner and new A-, B- and C-pillar upper trim panels and attaching hardware must be installed. Remove any other damaged components and hardware and install new components and hardware as needed. Failure to follow these instructions may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

The side air curtain module:

- deploys upon receiving a flow of current from the RCM , initiated by the RCM .
- is installed as an assembly.
- is mounted above the headliner.
- attaches from the A-pillar frame to the C-pillar frame.

Seat Track Position Sensors

The seat track position sensors indicate the position of the driver and passenger seats along the seat track to the RCM . The sensor detects the presence of a shunt bracket on the track, indicating that the seat has moved forward beyond a certain point of adjustment. The RCM uses seat track position sensor information to determinine the deployment rate of the dual-stage driver air bag and/or passenger air bag module(s).

Secondary Air Bag Warning (Chime)

The secondary air bag warning chime is an audible chime located in and controlled by the IPC . If a fault is detected with the air bag warning indicator, a DTC is stored in IPC memory. Upon receiving the message from the RCM that a SRS fault has been detected, the IPC sounds the secondary air bag warning chime in a pattern of 5 sets of 5 beeps.

Impact Sensors

In addition to the RCM , the SRS uses 6 satellite impact sensors. The RCM is mounted to the center tunnel beneath the floor console. All vehicles have 2 front impact severity sensors (frontal restraints sensor), 2 first row (front door) impact sensors (side restraints sensor 1), and 2 second row impact sensors (side restraints sensor 2). The front impact severity sensors are located in the front of the vehicle, behind the bumper. The front door impact sensors are mounted behind each front door trim panel and each second row sensor is located on each C-pillar. Mounting orientation is critical for correct operation of all impact sensors.

Seat Side Air Bag Modules

The seat side air bag module:

- deploys upon receiving a flow of current from the RCM , initiated by the side restraints sensor and internal RCM circuitry.
- is mounted in the seat backrest.
- is used in conjunction with a side air curtain module.

Driver Knee Bolster Air Bag Module

The driver knee bolster air bag module is part of the steering column opening trim panel and deploys upon receiving a flow of current from the RCM .

Fault Reporting

There are 2 types of fault reporting that can be utilized by the OCSM . The first type, considered conventional, has only one level of fault reporting and identifies a specific concern for a given component and points to a particular diagnostic path (for example, DTC B1317 (Battery Voltage High)).

The second type uses a process within the software of the controller that maps the byte and bit to name a specific device and fault condition. This process is called Bit-mapping and referred to as fault PIDs in the diagnosis of the vehicle. This type does not identify the specific concern or component on the first level of fault reporting (for example, DTC B2290 (Occupant Classification System Fault)). DTC B2290 can have up to 3 specific on-demand fault PIDs (areas of concern) associated with this DTC.

The RCM **does not** utilize fault PIDs for this vehicle.

Those associated fault PIDs are an extension of the information provided by the DTC and are identified by the same DTC number. Use a scan tool to view DTCs and their fault PIDs. Once a scan tool has retrieved a DTC, use the scan tool to view the fault PIDs. In the diagnostic path, other types of PIDs are sometimes used to determine the root cause (for example, resistance or voltage PIDs).

When viewing of fault PIDs has been carried out, the scan tool can display the PIDs associated with that DTC, including the status or state that exists (on-demand [active] DTC) or existed (continuous memory [historic]) DTC. Refer to the scan tool manufacturer's instructions for the scan tool being used on how to view fault PIDs.

Inspection and Verification

1. Verify the customer concern by checking the air bag warning indicator in the IPC . Refer to Prove Out the System in this section.
   With the ignition OFF, wait 10 seconds, then turn the ignition ON and monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator illuminates continuously for approximately 6 seconds and then turns off. If an air bag SRS fault is detected, the air bag warning indicator indicates the fault in one of the following ways:
   — fails to light
   — remains lit continuously
   — flashes
   The flashing might not occur until approximately 30 seconds after the ignition has been turned from OFF to ON. This is the time required to complete testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the diagnose and repair the air bag warning indicator and any SRS fault discovered.

2. Visually inspect for obvious signs of mechanical or electrical damage. Do not disconnect electrical connectors until directed to do so within the pinpoint test.

Visual Inspection Chart

Mechanical	Electrical

• Damaged Restraints Control Module (RCM) or loose mounting • Damaged LH or RH front impact severity sensor(s) or loose mounting • Damaged side impact sensor B- and/or C-pillar side impact sensor(s) or loose mounting • Damaged or disconnected Passenger Air Bag Deactivation (PAD) indicator • Damaged front driver/passenger seat assembly	• Open Central Junction Box (CJB) fuse 20 (10A) and/or 4 (7.5A) • Damaged wiring harness • Loose, damaged or corroded connectors • Circuitry open/shorted • Damaged shorting bars • Loose, damaged or pinched passenger seat wire harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the DLC .

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is ON.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record on-demand and Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the RCM and OCSM .

8. If the DTCs retrieved are related to the concern, go to the Restraints Control Module (RCM) DTC Chart or Occupant Classification System Module (OCSM) DTC Chart. For all other DTCs, refer to Section 419-10 .

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

The DTCs can be retrieved from the RCM and the OCSM with a scan tool via the DLC .

Restraints Control Module (RCM) DTC Chart

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: Network DTCs (U-codes) are often a result of intermittent concerns such as damaged wiring or low

battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming often set network DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent repeat network DTC concerns, inspect all network wiring, especially connectors. Test the vehicle battery, refer to Section 414-01 .

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. Continuous Memory Diagnostic Trouble Codes (CMDTCs) have an additional 2-character DTC status code suffix to assist in determining DTC history.

Occupant Classification System Module (OCSM) DTC Chart

DTC	Description	Action To Take
B1231	Event Threshold Exceeded (Crash Data Memory Full)	INSPECT the passenger seat for damage. REFER to Inspection and Repair After a Supplemental Restraint System (SRS) Deployment in this section.
B1317	Battery Voltage High	GO to Pinpoint Test Z .
B1318	Battery Voltage Low	GO to Pinpoint Test Z .
B1342	ECU is Faulted	INSTALL an Occupant Classification System (OCS) service kit. REFER to Occupant Classification Sensor in this section.
B2290	Occupant Classification System Fault	GO to Pinpoint Test AA .
B2909	Belt Tension Sensor Fault	GO to Pinpoint Test AB .
C1941	Zero Seat Weight Test Failure	This DTC is only reported when carrying out the System Reset. GO to Pinpoint Test AA .
U0151	Lost Communication with Restraints Control Module (RCM)	**NOTE:** The DTC will set in a module that is reporting a communication fault from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new OCSM as part of repair. REFER to Section 418-00 to diagnose the RCM . RCM does not respond to the scan tool.
U2050	No Application Present	INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section.
U2051	One or More Calibration Files Missing/Corrupt	INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section.

Symptom Chart

NOTE: Refer to Description and Operation, Intelligent Access with Push Button Start in Section 419-01B to review the procedures for achieving the various ignition states on vehicles with this feature.

Symptom Chart

Condition	Possible Sources	Action
• Air bag warning indicator is illuminated continuously	• Fuse • Wiring, terminals or connectors • Instrument Panel Cluster (IPC) • RCM	• CARRY OUT RCM and OCSM self-tests. REFER to Restraints Control Module (RCM) DTC Chart or Occupant Classification System Module (OCSM) DTC Chart in this section. • If no DTCs were retrieved from the RCM or OCSM, REFER to Section 413-01 to diagnose the IPC concern. • If the RCM or OCSM does not respond to the scan tool, Section 418-00 to diagnose the no communication concern.
• Air bag indicator flashing	• Air bag/pretensioner Supplemental Restraint System (SRS) fault	• CARRY OUT RCM and Occupant Classification System Module (OCSM) self-test. REFER to DTC Charts.
• Audible tone	• Air bag SRS system fault or air bag warning indicator fault	• CARRY OUT RCM and IPC self-test. REFER to Restraints Control Module (RCM) DTC Chart in this section and the Instrument Panel Cluster (IPC) DTC Chart in Section 413-01.
• The RCM does not respond to the scan tool	• Fuse • Scan tool • DLC • Wiring, terminals or connectors • RCM	• REFER to Section 418-00 to diagnose the no communication concern.
• The Occupant Classification System Module (OCSM) does not respond to the scan tool	• Fuse • Scan tool • DLC • Wiring, terminals or connectors • OCSM	• REFER to Section 418-00 to diagnose the no communication concern.

Pinpoint Test — Restraints Control Module (RCM)

Pinpoint Test A: DTCs B0001:11, B0001:12, B0001:13 and B0001:1A

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver air bag module stage 1 circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver air bag module

If a fault is detected, the RCM stores DTC B0001:11, B0001:12, B0001:13 or B0001:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Clockspring
- Driver air bag module
- RCM

DTC Description	Fault Trigger Condition
• B0001:11 — Driver Frontal Stage 1 Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either driver air bag stage 1 circuit, a fault is indicated.
• B0001:12 — Driver Frontal Stage 1 Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver air bag stage 1 circuit, a fault is indicated.
• B0001:13 — Driver Frontal Stage 1 Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between driver air bag stage 1 circuits, a fault is indicated.
• B0001:1A — Driver Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between driver air bag stage 1 circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Clockspring
- Driver air bag module
- RCM

PINPOINT TEST A: DTCs B0001:11, B0001:12, B0001:13 AND B0001:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

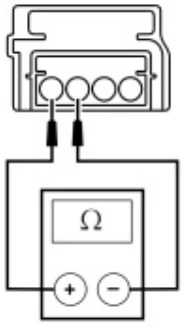
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
A1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0001:11, B0001:12, B0001:13 or B0001:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0001:13 or B0001:1A, GO to A2 . For DTC B0001:11, GO to A12 . For DTC B0001:12, GO to A15 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0001:13 or B0001:1A, GO to A20 . For DTC B0001:11, GO to A21 . For DTC B0001:12, GO to A22 .
A2 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID • Enter the following diagnostic mode on the scan tool: DataLogger — RCM . ▪ DEPLOY_00_R PID • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** GO to A19 . **No** GO to A3 .
A3 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID WHILE CARRYING OUT	

THE HARNESS TEST	
• Remove the lower steering column shroud to access the clockspring electrical connector. • While monitoring the DEPLOY_00_R PID, carry out the harness test of the driver air bag circuits and accessible connectors (including any in-line connectors) by wiggling and flexing the wire harness, connectors, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness or INSTALL a new clockspring as needed. REFER to Clockspring in this section. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to A23. **No** For PID value less than 2 ohms, GO to A4. For PID value greater than 3.68 ohms, GO to A8.
A4 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stages 1 and 2. • **Did the on-demand DTC change from B0001:1A to B0001:13?**	**Yes** GO to A17. **No** GO to A5.
A5 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module / clockspring disconnected, open circuit faults would normally be retrieved on stages 1 and 2. • **Did the on-demand DTC change from B0001:1A to B0001:13?**	**Yes** GO to A18. **No** GO to A6.
A6 CHECK FOR A SHORT BETWEEN DRIVER AIR BAG STAGE 1 CIRCUITS	

- Measure the resistance between clockspring C218A-2, circuit CR101 (VT/BN), harness side, and clockspring C218A-1, circuit RR101 (YE/GN), harness side.



N0116750

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to A7 .

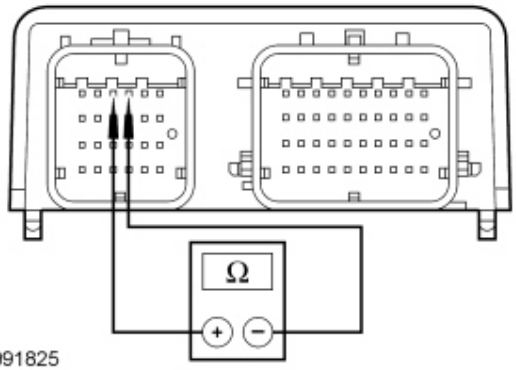
No
REPAIR circuits CR101 (VT/BN) and RR101 (YE/GN).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to A24 .

A7 CHECK THE RCM FOR LOW RESISTANCE

- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310A pins 3 and 4, component side.



N0091825

- **Is the resistance greater than 10,000 ohms?**

Yes
REPAIR circuits CR101 (VT/BN) and RR101 (YE/GN).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to A24 .

No
GO to A19 .

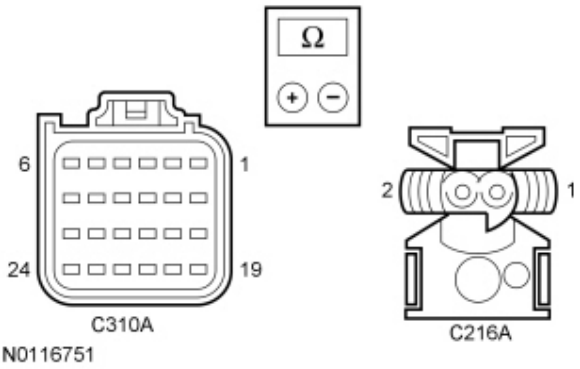
A8 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Remove the driver air bag module. Refer to Driver Air Bag Module in this section.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310A, harness side, and driver air bag module stage 1 C216A, harness side, using the following chart.

RCM	Circuit	Driver Air Bag Module Electrical Connector
C310A-4	CR101 (VT/BN)/(WH)	C216A-1
C310A-3	RR101 (YE/GN)/(OG)	C216A-2

Yes
GO to A10 .

No
GO to A9 .

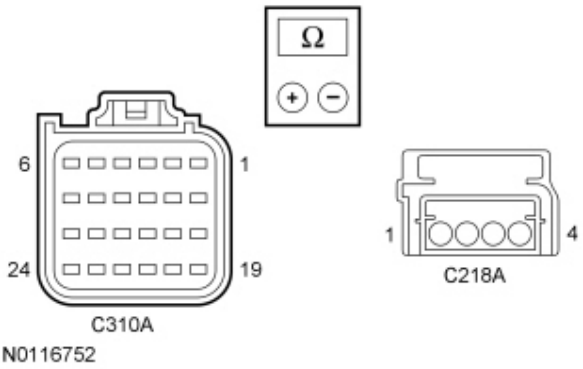


- **Are the resistances less than 1 ohm?**

A9 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)

- Disconnect: Clockspring C218A.
- Measure the resistance between RCM C310A, harness side, and clockspring C218A, harness side, using the following chart.

RCM	Circuit	Clockspring Electrical Connector
C310A-4	CR101 (VT/BN)	C218A-2
C310A-3	RR101 (YE/GN)	C218A-1



- **Are the resistances less than 0.5 ohm?**

Yes
GO to A18.

No
REPAIR circuit CR101 (VT/BN) or RR101 (YE/GN).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to A24.

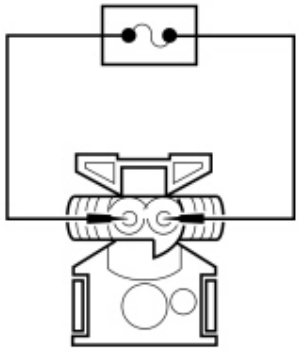
A10 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between driver air bag module stage 1 C216A-1, circuit CR101 (WH), harness side, and C216A-2, circuit RR101 (OG), harness side.

Yes
REMOVE the fused jumper wire and GO to A17.

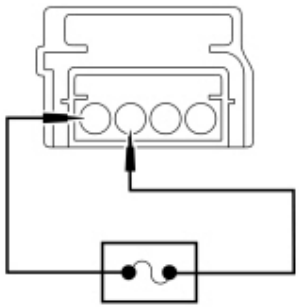
No
REMOVE the fused jumper wire and GO to A11.



N0116753

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag stage 1 circuits shorted together, a low resistance fault would normally be retrieved on stage 1. Stage 2 will show an open circuit fault due to the driver air bag being disconnected.
- **Was DTC B0001:1A retrieved on-demand during self-test?**

A11 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Clockspring C218A. • Connect a fused jumper wire between clockspring C218A-1, circuit RR101 (YE/GN), harness side, and C218A-2, circuit CR101 (VT/BN), harness side.	**Yes** REMOVE the fused jumper wire and GO to A18 . **No** REMOVE the fused jumper wire and GO to A19 .

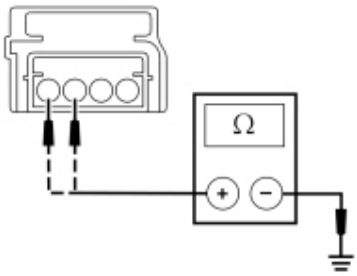


N0116754

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the clockspring stage 1 circuits shorted together, a low resistance fault would normally be retrieved on stage 1. Stage 2 will show an open circuit fault due to the driver air bag being disconnected.
- **Was DTC B0001:1A retrieved on-demand during self-test?**

A12 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported	**Yes** GO to A17 .

changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stages 1 and 2. • **Did the on-demand DTC change from B0001:11 to B0001:13?**	**No** GO to A13.
A13 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the clockspring disconnected, open circuit faults would normally be retrieved on driver air bag stages 1 and 2. • **Did the on-demand DTC change from B0001:11 to B0001:13?**	**Yes** GO to A18. **No** GO to A14.
A14 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between clockspring:
  ▪ C218A-2, circuit CR101 (VT/BN), harness side, and ground.
  ▪ C218A-1, circuit RR101 (YE/GN), harness side, and ground.
  	


N0116755
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to A19.
	
	No
	Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar.
	
	REPAIR circuit CR101 (VT/BN) or RR101 (YE/GN).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to A24.

A15 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO BATTERY INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step attempts to change the fault reported	**Yes**

by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: Clockspring C218A. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on driver air bag stages 1 and 2. • **Did the on-demand DTC change from B0001:12 to B0001:13?**	GO to A18. **No** GO to A16.
A16 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between clockspring: ▪ C218A-2, circuit CR101 (VT/BN), harness side, and ground. ▪ C218A-1, circuit RR101 (YE/GN), harness side, and ground.  N0116756 • **Is any voltage present?**	**Yes** Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit CR101 (VT/BN) or RR101 (YE/GN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to A24. **No** GO to A19.
A17 CONFIRM THE DRIVER AIR BAG MODULE FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damaged, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to	**Yes** INSTALL a new driver air bag module. REFER to Driver Air Bag Module in this section. GO to A24. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do**

Restraints Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**so in the pinpoint test.** For DTC B0001:13 or B0001:1A, GO to A20. For DTC B0001:11, GO to A21. For DTC B0001:12, GO to A22.
A18 CONFIRM THE CLOCKSPRING FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ■ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damaged, pinched, cut or pierced wires. ■ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Clockspring C218A. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to A24. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0001:13 or B0001:1A, GO to A20. For DTC B0001:11, GO to A21. For DTC B0001:12, GO to A22.
A19 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ■ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damaged, pinched, cut or pierced wires. ■ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ■ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to A24. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • If previously removed, install the driver air bag module. Refer to Driver Air Bag Module in this section. • Connect: Clockspring C218A (if previously disconnected). • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0001:13 or B0001:1A, GO to A20. For DTC B0001:11, GO to A21. For DTC B0001:12, GO to A22.
A20 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_00_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to A23. **No** If the driver air bag PID indicates incorrect resistance only when the steering wheel is rotated, INSTALL a new clockspring. REFER to Clockspring in this section. For all other faults, DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to A24.
A21 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0001:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to A24. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at**

	this time. Install SRS components only when directed to do so in the pinpoint test. GO to A23.
A22 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0001:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to A24. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to A23.

A23 CHECK THE HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Remove the driver air bag module:
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• Inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to A24.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to A24.

A24 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test B: DTCs B0002:11, B0002:12, B0002:13 and B0002:1A

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver air bag module stage 2 circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver air bag module

If a fault is detected, the RCM stores DTC B0002:11, B0002:12, B0002:13 or B0002:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Clockspring
- Driver air bag module
- RCM

DTC Description	Fault Trigger Condition
• B0002:11 — Driver Frontal Stage 2 Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either driver air bag stage 2 circuit, a fault is indicated.
• B0002:12 — Driver Frontal Stage 2 Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver air bag stage 2 circuit, a fault is indicated.
• B0002:13 — Driver Frontal Stage 2 Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between driver air bag stage 2 circuits, a fault is indicated.
• B0002:1A — Driver Frontal Stage 2 Deployment Control: Circuit Resistance	When the RCM measures less than the desired resistance range between driver air bag stage 2 circuits,

Below Threshold	a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Clockspring
- Driver air bag module
- RCM

PINPOINT TEST B: DTCs B0002:11, B0002:12, B0002:13 AND B0002:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

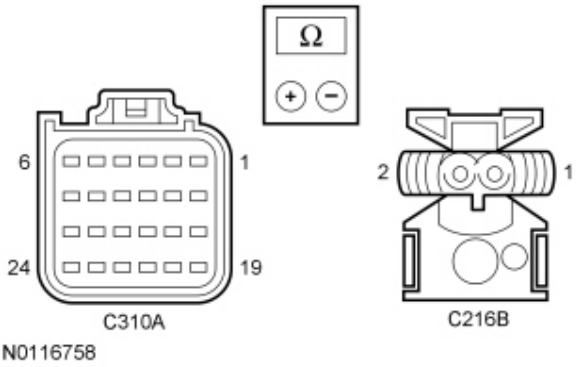
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
B1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0002:11, B0002:12, B0002:13 or B0002:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0002:13 or B0002:1A, GO to B2 . For DTC B0002:11, GO to B11 . For DTC B0002:12, GO to B14 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code

	(CMDTC) only. For DTC B0002:13 or B0002:1A, GO to B19. For DTC B0002:11, GO to B20. For DTC B0002:12, GO to B21.
B2 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_01_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_01_R PID • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** GO to B18. **No** GO to B3.
B3 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_01_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• Remove the lower steering column shroud to access the clockspring connector. • While monitoring the DEPLOY_01_R PID, carry out the harness test of the driver air bag circuits and accessible connectors (including any in-line connectors), by wiggling and flexing the wire harness, connectors, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness or INSTALL a new clockspring as needed. REFER to Clockspring in this section. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to B23. **No** For PID value less than 2 ohms, GO to B4. For PID value greater than 3.68 ohms, GO to B7.
B4 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stages 1 and 2.	**Yes** GO to B16. **No** GO to B5.

• **Did the on-demand DTC change from B0002:1A to B0002:13?**	
B5 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on stages 1 and 2. • **Did the on-demand DTC change from B0002:1A to B0002:13?**	**Yes** GO to B17. **No** GO to B6.
B6 CHECK FOR A SHORT BETWEEN DRIVER AIR BAG STAGE 2 CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between C218A-4, circuit CR102 (BU), harness side and C218A-3, circuit RR102 (WH), harness side.  N0116757 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B18. **No** REPAIR circuits CR102 (BU) and RR102 (WH). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to B23.
B7 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310A, harness side and driver air bag module stage 2 C216B, harness side using the following chart.	**Yes** GO to B9. **No** GO to B8.

RCM	Circuit	Driver Air Bag Module Electrical Connector
C310A-7	CR102 (BU)/(BN)	C216B-1
C310A-8	RR102 (WH)/(BU)	C216B-2

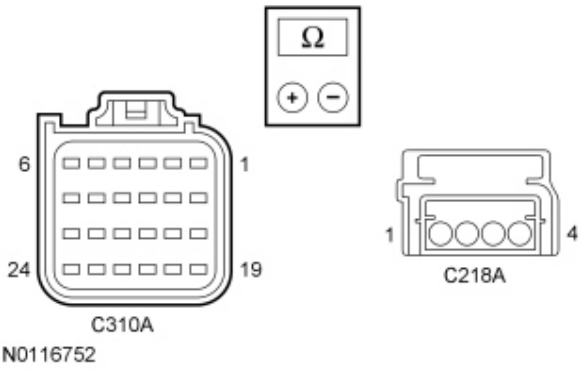


- **Are the resistances less than 1 ohm?**

B8 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)

- Disconnect: Clockspring C218A.
- Measure the resistance between RCM C310A, harness side, and clockspring C218A, harness side, using the following chart.

RCM	Circuit	Clockspring
C310A-7	CR102 (BU)	C218A-4
C310A-8	RR102 (WH)	C218A-3



- **Are the resistances less than 0.5 ohm?**

Yes
GO to B17.

No
REPAIR circuit CR102 (BU) or RR102 (WH).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to B23.

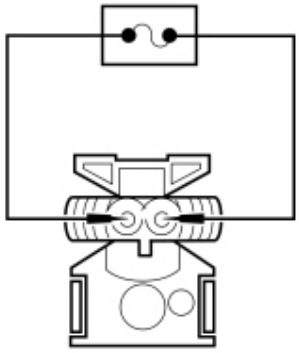
B9 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between driver air bag module stage 2 C216B-1, circuit CR102 (BN), harness side, and C216B-2, circuit RR102 (BU), harness side.

Yes
REMOVE the fused jumper and GO to B16.

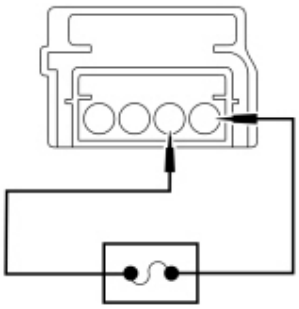
No
REMOVE the fused jumper and GO to B10.



N0116759

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with driver air bag module stage 2 circuits shorted together, a low resistance fault would normally be retrieved on stage 2. Stage 1 will show an open circuit fault due to the driver air bag being disconnected.
- **Was DTC B0002:1A retrieved on-demand during self-test?**

B10 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Clockspring C218A. • Connect a fused jumper wire between clockspring C218A-3, circuit RR102 (WH), harness side, and C218A-4, circuit CR102 (BU), harness side.	**Yes** REMOVE the fused jumper and GO to B17 . **No** REMOVE the fused jumper and GO to B18 .



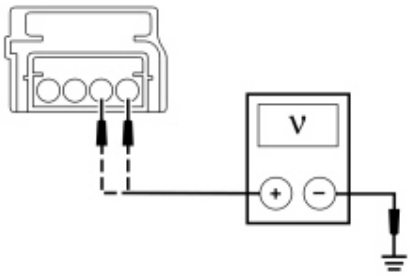
N0116760

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the clockspring stage 2 circuits shorted together, a low resistance fault would normally be retrieved on stage 2. Stage 1 will show an open circuit fault due to the driver air bag being disconnected.
- **Was DTC B0002:1A retrieved on-demand during self-test?**

B11 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported	**Yes** GO to B16 .

changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stages 1 and 2. • **Did the on-demand DTC change from B0002:11 to B0002:13?**	**No** GO to B12.
B12 CHECK DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0002:11 to B0002:13?**	**Yes** GO to B17. **No** GO to B13.
B13 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between clockspring: ▪ C218A-4, circuit CR102 (BU), harness side and ground. ▪ C218A-3, circuit RR102 (WH), harness side and ground.  N0116761 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B18. **No** REPAIR circuit CR102 (BU) or RR102 (WH). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to B23.
B14 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO BATTERY INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step attempts to change the fault reported	**Yes**

by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: Clockspring C218A. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on stages 1 and 2. • **Did the on-demand DTC change from B0002:12 to B0002:13?**	GO to B17. **No** GO to B15.
B15 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between clockspring:
  ▪ C218A-4, circuit CR102 (BU), harness side and ground.
  ▪ C218A-3, circuit RR102 (WH), harness side and ground.
  	


N0116762
• **Is any voltage present?**
	Yes
	REPAIR circuit CR102 (BU) or RR102 (WH).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to B23.
	
	No
	GO to B18.

B16 CONFIRM THE DRIVER AIR BAG MODULE FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to
	Yes
	INSTALL a new driver air bag module. REFER to Driver Air Bag Module in this section. GO to B23.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do**

Restraints Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**so in the pinpoint test.** For DTC B0002:13 or B0002:1A, GO to B19. For DTC B0002:11, GO to B20. For DTC B0002:12, GO to B21.
B17 CONFIRM THE CLOCKSPRING FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ■ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damage, pinched, cut or pierced wires. ■ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Clockspring C218A. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to B23. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0002:13 or B0002:1A, GO to B19. For DTC B0002:11, GO to B20. For DTC B0002:12, GO to B21.
B18 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ■ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damage, pinched, cut or pierced wires. ■ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ■ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to B23. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • If previously removed, install the driver air bag module. Refer to Driver Air Bag Module in this section. • Connect: Clockspring C218A (if previously disconnected). • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0002:13 or B0002:1A, GO to B19. For DTC B0002:11, GO to B20. For DTC B0002:12, GO to B21.
B19 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_01_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_01_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to B22. **No** If the driver air bag PID indicates incorrect resistance only when the steering wheel is rotated, INSTALL a new clockspring. REFER to Clockspring in this section. For all other faults, DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to B23.
B20 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0002:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to B23. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at**

	this time. Install SRS components only when directed to do so in the pinpoint test. GO to B22.
B21 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0002:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to B23. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to B22.

B22 CHECK THE HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Remove the driver air bag module.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• Inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to B23.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to B23.

B23 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test C: DTCs B0004:11, B0004:12, B0004:13 and B0004:1A

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver knee bolster air bag module circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver knee bolster air bag module

If a fault is detected, the RCM stores DTC B0004:11, B0004:12, B0004:13 or B0004:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver knee bolster air bag module
- RCM

DTC Description	Fault Trigger Condition
• B0004:11 — Driver Knee Bolster Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either driver knee bolster air bag module circuit, a fault is indicated.
• B0004:12 — Driver Knee Bolster Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver knee bolster air bag module circuit, a fault is indicated.
• B0004:13 — Driver Knee Bolster Deployment Control: Circuit Open	When the RCM measures greater than the desired resistance range between driver knee bolster air bag module circuits, a fault is indicated.
• B0004:1A — Driver Knee Bolster Deployment Control: Circuit Resistance	When the RCM measures less than the desired resistance range between driver knee bolster air bag module circuits,

Below Threshold	a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver knee bolster air bag module
- RCM

PINPOINT TEST C: DTCs B0004:11, B0004:12, B0004:13 AND B0004:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

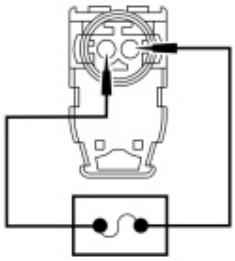
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
C1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0004:11, B0004:12, B0004:13 or B0004:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0004:13 or B0004:1A, GO to C2 . For DTC B0004:11, GO to C8 . For DTC B0004:12, GO to C10 . **No** This is an intermittent fault when present as a CMDTC only. For DTC B0004:13 or B0004:1A, GO to C13 .

	For DTC B0004:11, GO to C14. For DTC B0004:12, GO to C15.
C2 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_02_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_02_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to C12. **No** GO to C3.
C3 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_02_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_02_R PID, carry out the harness test of the driver knee air bag module circuits and accessible connectors (including any in-line connectors), by wiggling connectors and flexing the wire harness frequently. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to C17. **No** For PID value less than 1.7 ohms, GO to C4. For PID value greater than 2.78 ohms, GO to C6.
C4 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Knee Air Bag Module C2432. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver knee air bag module disconnected, open circuit faults would normally be retrieved. • **Did the on-demand DTC change from B0004:11 to B0004:13?**	**Yes** GO to C11. **No** GO to C5.
C5 CHECK FOR A SHORT BETWEEN DRIVER KNEE AIR BAG MODULE CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between driver knee air bag module C2432-1, circuit CR139 (VT/WH), harness side and C2432-2, circuit RR139 (YE), harness side.	**Yes** GO to C12. **No** REPAIR circuits CR139 (VT/WH) and RR139 (YE). Refer to Wiring Diagrams Cell 5, Connector Repair

 N0116763 • **Is the resistance greater than 10,000 ohms?**	Procedures for schematic and connector information. GO to C17 .
C6 CHECK THE DRIVER KNEE AIR BAG MODULE CIRCUITS FOR AN OPEN • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Knee Air Bag Module C2432. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B, harness side and driver knee air bag module C2432, harness side using the following chart. RCM / Circuit / Driver Knee Air Bag Module C310B-4 / RR139 (YE) / C2432-2 C310B-3 / CR139 (VT/WH) / C2432-1  N0116764 • **Are the resistances less than 0.5 ohm?**	**Yes** GO to C7 . **No** REPAIR circuit CR139 (VT/WH) or RR139 (YE). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to C17 .
C7 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED) • Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver knee air bag module C2432-1, circuit CR139 (VT/WH), harness side and C2432-2, circuit RR139 (YE), harness side.	**Yes** REMOVE the fused jumper wire and GO to C11 . **No** REMOVE the fused jumper wire and GO to C12 .

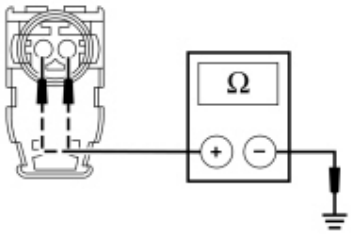


N0116765

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the driver knee air bag module circuits shorted together, a low resistance fault would normally be retrieved.
- **Did the on-demand DTC change from B0004:13 to B0004:1A?**

C8 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Knee Bolster Air Bag Module C2432. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver knee air bag module disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0004:11 to B0004:13?**	**Yes** GO to C11 . **No** GO to C9 .
C9 CHECK THE DRIVER KNEE AIR BAG MODULE CIRCUITS FOR A SHORT TO GROUND	

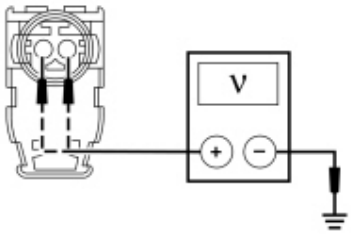
• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between driver knee air bag module:
  ▪ C2432-1, circuit CR139 (VT/WH), harness side and ground.
  ▪ C2432-2, circuit RR139 (YE), harness side and ground.
	Yes
	GO to C12 .
	
	No
	REPAIR circuit CR139 (VT/WH) or RR139 (YE).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to C17 .



N0116766

- **Are the resistances greater than 10,000 ohms?**

C10 CHECK THE DRIVER KNEE AIR BAG MODULE CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Knee Air Bag Module C2432.
• Disconnect: RCM C310A and C310B.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between driver knee air bag module:
  ▪ C2432-1, circuit CR139 (VT/WH), harness side and ground.
  ▪ C2432-2, circuit RR139 (YE), harness side and ground.
 	
  	


N0116767
• **Is any voltage present?**
	Yes
	REPAIR circuit CR139 (VT/WH) or RR139 (YE).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to C17 .
	
	No
	GO to C12 .

C11 CONFIRM THE DRIVER KNEE AIR BAG MODULE FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: Driver Knee Air Bag Module C2432. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new driver knee air bag module. REFER to Knee Air Bag Module in this section. GO to C17 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0004:13 or B0004:1A, GO to C13 .

	For DTC B0004:11, GO to C14. For DTC B0004:12, GO to C15.
C12 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Knee Air Bag Module C2432 (if previously disconnected). • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to C17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0004:13 or B0004:1A, GO to C13. For DTC B0004:11, GO to C14. For DTC B0004:12, GO to C15.
C13 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_02_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_02_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors), and flexing the wire harness frequently. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to C16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to C17.
C14 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any	**Yes**

in-line connectors) and flexing the wire harness frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0004:11 retrieved on-demand during self-test?**	DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to C17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to C16 .
C15 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Knee Air Bag Module C2432. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0004:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to C17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to C16 .
C16 CHECK HARNESS AND CONNECTORS	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Knee Bolster Air Bag Module C2432 (if not previously disconnected).
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to C17 .
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to C17 .

C17 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF.	**Yes**

• **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and Occupant Classification System Module (OCSM). • **Are any RCM and/or OCSM retrieved on-demand during self-test?**	Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test D: DTCs B0010:11, B0010:12, B0010:13 and B0010:1A

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the passenger air bag module stage 1 circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger air bag module

If a fault is detected, the RCM stores DTC B0010:11, B0010:12, B0010:13 or B0010:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger air bag module
- RCM

DTC Description	Fault Trigger Conditions
• B0010:11 — Passenger Frontal Stage 1 Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either passenger air bag stage 1 circuit, a fault is indicated.
• B0010:12 — Passenger Frontal Stage 1 Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either passenger air bag stage 1 circuit, a fault is indicated.
• B0010:13 — Passenger Frontal Stage 1 Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between passenger air bag stage 1 circuits, a fault is indicated.
• B0010:1A — Passenger Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between passenger air bag stage 1 circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger air bag module
- RCM

PINPOINT TEST D: DTCs B0010:11, B0010:12, B0010:13 AND B0010:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

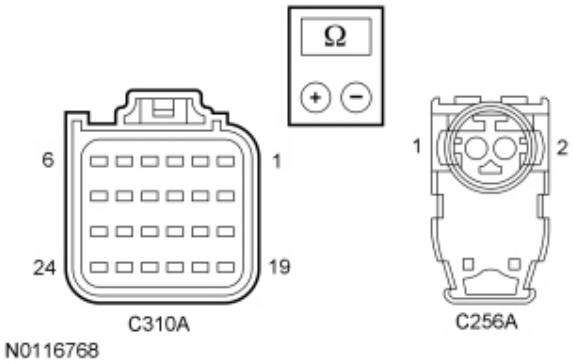
Test Step	Result / Action to Take
D1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0010:11, B0010:12, B0010:13 or B0010:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0010:13 or B0010:1A, GO to D2 . For DTC B0010:11, GO to D9 . For DTC B0010:12, GO to D11 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0010:13 or B0010:1A, GO to D14 . For DTC B0010:11, GO to D15 . For DTC B0010:12, GO to D16 .
D2 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_05_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM . ▪ DEPLOY_05_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to D13 . **No** GO to D3 .
D3 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_05_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_05_R PID, carry out the harness test of the passenger air bag module circuits and accessible connectors (including any in-line connectors) by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to D18 . **No** For PID value less than 1.7 ohms, GO to D4 . For PID value greater than 2.78 ohms, GO to D7 .
D4 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE	

INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove and disconnect the passenger air bag module. Refer to Passenger Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger air bag module removed, open circuit faults would normally be retrieved on passenger air bag stage 1 and stage 2 circuits. • **Did the on-demand DTC change from B0010:1A to B0010:13?**	**Yes** GO to D12. **No** GO to D5.
D5 CHECK FOR A SHORT BETWEEN PASSENGER AIR BAG STAGE 1 CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between passenger air bag module stage 1 C256A-1, circuit CR103 (GY/BU), harness side and C256A-2, circuit RR103 (VT/GN), harness side.  N0116763 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to D13. **No** GO to D6.
D6 CHECK RCM FOR LOW RESISTANCE	
• Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310A pins 1 and 2, component side.  N0091827 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuits CR103 (GY/BU) and RR103 (VT/GN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to D18. **No** GO to D13.

D7 CHECK THE PASSENGER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310A, harness side and passenger air bag module stage 1 C256A, harness side using the following chart.

RCM	Circuit	Passenger Air Bag Module Stage 1
C310A-1	CR103 (GY/BU)	C256A-1
C310B-2	RR103 (VT/GN)	C256A-2



- **Are the resistances less than 0.5 ohm?**

Yes
GO to D8 .

No
REPAIR circuit CR103 (GY/BU) or RR103 (VT/GN).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to D18 .

D8 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damage, pinched, cut or pierced wires.
  - inspect C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  - repair any concerns found.

  Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between passenger air bag module stage 1 C256A-1, circuit CR103 (GY/BU), harness side and C256A-2, circuit RR103 (VT/GN), harness side.

Yes
REMOVE the fused jumper wire and GO to D12 .

No
REMOVE the fused jumper wire and GO to D13 .

 N0116765 • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger air bag module stage 1 circuits shorted together, a low resistance fault would normally be retrieved on stage 1. Stage 2 shows an open circuit fault due to the passenger air bag being removed. • **Did the on-demand DTC change from B0010:13 to B0010:1A?**	
D9 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger air bag module removed, open circuit faults would normally be retrieved on passenger air bag stage 1 and stage 2 circuits. • **Did the on-demand DTC change from B0010:11 to B0010:13?**	**Yes** GO to D12 . **No** GO to D10 .
D10 CHECK THE PASSENGER AIR BAG STAGE 1 CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between passenger air bag module:
  ▪ C256A-1, circuit CR103 (GY/BU), harness side and ground.
  ▪ C256A-2, circuit RR103 (VT/GN), harness side and ground.
	Yes
	GO to D13 .
	
	No
	Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar.
	
	REPAIR circuit CR103 (GY/BU) or RR103 (VT/GN).

 N0116766 • **Are the resistances greater than 10,000 ohms?**	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to D18 .
D11 CHECK THE PASSENGER AIR BAG STAGE 1 CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Disconnect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between passenger air bag module: ▪ C256A-1, circuit CR103 (GY/BU), harness side and ground. ▪ C256A-2, circuit RR103 (VT/GN), harness side and ground.  N0116767 • **Is any voltage present on either circuit?**	**Yes** Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit CR103 (GY/BU) or RR103 (VT/GN). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to D18 . **No** GO to D13 .
D12 CONFIRM THE PASSENGER AIR BAG MODULE FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.	**Yes** INSTALL a new passenger air bag module. REFER to Passenger Air Bag Module in this section. GO to D18 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**

▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect and install the passenger air bag module (if previously disconnected). Refer to Passenger Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0010:13 or B0010:1A, GO to D14. For DTC B0010:11, GO to D15. For DTC B0010:12, GO to D16.
D13 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect and install the passenger air bag module (if previously disconnected). Refer to Passenger Air Bag Module in this section. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to D18. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0010:13 or B0010:1A, GO to D14. For DTC B0010:11, GO to D15. For DTC B0010:12, GO to D16.
D14 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_05_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_05_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness frequently. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to D17. **No** The fault is not present and cannot be recreated at this time. **Do not install any**

	new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to D18.
D15 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • **Was DTC B0010:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to D18. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to D17.
D16 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0010:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to D18. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to D17.

D17 CHECK THE HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Remove and disconnect the passenger air bag module. Refer to Passenger Air Bag Module in this section.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to D18.
	
	No
	The fault is not present and cannot be recreated at this

	time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to D18.
D18 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test E: DTCs B0011:11, B0011:12, B0011:13 and B0011:1A

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the passenger air bag module 2 circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger air bag module

If a fault is detected, the RCM stores DTC B0011:11, B0011:12, B0011:13 or B0011:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger air bag module
- RCM

DTC Description	Fault Trigger Conditions
• B0011:11 — Passenger Frontal Stage 2 Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either passenger frontal stage 2 deployment control circuit, a fault is indicated.
• B0011:12 — Passenger Frontal Stage 2 Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either passenger frontal stage 2 deployment control circuit, a fault is indicated.
• B0011:13 — Passenger Frontal Stage 2 Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between passenger frontal stage 2 deployment control circuits, a fault is indicated.
• B0011:1A — Passenger Frontal Stage 2 Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between passenger frontal stage 2 deployment control circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger air bag module
- RCM

PINPOINT TEST E: DTCs B0011:11, B0011:12, B0011:13 AND B0011:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

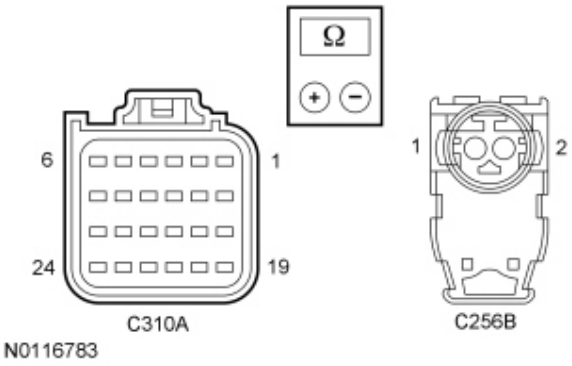
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
E1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0011:11, B0011:12, B0011:13 or B0011:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B0011:13 or B0011:1A, GO to E2. For DTC B0011:11, GO to E8. For DTC B0011:12, GO to E10. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0011:13 or B0011:1A, GO to E13. For DTC B0011:11, GO to E14. For DTC B0011:12, GO to E15.
E2 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_06_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_06_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to E12. **No** GO to E3.
E3 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_06_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_06_R PID, carry out the harness test of the passenger air bag module circuits and accessible connectors (including any in-line connectors) by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to E16. **No** For PID value less than 1.7 ohms, GO to E4. For PID value greater than 2.78 ohms, GO to E6.

E4 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger air bag module disconnected, open circuit faults would normally be retrieved on passenger air bag stage 1 and 2 circuits. • **Did the on-demand DTC change from B0011:1A to B0011:13?**	**Yes** GO to E11. **No** GO to E5.
E5 CHECK FOR A SHORT BETWEEN PASSENGER AIR BAG STAGE 2 CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between passenger air bag module stage 2 C256B-1, circuit CR104 (YE/GY), harness side and C256B-2, circuit RR104 (WH/BU), harness side.  N0116763 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to E11. **No** REPAIR circuits CR104 (YE/GY) and RR104 (WH/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to E17.
E6 CHECK THE PASSENGER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310A, harness side and passenger air bag module stage 2 C256B, harness side using the following chart. **RCM** / **Circuit** / **Passenger Air Bag Module Stage 2** C310A-10 / CR104 (YE/GY) / C256B-1	**Yes** GO to E7. **No** REPAIR circuit CR104 (YE/GY) or RR104 (WH/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to E17.

C310A-9	RR104 (WH/BU)	C256B-2

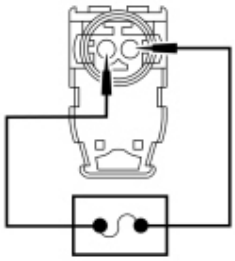


- **Are the resistances less than 0.5 ohm?**

E7 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between passenger air bag module stage 2 C256B-1, circuit CR104 (YE/GY), harness side and C256B-2, circuit RR104 (WH/BU), harness side.



- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the passenger air bag stage 2 circuits shorted together, a low resistance fault would normally be retrieved on stage 2. Stage 1 shows an open circuit fault due to the passenger air bag module being removed.
- **Did the on-demand DTC change from B0011:13 to B0011:1A?**

Yes
REMOVE the fused jumper wire and GO to E11 .

No
REMOVE the fused jumper wire and GO to E12 .

E8 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

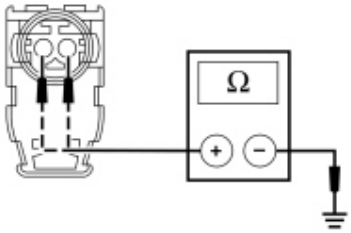
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Ignition OFF.

Yes
GO to E11 .

No
GO to E9 .

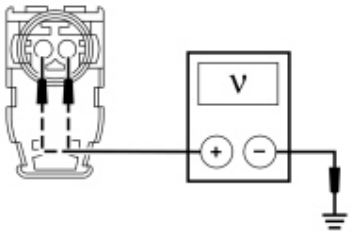
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger air bag module removed, open circuit faults would normally be retrieved on stage 1 and stage 2. • **Did the on-demand DTC change from B0011:11 to B0011:13?**	
E9 CHECK THE PASSENGER AIR BAG STAGE 2 CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between passenger air bag module stage 2:
  ▪ C256B-1, circuit CR104 (YE/GY), harness side and ground.
  ▪ C256B-2, circuit RR104 (WH/BU), harness side and ground.
  	


N0116766
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to E12 .
	
	No
	REPAIR circuit CR104 (YE/GY) or RR104 (WH/BU).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to E17 .

E10 CHECK THE PASSENGER AIR BAG STAGE 2 CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Remove and disconnect the passenger air bag module. Refer to Passenger Air Bag Module in this section.
• Disconnect: RCM C310A and C310B.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between passenger air bag module stage 2:
  ▪ C256B-1, circuit CR104 (YE/GY), harness side and ground.
  ▪ C256B-2, circuit RR104 (WH/BU), harness side and ground.
	Yes
	REPAIR circuit CR104 (YE/GY) or RR104 (WH/BU).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to E17 .
	
	No
	GO to E12 .



N0116767

- **Is any voltage present on either circuit?**

E11 CONFIRM THE PASSENGER AIR BAG MODULE FAULT **NOTE:** Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B SRS lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect and install the passenger air bag module (if previously disconnected). Refer to Passenger Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new passenger air bag module. REFER to Passenger Air Bag Module in this section. GO to E17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0011:13 or B0011:1A, GO to E13. For DTC B0011:11, GO to E14. For DTC B0011:12, GO to E15.
E12 CONFIRM THE RCM FAULT **NOTE:** Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to E17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0011:13 or

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Install the passenger air bag module (if previously removed) and connect passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	B0011:1A, GO to E13. For DTC B0011:11, GO to E14. For DTC B0011:12, GO to E15.
E13 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_06_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_06_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to E16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to E17.
E14 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0011:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to E17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to E16.
E15 CHECK THE PASSENGER FRONTAL STAGE 2 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS)	**Yes** DEPOWER the SRS and

Depowering and Repowering in this section. • Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0011:12 retrieved on-demand during self-test?**	REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to E17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to E16.
E16 CHECK THE HARNESS AND CONNECTORS	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Remove the passenger air bag module and disconnect the passenger air bag module connectors C256A and C256B. Refer to Passenger Air Bag Module in this section.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to E17.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to E17.

E17 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer on-demand during self-test.

Pinpoint Test F: DTCs B0020:11, B0020:12, B0020:13 and B0020:1A

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver seat side air bag module circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver seat side air bag module

If a fault is detected, the RCM stores DTC B0020:11, B0020:12, B0020:13 or B0020:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver seat side air bag module
- RCM

DTC Description	Fault Trigger Conditions
• B0020:11 — Left Side Airbag Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either driver seat side air bag circuit, a fault is indicated.
• B0020:12 — Left Side Airbag Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver seat side air bag circuit, a fault is indicated.
• B0020:13 — Left Side Airbag Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between the driver seat side air bag circuit, a fault is indicated.
• B0020:1A — Left Side Airbag Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the driver seat side air bag circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver seat side air bag module
- RCM

PINPOINT TEST F: DTCs B0020:11, B0020:12, B0020:13 AND B0020:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

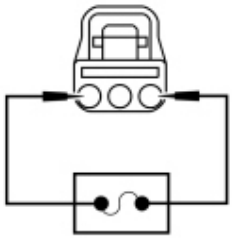
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
F1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0020:11, B0020:12, B0020:13 or B0020:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B0020:13 or B0020:1A, GO to F2 . For DTC B0020:11, GO to F8 . For DTC B0020:12, GO to F10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0020:13 or B0020:1A, GO to F13 . For DTC B0020:11, GO to

	F14 . For DTC B0020:12, GO to F15 .
F2 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_10_R) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — RCM . ▪ DEPLOY_10_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to F12 . **No** GO to F3 .
F3 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_10_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_10_R PID carry out the harness test of the driver seat side air bag circuits and accessible connectors (including any in-line connectors) by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to F17 . **No** For PID value less than 1.7 ohms, GO to F4 . For PID value greater than 2.78 ohms, GO to F6 .
F4 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver seat side air bag disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0020:1A to B0020:13?**	**Yes** GO to F11 . **No** GO to F5 .
F5 CHECK FOR A SHORT BETWEEN DRIVER SEAT SIDE AIR BAG CIRCUITS	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between driver seat side air bag module C367-3, circuit CR105 (GN/BU), harness side and C367-1, circuit RR105 (GY/YE), harness side.	**Yes** GO to F12 . **No** REPAIR circuits CR105 (GN/BU) and RR105 (GY/YE).

 DR1050-A • **Is the resistance greater than 10,000 ohms?**	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to F17 .
F6 CHECK THE DRIVER SEAT SIDE AIR BAG CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B, harness side and driver seat side air bag module C367, harness side using the following chart. **RCM** / **Circuit** / **Driver Seat Side Air Bag Module** C310B-6 / CR105 (GN/BU) / C367-3 C310B-5 / RR105 (GY/YE) / C367-1  N0119357 • **Are the resistances less than 0.5 ohm?**	**Yes** GO to F7 . **No** REPAIR circuit CR105 (GN/BU) or RR105 (GY/YE). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to F17 .
F7 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver seat side air bag module C367-1, circuit RR105 (GY/YE), harness side and C367-3, circuit CR105 (GN/BU), harness side.	**Yes** REMOVE the fused jumper wire and GO to F11 . **No** REMOVE the fused jumper wire and GO to F12 .

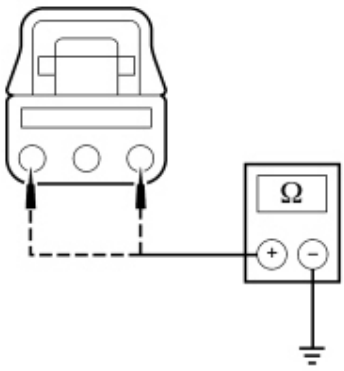


N0116770

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the driver seat side air bag module circuits shorted together, a low resistance fault would normally be retrieved.
- **Did the on-demand DTC change from B0020:13 to B0020:1A?**

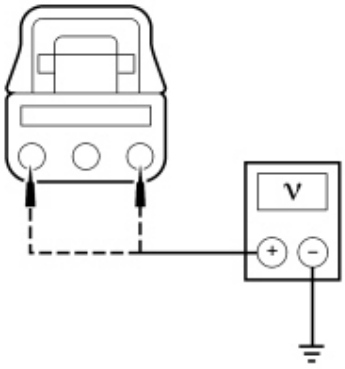
F8 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver seat side air bag module disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0020:11 to B0020:13?**	**Yes** GO to F11 . **No** GO to F9 .
F9 CHECK THE DRIVER SEAT SIDE AIR BAG CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between driver seat side air bag module:
  ▪ C367-1, circuit RR105 (GY/YE), harness side and ground.
  ▪ C367-3, circuit CR105 (GN/BU), harness side and ground.
	Yes
	GO to F12 .
	
	No
	REPAIR circuit CR105 (GN/BU) or RR105 (GY/YE).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to F17 .



N0045012

- **Is the resistance greater than 10,000 ohms?**

F10 CHECK THE DRIVER SEAT SIDE AIR BAG CIRCUITS FOR A SHORT TO VOLTAGE
- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Driver Seat Side Air Bag Module C367.
- Disconnect: RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Measure the voltage between driver seat side air bag module:
  - C367-1, circuit RR105 (GY/YE), harness side and ground.
  - C367-3, circuit CR105 (GN/BU), harness side and ground.
  	


N0045011
- **Is any voltage present on either circuit?**
	Yes
	REPAIR circuit CR105 (GN/BU) or RR105 (GY/YE).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to F17.
	
	No
	GO to F12.

F11 CONFIRM THE DRIVER SEAT SIDE AIR BAG MODULE FAULT
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damage, pinched, cut or pierced wires.
  - inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  - repair any concerns found.
	Yes
	INSTALL a new driver side air bag module. REFER to Side Air Bag Module in this section. GO to F17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B0020:13 or B0020:1A, GO to F13.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Side Air Bag Module C367. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0020:11, GO to F14. For DTC B0020:12, GO to F15.
F12 CONFIRM THE RCM FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: Driver Seat Side Air Bag Module C367.
• Connect: RCM C310A and C310B (if previously disconnected).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to F17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B0020:13 or B0020:1A, GO to F13.
	
	For DTC B0020:11, GO to F14.
	
	For DTC B0020:12, GO to F15.

F13 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_10_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_10_R PID • Monitor the DEPLOY_10_R PID. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to F16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

	GO to F17.
F14 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0020:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to F17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to F16.
F15 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0020:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to F17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to F16.

F16 CHECK THE HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect the driver seat side air bag module C367:
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to F17.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when**

	directed to do so in the pinpoint test. GO to F17 .
F17 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test G: DTCs B0021:11, B0021:12, B0021:13 and B0021:1A

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver side air curtain circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver side air curtain

If a fault is detected, the RCM stores DTC B0021:11, B0021:12, B0021:13 or B0021:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver side curtain module
- RCM

DTC Description	Fault Trigger Conditions
• B0021:11 — Left Curtain Deployment Control 1: Circuit Short to Ground	When the RCM senses a short to ground on either driver side air curtain circuit, a fault is indicated.
• B0021:12 — Left Curtain Deployment Control 1: Circuit Short to Battery	When the RCM senses a short to voltage on either driver side air curtain circuit, a fault is indicated.
• B0021:13 — Left Curtain Deployment Control 1: Circuit Open	When the RCM measures more than the desired resistance range between the driver side air curtain circuits, a fault is indicated.
• B0021:1A — Left Curtain Deployment Control 1: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the driver side air curtain circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver side air curtain module
- RCM

PINPOINT TEST G: DTCs B0021:11, B0021:12, B0021:13 AND B0021:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
G1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0021:11, B0021:12, B0021:13 or B0021:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0021:13 or B0021:1A, GO to G2 . For DTC B0021:11, GO to G8 . For DTC B0021:12, GO to G10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0021:13 or B0021:1A, GO to G13 . For DTC B0021:11, GO to G14 . For DTC B0021:12, GO to G15 .
G2 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_11_R) PID • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — RCM . ▪ DEPLOY_11_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to G12 . **No** GO to G3 .
G3 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_11_R) PID WHILE CARRYING OUT THE HARNESS TEST • While monitoring the DEPLOY_11_R PID carry out the harness test of the driver side air curtain circuits and accessible connectors (including any in-line connectors) by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to G17 . **No** For PID value less than 1.7 ohms, GO to G4 . For PID value greater than 2.78 ohms, GO to G6 .
G4 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

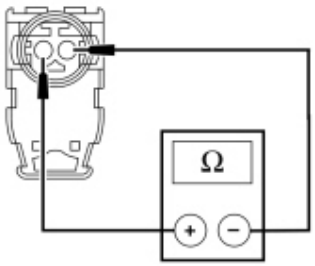
- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Driver Side Air Curtain C9018.
  - Remove the headliner. Refer to the appropriate procedure in Section 501-05.
- Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM.
- **DIAGNOSTIC TIP:** When viewing DTCs with the driver side air curtain disconnected, an open circuit fault would normally be retrieved.
- **Did the on-demand DTC change from B0021:1A to B0021:13?**

Yes
GO to G11.

No
GO to G5.

G5 CHECK FOR A SHORT BETWEEN DRIVER SIDE AIR CURTAIN CIRCUITS

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between driver side air curtain C9018-1, circuit CR109 (BN/BU), harness side and C9018-2, circuit RR109 (BU/GN), harness side.



N0116763

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to G12.

No
REPAIR circuits CR109 (BN/BU) and RR109 (BU/GN).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to G17.

G6 CHECK THE DRIVER SIDE AIR CURTAIN CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Driver Side Air Curtain C9018.
  - Remove the headliner. Refer to the appropriate procedure in Section 501-05.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310B, harness side and driver side air curtain C9018, harness side using the following chart.

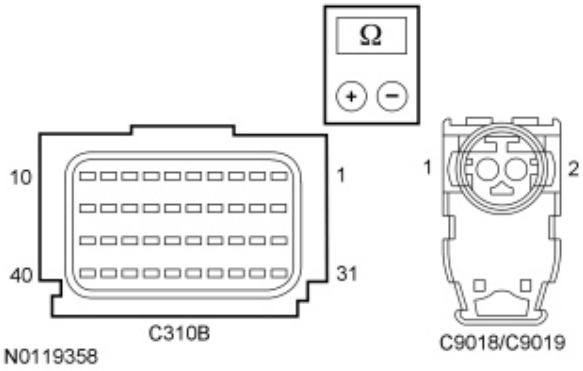
RCM	Circuit	Driver Side Air Curtain
C310B-7	CR109 (BN/BU)	C9018-1
C310B-8	RR109 (BU/GN)	C9018-2

Yes
GO to G7.

No
REPAIR circuit CR109 (BN/BU) or RR109 (BU/GN).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

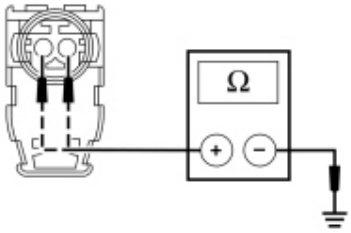
GO to G17.



- **Are the resistances less than 0.5 ohm?**

G7 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver side air curtain C9018-1, circuit CR109 (BN/BU), harness side and C9018-2, circuit RR109 (BU/GN), harness side.  N0116765 • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver side air curtain circuits shorted together, a low resistance fault would normally be retrieved. • **Did the on-demand DTC change from B0021:13 to B0021:1A?**	**Yes** REMOVE the fused jumper wire and GO to G11 . **No** REMOVE the fused jumper wire and GO to G12 .
G8 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Side Air Curtain C9018. ▪ Remove the headliner. Refer to the appropriate procedure in Section 501-05 . • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering	**Yes** GO to G11 . **No** GO to G9 .

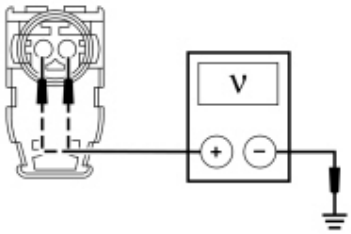
in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver side air curtain disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0021:11 to B0021:13?**	
G9 CHECK THE DRIVER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between driver side air curtain:
  ▪ C9018-1, circuit CR109 (BN/BU), harness side and ground.
  ▪ C9018-2, circuit RR109 (BU/GN), harness side and ground.
  	


N0116766
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to G12 .
	
	No
	REPAIR circuit CR109 (BN/BU) or RR109 (BU/GN).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to G17 .

G10 CHECK THE DRIVER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Side Air Curtain C9018.
  ▪ Remove the headliner. Refer to the appropriate procedure in Section 501-05 .
• Disconnect: RCM C310A and C310B.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between driver side air curtain:
  ▪ C9018-1, circuit CR109 (BN/BU), harness side and ground.
  ▪ C9018-2, circuit RR109 (BU/GN), harness side and ground.
	Yes
	REPAIR circuit CR109 (BN/BU) or RR109 (BU/GN).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to G17 .
	
	No
	GO to G12 .



N0116767

- **Is any voltage present?**

G11 CONFIRM THE DRIVER SIDE AIR CURTAIN MODULE FAULT **NOTE:** Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Side Air Curtain C9018. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new driver side air curtain. REFER to Side Air Curtain Module in this section. GO to G17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0021:13 or B0021:1A, GO to G13. For DTC B0021:11, GO to G14. For DTC B0021:12, GO to G15.
G12 CONFIRM THE RCM FAULT **NOTE:** Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to G17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0021:13 or B0021:1A, GO to G13.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Side Air Curtain C9018. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0021:11, GO to G14. For DTC B0021:12, GO to G15.
G13 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_11_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_11_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to G16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to G17.
G14 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0021:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to G17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to G16.
G15 CHECK THE LEFT CURTAIN DEPLOYMENT CONTROL 1 FOR AN INTERMITTENT SHORT TO BATTERY FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Side Air Curtain C9018.	**Yes** DEPOWER the SRS and REPAIR as necessary.

▪ Remove the headliner. Refer to the appropriate procedure in Section 501-05 . • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0021:12 retrieved on-demand during self-test?**	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to G17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to G16 .
G16 CHECK THE HARNESS AND CONNECTORS • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Side Air Curtain C9018. ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. • **Were any concerns found?**	**Yes** REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to G17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to G17 .
G17 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test H: DTCs B0028:11, B0028:12, B0028:13 and B0028:1A

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the passenger seat side air bag circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger seat side air bag module

If a fault is detected, the RCM stores DTC B0028:11, B0028:12, B0028:13 or B0028:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger seat side air bag module
- RCM

DTC Description	Fault Trigger Conditions
• B0028:11 — Right Side Airbag Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either passenger seat side air bag circuit, a fault is indicated.
• B0028:12 — Right Side Airbag Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either passenger seat side air bag circuit, a fault is indicated.
• B0028:13 — Right Side Airbag Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between the passenger seat side air bag circuits, a fault is indicated.
• B0028:1A — Right Side Airbag Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the passenger seat side air bag circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger seat side air bag module
- RCM

PINPOINT TEST H: DTCs B0028:11, B0028:12, B0028:13 AND B0028:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

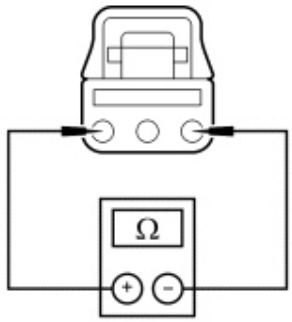
NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
H1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0028:11, B0028:12, B0028:13 or B0028:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B0028:13 or B0028:1A, GO to H2 . For DTC B0028:11, GO to H8 . For DTC B0028:12, GO to H10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0028:13 or B0028:1A, GO to H13 . For DTC B0028:11, GO to H14 .

	For DTC B0028:12, GO to H15.
H2 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_13_R) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_13_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to H12. **No** GO to H3.
H3 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_13_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_13_R PID carry out the harness test of the passenger seat side air bag circuits and accessible connectors (including any in-line connectors) by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to H17. **No** For PID value less than 1.7 ohms, GO to H4. For PID value greater than 2.78 ohms, GO to H6.
H4 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger seat side air bag module disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0028:1A to B0028:13?**	**Yes** GO to H11. **No** GO to H5.
H5 CHECK FOR A SHORT BETWEEN PASSENGER SEAT SIDE AIR BAG CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between passenger seat side air bag module C337-3, circuit CR106 (VT/GY), harness side and C337-1, circuit RR106 (YE/OG), harness side.	**Yes** GO to H12. **No** REPAIR circuits CR106 (VT/GY) and RR106 (YE/OG). Refer to Wiring Diagrams



DR1050-A

- **Is the resistance greater than 10,000 ohms?**

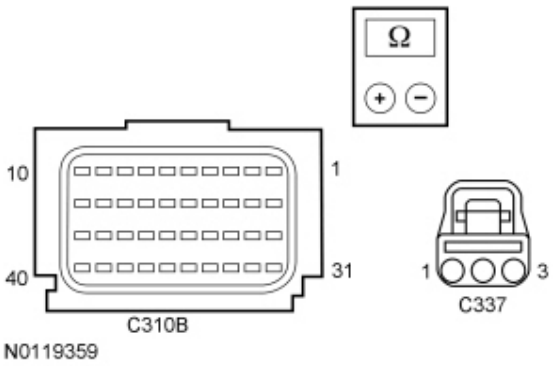
Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to H17 .

H6 CHECK PASSENGER SEAT SIDE AIR BAG CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Passenger Seat Side Air Bag Module C337.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310B, harness side and passenger seat side air bag module C337, harness side using the following chart.

RCM	Circuit	Passenger Seat Side Air Bag Module
C310B-16	CR106 (VT/GY)	C337-3
C310B-15	RR106 (YE/OG)	C337-1



N0119359

- **Are the resistances less than 0.5 ohm?**

Yes
GO to H7 .

No
REPAIR circuit CR106 (VT/GY) or RR106 (YE/OG).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to H17 .

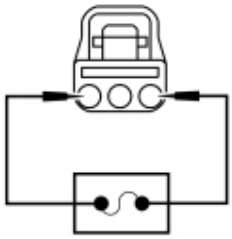
H7 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between passenger seat side air bag module C337-3, circuit CR106 (VT/GY), harness side and C337-1, circuit RR106 (YE/OG), harness side.

Yes
REMOVE the fused jumper wire and GO to H11 .

No
REMOVE the fused jumper wire and GO to H12 .



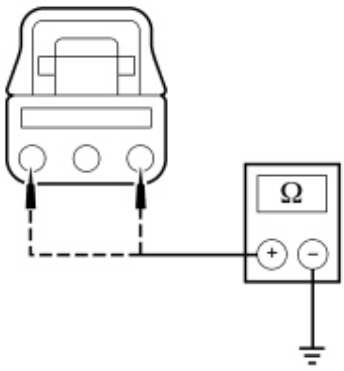
N0116770

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the passenger seat side air bag circuits shorted together, a low resistance fault would normally be retrieved.
- **Did the on-demand DTC change from B0028:13 to B0028:1A?**

H8 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger seat side air bag module disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0028:11 to B0028:13?**	**Yes** GO to H11 . **No** GO to H9 .

H9 CHECK PASSENGER SEAT SIDE AIR BAG CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between passenger seat side air bag module:
  ▪ C337-1, circuit RR106 (YE/OG), harness side and ground.
  ▪ C337-3, circuit CR106 (VT/GY), harness side and ground.
	Yes
	GO to H12 .
	
	No
	REPAIR circuit CR106 (VT/GY) or RR106 (YE/OG).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to H17 .



N0045012

- **Are the resistances greater than 10,000 ohms?**

H10 CHECK THE PASSENGER SEAT SIDE AIR BAG CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Disconnect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between passenger seat side air bag module: ▪ C337-1, circuit RR106 (YE/OG), harness side and ground. ▪ C337-3, circuit CR106 (VT/GY), harness side and ground.  N0045011 • **Is any voltage present on either circuit?**	**Yes** REPAIR circuit CR106 (VT/GY) or RR106 (YE/OG). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to H17 . **No** GO to H12 .
H11 CONFIRM THE PASSENGER SEAT SIDE AIR BAG MODULE FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found.	**Yes** REMOVE and INSPECT the seat side air bag module harness for damage. REFER to Side Air Bag Module in this section. If a concern is found, REPAIR as necessary. If a concern was not found, INSTALL a new passenger side air bag module. REFER to Side Air Bag Module in this section. GO to H17 . **No** In the process of diagnosing

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Seat Side Air Bag Module C337. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0028:13 or B0028:1A, GO to H13. For DTC B0028:11, GO to H14. For DTC B0028:12, GO to H15.
H12 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Seat Side Air Bag Module C337. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to H17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B0028:13 or B0028:1A, GO to H13. For DTC B0028:11, GO to H14. For DTC B0028:12, GO to H15.
H13 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_13_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_13_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to H16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams

	Cell 5 , Connector Repair Procedures for schematic and connector information. GO to H17 .
H14 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0028:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to H17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to H16 .
H15 CHECK THE RIGHT SIDE AIRBAG DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0028:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to H17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to H16 .

H16 CHECK HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Seat Side Air Bag Module C337.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to H17 .
	
	No
	The fault is not present and cannot be recreated at this

	time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to H17.
H17 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test I: DTCs B0029:11, B0029:12, B0029:13 and B0029:1A

Normal Operation

The Restraints Control Module (RCM) continuously monitors the passenger side air curtain circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger side air curtain

If a fault is detected, the RCM stores DTC B0029:11, B0029:12, B0029:13 or B0029:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger side air curtain module
- RCM

DTC Description	Fault Trigger Conditions
• B0029:11 — Right Curtain Deployment Control 1: Circuit Short to Ground	When the RCM senses a short to ground on either passenger side air curtain circuit, a fault is indicated.
• B0029:12 — Right Curtain Deployment Control 1: Circuit Short to Battery	When the RCM senses a short to voltage on either passenger side air curtain circuit, a fault is indicated.
• B0029:13 — Right Curtain Deployment Control 1: Circuit Open	When the RCM measures more than the desired resistance range between the passenger side air curtain circuits, a fault is indicated.
• B0029:1A — Right Curtain Deployment Control 1: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the passenger side air curtain circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger side air curtain module
- RCM

PINPOINT TEST I: DTCs B0029:11, B0029:12, B0029:13 AND B0029:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
I1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0029:11, B0029:12, B0029:13 or B0029:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0029:13 or B0029:1A, GO to I2 . For DTC B0029:11, GO to I8 . For DTC B0029:12, GO to I10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0029:13 or B0029:1A, GO to I13 . For DTC B0029:11, GO to I14 . For DTC B0029:12, GO to I15 .
I2 CHECK RIGHT CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_14_R) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger — RCM . ▪ DEPLOY_14_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to I12 . **No** GO to I3 .
I3 CHECK THE RIGHT CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_14_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_14_R PID carry out the harness test of the passenger side air curtain circuits and accessible connectors (including any in-line connectors), by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to I17 . **No** For PID value less than 1.7 ohm, GO to I4 . For PID value greater than 2.78 ohms, GO to I6 .
I4 CHECK THE RIGHT CURTAIN DEPLOYMENT CONTROL 1 DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

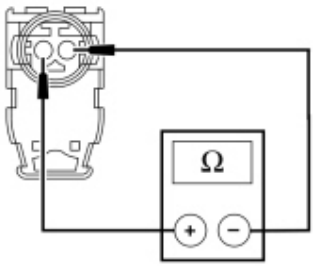
- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Passenger Side Air Curtain C9019.
  - Remove the headliner. Refer to the appropriate procedure in Section 501-05.
- Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM.
- **DIAGNOSTIC TIP:** When viewing DTCs with the passenger side air curtain disconnected, an open circuit fault would normally be retrieved.
- **Did the on-demand DTC change from B0029:1A to B0029:13?**

Yes
GO to I11.

No
GO to I5.

I5 CHECK THE FOR A SHORT BETWEEN PASSENGER SIDE AIR CURTAIN CIRCUITS

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between passenger side air curtain C9019-1, circuit CR111 (BN/WH), harness side and C9019-2, circuit RR111 (YE/VT), harness side.



N0116763

- **Is the resistance greater than 10,000 ohms?**

Yes
GO to I12.

No
REPAIR circuits CR111 (BN/WH) and RR111 (YE/VT).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to I17.

I6 CHECK THE PASSENGER SIDE AIR CURTAIN CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Passenger Side Air Curtain C9019.
  - Remove the headliner. Refer to the appropriate procedure in Section 501-05.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310B, harness side and passenger side air curtain C9019, harness side using the following chart.

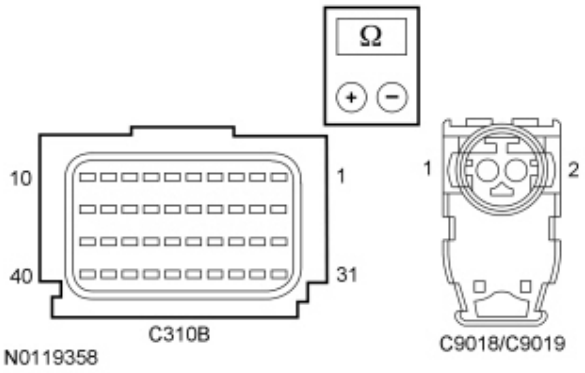
RCM	Circuit	Passenger Side Air Curtain
C310B-17	CR111 (BN/WH)	C9019-1
C310B-18	RR111 (YE/VT)	C9019-2

Yes
GO to I7.

No
REPAIR circuit CR111 (BN/WH) or RR111 (YE/VT).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to I17.

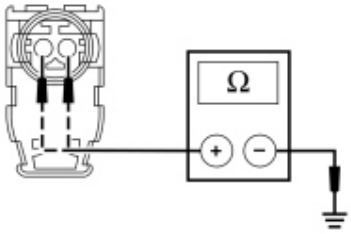


N0119358

- **Are the resistances less than 0.5 ohm?**

I7 CHECK THE RIGHT CURTAIN DEPLOYMENT CONTROL 1 DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between passenger side air curtain C9019-1, circuit CR111 (BN/WH), harness side and C9019-2, circuit RR111 (YE/VT), harness side.  N0116765 • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger side air curtain circuits shorted together, a low resistance fault would normally be retrieved. • **Did the on-demand DTC change from B0029:13 to B0029:1A?**	**Yes** REMOVE the fused jumper wire and GO to I11 . **No** REMOVE the fused jumper wire and GO to I12 .
I8 CHECK THE RIGHT CURTAIN DEPLOYMENT CONTROL 1 DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Side Air Curtain C9019. ▪ Remove the headliner. Refer to the appropriate procedure in Section 501-05 . • Repower the SRS . **Do not** prove out the SRS at this time. Refer to	**Yes** GO to I11 . **No** GO to I9 .

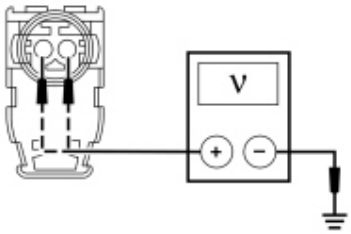
Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger side air curtain disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0029:11 to B0029:13?**	
I9 CHECK THE PASSENGER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between passenger side air curtain:
  ▪ C9019-1, circuit CR111 (BN/WH), harness side and ground.
  ▪ C9019-2, circuit RR111 (YE/VT), harness side and ground.
  	


N0116766
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to I12 .
	
	No
	REPAIR circuit CR111 (BN/WH) or RR111 (YE/VT).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to I17 .

I10 CHECK THE PASSENGER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Side Air Curtain C9019.
  ▪ Remove the headliner. Refer to the appropriate procedure in Section 501-05 .
• Disconnect: RCM C310A and C310B.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between passenger side air curtain:
  ▪ C9019-1, circuit CR111 (BN/WH), harness side and ground.
  ▪ C9019-2, circuit RR111 (YE/VT), harness side and ground.
	Yes
	REPAIR circuit CR111 (BN/WH) or RR111 (YE/VT).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to I17 .
	
	No
	GO to I12 .



N0116767

- **Is any voltage present on either circuit?**

I11 CONFIRM THE PASSENGER SIDE AIR CURTAIN MODULE FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
• Connect: Passenger Side Air Curtain C9019.
• Connect: RCM C310A and C310B.
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new passenger side air curtain. REFER to Side Air Curtain Module in this section. GO to I17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B0029:13 or B0029:1A, GO to I13.
	
	For DTC B0029:11, GO to I14.
	
	For DTC B0029:12, GO to I15.

I12 CONFIRM THE RCM FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
	Yes
	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to I17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B0029:13 or B0029:1A, GO to I13.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Side Air Curtain C9019. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0029:11, GO to I14. For DTC B0029:12, GO to I15.
I13 CHECK THE RIGHT CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_14_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_14_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to I16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to I17.
I14 CHECK FOR AN INTERMITTENT RIGHT CURTAIN DEPLOYMENT CONTROL 1 SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0029:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to I17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to I16.
I15 CHECK FOR AN INTERMITTENT RIGHT CURTAIN DEPLOYMENT CONTROL 1 SHORT TO BATTERY FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Side Air Curtain C9019.	**Yes** DEPOWER the SRS and REPAIR as necessary.

▪ Remove the headliner. Refer to the appropriate procedure in Section 501-05 . • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0029:12 retrieved on-demand during self-test?**	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to I17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to I16 .
I16 CHECK HARNESS AND CONNECTORS • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Side Air Curtain C9019. ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. • **Were any concerns found?**	**Yes** REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to I17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to I17 .
I17 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs will be retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test J: DTCs B0050:11, B0050:12, B0050:13 and B0050:1D

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors the driver safety belt buckle switch circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Current out of range
- Faulted driver safety belt buckle switch

If a fault is detected, the RCM stores DTC B0050:11, B0050:12, B0050:13 or B0050:1D in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

DTC Description	Fault Trigger Conditions
• B0050:11 — Driver Seatbelt Sensor: Circuit Short to Ground	When the RCM senses a short to ground on the driver safety belt buckle switch circuit, a fault is indicated.
• B0050:12 — Driver Seatbelt Sensor: Circuit Short to Battery	When the RCM senses a short to voltage on the driver safety belt buckle switch circuit, a fault is indicated.
• B0050:13 — Driver Seatbelt Sensor: Circuit Open	When the RCM senses an open on either driver safety belt buckle switch circuit, a fault is indicated.
• B0050:1D — Driver Seatbelt Sensor: Circuit Current Out of Range	When the RCM senses current out of an acceptable range between the driver safety belt buckle switch circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver safety belt buckle assembly
- RCM

PINPOINT TEST J: DTCs B0050:11, B0050:12, B0050:13 AND B0050:1D

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

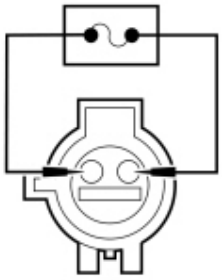
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS

component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
J1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0050:11, B0050:12, B0050:13 or B0050:1D retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B0050:11 or B0050:1D, GO to J2. For DTC B0050:12, GO to J4. For DTC B0050:13, GO to J5. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to J10.
J2 CHECK THE DRIVER SEATBELT SENSOR DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND OR CURRENT OUT OF RANGE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Disconnect: Driver Safety Belt Buckle Switch C3065. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver safety belt buckle switch disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0050:11 or B0050:1D to B0050:13?**	**Yes** GO to J8. **No** For DTC B0050:11, GO to J3. For DTC B0050:1D, GO to J9.
J3 CHECK THE DRIVER SAFETY BELT BUCKLE SWITCH CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between driver safety belt buckle switch C3065-2, circuit CR201 (GN/BU), harness side and ground.	**Yes** GO to J9. **No** REPAIR circuit CR201 (GN/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

 N0010350 • **Is the resistance greater than 10,000 ohms?**	GO to J11.
J4 CHECK THE DRIVER SAFETY BELT BUCKLE SWITCH CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Disconnect: Driver Safety Belt Buckle Switch C3065. • Disconnect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between driver safety belt buckle switch C3065-2, circuit CR201 (GN/BU), harness side and ground.  N0010351 • **Is any voltage present?**	**Yes** REPAIR circuit CR201 (GN/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to J11. **No** GO to J9.
J5 CHECK THE DRIVER SEATBELT SENSOR DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Ignition OFF. • Disconnect: Driver Safety Belt Buckle Switch C3065. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect a fused jumper wire between driver safety belt buckle switch C3065-2, circuit CR201 (GN/BU), harness side and C3065-1, circuit GD143 (BK/VT), harness side.	**Yes** REMOVE the fused jumper wire and GO to J8. **No** REMOVE the fused jumper wire and GO to J6.



N0116777

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the driver safety belt buckle switch circuits shorted together, a short to ground fault would normally be retrieved.
- **Did the on-demand DTC change from B0050:13 to B0050:11?**

J6 CHECK THE DRIVER SAFETY BELT BUCKLE SWITCH CIRCUIT FOR A OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B-34, circuit CR201 (GN/BU), harness side and driver safety belt buckle switch C3065-2, circuit CR201 (GN/BU), harness side.  N0096128 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to J7 . **No** REPAIR circuit CR201 (GN/BU). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to J11 .

J7 CHECK THE DRIVER SAFETY BELT BUCKLE SWITCH GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between driver safety belt buckle switch C3065-1, circuit GD143 (BK/VT), harness side and ground.  N0010409	**Yes** GO to J9 . **No** REPAIR circuit GD143 (BK/VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to J11 .

• **Is the resistance less than 5 ohms?**	
J8 CONFIRM DRIVER SEATBELT SENSOR FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: RCM C310A and C310B.
• Connect: Driver Safety Belt Buckle Switch C3065.
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new driver safety belt buckle assembly. REFER to Section 501-20A. GO to J11.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to J10.

J9 CONFIRM THE RCM FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: Driver Safety Belt Buckle Switch C3065.
• Connect: RCM C310A and C310B (if previously disconnected).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to J11.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to J10.

J10 CHECK FOR AN INTERMITTENT FAULT	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Disconnect: Driver Safety Belt Buckle Switch C3065.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Component(s)/Connector (s).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was DTC B0050:11, B0050:12, B0050:13 or B0050:1D retrieved on-demand during self-test?**
	Yes
	The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test.
	
	For DTC B0050:11 or B0050:1D, GO to J2.
	
	For DTC B0050:12, GO to J4.
	
	For DTC B0050:13, GO to J5.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found. GO to J11.

J11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test K: DTCs B0052:11, B0052:12, B0052:13 and B0052:1D

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors the passenger safety belt buckle switch and circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Current out of range
- Faulted safety belt buckle switch

If a fault is detected, the RCM stores DTC B0052:11, B0052:12, B0052:13 or B0052:1D in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

DTC Description	Fault Trigger Conditions
• B0052:11 — Passenger Seatbelt Sensor: Circuit Short to Ground	When the RCM senses a short to ground on the passenger safety belt buckle switch circuit, a fault is indicated.
• B0052:12 — Passenger Seatbelt Sensor: Circuit Short to Battery	When the RCM senses a short to voltage on the passenger safety belt buckle switch circuit, a fault is indicated.
• B0052:13 — Passenger Seatbelt Sensor: Circuit Open	When the RCM senses an open on either passenger safety belt buckle switch circuit, a fault is indicated.
• B0052:1D — Passenger Seatbelt Sensor: Circuit Current Out of Range	When the RCM senses current out of an acceptable range between the passenger safety belt buckle switch circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger safety belt buckle assembly
- RCM

PINPOINT TEST K: DTCs B0052:11, B0052:12, B0052:13 AND B0052:1D

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

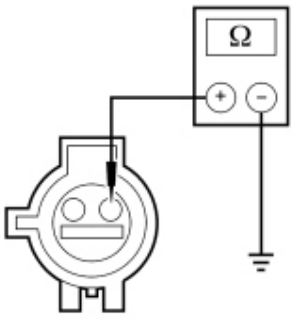
NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take

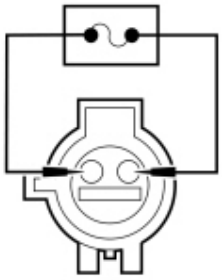
K1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Were any DTC B0052:11, B0052:12, B0052:13 or B0052:1D retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B0052:11 or B0052:1D, GO to K2. For DTC B0052:12, GO to K4. For DTC B0052:13, GO to K5. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to K10.
K2 CHECK THE PASSENGER SEATBELT SENSOR DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND OR CURRENT OUT OF RANGE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Disconnect: Passenger Safety Belt Buckle Switch C3066. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt buckle switch disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0052:11 or B0052:1D to B0052:13?**	**Yes** GO to K8. **No** For DTC B0052:11, GO to K3. For DTC B0052:1D, GO to K9.
K3 CHECK THE PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between passenger seat belt buckle switch C3066-2, circuit CR202 (BN/GN), harness side and ground.	**Yes** GO to K9. **No** REPAIR circuit CR202 (BN/GN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to K11.



N0010350

- **Is the resistance greater than 10,000 ohms?**

K4 CHECK THE PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Disconnect: Passenger Safety Belt Buckle Switch C3066. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between passenger seat belt buckle switch C3066-2, circuit CR202 (BN/GN), harness side and ground.  N0010351 • **Is any voltage present?**	**Yes** REPAIR circuit CR202 (BN/GN). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to K11 . **No** GO to K9 .
K5 CHECK THE PASSENGER SEATBELT SENSOR DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Disconnect: Passenger Safety Belt Buckle Switch C3066. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect a fused jumper wire between passenger safety belt buckle switch C3066-2, circuit CR202 (BN/GN), harness side and C3066-1, circuit GD145 (BK/BU), harness side.	**Yes** REMOVE the fused jumper wire and GO to K8 . **No** REMOVE the fused jumper wire and GO to K6 .

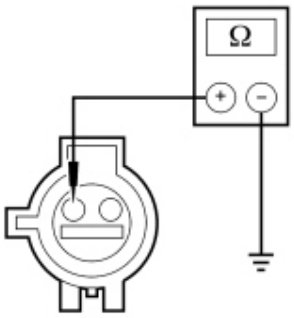


N0116777

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt buckle switch circuits shorted together, a short to ground fault would normally be retrieved.
- **Did the on-demand DTC change from B0052:13 to B0052:11?**

K6 CHECK PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B-33, circuit CR202 (BN/GN), harness side and the passenger safety belt buckle switch C3066-2, circuit CR202 (BN/GN), harness side.  N0096126 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K7 . **No** REPAIR circuit CR202 (BN/GN). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to K11 .

K7 CHECK PASSENGER SAFETY BELT BUCKLE SWITCH GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between passenger safety belt buckle switch C3066-1, circuit GD145 (BK/BU), harness side and ground.	**Yes** GO to K9 . **No** REPAIR circuit GD145 (BK/BU). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to K11 .



N0010409

- **Is the resistance less than 5 ohms?**

K8 CONFIRM PASSENGER SEATBELT SENSOR FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
• Connect: RCM C310A and C310B.
• Connect: Passenger Safety Belt Buckle Switch C3066.
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new passenger safety belt buckle assembly. REFER to Section 501-20A. GO to K11.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to K10.

K9 CONFIRM THE RCM FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
	Yes
	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to K11.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to K10.

▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Safety Belt Buckle Switch C3066. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	
K10 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Buckle Switch C3066. ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector (s). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0052:11, B0052:12, B0052:13 or B0052:1D retrieved on-demand during self-test?**	**Yes** The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B0052:11 or B0052:1D, GO to K2. For DTC B0052:12, GO to K4. For DTC B0052:13, GO to K5. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found. GO to K11.
K11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test L: DTCs B0082:11, B0082:12, B0082:13 and B0082:1A

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the passenger safety belt load limiter circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger safety belt load limiter

If a fault is detected, the RCM stores DTC B0082:11, B0082:12, B0082:13 or B0082:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger safety belt load limiter
- RCM

DTC Description	Fault Trigger Condition
• B0082:11 — Passenger Seatbelt Load Limiter Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either passenger safety belt load limiter circuit, a fault is indicated.
• B0082:12 — Passenger Seatbelt Load Limiter Deployment Control: Short to Battery	When the RCM senses a short to battery on either passenger safety belt load limiter circuit, a fault is indicated.
• B0082:13 — Passenger Seatbelt Load Limiter Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between the passenger safety belt load limiter circuits, a fault is indicated.
• B0082:1A — Passenger Seatbelt Load Limiter Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the passenger safety belt load limiter circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger safety belt load limiter
- RCM

PINPOINT TEST L: DTCs B0082:11, B0082:12, B0082:13 AND B0082:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

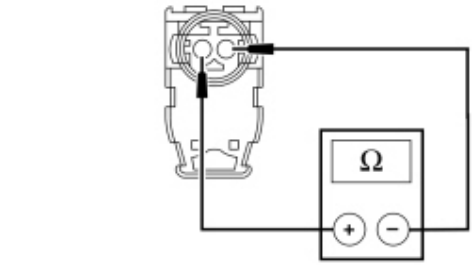
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
L1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0082:11, B0082:12, B0082:13 or B0082:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0082:13 or B0082:1A, GO to L2 . For DTC B0082:11, GO to L8 . For DTC B0082:12, GO to L10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0082:13 or B0082:1A, GO to L13 .

	For DTC B0082:11, GO to L14. For DTC B0082:12, GO to L15.
L2 CHECK THE PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_26_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_26_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to L12. **No** GO to L3.
L3 CHECK THE PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_26_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_26_R PID, carry out the harness test of the passenger safety belt load limiter circuits and accessible connectors (including any in-line connectors), by wiggling connectors and flexing the wire harness frequently. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to L17. **No** For PID value less than 1.7 ohms, GO to L4. For PID value greater than 2.78 ohms, GO to L6.
L4 CHECK THE PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Load Limiter C389. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt load limiter disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0082:1A to B0082:13?**	**Yes** GO to L11. **No** GO to L5.
L5 CHECK FOR A SHORT BETWEEN PASSENGER SAFETY BELT LOAD LIMITER CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B.	**Yes** GO to L12. **No**

- Measure the resistance between passenger safety belt load limiter C389-1, circuit CR122 (WH/OG), harness side and C389-2, circuit RR122 (BN), harness side.



N0116763

- **Is the resistance greater than 10,000 ohms?**

REPAIR circuits CR122 (WH/OG) and RR122 (BN).

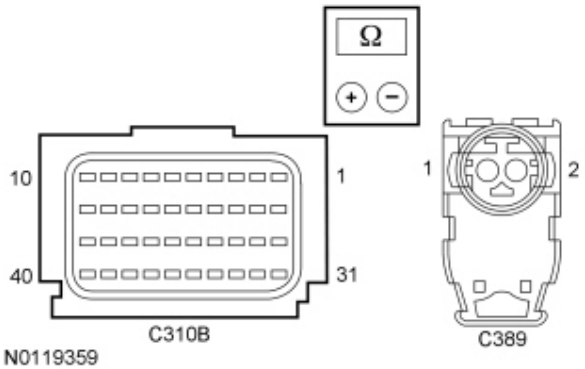
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to L17.

L6 CHECK THE PASSENGER SAFETY BELT LOAD LIMITER CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Passenger Safety Belt Load Limiter C389.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310B, and passenger safety belt load limiter C389, harness side using the following chart.

RCM	Circuit	Passenger Safety Belt Load Limiter
C310B-13	CR122 (WH/OG)	C389-1
C310B-14	RR122 (BN)	C389-2



N0119359

- **Are the resistances less than 0.5 ohm?**

Yes
GO to L7.

No
REPAIR circuit CR122 (WH/OG) or RR122 (BN).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to L17.

L7 CHECK THE PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

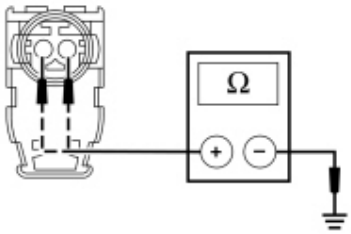
- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between passenger safety belt load limiter C389-1, circuit CR122 (WH/OG), harness side and C389-2,

Yes
REMOVE the fused jumper wire and GO to L11.

No
REMOVE the fused jumper wire and GO to L12.

circuit RR122 (BN), harness side.  N0116765 • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt retractor circuits shorted together, a low resistance fault would normally be retrieved. • **Did the on-demand DTC change from B0082:13 to B0082:1A?**	
L8 CHECK THE PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Load Limiter C389. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt load limiter disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B0082:11 to B0082:13?**	**Yes** GO to L11 . **No** GO to L9 .
L9 CHECK THE PASSENGER SAFETY BELT LOAD LIMITER CIRCUITS FOR A SHORT TO GROUND	

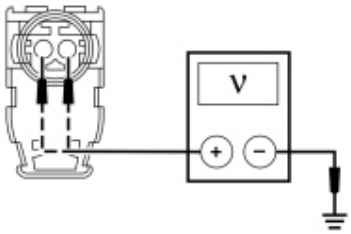
• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between passenger safety belt load limiter:
  ▪ C389-1, circuit CR122 (WH/OG), harness side and ground.
  ▪ C389-2, circuit RR122 (BN), harness side and ground.
	Yes
	GO to L12 .
	
	No
	REPAIR circuit CR122 (WH/OG) or RR122 (BN).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to L17 .



N0116766

- **Are the resistances greater than 10,000 ohms?**

L10 CHECK THE PASSENGER SAFETY BELT LOAD LIMITER CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Safety Belt Load Limiter C389.
• Disconnect: RCM C310A and C310B.
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between passenger safety belt load limiter:
  ▪ C389-1, circuit CR122 (WH/OG), harness side and ground.
  ▪ C389-2, circuit RR122 (BN), harness side and ground.
 	
  	


N0116767
• **Is any voltage present on either circuit?**
	Yes
	REPAIR circuit CR122 (WH/OG) or RR122 (BN).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to L17.
	
	No
	GO to L12.

L11 CONFIRM THE PASSENGER SAFETY BELT RETRACTOR FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
	Yes
	INSTALL a new passenger safety belt load limiter. REFER to Section 501-20A. GO to L17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B0082:13 or B0082:1A, GO to L13.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Safety Belt Load Limiter C389. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0082:11, GO to L14. For DTC B0082:12, GO to L15.
L12 CONFIRM THE RCM FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Restraint System Components.
• Connect: RCM C310A and C310B (if previously disconnected).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to L17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B0082:13 or B0082:1A, GO to L13.
	
	For DTC B0082:11, GO to L14.
	
	For DTC B0082:12, GO to L15.

L13 CHECK THE PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_26_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_26_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness frequently. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to L16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

	GO to L17 .
L14 CHECK FOR AN INTERMITTENT PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL SHORT TO GROUND FAULT • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0082:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to L17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to L16 .
L15 CHECK FOR AN INTERMITTENT PASSENGER SEATBELT LOAD LIMITER DEPLOYMENT CONTROL SHORT TO VOLTAGE FAULT • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Load Limiter C389. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness frequently. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0082:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to L17 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to L16 .

L16 CHECK THE HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Safety Belt Load Limiter C389.
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to L17 .
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when**

	directed to do so in the pinpoint test. GO to L17 .
L17 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test M: DTC B0090:11 or B0090:93

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) checks the LH front impact severity sensor and circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Faulted LH front impact severity sensor

If a fault is detected, the RCM stores DTC B0090:11, B0090:81, B0090:93 or B0090:96 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

- DTC B0090:11 (Left Frontal Restraints Sensor: Circuit Short to Ground) — When the RCM senses a short to ground on the feed circuit of the LH front severity impact sensor, a fault is indicated.
- DTC B0090:93 (Left Frontal Restraints Sensor: No Operation) — When the RCM senses a faulted sensor, a short to voltage on the feed circuit, open on the feed or return circuit, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- LH front impact severity sensor
- RCM

PINPOINT TEST M: DTCs B0090:11 OR B0090:93

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

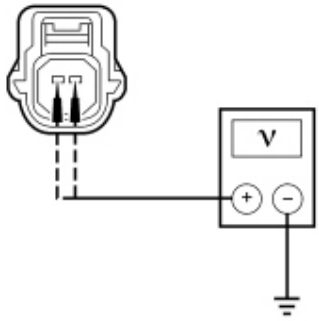
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Do not probe any impact sensor. The impact sensor can not be tested using a multi-meter.

Test Step	Result / Action to Take
M1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0090:11 or B0090:93 retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0090:11, GO to M2 . For DTC B0090:93, GO to M5 . **No** The fault is intermittent when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to M10 .
M2 CHECK THE LEFT FRONTAL RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: LH Front Impact Severity Sensor C1465. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Did the on-demand DTC change from B0090:11 to B0090:93?**	**Yes** INSTALL a new LH front impact severity sensor. REFER to Front Impact Severity Sensor in this section. GO to M11 . **No** GO to M3 .
M3 CHECK THE LH FRONT IMPACT SEVERITY SENSOR FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between LH front impact severity sensor C1465-1, circuit VR213 (VT/GN), harness side and ground.	**Yes** GO to M4 . **No** REPAIR circuit VR213 (VT/GN).

 N0092553 • **Is the resistance greater than 10,000 ohms?**	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to M11.
M4 CHECK FOR A SHORT BETWEEN LH FRONT IMPACT SEVERITY SENSOR CIRCUITS	
• Measure the resistance between LH front impact severity sensor C1465-1, circuit VR213 (VT/GN), harness side and C1465-2, circuit RR129 (YE/GY), harness side.  N0036987 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to M9. **No** REPAIR circuits VR213 (VT/GN) and RR129 (YE/GY). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to M11.
M5 CHECK THE LH FRONT IMPACT SEVERITY SENSOR AND RCM CONNECTIONS (NO OPERATION INDICATED)	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Inspect LH front impact severity sensor C1465 to be fully seated and locked. Seat and lock connector as necessary. • Gain access to the RCM and inspect C310A and C310B to be sure they are fully seated and locked. Seat and lock the connector(s) as necessary. Refer to Restraints Control Module (RCM) in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0090:93 retrieved on-demand during self-test?**	**Yes** GO to M6. **No** Fault corrected. GO to M11.
M6 CHECK THE LH FRONT IMPACT SEVERITY SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: LH Front Impact Severity Sensor C1465. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** REPAIR circuit VR213 (VT/GN) or RR129 (YE/GY). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

- Ignition ON.
- Measure the voltage between LH front impact severity sensor:
  - C1465-1, circuit VR213 (VT/GN), harness side and ground.
  - C1465-2, circuit RR129 (YE/GY), harness side and ground.



N0036990

- **Is any voltage present on either circuit?**

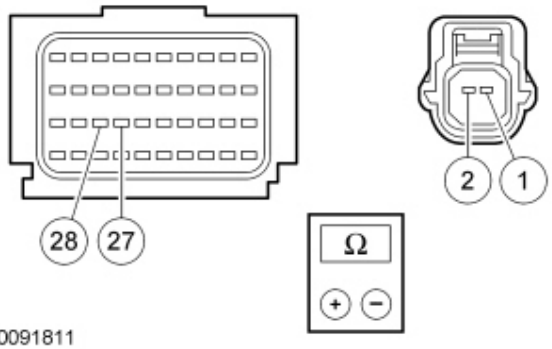
GO to M11.

No
GO to M7.

M7 CHECK THE LH FRONT IMPACT SEVERITY SENSOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Measure the resistance between RCM C310B, harness side and LH front impact severity sensor C1465, harness side using the following chart.

RCM	Circuit	LH Front Impact Severity Sensor
C310B-27	VR213 (VT/GN)	C1465-1
C310B-28	RR129 (YE/GY)	C1465-2



N0091811

- **Are the resistances less than 0.5 ohm?**

Yes
GO to M8.

No
REPAIR circuit VR213 (VT/GN) or RR129 (YE/GY).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to M11.

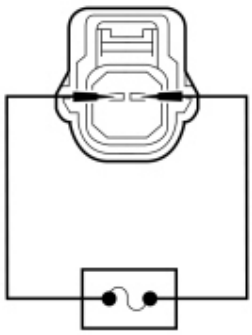
M8 CHECK THE LEFT FRONTAL RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (NO OPERATION INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between LH front impact severity sensor C1465-1, circuit VR213 (VT/GN), harness side and C1465-2, circuit RR129 (YE/GY), harness side.

Yes
REMOVE the fused jumper wire and INSTALL a new sensor. REFER to Front Impact Severity Sensor in this section. GO to M11.

No
REMOVE the fused jumper wire and GO to M9.



N0114279

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **Did the on-demand DTC change from B0090:93 to B0090:11?**

M9 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. • Connect: RCM C310A and C310B. • Connect: LH Front Impact Severity Sensor C1465. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section. GO to M11 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to M10 .
M10 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: LH Front Impact Severity Sensor C1465. • Disconnect: RCM C310A and C310B. • Inspect for the following: ▪ inspect harness and component connectors for loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position	**Yes** The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0090:11, GO to M2 . For DTC B0090:93, GO to

Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector(s). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0090:11 or B0090:93 retrieved on-demand during self-test?**	M5. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to M11.
M11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand self test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test N: DTCs B0091:11, B0091:93, B0097:11 and B0097:93

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors the driver front door and passenger second row C-pillar side impact sensors and circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Faulted driver front door side impact sensor
- Faulted passenger second row C-pillar side impact sensor

If a fault is detected, the RCM stores DTC B0091:11, B0091:93, B0097:11 or B0097:93 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM communicates with each impact sensor. If the RCM is unable to communicate with the sensor, a DTC is stored in memory. A Continuous Memory Diagnostic Trouble Code (CMDTC) **no operation** (failure type :93) can be set by a short to voltage on the return circuit of the impact sensor.

NOTE: A short to ground on either impact sensor feed circuit sets DTCs B0091:11 and B0097:11.

A short to voltage on either impact sensor feed or return circuit sets DTCs B0091:93 and B0097:93.

DTC Description	Fault Trigger Condition
• B0091:11 — Left Side Restraints Sensor 1: Circuit Short to Ground	When the RCM senses a shorted driver front door side impact sensor, a shorted passenger second row C-pillar side impact sensor, a short to ground on the driver front door side impact sensor feed circuit or a short to ground on the passenger second row C-pillar side impact sensor feed circuit, a fault is indicated.
• B0091:93 — Left Side Restraints Sensor 1: No Operation	When the RCM senses a faulted driver front door side impact sensor, a short to voltage on the feed or return circuit of the driver front door side impact sensor, a short to voltage on the feed or return circuit of passenger second row C-pillar side impact sensor or an open feed or return circuit of the driver front door side impact sensor, a fault is indicated.
• B0097:11 — Right Side Restraints Sensor 2: Circuit Short to Ground	When the RCM senses a shorted driver front door side impact sensor, a shorted passenger second row C-pillar side impact sensor, a short to ground on the driver front door side impact sensor feed circuit or a short to ground on the passenger second row C-pillar side impact sensor feed circuit, a fault is indicated.
• B0097:93 — Right Side Restraints Sensor 2: No Operation	When the RCM senses a faulted passenger second row C-pillar side impact sensor, a short to voltage on the feed or return circuit of passenger second row C-pillar side impact sensor, a short to voltage on the feed or return circuit of the driver front door side impact sensor or an open feed or return circuit of the passenger second row C-pillar side impact sensor, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver front door side impact sensor
- Passenger second row C-pillar side impact sensor
- RCM

PINPOINT TEST N: DTCs B0091:11, B0091:93, B0097:11 AND B0097:93

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

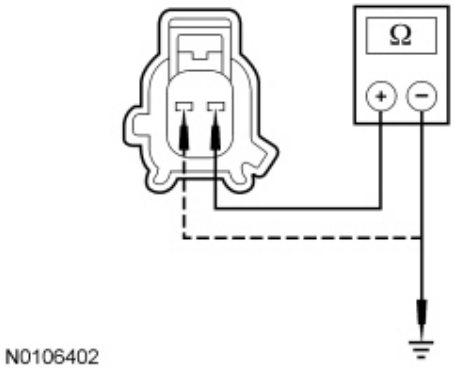
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: Do not probe any impact sensor. The impact sensor cannot be tested using a multi-meter.

Test Step	Result / Action to Take

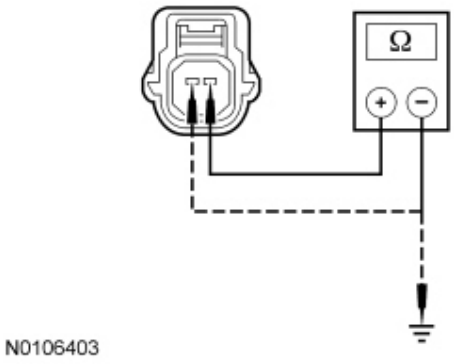
N1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Were any DTCs retrieved on-demand during self-test?**	**Yes** Fault(s) cannot be cleared until corrected and the DTC (s) are no longer retrieved on-demand during self-test. For DTC B0091:11 **AND** B0097:11, GO to N2. For DTC B0091:93 **AND** B0097:93, GO to N6. For DTC B0091:93 **ONLY**, GO to N8. For DTC B0097:93 **ONLY**, GO to N11. For any other DTCs, REFER to the DTC Chart in this section. **No** The fault is intermittent when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to N15.
N2 CHECK THE LEFT SIDE RESTRAINTS SENSOR 1 DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Front Door Side Impact Sensor C567. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Did the on-demand DTCs change from B0091:11 and B0097:11 to B0091:93?**	**Yes** INSTALL a new driver front door side impact sensor. REFER to Side Impact Sensor — Front Door in this section. GO to N16. **No** GO to N3.
N3 CHECK THE RIGHT SIDE RESTRAINTS SENSOR 2 DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: Driver Front Door Side Impact Sensor C567. • Disconnect: Passenger Second Row C-Pillar Side Impact Sensor C3249. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON.	**Yes** INSTALL a new passenger second row C-pillar side impact sensor. REFER to Side Impact Sensor — Second Row, 4-Door Sedan or Side Impact Sensor — Second Row, 5-Door Hatchback in this section. GO to N16. **No** GO to N4.

• Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Did the on-demand DTC change from B0091:11 and B0097:11 to B0097:93?**	
N4 CHECK THE DRIVER FRONT DOOR SIDE IMPACT SENSOR FEED CIRCUIT FOR A SHORT TO GROUND AND SHORT BETWEEN SENSOR CIRCUITS	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Front Door Side Impact Sensor C567.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between driver front door side impact sensor:
  ▪ C567-1, circuit VR217 (GY/YE), harness side and ground.
  ▪ C567-1, circuit VR217 (GY/YE), harness side and C567-2, circuit RR131 (VT/GY), harness side.
  	


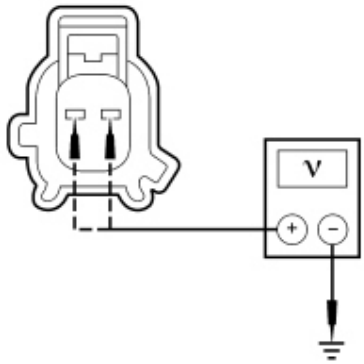
N0106402
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to N5 .
	
	No
	REPAIR circuit VR217 (GY/YE) and/or RR131 (VT/GY).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to N16 .

N5 CHECK THE PASSENGER SECOND ROW C-PILLAR SIDE IMPACT SENSOR FEED CIRCUIT FOR A SHORT TO GROUND AND SHORT BETWEEN SENSOR CIRCUITS	

• Measure the resistance between passenger second row C-pillar side impact sensor:
  ▪ C3249-1, circuit VR220 (VT/OG), harness side and ground.
  ▪ C3249-1, circuit VR220 (VT/OG), harness side and C3249-2, circuit RR134 (BN/BU), harness side.
  	


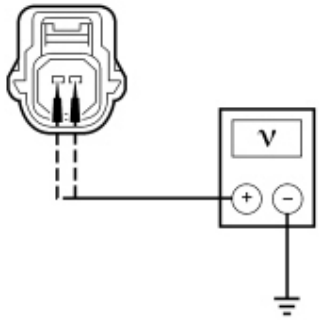
N0106403
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to N14 .
	
	No
	REPAIR circuit VR220 (VT/OG) and/or RR134 (BN/BU).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to N16 .

N6 CHECK THE DRIVER FRONT DOOR SIDE IMPACT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B.	**Yes** REPAIR circuit VR217 (GY/YE) or RR131 (VT/GY).

• Disconnect: Driver Front Door Side Impact Sensor C567.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between driver front door side impact sensor:
  ▪ C567-1, circuit VR217 (GY/YE), harness side and ground.
  ▪ C567-2, circuit RR131 (VT/GY), harness side and ground.
  	


N0052817
• **Is any voltage present on either circuit?**
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to N16 .
	
	No
	GO to N7 .

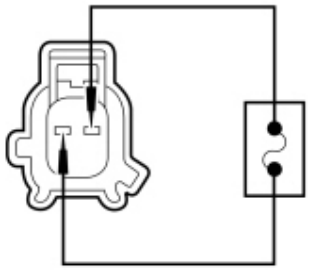
N7 CHECK THE PASSENGER SECOND ROW C-PILLAR SIDE IMPACT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE (NO OPERATION INDICATED)	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Second Row C-Pillar Side Impact Sensor C3249.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between passenger second row C-pillar side impact sensor:
  ▪ C3249-1, circuit VR220 (VT/OG), harness side and ground.
  ▪ C3249-2, circuit RR134 (BN/BU), harness side and ground.
  	


N0036990
• **Is any voltage present on either circuit?**
	Yes
	REPAIR circuit VR220 (VT/OG) or RR134 (BN/BU).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to N16 .
	
	No
	GO to N14 .

N8 CHECK THE DRIVER FRONT DOOR SIDE IMPACT SENSOR AND RCM CONNECTIONS (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Gain access to the driver front door side impact sensor and inspect C567 to be fully seated and locked. Seat and lock the connector as	**Yes** GO to N9 . **No** Fault corrected. GO to

necessary. Refer to Side Impact Sensor — Front Door in this section. • Gain access to the RCM and inspect C310A and C310B to be fully seated and locked. Seat and lock the connector(s) as necessary. Refer to Restraints Control Module (RCM) in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0091:93 retrieved on-demand during self-test?**	N16.
N9 CHECK THE DRIVER FRONT DOOR SIDE IMPACT SENSOR CIRCUITS FOR AN OPEN (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: Driver Front Door Side Impact Sensor C567. • Measure the resistance between RCM C310B, harness side and driver front door side impact sensor C567, harness side using the following chart. **RCM** / **Circuit** / **Driver Front Door Side Impact Sensor** C310B-36 / VR217 (GY/YE) / C567-1 C310B-35 / RR131 (VT/GY) / C567-2  N0091245 • **Are the resistances less than 0.5 ohm?**	**Yes** GO to N10. **No** REPAIR circuit VR217 (GY/YE) or RR131 (VT/GY). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to N16.
N10 CHECK THE LEFT SIDE RESTRAINTS SENSOR 1 DTC FOR A FAULT STATUS CHANGE (NO OPERATION INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver front door side impact sensor C567-1, circuit VR217 (GY/YE), harness side and C567-2, circuit RR131 (VT/GY), harness side.	**Yes** REMOVE the fused jumper wire and INSTALL a new driver front door side impact sensor. REFER to Side Impact Sensor — Front Door in this section. GO to N16. **No** REMOVE the fused jumper wire and GO to N14.

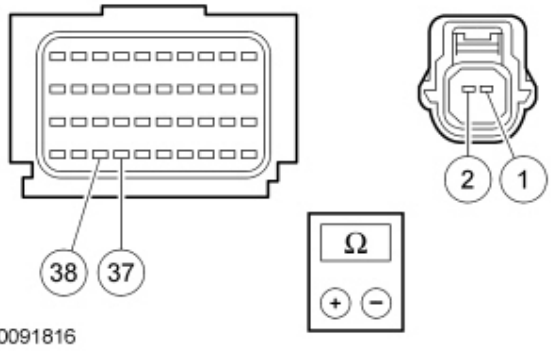


N0109792

- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- **Did the DTC change from B0091:93 to B0091:11 and B0097:11?**

N11 CHECK THE PASSENGER SECOND ROW C-PILLAR SIDE IMPACT SENSOR AND RCM CONNECTIONS (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Gain access to the passenger second row C-pillar side impact sensor and inspect C3249 to be fully seated and locked. Seat and lock the connector as necessary. Refer to Side Impact Sensor — Second Row, 4-Door Sedan or Side Impact Sensor — Second Row, 5-Door Hatchback in this section. • Gain access to the RCM and inspect C310A and C310B to be fully seated and locked. Seat and lock the connector(s) as necessary. Refer to Restraints Control Module (RCM) in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0097:93 retrieved on-demand during self-test?**	**Yes** GO to N12 . **No** Fault corrected. GO to N16 .
N12 CHECK THE PASSENGER SECOND ROW C-PILLAR SIDE IMPACT SENSOR CIRCUITS FOR AN OPEN (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: Passenger Second Row C-Pillar Side Impact Sensor C3249. • Measure the resistance between RCM C310B, harness side and passenger second row C-pillar side impact sensor C3249, harness side using the following chart.	**Yes** GO to N13 . **No** REPAIR circuit VR220 (VT/OG) or RR134 (BN/BU). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to N16 .

RCM	Circuit	Passenger Second Row C-Pillar Side Impact Sensor
C310B-37	VR220 (VT/OG)	C3249-1
C310B-38	RR134 (BN/BU)	C3249-2



N0091816

- **Are the resistances less than 0.5 ohm?**

N13 CHECK THE RIGHT SIDE RESTRAINTS SENSOR 2 DTC FOR A FAULT STATUS CHANGE (NO OPERATION INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between passenger second row C-pillar side impact sensor C3249-1, circuit VR220 (VT/OG), harness side and C3249-2, circuit RR134 (BN/BU), harness side.  N0114279 • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Did the DTC change from B0097:93 to B0097:11 and B0091:11?**	**Yes** REMOVE the fused jumper wire and INSTALL a new passenger second row C-pillar side impact sensor. REFER to Side Impact Sensor — Second Row, 4-Door Sedan or Side Impact Sensor — Second Row, 5-Door Hatchback in this section. GO to N16. **No** REMOVE the fused jumper wire and GO to N14.
N14 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to N16. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to N15.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: RCM C310A and C310B. • Connect: Driver Front Door Side Impact Sensor C567 (if previously disconnected). • Connect: Passenger Second Row C-Pillar Side Impact Sensor C3249 (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	
N15 CHECK FOR AN INTERMITTENT FAULT	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Front Door Side Impact Sensor C567 and/or Passenger Second Row C-Pillar Side Impact Sensor C3249.
• Disconnect: RCM C310A and C310B.
• Inspect for the following:
  ▪ inspect harness and component connectors for loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Component(s)/Connector(s).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was DTC B0091:11, B0091:93, B0097:11 or B0097:93 retrieved on-demand during self-test?**
	Yes
	Fault(s) cannot be cleared until corrected and the DTC is no longer retrieved on-demand during self-test.
	
	For DTC B0091:11 **AND** B0097:11, GO to N2.
	
	For DTC B0091:93 **AND** B0097:93, GO to N6.
	
	For DTC B0091:93 **ONLY**, GO to N8.
	
	For DTC B0097:93 **ONLY**, GO to N11.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to N16.

N16 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test O: DTCs B0092:11, B0092:93, B0096:11 and B0096:93

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors the driver second row C-pillar and passenger front door side impact sensors and circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Faulted driver second row C-pillar side impact sensor
- Faulted passenger front door side impact sensor

If a fault is detected, the RCM stores DTC B0092:11, B0092:93, B0096:11 or B0096:93 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM communicates with each impact sensor. If the RCM is unable to communicate with the sensor, a DTC is stored in memory. A Continuous Memory Diagnostic Trouble Code (CMDTC) **no operation** (failure type status :93) can be set by a short to voltage on the return circuit of the impact sensor.

NOTE: A short to ground on either impact sensor feed circuit sets DTCs B0092:11 and B0096:11.

A short to voltage on either impact sensor feed or return circuit sets DTCs B0092:93 and B0096:93.

DTC Description	Fault Trigger Condition
• B0092:11 — Left Side Restraints Sensor 2: Circuit Short to Ground	When the RCM senses a shorted passenger front door side impact sensor, a shorted driver second row C-pillar side impact sensor, a short to ground on the passenger front door side impact sensor feed circuit or a short to ground on the driver second C-pillar side impact sensor feed circuit, a fault is indicated.
• B0092:93 — Left Side Restraints Sensor 2: No Operation	When the RCM senses a faulted driver second row C-pillar side impact sensor, a short to voltage on the feed or return circuit of the driver second row C-pillar side impact sensor, a short to voltage on the feed or return circuit of passenger front door side impact sensor or an open feed or return circuit of the passenger front door side impact sensor, a fault is indicated.
• B0096:11 — Right Side Restraints Sensor 1: Circuit Short to Ground	When the RCM senses a shorted passenger front door side impact sensor, a shorted driver second row C-pillar side impact sensor, a short to ground on the passenger front door side impact sensor feed circuit or a short to ground on the driver second row C-pillar side impact sensor feed circuit, a fault is indicated.
• B0096:93 — Right Side Restraints Sensor 1: No Operation	When the RCM senses a faulted passenger front door side impact sensor, a short to voltage on the feed or return circuit of passenger front door side impact sensor, a short to voltage on the feed or return circuit of the driver second row C-pillar side impact sensor or an open feed or return circuit of the passenger front door side impact sensor, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver second row C-pillar side impact sensor
- Passenger front door side impact sensor
- RCM

PINPOINT TEST O: DTCs B0092:11, B0092:93, B0096:11 AND B0096:93

WARNING: Do not handle, move or change the original horizontal mounting position of the

restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

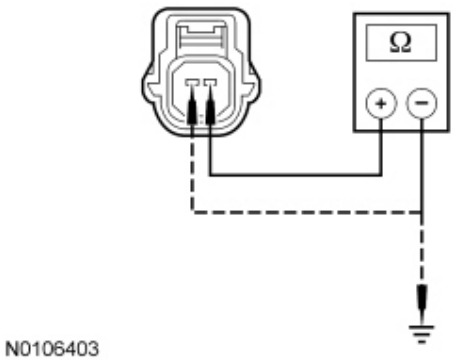
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: Do not probe any impact sensor. The impact sensor cannot be tested using a multi-meter.

Test Step	Result / Action to Take
O1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Were any DTCs retrieved on-demand during self-test?**	**Yes** Fault(s) cannot be cleared until corrected and the DTC (s) are no longer retrieved on-demand during self-test. For DTC B0092:11 **AND** B0096:11, GO to O2 . For DTC B0092:93 **AND** B0096:93, GO to O6 . For DTC B0092:93 **ONLY** , GO to O8 . For DTC B0096:93 **ONLY** , GO to O11 . For any other DTCs, REFER to the DTC Chart in this section. **No** The fault is intermittent when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to O15 .
O2 CHECK THE LEFT SIDE RESTRAINTS SENSOR 2 DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS)	**Yes** INSTALL a new driver second row C-pillar side impact sensor. REFER to Side Impact Sensor — Second Row, 4-Door Sedan or Side Impact

Depowering and Repowering in this section. • Disconnect: Driver Second Row C-Pillar Side Impact Sensor C3248. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Did the on-demand DTC change from B0092:11 and B0096:11 to B0092:93?**	Sensor — Second Row, 5-Door Hatchback in this section. GO to O16. **No** GO to O3.
O3 CHECK THE RIGHT SIDE RESTRAINTS SENSOR 1 DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: Driver Second Row C-Pillar Side Impact Sensor C3248. • Disconnect: Passenger Front Door Side Impact Sensor C644. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Did the on-demand DTC change from B0092:11 and B0096:11 to B0096:93?**	**Yes** INSTALL a new passenger front door side impact sensor. REFER to Side Impact Sensor — Front Door in this section. GO to O16. **No** GO to O4.
O4 CHECK THE DRIVER SECOND ROW C-PILLAR SIDE IMPACT SENSOR FEED CIRCUIT FOR A SHORT TO GROUND AND SHORT BETWEEN SENSOR CIRCUITS	

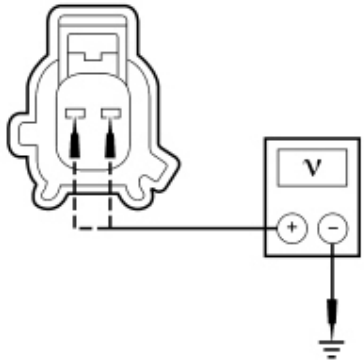
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Second Row C-Pillar Side Impact Sensor C3248.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between driver second row C-pillar side impact sensor:
  ▪ C3248-1, circuit VR219 (GN/WH), harness side, and ground.
  ▪ C3248-1, circuit VR219 (GN/WH), harness side, and C3248-2, circuit RR133 (GY/BN), harness side.
  	


N0106403
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to O5.
	
	No
	REPAIR circuit VR219 (GN/WH) and/or RR133 (GY/BN).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to O16.

O5 CHECK THE PASSENGER FRONT DOOR SIDE IMPACT SENSOR FEED CIRCUIT FOR A SHORT TO GROUND AND SHORT BETWEEN SENSOR CIRCUITS	
• Measure the resistance between passenger front door side impact sensor:	**Yes** GO to O14.

■ C644-1, circuit VR218 (YE/OG), harness side, and ground. ■ C644-1, circuit VR218 (YE/OG), harness side, and C644-2, circuit RR132 (BU/WH), harness side.  N0106402 • **Are the resistances greater than 10,000 ohms?**	**No** REPAIR circuits VR218 (YE/OG) and/or RR132 (BU/WH). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to O16.
O6 CHECK THE DRIVER SECOND ROW C-PILLAR SIDE IMPACT SENSOR FEED CIRCUIT FOR A SHORT TO VOLTAGE (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: Driver Second Row C-Pillar Side Impact Sensor C3248. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between driver second row C-pillar side impact sensor: ■ C3248-1, circuit VR219 (GN/WH), harness side and ground. ■ C3248-2, circuit RR133 (GY/BN), harness side and ground.  N0036990 • **Is any voltage present on either circuit?**	**Yes** REPAIR circuit VR219 (GN/WH) or RR133 (GY/BN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to O16. **No** GO to O7.
O7 CHECK THE PASSENGER FRONT DOOR SIDE IMPACT SENSOR FEED CIRCUIT FOR A SHORT TO VOLTAGE (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Front Door Side Impact Sensor C644. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between passenger front door side impact	**Yes** REPAIR circuit VR218 (YE/OG) or RR132 (BU/WH). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

sensor:
- C644-1, circuit VR218 (YE/OG), harness side and ground.
- C644-2, circuit RR132 (BU/WH), harness side and ground.



- **Is any voltage present on either circuit?**

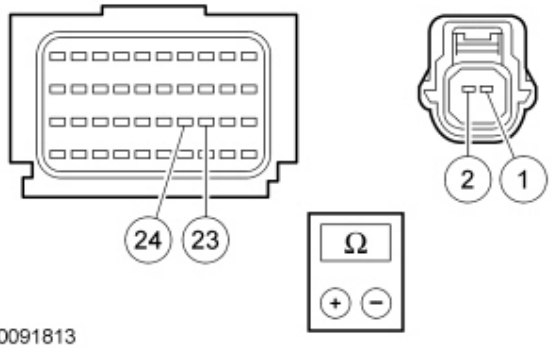
GO to O16.

No
GO to O14.

O8 CHECK THE DRIVER SECOND ROW C-PILLAR SIDE IMPACT SENSOR AND RCM CONNECTIONS (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Gain access to the driver second row C-pillar side impact sensor and inspect C3248 to be fully seated and locked. Seat and lock the connector as necessary. Refer to Side Impact Sensor — Second Row, 4-Door Sedan or Side Impact Sensor — Second Row, 5-Door Hatchback in this section. • Gain access to the RCM and inspect C310A and C310B to be fully seated and locked. Seat and lock the connector(s) as necessary. Refer to Restraints Control Module (RCM) in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0092:93 retrieved on-demand during self-test?**	**Yes** GO to O9. **No** Fault corrected. GO to O16.

O9 CHECK THE DRIVER SECOND ROW C-PILLAR SIDE IMPACT SENSOR CIRCUITS FOR AN OPEN (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: Driver Second Row C-Pillar Side Impact Sensor C3248. • Measure the resistance between RCM C310B, harness side and driver second row C-pillar side impact sensor C3248, harness side, using the following chart.	**Yes** GO to O10. **No** REPAIR circuit VR219 (GN/WH) or RR133 (GY/BN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to O16.

RCM	Circuit	Driver Second Row C-Pillar Side Impact Sensor
C310B-23	VR219 (GN/WH)	C3248-1
C310B-24	RR133 (GY/BN)	C3248-2



N0091813

- **Are the resistances less than 0.5 ohm?**

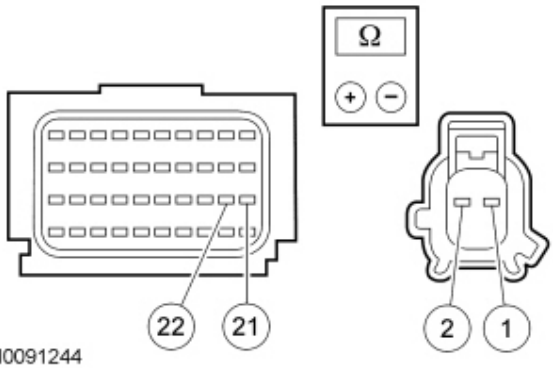
O10 CHECK THE LEFT SIDE RESTRAINTS SENSOR 2 DTC FOR A FAULT STATUS CHANGE (NO OPERATION INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver second row C-pillar side impact sensor C3248-1, circuit VR219 (GN/WH), harness side, and C3248-2, circuit RR133 (GY/BN), harness side.  N0114279 • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Did the DTC change from B0092:93 to B0092:11 and B0096:11?**	**Yes** REMOVE the fused jumper wire and INSTALL a new driver second row C-pillar side impact sensor. REFER to Side Impact Sensor — Second Row, 4-Door Sedan or Side Impact Sensor — Second Row, 5-Door Hatchback in this section. GO to O16. **No** REMOVE the fused jumper wire and GO to O14.
O11 CHECK THE PASSENGER FRONT DOOR SIDE IMPACT SENSOR AND RCM CONNECTIONS (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Gain access to passenger front door side impact sensor and inspect C644 to be fully seated and locked. Seat and lock the connector as necessary. Refer to Side Impact Sensor — Front Door in this section. • Gain access to the RCM and inspect C310A and C310B to be fully seated and locked. Seat and lock the connector(s) as necessary. Refer to Restraints Control Module (RCM) in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM.	**Yes** GO to O12. **No** Fault corrected. GO to O16.

- **Was DTC B0096:93 retrieved on-demand during self-test?**

O12 CHECK THE PASSENGER FRONT DOOR SIDE IMPACT SENSOR CIRCUITS FOR AN OPEN (NO OPERATION INDICATED)

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: RCM C310A and C310B.
- Disconnect: Passenger Front Door Side Impact Sensor C644.
- Measure the resistance between RCM C310B, harness side and passenger front door side impact sensor C644, harness side, using the following chart.

RCM	Circuit	Passenger Front Door Side Impact Sensor
C310B-22	VR218 (YE/OG)	C644-1
C310B-21	RR132 (BU/WH)	C644-2



N0091244

- **Are the resistances less than 0.5 ohm?**

Yes
GO to O13.

No
REPAIR circuit VR218 (YE/OG) or RR132 (BU/WH).

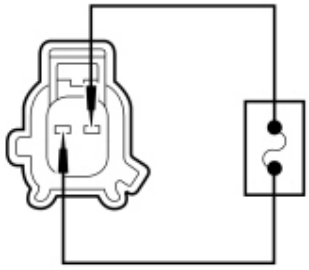
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to O16.

O13 CHECK THE RIGHT SIDE RESTRAINTS SENSOR 1 DTC FOR A FAULT STATUS CHANGE (NO OPERATION INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Connect: RCM C310A and C310B.
- Connect a fused jumper wire between passenger front door side impact sensor C644-1, circuit VR218 (YE/OG), harness side, and C644-2, circuit RR132 (BU/WH), harness side.



N0109792

- Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering

Yes
REMOVE the fused jumper wire and INSTALL a new passenger front door side impact sensor. REFER to Side Impact Sensor — Front Door in this section. GO to O16.

No
REMOVE the fused jumper wire and GO to O14.

in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Did the DTC change from B0096:93 to B0092:11 and B0096:11?**	
O14 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Second Row C-Pillar Side Impact Sensor C3248 (if previously disconnected). • Connect: Passenger Front Door Side Impact Sensor C644 (if previously disconnected). • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to O16. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to O15.
O15 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Affected Impact Sensor — Driver Second Row C-Pillar Side Impact Sensor C3248 and/or Passenger Front Door Side Impact Sensor C644. • Disconnect: RCM C310A and C310B. • Inspect for the following: ▪ inspect harness and component connectors for loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector(s). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** Fault(s) cannot be cleared until corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0092:11 **AND** B0096:11, GO to O2. For DTC B0092:93 **AND** B0096:93, GO to O6. For DTC B0092:93 **ONLY**, GO to O8. For DTC B0096:93 **ONLY**, GO to O11. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when**

• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0092:11, B0092:93, B0096:11 or B0096:93 retrieved on-demand during self-test?**	**directed to do so in the pinpoint test.** GO to O16 .
O16 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test.**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test P: DTC B0095:11 or B0095:93

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) checks the RH front impact severity sensor and circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Faulted RH front impact severity sensor

If a fault is detected, the RCM stores DTC B0095:11, B0095:81, B0095:93 or B0095:96 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

- DTC B0095:11 (Right Front Restraints Sensor: Circuit Short to Ground) — When the RCM senses a short to ground on the RH front impact severity sensor feed circuit, a fault is indicated.
- DTC B0095:93 (Right Front Restraints Sensor: No Operation) — When the RCM senses a faulted sensor, short to voltage or open on either RH front impact severity sensor circuit, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- RH front impact severity sensor
- RCM

PINPOINT TEST P: DTC B0095:11 OR B0095:93

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Do not probe any impact sensor. The impact sensor can not be tested using a multi-meter.

Test Step	Result / Action to Take
P1 RETRIEVE RCM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B0095:11 or B0095:93 retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0095:11, GO to P2 . For DTC B0095:93, GO to P5 . **No** The fault is intermittent when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to P10 .
P2 CHECK THE RIGHT FRONT RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RH Front Impact Severity Sensor C1466. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Did the on-demand DTC change from B0095:11 to B0095:93?**	**Yes** INSTALL a new RH front impact severity sensor. REFER to Front Impact Severity Sensor in this section. GO to P11 . **No** GO to P3 .
P3 CHECK THE RH FRONT IMPACT SEVERITY SENSOR CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B.	**Yes** GO to P4 . **No**

• Measure the resistance between RH front impact severity sensor C1466-1, circuit VR214 (WH/BU), harness side and ground.  N0092553 • **Is the resistance greater than 10,000 ohms?**	REPAIR circuit VR214 (WH/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to P11.
P4 CHECK FOR A SHORT BETWEEN RH FRONT IMPACT SEVERITY SENSOR CIRCUITS	
• Measure the resistance between RH front impact severity sensor C1466-1, circuit VR214 (WH/BU), harness side and C1466-2, circuit RR130 (GN/BU), harness side.  N0036987 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to P9. **No** REPAIR circuits VR214 (WH/BU) and RR130 (GN/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to P11.
P5 CHECK THE RH FRONT IMPACT SEVERITY SENSOR AND RCM CONNECTIONS (NO OPERATION INDICATED)	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Inspect RH front impact severity sensor C1466 to be fully seated and locked. • Gain access to the RCM and inspect C310A and C310B to be sure they are fully seated and locked. Refer to Restraints Control Module (RCM) in this section. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0095:93 retrieved on-demand during self-test?**	**Yes** GO to P6. **No** Fault corrected. GO to P11.
P6 CHECK THE RH FRONT IMPACT SEVERITY SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RH Front Impact Severity Sensor C1466. • Disconnect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to	**Yes** REPAIR circuit VR214 (WH/BU) or RR130 (GN/BU). Refer to Wiring Diagrams

Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between RH front impact severity sensor: ▪ C1466-1, circuit VR214 (WH/BU), harness side and ground. ▪ C1466-2, circuit RR130 (GN/BU), harness side and ground.  N0036990 • **Is any voltage present on either circuit?**	Cell 5, Connector Repair Procedures for schematic and connector information. GO to P11. **No** GO to P7.
P7 CHECK THE RH FRONT IMPACT SEVERITY SENSOR CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between RCM C310B, harness side and RH front impact severity sensor C1466, harness side using the following chart. 	RCM	Circuit	RH Front Impact Severity Sensor
---	---	---
C310B-30	VR214 (WH/BU)	C1466-1
C310B-29	RR130 (GN/BU)	C1466-2 |  N0091814 • **Are the resistances less than 0.5 ohm?**	**Yes** GO to P8. **No** REPAIR circuit VR214 (WH/BU) or RR130 (GN/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to P11.
P8 CHECK THE RIGHT FRONT RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (NO OPERATION INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between RH front impact severity sensor C1466-1, circuit VR214 (WH/BU), harness side and C1466-2, circuit RR130 (GN/BU), harness side.	**Yes** REMOVE the fused jumper wire and INSTALL a new sensor. REFER to Front Impact Severity Sensor in this section. GO to P11. **No**

 N0114279 • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Did the on-demand DTC change from B0095:93 to B0095:11?**	REMOVE the fused jumper wire and GO to P8 .
P9 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. • Connect: RH Front Impact Severity Sensor C1466. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section. GO to P11 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to P10 .
P10 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RH Front Impact Severity Sensor C1466. • Disconnect: RCM C310A and C310B. • Inspect for the following: ▪ inspect harness and component connectors for loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires.	**Yes** The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0095:11, GO to P2 .

▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector(s). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B0095:11 or B0095:93 retrieved on-demand during self-test?**	For DTC B0095:93, GO to P5. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to P11.
P11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test Q: DTCs B00A0:09, B00A0:4A, B00A0:63, B00A0:64 and B00A0:68

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) is in constant communication with various control modules on the High Speed Controller Area Network (HS-CAN), including the Occupant Classification System Module (OCSM). The RCM continuously monitors the HS-CAN for fault messages reported by the Occupant Classification System (OCS) system. The RCM also checks for the correct identification of the OCSM. If the RCM detects one of the following faults reported by the OCS system, it stores DTC B00A0:09, B00A0:4A, B00A0:63, B00A0:64 or B00A0:68 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

This pinpoint test is intended to diagnose the following:

- OCSM
- RCM

DTC Description	Fault Trigger Conditions
• B00A0:09 — Occupant Classification System: Component Failure	When the RCM receives a message from the OCSM that a fault exists within the OCS system, this fault is indicated.
• B00A0:4A — Occupant Classification System: Incorrect Component Installed	When the RCM senses the OCS system is present but not configured, a fault is indicated.

• B00A0:63 — Occupant Classification System: Circuit / Component Protection Time-Out	When the RCM receives 8 or more invalid states from the OCSM , a fault is indicated.
• B00A0:64 — Occupant Classification System: Signal Plausibility Failure	When the RCM receives messages containing upper or lower data limits other than limits stored in memory, a fault is indicated.
• B00A0:68 — Occupant Classification System: Event Information	When the RCM receives a message containing incorrect data, a fault is indicated.

PINPOINT TEST Q: DTCs B00A0:09, B00A0:4A, B00A0:63, B00A0:64 and B00A0:68

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
Q1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B00A0:09, B00A0:4A, B00A0:63, B00A0:64 or B00A0:68 retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTCs B00A0:09, B00A0:63 and B00A0:68, RETRIEVE DTCs from the OCSM and REFER to the Occupant Classification System Module (OCSM) DTC chart for diagnostic direction. For DTC B00A0:4A or B00A0:64, GO to Q2 . **No** CHECK for causes of the intermittent fault. Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. **Do not install any new SRS**

	components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to Q5.
Q2 CHECK THE OCS • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Verify the correct OCS system service kit has been installed in the vehicle. • **Is the correct OCS system service kit installed?**	**Yes** GO to Q3. **No** INSTALL the correct OCS system service kit. REFER to Occupant Classification Sensor in this section. GO to Q5.
Q3 CHECK FOR THE CORRECT RCM • Disconnect the scan tool. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Log Viewer. • Retrieve and record the RCM part number from Log Viewer and check the recorded part number against the part number listed in the Ford Catalog Advantage TM or equivalent. • **Is the correct RCM installed?**	**Yes** GO to Q4. **No** INSTALL the correct RCM. REFER to Restraints Control Module (RCM) in this section. GO to Q5.
Q4 CHECK THE RCM • Ignition ON. • Carry out Programmable Module Installation (PMI) for the RCM. Manually enter as-built data. Refer to Section 418-01. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B00A0:4A or B00A0:64 retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to Q5. **No** Fault corrected. GO to Q5.
Q5 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM DTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test R: DTCs B00B5:11, B00B5:12, B00B5:13 and B00B5:1D

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors the driver seat track position sensor and circuits for the following faults:

- Short to ground
- Short to voltage
- Open circuit
- Current out of range
- Faulted driver seat track position sensor

If a fault is detected, the RCM stores DTC B00B5:11, B00B5:12, B00B5:13 or B00B5:1D in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

DTC Description	Fault Trigger Conditions
• B00B5:11 — Driver Seat Track Position Restraints Sensor: Circuit Short to Ground	When the RCM senses a short to ground on the driver seat track position sensor circuit, a fault is indicated.
• B00B5:12 — Driver Seat Track Position Restraints Sensor: Circuit Short to Battery	When the RCM senses a short to voltage on the driver seat track position sensor circuit, a fault is indicated.
• B00B5:13 — Driver Seat Track Position Restraints Sensor: Circuit Open	When the RCM senses an open on either of the driver seat track position sensor circuits, a fault is indicated.
• B00B5:1D — Driver Seat Track Position Restraints Sensor: Circuit Current Out of Range	When the RCM senses current out of an acceptable range between the driver seat track position sensor circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver seat track position sensor
- RCM

PINPOINT TEST R: DTCs B00B5:11, B00B5:12, B00B5:13 AND B00B5:1D

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

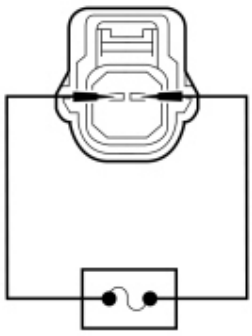
NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
R1 RETRIEVE RCM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B00B5:11, B00B5:12, B00B5:13 or B00B5:1D retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B00B5:11 or B00B5:1D, GO to R2 . For DTC B00B5:12, GO to R4 . For DTC B00B5:13, GO to R5 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to R10 .
R2 CHECK THE DRIVER SEAT TRACK POSITION RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND OR CURRENT OUT OF RANGE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Disconnect: Driver Seat Track Position Sensor C356. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver seat track position sensor disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B00B5:11 or B00B5:1D to B00B5:13?**	**Yes** GO to R8 . **No** For DTC B00B5:1D, GO to R9 . For DTC B00B5:11, GO to R3 .
R3 CHECK THE DRIVER SEAT TRACK POSITION SENSOR CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between driver seat track position sensor C356-2, circuit VR215 (YE/VT) and ground.	**Yes** GO to R9 . **No** REPAIR circuit VR215 (YE/VT).

 N0061722 • **Is the resistance greater than 10,000 ohms?**	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to R11 .
R4 CHECK THE DRIVER SEAT TRACK POSITION SENSOR CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: Driver Seat Track Position Sensor C356. • Disconnect: Driver Seat Side Air Bag Module C367. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between driver seat track position sensor C356-2, circuit VR215 (YE/VT), harness side and ground.  N0061721 • **Is any voltage present?**	**Yes** REPAIR circuit VR215 (YE/VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to R11 . **No** GO to R9 .
R5 CHECK THE DRIVER SEAT TRACK POSITION RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367. • Disconnect: Driver Seat Track Position Sensor C356. • Connect a fused jumper wire between driver seat track position sensor C356-2, circuit VR215 (YE/VT), harness side and C356-1, circuit GD143 (BK/VT), harness side.	**Yes** REMOVE the fused jumper wire and GO to R8 . **No** REMOVE the fused jumper wire and GO to R6 .

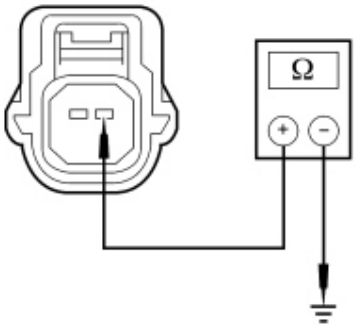


N0114279

- Enter the following diagnostic mode on the scan tool: Self Test — RCM .
- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- **DIAGNOSTIC TIP:** When viewing DTCs with the driver seat track position sensor circuits shorted together, a short to ground fault would normally be retrieved.
- **Did the on-demand DTC change from B00B5:13 to B00B5:11?**

R6 CHECK THE DRIVER SEAT TRACK POSITION SENSOR CIRCUIT FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B-32, circuit VR215 (YE/VT), harness side and driver seat track position sensor C356-2, circuit VR215 (YE/VT), harness side.  N0091866 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to R7 . **No** REPAIR circuit VR215 (YE/VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to R11 .

R7 CHECK THE DRIVER SEAT TRACK POSITION SENSOR GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between driver seat track position sensor C356-1, circuit GD143 (BK/VT) and ground.	**Yes** GO to R9 . **No** REPAIR circuit GD143 (BK/VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to R11 .



N0061723

- **Is the resistance less than 0.5 ohm?**

R8 CONFIRM THE DRIVER SEAT TRACK POSITION RESTRAINTS SENSOR FAULT **NOTE:** Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Disconnect: Driver Seat Track Position Sensor C356. • Connect: RCM C310A and C310B (if previously disconnected). • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new driver seat track position sensor. REFER to Seat Position Sensor in this section. GO to R11. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to R10.
R9 CONFIRM THE RCM FAULT **NOTE:** Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to R11. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to R10.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Seat Track Position Sensor C356. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	
R10 CHECK FOR AN INTERMITTENT FAULT	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Seat Track Position Sensor C356.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Component(s)/Connector(s).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was DTC B00B5:11, B00B5:12, B00B5:13 or B00B5:1D retrieved on-demand during self-test?**
	Yes
	The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test.
	
	For DTC B00B5:11 or B00B5:1D, GO to R2.
	
	For DTC B00B5:12, GO to R4.
	
	For DTC B00B5:13, GO to R5.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to R11.

R11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

are retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved?**	

Pinpoint Test S: DTCs B00C5:11, B00C5:12, B00C5:13 and B00C5:1D

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors the passenger seat track position sensor and circuits for the following faults:

- Short to ground
- Short to voltage
- Open circuit
- Current out of range
- Faulted passenger seat track position sensor

If a fault is detected, the RCM stores DTC B00C5:11, B00C5:12, B00C5:13 or B00C5:1D in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

DTC Description	Fault Trigger Conditions
• B00C5:11 — Passenger Seat Track Position Restraints Sensor: Circuit Short to Ground	When the RCM senses a short to ground on the passenger seat track position sensor circuit, a fault is indicated.
• B00C5:12 — Passenger Seat Track Position Restraints Sensor: Circuit Short to Battery	When the RCM senses a short to voltage on the passenger seat track position sensor circuit, a fault is indicated.
• B00C5:13 — Passenger Seat Track Position Restraints Sensor: Circuit Open	When the RCM senses an open on either of the passenger seat track position sensor circuits, a fault is indicated.
• B00C5:1D — Passenger Seat Track Position Restraints Sensor: Circuit Current Out of Range	When the RCM senses current out of an acceptable range between the passenger seat track position sensor circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger seat track position sensor
- RCM

PINPOINT TEST S: DTCs B00C5:11, B00C5:12, B00C5:13 AND B00C5:1D

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this

instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
S1 RETRIEVE RCM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B00C5:11, B00C5:12, B00C5:13 or B00C5:1D retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B00C5:11 or B00C5:1D, GO to S2 . For DTC B00C5:12, GO to S4 . For DTC B00C5:13, GO to S5 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to S10 .
S2 CHECK THE PASSENGER SEAT TRACK POSITION RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND OR CURRENT OUT OF RANGE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Disconnect: Passenger Seat Track Position Sensor C3617. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger seat track position sensor disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B00C5:11 or B00C5:1D**	**Yes** GO to S8 . **No** For DTC B00C5:1D, GO to S9 . For DTC B00C5:11, GO to S3 .

to B00C5:13?	
S3 CHECK THE PASSENGER SEAT TRACK POSITION SENSOR CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between passenger seat track position sensor C3617-2, circuit VR216 (GN/OG) and ground.  N0061722 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to S9 . **No** REPAIR circuit VR216 (GN/OG). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to S11 .
S4 CHECK THE PASSENGER SEAT TRACK POSITION SENSOR CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: Passenger Seat Track Position Sensor C3617. • Disconnect: Passenger Seat Side Air Bag Module C337. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between passenger seat track position sensor C3617-2, circuit VR216 (GN/OG), harness side and ground.  N0061721 • **Is any voltage present?**	**Yes** REPAIR circuit VR216 (GN/OG). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to S11 . **No** GO to S9 .
S5 CHECK THE PASSENGER SEAT TRACK POSITION RESTRAINTS SENSOR DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.	**Yes** REMOVE the fused jumper wire and GO to S8 . **No**

• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Disconnect: Passenger Seat Track Position Sensor C3617. • Connect a fused jumper wire between passenger seat track position sensor C3617-2, circuit VR216 (GN/OG), harness side and C3617-1, circuit GD145 (BK/BU), harness side.  N0114279 • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger seat track position restraints sensor circuits shorted together, a short to ground fault would normally be retrieved. • **Did the on-demand DTC change from B00C5:13 to B00C5:11?**	REMOVE the fused jumper wire and GO to S6.
S6 CHECK THE PASSENGER SEAT TRACK POSITION SENSOR CIRCUIT FOR AN OPEN	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B-31, circuit VR216 (GN/OG), harness side and passenger seat track position sensor C3617-2, circuit VR216 (GN/OG), harness side.  N0105976 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to S7. **No** REPAIR circuit VR216 (GN/OG). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to S11.
S7 CHECK THE PASSENGER SEAT TRACK POSITION SENSOR GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between passenger seat track position sensor C3617-1, circuit GD145 (BK/BU) and ground.	**Yes** GO to S9. **No** REPAIR circuit GD145

 N0061723 • **Is the resistance less than 0.5 ohm?**	(BK/BU). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to S11.
S8 CONFIRM THE PASSENGER SEAT TRACK POSITION RESTRAINTS SENSOR FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Disconnect: Passenger Seat Track Position Sensor C3617. • Connect: RCM C310A and C310B (if previously disconnected). • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new passenger seat track position sensor. REFER to Seat Position Sensor in this section. GO to S11. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to S10.
S9 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to S11. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to S10.

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Seat Track Position Sensor C3617. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	
S10 CHECK FOR AN INTERMITTENT FAULT	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Seat Track Position Sensor C3617.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Component(s)/Connector(s).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was DTC B00C5:11, B00C5:12, B00C5:13 or B00C5:1D retrieved on-demand during self-test?**
	Yes
	The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test.
	
	For DTC B00C5:11 or B00C5:1D, GO to S2.
	
	For DTC B00C5:12, GO to S4.
	
	For DTC B00C5:13, GO to S5.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to S11.

S11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and Occupant Classification System Module (OCSM) CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

are retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved?**	

Pinpoint Test T: DTCs B00D5:11, B00D5:12 and B00D5:13

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The RCM briefly activates the Passenger Air Bag Deactivation (PAD) indicator to prove-out and verify to the occupants correct functional operation of the PAD indicator.

The RCM monitors the PAD indicator circuits for the following faults:

- Open circuit
- Short to voltage
- Short to ground
- Faulted PAD indicator

If a fault is detected, the RCM stores DTC B00D5:11, B00D5:12 or B00D5:13 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

- DTC B00D5:11 (Restraint System Passenger Disable Indicator: Circuit Short to Ground) — When the RCM senses a short to ground on the PAD indicator circuit, a fault is indicated.
- DTC B00D5:12 (Restraint System Passenger Disable Indicator: Circuit Short to Battery) — When the RCM senses a short to voltage on the PAD indicator circuit, a fault is indicated.
- DTC B00D5:13 (Restraint System Passenger Disable Indicator: Circuit Open) — When the RCM senses an open circuit on the PAD indicator, a fault is indicated. An open ignition circuit to the PAD indicator can set this DTC.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- PAD indicator
- RCM

PINPOINT TEST T: DTCs B00D5:11, B00D5:12 AND B00D5:13

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

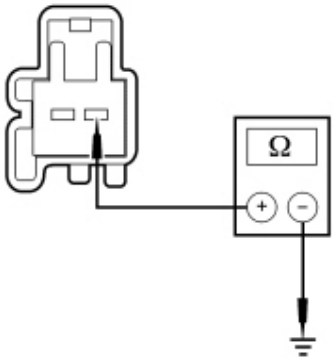
NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
T1 RETRIEVE RCM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B00D5:11, B00D5:12 or B00D5:13 retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B00D5:11, GO to T2. For DTC B00D5:13, GO to T4 For DTC B00D5:12, GO to T7. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to T10.
T2 CHECK THE PAD INDICATOR CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Disconnect: PAD Indicator C2286. • Measure the resistance between PAD indicator C2286-2, circuit RR116 (BN/GN), harness side and ground.  N0061732 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to T9. **No** GO to T3.
T3 CHECK THE RCM FOR LOW RESISTANCE	
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between PAD indicator C2286-2, circuit RR116 (BN/GN), harness side and ground.	**Yes** GO to T9. **No** REPAIR circuit RR116 (BN/GN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to T11.



N0061732

- **Is the resistance greater than 10,000 ohms?**

T4 CHECK THE PAD INDICATOR CIRCUIT FOR AN OPEN	
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: PAD Indicator C2286. • Measure the resistance between PAD indicator C2286-2, circuit RR116 (BN/GN) and RCM C310A-22, circuit RR116 (BN/GN), harness side.  N0091818 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to T5 . **No** REPAIR circuit RR116 (BN/GN). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to T11 .
T5 CHECK THE IGNITION CIRCUIT AT PAD INDICATOR FOR VOLTAGE	
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between PAD indicator C2286-1, circuit CBP04 (VT), harness side and ground.  N0061734 • **Is the voltage greater than 10 volts?**	**Yes** GO to T6 . **No** VERIFY Central Junction Box (CJB) fuse 4 (7.5A) is OK. If OK, REPAIR circuit CBP04 (VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. GO to T11 .
T6 CHECK THE PAD INDICATOR	

• Ignition OFF. • Connect: PAD Indicator C2286. • Connect a fused jumper wire between RCM C310A-22, circuit RR116 (BN/GN), harness side and ground.  N0091819 • Ignition ON. • Monitor the PAD indicator. • **Does the PAD indicator illuminate?**	**Yes** REMOVE the fused jumper wire and GO to T9 . **No** REMOVE the fused jumper wire and INSTALL a new PAD indicator. REFER to Passenger Air Bag Deactivation (PAD) Indicator in this section. GO to T11 .
T7 CHECK THE PAD INDICATOR CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: PAD Indicator C2286. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between PAD indicator C2286-2, circuit RR116 (BN/GN), harness side and ground.  N0061735 • **Is any voltage present?**	**Yes** REPAIR circuit RR116 (BN/GN). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to T11 . **No** GO to T8 .
T8 CHECK THE RCM	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON.	**Yes** INSTALL a new PAD indicator. REFER to Passenger Air Bag Deactivation (PAD) Indicator in this section. **No** GO to T9 .

• Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the PAD indicator disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B00D5:12 to B00D5:13?**	
T9 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. • Connect: PAD Indicator C2286. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section. GO to T11 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to T10 .
T10 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Disconnect: PAD Indicator C2286. ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector (s). • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B00D5:11, B00D5:12 or B00D5:13 retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B00D5:11, GO to T2 . For DTC B00D5:13, GO to T4 . For DTC B00D5:12, GO to T7 . **No** CHECK for causes of intermittent open, short to ground or short to voltage on circuit RR116 (BN/GN). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. ACTIVATE other systems in the same wire harness. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the**

	pinpoint test. GO to T11 .
T11 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM . • **Are any on-demand RCM and/or Occupant Classification System Module (OCSM) DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test U: DTCs B1211:11, B1211:12, B1211:13 and B1211:1A

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver safety belt retractor circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver safety belt retractor pretensioner

If a fault is detected, the RCM stores DTC B1211:11, B1211:12, B1211:13 or B1211:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to the diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver safety belt retractor
- RCM

DTC Description	Fault Trigger Conditions
• B1211:11 — Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on the driver safety belt retractor pretensioner circuit, a fault is indicated.
• B1211:12 — Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Battery	When the RCM senses a short to battery on the driver safety belt retractor pretensioner circuit, a fault is indicated.
• B1211:13 — Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between the driver safety belt retractor pretensioner circuits, a fault is indicated.
• B1211:1A — Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the driver safety belt retractor pretensioner circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Driver safety belt retractor pretensioner
- RCM

PINPOINT TEST U: DTCs B1211:11, B1211:12, B1211:13 AND B1211:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

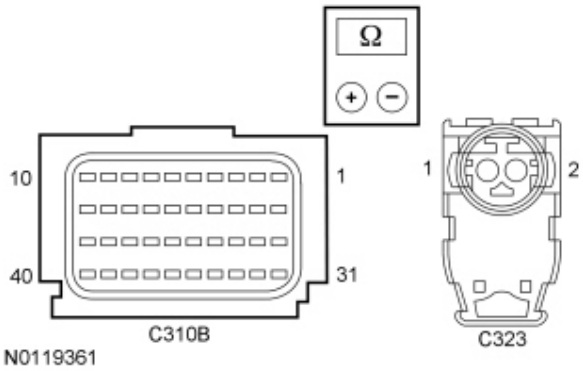
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
U1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B1211:11, B1211:12, B1211:13 or B1211:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B1211:13 or B1211:1A, GO to U2. For DTC B1211:11, GO to U8. For DTC B1211:12, GO to U10. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B1211:13 or B1211:1A, GO to U13. For DTC B1211:11, GO to U14. For DTC B1211:12, GO to U15.
U2 CHECK THE DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_23_R) PID • Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_23_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to U12. **No** GO to U3.
U3 CHECK THE DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_23_R) PID WHILE CARRYING OUT THE HARNESS TEST • While monitoring the DEPLOY_23_R PID carry out the harness test of the driver safety belt retractor pretensioner circuits and accessible connectors (including any in-line connectors), by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to U17. **No** For PID value less than 1.7 ohms, GO to U4. For PID value greater than 2.78 ohms, GO to U6.

U4 CHECK THE DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Retractor Pretensioner C323. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the driver safety belt retractor pretensioner disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B1211:1A to B1211:13?**	**Yes** GO to U11. **No** GO to U5.
U5 CHECK FOR A SHORT BETWEEN DRIVER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between the driver safety belt retractor pretensioner C323-2, circuit CR146 (GY/VT), harness side and C323-1, circuit RR146 (BU/BN), harness side.  N0116763 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to U12. **No** REPAIR circuit CR146 (GY/VT) or RR146 (BU/BN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to U17.
U6 CHECK THE DRIVER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Retractor Pretensioner C323. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310B, harness side and driver safety belt retractor pretensioner C323, harness side using the following chart.	**Yes** GO to U7. **No** REPAIR circuit CR146 (GY/VT) or RR146 (BU/BN). Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to U17.

RCM	Circuit	Driver Safety Belt Retractor Pretensioner
C310B-2	CR146 (GY/VT)	C323-2
C310B-	RR146	C323-1

1	(BU/BN)	

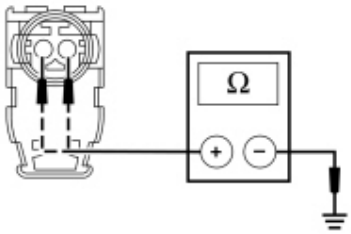


- **Are the resistances less than 0.5 ohm?**

U7 CHECK THE DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect a fused jumper wire between the driver safety belt retractor pretensioner C323-2, circuit CR146 (GY/VT), harness side and C323-1, circuit RR146 (BU/BN), harness side.  N0116765 • Connect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver safety belt retractor pretensioner circuits shorted together, a low resistance fault would normally be retrieved. • **Did the on-demand DTC change from B1211:13 to B1211:1A?**	**Yes** REMOVE the fused jumper wire and GO to U11 . **No** REMOVE the fused jumper wire and GO to U12 .

U8 CHECK THE DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF.	**Yes** GO to U11 . **No** GO to U9 .

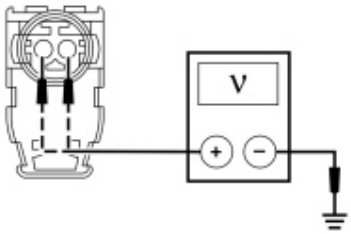
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Retractor Pretensioner C323. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver safety belt retractor pretensioner disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B1211:11 to B1211:13?**	
U9 CHECK THE DRIVER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between driver safety belt retractor pretensioner:
  ▪ C323-2, circuit CR146 (GY/VT), harness side and ground.
  ▪ C323-1, circuit RR146 (BU/BN), harness side and ground.
  	


N0116766
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to U12 .
	
	No
	REPAIR circuit CR146 (GY/VT) or RR146 (BU/BN).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to U17 .

U10 CHECK THE DRIVER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Safety Belt Retractor Pretensioner C323.
• Disconnect: RCM C310A and C310B.
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between the driver safety belt retractor pretensioner:
  ▪ C323-2, circuit CR146 (GY/VT), harness side and ground.
  ▪ C323-1, circuit RR146 (BU/BN), harness side and ground.
	Yes
	REPAIR circuit CR146 (GY/VT) or RR146 (BU/BN).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to U17 .
	
	No
	GO to U12 .



N0116767

- **Is any voltage present on either circuit?**

U11 CONFIRM THE DRIVER SAFETY BELT RETRACTOR PRETENSIONER FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
• Connect: Driver Safety Belt Retractor Pretensioner C323.
• Connect: RCM C310A and C310B (if previously disconnected).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Was the original DTC retrieved on-demand during self-test?**
	Yes
	INSTALL a new driver safety belt retractor pretensioner. REFER to Section 501-20A. GO to U17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B1211:13 or B1211:1A, GO to U13.
	
	For DTC B1211:11, GO to U14.
	
	For DTC B1211:12, GO to U15.

U12 CONFIRM THE RCM FAULT	

NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
	Yes
	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to U17.
	
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.**
	
	For DTC B1211:13 or

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Driver Safety Belt Retractor Pretensioner C323. • Connect: RCM C310A and C310B. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	B1211:1A, GO to U13. For DTC B1211:11, GO to U14. For DTC B1211:12, GO to U15.
U13 CHECK FOR INTERMITTENT DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_23_R) PID LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_23_R PID • Attempt to recreate the fault by wiggling the connectors (including any in-line connectors) and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to U16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to U17.
U14 CHECK FOR AN INTERMITTENT DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B1211:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to U17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to U16.
U15 CHECK FOR AN INTERMITTENT DRIVER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL SHORT TO VOLTAGE FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS)	**Yes** DEPOWER the SRS and

Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Retractor Pretensioner C323. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B1211:12 retrieved on-demand during self-test?**	REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to U17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to U16.

U16 CHECK THE HARNESS AND CONNECTORS
• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Driver Safety Belt Retractor Pretensioner C323.
  ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to U17.
	
	No
	The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to U17.

U17 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and Occupant Classification System Module (OCSM) CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test V: DTCs B1214:11, B1214:12, B1214:13 and B1214:1A

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the passenger safety belt retractor pretensioner and circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger safety belt retractor pretensioner

If a fault is detected, the RCM stores DTC B1214:11, B1214:12, B1214:13 or B1214:1A in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger safety belt retractor pretensioner
- RCM

DTC Description	Fault Trigger Conditions
• B1214:11 — Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on the passenger safety belt retractor pretensioner circuit, a fault is indicated.
• B1214:12 — Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Battery	When the RCM senses a short to battery on the passenger safety belt retractor pretensioner circuit, a fault is indicated.
• B1214:13 — Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Open	When the RCM measures more than the desired resistance range between the passenger safety belt retractor pretensioner circuits, a fault is indicated.
• B1214:1A — Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between the passenger safety belt retractor pretensioner circuits, a fault is indicated.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Passenger safety belt retractor pretensioner
- RCM

PINPOINT TEST V: DTCs B1214:11, B1214:12, B1214:13 and B1214:1A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

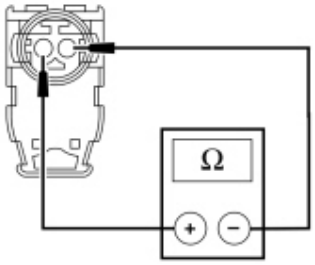
NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
V1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC B1214:11, B1214:12, B1214:13 or B1214:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B1214:13 or B1214:1A, GO to V2 . For DTC B1214:11, GO to V8 . For DTC B1214:12, GO to V10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. The fault condition is not present at this time. For DTC B1214:13 or

	B1214:1A, GO to V13. For DTC B1214:11, GO to V14. For DTC B1214:12, GO to V15.
V2 CHECK THE PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_24_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ▪ DEPLOY_24_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to V12. **No** GO to V3.
V3 CHECK THE PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_24_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• While monitoring the DEPLOY_24_R PID carry out the harness test of the passenger safety belt retractor pretensioner circuits and accessible connectors (including any in-line connectors), by wiggling connectors and flexing the wire harness. • **Does the PID value read between 1.7 and 2.78 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to V17. **No** For PID value less than 1.7 ohms, GO to V4. For PID value greater than 2.78 ohms, GO to V6.
V4 CHECK THE PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Retractor Pretensioner C303. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt retractor pretensioner disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B1214:1A to B1214:13?**	**Yes** GO to V11. **No** GO to V5.
V5 CHECK FOR A SHORT BETWEEN PASSENGER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS)	**Yes** GO to V12.

Depowering and Repowering in this section.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between the passenger safety belt retractor pretensioner C303-1, circuit RR147 (YE/VT), harness side and C303-2, circuit CR147 (GN/OG), harness side.



N0116763

- **Is the resistance greater than 10,000 ohms?**

No
REPAIR circuits CR147 (GN/OG) and RR147 (YE/VT).

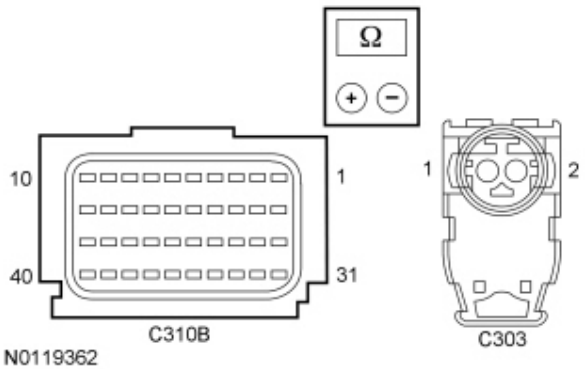
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to V17.

V6 CHECK THE PASSENGER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Passenger Safety Belt Retractor Pretensioner C303.
- Disconnect: RCM C310A and C310B.
- Measure the resistance between RCM C310B, harness side and passenger safety belt retractor pretensioner C303, harness side using the following chart.

RCM	Circuit	Passenger Safety Belt Retractor Pretensioner
C310B-11	RR147 (YE/VT)	C303-1
C310B-12	CR147 (GN/OG)	C303-2



N0119362

- **Are the resistances less than 0.5 ohm?**

Yes
GO to V7.

No
REPAIR circuit CR147 (GN/OG) or RR147 (YE/VT).

Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.

GO to V17.

V7 CHECK THE PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL DTCs FOR FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.

Yes
REMOVE the fused jumper wire and GO to V11.

• Disconnect: Passenger Seat Side Air Bag Module C337. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between the passenger safety belt retractor pretensioner C303-1, circuit RR147 (YE/VT), harness side and C303-2, circuit CR147 (GN/OG), harness side.  N0116765 • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt retractor pretensioner circuits shorted together, a low resistance fault would normally be retrieved. • **Did the on-demand DTC change from B1214:13 to B1214:1A?**	**No** REMOVE the fused jumper wire and GO to V12 .
V8 CHECK THE PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Retractor Pretensioner C303. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the passenger safety belt retractor pretensioner disconnected, an open circuit fault would normally be retrieved. • **Did the on-demand DTC change from B1214:11 to B1214:13?**	**Yes** GO to V11 . **No** GO to V9 .
V9 CHECK THE PASSENGER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: RCM C310A and C310B.
• Measure the resistance between the passenger safety belt retractor pretensioner:
  ▪ C303-2, circuit CR147 (GN/OG), harness side and ground.
  ▪ C303-1, circuit RR147 (YE/VT), harness side and ground.
	Yes
	GO to V12 .
	
	No
	REPAIR circuit CR147 (GN/OG) or RR147 (YE/VT).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic

 N0116766 • **Are the resistances greater than 10,000 ohms?**	and connector information. GO to V17 .
V10 CHECK THE PASSENGER SAFETY BELT RETRACTOR PRETENSIONER CIRCUITS FOR A SHORT TO VOLTAGE • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337. • Disconnect: Passenger Safety Belt Retractor Pretensioner C303. • Disconnect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between the passenger safety belt retractor pretensioner: ▪ C303-2, circuit CR147 (GN/OG), harness side and ground. ▪ C303-1, circuit RR147 (YE/VT), harness side and ground.  N0116767 • **Is any voltage present on either circuit?**	**Yes** REPAIR circuit CR147 (GN/OG) or RR147 (YE/VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to V17 . **No** GO to V12 .
V11 CONFIRM THE PASSENGER SAFETY BELT RETRACTOR PRETENSIONER FAULT **NOTE:** Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints	**Yes** INSTALL a new passenger safety belt retractor pretensioner. REFER to Section 501-20A . GO to V17 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do**

Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: Passenger Safety Belt Retractor Pretensioner C303. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**so in the pinpoint test.** For DTC B1214:13 or B1214:1A, GO to V13. For DTC B1214:11, GO to V14. For DTC B1214:12, GO to V15.
V12 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ■ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damage, pinched, cut or pierced wires. ■ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Restraint System Components. • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to V17. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** For DTC B1214:13 or B1214:1A, GO to V13. For DTC B1214:11, GO to V14. For DTC B1214:12, GO to V15.
V13 CHECK FOR AN INTERMITTENT PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_24_R) PID LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM. ■ DEPLOY_24_R PID • Attempt to recreate the fault by wiggling the connectors (including any in-line connectors) and flexing the wire harness. • **Does the PID value read between 1.7 ohms and 2.78 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to V16. **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair

	Procedures for schematic and connector information. GO to V17.
V14 CHECK FOR AN INTERMITTENT PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC B1214:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to V17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to V16.
V15 CHECK FOR AN INTERMITTENT PASSENGER SEATBELT RETRACTOR PRETENSIONER DEPLOYMENT CONTROL SHORT TO VOLTAGE FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Safety Belt Retractor Pretensioner C303. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling the connectors (including any in-line connectors) and flexing the wire harness. • **Was DTC B1214:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to V17. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to V16.
V16 CHECK THE HARNESS AND CONNECTORS	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Safety Belt Retractor Pretensioner C303.
  ▪ inspect connector(s) (including any in-line connectors) for loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
• **Were any concerns found?**
	Yes
	REPAIR as necessary.
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to V17.
	
	No
	The fault is not present and

	cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to V17.
V17 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and Occupant Classification System Module (OCSM) CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test W: DTCs B0001:2B, B0002:2B, B0004:2B, B0010:2B, B0011:2B, B0020:2B, B0021:2B, B0028:2B, B0029:2B, B0050:2B, B0052:2B, B0082:2B, B00B5:2B, B00C5:2B, B1211:2B and B1214:2B

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors all deployable device and sensor circuits for a signal cross-coupled (short) between circuits. If the RCM detects a short between the circuits of one device and another device, it stores a DTC for each of the signal-cross coupled faults in memory. The RCM sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator. When a normal loop fault is present (one loop is either shorted to battery/ground, open circuit or low resistance), signal cross-coupled diagnostics are not active. Once the normal loop fault is repaired, the signal cross-coupled diagnostics resume.

DTC Description	Fault Trigger Condition
• B0001:2B — Driver Frontal Stage 1 Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver air bag module stage 1 circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0002:2B — Driver Frontal Stage 2 Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver air bag module stage 2 circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0004:2B — Driver Knee Bolster Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver knee bolster circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0010:2B — Passenger Frontal Stage 1 Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger air bag module stage 1 circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0011:2B — Passenger Frontal Stage 2 Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger air bag module stage 2 circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding

	SRS component.
• B0020:2B — Left Side Airbag Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver seat side air bag module circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0021:2B — Left Curtain Deployment Control 1: Signal Cross Coupled	If the RCM detects a short between the driver side air curtain module circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0028:2B — Right Side Airbag Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger seat side air bag module circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0029:2B — Right Curtain Deployment Control 1: Signal Cross Coupled	If the RCM detects a short between the passenger side air curtain module circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0050:2B — Driver Seatbelt Sensor: Signal Cross Coupled	If the RCM detects a short between the driver safety belt buckle switch circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0052:2B — Passenger Seatbelt Sensor: Signal Cross Coupled	If the RCM detects a short between the passenger safety belt buckle switch circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B0082:2B — Passenger Seatbelt Load Limiter Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger safety belt adaptive load limiter circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B00B5:2B — Driver Seat Track Position Restraints Sensor: Signal Cross Coupled	If the RCM detects a short between the driver seat track position sensor circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B00C5:2B — Passenger Seat Track Position Restraints Sensor: Signal Cross Coupled	If the RCM detects a short between the passenger seat track position sensor circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B1211:2B — Driver Seatbelt Retractor Pretensioner Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver safety belt buckle pretensioner circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
• B1214:2B — Passenger Seatbelt Retractor Pretensioner Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger safety belt buckle pretensioner circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- RCM

PINPOINT TEST W: DTCs B0001:2B, B0002:2B, B0004:2B, B0010:2B, B0011:2B, B0020:2B, B0021:2B, B0028:2B, B0029:2B, B0050:2B, B0052:2B, B0082:2B, B00B5:2B, B00C5:2B, B1211:2B AND B1214:2B

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>W1 RETRIEVE RCM DTCs</td><td rowspan="2">Yes
This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to W2 .

No
This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to W4 .</td></tr>

- **Are the resistances greater than 10,000 ohms between the affected circuits?**

W3 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to W5.

• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Restraint System Component(s).
• Connect: RCM C310A and C310B.
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Were any signal cross coupled DTCs retrieved on-demand during self-test?**
	No
	In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to W4.

W4 CHECK FOR AN INTERMITTENT FAULT	
NOTE: Most cross link faults are due to connector and/or wiring harness damage. Carry out a thorough inspection of connector(s) and/or wiring harness for damage. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect **ALL of the affected** SRS devices. • Inspect the wiring harness(es) for any type of damage. Repair as necessary. Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information. • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Were any signal cross coupled DTCs retrieved on-demand during self-test?**	**Yes** The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. GO to W2. **No** The fault is not present and cannot be recreated at this time. CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to W5.
W5 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and Occupant Classification System Module (OCSM) DTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

during self-test?	

Pinpoint Test X: DTCs B0001:4A, B0002:4A, B0004:4A, B0010:4A, B0011:4A, B0020:4A, B0021:4A, B0028:4A, B0029:4A, B0050:4A, B0052:4A, B0082:4A, B0090:4A, B0091:4A, B0092:4A, B0095:4A, B0096:4A, B0097:4A, B00B5:4A, B00C5:4A, B00D5:4A, B1211:4A, B1214:4A and U3000:4A

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) monitors all of Supplemental Restraint System (SRS) device connections. If the RCM detects a connection or device connected that is not stored in memory, the RCM sets a DTC and sends a message to the Instrument Panel Cluster (IPC) to illuminate air bag warning indicator.

DTC Description	Fault Trigger Conditions
• B0001:4A — Driver Frontal Stage 1 Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0002:4A — Driver Frontal Stage 2 Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0004:4A — Driver Knee Bolster Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0010:4A — Passenger Frontal Stage 1 Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0011:4A — Passenger Frontal Stage 2 Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0020:4A — Left Side Airbag Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0021:4A — Left Curtain Deployment Control 1: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0028:4A — Right Side Airbag Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0029:4A — Right Curtain Deployment Control 1: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0050:4A — Driver Seatbelt Sensor: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0052:4A — Passenger Seatbelt Sensor: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0082:4A — Passenger Seatbelt Load Limiter Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0090:4A — Left Frontal Restraints Sensor: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0091:4A — Left Side Restraints Sensor 1: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0092:4A — Left Side Restraints Sensor 2: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0095:4A — Right Frontal Restraints Sensor: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.

• B0096:4A — Right Side Restraints Sensor 1: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B0097:4A — Right Side Restraints Sensor 2: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B00B5:4A — Driver Seat Track Position Restraints Sensor: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B00C5:4A — Passenger Seat Track Position Restraints Sensor: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B00D5:4A — Restraint System Passenger Disable Indicator: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B1211:4A — Driver Seatbelt Retractor Pretensioner Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• B1214:4A — Passenger Seatbelt Retractor Pretensioner Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
• U3000:4A — Control Module: Incorrect Component Installed	This DTC sets if the RCM detects the incorrect vehicle or model year ID from the Occupant Classification System Module (OCSM) or ABS module.

This pinpoint test is intended to diagnose the following:

- Incorrect RCM for vehicle
- RCM not configured

PINPOINT TEST X: DTCs B0001:4A, B0002:4A, B0004:4A, B0010:4A, B0011:4A, B0020:4A, B0021:4A, B0028:4A, B0029:4A, B0050:4A, B0052:4A, B0082:4A, B0090:4A, B0091:4A, B0092:4A, B0095:4A, B0096:4A, B0097:4A, B00B5:4A, B00C5:4A, B00D5:4A, B1211:4A, B1214:4A AND U3000:4A

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

Test Step	Result / Action to Take
X1 RETRIEVE RCM DTCs • Connect the scan tool. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Were any incorrect component installed DTCs retrieved?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. GO to X2. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. The fault condition is not present at this time. GO to X7.
X2 CHECK THE VEHICLE HISTORY • Ignition OFF. • Check the vehicle repair history. • **Has a new RCM or OCSM been installed during this or a prior repair?**	**Yes** GO to X3. **No** GO to X4.

X3 CHECK THE RCM AND OCSM VEHICLE IDENTIFICATION PIDs
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: DataLogger — RCM.
• View and record the following PID values:
  ▪ V_ID_14229_RCM
  ▪ OCS_MY
• Enter the following diagnostic mode on the scan tool: DataLogger — OCSM.
• View and record the following PID values:
  ▪ OCS_MY_OCS
  ▪ OCS_VEH_ID
• Verify the correct vehicle application.
• **Does the PID values match the vehicle application?**
	Yes
	GO to X4.
	
	No
	INSTALL the correct RCM or Occupant Classification System (OCS) system service kit. REFER to Restraints Control Module (RCM) or Occupant Classification Sensor in this section. GO to X8.

X4 CHECK ABS MODULE • Enter the following diagnostic mode on the scan tool: Log Viewer. • Retrieve and record the ABS module part number from Log Viewer. • Check the recorded part number against the part number listed in the Ford Catalog Advantage™ or equivalent. • **Is the correct ABS module installed in the vehicle?**	**Yes** GO to X5. **No** INSTALL the correct ABS module. REFER to Section 206-09. GO to X8.
X5 CHECK RCM • Carry out Programmable Module Installation (PMI) for the RCM. Use as-built data when carrying out PMI. Refer to Section 418-01. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Were any incorrect component installed DTCs retrieved on-demand during self-test?**	**Yes** GO to X6. **No** Fault corrected. GO to X8.
X6 CONFIRM THE RCM FAULT **NOTE:** Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to X8.

• Ignition OFF.
• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: All Previously Disconnected Component(s)/Connector(s).
• Ignition ON.
• Enter the following diagnostic mode on the scan tool: Self Test — RCM.
• **Were any incorrect component installed DTCs retrieved?**
	No
	In the process of diagnosing the fault, the fault condition has become intermittent.
	
	Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to X7.

X7 CHECK FOR AN INTERMITTENT FAULT • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Were any incorrect component installed DTCs retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to X8. **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. ACTIVATE other systems in the same wire harness. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to X8.
X8 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self-Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during the self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM DTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test Y: DTCs U0028:08 and U0028:88

Refer to Wiring Diagrams Cell 42 , Vehicle Dynamic Systems for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) supplies the stability/traction control system with the yaw rate, roll rate, lateral and longitudinal accelerometer readings over a dedicated Controller Area Network (CAN) bus. If the RCM detects a fault with communications with the ABS module or dedicated CAN bus circuits, it stores DTC U0028:08 or U0028:88.

The RCM **will not** request the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator if either DTC U0028:08 or U0028:88 sets. The air bag warning indicator remains off if either of these DTCs are set.

- DTC U0028:08 (Vehicle Communication Bus A: Bus Signal / Message Failures) — When the RCM does not receive dedicated CAN bus messages from the ABS module for 5 seconds, a fault is indicated. An open dedicated CAN circuit, incorrect installed ABS module or loss of power and/or ground to the ABS module also sets this DTC.
- DTC U0028:88 (Vehicle Communication Bus A: Bus Off) — When the RCM detects the dedicated CAN circuits are shorted to ground, shorted to voltage or shorted to each other, a fault is indicated.

The ABS module may set similar DTCs, U0151 (Lost Communication With Restraints Control Module) and U0452 (Invalid Data Received From Restraints Control Module).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- RCM
- ABS module

PINPOINT TEST Y: DTCs U0028:08 and U0028:88

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

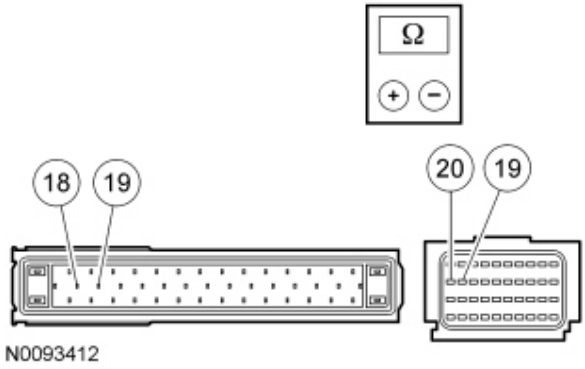
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may

not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
Y1 RETRIEVE RCM DTCs • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC U0028:08 or U0028:88 retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the self-test. For DTC U0028:08, GO to Y2. For DTC U0028:88, GO to Y6. **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to Y13.
Y2 CHECK FOR CORRECT RCM • Enter the following diagnostic mode on the scan tool: Log Viewer. • Retrieve and record the RCM part number from Log Viewer. • Check the recorded RCM part number against the part number listed in the Ford Catalog Advantage™ or equivalent. Refer to Restraints Control Module (RCM) in this section. • **Is the correct RCM installed in the vehicle?**	**Yes** GO to Y3. **No** INSTALL the correct RCM.GO to Y14.
Y3 CHECK FOR CORRECT ABS MODULE • Retrieve and record the ABS module part number from Log Viewer. • Check the recorded ABS module part number against the part number listed in the Ford Catalog Advantage™ or equivalent. • **Is the correct ABS module installed in the vehicle?**	**Yes** GO to Y4. **No** INSTALL the correct ABS module. REFER to Section 206-09. GO to Y14.
Y4 CHECK THE HS-CAN NETWORK COMMUNICATIONS (ABS MODULE COMMUNICATIONS) • Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test. • **NOTE:** The Network Test does not test the dedicated CAN communications between the ABS module and RCM. • **Did the Network Test pass (ABS module communicate with the scan tool)?**	**Yes** GO to Y5. **No** REFER to Section 418-00 to diagnose the High Speed Controller Area Network (HS-CAN)/ ABS module communication concern. GO to Y14.
Y5 CHECK THE DEDICATED CAN CIRCUITS FOR AN OPEN • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Disconnect: ABS Module C135. • Measure the resistance between the ABS module C135, harness side and the RCM C310B, harness side as indicated in the following chart: ┌ ┬ ┐	**Yes** GO to Y9. **No** REPAIR circuit VCA24 (GN/OG) and VCA23 (BU/WH). Refer to Wiring Diagrams Cell 5, Connector Repair

ABS Module	Circuit	RCM
C135-18	VCA23 (BU/WH)	C310B-20
C135-19	VCA24 (GN/OG)	C310B-19



N0093412

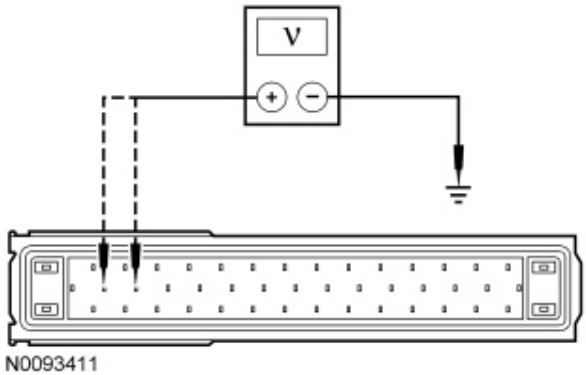
- **Are the resistances less 5 ohms?**

Procedures for schematic and connector information.

GO to Y14 .

Y6 CHECK THE DEDICATED CAN CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: RCM C310A and C310B.
- Disconnect: ABS Module C135.
- Repower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Measure the voltage between ABS module:
  - C135-18, circuit VCA23 (WH/BU), harness side and ground.
  - C135-19, circuit VCA24 (GN/OG), harness side and ground.



N0093411

- **Is any voltage present on either circuit?**

Yes
REPAIR circuit VCA24 (GN/OG) or VCA23 (BU/WH).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to Y14 .

No
GO to Y7 .

Y7 CHECK THE DEDICATED CAN CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure the resistance between ABS module:
  - C135-18, circuit VCA23 (WH/BU), harness side and ground.
  - C135-19, circuit VCA24 (GN/OG), harness side and ground.

Yes
GO to Y8 .

No
REPAIR circuit VCA24 (GN/OG) or VCA23 (BU/WH).

Refer to Wiring Diagrams Cell

 N0093410 • **Are the resistances greater than 10,000 ohms?**	5 , Connector Repair Procedures for schematic and connector information. GO to Y14 .
Y8 CHECK FOR SHORT BETWEEN THE DEDICATED CAN CIRCUITS	
• Measure the resistance between ABS module C135-18, circuit VCA23 (WH/BU), harness side and C135-19, circuit VCA24 (GN/OG), harness side.  N0093409 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to Y9 . **No** REPAIR circuit VCA24 (GN/OG) and VCA23 (BU/WH). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to Y14 .
Y9 CHECK THE RCM TERMINATING RESISTOR	
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: RCM C310B. • Measure the resistance between ABS module C135-18, circuit VCA23 (WH/BU), harness side and C135-19, circuit VCA24 (GN/OG), harness side.  N0093409 • **Is the resistance between 108 and 132 ohms?**	**Yes** GO to Y10 . **No** GO to Y11 .
Y10 CHECK THE ABS MODULE TERMINATING RESISTOR	
• Disconnect: RCM C310B. • Connect: ABS Module C135. • Measure the resistance between RCM C310B-20, circuit VCA23 (WH/BU), harness side and C310B-19, circuit VCA24 (GN/OG),	**Yes** For DTC U0028:08, GO to Y11 .

harness side.  N0093009 • **Is the resistance between 108 and 132 ohms?**	For DTC U0028:88, GO to Y12 . **No** GO to Y12 .
Y11 CONFIRM THE RCM FAULT	
NOTE: Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • If previously directed to repower the SRS , depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ inspect ABS module C135 for dirt, corrosion, water intrusion, pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector (s). • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM . • **Was DTC U0028:08 retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section. GO to Y14 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to Y13 .
Y12 CONFIRM THE ABS MODULE FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • If previously directed to repower the SRS , depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in Section 501-20B . • Prior to reconnecting any previously disconnected SRS component: ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.	**Yes** INSTALL a new ABS module. REFER to Section 206-09 . GO to Y14 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. CHECK for causes of the intermittent fault. ATTEMPT to

▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ▪ inspect ABS module C135 for dirt, corrosion, water intrusion, pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector (s). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC U0028:88 retrieved on-demand during self-test?**	recreate the hard fault by flexing the wire harness and cycling the ignition frequently. ACTIVATE other systems in the same wire harness. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to Y13.
Y13 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310B. • Disconnect: ABS Module C135. ▪ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: All Previously Disconnected Component(s)/Connector (s). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • **Was DTC U0028:08 or U0028:88 retrieved on-demand during self-test?**	**Yes** The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. CHECK for causes of the intermittent fault in the areas previously worked in, particularly the pins and terminals of any electrical connector that were disconnected. REPAIR any intermittent wiring, terminal or connector concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to Y14. **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. GO to Y14.

Y14 CHECK FOR ADDITIONAL RCM AND ABS MODULE DTCs	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in Section 501-20B. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — RCM. • Enter the following diagnostic mode on the scan tool: Self Test — ABS Module. • **Were any DTCs retrieved on-demand from the RCM or ABS module during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the appropriate DTC Chart(s) in this section and/or Section 206-09 for pinpoint test direction. **No** CLEAR all CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test Z: DTCs B1317, B1318, U3003:16 and U3003:17

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

NOTE: DTCs B1317, B1318, B1676, U3003:16 and U3003:17 can be set if the vehicle has been recently jump started, the battery has been recently charged or the battery has been discharged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if the battery has been left unattended with the accessories on.

Normal Operation — Restraints Control Module (RCM)

The Restraints Control Module (RCM) continuously monitors the input voltage for correct operation. If the RCM detects input voltage below 9.5 volts, it stores DTC U3003:16 in memory. If the RCM detects input voltage above 20 volts, it stores DTC U3003:17 in memory. If the RCM sets DTC U3003:16 or U3003:17, it sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

Normal Operation — Occupant Classification System Module (OCSM)

The Occupant Classification System Module (OCSM) continuously monitors the input voltage for correct operation. If the OCSM detects input voltage below 8 volts, it stores DTC B1318 in memory. If the OCSM detects input voltage above 17.2 volts, it stores DTC B1317 in memory. If the OCSM sets DTC B1317 or B1318, it sends a fault message to the RCM. The RCM then sends a message to the IPC module to illuminate the air bag warning indicator.

DTC Description	Fault Trigger Conditions
• U3003:16 — Battery Voltage: Circuit Voltage Below Threshold	If the RCM detects voltage below 9.5 volts with a Supplemental Restraint System (SRS) fault, it sets this DTC.
• U3003:17 — Battery Voltage: Circuit Voltage Above Threshold	If the RCM detects voltage above 16 volts with a SRS fault or above 20 volts without a SRS fault, it sets this DTC.
• B1317 — Battery Voltage High	If the OCSM detects voltage above 17.2 volts, it sets this DTC.
• B1318 — Battery Voltage Low	If the OCSM detects voltage below 8 volts, it sets this DTC.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- RCM
- OCSM

PINPOINT TEST Z: DTCs B1317, B1318, U3003:16 and U3003:17

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

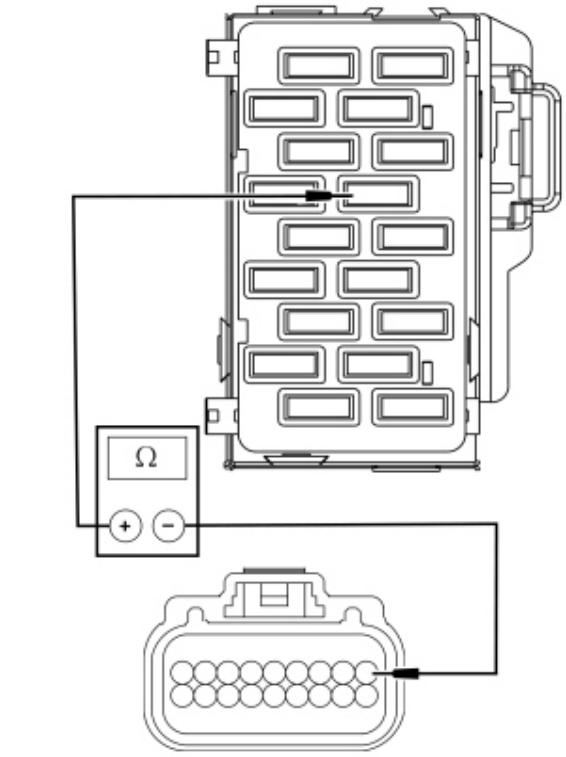
NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
Z1 RETRIEVE ALL CMDTCs IN ALL MODULES • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — ALL CMDTC (Continuous Memory). • **Is DTC B1317, B1318, B1676, U3003:16 or U3003:17 present in one or more modules AND P0562, P0563, P0620, P0625, P0626 or P065B retrieved from the PCM?**	**Yes** REFER to Section 414-00 to diagnose the charging system. **No** GO to Z2 .
Z2 TEST BATTERY CONDITION • Ignition OFF. • Carry out the battery condition test. Refer to Section 414-01 . • **Did battery pass the condition test?**	**Yes** If the battery passed the condition test but required a recharge, REFER to Section 414-00 to diagnose the charging system. CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). TEST the system for normal operation. If the battery passed the condition test and did not require a recharge, GO to Z3 . **No** INSTALL a new battery. CLEAR all CMDTCs . TEST the SRS for normal operation.
Z3 CHECK CHARGING SYSTEM VOLTAGE **NOTE:** Do not allow the engine speed to exceed 2,000 rpm while performing this step or the generator may self excite and result in default charging system output voltage. If engine speed exceeds 2,000 rpm, shut the vehicle OFF and restart the engine before performing this step.	**Yes** For DTC B1318 or U3003:16, GO to Z4 . For DTC B1317 or

• Measure the voltage of the battery: ▪ For DTC B1317 or U3003:17, turn off all accessories and run the engine at 1,500 rpm for a minimum of 2 minutes while measuring battery voltage. ▪ For DTC B1318 or U3003:16, turn on headlights and HVAC fan on high and run engine at 1,500 rpm for a minimum of 2 minutes while measuring battery voltage.  AJ0210-A • **Is the voltage between 13 and 15.2 volts?**	U3003:17, GO to Z6 . **No** REFER to Section 414-00 to diagnose the charging system. CLEAR all CMDTCs . TEST the SRS for normal operation.
Z4 CHECK FOR OPEN IGNITION CIRCUIT TO THE MODULE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect the module with the concern: ▪ For the RCM , disconnect C310A and C310B. ▪ For the Occupant Classification System Module (OCSM), disconnect C3159. • For the RCM , measure the resistance between RCM C310A-13, circuit CBP20 (YE/VT), harness side and Central Junction Box (CJB) fuse 20.  N0114855	**Yes** GO to Z5 . **No** REPAIR the affected circuit. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. CLEAR all CMDTCs . TEST the SRS for normal operation.

- For the OCSM , measure the resistance between OCSM C3159-1, circuit CBP04 (VT), harness side and CJB fuse 4.

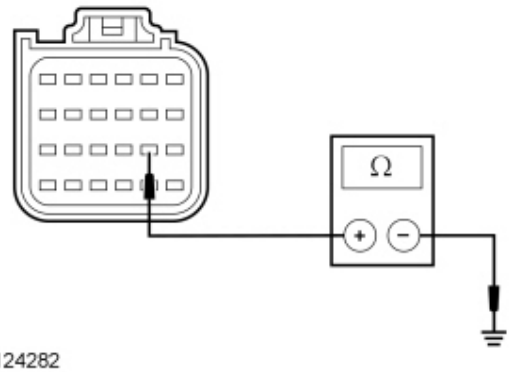


N0116799

- **Is the resistance less than 1 ohm?**

Z5 CHECK FOR OPEN GROUND TO THE MODULE

- For the RCM :
  - Measure the resistance between the RCM case and a good ground.
  - Measure the resistance between RCM C310A-14, circuit GD174 (BK/WH), harness side and ground.



N0124282

- For the OCSM , measure the resistance between OCSM C3159-14, circuit GD145 (BK/BU), harness side and ground.

Yes
GO to Z6 .

No
For the RCM , VERIFY there is no corrosion between the RCM case and mounting and VERIFY the fasteners are clean and tightened to specification with no corrosion or REPAIR circuit GD174 (BK/WH).

For the OCSM , REPAIR circuit GD145 (BK/BU).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

CLEAR all CMDTCs .
TEST the SRS for normal operation.

 N0116787 • **Is the resistance less than 1 ohm?**	

Z6 CHECK FOR MODULE OPERATION
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect the module with the concern:
  ▪ For the RCM , disconnect C310A and C310B.
  ▪ For the OCSM , disconnect C3159.
• Check for the following:
  ▪ corrosion.
  ▪ damaged pins.
  ▪ pushed-out pins.
• Connect the RCM C310A and C310B or OCSM C3159 and make sure the connector seats correctly.
• Repower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new module. REFER to Restraints Control Module (RCM) or Occupant Classification Sensor in this section.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR all CMDTCs . TEST the SRS for normal operation.

Pinpoint Test — Occupant Classification System Module (OCSM)

Pinpoint Test AA: DTCs B2290 and C1941

Refer to Wiring Diagrams Cell 46 , Supplemental Restraint System for schematic and connector information.

Normal Operation

The Occupant Classification System Module (OCSM) monitors the pressure sensor and circuity for faults. If a fault is detected, the OCSM stores DTC B2290 in memory and sends a message to the Restraints Control Module (RCM). The RCM stores DTC B00A0:09 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The Occupant Classification System (OCS) system components **are not** to be serviced separately.

DTC C1941 sets when system reset fails to complete the testing. DTC C1941 clears upon a successful system reset.

Fault PIDs [a]	Description	Fault Trigger Condition
2290_12_OD and 2290_12_CM	Passenger Seat OCS Sensor No. 1 Circuit Short to Battery	When the OCSM senses a short to voltage on the bladder pressure sensor VREF and/or signal circuit, a fault is indicated.
2290_13_OD and 2290_13_CM	Passenger Seat OCS Sensor No. 1 Circuit Short to Ground	When the OCSM senses a short to ground on the bladder pressure sensor circuits, a fault is indicated.

2290_15_OD and 2290_15_CM	Passenger Seat OCS Sensor No. 1 Internal Fault	When the OCSM senses an internal failure with the bladder pressure sensor, a fault is indicated.

[a] Fault PIDs that end in OD indicate on-demand status and are associated with DTC B2290. Fault PIDs that end in CM indicate continuous memory status and are associated with DTC B2290.

- DTC C1941 (Zero Seat Weight Test Failure) — This DTC sets if the OCSM is unable to complete a successful System Reset. All other OCS system DTCs must be diagnosed and repaired before carrying out the OCS system reset.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Faulty OCS system component
- Pressure sensing fault
- Mounting condition

PINPOINT TEST AA: DTCs B2290 AND C1941

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

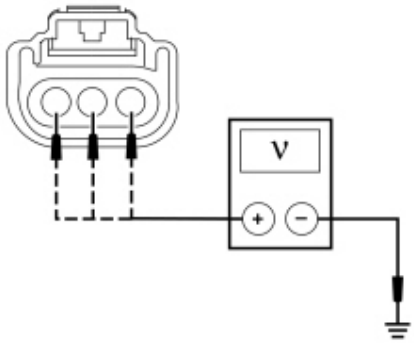
NOTE: A production OCS system allows the disconnect of the electrical connector from the OCSM .

An OCS system service kit has the OCSM electrical connector glued to the module. It cannot and should not be disconnected or altered.

Test Step	Result / Action to Take
AA1 RETRIEVE OCSM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test — OCSM . • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2290 Fault PIDs. ▪ Refer to PID list in Normal Operation to view 2290 fault PIDs. • **Do any on-demand 2290 fault PIDs indicate a fault and/or was DTC C1941 retrieved during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. GO to AA2 . **No** This is an intermittent fault when present as a

	Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to AA13.
AA2 CHECK THE SEAT WIRING AND CONNECTORS	
• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Carry out a thorough inspection of the OCS system wiring, terminals and connectors and the related seat wiring harness and body wiring harness terminals and connectors. • **Were any problems noted?**	**Yes** DEPOWER the SRS and REPAIR the seat connectors and wiring as needed. GO to AA14. If DTC C1941 was present, GO to AA9. If DTC C1941 was **not** present, GO to AA14. **No** **Vehicles with a production OCS system:** For DTC C1941, GO to AA9. For fault PID 2290_15_OD, GO to AA3. For fault PID 2290_13_OD, GO to AA10. For fault PID 2290_12_OD, GO to AA11. **Vehicles with a OCS system service kit**, INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section. GO to AA14.
AA3 CHECK THE OCS PRESSURE SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	

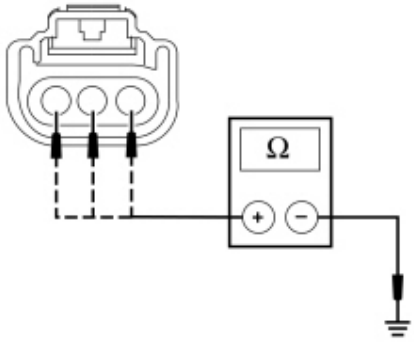
• Depower the Supplemental Restraint System (SRS). Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Seat Side Air Bag Module C337.
• Disconnect: Seat Pressure Sensor C3042.
• Disconnect: OCSM C3159.
• Ignition ON.
• Measure the voltage between seat pressure sensor:
  ▪ C3042-1, circuit CR152 (GY/YE), harness side and ground.
  ▪ C3042-2, circuit VR223 (BU/WH), harness side and ground.
  ▪ C3042-3, circuit RR152 (YE/VT), harness side and ground.
	Yes
	REPAIR circuit CR152 (GY/YE), RR152 (YE/VT) or VR223 (BU/WH).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to AA14.
	
	No
	GO to AA4.



N0116788

- **Is any voltage present on any circuit?**

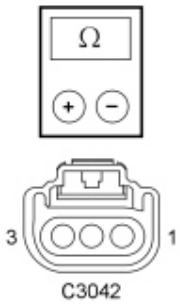
AA4 CHECK THE SEAT PRESSURE SENSOR CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**
• Measure the resistance between seat pressure sensor:
  ▪ C3042-1, circuit CR152 (GY/YE), harness side and ground.
  ▪ C3042-2, circuit VR223 (BU/WH), harness side and ground.
  ▪ C3042-3, circuit RR152 (YE/VT), harness side and ground.
  	


N0116789
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to AA5 .
	
	No
	REPAIR circuit CR152 (GY/YE), RR152 (YE/VT) or VR223 (BU/WH).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to AA14 .

AA5 CHECK THE SEAT PRESSURE SENSOR CIRCUIT VREF FOR AN OPEN	
• Measure the resistance between OCSM C3159-3, circuit CR152 (GY/YE), harness side, and seat pressure sensor C3042-1, circuit CR152 (GY/YE), harness side.  N0116790 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to AA6 . **No** REPAIR circuit CR152 (GY/YE). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to AA14 .

AA6 CHECK THE SEAT PRESSURE SENSOR RETURN CIRCUIT FOR AN OPEN	
• Measure the resistance between OCSM C3159-5, circuit RR152 (YE/VT), harness side, and seat pressure sensor C3042-3, circuit RR152 (YE/VT), harness side.  N0116791 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to AA7 . **No** REPAIR circuit RR152 (YE/VT). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to AA14 .
AA7 CHECK THE SEAT PRESSURE SENSOR SIGNAL CIRCUIT FOR AN OPEN	
• Measure the resistance between OCSM C3159-4, circuit VR223 (BU/WH), harness side, and seat pressure sensor C3042-2, circuit VR223 (BU/WH), harness side.  N0116792 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to AA8 . **No** REPAIR circuit VR223 (BU/WH). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to AA14 .
AA8 CHECK FOR A SHORT BETWEEN SEAT PRESSURE SENSOR CIRCUITS	
• Measure the resistance between seat pressure sensor: ▪ C3042-1, circuit CR152 (GY/YE), harness side, and C3042-2, circuit VR223 (BU/WH), harness side. ▪ C3042-1, circuit CR152 (GY/YE), harness side, and C3042-3, circuit RR152 (YE/VT), harness side. ▪ C3042-2, circuit VR223 (BU/WH), harness side, and C3042-3, circuit RR152 (YE/VT), harness side.	**Yes** INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section. GO to AA14 . **No** REPAIR circuit CR152 (GY/YE), RR152 (YE/VT) and/or VR223 (BU/WH). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to AA14 .

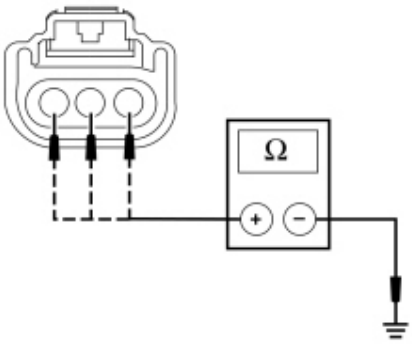


N0116793

- **Are the resistances greater than 10,000 ohms?**

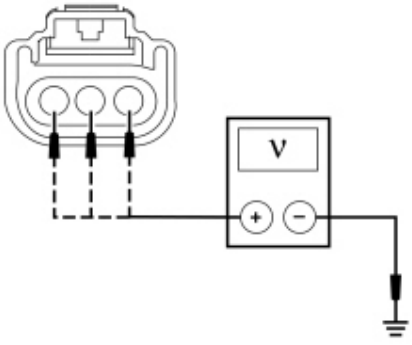
AA9 CHECK THE OCS SYSTEM	
NOTE: Make sure all OCS system components, SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out self-test. If not, DTCs will be recorded. • Enter the following diagnostic mode on the scan tool: OCS System Reset. • **WARNING: Make sure the front passenger seat repair is complete, the seat and all attached components (head restraint, seat side shield, etc.) are correctly assembled, and the seat is correctly installed to the vehicle before carrying out the System Reset. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.** • ***NOTICE:*** **To prevent system failure, take the following precautions before carrying out the Occupant Classification System (OCS) system reset:** ▪ **Make sure the OCS system components are connected and no Occupant Classification System Module (OCSM) faults are present, with the exception of DTC C1941. All other OCS system DTCs must be diagnosed and repaired before carrying out the OCS system reset.** ▪ **Make sure the voltage to the OCSM is greater than 8 volts and less than 18 volts.** ▪ **Make sure the OCS system is not at a temperature below 6° C (42°F) or above 36°C (97°F) when initiating the OCS system reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature within the limits, 6°C to 36°C (42°F to 97°F) for a minimum of 30 minutes.** ▪ **Make sure nothing is present on the passenger seat before carrying out the OCS system reset and nothing is placed on the seat during the process.** ▪ **Make sure a minimum 8-second time period has passed after cycling the ignition switch ON before the carrying out the OCS system reset process.** • Carry out the OCS system reset. • If the first system reset attempt was unsuccessful, carry out a thorough inspection of the following and repair any concerns found. ▪ OCS system connector and wiring for damage ▪ Pressure sensor hose for kinks and/or damage ▪ Seat-related wiring harness and body wiring harness terminals and connectors for damage • Carry out a second OCS system reset. • Ignition OFF. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — OCSM . • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2290 Fault PIDs. ▪ Refer to PID list in Normal Operation to view 2290 fault PIDs.	**Yes** GO to AA12 . **No** Fault corrected. GO to AA14 .

• **Do any on-demand 2290 fault PIDs indicate a fault and/or was DTC C1941 retrieved on-demand during self-test?**	
AA10 CHECK THE SEAT PRESSURE SENSOR CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF.
• **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**
• Disconnect: Seat Pressure Sensor C3042.
• Disconnect: OCSM C3159.
• Measure the resistance between seat pressure sensor:
  ▪ C3042-1, circuit CR152 (GY/YE), harness side and ground.
  ▪ C3042-2, circuit VR223 (BU/WH), harness side and ground.
  ▪ C3042-3, circuit RR152 (YE/VT), harness side and ground.
  	


N0116789
• **Are the resistances greater than 10,000 ohms?**
	Yes
	GO to AA12.
	
	No
	REPAIR circuit CR152 (GY/YE), RR152 (YE/VT) or VR223 (BU/WH).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to AA14.

AA11 CHECK THE SEAT PRESSURE SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Seat Side Air Bag Module C337.
• Disconnect: Seat Pressure Sensor C3042.
• Disconnect: OCSM C3159.
• Repower the SRS. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between seat pressure sensor:
  ▪ C3042-1, circuit CR152 (GY/YE), harness side and ground.
  ▪ C3042-2, circuit VR223 (BU/WH), harness side and ground.
  ▪ C3042-3, circuit RR152 (YE/VT), harness side and ground.
  	


N0116788
	Yes
	REPAIR circuit CR152 (GY/YE), RR152 (YE/VT) or VR223 (BU/WH).
	
	Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
	
	GO to AA14.
	
	No
	GO to AA12.

• **Is any voltage present on any circuit?**	
AA12 CONFIRM THE OCS FAULT	
NOTE: Make sure all OCS system components, SRS components, sensor electrical connectors and the RCM electrical connectors are connected before carrying out self-test. If not, DTCs will be recorded. • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Prior to reconnecting any previously disconnected SRS component: ▪ OCS system connector and wiring for damage. ▪ pressure sensor hose for kinks and/or damage. ▪ seat-related wiring harness and body wiring harness terminals and connectors for damage. ▪ inspect wire harness for any damage, pinched, cut or pierced wires. ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ▪ repair any concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. • Connect: OCSM C3159 (if disconnected previously). • Connect: Seat Pressure Sensor C3042 (if previously disconnected). • Enter the following diagnostic mode on the scan tool: Self Test — OCSM . • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2290 Fault PIDs. ▪ Refer to PID list in Normal Operation to view 2290 fault PIDs. • **Does the original on-demand 2290 fault PID indicate a fault or was DTC C1941 retrieved on-demand during self-test?**	**Yes** INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section. GO to AA14 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to AA13 .
AA13 CHECK FOR AN INTERMITTENT FAULT	
• Enter the following diagnostic mode on the scan tool: Self Test — OCSM . • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2290 Fault PIDs. • **Do any on-demand 2290 fault PIDs indicate a fault?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. CHECK for causes of the intermittent fault at or near the affected SRS component connector. REPAIR any intermittent wiring, terminal or connector concerns found. Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. If an intermittent concern **was** found and repaired, GO to AA14 .

	If an intermittent concern **was not** found and repaired, USE the fault PIDs recorded and GO to the appropriate pinpoint test step. **Vehicles with a production OCS system** For fault PID 2290_15_OD, GO to AA3. For fault PID 2290_13_OD, GO to AA10. For fault PID 2290_12_OD, GO to AA11. **Vehicles with an OCS system service kit** : INSPECT the seat wiring harness for damage and REPAIR as needed. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. If OK, INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section. GO to AA11. **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. ACTIVATE other systems in the same wire harness. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to AA14.
AA14 CHECK FOR ADDITIONAL SRS DTCs • Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for

event of an accidental deployment. • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved on-demand during self test?**	pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test AB: DTC B2909

Refer to Wiring Diagrams Cell 46, Supplemental Restraint System for schematic and connector information.

Normal Operation

The Belt Tension Sensor (BTS) operates in conjunction with the Occupant Classification System (OCS) system. The OCS system interprets a variable voltage signal provided by the BTS to identify the possible presence of a child safety seat in the front passenger seat. The voltage output of the BTS is proportional to the amount of tension applied to the sensor by the belt. No tension on the belt returns a low voltage (approximately 0.95 volt) to the Occupant Classification System Module (OCSM), while high tension returns a higher voltage (approximately 3.8 volts) to the OCSM.

The OCSM monitors the BTS and circuitry for faults. If a fault is detected, the OCSM stores DTC B2909 in memory and sends a message to the Restraints Control Module (RCM). The RCM stores DTC B00A0:09 in memory and sends a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

Fault PIDs [a]	Description	Fault Trigger Condition
2909_29_OD and 2909_29_CM	Front Passenger Side Belt Tension Sensor Short to Ground	When the OCSM senses a short to ground on the BTS circuits, a fault is indicated.
2909_31_OD and 2909_31_CM	Front Passenger Side Belt Tension Sensor Circuit Fault	When the OCSM senses a failure on the BTS circuits, a fault is indicated.
2909_30_OD and 2909_30_CM	Front Passenger Side Belt Tension Sensor Circuit Open	When the OCSM senses an open on the BTS circuits, a fault is indicated.
2909_28_OD and 2909_28_CM	Front Passenger Side Belt Tension Sensor Circuit Short to Battery	When the OCSM senses a short to voltage on the BTS signal circuit, a fault is indicated.

[a] Fault PIDs that end in OD indicate on-demand status and are associated with DTC B2909. Fault PIDs that end in CM indicate continuous memory status and are associated with DTC B2909.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- BTS (part of RH front safety belt retractor)
- OCSM

PINPOINT TEST AB: DTC B2909

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive

load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

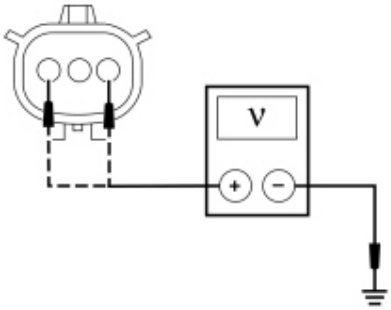
NOTE: Only disconnect or reconnect Supplemental Restraint System (SRS) components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog Advantage™ or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AB1 RETRIEVE OCSM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — OCSM . • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2909 Fault PIDs. ▪ Refer to PID list in Normal Operation to view 2909 fault PIDs. • **Do any on-demand 2909 fault PIDs indicate a fault?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For fault PID 2909_31_OD, GO to AB2 . For fault PID 2909_28_OD, GO to AB8 . For fault PID 2909_30_OD, GO to AB9 . For fault PID 2909_29_OD, GO to AB10 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. GO to AB13 .
AB2 CHECK THE BTS CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF.
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Disconnect: Passenger Seat Side Air Bag Module C337.
• Disconnect: BTS C3238.
• Disconnect: OCSM C3159 (vehicles with an OE OCS system).
• Disconnect: Passenger Seat Harness C3007 (vehicles with an OCS system service kit).
• Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between BTS :
  ▪ C3238-1, circuit RR142 (GN), harness side and ground.
  ▪ C3238-3, circuit LR142 (YE/BU), harness side and ground.
	Yes
	REPAIR circuit LR142 (YE/BU) or RR142 (GN).
	
	Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.
	
	GO to AB14 .
	
	No
	GO to AB3 .



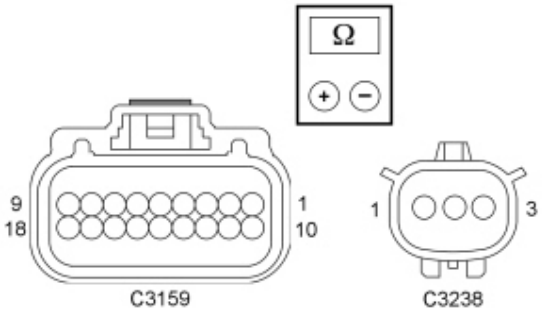
N0117232

- **Is any voltage present on either circuit?**

AB3 CHECK THE BTS CIRCUITS FOR AN OPEN

- Ignition OFF.
- For vehicles with an OE OCS system, measure the resistance between OCSM C3159, harness side and BTS C3238, harness side using the following chart.

OCSM	Circuit	BTS
C3159-11	LR142 (YE/BU)	C3238-3
C3159-12	RR142 (GN)	C3238-1
C3159-13	VR210 (BU/BN)	C3238-2



N0116776

- For vehicles with an OCS system service kit, measure the resistance between passenger seat harness C3007, main body harness side and BTS C3238, harness side using the following chart.

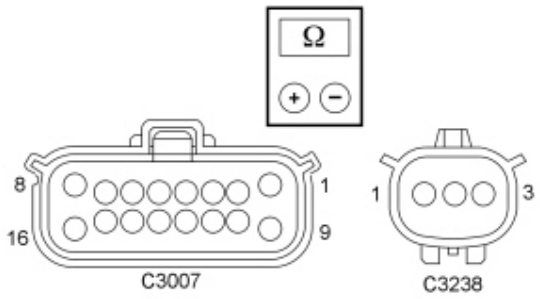
Passenger Seat Harness	Circuit	BTS
C3007-13	LR142 (YE/BU)	C3238-3
C3007-14	RR142 (GN)	C3238-1
C3007-12	VR210 (BU/BN)	C3238-2

Yes
GO to AB4 .

No
REPAIR the affected circuit(s).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

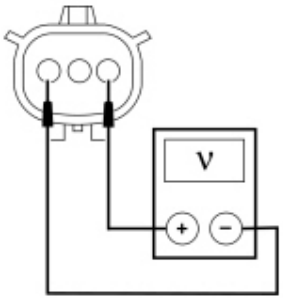
GO to AB14 .



N0116936

- **Are the resistances less than 0.5 ohm?**

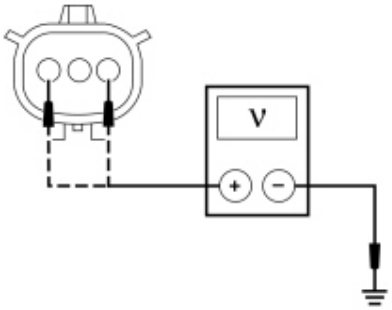
AB4 CHECK THE BTS VREF AND SIGNAL CIRCUIT FOR A SHORT TO GROUND	
• Measure the resistance between BTS : ▪ C3238-1, circuit RR142 (GN), harness side and ground. ▪ C3238-3, circuit LR142 (YE/BU), harness side and ground.  N0116796 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AB5 . **No** REPAIR circuit LR142 (YE/BU) or RR142 (GN). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to AB14 .
AB5 CHECK FOR A SHORT BETWEEN BTS CIRCUITS	
• Measure the resistance between BTS : ▪ C3238-1, circuit RR142 (GN), harness side and C3238-3, circuit LR142 (YE/BU), harness side. ▪ C3238-1, circuit RR142 (GN), harness side and C3238-2, circuit VR210 (BU/BN), harness side. ▪ C3238-3, circuit LR142 (YE/BU), harness side and C3238-2, circuit VR210 (BU/BN), harness side.  N0116793 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AB6 . **No** REPAIR the affected circuit(s). Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information. GO to AB14 .
AB6 CHECK THE OCSM OUTPUT	

• Prior to reconnecting any previously disconnected SRS component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: OCSM C3159 (vehicles with an OE OCS system).
• Connect: Passenger Seat Harness C3007 (vehicles with an OCS system service kit).
• Ignition ON.
• Measure the voltage between BTS C3238-3, circuit LR142 (YE/BU), harness side and C3238-1, circuit RR142 (GN), harness side.
 	
  	


N0116797
• **Is the voltage approximately 5 volts?**
	Yes
	GO to AB7.
	
	No
	GO to AB12.

AB7 CHECK BTS VOLTAGE OUTPUT	
• Ignition OFF. • Connect a fused jumper wire between BTS C3238-3, circuit LR142 (YE/BU), harness side and C3238 pin 3, component side. • Connect a fused jumper wire between BTS C3238-1, circuit RR142 (GN), harness side and C3238 pin 1, component side. • Ignition ON. • Measure the voltage between BTS C3238 pin 3, component side and ground as the tension of the BTS varies by pulling upward at the safety belt webbing.  N0109029 • **Does the voltage vary from approximately 0.95 volt with no tension applied to the sensor to approximately 3.8 volts with full tension applied to the sensor?**	**Yes** REMOVE the fused jumper wires and GO to AB12. **No** REMOVE the fused jumper wires and INSTALL a new RH safety belt retractor assembly. REFER to Section 501-20A. GO to AB14.
AB8 CHECK THE BTS CIRCUITS FOR A SHORT TO VOLTAGE	

- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: Passenger Seat Side Air Bag Module C337.
- Disconnect: BTS C3238.
- Disconnect: OCSM C3159 (vehicles with an OE OCS system).
- Disconnect: Passenger Seat Harness C3007 (vehicles with an OCS system service kit).
- Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Ignition ON.
- Measure the voltage between BTS :
  - C3238-1, circuit RR142 (GN), harness side and ground.
  - C3238-3, circuit LR142 (YE/BU), harness side and ground.



N0116798

- **Is any voltage present on either circuit?**

Yes
REPAIR circuit LR142 (YE/BU) or RR142 (GN).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

GO to AB14 .

No
GO to AB12 .

AB9 CHECK THE BTS CIRCUIT FOR AN OPEN

- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: BTS C3238.
- Disconnect: OCSM C3159 (vehicles with an OE OCS system).
- Disconnect: Passenger Seat Harness C3007 (vehicles with an OCS system service kit).
- For vehicles with an OE OCS system, measure the resistance between OCSM C3159, harness side and BTS C3238, harness side using the following chart.

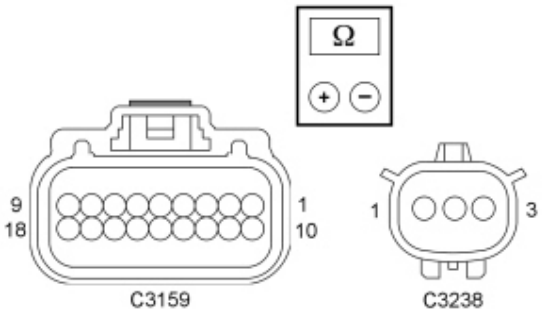
OCSM	Circuit	BTS
C3159-11	LR142 (YE/BU)	C3238-3
C3159-12	RR142 (GN)	C3238-1
C3159-13	VR210 (BU/BN)	C3238-2

Yes
GO to AB11 .

No
REPAIR the affected circuit(s).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

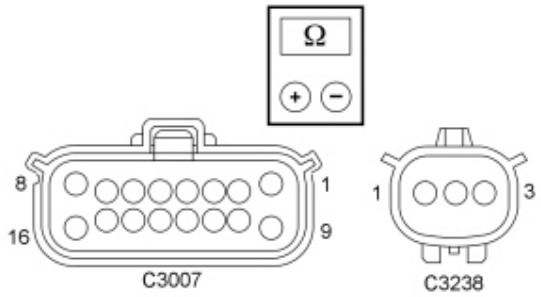
GO to AB14 .



N0116776

- For vehicles with an OCS system service kit, measure the resistance between passenger seat harness C3007, harness side and BTS C3238, harness side using the following chart.

Passenger Seat Harness	Circuit	BTS
C3007-13	LR142 (YE/BU)	C3238-3
C3007-14	RR142 (GN)	C3238-1
C3007-12	VR210 (BU/BN)	C3238-2



N0116936

- **Are the resistances less than 0.5 ohm?**

AB10 CHECK THE BTS CIRCUITS FOR A SHORT TO GROUND

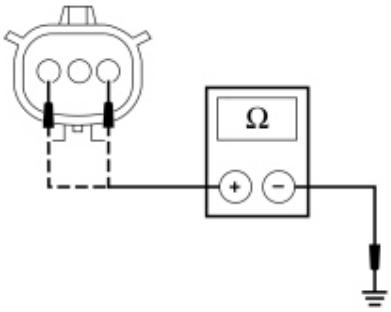
- Ignition OFF.
- Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
- Disconnect: BTS C3238.
- Disconnect: OCSM C3159 (vehicles with an OE OCS system).
- Disconnect: Passenger Seat Harness C3007 (vehicles with an OCS system service kit).
- Measure the resistance between BTS :
  - C3238-1, circuit RR142 (GN), harness side and ground.
  - C3238-3, circuit LR142 (YE/BU), harness side and ground.

Yes
GO to AB11 .

No
REPAIR circuit LR142 (YE/BU) or RR142 (GN).

Refer to Wiring Diagrams Cell 5 , Connector Repair Procedures for schematic and connector information.

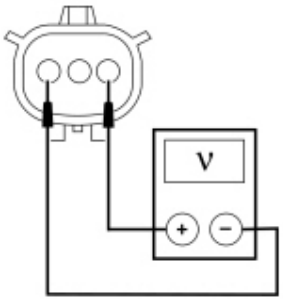
GO to AB14 .



N0116796

- **Are the resistances greater than 10,000 ohms?**

AB11 CHECK THE OCSM OUTPUT	

• Disconnect: Passenger Seat Side Air Bag Module C337.
• Prior to reconnecting any previously disconnected component:
  ▪ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  ▪ inspect wire harness for any damage, pinched, cut or pierced wires.
  ▪ repair any concerns found.
 	
Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information.
 	
• Connect: OCSM C3159 (vehicles with an OE OCS system).
• Connect: Passenger Seat Harness C3007 (vehicles with an OCS system service kit).
• Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Ignition ON.
• Measure the voltage between BTS C3238-3, circuit LR142 (YE/BU), harness side and C3238-1, circuit RR142 (GN), harness side.
 	
  	


N0116797
 	
• **Is the voltage approximately 5 volts?**
	Yes
	GO to AB7.
	
	No
	GO to AB12.

AB12 CONFIRM THE OCS SYSTEM FAULT	
NOTE: Make sure all OCS system components, SRS sensor electrical connectors and the RCM electrical connectors are connected before carrying out self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Prior to reconnecting any previously disconnected SRS component:	**Yes** INSTALL a new OCS system service kit. REFER to Occupant Classification Sensor in this section. GO to AB14. **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not**

■ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damage, pinched, cut or pierced wires. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: BTS C3238. • Connect: OCSM C3159 (if previously disconnected) (vehicles with an OE OCS system). • Connect: Passenger Seat Harness C3007 (if previously disconnected) (vehicles with an OCS system service kit). • Repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — OCSM. • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2909 Fault PIDs. ■ Refer to PID list in Normal Operation to view 2909 fault PIDs. • **Does the original on-demand 2909 fault PID indicate a fault?**	**install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** GO to AB13.
AB13 CHECK FOR AN INTERMITTENT FAULT	
• Ignition OFF. • Disconnect: BTS C3238. ■ inspect connector(s) (including any in-line connectors) for loose or spread terminals and loose or frayed wire connections at terminals. ■ inspect wire harness for any damage, pinched, cut or pierced wires. ■ repair any concerns found. Refer to Wiring Diagrams Cell 5, Connector Repair Procedures for schematic and connector information. • Connect: BTS C3238. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — OCSM. • Enter the following diagnostic mode on the scan tool: DataLogger — OCSM — View and Record All 2909 Fault PIDs. ■ Refer to PID list in Normal Operation to view 2909 fault PIDs. • **Do any on-demand 2909 fault PIDs indicate a fault?**	**Yes** This is a hard fault. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. Using the on-demand fault PIDs recorded, GO to the appropriate pinpoint test step. For fault PID 2909_31_OD, GO to AB2. For fault PID 2909_28_OD, GO to AB8. For 2909_30_OD, GO to AB9. For fault PID 2909_29_OD, GO to AB10. **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. ACTIVATE other systems in the same wire harness. **Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found. GO to AB14.
AB14 CHECK FOR ADDITIONAL SRS DTCs	

• Ignition OFF. • **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test — Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM and OCSM. • **Are any RCM and/or OCSM DTCs retrieved?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs. PROVE OUT the SRS. Repair is complete. RETURN the vehicle to the customer.

Inspection and Repair After a Supplemental Restraint System (SRS) Deployment

WARNING: Remove restraint system diagnostic tools from the vehicle prior to road testing. If tools are not removed, the supplemental restraint system (SRS) device may not deploy in a crash. Failure to follow this instruction may result in serious personal injury or death in a crash and possibly violate vehicle safety standards.

NOTE: After diagnosing or repairing a Supplemental Restraint System (SRS), the restraint system diagnostic tools (if required) must be removed before operating the vehicle over the road.

NOTE: Deployable devices (such as air bag modules, pretensioners) may deploy alone or in various combinations depending on the impact event.

NOTE: Always refer to the appropriate workshop manual procedures prior to carrying out vehicle repairs affecting the SRS and safety belt system.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. **NOTE:** Refer to the correct removal and installation procedure for all SRS components being installed.

   When any deployable device or combination of devices have deployed and/or the Restraints Control Module (RCM) has DTC B1231/B1193:00 (Event Threshold Exceeded) in memory, the repair of the vehicle SRS is to include the removal of all deployed devices and the installation of new deployable devices, the removal and installation of new impact sensors and the removal and installation of a new RCM . DTCs must be cleared from all required modules after repairs are carried out.

Vehicles with Occupant Classification System (OCS) system

2. **NOTE:** After installation of new Occupant Classification System (OCS) components, carry out the Occupant Classification System (OCS) System Reset procedure as instructed in the workshop manual. Refer to the appropriate workshop manual for OCS system removal and installation procedure.

   When a vehicle has been involved in a collision and the Occupant Classification System Module (OCSM) has DTC B1231/B1193:00 stored in memory, the repair of the OCS system is to include the following procedures for the specified system:
   - For rail-type OCS system, inspect the passenger side floorpan for damage and repair as necessary. Install new OCS system rails. Do not install a new OCSM unless DTC B1231 cannot be cleared.
   - For weight sensor bolt-type OCS system, inspect the passenger side floorpan for damage and repair as necessary. Install a new seat track with OCS system weight sensor bolts. DTC must be cleared from the OCSM before carrying out Occupant Classification System (OCS) System Reset. Do not install a new OCSM unless DTC B1231/B1193:00 cannot be cleared.
   - For bladder-type OCS system, inspect for damage and repair as necessary. If installation of an OCS system component is required, an OCS system service kit must be installed.

All vehicles

3. When any damage to the impact sensor mounting points or mounting hardware has occurred,

repair or install new mounting points and mounting hardware as needed.

4. When the driver air bag module has deployed, a new clockspring must be installed.

5. New driver and/or front passenger safety belt systems (including retractors, buckles and height adjusters) must be installed if the vehicle is involved in a collision that results in deployment of the driver and/or front passenger safety belt pretensioners. For additional information, refer to Section 501-20A .

6. Inspect the entire vehicle for damage, including the following components:
   - Steering column (deployable column if equipped)
   - Instrument panel knee bolsters and mounting points
   - Instrument panel braces and brackets
   - Instrument panel and mounting points
   - Seats and seat mounting points
   - Safety belts, safety belt buckles and safety belt retractors. For additional information, refer to Section 501-20A .
   - SRS wiring, wiring harnesses and connectors

7. After carrying out the review and inspection of the entire vehicle for damage, repair or install new components as needed.

Pyrotechnic Device Disposal

Disposal of Deployable Devices and Pyrotechnic Devices That are Undeployed/Inoperative

NOTE: All inoperative air bag modules and safety belt pretensioners have been placed on the Mandatory Return List. All discolored or damaged air bag modules must be treated the same as any inoperative live air bag being returned.

1. Depower the Supplemental Restraint System (SRS). For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the undeployed/inoperative device. For additional information, refer to the appropriate procedure in this section or Section 501-20A .

3. **NOTE:** When installing a new air bag module, a prepaid return postcard is provided with the replacement air bag module. The serial number for the new part and the Vehicle Identification Number (VIN) must be recorded and sent to Ford Motor Company.

   If installing a new air bag module, record the necessary information and return the inoperative air bag module to Ford Motor Company.

Disposal of Deployable Devices and Pyrotechnic Devices That Are Deployed

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the deployed device. For additional information, refer to the appropriate procedure in this section or Section 501-20A .

3. **NOTE:** If a dual stage driver or passenger air bag module has deployed due to a crash event, the air bag module requires manual deployment to make sure both stages have deployed before scrapping the vehicle or disposing of the air bag module. To determine if a vehicle is equipped with dual stage driver or passenger air bag modules, refer to the Description and Operation portion of this section.

   Dispose of the deployed device in the same manner as any other part to be scrapped.

Disposal of Deployable Devices and Pyrotechnic Devices That Require Manual Deployment

1. Safety and environmental concerns require consideration and treatment of restraints system deployable and pyrotechnic devices when disposing of vehicles, deployable devices or pyrotechnic devices. Deploying deployable and pyrotechnic devices before scrapping a vehicle or the device eliminates the potential for hazardous exposures or reactions during processing. If special handling procedures are followed, deployable and pyrotechnic devices can be deployed safely and recycled with the vehicle, shipped separately to a recycling facility or disposed of safely.

   NOTE: To determine the deployable devices a vehicle is equipped with, refer to the Description

and Operation portion of this section.

A vehicle equipped with any of the following deployable devices requires manual deployment of the devices before scrapping the vehicle or component. For additional information, refer to the appropriate portion of this procedure.

- Driver air bag module
- Passenger air bag module
- Knee air bag module
- Seat side air bag modules
- Safety Canopy® modules
- Side air curtain modules

2. **NOTE:** To determine the pyrotechnic devices a vehicle is equipped with, refer to the Description and Operation portion of this section.

   A vehicle equipped with any of the following pyrotechnic devices requires manual deployment of the devices before scrapping the vehicle or component. For additional information, refer to the appropriate portion of this procedure.

   - Safety belt buckle pretensioners
   - Safety belt retractor pretensioners
   - Adaptive load-limiting retractors
   - Deployable steering column

3. **NOTE:** To determine if a vehicle is equipped with dual stage driver or passenger air bag modules, refer to Principles of Operation in the Diagnosis and Testing portion of this section.

   If a dual stage driver or passenger air bag module has deployed due to a crash event, the air bag module requires manual deployment to make sure both stages have deployed before scrapping the vehicle or disposing of the air bag module. For additional information, refer to Driver Air Bag Module, Knee Air Bag Module, Passenger Air Bag Module and Seat Side Air Bag Modules — Remote Deployment in this procedure.

Driver Air Bag Module, Knee Air Bag Module, Passenger Air Bag Module and Seat Side Air Bag Modules — Remote Deployment

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: Always carry or place a live Safety Canopy®, or side air curtain module, with the module and tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9.14 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

NOTE: For air bag modules with multiple loops, all the loops on the air bag module must be deployed.

NOTE: Some driver and passenger front air bags have 2 deployment stages. After a collision it is possible that Stage 1 has deployed and Stage 2 has not.

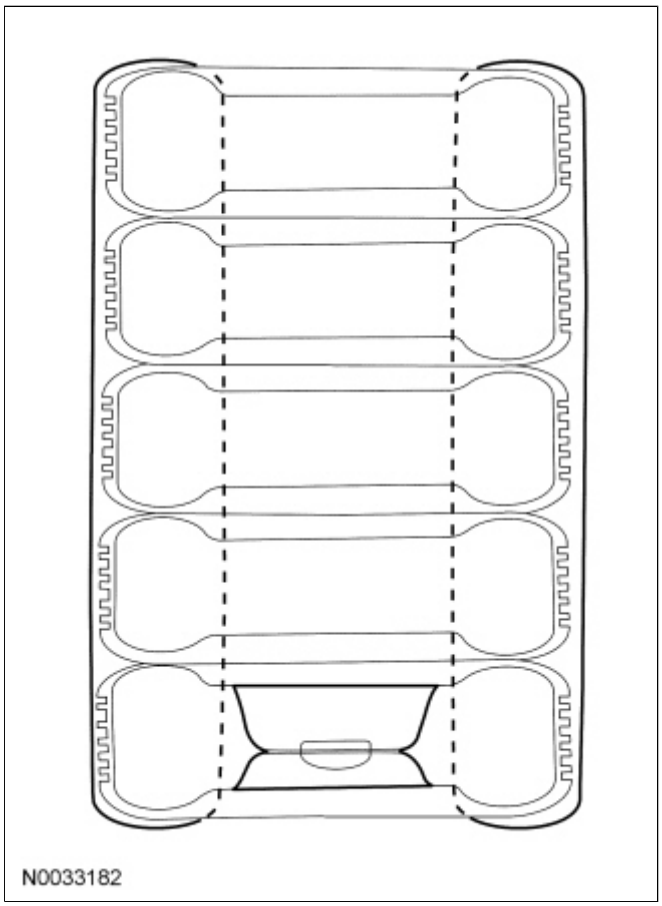
If a front air bag module has deployed, it is **mandatory** that the front air bag module be remotely deployed using the appropriate air bag disposal procedure.

NOTE: A typical air bag disposal is shown that is similar for all vehicles.

All driver, knee, passenger and seat side air bag modules

1. Make a container to house the air bag module for deployment.
    - **NOTE:** The tires must be of sufficient size to accommodate the air bag module.

      Obtain a tire and wheel assembly and an additional 4 tires (without wheels) of the same size.
    - With the tire and wheel assembly on the bottom, stack the tires.
    - Securely tie all of the tires together.



2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Remove the air bag module. For additional information, refer to the appropriate procedure in this section.

4. **NOTE:** If the air bag module does not have a hard-wired pigtail, it will be necessary to cut the wires and connector(s) from the vehicle wire harness and reconnect to the air bag module.

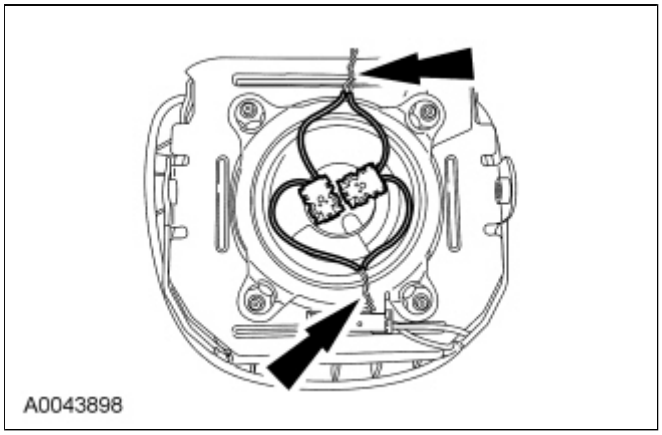
   Cut each of the air bag module wires near the electrical connector that connects to the vehicle

wire harness.

5. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

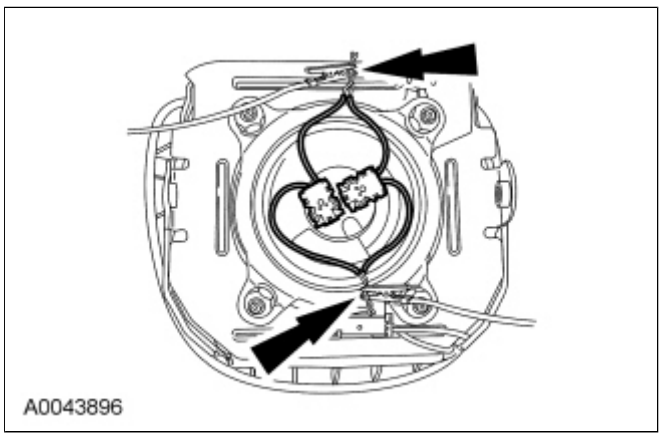
6. **NOTE:** Typical driver air bag module with 2 loops shown, other air bag modules with multiple loops similar.

   For air bag modules with multiple loops, twist together a wire from each loop then repeat for the remaining wires from each loop.



7. Make a jumper harness to deploy the air bag module.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

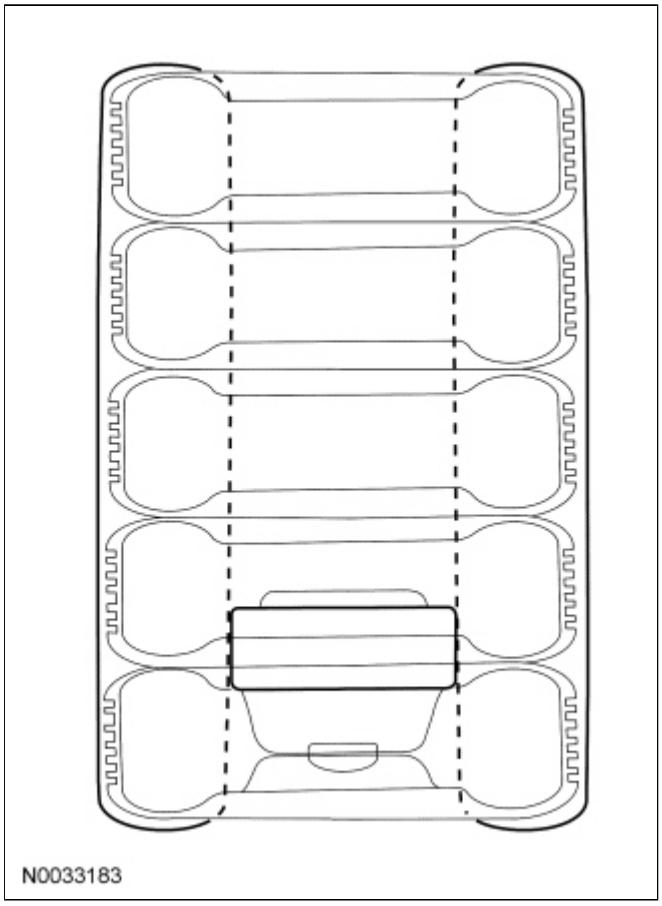
8. Using the end of the jumper harness where the wires are not connected together, attach each wire of the jumper harness to each wire of the air bag module or to the twisted-together wires if multiple loops. Use tape or other insulating material to make sure that the leads do not make contact with each other.



Driver air bag modules

9. **NOTE:** Make sure to maintain the connections to the air bag module.

   With the stack of tires upright and the wheel on the bottom, carefully place the driver air bag module, with the trim cover facing up, on the wheel.

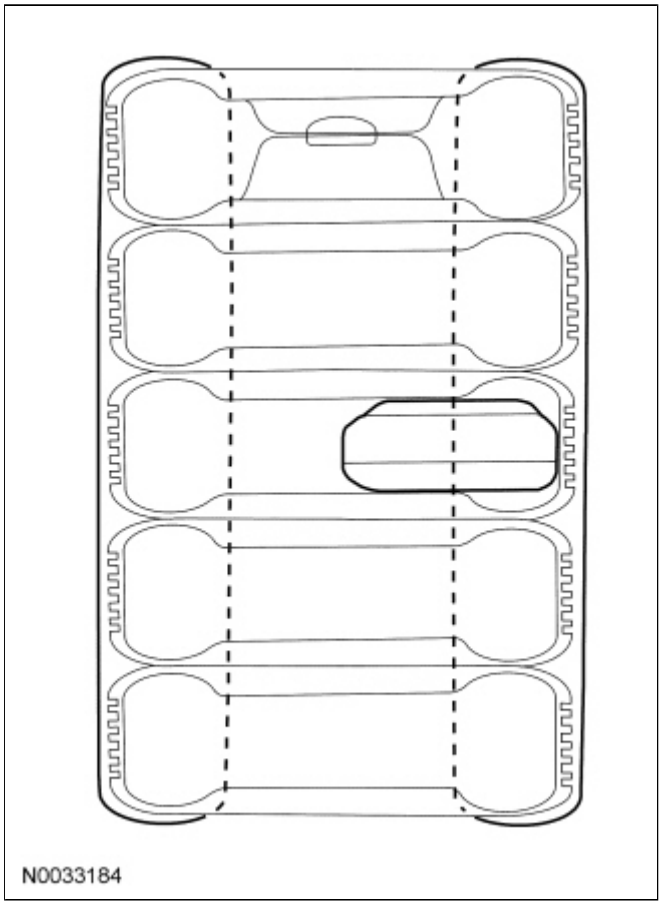


Passenger, knee and seat side air bag modules

10. **NOTE:** Make sure to maintain the connections to the air bag module.

    Tip the stack of tires on its side and place the air bag module inside the center tire, making sure that there are 2 tires beneath the tire containing the air bag module and 2 tires (including the tire and wheel assembly) above the tire containing the air bag module.

11. Place the tire stack upright, with the wheel on top.



All driver, knee, passenger and seat side air bag modules

12. Remain at least 9.14 m (30 ft) away from the air bag module.
13. From the end of the jumper harness that is not connected to the air bag module, disconnect the 2 wires of the jumper harness from each other.
14. Deploy the air bag module by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.
15. To allow for cooling, wait at least 10 minutes before approaching the deployed air bag module.
16. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.

Safety Belt Buckle Pretensioners, Safety Belt Retractor Pretensioners and Adaptive Load Limiting Safety Belt Retractors — Remote Deployment

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

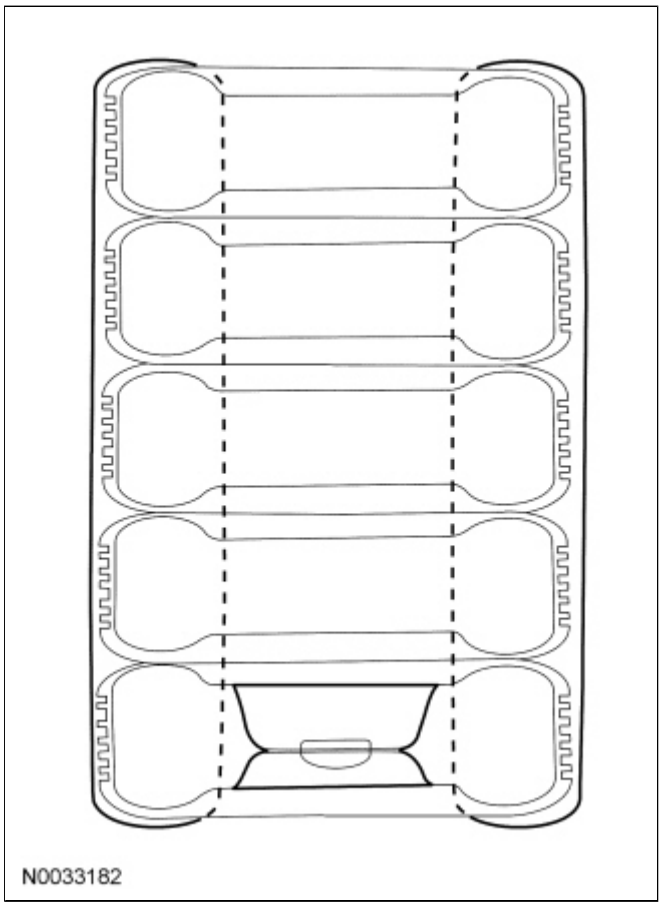
WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9.14 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in

serious personal injury.

NOTE: A typical safety belt buckle and retractor disposal is shown that is similar for all vehicles.

1. Make a container to house the safety belt buckle or retractor for deployment.
   - **NOTE:** The tires must be of sufficient size to accommodate the safety belt buckle or retractor.

     Obtain a tire and wheel assembly and an additional 4 tires (without wheels) of the same size.
   - With the tire and wheel assembly on the bottom, stack the tires.
   - Securely tie all of the tires together.



2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Remove the safety belt buckle or retractor. For additional information, refer to the appropriate procedure in Section 501-20A .
   - When deploying a safety belt buckle pretensioner, install a nut and bolt of sufficient length and of the same diameter as was used to retain it to the seat.

4. **NOTE:** If the safety belt buckle or retractor does not have a hard-wired pigtail, it will be necessary to cut the wires and connector(s) from the vehicle wire harness and reconnect to the safety belt buckle or retractor.

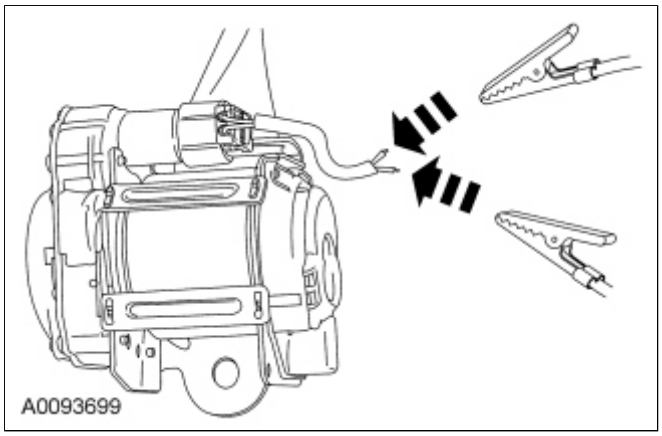
   Cut each of the safety belt buckle or retractor wires near the electrical connector that connects to the vehicle wire harness.

5. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

6. Make a jumper harness to deploy the safety belt buckle or retractor.
    - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
    - At one end of the jumper harness, connect the wires together.

7. **NOTE:** Typical safety belt retractor pretensioner shown, other safety belt buckle pretensioners and load-limiting retractors similar.

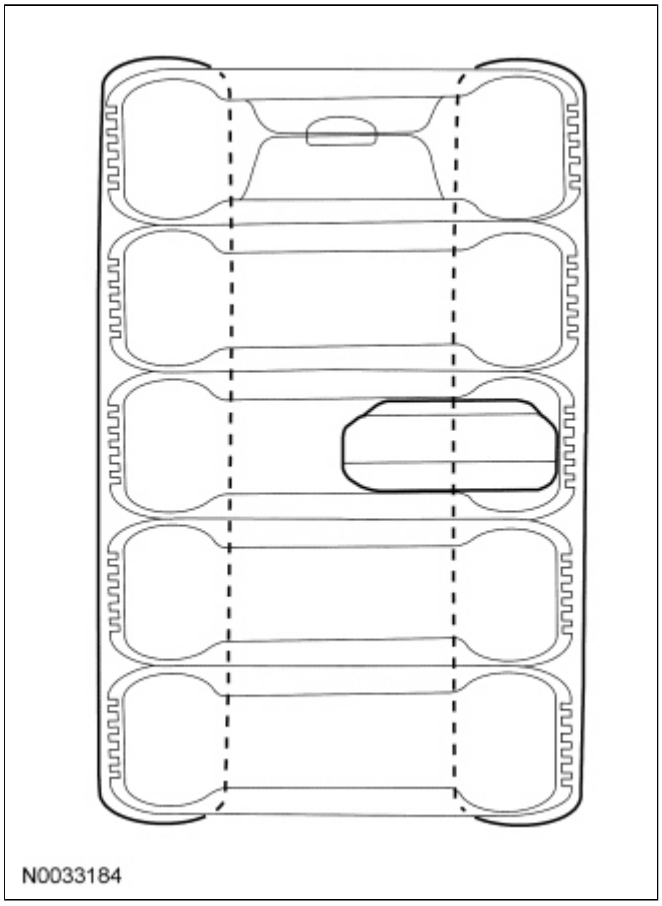
    Using the end of the jumper harness that the wires are not connected together, attach each wire of the jumper harness to each wire of the safety belt buckle or retractor. Use tape or other insulating material to make sure that the leads do not make contact with each other.



8. **NOTE:** Make sure to maintain the connections to the safety belt buckle or retractor.

    Tip the stack of tires on its side and place the safety belt buckle or retractor inside the center tire, making sure that there are 2 tires beneath the tire containing the safety belt buckle or retractor and 2 tires (including the tire and wheel assembly) above the tire containing the safety belt buckle or retractor.

9. Place the tire stack upright, with the wheel on top.



10. Remain at least 9.14 m (30 ft) away from the safety belt buckle or retractor.

11. From the end of the jumper harness that is not connected to the safety belt buckle or retractor, disconnect the 2 wires of the jumper harness from each other.

12. Deploy the safety belt buckle or retractor by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

13. To allow for cooling, wait at least 10 minutes before approaching the deployed safety belt buckle or retractor.

14. Dispose of the deployed safety belt buckle or retractor in the same manner as any other part to be scrapped.

Safety Belt Buckle Pretensioners, Safety Belt Retractor Pretensioners and Load Limiting Safety Belt Retractors — In-Vehicle Deployment

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9.14 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in

serious personal injury.

NOTE: A typical safety belt buckle and retractor disposal is shown that is similar for all vehicles.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Access the safety belt buckle or retractor electrical connectors. For additional information, refer to Section 501-20A .

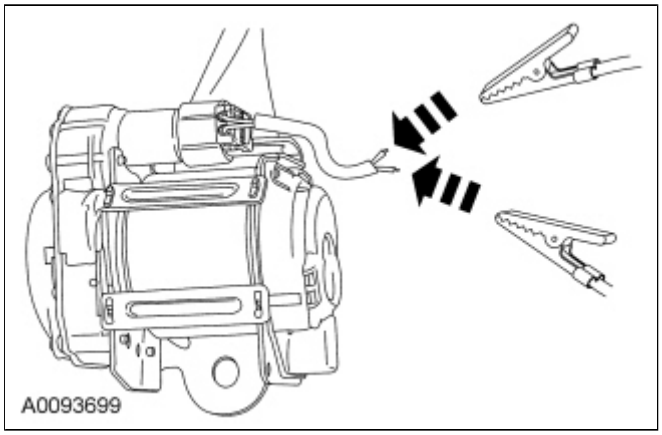
3. Cut each of the safety belt buckle or retractor wires, leaving at least 101.6 mm (4 in) to work with.

4. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

5. Make a jumper harness to deploy the safety belt buckle or retractor.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

6. **NOTE:** Typical safety belt retractor pretensioner shown, other safety belt buckle pretensioners and load-limiting retractors are similar.

   Using the end of the jumper harness that the wires are not connected together, attach each wire of the jumper harness to each wire of the safety belt buckle or retractor. Use tape or other insulating material to make sure that the leads do not make contact with each other.



7. Remain at least 9.14 m (30 ft) away from the safety belt buckle or retractor.

8. From the end of the jumper harness that is not connected to the safety belt buckle or retractor, disconnect the 2 wires of the jumper harness from each other.

9. Deploy the safety belt buckle or retractor by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

10. To allow for cooling, wait at least 10 minutes before approaching the deployed safety belt buckle or retractor.

11. Dispose of the deployed safety belt buckle or retractor in the same manner as any other part to be scrapped.

Safety Canopy® Modules and Side Air Curtain Modules — In-Vehicle Deployment

WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9.14 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

NOTE: The Safety Canopy® or side air curtain module deployment for a scrapped vehicle will occur in its installed position in the vehicle.

NOTE: A typical Safety Canopy® or side air curtain module disposal is shown that is similar for all vehicles.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

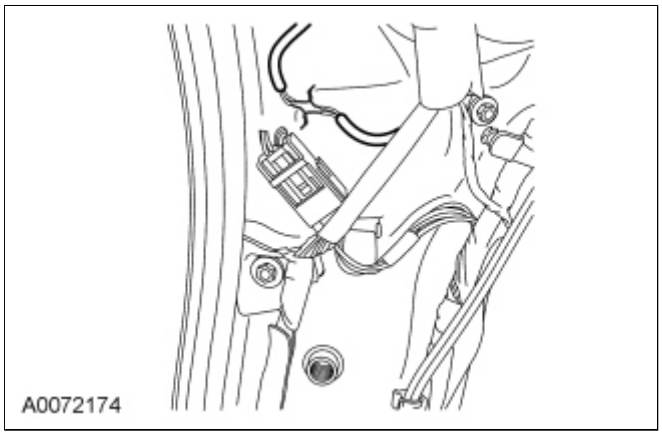
2. Access the Safety Canopy®/side air curtain module electrical connectors. For additional information, refer to the appropriate procedure in this section.

3. Cut each of the Safety Canopy®/side air curtain module wires leaving at least 101.6 mm (4 in) to work with.

4. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

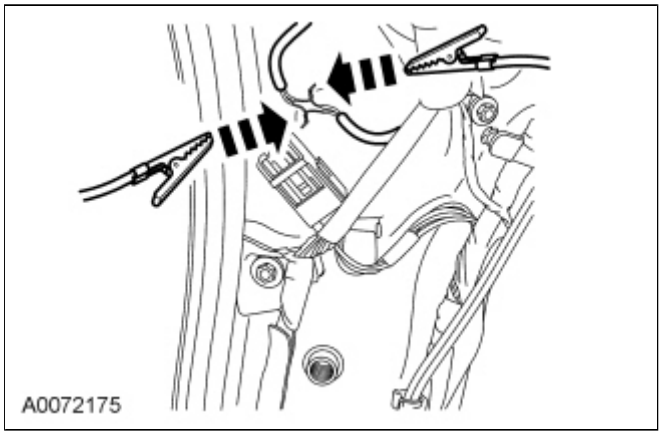
5. **NOTE:** Typical Safety Canopy®/side air curtain module with 2 loops shown, other Safety Canopy®/side air curtain modules with 2 loops are similar.

   For Safety Canopy®/side air curtain modules with multiple loops, twist together a wire from each loop then repeat for the remaining wires from each loop.



6. Make a jumper harness to deploy the Safety Canopy®/side air curtain module.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

7. Using the end of the jumper harness where the wires are not connected together, attach each wire of the jumper harness to each wire of the Safety Canopy®/side air curtain module or to the twisted-together wires if multiple loops. Use tape or other insulating material to make sure that the leads do not make contact with each other.



8. From the end of the jumper harness that is not connected to the Safety Canopy®/side air curtain module, disconnect the 2 wires of the jumper harness from each other.

9. Deploy the Safety Canopy®/side air curtain module by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

10. To allow for cooling, wait at least 10 minutes before approaching the deployed Safety Canopy®/side air curtain module.

11. Dispose of the deployed Safety Canopy®/side air curtain module in the same manner as any other part to be scrapped.

Deployable Steering Column — In-Vehicle Deployment

WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9.14 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. **NOTE:** It may be necessary to lower or remove the deployable steering column from the instrument panel to access the deployable steering column electrical connector.

   Access the deployable steering column electrical connector.

3. **NOTE:** If the deployable steering column does not have a hard-wired pigtail, it will be necessary to cut the wires and connector(s) from the vehicle wire harness and reconnect to the deployable steering column.

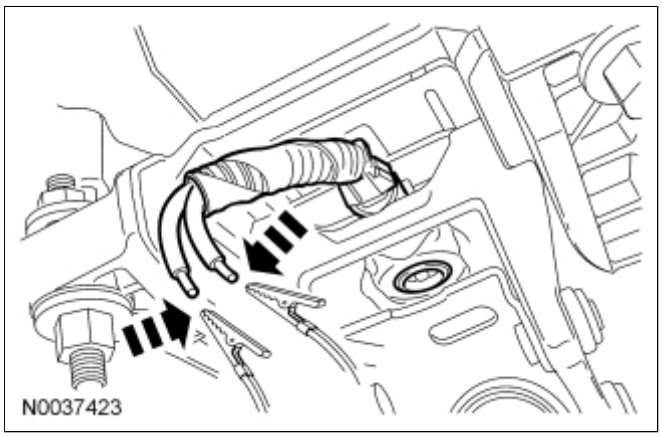
   Cut each of the deployable steering column wires, leaving at least 101.6 mm (4 in) to work with.

4. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

5. Make a jumper harness to deploy the deployable steering column.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

6. Using the end of the jumper harness where the wires are not connected together, attach each

wire of the jumper harness to each wire of the deployable steering column. Use tape or other insulating material to make sure that the leads do not make contact with each other.



7. Remain at least 9.14 m (30 ft) away from the deployable steering column.
8. From the end of the jumper harness that is not connected to the deployable steering column, disconnect the 2 wires of the jumper harness from each other.
9. Deploy the deployable steering column by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.
10. To allow for cooling, wait at least 10 minutes before approaching the deployed steering column.
11. Dispose of the deployed steering column in the same manner as any other part to be scrapped.

Supplemental Restraint System (SRS) Deactivation and Reactivation

Deactivation

WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the Supplemental Restraint System (SRS). For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

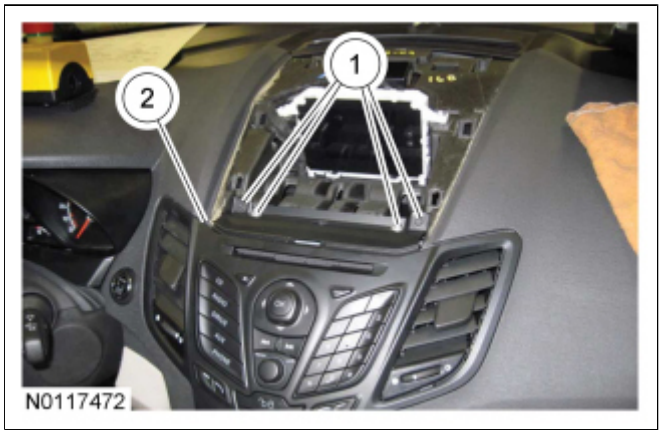
2. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

3. Remove the knee air bag module. For additional information, refer to Knee Air Bag Module in this section.

4. Remove the glove compartment.
   - Open the glove compartment and carefully pry at each end to separate the glove compartment from the hinges.

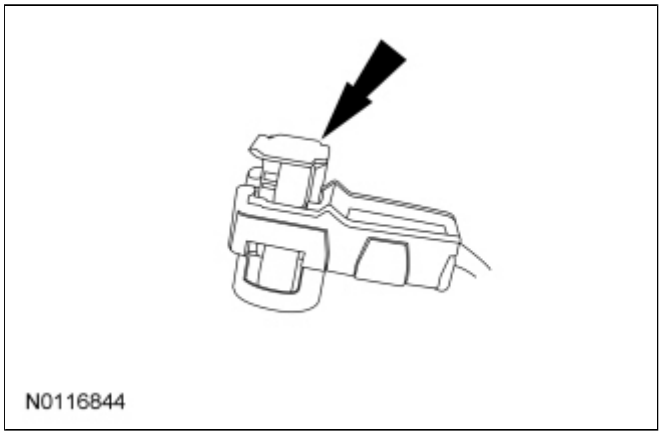
5. Pull up and out to release the clips and remove the upper center instrument panel finish panel.

6. Separate the center instrument panel finish panel.
    1. Remove the 4 screws.
    2. Pull out and separate the center instrument panel finish panel.



7. ***NOTICE:*** **Do not pull the passenger air bag module electrical connectors out by the locking button. Damage to the locking buttons can occur.**

    Disconnect both passenger air bag module electrical connectors.
    - Using a small screwdriver, lift up and release the locking button on the passenger air bag module electrical connector. With the locking button released, disconnect the electrical connector.
    - Repeat for the other electrical connector.



8. From under the rear of the RH front seat, disconnect side air bag module electrical connector C337.

9. From under the rear of the LH front seat, disconnect side air bag module electrical connector C367.

10. Drop the headliner to access the side air curtain module electrical connectors. For additional information, refer to Section 501-05 .

11. Squeeze the tabs and disconnect the RH and LH side air curtain module electrical connectors.

12. Install RCM fuse 20 (10A) to the Central Junction Box (CJB).

13. Connect the battery ground cable.

Reactivation

1. Remove RCM fuse 20 (10A) from the CJB .

2. Disconnect the battery ground cable and wait at least one minute.

3. Connect the RH and LH side air curtain module electrical connectors.

4. Install the headliner. For additional information, refer to Section 501-05 .

5. From under the rear of the LH front seat, connect side air bag module electrical connector C367.

6. From under the rear of the RH front seat, connect side air bag module electrical connector C337.

7. ***NOTICE:*** **The passenger air bag module electrical connector locking buttons must be in the released position when connected. Do not install the passenger air bag module electrical connectors by the locking buttons. Failure to follow these instructions may cause connector damage.**

   With the locking button released, install the passenger air bag module electrical connectors fully into the passenger air bag module and seat the locking buttons.

8. Install the center instrument panel finish panel.
   1. Position the center instrument panel finish panel and push in seating the retaining clips.
   2. Install the 4 screws.

9. Position the upper center instrument panel finish panel and push in seating the retaining clips.

10. Install the glove compartment.

11. Install the knee air bag module. For additional information, refer to Knee Air Bag Module in this section.

12. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

13. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Supplemental Restraint System (SRS) Depowering and Repowering

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Depowering Procedure

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Turn all vehicle accessories OFF.
2. Turn the ignition OFF.
3. At the Central Junction Box (CJB), located behind the glove box, remove RCM fuse 20 (10A) from the CJB. For additional information, refer to the Wiring Diagrams manual.
4. Turn the ignition ON and monitor the air bag warning indicator for at least 30 seconds. The air bag warning indicator flashes once, then remains illuminated continuously (no flashing) if the correct RCM fuse has been removed. If the air bag warning indicator does not remain illuminated continuously, remove the correct RCM fuse before proceeding.
5. Turn the ignition OFF.
6. **WARNING: Always deplete the backup power supply before repairing or installing any new front or side air bag supplemental restraint system (SRS) component and before servicing, removing, installing, adjusting or striking components near the front or side impact sensors or the restraints control module (RCM). Nearby components include doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   Refer to the Description and Operation portion of Section 501-20B for location of the RCM and impact sensor(s).

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Failure to follow these instructions may result in serious personal injury or death in the event of an

accidental deployment.

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-01 .

Repowering Procedure

Vehicles with keyed ignition (vehicles with ignition switch)

1. Turn the ignition from OFF to ON.

2. Install RCM fuse 20 (10A) to the CJB .

3. **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**

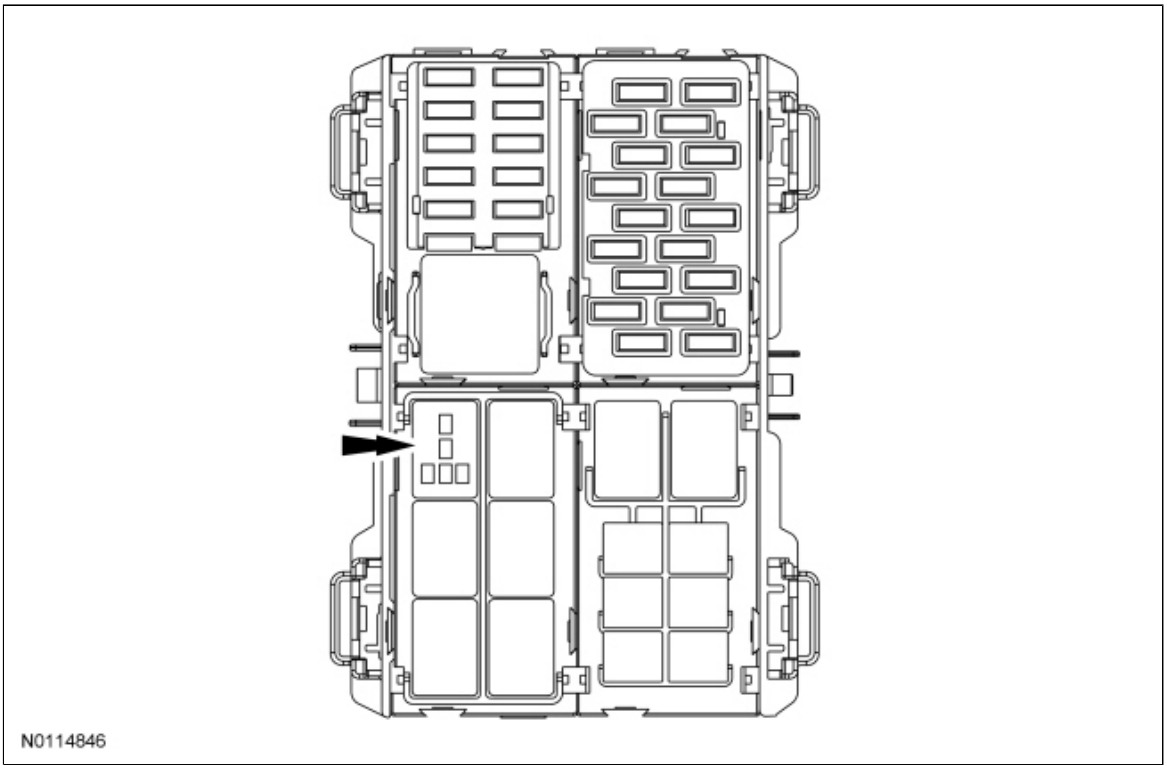
   Connect the battery ground cable.

4. Prove out the SRS as follows:
   Turn the ignition from ON to OFF. Wait 10 seconds, then turn the ignition back to ON and monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator illuminates continuously for approximately 6 seconds and then turns off. If a SRS fault is present, the air bag warning indicator indicates the fault in one of the following ways:
   - fail to light.
   - remain lit continuously.
   - flash.
   The flashing might not occur until approximately 30 seconds after the ignition has been turned from OFF to ON. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
   Clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM) using a scan tool.

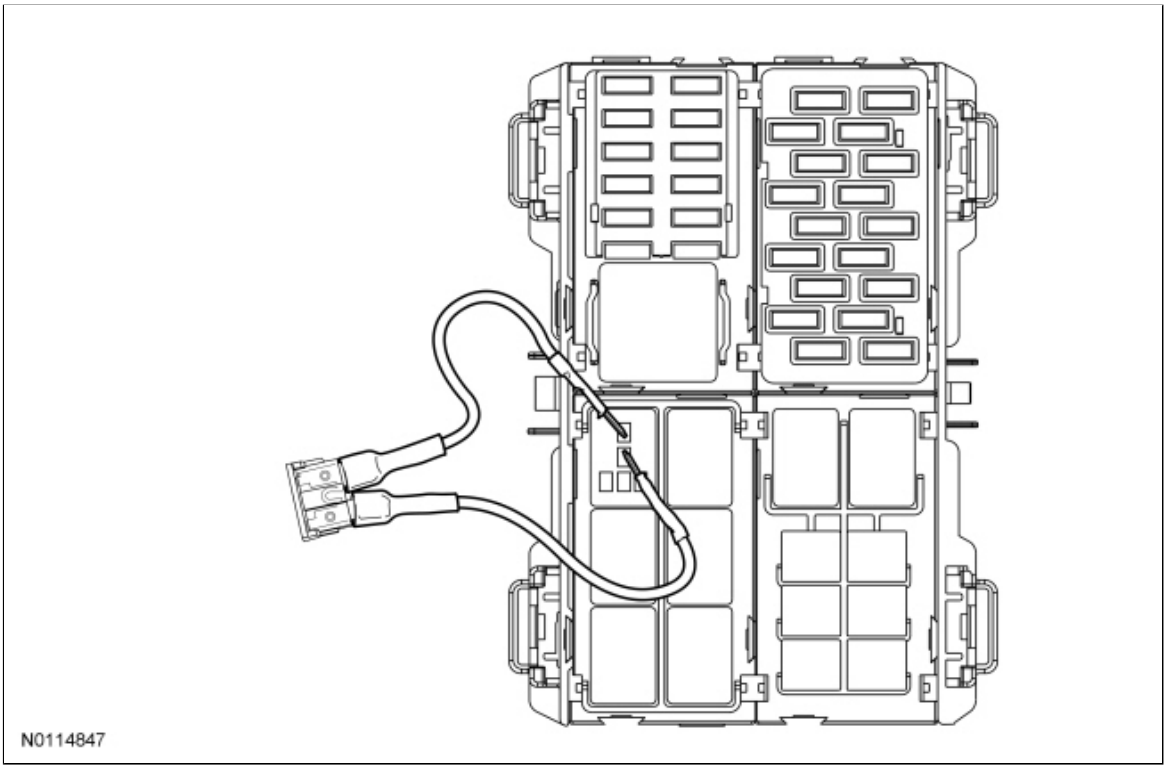
Vehicles with Intelligent Access (IA) (vehicles with push button start system)

5. Install RCM fuse 20 (10A) to the CJB and install the cover.

6. Remove the Smart Keyless Ignition Relay (CJB relay 7).



7. Install a fused (15A) jumper wire between Smart Keyless Entry Ignition Relay (CJB relay 7) socket pins 3 and 5 as shown..



8. **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**

   Connect the battery ground cable.

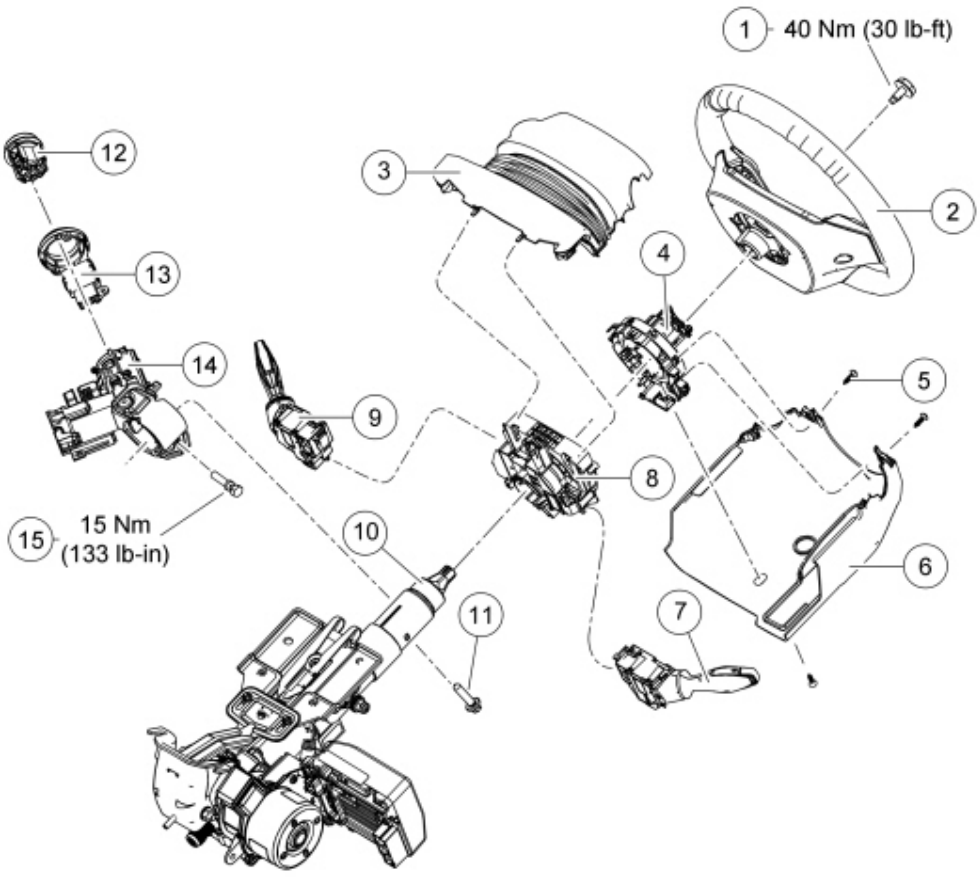
9. Remove the fused jumper wire from the CJB .

10. Install the Smart Keyless Ignition Relay (CJB relay 7).

11. Prove out the SRS as follows:
    With the ignition OFF, wait 10 seconds, then turn the ignition ON and monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator illuminates continuously for approximately 6 seconds and then turns off. If an air bag SRS fault is detected, the air bag warning indicator indicates the fault in one of the following ways:
    - fail to light.
    - remain lit continuously.
    - flash.

    The flashing might not occur until approximately 30 seconds after the ignition has been turned from OFF to ON. This is the time required to complete testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the diagnose and repair the air bag warning indicator and any SRS fault discovered.
    Clear all RCM and OCSM CMDTCs .

Clockspring



N0119131

Item	Part Number	Description
1	W750985	Steering wheel bolt
2	3600	Steering wheel

3	3530	Upper steering column shroud
4	14A664	Clockspring
5	W701928	Steering column shroud bolt (2 required)
6	3530	Lower steering column shroud
7	13341	Switch assembly
8	3F791	Steering column multifunction switch
9	17A553	Switch assembly wiper/washer
10	3C529	Steering column
11	—	Steering column lock bolt
12	11582	Ignition switch cylinder
13	15607	Passive Anti-Theft System (PATS) transceiver electrical connector (part of 14401)
14	3F790	Ignition switch housing
15	66154	Ignition switch housing bolt (part of 3F790)

Removal

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. ***NOTICE:*** **Make sure the road wheels are in the straight-ahead position to prevent damage to the clockspring.**

   Remove the steering wheel. For additional information, refer to Section 211-04 .

2. Remove the steering column shroud. For additional information, refer to Section 211-04 .

3. Disconnect the clockspring electrical connectors, disengage the 3 retaining tabs and remove the clockspring.

Installation

1. ***NOTICE:*** **If installing a new clockspring, do not remove the clockspring anti-rotation key until the steering wheel is installed. If the anti-rotation key has been removed before installing the steering wheel, the clockspring must be centered. Failure to follow this instruction may result in component damage and/or system failure.**

   Position the clockspring onto the steering column and engage the retaining tabs to the multi-function switch.

2. Connect the clockspring electrical connectors.

3. **WARNING: If the clockspring is not correctly centralized, it may fail prematurely. If in doubt, repeat the centralizing procedure. Failure to follow these instructions may increase the risk of serious personal injury or death in a crash.**

   NOTICE: **Do not over-rotate the clockspring inner rotor. The internal ribbon wire is connected to the clockspring rotor. The internal ribbon wire acts as a stop and can be broken from its internal connection. Failure to follow this instruction may result in component damage and/or system failure.**

   If a new clockspring was installed and the anti-rotation key has not been removed **proceed to Step 5.** If a new clockspring was installed and the anti-rotation key has been removed before the steering wheel is installed or the same clockspring is being installed, rotate the clockspring inner rotor

counterclockwise and carefully feel for the ribbon wire to run out of length with slight resistance. Stop rotating the clockspring inner rotor at this point.

4. Starting with the clockspring rotated fully counterclockwise as indicated in Step 3, rotate the clockspring inner rotor, wiring and connector clockwise through 3.75 full revolutions with the connector ending up in the 12 o'clock position.
   Verify the clockspring is correctly centralized by observing that the clockspring rotor, wiring and connector are in the 12 o'clock position.

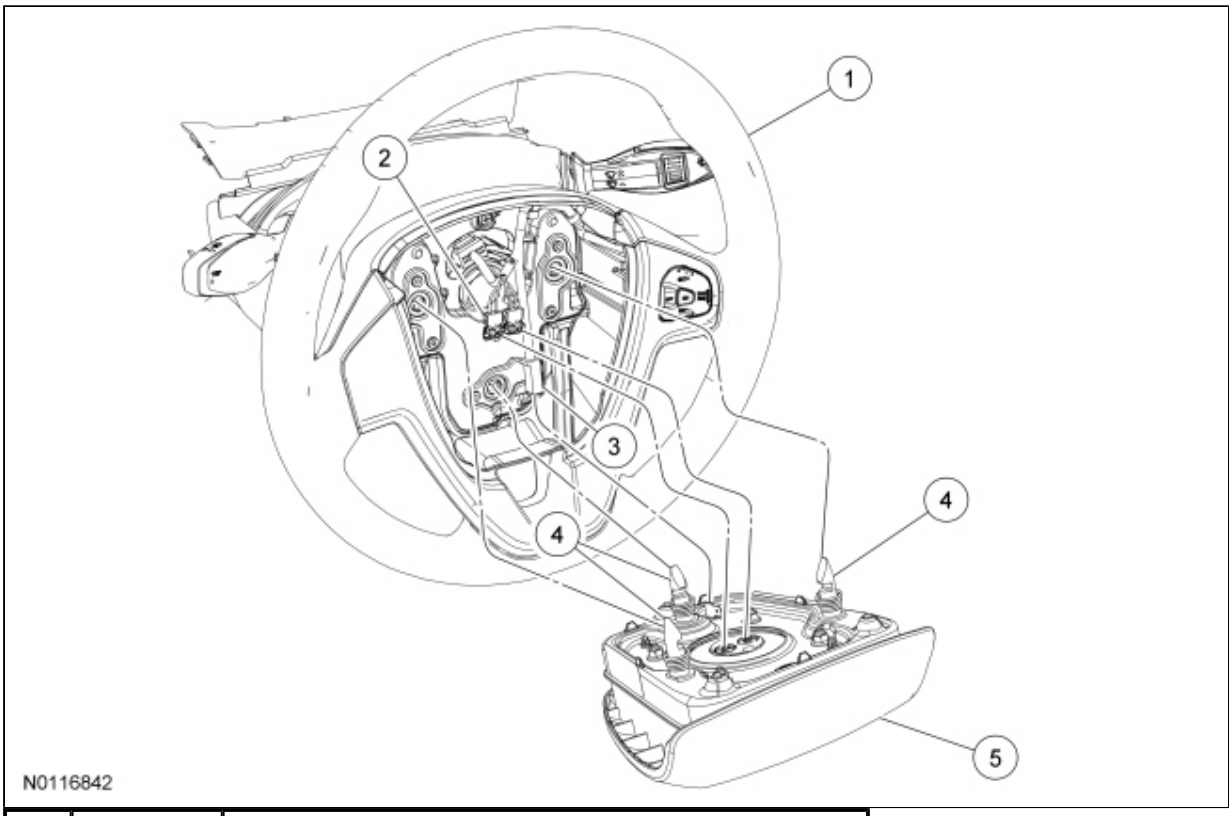
5. Install the steering column shroud. For additional information, refer to Section 211-04 .

6. Install the steering wheel. For additional information, refer to Section 211-04 .

7. If a new clockspring was installed, remove the anti-rotation key.

8. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

Driver Air Bag Module



Item	Part Number	Description
1	3600	Steering wheel
2	—	Driver air bag module electrical connectors (2 required) (part of 14A664)
3	—	Horn switch electrical connector (part of 14A664)
4	—	Driver air bag module locking pins (part of 43B13)
5	43B13	Driver air bag module

Removal

WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

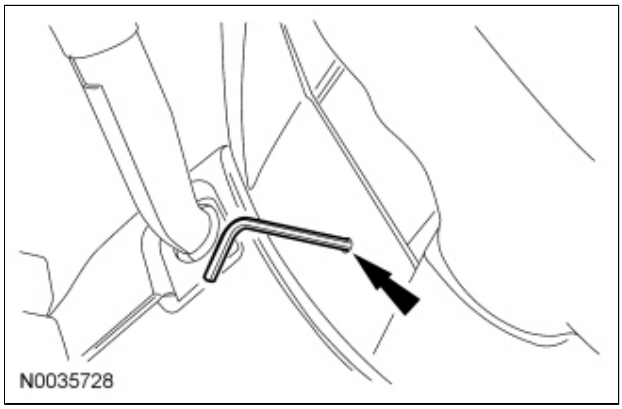
WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition switch is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Insert a 3 mm (0.118 in) Allen wrench or a suitable tool into 1 of the access holes on the steering wheel back cover.



3. Separate the driver air bag module from the steering wheel in the following sequence.
    1. Position the tool against the wire clip.
    2. Push the tool in, disengaging the wire clip from 1 of the driver air bag module locking pins.
        - It may be necessary to gently pull back on that side of the driver air bag module to release it from the steering wheel.
    3. Turn the steering wheel for access and repeat this step at all 3 steering wheel back cover openings.

4. Remove the driver air bag module.
    - Disconnect the 2 driver air bag module and the horn switch electrical connectors.

Installation

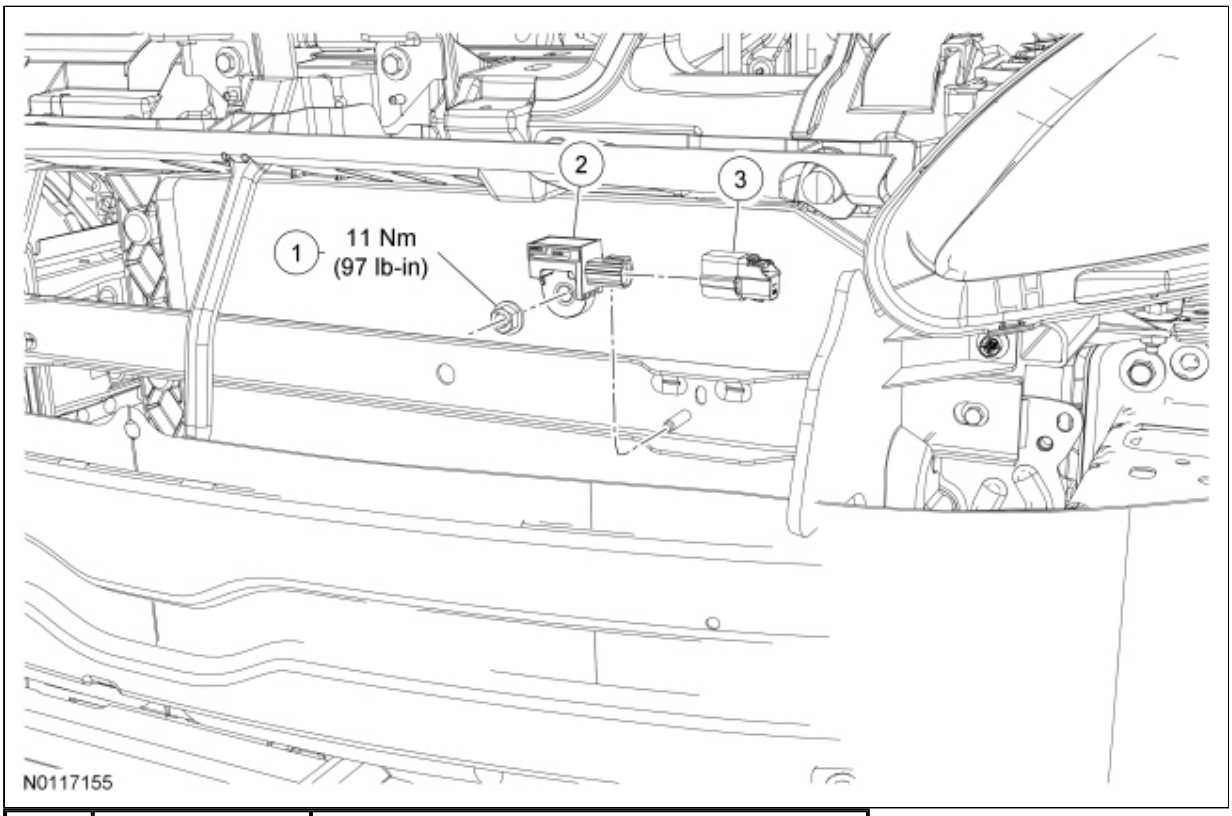
1. Connect the 2 driver air bag module and the horn switch electrical connectors.

2. Align the driver air bag module locking pins to the steering wheel and, while pushing inward, seat the 3 driver air bag module locking pins to the steering wheel wire clips.

3. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Front Impact Severity Sensor

NOTE: LH side shown, RH similar.



Item	Part Number	Description
1	W700101	Front impact severity sensor nut
2	14B004	Front impact severity sensor
3	—	Electrical connector (part of 14K012)

Removal and Installation

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the front bumper cover. For additional information, refer to Section 501-19 .
2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.
3. Remove the nut, disconnect the electrical connector and remove the front impact severity sensor.

- To install, tighten to 11 Nm (97 lb-in).

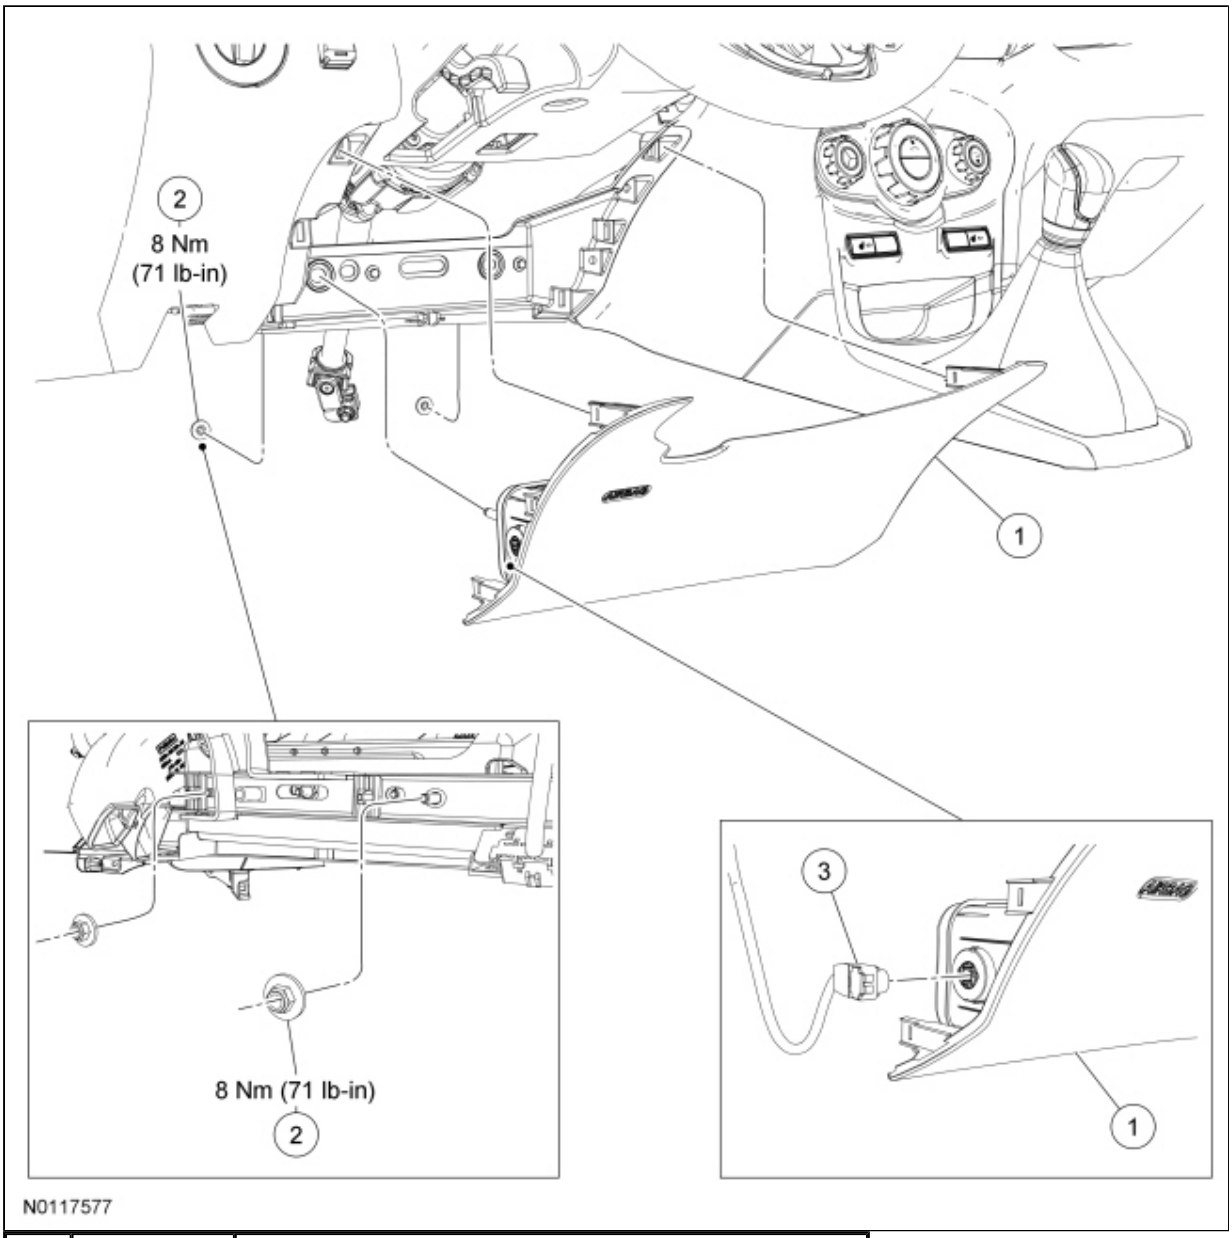
4. **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   NOTE: Make sure the radiator support and front impact severity sensor and bracket assembly mating surfaces are clean and free of foreign material.

   To install, reverse the removal procedure.

5. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Knee Air Bag Module



Item	Part Number	Description
1	54045J77	Knee air bag module
2	W701014	Knee air bag module nuts (2 required)
3	—	Knee air bag module electrical connector (part of 14K024)

Removal

WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

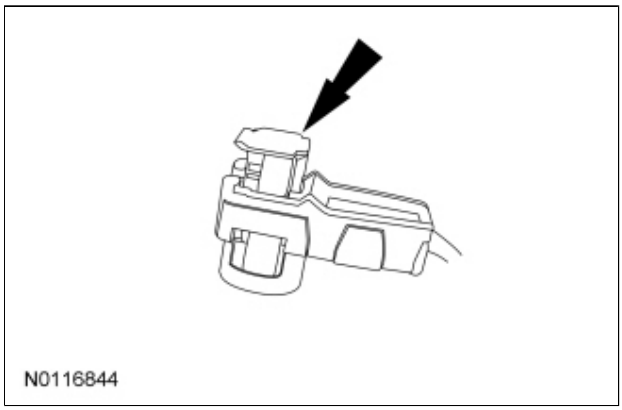
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the 2 nuts, pull out to release the clips and separate the knee air bag from the instrument panel.

3. ***NOTICE:*** **Do not pull the knee air bag module electrical connector out by the locking button. Damage to the locking button can occur.**

   Using a small screwdriver, lift up and release the locking button on the knee air bag module electrical connector. With the locking button released, disconnect the electrical connector and remove the knee air bag module.



Installation

1. ***NOTICE:*** **Make sure the knee air bag module electrical connector locking button is in the released position when connected. Do not install the knee air bag module electrical connector by the locking button. Failure to follow these instructions may cause connector damage.**

   With the locking button released, install the knee air bag module electrical connector fully into the knee air bag module and seat the locking button.

2. Position the knee air bag module to the instrument panel, push in and seat the retaining clips.

3. Install the 2 knee air bag module nuts.
   - Tighten to 8 Nm (71 lb-in).

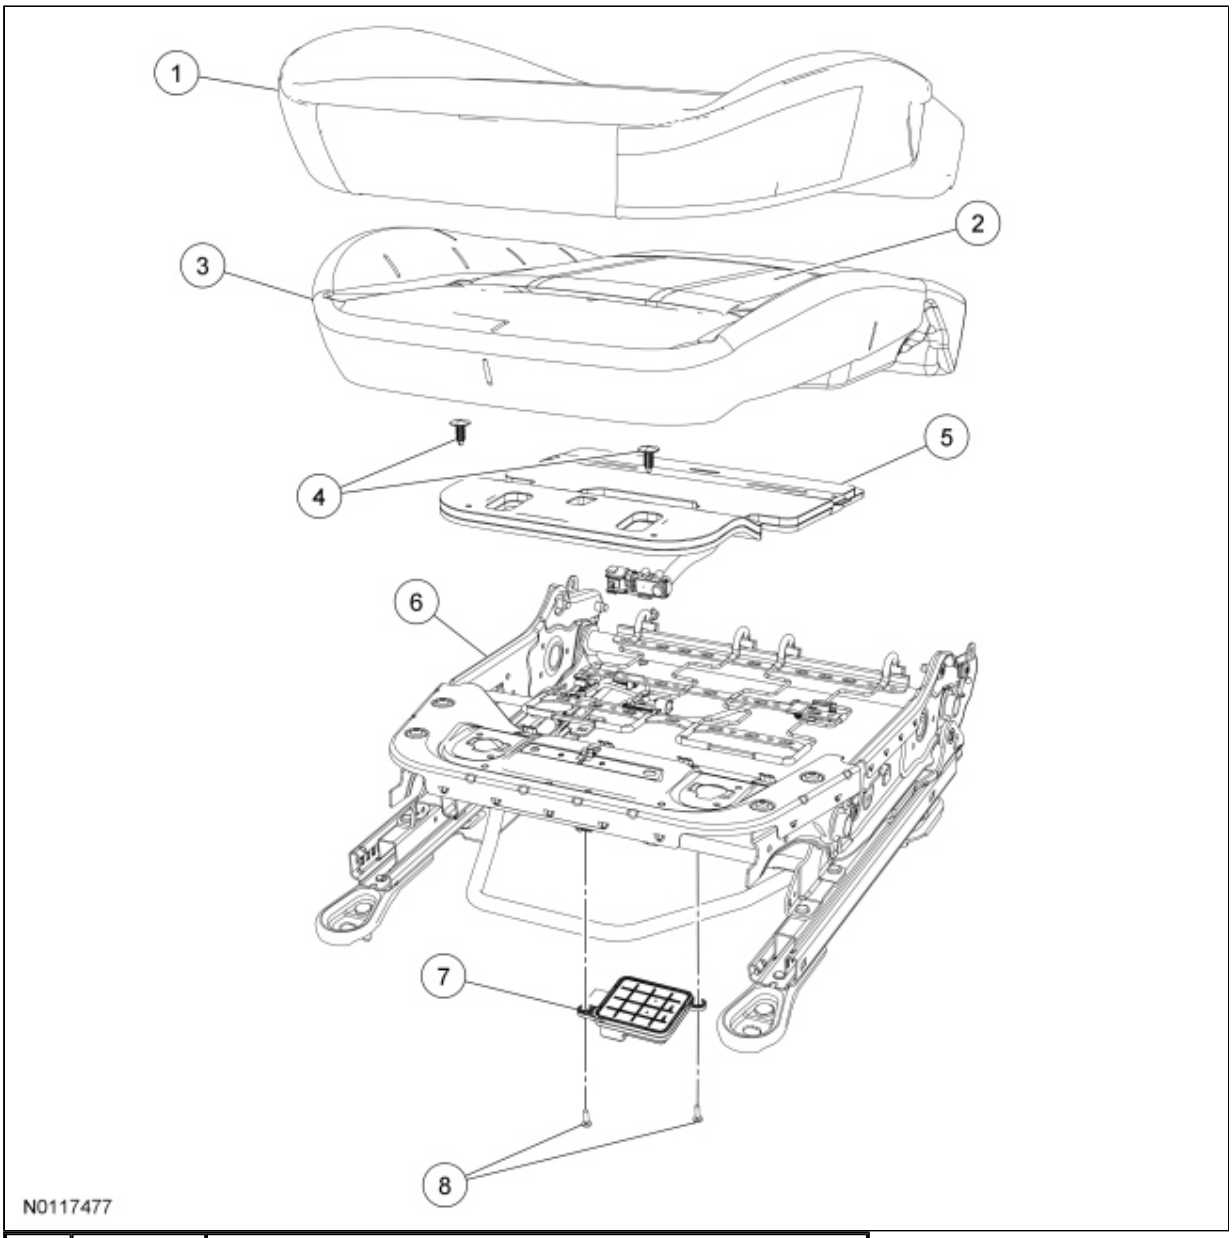
4. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Occupant Classification Sensor

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

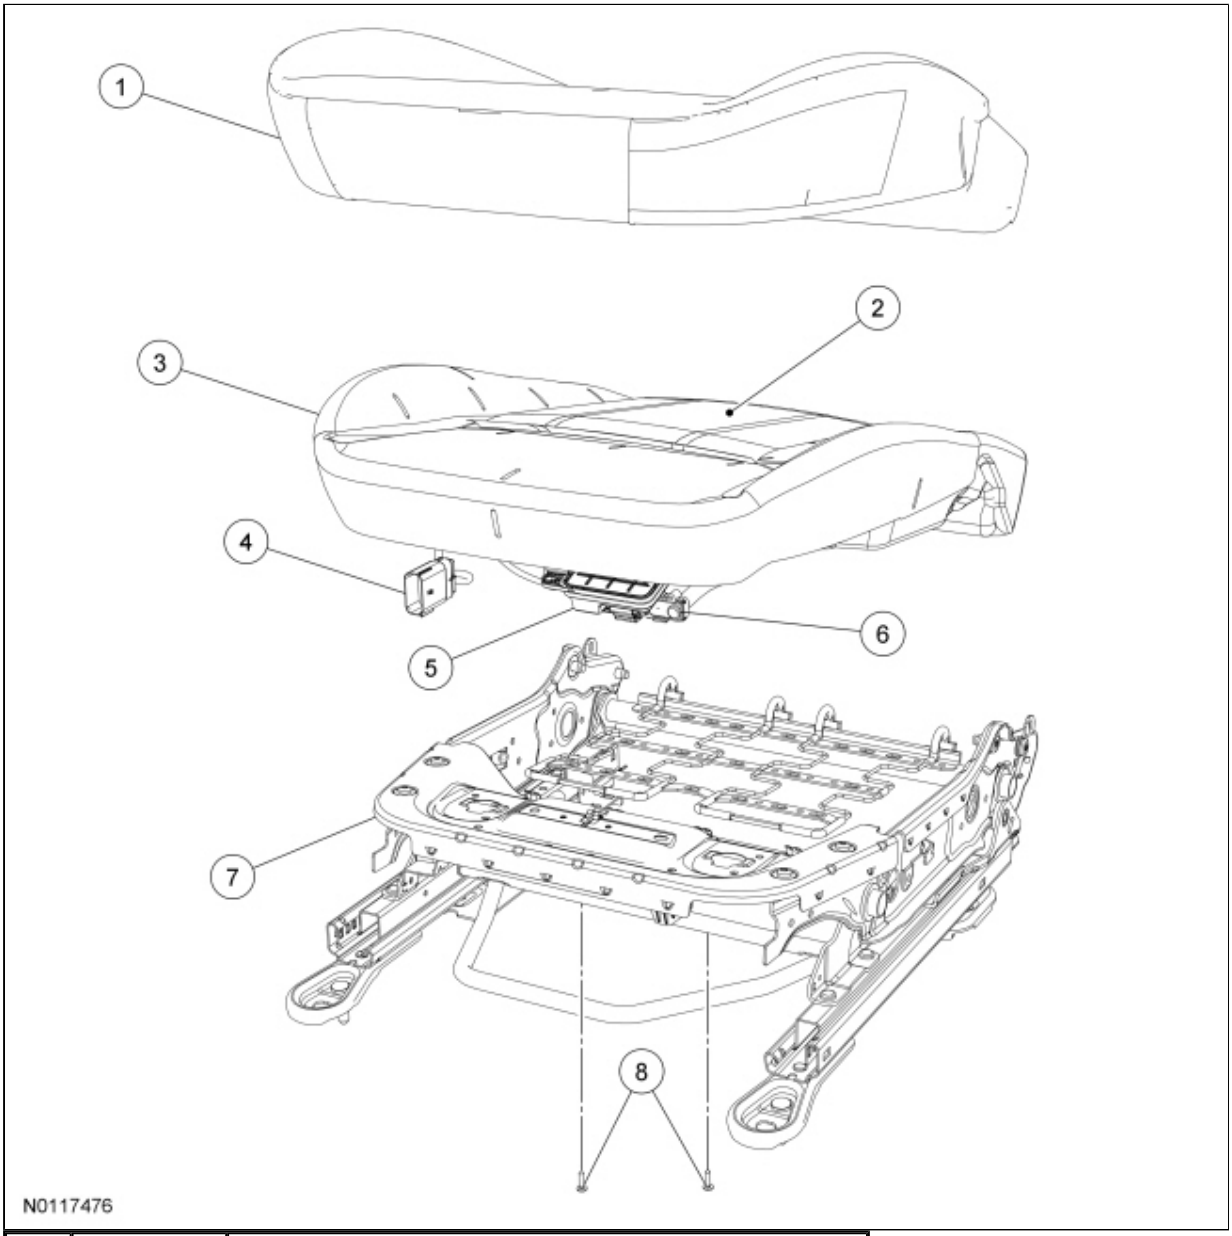
Original Equipment Manufacturer (OEM) Occupant Classification System (OCS) System



Item	Part Number	Description
1	62900	Seat cushion cover

2	—	Heater mat (part of Original Equipment Manufacturer (OEM) Occupant Classification System (OCS)) (if equipped)
3	—	Cushion foam pad (part of OEM OCS)
4	—	Pin-type retainers (2 required) (part of OEM OCS)
5	—	OCS bladder and pressure sensor (part of OEM OCS)
6	61704	Seat track assembly
7	—	Occupant Classification System Module (OCSM) (part of OEM OCS)
8	—	OCSM screws (2 required) (part of OEM OCS)

Service Kit Occupant Classification System (OCS) System



Item	Part Number	Description
1	62900	Seat cushion cover
2	—	Heater mat (part of 632A22) (if equipped)

3	—	Cushion foam pad (part of 632A22)
4	—	Passenger seat wire harness (part of 632A22)
5	—	Occupant Classification System Module (OCSM) (part of 632A22)
6	—	Pressure sensor (part of 632A22)
7	61704	Seat track assembly
8	—	OCSM screws (part of 632A22)

Removal

WARNING: Make sure the front passenger seat repair is complete, the seat and all attached components (head restraint, seat side shield, etc.) are correctly assembled, and the seat is correctly installed to the vehicle before carrying out the System Reset. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.

NOTICE: **Carry out the Occupant Classification System (OCS) system reset when a front passenger seat cushion is disassembled, a new trim cover is installed or an OCS system service kit is installed. Use a scan tool to carry out the OCS system reset. Failure to follow this instruction may result in system failure and incorrect operation of the OCS system.**

NOTE: Occupant Classification System (OCS) system components, seat cushion foam pad, bladder with pressure sensor and Occupant Classification System Module (OCSM), are calibrated to each other and are serviced as an assembly. If a new OCS system or OCS system component is needed, install a new OCS system service kit.

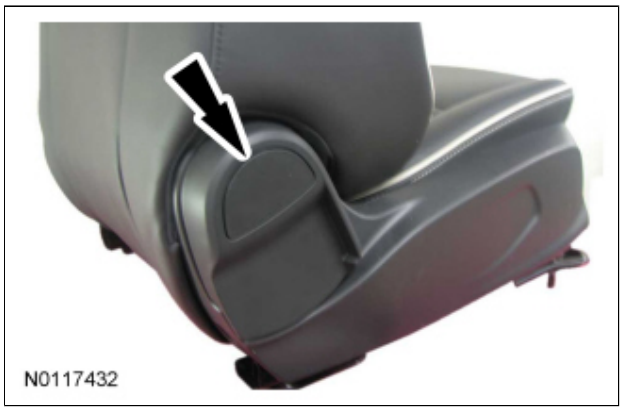
NOTE: To identify between a production OCS system and a OCS system service kit, inspect the OCSM and pressure sensor electrical connectors. An OCS system service kit has the electrical connectors glued and should not be disconnected or altered.

NOTE: The heater mat is not serviced separately. If a new heater mat is needed on the front passenger seat cushion, install a new OCS system service kit with a heater mat.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

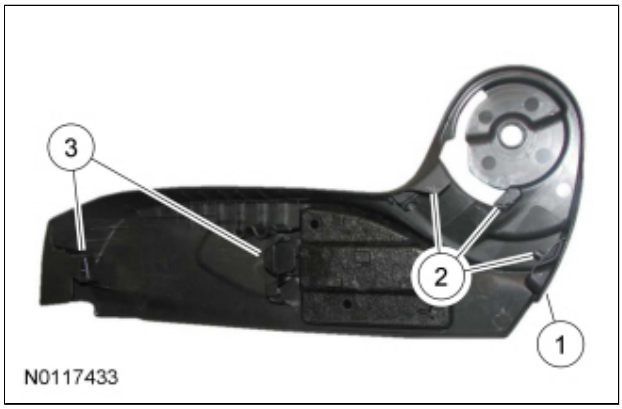
NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the front passenger seat. For additional information, refer to Section 501-10 .
2. Remove the recliner handle bolt cover, the bolt and the recliner handle.



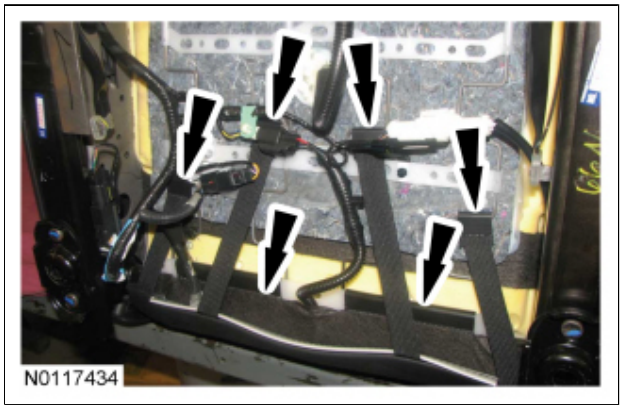
3. Remove the cushion side shield.
    1. Remove the screw at the rear of the cushion side shield.
    2. Pull out at the back of the cushion side shield to release the locator pins and tab.

3. Slide the cushion side shield forward to disengage the brackets Remove the cushion side shield.



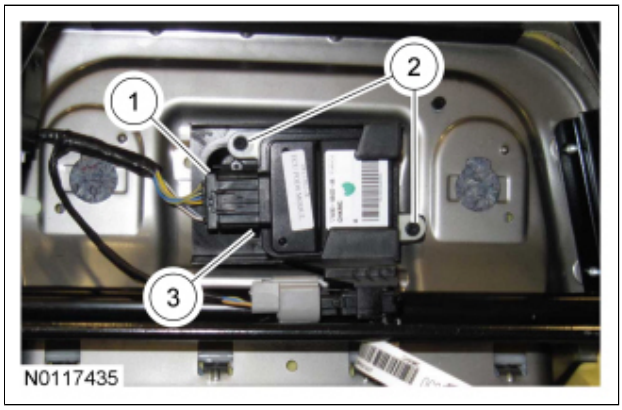
4. Remove the screw and the inner recliner cover.

5. Detach the J-clip retainers.

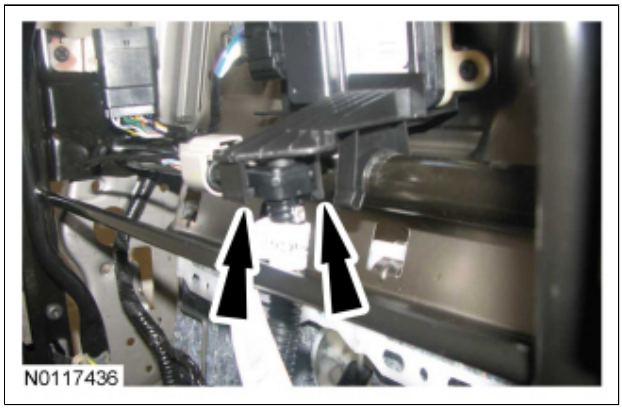


6. Disengage the remaining cushion cover retainers attached to the seat track and seat cushion frame.
   - If Original Equipment Manufacturer (OEM) Occupant Classification System (OCS), remove the cushion foam pad and cover.

7. Remove the Occupant Classification System Module (OCSM).
   1. For OEM OCS , disconnect the electrical connector, if equipped.
   2. Remove the 2 screws.
   3. Release the tab and remove the OCSM .



8. Disengage the 2 retainers and slide the pressure sensor off the bracket.

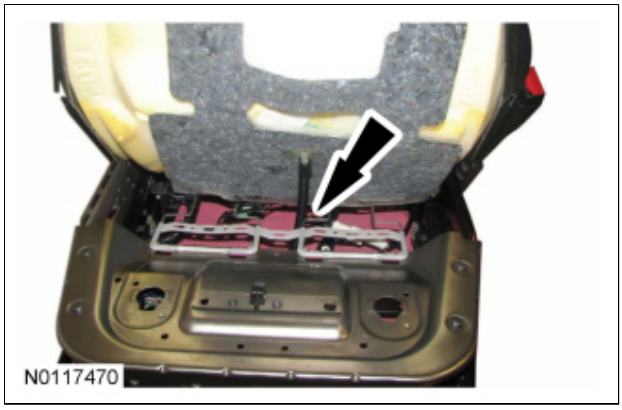


9. **NOTE:** Note the wire routing for installation.

   Disconnect all the seat cushion wire harness electrical connectors and detach the retainers.

10. For OEM OCS , lift the foam pad and remove the Occupant Classification System (OCS) bladder pin-type retainers.

11. Route the OCS components out from between the cushion supports.
    - At installation, make sure the hose is not kinked.



12. Remove the hog rings and the cushion cover.

13. To install, reverse the removal procedure.

14. Repower the SRS . **Do not** prove out the SRS at this time. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

15. **WARNING: Occupant Classification System (OCS) parts are calibrated as an assembly and must only be replaced in the configuration they are sold. Never separate parts of an assembly. Failure to follow this instruction may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.**

    NOTICE: **To prevent system failure, take the following precautions before carrying out the Occupant Classification System (OCS) system reset:**
    - **Make sure the voltage to the Occupant Classification System Module (OCSM) is greater than 8 volts and less than 18 volts.**
    - **Make sure the OCS system is not at a temperature below 6°C (42°F) or above 36°C (97°F) when initiating the OCS system reset process. If the vehicle has been exposed to extreme cold or hot temperatures, the vehicle must be exposed and kept at a temperature between 6°C to 36°C (42°F to 97°F) for a minimum of 30 minutes.**
    - **Make sure nothing is present on the passenger seat before and during the OCS system reset process.**

- **Prior to carrying out the OCS system reset, make sure a minimum of 8 seconds has elapsed after cycling the ignition switch ON.**

Carry out the OCS system reset.

16. If the first system reset attempt was unsuccessful, carry out a thorough visual inspection of the following and repair any concerns found.
    - OCS system connector and wiring for damage
    - Pressure sensor hose for kinks and/or damage
    - Seat-related wiring harness and body wiring harness terminals and connectors for damage

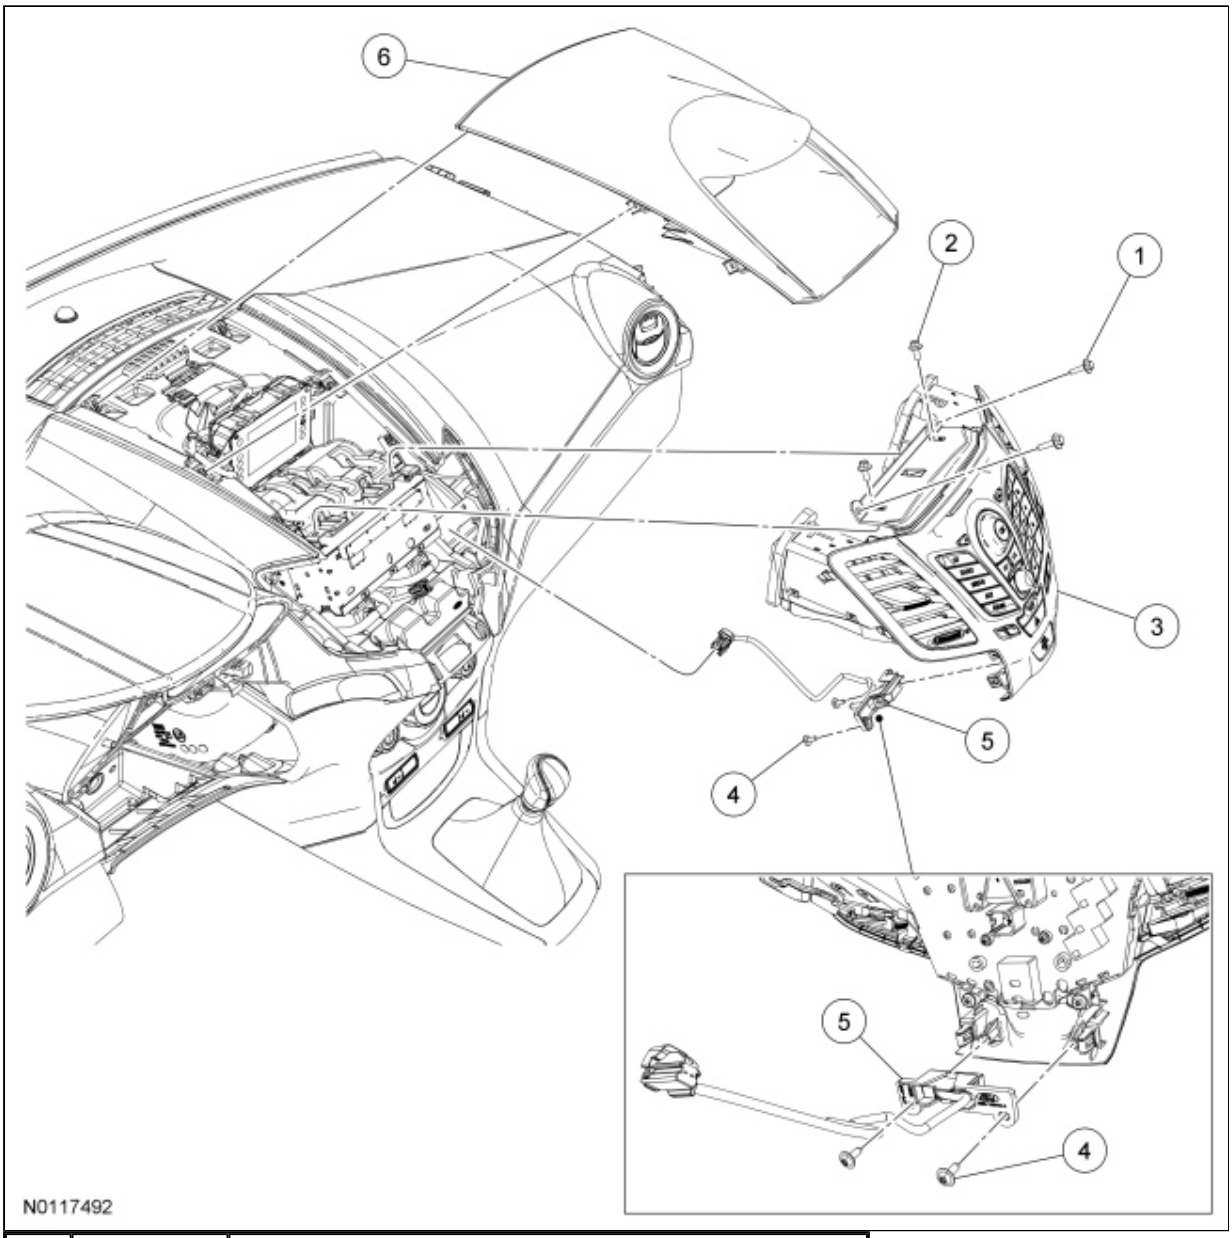
17. **NOTE:** Cycle the ignition switch after the OCS system reset.

    Carry out a second OCS system reset. If the second attempt is unsuccessful, install a new OCS system service kit. For additional information, refer to Occupant Classification System in Section 501-20B .

18. Prove out the SRS as follows:
    Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
    - fail to light.
    - remain lit continuously.
    - flash at a 5 Hz rate (RCM not configured).

    The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
    Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

Passenger Air Bag Deactivation (PAD) Indicator



Item	Part Number	Description
1	W707628	Front Controls Interface Module (FCIM) finish panel screw (2 required)
2	W505142	FCIM finish panel screw (2 required)
3	5404320	FCIM finish panel
4	W715260	Passenger Air Bag Deactivation (PAD) indicator screw (2 required)
5	10A936	PAD indicator
6	58042A82	Upper finish panel

Removal and Installation

1. **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**

   NOTE: A DTC sets in the Restraints Control Module (RCM) if the Passenger Air Bag Deactivation (PAD) indicator electrical connector is disconnected with the ignition ON. Clear the RCM memory before releasing the vehicle.

   Turn the ignition OFF and wait at least one minute.

2. Pull up and out to release the clips and remove the upper panel finish panel.

3. Remove 4 screws, pull out and separate the Front Controls Interface Module (FCIM) finish panel.

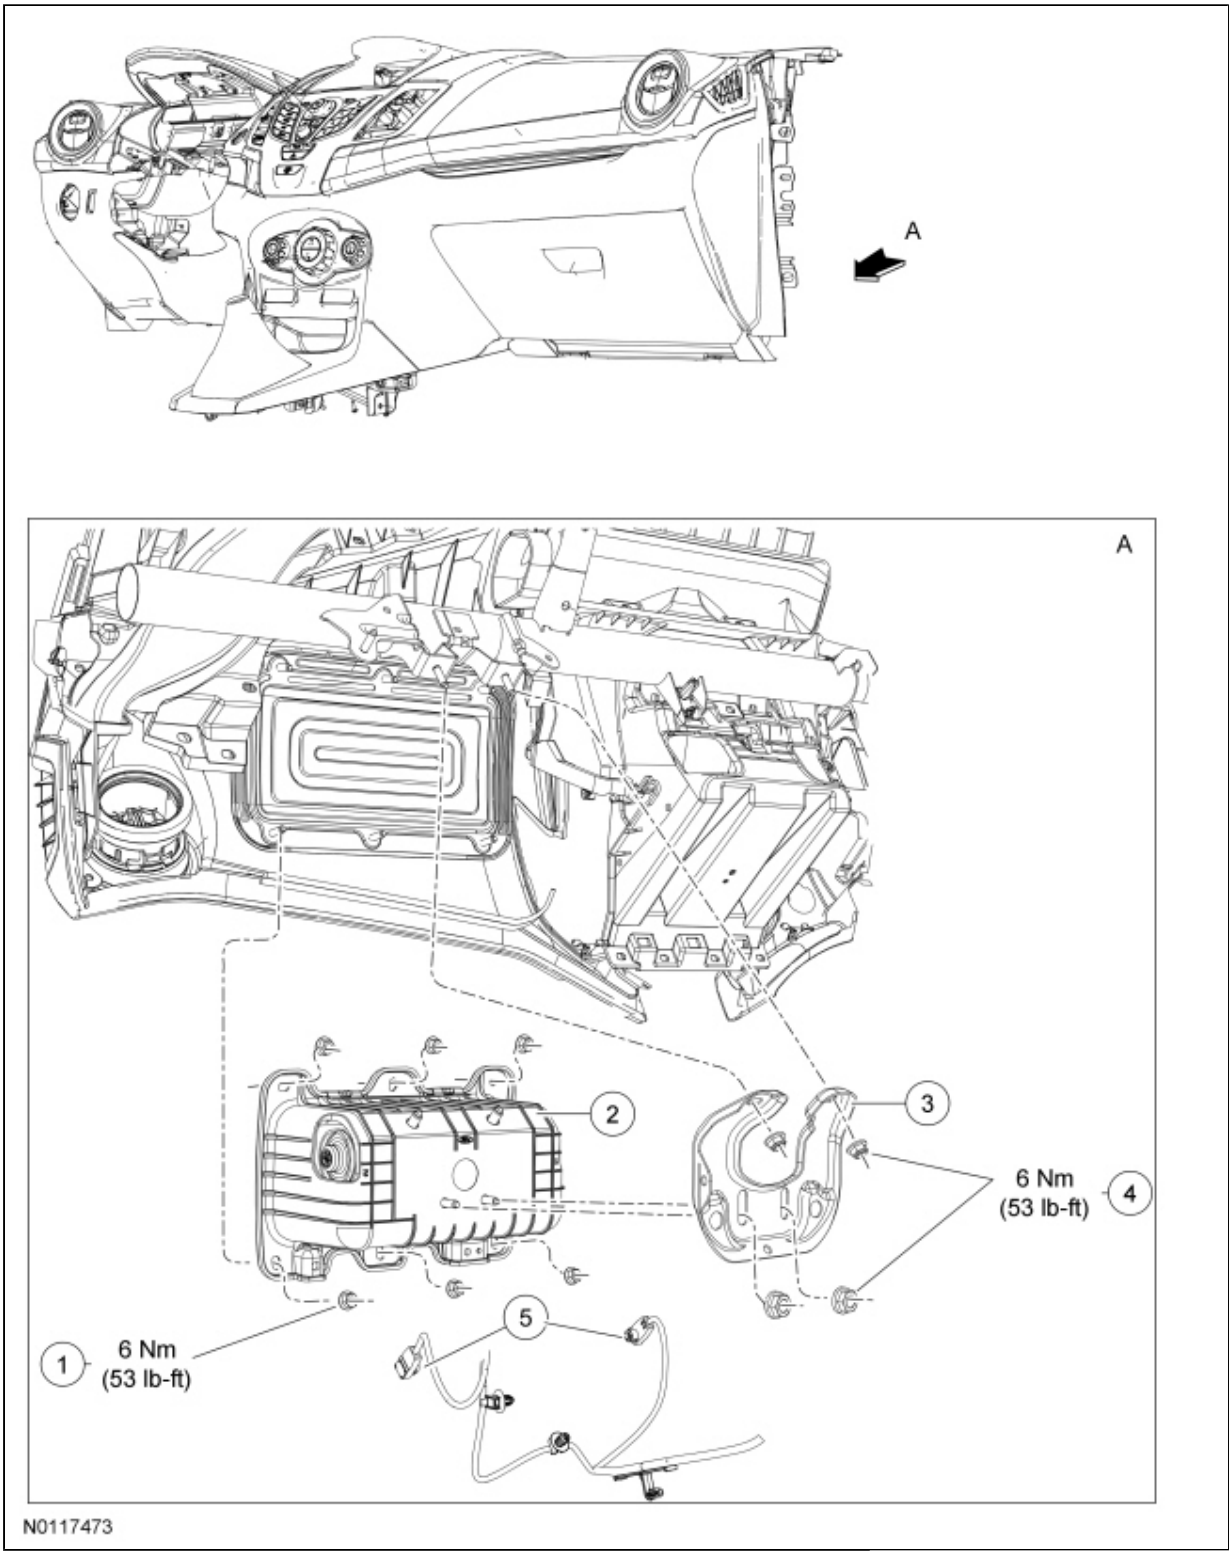
4. Remove 2 screws, disconnect the electrical connector and remove the PAD indicator.

5. To install, reverse the removal procedure.

6. Prove out the SRS as follows:
   Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
   - fail to light.
   - remain lit continuously.
   - flash at a 5 Hz rate (RCM not configured).

   The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
   Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

Passenger Air Bag Module



Item	Part Number	Description
1	W702147	Passenger air bag module nuts (6 required)
2	044A74	Passenger air bag module assembly
3	045F38	Passenger air bag module bracket

4	W520101	Passenger air bag module bracket nuts (4 required)
5	—	Electrical connectors (part of 14401)

Removal

WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

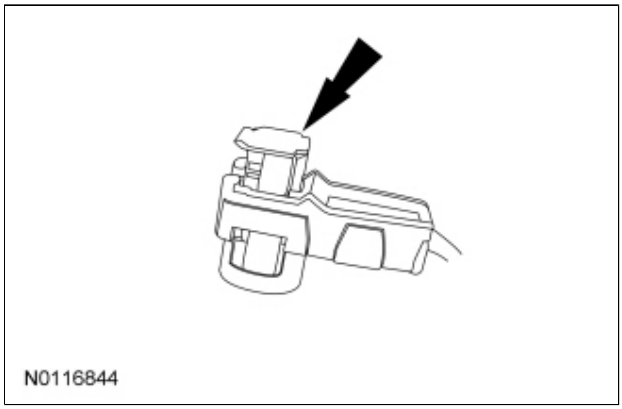
2. Remove the glove compartment.
   - Open the glove compartment and carefully pry at each end to separate the glove compartment from the hinges.

3. Remove the nuts and the passenger air bag module bracket.
   - Detach the wire harness retainers.

4. Remove the nuts and separate the passenger air bag module.
   - Detach the wire harness retainers.

5. ***NOTICE:*** **Do not pull the passenger air bag module electrical connectors out by the locking button. Damage to the locking buttons can occur.**

   Using a small screwdriver, lift up and release the locking button on the passenger air bag module electrical connector. With the locking button released, disconnect the electrical connector.
   - Repeat for the other electrical connector.
   - Remove the passenger air bag module.



Installation

1. Position the passenger air bag module into the instrument panel and install the nuts.
   - Tighten to 6 Nm (53 lb-in).

2. ***NOTICE:*** **Make sure the passenger air bag module electrical connector locking buttons are in the released position when connected. Do not install the passenger air bag module electrical connectors by the locking buttons. Failure to follow these instructions may cause connector damage.**

   With the locking button released, install the passenger air bag module electrical connectors fully into the passenger air bag module and seat the locking buttons.
   - Attach the wire harness retainers.

3. Position the passenger air bag module bracket and install the nuts.
   - Tighten to 6 Nm (53 lb-in).

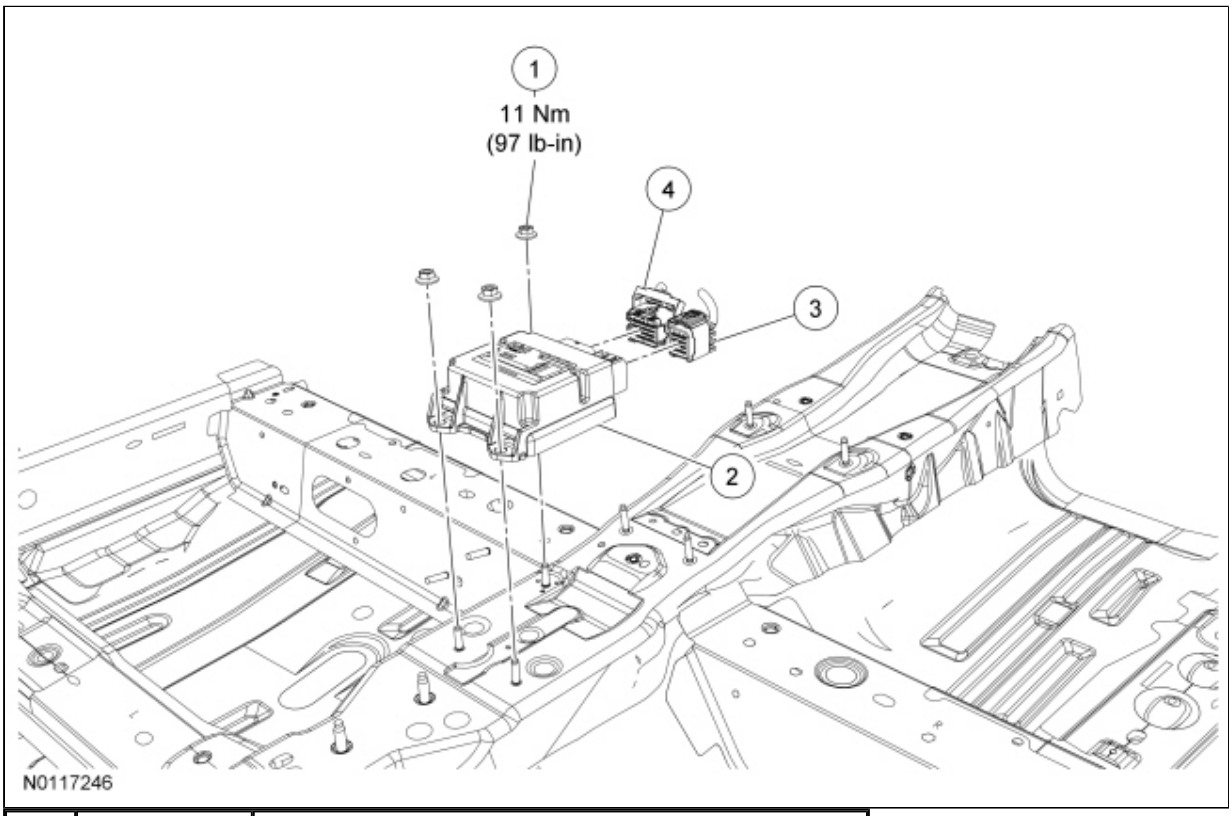
4. Install the glove compartment.

5. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Restraints Control Module (RCM)

Special Tool(s)

ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool



Item	Part Number	Description
1	W707142	Restraints Control Module (RCM) nuts (3 required)
2	14B321	RCM
3	—	RCM small electrical connector (part of 14K024)
4	—	RCM large electrical connector (part of 14A005)

Removal

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to

follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Carrying out Programmable Module Installation (PMI) will not enable the 911 assist option that is disabled. The RCM and Accessory Protocol Interface Module (APIM) must be configured correctly to fully support 911 assist functionality.

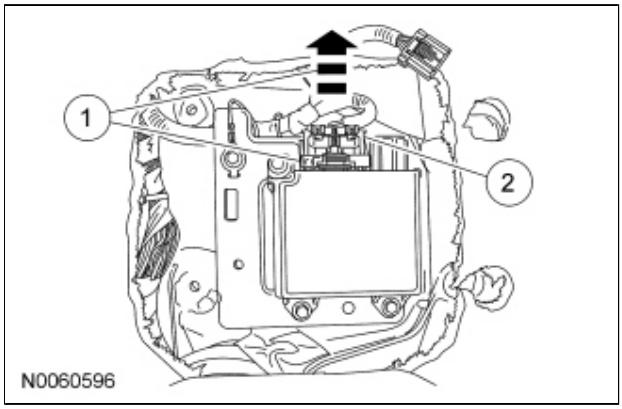
1. When installing a new RCM, carry out the appropriate steps necessary for the Programmable Module Installation (PMI) procedure. For additional information, refer to Section 418-01.

2. Depower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Remove the floor console. For additional information, refer to Section 501-12.

4. Slide the locking wedge back, press to release the locking tab and disconnect the small RCM electrical connector.

5. Disconnect the large RCM electrical connector.
    1. Pinch the thumb tab and pivot the Connector Position Assurance (CPA) lever all the way back until it stops.
    2. Pull out and disconnect the RCM electrical connector.



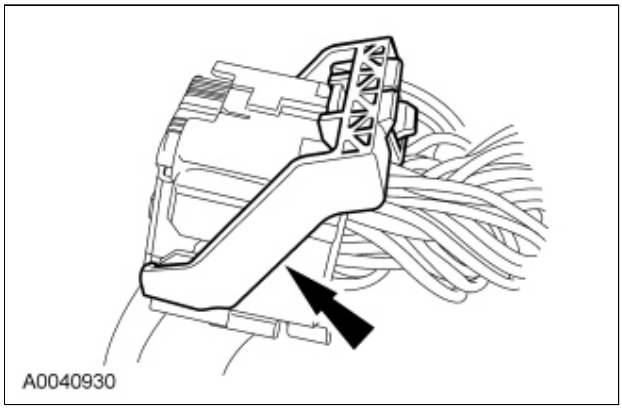
6. Remove the 3 nuts and the RCM.

Installation

1. **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   Install the RCM and 3 nuts.
   - Tighten to 11 Nm (97 lb-in).

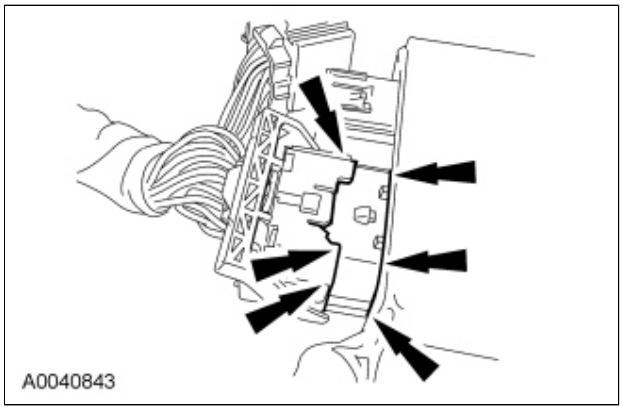
2. Make sure the CPA lever is in the full release position before attempting to connect the connector.



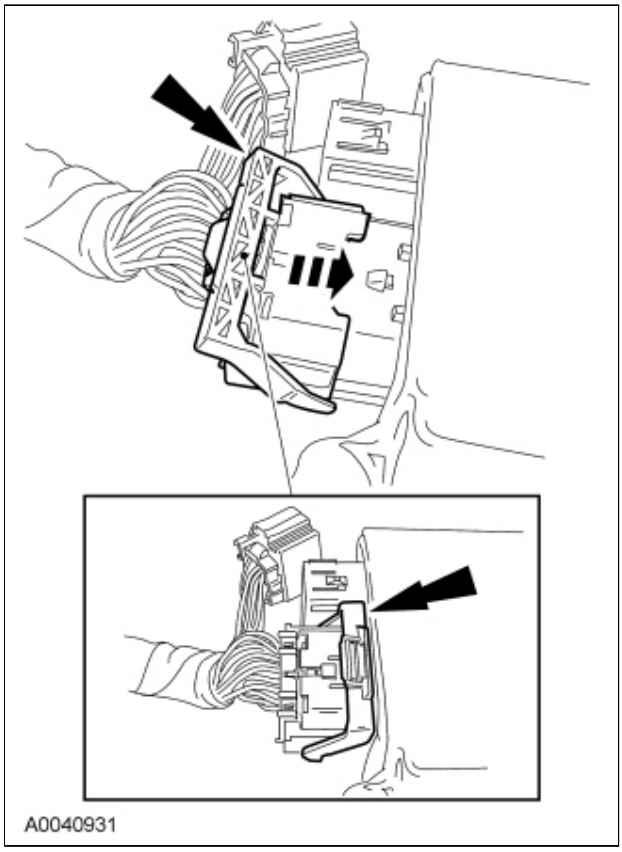
3. ***NOTICE:*** **Putting the large Restraints Control Module (RCM) electrical connector into the RCM on an angle can cause bad electrical connections and damage components.**

   Position the large RCM electrical connector into the RCM .
   - ***NOTICE:*** **Do not push the connector to where the lever pivots and seats itself. Light pressure is needed to get the connector into position on the Restraints Control Module (RCM) before using the lever to fully seat the connector. Failure to follow this instruction may result in component damage and/or system failure.**

     With the large RCM electrical connector uniformly aligned to the RCM , lightly push in until a subtle audible click is heard and slight resistance is felt.



4. Connect the large RCM electrical connector.
   - Using the CPA lever, pivot it toward the RCM , drawing the connector into the RCM .
     - Make sure the thumb tab is engaged to the retainer on the RCM and locked in place.



5. Connect the small RCM electrical connector and push the locking wedge in.

6. Install the floor console. For additional information, refer to Section 501-12 .

7. Repower the SRS . **Do not prove out the SRS at this time.** For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

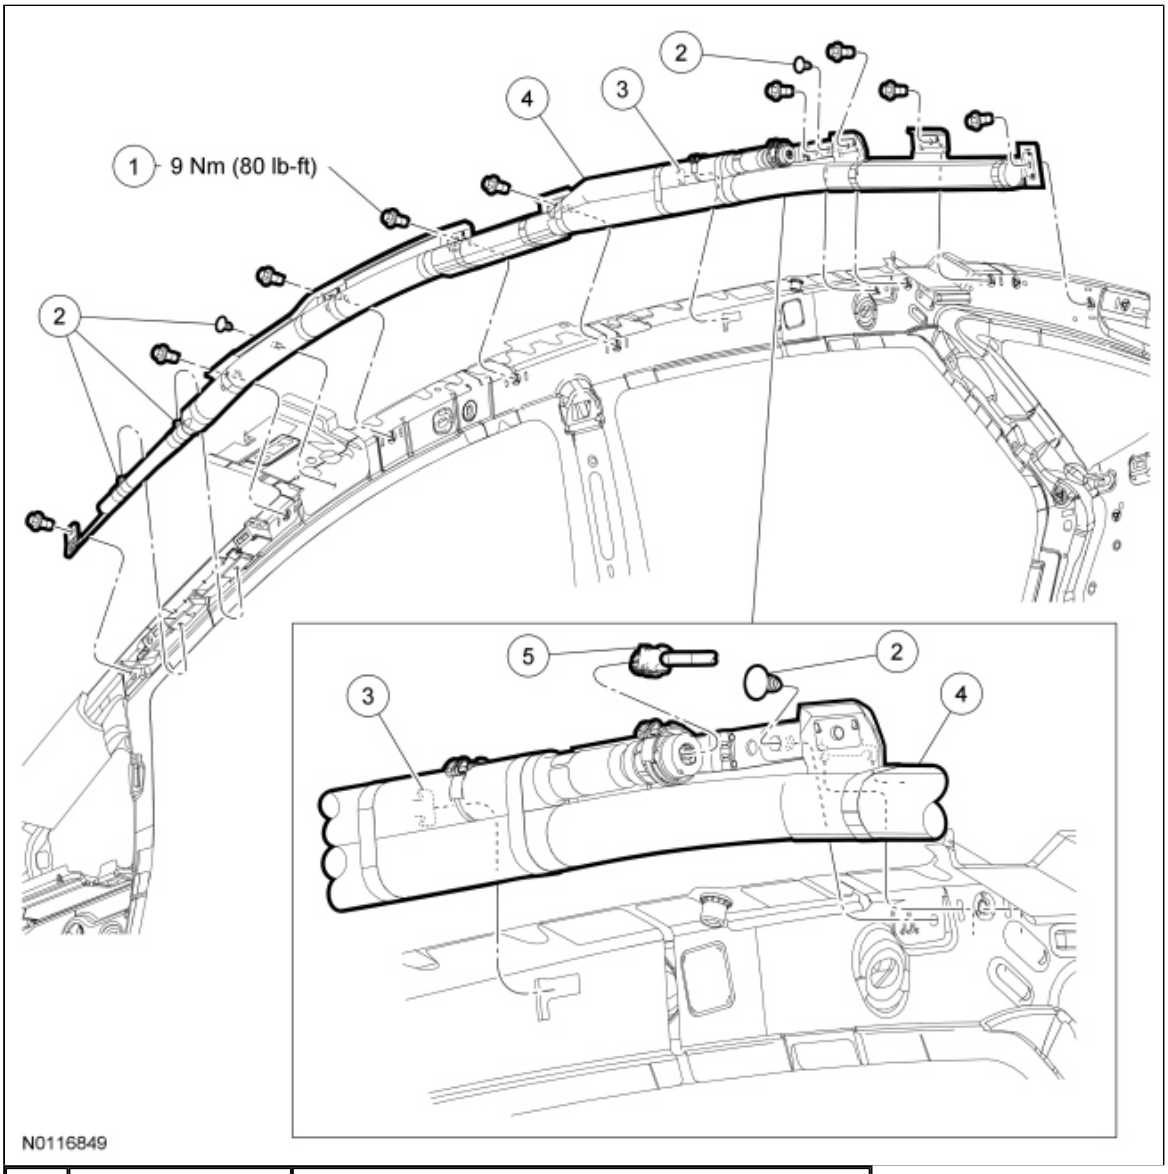
8. If a new RCM was installed, carry out the appropriate steps to complete the Programmable Module Installation (PMI) procedure. For additional information, refer to Section 418-01 .

9. Prove out the SRS as follows:
   Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
   - fail to light.
   - remain lit continuously.
   - flash at a 5 Hz rate (RCM not configured).

   The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.
   Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

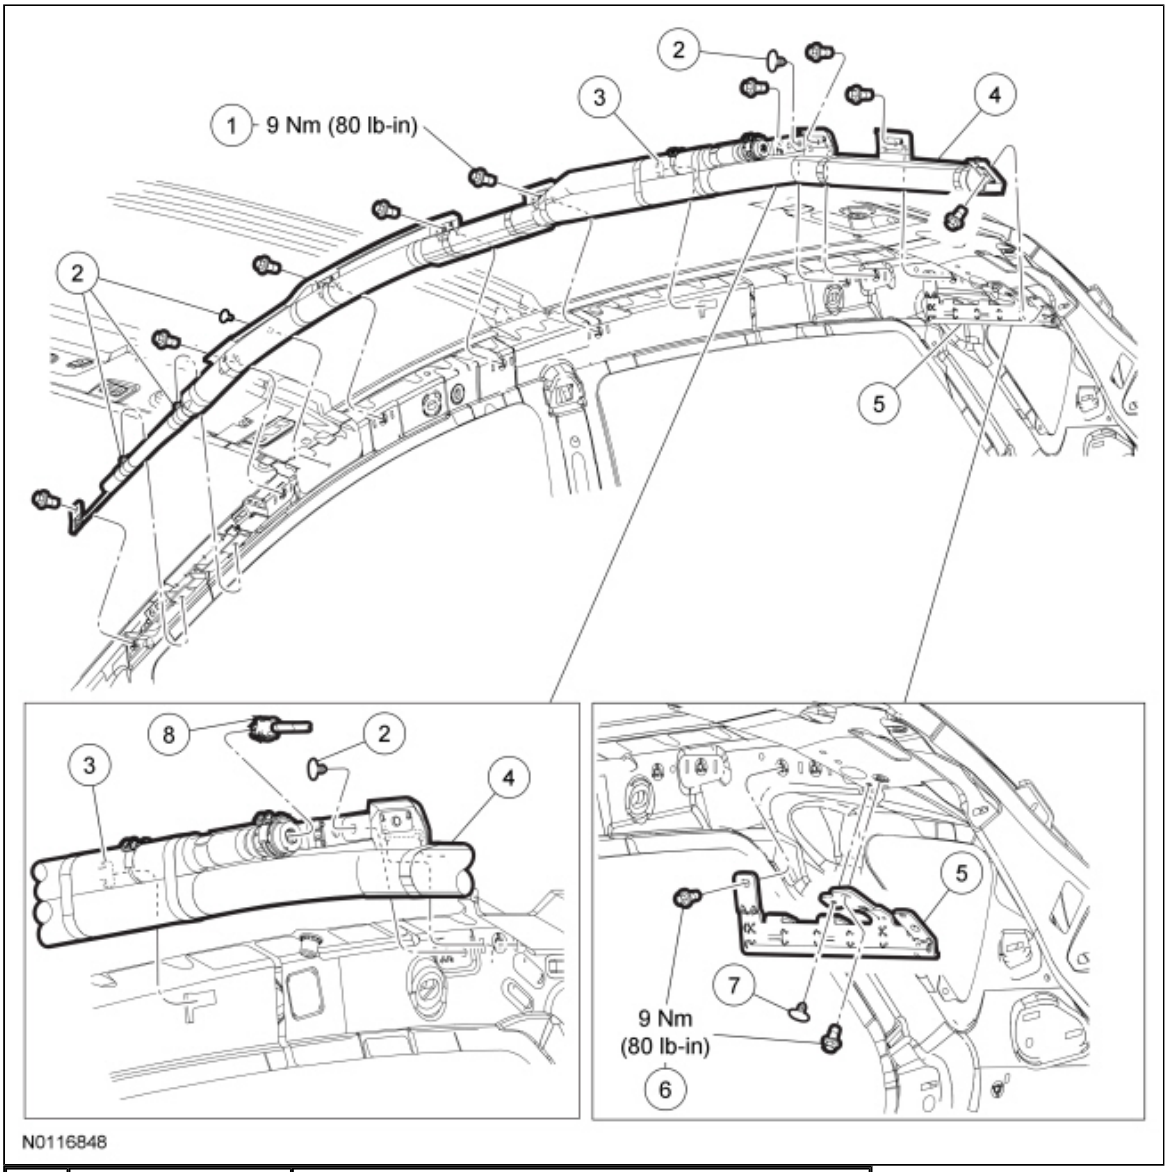
Side Air Curtain Module

4-Door Sedan



Item	Part Number	Description
1	W505252	Side air curtain module bolt (9 required)
2	—	Side air curtain module pin-type retainers (4 required) (part of 042D94/95)
3	—	Side air curtain module T-tab bracket (part of 042D94/95)
4	042D94/RH 042D95/LH	Side air curtain module
5	—	Side air curtain module electrical connector (part of 14A005)

5-Door Hatchback



Item	Part Number	Description
1	W505252	Side air curtain module bolt (9 required)
2	—	Side air curtain module pin-type retainers (4 required) (part of 042D94/95)
3	—	Side air curtain module T-tab bracket (part of 042D94/95)
4	042D94/RH 042D95/LH	Side air curtain module
5	611D78/RH 611D79/LH	Side air curtain roof bracket
6	W706681	Side air curtain roof bracket bolts
7	—	Pin-type retainer (part of 611D78/79) (2 required)
8	—	Side air curtain module electrical connector (part of 14A005)

Removal and Installation

WARNING: Always carry or place a live Safety Canopy®, or side air curtain module, with the module and tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

WARNING: Anytime the Safety Canopy® or side air curtain module has deployed, a new headliner and new A-, B- and C-pillar upper trim panels and attaching hardware must be installed. Remove any other damaged components and hardware and install new components and hardware as needed. Failure to follow these instructions may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

WARNING: Inspect a Safety Canopy® or side air curtain module before installation. If the module is damaged, the cover has separated or the Safety Canopy® or side air curtain material has been exposed, install a new module. Do not attempt to repair the module. Failure to follow these instructions may result in the Safety Canopy® or side air curtain deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

WARNING: Do not obstruct or place objects in the deployment path of the Safety Canopy® or side air curtain module. Failure to follow this instruction may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

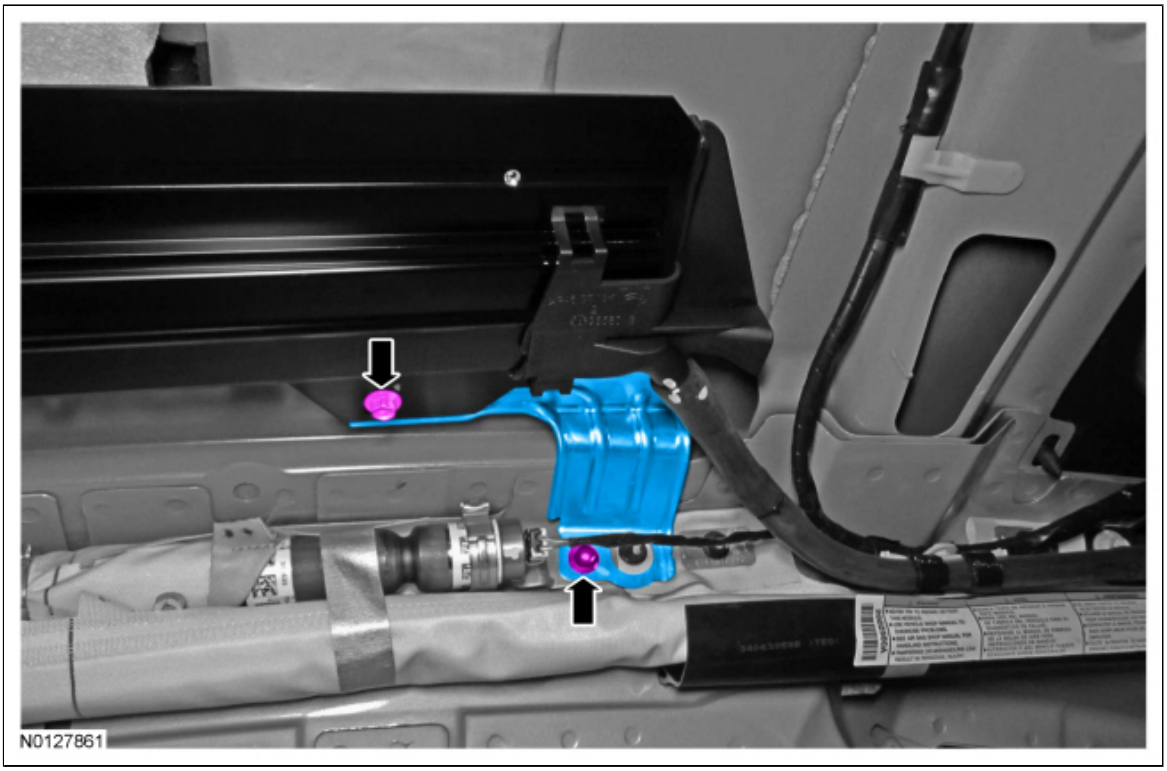
WARNING: Never put any type of fastener or tie strap around any part of a Safety Canopy® module, side air curtain module or interior trim panel. This will prevent the Safety Canopy® or side air curtain module from deploying correctly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

WARNING: Before installing a Safety Canopy® or side air curtain module, inspect the roofline for any damage. If necessary, the sheet metal must be reworked to its original condition and structural integrity. Install new fasteners if damaged and remove foreign material. Failure to follow these instructions may result in the Safety Canopy® or side air curtain deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

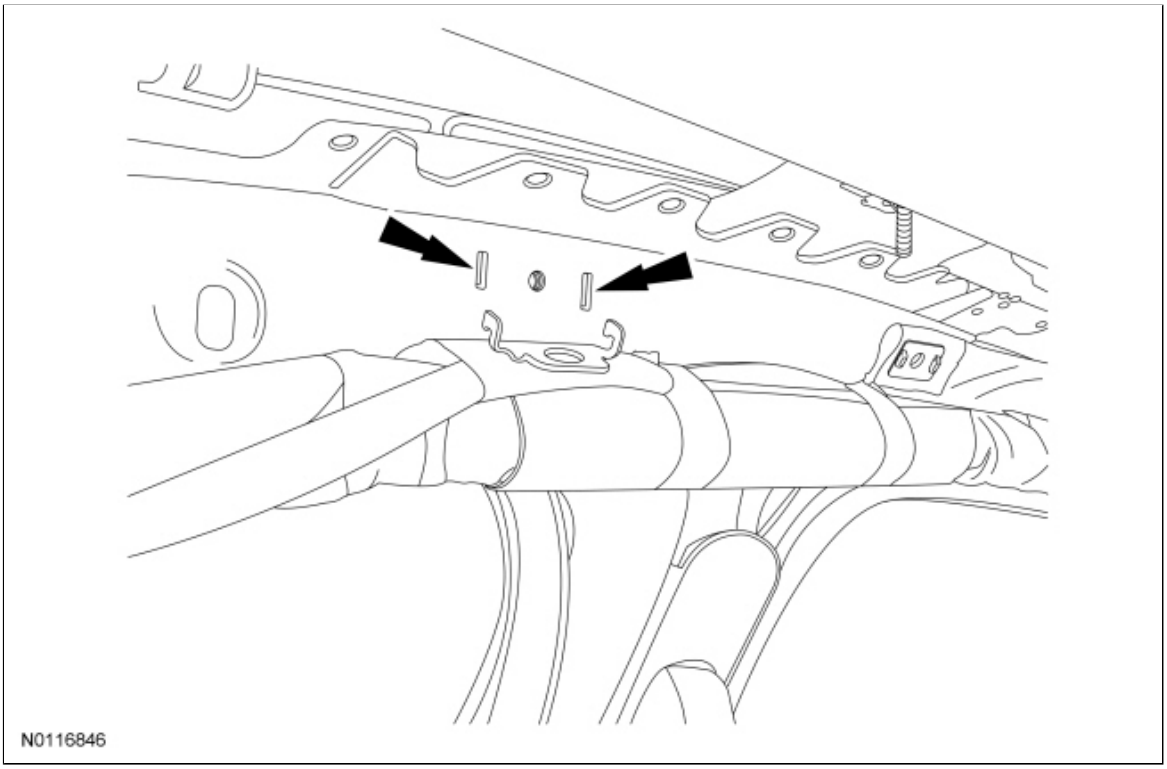
1. Remove the headliner. For additional information, refer to Section 501-05 .
2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.
3. Squeeze the tabs and disconnect the side air curtain module electrical connector.
4. If equipped with a roof opening panel, remove the 2 bolts and the roof opening panel frame bracket.



5. Remove all the side air curtain module bolts.
    - To install, tighten to 9 Nm (80 lb-in).

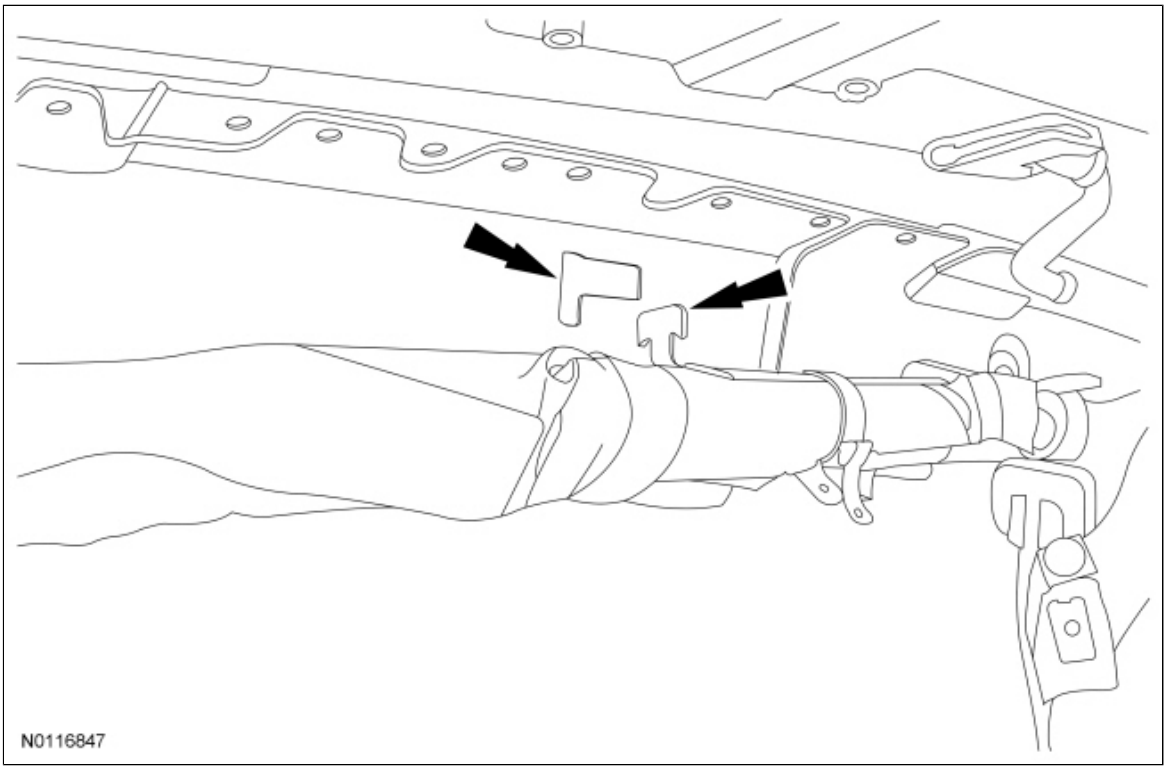
6. Disengage all the side air curtain module pin-type retainers.

7. At all screw attachment points except the rear, lift and rotate the top of the bracket out of the roof sheet metal slots.
    - For the rear bracket, pull rearward and rotate out of the roof sheet metal slot.



8. Slide the side air curtain module canister forward and disengage the T-tab bracket from the roof sheet metal slot.

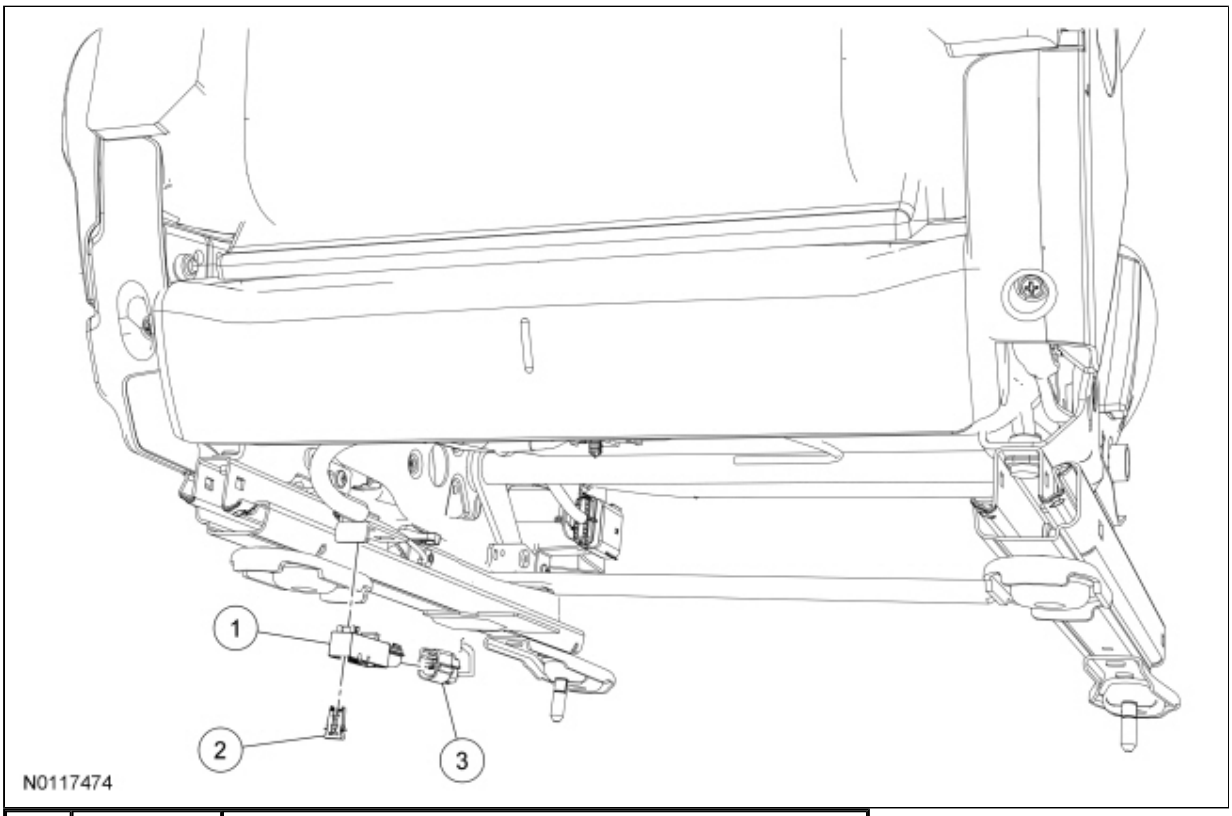
- Remove the side air curtain module.



9. To install, reverse the removal procedure.
10. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Seat Position Sensor

NOTE: Driver seat shown, passenger similar.



Item	Part Number	Description
1	14B416	Seat position sensor
2	—	Seat position sensor lock tab (part of 14B416)
3	—	Seat position sensor electrical connector (part of 14A698/RH 14A699/LH)

1. Position the seat all the way up (if equipped) and to the middle of the seat track.

2. **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**

   Turn the ignition OFF and wait at least one minute.

3. From under the rear of the affected seat, remove the retaining clip, disconnect the electrical connector and remove the seat position sensor.

4. To install, reverse the removal procedure.

5. Prove out the SRS as follows:
   Turn the ignition switch from ON to OFF. Wait 10 seconds, then turn the ignition switch back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:

- fail to light.
- remain lit continuously.
- flash at a 5 Hz rate (RCM not configured).

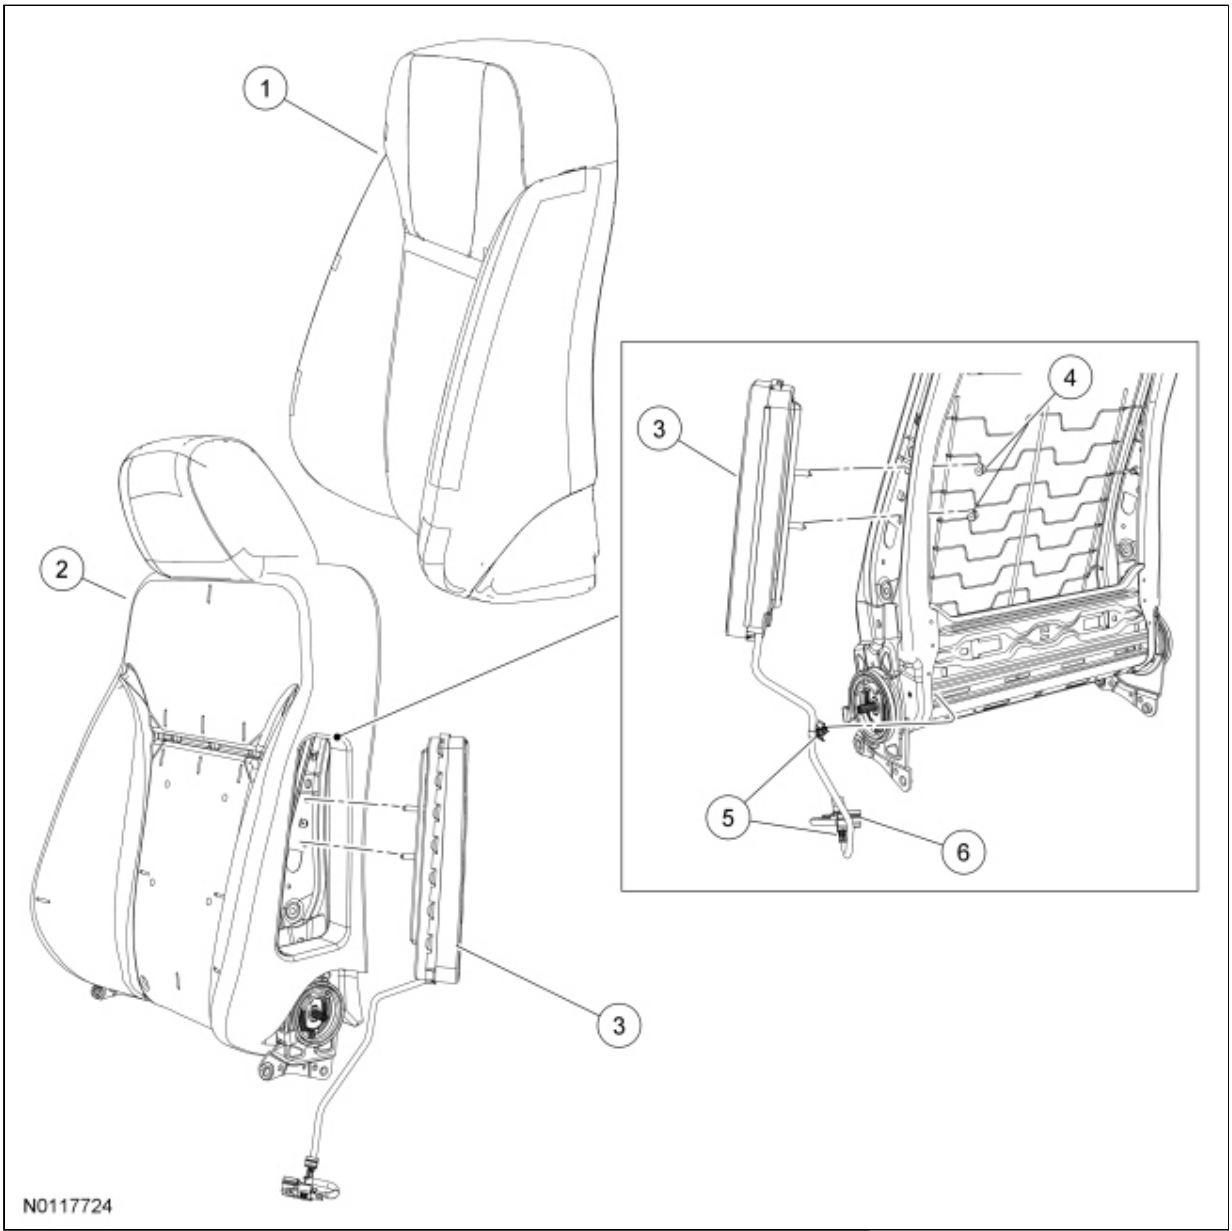
The air bag warning indicator may not illuminate until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS fault discovered.

Use a scan tool and clear all continuous DTCs from the RCM and Occupant Classification System Module (OCSM).

Side Air Bag Module

NOTE: Driver side shown, passenger similar.

NOTE: For side air bag module nut torque specification and tightening sequence, refer to the step in this procedure.



Item	Part Number	Description
1	64416	Backrest cover and deployment chute
2	—	Seat backrest assembly
3	611D11/LH 611D10/RH	Side air bag module
4	W790242	Side air bag module nuts (2 required)
5	—	Wire harness retainers (part of 611D10/11)
6	—	Electrical connector (part of 611D10/11)

Removal

WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

WARNING: If the seat side air bag cover has been damaged or separated from its mounting, or if the air bag material has been exposed, install a new seat side air bag module. Never try to repair the seat side air bag module. Failure to follow these instructions may result in the seat side air bag deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

WARNING: Front seat backrest trim covers installed on seats equipped with seat side air bags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

NOTE: If a side air bag deployment took place, install a new seat back pad, trim cover and side air bag module. The seat backrest frame should be installed new if necessary.

NOTE: When installing a new side air bag module after a deployment, refer to Section 501-10 for additional information concerning new side air bag module installation.

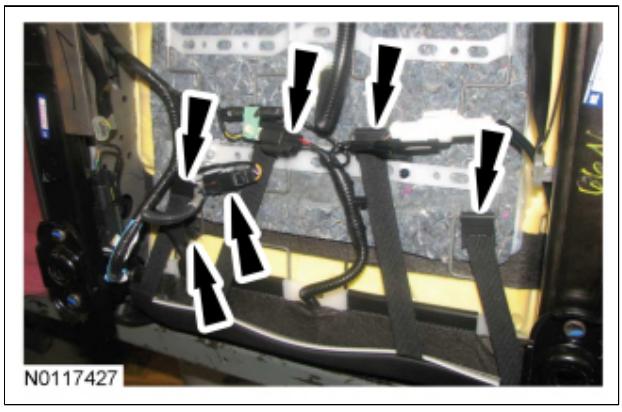
NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

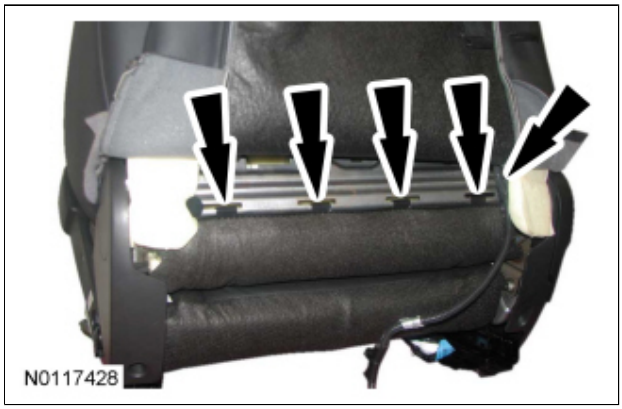
1. Remove the front seat from the vehicle. For additional information, refer to Section 501-10 .

2. **NOTE:** Passenger seat shown, driver seat similar.

   From under the seat, carry out the following.
   - Disconnect the side air bag module electrical connector and detach the wire harness retainer.
   - Disengage the 4 backrest cover elastic strap retainers attached to the bottom rear of the seat.

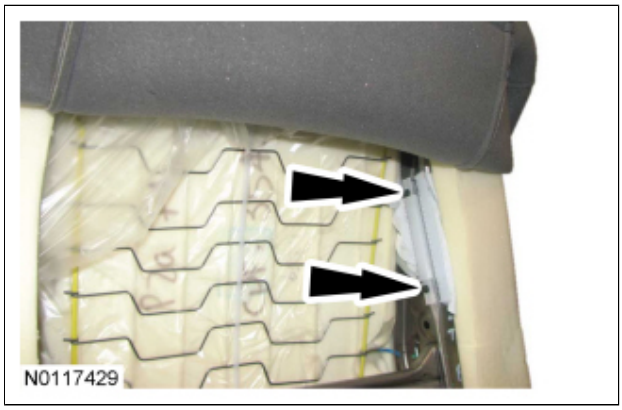


3. Detach the backrest cover retainers and the side air bag module wire harness retainer from the rear of the backrest frame.



4. Invert the backrest cover up enough to expose the side air bag deployment chute.

5. Remove 1 rivet from the deployment chute J-clip retainers.
   - From the back of the rivet, push the rivet stud end in and pull the head out from the other side.



6. Slide the 2 deployment chute J-clip retainers apart.

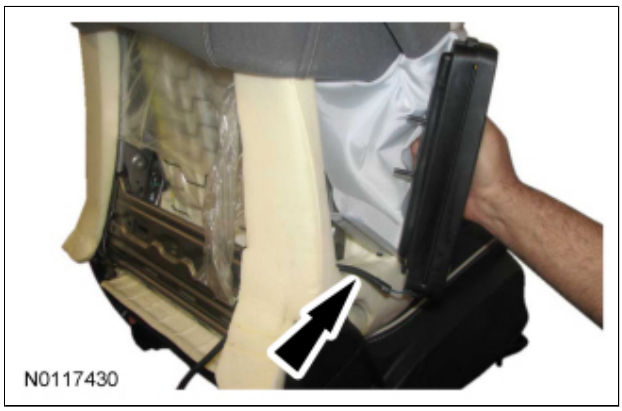
7. Remove the 2 side air bag module nuts.

8. Remove the side air bag module in the following sequence:
   1. Pull the side air bag module mounting studs back through the backrest frame.
   2. Position the side air bag module away from the backrest frame.
   3. Route out the wire harness.

Installation

1. **NOTE:** Passenger seat shown, driver seat similar.

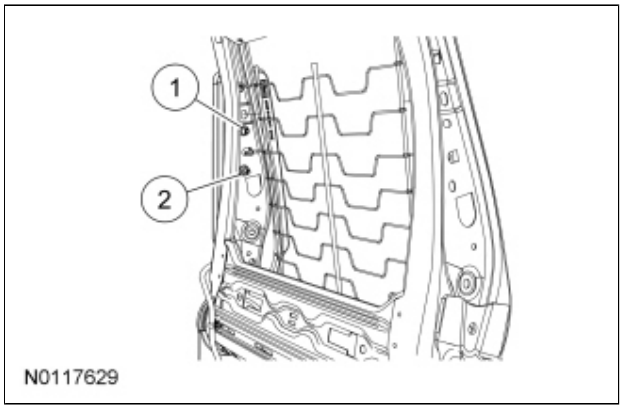
   Route the side air bag module wire harness through the backrest foam pad opening.



2. **WARNING: Before installing the seat side air bag module/deployment chute assembly:**
   - **Inspect the side air bag module and mounting surfaces for any damage or foreign material.**
   - **Remove any foreign material from the mounting surfaces of the deployment chute, the seat backrest frame mounting bracket and the air bag module cavity in the seat backrest foam pad.**
   - **Install new parts if damaged.**

   Failure to follow these instructions may result in the seat side air bag deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

   Position the side air bag module studs through the backrest frame holes and install the nuts in the sequence shown.
   - Tighten to 9 Nm (80 lb-in).

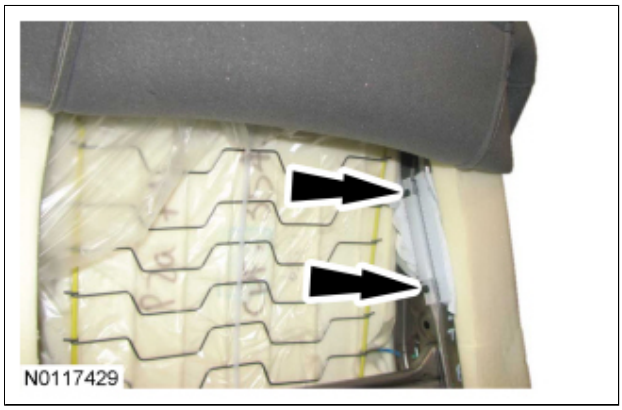


3. **WARNING: Check the seat side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, a new seat back trim cover and deployment chute must be installed as a unit. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.**

   WARNING: If the seat side air bag module deployment chute is not correctly positioned and closed, the seat side air bag module may not deploy correctly. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

   Wrap the deployment chute around the side air bag module and backrest frame.
   1. Position the outboard side of the air bag deployment chute around the outboard side of the backrest frame and pad.
   2. Insert the inboard side of the air bag deployment chute between the seat backrest frame and pad.

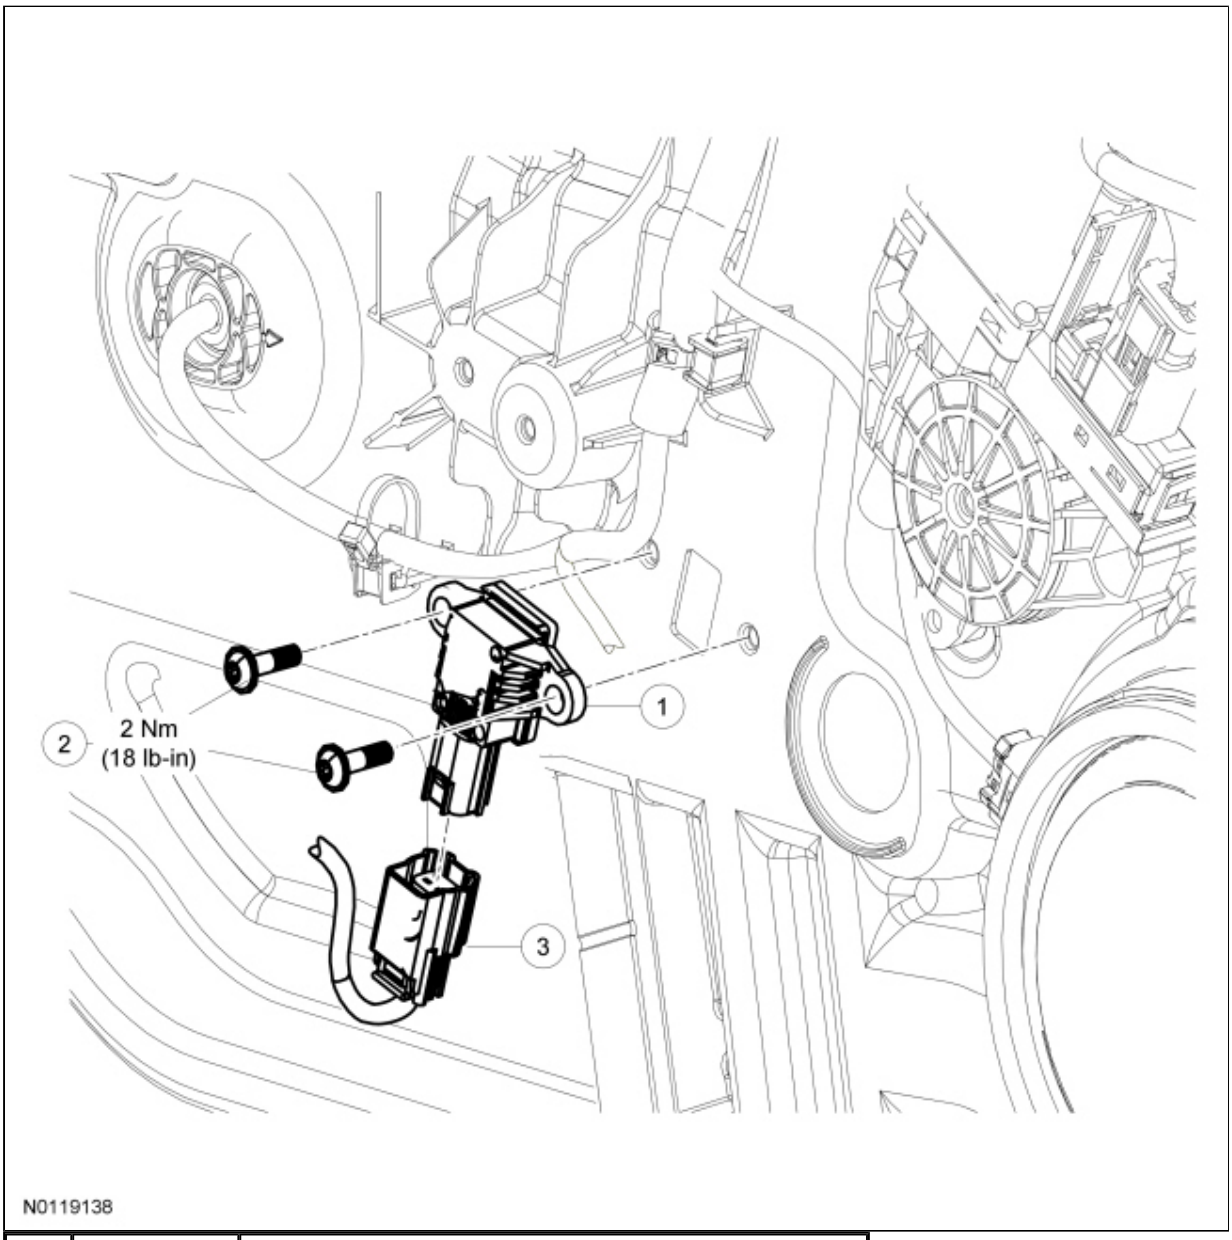
4. Engage the deployment chute J-clip retainers and install plastic rivets at the top and bottom of the J-clip retainers.



5. Roll the backrest cover down around the backrest frame.
6. Attach the side air bag module wire harness to the backrest frame.
7. Attach the backrest cover retainers to the rear of the backrest frame.
8. Route, attach and connect the side air bag module wire harness.
9. Attach the 4 backrest cover elastic strap retainers to the bottom rear of the seat.
10. Install the front seat. For additional information, refer to Section 501-10 .

Side Impact Sensor — Front Door

NOTE: LH shown, RH similar.



Item	Part Number	Description
1	14B345	Side impact sensor
2	W506964	Side impact sensor bolts
3	—	Side impact sensor electrical connector (part of 14631)

Removal and Installation

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death

in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Slide the locking wedge back and disconnect the side impact sensor electrical connector.

4. Remove the 2 bolts and the side impact sensor.
   - To install, tighten to 2 Nm (18 lb-in).

5. **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

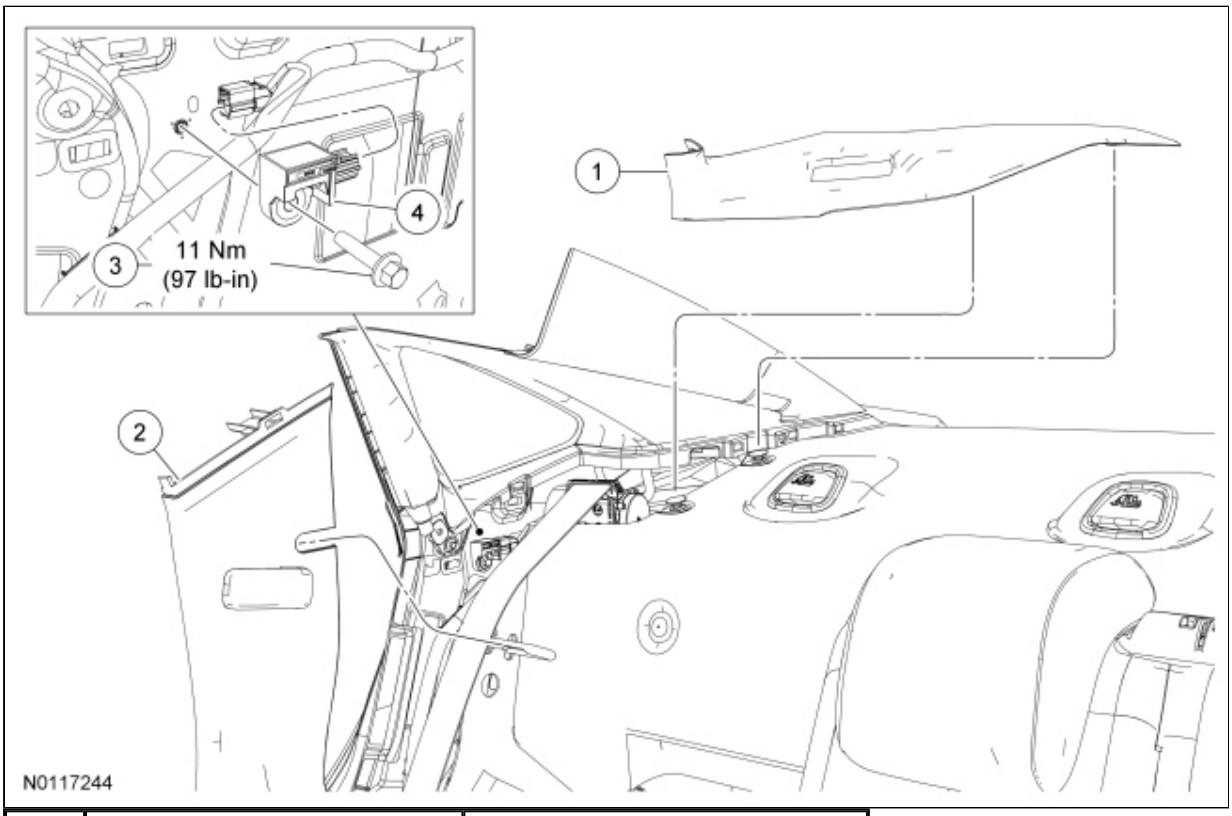
   NOTE: Make sure the door sheet metal and side impact sensor mating surfaces are clean.

   To install, reverse the removal procedure.

6. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Side Impact Sensor — Second Row, 4-Door Sedan

NOTE: RH shown, LH similar.



Item	Part Number	Description
1	5446808 RH / 5446809 LH	Upper parcel shelf trim panel
2	5431012 RH / 5431013 LH	Lower C-pillar trim panel
3	W505256	Side impact sensor bolt
4	14B004	Side impact sensor

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.
2. Position the rear door opening weather-strip aside.
3. Pull to release the clips and position the upper parcel shelf trim panel aside.

4. Position the seat backrest down.

5. Position the lower C-pillar trim panel away enough to access the side impact sensor.
   - Pull to release the clips and locate the side impact sensor just below the quarter glass.

6. **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   NOTE: Make sure the C-pillar and side impact sensor mating surface is clean and free of foreign material.

   Remove the bolt, disconnect the electrical connector and remove the side impact sensor.
   - To install, tighten to 11 Nm (97 lb-in).

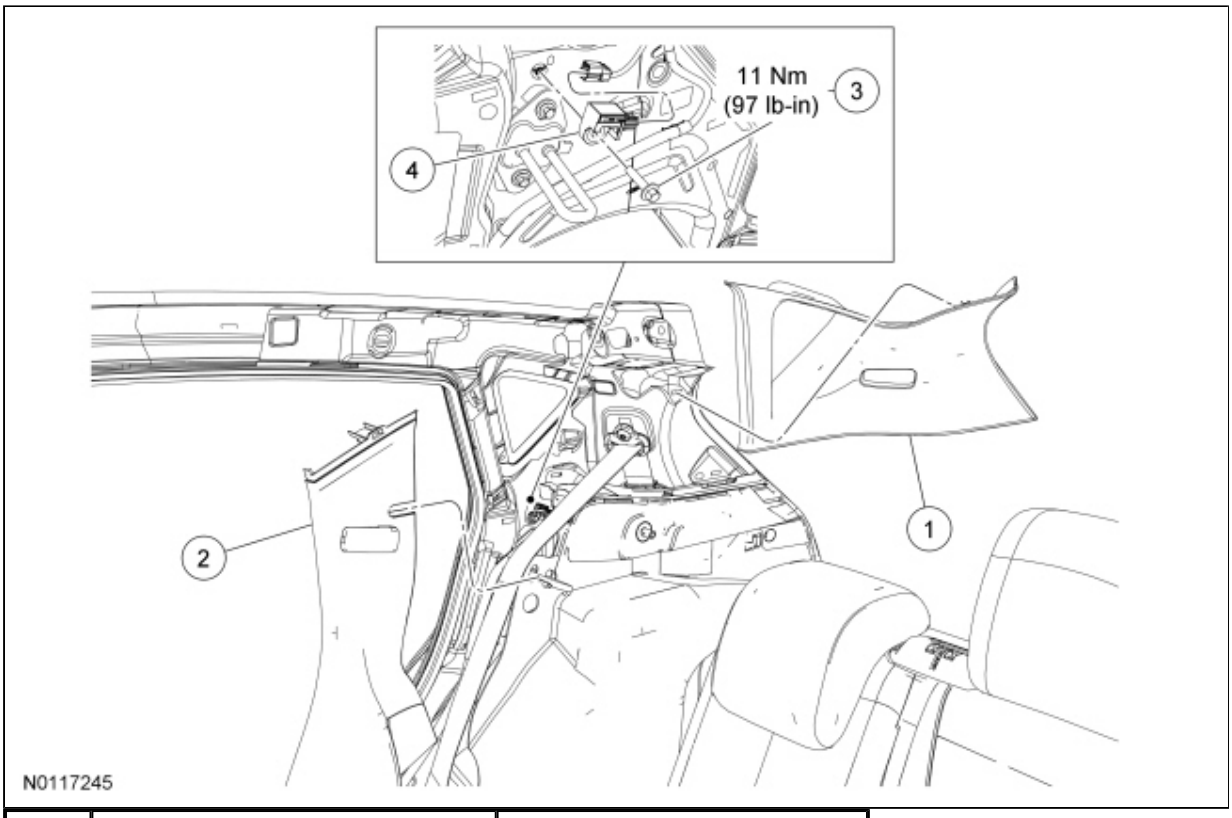
7. To install, reverse the removal procedure.

8. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Side Impact Sensor — Second Row, 5-Door Hatchback

Removal and Installation

NOTE: RH shown, LH similar.



Item	Part Number	Description
1	5852018 RH / 5852019 LH	Upper quarter trim panel
2	5431012 RH / 5431013 LH	Lower C-pillar trim panel
3	W505256	Side impact sensor bolt
4	14B004	Side impact sensor

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Position the door opening weather-strip aside.

3. Pull to release the clips and position the upper quarter trim panel aside.

4. Position the seat backrest down.

5. Position the lower C-pillar trim panel away enough to access the side impact sensor.
   - Pull to release the clips and locate the side impact sensor just below the quarter glass.

6. **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   NOTE: Make sure the C-pillar and side impact sensor mating surface is clean and free of foreign material.

   Remove the bolt, disconnect the electrical connector and remove the side impact sensor.
   - To install, tighten to 11 Nm (97 lb-in).

7. To install, reverse the removal procedure.

8. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Descriptions of Ford Steel Families

Grade	Alloy Content	Heat Treatment	Typical Applications	Comments
Mild Steel, Bake Hardened, Solid Solution Strengthened	Low	Fully annealed/dead soft	Body panels (closures, floor pan, dash panel)	—
High-Strength Low Alloy (HSLA)	Low	Fully annealed/dead soft	Rails, structural members	Strengthened with fine particles and small grain size
Dual Phase	Medium (Manganese Silicon,	Fully annealed/partially hardened	Rails, structural members	15-50% of structure is hard martensite

	Molybdenum Chromium)			
Ultra High Strength Steel (UHSS) (Martensitic, Boron)	Low	Fully hardened	Rocker reinforcements, door beams, bumper beams	100% of structure is hard martensite
Transformation Induced Plasticity Steel	High (Manganese, Phosphorous, Silicon, Aluminum)	Fully annealed/ partially hardened	To be determined	Complex microstructure for high strength and ductility

Ford Recommended Steel Repairability Matrix

Grade	Trade Descrip-tions	Welding Method			Cold Repairs	Use of Heat for Repair	Temp-erature Range	Max-imum Heat
		Metal Inert Gas (MIG)	Squeeze-Type Resist-ance Spot Welding (STRW)	MIG Braze				
Mild Steel	Mild	Yes	Yes	NA	Yes [a]	Yes	Up to 650°C (1,200° F)	90 sec. x 2
Laminate Steel	Quiet Steel	No	Yes	No	Yes [a]	NA	NA	NA
Bake Hardened	BH 180, BH210, BH 250, BH 280	Yes	Yes	Yes [b]	Yes [a]	Yes	Up to 650°C (1,200° F)	90 sec. x 2
Solid Solution Strength- ened	—	Yes	Yes	Yes [b]	Yes [a]	Yes	Up to 650° C (1,200° F)	90 sec. x 2
High- Strength Low Alloy (HSLA)	HSLA 250, HSLA 350, HSLA 550	Yes	Yes	Yes [b]	Yes [a]	Yes	Up to 650°C (1,200° F)	90 sec. x 2
Dual Phase = 600 MPa Ultimate Tensile Strength	DP 500, DP 600	Yes	Yes	Yes [b]	Yes [a]	No	NA	NA
Dual Phase = 600 MPa Ultimate Tensile Strength (particular to 780 and 980 grades) [c]	DP 700, DP 780, DP 900	Yes [d]	Yes	Yes [b]	No	No	NA	NA
Ultra High Strength Steel (UHSS) (Martens-itic, Boron) [e]	Boron	Yes [a]	Yes	Yes [b]	No	No	NA	NA
Transform- ation Induced Plasticity (TRIP) Steel	TRIP 590, TRIP 780, TRIP 980	NA	NA	NA	NA	NA	NA	NA

[a] Cold repairs can be performed if damage excludes kinks. May section only if approved procedure in workshop manual.

[b] MIG braze allowed for non-structural applications only.

[c] Dual phase steels DP 700, DP 780 and DP 980 must be replaced at factory joints, no sectioning unless approved procedure in workshop manual.
[d] For DP 980, use MIG plug welding only, no stitch welding.
[e] Boron components must be replaced at factory joints, no sectioning allowed.

Body

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

The body consists of the following:

- Four-door sedan
- Five-door hatchback
- Bolted, removable front fenders, hinged doors and hood
- Steel roof panel constructed of mild steel
- Steel hood constructed of dent-resistant steel
- Steel fenders constructed of dent-resistant steel
- Steel doors with outer door panels constructed of high-strength bake hardenable steel
- Steel luggage compartment lid constructed of dent-resistant steel
- Door panels on all models have sound deadener (mastic) applied
- Mastic and sound deadener material applied to floor pan interior and exterior
- Boron reinforced bolt-on front bumper beam
- Boron reinforced bolt-on rear bumper beam
- Front subframe assembly housing suspension and steering components
- Front frame rail service kit is not available
- Sound deadener mastic material used in roof panel, floor pan and door panels

For dimensional information, refer to the following illustrations:

Body Margins

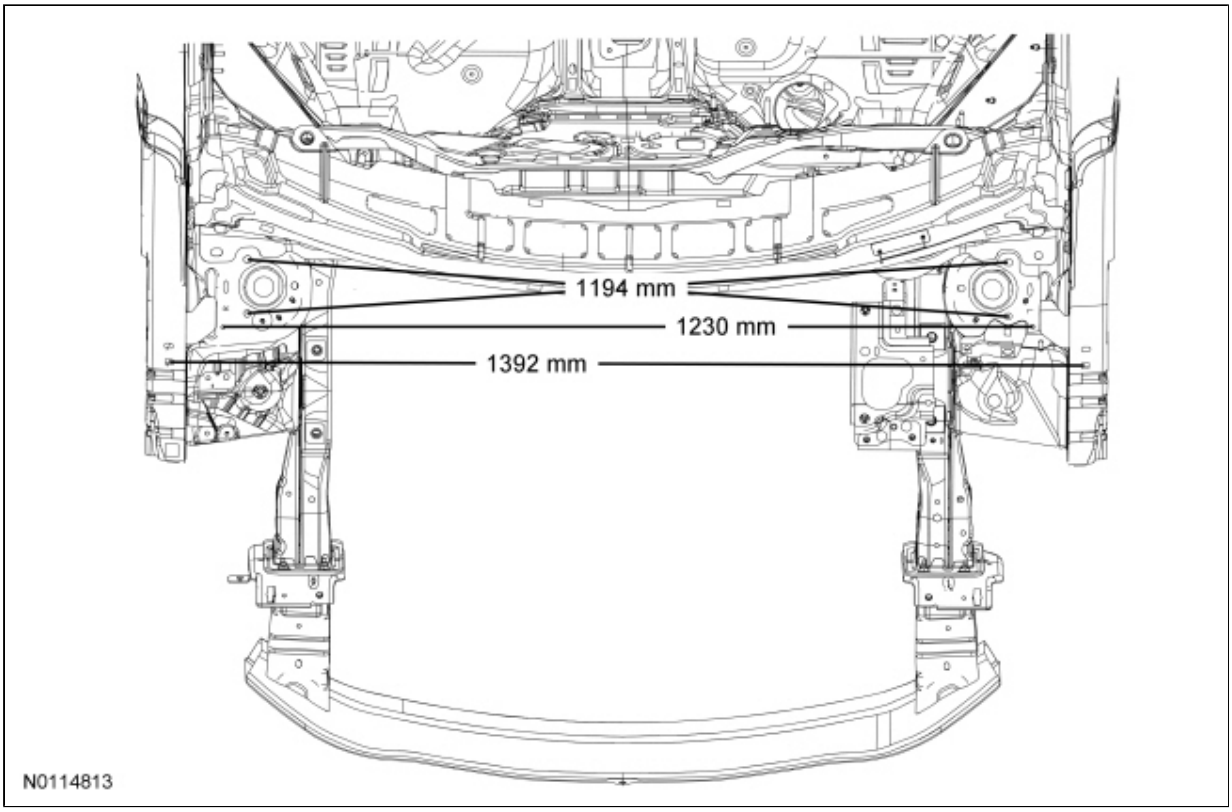
7	Rear door to body side	3.6 mm (0.141 in) ± 1.5 mm (0.059 in)	0.0 mm (in) ± 1.5 mm (0.059 in)
8	Body side to tail lamp	2.0 mm (0.078 in) ± 1.0 mm (0.039 in)	1 mm (0.039 in) ± 1.0 mm (0.039 in)
9	Tail lamp to rear fascia	0.4 mm (0.078 in) ± 1.5 mm (0.059 in)	2.0 mm (0.078 in) ± 2.0 mm (0.078 in)
10	Body side to rear fascia	0.0 mm (0 in) ± 0.5 mm (0.019 in)	.5 mm (0.196 in) ± 1.0 mm (0.039 in)
11	Rear fascia to liftgate	4.2 mm (0.165 in) ± 1.5 mm (0.059 in)	2.3 mm (0.09 in) ± 1.5 mm (0.059 in)

Underhood Dimensions

NOTE: Measurements are obtained on center, unless otherwise indicated.

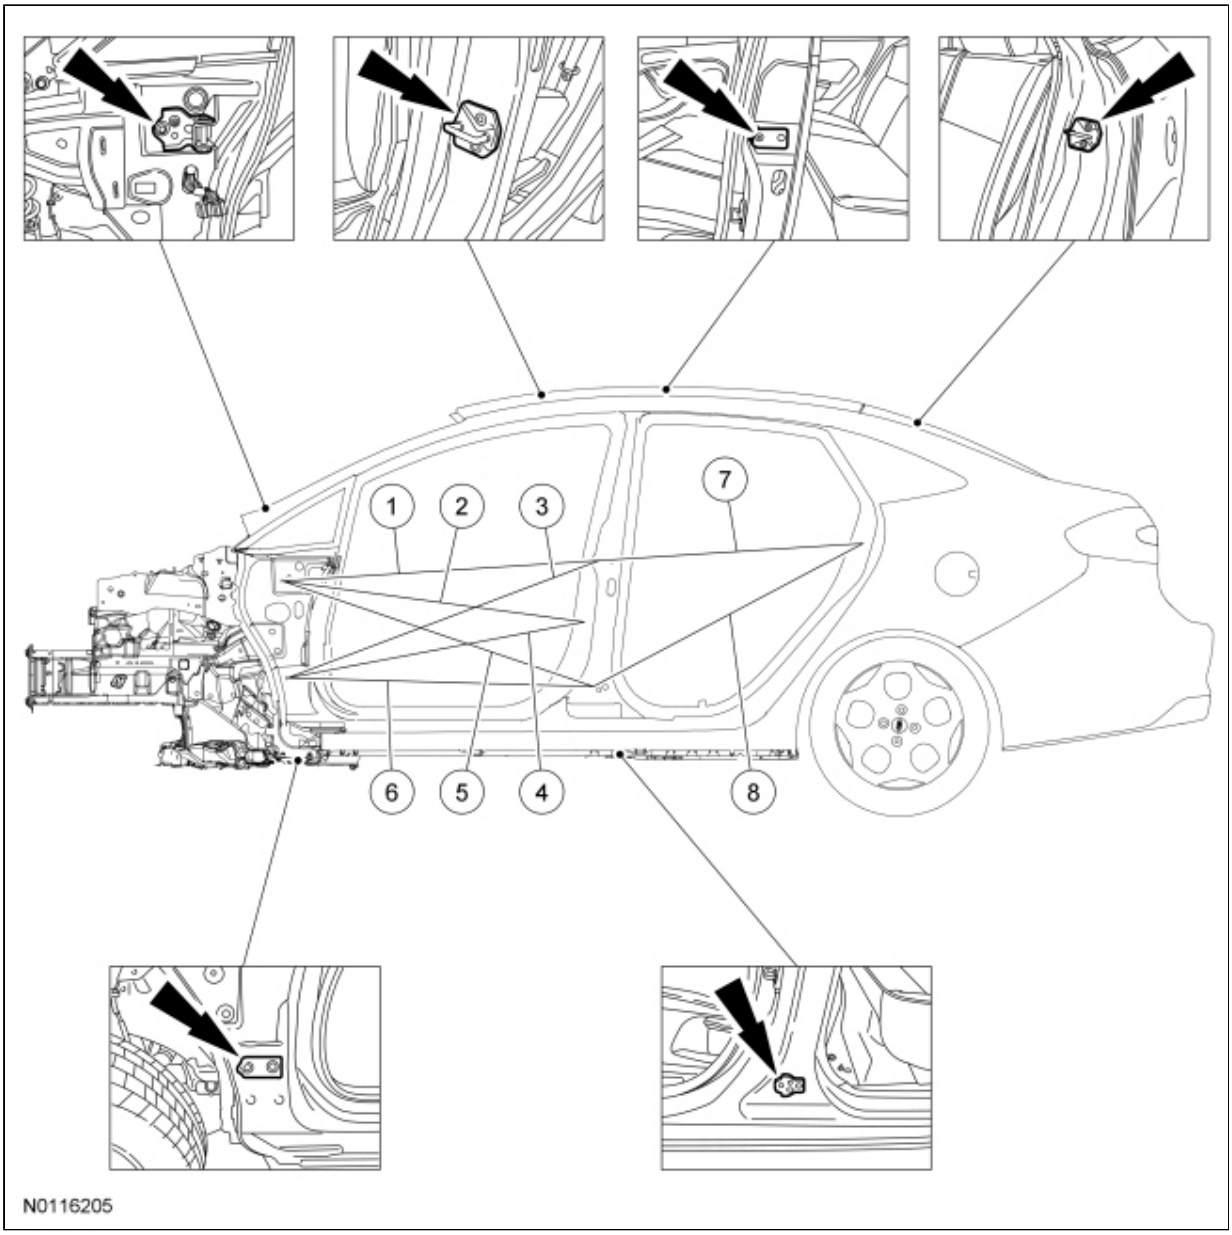
NOTE: Underhood dimensions shown in this illustration apply to all body styles.



Body Side Closure Dimensions

NOTE: 4-door sedan shown, 5-door hatchback the same.

NOTE: Measurements are obtained on center, unless otherwise indicated.

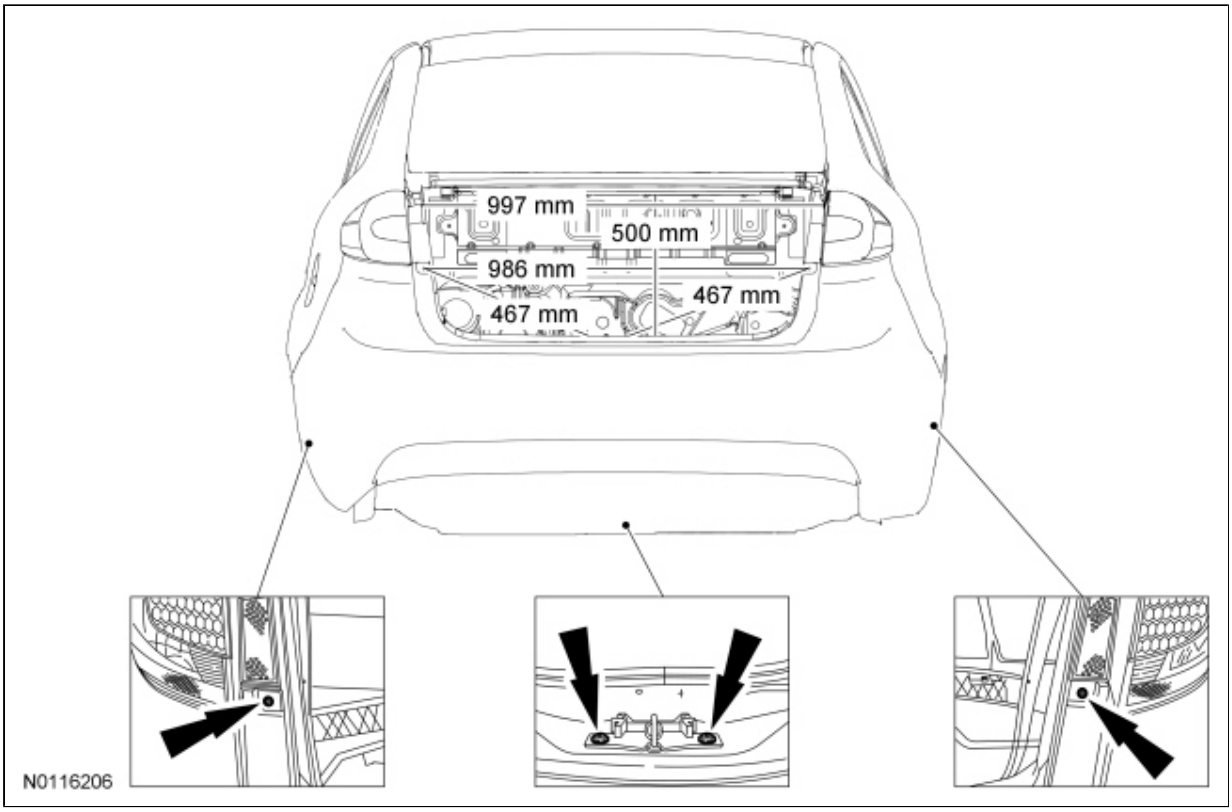


1	A-pillar upper door hinge to B-pillar upper door hinge	1081 mm
2	A-pillar upper door hinge to front door striker upper bolt	1050 mm
3	A-pillar lower door hinge to rear door upper hinge	1135 mm
4	A-pillar lower door hinge to front door striker upper bolt	1055 mm
5	A-pillar upper door hinge to B-pillar lower door hinge	1115 mm
6	A-pillar lower door hinge to B-Pillar lower door hinge	1042 mm
7	B-pillar upper door hinge to rear door striker upper bolt	910 mm
8	B-pillar lower door hinge to rear door striker upper bolt	1048 mm

Rear Opening Dimensions

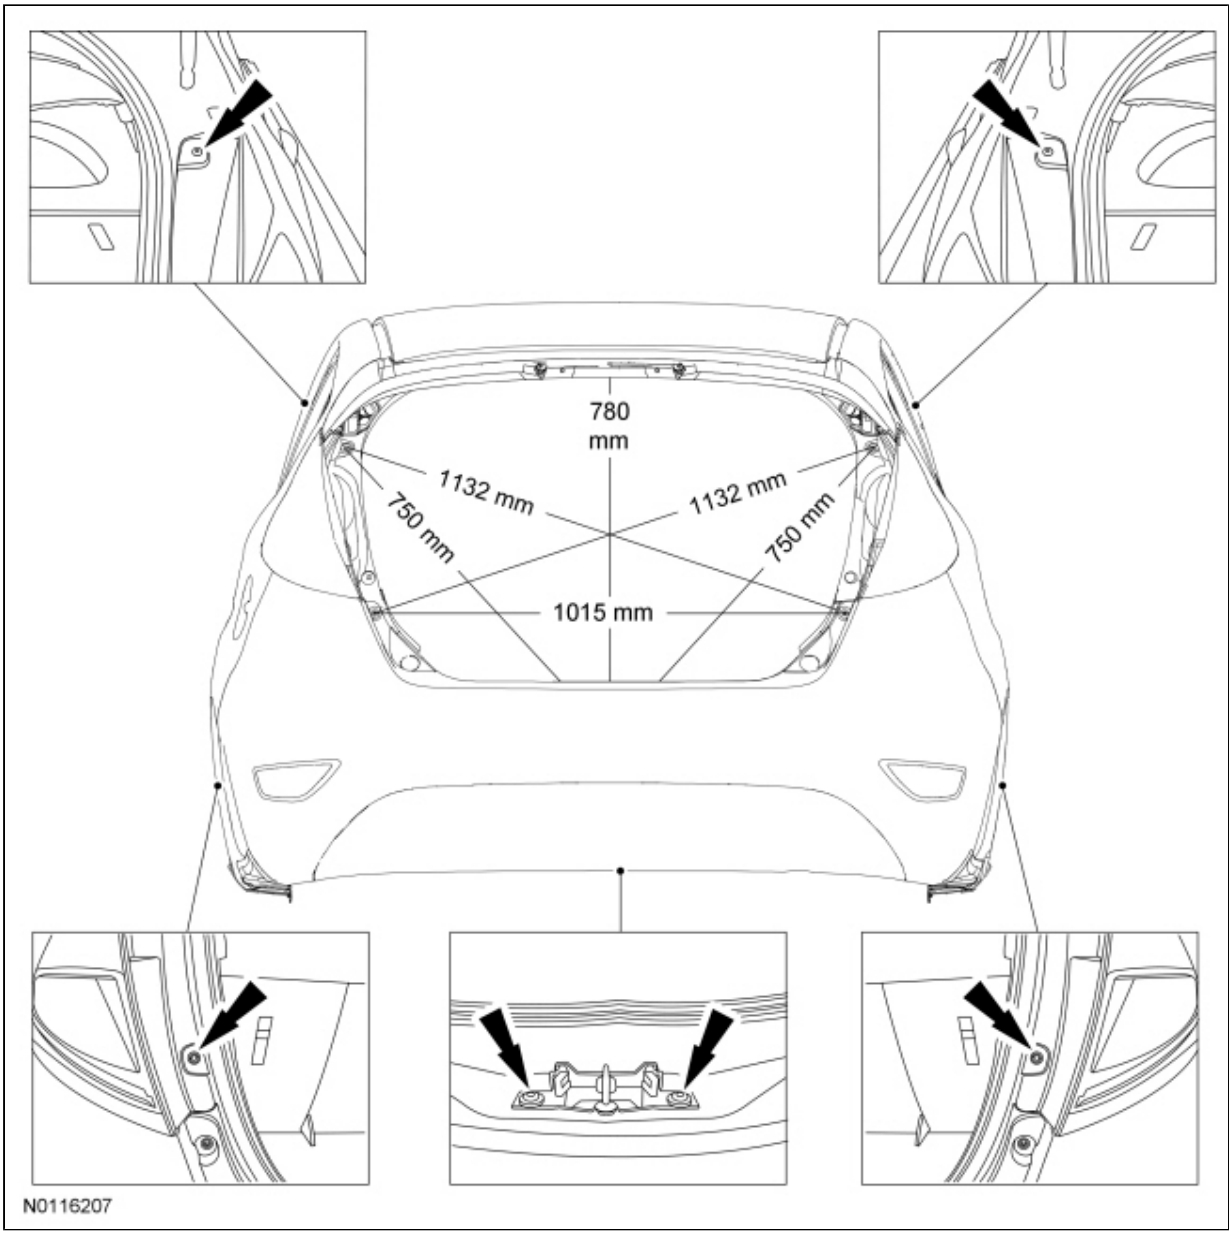
4-Door Sedan

NOTE: Measurements are obtained on center, unless otherwise indicated.



5-Door Hatchback

NOTE: Measurements are obtained on center, unless otherwise indicated.

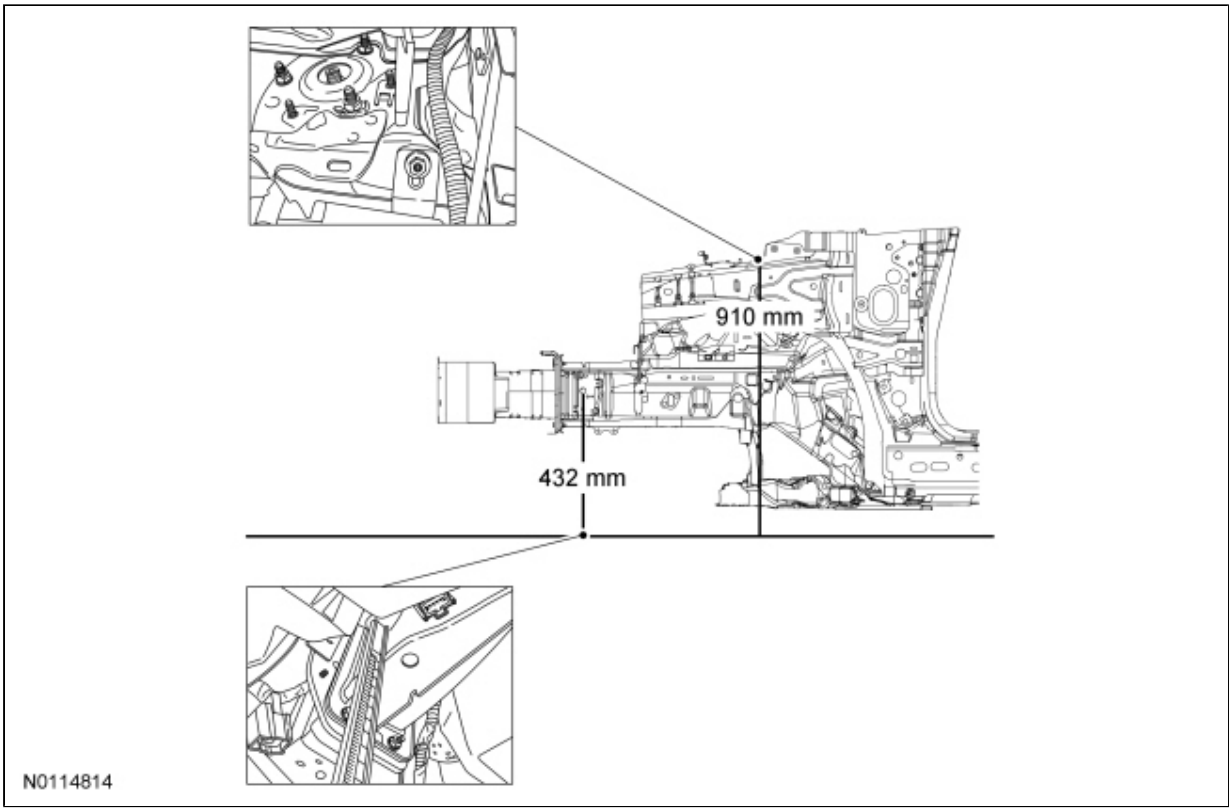


Underbody Dimensions

Datum Height — Front Structure

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

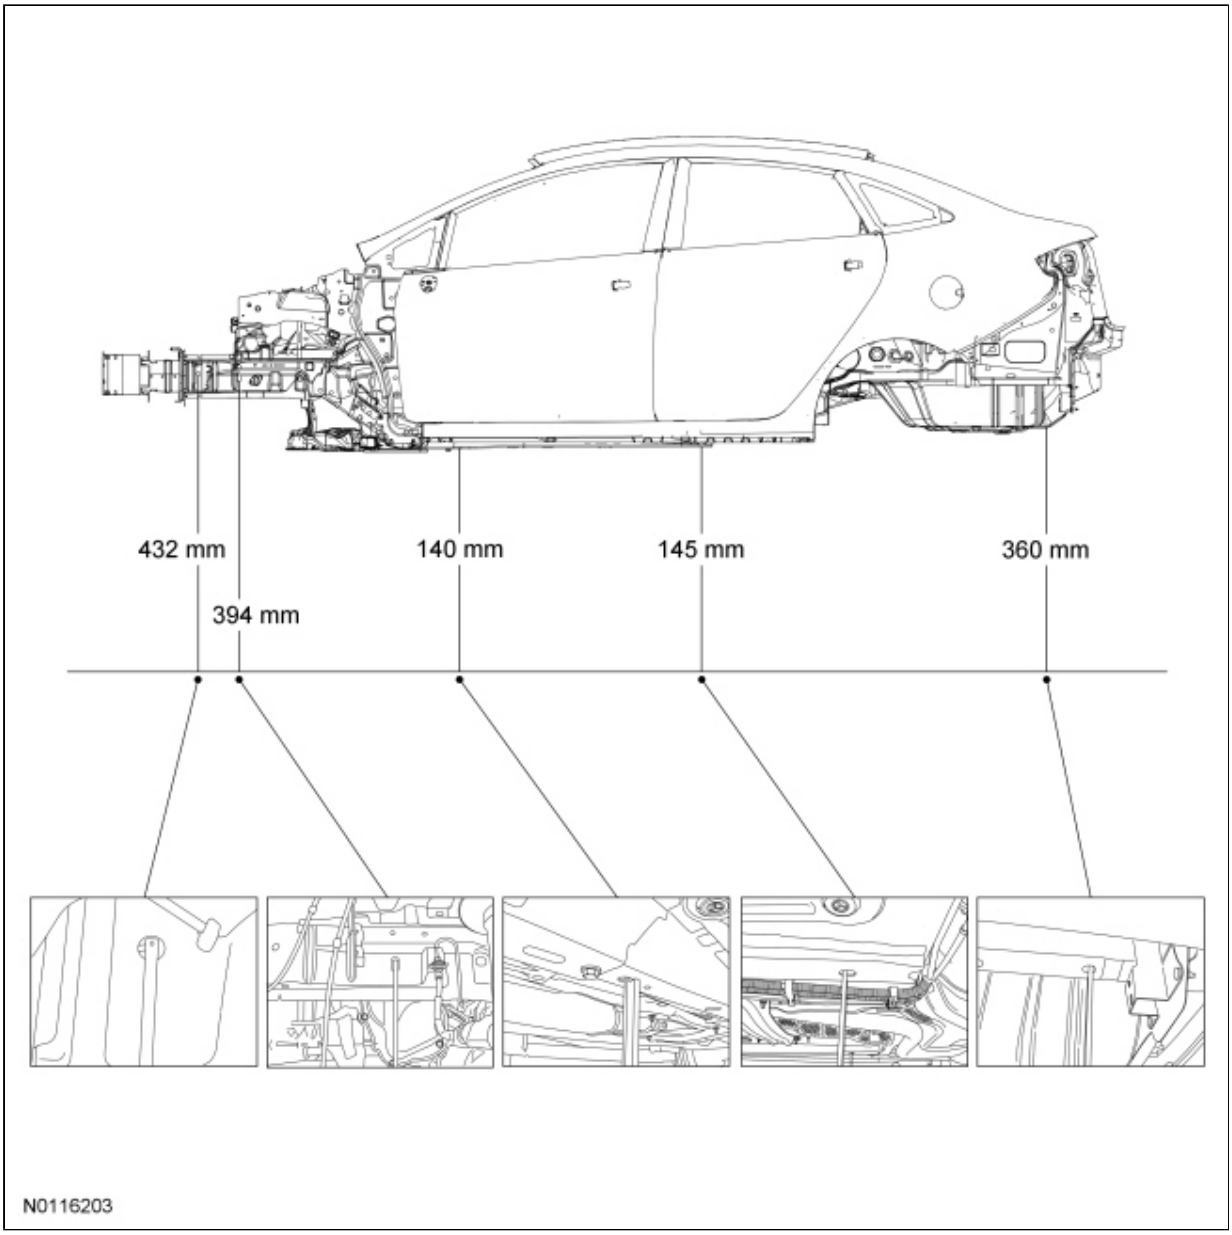
NOTE: A structural frame rail sectioning kit is not available. Frame rails must be replaced at factory seams.



Datum Height — 4-Door Sedan

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

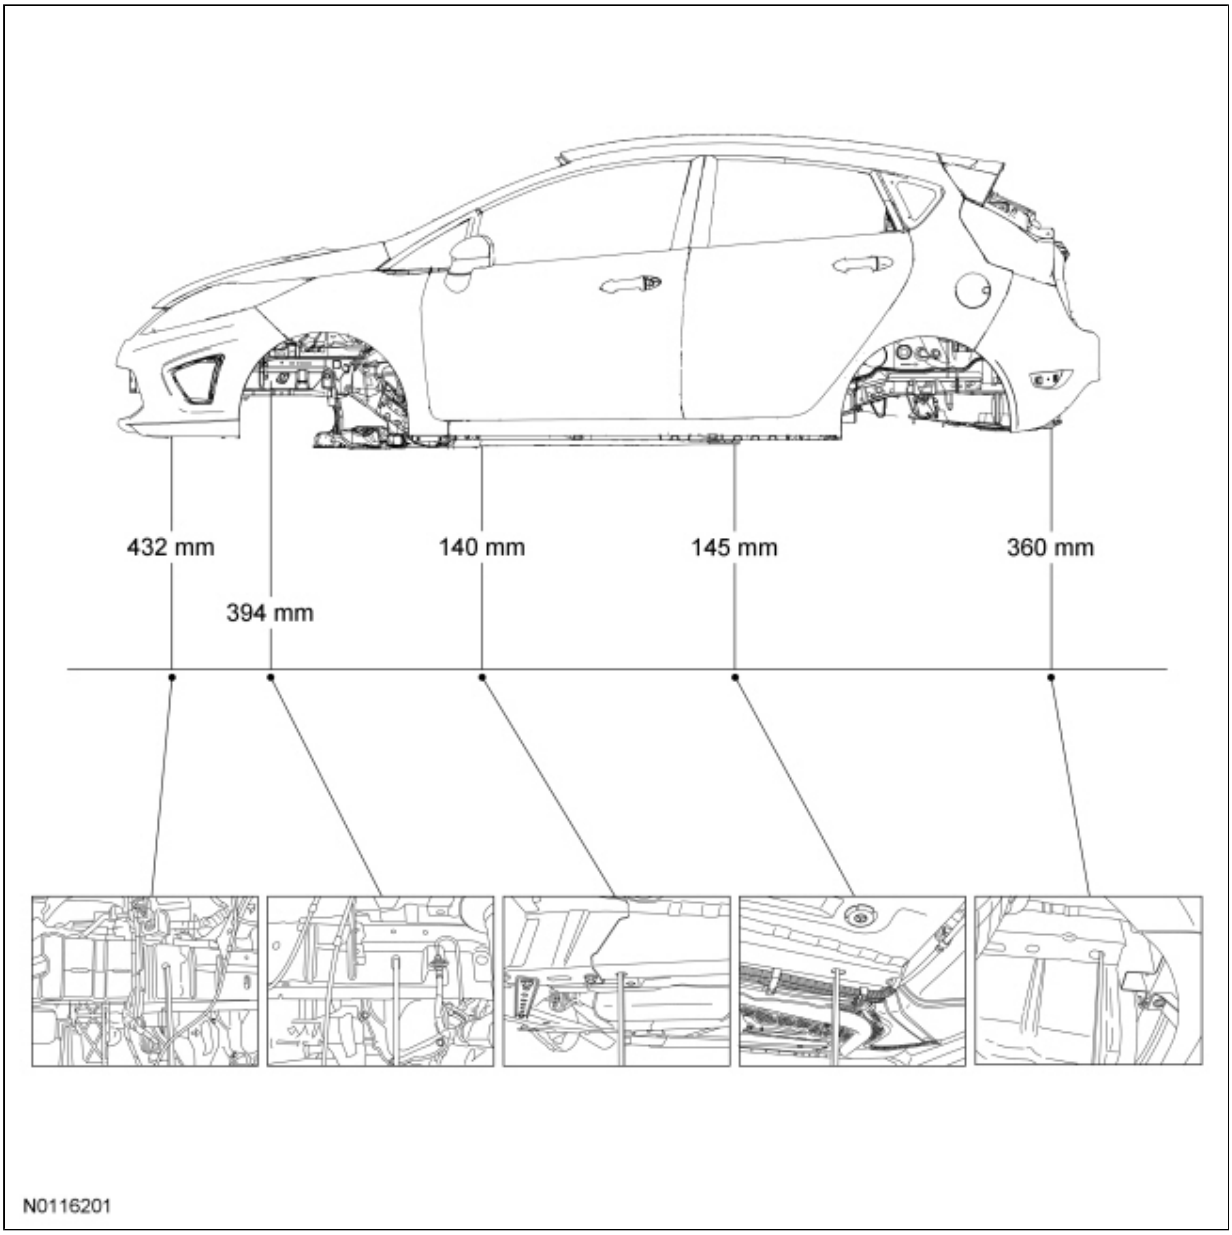
NOTE: A structural frame rail sectioning kit is not available. Frame rails must be replaced at factory seams.



Datum Height — 5-Door Hatchback

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

NOTE: A structural frame rail sectioning kit is not available. Frame rails must be replaced at factory seams.

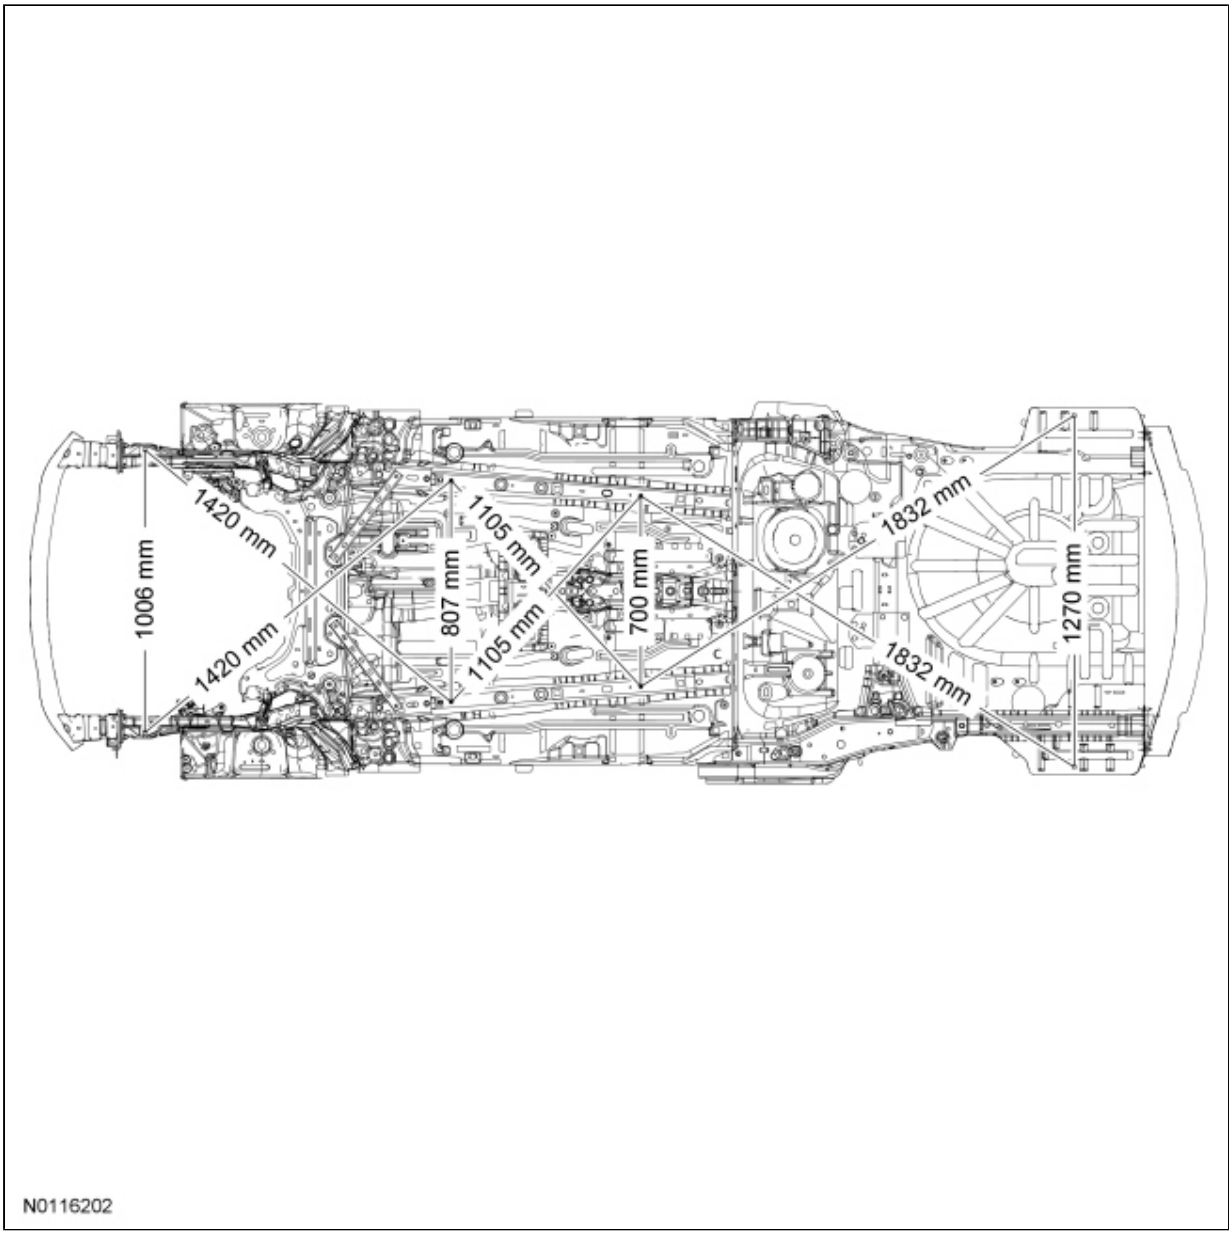


Underbody Dimensions — 4-Door Sedan

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

NOTE: A structural frame rail sectioning kit is not available for the front frame rail section. Frame rails must be replaced at factory seams. It is mandatory to maintain factory body dimensions when carrying out any repair procedure to the frame rails. Refer to Frame Members — Front in this section.

NOTE: Measurements are obtained on center, unless otherwise indicated.



Underbody Dimensions — 5-Door Hatchback

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

NOTE: A structural frame rail sectioning kit is not available for the front frame rail section. Frame rails must be replaced at factory seams. It is mandatory to maintain factory body dimensions when carrying out any repair procedure to the frame rails. Refer to Frame Members — Front in this section.

0.9 + 0.7 + 0.9	4.3 mm (0.16 in)

General Specifications

Item	Specification
Plug weld hole	8 mm (0.31 in)
Weld wire ER70S-3 or equivalent	0.9-1.1 mm (0.035-0.045 in)

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

The correct equipment and settings must be used when welding mild or high-strength steel. Metal Inert Gas (MIG) and Squeeze-Type Resistance Spot Welding (STRW) are the preferred methods. Surfaces must be clean and free of foreign materials.

- Correct eye protection must be worn.
- The correct protective clothing should always be worn.
- Adequate ventilation must be provided to avoid accumulation of poisonous gases.
- A test weld should always be carried out on a test sample.
- Use cleaning brushes and abrasive grinding wheels dedicated to the type of materials being welded.
- Follow equipment manufacturer's prescribed procedures and equipment settings for the type of welder being used. ER70S-3 or ER70S-6 wire are typically used for MIG welding steel.
- Disconnect the battery ground cable. Refer to Section 414-01 .
- Disconnect on-vehicle modules and protect them from possible heat damage and electrical currents when welding.
- Corrosion protection must be restored whenever bare metal repairs are made. Refer to Restoring Corrosion Protection Following Repair in this section.
- Adequate power supply needs to be used to make sure of correct equipment performance.
- Factory spot welds may be substituted with either STRW or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.
- Vehicles equipped with optional safety canopy require removal of these components prior to any welding procedures being carried out in the roof-line or body side areas of the vehicle. Refer to Section 501-20B .

Sealers

Material

Item	Specification
Seam Sealer TA-2	—

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

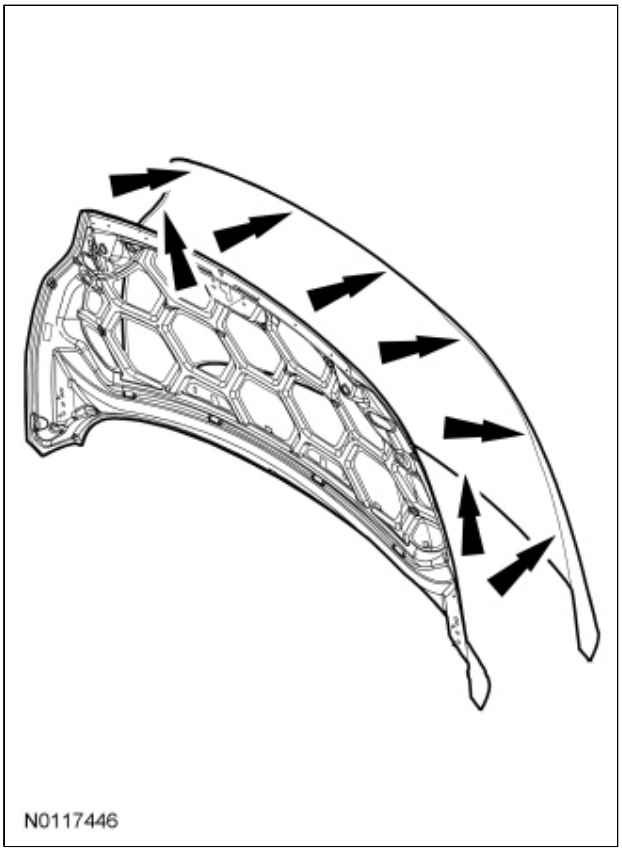
The correct sealing of joints is essential to repairing the vehicle correctly. Sealers are used to prevent wind noise, water leaks, exhaust fumes and dust from entering the vehicle. They also provide anti-corrosion barriers. Sealers are applied to areas such as door and rear compartment hem flanges, wheelhouse, quarter outer, floor, cowl, roof and other panel-to-panel attaching points. The following joint sealers are recommended for use depending upon the application:

- Seam Sealer — Heavy-bodied, non-sag adhesive/sealer for use on standing cosmetic seams, truck bed seams, tooled door skin seams and floor pans.

Sealers should remain flexible after curing and must be paintable. Follow the manufacturer's directions for correct application of these materials.

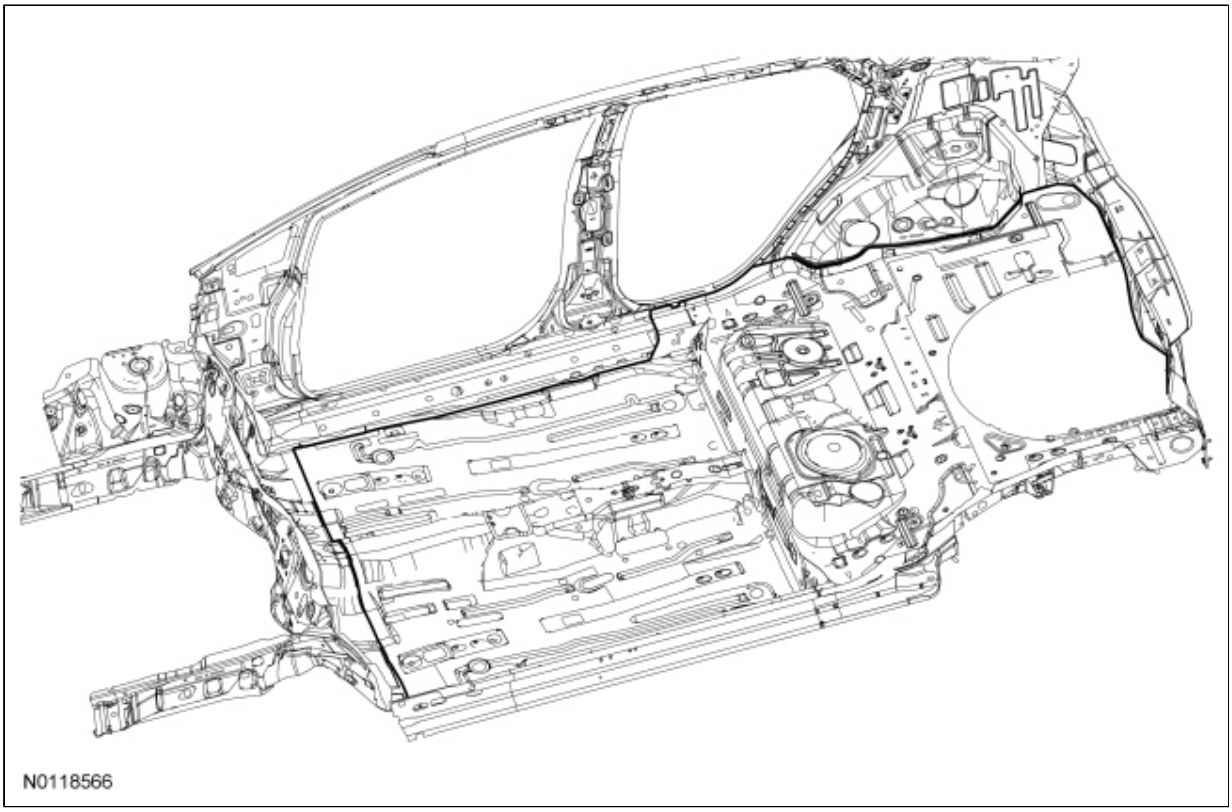
Any damage to originally sealed joints should be repaired by resealing. Along with attaching points of new panels, open joints that require bridging of sealer to close a gap should be sealed using a heavy-bodied sealer.

Hood Sealer

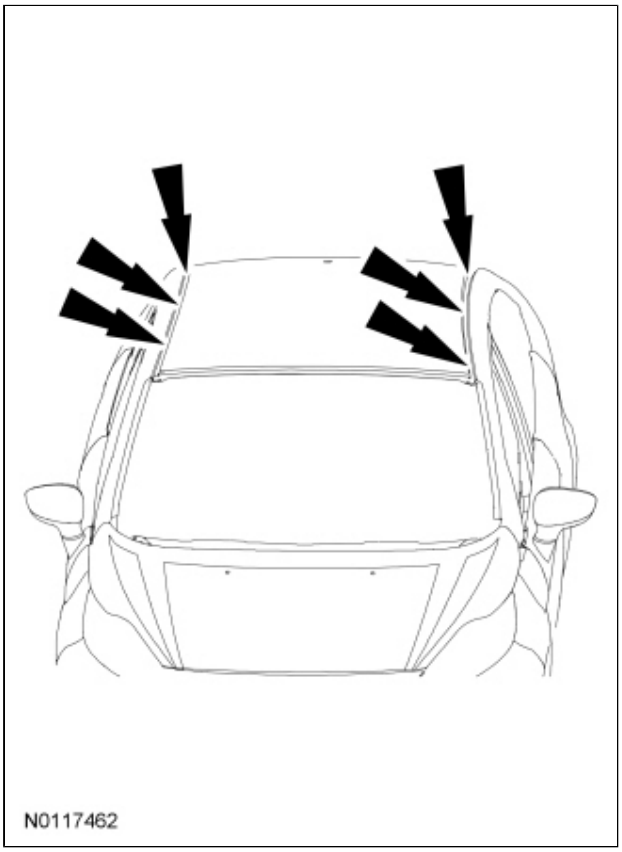


Floor Sealer

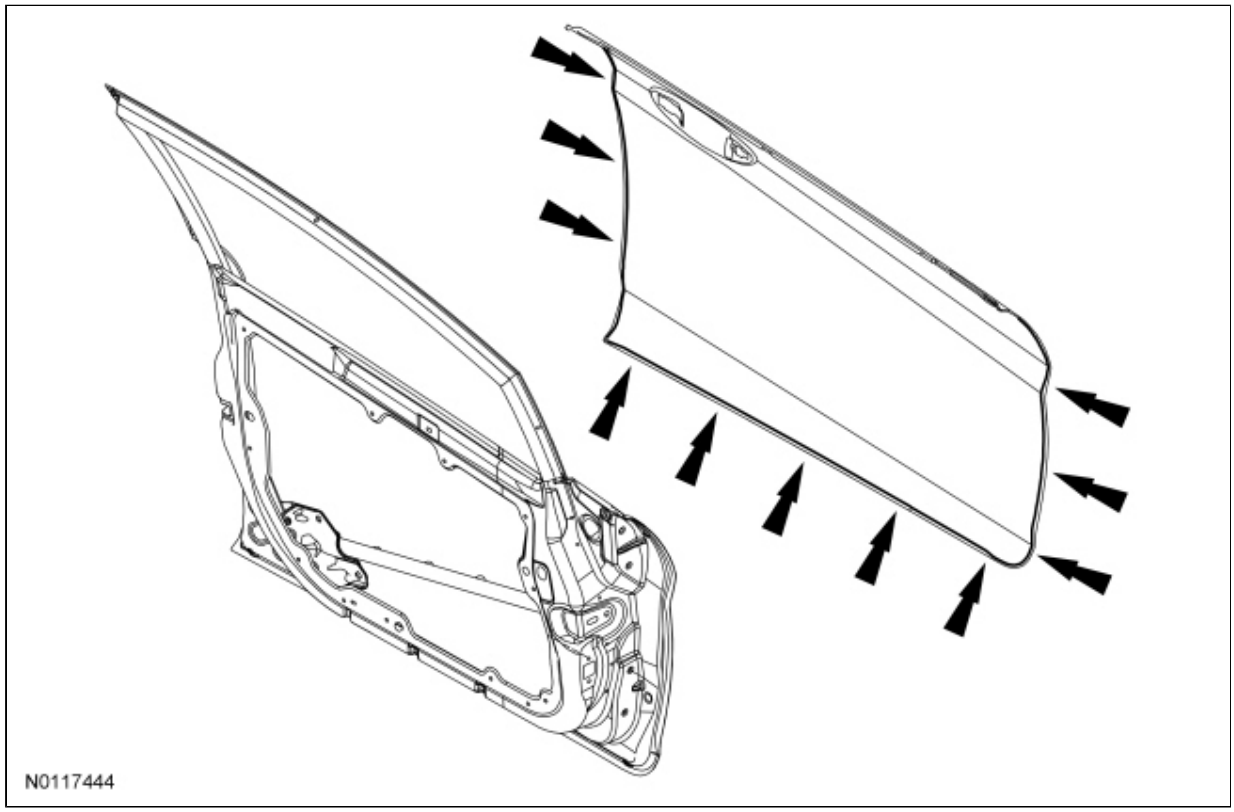
NOTE: RH side shown. LH side removed for clarity.



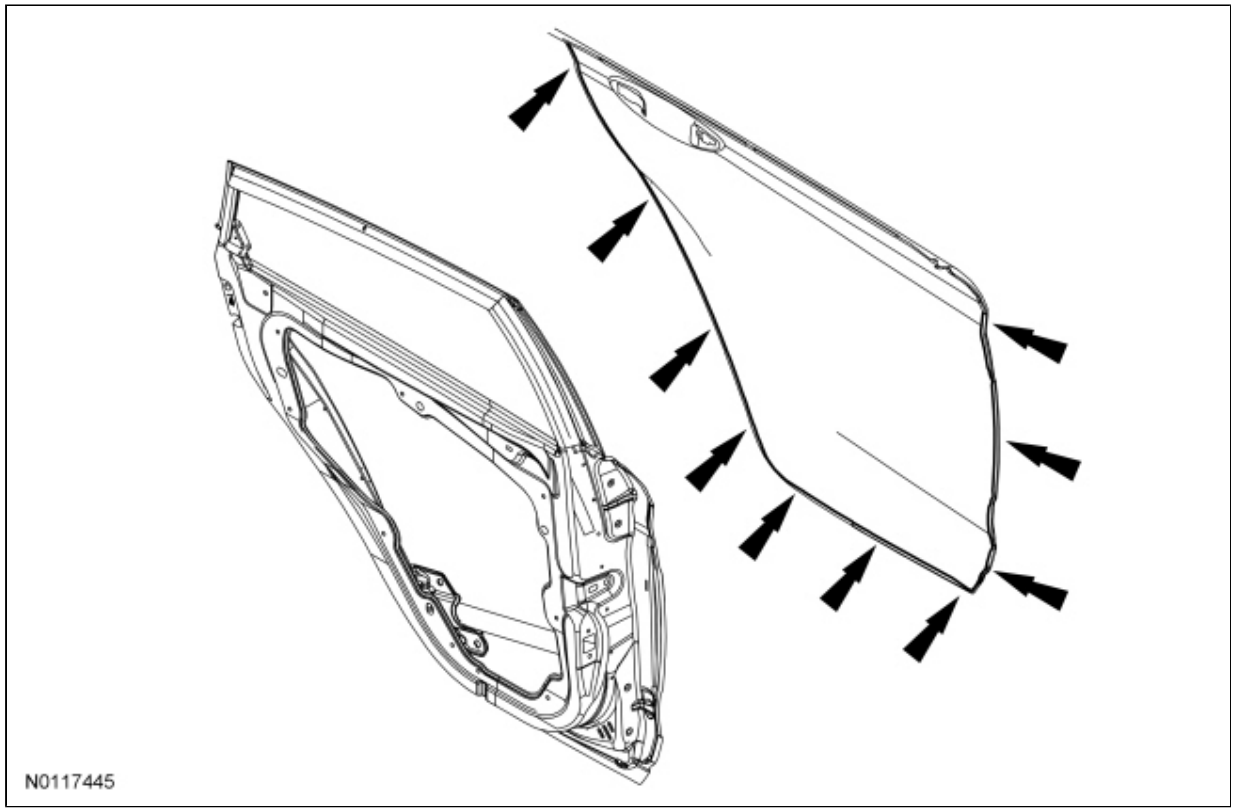
Roof Sealer



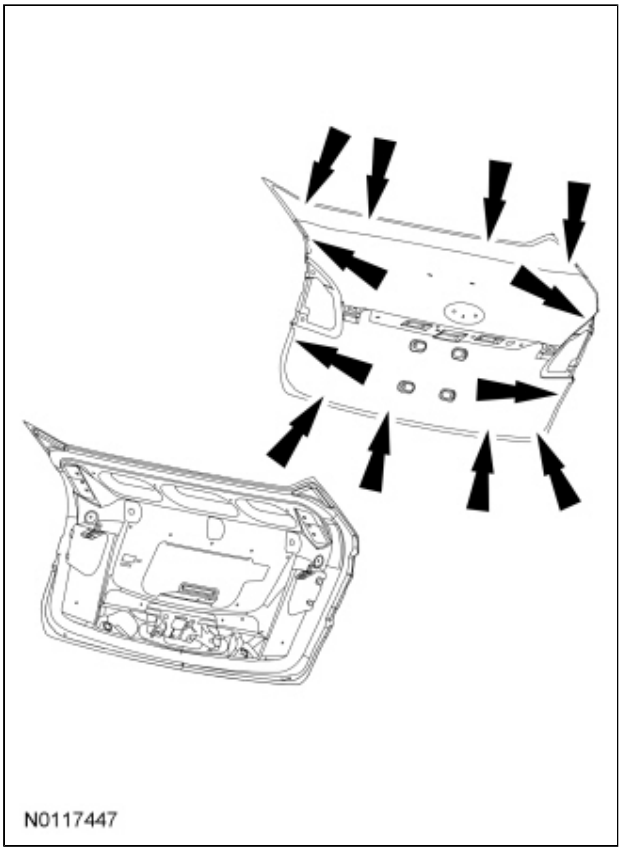
Front Door Sealer



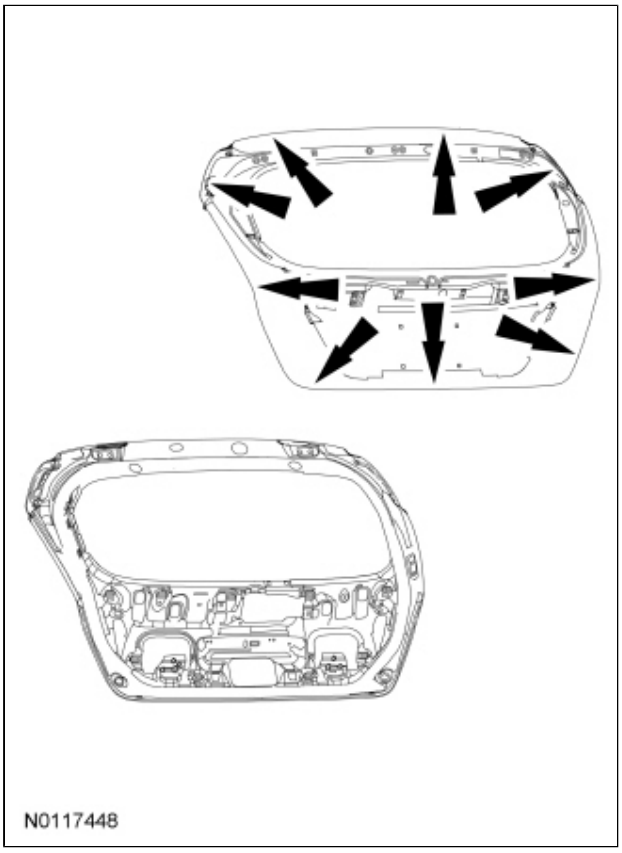
Rear Door Sealer



Deck Lid Sealer — 4-Door Sedan



Deck Lid Sealer — 5-Door Hatchback



Sound Deadeners and Insulators

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Mastic is made of a combustible material and should be removed prior to carrying out welding procedures to the area. Heat zones from welding near the mastic may cause the mastic material to burn.**

NOTICE: **Corrosion protection must be restored to the area AFTER the mastic material is applied. Corrosion protection products may be wax based and loss of adhesion may occur.**

NOTE: To restore the vehicle to design intent, missing or damaged sound deadeners and insulators should be installed with the correct service replacement component.

Whenever replacement of an existing mastic insulator is carried out, the surface must be thoroughly cleaned to make sure correct adhesion will occur. The surface should be 10°C (50°F) or greater before applying the mastic. The use of a heat gun to warm the metal surface will aid in adhesion.

NOTE: Noise, Vibration and Harshness (NVH) pads are obtained locally.

NVH Pads — Floor

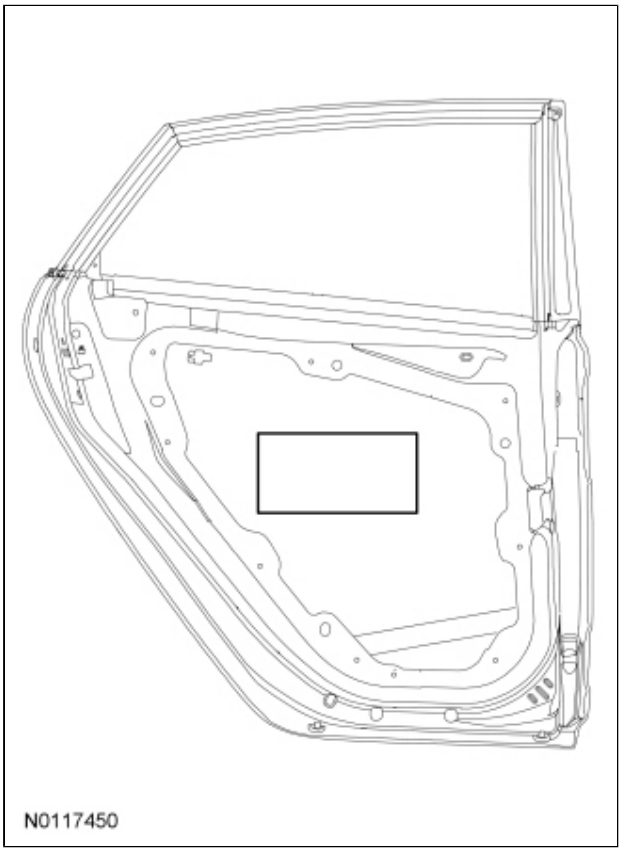
NVH Pad — Rear Door

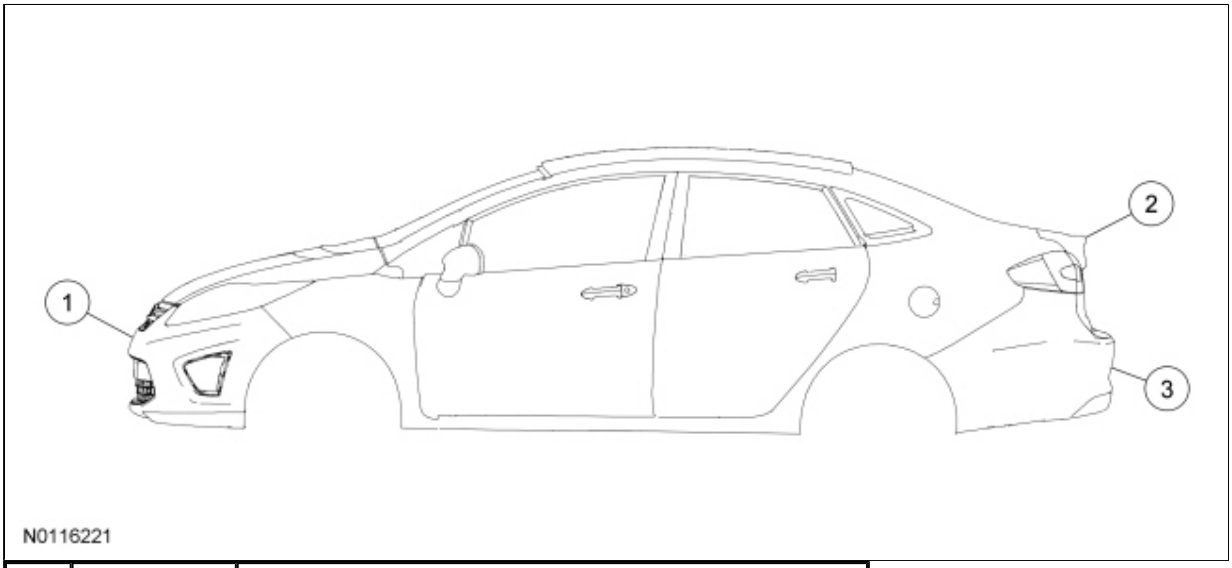


Plastic Components

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

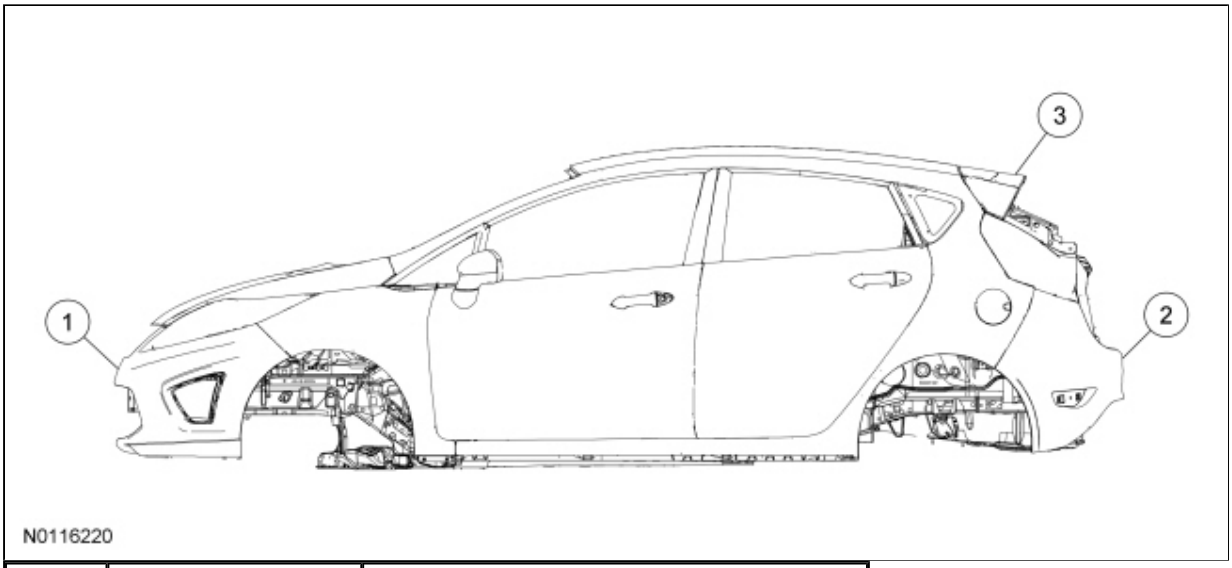
NOTE: The following illustration(s) are not all-inclusive of trim levels available. The actual trim level of the vehicle will determine the viability of carrying out a plastic repair.

Exterior Plastics — Painted, 4-Door Sedan



Item	Part Number	Description
1	17D957	Front bumper fascia — Thermoplastic Olefin (TPO)
2	5444210	Decklid spoiler — Acrylonitrile Butadiene Styrene (ABS)
3	17K835	Rear bumper fascia — TPO

Exterior Plastics — Painted, 5-Door Hatchback



Item	Part Number	Description
1	17D957	Front bumper fascia — TPO
2	17K835	Rear bumper fascia — TPO
3	5844210	Rear spoiler — ABS

Several considerations will determine viability of plastic repair procedure(s):

- Is the damage cosmetic or structural?
- Can the repair be carried out on the vehicle?
- Is the part readily available?
- Is component repair the most cost effective method?
- Can the component be economically restored to original strength and appearance?
- Will the repair provide for the fastest, highest quality repair?

Several types of plastic are in use for automotive application. However, all plastics will fall into 2 primary categories of thermoplastic or thermosetting plastic.

Thermosetting Plastic

Generally, thermosetting plastics are made with 2-part thermosetting resins. When mixed together, heat is generated, producing a cure that is irreversible. Because of this, thermosetting plastics will require the use of a 2-part adhesive for repair.

Sheet-Molded Composite (SMC)

Sheet-Molded Composite (SMC) is a type of thermosetting plastic that uses glass fibers or nylon fibers in combination with thermosetting polyester resins. When fully cured, SMC is strong and rigid.

SMC is similar, but not identical, to fiberglass. Ford Motor Company uses SMC in components such as fenders, hoods and liftgates.

Thermoplastic Compounds

Thermoplastic compounds are manufactured by a process that is reversible. Thermoplastics can be remolded repeatedly by reheating. This characteristic of thermoplastics makes plastic welding a possible repair alternative. A repair of thermoplastic compounds is still possible through the use of 2-part adhesive and filler repair materials and reinforcements as needed. Thermoplastics are widely used in interior trim components, wheel flares, body side cladding and bumper covers.

Polyolefin

Polyolefins fall into the family of thermoplastics with one unique characteristic: an oily or waxy feel to the

material when sanded or ground. Polyolefin lends itself very well to remolding through the use of heat. Because of this, components made of this material lend themselves well to the possibility of plastic welding. Most adhesive repair materials and paint will not bond to surface of a polyolefin unless an adhesion promoter specially formulated for plastic is first applied to the exposed raw surface. Otherwise, polyolefins are repaired like most other thermoplastics. Some typical uses of polyolefins are bumper covers, fan shrouds and wheel housings.

Correct identification of the various types of plastic is necessary to select the appropriate repair method(s) to carry out high quality plastic repairs. Refer to Plastics Identification in this section.

Adhesives

Material

Item	Specification
Metal Bonding Adhesive TA-1	—
Motorcraft Metal Surface Prep ZC-31-A	—
Plastic Bonding Adhesive TA-9	—
Trim and Weatherstrip Adhesive TA-14-A	—

WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

Structural Adhesives

Adhesives are used in a variety of applications. Typical uses for adhesives include roof panels, door skins and quarter panels. Trim applications include body side mouldings, emblems, stationary glass and weatherstripping. Combination sealer/adhesives are also used. Surface preparation is critical to a high quality repair. Following the label instructions for the product is essential.

Work in a well-ventilated area and protect adjacent surfaces when working with adhesives. Carry out a trial fit, mark and align the surfaces before bonding the materials together.

Seam sealers and corrosion protection may be necessary once the adhesive(s) has cured, depending on the application. The following is a list of adhesives recommended for certain types of applications:

- Metal Bonding Adhesive — For bonding cold-rolled steel, galvanized steel, aluminum and correctly prepared E-coat. It is used for door skin and roof panel replacement and OEM structural adhesive replacement.
- Plastic Bonding Adhesive — For bonding a variety of plastics to plastics and plastics to primed, painted or E-coated metals. Also for general purpose bonding of trim components.
- Trim and Weatherstrip Adhesive — For use on body side moulding, emblems, trim, bumper impact strips and carpeting.

NOTE: Ford Motor Company does not approve or recognize structural repair procedures using anything but genuine Ford parts.

Structural repairs (frames, rails, aprons and body panels) carried out using other than Ford Motor Company parts have not been tested. In addition, structural equivalence and corrosion protection cannot be assured.

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using genuine Ford Motor Company parts and approved methods.

Structural component repair procedures approved by Ford using genuine parts have been validated through testing by Ford Motor Company engineers. Should alternative structural component repair procedures and/or parts be used, repairers should be aware of the potential liability they incur.

NOTE: Corrosion protection needs to be restored whenever it is necessary to sand or grind through painted surfaces or E-coat, or when bare metal repairs are made.

NOTE: Factory spot welds may be substituted with either resistance spot welds or Metal Inert Gas (MIG) plug

welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry out body side sectioning repairs in areas of laser welds. Factory laser welds cannot be duplicated with conventional welding equipment and structural integrity may be compromised. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Do not cut or grind body side components within 50 mm (1.96 in) of restraint anchoring points. Welding within 50 mm (1.96 in) of restraint anchoring points may result in incorrect operation of restraint devices. For additional restraints anchoring location information, refer to Section 501-20A and Section 501-20B . Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: On vehicles equipped with Safety Canopy® options, prior to carrying out any sectioning repairs near the roof line or sail panel areas of the vehicle, remove the Safety Canopy®

module and related components. Failure to comply may result in accidental deployment or damage to the Safety Canopy®. Refer to Section 501-20B . Failure to follow these instructions may result in serious injury to technician or vehicle occupant(s).

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

1. **NOTE:** Observe prescribed welding procedures when carrying out repairs. For additional information, refer to Welding Precautions — Steel in this section.

   NOTE: When it is necessary to carry out weld-bonding procedures, refer to Weld-Bonding in this section.

   Detrim the vehicle as necessary and drill out the spot welds from the damaged area. Using an air chisel or reciprocating saw, cut off the portion of the panel to be replaced.

2. Where possible, create a backer piece using a portion of the old panel. This will create a stronger joint.

3. When welding overlapping surfaces or substrates, apply a high quality weld-through primer between the surfaces prior to welding.
   - Make sure horizontal joints and flanges are correctly sealed with seam sealer to prevent moisture intrusion. Water and moisture migrate to horizontal joints and corrosion tends to occur more rapidly in these areas. Metal surfaces must be clean and dry before applying seam sealer.

4. Proceed with refinish procedures following Ford-approved paint guidelines.

5. Apply corrosion protection as necessary to repair area.

Restoring Corrosion Protection Following Repair

Special Tool(s)

ST3049-A	Rust Inhibitor Installation Kit 286-00002
ST3048-A	Undercoating Spray Gun 286-00001

Material

Item	Specification
Motorcraft® Metal Surface Prep ZC-31-A	—
Premium Undercoating ValuGard™ VG101, VG101A (aerosol)	—
Rust Inhibitor ValuGard™ VG104, VG104A (aerosol)	—

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Drilling access holes in body panels is not recommended. Drilling holes will break the original paint finish and promote corrosion.**

NOTE: Corrosion protection needs to be restored whenever it is necessary to sand or grind through painted surfaces or E-coat, or when bare metal repairs are made.

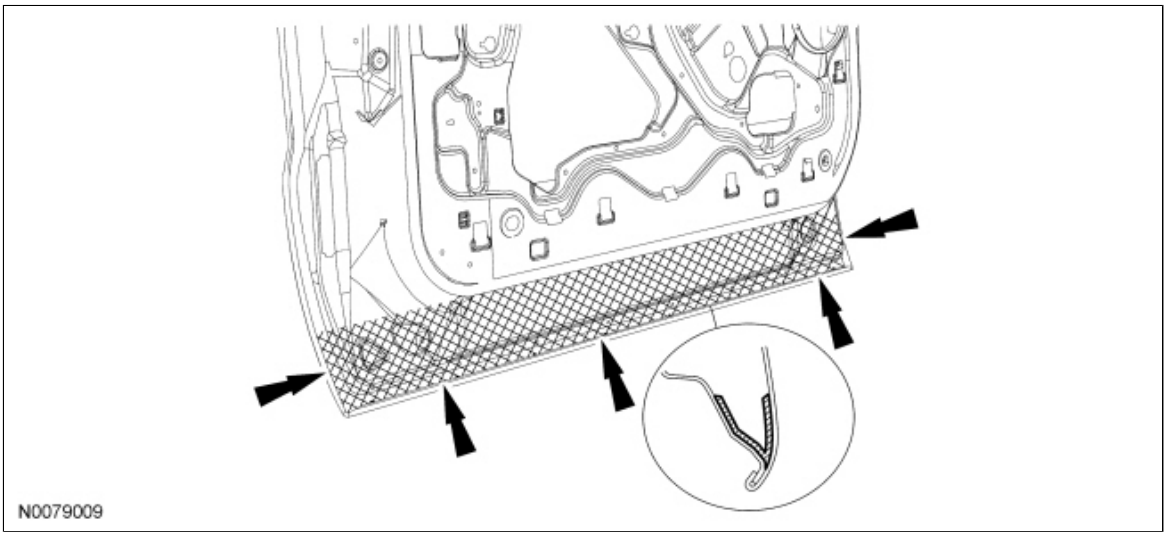
NOTE: Refer to product label for preparation and handling instructions.

1. The surfaces must be free of oil, dirt and other foreign material. Carry out the process in the following sequence.
    1. Thoroughly clean and degrease metal surfaces using metal surface prep to remove wax and grease.
    2. For best results, the vehicle should be at room temperature. Attach the rust inhibitor canister to the Rust Inhibitor Installation Kit 286-00002.
    3. Rust inhibitor should be applied after the welding and refinishing process. Product cannot be welded through.
    4. Air pressure setting for applicator gun is 448-517 kPa (65-75 psi).
        - Use the long wand when spraying enclosed areas. The spray nozzle provides a 360-degree spray pattern. Insert the wand as far as possible into the access hole, pull the trigger and wait 2-3 seconds and slowly pull the wand out of the access hole.
        - The short, hook-shaped wand sprays in one direction and must be rotated to provide complete coverage.
        - Apply the material in light mist coats.
        - Material displaces moisture.
    5. Clean up any overspray with a mild solvent such as mineral spirits or bug and tar remover.

NOTE: The following illustrations provide typical applications of body seams and spot welded flanges and are not vehicle specific.

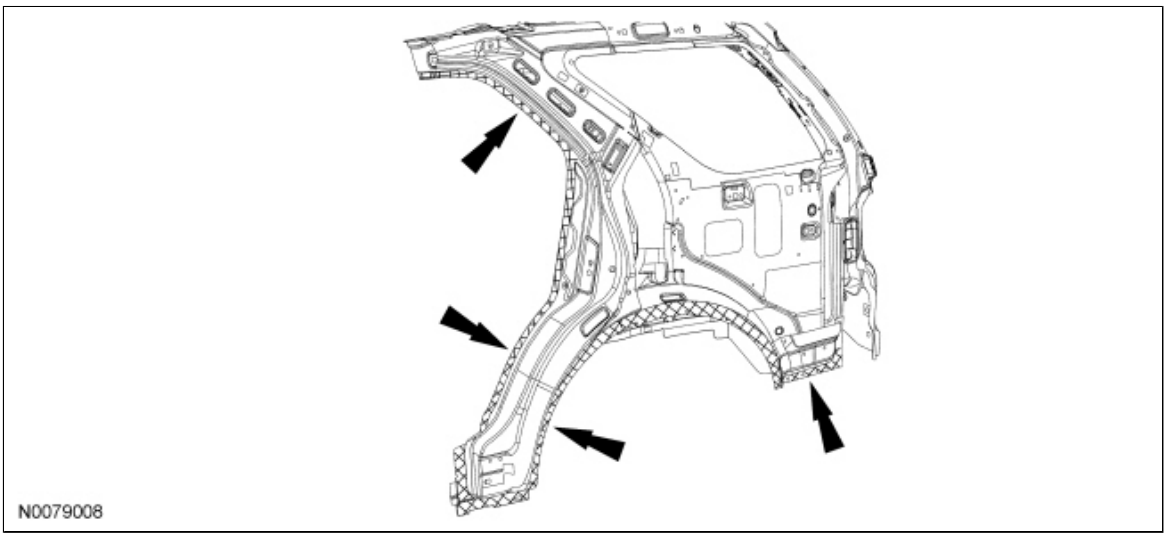
2. **NOTE:** Door assembly lower view.

   Apply rust inhibitor as shown to the inside of the door shell on all the interior metal surfaces using the most suitable applicator wand. Apply material to the exposed edges after carrying out the welding process. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion. Keep door drain holes clear to prevent moisture buildup.



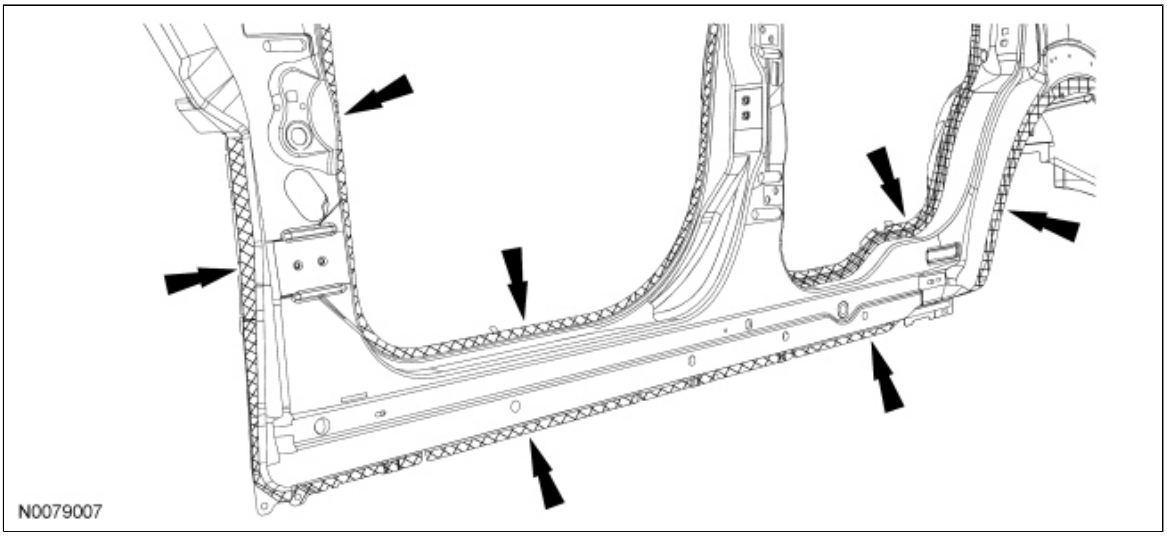
3. **NOTE:** Quarter panel inner view.

   Apply rust inhibitor to the closed channel portion of the spot weld flange areas using the short, hook-shaped wand. Apply material to the exposed edges after carrying out the welding process. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion.



4. **NOTE:** Door frame opening view.

   Apply rust inhibitor to the closed channel portion of the spot weld flange areas using the short, hook-shaped wand. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion.



Body and Frame Undercoating

1. **WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.**

   WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

   NOTICE: **Do not allow undercoating on powertrain components. Failure to follow these instructions may result in incorrect operation of these components.**

   NOTE: Refer to product label for preparation and handling instructions.

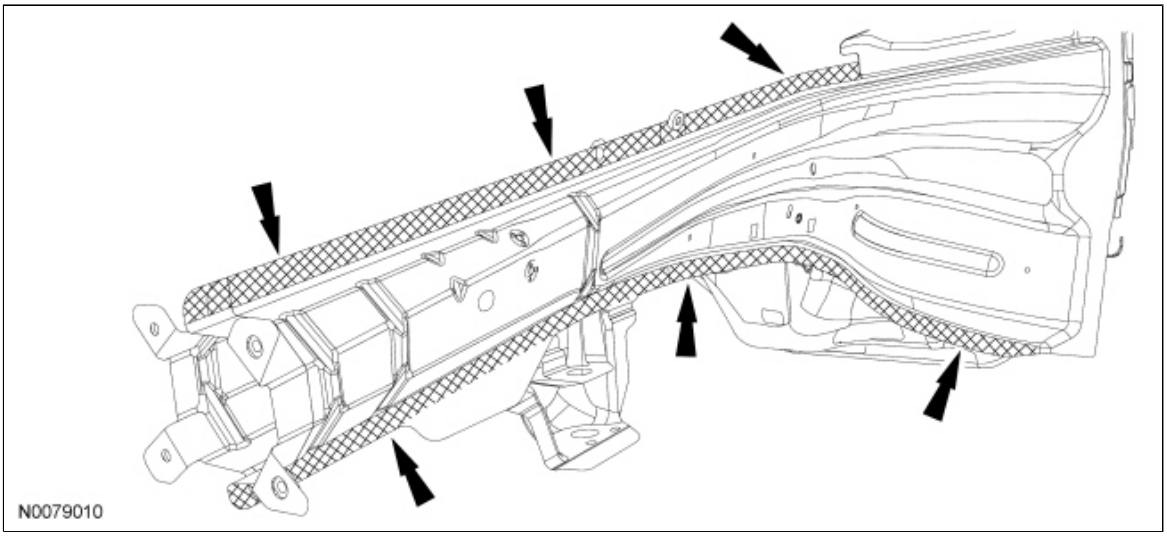
   NOTE: Avoid high-pressure water spray cleaning to treated underbody area for 24 hours.

   Wire brush the area and make sure the surfaces are free of oil, dirt and other foreign material. Carry out the undercoating process in the following sequence.
   1. Thoroughly clean and degrease metal surfaces using metal surface prep to remove wax and grease.
   2. For best results, the vehicle should be at room temperature.
      - Canister attaches directly to the dispensing gun. Attach the undercoating canister to the Undercoating Spray Gun 286-00001.
   3. Undercoat should be applied after the welding and refinishing process. Product cannot be welded through.
   4. Air pressure setting for applicator gun is 552-621 kPa (80-90 psi).
      - Apply light mist coats, applicator sprays in fogging pattern.
      - Material displaces moisture.
   5. Clean up any overspray with a mild solvent such as mineral spirits or bug and tar remover.

NOTE: The following illustrations provide typical applications to frame rails and are not vehicle specific.

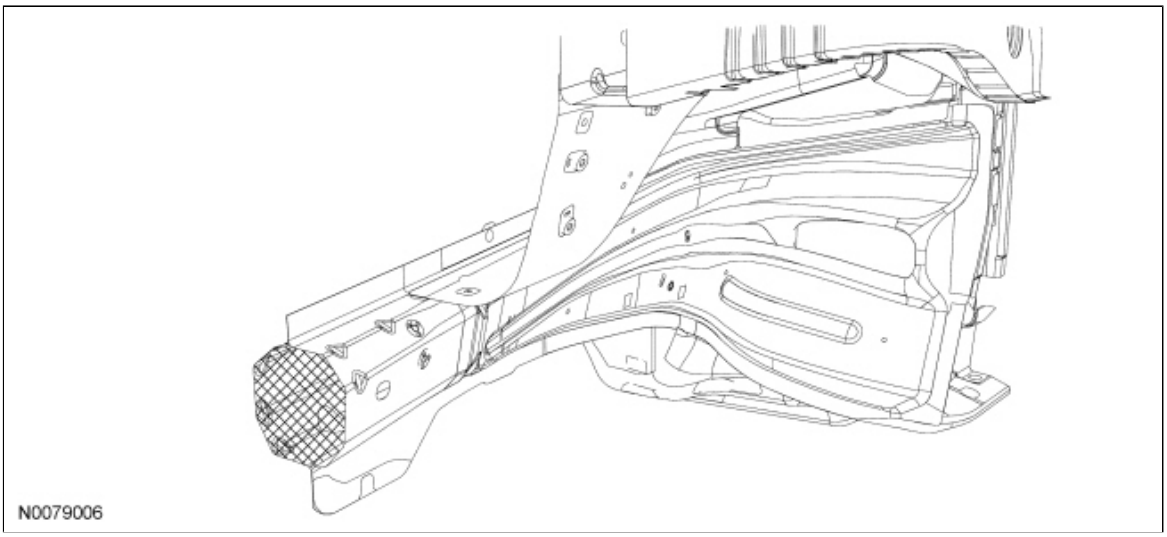
2. **NOTE:** Frame rail exterior spot-weld flange view.

   Apply undercoat material to the exterior exposed edges after carrying out the welding and refinishing process.



3. **NOTE:** Cross section view of typical unibody frame rail shown.

   Apply rust inhibitor to the inner surfaces of the rail after carrying out welding process. Use the long wand and insert as far as possible, depress trigger and wait 2-3 seconds and slowly pull the wand to make sure the area is completely fogged.



4. **NOTE:** Full frame vehicle, front rail-to-mid rail section repair shown.

   Apply undercoat material to the exposed surfaces after carrying out the welding process. Make sure to completely cover any bare metal areas.

Item	Specification
Motorcraft® Acid Neutralizer ZC-1-A	—
Motorcraft® Alkaline Neutralizer ZC-2-A	—
3M™ Perfect-It™ Show Car Liquid Wax 39026	—
Motorcraft® Detail Wash ZC-3-A	—

Iron Oxide (Rail Dust) or Acid Rain Decontamination

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTICE: **In extreme cases of contamination, the vehicle may require refinishing. To avoid paint failure, follow the appropriate decontamination procedure prior to carrying out any panel refinishing procedure.**

NOTE: Iron oxide contamination appears as tiny rust spots on horizontal surfaces and in severe cases can be felt. This damage is typically caused from rail shipment, storage near railroad tracks or fallout from industrial manufacturing facilities.

NOTE: Acid rain contamination can be identified as water spotting and, in severe cases, staining within the water spots.

1. ***NOTICE:*** **Never paint over iron particles as rust spots will reoccur. Use only the recommended decontamination procedure detailed below.**

   Rinse any dust, dirt and foreign material from the vehicle body with cold water. Flush liberally.

2. Prepare the acid neutralizer by mixing 8 parts of water to 1 part neutralizer in a bucket.

3. ***NOTICE:*** **To avoid paint failure, do not allow the product to dry on the vehicle.**

   NOTE: Use a separate wash mitt for each product applied to the vehicle.

   Working quickly and beginning at the top of the vehicle and working to the sides, apply the acid neutralizer mix to the entire vehicle. Keep the vehicle wet with the solution and lightly agitate for 5

to 7 minutes. Continue around the vehicle 4 to 5 times. For severe conditions, work the product for up to 8 minutes.

4. Rinse the vehicle completely with cold water to remove the product.

5. Dry only the horizontal surfaces of the vehicle, do not dry the glass at this time.

6. ***NOTICE:*** **To avoid damage to the paint surface, do not apply the alkaline neutralizer directly to the vehicle plastic trim.**

   NOTE: Use a separate wash mitt for each product applied to the vehicle.

   NOTE: Alkaline neutralizer is a ready-to-use product. Do not mix with water.

   Pour the alkaline neutralizer into a squirt bottle and apply the solution to a clean wash mitt.

7. ***NOTICE:*** **To avoid paint failure, do not allow the alkaline neutralizer to dry on the vehicle.**

   Apply the product to the vehicle keeping the solution wet and lightly agitate for 5 to 7 minutes. For severe conditions, work the product for up to 8 minutes.

8. Rinse the vehicle completely with cold water to remove the product.

9. Prepare the detail wash by mixing 29.5 ml (1 oz) with 3.78L (1 gal) of water.

10. Using a clean wash mitt, shampoo the entire vehicle and rinse with cold water. Dry the vehicle completely.

11. Visually inspect the paint surface for any remaining evidence of ferrous metal particles. Repeat procedure as necessary.

Surface Finishing Following Decontamination

1. ***NOTICE:*** **When attempting to affect a repair by buffing, polishing or color sanding, do not remove an excess of 0.3 mil of paint film or refinishing will be required.**

   NOTE: Acid rain discoloring or etching may require color sanding in addition to buffing and polishing. In extreme cases, refinishing may be required if the following procedure does not restore the vehicle finish.

   NOTE: Do not intermix buffing products. Use only one manufacturer's product.

   NOTE: Always follow the manufacturer's product usage sequence. Use the appropriate buffing or polishing pad at the recommended buffing speed as specified by the product manufacturer.

   Apply rubbing compound to the vehicle surface as recommended by the product manufacturer.

2. Apply machine glaze to the vehicle surface as recommended by the product manufacturer.

3. Use an alcohol and water mixture (1 to 1) to clean the buffed and polished areas. Verify removal of scratches and swirls before the application of the final polish.

4. Apply a final polish material by hand, with a dual-action sander and foam pad, or with an orbital polisher and appropriate polishing bonnet.

5. Wash and dry the vehicle.

Refinishing — Manufacturing Damage

Material

Item	Specification
3M™ Perfect-It™ Show Car Liquid Wax 39026	—
Motorcraft® Detail Wash ZC-3-A	—

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTICE: **To avoid overspray damage to adjacent panels, protect adjacent areas/substrates when preparing for and during refinishing.**

NOTE: Peeling/delamination concerns can be described as lack of adhesion, either between the substrate and topcoats or between individual coats of paint.

1. Wash the repair area with detail wash or pH-neutral soap and water.
2. Remove any trim, emblems and hardware from the area to be repaired.
3. **NOTE:** All delamination must be removed.

   Sand or media blast the damaged surface, keeping the repair area as minimal as possible.
4. Treat any bare metal surface to prevent flash corrosion, and prime and block sand as necessary prior to refinishing.
5. Mask the adjacent panels to protect from overspray.
6. Spot repair the base coat as necessary, following the paint manufacturer's prescribed procedures.
7. Following the paint manufacturer's prescribed procedure, apply clear coat to the entire panel.

Weld-Bonding — Squeeze-Type Resistance Spot Welding (STRW) Method

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to

serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
    - **air bags**
    - **restraint system modules**
    - **safety belts, buckles or retractors**
    - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

NOTE: On door shells that are manufactured with structural adhesives only, weld bonding door skins is not recommended. Only metal bonding adhesive should be used.

NOTE: Weld-bonding is a method used to join metals using Squeeze-Type Resistance Spot Welding (STRW) or Metal Inert Gas (MIG) welding and structural adhesive. The steps listed in this procedure apply to both types of welding. STRW is the preferred method. MIG welding should only be used when areas to be welded cannot be accessed using STRW -type machinery.

NOTE: Factory spot welds should be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

1. Verify the vehicle is dimensionally correct on a frame machine. Straighten if necessary.

2. Remove damaged panels with an air saw or air chisel. Remove only large portions of the damaged panel. Avoid cutting into mating flanges or adjacent parts.

3. Drill out the spot welds using an appropriate spot-weld cutter and remove the remaining portions of the panel to be replaced.

4. Prepare any damaged flanges on the vehicle using hammer and dolly.

5. Grind the mating surface of the original flanges no greater than 25 mm (0.98 in) where the metal bonding adhesive will be applied.
    - Be sure to remove galvanizing on metal. Metal should have a shiny appearance.
    - Be careful not to damage the corners or thin the metal. The E-coat should also be removed on the opposite side of the flange only where the spot welds are to be placed. Clean surfaces with metal surface prep or equivalent.

6. Dry-fit and clamp the replacement service parts to verify a correct fit.

- Remove the service part after verifying correct fit and alignment.

7. **NOTE:** The ends of welding clamps should be insulated on the ends using tape or similar material when welding is carried out.

   Follow manufacturer's prescribed welding procedures and settings. For additional information, refer to Welding Precautions — Steel in this section.

8. Prepare the adhesive. Dispense a small amount of metal bonding adhesive from the cartridge to make sure of an even flow of both components. Attach the mixing tip and dispense a mixing tip length of adhesive to make sure of a correct mix ratio.

9. **NOTE:** Welding can be carried out anytime during the adhesive curing process, or after the adhesive is fully cured. Welder settings will vary when welding through wet adhesive versus welding through fully cured adhesive. Refer to welder manufacturer's recommended settings for welding through fully cured adhesive. It is recommended to place a shunt weld in an area with no adhesive to make sure of conductivity, particularly when welding through fully cured adhesive.

   NOTE: Refer to the product label for handling and preparation instructions.

   Create a test sample.
   1. Prepare the metal and adhesive as described. Apply a 6-9 mm (0.23-0.35 in) bead of adhesive and weld the sample.
   2. Place the welded sample in a vice and carry out destructive weld tests by peeling the scrap metal apart using large lock-type pliers. Measure the weld nugget to determine that the nugget meets Ford weld nugget requirements. If the weld nugget does not meet required size, adjust welder settings until the correct weld nugget size is achieved.
   3. When the correct weld nugget size is achieved, the service part can be weld-bonded. For additional information, refer to the weld nugget table in Specifications in this section.

10. Apply a 6-9 mm (0.23-0.35 in) bead of metal bonding adhesive to the vehicle prepared flange surface.

11. Place the service part(s) in the correct position on the vehicle.
    - When positioned, do not pull the component away from the vehicle. If repositioning is necessary, slide the service part(s). This will make sure of correct contact between the components and adhesive.

12. Clamp evenly and tightly. The adhesive contains glass beads which will prevent over-clamping the component.

13. **NOTE:** Refer to product label for cure times and handling instructions. Clamps may be removed immediately after the component is welded.

    Wipe excess adhesive from the panel before it cures.

14. Finish any cosmetic section seams with fiber-filled body filler. Rough sand the filler, apply conventional body filler after the adhesive cures and block-sand the area.

15. Use seam sealer wherever a cosmetic seam sealer is required.

16. Mix and apply primer surfacer per Ford-approved paint recommendations.

17. Mix and apply basecoat per Ford-approved paint recommendations.

18. Mix and apply clearcoat per Ford-approved paint recommendations. Refinishing materials may be force-dried following paint manufacturer's recommendations.

19. Apply anti-corrosion treatment to the repair area as required. For additional information, refer to

Restoring Corrosion Protection Following Repair in this section.

Weld-Bonding — Metal Inert Gas (MIG) Welding Method

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in

serious personal injury.

NOTE: Metal Inert Gas (MIG) weld-bonding can be substituted as an alternative to Squeeze-Type Resistance Spot Welding (STRW). It may only be used to weld areas that are inaccessible to STRW machinery. However, when accessible, STRW is the preferred method.

NOTE: On door shells that are manufactured with structural adhesives only, weld-bonding door skins is not recommended. Only metal bonding adhesive should be used.

NOTE: Factory spot welds should be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

1. Remove damaged panels with an air saw or air chisel. Remove only large portions of the damaged panel. Avoid cutting into mating flanges or adjacent parts.
    - Drill out the spot welds using an appropriate spot-weld cutter and remove the remaining portions of the panel to be replaced.

2. After removing the damaged sheet metal panel(s), repair any damaged flanges on the vehicle using a hammer and dolly.

3. Using an appropriate grinder, carefully grind around the entire receiving flange area following the original welds. Be sure to remove all E-coat, paint or galvanized coating from the mating surfaces of the joint.
    - Be sure to remove galvanizing on metal. Metal should have a shiny appearance.
    - Be careful not to damage the corners or thin the metal. The E-coat should also be removed on the opposite side of the flange only where the spot welds are to be placed. Clean the surface with metal surface prep or equivalent.

4. Repeat the procedure from Step 3 on the mating surface of the replacement service part(s).

5. Prepare the new service panel for plug welds.
    - Using the original panel as a reference, drill or punch 8 mm (0.31 in) diameter holes in the exact number as the original spot welds. The holes should be positioned as close as possible to the original spot weld locations, without lining up exactly on top of an original spot weld site.
    - To make sure of correct weld performance, grind the immediate perimeter of the plug weld hole. Grind only in the area of the plug weld; this will keep corrosion to a minimum.

6. Dry-fit and clamp the replacement service parts to verify a correct fit and alignment.
    - Remove the service part after verifying correct fit and alignment.

7. The vehicle prepared flange areas where plug welds will be located must be kept free of adhesive. Apply 25 mm (0.98 in) tape to the plug weld areas to prevent contamination from the adhesive.

8. Prepare the adhesive. Dispense a small amount of metal bonding adhesive from the cartridge to make sure of an even flow of both components. Attach the mixing tip and dispense a mixing tip length of adhesive to make sure of correct mix ratio.

9. **NOTE:** Refer to product label for cure times and handling instructions.

   Apply a 6-9 mm (0.23-0.35 in) bead of adhesive to the vehicle prepared flange surface. Remove the tape from the plug weld areas.

10. Place the service part(s) in the correct position on the vehicle.
    - When positioned, do not pull the component away from the vehicle. If repositioning is necessary, slide the service part(s). This will make sure of correct contact between the components and adhesive.

11. Clamp evenly and tightly. The adhesive contains glass beads which will prevent over-clamping the component.

12. **NOTE:** Welding can be carried out anytime during the adhesive curing process or after the adhesive is fully cured.

    NOTE: If welding will not be carried out immediately, refer to product label for cure times and handling instructions. Clamps may be removed immediately after the component is welded.

    Wipe excess adhesive from the panel before it cures.

13. Finish any cosmetic section seams with fiber-filled body filler. Rough sand the filler, apply conventional body filler after the adhesive cures and block-sand the area.

14. Use seam sealer wherever a cosmetic seam sealer is required.

15. Mix and apply primer surfacer per Ford-approved paint recommendations.

16. Mix and apply basecoat per Ford-approved paint recommendations.

17. Mix and apply clearcoat per Ford-approved paint recommendations. Refinishing materials may be force-dried following paint manufacturer's recommendations.

18. Apply anti-corrosion treatment to the repair area as required. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

Plastics Identification

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTE: Identification of the various plastic types is necessary to select the appropriate repair methods to make high quality plastic repairs. Plastics can generally be broken down into 2 categories, thermoplastics and thermosetting plastics. Thermoplastics can be remolded by heating. This makes plastic welding a possible repair alternative.

1. **NOTE:** In some instances, a code or material designation is stamped indicating the plastic type.

   Thermoplastics are solvent reactive. Types of thermoplastics include Thermoplastic Olefin (TPO), Polyvinyl Chloride (PVC) and Acrylonitrile Butadiene Styrene (ABS). Polyolefins have an oily or waxy appearance. Examples include some bumper covers, stone shields, fender aprons and fan shrouds. Polyolefins require an adhesion promoter prior to carrying out any refinish procedure.
   - To determine if the part is a polyolefin, grind the damaged area in an out-of-sight area. Grinding a polyolefin will melt and smear the plastic and leave a ragged edge. If the part is non-polyolefin, the area will grind or sand smoothly, producing a powdery dust.

   Rigid Plastic Parts

Code	Family Name	Common Trade Name	Typical Application
ABS	Acrylonitrile Butadiene Styrene	ABS, Cycolac, Lustran, Kralistic	A-Pillars, Consoles, Grilles
SMC	Sheet Molded Composite	SMC	Body Panels

   Flexible Plastic Parts

Code	Family Name	Common Trade Name	Typical Application
RRIM	Reinforced Reaction Injection-Mold Material PUR	RRIM	Fascias, Body Panels, Body Trims
TPO	Thermoplastic Polyolefin	Polytrope, Renflex, Santropren Telcar, Vistaflex, ETA, Apex, TPO	Bumpers, End Caps, Rubber Strips, Sight Shields, Claddings, Interior B-Post

2. Polyolefin plastic can also be identified by placing a small sliver in a container of water, if the sample floats, it is a polyolefin plastic. A non-polyolefin will sink when placed in a container of water.

3. Generally, thermosetting plastics are rigid or semi-rigid. Sheet-Molded Composite (SMC) is reinforced with glass and other fibers and are strong and rigid. SMC is used for large panels such as hoods, liftgates, fenders and quarter panels.

- A burn test can be a reliable method to determine if a plastic is a thermosetting plastic. Extreme care must be exercised when using this method.
    - Apply an open flame to the corner of the damaged component. If the material crystallizes and becomes hard, it is a thermosetting plastic.

Plastics Refinishing

All Components

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not paint any air bag module trim covers or deployment doors. Paint may cause the air bag to deploy incorrectly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

NOTE: When using any Ford-approved refinishing product, it is recommended to stay within the same paint system throughout the process. For example, do not use one manufacturer's primers and another manufacturer's topcoats.

1. **NOTE:** Care must be used if applying heat to parts. Thermoplastics soften and tend to lose their shape when heated.

   The first step for any repair or refinish procedure is to identify the type of plastic. Is it thermosetting or thermoplastic, grained or smooth? This will determine how it should be cleaned and prepared for refinishing. For additional information, refer to Plastics Identification in this section.
   - It is essential that the correct cleaner is used, depending on which painting system is employed, solvent-based or water-based.
   - Clean part with warm water/mild detergent, then with plastic cleaner to remove wax, silicone and other contaminants. Do not allow parts to remain wet for extended periods.
   - As a general rule, if water beads on the part, it requires additional cleaning as all the manufacturing release agents have not been removed.

2. New parts may require baking in a spray booth or heating with heat lamps to release trapped solvents or mold release agents used in the manufacturing processes.

Non-grained components

3. After cleaning, lightly sand with 600-grit or finer sandpaper. Remove sanding residue with plastic cleaner and wipe dry.

Grained components

4. After cleaning, light use of a gray scuff pad is permissible providing the graining not be flattened. Remove sanding residue with plastic cleaner and wipe dry.

All components

5. Apply a plastics adhesion promoter to any bare plastic part following manufacturer's recommendation. Throughout the refinish procedure, any time bare plastic is exposed for any reason, it is essential that adhesion promoter be reapplied to that area.

6. A sealer may be required to prevent wrinkling and lifting of the topcoat prior to carrying out the refinish procedure.

7. Flexible and non-flexible components should be refinished separately as a flex additive may be required when refinishing flexible parts (refer to the paint manufacturer's recommendation).

8. It is recommended to carry out refinishing of exterior components on-vehicle (after cut-in) to control color match and blending to adjacent panels.

9. Proceed with the refinish process and follow the Ford-approved paint system procedures. Steps may vary between paint manufacturers.

Plastics Repair

Material

Item	Specification
Plastic Bonding Adhesive TA-9	—

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

1. In deciding whether to repair or install a new component, follow these guidelines.
   - Is a part readily available?
   - Can the damaged part be economically returned to its original strength and appearance, or will the labor cost exceed the cost of a new component?
   - Will repair provide for the fastest, highest quality repair?

2. ***NOTICE:*** **Never apply solvents such as lacquer thinner or reducer at any stage of plastic repair. Solvents, cleaners and water are absorbed by many types of plastics and by the glass fibers used for reinforcements. If this occurs, the plastic may swell in the area of repair and cause the repair to fail. Remove cleaners and water quickly and use air and heat to speed up drying.**

   NOTICE: **During the repair of many plastics and particularly polyolefin plastics, an adhesion promoter must be applied to the substrate to allow repair materials and paint to bond correctly. Reapplication is required when grinding or sanding through the sealer or primered layers.**

   NOTE: When possible, it is recommended to carry out as much of the plastic repair as possible on the vehicle. Parts mounted on the vehicle are held in correct alignment throughout the repair. Attempting to repair the part off the vehicle may cause misalignment. This could lead to failure of the repair.

   Select the correct repair method by identifying the type of plastic being repaired. For additional information, refer to Plastics Identification in this section to determine the type of plastic being repaired.

3. **NOTE:** Always refer to the manufacturer's label directions for the type of repair materials, fillers and bonding agents being used as they are material specific.

   Determine whether a reinforcement piece is needed as a backer on large repairs.
   - Construct a reinforcement piece from a scrap piece of the type of plastic being repaired and follow manufacturer's label directions for the type of system being used.
   - When repairing Sheet-Molded Composite (SMC), a reinforcement piece can be constructed using several layers of glass cloth saturated with resin or structural adhesive. The weave of the cloth or screening should be loose enough to allow the resin to

thoroughly penetrate. Reinforcement should cover the entire area of damage and extend outward beyond the damage or joint area.

Sheet-Molded Composite (SMC) Panel Repair

NOTE: The following procedure applies to repair of structural cracks and large gouges. If damage is cosmetic, use of reinforcing cloth may not be necessary.

1. Panels to be repaired should be dry and at room temperature 18°C (65°F) to 24°C (75°F) prior to carrying out any repairs. Both sides of the panel must be thoroughly cleaned before sanding or grinding.

2. Cover the break in the SMC (front and back) with masking tape. This protects the damaged area from absorbing the prep cleaner and eliminates wicking of the cleaner through the fibers into the SMC .

3. Remove all waxes, silicones, dirt and road oils from the area surrounding both sides of the damaged area with a plastics wax and grease remover.
    - Remove the tape and sand the back of the repair area with an angle grinder, Dual Action (D/A) sander or by hand using 80-grit sandpaper. Remove all dust with a vacuum and tack cloth.

4. Create a reinforcing patch using a piece of scrap SMC that conforms well to the back of the damaged area or form a patch from fiberglass cloth.
    - Cut a section of cloth large enough to cover the repair, plus 25.4 mm (1 in) around the repair area.
    - Cut a section of plastic film backing approximately 25.4 mm (1 in) larger than the cloth. Lay the plastic on a smooth, flat surface where it will be used to create a pyramid patch.

5. Follow manufacturer's directions and apply plastic repair adhesive to the plastic film backing and smooth with plastic spreader to recommended thickness. Place the pre-cut fiberglass cloth on the adhesive-coated plastic film. Cover the cloth with a coat of repair adhesive and spread to the recommended thickness.

6. Apply the prepared patch to the backside of the panel and compress. Follow manufacturer's instructions for adhesive cure. Remove plastic film after adhesive cures and sand as necessary to remove roughness.

7. Remove masking tape from the front side of damaged area and grind down to the backing patch. Use an angle grinder with a 30- to 40-grit wheel. Make a gradual taper in the area, this will prevent bull's-eyes or read-through in the finished repair. Sand prepared area with a D/A sander or hand-sand with 80-grit sandpaper.

8. Build a pyramid patch using fiberglass cloth or equivalent and plastic repair adhesive. Following manufacturer's directions, apply patch to damaged area.

9. Rough-grind area to remove excess adhesive. Sand repair area with 80-grit sandpaper, making sure to cut slightly below the SMC finished surface. This will allow for a finish coat of plastic body repair material.

10. Apply a finish coat of plastic repair filler material per manufacturer's directions.

11. Finish-sand, prime and topcoat using Ford-approved paint systems.

Thermoplastic Compounds

1. In deciding whether to repair or install a new component, follow these guidelines.
    - Is a part readily available?
    - Can the damaged part be economically returned to its original strength and appearance, or will the labor cost exceed the cost of a new component?
    - Will repair provide for the fastest, highest quality repair?

2. **NOTE:** The following steps are to be used as a guideline. Depending on what brand of adhesives or patch materials are used, procedures may vary slightly.

   Thoroughly clean the damaged area with wax and grease remover formulated for use with plastics.

3. Hand sand the repair area with 80-grit sandpaper and remove any foreign material with compressed air.

4. Apply a plastics adhesion promoter per label directions to the repair area.

5. For small repairs, a plastic adhesive filler can be applied to the damaged area. Follow manufacturer's directions and build layers to form a thickness above the damaged area. This will allow the area to be sanded smooth.

6. To repair large holes or cracks, measure and cut a piece of fiberglass cloth or equivalent 25.4 mm (1 in) larger than the crack or hole.
    - Apply plastic repair adhesive to the damaged area and immediately apply fiberglass cloth into plastic adhesive for reinforcement. Apply additional plastic repair adhesive for strength and shape as required.

7. Contour and shape the repair as necessary with a D/A sander. Avoid sanding through the repair.

8. Finish-sand the area and carry out any required paint operations using Ford-approved paint systems.

Tab Repair — Bumper

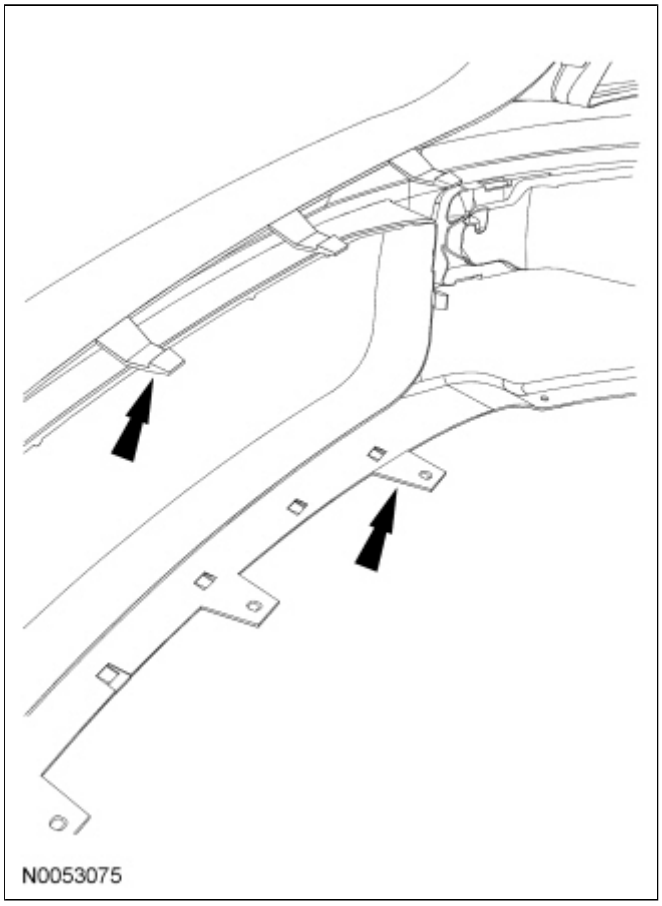
1. **NOTE:** Inspect the bumper cover to determine if part of it can be repaired to an acceptable level of quality of appearance, fit and durability. Will labor and material cost of the repair meet or exceed the cost of a new replacement bumper cover? If the bumper cover is determined to be repairable, proceed to the following steps.

   NOTE: The following steps are to be used as a guideline. Depending on what brand of adhesives or patch materials are used, procedures may vary slightly.

   Remove the affected bumper. For additional information, refer to Section 501-19.

NOTE: Illustration is not vehicle specific.

2. Clean the broken tab(s) with a plastics wax and grease remover.



3. Hand sand the repair area with 80-grit sandpaper and remove any foreign material with compressed air.

4. Apply a plastics adhesion promoter per label directions to the repair area.

5. Measure and cut a patch of fiberglass cloth or equivalent large enough to form the front of the tab, then slope back in a wedge shape approximately 51 mm (2 in) from original tab.

6. Prepare the repair adhesive cloth patch per manufacturer's instructions and apply to the affected area.
    - Immediately position the plastic repair material patch to form the tab shape.

7. Allow appropriate cure time and shape the repair tab using a small angle sander. Use extreme care to not sand through the exterior surface.

8. Carry out any required paint repair operations to the bumper cover using Ford-approved paint systems.

9. Reassemble and install the bumper cover. For additional information, refer to Section 501-19.

Door Outer Panel — Front

Special Tool(s)

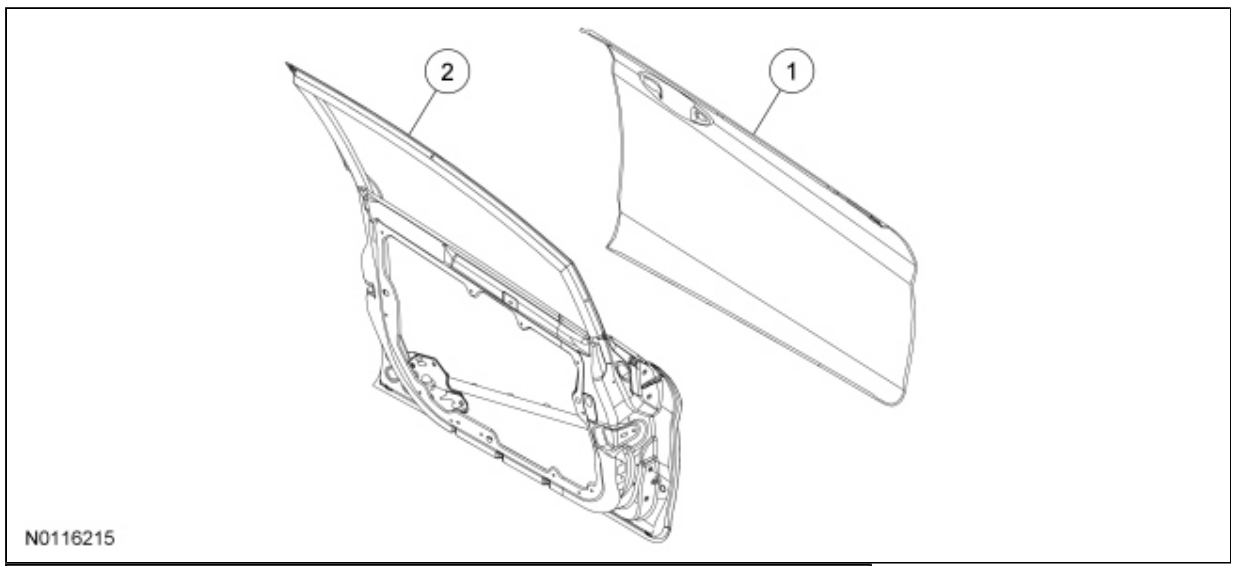
ST1073-A	Heat Gun 107-R0300
ST2956-A	Pro 230 MIG Welder 208-00030

Material

Item	Specification
Flexible Foam Repair Fusor® 121, or equivalent; obtain locally	—
Metal Bonding Adhesive TA-1	—
Rust Inhibitor ValuGard™ VG104, VG104A (aerosol)	—
Seam Sealer TA-2	—

Door Assembly — Front

NOTE: Door intrusion beam is constructed of boron steel and is non-serviceable.



Item	Part Number	Description

1	5420200 (RH)/ 5420201 (LH)	Door outer panel — mild steel
2	5420124 (RH)/ 5420125 (LH)	Door shell — mild and boron steel

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

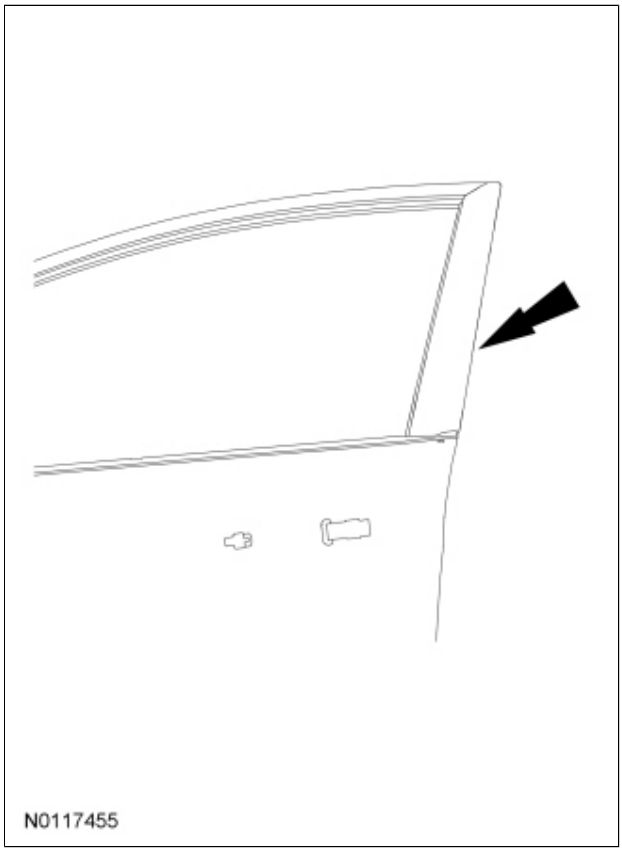
Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

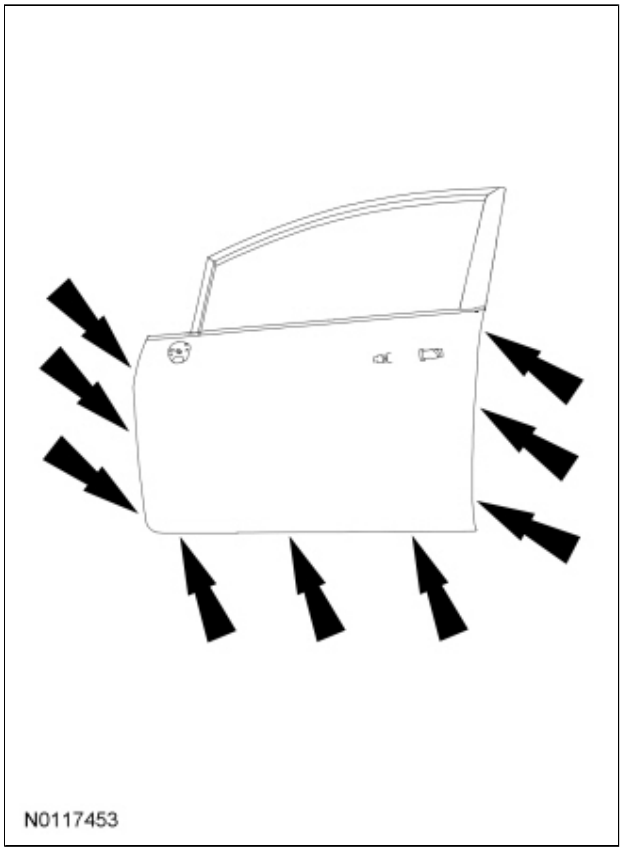
1. Inspect the door hinges prior to panel replacement. Install new or rebuild as necessary.
2. Remove the door window glass. For additional information, refer to Section 501-11 .
3. Remove the door. For additional information, refer to Section 501-03 .
4. Remove the door outer latch and outer door handle. For additional information, refer to Section 501-14 .
5. Remove the side view mirror. For additional information, refer to Section 501-09 .

6. Remove the door applique.



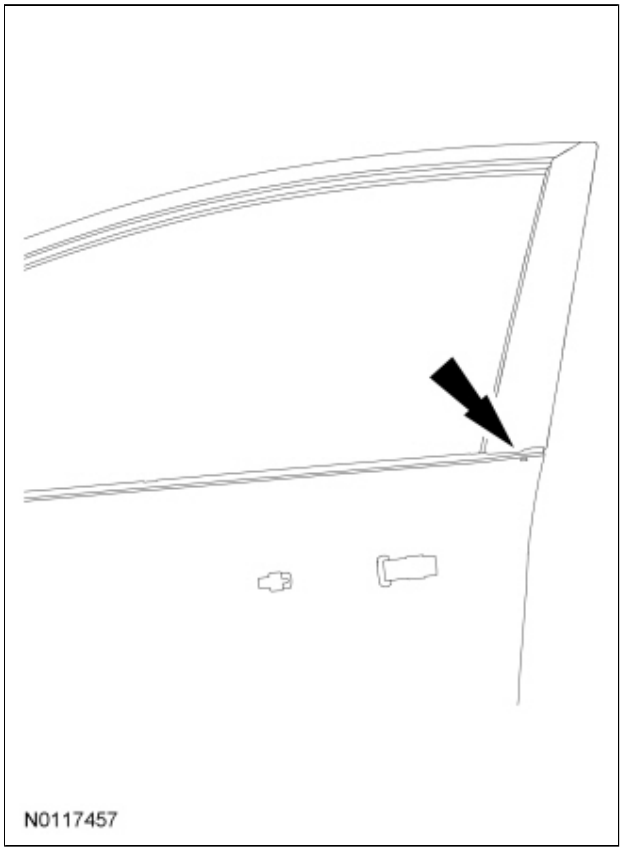
7. ***NOTICE:*** **To prevent damage to the mating surfaces of the door assembly, use extreme care to avoid cutting into the door shell.**

   Using a suitable grinder, grind along the perimeter of the outer door panel to separate the hem edges as indicated.



8. ***NOTICE:*** **Drill though the outer panel sheet metal only to avoid damage to the door assembly.**

   Carefully remove the tack weld at the upper rear of the outer door panel.



9. **NOTE:** The use of a heat gun may be required to soften the door panel adhesive.

Prior to removing the outer door panel, use a sharp knife to cut the adhesive between the door shell and outer panel and the intrusion beam.

- Using a flat-blade chisel or equivalent, remove the original panel.
- Using a sharp knife or broad edge scraper, remove the remaining portion of the hem flange from the door shell.
- Remove any remaining adhesive from the door shell flange.

Installation

1. Prepare the door shell assembly.
   - Grind clean all mating surfaces.
   - Dress any tack welds.

2. Prepare the service replacement outer door panel.
   - Sand clean all the mating surfaces of the replacement panel.
   - Apply a mastic sound-deadener patch (obtain locally) to the inner side of the replacement panel. For additional information, refer to Sound Deadeners and Insulators in this section.

3. **NOTE:** Hemming and alignment must be completed before the adhesive has begun to cure.

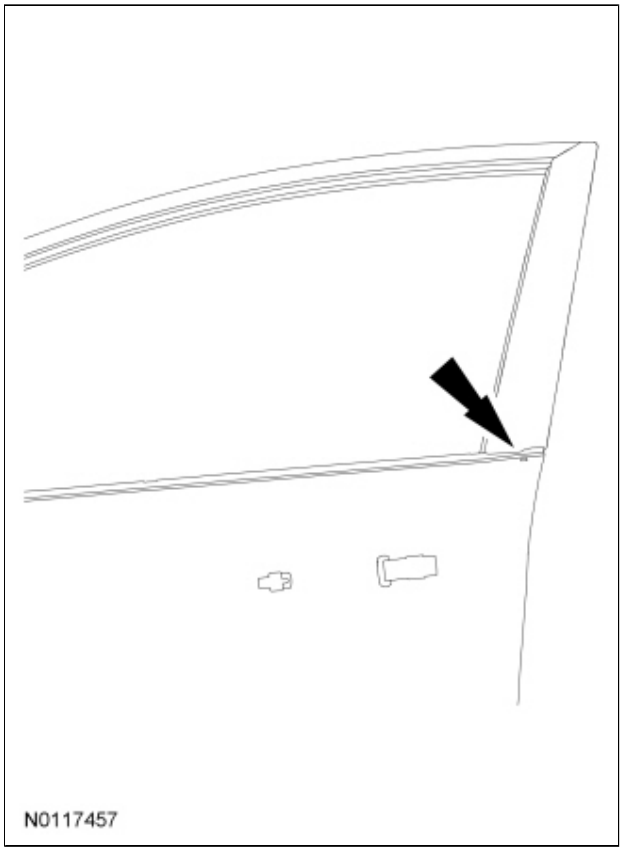
   Apply metal bonding adhesive to the replacement panel hem flange and position on the door shell and begin the hemming process.
   - Using a door panel installation tool or the hammer and dolly method, close the door hem flange around the entire perimeter of the door and smooth any residual adhesive in the joints.

4. Fit the door assembly to the vehicle and assure correct alignment with the adjoining panels.

5. Clamp the upper front portion of the door outer panel to the door shell and allow adhesive to cure.

6. **WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.**

   Clamp the upper rear portion of the door outer panel to the door shell and apply a MIG tack weld where previously removed.



7. Remove the door assembly from the vehicle.
8. Apply flexible foam repair material between the door outer panel and the intrusion beam.
9. Sand and prime the flange area and apply a continuous bead of seam sealer to the entire door hem flange perimeter.
10. Prime and paint the door flange area using a Ford approved paint system.
11. Apply rust inhibitor to the inside of the door assembly to all hem flange areas. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.
12. Install the door on the vehicle. For additional information, refer to Section 501-03 and refinish using a Ford approved paint system.
13. Install the door latch and outer door handle. For additional information, refer to Section 501-14 .
14. Install the window glass. For additional information, refer to Section 501-11 .
15. Install the side view mirror. For additional information, refer to Section 501-09 .
16. Install a new door applique.

Door Outer Panel — Rear

Special Tool(s)

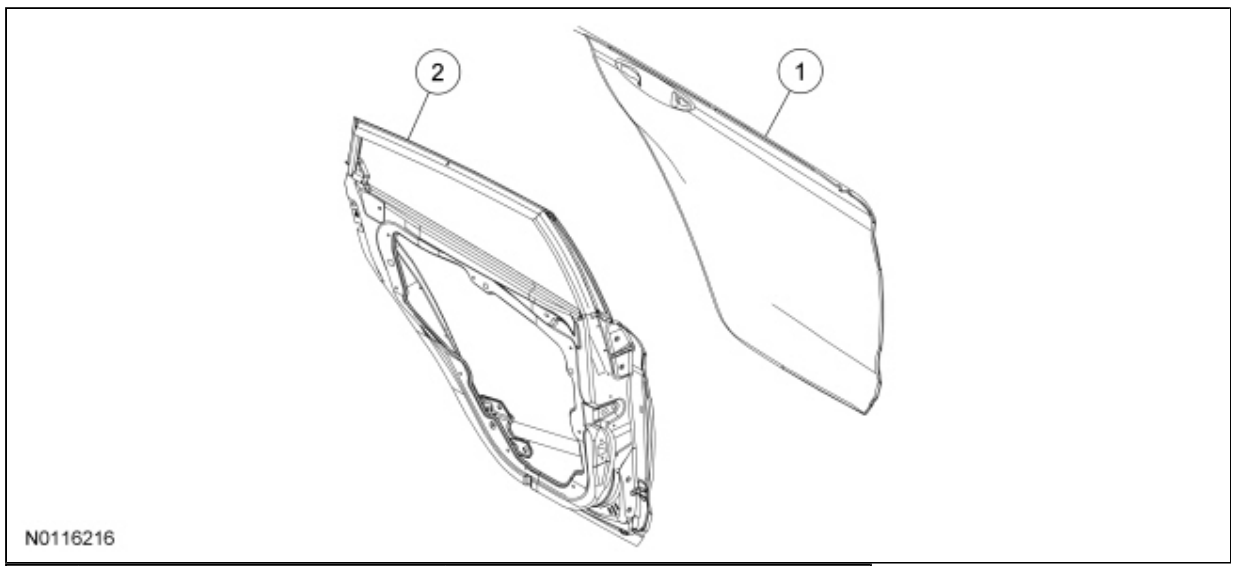
ST1073-A	Heat Gun 107-R0300
ST2956-A	Pro 230 MIG Welder 208-00030

Material

Item	Specification
Flexible Foam Repair Fusor® 121, or equivalent; obtain locally	—
Metal Bonding Adhesive TA-1	—
Rust Inhibitor ValuGard™ VG104, VG104A (aerosol)	—
Seam Sealer TA-2	—

Door Assembly — Rear

NOTE: Door intrusion beam is constructed of boron steel and is non-serviceable.



Item	Part Number	Description

1	5824700 (RH)/ 5825701 (LH)	Door outer panel — mild steel
2	5420124 (RH)/ 5420125 (LH)	Door shell — mild and boron steel

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. 6	17B749 (RH)/ 17B750 (LH)	Bumper mounting bracket — mild steel HSLA 300 steel
7	—	Bracket (part of 54010A88/54101A89) — mild steel
8	—	Cowl top support (part of 16054/16055) — mild steel
9	—	Brace (part of 54010A88/54101A89 — HSLA 300 steel
10	—	Reinforcement (part of 54010A88/54101A89) — Dual Phase Steel (DP) 600 steel
11	5410008 (RH)/ 5410009 (LH)	Frame rail, inner — Dual Phase Steel (DP) 600 steel

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct

density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Straighten damaged frame rails to correct frame dimensions prior to frame member sectioning. Failure to follow these instructions may adversely affect frame rail performance and may result in serious personal injury to vehicle occupant(s).

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

***NOTICE:* A frame rail sectioning kit is not available for this vehicle. Frame rail replacement must be done at the factory seams. Failure to follow this direction will result in an incorrect repair and vehicle energy management will be compromised.**

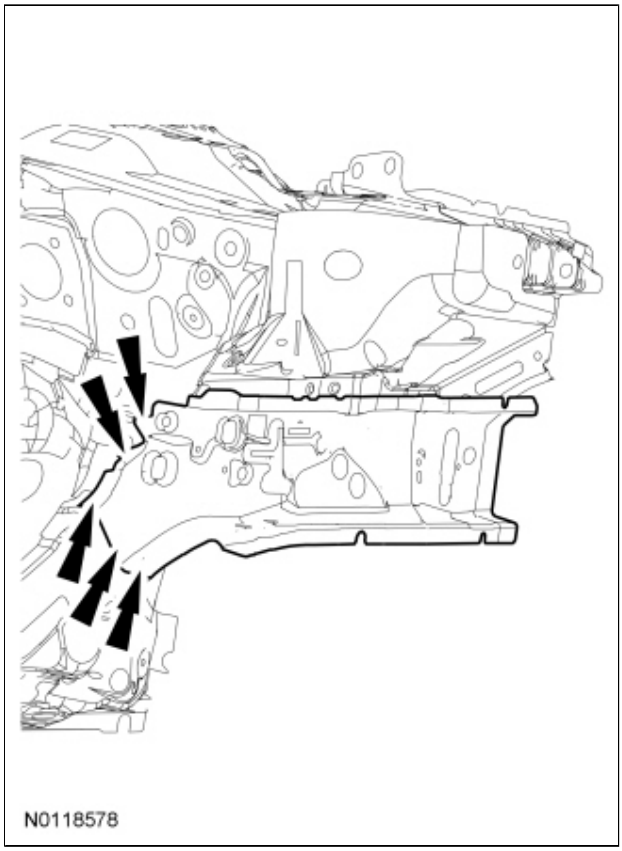
1. Position the vehicle on a frame repair rack following the manufacturer's recommendations. Measure the vehicle to determine if the body requires rough straightening and alignment. For dimensional information, refer to Body in this section.

2. Remove the hood. For additional information, refer to Section 501-02 .
3. Remove the fender(s) from the affected side(s). For additional information, refer to Section 501-02 .
4. Remove the front bumper cover and reinforcement. For additional information, refer to Section 501-19 .
5. Remove the battery. For additional information, refer to Section 414-01 .
6. Remove the front strut from the affected side of the vehicle. For additional information, refer to Section 204-01 .
7. Remove the engine mount from the affected side of the vehicle. For additional information, refer to Section 303-01 .
8. Remove the subframe. For additional information, refer to Section 502-00 .
9. Disconnect and position aside the Anti-Lock Brake System (ABS) sensor wire.
10. **NOTE:** Use care not to drill through to fender apron or A-pillar when removing the frame rail.

    Carefully drill out the spot welds and remove the outer frame rail.

11. **NOTE:** Use care not to drill through to fender apron or A-pillar when removing the frame rail.

    Carefully drill out the spot welds and remove the inner frame rail.



12. Dress any plug weld nuggets on the vehicle underbody structure resulting from inner or outer rail removal.

Installation

1. **NOTE:** Factory spot welds may be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

   Apply a locally available weld-through primer only to the immediate weld locations of the inner and outer frame rails.

2. Install and clamp the service replacement inner frame rail in place. Tack weld and verify correct alignment of the frame rail.

3. **NOTE:** Factory spot welds may be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

   Install and clamp the service replacement outer frame rail in place.
   - Verify correct alignment of the outer frame rail.

4. Using a MIG welder or resistance spot welder, plug weld along the top and bottom seam of the service replacement rails.

5. Use a dye penetrant or equivalent to determine if any cracks or large voids exist, grind out any defects that exist and repair until the weld is free of defects.
   - Dress welds as necessary.

6. Apply corrosion protection. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

7. MIG plug weld or resistance spot weld a new front bumper reinforcement mounting plate to the front frame rail assembly.

8. Install the subframe. For additional information, refer to Section 502-00 .
9. Install the engine mount from the affected side of the vehicle. For additional information, refer to Section 303-01 .
10. Install the front strut. For additional information, refer to Section 204-01 .
11. Connect the Anti-Lock Brake System (ABS) sensor wire.
12. Install the battery. For additional information, refer to Section 414-01 .
13. Install the fender(s). For additional information, refer to Section 501-02 .
14. Install the front bumper cover and reinforcement. For additional information, refer to Section 501-19 .
15. Install the hood. For additional information, refer to Section 501-02 .

Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Because of component composition (Dual Phase Steel (DP) 600 steel) a frame rail sectioning kit is not available for this vehicle. Frame rail replacement must be carried out by replacement at the factory seams.**

1. Position the vehicle on a frame repair rack following the manufacturer's recommendations. Measure the vehicle to determine if the body requires rough straightening and alignment. For dimensional information, refer to Body in this section.

2. Remove the rear bumper cover and reinforcement. For additional information, refer to section Section 501-19 .

3. Remove the rear wheels. For additional information, refer to section Section 204-04 .

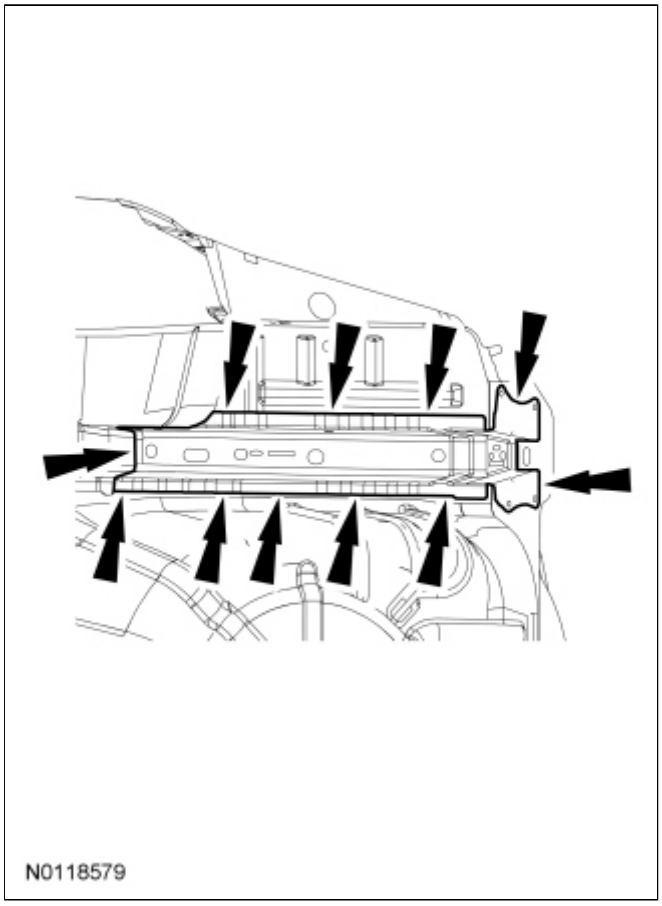
4. Remove the rear axle. For additional information, refer to section Section 204-02 .

5. LH side only. Remove the fuel fill assembly. For additional information, refer to section Section 310-01 .

6. **NOTE:** Use caution not to drill through the vehicle floor pan when removing spot welds.

   NOTE: LH side shown. RH side similar.

   Carefully remove the spot welds and the rear frame rail.



Installation

1. Dress all spot weld nuggets on the vehicle mating surfaces.
2. **NOTE:** Factory spot welds may be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

   Drill plug weld holes in the replacement rear frame rail service part.
3. Apply a locally available weld-through primer to the immediate weld location only on the replacement part and vehicle mating surfaces.
4. Install and clamp the service replacement rear frame rail in place and verify correct alignment of the frame rail.
5. Using a MIG welder or resistance spot welder, plug weld the service replacement rail.
6. Apply corrosion protection. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.
7. Install a new rear bumper mounting plate.
8. LH side only. Install the fuel fill assembly. For additional information, refer to section Section 310-01 .
9. Install the rear axle. For additional information, refer to section Section 204-02 .
10. Install the rear wheels. For additional information, refer to section Section 204-04 .

11. Install the rear bumper cover and reinforcement. For additional information refer to section Section 501-19 .

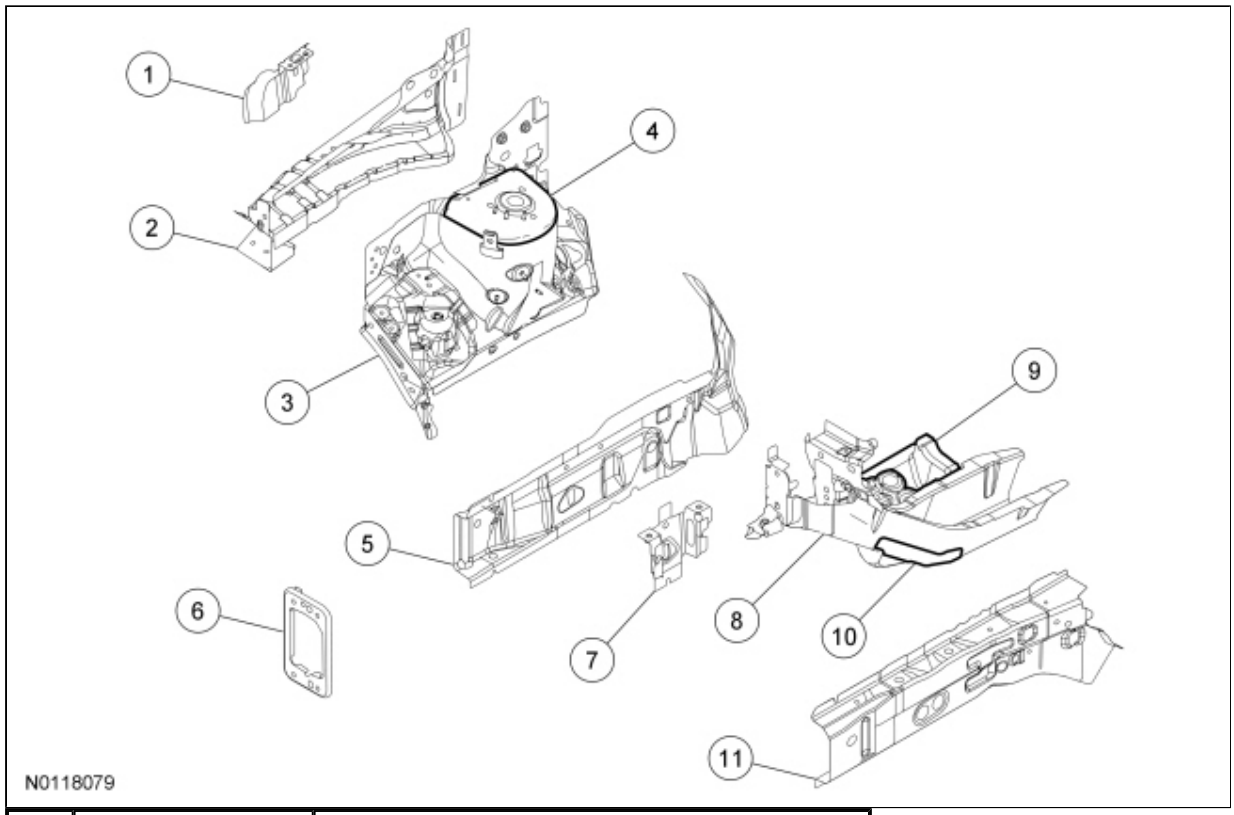
3	5446775	Reinforcement — mild steel
4	13A418A	Rear lamp closing panel — mild steel
5	5440320	Back panel — mild steel
6	5440338	Reinforcement — mild steel
7	13A418B	Rear lamp closing panel — mild steel

Front Structure

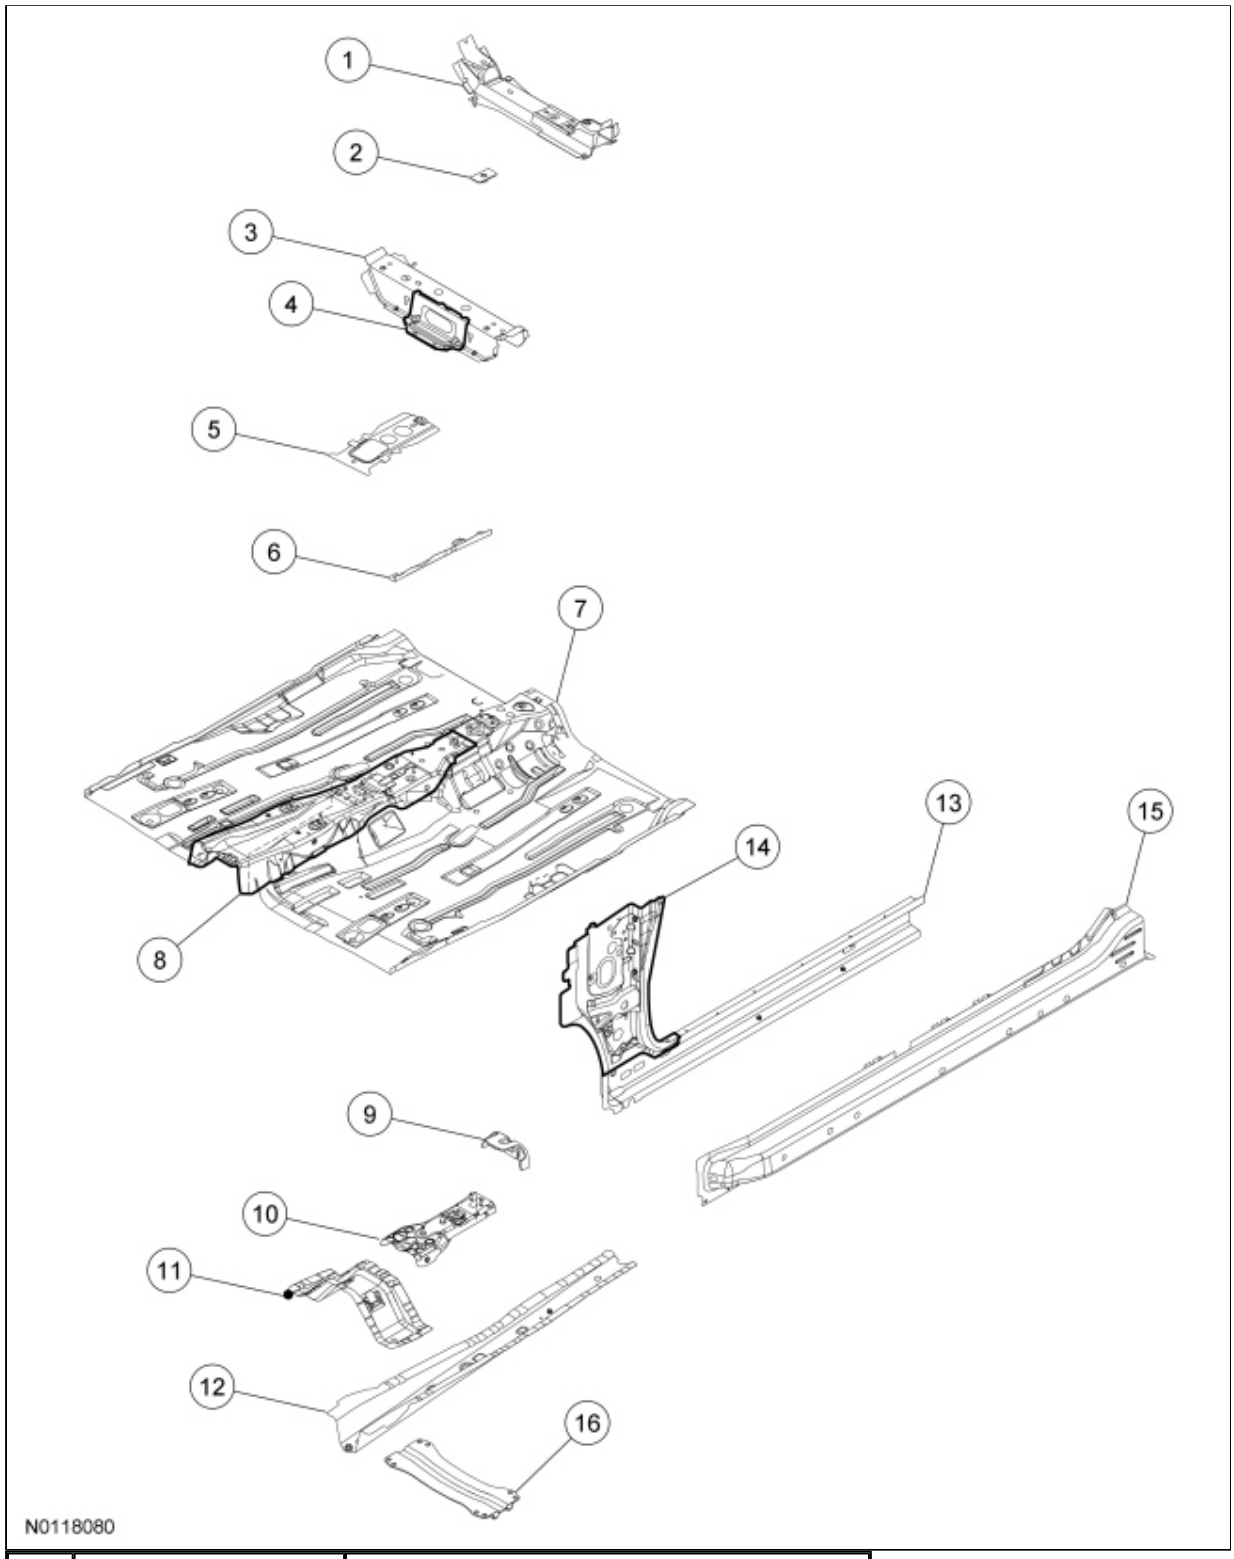
NOTE: Right side fender reinforcements and apron shown, left side similar.



Item	Part Number	Description
1	16C078 (RH)/ 16C079 (LH)	Fender bracket — mild steel
2	16018 (RH)/ 16019 (LH)	Fender reinforcement, outer — HSLA 350 steel
3	16054 (RH)/ 16055 (LH)	Fender apron — mild steel
4	—	Strut tower (part of 16054/16055) — HSLA 300 steel
5	54010A88 (RH)/ 54101A89 (LH)	Frame rail, outer — Dual Phase Steel (DP) 600 steel
6	17B749 (RH)/ 17B750 (LH)	Bumper mounting bracket — mild steel HSLA 300 steel
7	—	Bracket (part of 54010A88/54101A89) — mild steel
8	—	Cowl top support (part of 16054/16055) — mild steel

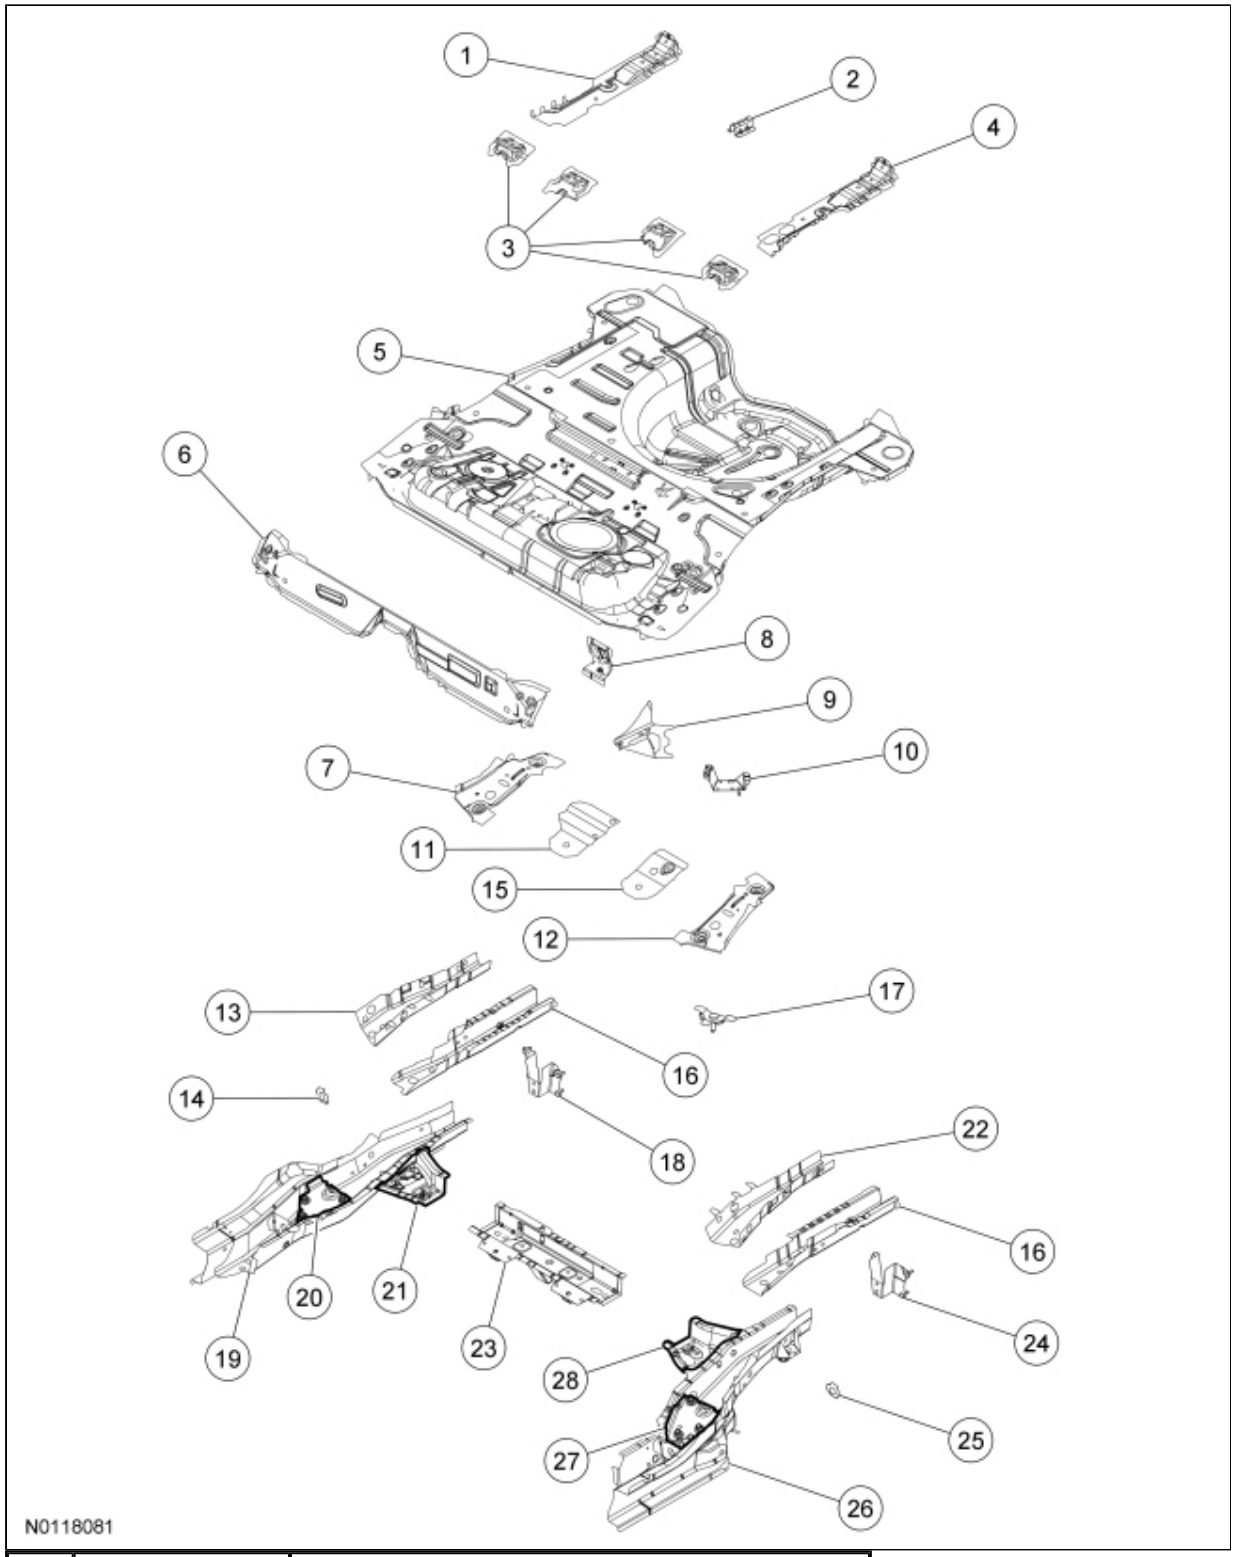
9	—	Brace (part of 54010A88/54101A89 — HSLA 300 steel
10	—	Reinforcement (part of 54010A88/54101A89) — Dual Phase Steel (DP) 600 steel
11	5410008 (RH)/ 5410009 (LH)	Frame rail, inner — Dual Phase Steel (DP) 600 steel

Underbody — Front Floor



Item	Part Number	Description
1	5410776A (RH)/ 5410776B (LH)	Crossmember — DP 600 steel
2	5862570	seat mounting bracket — Bake Hardened Steel (BH) 210 steel
3	5410672 (RH)/ 5410673 (LH)	Crossmember - front, upper — DP 600 steel
4	—	Bracket (part of 5410672/5410673) — mild steel
5	54111A46	Gusset (2 required) — HSLA 300 steel
6	54106A96 (RH)/ 54106A97 (LH)	Floor side member — mild steel
7	5411135	Floor pan — mild steel
8	—	Floor tunnel (part of 5411135) — HSLA 300 steel
9	2A697	Parking brake cable guide — mild steel
10	2L624	Parking brake cable reinforcement — mild steel
11	54111K48	Reinforcement — DP 780 steel
12	5410062	Side member extension (2 required) — DP 780 steel
13	5402038 (RH)/ 5402039 (LH)	Cowl side panel, inner — DP 780 steel
14	—	Cowl side panel, inner (part of 5402038/5402039 — DP 600 steel
15	5410116 (RH)/ 5410117 (LH)	Rocker panel reinforcement — DP 780 steel
16	58108K38	Crossmember — mild steel

Underbody — Rear Floor



Item	Part Number	Description
1	—	Brace (part of 5411215) — mild steel DP 600 steel
2	5447076	Bracket — mild steel
3	—	Gusset — mild steel
4	—	Brace (part of 5411215) — DP 600 steel
5	5411215	Floor pan — mild steel
6	—	Reinforcement (part of 5411215) — HSLA 300 steel
7	—	Reinforcement (part of 5411215) — HSLA 300

		steel
8	—	Bracket (part of 5411215) — mild steel
9	—	Reinforcement (part of 5411215) — mild steel
10	—	Bracket (part of 5411215) — mild steel
11	—	Bracket (part of 5411215) — mild steel
12	—	Bracket (part of 5411215) — HSLA 300 steel
13	5410125	Floor side member — HSLA 300 steel
14	2082	Bracket (2 required) — mild steel BH 210 steel
15	—	Bracket (part of 5411215) — mild steel
16	5410456 (RH)/ 5410457 (LH)	Side member — DP 600 steel
17	9N077U (4-door)/ 9N077A (5-door)	Fuel tank bracket — mild steel
18	17A750A	Bumper mounting bracket — DP 600 steel
19	5410124 (4-door)/ 5810124 (5-door)	Floor side member — DP 600 steel
20	—	Reinforcement (part of 5410124/5810124) — BH 240 steel
21	—	Bracket (part of 5410124/5810124) — HSLA 250 steel
22	—	Reinforcement (part of 5410124/5410125/5810124/5810125) — BH 240 steel
23	4K338	Crossmember — HSLA 300 steel
24	17A750A	Bumper mounting bracket — mild steel DP 600 steel
25	2082	Bracket — BH 210 steel
26	5410125 (4-door)/ 5810125 (5-door)	Floor side member — DP 600 steel
27	—	Reinforcement (part of 5410125/5810125) — DP 600 steel
28	—	Bracket part of 5410125/5810125 — HSLA 250 steel

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**

- **safety belts, buckles or retractors**
- **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not cut or grind body side components within 50 mm (1.96 in) of restraint anchoring points. Welding within 50 mm (1.96 in) of restraint anchoring points may result in incorrect operation of restraint devices. For additional restraints anchoring location information, refer to Section 501-20A and Section 501-20B . Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Do not carry out body side sectioning repairs in areas of laser welds. Factory laser welds cannot be duplicated with conventional welding equipment and structural integrity may be compromised. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: On vehicles equipped with Safety Canopy® options, prior to carrying out any sectioning repairs near the roof line or sail panel areas of the vehicle, remove the Safety Canopy® module and related components. Failure to comply may result in accidental deployment or damage to the Safety Canopy®. Refer to Section 501-20B . Failure to follow these instructions may result in serious injury to technician or vehicle occupant(s).

NOTE: Factory spot welds may be substituted with either resistance spot welds or Metal Inert Gas (MIG) plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

1. Remove the outer body sheet metal from the affected area prior to carrying out any reinforcing panel replacement. For additional information, refer to Sectioning Guidelines in this section.

2. **NOTE:** Observe prescribed welding procedures when carrying out repairs. For additional information, refer to Welding Precautions — Steel in this section.

   NOTE: When it is necessary to carry out weld-bonding procedures, refer to Weld-Bonding in this section.

   Remove the outer body sheet metal from the affected area prior to carrying out any reinforcing panel replacement. For additional information, refer to Sectioning Guidelines in this section.

3. When welding overlapping surfaces or substrates, apply a high quality weld-through primer between the surfaces prior to welding.
    - Make sure horizontal joints and flanges are correctly sealed with seam sealer to prevent moisture intrusion. Water and moisture migrate to horizontal joints and corrosion tends to occur more rapidly in these areas. Clean metal surfaces with metal surface prep or equivalent applying seam sealer.

4. Proceed with refinish procedures following Ford-approved paint guidelines.

5. Apply corrosion protection as necessary to repair area.

Roof Panel — 4-Door Sedan

Special Tool(s)

ST1073-A	Heat Gun 107-R0300

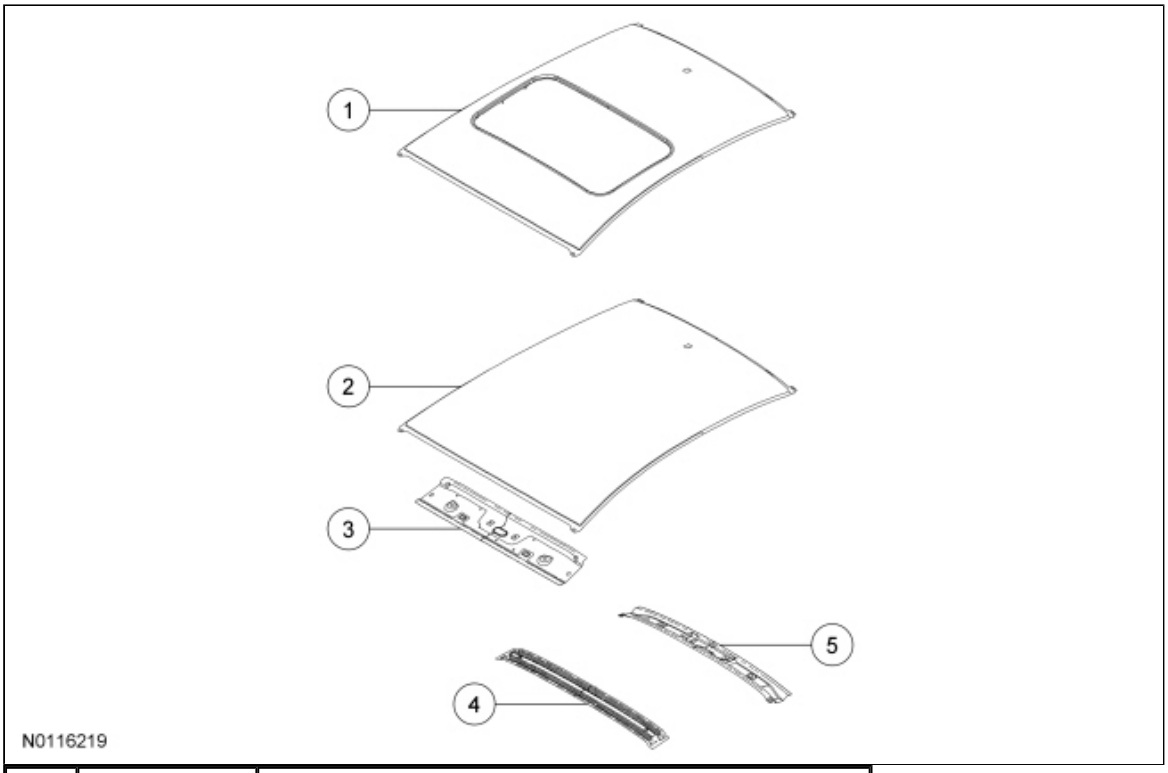
Roof Panel — Exploded View



Item	Part Number	Description
1	5450202B	Roof panel with sunroof — mild steel
2	5450202A	Roof panel without sunroof — mild steel
3	5403410	Windshield header panel — HSLA 350 steel
4	5451272	Roof bow without sunroof only — HSLA 350 steel
5	5842220	Rear roof rail — mild steel

Removal and Installation

WARNING: Never install used or reconditioned parts (as specified below) from pre-owned, salvaged or damaged vehicles. The use of such parts could lead to serious injury.

Never use non-Ford parts or accessories for completing repairs.

Ford Motor Company does not approve or recognize body and structural repair procedures, tools, parts or anything but new genuine Ford equipment. Ford cannot attest to the safety, quality, durability or legality of non-Ford parts or accessories. Use of such parts could lead to serious personal injury as they may contain damage which is not visible.

Ford does not approve use of the following:

- **Salvaged or used parts**
- **Major body clips or assemblies from salvage vehicles**
- **Aftermarket structural or body components**
- **Salvaged or reconditioned wheels**
- **Used supplemental restraint system (SRS) components**
  - **air bags**
  - **restraint system modules**
  - **safety belts, buckles or retractors**
  - **crash sensors**

Returning a vehicle to pre-accident condition can only be assured if repair procedures are carried out by skilled technicians using new genuine Ford parts and Ford-approved methods. Structural component repair procedures approved by Ford, using genuine Ford parts, have been validated by Ford Motor Company engineers.

Ford Motor Company does not endorse, cannot attest to, and makes no representations regarding structural

repairs (frames, rails, aprons and body panels) carried out using non-genuine Ford Motor Company parts or non-Ford-approved methods. In particular, Ford makes no representations that the vehicle will meet any crash safety or anti-corrosion performance requirement. Such parts and methods have not been tested by Ford, and may not meet Ford's requirements for safety, performance, strength, quality, durability and corrosion protection.

Ford Motor Company bears no responsibility or liability of any kind if repairs are performed using alternative structural component repair procedures and/or parts.

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

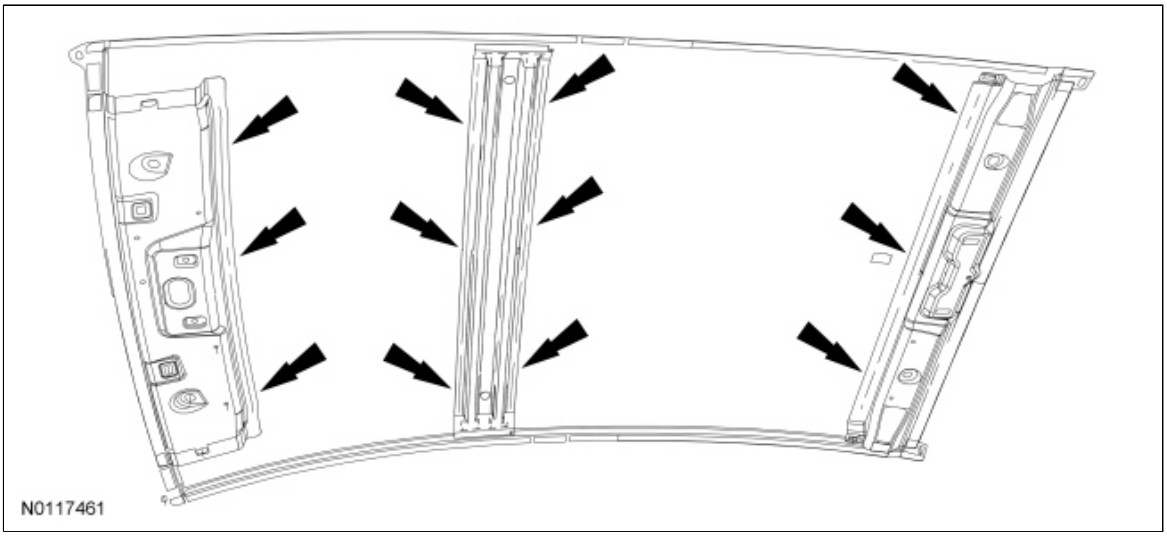
WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

***NOTICE:* Be sure to adequately protect all glass, exterior finish and interior trim to avoid surface contamination from repair materials.**

NOTE: The driver and passenger sides of the roof panel are laser skip-welded. Installation of a new roof panel will employ a weld-bonding technique. The use of mechanical welding and chemical bonding are both part of the installation technique.

1. Remove and discard the roof ditch mouldings.
2. Remove the windshield. For additional information, refer to Section 501-11 .
3. Remove the rear window. For additional information, refer to Section 501-11 .
4. Remove the headliner. For additional information, refer to Section 501-05 .
5. Remove the side air curtains. For additional information, refer to Section 501-20B .
6. Remove the antenna. For additional information, refer to Section 415-00 .
7. Remove the sun roof (If equipped). For additional information, refer to Section 501-17 .
8. From inside the vehicle, leaving as much of the foam as possible intact, separate the Noise, Vibration and Harshness (NVH) foam along the front and rear header panels and roof bow (if equipped) from the roof panel using a flexible and sharp broad scraper or knife.



9. ***NOTICE:*** **Drill through the outer panel sheet metal only to avoid damage to the header panel assembly.**

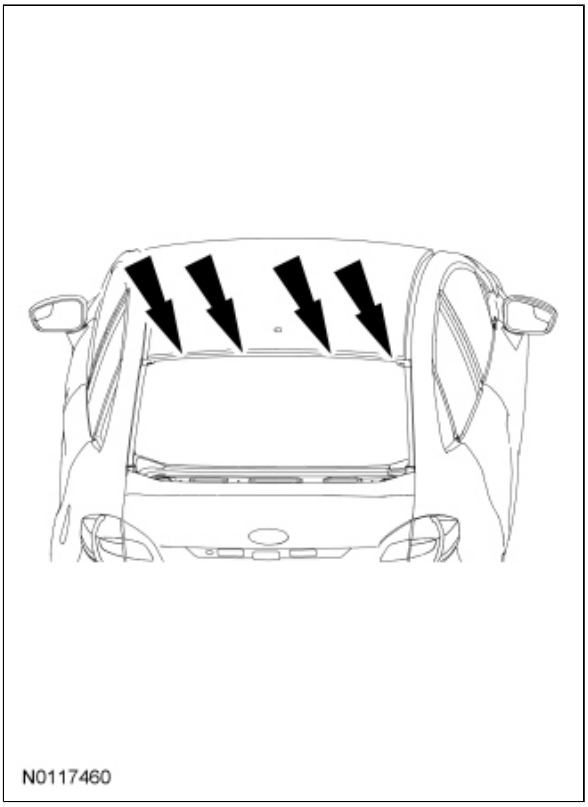
   NOTE: Note the location and quantity of the spot welds to assist in installation of the new roof panel.

   Remove the windshield header panel spot welds.

10. ***NOTICE:*** **Drill through the outer panel sheet metal only to avoid damage to the header panel assembly.**

    NOTE: Note the location and quantity of the spot welds to assist in installation of the new roof panel.

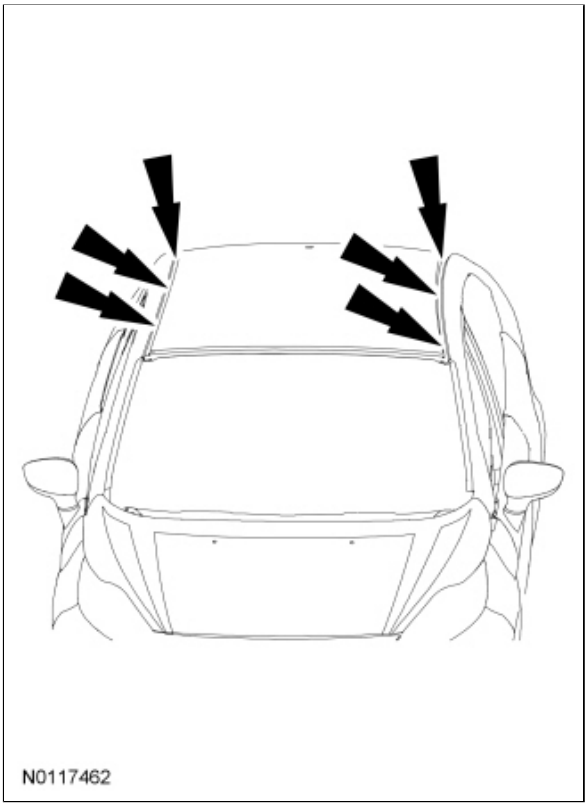
    Remove the rear header panel spot welds.



11. ***NOTICE:*** **Drill through the outer panel sheet metal only to avoid damage to the body side panel assembly.**

    NOTE: Note the location and quantity of the spot welds to assist in installation of the new roof panel.

    Remove the roof ditch spot welds.



12. Remove the roof panel from the vehicle.

Installation

1. Using a suitable disc grinder, clean out any remaining seam sealer and paint along the roof ditch mating surface.

2. Dress any spot weld nuggets in the roof ditch as well as the front and rear header panel mating surfaces.

3. Using the hammer and dolly method, straighten any damage caused to the mating surfaces on the vehicle during panel removal.

4. Inspect the windshield header panel, roof bow and rear header panel. Repair or replace as required.

5. Position the service replacement roof panel on the vehicle.

6. Correctly align and index mark the positioning of the panel-to-vehicle and remove the panel.

7. **NOTE:** Spot welds can be replaced with MIG plug welds. Plug welds should equal resistance spot welds in both location and quantity. Do not place a new spot or plug weld directly over an original weld location.

   Prepare the roof panel for installation:
   - If Metal Inert Gas (MIG) plug welding, drill 8 mm (0.314 in) holes along the front and rear header panel flanges.
   - If Squeeze-Type Resistance Spot Welding (STRW), remove the e-coat only in the exact locations for spot welds along the front and rear header panels flanges.

8. Remove the e-coat on the roof ditch mating surface of the service replacement roof panel.

9. Apply a bead of metal bonding adhesive on the front and rear header panels and roof bow (if equipped) and to the body side-to-roof panel flange area. Immediately reinstall the roof panel aligning it to the index marks made during test fitting.

10. Make sure good contact is made with the adhesive. Clamp the roof panel on all sides and smooth out any residual adhesive in the joints.

11. Resistance spot weld or MIG plug weld the roof panel to the front and rear header panels and allow the adhesive to cure.

12. Inspect header panels and roof bow (if equipped) to roof panel adhesive mating surfaces. If good contact is not apparent, apply flexible foam material for NVH purposes.

13. **NOTE:** Always use refinishing materials from a single paint manufacturer. Combining products from more than one manufacturer may result in refinishing material incompatibility issues and potential void of warranty for each product applied.

    Sand and prime the roof ditch repair and apply a continuous bead of seam sealer to the roof ditch area joints.

14. Refinish the entire repair area using a Ford approved refinishing system.

15. Install the side air curtains. For additional information, refer to Section 501-20B .

16. Install the sun roof (if equipped). For additional information, refer to Section 501-17 .

17. Install the antenna. For additional information, refer to Section 415-00 .

18. Install the headliner. For additional information, refer to Section 501-05 .

19. Install the windshield and rear window. For additional information, refer to Section 501-11 .

20. Install new roof ditch mouldings.

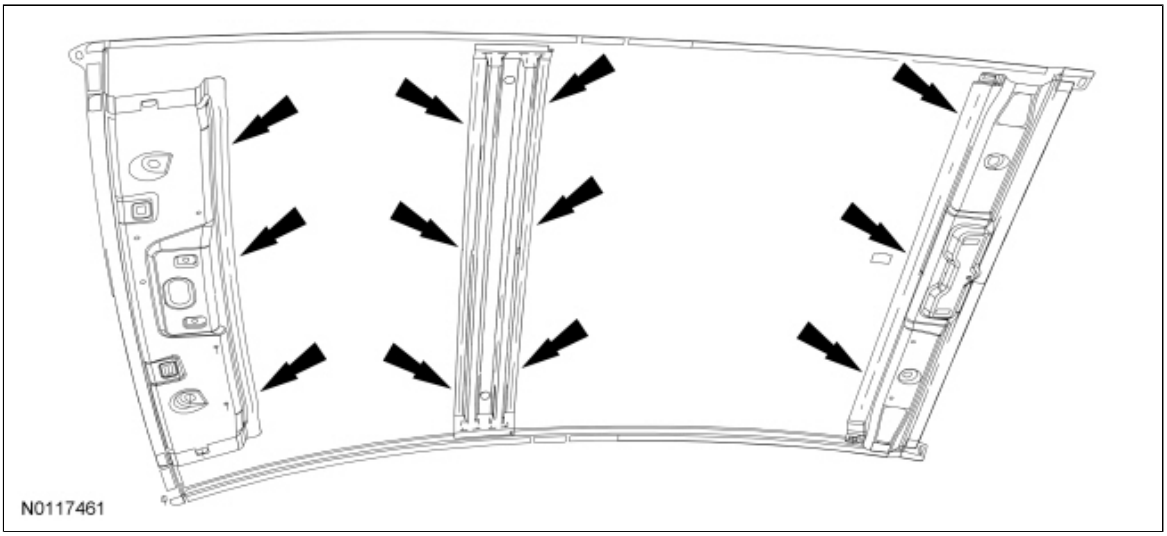
NOTE: The driver and passenger sides of the roof panel are laser skip-welded. Installation of a new roof panel will employ a weld-bonding technique. The use of mechanical welding and chemical bonding are both part of the installation technique.

1. Remove the spoiler. For additional information, refer to Section 501-08 .
2. Remove and discard the roof ditch mouldings.
3. Remove the windshield. For additional information, refer to Section 501-11 .
4. Remove the rear luggage compartment lid. For additional information, refer to Section 501-03 .
5. Remove the headliner. For additional information, refer to Section 501-05 .
6. Remove the side air curtains. For additional information, refer to Section 501-20B .
7. Remove the antenna. For additional information, refer to Section 415-00 .
8. Remove the sun roof (if equipped). For additional information, refer to Section 501-17 .
9. From inside the vehicle, leaving as much of the foam as possible intact, separate the Noise, Vibration and Harshness (NVH) foam along the front and rear header panels and roof bow (if equipped) from the roof panel using a flexible and sharp broad scraper or knife.



10. ***NOTICE:*** **Drill through the outer panel sheet metal only to avoid damage to the header panel assembly.**

    NOTE: Note the location and quantity of the spot welds to assist in installation of the new roof panel.

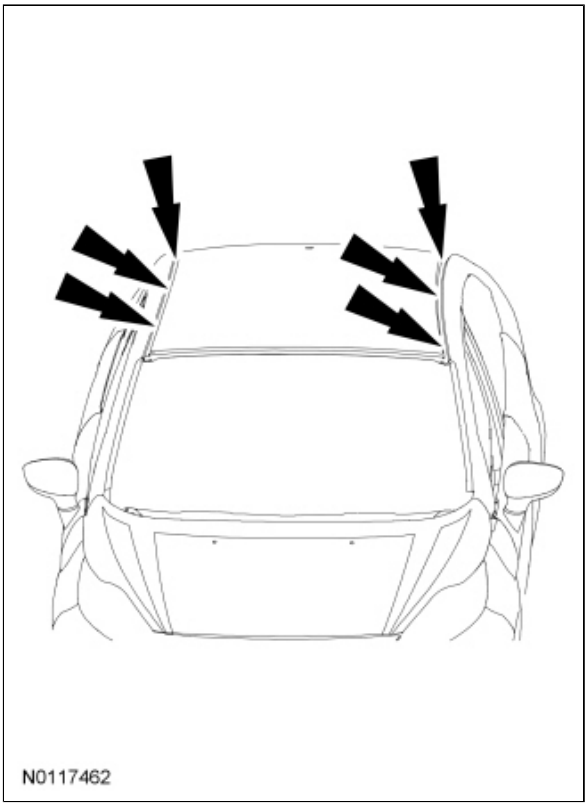
    Remove the windshield header panel spot welds.

11. ***NOTICE:*** **Drill through the outer panel sheet metal only to avoid damage to the header panel assembly.**

    NOTE: Note the location and quantity of the spot welds to assist in installation of the new roof panel.

    Remove the rear header panel spot welds.

12. Remove the roof ditch spot welds.



13. Remove the roof panel from the vehicle.

Installation

1. Using a suitable disc grinder, clean out any remaining seam sealer and paint along the roof ditch mating surface.

2. Dress any spot weld nuggets in the roof ditch as well as the front and rear header panel mating surfaces.

3. Using the hammer and dolly method, straighten any damage caused to the mating surfaces on the vehicle during panel removal.

4. Inspect the windshield header panel, roof bow and rear header panel. Repair or replace as required.

5. Position the service replacement roof panel on the vehicle.

6. Correctly align and index mark the positioning of the panel-to-vehicle and remove the panel.

7. **NOTE:** Spot welds can be replaced with Squeeze-Type Resistance Spot Welding (STRW) or Metal Inert Gas (MIG) plug welds. Plug welds should equal resistance spot welds in both location and quantity. Do not place a new spot or plug weld directly over an original weld location.

   Prepare the roof panel for installation:
   - If MIG plug welding, drill 8 mm (0.314 in) holes along the front and rear header panel flanges.
   - If Squeeze-Type Resistance Spot Welding (STRW), remove the e-coat only in the exact locations for spot welds along the front and rear header panels flanges.

8. Remove the e-coat on the roof ditch mating surface of the service replacement roof panel.

9. Apply a bead of metal bonding adhesive on the front and rear header panels and roof bow (if equipped) and to the body side-to-roof panel flange area. Immediately reinstall the roof panel aligning it to the index marks made during test fitting.

10. Resistance spot weld or MIG plug weld the roof panel to the front and rear header panels and allow adhesive to cure.

11. Inspect header panels and roof bow (if equipped) to roof panel adhesive mating surfaces. If good contact is not

apparent, apply flexible foam material for NVH purposes.

12. **NOTE:** Always use refinishing materials from a single paint manufacturer. Combining products from more than one manufacturer may result in refinishing material incompatibility issues and potential void of warranty for each product applied.

    Sand and prime the roof ditch repair and apply a continuous bead of seam sealer to the roof ditch area joints.

13. Refinish the entire repair area using a Ford approved refinishing system.

14. Install the antenna. For additional information, refer to Section 415-00 .

15. Install the side air curtains. For additional information, refer to Section 501-20B .

16. Install the sun roof (if equipped). For additional information, refer to Section 501-17 .

17. Install the headliner. For additional information, refer to Section 501-05 .

18. Install the windshield. For additional information, refer to Section 501-11 .

19. Install the rear luggage compartment lid. For additional information, refer to Section 501-03 .

20. Install new roof ditch mouldings.

21. Install the spoiler. For additional information, refer to Section 501-08 .

Torque Specifications

Description	Nm	lb-ft	lb-in
Ball joint nuts	52	38	—
Engine roll restrictor bolt	70	52	—
Stabilizer bar link lower nuts	48	35	—
Steering shaft pinch bolt	32	24	—
Subframe brace bolts	48	35	—
Subframe forward bolts	60	44	—
Subframe rearward bolts [a]	—	—	—
Tie-rod end nuts	55	41	—

[a] Refer to the procedure in this section.

Subframe and Mounting Systems

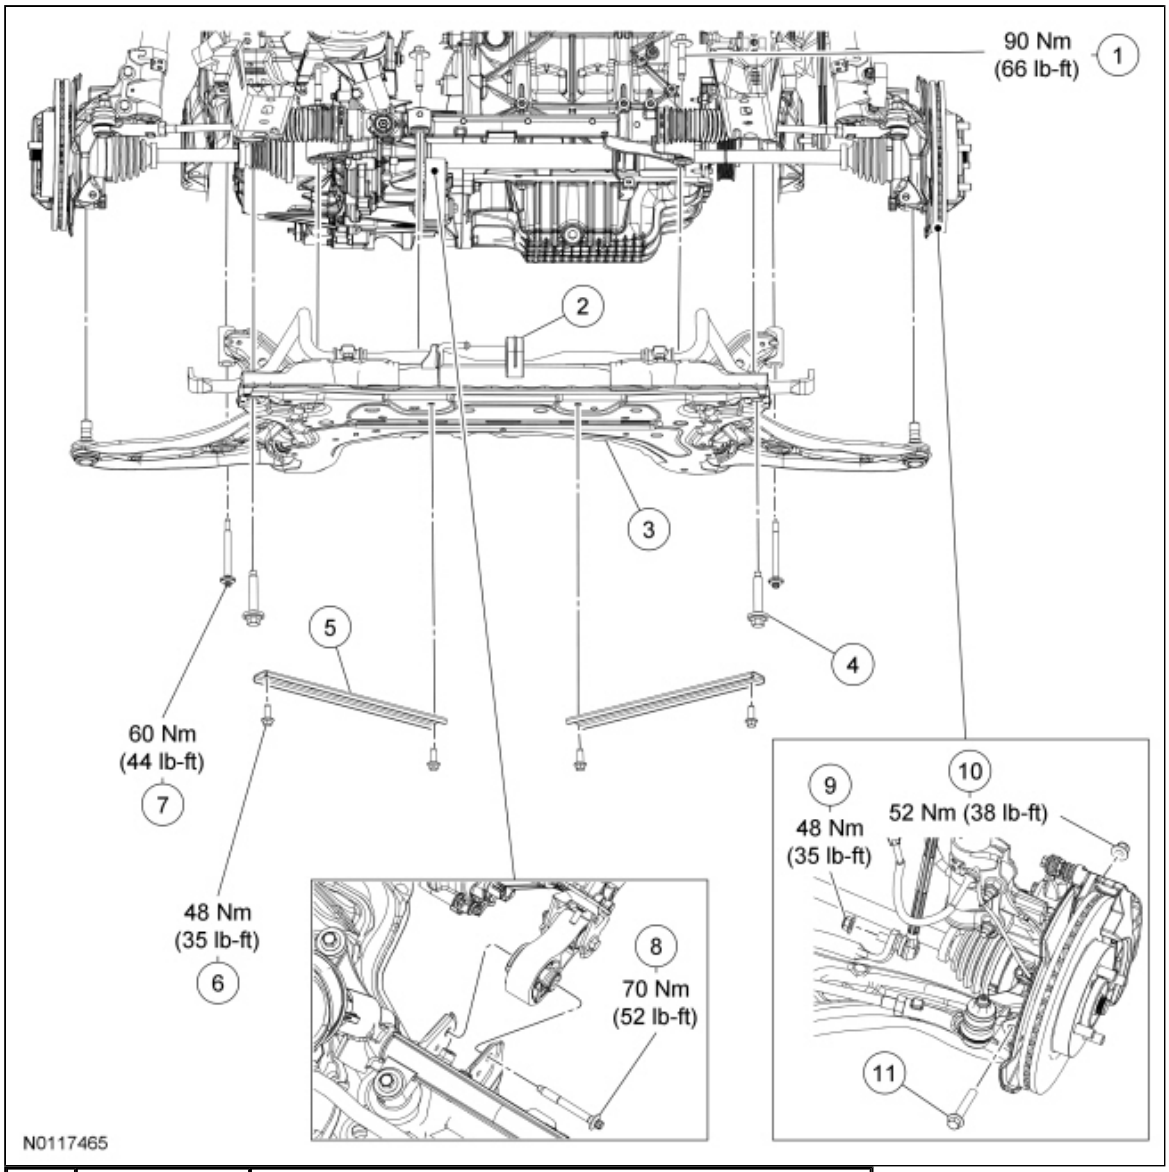
The front subframe is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the steering system.
- provide mounting surfaces for the front suspension lower control arms, the engine mounts and for the front stabilizer bar.

Subframe — Front

Special Tool(s)

ST1682-A	Powertrain Lift 300-OTC1585AE or equivalent
ST1106-A	Remover, Tie-Rod End 211-001 (TOOL-3290-D)



Item	Part Number	Description
1	W712486	Steering gear bolt (3 required) (install new)

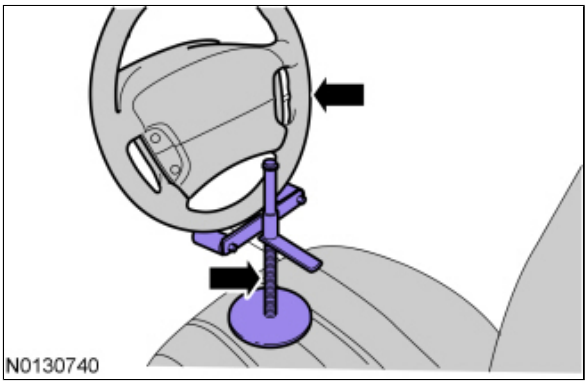
2	5A262	Exhaust insulator
3	5019	Subframe assembly
4	W714343	Subframe rearward bolt (2 required) (install new)
5	5A104	Subframe brace (2 required)
6	W500233	Subframe brace bolts (4 required)
7	W714404	Subframe forward bolt (2 required)
8	W715185	Roll restrictor bolt
9	W520103	Stabilizer bar link lower nut (2 required) (install new)
10	W520203	Ball joint nut (2 required) (install new)
11	W709618	Ball joint bolt (2 required) (install new)

Removal

NOTICE: **Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure may result in major service expense. New parts must be installed where specified with the same part numbers or equivalent part, if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure correct retention of these parts.**

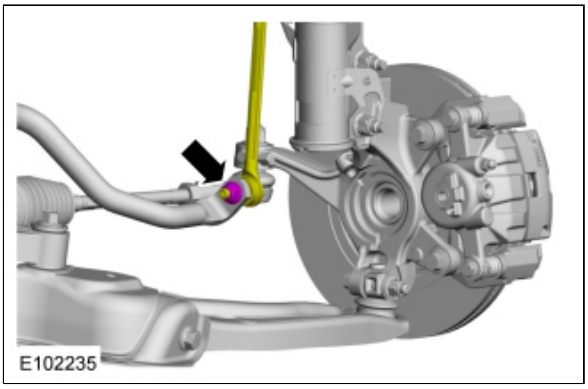
1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-02 .
2. **NOTE:** Use a steering wheel holding device (such as Hunter® 28-75-1 or equivalent).

   Using a suitable holding device, hold the steering wheel in the straight-ahead position.

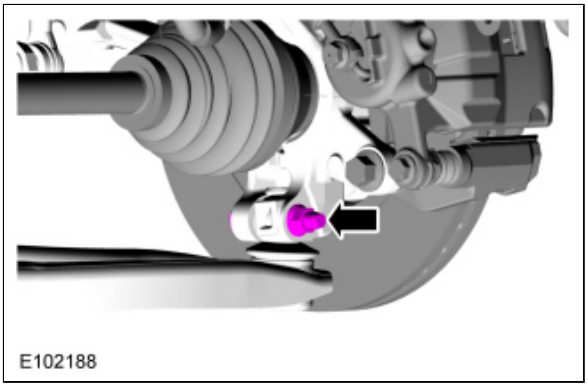


3. Remove the pinch bolt and disconnect the steering shaft.
   - Discard the bolt.

4. Remove the front tires and wheels. For additional information, refer to Section 204-04 .
5. Remove the nuts and disconnect the lower stabilizer bar links.

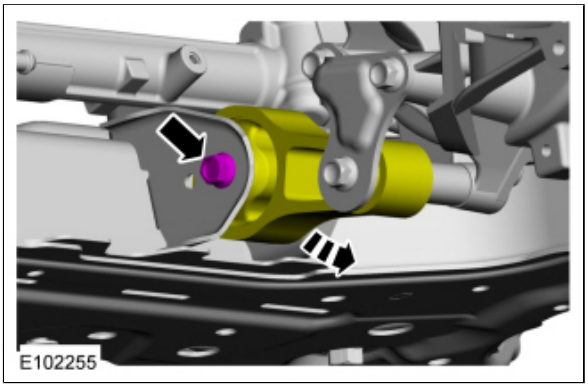


6. Remove the bolts and disconnect the ball joints from the steering knuckles.
    - Discard the bolts.

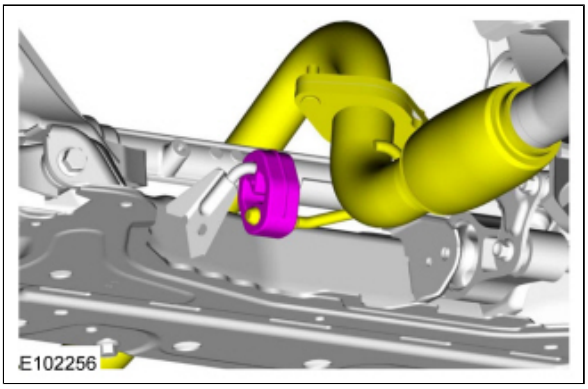


7. Remove the nuts and disconnect the tie-rod ends from the steering knuckle.
    - Discard the nuts.

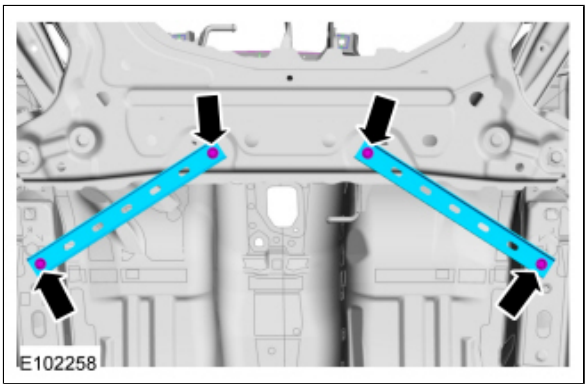
8. Remove the engine roll restrictor bolt from the subframe.



9. Disconnect the exhaust hanger.

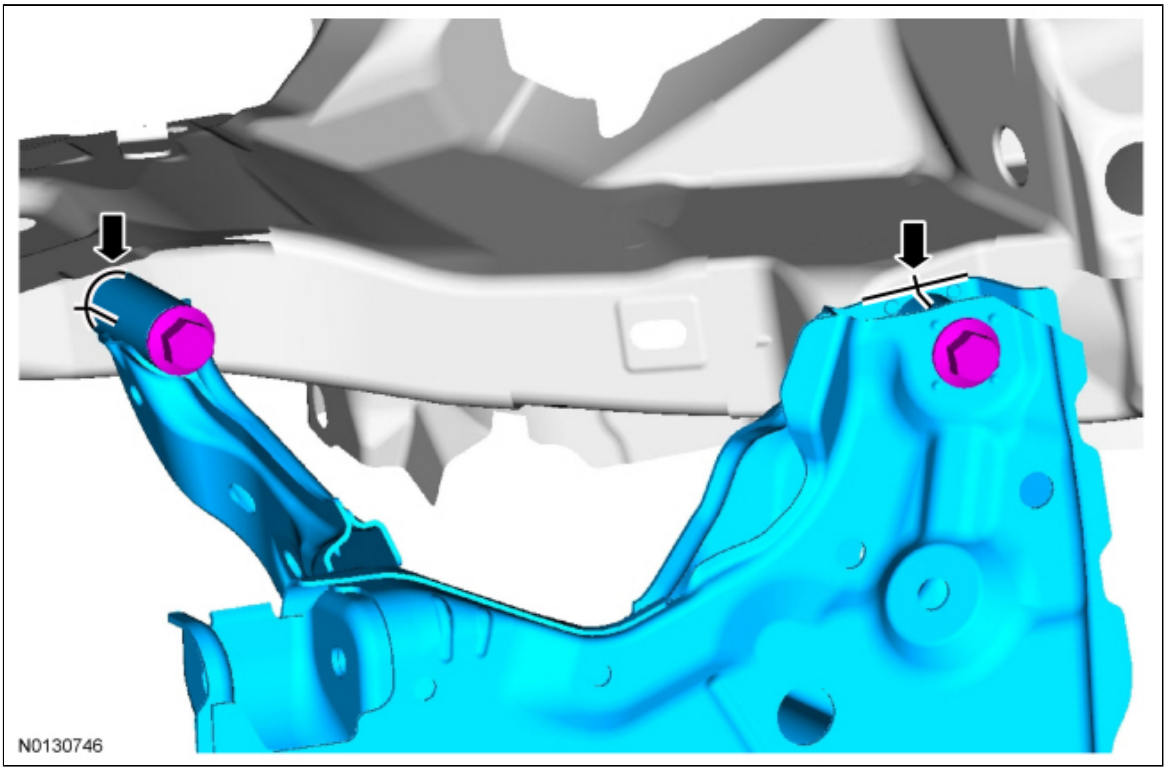


10. Remove the bolts and subframe braces.

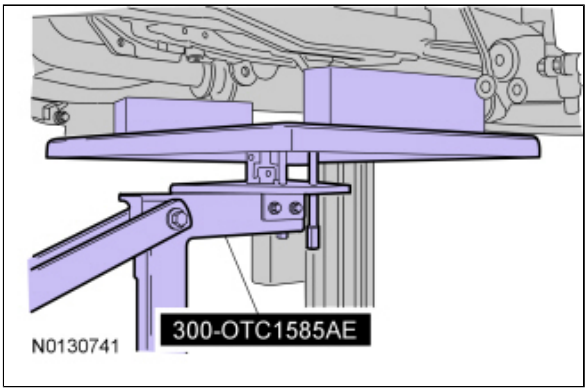


11. **NOTE:** This step is not necessary if the subframe assembly is replaced.

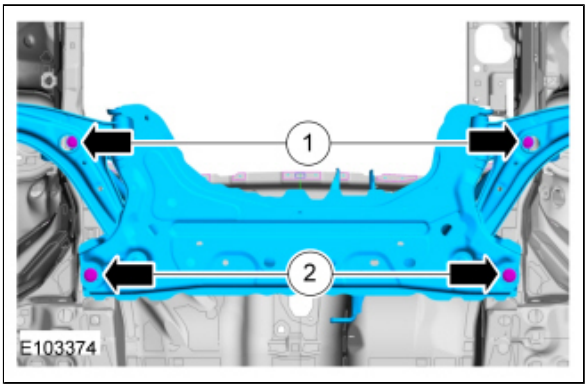
    Mark the position of the subframe-to-frame mounting location at each mounting point on the frame rails on both sides of the vehicle to aide in installation.



12. Position the Powertrain Lift under the subframe assembly.



13. Remove the forward and rearward subframe bolts.
    1. Remove the forward bolts.
    2. Remove the rearward bolts.
       - Discard the rearward bolts.



14. Carefully lower the subframe assembly from the vehicle.

Installation

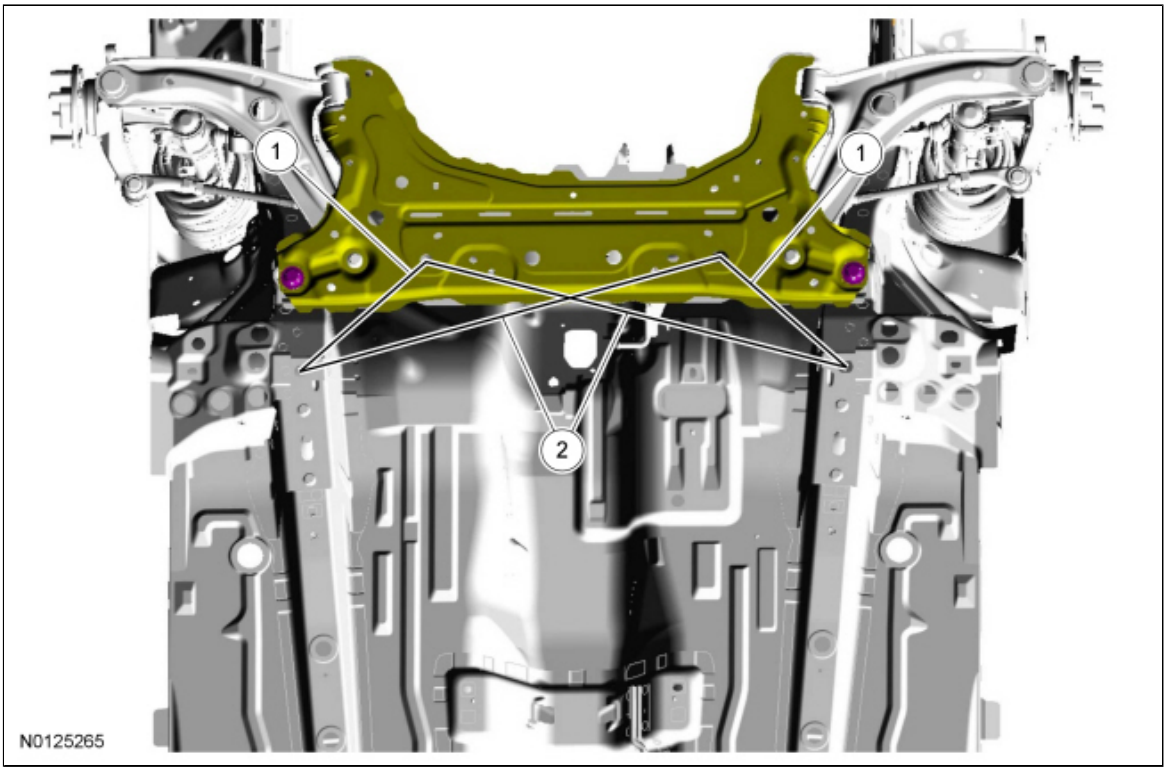
1. Position the subframe to the vehicle and loosely install the 2 new rearward bolts and the forward bolts.

2. Remove the Powertrain Lift.

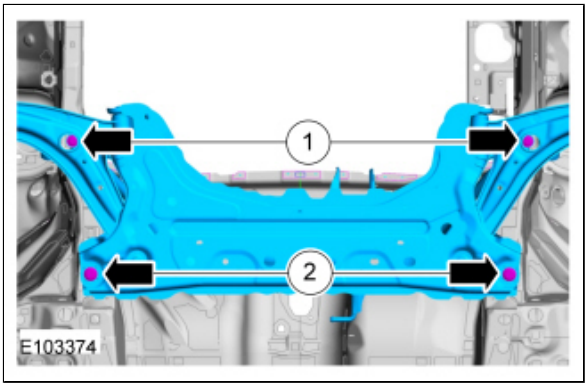
3. If installing the subframe that was previously removed, align the subframe to the locating marks made during removal.

4. **NOTE:** RH and LH dimensions are identical. All measurements on center.

   If installing a new subframe, measure for correct positioning of the subframe to vehicle underbody.
   1. Location 1 — 260 mm (10.236 in).
   2. Location 2 — 666 mm (26.22 in).

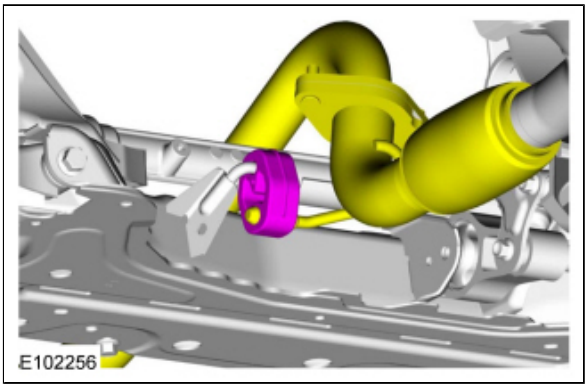


5. Tighten the subframe bolts.
    1. Tighten the forward bolts to 60 Nm (44 lb-ft).
    2. Tighten the new rearward bolts to 100 Nm (74 lb-ft).
        - Tighten the rearward bolts an additional 240 degrees.

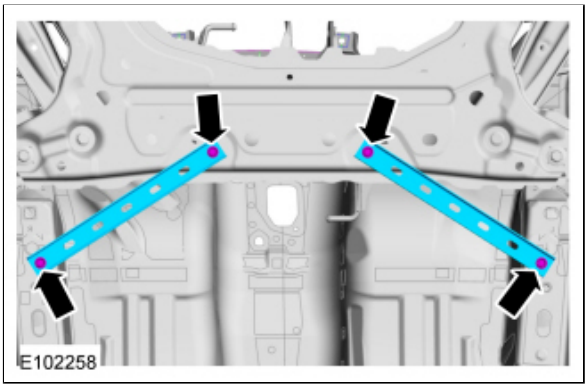


6. Install the engine roll restrictor bolt.
    - Tighten to 50 Nm (37 lb-ft).

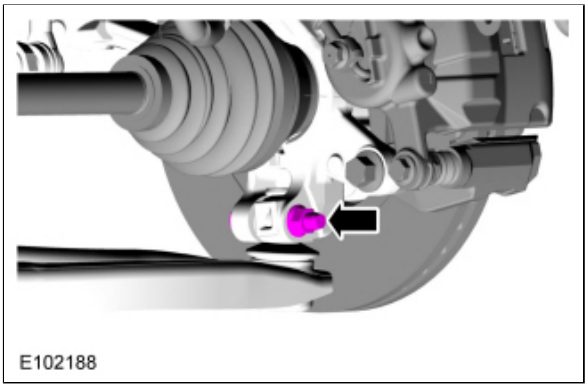
7. Connect the exhaust hanger.



8. Install the subframe braces and bolts.
    - Tighten to 48 Nm (35 lb-ft).

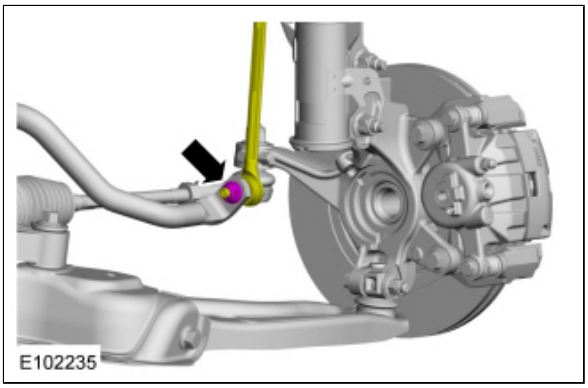


9. Connect the ball joints to the steering knuckles.
    - Install new bolts.
    - Tighten to 52 Nm (38 lb-ft).



10. Connect the tie-rod ends to the steering knuckle.
    - Install new nuts.
    - Tighten to 55 Nm (41 lb-ft).

11. Connect the lower stabilizer bar links and install the nuts.
    - Tighten to 48 Nm (35 lb-ft).



12. Install the front tires and wheels. For additional information, refer to Section 204-04 .

13. **WARNING: Do not reuse steering column shaft bolts. This may result in fastener failure and steering column shaft detachment or loss of steering control. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

    Connect the steering shaft and install a new pinch bolt.
    - Tighten to 32 Nm (24 lb-ft).

14. If installing a new subframe, check wheel alignment. For additional information, refer to Section 204-00 .

Engine

NOTICE: **When repairing engines, all parts must be contamination free. If contamination/foreign material is present when repairing an engine, premature engine failure may occur.**

NOTE: Specifications show the expected minimum or maximum condition. Refer to the appropriate section in Group 303 for the procedure.

NOTE: If a component fails to meet the specifications, it is necessary to refinish it or install a new component. Wear limits are provided as an aid to determine if the component can be refinished. A new component must be installed when any component fails to meet specifications and cannot be refinished.

NOTE: This section contains information, steps and procedures that may not be specific to this engine.

This section covers general procedures and diagnosis and testing of the engine system, except for exhaust emission control devices, which are covered in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

The engine incorporates the following features: Refer to the appropriate section in Group 303 for the procedure.

- Crankcase ventilation or breather system
- Exhaust emission control system
- Evaporative Emission (EVAP) control system

Some engines incorporate a fail-safe cooling system. Refer to the appropriate section in Group 303 for the procedure.

The engine, fuel system, ignition system, emissions system and exhaust system all affect exhaust emission levels and must be maintained according to the maintenance schedule. Refer to the scheduled Maintenance Guide.

Correct engine identification is required to order parts. Refer to the appropriate section in Group 303 for the procedure.

For complete vehicle and engine identification codes, refer to Section 100-01 .

Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C945-A

There are 2 diagnostic paths that can be followed depending on the type of engine concern. Carry out either Inspection and Verification — Engine Performance or Inspection and Verification — NVH.

Inspection and Verification — Engine Performance

1. Verify the customer concern by operating the engine to duplicate the condition.

2. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

   Visual Inspection Chart

Mechanical
• Engine coolant leaks • Engine oil leaks • Fuel leaks • Damaged or severely worn parts • Loose mounting bolts, studs and nuts

3. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM.

   If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to Section 418-00, No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00.
   - If the network test passes, retrieve and record Continuous Memory Diagnostic Trouble Codes (CMDTCs).

8. Clear the continuous DTCs and carry out the self-test diagnostics for the PCM.

9. If the DTCs retrieved are related to the concern, go to the DTC Chart, refer to Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart - Engine .

Inspection and Verification — NVH

1. NVH symptoms should be identified using the diagnostic tools and techniques that are available. For a list of these techniques, tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 .

2. Verify the customer concern by operating the engine to duplicate the condition.

3. Check the engine oil level and check the oil for contamination. Low engine oil level or contaminated oil are a common cause of engine noise. If the oil is contaminated, the source of the contamination must be identified and repaired as necessary.

4. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

   Visual Inspection Chart

Mechanical
• Loose mounting bolts, studs and nuts • Damaged or leaking powertrain mounts • Damaged or disconnected vacuum hoses • Obstruction of cooling fan • Obstruction of Front End Accessory Drive (FEAD) • Damaged or disconnected air intake components

5. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

6. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

7. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

8. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

9. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record continuous memory DTCs.

10. Clear the continuous DTCs and carry out the self-test diagnostics for the PCM.

11. If the DTCs retrieved are related to the concern, go to the DTC Chart, refer to Section 419-10 .

12. If no DTCs related to the concern are retrieved, continue the inspection and verification if a noise concern is related to the engine. For vibration concerns and noise concerns such as powertrain mounts, air intake system and starter, GO to Symptom Chart - NVH .

In some cases, a noise may be a normal characteristic of that engine type. In other cases the noise may require further investigation. Comparing the noise to a similar year/model vehicle equipped with the same engine will aid in determining if the noise is normal or abnormal.

Once a customer concern has been identified as an abnormal engine noise, it is critical to determine the location of the specific noise. Use the EngineEAR/ChassisEAR or stethoscope (the noise will always be louder closer to the noise source) to isolate the location of the noise to one of the following:

- Fuel injector(s)
- Upper end of engine
- Lower end of engine
- Front of engine
- Rear of engine

Fuel injector noise

A common source of an engine ticking noise can be related to the fuel injector(s). This is normal engine noise that can be verified by listening to another vehicle. If the injector noise is excessive or irregular, use the EngineEAR/ChassisEAR or stethoscope to isolate the noise to a specific fuel injector.

Upper end engine noise

A common source of upper end engine noise (ticking, knocking or rattle) include the camshaft(s) and valve train. Upper end engine noise can be determined using the EngineEAR/ChassisEAR or stethoscope on the valve cover bolts. If the noise is loudest from the valve cover bolts, then the noise is upper end. The EngineEAR/ChassisEAR or stethoscope can be used to further isolate the noise to the specific cylinder bank and cylinder. Removal of the valve covers will be required to visually inspect the valve train to pinpoint the source of the noise.

Lower end engine noise

A common source of lower end engine noise (ticking or knocking) include the crankshaft, connecting rod (s) and bearings. Lower end noises can be determined by using the oil pan or lower cylinder block. If the noise is loudest from these areas, then the noise is lower end. If an engine noise is isolated to the lower end, some disassembly of the engine may be required to inspect for damage or wear.

Front of engine noise

A common source of noise from the front of the engine (squeal, chirp, whine or hoot) is the Front End Accessory Drive (FEAD) components. To isolate FEAD noise, carry out the Engine Accessory Test, refer to Section 100-04 .

Some other noises from the front of the engine (ticking, tapping or rattle) may be internal to the engine. Use the EngineEAR/ChassisEAR or stethoscope on the engine front cover to determine if the noise is internal to the engine. Removal of the engine front cover may be necessary to inspect internal engine components.

Rear of engine noise

A common source of noise from the rear of the engine (knocking) is the flywheel/flexplate. Inspection of the flywheel/flexplate will be necessary.

If equipped, the Rear End Accessory Drive (READ) can also be a source of noise from the rear of the engine (squeal or chirp). The READ consists of the coolant pump and belt.

Some engines have timing drive components at the rear of the engine and may be the source of noise (ticking, knocking or rattle). Use the EngineEAR/ChassisEAR or stethoscope on the rear of the engine if the noise is suspected to be internal to the engine. Some disassembly of the engine may be required to inspect for damage or wear.

13. After the noise is localized, note the characteristics of the noise, including type of noise, frequency and conditions when the noise occurs and GO to Symptom Chart - NVH .

Symptom Chart — Engine Performance

Symptom Chart — Engine Performance

Condition	Possible Sources	Action
• Difficult starting	• Inoperative or damaged ignition system • Air or vacuum leak • Inoperative or damaged fuel system • Inoperative or damaged starting system	• Refer to the appropriate section in Group 303 for the procedure. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Damaged charging system/battery	• REFER to Section 414-00 .
	• Burnt valve	• INSTALL a new cylinder head. TEST the system for normal operation after the repair.
	• Worn piston	• INSTALL a new piston. TEST the system for normal operation after the repair.
	• Worn piston rings	• INSTALL new piston rings. TEST the system for normal operation after the repair.
	• Worn cylinder	• INSTALL a new cylinder block. TEST the system for normal operation after the repair.
	• Damaged head gasket	• INSTALL a new cylinder head gasket. TEST the system for normal operation after the repair.
	• Inoperative or damaged cooling system	• REFER to Section 303-03 .
	• Fail-safe cooling invoked (if equipped)	• REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
• Poor idling	• Vacuum leaks	• Refer to the appropriate section in Group 303 for the procedure. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Inoperative or damaged ignition system	• REFER to Section 303-07 .
	• Inoperative or damaged cooling	• Refer to the appropriate section in Group 303 for the procedure.

	system • Inoperative or damaged fuel system	
	• Fail-safe cooling invoked (if equipped)	• REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Incorrect valve clearance	• ADJUST valve clearance. REFER to Section 303-01 . TEST the system for normal operation after the repair.
	• Incorrect valve-to-valve seat contact	• INSTALL a new cylinder head. TEST the system for normal operation after the repair.
	• Damaged head gasket	• INSTALL a new cylinder head gasket. TEST the system for normal operation after the repair.
• Engine runs rough	• Inoperative or damaged fuel system • Air or vacuum leaks • Inoperative or damaged cooling system • Inoperative or damaged ignition system	• Refer to the appropriate section in Group 303 for the procedure.
	• Fail-safe cooling invoked (if equipped)	• REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Burnt or sticking valve	• INSTALL a new cylinder head. TEST the system for normal operation after the repair.
	• Weak or broken valve spring	• INSTALL a new valve spring. TEST the system for normal operation after the repair.
	• Carbon accumulation in combustion chamber	• ELIMINATE carbon buildup. TEST the system for normal operation after the repair.
• Excessive oil consumption	• Leaking oil	• REPAIR oil leakage. TEST the system for normal operation after the repair.
	• Inoperative PCV system	• REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair.
	• Incorrect oil	• CHANGE oil to correct specification.
	• Worn valve stem seal	• INSTALL a new valve stem seal. TEST the system for normal operation after the repair.
	• Worn valve stem or valve guide	• INSTALL a new cylinder head. TEST the system for normal operation after the repair.
	• Sticking piston rings	• INSTALL new piston rings. TEST the system for normal operation after the repair.
	• Worn piston ring groove	• INSTALL a new piston and piston pin. TEST the system for normal

		operation after the repair.
	• Worn pistion or cylinder	• INSTALL a new piston or cylinder block. TEST the system for normal operation after the repair.
• Oil in coolant	• Leaking head gasket • Damaged cylinder block • Damaged cylinder head	• INSPECT the engine components. INSTALL new engine components as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
• Coolant in oil	• Leaking head gasket • Damaged cylinder block • Damaged cylinder head	• INSPECT the engine components. INSTALL new engine components as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
• Insufficient power	• Inoperative or damaged ignition system • Air intake system blockage • Lubrication system blockage • Inoperative/blocked or damaged fuel system	• Refer to the appropriate section in Group 303 for the procedure.
	• Oil level too high	• DRAIN oil to correct level. TEST the system for normal operation after the repair.
	• Incorrect engine oil	• INSTALL correct specification engine oil. TEST the system for normal operation after the repair.
	• Excessive accessory drive belt loading • Inoperative or damaged cooling system	• Refer to the appropriate section in Group 303 for the procedure.
	• Fail-safe cooling invoked (if equipped)	• REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Damaged or plugged exhaust system	• INSPECT exhaust system.
	• Incorrect tire size	• REFER to Section 204-00 .
	• Dragging brakes	• REFER to Section 206-00 .
	• Slipping transmission	• REFER to Section 307-11 .
	• Incorrect valve clearance	• ADJUST valve clearance. REFER to Section 303-01 . TEST the system for normal operation after the repair.
	• Worn or damaged valve tappet	• INSTALL a new valve tappet. TEST the system for normal operation after the repair.
	• Damaged valve	• INSTALL a new cylinder head

	guide • Compression leakage at valve seat • Seized valve stem	assembly. TEST the system for normal operation after the repair.
	• Weak or broken valve spring	• INSTALL a new valve spring. TEST the system for normal operation after the repair.
	• Worn or damaged cam	• INSTALL a new camshaft. TEST the system for normal operation after the repair.
	• Damaged head gasket	• INSTALL a new head gasket. TEST the system for normal operation after the repair.
	• Cracked or distorted cylinder head	• INSTALL a new cylinder head assembly. TEST the system for normal operation after the repair.
	• Damaged, worn or sticking piston ring(s)	• INSTALL a new piston ring(s). TEST the system for normal operation after the repair.
	• Worn or damaged piston	• INSTALL a new piston and piston pin. TEST the system for normal operation after the repair.

Symptom Chart — NVH

Symptom Chart — NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible that any one of multiple systems may be the cause of the symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

Condition	Possible Sources	Action
• Drone type noise	• Powertrain mount (s)	• CARRY OUT the Powertrain/Drivetrain Mount Neutralizing procedure in this section. TEST the system for normal operation after the repair.
• Drumming noise — occurs inside the vehicle during idle or high idle, hot or cold. Very low-frequency drumming is very rpm dependent	• Engine vibration excites the body resonances inducing interior noise	• CARRY OUT the Powertrain/Drivetrain Mount Neutralizing procedure in this section. TEST the system for normal operation after the repair.
• Engine drumming noise — accompanied by vibration	• Powertrain mount (s)	• CARRY OUT the Powertrain/Drivetrain Mount Neutralizing procedure in this section. TEST the system for normal operation after the repair.

• Rattle — occurs at idle or at light acceleration from a stop	• Powertrain mount (s)	• CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to Section 303-01 . For transaxle, REFER to Section 307-11 . TEST the system for normal operation after the repair.
• Whine/moan type noise — pitch increases or changes with vehicle speed	• Powertrain mount (s)	• CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to Section 303-01 . For transaxle, REFER to Section 307-11 . TEST the system for normal operation after the repair.
• Clunk — occurs when shifting from PARK or between REVERSE and DRIVE	• Powertrain mount (s) • Idle speed is too high	• CHECK the powertrain/drivetrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to Section 303-01 . For transaxle, REFER to Section 307-11 . TEST the system for normal operation after the repair. • CHECK for the correct idle speed.
• Accessory drive bearing hoot — occurs at idle or high idle in cold temperatures of approximately 4°C (40°F) or colder at the first start of the day	• Accessory drive idler or tensioner pulley bearing is experiencing stick/slip between ball bearings and the bearing race	• CARRY OUT the engine cold soak procedure. REFER to Section 100-04 . • PLACE the EngineEAR probe directly on the idler/tensioner center post or bolt to verify which bearing is making the noise. INSTALL new parts as necessary. REFER to Section 303-05 . TEST the system for normal operation after the repair.
• Accessory drive belt noise, squeal or chirping	• Defective/worn or incorrect accessory drive belt • Misaligned pulley(s) • Pulley runout • Damaged or worn accessory drive component or idler • Fluid contamination of the accessory drive belt or pulleys • Damaged or worn accessory drive belt tensioner • Damaged pulley grooves	• CARRY OUT the Engine Accessory Test. REFER to Section 100-04 . INSPECT components and INSTALL new parts as necessary. REFER to Section 303-05 . TEST the system for normal operation after the repair.
• Clunking noise	• Coolant pump has excessive end play or imbalance	• CHECK the coolant pump for excessive end play. INSPECT the coolant pump

		for imbalance with the drive belt off. INSTALL a new coolant pump as necessary. REFER to Section 303-03 . TEST the system for normal operation after the repair.
• Whine or moaning noise	• Air intake system	• CHECK the air cleaner and ducts for correct fit. INSPECT the air intake system for leaks or damage. REPAIR as necessary. TEST the system for normal operation after the repair.
• Whistling noise — normally accompanied with poor idle condition	• Air intake system	• CHECK the air intake ducts, air cleaner, throttle body and vacuum hoses for leaks and correct fit. REPAIR or ADJUST as necessary. TEST the system for normal operation after the repair.
• Hissing noise — occurs during idle or high idle that is apparent with the hood open	• Vacuum leak	• USE the Ultrasonic Leak Detector/EngineEAR to locate the source. SCAN the air intake system from the inlet to each cylinder intake port. DISCARD the leaking parts, and INSTALL a new component. TEST the system for normal operation after the repair.
	• Vehicles with a plastic intake manifold	• Acceptable condition. Some plastic manifolds exhibit this noise, which is the effect of the plastic manifold.
• Grinding noise — occurs during engine cranking	• Incorrect starter motor mounting	• INSPECT the starter motor for correct mounting. REPAIR as necessary. REFER to Section 303-06 . TEST the system for normal operation after the repair.
	• Starter motor	• CHECK the starter motor. INSTALL a new starter motor as necessary. REFER to Section 303-06 . TEST the system for normal operation after the repair.
	• Incorrect starter motor drive engagement	• INSPECT the starter motor drive for wear or damage. INSTALL a new starter motor as necessary. REFER to Section 303-06 . TEST the system for normal operation after the repair. • INSPECT the flexplate for wear or damage. INSTALL a new flexplate as necessary. REFER to Section 303-01 . TEST the system for normal operation after the repair.
• Engine noise, front	• Damaged or	• CHECK for obvious signs of

of engine — knocking noise from lower front of engine	separated crankshaft pulley/damper	damage or wobble during operation. INSTALL new as necessary. REFER to Section 303-01 . TEST the system for normal operation after the repair.
• Engine noise, front of engine — ticking, tapping or rattling noise from the front of the engine	• Timing drive components	• REMOVE the accessory drive belt. REFER to Section 303-05 . • USE the EngineEAR to isolate the noise to the engine front cover. • REMOVE the engine front cover and INSPECT the timing drive components. INSTALL new parts as necessary. REFER to Section 303-01 . TEST the system for normal operation after the repair.
• Engine noise, upper end — ticking noise near the fuel rail and intake manifold	• Fuel rail clip • Fuel injector	• CHECK for loose or damaged fuel rail clip(s). REPAIR as necessary. TEST the system for normal operation after the repair. • USE the EngineEAR to isolate the noisy injector(s). INSTALL a new injector(s) as necessary. REFER to Section 303-04 . TEST the system for normal operation after the repair.
• Engine noise, upper end — occurs mostly with a warm engine at light/medium acceleration	• Worn or damaged spark plugs • Carbon accumulation in combustion chamber	• REMOVE the spark plugs. INSPECT and INSTALL new as necessary. REFER to Section 303-07 . TEST the system for normal operation after the repair. • Bore scope the cylinder. ELIMINATE carbon buildup. TEST the system for normal operation after the repair.
• Engine noise, upper end — rattling noise from the valve train. Worse when the engine is cold	• Low oil level • Thin or diluted oil • Low oil pressure	• CHECK the oil level. FILL as necessary. • INSPECT the oil for contamination. If the oil is contaminated, CHECK for the source. REPAIR as necessary. CHANGE the oil and filter. TEST the system for normal operation after the repair. • CARRY OUT an oil pressure test. If not within specifications, REMOVE the engine oil pan. REFER to

		Section 303-01 . INSPECT for a blocked oil pick up tube. TEST the system for normal operation after the repair.
	• Worn valve train components	• CARRY OUT the Valve Train Analysis Component Test in this section. INSTALL new parts as necessary. TEST the system for normal operation after the repair.
	• Worn valve guides	• CARRY OUT the Valve Guide Inner Diameter procedure in this section.
	• Excessive runout of the valve seats on the valve face	• CARRY OUT the Valve Seat Inspection procedure in this section.
• Engine noise, upper end — pinging noise	• Gasoline octane too low	• VERIFY with customer the type of gasoline used. CORRECT as necessary. TEST the system for normal operation after the repair.
	• Knock Sensor (KS) operation	• CHECK the KS . INSTALL a new KS as necessary. REFER to Section 303-14 . TEST the system for normal operation after the repair.
	• Incorrect spark timing	• CHECK the spark timing. REPAIR as necessary. TEST the system for normal operation after the repair.
	• High operating temperature	• INSPECT the cooling system for leaks. CHECK the coolant level. REFILL as necessary. CHECK the coolant for the correct mix ratio. DRAIN and REFILL as needed. VERIFY the engine operating temperature is within specifications. REPAIR as necessary. TEST the system for normal operation after the repair.
	• Spark plug	• CHECK the spark plugs. INSTALL new spark plugs as necessary. TEST the system for normal operation after the repair.
	• Catalytic converter	• Compare with a similar vehicle for what is acceptable noise.
• Engine noise, lower end — ticking or knocking noise near the oil filter adapter	• Oil pump	• USE the EngineEAR to verify the oil pump as the source of the noise at low rpm. REPAIR as necessary. REFER to Section 303-01 . TEST the system for normal operation after the repair.
• Engine noise, lower end — light	• Excessive clearance between	• CARRY OUT the Piston-to-Cylinder Bore Clearance

knocking noise, also described as piston slap. Noise is most noticeable when the engine is cold with light to medium acceleration. The noise disappears as the engine warms	the piston and the cylinder wall	procedure in this section.
• Engine noise, lower end — light double knock or sharp rap sound. Occurs mostly with a warm engine at idle or low speeds in drive. Increases in relation to engine load. Associated with a poor lubrication history	• Excessive clearance between the piston and the piston pin	• CARRY OUT the Piston Pin Bore Diameter and the Piston Pin Diameter procedures in this section.
• Engine noise, lower end — light knocking noise. The noise is most noticeable when the engine is warm. The noise tends to decrease when the vehicle is coasting or in NEUTRAL	• Excessive clearance between the connecting rod bearings and the crankshaft	• CARRY OUT the Connecting Rod Bearing Journal-to-Bearing Clearance procedure in this section.
• Engine noise, lower end — deep knocking noise. The noise is most noticeable when the engine is warm, at lower rpm and under a light load and then at float	• Worn or damaged crankshaft main bearings	• CARRY OUT the Crankshaft Main Bearing Journal-to-Bearing Clearance procedure in this section.
• Engine noise, rear of engine — knocking noise at rear of engine	• Damaged flywheel/flexplate	• CARRY OUT the Flexplate Inspection procedure in this section.
• Engine vibration — vibration felt at all times	• Excessive engine pulley runout	• CARRY OUT the Engine Accessory Test. REFER to Section 100-04 . INSTALL a new engine pulley as necessary. REFER to Section 303-01 . TEST the system for normal operation after the repair.
	• Damaged or worn accessory component	• CARRY OUT the Engine Accessory Test. REFER to Section 100-04 . REPAIR or INSTALL a new component as necessary. TEST the system for normal operation

		after the repair.
• Engine vibration — at idle, a low-frequency vibration (5-20 Hz) or mild shake that is felt through the seat/floorpan	• Cylinder misfire	• Using the scan tool, CARRY OUT the cylinder power balance and the relative compression test. REPAIR as necessary. REFER to Section 303-01 . TEST the system for normal operation after the repair.
• Engine vibration — is felt with increases and decreases in engine rpm	• Powertrain mount (s)	• CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to Section 303-01 . For the transaxle, REFER to Section 307-11 . TEST the system for normal operation after the repair.
	• Engine or transmission grounded to chassis	• INSPECT the powertrain/drivetrain for correct clearances. REPAIR as necessary. TEST the system for normal operation after the repair.
• Engine vibration — increases intensity as the engine rpm is increased	• Engine out-of-balance	• CARRY OUT the Neutral Engine Run-Up (NERU) Test. REFER to Section 100-04 . TEST the system for normal operation after the repair.
• Engine vibration — mostly at coast/neutral coast. Condition improves with vehicle acceleration	• Combustion instability	• CHECK the ignition system. INSTALL new components as necessary. REFER to Section 303-07 . TEST the system for normal operation after the repair.
• Engine vibration or shudder — occurs with light to medium acceleration above 56 km/h (35 mph)	• Worn or damaged spark plugs	• INSPECT the spark plugs for cracks, high resistance or broken insulators. INSTALL a new spark plug(s) as necessary. REFER to Section 303-07 . TEST the system for normal operation after the repair.
	• Plugged fuel injector	• REPAIR or INSTALL a new injector as necessary. REFER to Section 303-04 . TEST the system for normal operation after the repair.
	• Contaminated fuel	• INSPECT the fuel for contamination. DRAIN the fuel system and refill. REFER to Section 310-00 .

Component Tests

The following component tests are used to diagnose engine concerns.

Engine Oil Leaks

NOTE: When diagnosing engine oil leaks, the source and location of the leak must be positively identified prior to repair. If the vehicle is driven extensively between adding the fluorescent additive and performing the leak test, fan air or wind can spread the leaking oil and make identifying the location of the leak difficult.

Prior to carrying out this procedure, clean the cylinder block, cylinder heads, valve covers, oil pan and flywheel with a suitable solvent to remove all traces of oil.

Engine Oil Leaks — Fluorescent Oil Additive Method

Use the 12 Volt Master UV Diagnostic Inspection Kit to carry out the following procedure for oil leak diagnosis.

1. Add 29.6 ml (1 oz) of gasoline engine oil dye to a minimum of 0.47L (1/2 qt) and a maximum of 0.95L (1 qt) engine oil and fill through the engine oil fill. Thoroughly premix the gasoline engine oil dye or it will not have enough time to reach the crankcase, oil galleries and seal surfaces during this particular 15 minute test. The additive must be mixed well with oil and added through the oil fill. Check the level on the oil level indicator to determine what amount of oil to premix. If it is in the middle of the crosshatch area or below the full mark, use 0.95L (1 qt). If it is at the full mark, use 0.47L (1/2 qt).

2. Run the engine for 15 minutes. Stop the engine and inspect all seal and gasket areas for leaks using the UV Leak Detector Kit. A clear bright yellow or orange area will identify the leak. For extremely small leaks, several hours may be required for the leak to appear.

3. At the end of test, make sure the oil level is within the upper and lower oil indicator marks. Remove oil as necessary if it registers above the full mark.

Leakage Points — Underhood

Examine the following areas for oil leakage:

- Valve cover gaskets
- Cylinder head gaskets
- Oil cooler, if equipped
- Oil filter adapter
- Engine front cover
- Oil filter adapter and filter body
- Oil level indicator tube connection
- Engine Oil Pressure (EOP) switch

Leakage Points — Under Engine, With Vehicle on Hoist

Examine the following areas for oil leakage:

- Oil pan gaskets
- Oil pan sealer
- Engine front cover gasket
- Crankshaft front seal
- Crankshaft rear oil seal
- Oil filter adapter and filter body
- Oil cooler, if equipped

Leakage Points — With Transmission and Flywheel Removed

Examine the following areas for oil leakage:

- Crankshaft rear oil seal
- Rear main bearing cap parting line
- Flexplate mounting bolt holes (with flexplate installed)
- Pipe plugs at the end of oil passages

Oil leaks at crimped seams in sheet metal parts and cracks in cast or stamped parts can be detected when using the dye method.

Compression Test

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level and that the battery is correctly charged. Operate the vehicle until the engine is at normal operating temperature. Turn the ignition switch to the OFF position, then remove all the spark plugs.

2. Set the throttle plates in the wide-open position.

3. Install a compression gauge in the No. 1 cylinder.

4. Install an auxiliary starter switch in the starting circuit. With the ignition switch in the OFF position, and using the auxiliary starter switch, crank the engine a minimum of 5 compression strokes and record the highest reading. Note the approximate number of compression strokes necessary to obtain the highest reading.

5. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.

Compression Test — Test Results

The indicated compression pressures are considered within specification if the lowest reading cylinder is at least 75% of the highest reading. Refer to the Compression Pressure Limit Chart.

Compression Pressure Limit Chart

Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure
924 kPa (134 psi)	696 kPa (101 psi)	1,131 kPa (164 psi)	848 kPa (123 psi)	1,338 kPa (194 psi)	1,000 kPa (146 psi)	1,544 kPa (224 psi)	1,158 kPa (168 psi)
938 kPa (136 psi)	703 kPa (102 psi)	1,145 kPa (166 psi)	855 kPa (124 psi)	1,351 kPa (196 psi)	1,014 kPa (147 psi)	1,558 kPa (226 psi)	1,165 kPa (169 psi)
952 kPa (138 psi)	717 kPa (104 psi)	1,158 kPa (168 psi)	869 kPa (126 psi)	1,365 kPa (198 psi)	1,020 kPa (148 psi)	1,572 kPa (228 psi)	1,179 kPa (171 psi)
965 kPa (140 psi)	724 kPa (106 psi)	1,172 kPa (170 psi)	876 kPa (127 psi)	1,379 kPa (200 psi)	1,034 kPa (150 psi)	1,586 kPa (230 psi)	1,186 kPa (172 psi)
979 kPa (142 psi)	738 kPa (107 psi)	1,186 kPa (172 psi)	889 kPa (129 psi)	1,303 kPa (202 psi)	1,041 kPa (151 psi)	1,600 kPa (232 psi)	1,200 kPa (174 psi)
933 kPa (144 psi)	745 kPa (109 psi)	1,200 kPa (174 psi)	903 kPa (131 psi)	1,407 kPa (204 psi)	1,055 kPa (153 psi)	1,055 kPa (153 psi)	1,207 kPa (175 psi)
1,007 kPa	758 kPa	1,214 kPa	910 kPa	1,420 kPa	1,062 kPa	1,627 kPa	1,220 kPa

(146 psi)	(110 psi)	(176 psi)	(132 psi)	(206 psi)	(154 psi)	(154 psi)	(177 psi)
1,020 kPa (148 psi)	765 kPa (111 psi)	1,227 kPa (178 psi)	917 kPa (133 psi)	1,434 kPa (208 psi)	1,075 kPa (156 psi)	1,641 kPa (238 psi)	1,227 kPa (178 psi)
1,034 kPa (150 psi)	779 kPa (113 psi)	1,241 kPa (180 psi)	931 kPa (135 psi)	1,448 kPa (210 psi)	1,083 kPa (157 psi)	1,655 kPa (240 psi)	1,241 kPa (180 psi)
1,048 kPa (152 psi)	786 kPa (114 psi)	1,255 kPa (182 psi)	936 kPa (136 psi)	1,462 kPa (212 psi)	1,089 kPa (158 psi)	1,669 kPa (242 psi)	1,248 kPa (181 psi)
1,062 kPa (154 psi)	793 kPa (115 psi)	1,269 kPa (184 psi)	952 kPa (138 psi)	1,476 kPa (214 psi)	1,103 kPa (160 psi)	1,682 kPa (244 psi)	1,262 kPa (183 psi)

1,110 kPa (161 psi)	834 kPa (121 psi)	1,324 kPa (192 psi)	993 kPa (144 psi)	1,631 kPa (222 psi)	1,145 kPa (166 psi)	—	—

If one or more cylinders reads low, squirt approximately one tablespoon of engine oil meeting Ford specification on top of the pistons in the low-reading cylinders. Repeat the compression pressure check on these cylinders.

Compression Test — Interpreting Compression Readings

1. If compression improves considerably, piston rings are worn or damaged.

2. If compression does not improve, valves are sticking or not seating correctly.

3. If 2 adjacent cylinders indicate low compression pressures and squirting oil on each piston does not increase compression, the head gasket may be leaking between cylinders. Engine oil or coolant in cylinders could result from this condition.
   Use the Compression Pressure Limit Chart when checking cylinder compression so that the lowest reading is within 75% of the highest reading.

Cylinder Leakage Detection

When a cylinder produces a low reading, use of a cylinder leakage tester will be helpful in pinpointing the exact cause.

The leakage tester is inserted in the spark plug hole, the piston is brought up to Top Dead Center (TDC) on the compression stroke, and compressed air is admitted.

Once the combustion chamber is pressurized, the leakage tester gauge will read the percentage of leakage. Leakage exceeding 20% is excessive.

While the air pressure is retained in the cylinder, listen for the hiss of escaping air. A leak at the intake valve will be heard in the Throttle Body (TB). A leak at the exhaust valve can be heard at the tailpipe. Leakage past the piston rings will be audible at the PCV connection. If air is passing through a blown head gasket to an adjacent cylinder, the noise will be evident at the spark plug hole of the cylinder into which the air is leaking. Cracks in the cylinder block or gasket leakage into the cooling system may be detected by a stream of bubbles in the radiator.

Excessive Engine Oil Consumption

Nearly all engines consume oil, which is essential for normal lubrication of the cylinder bore walls and pistons and rings. Determining the level of oil consumption may require testing by recording how much oil is being added over a given set of miles.

Customer driving habits greatly influence oil consumption. Mileage accumulated during towing or heavy loading generates extra heat. Frequent short trips, stop-and-go type traffic or extensive idling, prevent the engine from reaching normal operating temperature. This prevents component clearances from reaching specified operating ranges.

The following diagnostic procedure may be utilized to determine internal oil consumption. Make sure that the concern is related to internal oil consumption, and not external leakage, which also consumes oil. Verify there are no leaks before carrying out the test. Once verified, the rate of internal oil consumption can be tested.

A new engine may require extra oil in the early stages of operation. Internal piston-to-bore clearances and sealing characteristics improve as the engine breaks in. Engines are designed for close tolerances and do not require break-in oils or additives. Use the oil specified in the Owner's Literature. Ambient temperatures may determine the oil viscosity specification. Verify that the correct oil is being used for the vehicle in the geographic region in which it is driven.

Basic Pre-checks

1. For persistent complaints of oil consumption, interview the customer to determine the oil consumption characteristics. If possible, determine the brand and grade of oil currently in the oil pan. Look at the oil filter or oil-change station tags to determine if Ford-recommended maintenance schedules have been followed. Make sure that the oil has been changed at the specified mileage intervals. If vehicle mileage is past the first recommended drain interval, the OEM production filter should have been changed.

2. Ask how the most current mileage was accumulated. That is, determine whether the vehicle was driven under the following conditions:
    - Extended idling or curbside engine operation
    - Stop-and-go traffic or taxi operation
    - Towing a trailer or vehicle loaded heavily
    - Frequent short trips (engine not up to normal operating temperature)
    - Excessive throttling or high engine-rpm driving

3. Verify that there are no external leaks. If necessary, review the diagnostic procedure under Engine Oil Leaks in the Diagnosis and Testing portion of this section.

4. Inspect the crankcase ventilation system for:
    - disconnected hoses at the valve cover or TB .
    - loose or missing valve cover fill cap.
    - missing or incorrectly seated engine oil level indicator.
    - incorrect or dirty PCV valve.
    - a PCV valve grommet unseated in the valve cover (if so equipped).

5. Inspect for signs of sludge. Sludge affects PCV performance and can plug or restrict cylinder head drainback wells. It can also increase oil pressure by restricting passages and reducing the drainback capability of piston oil control rings. Sludge can result from either excessive water ingestion in the crankcase or operation at extremely high crankcase temperatures.

6. Inspect the air filter for dirt, sludge or damage. A hole in the filter element will allow unfiltered air to bypass into the air induction system. This can cause premature internal wear (engine dusting), allowing oil to escape past rings, pistons, valves and guides.

7. If the engine is hot or was recently shut down, wait at least 5 minutes to allow the oil to drain

back. Ask the customer if this requirement has been followed. Adding oil without this wait period can cause an overfill condition, leading to excessive oil consumption and foaming which may cause engine damage.

8. Make sure the oil level indicator (dipstick) is correctly and fully seated in the indicator tube. Remove the oil level indicator and record the oil level.

Detailed Pre-checks

1. Check the thermostat opening temperature to make sure that the cooling system is operating at the specified temperature. If it is low, internal engine parts are not running at specified internal operating clearances.

2. Verify the spark plugs are not oil saturated. Oil leaking into one or more cylinders will appear as an oil soaked condition on the plug. If a plug is saturated, a compression check may be necessary at the conclusion of the oil consumption test.

Oil Consumption Test

Once all of the previous conditions are met, carry out an oil consumption test.

1. Drain the engine oil and remove the oil filter. Install a new manufacturer-specified oil filter. Make sure the vehicle is positioned on a level surface. Refill the oil pan to a level **one liter (quart) less** than the specified fill level, using manufacturer-specified oil.

2. Run the engine for 3 minutes (if hot) or 10 minutes (if cold). Allow for a minimum 5-minute drainback period and then record the oil level shown on the oil level indicator. Place a mark on the backside of the oil level indicator noting the oil level location.

3. Add the final one liter (quart) to complete the normal oil fill. Restart the engine and allow it to idle for 2 minutes. Shut the engine down.

4. After a 5-minute drainback period, record the location of the oil level again. Mark the oil level indicator with the new oil level location. (Note: Both marks should be very close to the MIN-MAX upper and lower limits or the upper and lower holes on the oil level indicator. These marks will exactly measure the engine's use of oil, with a one quart differential between the new marks.) Demonstrate to the customer that the factory-calibrated marks on the oil level indicator are where the oil should fall after an oil change with the specified fill amount. Explain however, that this may vary slightly between MIN-MAX or the upper and lower holes on the oil level indicator.

5. Record the vehicle mileage.

6. Advise the customer that oil level indicator readings must be taken every 320 km (200 mi) or weekly, using the revised marks as drawn. Remind the customer that the engine needs a minimum 5-minute drainback for an accurate reading and that the oil level indicator must be firmly seated in the tube prior to taking the reading.

7. When the subsequent indicator readings demonstrate a full liter (quart) has been used, record the vehicle mileage. The mileage driven should not be less than 2,414 km (1,500 mi). The drive cycle the vehicle has been operated under must be considered when making this calculation. It may be necessary to have the customer bring the vehicle in for a periodic oil level indicator reading to closely monitor oil usage.

Post Checks, Evaluation and Corrective Action

1. If test results indicate excessive oil consumption, carry out a cylinder compression test. The cylinder compression test should be carried out with a fully charged battery and all spark plugs removed. See the Compression Test Chart in this section for pressure range limits.

2. Compression should be consistent across all cylinders. Refer to the Compression Testing portion

of this section. If compression tested within the specifications found in this section, the excessive oil consumption may be due to wear on the valve guides, valves or valve seals.

3. A cylinder leak detection test can be carried out using a cylinder leakage tester. This can help identify valves, piston rings, or worn valve guides/valve stems, inoperative valve stem seals or other related areas as the source of oil consumption.

NOTE: An oil-soaked appearance on the porcelain tips of the spark plugs also indicates excessive oil use. A typical engine with normal oil consumption will exhibit a light tan to brown appearance. See Spark Plug Analysis in this section for details. A single or adjoining, multiple cylinder leak can be traced by viewing the tips.

4. If an internal engine part is isolated as the root cause, determine if the repair will exceed cost limits and proceed with a repair strategy as required.

5. Once corrective action to engine is complete and verifying that all pre-check items were eliminated in the original diagnosis, repeat the Oil Consumption Test as described above and verify consumption results.

Intake Manifold Vacuum Test

Bring the engine to normal operating temperature. Connect the Vacuum/Pressure Tester to the intake manifold. Run the engine at the specified idle speed.

The vacuum gauge should read between 51-74 kPa (15-22 in-Hg) depending upon the engine condition and the altitude at which the test is conducted. Subtract 4.0193 kPa (1 in-Hg) from the specified reading for every 304.8 m (1,000 ft) of elevation above sea level.

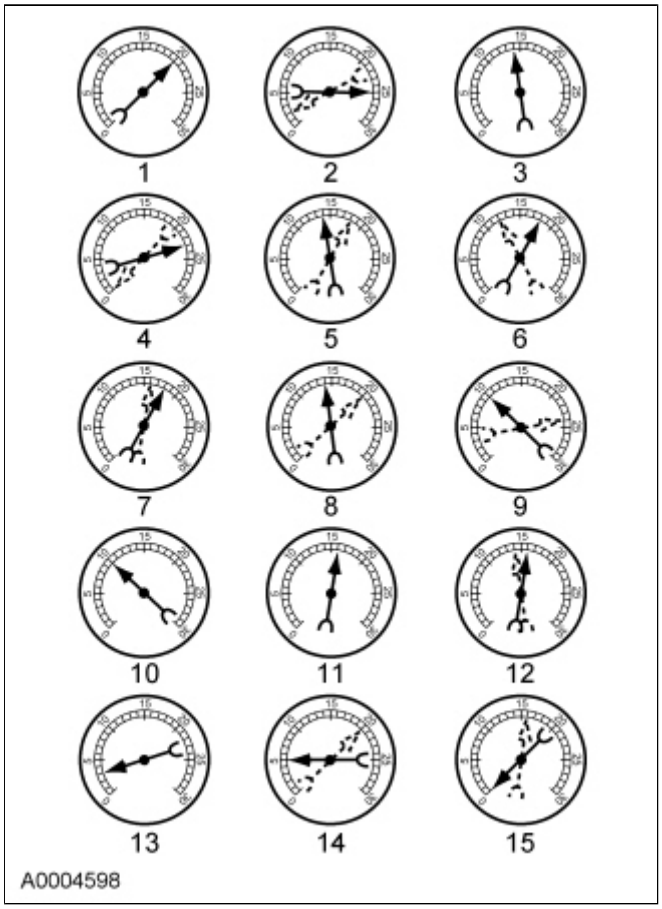
The reading should be steady. If necessary, adjust the gauge damper control (where used) if the needle is fluttering rapidly. Adjust the damper until the needle moves easily without excessive flutter.

Intake Manifold Vacuum Test — Interpreting Vacuum Gauge Readings

A careful study of the vacuum gauge reading while the engine is idling will help pinpoint trouble areas. Always conduct other appropriate tests before arriving at a final diagnostic decision. Vacuum gauge readings, although helpful, must be interpreted carefully.

Most vacuum gauges have a normal band indicated on the gauge face.

The following are potential gauge readings. Some are normal; others should be investigated further.



1. NORMAL READING: Needle between 51-74 kPa (15-22 in-Hg) and holding steady.

2. NORMAL READING DURING RAPID ACCELERATION AND DECELERATION: When the engine is rapidly accelerated (dotted needle), the needle will drop to a low reading (not to zero). When the throttle is suddenly released, the needle will snap back up to a higher than normal figure.

3. NORMAL FOR HIGH-LIFT CAMSHAFT WITH LARGE OVERLAP: The needle will register as low as 51 kPa (15 in-Hg) but will be relatively steady. Some oscillation is normal.

4. WORN RINGS OR DILUTED OIL: When the engine is accelerated (dotted needle), the needle drops to 0 kPa (0 in-Hg). Upon deceleration, the needle runs slightly above 74 kPa (22 in-Hg).

5. STICKING VALVES: When the needle (dotted) remains steady at a normal vacuum but occasionally flicks (sharp, fast movement) down and back about 13 kPa (4 in-Hg), one or more valves may be sticking.

6. BURNED OR WARPED VALVES: A regular, evenly-spaced, downscale flicking of the needle indicates one or more burned or warped valves. Insufficient valve clearance will also cause this reaction.

7. POOR VALVE SEATING: A small but regular downscale flicking can mean one or more valves are not seating.

8. WORN VALVE GUIDES: When the needle oscillates over about a 13 kPa (4 in-Hg) range at idle speed, the valve guides could be worn. As engine speed increases, the needle will become steady if guides are responsible.

9. WEAK VALVE SPRINGS: When the needle oscillation becomes more violent as engine rpm is increased, weak valve springs are indicated. The reading at idle could be relatively steady.

10. LATE VALVE TIMING: A steady but low reading could be caused by late valve timing.

11. IGNITION TIMING RETARDING: Retarded ignition timing will produce a steady but somewhat low reading.

12. INSUFFICIENT SPARK PLUG GAP: When spark plugs are gapped too close, a regular, small pulsation of the needle can occur.

13. INTAKE LEAK: A low, steady reading can be caused by an intake manifold or throttle body gasket leak.

14. BLOWN HEAD GASKET: A regular drop of fair magnitude can be caused by a blown head gasket or warped cylinder head-to-cylinder block surface.

15. RESTRICTED EXHAUST SYSTEM: When the engine is first started and is idled, the reading may be normal, but as the engine rpm is increased, the back pressure caused by a clogged muffler, kinked tailpipe or other concerns will cause the needle to slowly drop to 0 kPa (0 in-Hg). The needle then may slowly rise. Excessive exhaust clogging will cause the needle to drop to a low point even if the engine is only idling.

16. When vacuum leaks are indicated, search out and correct the cause. Excess air leaking into the system will upset the fuel mixture and cause concerns such as rough idle, missing on acceleration or burned valves. If the leak exists in an accessory unit such as the power brake booster, the unit will not function correctly. Always fix vacuum leaks.

Oil Pressure Test

1. Disconnect and remove the Engine Oil Pressure (EOP) switch from the engine.

2. Connect the Oil Pressure Gauge to the oil pressure switch oil galley port.

3. Run the engine until normal operating temperature is reached.

4. Run the engine at the specified rpm and record the gauge reading.

5. The oil pressure should be within specifications; refer to the specification chart in the appropriate engine section.

6. If the pressure is not within specification, check the following possible sources:
    - Insufficient oil
    - Oil leakage
    - Worn or damaged oil pump
    - Oil pump screen cover and tube
    - Excessive main bearing clearance
    - Excessive connecting rod bearing clearance
    - Chain tensioner leak

Valve Train Analysis

The following component tests are used to diagnose valve train concerns.

Valve Train Analysis — Engine Off — Valve Cover Removed

Check for damaged or severely worn parts and correct assembly. Make sure correct parts are used with

the static engine analysis as follows.

Valve Train Analysis — Camshafts and Valve Tappets

- Check for broken or damaged parts.
- Check for loose mounting bolts on camshaft caps.
- Check for worn or damaged valve tappets.

Valve Train Analysis — Valve Springs — Valve Tappets Removed

- Check for broken or damaged parts.

Valve Train Analysis — Valve Spring Retainer and Valve Spring Retainer Keys — Valve Tappets Removed

- Check for correct seating of the valve spring retainer key on the valve stem and in valve spring retainer.
- Check for correct seating on the valve stem.

Valve Train Analysis — Valves and Cylinder Head — Valve Tappets Removed

- Check for plugged oil drain back holes.
- Check for worn or damaged valve tips.
- Check for missing or damaged valve stem seals or guide-mounted valve stem seal.
- Check for missing or worn valve spring seats.

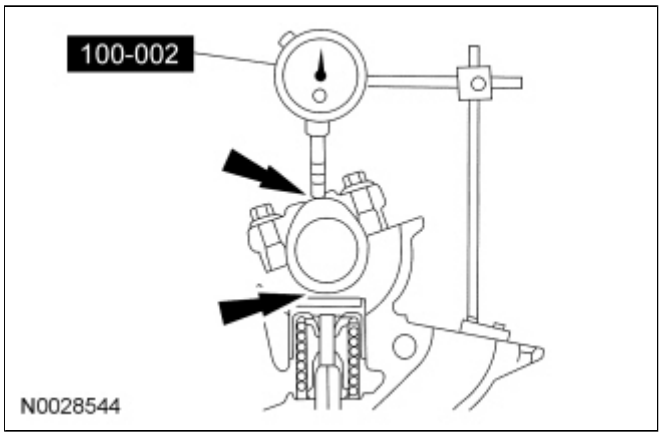
Valve Train Analysis — Camshaft Lobe Lift

Check the lift of each camshaft lobe in consecutive order and make a note of the readings.

1. Remove the spark plugs. Refer to Section 303-07 .

2. Install the Dial Indicator Gauge with Holding Fixture so the rounded tip of the dial indicator is on top of the camshaft lobe and on the same plane as the valve tappet.

3. Rotate the crankshaft using a breaker bar and socket attached to the crankshaft pulley retainer bolt. Rotate the crankshaft until the base circle of the camshaft lobe is reached.



4. Zero the dial indicator. Continue to rotate the crankshaft until the high-lift point of the camshaft lobe is in the fully-raised position (highest indicator reading).

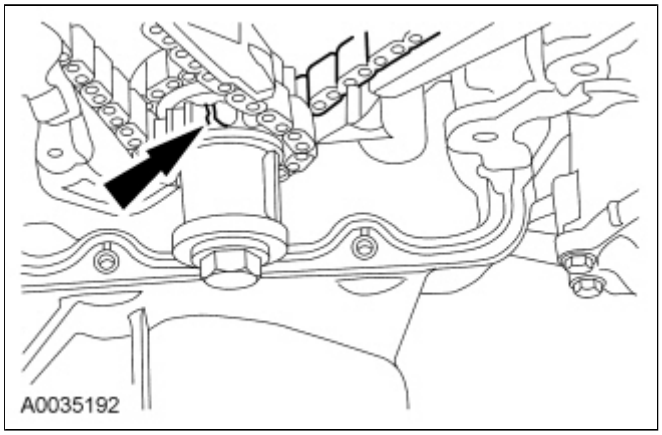
5. To check the accuracy of the original dial indicator reading, continue to rotate crankshaft until the base circle is reached. The dial indicator reading should be zero. If zero reading is not obtained,

repeat Steps 1 through 6.

6. If the lift on any lobe is below specified service limits, install a new camshaft and valve tappets.
7. Install the spark plugs. Refer to Section 303-07 .

Sprockets

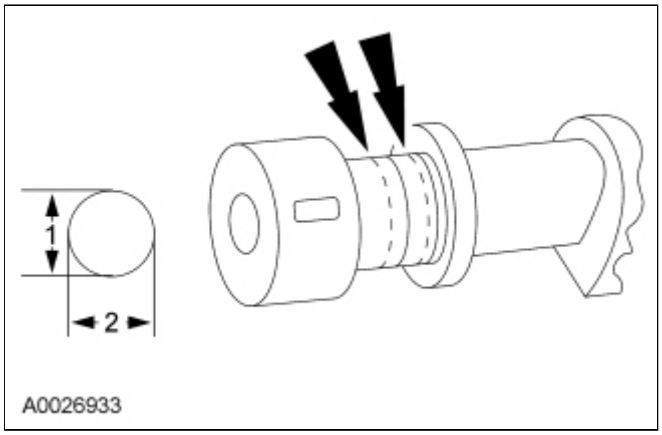
1. Inspect the sprockets for cracks and worn or chipped teeth.



Camshaft Bearing Journal Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure each camshaft journal diameter in 2 directions.

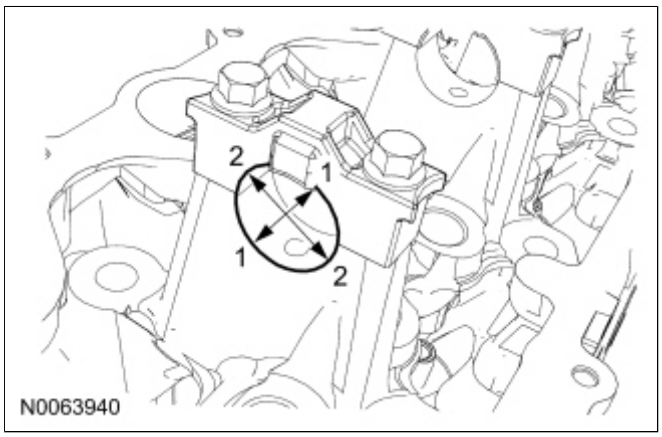


Camshaft Journal to Bearing Clearance — OHC Engines

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** The camshaft journals must meet specifications before checking camshaft journal clearance.

   Measure each camshaft bearing in 2 directions.
   - Subtract the camshaft journal diameter from the camshaft bearing diameter.



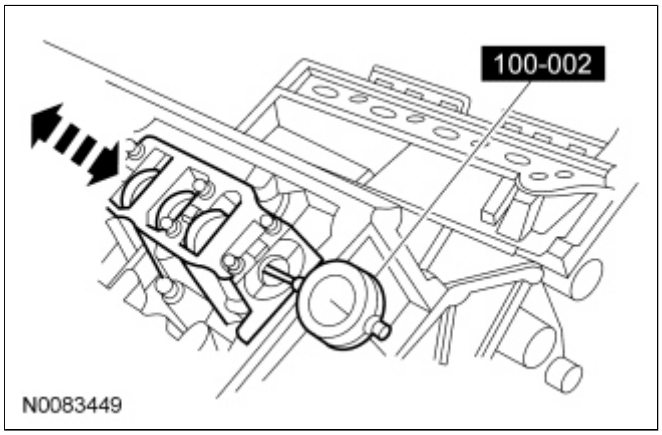
Camshaft End Play — OHC Engines

Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

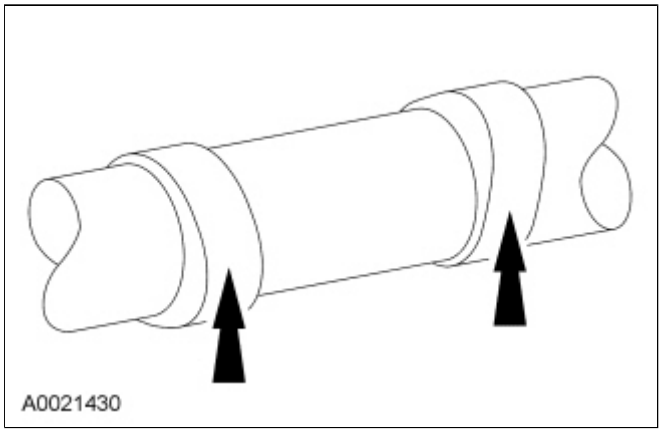
NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Using the Dial Indicator Gauge with Holding Fixture, measure the camshaft end play.
2. Position the camshaft to the rear of the cylinder head.
3. Zero the Dial Indicator Gauge.
4. Move the camshaft to the front of the cylinder head. Note and record the camshaft end play.
   - If camshaft end play exceeds specifications, install a new camshaft and recheck end play.
   - If camshaft end play exceeds specification after camshaft installation, install a new cylinder head.



Camshaft Surface Inspection

1. Inspect camshaft lobes for pitting or damage in the contact area. Minor pitting is acceptable outside the contact area.



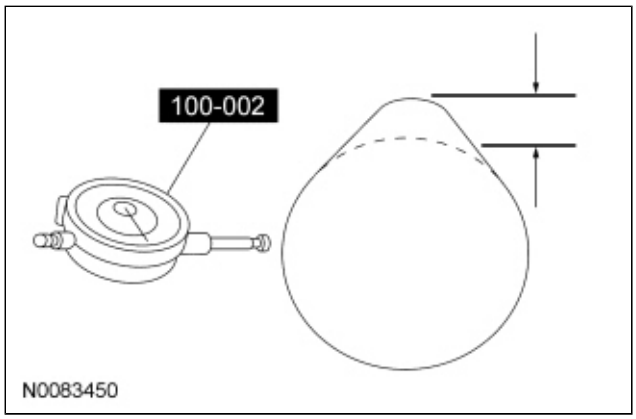
Camshaft Lobe Lift

Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use the Dial Indicator Gauge with Holding Fixture to measure camshaft intake/exhaust lobe lift.
    - Rotate the camshaft and subtract the lowest Dial Indicator Gauge reading from the highest Dial Indicator Gauge reading to figure the camshaft lobe lift.



Camshaft Runout

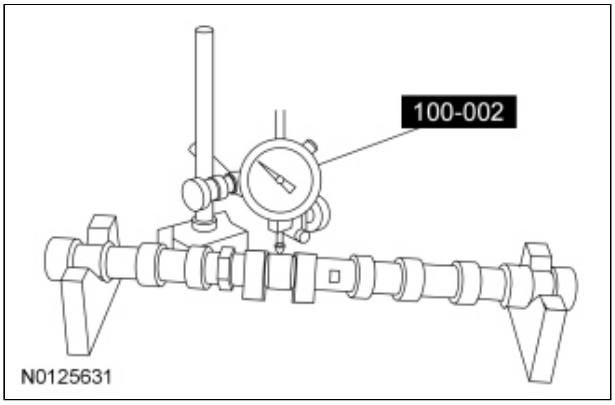
Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Camshaft journals must be within specifications before checking runout.

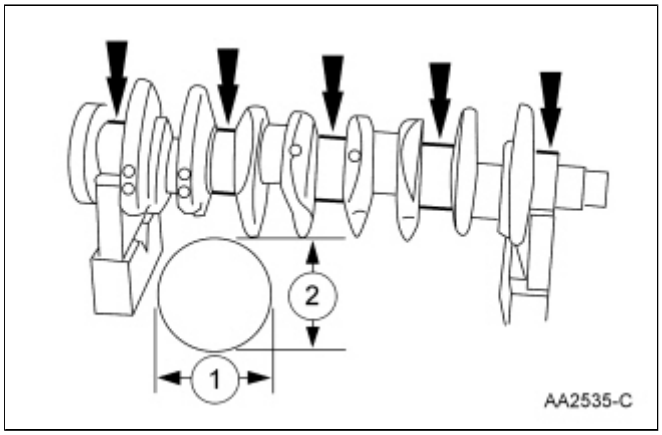
   Using the Dial Indicator Gauge with Holding Fixture, measure the camshaft runout.
   - Camshaft must be supported on the first and last camshaft bearing journal.
   - Rotate the camshaft and subtract the lowest Dial Indicator Gauge reading from the highest Dial Indicator Gauge reading.



Crankshaft Main Bearing Journal Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

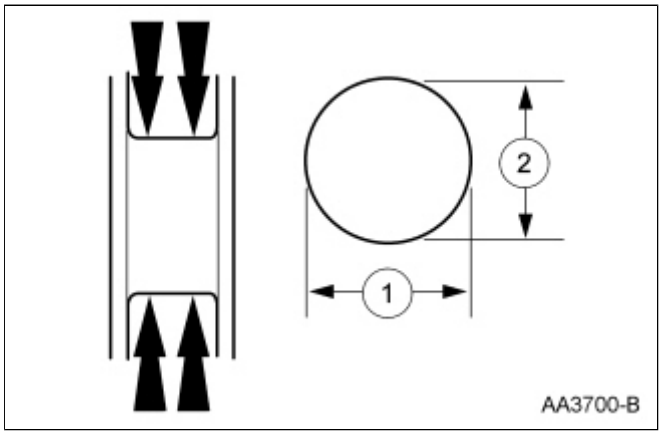
1. Measure each of the crankshaft main bearing journal diameters in at least 2 directions.



Crankshaft Main Bearing Journal Taper and Out-of-Round

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure each of the crankshaft main bearing journal diameters in at least 2 directions at each end of the main bearing journal.

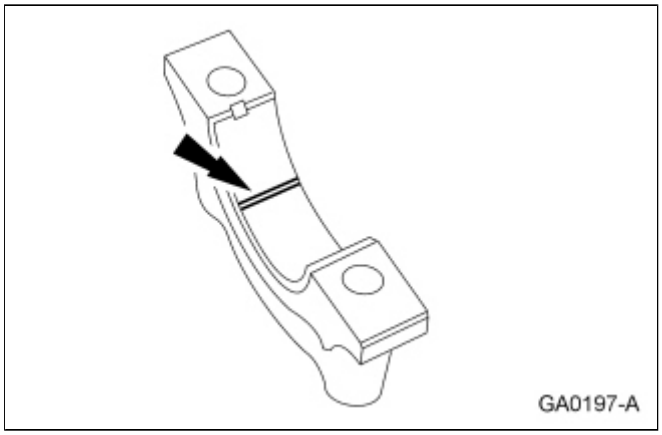


Crankshaft Main Bearing Journal-to-Bearing Clearance

NOTE: Refer to the appropriate Section 303-01 for the specification.

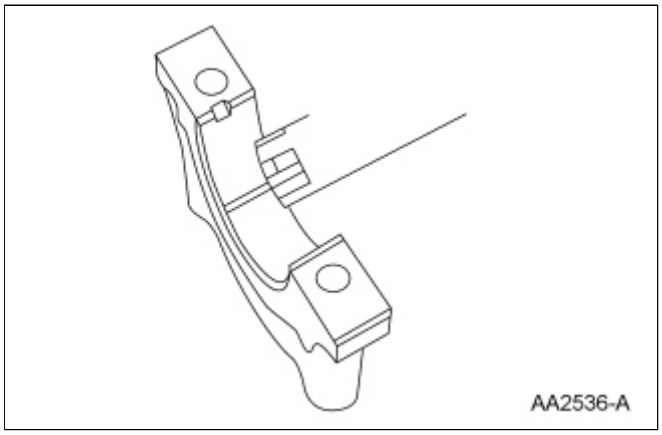
NOTE: Crankshaft main bearing journals must be within specifications before checking journal clearance.

1. Remove the crankshaft main bearing caps and crankshaft main bearing.
2. Lay a piece of Plastigage across the face of each crankshaft main bearing surface.



3. **NOTE:** Do not turn the crankshaft while carrying out this procedure.

   Install and remove the crankshaft main bearing cap.
4. Verify the crankshaft journal clearance.



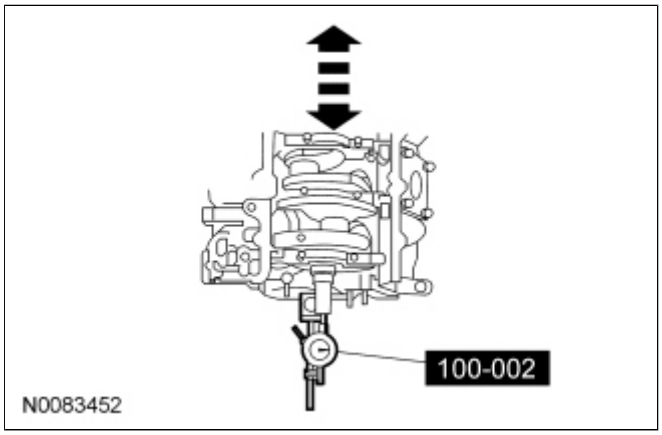
Crankshaft End Play

Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

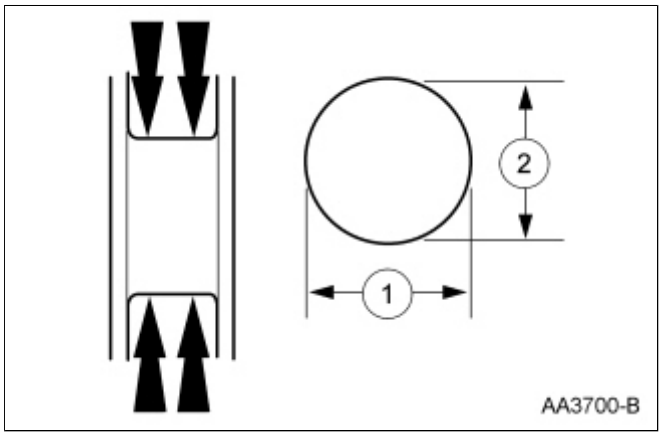
1. Install the Dial Indicator Gauge with Holding Fixture.
2. Position the crankshaft to the rear of the cylinder block.
3. Zero the Dial Indicator Gauge.
4. Move the crankshaft to the front of the cylinder block. Note and record the crankshaft end play.



Connecting Rod Bearing Journal Taper and Out-of-Round

NOTE: Refer to the appropriate Section 303-01 for the specification.

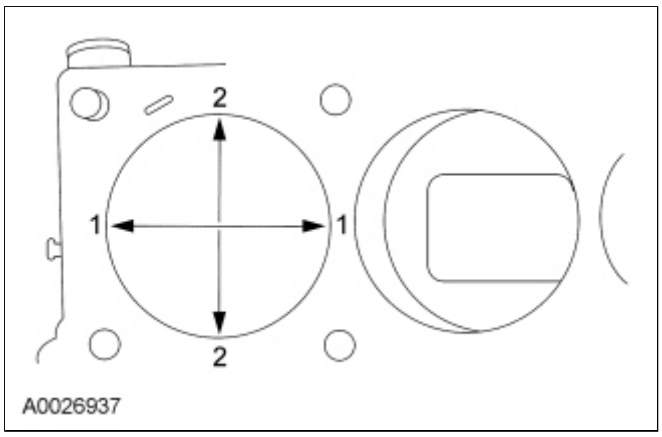
1. Measure the crankshaft connecting rod journal diameters in 2 directions perpendicular to one another at each end of the connecting rod journal. The difference in the measurements from one end to the other is the taper. Verify measurement is within the wear limit.



Cylinder Bore Taper

NOTE: Refer to the appropriate Section 303-01 for the specification.

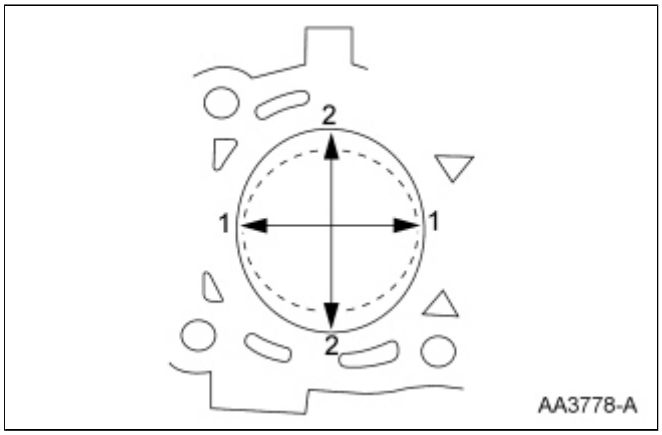
1. Measure the cylinder bore at the top, middle and bottom of piston ring travel in 2 directions as indicated. Verify the cylinder bore is within the wear limit. The difference indicates the cylinder bore taper. If the cylinder bore taper does not meet specification, bore the cylinder to the next oversize limit.



Cylinder Bore Out-of-Round

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the cylinder bore in 2 directions. The difference is the out-of-round.



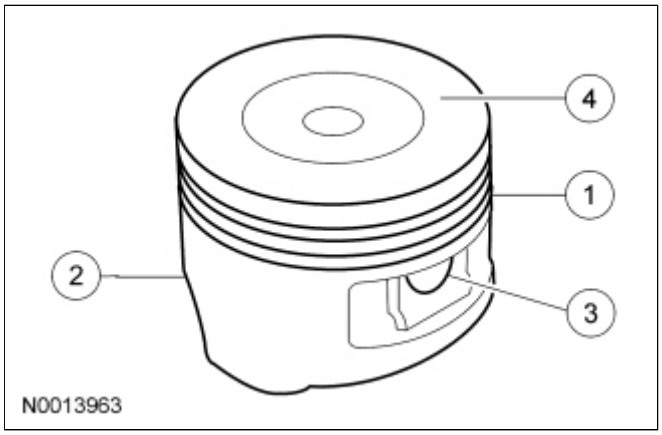
Piston Inspection

Special Tool(s)

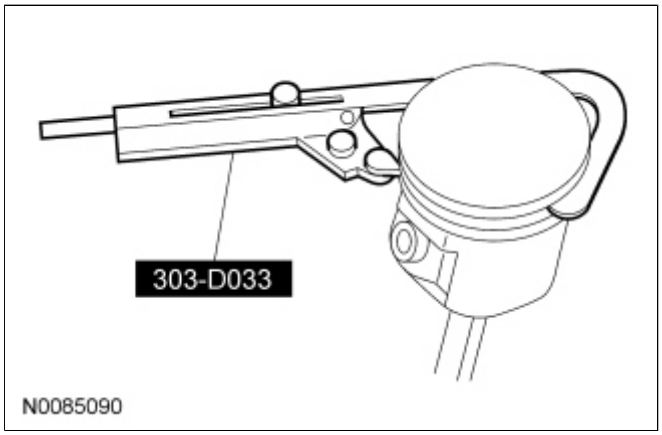
 ST1279-A	Scraper, Piston Ring Groove 303-D033 (D81L-6002-D) or equivalent

NOTICE: **Do not use a caustic cleaning solution or a wire brush to clean the pistons or damage can occur.**

1. Clean and inspect the (1) ring lands, (2) skirts, (3) pin bosses and the (4) tops of the pistons. If wear marks, scores or glazing is found on the piston skirt, check for a bent or twisted connecting rod.



2. Use the Piston Ring Groove Scraper to clean the piston ring grooves.
   - Make sure the oil ring holes are clean.

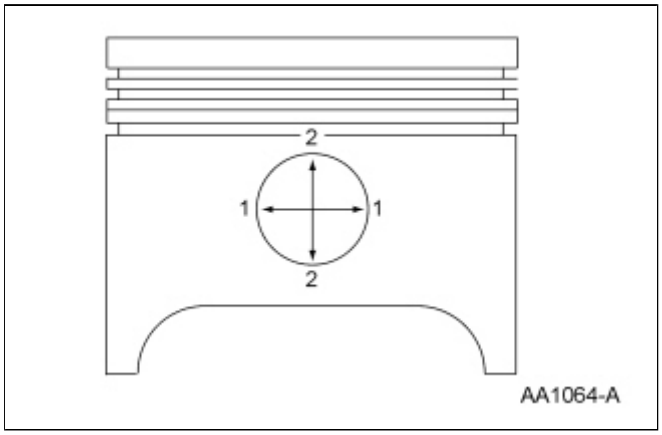


Piston Pin Bore Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Piston and piston pins are a matched set and should not be interchanged.

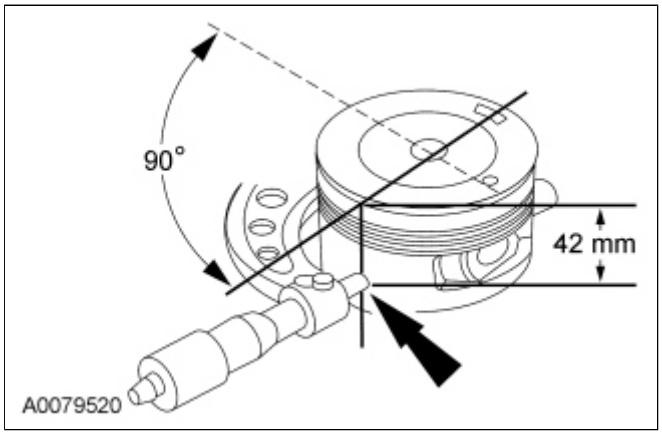
   Measure the piston pin bore diameter in 2 directions on each side. Verify the diameter is within specification.



Piston Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the piston diameter 90 degrees from the piston pin and 42 mm (1.65 in) down from the top of the piston at the point indicated.



Piston To Cylinder Bore Clearance

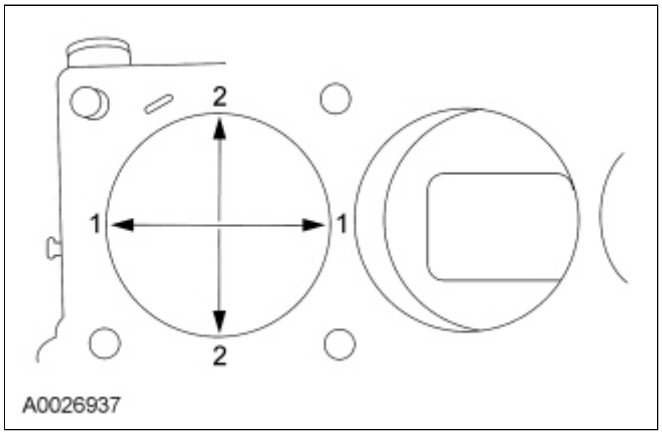
NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Subtract the piston diameter from the cylinder bore diameter to find the piston-to-cylinder bore clearance.

Piston Selection

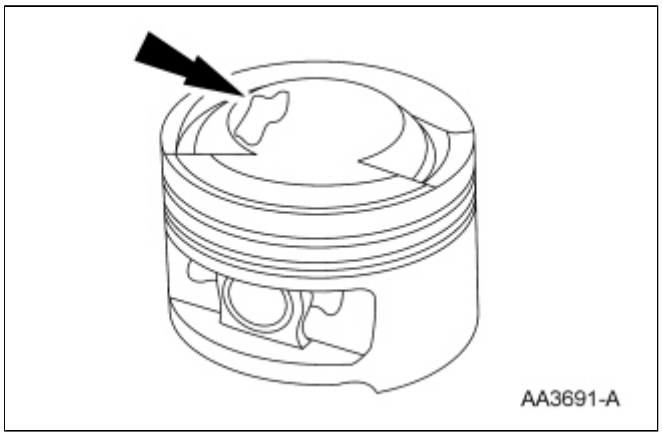
NOTE: The cylinder bore must be within the specifications for taper and out-of-round before fitting a piston.

1. Select a piston size based on the cylinder bore.



2. **NOTE:** For precision fit, new pistons are divided into 3 categories within each size range based on their relative position within the range. A paint spot or specific size grade on a new piston indicates the position within the size range.

   Choose the piston with the correct paint color or specific size grade.
   - Refer to the appropriate section in Group 303 for the procedure.



Piston Ring End Gap

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

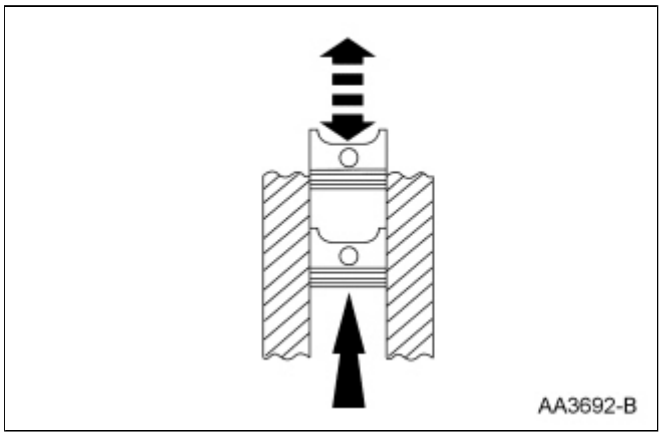
NOTICE: **Use care when fitting piston rings to avoid possible damage to the piston ring or the cylinder bore.**

NOTE: Piston rings should not be transferred from one piston to another.

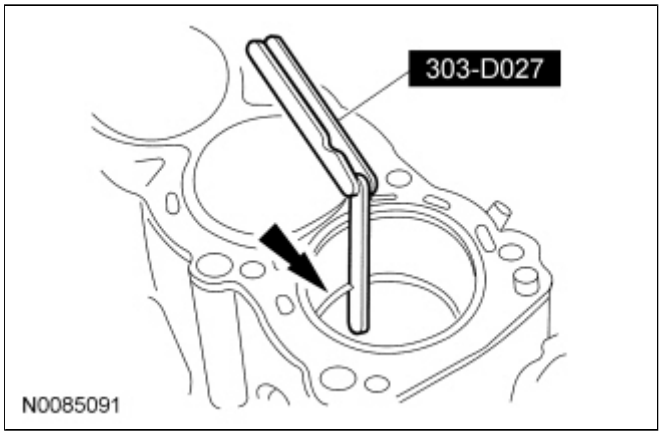
NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: The cylinder bore must be within specification for taper and out-of-round.

1. Use a piston without rings to push a piston ring in a cylinder to the bottom of ring travel.



2. Use the Feeler Gauge Set to measure the top piston ring end gap and the second piston ring end gap.



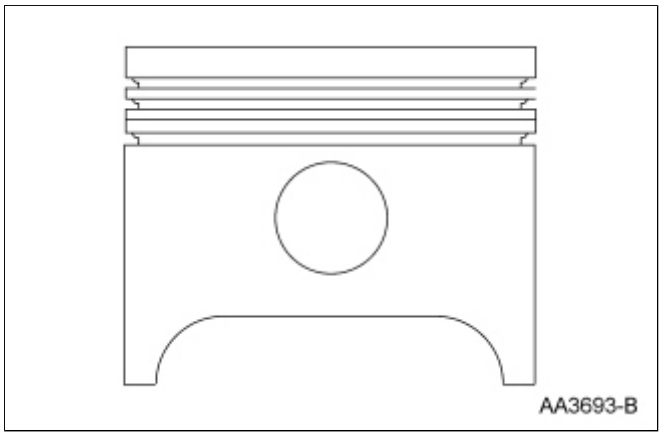
Piston Ring-to-Groove Clearance

Special Tool(s)

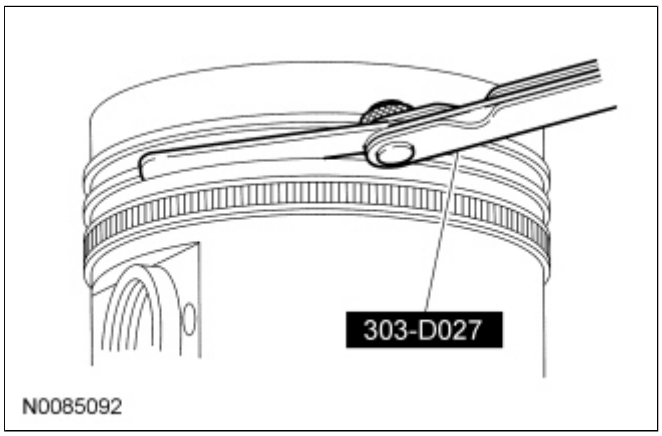
 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Inspect the piston for ring land damage or accelerated wear.



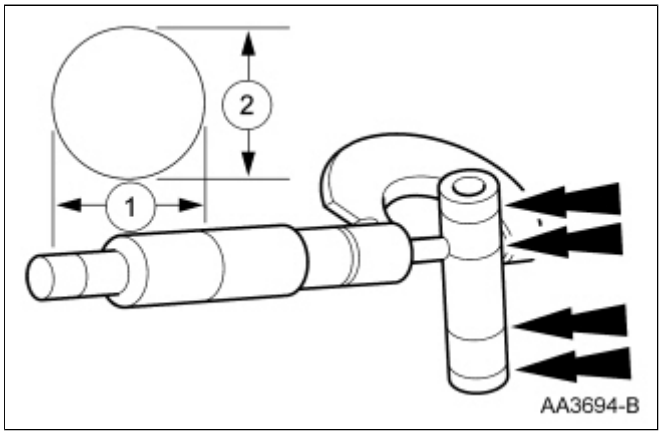
2. Using the Feeler Gauge Set, measure the piston ring-to-groove clearance.



Piston Pin Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the piston pin diameter in 2 directions at the points shown. Verify the diameter is within specification.

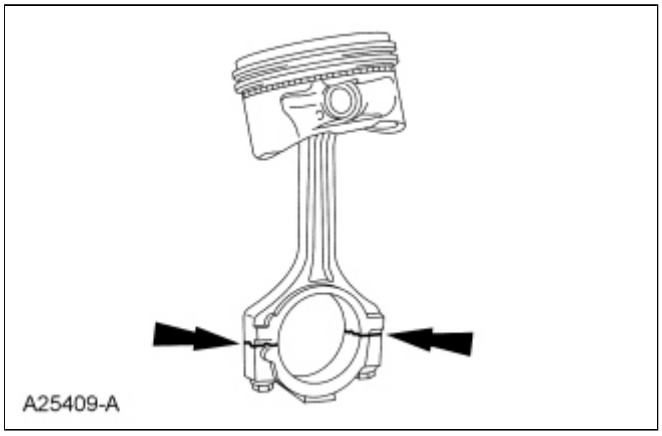


Connecting Rod Cleaning

NOTICE: **Do not use a caustic cleaning solution or damage to connecting rods can occur.**

1. **NOTE:** The connecting rod large end is a matched set. The connecting rod cap must be installed on the original connecting rod in the original position. Do not reverse the cap. Parts are not interchangeable.

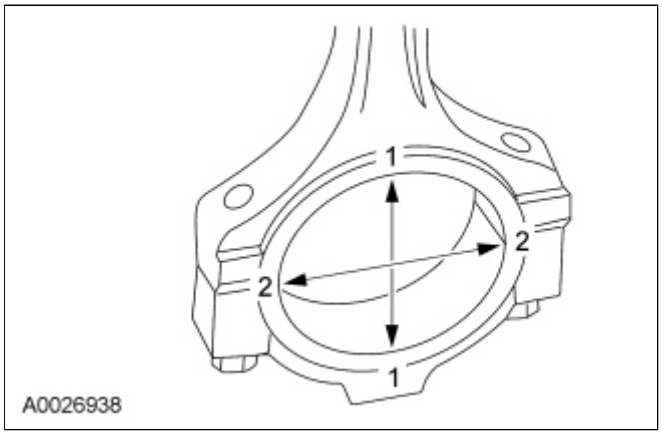
   Mark and separate the parts and clean with solvent. Clean the oil passages.



Connecting Rod Large End Bore

NOTE: Refer to the appropriate Section 303-01 for the specification.

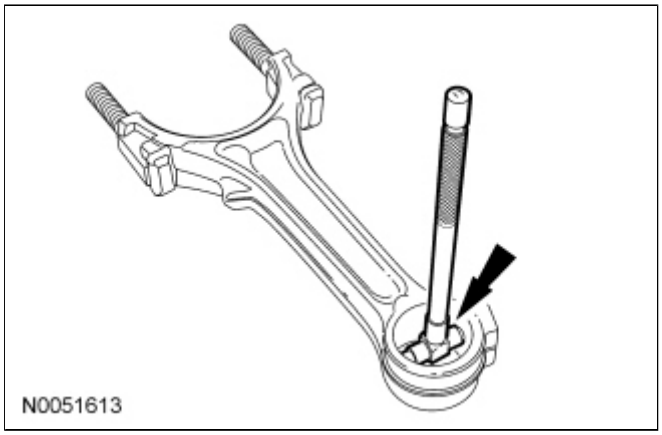
1. Tighten the bolts to specification, then measure the bore in 2 directions. The difference is the connecting rod bore out-of-round. Verify the out-of-round is within specification.



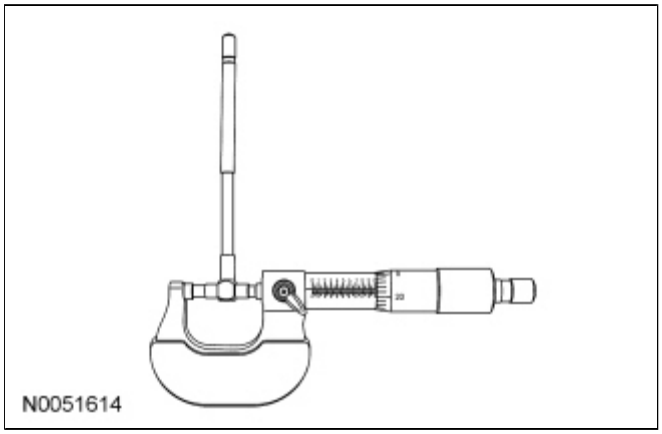
Connecting Rod Bushing Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use a telescoping gauge to determine the ID of the connecting rod bushing, if equipped.



2. Measure the telescoping gauge with a micrometer. Verify the diameter is within specification.



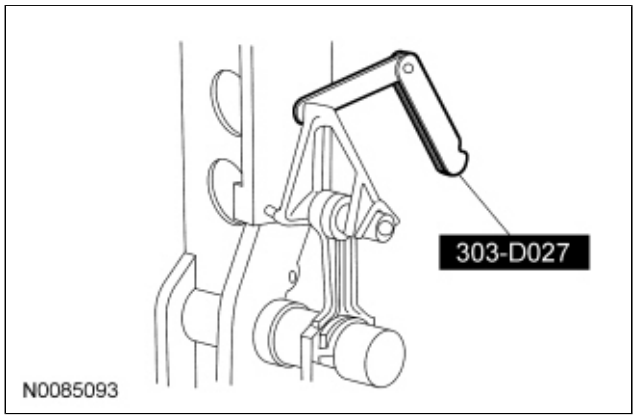
Connecting Rod Bend

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Using the Feeler Gauge Set, measure the connecting rod bend on a suitable alignment fixture. Follow the instructions of the fixture manufacturer. Verify the bend measurement is within specification.



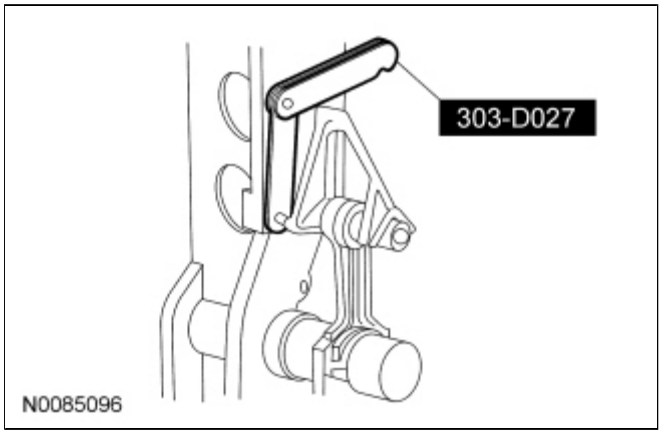
Connecting Rod Twist

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Using the Feeler Gauge Set, measure the connecting rod twist on a suitable alignment fixture. Follow the instructions of the fixture manufacturer. Verify the measurement is within specification.



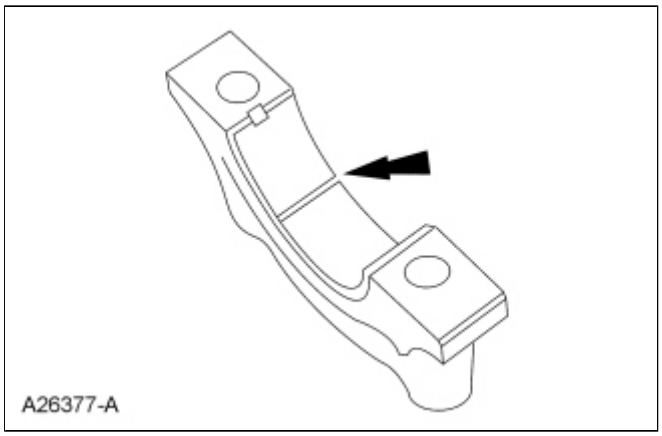
Connecting Rod Bearing Journal-to-Bearing Clearance

NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: The crankshaft connecting rod journals must be within specifications to check the connecting rod bearing journal clearance.

1. Remove the connecting rod bearing cap.

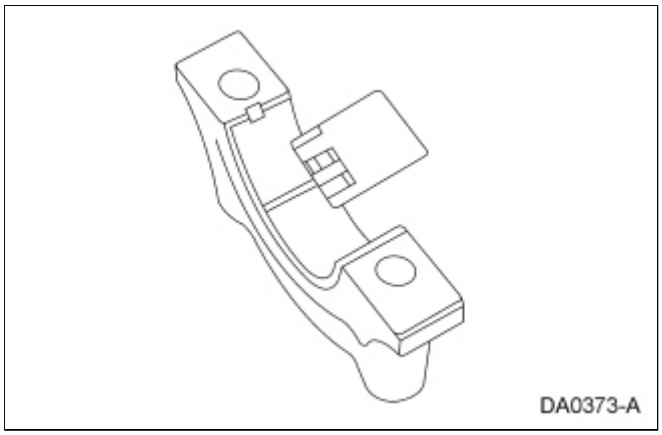
2. Position a piece of Plastigage across the bearing surface.



3. **NOTE:** Do not turn the crankshaft during this step.

   Install and tighten to specifications, then remove the connecting rod bearing cap.

4. Measure the Plastigage to get the connecting rod bearing journal clearance. The Plastigage should be smooth and flat. A changing width indicates a tapered or damaged connecting rod or connecting rod bearing.



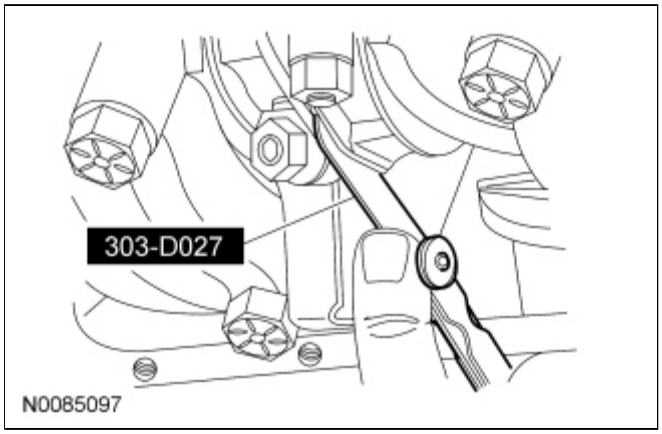
Connecting Rod to Crankshaft Side Clearance

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

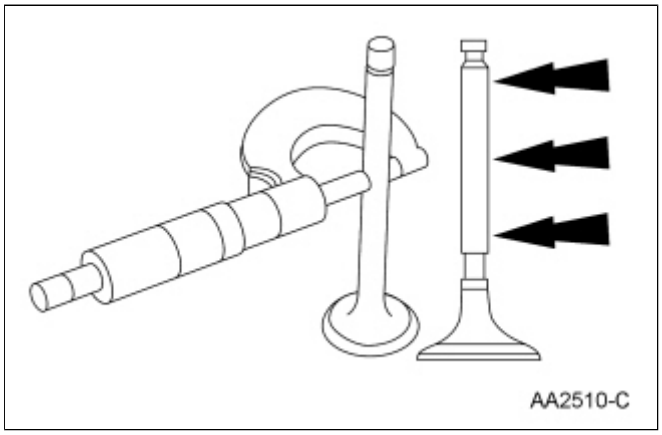
1. Using the Feeler Gauge Set, measure the clearance between the connecting rod and the crankshaft. Verify the measurement is within specification.



Valve Stem Diameter

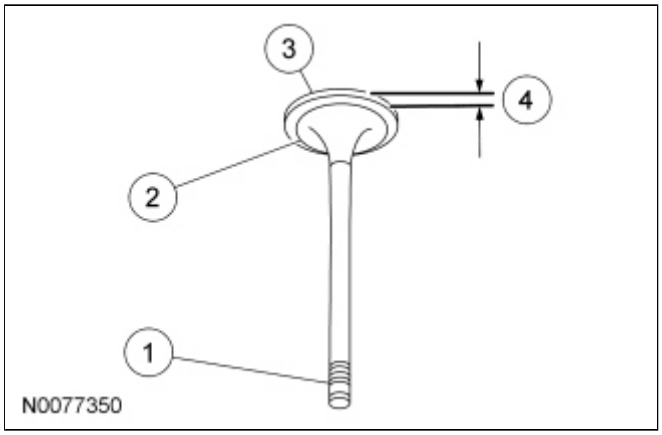
NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the diameter of each intake and exhaust valve stem at the points shown. Verify the diameter is within specification.



Valve Inspection

1. Inspect the following valve areas:
    1. The end of the stem for grooves or scoring.
    2. The valve face and the edge for pits, grooves or scores.
    3. The valve head for signs of burning, erosion, warpage and cracking.
    4. The valve margin for wear.

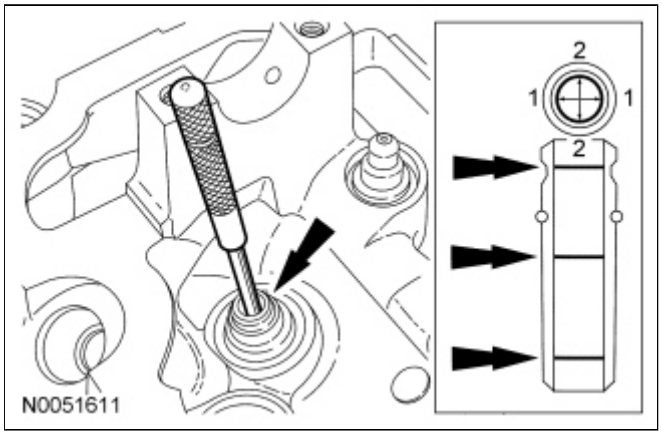


Valve Guide Inner Diameter

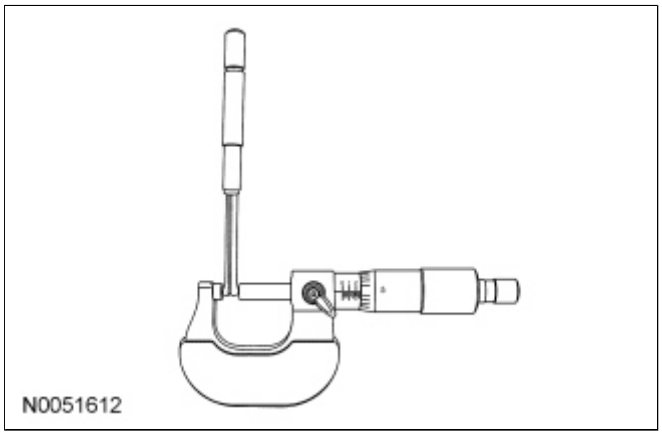
NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Valve guides tend to wear in an hourglass pattern. The ball gauge can be inserted into the combustion chamber side of the valve guide, if necessary.

   Use a ball gauge to determine the inside diameter of the valve guides in 2 directions at the top, middle and bottom of the valve guide.



2. Measure the ball gauge with a micrometer.



3. If the valve guide is not within specifications, install a new cylinder head assembly.

Valve Stem to Valve Guide Clearance

Special Tool(s)

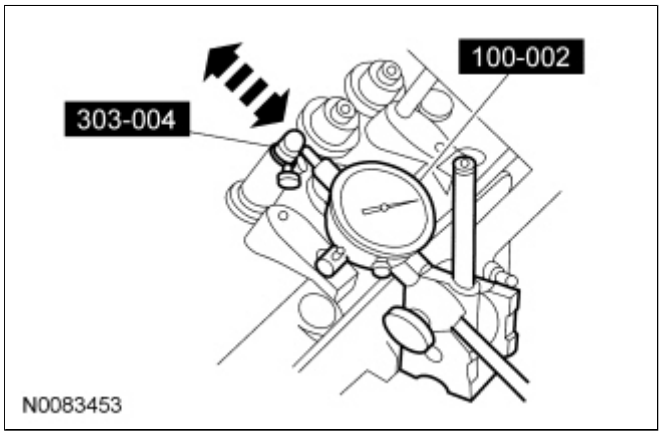
 ST1251-A	Clearance Gauge, Valve Guide 303-004 (TOOL-6505-E) or equivalent
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: The valve stem diameter must be within specifications before checking valve stem-to-valve guide clearance.

1. **NOTE:** If necessary, use a magnetic base.

   Install a Valve Guide Clearance Gauge on the valve stem and install a Dial Indicator Gauge with Holding Fixture. Lower the valve until the clearance gauge contacts the upper surface of the valve guide.

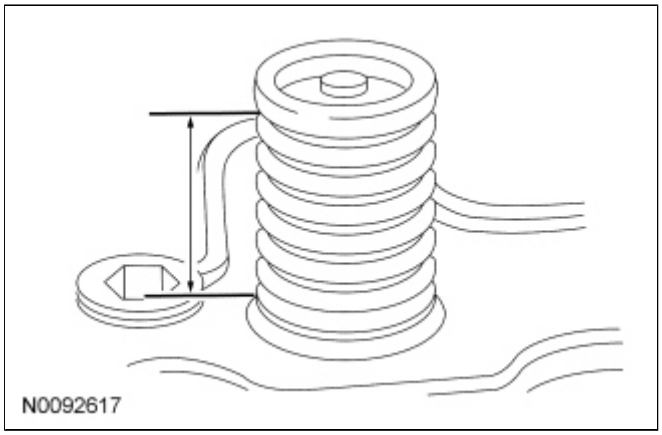
   


2. Move the Valve Guide Clearance Gauge toward the Dial Indicator Gauge with Holding Fixture and zero the Dial Indicator Gauge. Move the Valve Guide Clearance Gauge away from the Dial Indicator Gauge with Holding Fixture and note the reading. The reading will be DOUBLE the valve stem-to-valve guide clearance.

Valve Spring Installed Length

NOTE: Refer to the appropriate Section 303-01 for the specification.

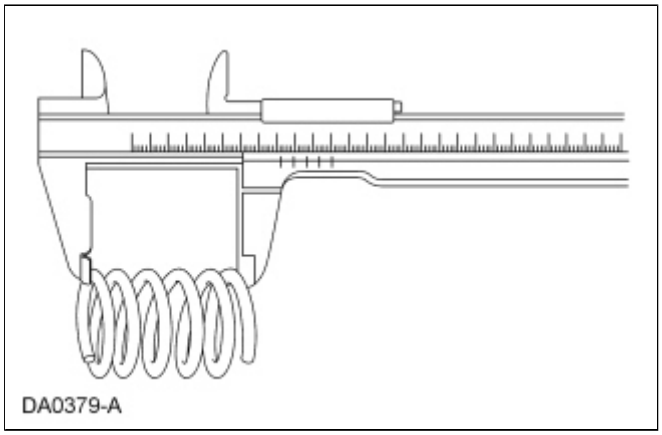
1. Measure the installed length of each valve spring.



Valve Spring Free Length

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the free length of each valve spring.



DA0379-A

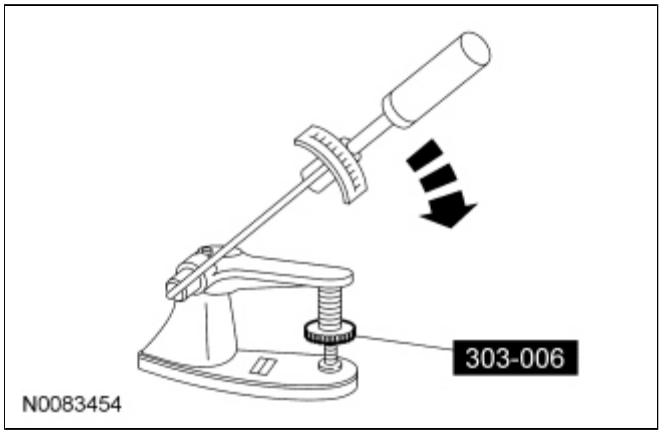
Valve Spring Strength

Special Tool(s)

ST1278-A	Pressure Gauge, Valve/Clutch Spring 303-006 (TOOL-6513-DD) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use the Valve/Clutch Spring Pressure Gauge to check the valve spring for correct strength at the specified valve spring length.



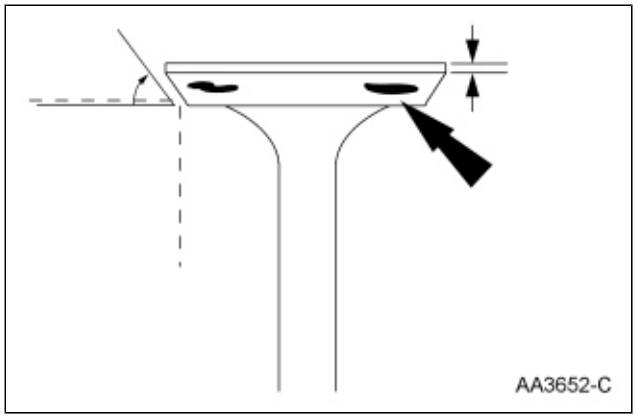
Valve Seat Inspection

Valve and Seat Refacing Measurements

NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: After grinding valves or valve seats, check valve clearance.

1. Check the valve head and seat.
   - Check valve angles.
   - Check margin width.
   - Be sure margin width is within specification.

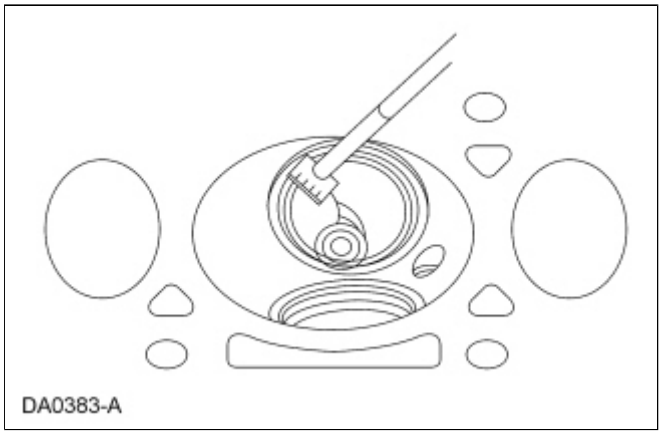


2. Inspect for abnormalities on the valve face and seat. Install a new cylinder head assembly if abnormalities are found.

Valve Seat Width

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the valve seat width. If necessary, grind the valve seat to specification.
    - Measure the intake valve seat width.
    - Measure the exhaust valve seat width.
    - Recheck the valve spring installed length after the seats have been ground, and shim the valve springs as necessary to achieve the correct installed spring length.
    - Depending on the engine, check the valve lash. Refer to General Procedures in Section 303-01.

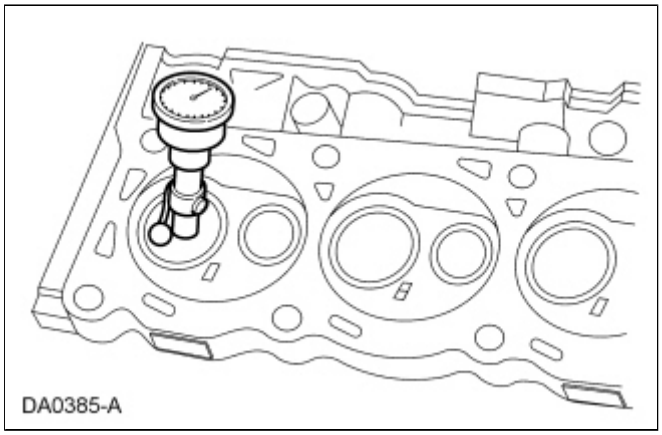


DA0383-A

Valve Seat Runout

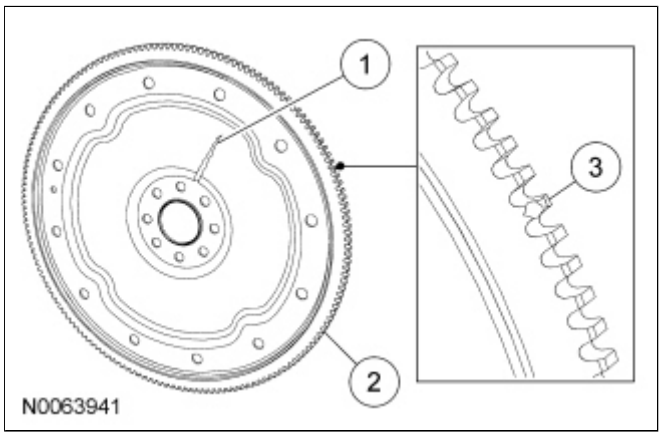
NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use a valve seat runout gauge to check valve seat runout.



Flexplate Inspection

1. Inspect the flexplate for:
    1. any cracks.
    2. worn ring gear teeth.
    3. chipped or cracked ring gear teeth.



Cylinder Head Distortion

Special Tool(s)

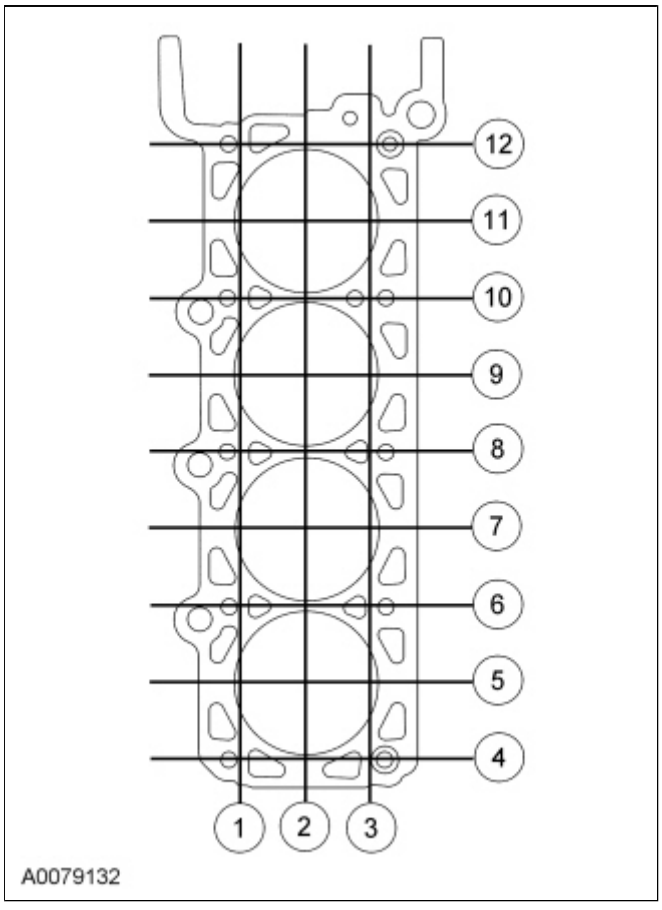
 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Make sure all cylinder head surfaces are clear of any gasket material, silicone sealant, oil and coolant. The cylinder head surface must be clean and dry before running a flatness check.

   NOTE: Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

   Using a Straightedge and a Feeler Gauge Set, inspect the cylinder head for flatness in the sequence shown.



Cylinder Block Distortion

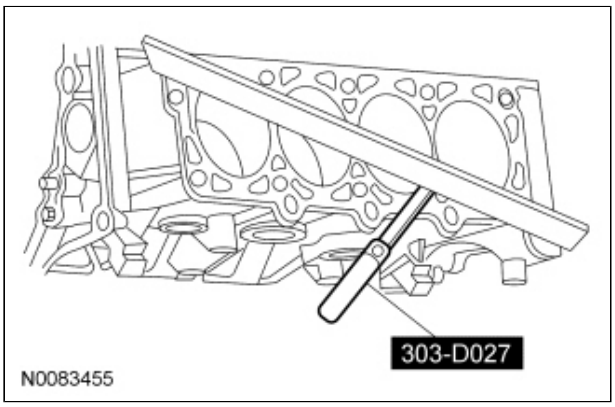
Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

   Use a Straightedge and a Feeler Gauge Set to inspect the cylinder block for flatness.



Cylinder Bore Cleaning

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C945-A

1. ***NOTICE:*** **If these procedures are not followed, rusting of the cylinder bores may occur.**

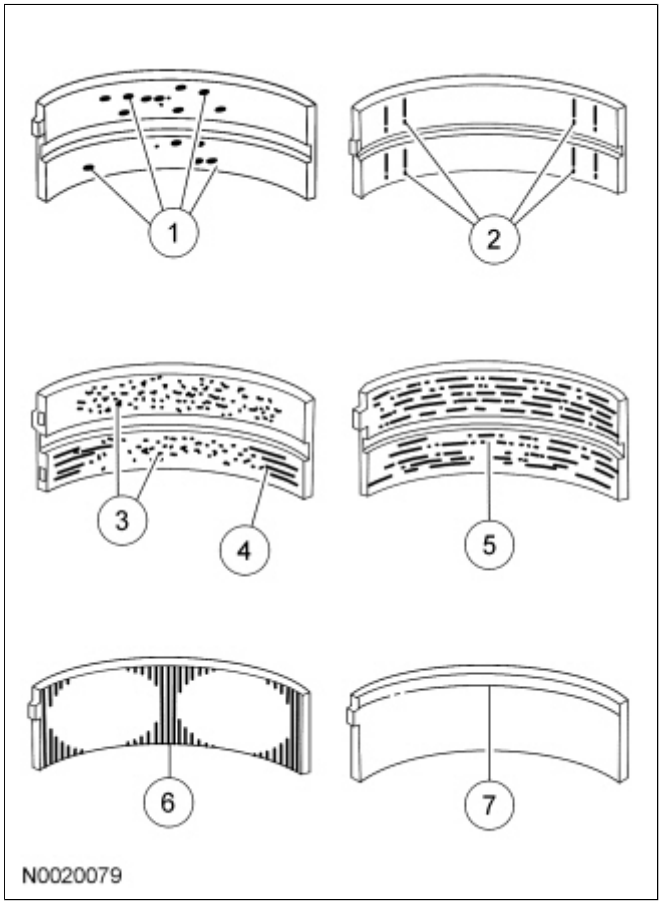
   Clean the cylinder bores with soap or detergent and water.

2. Thoroughly rinse with clean water and wipe dry with a clean, lint-free cloth.

3. Use a clean, lint-free cloth and lubricate the cylinder bores.
   - Use clean engine oil meeting Ford specification.

Bearing Inspection

1. Inspect bearings for the following defects:
    1. Cratering — fatigue failure
    2. Spot polishing — incorrect seating
    3. Imbedded dirty engine oil
    4. Scratching — dirty engine oil
    5. Base exposed — poor lubrication
    6. Both edges worn — journal damaged
    7. One edge worn — journal tapered or bearing not seated



Exhaust Manifold Cleaning and Inspection

Special Tool(s)

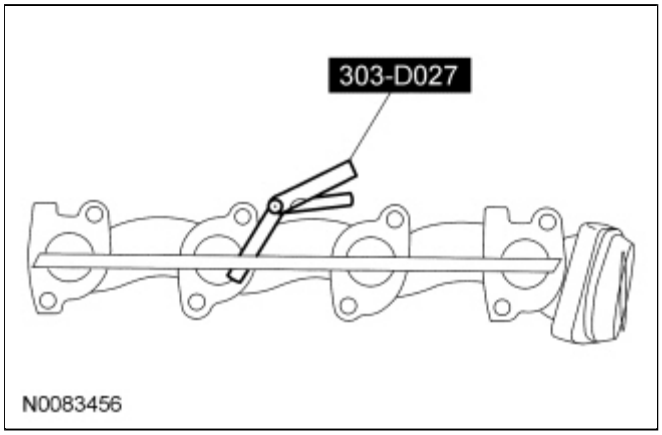
 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

1. Clean the exhaust manifold using a suitable solvent. Use a plastic scraping tool to clean the gasket sealing surfaces.

2. **NOTE:** New exhaust manifold gaskets, studs, nuts and/or bolts must be installed when an exhaust manifold is serviced.

   NOTE: Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

   Using the Straightedge and a Feeler Gauge Set, check the exhaust manifold sealing surface for warpage. If the warpage is greater than 0.76 mm (0.0299 in), install a new exhaust manifold.



Core Plug Replacement

Special Tool(s)

ST1185-A	Slide Hammer 100-001 (T50T-100-A)

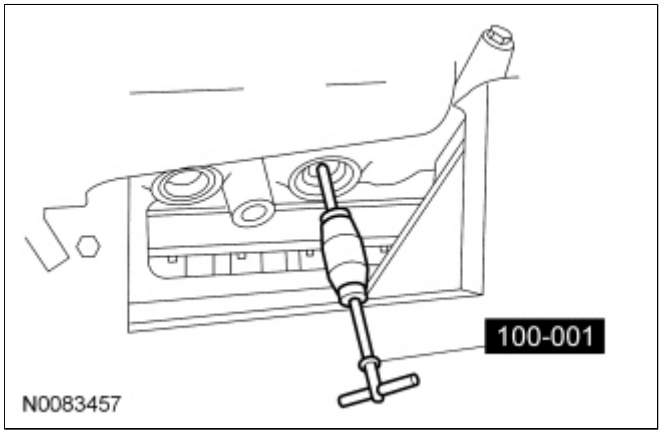
Material

Item	Specification
Threadlock 262 TA-26	WSK-M2G351-A6

All core plugs

1. **NOTE:** Cylinder block core plug shown, cylinder head core plug similar.

   Use the Slide Hammer and a freeze plug remover to remove the core plug.

2. **NOTE:** Oversize plugs are identified by the OS stamped in the flat located on the cup side of the plug.

   Inspect the core plug bore for any damage that would interfere with the correct sealing of the plug. If the core plug bore is damaged, bore for the next oversize plug.

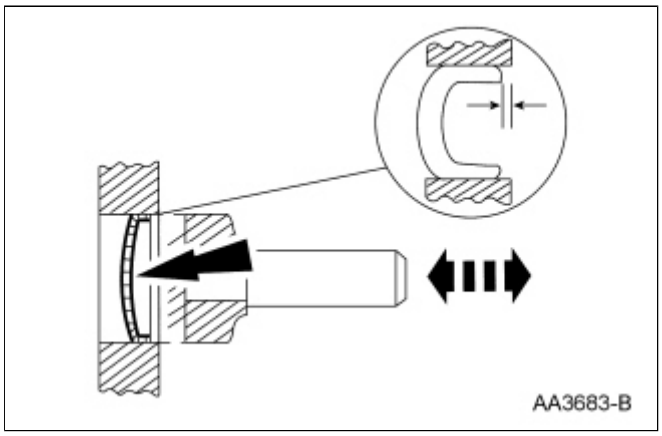
Cup-type

3. ***NOTICE:*** **Use care during this procedure so as not to disturb or distort the cup sealing surface.**

   NOTE: When installed, the flanged edge must be below the chamfered edge of the bore to effectively seal the bore.

   Coat the cup-type core plug and bore lightly with sealant and install the core plug using a freeze

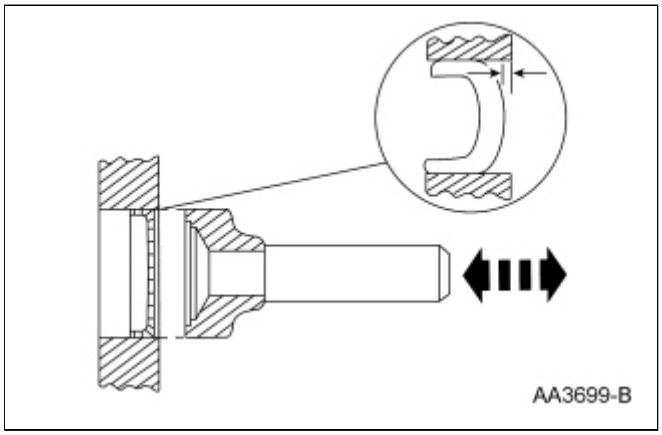
plug installer.



Expansion-type

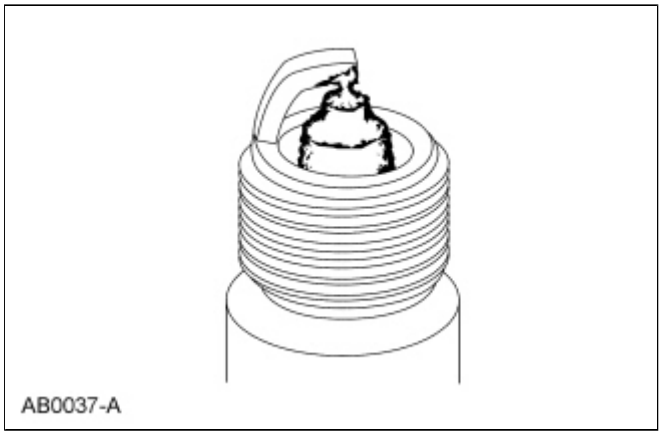
4. ***NOTICE:*** **Do not contact the crown when installing an expansion-type core plug. This could expand the plug before seating and result in leakage.**

   Coat the expansion-type core plug and bore lightly with sealant and install the core plug using a freeze plug installer.

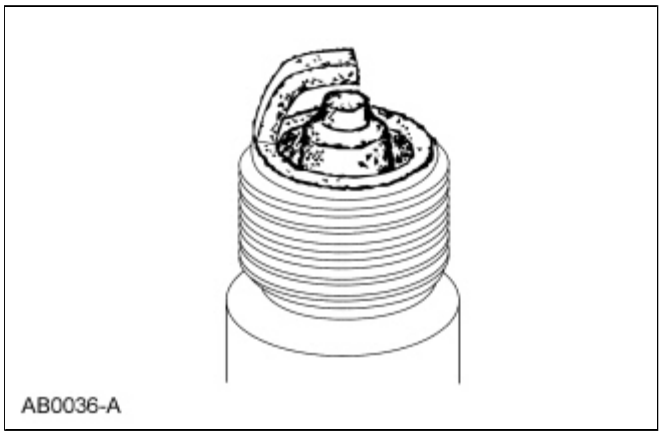


Spark Plug Inspection

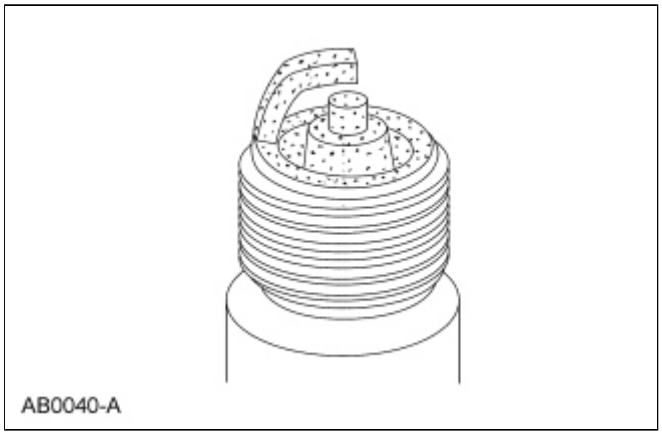
1. Inspect the spark plug for a bridged gap.
    - Check for deposit build-up closing the gap between the electrodes. Deposits are caused by oil or carbon fouling.
    - Install a new spark plug.



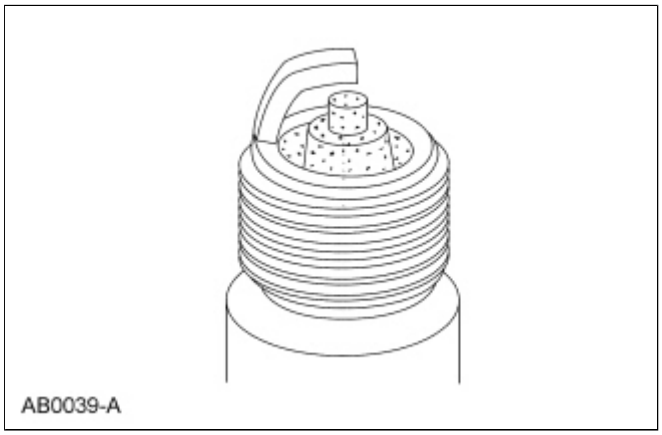
2. Check for oil fouling.
    - Check for wet, black deposits on the insulator shell bore electrodes, caused by excessive oil entering the combustion chamber through worn rings and pistons, excessive valve-to-guide clearance or worn or loose bearings.
    - Correct the oil leak concern.
    - Install a new spark plug.



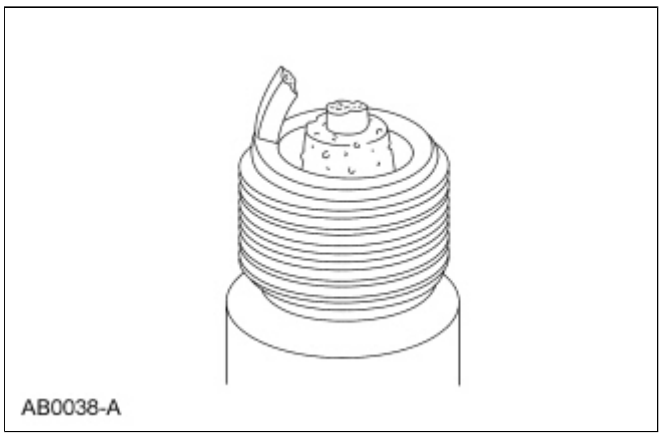
3. Inspect for carbon fouling. Look for black, dry, fluffy carbon deposits on the insulator tips, exposed shell surfaces and electrodes, caused by a spark plug with an incorrect heat range, dirty air cleaner, too rich a fuel mixture or excessive idling.
    - Install new spark plugs.



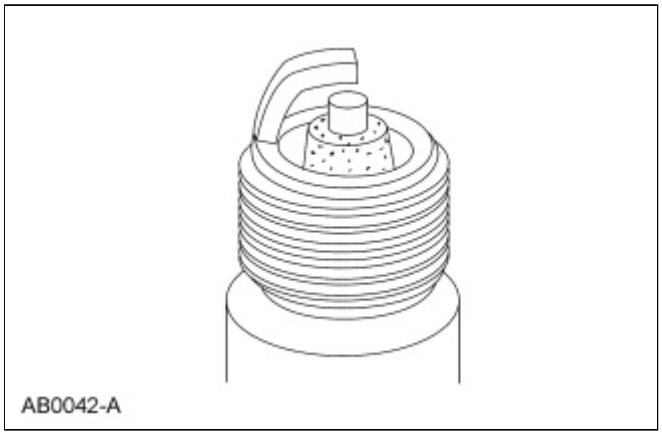
4. Inspect for normal burning.
    - Check for light tan or gray deposits on the firing tip.



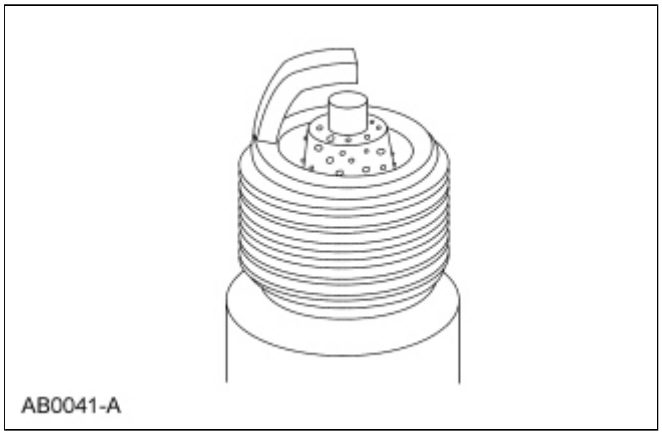
5. Inspect for pre-ignition, identified by melted electrodes and a possibly damaged insulator. Metallic deposits on the insulator indicate engine damage. This may be caused by incorrect ignition timing, wrong type of fuel or the unauthorized installation of a heli-coil insert in place of the spark plug threads.
    - Install a new spark plug.



6. Inspect for overheating, identified by white or light gray spots and a bluish-burnt appearance of electrodes. This is caused by engine overheating, wrong type of fuel, loose spark plugs, spark plugs with an incorrect heat range, low fuel pump pressure or incorrect ignition timing.
    - Install a new spark plug.

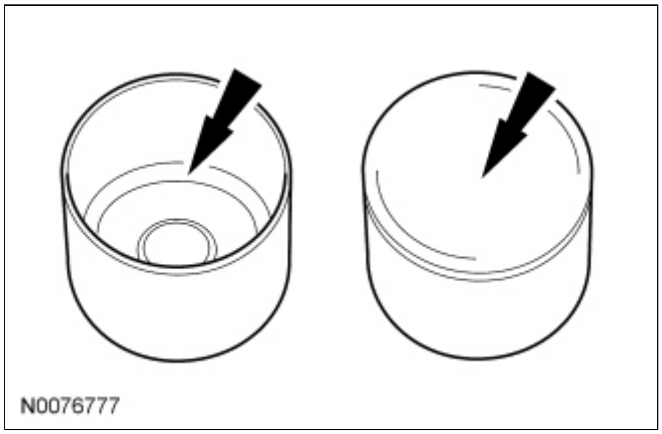


7. Inspect for fused deposits, identified by melted or spotty deposits resembling bubbles or blisters. These are caused by sudden acceleration.
    - Install new spark plugs.



Valve Tappet Inspection

1. Inspect the valve tappet for damage, especially in the indicated areas. If any damage is evident, inspect the camshaft lobes and valves for damage. Install new components as necessary.



Powertrain/Drivetrain Mount Neutralizing

NOTE: Refer to the appropriate section and procedure for special instructions on loosening and tightening mount fasteners.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Loosen, but do not remove, the powertrain/drivetrain mount fasteners.

3. Lower the vehicle.

4. ***NOTICE:*** **Do not twist or strain the powertrain/drivetrain mounts or damage to the mounts may occur.**

   Start the vehicle and move it in forward 0.6-1.2 m (2-4 ft). Then move the vehicle in reverse the same distance.

5. Raise and support the vehicle.

6. Tighten the powertrain/drivetrain mount fasteners.

7. Lower the vehicle.

8. Test the system for normal operation.

Material

Item	Specification	Fill Capacity

General Specifications

Item	Specification
Engine	
Displacement	1.6L
No. of cylinders	4
Bore/stroke	79.0/81.4 mm (3.11/3.20 in)
Firing order	1-3-4-2
Oil pressure (hot @ 800 rpm)	100 kPa (14.5 psi)
Oil pressure (hot @ 2,000 rpm)	200 kPa (29.0 psi)
Compression ratio	11:1

Engine weight — (with flexplate)	81.0 kg (178.6 lb)
Engine and transaxle weight — automatic transaxle	157.2 kg (346.6 lb)
Engine weight — (with flywheel)	90.5 kg (199.5 lb)
Engine and transaxle weight — manual transaxle	166.6 kg (367.5 lb)
Cylinder Block	
Cylinder bore diameter	79.005-79.025 mm (3.110-3.111 in)
Cylinder bore maximum out-of-round	0.008 mm (0.0003 in)
Main bearing bore diameter	54.000-54.018 mm (2.126-2.127 in)
Head gasket surface flatness	0.1 mm/general 0.05 mm/200 x 200 (0.004 in/general) (0.0019 in/7.87 x 7.87)
Piston	
Piston diameter (single grade)	78.977 - 78.991 mm (3.1093 - 3.1099 in)
Piston-to-cylinder bore clearance	0.0135 - 0.0485 mm (0.0005 - 0.0019 in)
Ring groove width — top	1.23-1.25 mm (0.048-0.049 in)
Ring groove width — 2nd	1.52-1.54 mm (0.059-0.060 in)
Ring groove width — oil	2.01-2.03 mm (0.079-0.080 in)
Piston skirt coating thickness	Tin Plating
Piston Pin	
Diameter	17.996-18.000 mm (0.7085-0.7086 in)
Length	51.0-51.3 mm (2.00-2.01 in)
Piston-to-pin clearance	0.012-0.020 mm (0.0005-0.0008 in)
Pin-to-rod clearance	Press fit
Cylinder Head	
Cylinder head flatness	0.1 mm (0.003 in) overall
Valve lift @ zero lash (exhaust)	8.6 mm (0.338 in)
Valve lift @ zero lash (intake)	8.7 mm (0.342 in)
Valve guide diameter	6.000-6.030 mm (0.242-0.244 in)
Valve seat width — intake/exhaust	1 mm ± 0.15 mm (0.039 in ± 0.006 in)
Valve seat angle	45 degrees
Valve seat runout	0.029 mm (0.001 in)
Valve tappet bore diameter	28.8-29.2 mm (1.13-1.15 in)
Cam bore diameter	25.0-25.03 mm (0.98-.099 in)
Valve	
Valve head diameter — intake	30.1 mm ± 0.15 mm (1.18 in ± 0.006 in)
Valve head diameter — exhaust	24.1 mm ± 0.15 mm (0.95 in ± 0.006 in)
Valve stem diameter — intake	5.968 mm ± 0.0075 mm (0.235 in ± 0.0003 in)
Valve stem diameter — exhaust	5.958 mm ± 0.0075 mm (0.234 in ± 0.0003 in)
Valve stem-to-guide clearance — intake	0.0245-0.0695 mm (0.0010-0.0027 in)
Valve stem-to-guide clearance — exhaust	0.0295-0.0745 mm (0.0011-0.003 in)
Valve face runout	0.03 mm (0.001 in)

Valve face angle	44.5 degrees ± 0.15 mm (0.005 in)
Valve Spring — Compression Pressure	
Intake and exhaust (installed)	180 N ± 11 N
Intake (valve open) 8.9 mm (0.35 in) of lift	320 N ± 20 N
Exhaust (valve open) 8.94 mm (0.351 in) of lift	320 N ± 20 N
Free length	48.7 mm ± 0.8 mm (1.92 in ± 0.031 in)
Assembled height	35.60 mm (1.401 in)
Crankshaft	
Main bearing journal diameter	47.980-48.000 mm (1.888-1.889 in)
Production repair	47.730-47.750 mm (1.878-1.879 in)
Main bearing clearance	0.024-0.044 mm (0.0009-0.0017 in)
Connecting rod journal diameter	43.980-44.000 mm (1.731-1.732 in)
Production repair	43.730-43.750 mm (1.721-1.722 in)
End play	0.2-0.43 mm (0.008-0.017 in)
Rings	
Width — top	1.19-1.23 mm (0.0468-0.0484 in)
Width — 2nd	1.495-1.53 mm (0.059-0.060 in)
Width — oil	2 mm (0.078 in)
Ring gap (in bore) — top	0.16-0.26 mm (0.0062-0.0102 in)
Ring gap (in bore) — 2nd	0.7-0.9 mm (0.0275-0.0295 in)
Ring gap (in bore) — oil	0.2-0.9 mm (0.0078-0.0295 in)
Valve Tappet	
Diameter	27.965-27.980 (1.100-1.101 in)
Tappet-to-valve clearance — intake	0.17-0.23 mm (0.007-0.009 in)
Tappet-to-valve clearance — exhaust	0.31-0.37 mm (0.012-0.015 in)
Tappet-to-bore clearance	0.020-0.065 mm (0.0008-0.0025 in)
Camshaft	
End play	0.07-0.20 mm (0.003-0.008 in)
Lobe lift — intake	8.9 mm (0.35 in)
Lobe lift — exhaust	8.94 mm (0.351 in)
Runout (1) [a]	0.02 mm (0.0008 in)
Thrust clearance	30.960-30.980 mm (1.21-1.22 in)
Journal diameter	24.97 mm ± 0.01 mm (0.98 in ± 0.0004 in)
Journal-to-bore clearance	0.020-0.070 mm (0.0008-0.0027 in)
Connecting Rod	
Running clearance	0.024-0.044 mm (0.0009-0.0017 in)
Bearing clearance	0.024-0.044 mm (0.0009-0.0017 in)
Bearing thickness (grade 1)	1.499-1.506 mm (0.0590-0.0592 in)
Bearing thickness (grade 2)	1.506-1.513 mm (0.0592-0.0595 in)
Bearing thickness (grade 3)	1.513-1.520 mm (0.0595-0.0598 in)

Bearing thickness (grade 4)	1.520-1.527 mm (0.0598-0.0601 in)
Crank bore diameter	47.025-47.045 mm (1.851-1.852 in)
Pin bore diameter	17.965-17.985 mm (0.7072-0.7080 in)
Length (center to center)	137 mm (5.393 in)

[a] No. 3 Journal — Supported by No. 1 and No. 5 journals.

Timing belt tensioner bolt	25	18	—
Transaxle fill plug	35	26	—
Transaxle support insulator bolts	90	66	—

Transaxle support insulator nuts	125	92	—
Transaxle roll-restrictor bolts	70	52	—
Valve cover retainers [a]	—	—	—
Variable Camshaft Timing (VCT) bridge bolts [a]	—	—	—
VCT solenoid bolts	8	—	71
Windage tray bolts	9	—	80

[a] Refer to the procedure in this section.

Engine

The 1.6L 4-cylinder engine has the following features:

- Dual overhead camshaft
- Four valves per cylinder
- Sequential Multi-Port Fuel Injection (SFI)
- Aluminum cylinder head
- Aluminum cylinder block
- Twin independent Variable Camshaft Timing (VCT) system
-

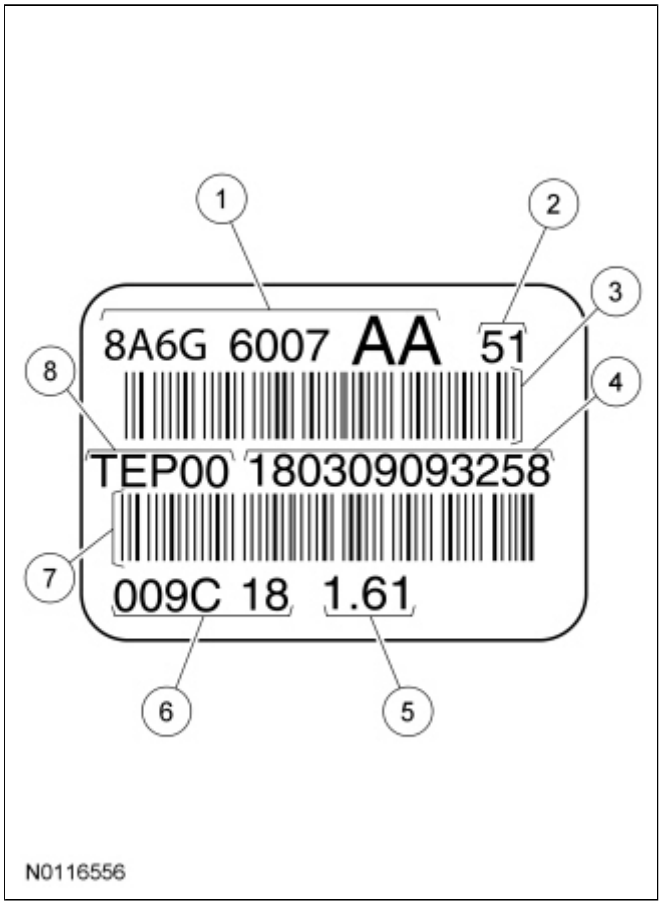
The 1.6L engine is a 4 valve-per-cylinder, dual overhead camshaft engine. The engine uses an ignition coil and spark plug wires. The cylinder block is made of aluminum and the bearing caps are integrated into the ladder assembly. An aluminum oil pan bolts to the bottom of the lower cylinder block and to the transmission to provide greater strength. The camshafts are mounted in the cylinder head and act against valve tappets to open and close the valves. The camshafts are driven off the front of the cylinder head by one timing belt. The belt is driven by a sprocket that is located on the crankshaft. The piston assembly is an aluminum piston with a sinter forged carbon steel connecting rod. The oil pump is driven by the crankshaft.

Engine Identification

Always refer to these labels when installation of new parts is necessary or when checking engine calibrations. The engine parts often differ within a CID family. Verification of the identification codes will make sure the correct parts are obtained. These codes contain all the pertinent information relating to the dates, optional equipment and revisions.

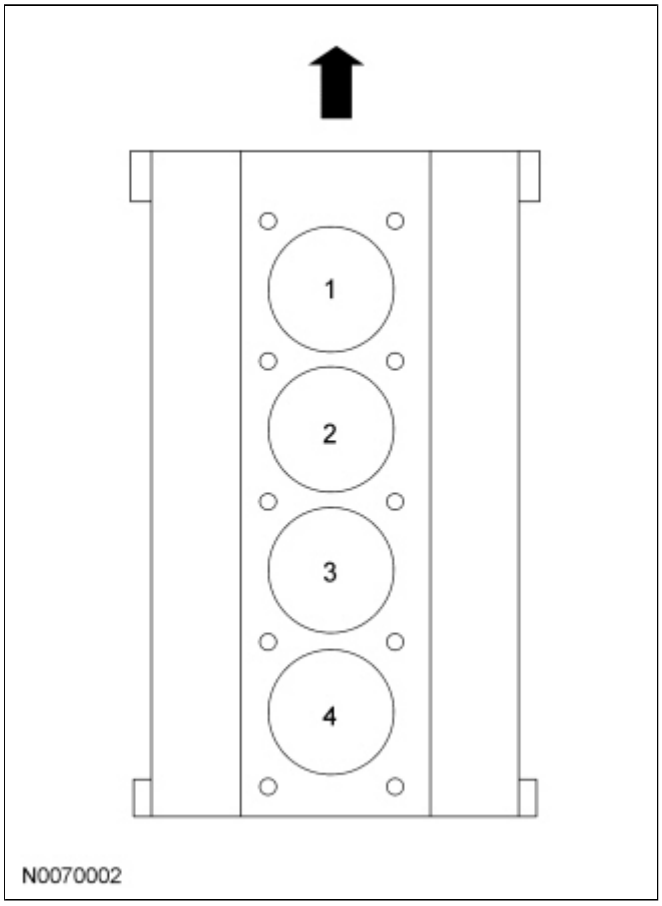
Engine Code Information Label

The engine code information label, located on the front side of the timing cover, contains the following:



Item	Description
1	Engine part number
2	Derivative of build
3	Bar code
4	Engine build date and time
5	Engine displacement
6	Engine build date (YYMMDD)
7	Bar code
8	Plant code (Taubate)

Engine Cylinder Identification



Exhaust Emission Control System

Operation and necessary maintenance of the exhaust emission control devices used on this engine are covered in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Induction System

The SFI provides the fuel/air mixture needed for combustion in the cylinders. The 4 solenoid-operated fuel injectors:

- are mounted in the cylinder head.
- meter fuel into the air intake stream in accordance with engine demand.
- are positioned so that their tips direct fuel just ahead of the engine intake valves.
- supply fuel from the fuel tank with a fuel pump mounted in the fuel tank.

Twin Independent Variable Camshaft Timing (VCT) System

The twin independent VCT system allows variable control of intake valve closing which optimizes combustion at full load providing improved power and low speed torque (broadening the torque curve) which enables variable valve overlap which provides better fuel economy and emissions and provides optimized cold start operation with improved exhaust emissions.

PCV System

All engines are equipped with a closed-type PCV system recycling the crankcase vapors to the intake manifold.

Lubrication System

The engine lubrication system operates as follows:

- Oil is drawn into the oil pump through the oil pump screen cover and tube in the sump of the oil pan.
- Oil is pumped through the oil filter on the left front side of the cylinder block and is cooled by an oil cooler.
- Oil enters the main gallery where it is distributed to the crankshaft main journals and to the cylinder head.
- From the main journals, the oil is routed through cross-drilled passages in the crankshaft to lubricate the connecting rod bearings. Controlled leakage through the crankshaft main bearings and connecting rod bearings is slung radially outward to cool and lubricate the cylinder walls as well as the entire connecting rod, piston and piston ring assembly.

Engine

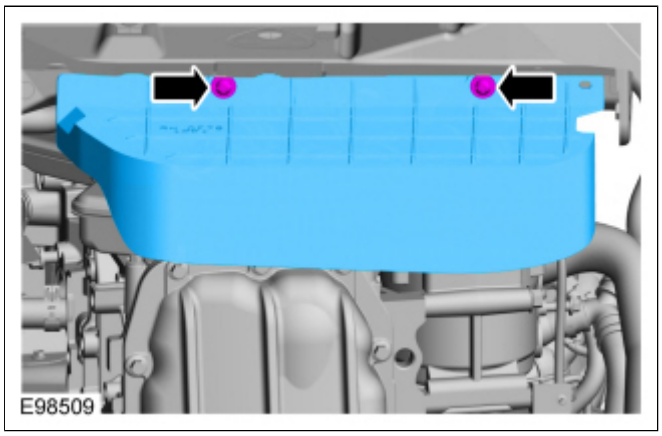
Refer to Section 303-00 for basic mechanical concerns or refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for driveability concerns.

Valve Clearance Check

1. Remove the valve cover. For additional information, refer to Valve Cover in this section.

2. Remove the 4 spark plugs. For additional information, refer to Section 303-07 .

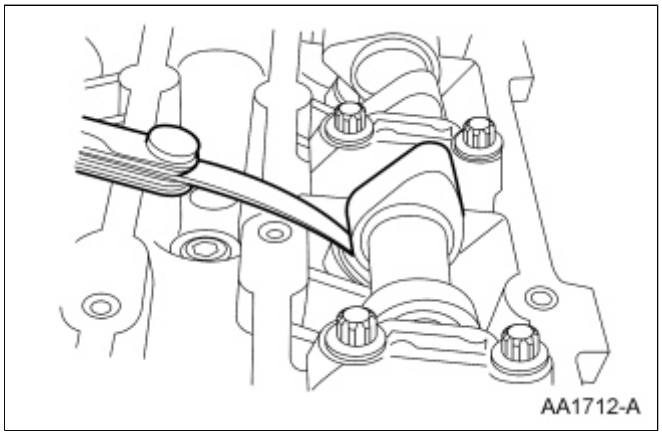
3. Remove the 2 bolts and accessory drive belt splash shield.
   - To install, tighten to 9 Nm (80 lb-in).



4. **NOTE:** Turn the engine clockwise only, and use the crankshaft bolt only.

   NOTE: Measure each valve's clearance at base circle, with the lobe pointed away from the tappet, before removing the camshafts. Failure to measure all clearances prior to removing the camshafts will necessitate repeated removal and installation and wasted labor time.

   Use a feeler gauge to measure each valve's clearance and record its location.



5. **NOTE:** The number on the valve tappet only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.

   NOTE: The nominal clearance is 0.20 mm (0.0079 in) for intake and 0.34 mm (0.0133 in) for exhaust.

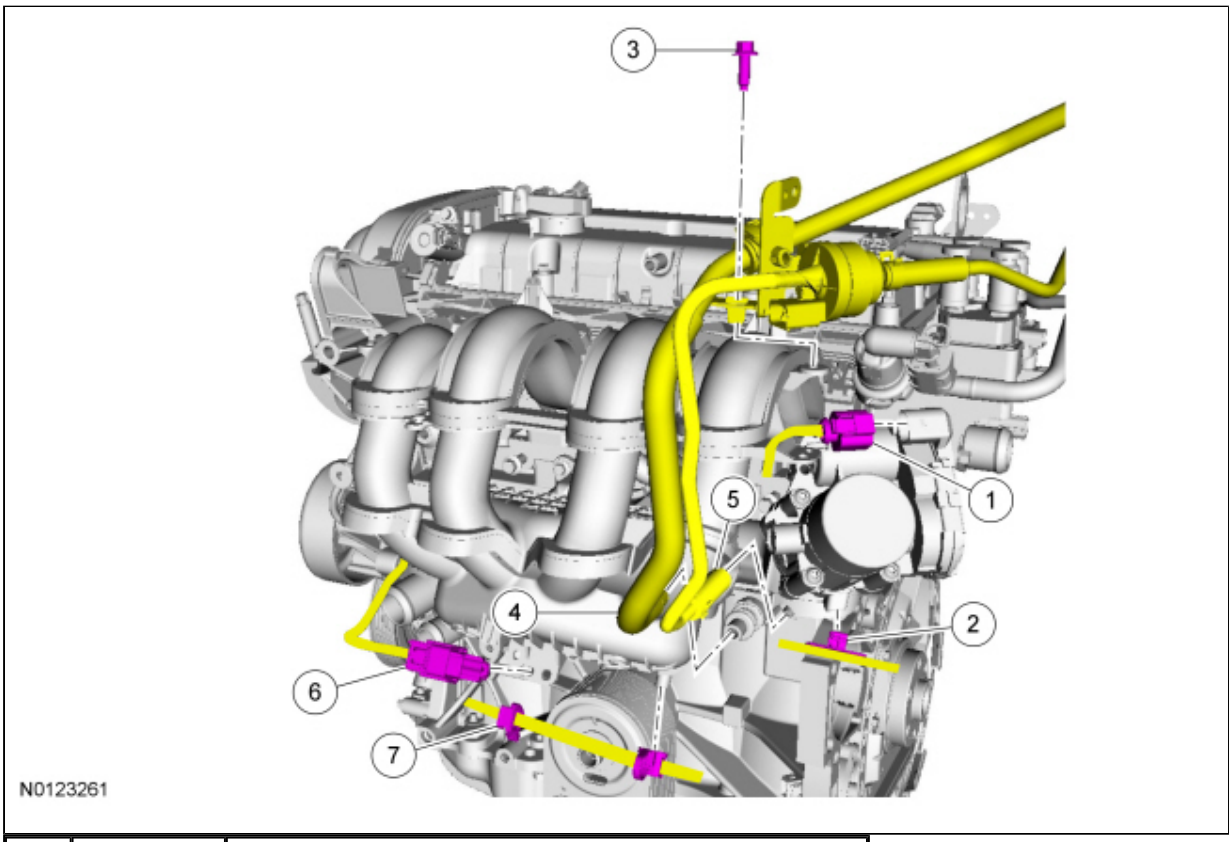
   NOTE: The acceptable clearances after being fully installed is 0.17-0.23 mm (0.007-0.009 in) for intake and 0.31-0.37 mm (0.012-0.015 in) for exhaust.

Select tappets using this formula: tappet thickness = measured clearance + the existing tappet thickness - nominal clearance.
Select the closest tappet size to the ideal tappet thickness available and mark the installation location.

6. If any tappets do not measure within specifications, install new tappets in these locations. For additional information, refer to Valve Train Components — Exploded View and Valve Tappets in this section.

Intake Manifold

Intake Manifold (View 1 of 2)

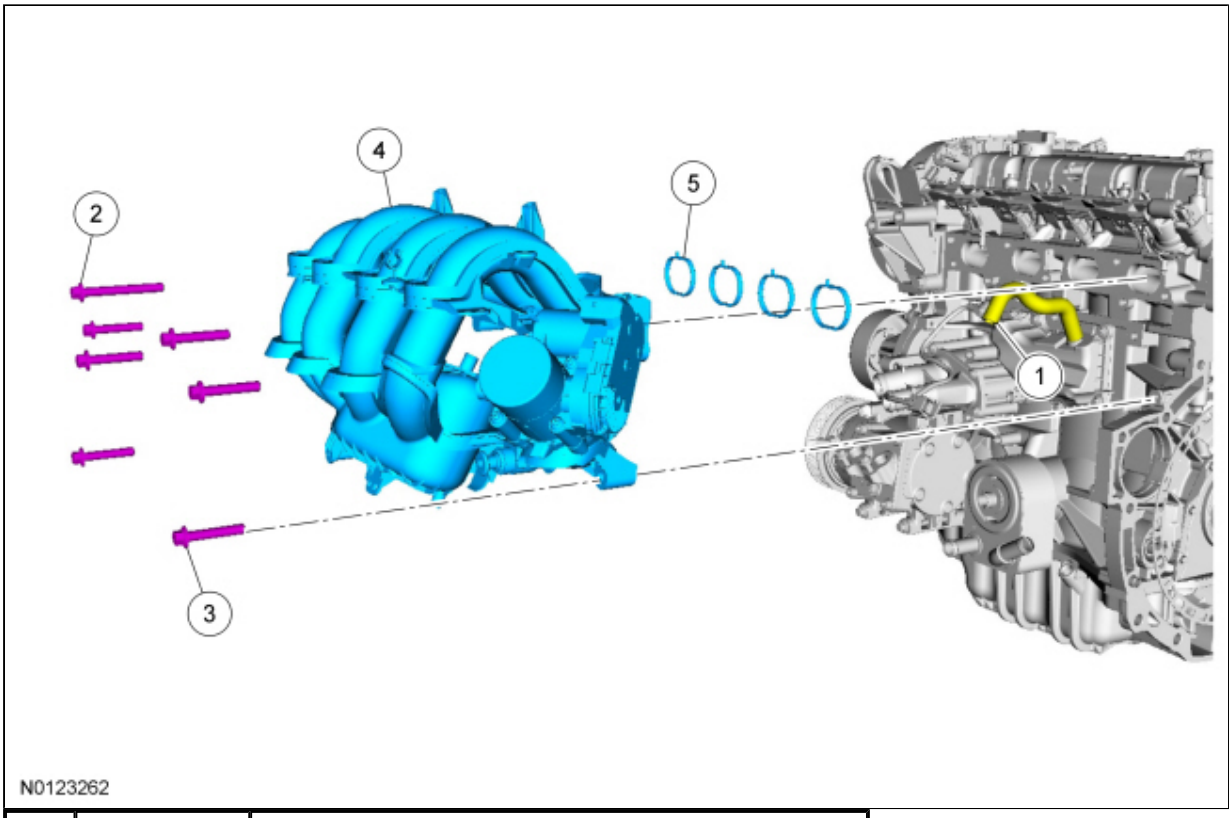


Item	Part Number	Description
1	—	Throttle Body (TB) electrical connector (part of 12A581)
2	—	TB wiring harness retainer (part of 12A581)
3	W500213	Evaporative Emission (EVAP) canister purge valve bolt - 9 Nm (80 lb-in)
4	9C490	Brake booster vacuum tube
5	9C047	EVAP canister purge valve tube
6	—	Knock Sensor (KS) electrical connector (part of 12A581)
7	—	Wiring harness retainer (part of 12A581) (2 required)

Intake Manifold (View 2 of 2)

NOTE: Refer to the on-line Workshop Manual to view this illustration as an interactive exploded view, requires Adobe® Acrobat® 8.0 or higher.

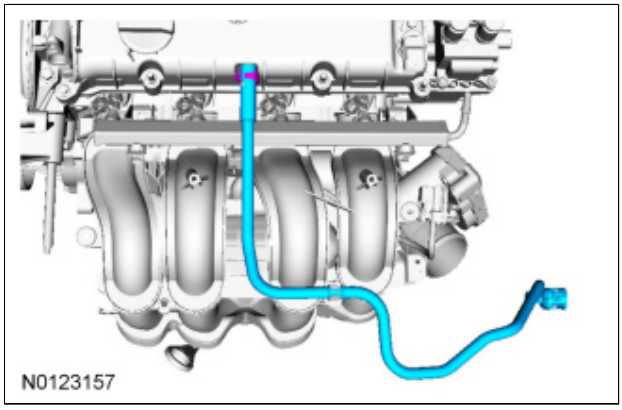
NOTE: Refer to the on-line Workshop Manual to learn about using an Interactive Illustration.



Item	Part Number	Description
1	6N664	PCV hose
2	W500117	Intake manifold bolt - 18 Nm (159 lb-in)
3	W500112	Intake manifold bolt (7 required) - 18 Nm (159 lb-in)
4	9424	Intake manifold
5	9439	Intake manifold gasket (4 required)

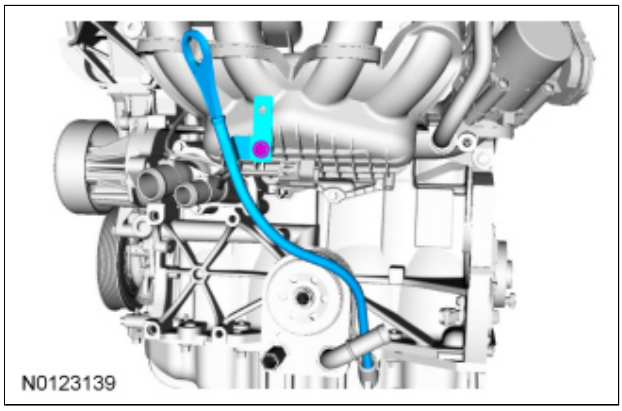
Removal

1. Remove the air cleaner outlet tube. For additional information, refer to Section 303-12 .
2. Disconnect the crankcase vent tube from the valve cover.
   - Detach the 2 crankcase vent tube retainers.

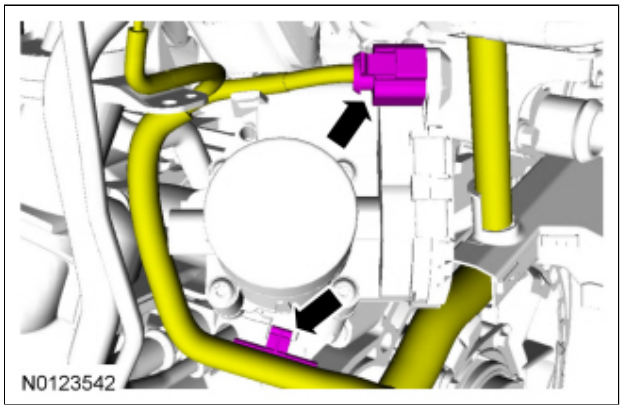


3. Remove the fuel rail. For additional information, refer to Section 303-04 .
4. Remove the generator. For additional information, refer to Section 414-00 .
5. Remove the screw and the oil level indicator and tube.

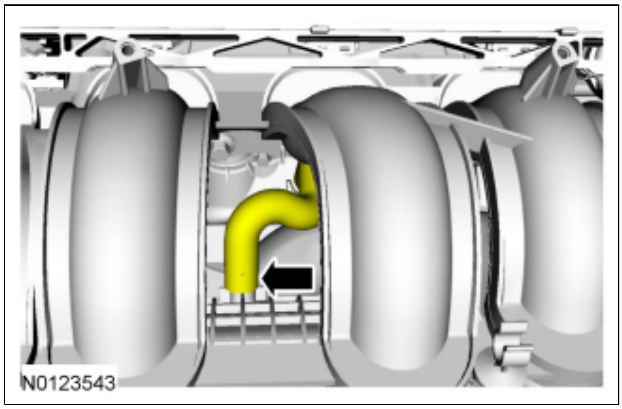
- Inspect and replace the O-ring seal, if necessary.



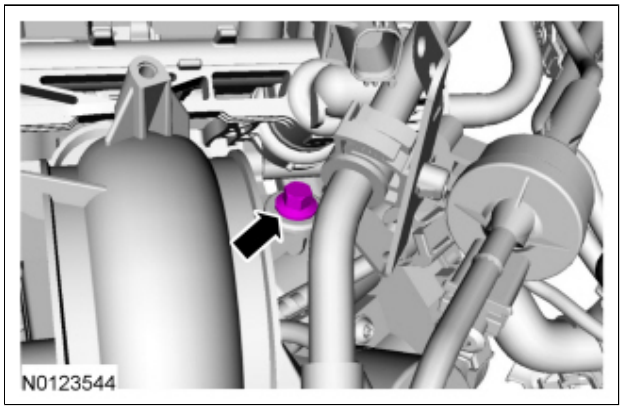
6. Disconnect the Throttle Body (TB) electrical connector.
   - Detach the wiring harness retainer from the TB .



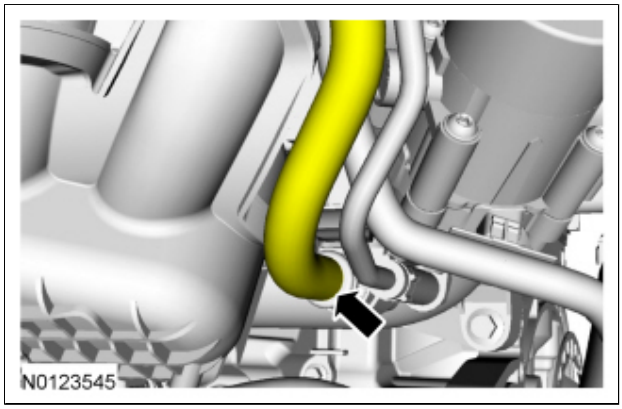
7. Disconnect the PCV hose from the intake manifold.



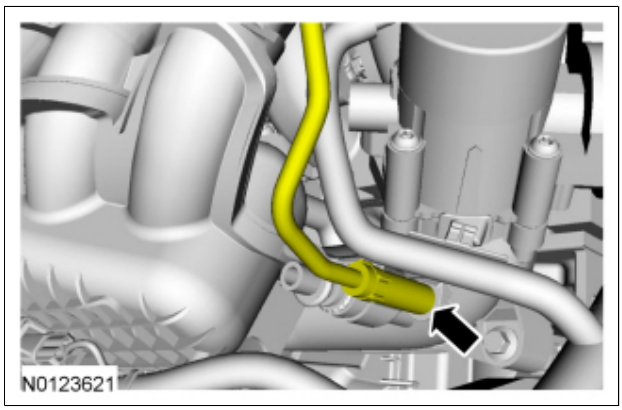
8. Remove the bolt for the Evaporative Emission (EVAP) canister purge valve.



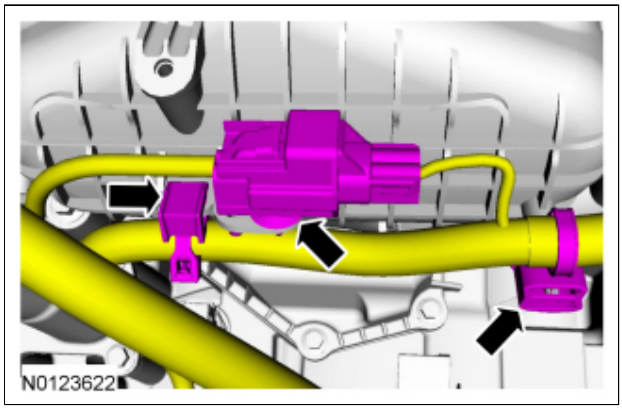
9. Disconnect the brake booster vacuum tube from the intake manifold.



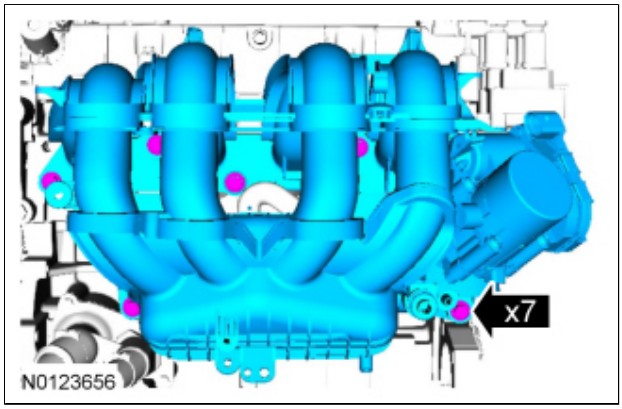
10. Disconnect the EVAP canister purge valve tube from the intake manifold and position the EVAP canister purge valve aside.



11. Detach the Knock Sensor (KS) electrical connector from the bottom of the intake manifold.
    - Detach the 2 wiring harness retainers from the bottom of the intake manifold.



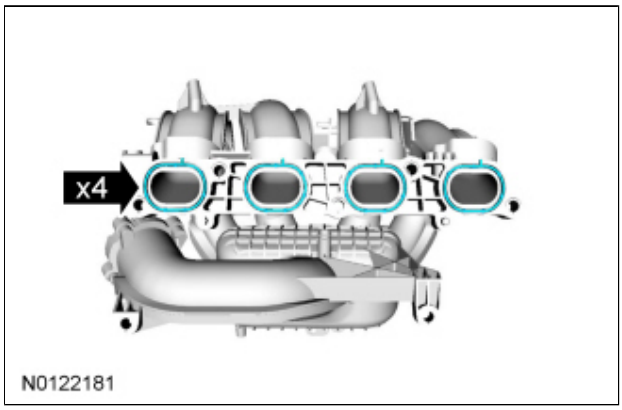
12. Remove the 7 bolts for the intake manifold.



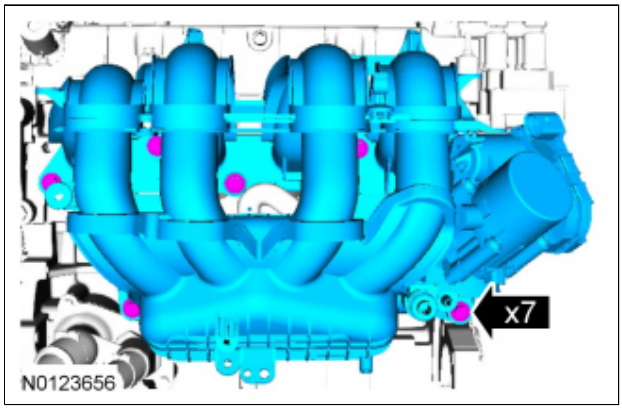
Installation

NOTICE: **If the engine is repaired or replaced because of upper engine failure, typically including valve or piston damage, check the intake manifold for metal debris. If metal debris is found, install a new intake manifold. Failure to follow these instructions can result in engine damage.**

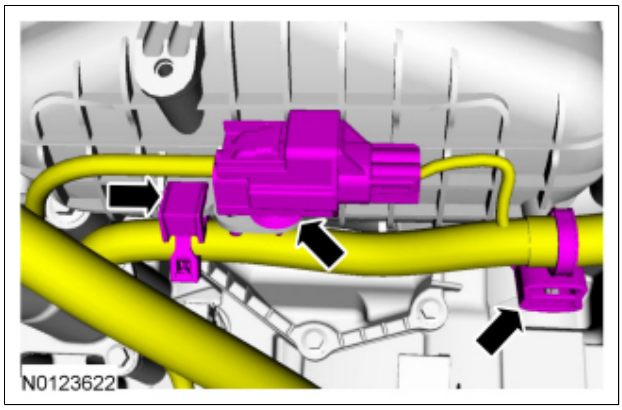
1. Inspect and install new intake manifold gaskets, if necessary.



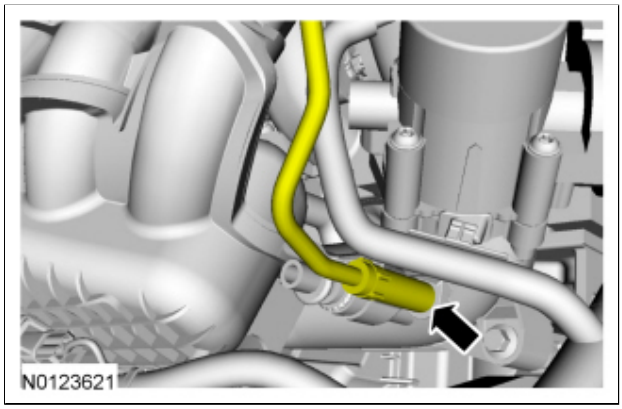
2. Install the intake manifold and the 7 bolts.
   - Tighten to 18 Nm (159 lb-in).



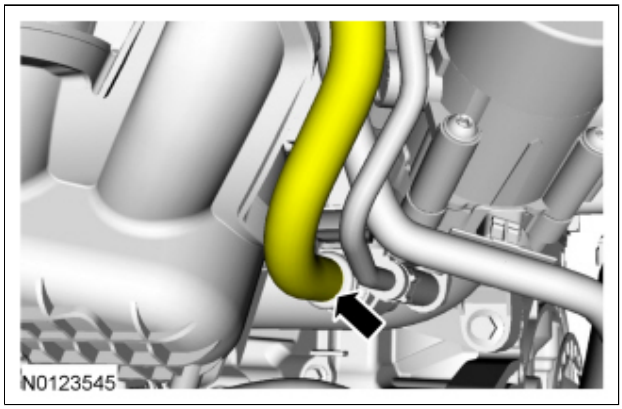
3. Attach the KS electrical connector to bottom of the intake manifold.
    - Attach the 2 wiring harness retainers to the bottom of the intake manifold.



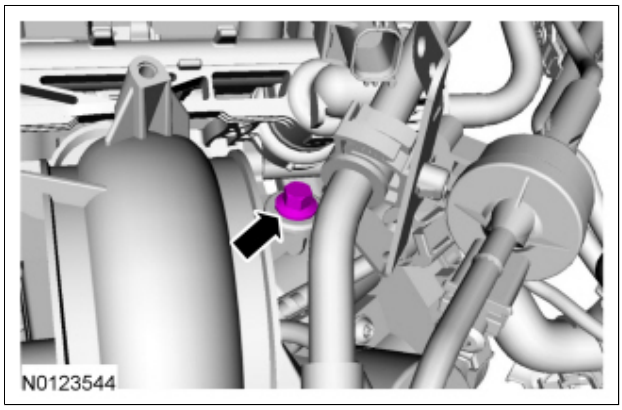
4. Position and connect the EVAP canister purge valve tube to the intake manifold.



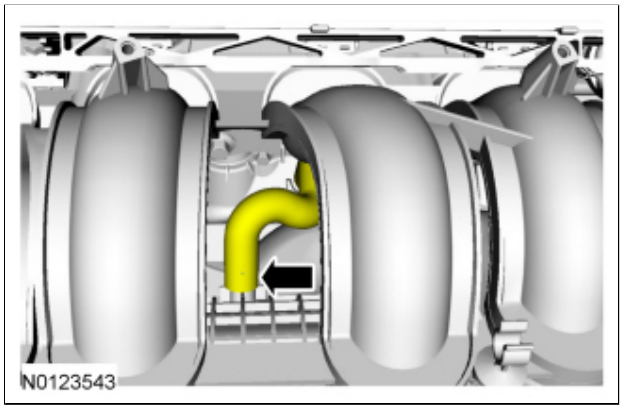
5. Connect the brake booster vacuum tube to the intake manifold.



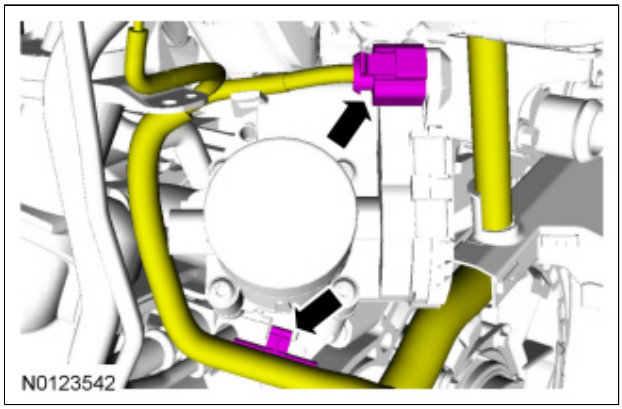
6. Install the bolt for the EVAP canister purge valve.
    - Tighten to 9 Nm (80 lb-in).



7. Connect the PCV hose to the intake manifold.

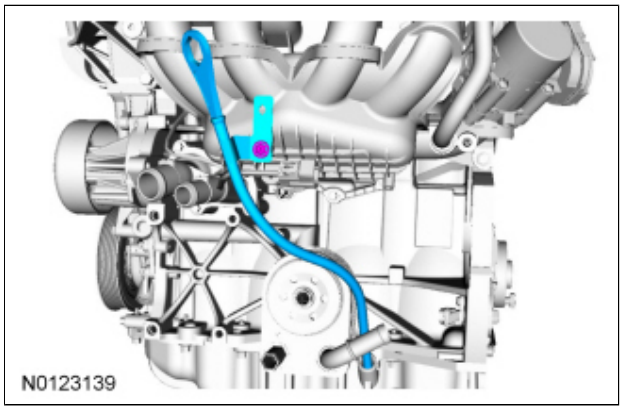


8. Connect the TB electrical connector.
    - Attach the wiring harness retainer to the TB .



9. **NOTE:** Lubricate the O-ring seal with clean engine oil.

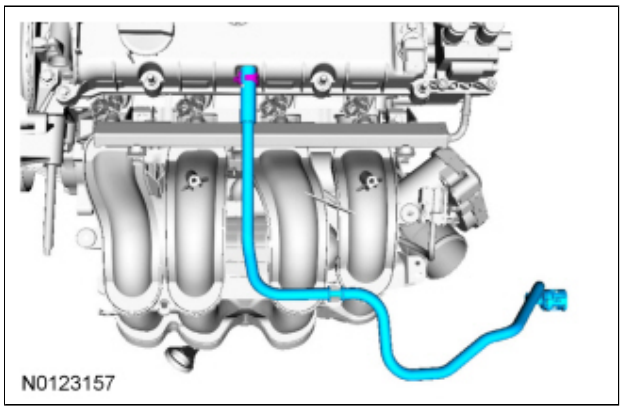
   Install the oil level indicator and tube and the screw.
   - Tighten to 4 Nm (35 lb-in).



10. Install the generator. For additional information, refer to Section 414-00 .

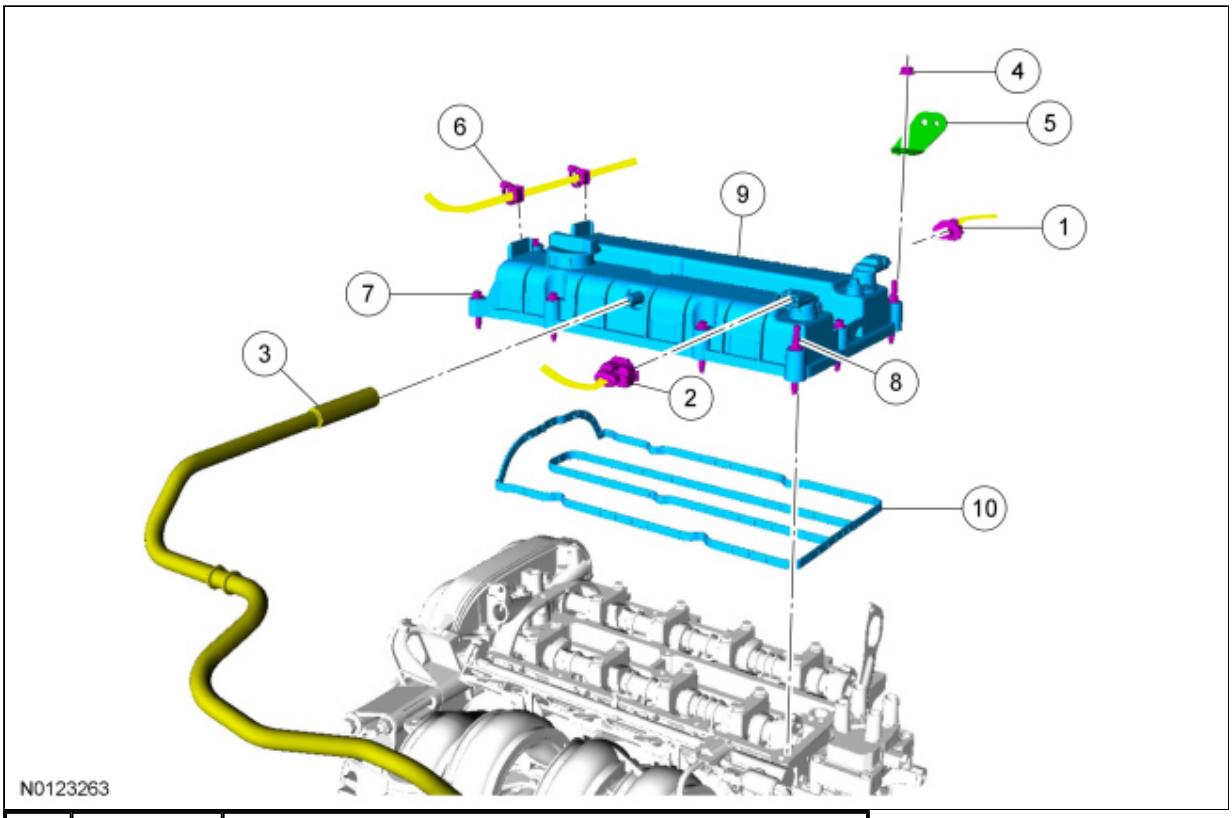
11. Install the fuel rail. For additional information, refer to Section 303-04 .

12. Connect the crankcase vent tube to the valve cover.
    - Attach the 2 crankcase vent tube retainers.



13. Install the air cleaner outlet tube. For additional information, refer to Section 303-12 .

Valve Cover



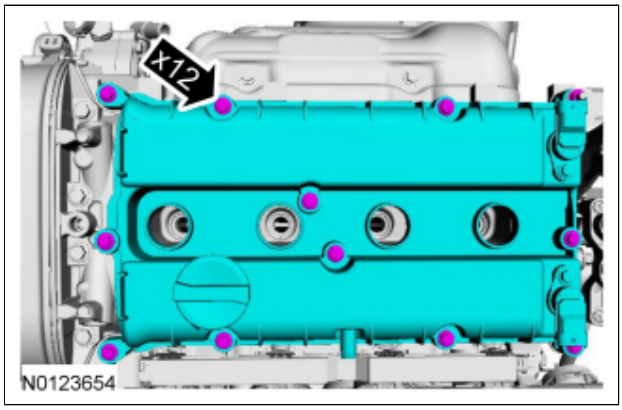
Item	Part Number	Description
1	—	Exhaust Camshaft Position (CMP) sensor electrical connector (part of 12A581)
2	—	Intake CMP sensor electrical connector (part of 12A581)
3	6A664	Crankcase vent tube
4	W520412	Heated Oxygen Sensor (HO2S) connector bracket nut - 8 Nm (71 lb-in)
5	14A163	HO2S connector bracket
6	—	Wiring harness retainer (part of 12A581) (2 required)
7	—	Valve cover bolt (8 required) (part of 6M293) - 9 Nm (80 lb-in)
8	—	Valve cover stud bolt (4 required) (part of 6M293) - 9 Nm (80 lb-in)
9	6582	Valve cover
10	6584	Valve cover gasket

Removal

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

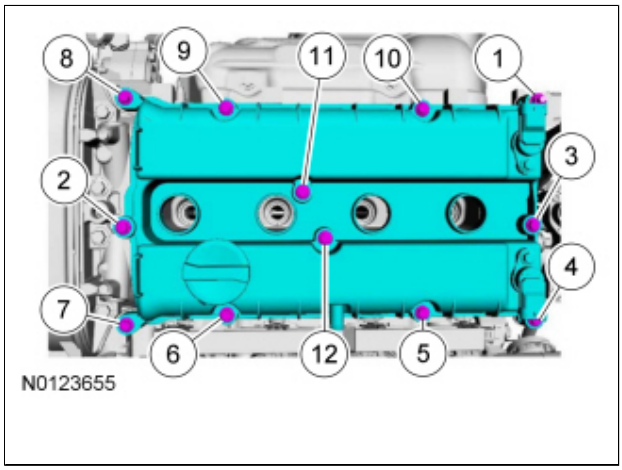
NOTICE: **Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths.**

1. Remove the 2 Variable Camshaft Timing (VCT) oil control solenoids. For additional information, refer to Section 303-14 .
2. Disconnect the 2 Camshaft Position (CMP) sensor electrical connectors.
3. Remove the spark plug wires. For additional information, refer to Section 303-07 .
4. Disconnect the crankcase vent tube from the valve cover.
5. Remove the nut and the Heated Oxygen Sensor (HO2S) electrical connector bracket.
6. Detach all the wiring harness retainers from the valve cover.
7. Loosen the 12 retainers and remove the valve cover.
    - Discard the gasket.



Installation

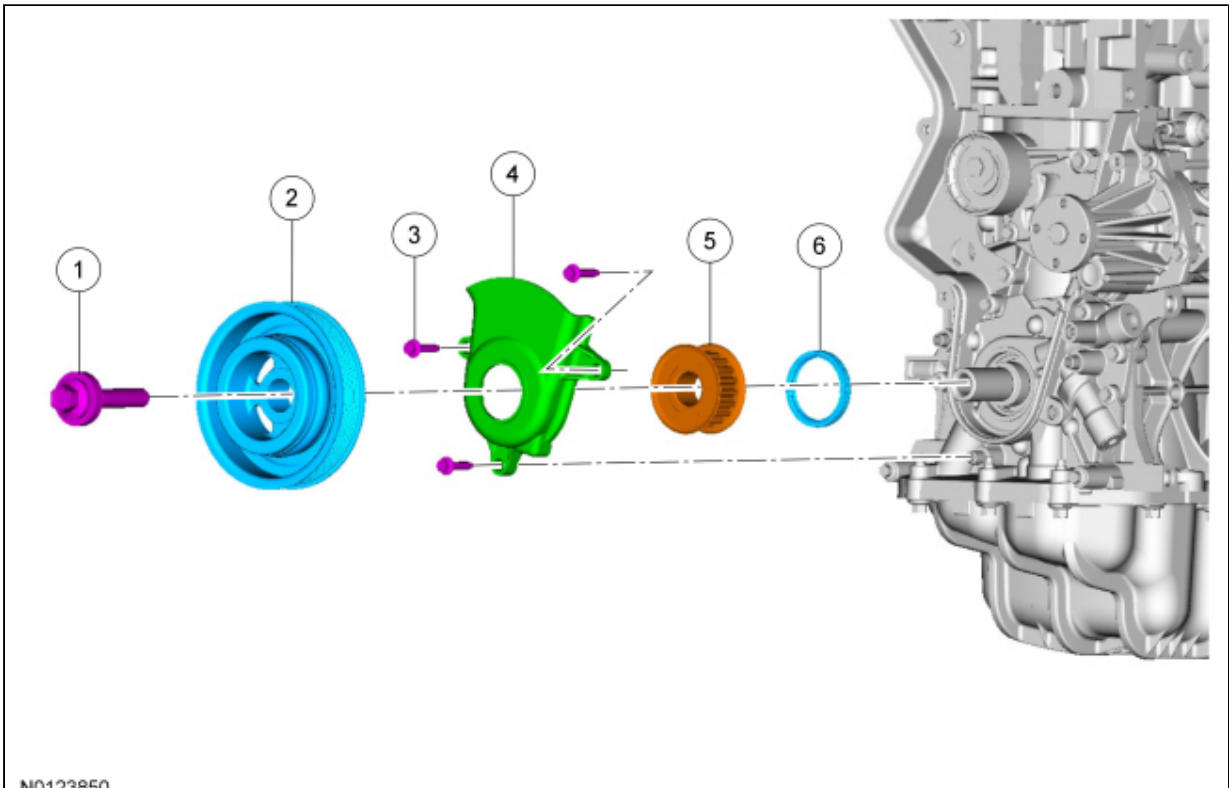
1. Using a new gasket, install the valve cover and tighten the retainers in sequence shown.
    - Tighten to 9 Nm (80 lb-in).



2. Attach all the wiring harness retainers to the valve cover.
3. Install the Heated Oxygen Sensor (HO2S) electrical connector bracket and nut.
    - Tighten to 8 Nm (71 lb-in).
4. Connect the crankcase vent tube to the valve cover.
5. Install the spark plug wires. For additional information, refer to Section 303-07 .
6. Connect the Camshaft Position (CMP) sensor electrical connectors.

7. Install the 2 Variable Camshaft Timing (VCT) oil control solenoids. For additional information, refer to Section 303-14 .

Crankshaft Pulley and Crankshaft Front Seal — Exploded View



Item	Part Number	Description
1	6A340	Crankshaft pulley bolt
2	6312	Crankshaft pulley
3	W500215	Lower timing belt cover bolt (3 required)
4	6019	Lower timing belt cover
5	6306	Crankshaft sprocket gear
6	6700	Crankshaft front seal

Removal and Installation

1. Refer to the procedures and/or exploded views in this section for any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Crankshaft Pulley

Special Tool(s)

 ST2425-A	Engine Support Bar 303-F072
 ST1595-A	Lifting Bracket, Engine 303-050 (T70P-6000)
 ST3262-A	Pin, Crankshaft Top Dead Center (TDC) 303-748
ST3261-A	Tool, Variable Camshaft Timing (VCT) Alignment 303-1097
ST1438-A	Strap Wrench 303-D055 (D85L-6000-A) or equivalent

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

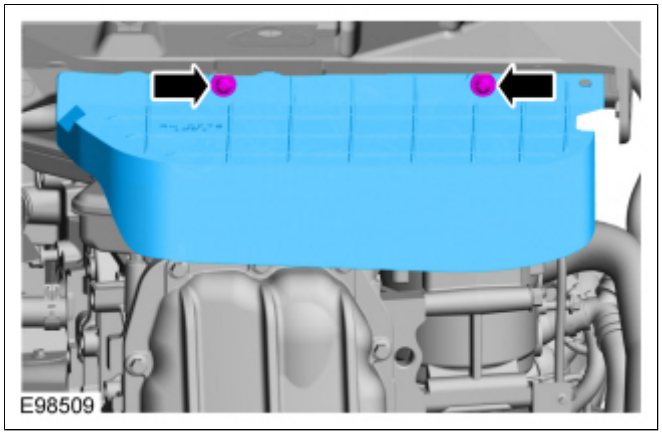
Removal

NOTICE: **Do not loosen or remove the crankshaft pulley bolt without first installing the special tools. The crankshaft pulley and the crankshaft timing sprocket are not keyed to the crankshaft. Before any repair requiring loosening or removal of the crankshaft pulley bolt, the crankshaft and camshafts must be locked in place by the special service tools, otherwise severe engine**

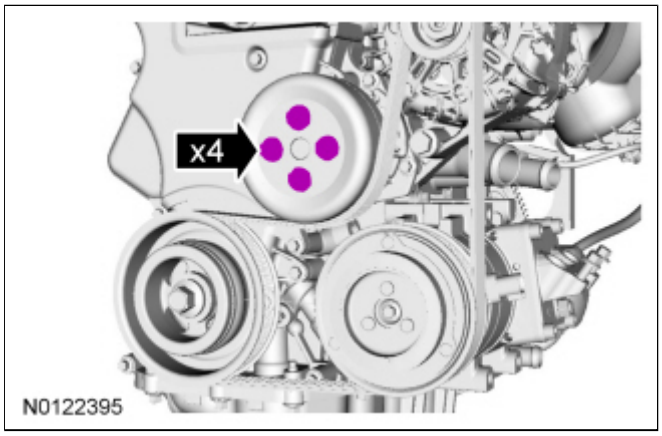
damage can occur.

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

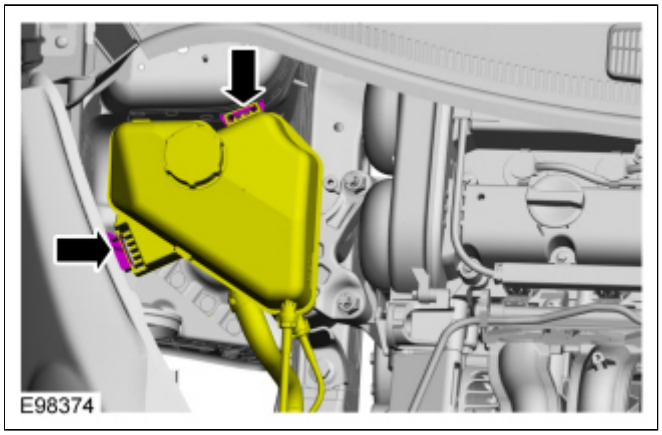
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the upper and lower cowl panel grilles. For additional information, refer to Section 501-02 .
3. Remove the RH front wheel and tire. For additional information, refer to Section 204-04 .
4. Remove the 2 bolts and accessory drive belt splash shield.



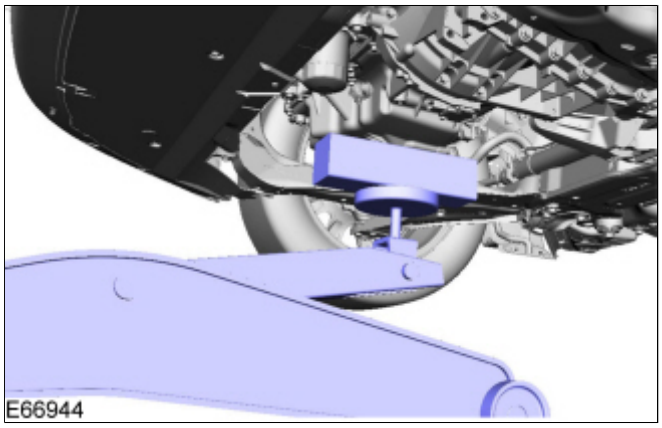
5. Loosen the 4 coolant pump bolts.



6. Remove the generator. For additional information, refer to Section 414-00 .
7. Release the 2 tabs and position the degas bottle aside.



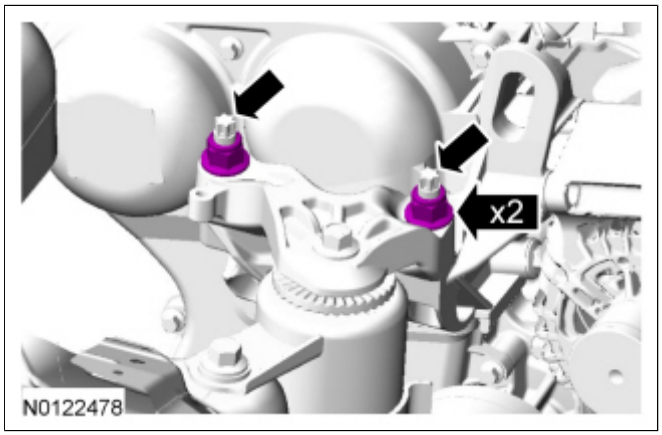
8. Using a floor jack and a block of wood, support the engine.



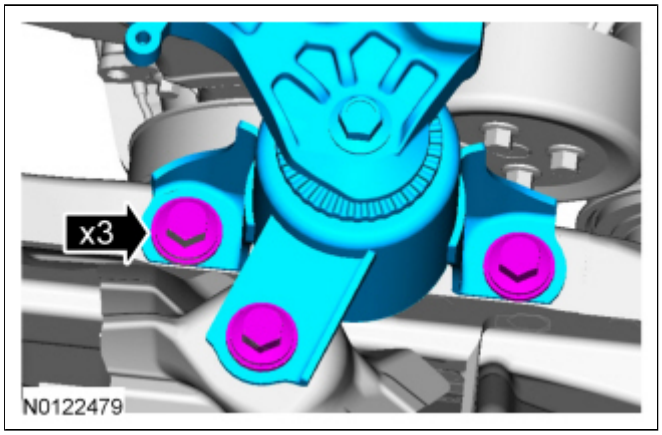
9. ***NOTICE:*** **The engine mount studs must be held while removing the engine mount nuts or damage to the powertrain may occur.**

   NOTE: Do not loosen the engine mount center bolt or the engine may become improperly positioned.

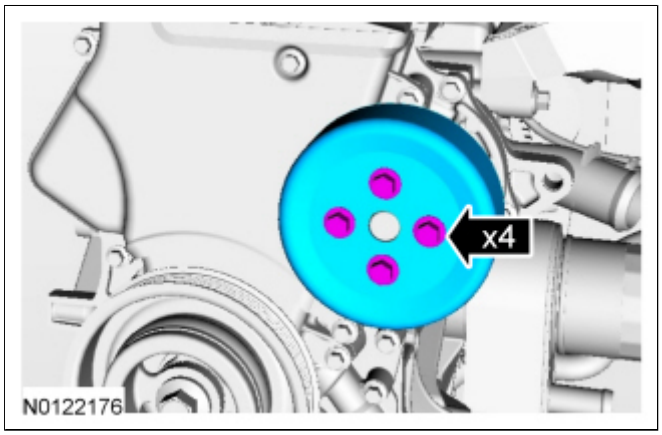
   Use the holding feature to prevent the engine mount studs from turning, remove the 2 engine mount nuts.



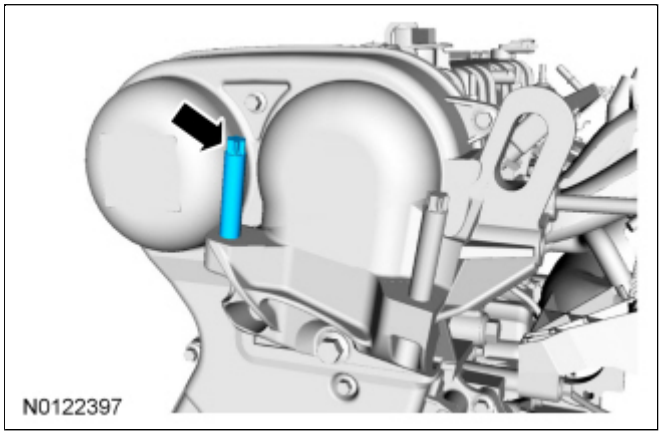
10. Remove the 3 bolts and the engine mount.



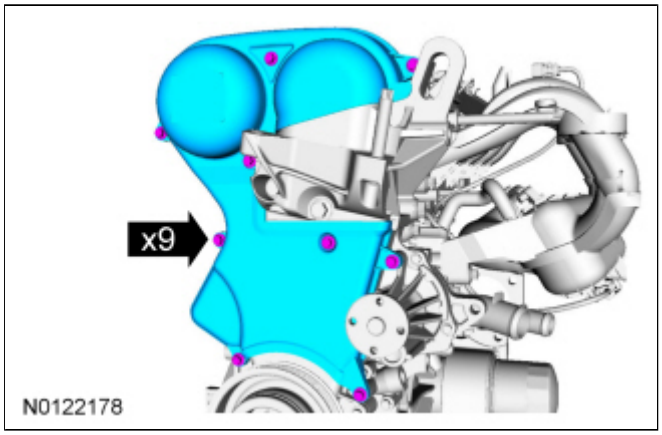
11. Remove the 4 bolts and coolant pump pulley.



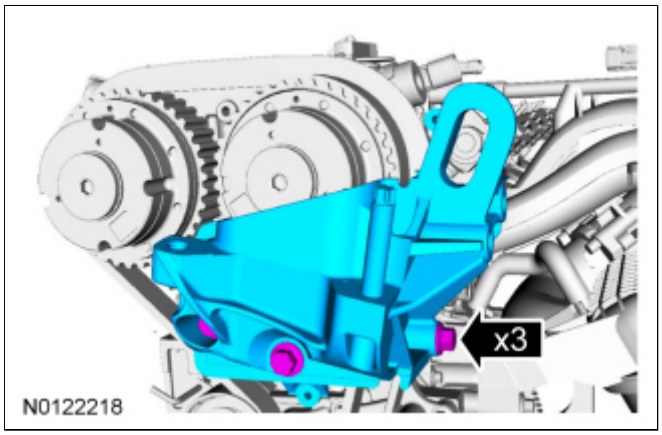
12. Remove the 1 engine mount stud.



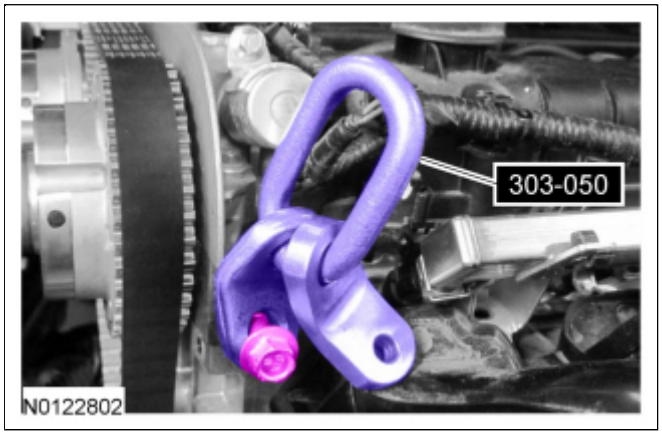
13. Remove the 9 bolts and the timing belt cover.



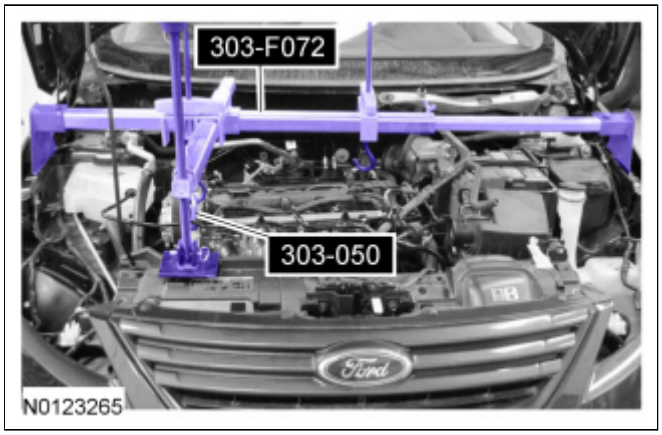
14. Remove the 3 bolts and the engine mount bracket.



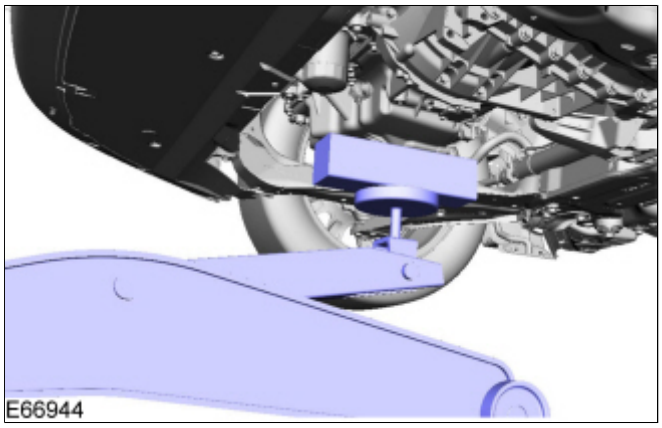
15. Using an engine mount bracket bolt, install the Engine Lifting Bracket.



16. Install the Engine Support Bar and support the engine.

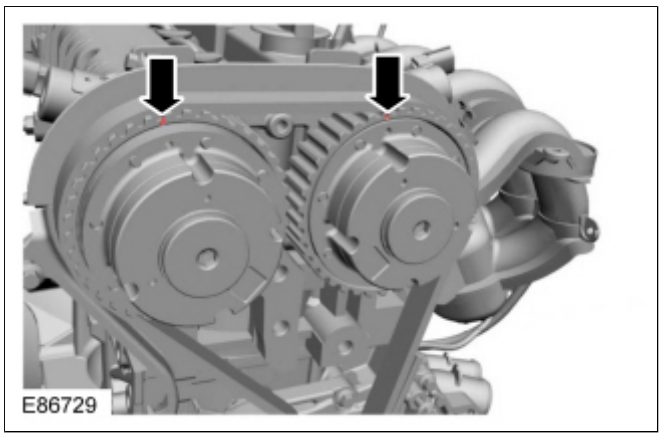


17. Remove the floor jack and block of wood.

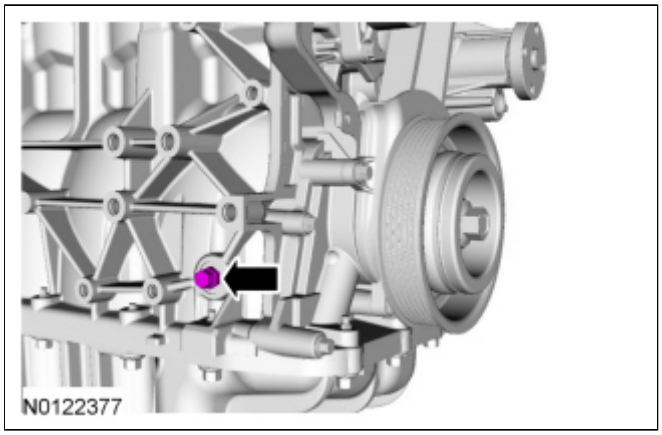


18. ***NOTICE:*** **Only rotate the crankshaft in a clockwise direction.**

    Using the crankshaft pulley bolt, turn the crankshaft clockwise until the markings on the camshaft phaser and sprockets are at the 11 o'clock position as shown.

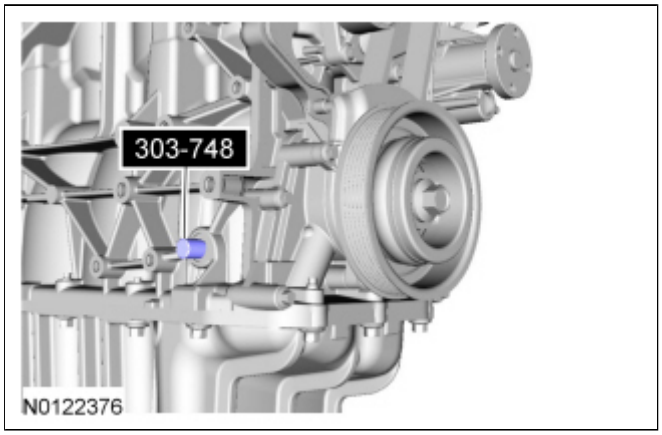


19. Remove the engine plug bolt.



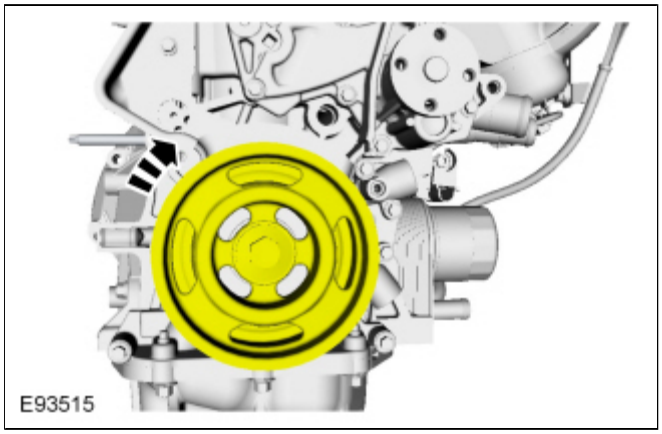
20. **NOTE:** The Crankshaft Top Dead Center (TDC) Timing Pin will contact the crankshaft and prevent it from turning past TDC . However, the crankshaft can still be rotated in the counterclockwise direction. The crankshaft must remain at the TDC position during the crankshaft pulley removal and installation.

    Install the Crankshaft TDC Pin.

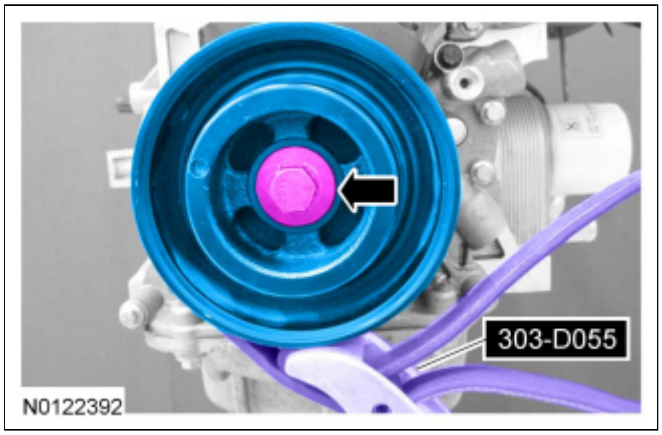


21. **NOTE:** Only rotate the crankshaft clockwise direction.

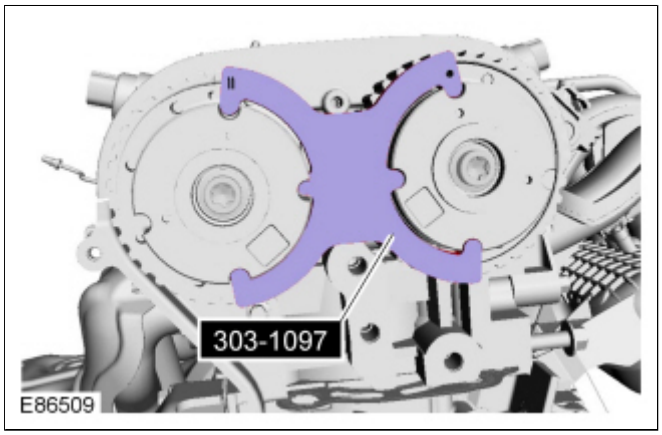
    Rotate the crankshaft until it contacts Crankshaft TDC Pin.



22. Using the Strap Wrench, remove the crankshaft pulley bolt and the crankshaft pulley.
    - Discard the crankshaft pulley bolt.

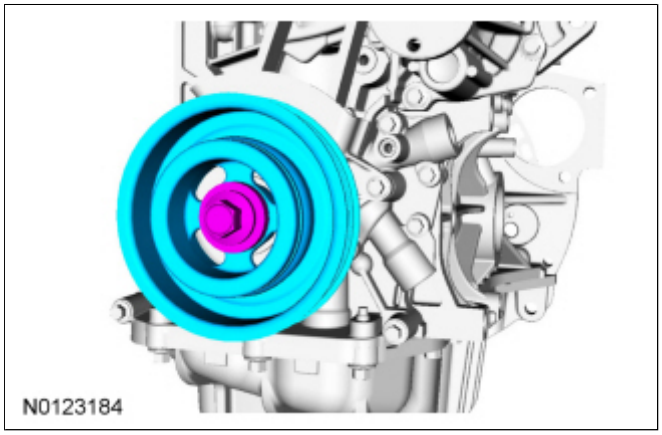


23. Install the VCT Alignment Tool.

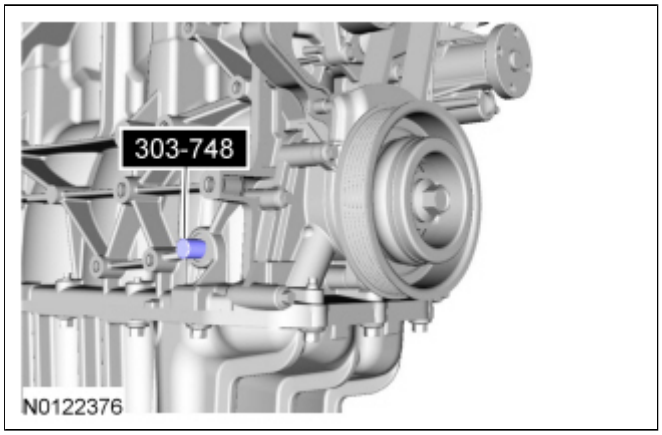


Installation

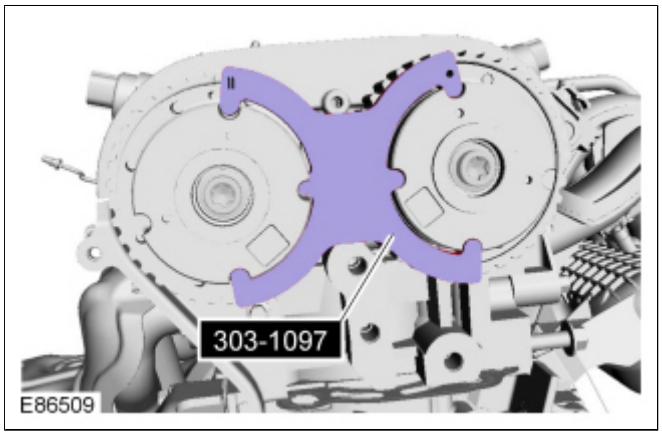
1. Install the crankshaft pulley and the new bolt.
    - Tighten to 100 Nm (74 lb-ft).
    - The final torque of the crankshaft will be completed in following steps.



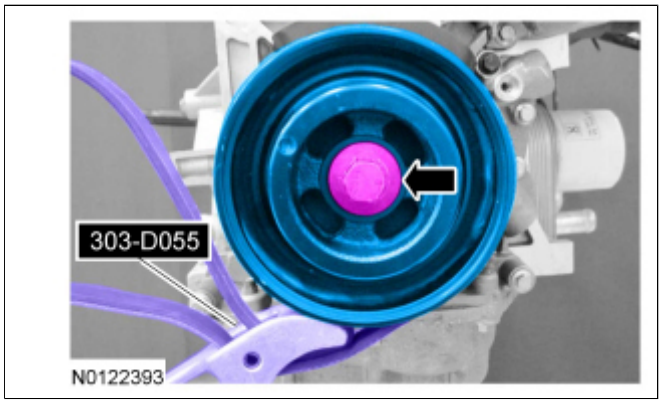
2. Remove the Crankshaft TDC Timing Pin.



3. Remove the VCT Alignment Tool.

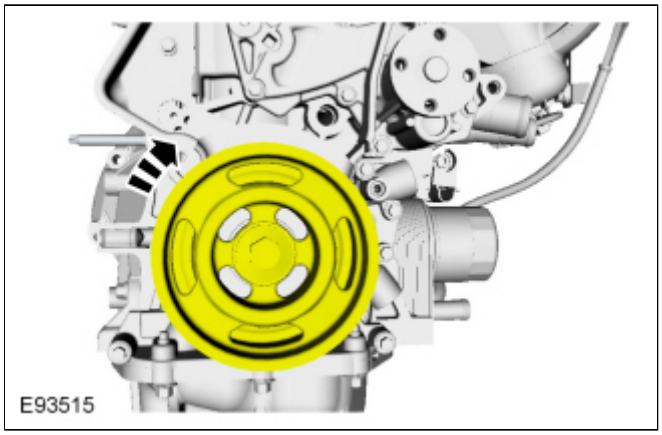


4. Tighten the crankshaft bolt in the following 3 stages.
    1. Stage 1: Using the Strap wrench, tighten an additional 90 degrees.
    2. Stage 2: Wait for 10 seconds.
    3. Stage 3: Using the Strap wrench, tighten an additional 15 degrees.

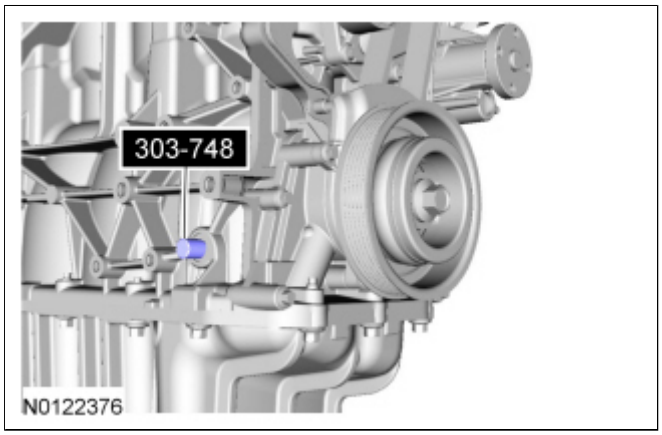


5. **NOTE:** Only rotate the crankshaft clockwise direction.

   Rotate the crankshaft about 1 3/4 turns.

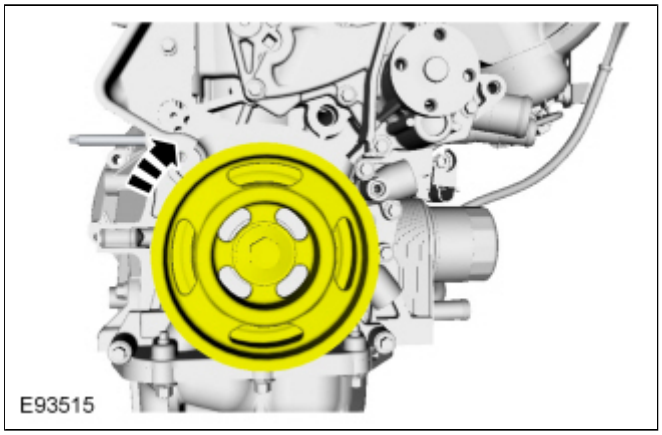


6. Install the Crankshaft TDC Timing Pin.



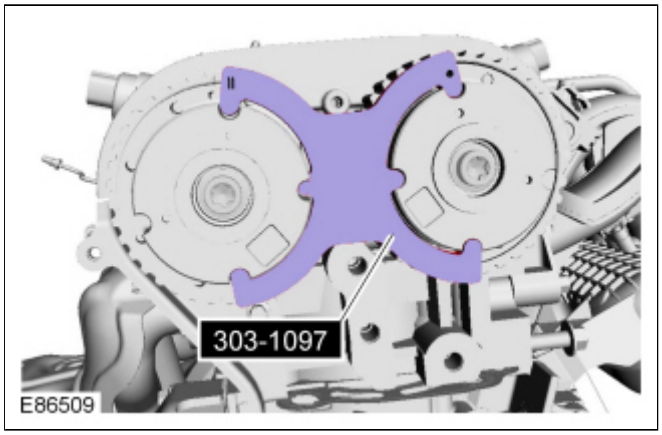
7. **NOTE:** Only rotate the crankshaft clockwise direction.

   Rotate the crankshaft until it stops against the Crankshaft TDC Timing Pin.

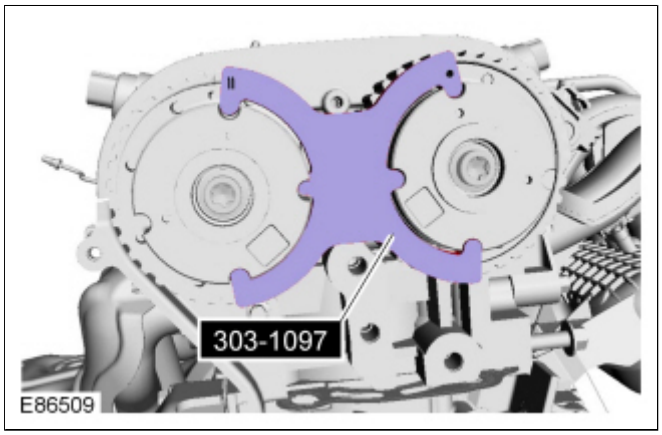


8. **NOTE:** The special tool can only be installed if the valve timing is correct.

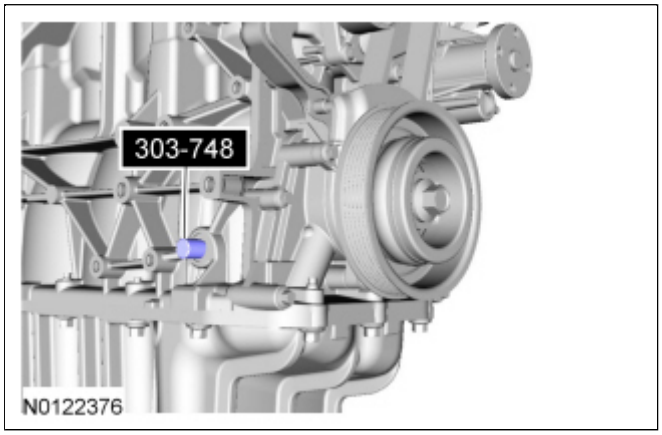
   Install the VCT Alignment Tool.
   - If the special tool cannot be installed, repeat the adjustment according to the preceding steps.



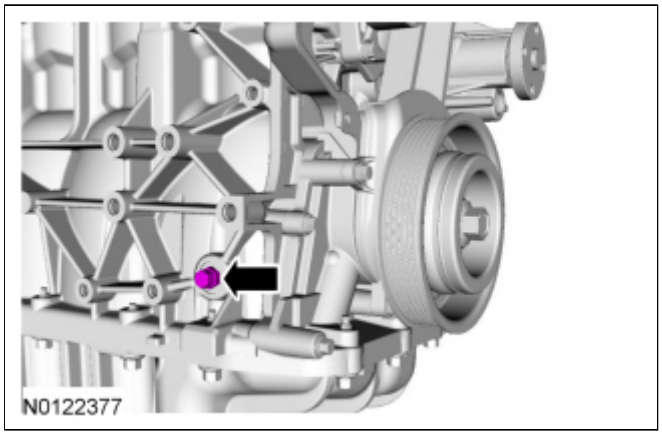
9. Remove the VCT Alignment Tool.



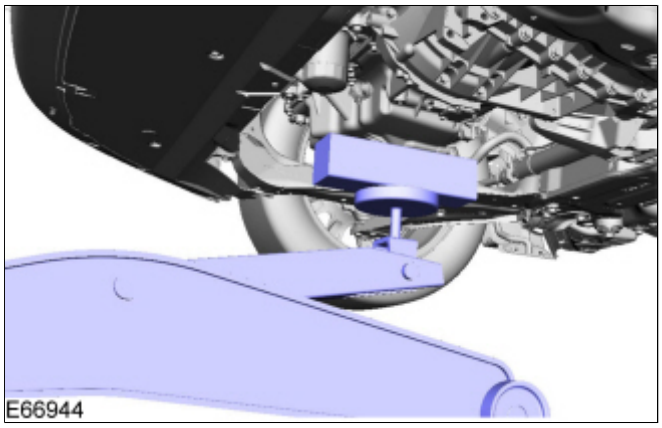
10. Remove the Crankshaft TDC Timing Pin.



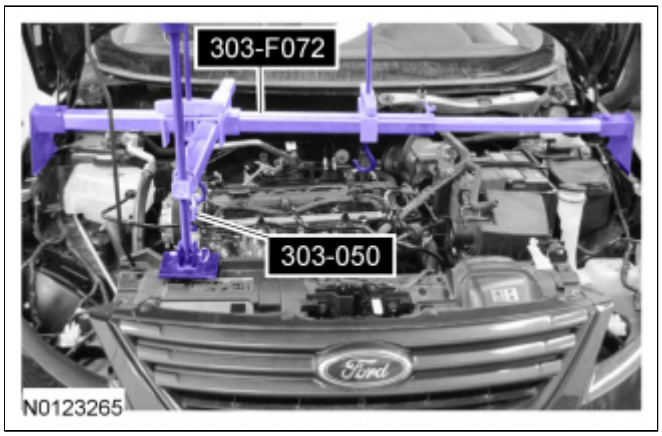
11. Install the engine plug bolt.
    - Tighten to 20 Nm (177 lb-in).



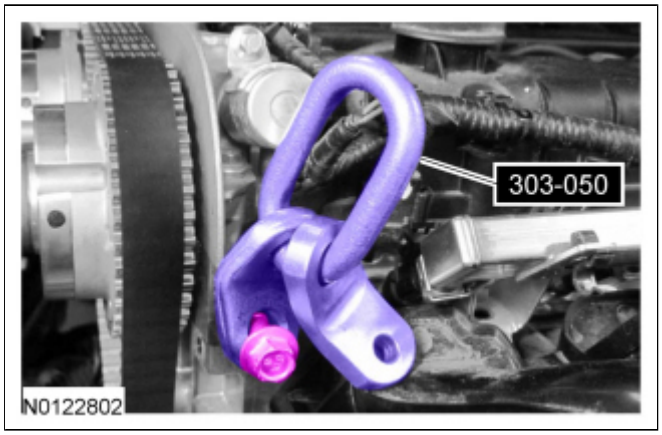
12. Using a floor jack and a block of wood, support the engine.



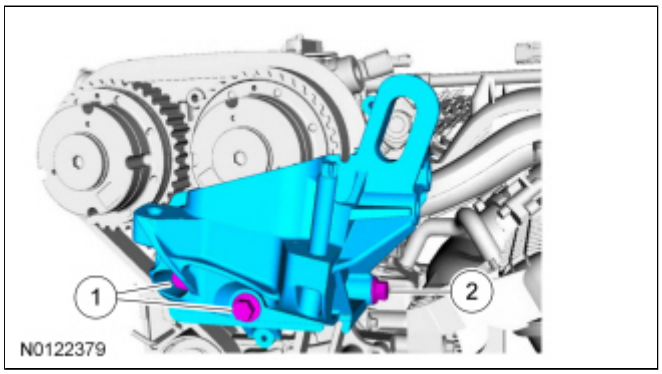
13. Remove the Engine Support Bar.



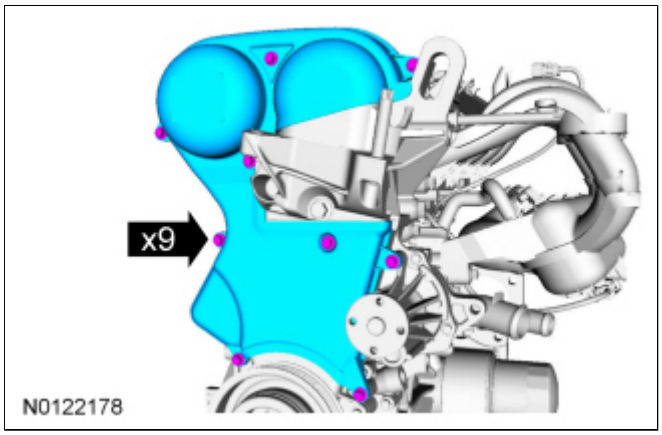
14. Remove the bolt and the Engine Lifting Bracket.



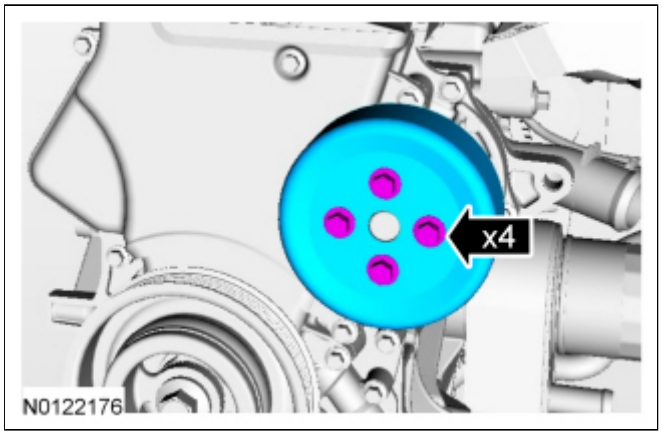
15. Install the engine mount bracket and the 3 bolts finger tight.
    1. Tighten the 2 bolts to 55 Nm (41 lb-ft).
    2. Tighten the bolt to 55 Nm (41 lb-ft).



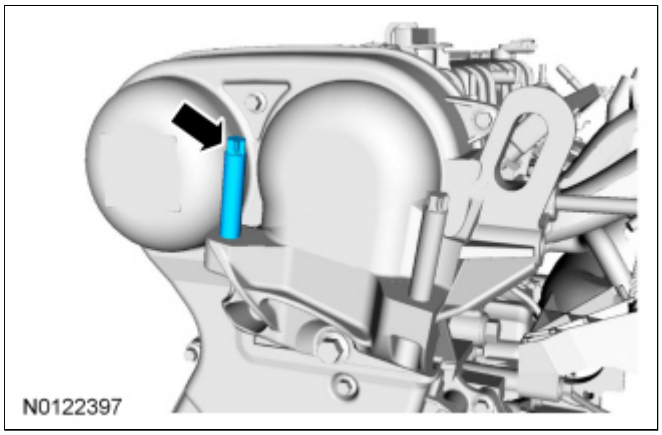
16. Install the timing belt cover and the 9 bolts.
    - Tighten to 9 Nm (80 lb-in).



17. Install the coolant pump pulley and the 4 bolts finger tight.

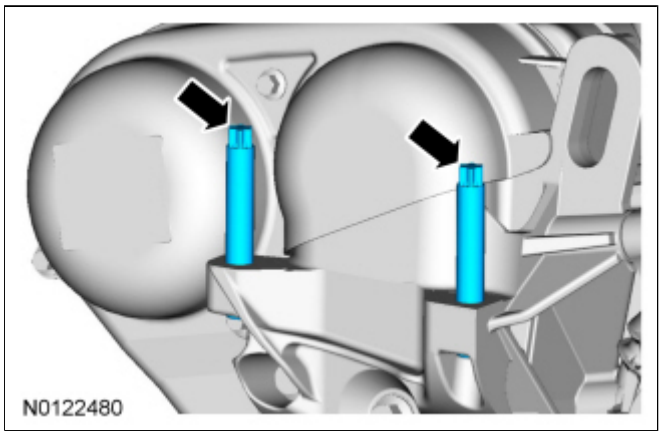


18. Install the 1 engine mount stud finger tight.



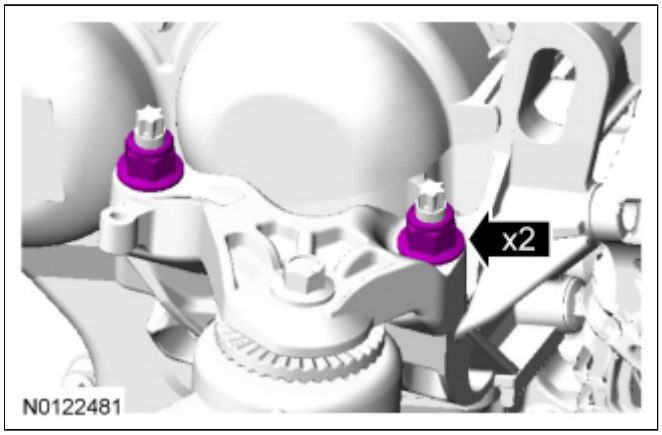
19. ***NOTICE:*** **The 2 engine mount studs must be torqued or damage to the powertrain may occur.**

    Torque the 2 engine mount studs before installing the engine mount nuts.
    - Tighten to 8 Nm (71 lb-in).

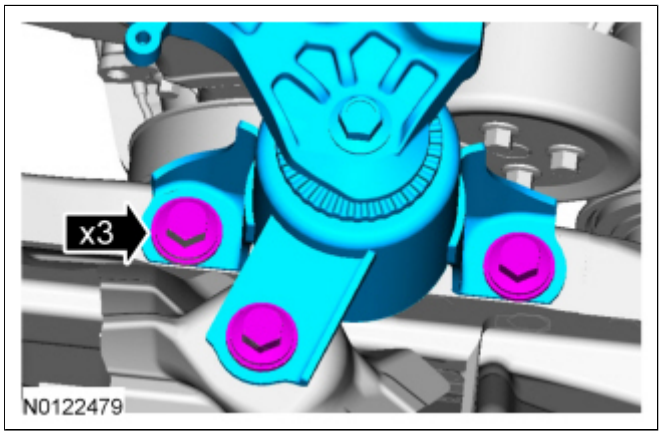


20. **NOTE:** Do not loosen the engine mount center bolt or the engine may become improperly positioned.

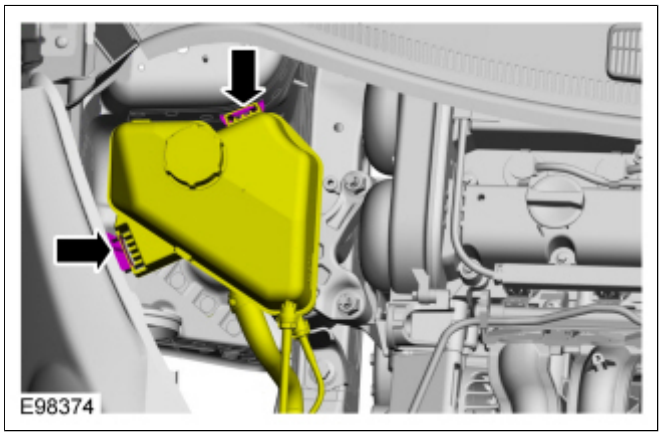
    Install the engine mount and the 2 nuts.
    - Tighten the 2 nuts to 80 Nm (59 lb-ft).



21. Install the 3 engine mount bolts.
    - Tighten to 48 Nm (35 lb-ft).

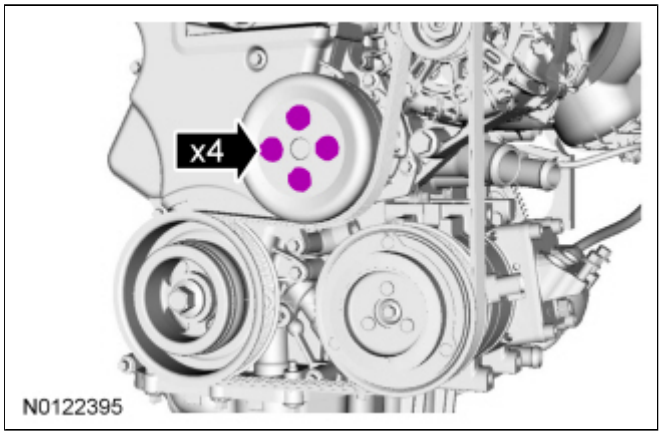


22. Position the degas bottle on the 2 retainer tabs.

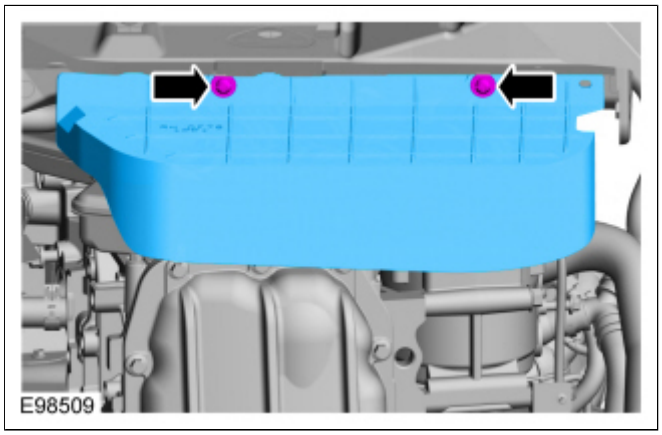


23. Install the generator. For additional information, refer to Section 414-00 .

24. Tighten the 4 coolant pump bolts to 20 Nm (177 lb-in).



25. Install the accessory drive belt splash shield and the 2 bolts.
    - Tighten to 9 Nm (80 lb-in).



26. Install the RH front wheel and tire. For additional information, refer to Section 204-04 .

27. Install the upper and lower cowl panel grilles. For additional information, refer to Section 501-02 .

Crankshaft Front Seal

Special Tool(s)

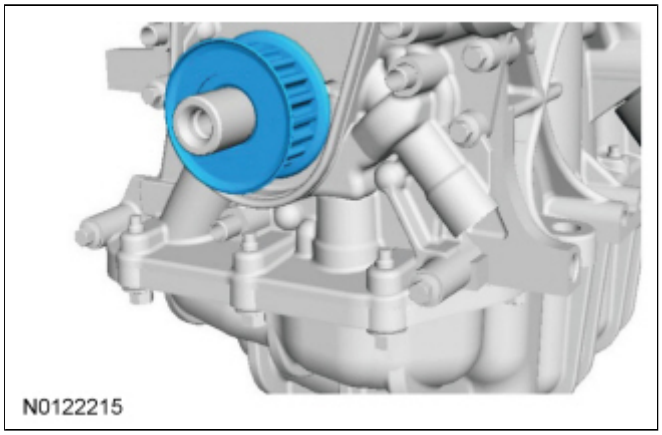
ST1378-A	Installer, Crankshaft Vibration Damper 303-175 (T82L-6316-B)
 ST1328-A	Installer, Front Cover Oil Seal 303-335 (T88T-6701-A)
ST3260-A	Replacer, Front Crankshaft Seal 303-420 (T92P-6701-BH)
ST2417-A	Remover, Input Shaft Oil Seal 308-375
ST1185-A	Slide Hammer 100-001 (T50T-100-A)

Material

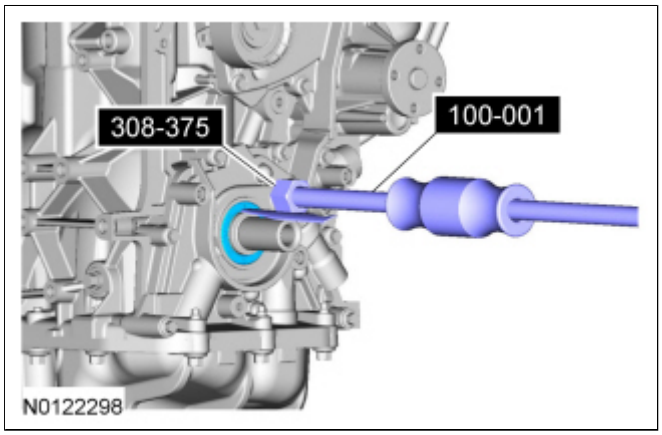
Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

Removal

1. Remove the timing belt. For additional information, refer to Timing Belt in this section.
2. Remove the crankshaft sprocket gear.



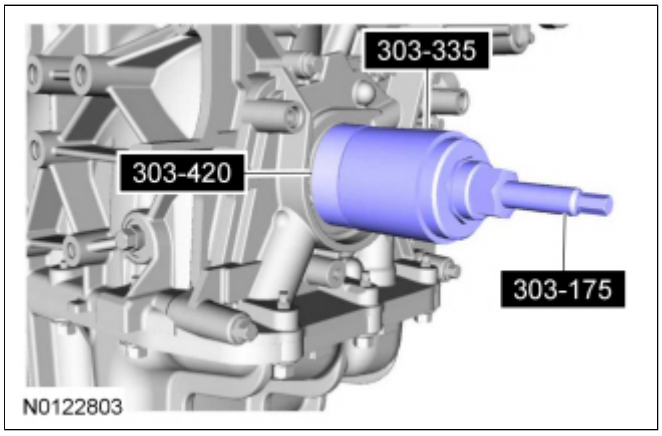
3. Using the Input Shaft Oil Seal Remover and Slide Hammer, remove the crankshaft front oil seal.



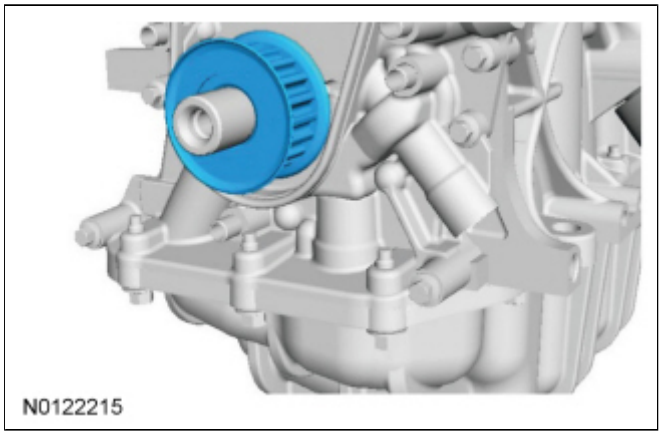
Installation

1. **NOTE:** Lubricate the oil seal with clean engine oil.

   Using the Crankshaft Vibration Damper Installer, Front Cover Oil Seal Installer and Front Crankshaft Seal Replacer, install the crankshaft front oil seal.

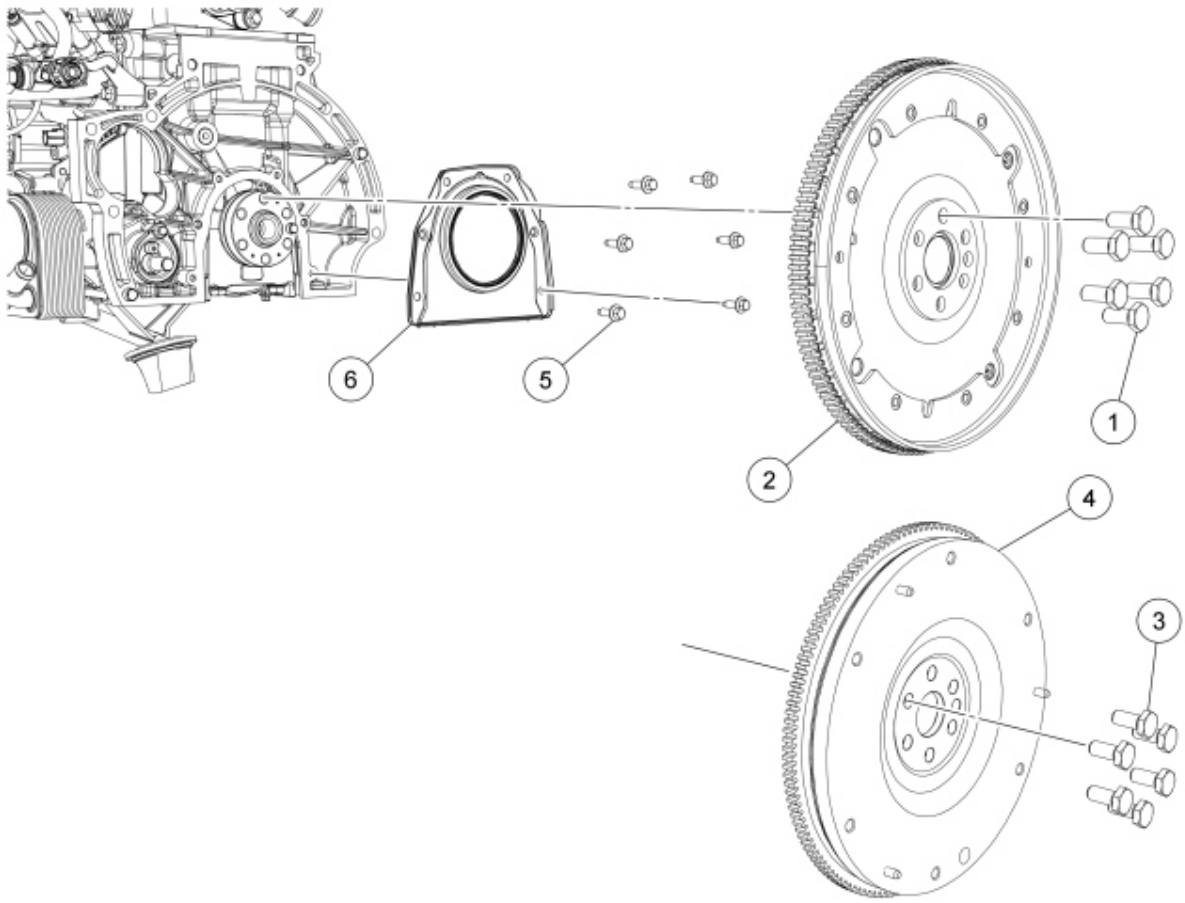


2. Install the crankshaft sprocket gear.



3. Install the timing belt. For additional information, refer to Timing Belt in this section.

Flexplate or Flywheel and Crankshaft Rear Seal — Exploded View



N0115216

Item	Part Number	Description
1	6379	Flexplate bolt (6 required)
2	6375	Flexplate
3	6379	Flywheel bolt (6 required)
4	6375	Flywheel
5	W500213	Crankshaft rear oil seal with retainer plate bolt (6 required)
6	6K301	Crankshaft rear oil seal with retainer plate

Removal and Installation

1. Refer to the procedures and/or exploded views in this section for any Warnings, Notices, Notes,

Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Flexplate

Special Tool(s)

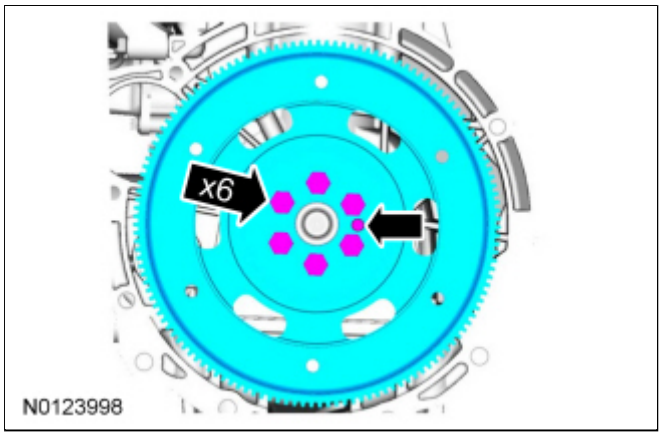
 ST1840-A	Tool, Flywheel Holding 303-103

Removal

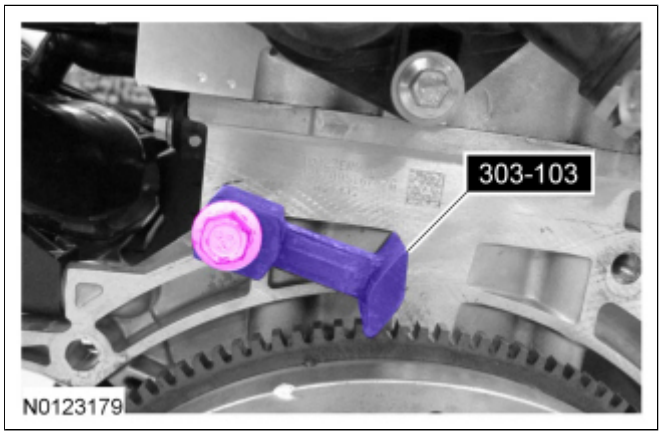
1. Remove the automatic transaxle. For additional information, refer to Section 307-11 .
2. Remove the 6 bolts and the flexplate.
   - Discard the bolts.

Installation

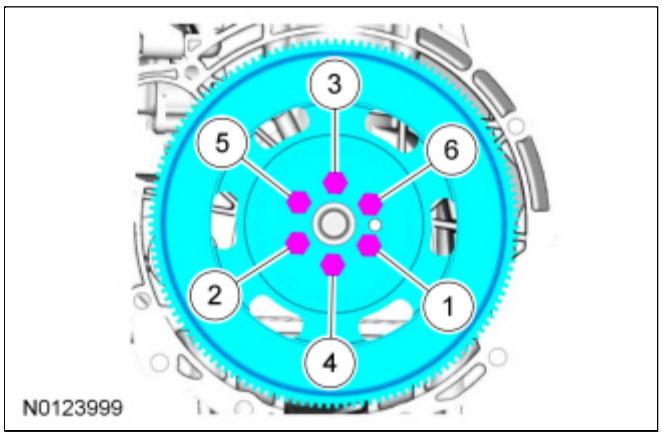
1. Align the flexplate and crankshaft using the dowel pin location hole and install the new bolts finger tight.



2. Install the Flywheel Holding Tool.



3. Tighten the bolts in the sequence shown in 2 stages:
    - Stage 1: Tighten to 30 Nm (22 lb-ft).
    - Stage 2: Tighten an additional 80 degrees.



4. Install the automatic transaxle. For additional information, refer to Section 307-11 .

Flywheel

Special Tool(s)

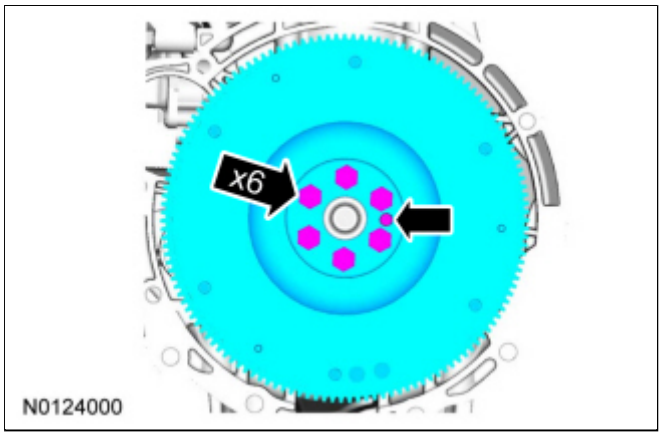
 ST1840-A	Tool, Flywheel Holding 303-103

Removal

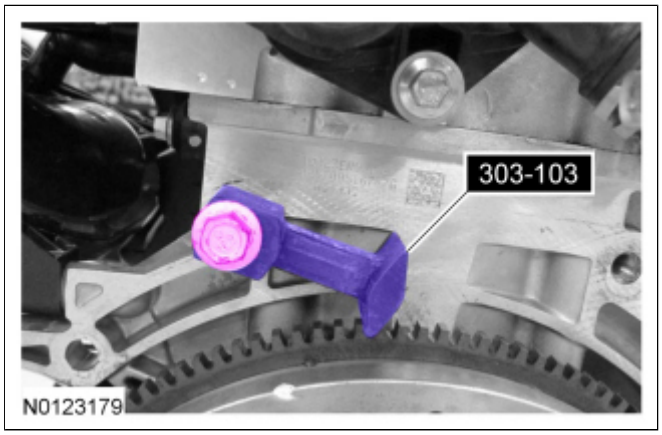
1. Remove the clutch disc and pressure plate. For additional information, refer to Section 308-01 .
2. Remove the 6 bolts and the flywheel.
   - Discard the bolts.

Installation

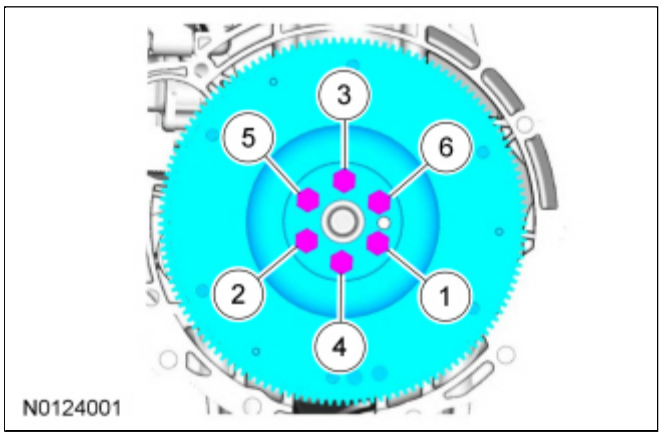
1. Align the flywheel and crankshaft using the dowel pin location hole and install the new bolts finger tight.



2. Install the Flywheel Holding Tool.



3. Tighten the bolts in the sequence shown in 2 stages:
    - Stage 1: Tighten to 30 Nm (22 lb-ft).
    - Stage 2: Tighten an additional 80 degrees.



4. Install the clutch disc and pressure plate. For additional information, refer to Section 308-01 .

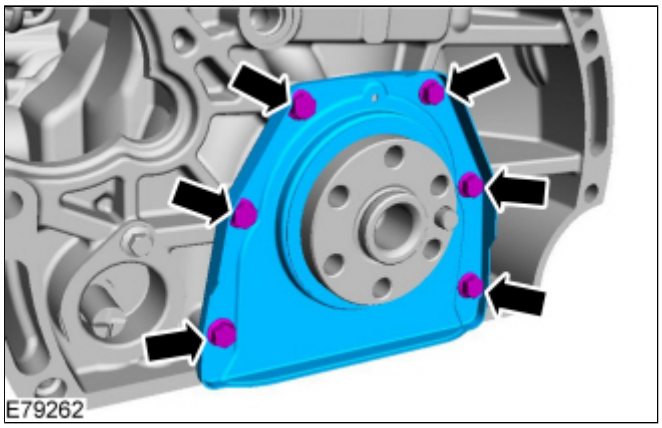
Crankshaft Rear Seal

Removal

1. Remove the flexplate or flywheel. For additional information, refer to Flexplate or Flywheel in this section.

2. Remove the oil pan. For additional information, refer to Oil Pan in this section.

3. Remove the 6 bolts and the crankshaft rear seal.



4. Clean the sealing surface of the crankshaft rear seal and crankshaft.

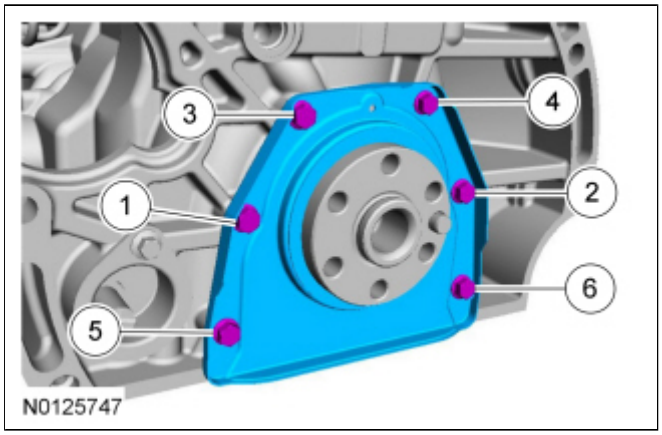
Installation

1. **NOTE:** New crankshaft rear seal is supplied with an alignment sleeve which must be removed after installation.

   NOTE: Do not remove the alignment sleeve from the crankshaft rear seal prior to installation on the crankshaft.

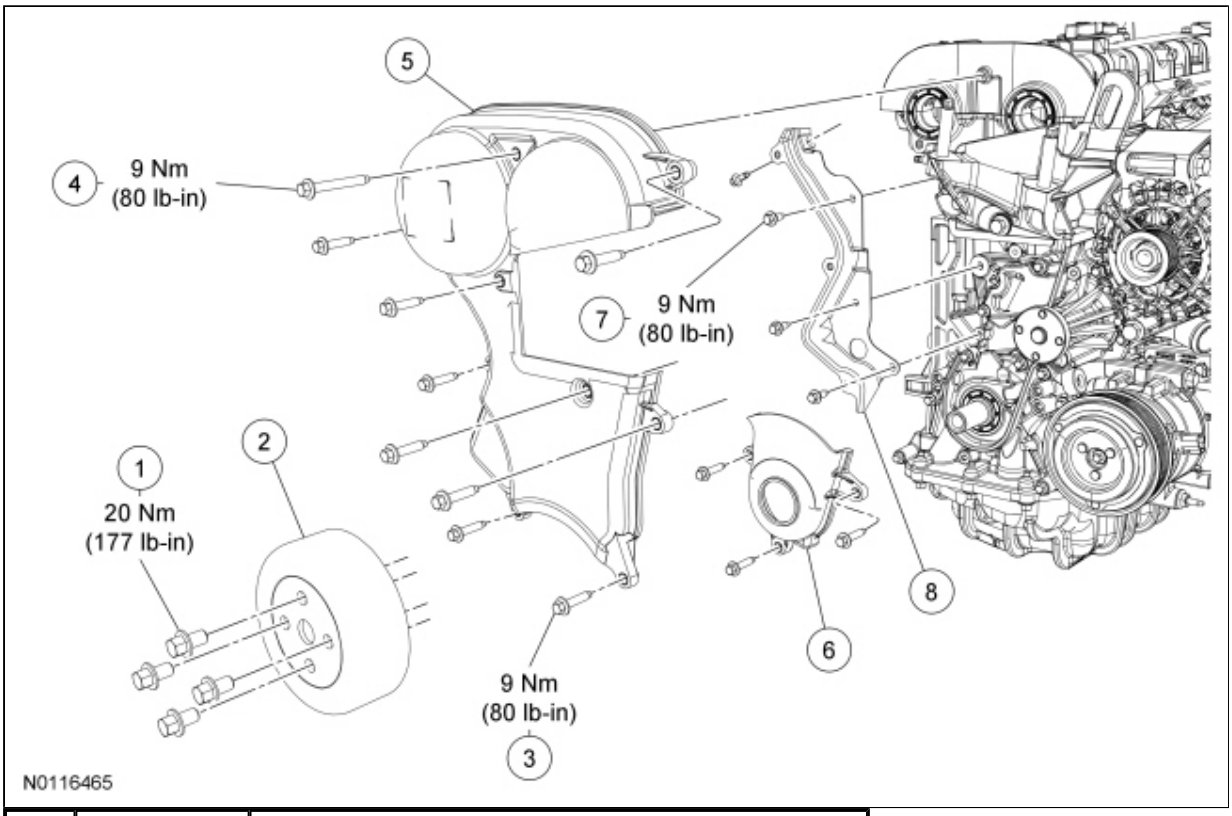
   NOTE: Do not lubricate the new crankshaft rear seal.

   Align the crankshaft rear seal and alignment sleeve on the crankshaft and push the crankshaft rear seal off the alignment sleeve onto the crankshaft without stopping until the crankshaft rear seal meets the cylinder block.
   - Install the 6 bolts and tighten in sequence shown in 2 stages.
     - Stage 1: Tighten bolts 1 through 6 to 4 Nm (35 lb-in).
     - Stage 2: Tighten bolts 1 through 6 to 9 Nm (80 lb-in).



2. Remove the alignment sleeve taking care not to touch the sealing lip.
3. Install the oil pan. For additional information, refer to Oil Pan in this section.
4. Install the flexplate or flywheel. For additional information, refer to Flexplate or Flywheel in this section.

Timing Belt Cover



Item	Part Number	Description
1	W714914	Coolant pump pulley bolt (3 required)
2	8509	Coolant pump pulley
3	W500215	Upper and lower timing belt cover bolt (12 required)
4	W500303	Upper timing belt cover bolt
5	6019	Upper timing belt cover
6	6019	Lower timing belt cover
7	W702251	Timing belt cover backplate bolt (4 required)
8	6019	Timing belt cover backplate

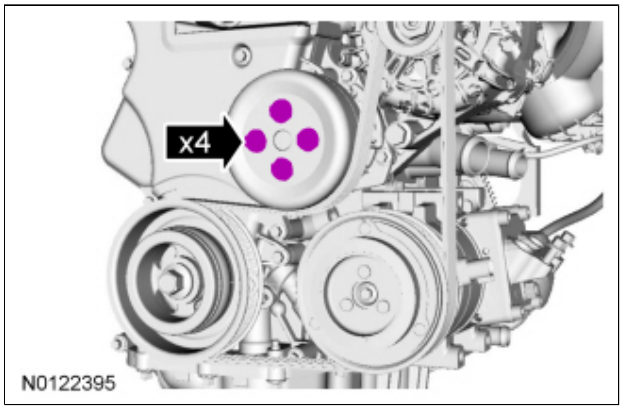
Removal

All timing belt covers

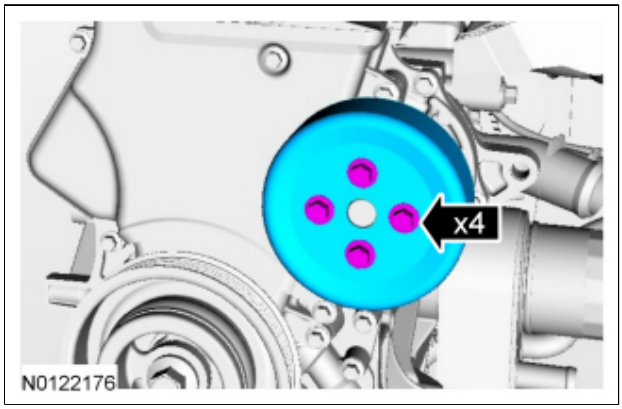
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

Upper timing belt cover

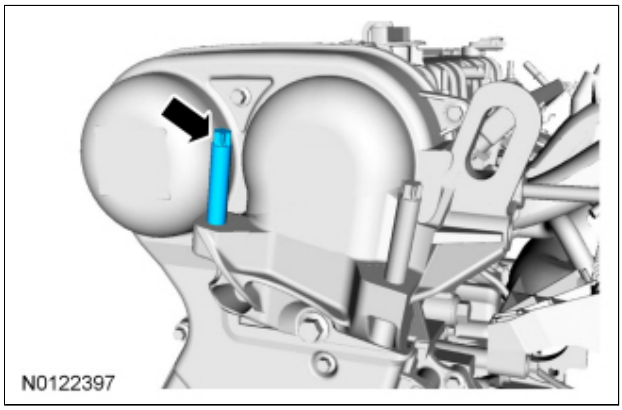
2. Loosen the 4 coolant pump pulley bolts.



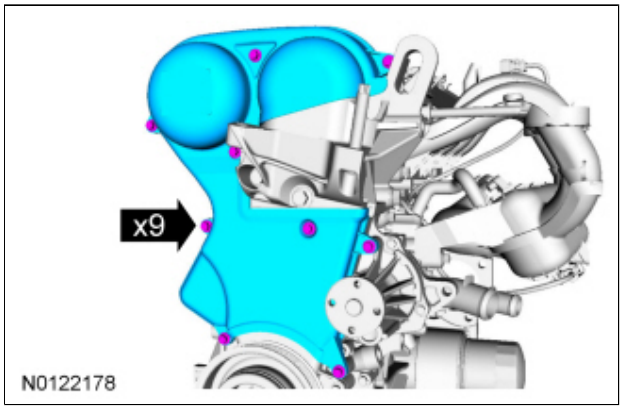
3. Remove the accessory drive belt. For additional information, refer to Section 303-05 .
4. Remove the engine mount. For additional information, refer to Engine Mount in this section.
5. Remove the 4 bolts and coolant pump pulley.



6. Remove the 1 engine mount stud.

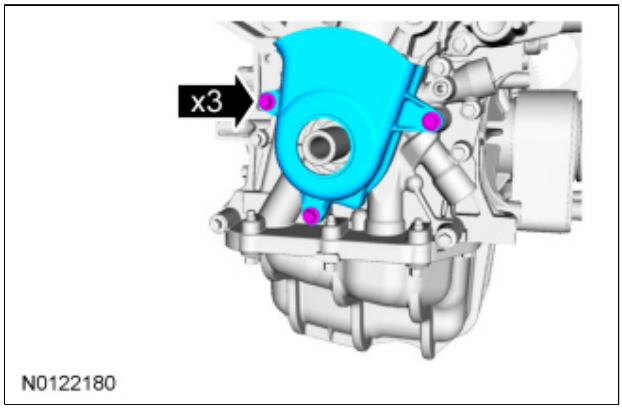


7. Remove the 9 bolts and the upper timing belt cover.



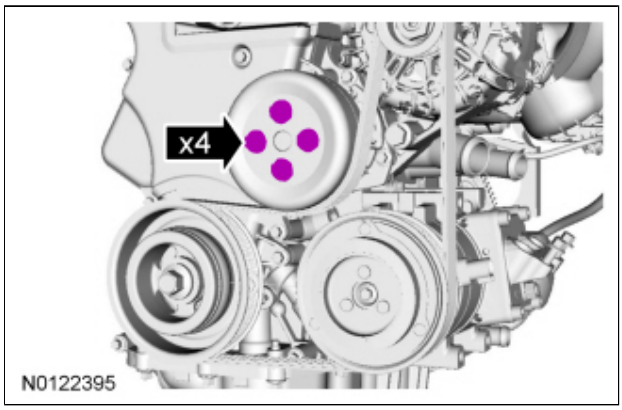
Lower timing belt cover

8. Remove the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.
9. Remove the 3 bolts and the lower timing belt cover.

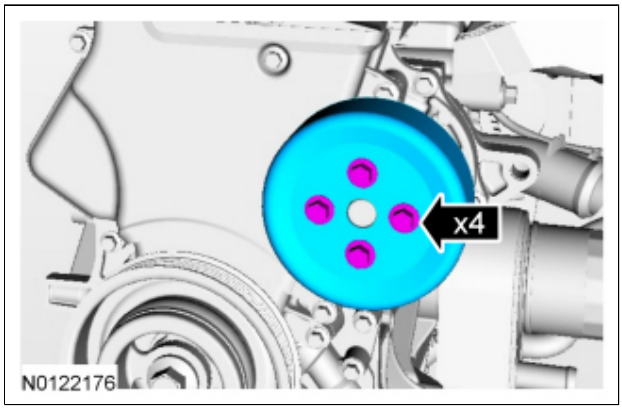


Timing belt cover backplate

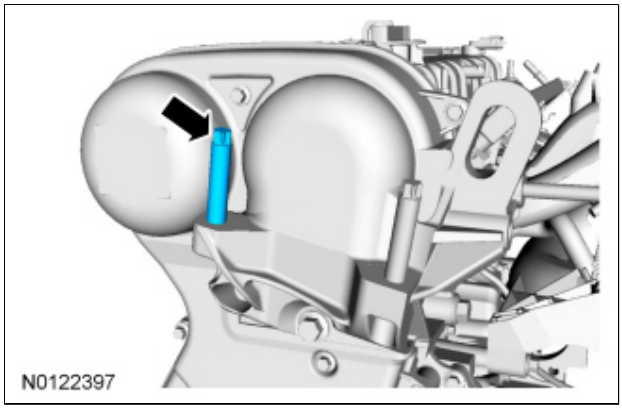
10. Loosen the 4 coolant pump pulley bolts.



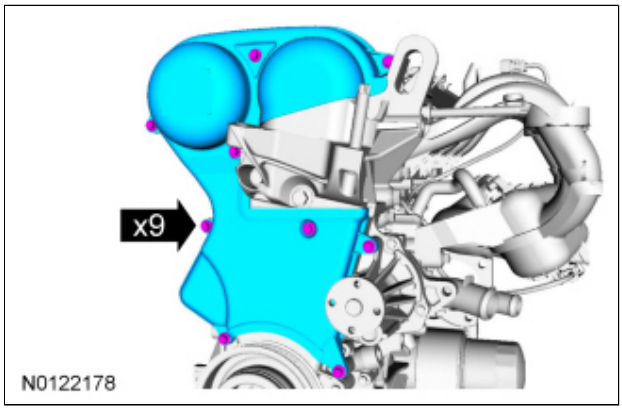
11. Remove the accessory drive belt. For additional information, refer to Section 303-05 .
12. Remove the engine mount. For additional information, refer to Engine Mount in this section.
13. Remove the 4 bolts and coolant pump pulley.



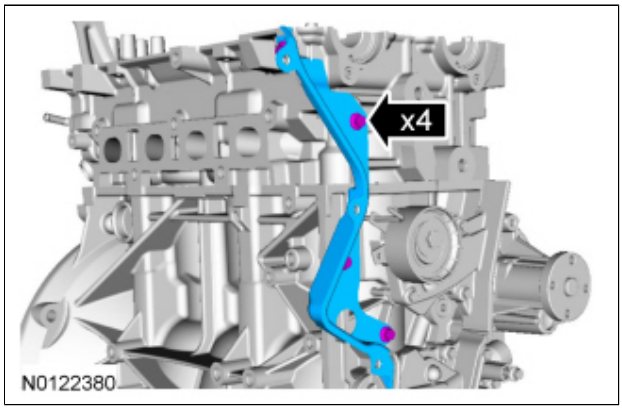
14. Remove the 1 engine mount stud.



15. Remove the 9 bolts and the upper timing belt cover.



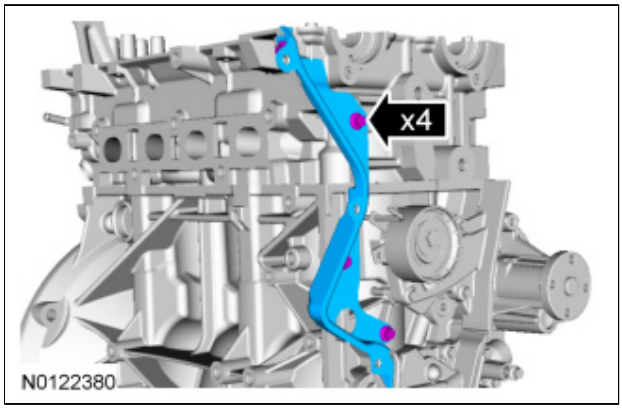
16. Remove the 4 bolts and the timing belt cover backplate.



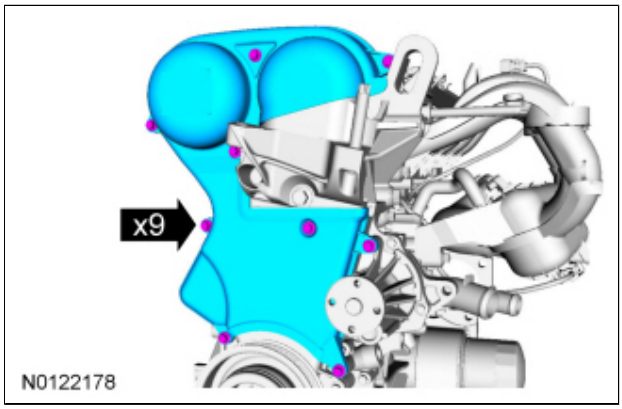
Installation

Timing belt cover backplate

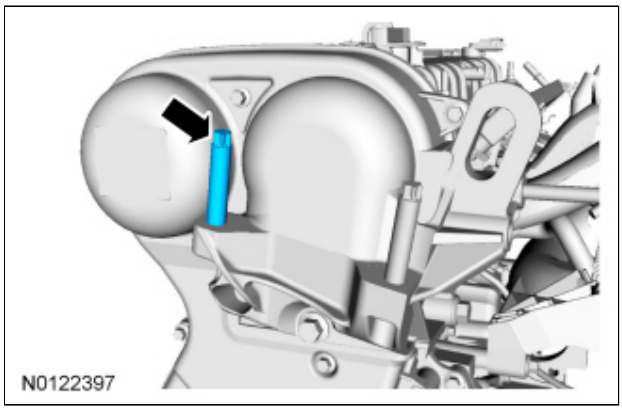
1. Install the timing belt cover backplate and the 4 bolts.
    - Tighten to 9 Nm (80 lb-in).



2. Install the upper timing belt cover and the 9 bolts.
    - Tighten to 9 Nm (80 lb-in).

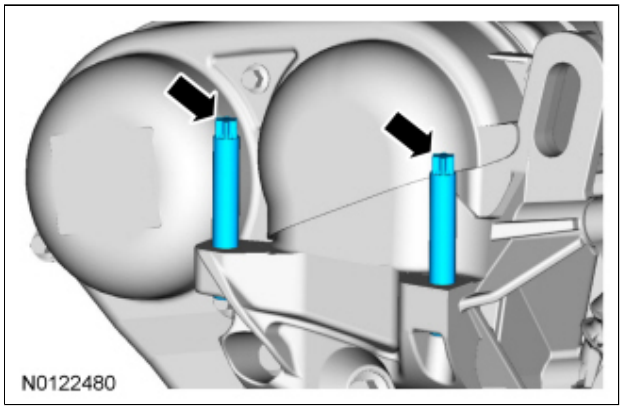


3. Install the 1 engine mount stud finger tight.

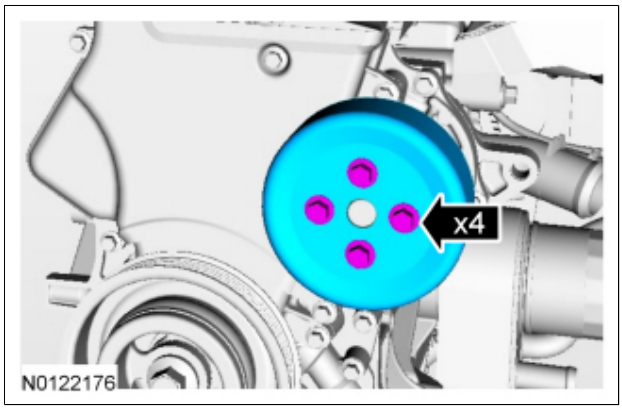


4. ***NOTICE:*** **The 2 engine mount studs must be torqued or damage to the powertrain may occur.**

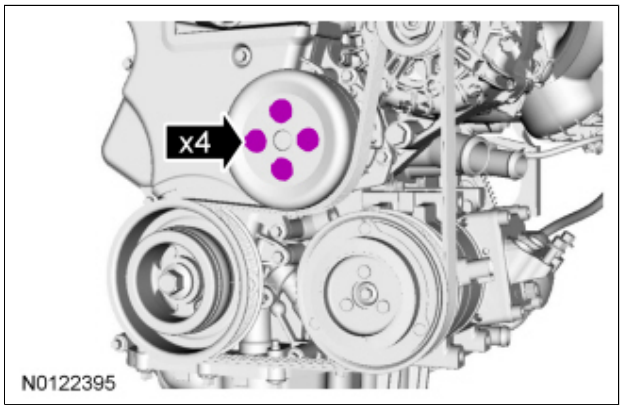
   Torque the 2 engine mount studs before installing the engine mount nuts.
    - Tighten to 8 Nm (71 lb-in).



5. Install the coolant pump pulley and the 4 bolts.
    - Do not torque at this time.

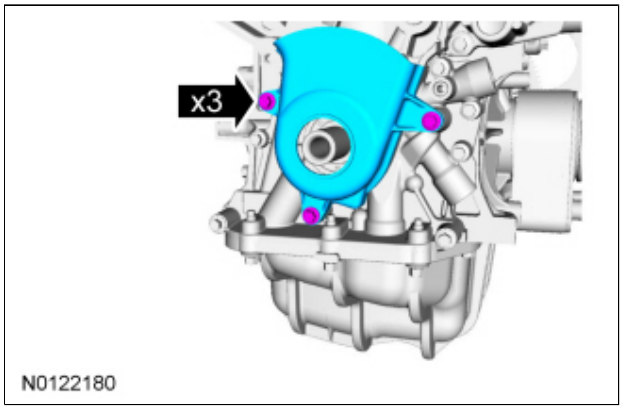


6. Install the engine mount. For additional information, refer to Engine Mount in this section.
7. Install the accessory drive belt. For additional information, refer to Section 303-05 .
8. Tighten the 4 coolant pump pulley bolts to 20 Nm (177 lb-in).



Lower timing belt cover

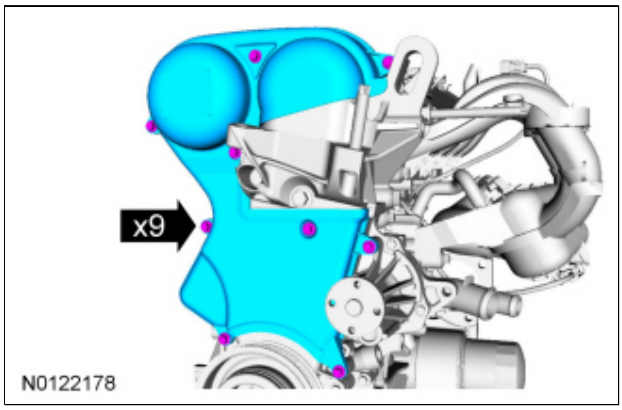
9. Install the lower timing belt cover and the 3 bolts.
    - Tighten to 9 Nm (80 lb-in).



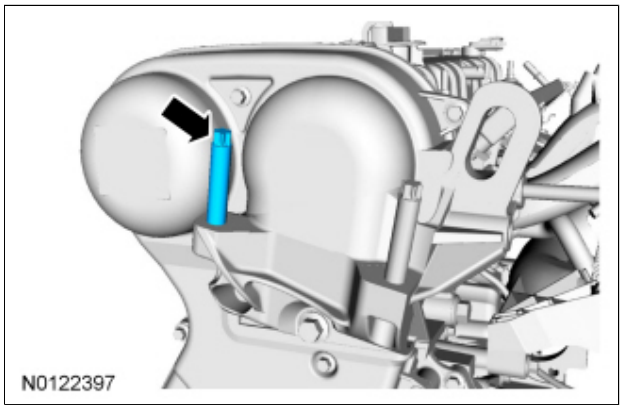
10. Install the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.

Upper timing belt cover

11. Install the upper timing belt cover and the 9 bolts.
    - Tighten to 9 Nm (80 lb-in).

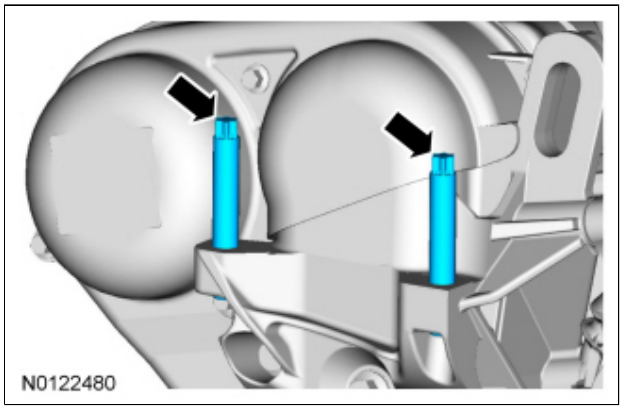


12. Install the 1 engine mount stud finger tight.

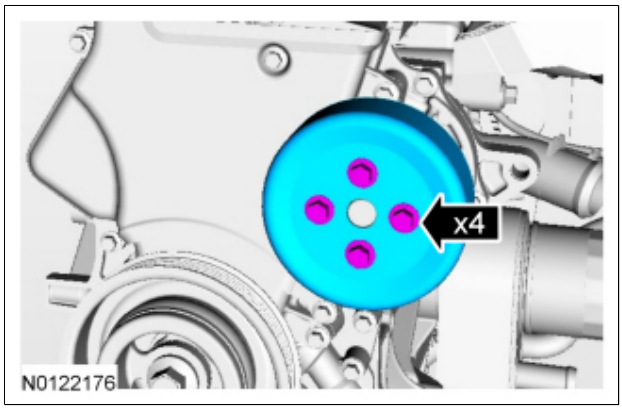


13. ***NOTICE:*** **The 2 engine mount studs must be torqued or damage to the powertrain may occur.**

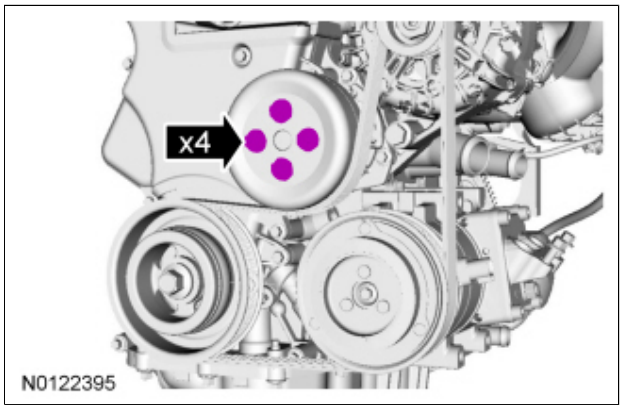
    Torque the 2 engine mount studs before installing the engine mount nuts.
    - Tighten to 8 Nm (71 lb-in).



14. Install the coolant pump pulley and the 4 bolts.
    - Do not torque at this time.



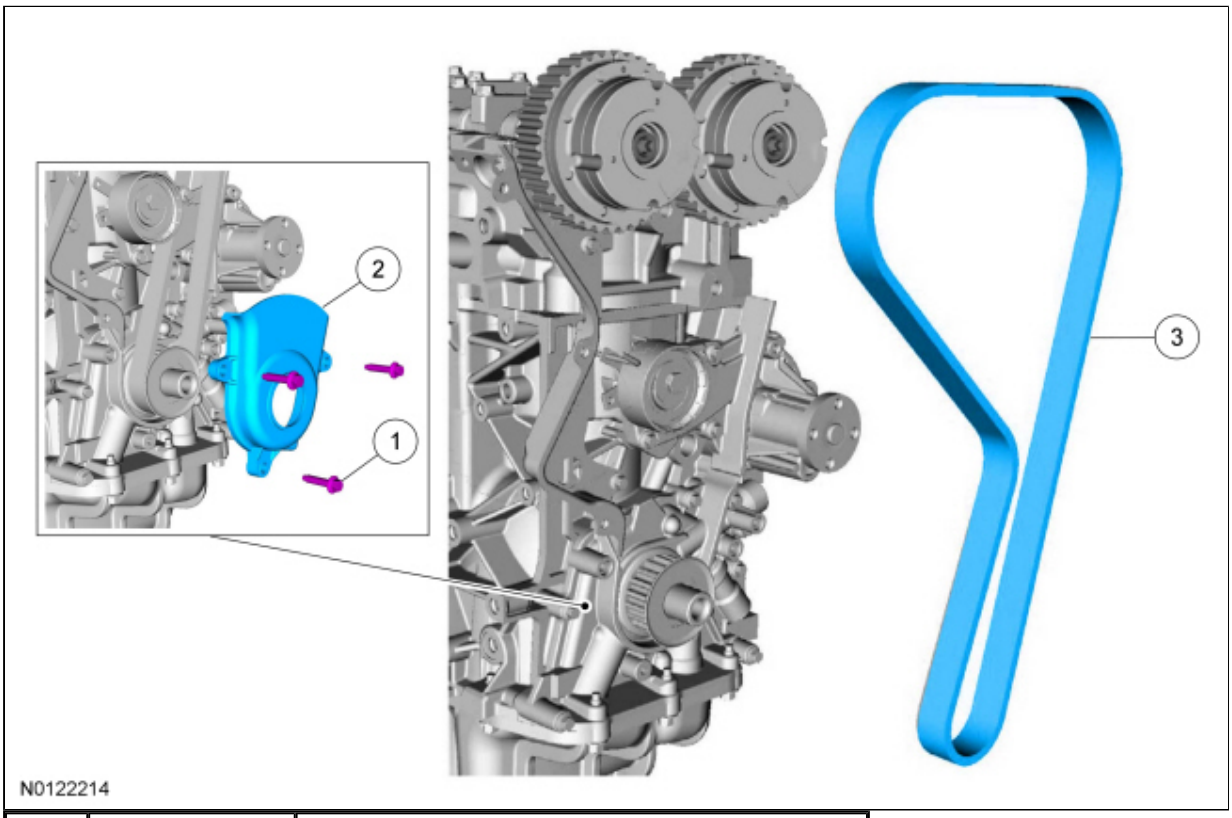
15. Install the engine mount. For additional information, refer to Engine Mount in this section.
16. Install the accessory drive belt. For additional information, refer to Section 303-05 .
17. Tighten the 4 coolant pump pulley bolts to 20 Nm (177 lb-in).



Timing Belt

Special Tool(s)

ST3261-A	Tool, Variable Camshaft Timing (VCT) Alignment 303-1097

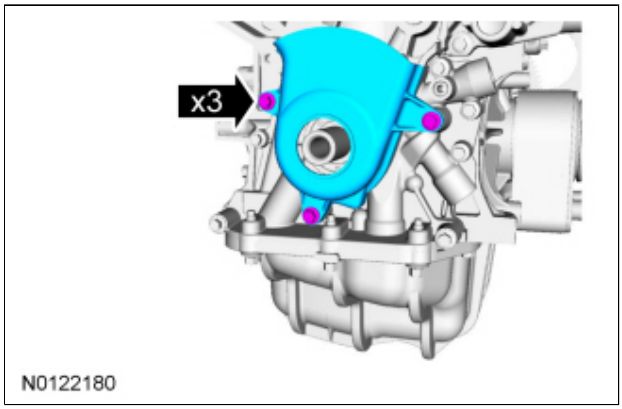


Item	Part Number	Description
1	W500215	Lower timing belt cover bolt (3 required)
2	6019	Lower timing belt cover
3	6268	Timing belt

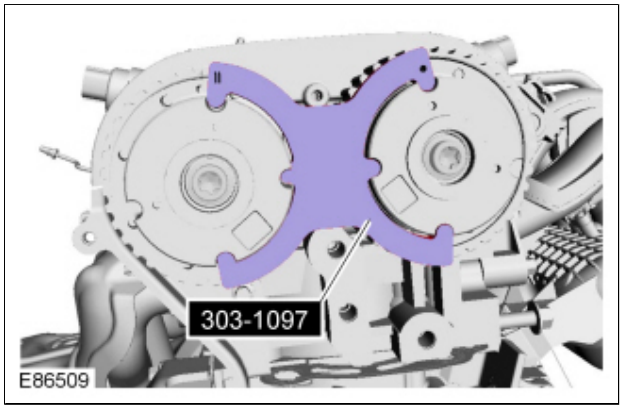
Removal and Installation

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.
3. Remove the 3 bolts and the lower timing belt cover.

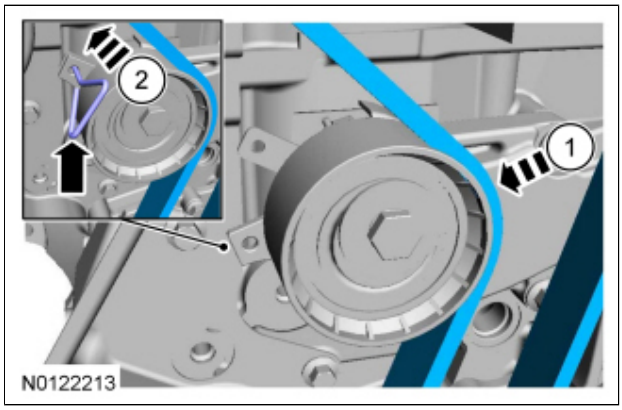


4. Install the VCT Alignment Tool.



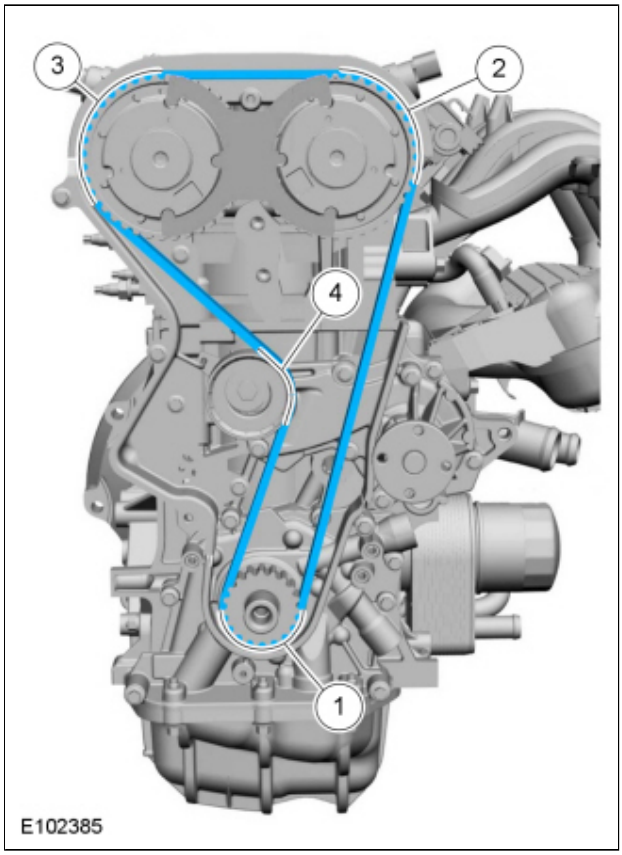
5. **WARNING: The timing belt tensioner spring is under load. Extra care must be taken at all times when handling the tensioner. Failure to follow this instruction may result in personal injury.**

   Remove the timing belt.
   1. Rotate the timing belt tensioner clockwise.
   2. Align the 2 holes on the tensioner and install a small screwdriver or holding pin.
      - Remove the timing belt.



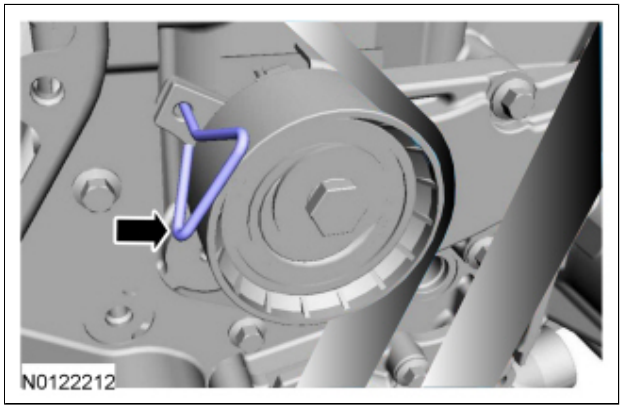
Installation

1. Install the timing belt in the sequence shown.

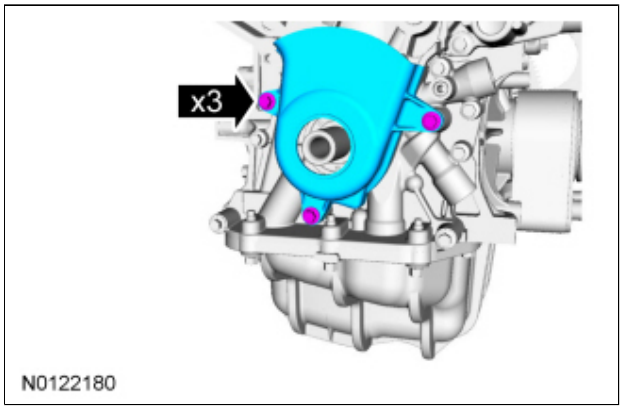


2. **WARNING: The timing belt tensioner spring is under load. Extra care must be taken at all times when handling the tensioner. Failure to follow this instruction may result in personal injury.**

   Remove the timing belt tensioner holding tool.



3. Install the lower timing belt cover and the 3 bolts.
   - Tighten to 9 Nm (80 lb-in).

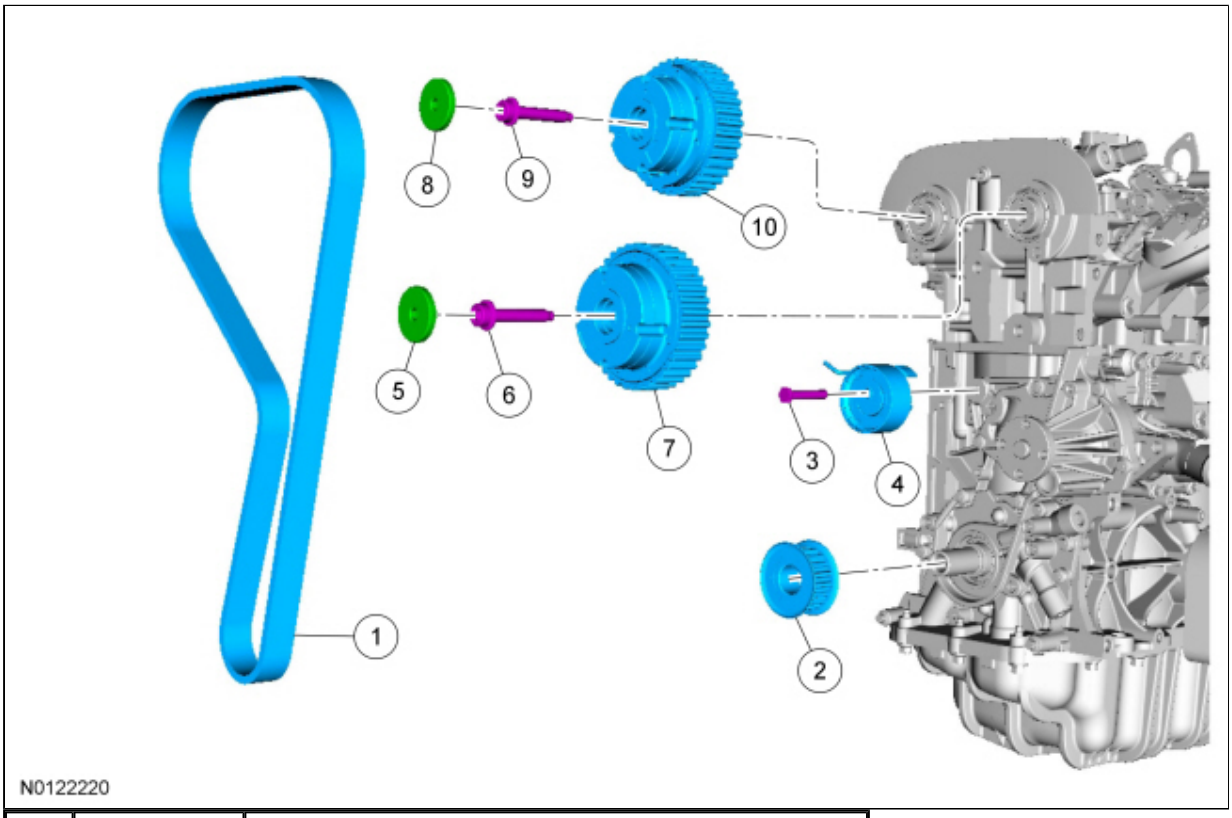


4. Install the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.

Timing Drive Components

Special Tool(s)

ST3261-A	Tool, Variable Camshaft Timing (VCT) Alignment 303-1097
ST3259-A	Alignment Plate, Camshaft 303-376B



N0122220

Item	Part Number	Description
1	6268	Timing belt
2	6306	Crankshaft sprocket gear
3	6A340	Timing belt tensioner bolt
4	6K254	Timing belt tensioner
5	W710954	Intake camshaft phaser and sprocket plug and seal
6	6279	Intake camshaft phaser and sprocket bolt
7	6256	Intake camshaft phaser and sprocket
8	W710954	Exhaust camshaft phaser and sprocket plug and seal

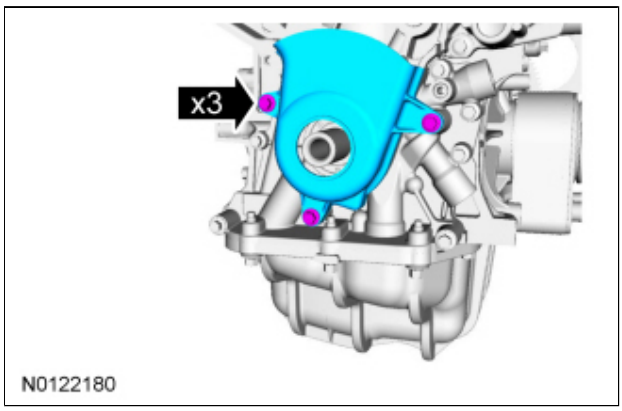
9	6279	Exhaust camshaft phaser and sprocket bolt
10	6256	Exhaust camshaft phaser and sprocket

Removal

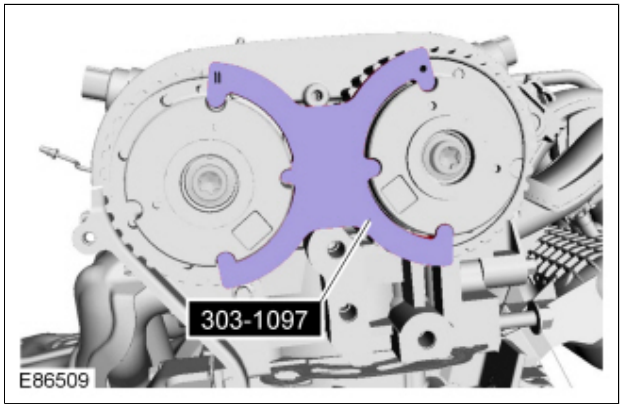
NOTICE: **Do not loosen or remove the crankshaft pulley bolt without first installing the special tools. The crankshaft pulley and the crankshaft timing sprocket are not keyed to the crankshaft. Before any repair requiring loosening or removal of the crankshaft pulley bolt, the crankshaft and camshafts must be locked in place by the special service tools, otherwise severe engine damage can occur.**

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the valve cover. For additional information, refer to Valve Cover in this section.
3. Remove the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.
4. Remove the 3 bolts and the lower timing belt cover.

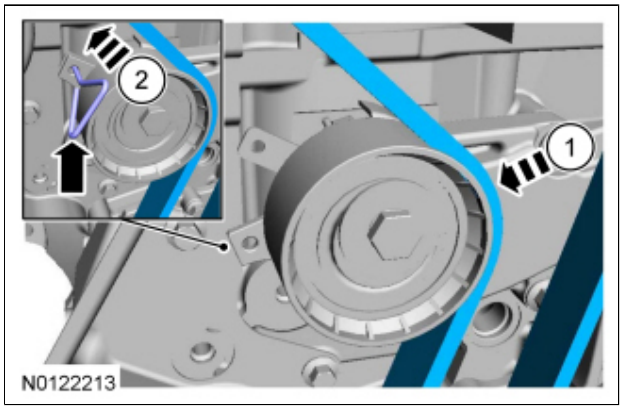


5. Install the VCT Alignment Tool.

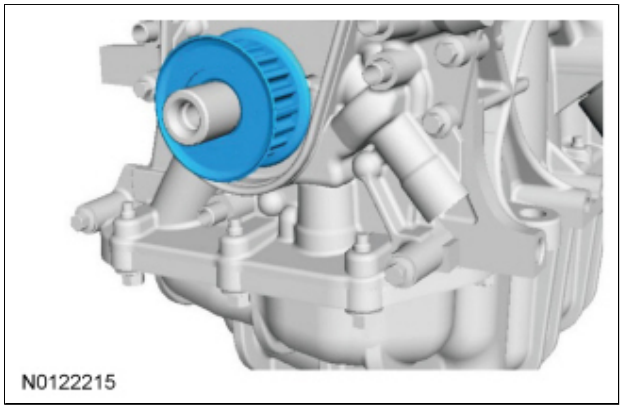


6. **WARNING: The timing belt tensioner spring is under load. Extra care must be taken at all times when handling the tensioner. Failure to follow this instruction may result in personal injury.**

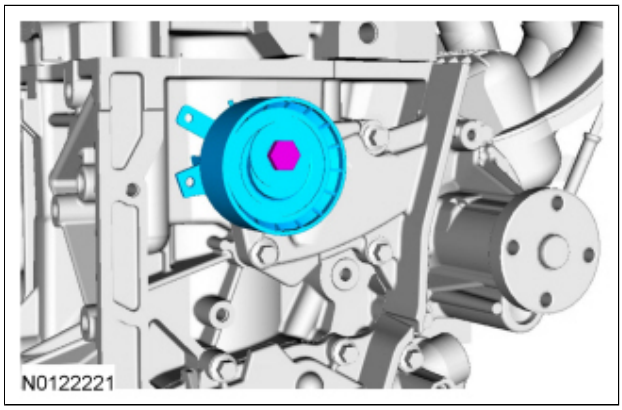
   Remove the timing belt.
   1. Rotate the timing belt tensioner clockwise.
   2. Align the 2 holes on the tensioner and install a small screwdriver or holding pin.
      - Remove the timing belt.



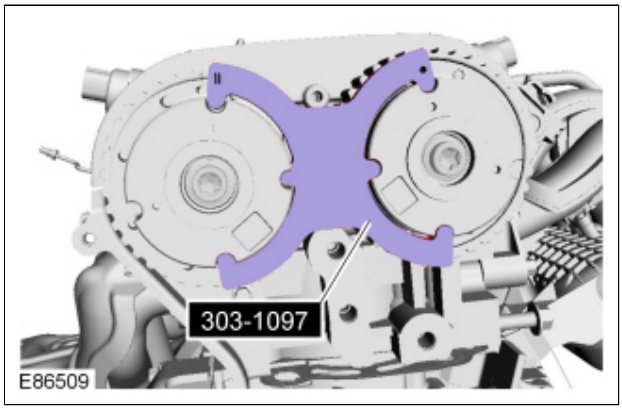
7. Remove the crankshaft sprocket gear.



8. Remove the bolt and the timing belt tensioner.

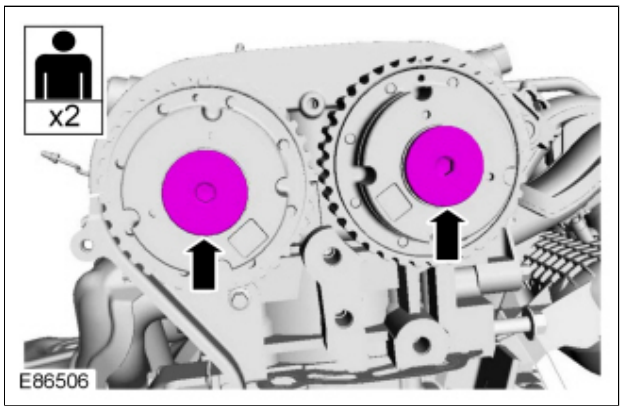


9. Remove the VCT Alignment Tool.



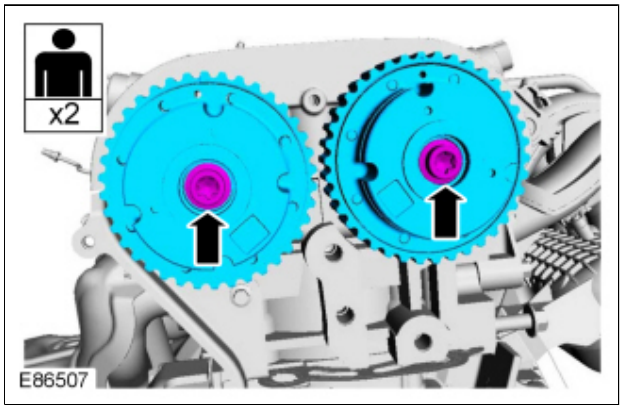
10. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

    Remove the 2 camshaft phaser and sprocket plugs.



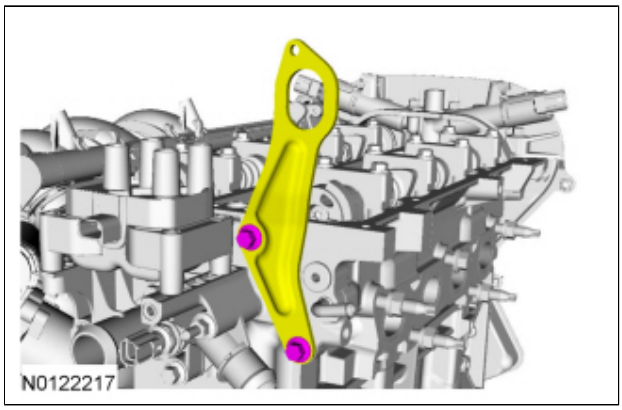
11. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

    Remove the 2 bolts and the camshaft phaser and sprockets.

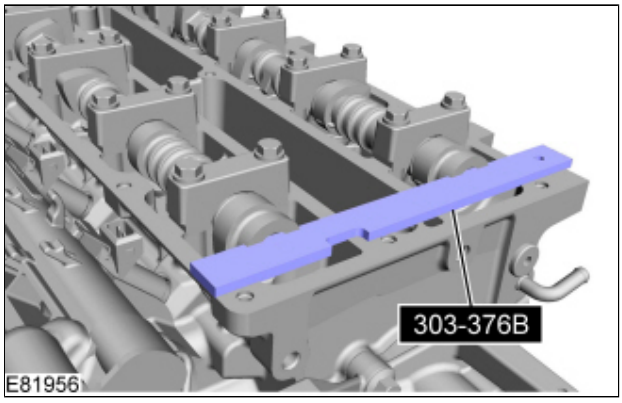


Installation

1. Loosen the 2 bolts for the LH engine lift eye.



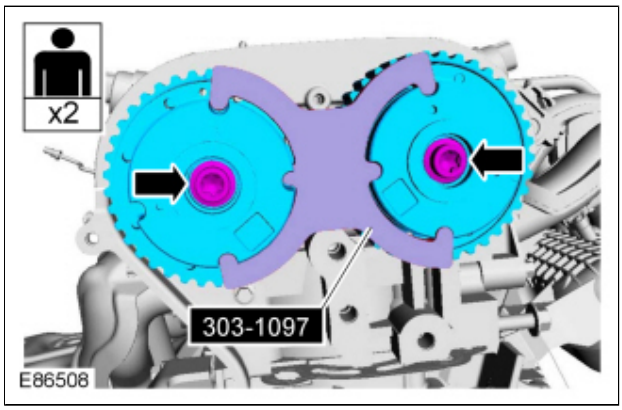
2. Install the Camshaft Alignment Plate into the end of the camshafts.



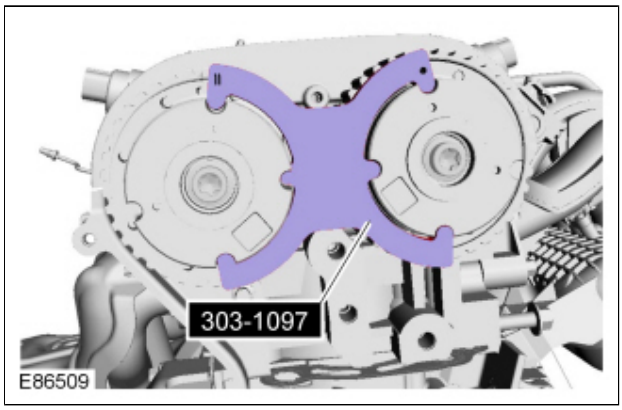
3. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

   NOTE: The timing marks of the camshaft phaser and sprocket must be at the 12 o'clock position.

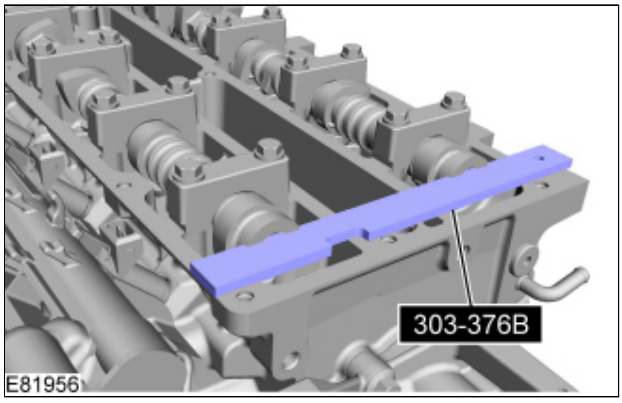
   Install the 2 camshaft phaser and sprockets, bolts and the VCT Alignment Tool.
   - Tighten the 2 bolts to 25 Nm (18 lb-ft).



4. Remove the VCT Alignment Tool.

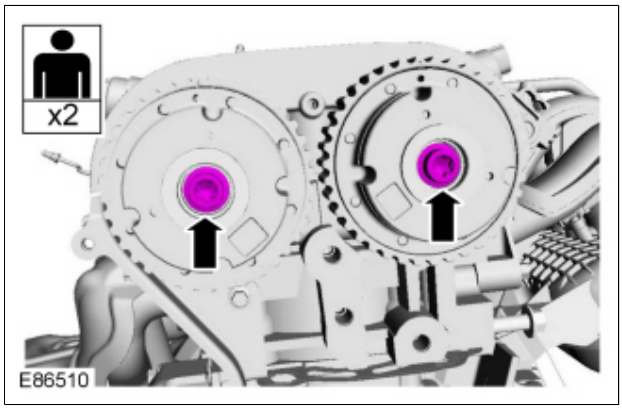


5. Remove the Camshaft Alignment Plate.



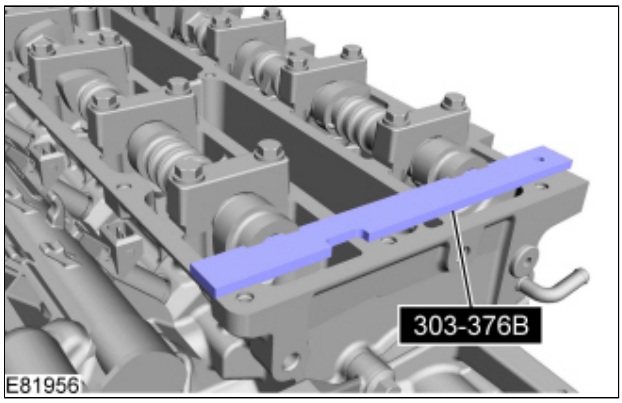
6. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

   Tighten to 2 camshaft phaser and sprocket bolts an additional 75 degrees.



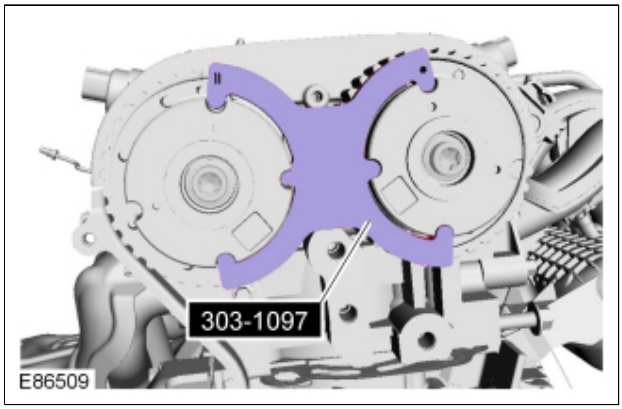
7. **NOTE:** The special tool can only be installed if the valve timing is correct.

   Install the Camshaft Alignment Plate into the end of the camshafts.

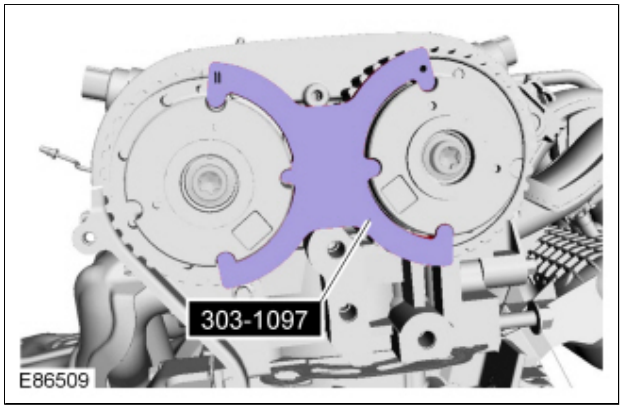


8. **NOTE:** The special tool can only be installed if the valve timing is correct.

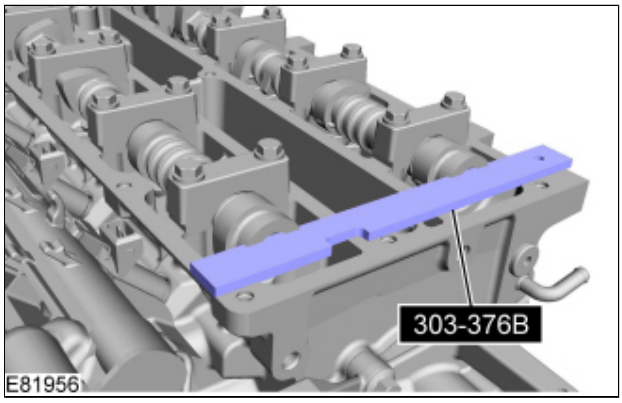
   Install the VCT Alignment Tool.
   - If the special tools cannot be installed, repeat the adjustment according to the preceding steps.



9. Remove the VCT Alignment Tool.

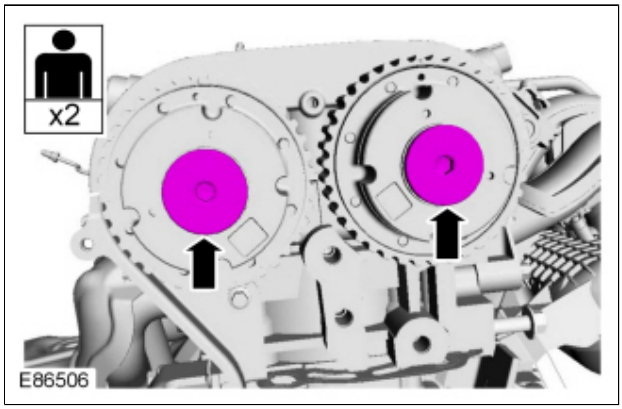


10. Remove the Camshaft Alignment Plate.

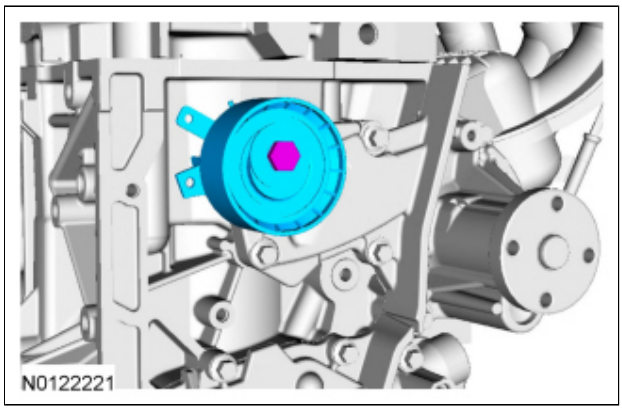


11. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

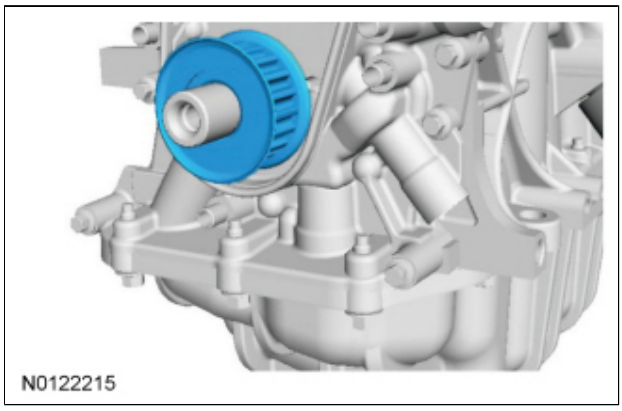
    Install the 2 camshaft phaser and sprocket plugs.
    - Tighten to 16 Nm (142 lb-in).



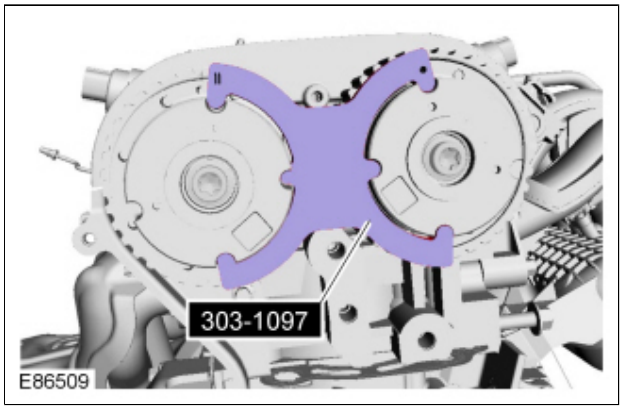
12. Install the timing belt tensioner and the bolt.
    - Tighten to 25 Nm (18 lb-ft).
    - Rotate the timing belt tensioner clockwise and align the 2 holes on the tensioner and install a small screwdriver or holding pin.



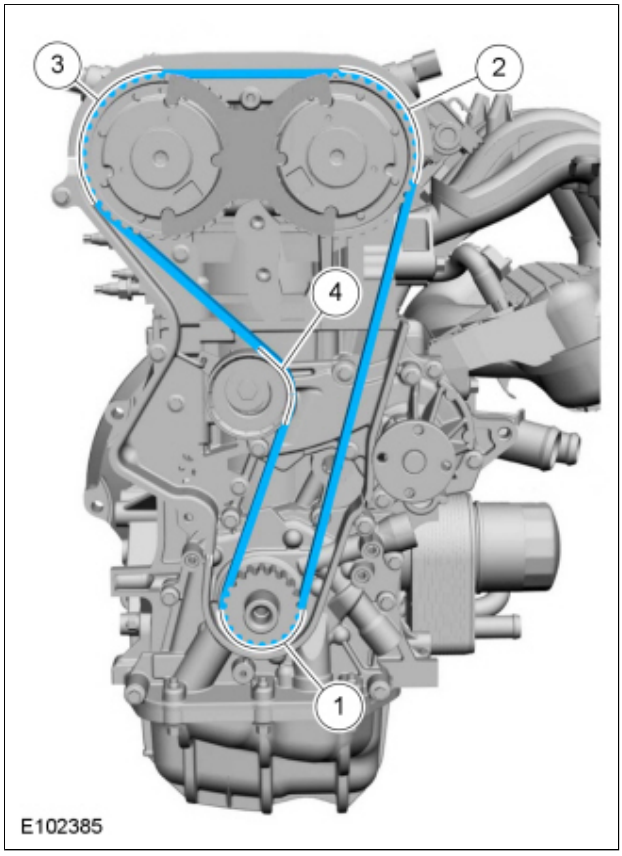
13. Install the crankshaft sprocket gear.



14. Install the VCT Alignment Tool.

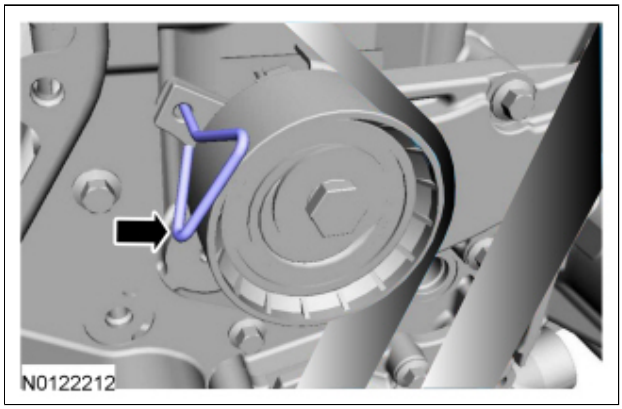


15. Install the timing belt in the sequence shown.

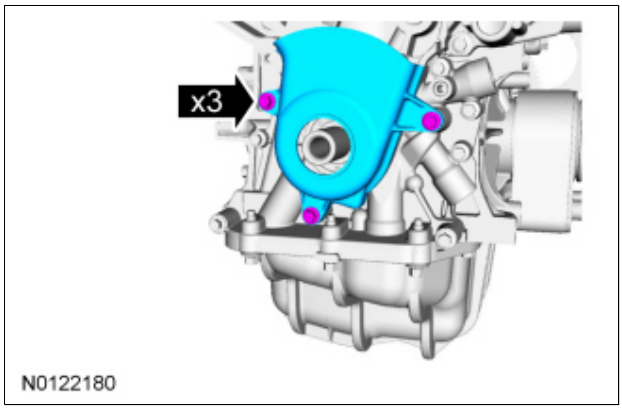


16. **WARNING: The timing belt tensioner spring is under load. Extra care must be taken at all times when handling the tensioner. Failure to follow this instruction may result in personal injury.**

    Remove the timing belt tensioner holding tool.

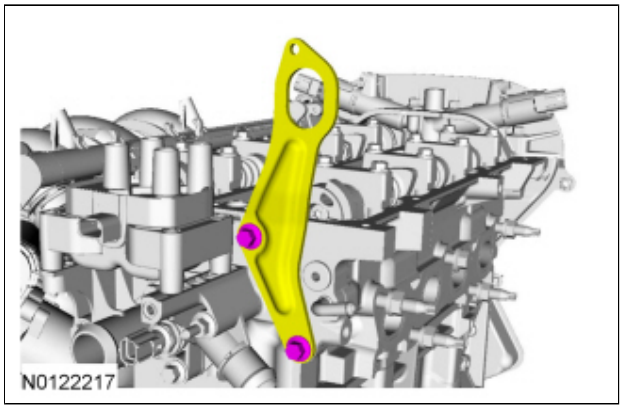


17. Install the lower timing belt cover and the 3 bolts.
    - Tighten to 9 Nm (80 lb-in).



18. Install the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.

19. Tighten the 2 bolts for the LH engine lift eye.
    - 19 Nm (168 lb-in).

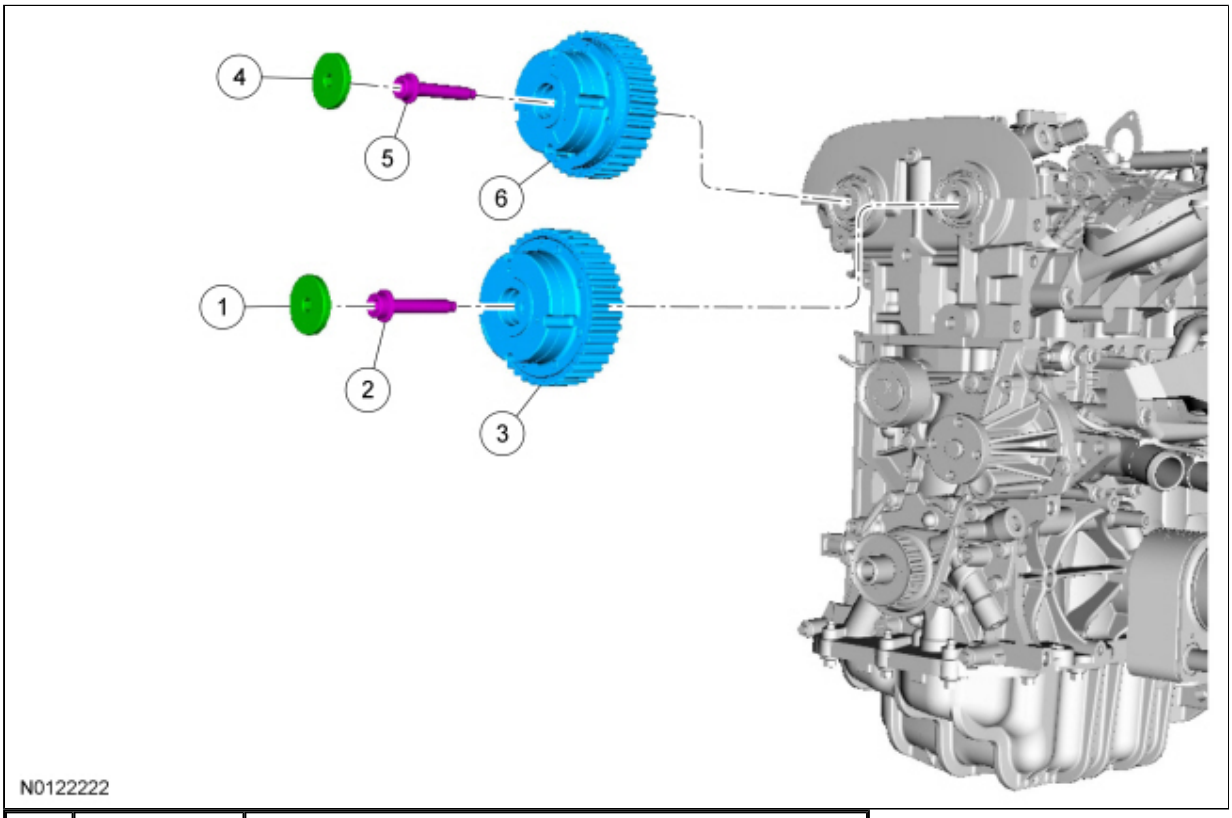


20. Install the valve cover. For additional information, refer to Valve Cover in this section.

Camshaft Phaser and Sprocket

Special Tool(s)

ST3259-A	Alignment Plate, Camshaft 303-376B
ST3261-A	Tool, Variable Camshaft Timing (VCT) Alignment 303-1097



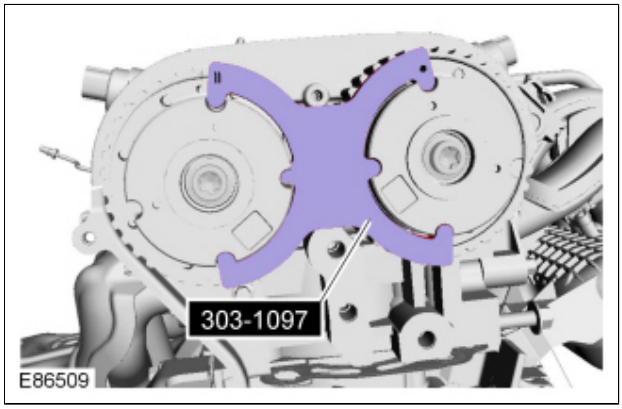
Item	Part Number	Description
1	W710954	Intake camshaft phaser and sprocket plug and seal
2	6279	Intake camshaft phaser and sprocket bolt
3	6256	Intake camshaft phaser and sprocket
4	W710954	Exhaust camshaft phaser and sprocket plug and seal
5	6279	Exhaust camshaft phaser and sprocket bolt
6	6256	Exhaust camshaft phaser and sprocket

Removal

NOTICE: **Do not loosen or remove the crankshaft pulley bolt without first installing the special tools. The crankshaft pulley and the crankshaft timing sprocket are not keyed to the crankshaft. Before any repair requiring loosening or removal of the crankshaft pulley bolt, the crankshaft and camshafts must be locked in place by the special service tools, otherwise severe engine damage can occur.**

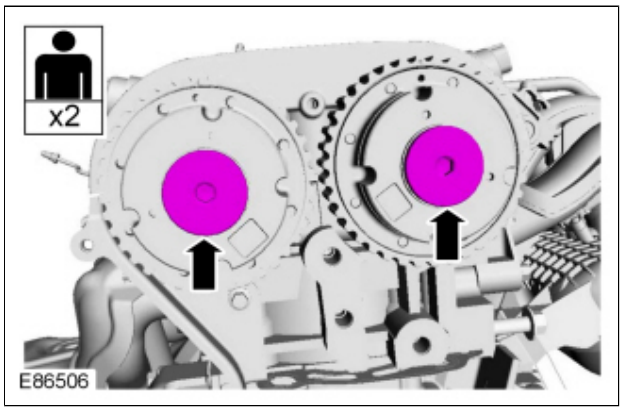
NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the valve cover. For additional information, refer to Valve Cover in this section.
3. Remove the timing belt. For additional information, refer to Timing Belt in this section.
4. Remove the VCT Alignment Tool.



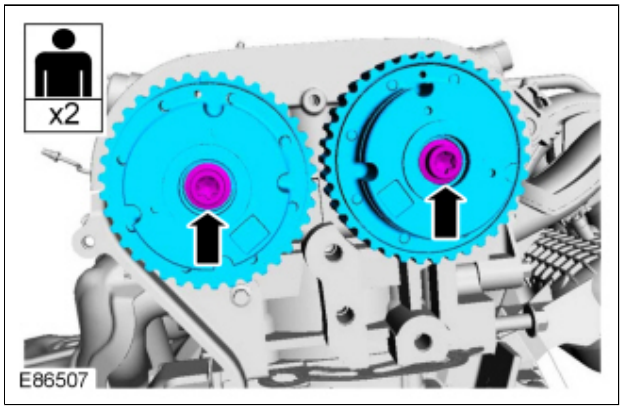
5. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

   Remove the 2 camshaft phaser and sprocket plugs.



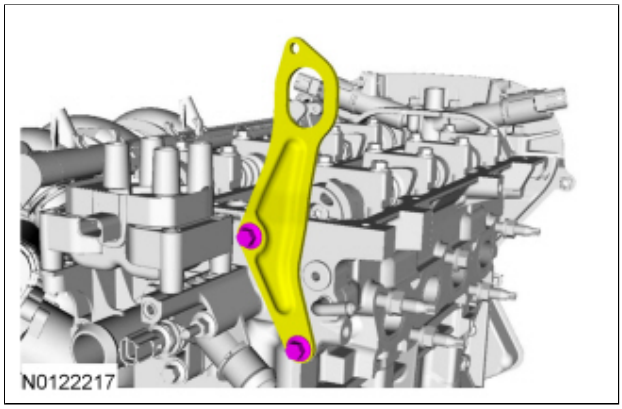
6. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

   Remove the 2 bolts and the camshaft phaser and sprockets.



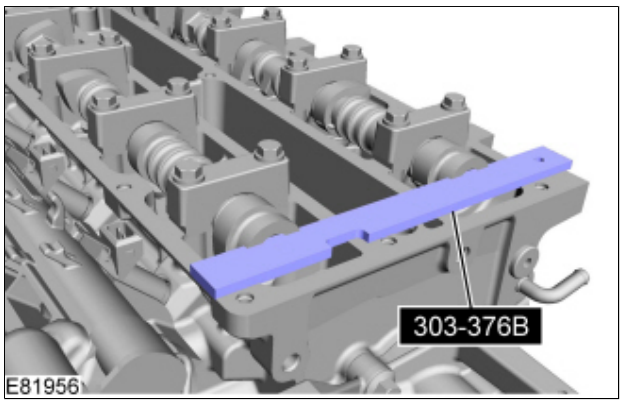
Installation

1. Loosen the 2 bolts for the LH engine lift eye.



2. ***NOTICE:*** **It may be necessary to use an open-ended wrench to turn the camshafts by the hexagon to align the camshafts.**

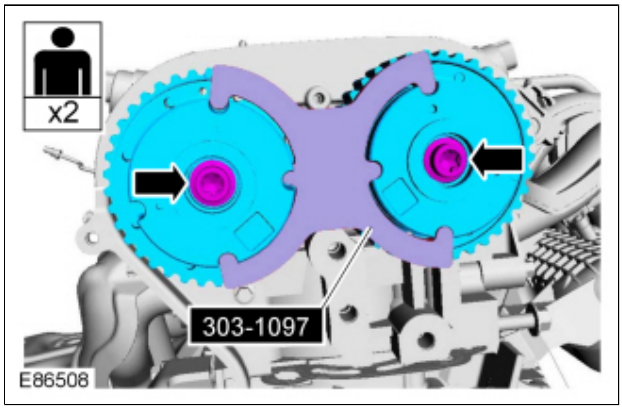
   Install the Camshaft Alignment Plate into the end of the camshafts.



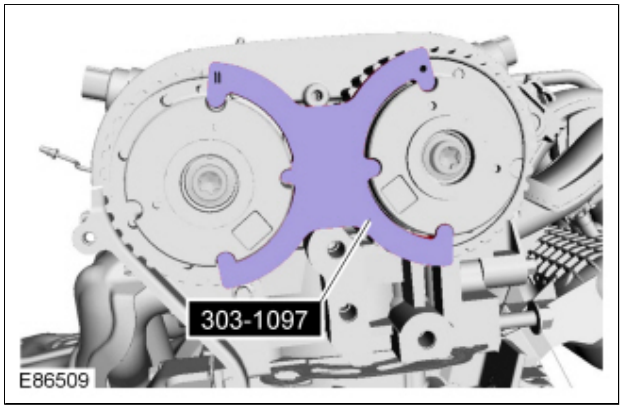
3. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

   NOTE: The timing marks of the camshaft phaser and sprocket must be at the 12 o'clock position.

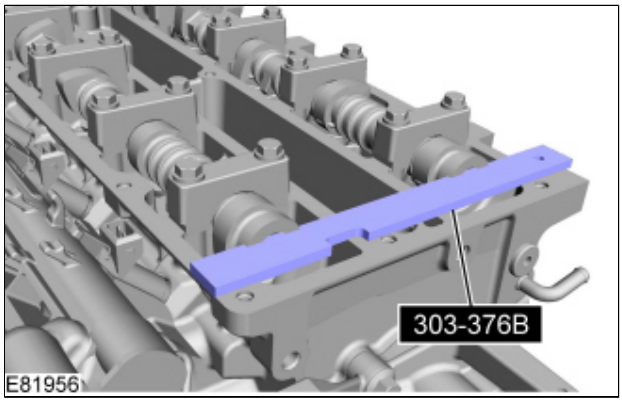
   Install the 2 camshaft phaser and sprocket, bolts and the VCT Alignment Tool.
   - Tighten the 2 bolts to 25 Nm (18 lb-ft).



4. Remove the VCT Alignment Tool.

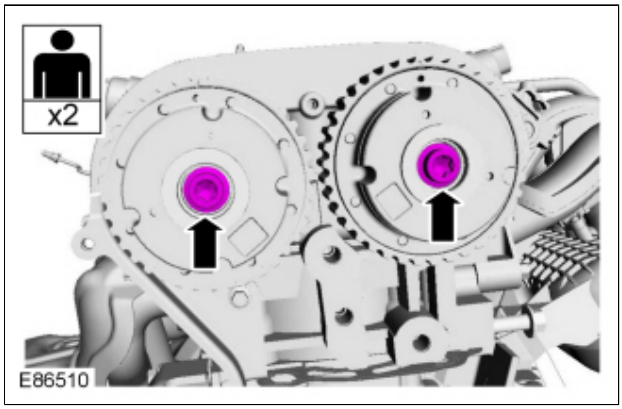


5. Remove the Camshaft Alignment Plate.



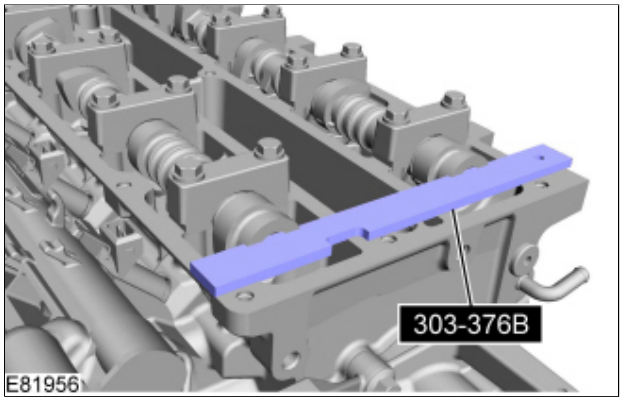
6. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

   Tighten the 2 camshaft phaser and sprocket bolts an additional 75 degrees.



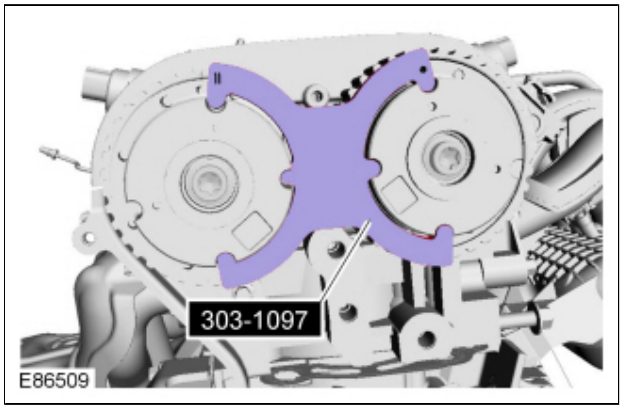
7. **NOTE:** The special tool can only be installed if the valve timing is correct.

   Install the Camshaft Alignment Plate into the end of the camshafts.

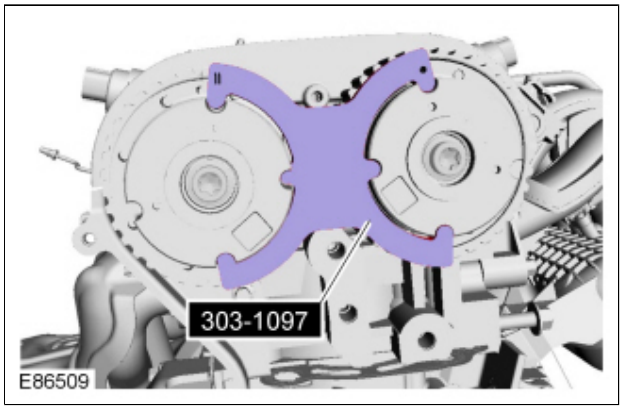


8. **NOTE:** The special tool can only be installed if the valve timing is correct.

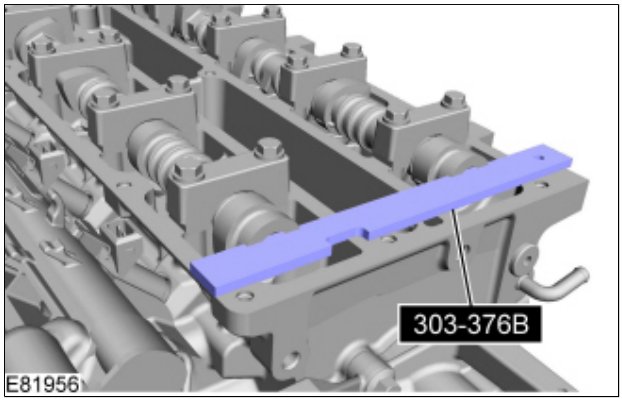
   Install the VCT Alignment Tool.
   - If the special tools cannot be installed, repeat the adjustment according to the preceding steps.



9. Remove the VCT Alignment Tool.

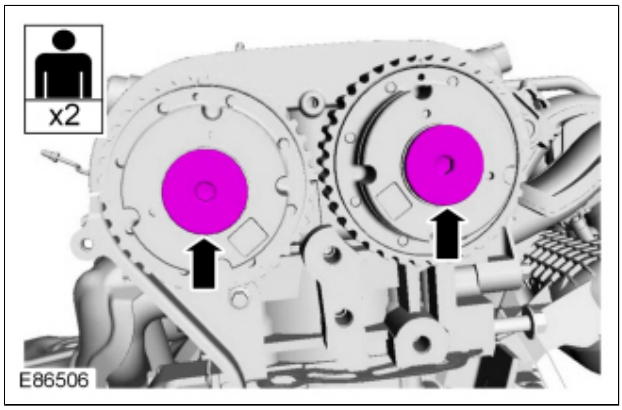


10. Remove the Camshaft Alignment Plate.

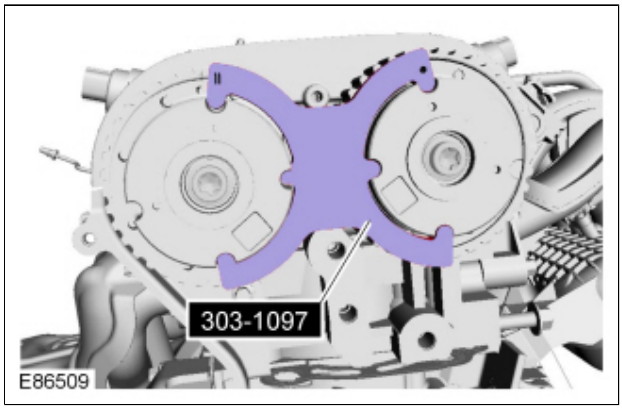


11. ***NOTICE:*** **Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**

    Install the 2 camshaft phaser and sprocket plugs.
    - Tighten to 16 Nm (142 lb-in).

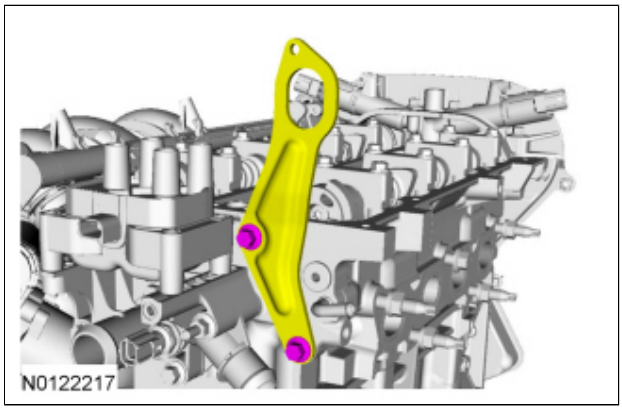


12. Install the VCT Alignment Tool.



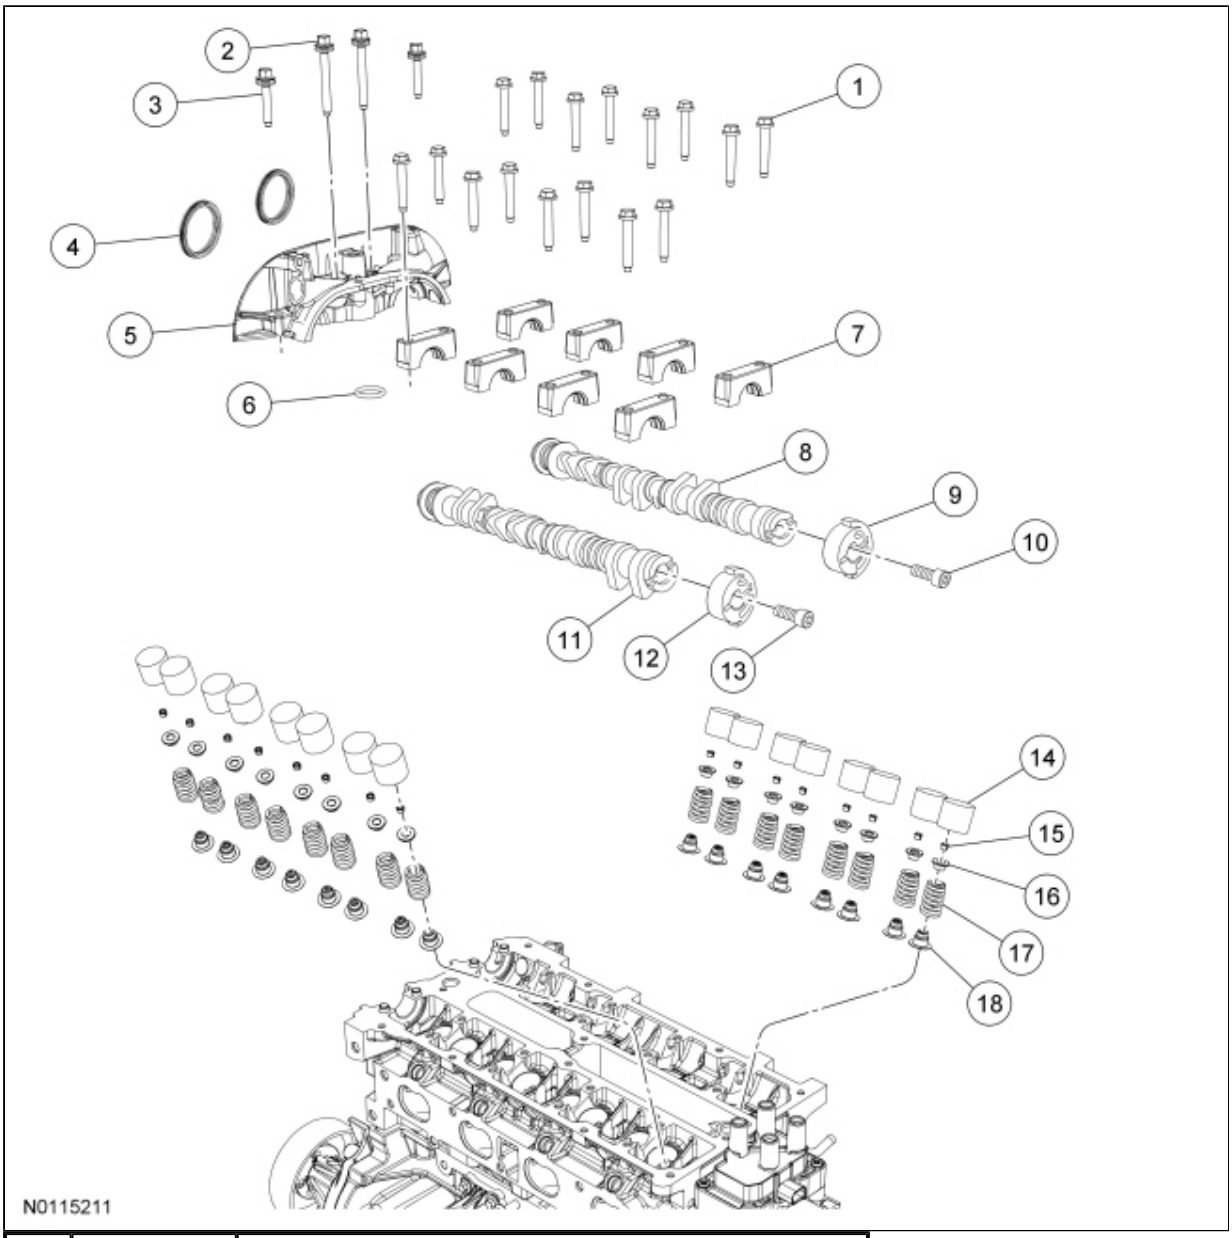
13. Install the timing belt. For additional information, refer to Timing Belt in this section.

14. Tighten the 2 bolts for the LH engine lift eye.
    - Tighten to 19 Nm (168 lb-in).



15. Install the valve cover. For additional information, refer to Valve Cover in this section.

Valve Train Components — Exploded View



Item	Part Number	Description
1	W706225	Camshaft cap bolt (16 required)
2	W710294	Variable Camshaft Timing (VCT) bridge bolt (2 required)
3	W710295	VCT bridge bolt (2 required)
4	6K292	Camshaft oil seal (2 required)
5	—	VCT bridge (part of 6049)
6	W708317	VCT bridge O-ring seal
7	—	Camshaft cap (8 required) (part of 6049)
8	6250	Exhaust camshaft
9	—	Exhaust camshaft trigger wheel (part of 6250)

10	—	Exhaust camshaft trigger wheel bolt (part of 6250)
11	6250	Intake camshaft
12	—	Intake camshaft trigger wheel (part of 6250)
13	—	Intake camshaft trigger wheel bolt (part of 6250)
14	6500	Valve tappet (16 required)
15	6518	Valve collet (16 required)
16	6514	Valve spring retainer (16 required)
17	6513	Valve spring (16 required)
18	6571	Valve seal (16 required)

1. Refer to the procedures and/or exploded views in this section for any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Camshafts

Special Tool(s)

 ST3263-A	Installer, Camshaft Seal 303-1532
ST2417-A	Remover, Input Shaft Oil Seal 308-375
ST1185-A	Slide Hammer 100-001 (T50T-100-A)

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A
Gasket Maker TA-16	WSK-M2G348-A5

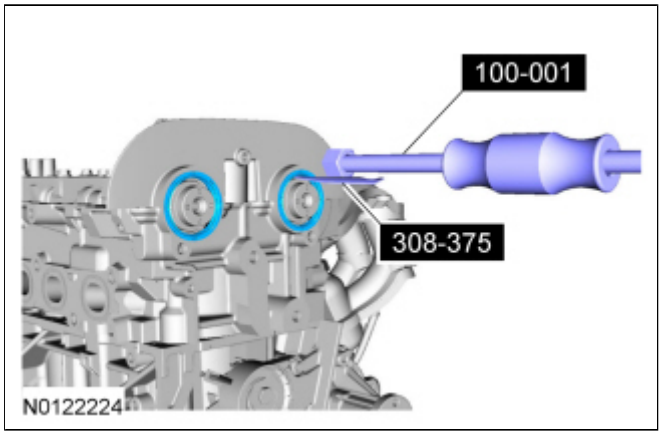
Removal

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

NOTICE: **Do not rotate the camshafts unless instructed to in this procedure. Rotating the camshafts or crankshaft with timing components loosened or removed can cause serious damage to the valves and pistons.**

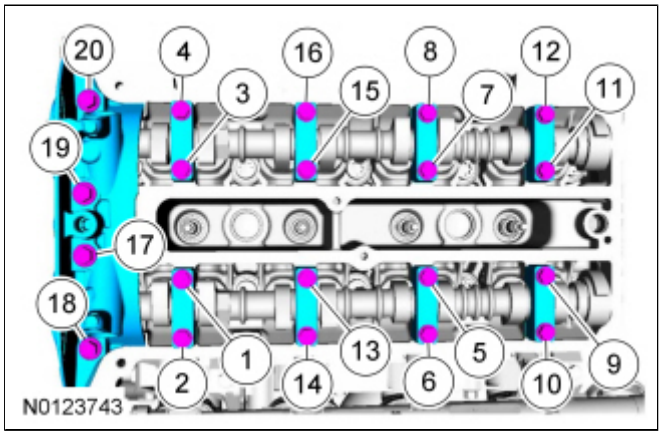
1. Remove the camshaft phaser and sprockets. For additional information, refer to Camshaft Phaser and Sprocket in this section.

2. Using the Input Shaft Oil Seal Remover and Slide Hammer, remove the 2 camshaft oil seals.



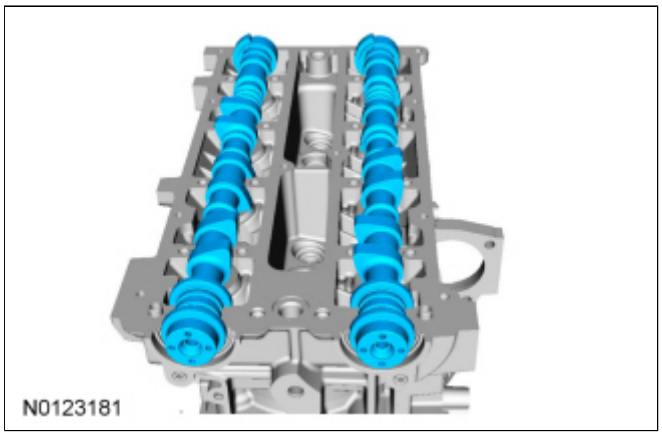
3. **NOTE:** Note the position of each component before removal.

   Remove the bolts for the camshaft bearing caps and Variable Camshaft Timing (VCT) bridge in the sequence shown.
   - Inspect and replace the VCT bridge O-ring seal, if necessary.

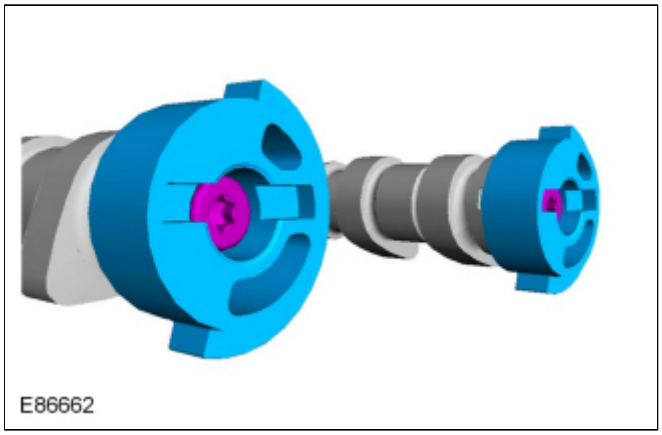


4. ***NOTICE:*** **Do not pry on camshafts when removing or damage to the camshafts may occur.**

   Remove the 2 camshafts from the cylinder head.

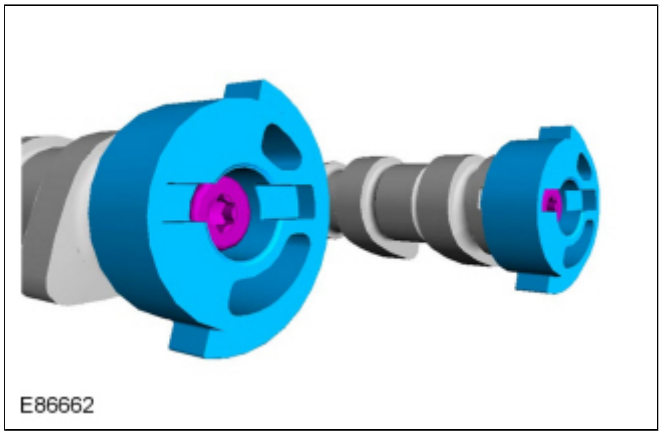


5. If necessary, remove the 2 bolts and the camshaft trigger wheels.



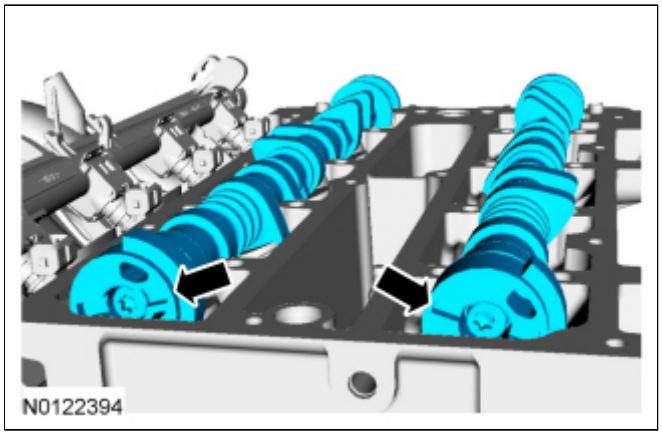
Installation

1. If removed, install the camshaft trigger wheels and the 2 bolts.
    - Tighten to 21 Nm (15 lb-ft).

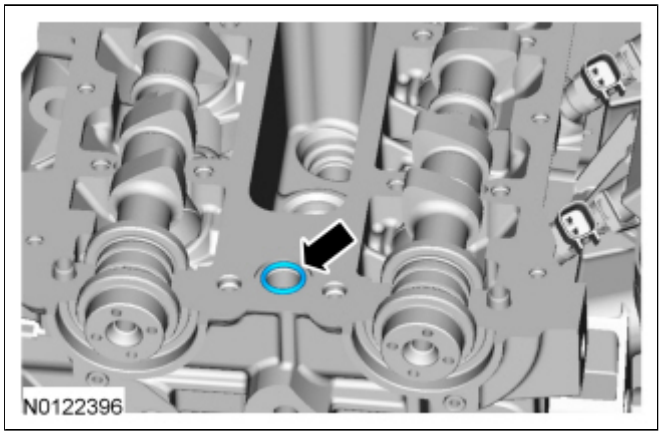


2. **NOTE:** Lubricate the camshafts with clean engine oil.

   Install the camshafts as shown.

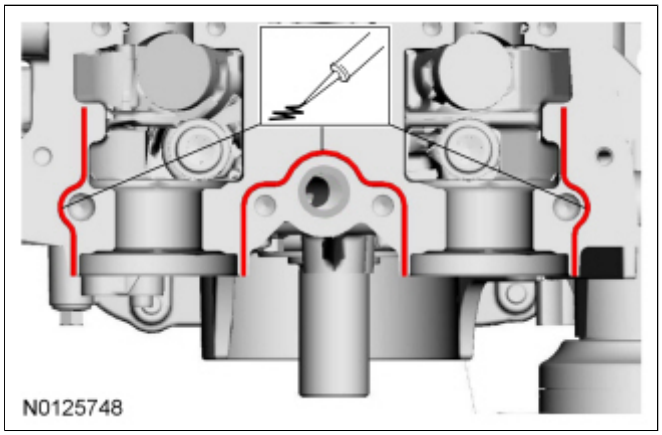


3. Install the VCT bridge O-ring seal.



4. **NOTE:** The VCT bridge must be installed within 5 minutes of applying the gasket maker to the cylinder head.

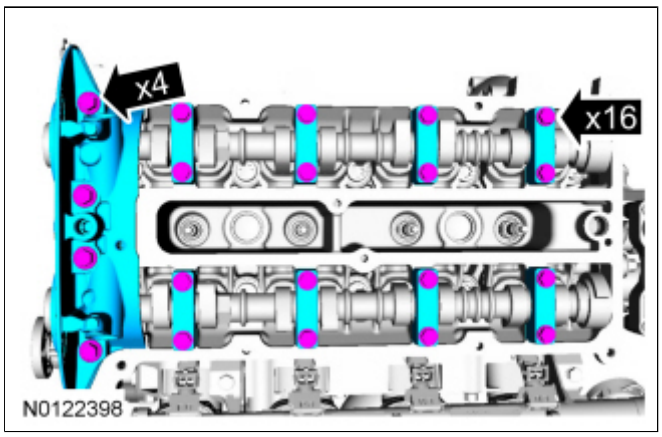
   Apply a 1.5 mm (0.059 in) bead of gasket maker to the cylinder head as shown.



5. ***NOTICE:*** **Make sure that the camshafts and camshaft bearing caps are installed in their original locations or damage to the engine may occur.**

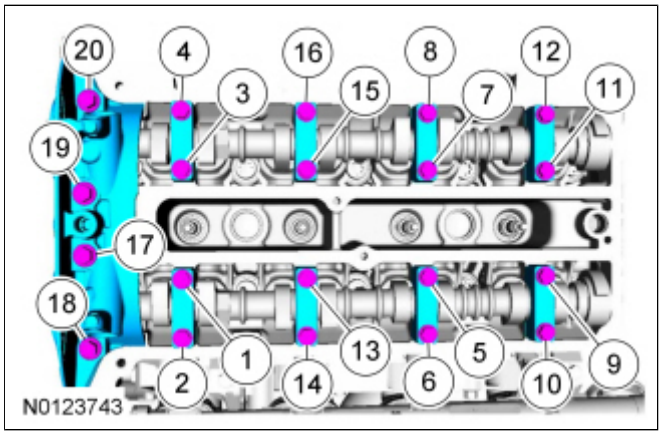
   NOTE: Apply clean engine oil to the bearing surfaces of the camshaft bearing caps and the VCT bridge.

   Install the camshaft bearing caps, VCT bridge and the bolts finger tight.



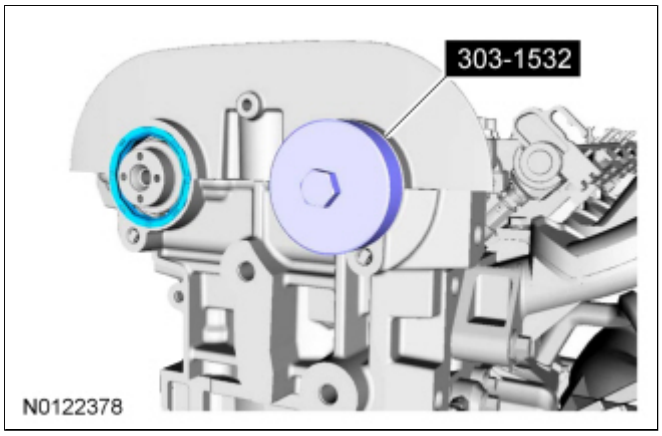
6. Tighten the bolts in the sequence shown in 6 stages.
   - Stage 1: Tighten the bolts evenly, half a turn at a time, until the camshaft bearing caps and the VCT bridge are seated against the cylinder head.

- Stage 2: Tighten bolts 1 through 16 to 7 Nm (62 lb-in).
- Stage 3: Tighten bolts 17 through 20 to 10 Nm (89 lb-in).
- Stage 4: Tighten bolts 1 through 16 an additional 45 degrees.
- Stage 5: Tighten bolts 17 and 19 an additional 70 degrees.
- Stage 6: Tighten bolts 18 and 20 an additional 53 degrees.



7. If the cylinder head, camshafts or valve tappets were replaced, check the valve clearance. For additional information, refer to Valve Clearance Check in this section.

8. Using the Camshaft Seal Installer, install the 2 camshaft oil seals.



9. Install the camshaft phaser and sprocket. For additional information, refer to Camshaft Phaser and Sprocket in this section.

Valve Springs

Special Tool(s)

 ST1981-A	Compressor, Valve Spring 303-300 (T87C-6565-A)
ST1907-A	Compressor, Valve Spring 303-350 (T89P-6565-A)
ST1902-A	Compressor, Valve Spring 303-1418

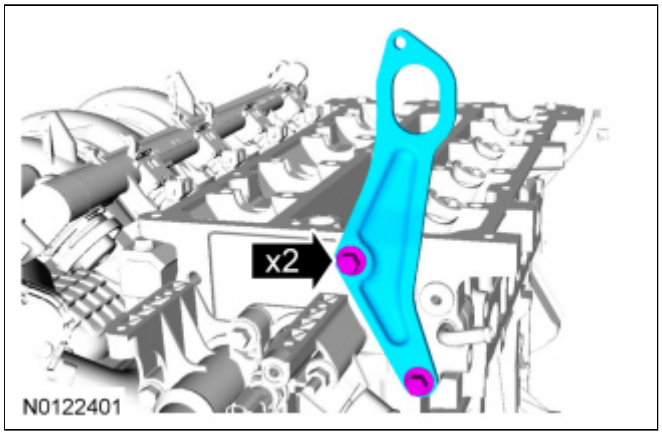
Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A
Multi-Purpose Grease XG-4 and/or XL-5	ESB-M1C93-B

Removal

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

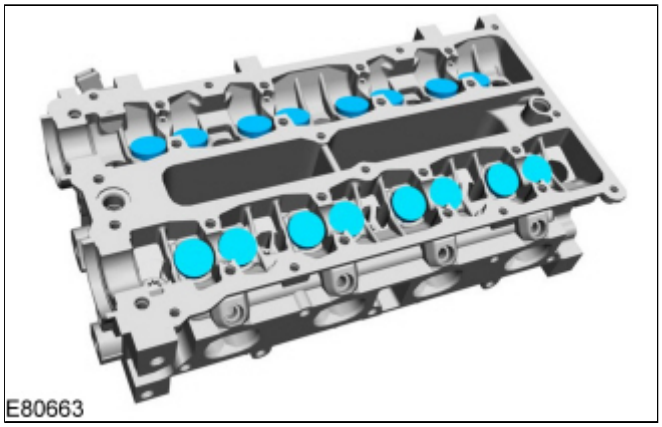
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the camshafts. For additional information, refer to Camshafts in this section.
3. Remove the ignition coil. For additional information, refer to Section 303-07 .
4. Remove the 2 bolts and the LH engine lift eye.



5. **NOTE:** If the camshafts and valve tappets are to be reused, mark the location of the valve tappets to make sure they are assembled in their original positions.

   NOTE: The number on the valve tappets only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.

   Remove and inspect the valve tappets. For additional information, refer to Section 303-00 .



6. ***NOTICE:*** **Only use hand tools when removing or installing the spark plugs, or damage can occur to the cylinder head or spark plug.**

   NOTE: Use compressed air to remove any foreign material in the spark plug well before removing the spark plugs.

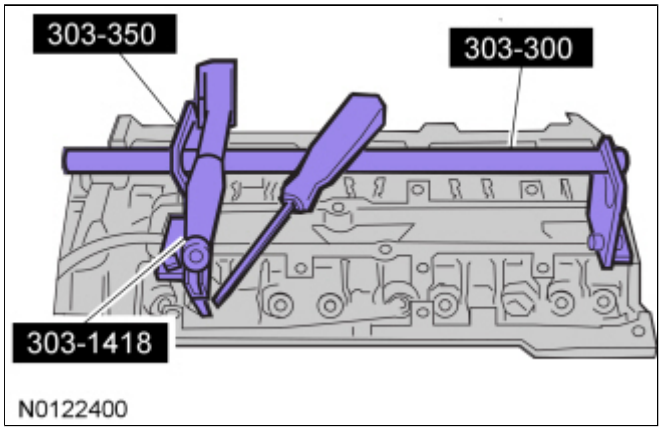
   Remove the 4 spark plugs.

7. ***NOTICE:*** **Use compressed air at 7 to 10 bars (100-150 psi). Do not disconnect the compressed air from the cylinder until the valve spring, valve spring retainer and valve collet is installed. Any loss of air pressure will allow the valve to fall into the cylinder.**

   Connect the compressed air supply to the No. 1 cylinder.

8. **NOTE:** Place all parts in order to one side.

   Apply compressed air to the cylinder and remove the valve spring.
   - Using the Valve Spring Compressors, compress the valve spring and remove the valve collet, using some multi-purpose grease and a small screwdriver.
   - Remove the valve spring retainer and the valve spring.

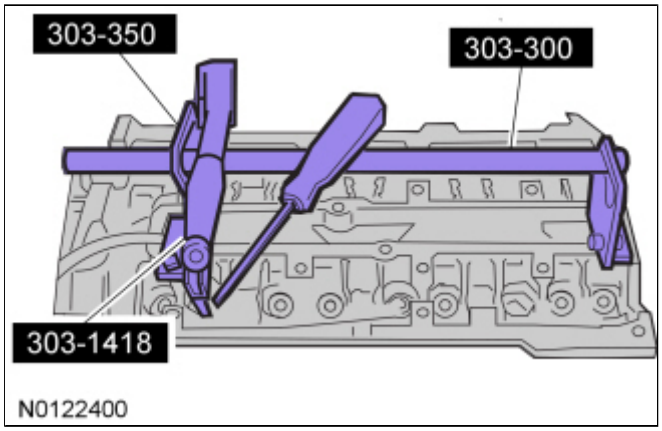


9. Repeat the appropriate removal steps for all of the other cylinders.

Installation

1. **NOTE:** Check the seating of the valve collet.

   Using the Valve Spring Compressors, install the valve spring.
   - Insert the valve spring and the valve spring retainer.
   - Compress the valve spring and install the valve collet using some multi-purpose grease and a small screwdriver.



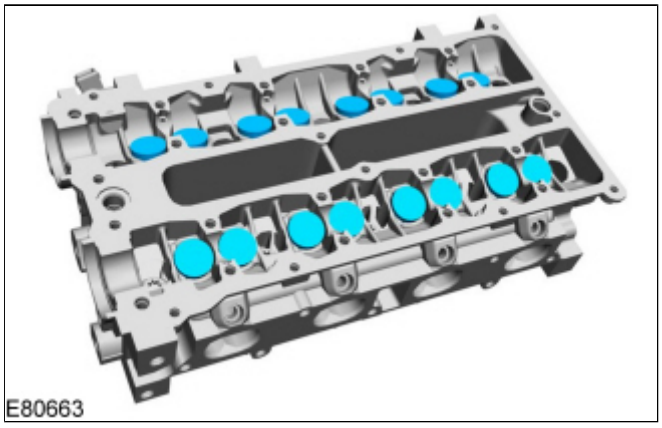
2. Disconnect the compressed air supply.

3. Repeat the appropriate installation steps for all of the other cylinders.

4. ***NOTICE:*** **Only use hand tools when removing or installing the spark plugs, or damage can occur to the cylinder head or spark plug.**

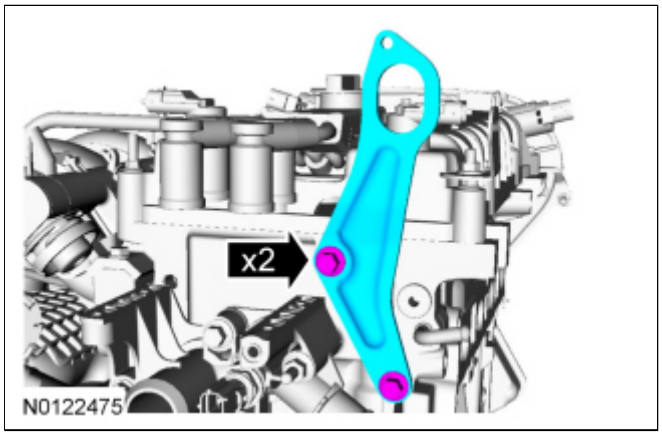
   Install the 4 spark plugs.
   - Tighten to 15 Nm (133 lb-in).

5. Coat the valve tappets with clean engine oil and install them in the cylinder head in their original position.



6. Install the camshafts. For additional information, refer to Camshafts in this section.

7. Install the LH engine lift eye and the 2 bolts.
   - Tighten to 19 Nm (168 lb-in).



8. Install the ignition coil. For additional information, refer to Section 303-07 .

Valve Seals

Material

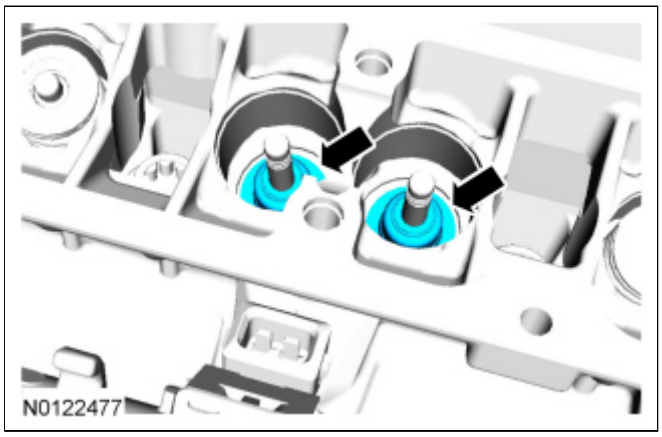
Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

Removal

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

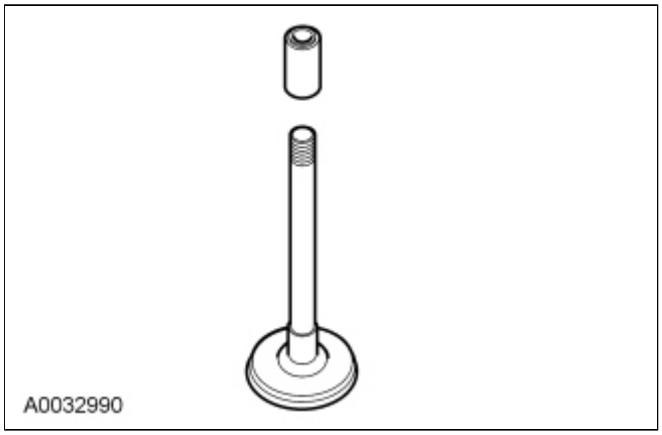
1. Remove the valve springs. For additional information, refer to Valve Springs in this section.
2. **NOTE:** Use valve stem seal pliers (such as Snap-on® YA-8230 or equivalent).

   Using valve stem seal pliers, remove and discard the valve seals.



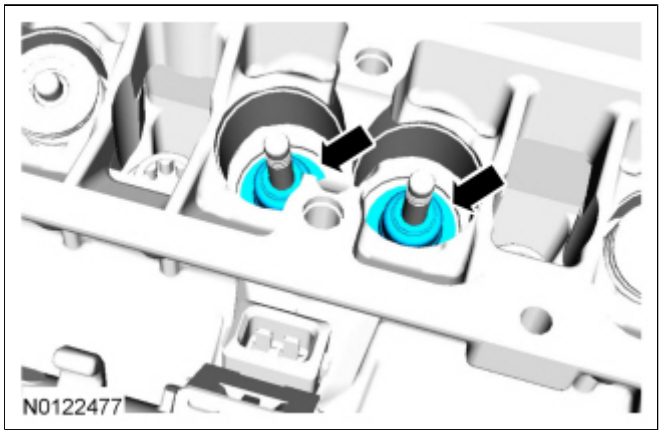
Installation

1. Install the valve stem seal installation sleeve.



2. **NOTE:** Lubricate the valve stem seal with clean engine oil prior to installation.

   Using valve stem seal pliers, install the valve seals.



3. Install the valve springs. For additional information, refer to Valve Springs in this section.

Valve Tappets

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

Removal and Installation

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

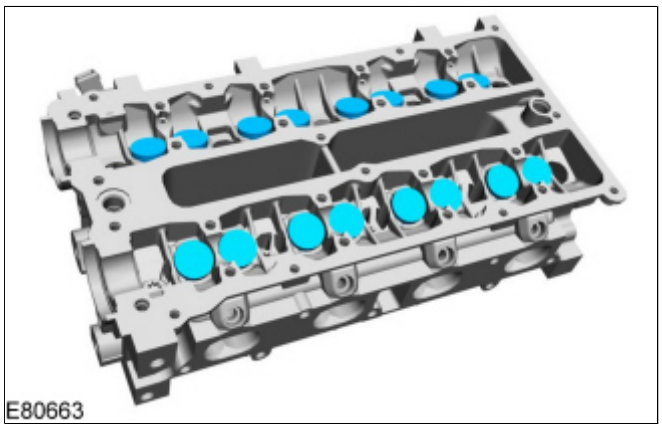
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the camshafts. For additional information, refer to Camshafts in this section.

3. **NOTE:** If the camshafts and valve tappets are to be reused, mark the location of the valve tappets to make sure they are assembled in their original positions.

   NOTE: The number on the valve tappets only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.

   Remove and inspect the valve tappets. For additional information, refer to Section 303-00 .



E80663

4. To install, reverse the removal procedure.
   - Coat the valve tappets with clean engine oil prior to installation.

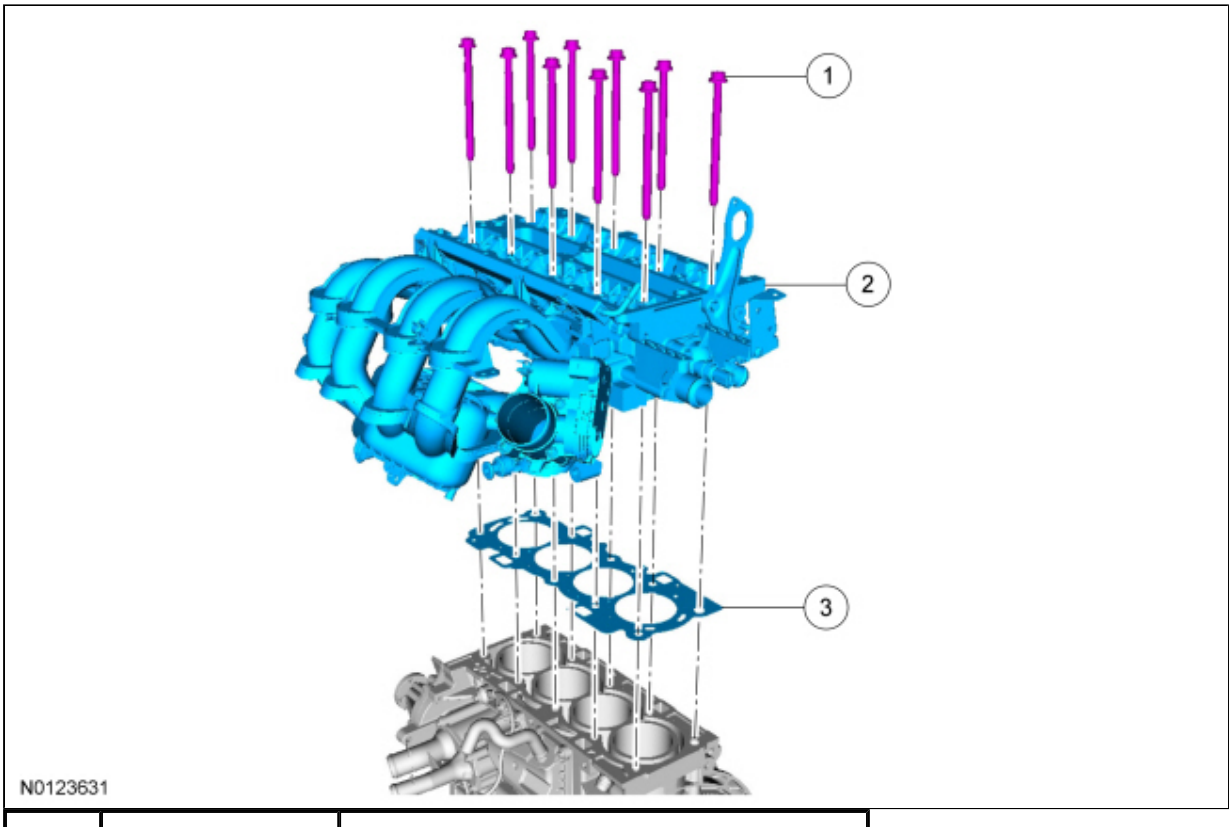
Cylinder Head

Special Tool(s)

 ST2425-A	Engine Support Bar 303-F072
ST1595-A	Lifting Bracket, Engine 303-050 (T70P-6000)

Material

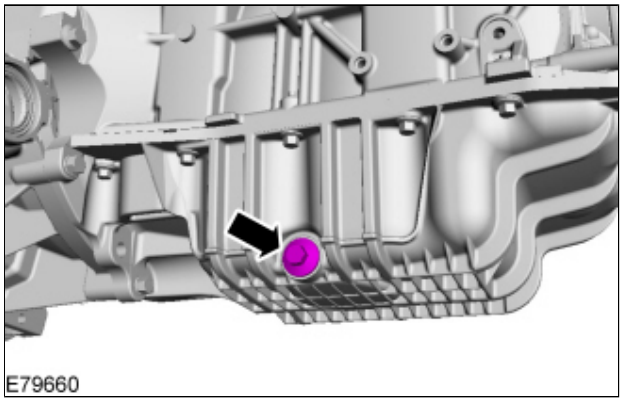
Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A
Motorcraft® Metal Surface Prep ZC-31-A	—



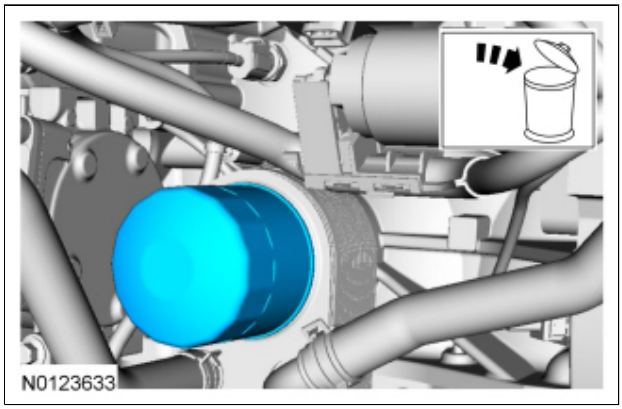
Item	Part Number	Description
1	6065	Cylinder head bolt (10 required)
2	6049	Cylinder head
3	6051	Cylinder head gasket

Removal

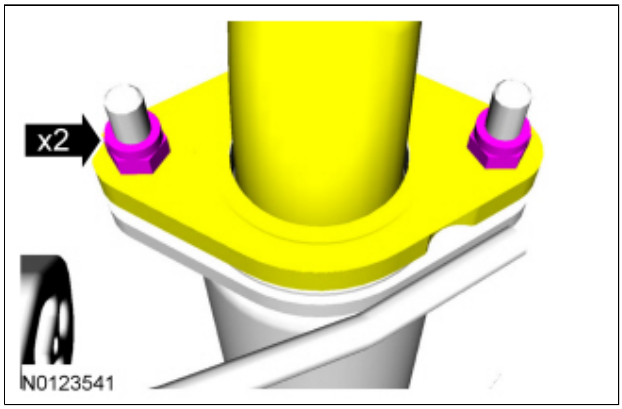
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Release the fuel system pressure. For additional information, refer to Section 310-00 .
3. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
4. Remove the Air Cleaner (ACL) outlet tube. For additional information, refer to Section 303-12 .
5. Remove the Heated Oxygen Sensor (HO2S). For additional information, refer to Section 303-14 .
6. Drain the engine cooling system. For additional information, refer to Section 303-03 .
7. Drain the engine oil.
   - Install the drain plug.
   - Tighten to 28 Nm (21 lb-ft).



8. Remove and discard the engine oil filter.

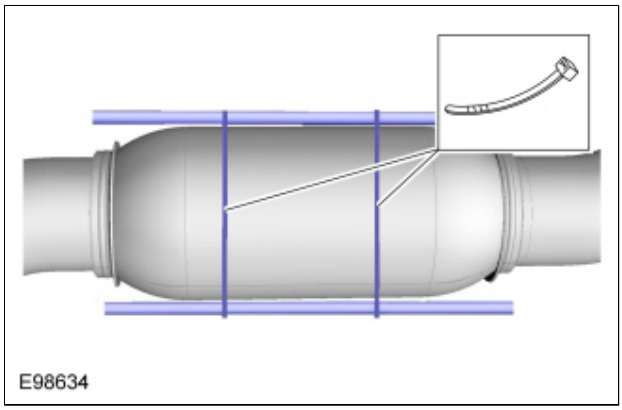


9. Remove the Catalyst Monitor Sensor (CMS). For additional information, refer to Section 303-14 .
10. Remove the 2 catalytic converter-to-muffler nuts and separate the catalytic converter from the muffler.
    - Discard the gasket.

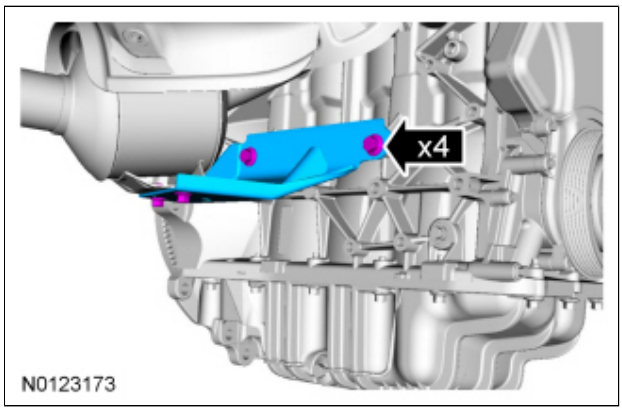


11. ***NOTICE:*** **Do not excessively bend or twist the exhaust flexible pipe. Failure to follow these instructions may cause damage to the flexible pipe.**

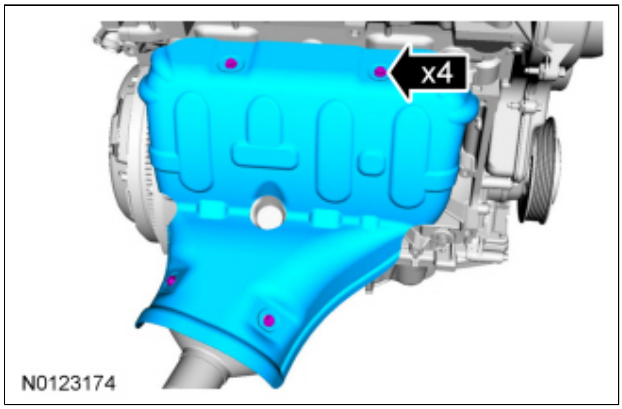
    Support the exhaust flexible pipe with a support wrap or suitable splint.



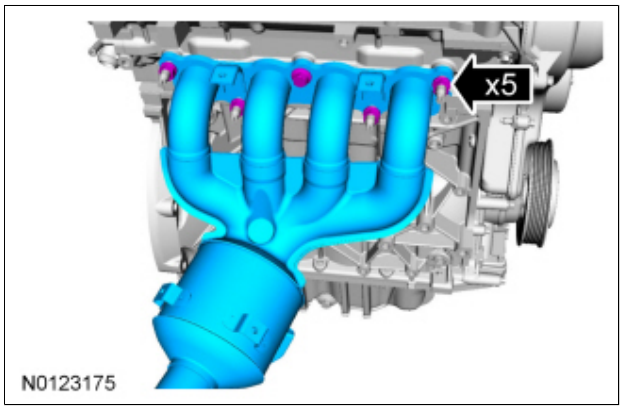
12. Remove the 4 bolts and the lower catalytic converter bracket.



13. Remove the 4 bolts and the catalytic converter heat shield.



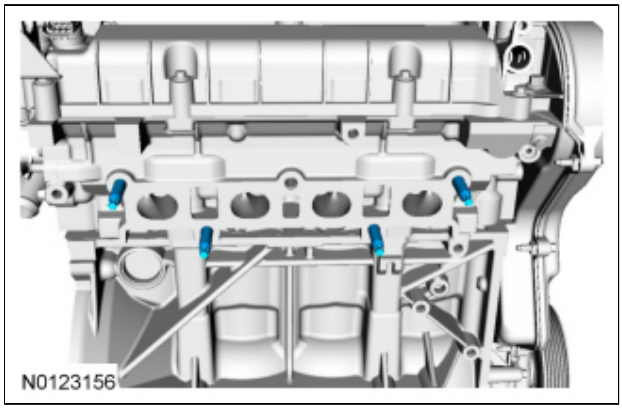
14. Remove the 4 catalytic converter nuts and bolt.
    - Discard the 4 nuts and bolt.



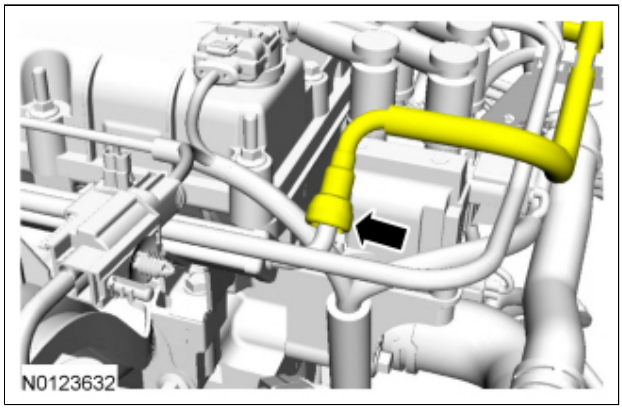
15. Position the catalytic converter back and secure with mechanic wire.
    - Discard the catalytic converter gasket.

16. If equipped, disconnect the block heater electrical connector.

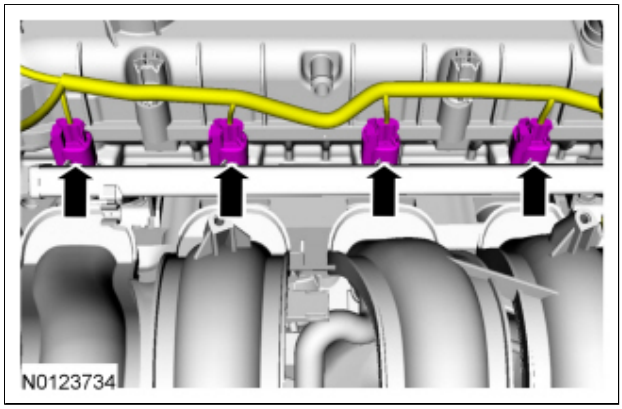
17. Remove the 4 catalytic converter studs and discard.



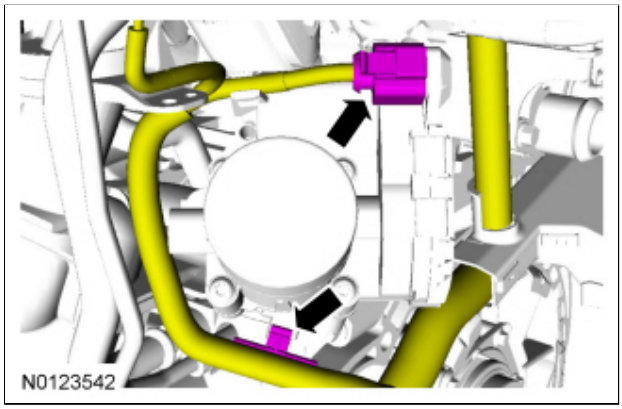
18. Disconnect the fuel tube spring lock couplings from the fuel rail. For additional information, refer to Section 310-00 .



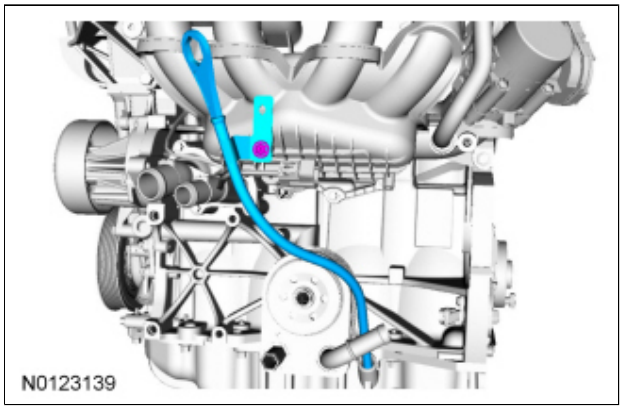
19. Disconnect the 4 fuel injector electrical connectors.



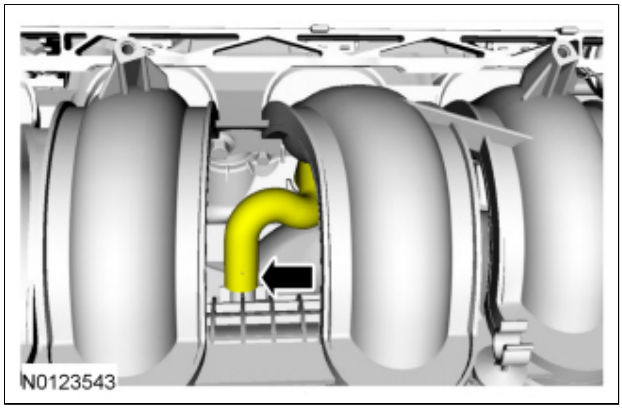
20. Disconnect the Throttle Body (TB) electrical connector.
    - Detach the wiring harness retainer from the TB .



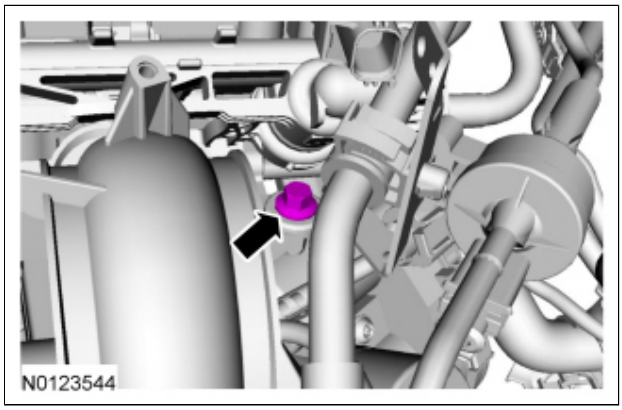
21. Remove the screw and the oil level indicator and tube.
    - Inspect and replace the O-ring seal, if necessary.



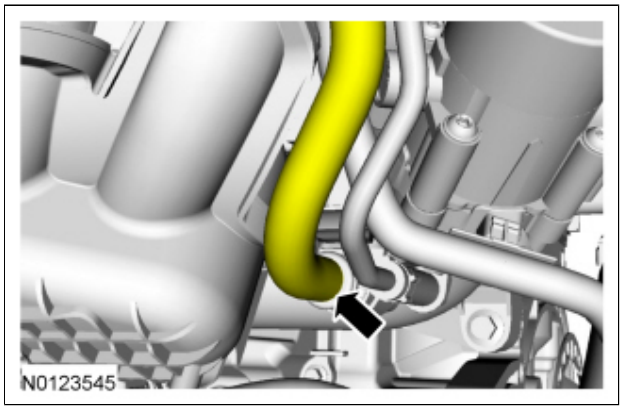
22. Disconnect the PCV hose from the intake manifold.



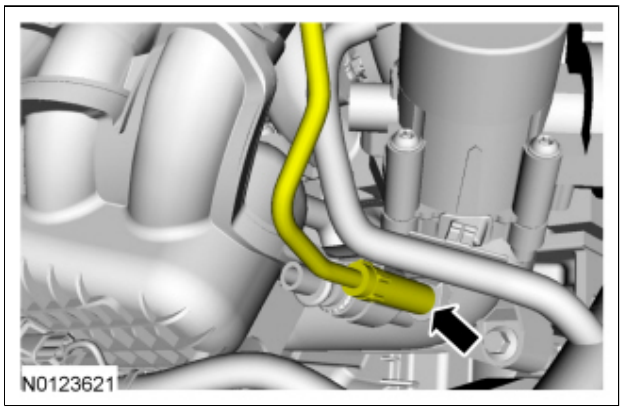
23. Remove the bolt for the Evaporative Emission (EVAP) canister purge valve.



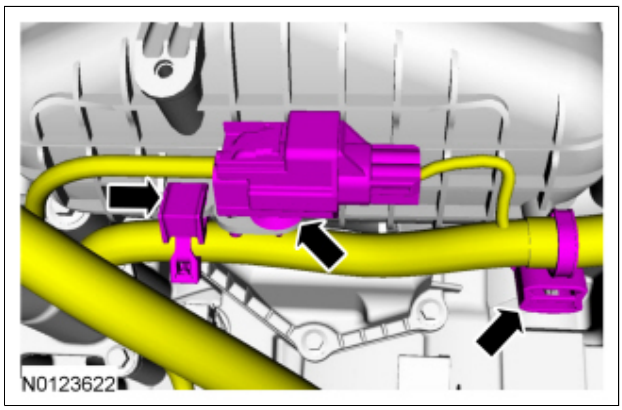
24. Disconnect the brake booster vacuum tube from the intake manifold.



25. Disconnect the EVAP canister purge valve tube from the intake manifold and position the EVAP canister purge valve aside.

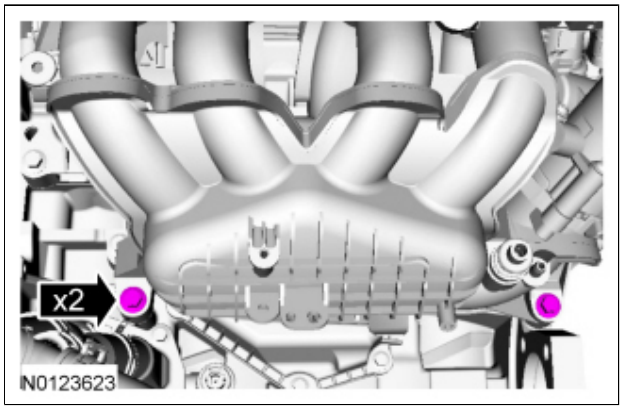


26. Detach the Knock Sensor (KS) electrical connector from the bottom of the intake manifold.
    - Detach the 2 wiring harness retainers from the bottom of the intake manifold.

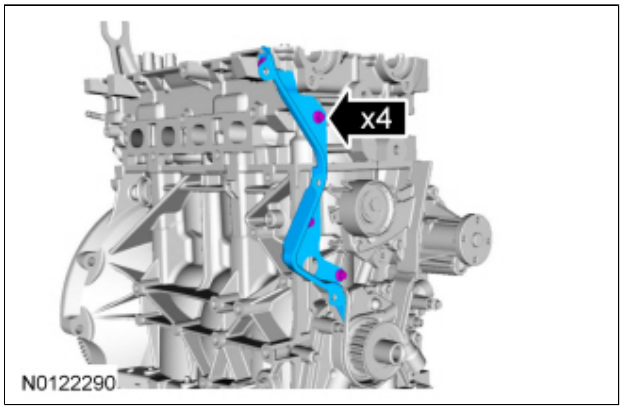


27. Remove the valve tappets. For additional information, refer to Valve Tappets in this section.

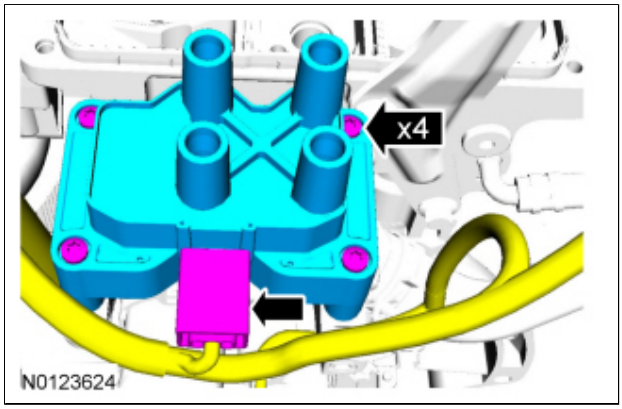
28. Remove the 2 lower bolts for the intake manifold.



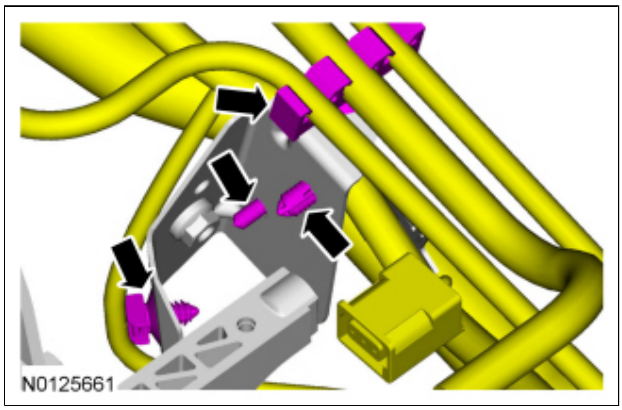
29. Remove the 4 bolts and the timing belt cover backplate.



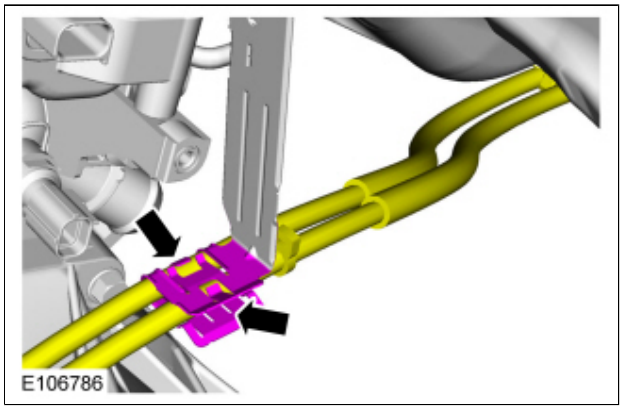
30. Disconnect the ignition coil electrical connector and remove the 4 screws and the ignition coil.



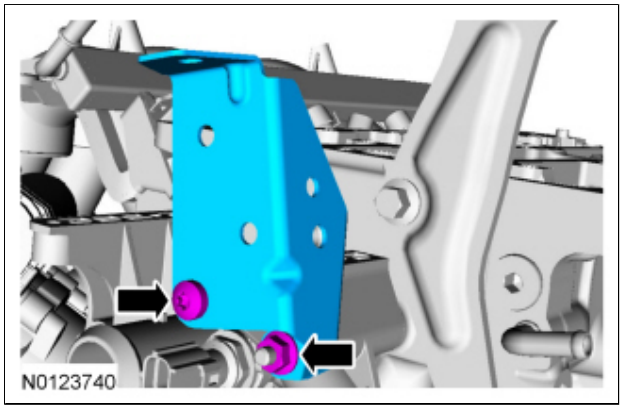
31. Detach the fuel tube retainer from the coolant outlet bracket.
    - Detach the 2 wiring harness retainers and the coolant hose retainer from the coolant outlet bracket.



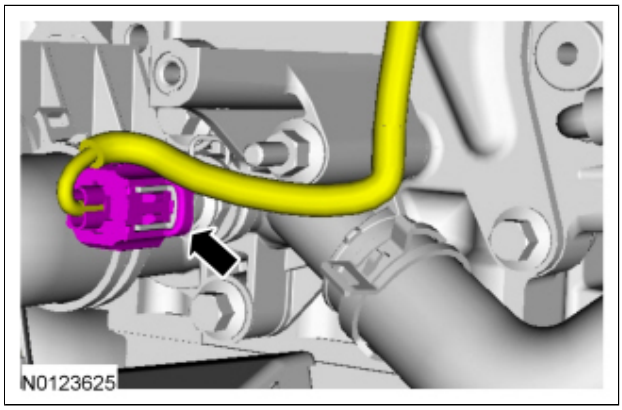
32. If equipped with a manual transaxle, remove the transaxle shift cables from the clip.



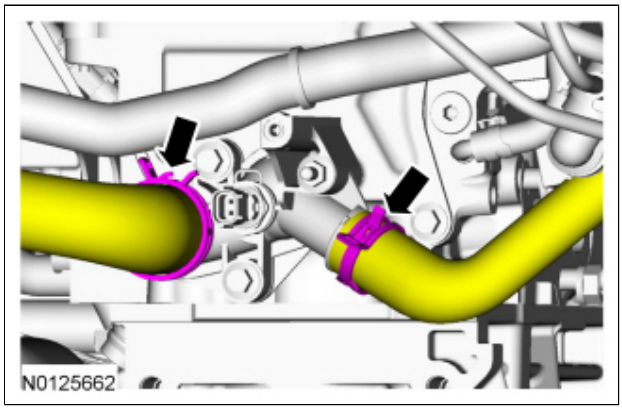
33. Remove the nut, bolt and the bracket from the coolant outlet.



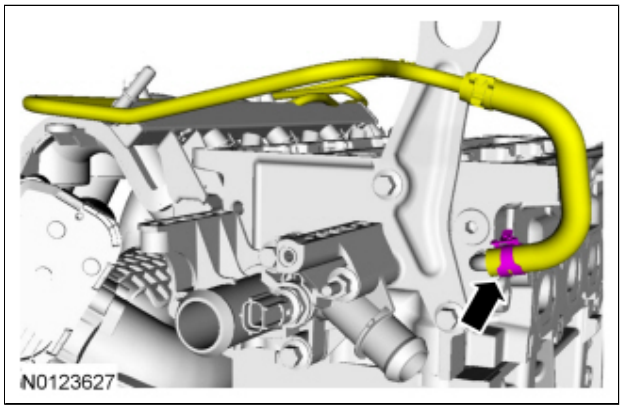
34. Disconnect the Engine Coolant Temperature (ECT) sensor electrical connector.



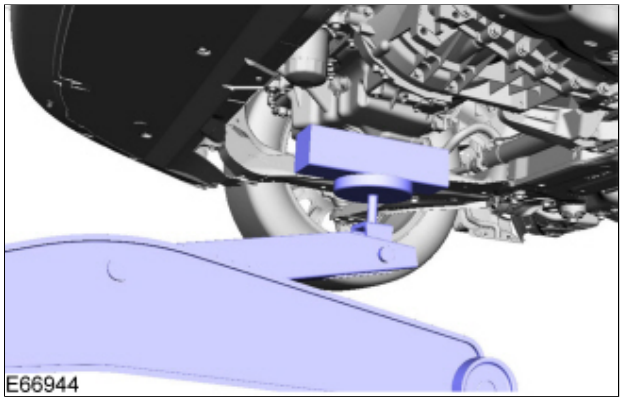
35. Disconnect the 2 coolant hoses from the coolant outlet.



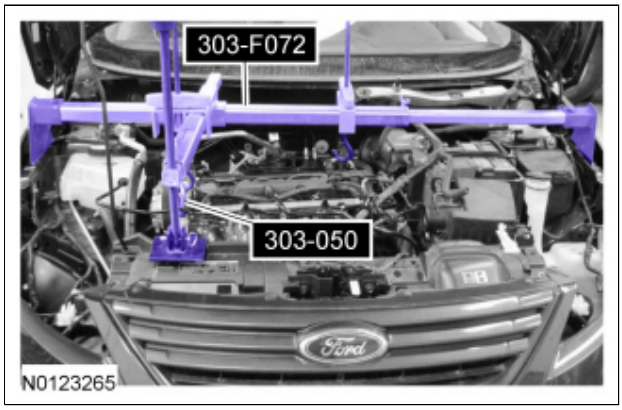
36. Disconnect the coolant return hose from the cylinder head.



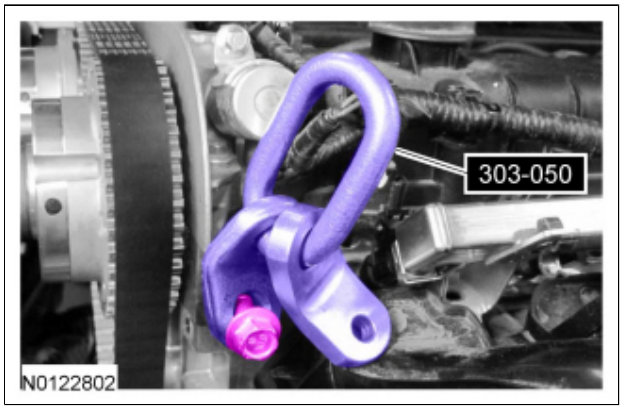
37. Using a floor jack and a block of wood, support the engine.



38. Remove the Engine Support Bar.

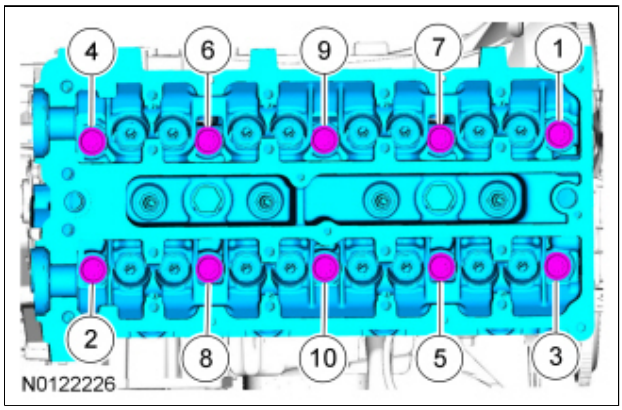


39. Remove the bolt and the Engine Lifting Bracket.



40. **NOTE:** Make sure that the cylinder head is at ambient air temperature before removing the cylinder head bolts.

    Remove the 10 cylinder head bolts in the sequence shown.
    - Remove the cylinder head.
    - Discard the cylinder head bolts and gasket.



41. Support the cylinder head on a bench with the head gasket side up. Check the cylinder head distortion and the cylinder block distortion. For additional information, refer to Section 303-00 .

Installation

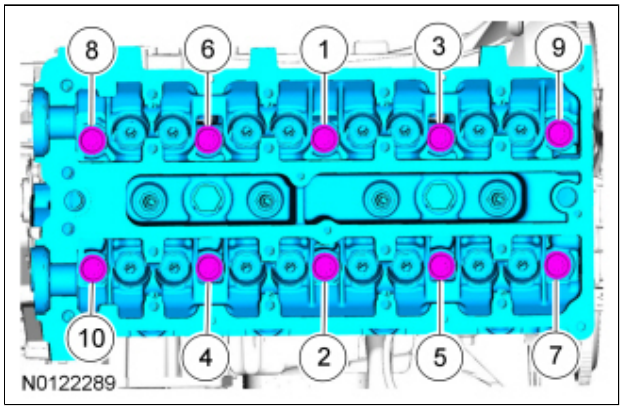
1. ***NOTICE:*** **Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**

   NOTE: If there is no residual gasket material present, metal surface prep can be used to clean and prepare the surfaces.

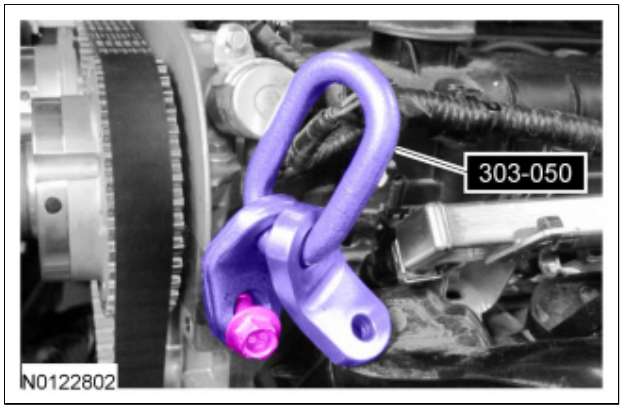
   Clean the cylinder head-to-cylinder block mating surface of both the cylinder head and the cylinder block in the following sequence.
   1. Remove any large deposits of gasket material with a plastic scraper.
   2. Apply metal surface prep, following package directions, to remove any traces of oil or coolant, and to prepare the surfaces to bond with the new gasket. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.

2. **NOTE:** Lubricate the bolts with clean engine oil prior to installation.

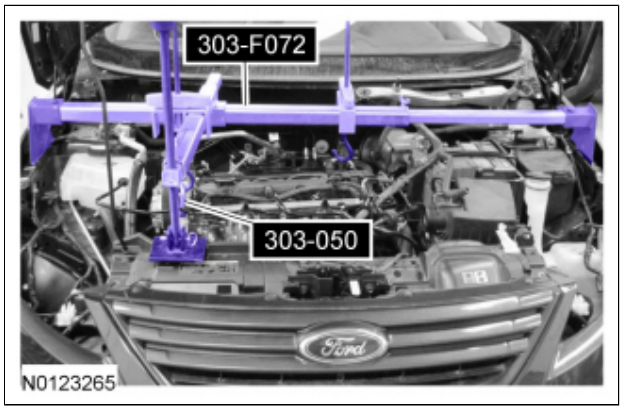
   Install the cylinder head gasket, cylinder head and 10 new bolts. Tighten the bolts in the sequence shown in 4 stages:
   - Stage 1: Tighten to 5 Nm (44 lb-in).
   - Stage 2: Tighten to 15 Nm (133 lb-in).
   - Stage 3: Tighten to 35 Nm (26 lb-ft).
   - Stage 4: Tighten an additional 75 degrees.



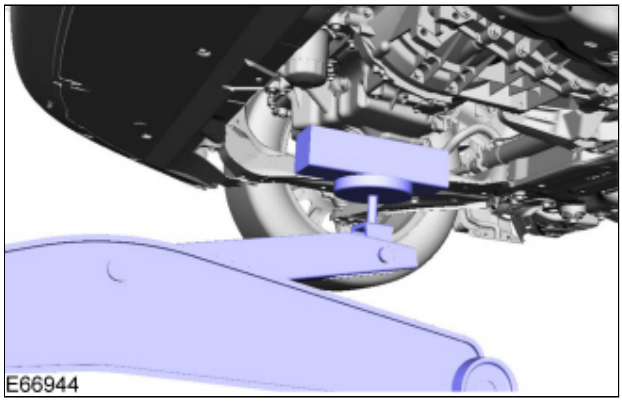
3. Using a engine mount bracket bolt, install the Engine Lifting Bracket.



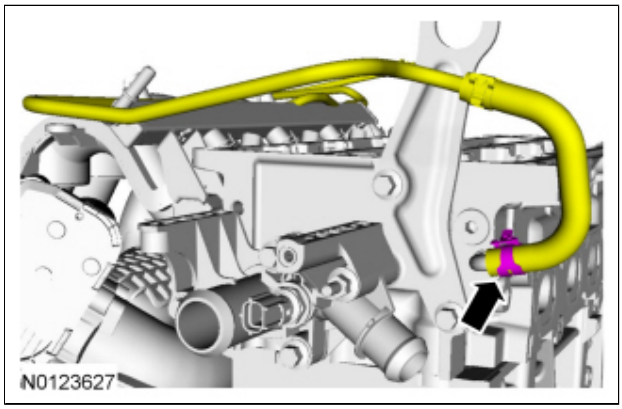
4. Install the Engine Support Bar and support the engine.



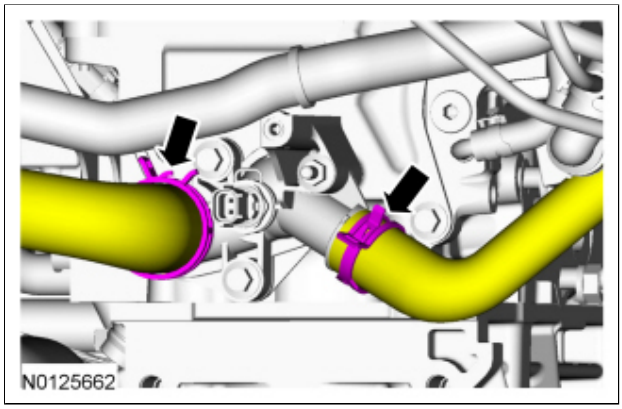
5. Remove the floor jack and block of wood.



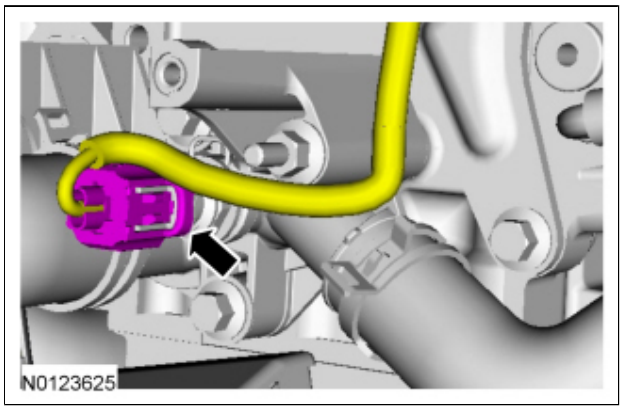
6. Connect the coolant return hose to the cylinder head.



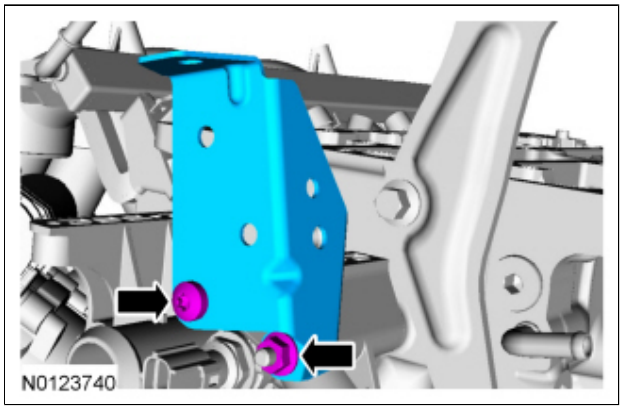
7. Connect the 2 coolant hoses to the coolant outlet.



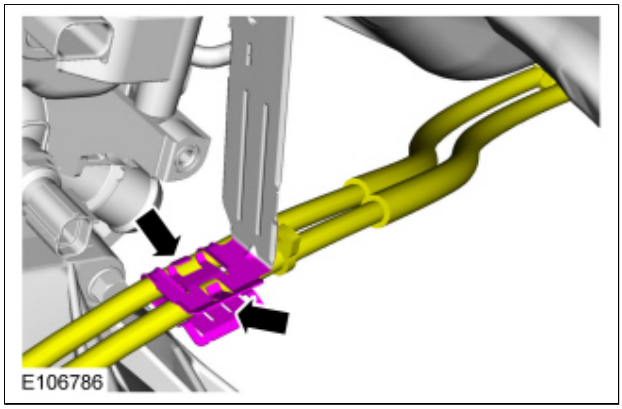
8. Connect the ECT sensor electrical connector.



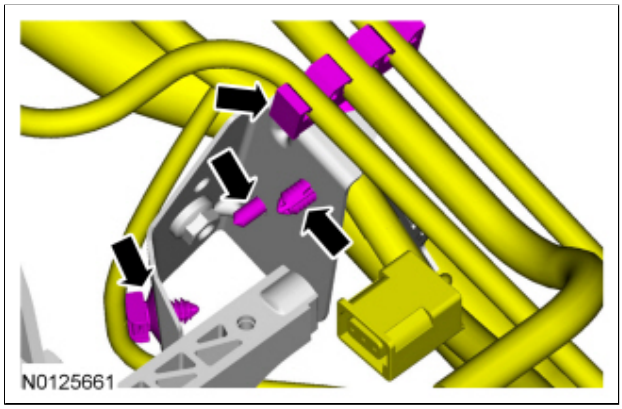
9. Install the coolant outlet bracket, nut and the bolt.
    - Tighten to 6 Nm (53 lb-in).



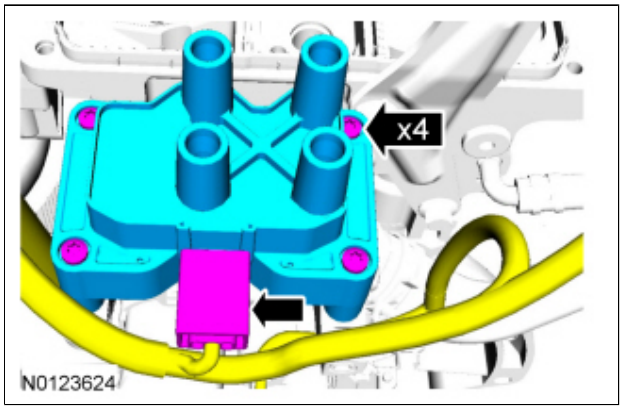
10. If equipped with a manual transaxle, install the transaxle shift cables to the clip.



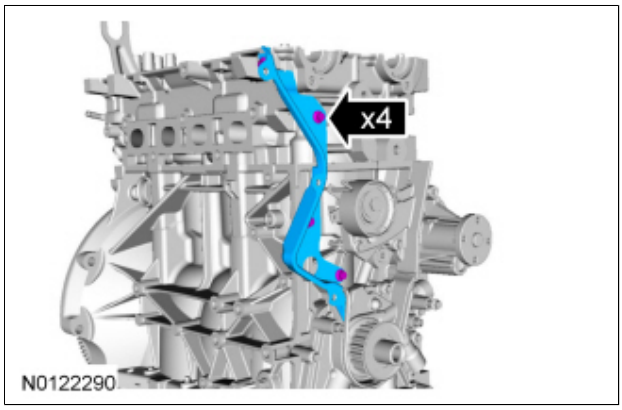
11. Attach the fuel tube retainer to the coolant outlet bracket.
    - Attach the 2 wiring harness and coolant hose retainers to the coolant outlet bracket.



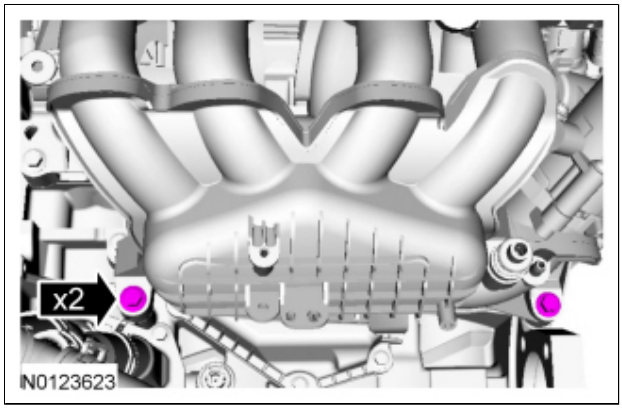
12. Install the ignition coil, 4 screws and connect the ignition coil electrical connector.
    - Tighten to 6 Nm (53 lb-in).



13. Install the timing belt cover backplate and the 4 bolts.
    - Tighten to 9 Nm (80 lb-in).

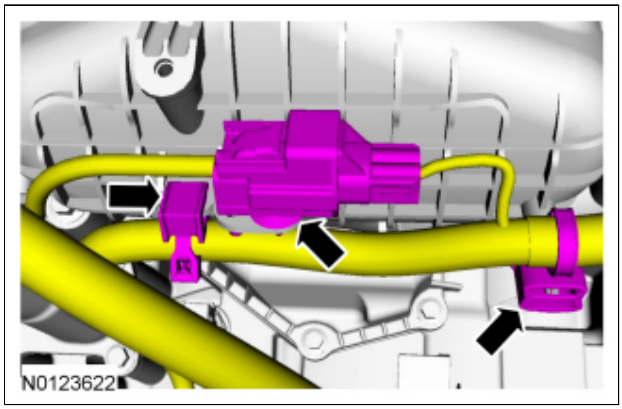


14. Install the 2 lower bolts for the intake manifold.
    - Tighten to 18 Nm (159 lb-in).

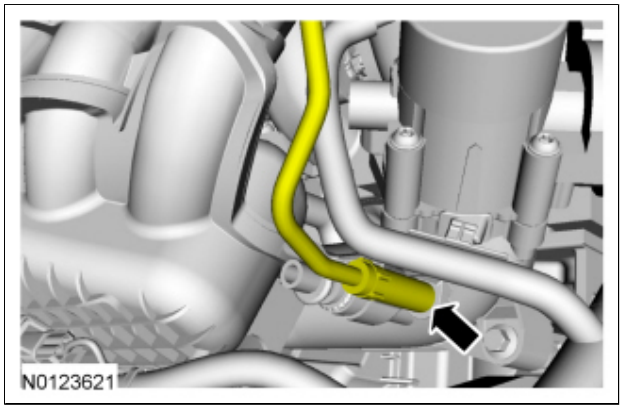


15. Install the valve tappets. For additional information, refer to Valve Tappets in this section.

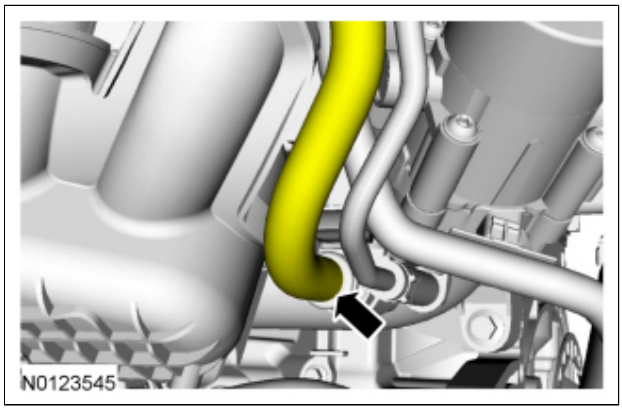
16. Attach the KS electrical connector to bottom of the intake manifold.
    - Attach the 2 wiring harness retainers to the bottom of the intake manifold.



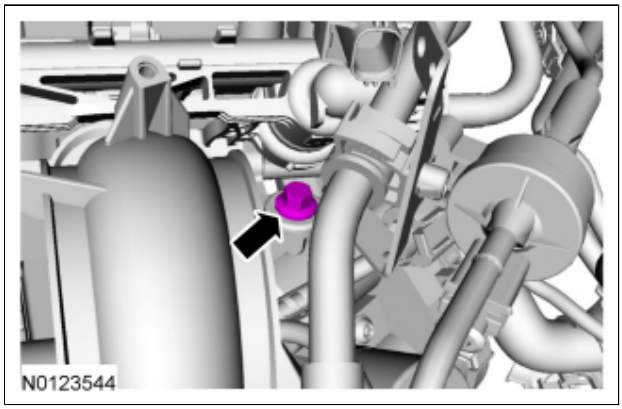
17. Position and connect the EVAP canister purge valve tube to the intake manifold.



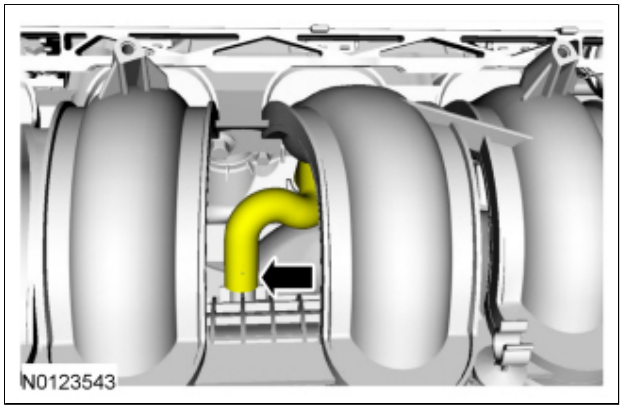
18. Connect the brake booster vacuum tube to the intake manifold.



19. Install the bolt for the EVAP canister purge valve.
    - Tighten to 9 Nm (80 lb-in).

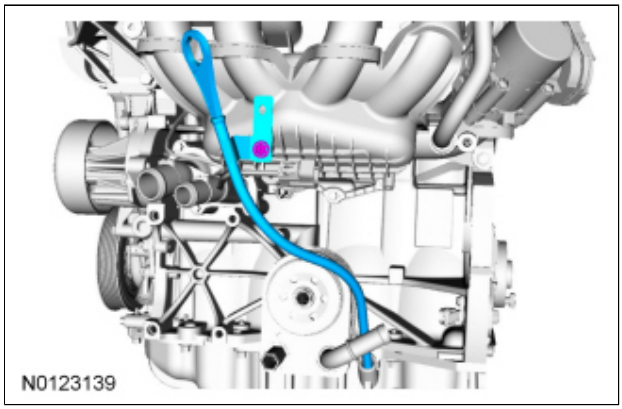


20. Connect the PCV hose to the intake manifold.

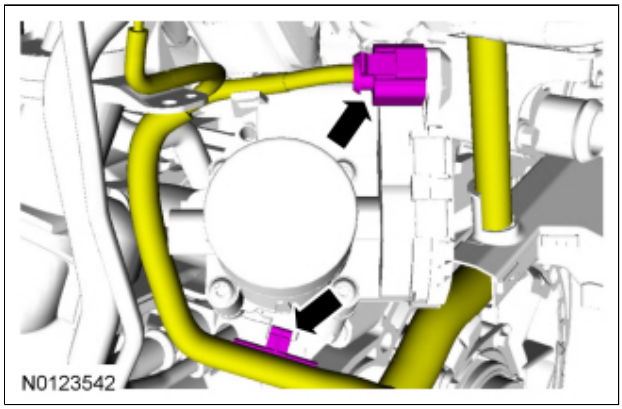


21. **NOTE:** Lubricate the O-ring seal with clean engine oil.

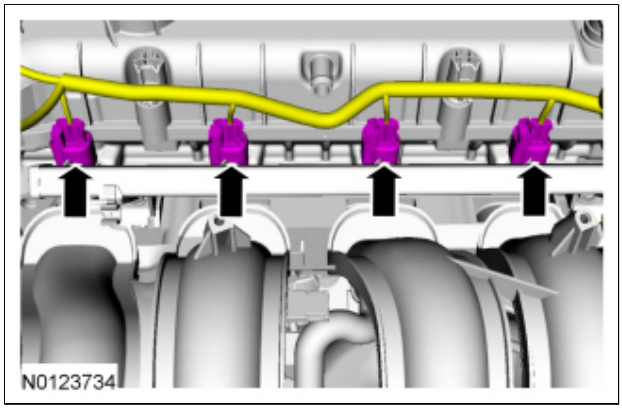
    Install the oil level indicator and tube and the screw.
    - Tighten to 4 Nm (35 lb-in).



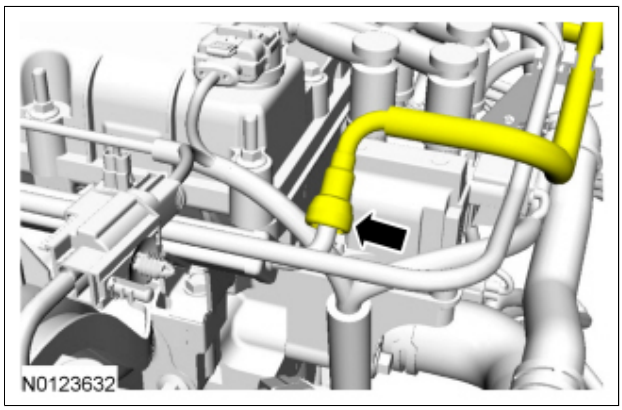
22. Connect the TB electrical connector.
    - Attach the wiring harness retainer to the TB .



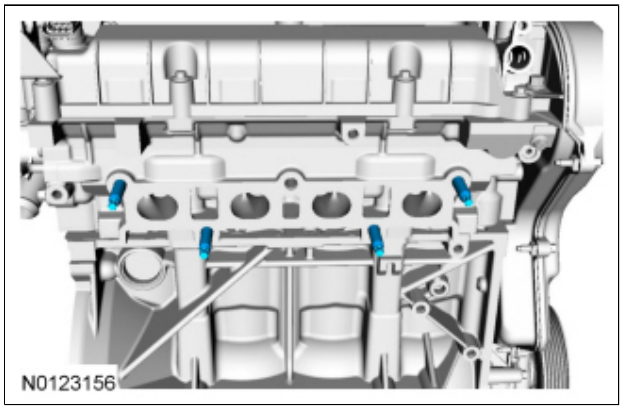
23. Connect the 4 fuel injector electrical connectors.



24. Connect the fuel tube spring lock couplings to the fuel rail. For additional information, refer to Section 310-00 .

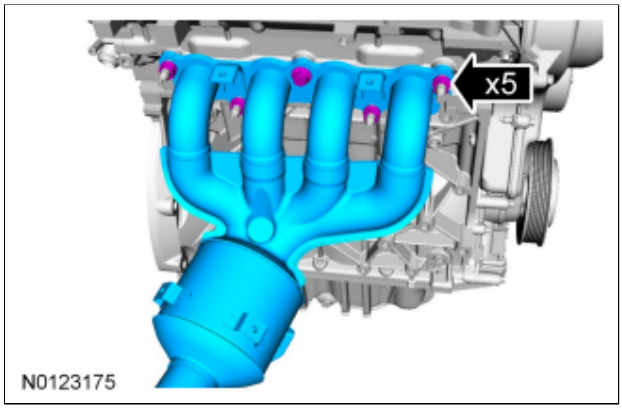


25. Install the 4 new catalytic converter studs.
    - Tighten to 17 Nm (150 lb-in).



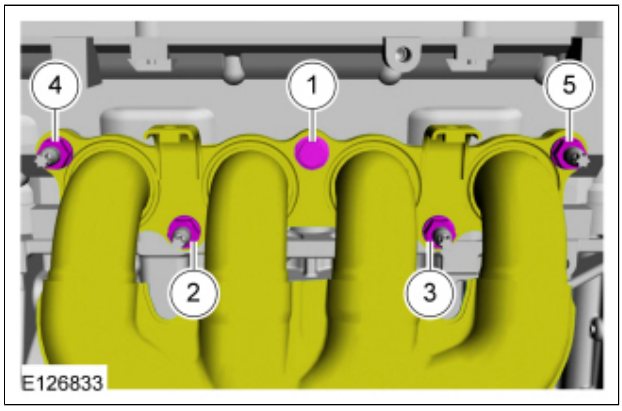
26. If equipped, connect the block heater electrical connector.

27. Using a new gasket, position the catalytic converter and install the 4 new nuts and bolt finger tight.

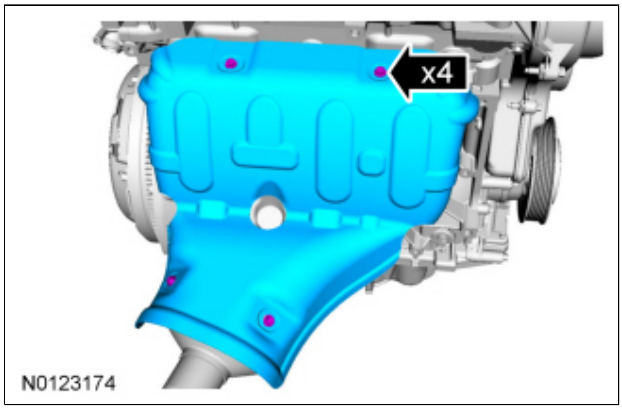


28. ***NOTICE:*** **Failure to tighten the catalytic converter manifold fasteners in 20 Nm increments until reaching final torque of 55 Nm will cause the converter to develop an exhaust leak.**

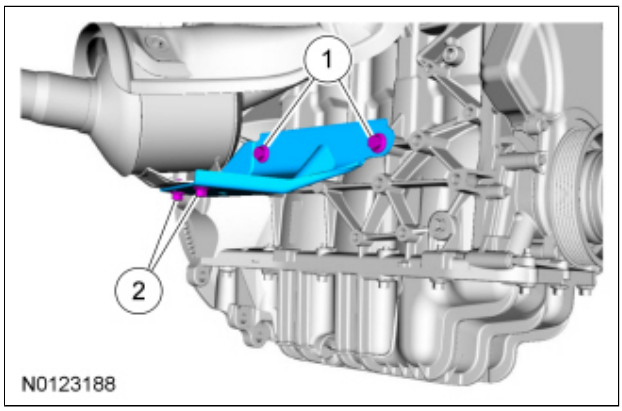
    Tighten the bolt and 4 nuts in the sequence shown, in 3 stages.
    - Stage 1: Tighten all fasteners in sequence to 20 Nm (177 lb-in).
    - Stage 2: Tighten all fasteners in sequence to 40 Nm (30 lb-ft).
    - Stage 3: Tighten all fasteners in sequence to 55 Nm (41 lb-ft).



29. Install the catalytic converter heat shield and the 4 bolts.
    - Tighten to 10 Nm (89 lb-in).

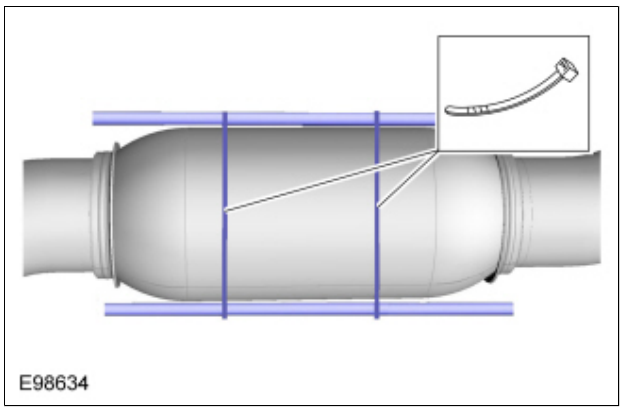


30. Install the lower catalytic converter bracket and the 4 bolts and tighten in sequence shown.
    1. Tighten the catalytic converter bracket-to-engine block bolts to 50 Nm (37 lb-ft).
    2. Tighten the catalytic converter bracket-to-catalytic converter bolts to 25 Nm (18 lb-ft).

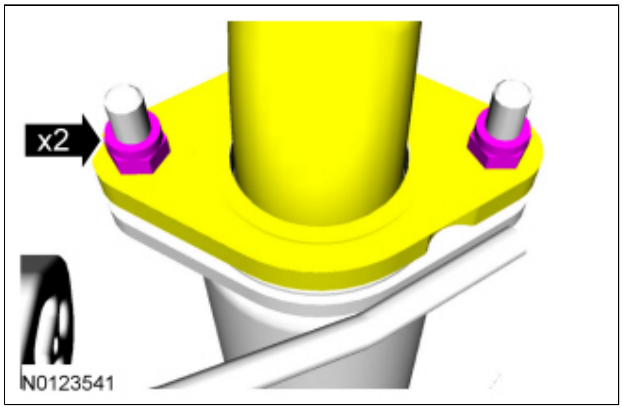


31. ***NOTICE:*** **Do not excessively bend or twist the exhaust flexible pipe. Failure to follow these instructions may cause damage to the flexible pipe.**

    Remove the support for the exhaust flexible pipe.



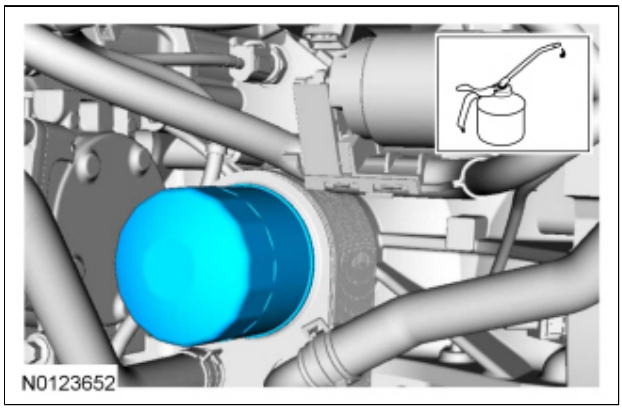
32. Using a new gasket, position the catalytic converter to the muffler and install the 2 catalytic converter nuts.
    - Tighten to 48 Nm (35 lb-ft).



33. Install the CMS . For additional information, refer to Section 303-14 .

34. **NOTE:** Lubricate the engine oil filter gasket with clean engine oil prior to installing the oil filter.

    Install a new engine oil filter.
    - Tighten to 15 Nm (133 lb-in).



35. Install the HO2S . For additional information, refer to Section 303-14 .

36. Install the ACL outlet tube. For additional information, refer to Section 303-12 .

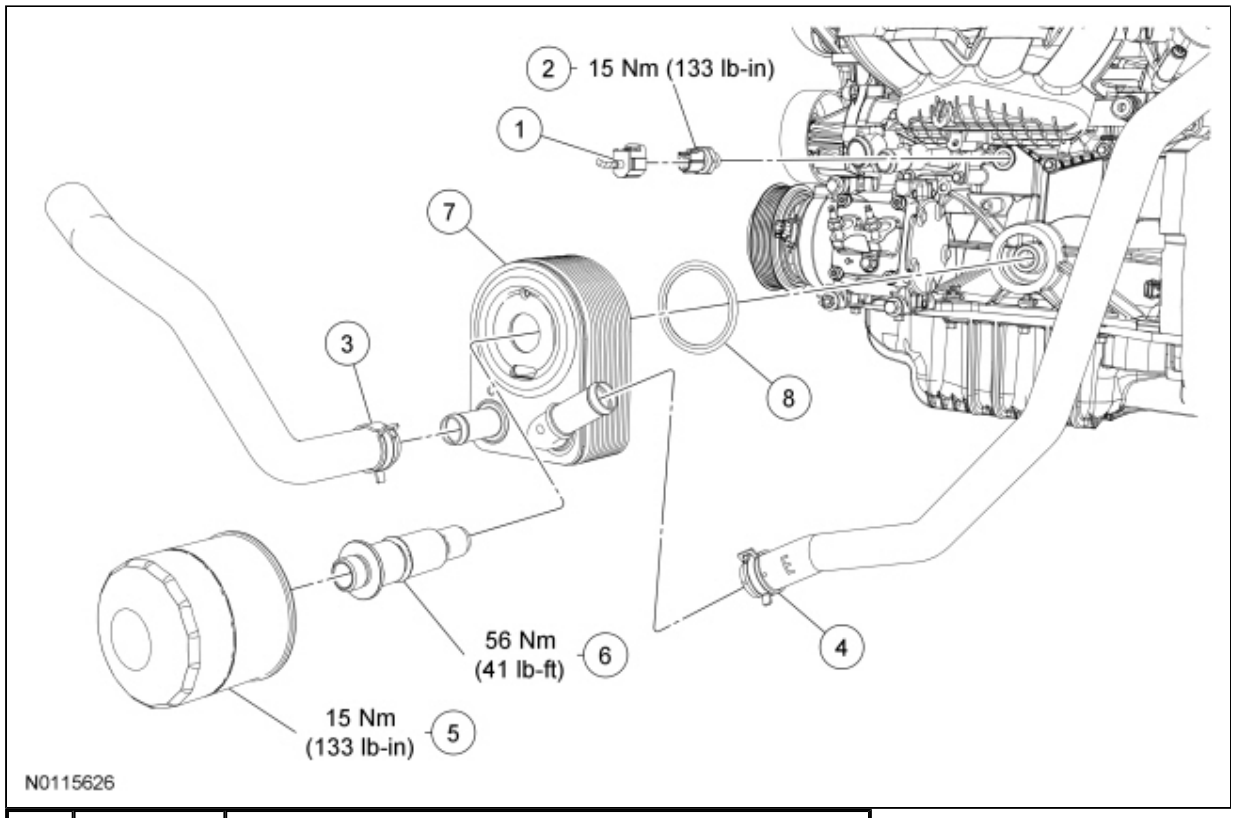
37. Connect the battery ground cable. For additional information, refer to Section 414-01 .

38. Fill the engine with clean engine oil.

39. Fill the engine cooling system. For additional information, refer to Section 303-03 .

Engine Lubrication Components — Exploded View

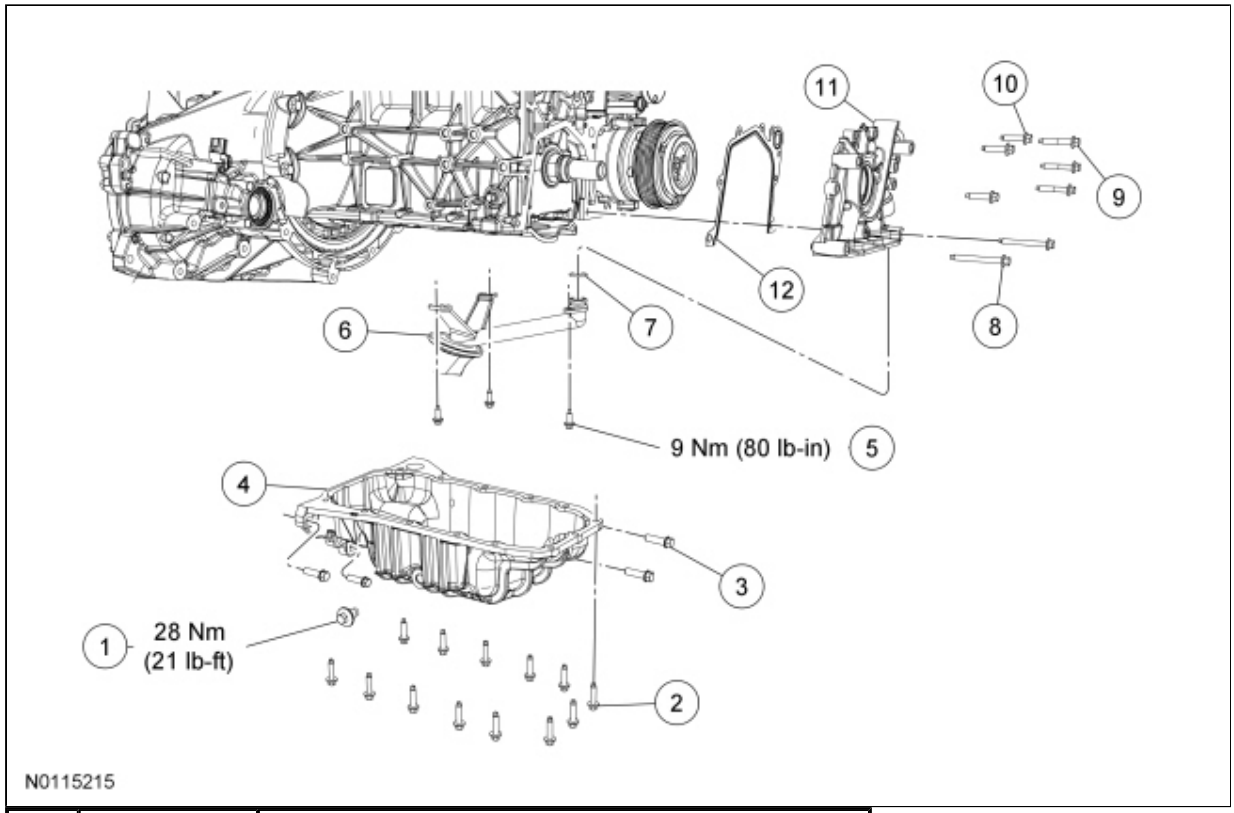
Oil Filter, Oil Cooler and Engine Oil Pressure (EOP) Switch



Item	Part Number	Description
1	—	Engine Oil Pressure (EOP) switch electrical connector (part of 12A522)
2	9278	EOP switch
3	8K276	Oil cooler coolant hose
4	18472	Oil cooler coolant hose
5	6731	Oil filter
6	6L626	Oil cooler mounting bolt
7	6A642	Oil cooler
8	6L621	Oil cooler gasket

Oil Pan, Oil Pump and Oil Pump Screen and Pickup Tube

NOTE: Automatic transaxle shown, manual transaxle similar.



Item	Part Number	Description
1	6730	Oil pan drain plug
2	W500225	Oil pan bolt (13 required)
3	W701069	Oil pan bolt (4 required)
4	6675	Oil pan
5	W703311	Oil pump screen and pickup tube bolt (3 required)
6	6622	Oil pump screen and pickup tube
7	6626	Oil pump screen and pickup tube O-ring seal
8	W500300	Oil pump bolt (2 required)
9	W500301	Oil pump bolt (3 required)
10	W500215	Oil pump bolt (3 required)
11	6600	Oil pump
12	6659	Oil pump gasket

1. Refer to the procedures and/or exploded views in this section for any Warnings, Notices, Notes, Materials, Specifications, and Special Tools. Items in the exploded views may not be listed in order of removal.

Oil Cooler

Material

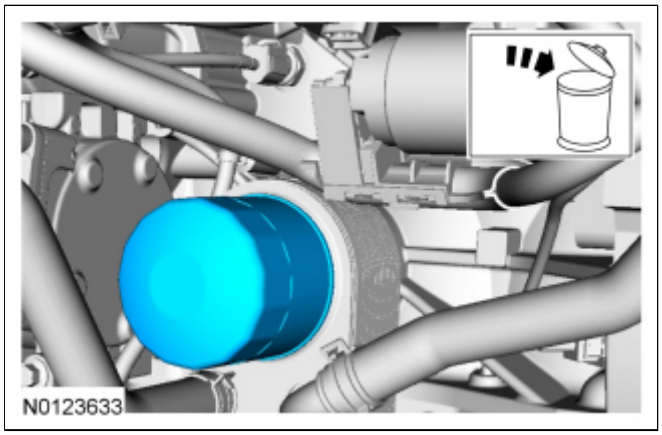
Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A
Motorcraft® Specialty Orange Engine Coolant VC-3-B (US); CVC-3-B (Canada)	WSS-M97B44-D

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. **NOTE:** Lubricate the engine oil filter gasket with clean engine oil prior to installing the oil filter.

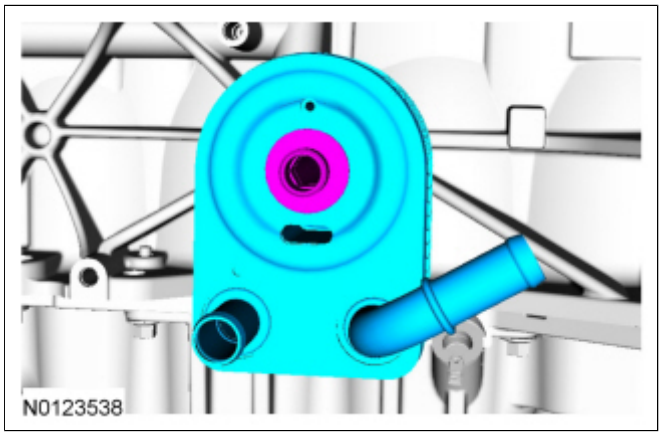
   Remove the engine oil filter and discard.
   - To install, tighten to 15 Nm (133 lb-in).



3. Using hose clamp pliers, clamp the 2 oil cooler coolant hoses and remove the 2 coolant hoses from the oil cooler.

4. ***NOTICE:*** **If metal or aluminum material is present in the oil cooler, mechanical concerns exist. Failure to correct these concerns may cause engine failure. To diagnose mechanical concerns, refer to Section 303-00 .**

   Remove the oil cooler mounting bolt and the oil cooler.
   - Inspect the oil cooler gasket, replace if necessary.
   - To install, tighten to 56 Nm (41 lb-ft).



5. To install, reverse the removal procedure.
   - Inspect and adjust the coolant level in the degas bottle.

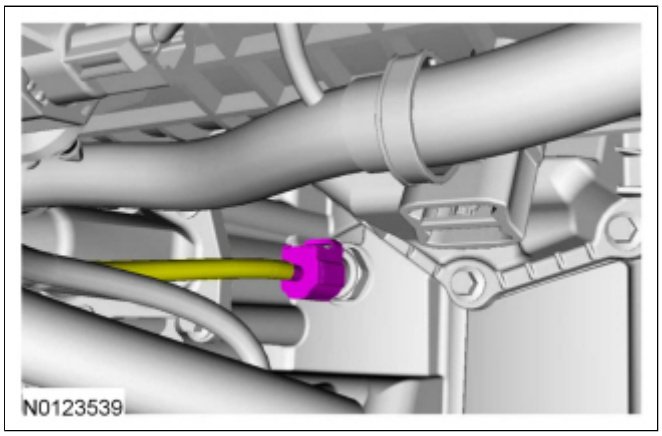
Engine Oil Pressure (EOP) Switch

Material

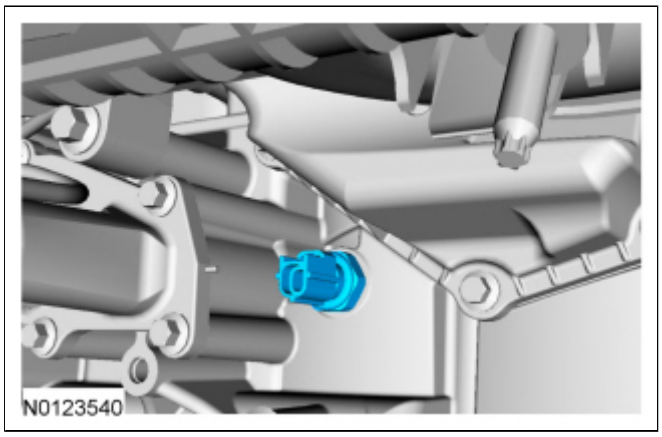
Item	Specification
Thread Sealant with PTFE TA-24	WSK-M2G350-A2

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the EOP switch electrical connector.



3. Remove the EOP switch.
   - To install, tighten to 18 Nm (159 lb-in).



4. To install, reverse the removal procedure.
   - Apply thread sealant to the EOP switch threads.

Oil Pan

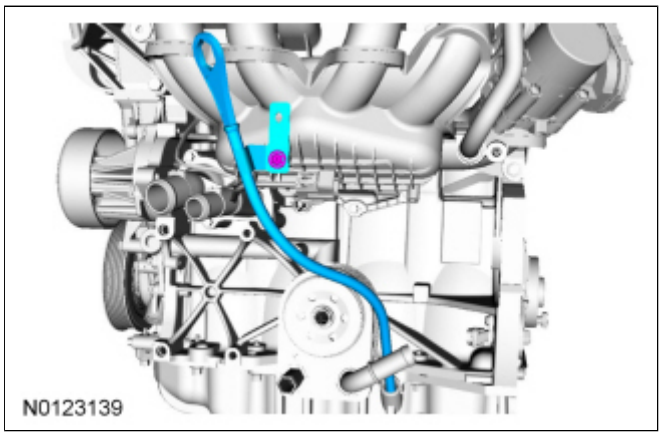
Material

Item	Specification
Motorcraft® Metal Surface Prep ZC-31-A	—
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4

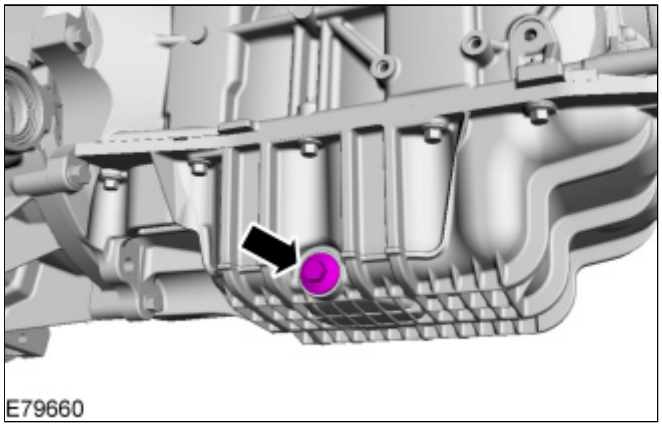
Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

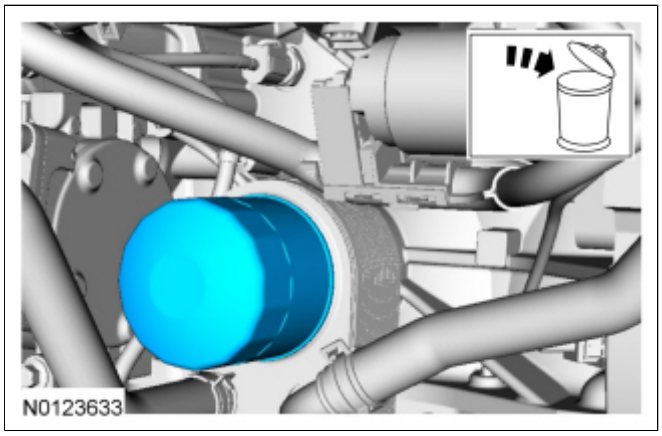
2. Remove the screw and the oil level indicator and tube.
   - Inspect and replace the O-ring seal, if necessary.



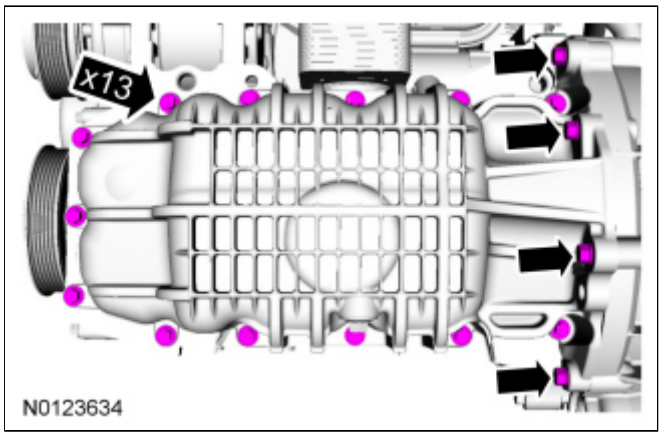
3. Drain the engine oil.
   - Install the drain plug.
   - Tighten to 28 Nm (21 lb-ft).



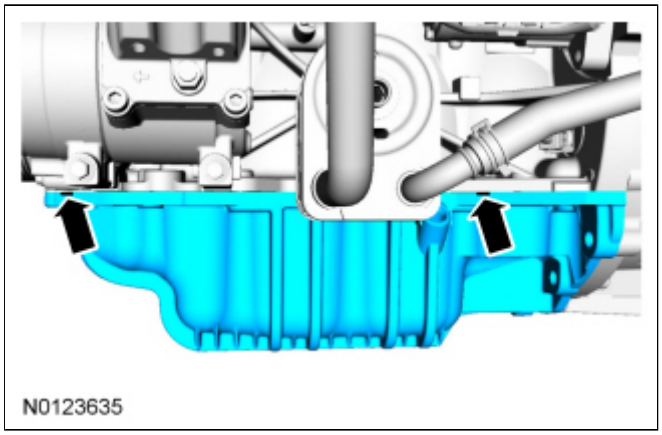
4. Remove and discard the engine oil filter.



5. Remove the 17 bolts from the oil pan.



6. Using the 3 pry pads (2 shown), remove the oil pan.

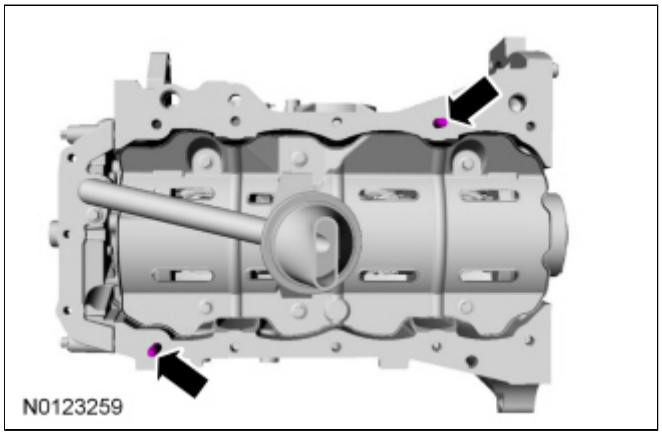


Installation

1. ***NOTICE:*** **Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove traces of sealant.**

   Clean and inspect all mating surfaces using silicone gasket remover.

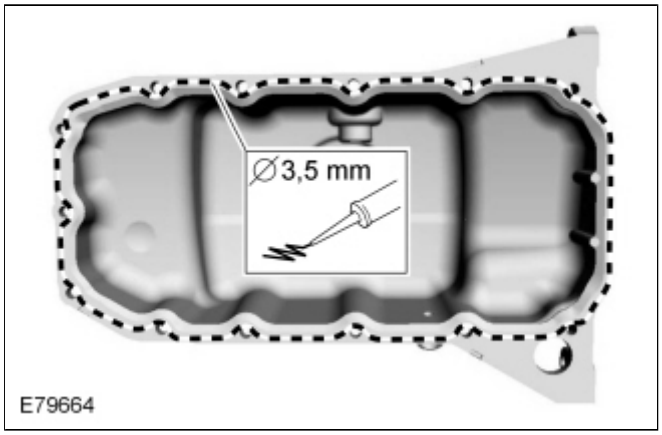
2. Install 2 M8x20 studs for oil pan alignment.



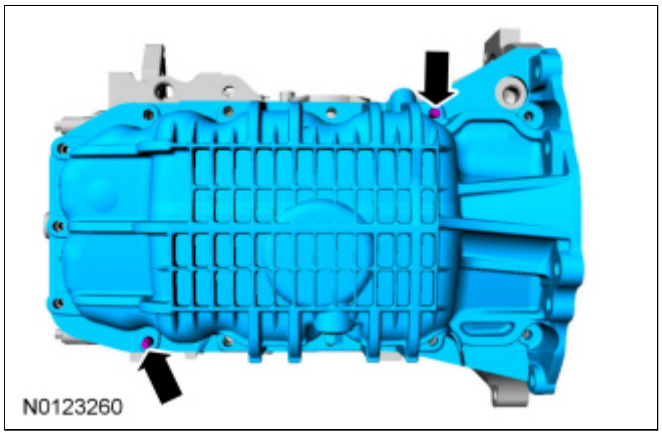
3. **NOTE:** The oil pan must be installed within 5 minutes of applying the sealant.

   NOTE: If the oil pan is not secured within 5 minutes of sealant application, the sealant must be removed and the sealing area cleaned with metal surface prep. Allow to dry until there is no sign of wetness, or 5 minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage

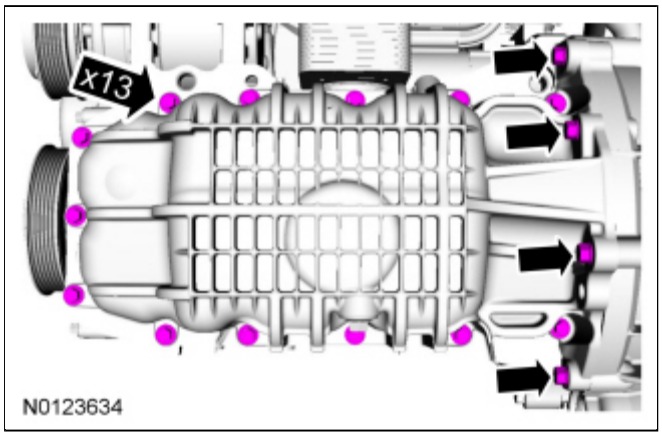
   Apply a 3.5 mm (0.137 in) bead of sealant to the oil pan.



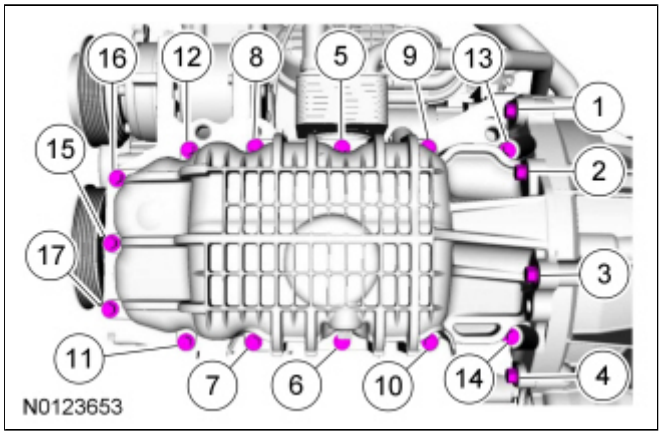
4. Install the oil pan using the 2 studs for alignment.



5. Install 15 bolts finger tight and remove the 2 alignment studs and install the remaining 2 bolts finger tight.

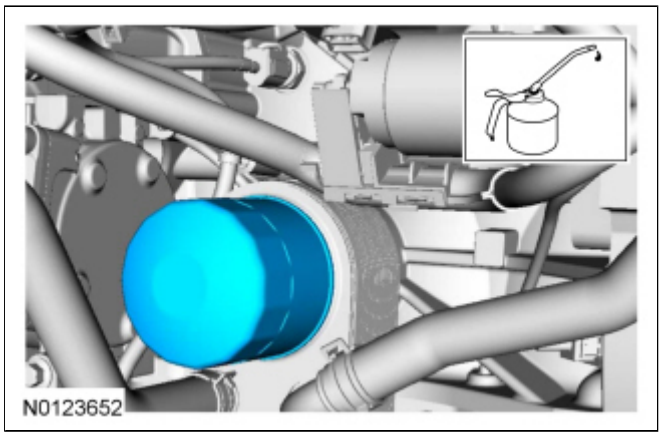


6. Tighten the oil pan bolts in the following sequence in 3 stages.
   - Stage 1: Tighten bolts 1 through 4 to 48 Nm (35 lb-ft).
   - Stage 2: Tighten bolts 5 through 17 to 10 Nm (89 lb-in).
   - Stage 3: Tighten bolts 5 through 17 to 20 Nm (177 lb-in).



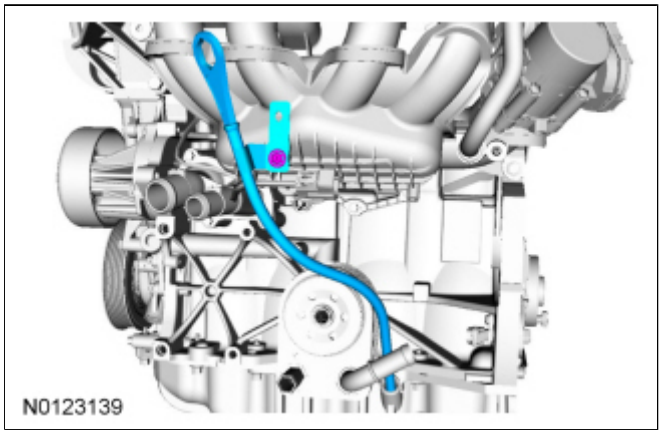
7. **NOTE:** Lubricate the engine oil filter gasket with clean engine oil prior to installing the oil filter.

   Install a new engine oil filter.
   - Tighten to 15 Nm (133 lb-in).



8. **NOTE:** Lubricate the O-ring seal with clean engine oil.

   Install the oil level indicator and tube and the screw.
   - Tighten to 4 Nm (35 lb-in).



9. Fill the engine with clean engine oil.

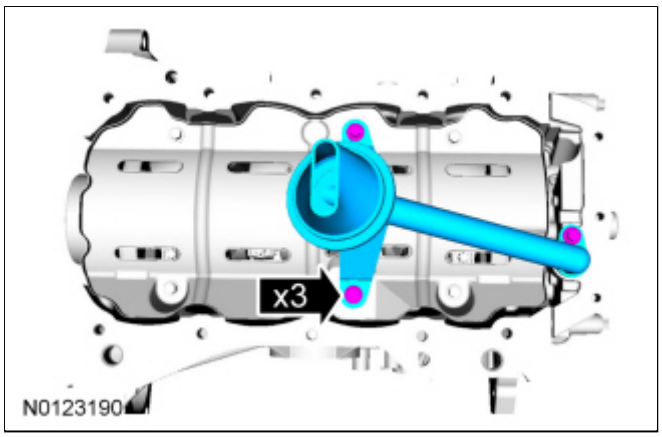
Oil Pump Screen and Pickup Tube

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the engine oil pan. For additional information, refer to Oil Pan in this section.

3. Remove the 3 bolts and the oil pump screen and pickup tube.
   - Inspect and replace the O-ring seal, if necessary.
   - To install, tighten to 9 Nm (80 lb-in).

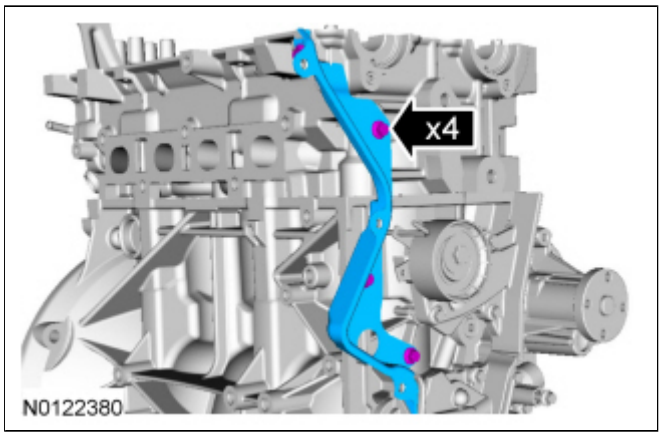


4. To install, reverse the removal procedure.

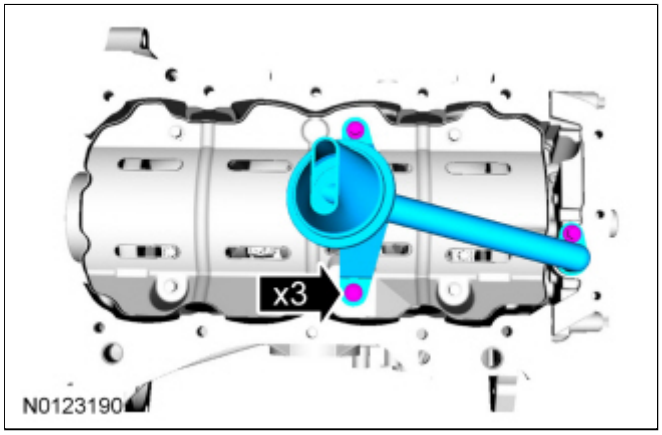
Oil Pump

Removal

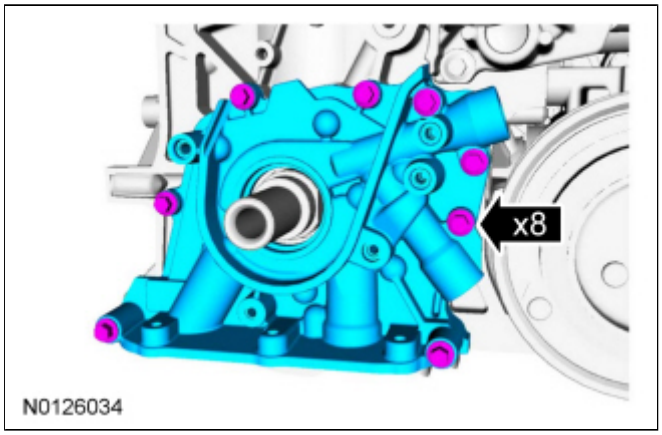
1. Remove the crankshaft front seal. For additional information, refer to Crankshaft Front Seal in this section.
2. Remove the oil pan. For additional information, refer to Oil Pan in this section.
3. Remove the 4 bolts and the timing belt cover backplate.



4. Remove the 3 bolts and the oil pump screen and pickup tube.
   - Inspect and replace the oil pump screen and pickup tube O-ring seal, if necessary.

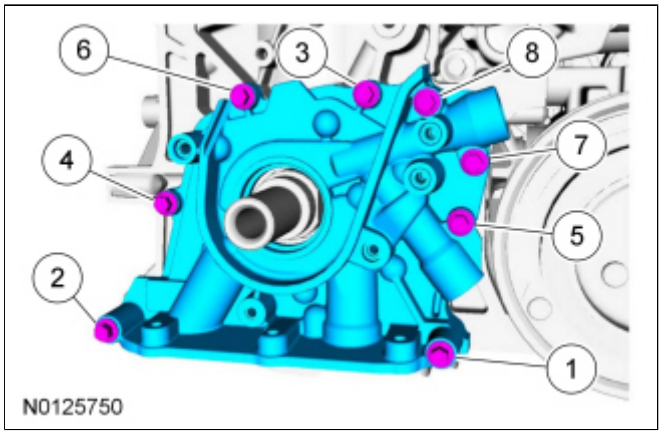


5. Remove the 8 bolts and the oil pump.
   - Remove and discard the oil pump gasket.

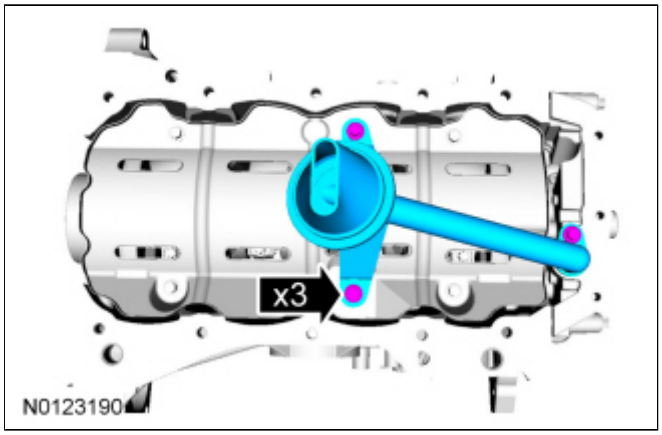


Installation

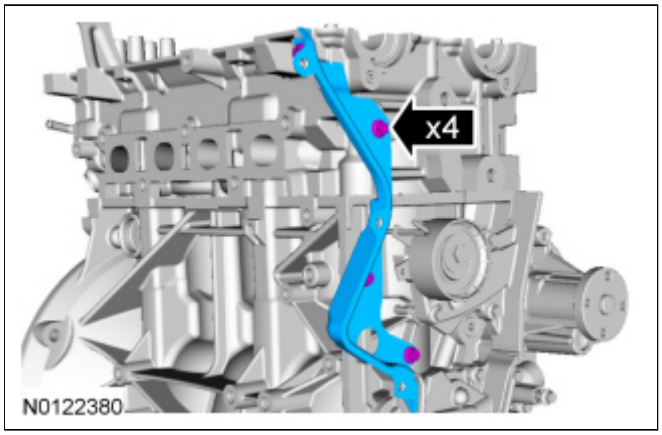
1. Install a new gasket, the oil pump and the 8 bolts in their original position and tighten in sequence shown in 2 stages.
    - Stage 1: Tighten to 6 Nm (53 lb-in).
    - Stage 2: Tighten to 9 Nm (80 lb-in).



2. Install the oil pump screen and pickup tube and 3 bolts.
    - Tighten to 9 Nm (80 lb-in).



3. Install the timing belt cover backplate and the 4 bolts.
    - Tighten to 9 Nm (80 lb-in).



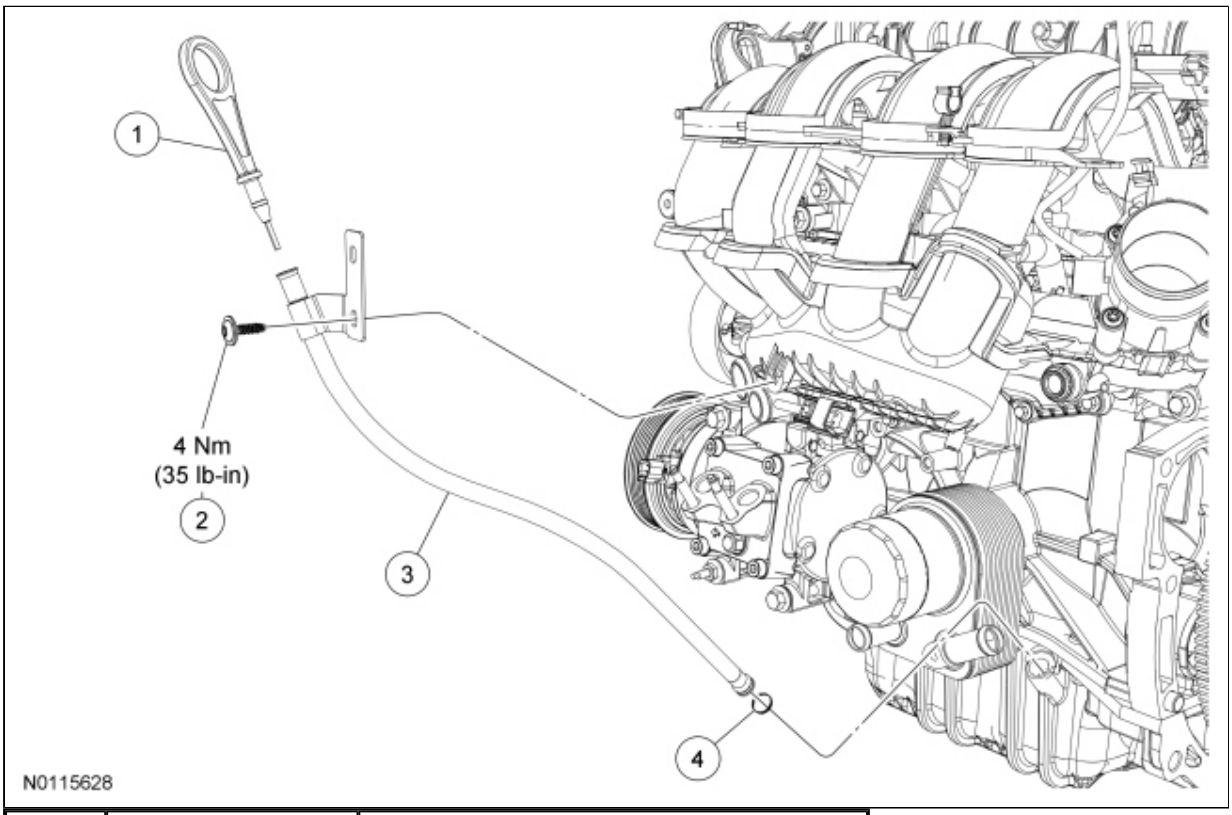
4. Install the oil pan. For additional information, refer to Oil Pan in this section.

5. Install the crankshaft front seal. For additional information, refer to Crankshaft Front Seal in this section.

Oil Level Indicator and Tube

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A



Item	Part Number	Description
1	6750	Oil level indicator
2	W709843	Oil level indicator tube screw
3	6754	Oil level indicator tube
4	W701261	O-ring seal

Removal and Installation

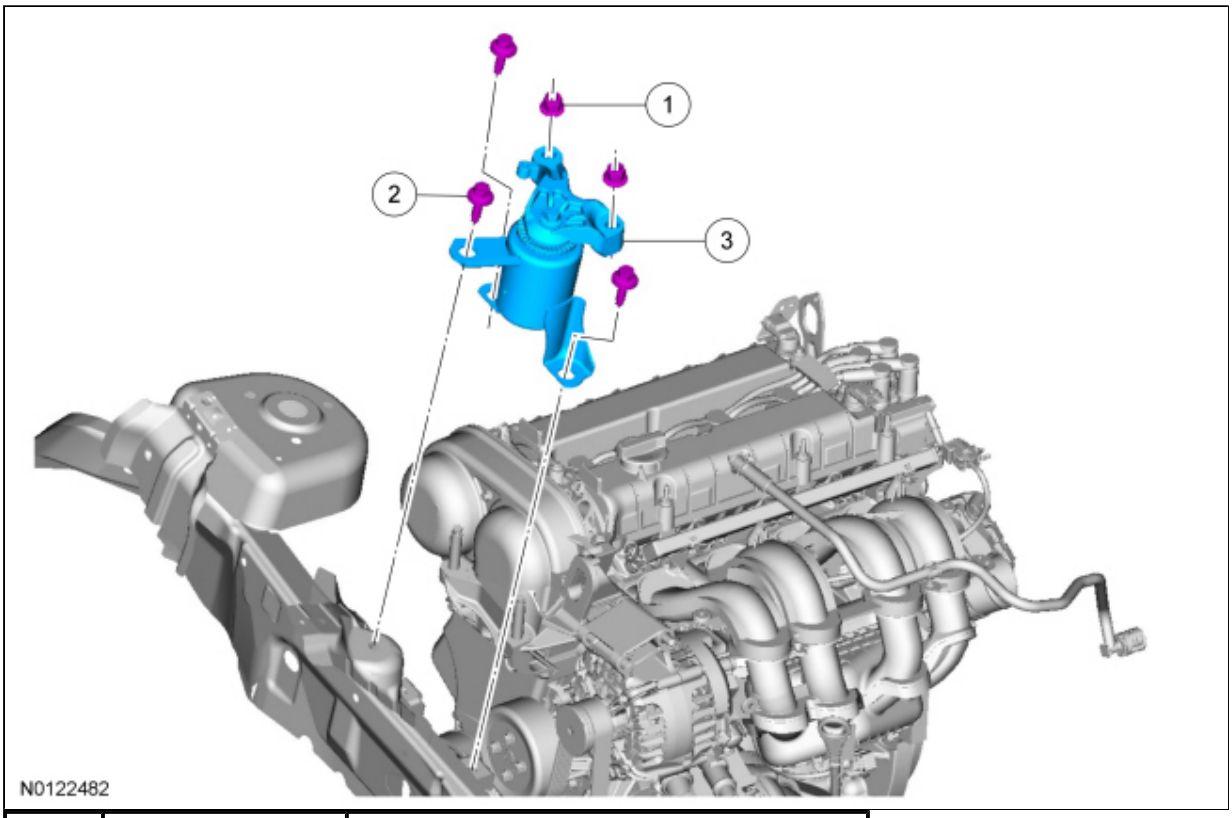
1. Remove the oil level indicator.

2. Remove the oil level indicator tube screw.
   - To install, tighten to 4 Nm (35 lb-in).

3. Remove the oil level indicator tube.
   - Inspect and replace the O-ring seal, if necessary.
   - To install, lubricate the O-ring seal with clean engine oil.

4. To install, reverse the removal procedure.

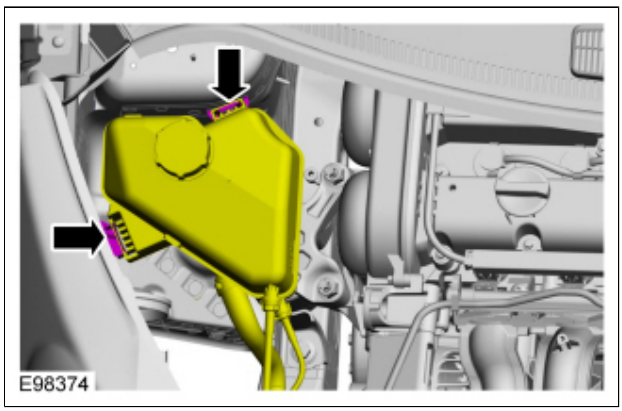
Engine Mount



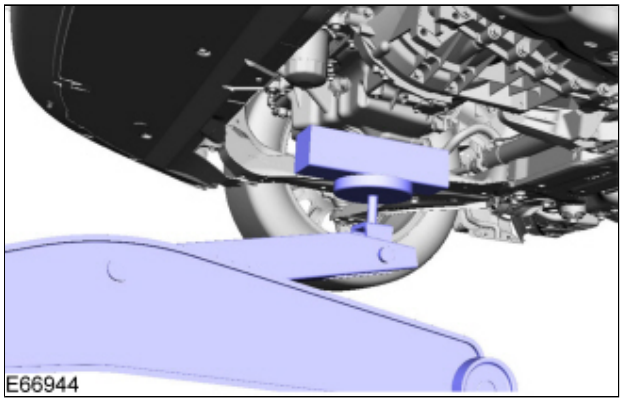
Item	Part Number	Description
1	W520214	Engine mount nut (2 required)
2	W706408	Engine mount bolt (3 required)
3	6038	Engine mount

Removal

1. Release the 2 tabs and position the degas bottle aside.



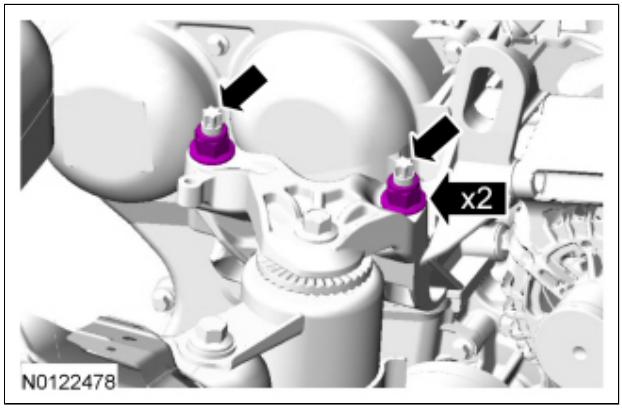
2. Using a floor jack and a wooden block, support the engine.



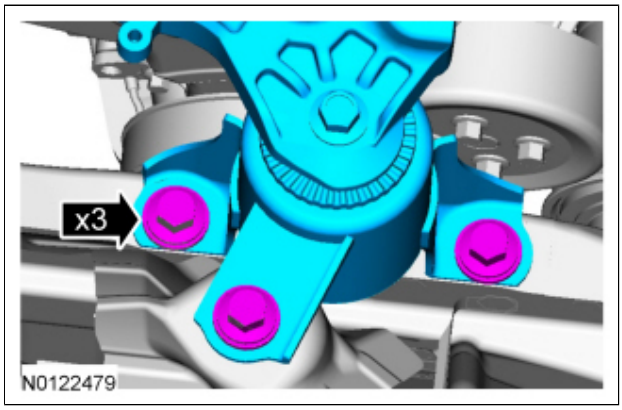
3. ***NOTICE:*** **The engine mount studs must be held while removing the engine mount nuts or damage to the powertrain may occur.**

   NOTE: Do not loosen the engine mount center bolt or the engine may become improperly positioned.

   Use the holding feature to prevent the engine mount studs from turning, remove the 2 engine mount nuts.



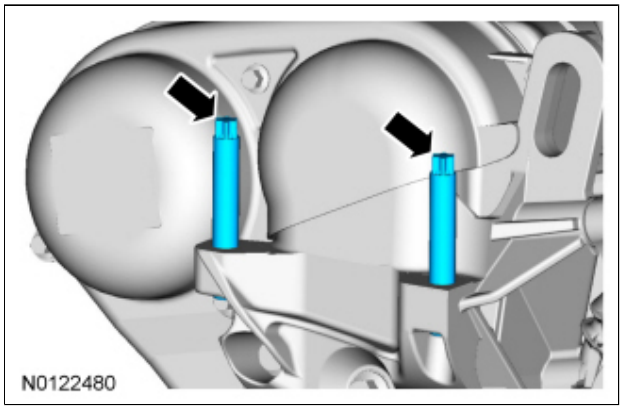
4. Remove the 3 bolts and the engine mount.



Installation

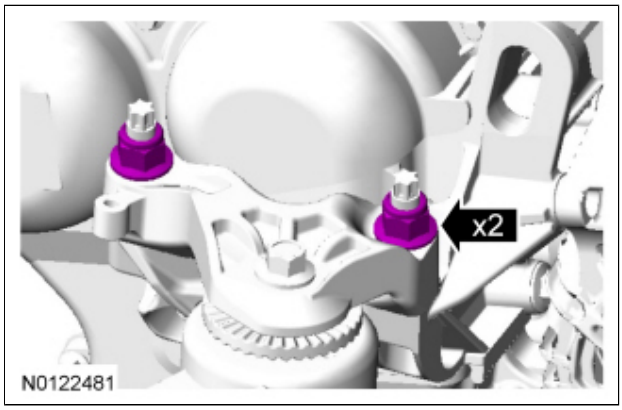
1. ***NOTICE:*** **The engine mount studs must be torqued or damage to the powertrain may occur.**

   Torque the engine mount studs before installing the engine mount.
   - Tighten to 8 Nm (71 lb-in).

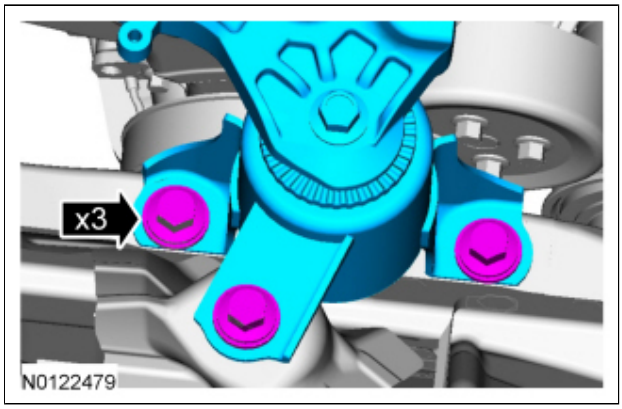


2. **NOTE:** Do not loosen the engine mount center bolt or the engine may become improperly positioned.

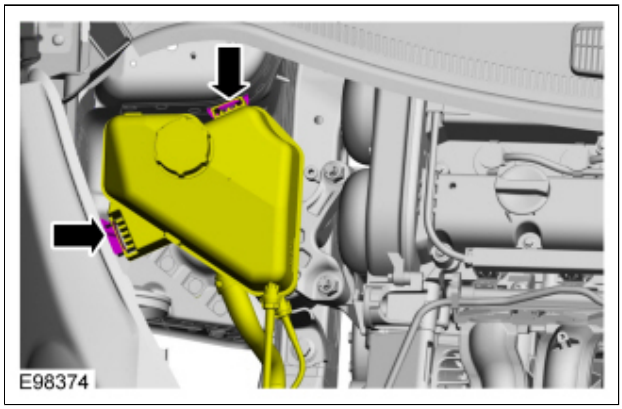
   Install the engine mount and the 2 nuts.
   - Tighten the 2 nuts to 80 Nm (59 lb-ft).



3. Install the 3 engine mount bolts.
   - Tighten to 48 Nm (35 lb-ft).



4. Position the degas bottle on the 2 retainer tabs.



E98374

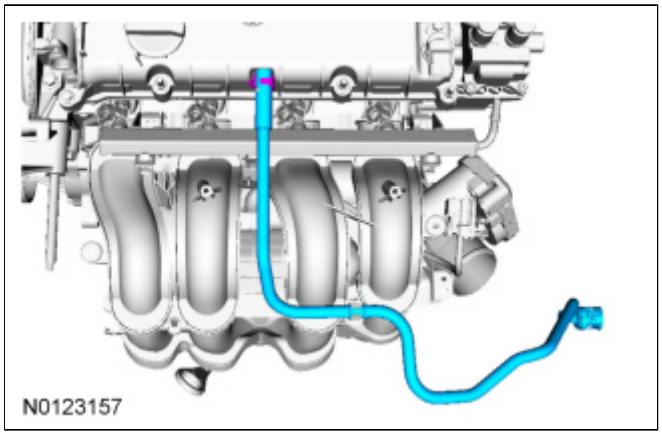
Engine — Automatic Transaxle

Special Tool(s)

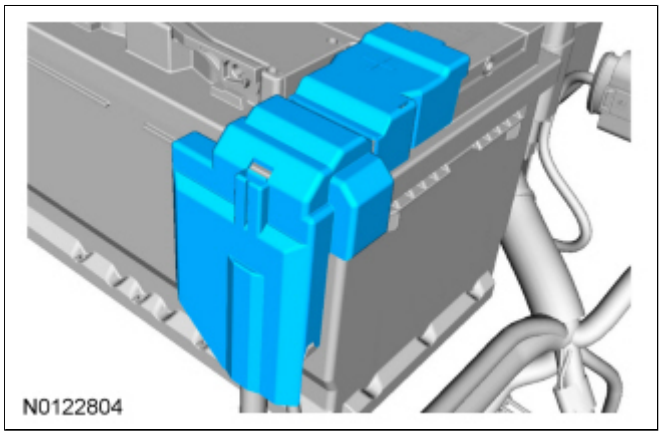
ST1341-A	2,200# Floor Crane, Fold Away 300-OTC1819E
ST1682-A	Powertrain Lift 300-OTC1585AE
ST1602-A	Spreader Bar 303-D089 (D93P-6001-A3) or equivalent
 ST2743A	Adjustable Grip Arm, 1735A 014-00001

All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Release the fuel system pressure. For additional information, refer to Section 310-00 .
3. Remove the Air Cleaner (ACL) and ACL outlet pipe. For additional information, refer to Section 303-12 .
4. Disconnect the crankcase vent tube from the valve cover.
   - Detach the 2 crankcase vent tube retainers and remove the tube.

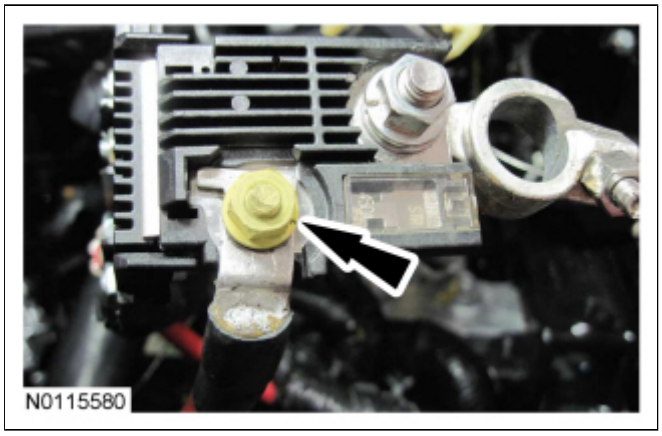


5. Remove the positive battery cable cover.



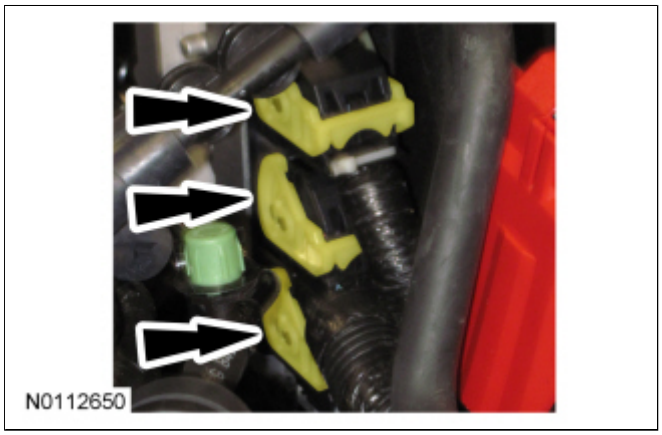
6. Remove the battery. For additional information, refer to Section 414-01 .

7. Remove the nut and cable from the positive battery cable terminal.

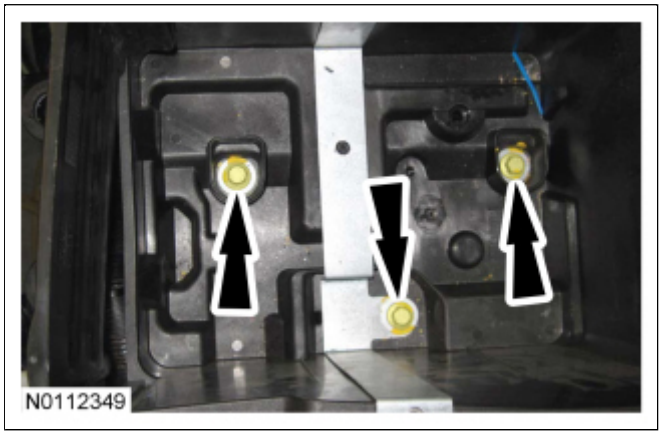


8. Remove the bolt and the PCM cover.

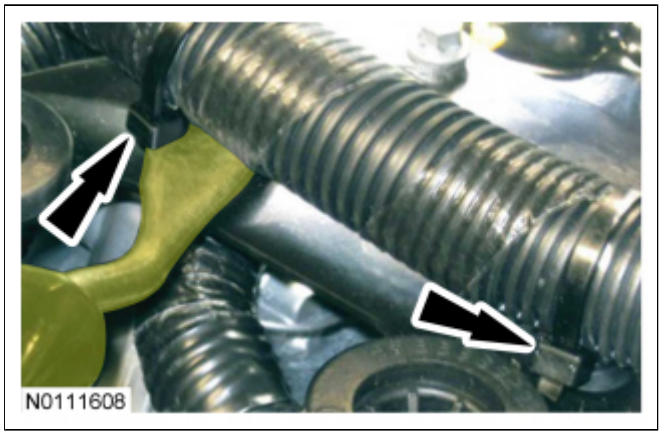
9. Disconnect the 3 PCM electrical connectors.



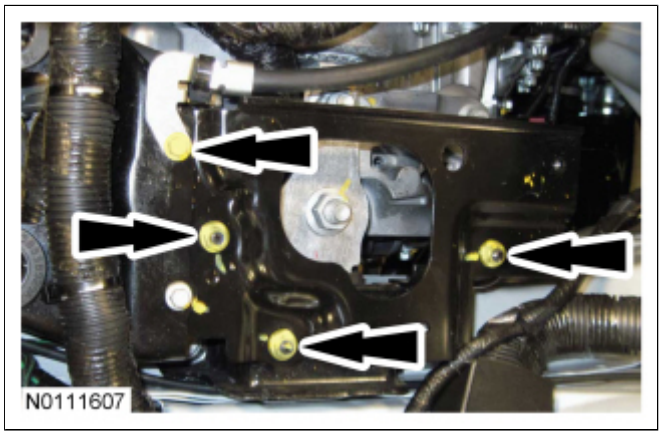
10. Remove the 3 bolts and the battery tray.



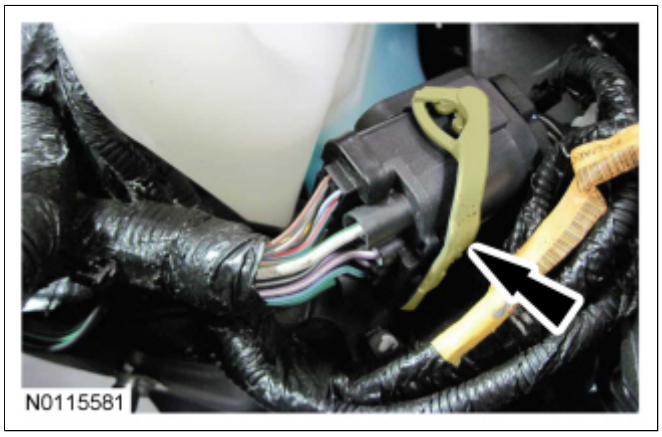
11. Detach the 2 positive battery cable wire harness retainers from battery tray bracket.



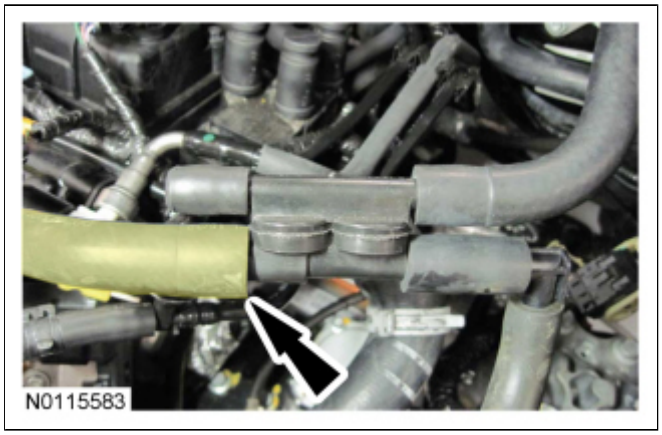
12. Remove the selector lever cable bolt, 3 battery tray nuts and the battery tray bracket.
    - Detach the 2 wiring harness retainers from the battery tray bracket.



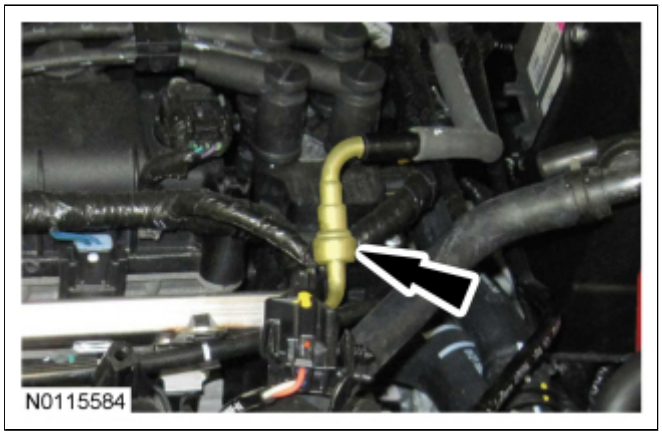
13. Disconnect the engine harness electrical connector.



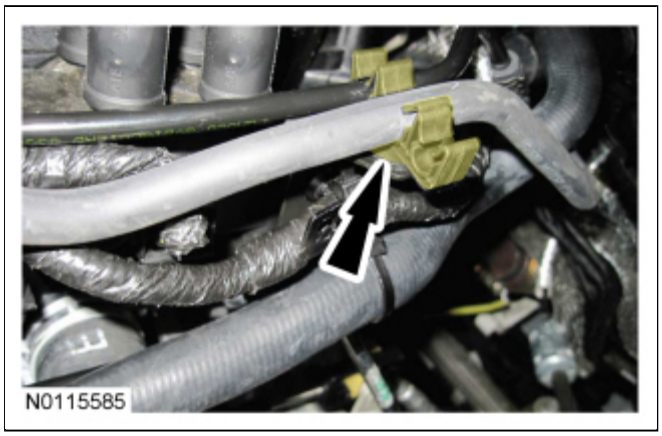
14. Disconnect the brake booster vacuum hose.



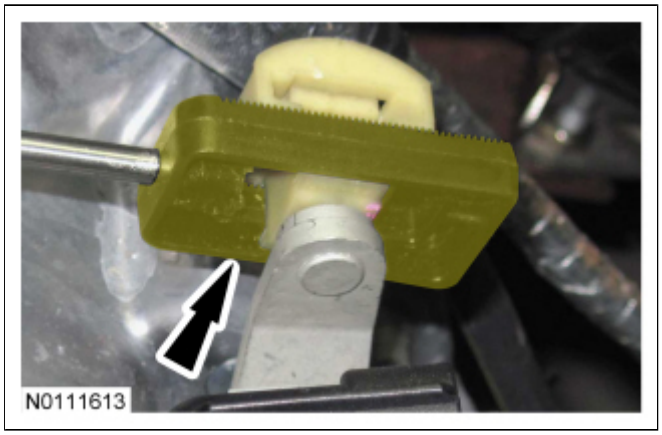
15. Disconnect the fuel tube spring lock couplings from the fuel rail. For additional information, refer to Section 310-00 .



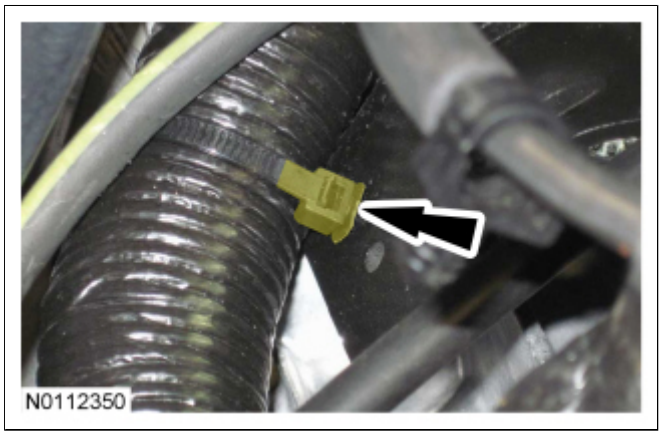
16. Detach the fuel tube from the coolant outlet bracket retainer.



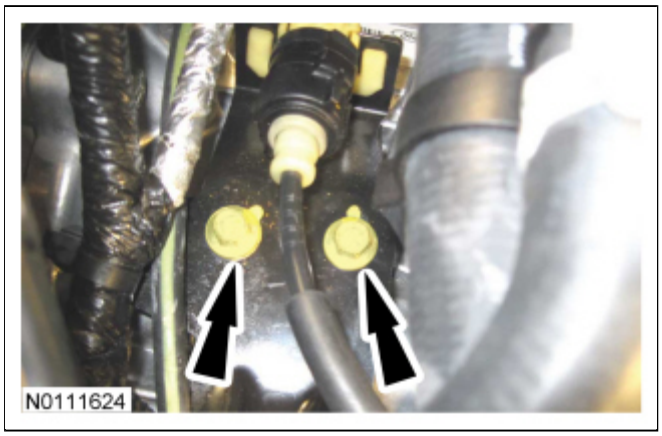
17. Remove the generator. For additional information, refer to Section 414-00 .
18. Drain the cooling system. For additional information, refer to Section 303-03 .
19. Remove the degas bottle. For additional information, refer to Section 303-03 .
20. Disconnect the selector lever cable from the control lever.



21. Detach the wiring harness retainer from the selector lever cable bracket.

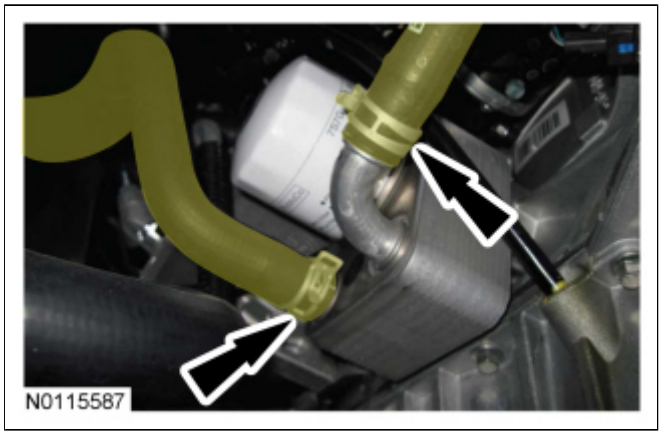


22. Remove the 2 selector lever cable bracket bolts from the transaxle and position the selector lever cable and bracket aside.



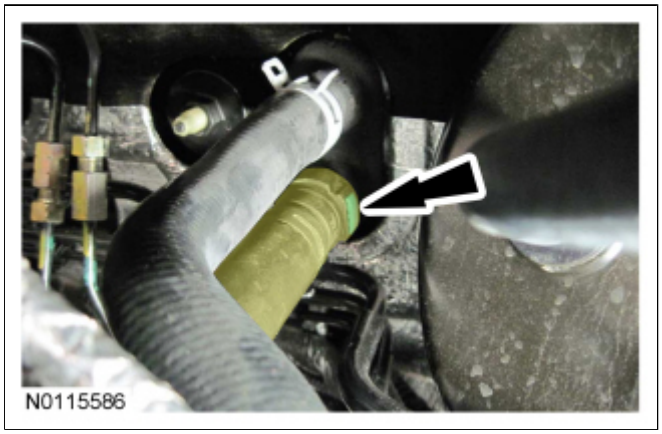
23. Remove the cooling fan motor and shroud. For additional information, refer to Section 303-03 .

24. Disconnect the 2 coolant hoses from the engine oil cooler.
    - Detach the oil cooler hose retainer from the upper radiator hose.

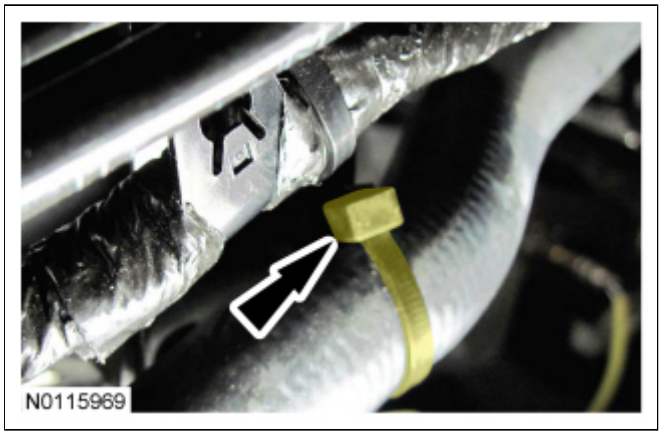


25. Remove the Heated Oxygen Sensor (HO2S). For additional information, refer to Section 303-14 .

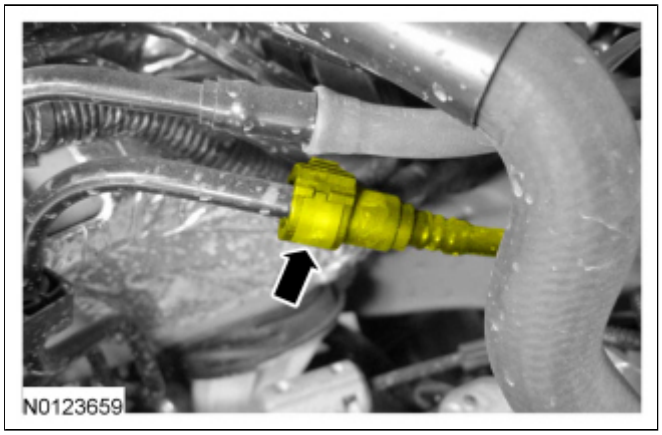
26. Disconnect the lower heater hose from the heater core.



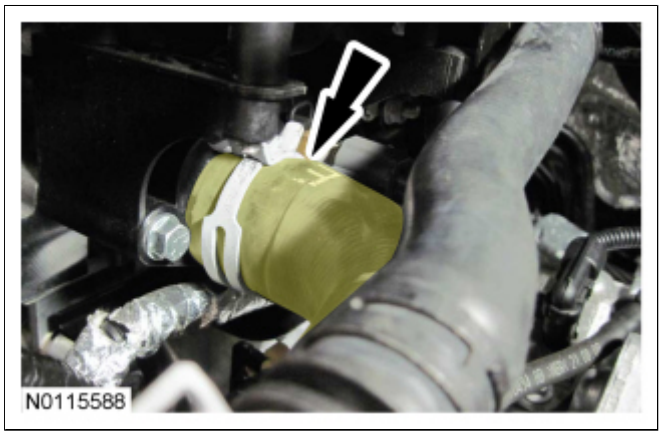
27. Detach the coolant hose retainer from the coolant outlet bracket.



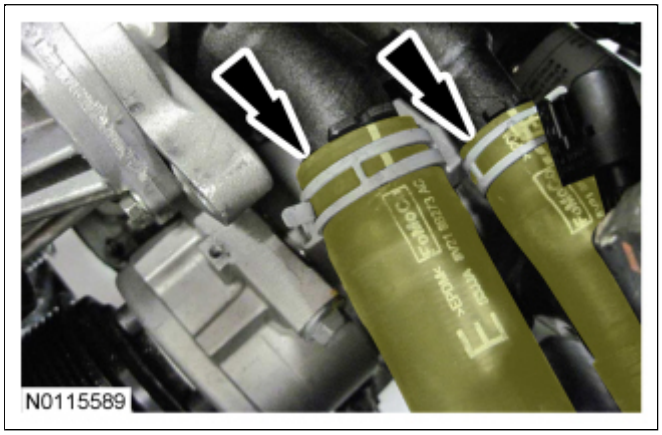
28. Disconnect the Evaporative Emission (EVAP) tube quick connect coupling near the bulk head. For additional information, refer to Section 310-00 .



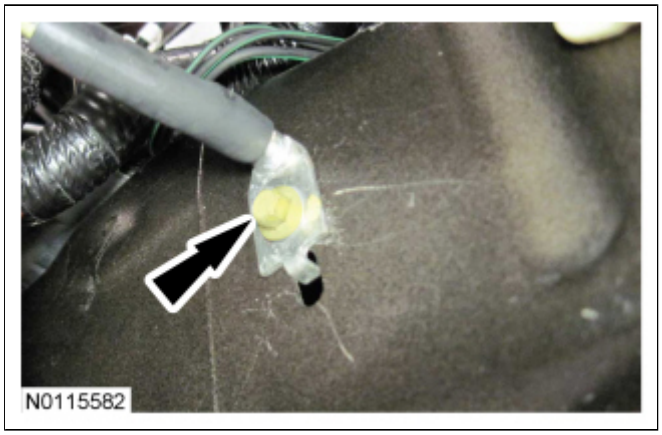
29. Disconnect the upper radiator hose from the engine.



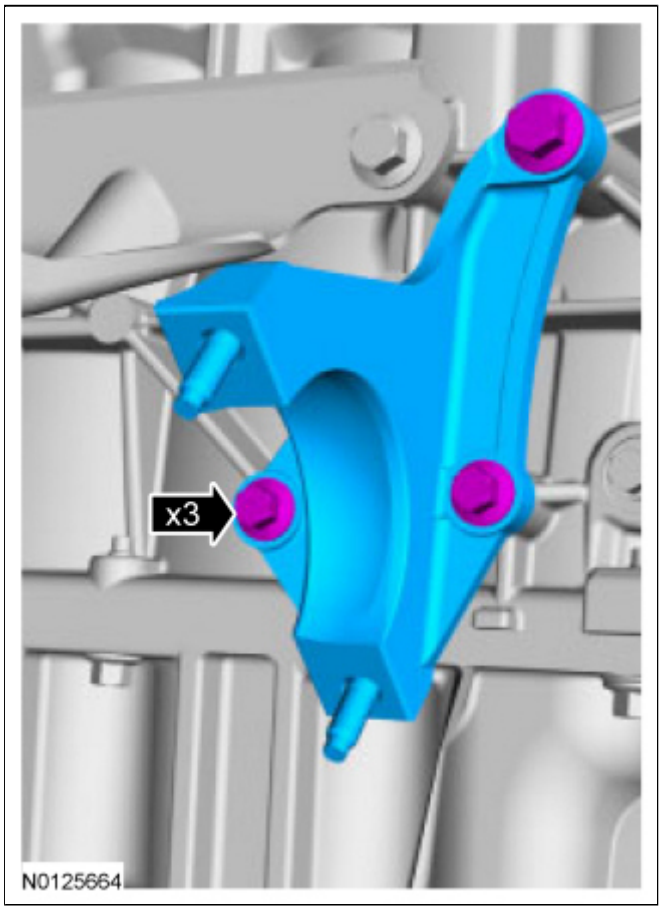
30. Disconnect the lower radiator hose and coolant hose from the thermostat housing.



31. Remove the bolt and position the engine ground wire aside.

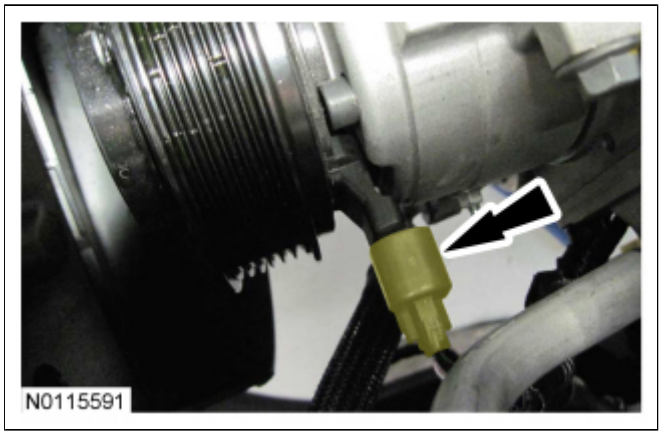


32. Drain the transmission. For additional information, refer to Section 307-11 .
33. Remove the RH and LH halfshafts. For additional information, refer to Section 205-04 .
34. Remove the 3 bolts and the halfshaft bracket.

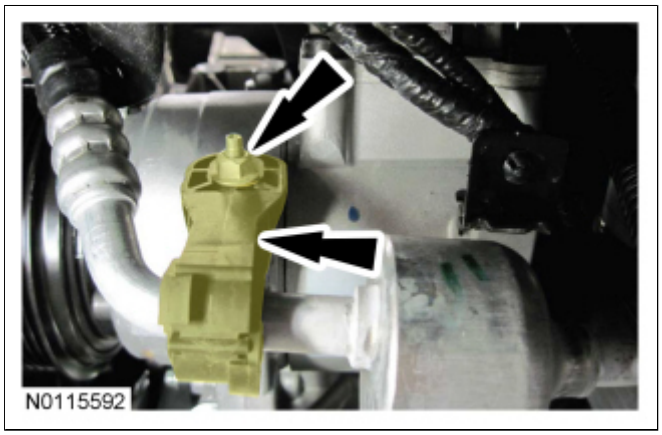


Vehicles with A/C

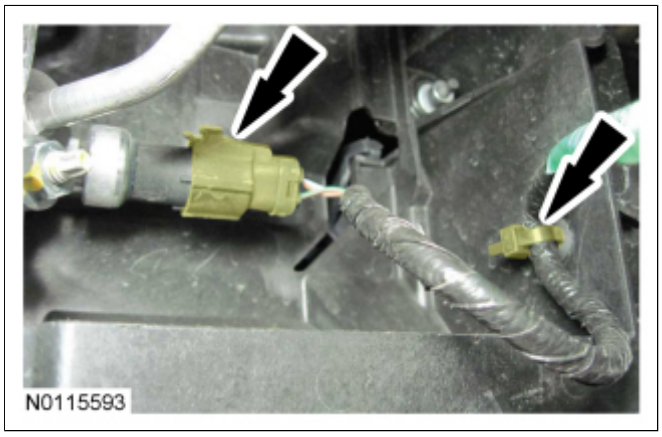
35. Disconnect the A/C compressor electrical connector.



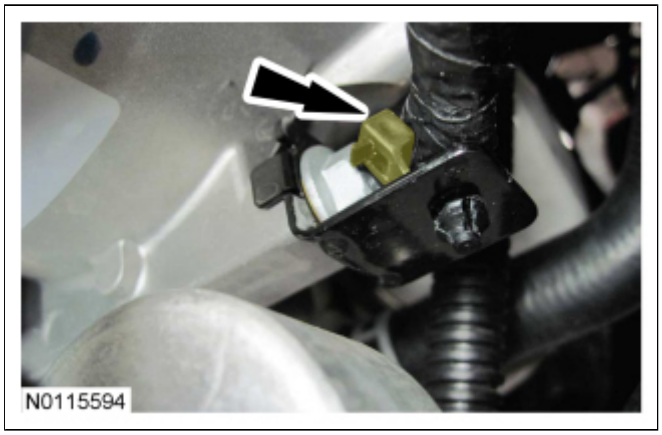
36. Remove the nut and position the A/C line bracket aside.



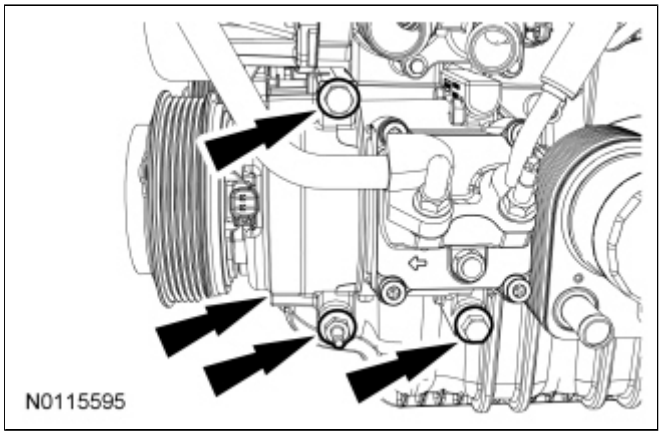
37. Disconnect the A/C pressure transducer electrical connector.
    - Detach the wiring harness retainer.



38. Detach the wiring harness retainer from the lower A/C compressor bracket.

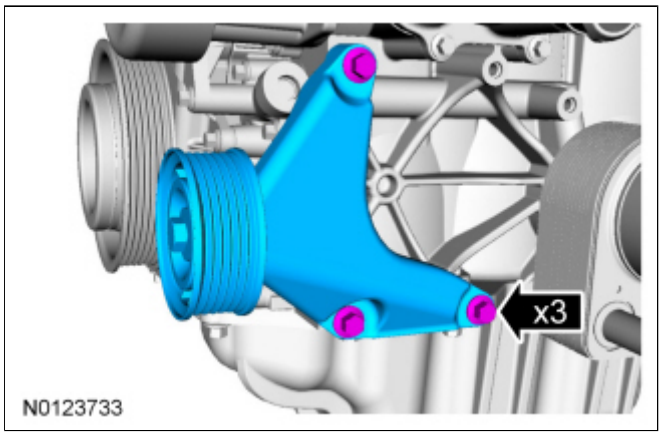


39. Remove the 2 bolts, stud bolt and position the A/C compressor aside and support with a length of mechanic's wire.



Vehicles without A/C

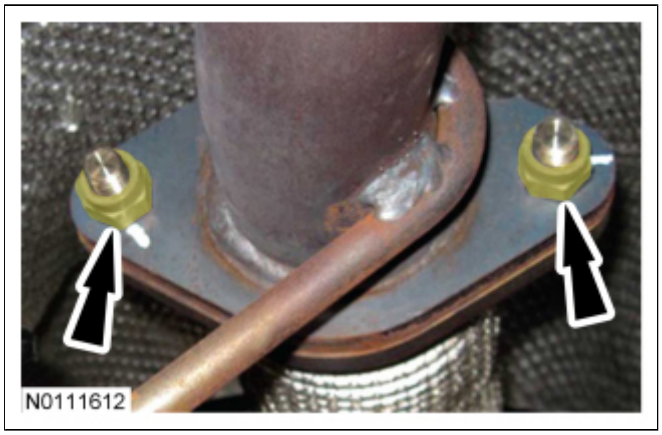
40. Remove the 3 bolts and the accessory drive belt idler pulley bracket.



All vehicles

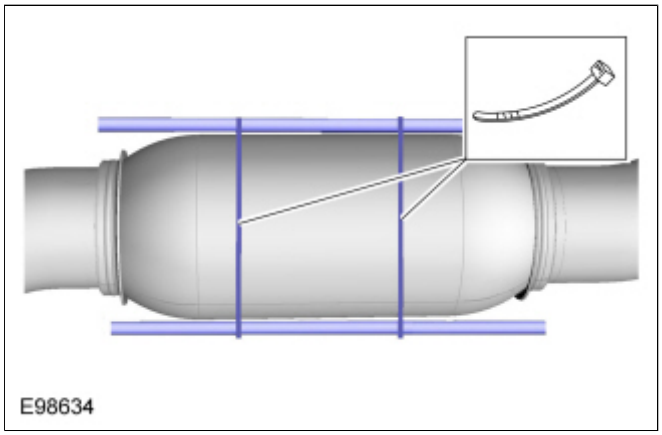
41. Remove the Catalyst Monitor Sensor (CMS). For additional information, refer to Section 303-14 .

42. Remove the 2 catalytic converter-to-muffler nuts and separate.
    - Discard the gasket.

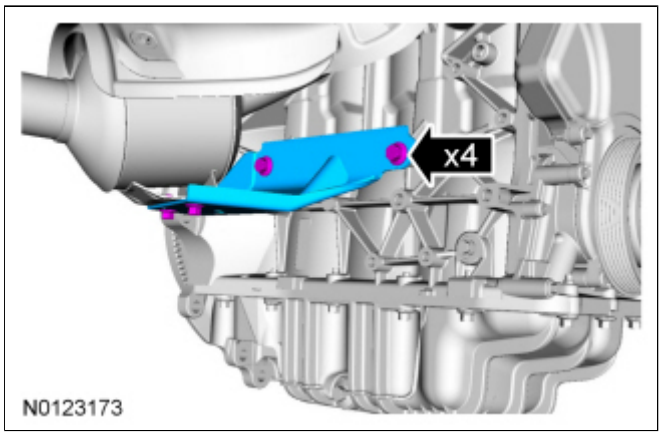


43. ***NOTICE:*** **Do not excessively bend or twist the exhaust flexible pipe. Failure to follow these instructions may cause damage to the flexible pipe.**

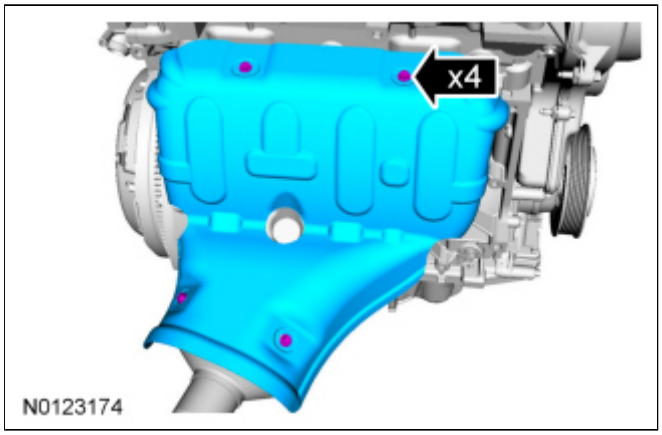
    Support the exhaust flexible pipe with a support wrap or suitable splint.



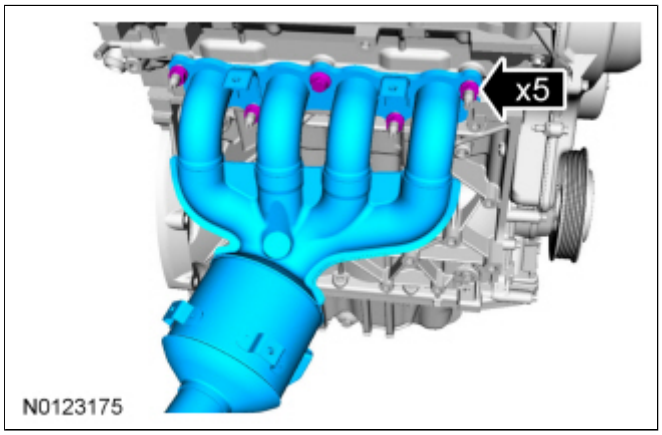
44. Remove the 4 bolts and the lower catalytic converter bracket.



45. Remove the 4 bolts and the catalytic converter heat shield.



46. Remove the 4 catalytic converter nuts and bolt.
    - Discard the bolt and 4 nuts.

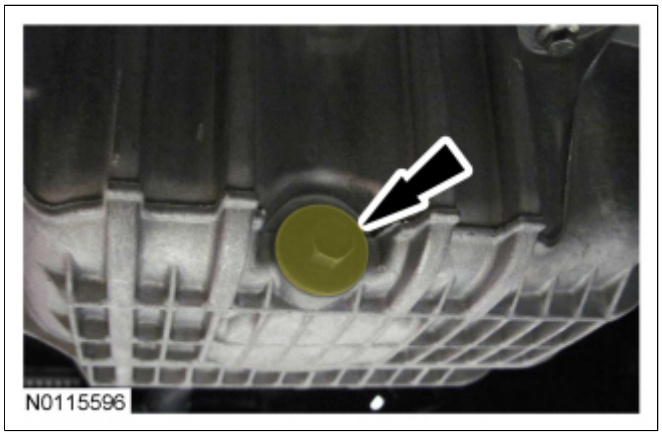


47. Position the catalytic converter back and secure with mechanic wire.
    - Discard the catalytic converter gasket.

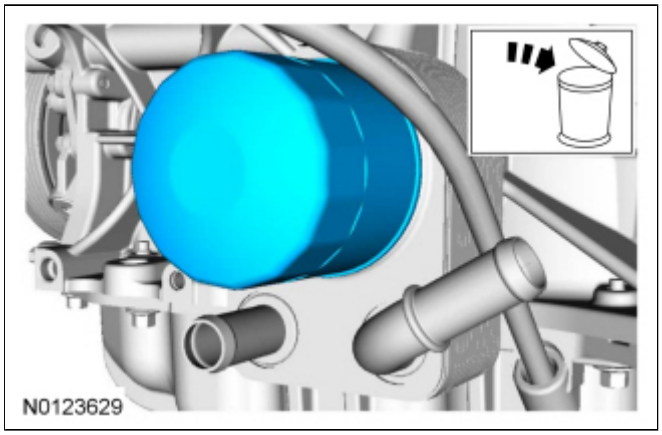
48. Clean and inspect the catalytic converter flange. For additional information, refer to exhaust manifold cleaning and inspection in Section 303-00 .

49. If equipped, disconnect the block heater electrical connector.

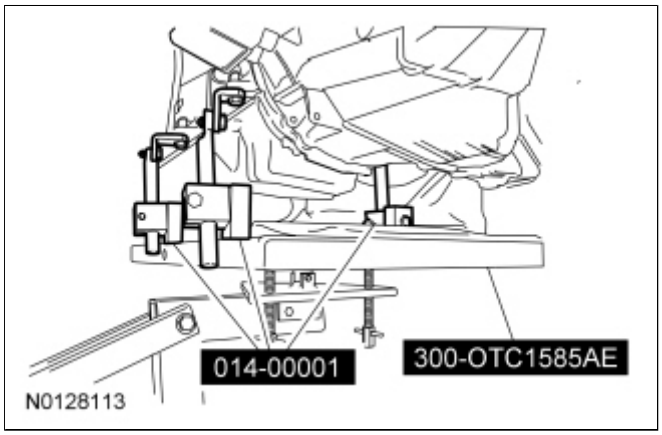
50. Drain the engine oil.
    - Install the drain plug and tighten to 28 Nm (21 lb-ft).



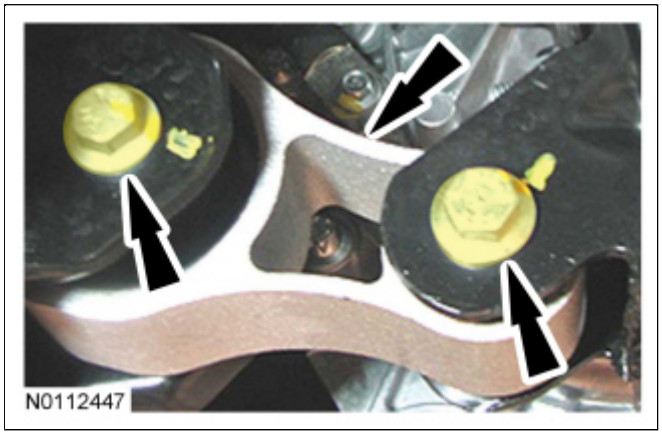
51. Remove and discard the engine oil filter.



52. Using the Powertrain Lift and Adjustable Grip Arms, secure the engine to the lift table.



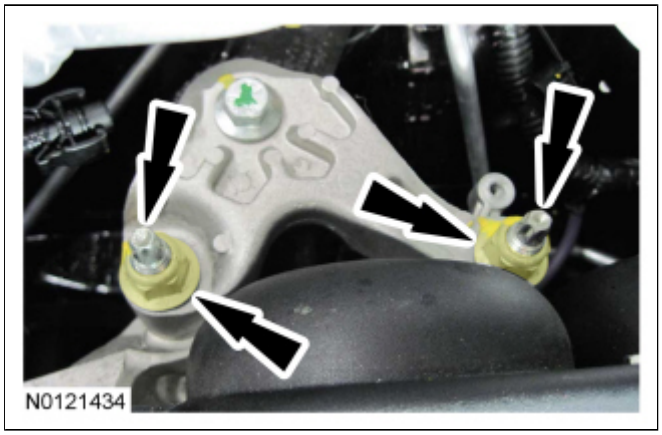
53. Remove the 2 bolts and the transaxle roll restrictor.



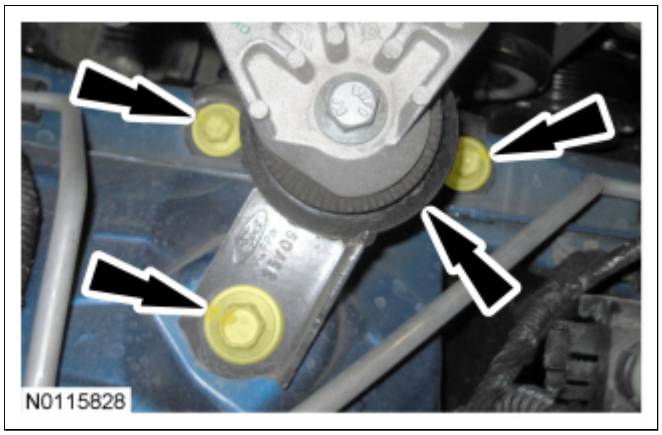
54. ***NOTICE:*** **The engine mount studs must be held while removing the engine mount nuts or damage to the powertrain may occur.**

    NOTE: Do not loosen the engine mount center bolt or the engine may become improperly positioned.

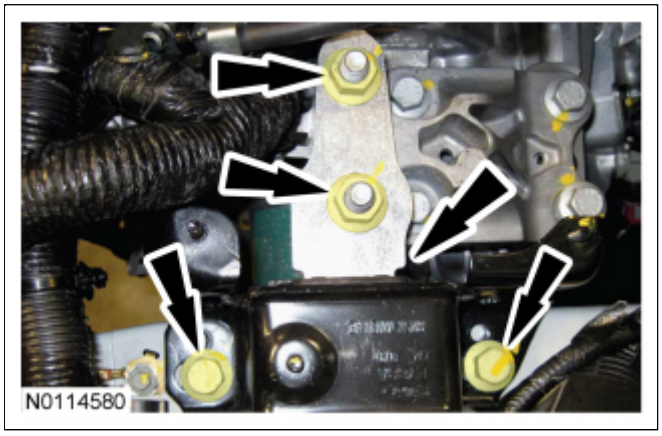
    Use the holding feature to prevent the engine mount studs from turning, remove the 2 engine mount nuts.



55. Remove the 3 bolts and the engine mount.

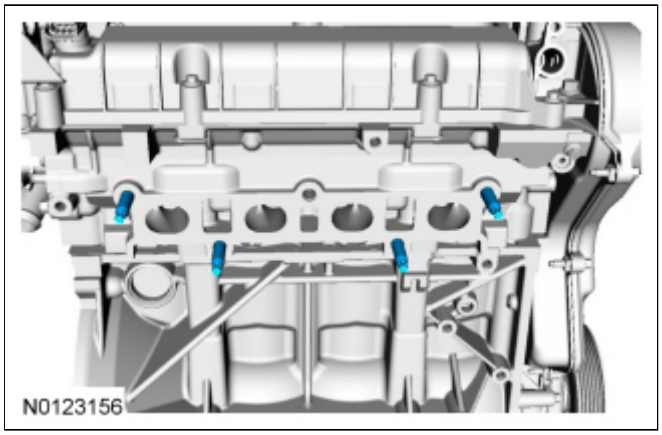


56. Remove the 2 bolt, 2 nuts and the transaxle support insulator.

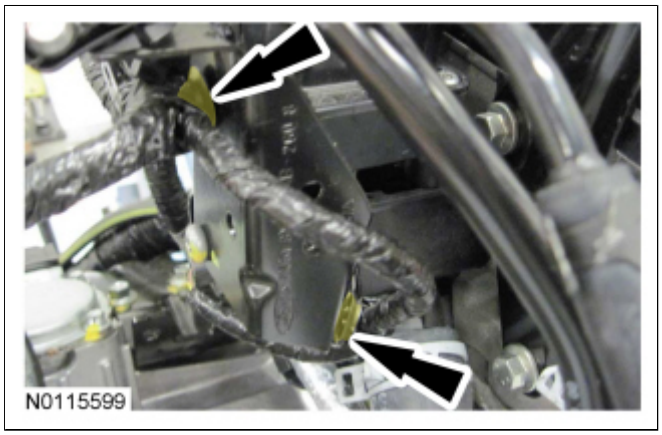


57. Lower the engine and transaxle assembly from the vehicle.

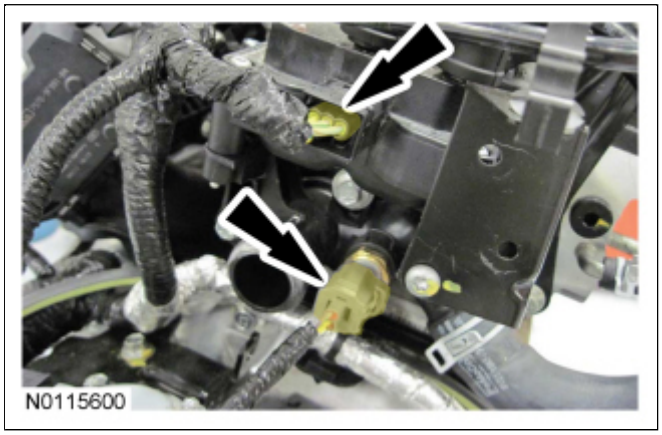
58. Remove the 4 catalytic converter studs and discard.



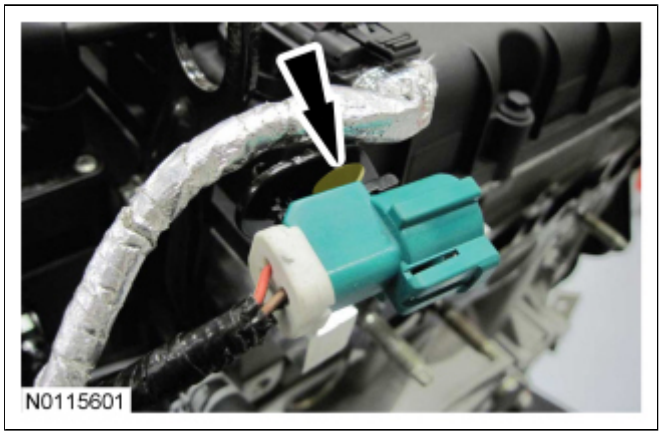
59. Detach the 2 wiring harness retainers from the coolant outlet bracket.



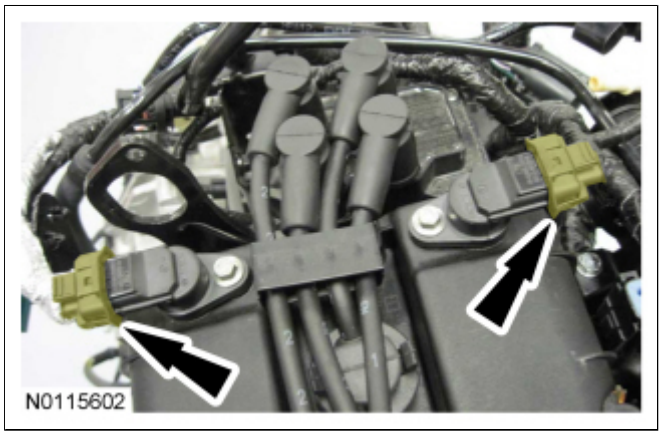
60. Disconnect the ignition coil and Engine Coolant Temperature (ECT) sensor electrical connectors.



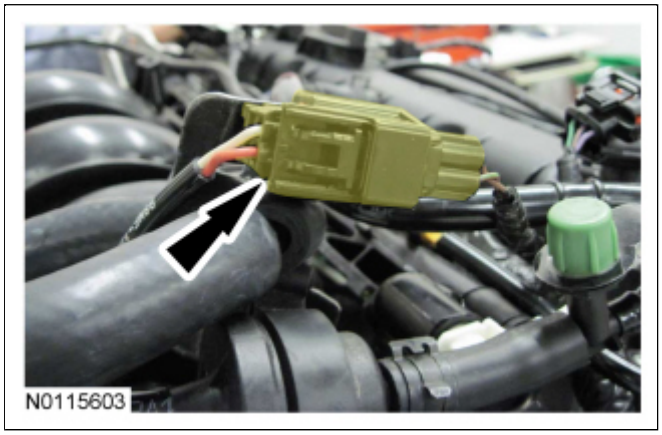
61. Detach the HO2S sensor electrical connector pin-type retainer from the bracket.



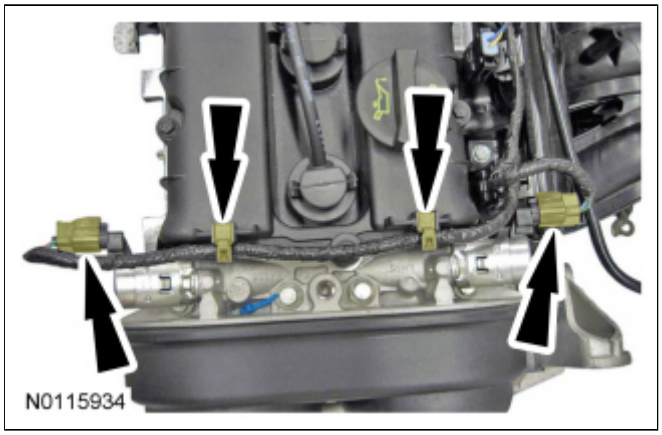
62. Disconnect the 2 Camshaft Position (CMP) sensor electrical connectors.



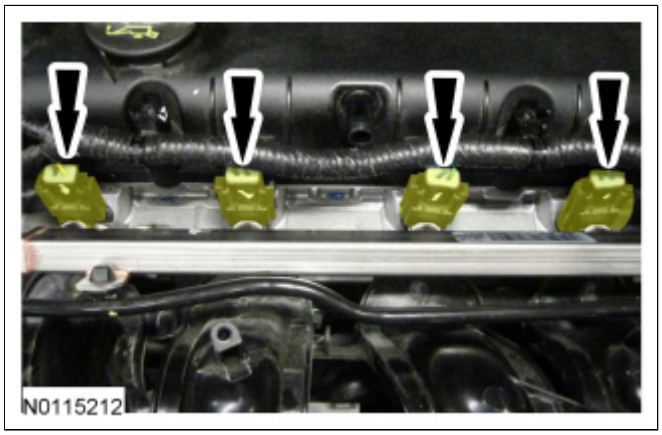
63. Detach and disconnect the LH Knock Sensor (KS) electrical connector.



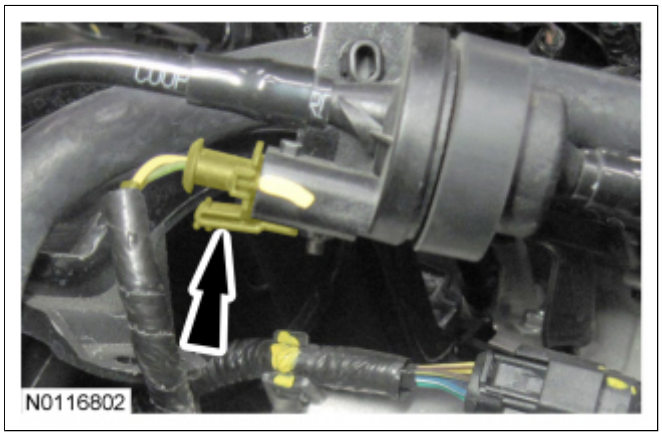
64. Disconnect the Variable Camshaft Timing (VCT) oil control solenoid electrical connectors.
    - Detach the 2 wiring harness retainers.



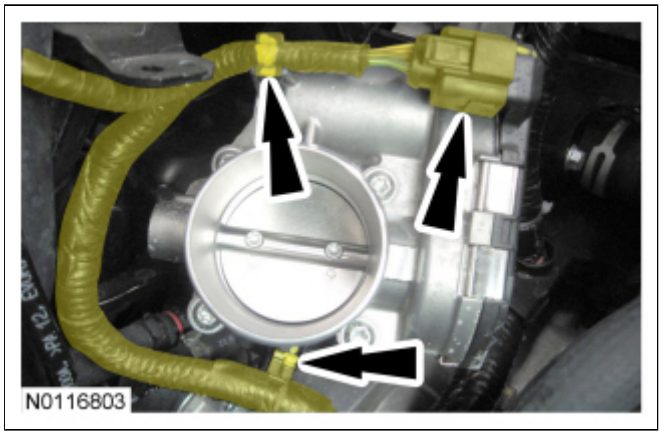
65. Disconnect the 4 fuel injector electrical connectors.
    - Detach the wiring harness retainers from the valve cover stud bolts.



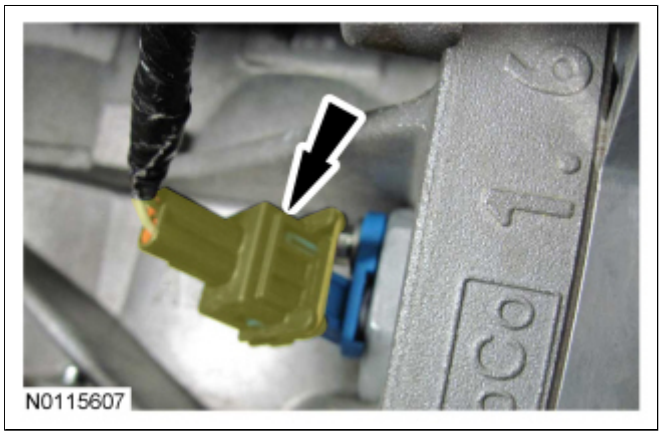
66. Disconnect the EVAP canister purge valve electrical connector.



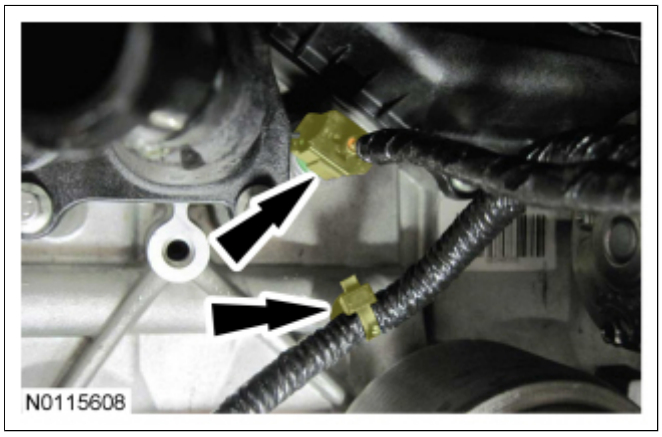
67. Disconnect the Throttle Body (TB) electrical connector.
    - Detach the 2 wiring harness retainers from the TB .



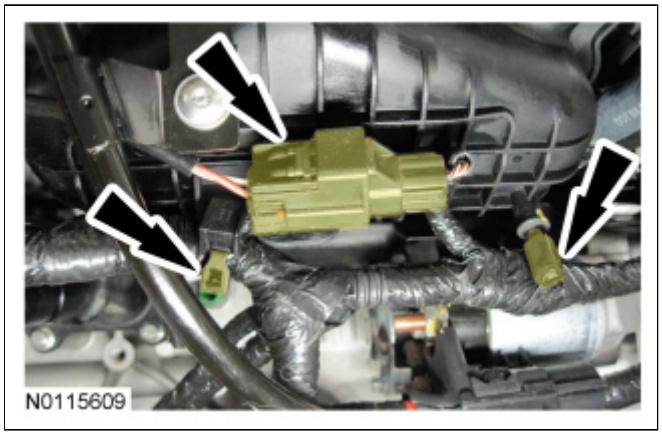
68. Disconnect the Crankshaft Position (CKP) sensor electrical connector.



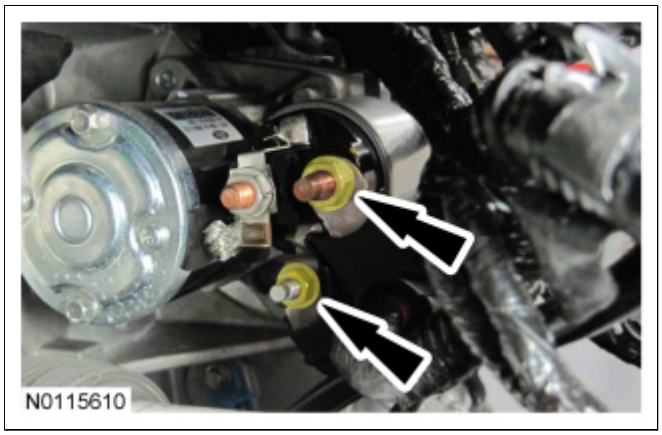
69. Disconnect the Engine Oil Pressure (EOP) switch electrical connector.
    - Detach the wiring harness retainer from the engine block.



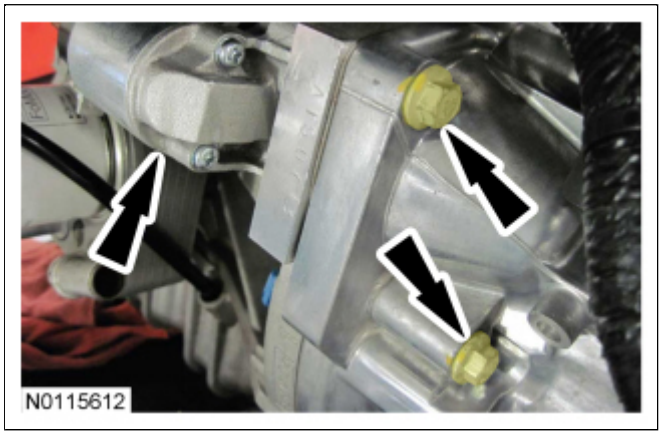
70. Disconnect the RH KS electrical connector.
    - Detach the 2 wiring harness retainers from the intake manifold.



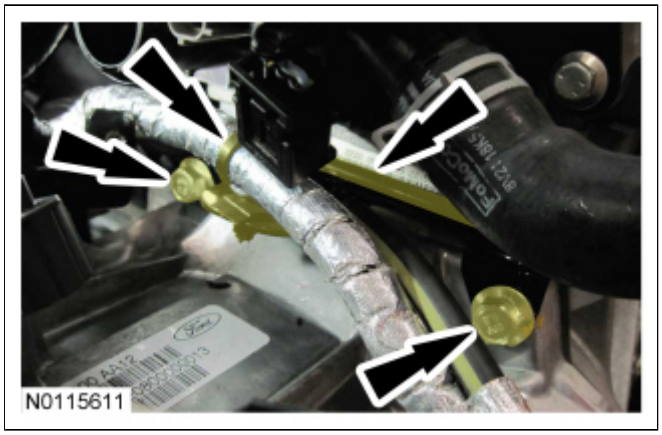
71. Remove the 2 nuts and disconnect the starter motor electrical terminals.



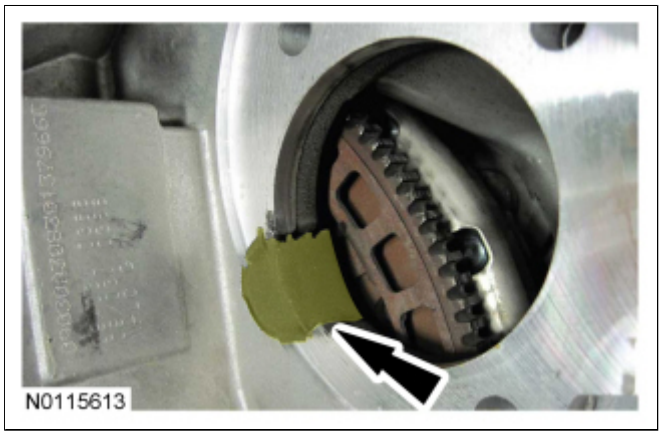
72. Remove the 3 bolts (2 shown) and the starter motor.



73. Detach the wiring harness pin-type retainer and remove the 2 upper bellhousing-to-engine bolts and bracket.



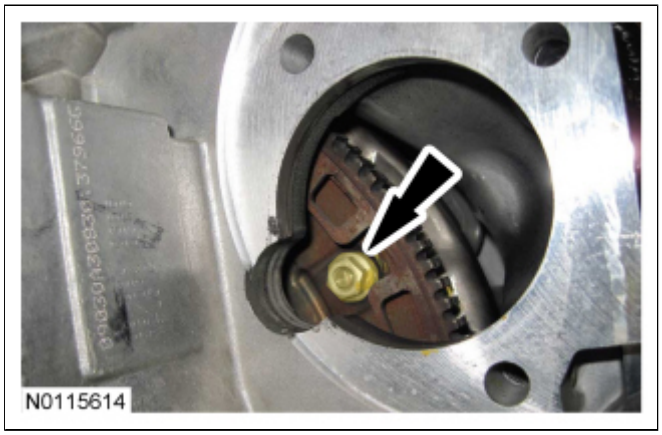
74. Remove the clutch nut access cover.



75. ***NOTICE:*** **Rotate the engine in a clockwise direction only or engine damage may occur.**

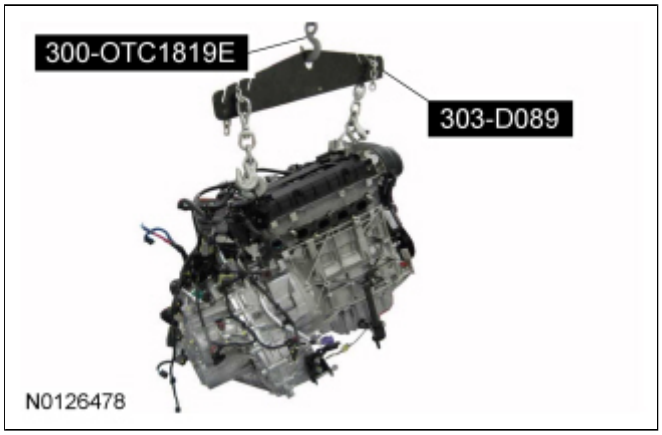
    NOTE: Mark one stud and the flexplate for installation reference.

    Remove the 6 flexplate-to-clutch nuts and discard.

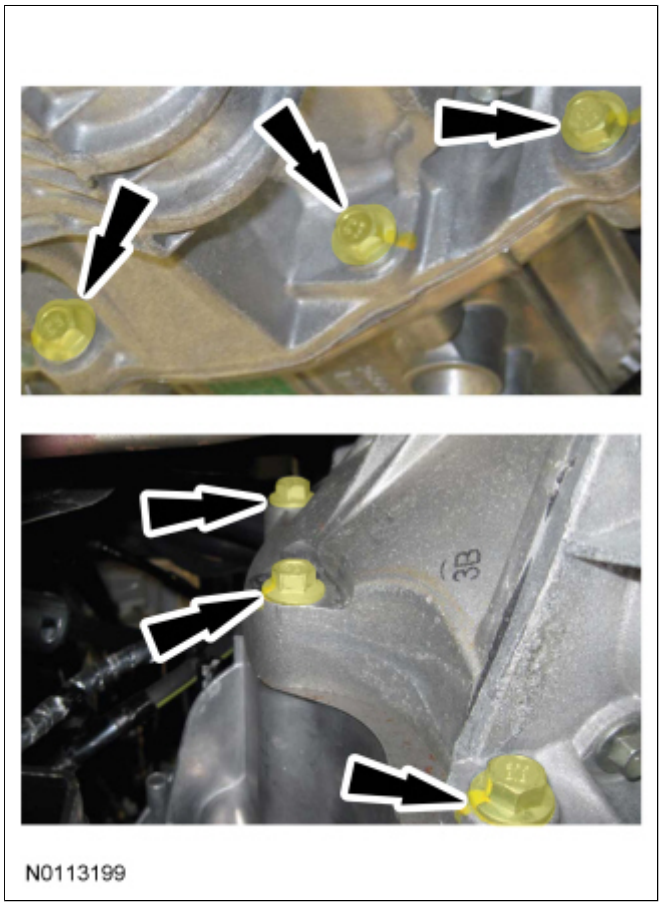


76. **NOTE:** Lower the engine to within a few inches of the floor.

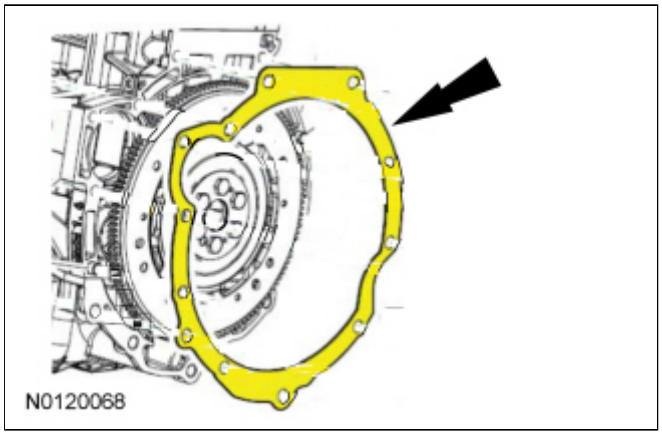
    Using the Floor Crane and Spreader Bar, remove the engine and transaxle assembly from the lift table.



77. Remove the 6 clutch housing-to-engine bolts and separate the engine and transaxle.



78. Remove and discard the engine-to-transaxle separator plate.



N0120068

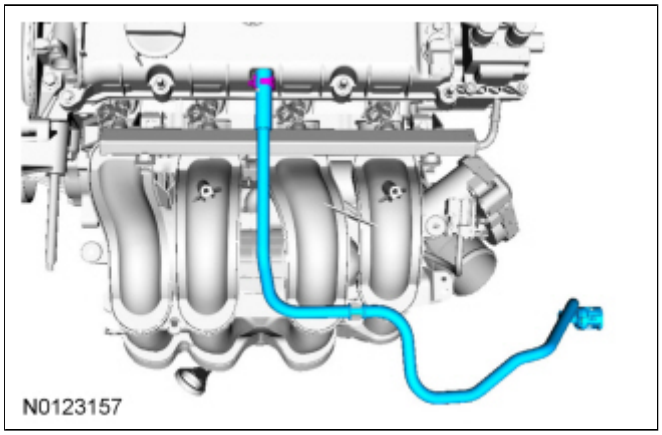
Engine — Manual Transaxle

Special Tool(s)

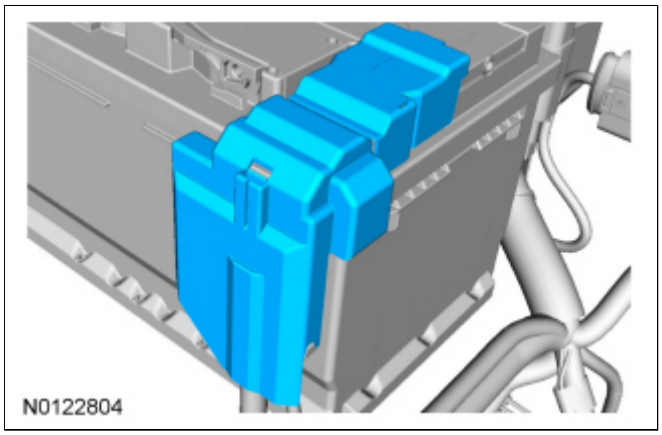
ST1341-A	2,200# Floor Crane, Fold Away 300-OTC1819E
ST1682-A	Powertrain Lift 300-OTC1585AE
ST1602-A	Spreader Bar 303-D089 (D93P-6001-A3) or equivalent
 ST2743A	Adjustable Grip Arm, 1735A 014-00001

All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Release the fuel system pressure. For additional information, refer to Section 310-00 .
3. Remove the Air Cleaner (ACL) and ACL outlet pipe. For additional information, refer to Section 303-12 .
4. Disconnect the crankcase vent tube from the valve cover.
   - Detach the 2 crankcase vent tube retainers and remove the tube.

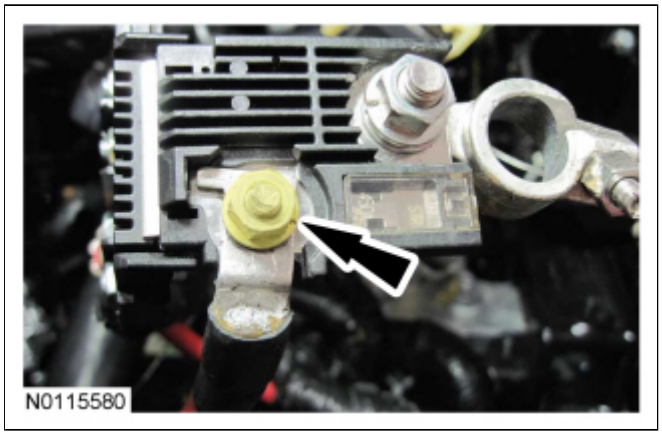


5. Remove the positive battery cable cover.



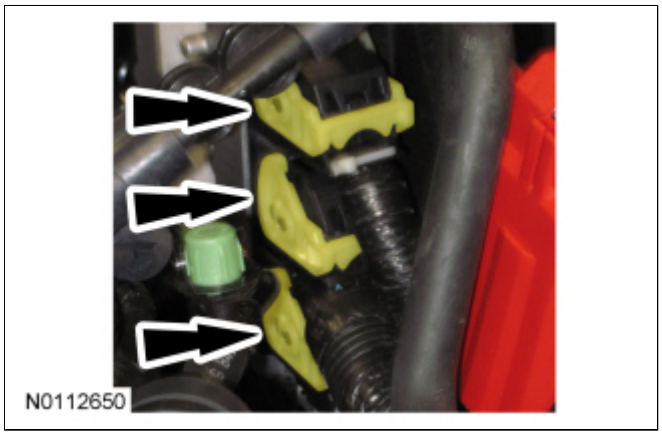
6. Remove the battery. For additional information, refer to Section 414-01 .

7. Remove the nut and cable from the positive battery cable terminal.

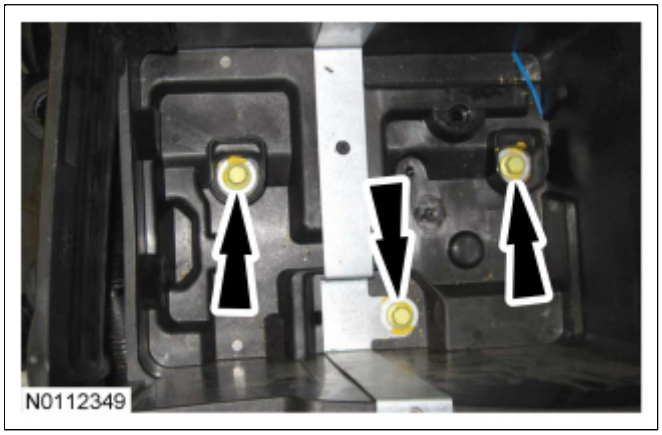


8. Remove the bolt and the PCM cover.

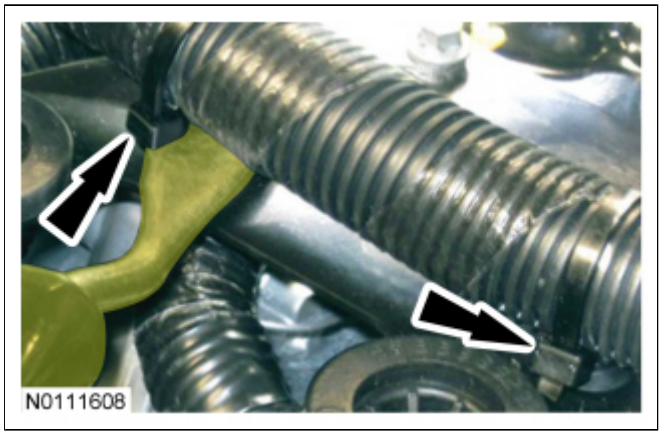
9. Disconnect the 3 PCM electrical connectors.



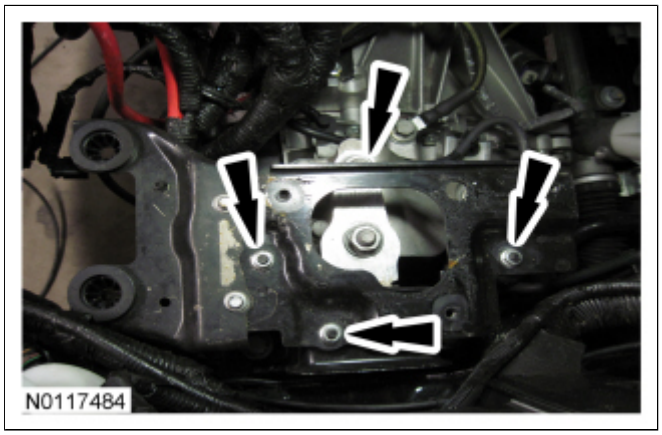
10. Remove the 3 bolts and the battery tray.



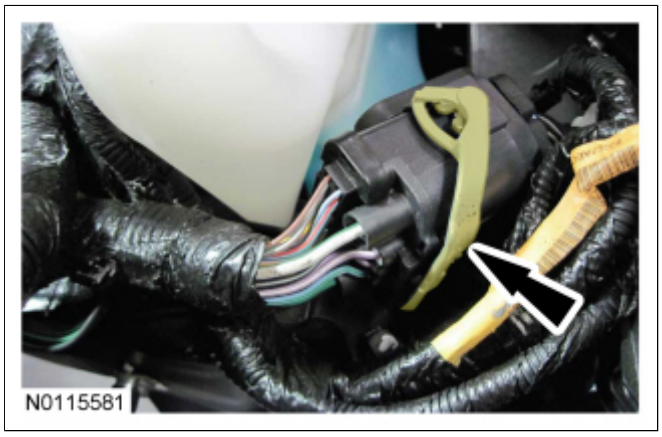
11. Detach the 2 positive battery cable wire harness retainers from battery tray bracket.



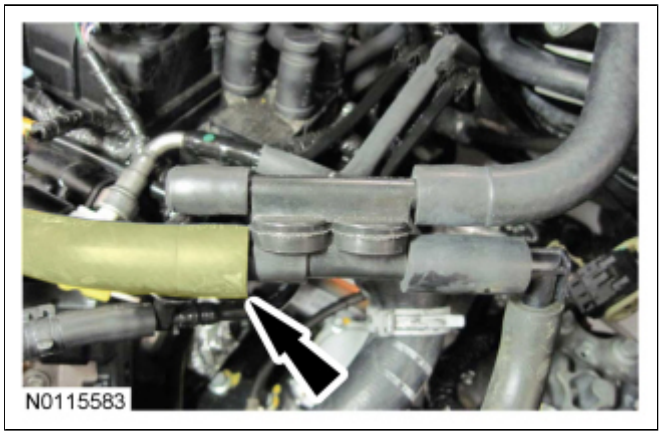
12. Remove the 3 battery tray nuts and the battery tray bracket.
    - Detach the 2 wiring harness retainers from the battery tray bracket.



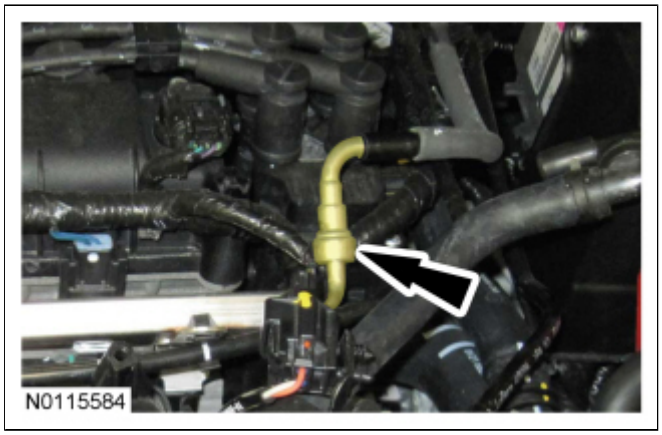
13. Disconnect the engine harness electrical connector.



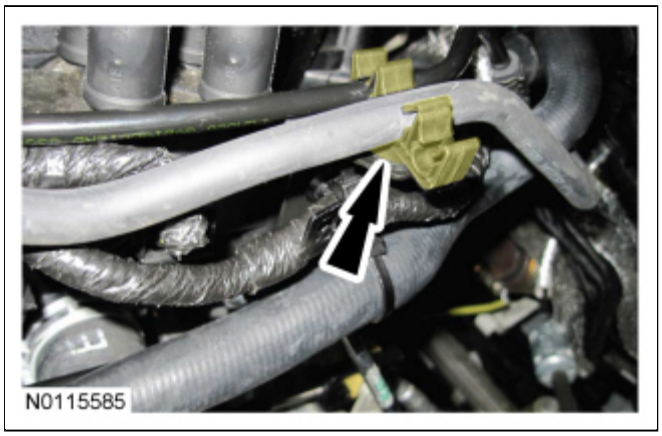
14. Disconnect the brake booster vacuum hose.



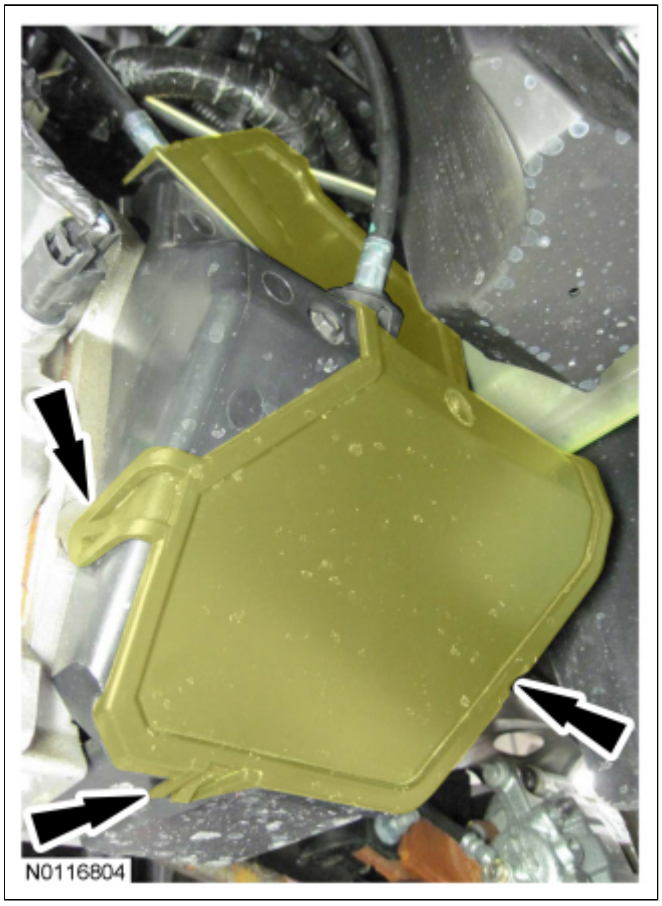
15. Disconnect the fuel tube spring lock couplings from the fuel rail. For additional information, refer to Section 310-00 .



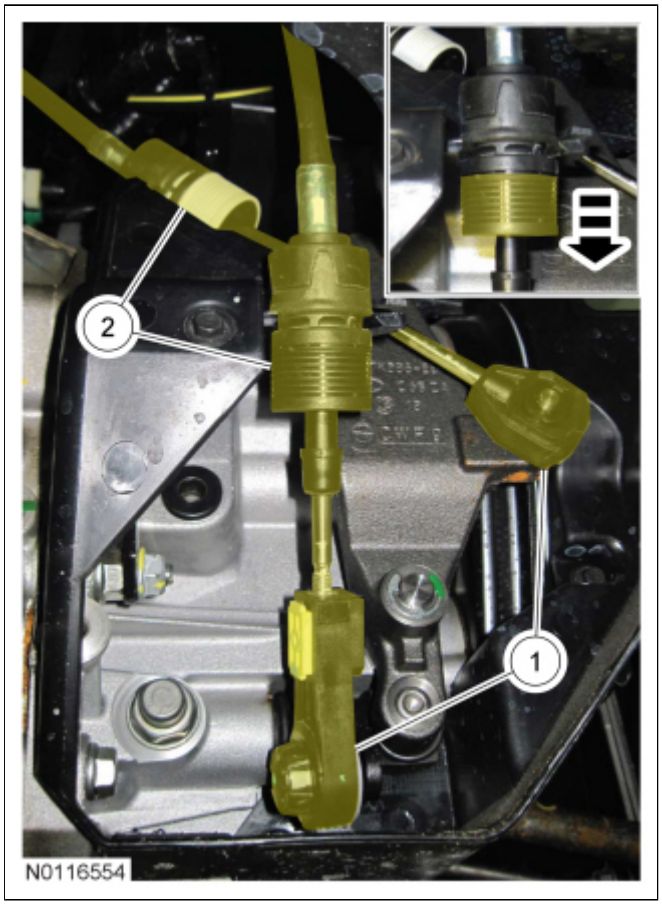
16. Detach the fuel tube from the coolant outlet bracket retainer.



17. Remove the generator. For additional information, refer to Section 414-00 .
18. Drain the cooling system. For additional information, refer to Section 303-03 .
19. Remove the degas bottle. For additional Information, refer to Section 303-03 .
20. Release the 7 retainers (2 shown) and remove the gearshift cable cover.

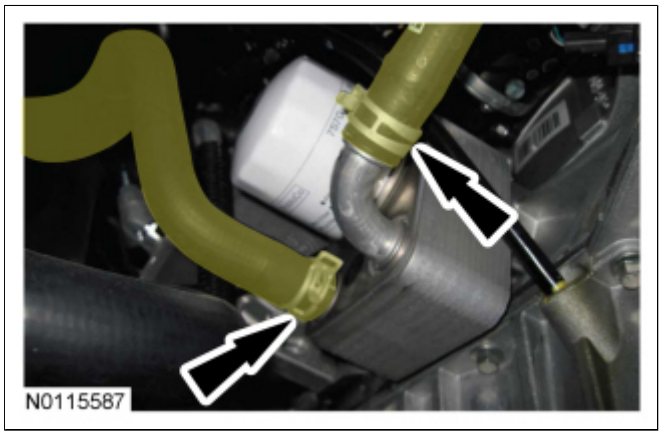


21. Remove the gearshift cables.
    1. Using a suitable tool, lightly pry the gearshift cables off the transaxle shift control levers.
    2. Remove the gearshift cable by pulling the lower part of abutment down and removing from the brackets.



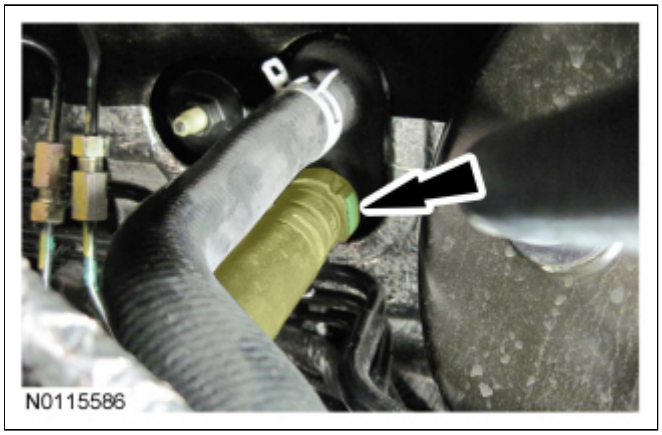
22. Remove the cooling fan motor and shroud. For additional information, refer to Section 303-03 .

23. Disconnect the 2 coolant hoses from the engine oil cooler.
    - Detach the oil cooler hose retainer from the upper radiator hose.

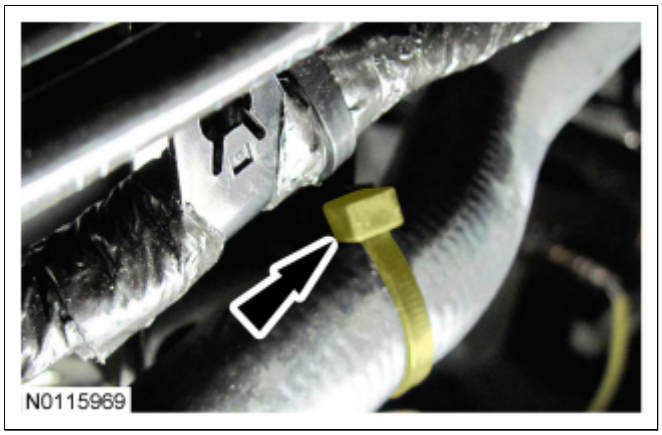


24. Remove the Heated Oxygen Sensor (HO2S). For additional information, refer to Section 303-14 .

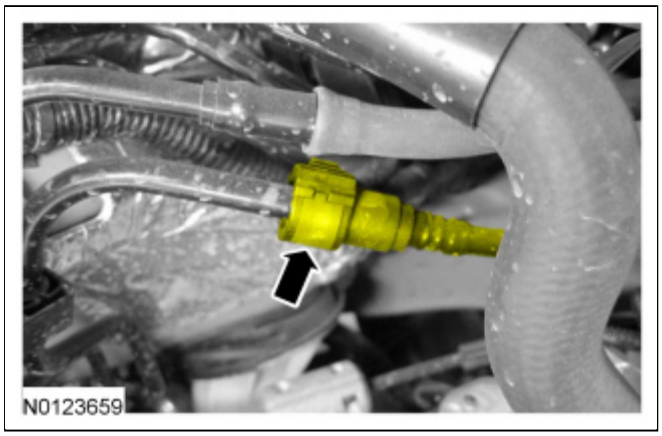
25. Disconnect the lower heater hose from the heater core.



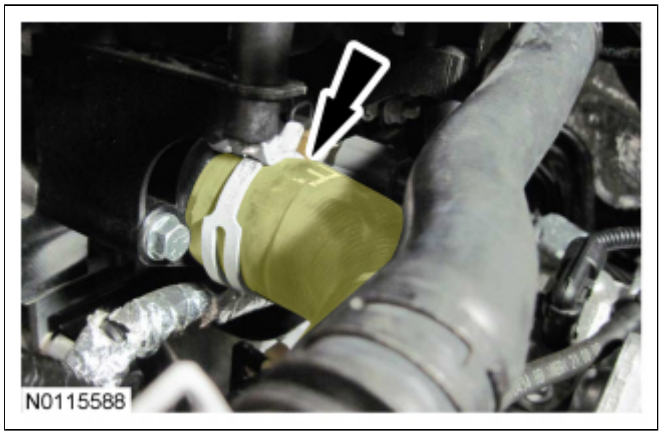
26. Detach the coolant hose retainer from the coolant outlet bracket.



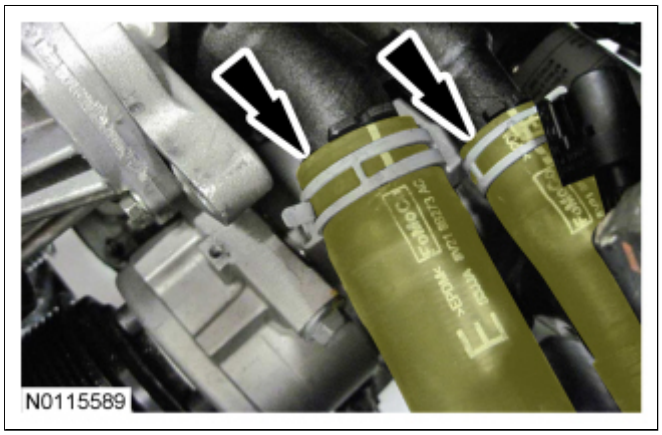
27. Disconnect the Evaporative Emission (EVAP) tube quick connect coupling near the bulk head. For additional information, refer to Section 310-00 .



28. Disconnect the upper radiator hose from the engine.



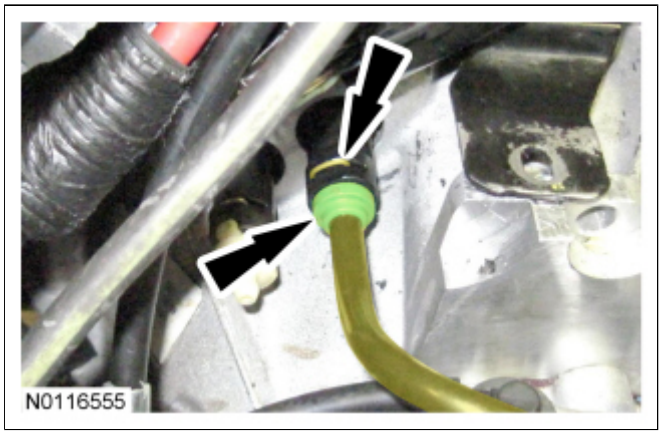
29. Disconnect the lower radiator hose and coolant hose from the thermostat housing.



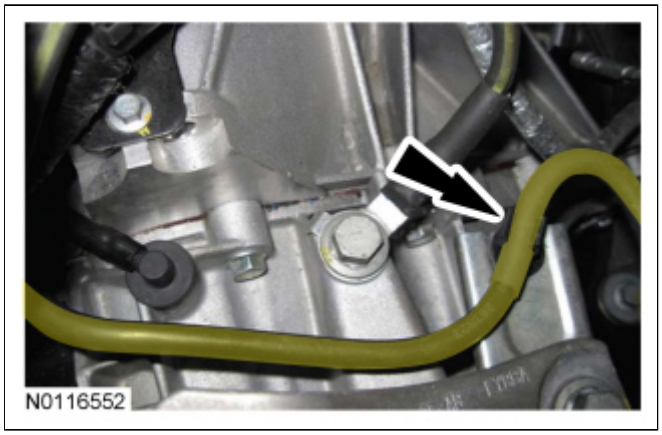
30. **WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.**

NOTICE: **Do not spill brake fluid on painted or plastic surfaces or damage to the surface may occur. If brake fluid is spilled onto a painted or plastic surface, immediately wash the surface with water.**

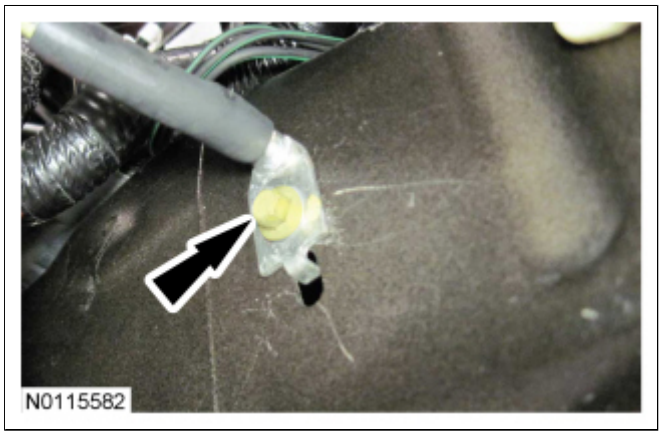
Remove the clip and disconnect the clutch hydraulic hose.



31. Detach the clutch hydraulic hose from the transaxle retainer.

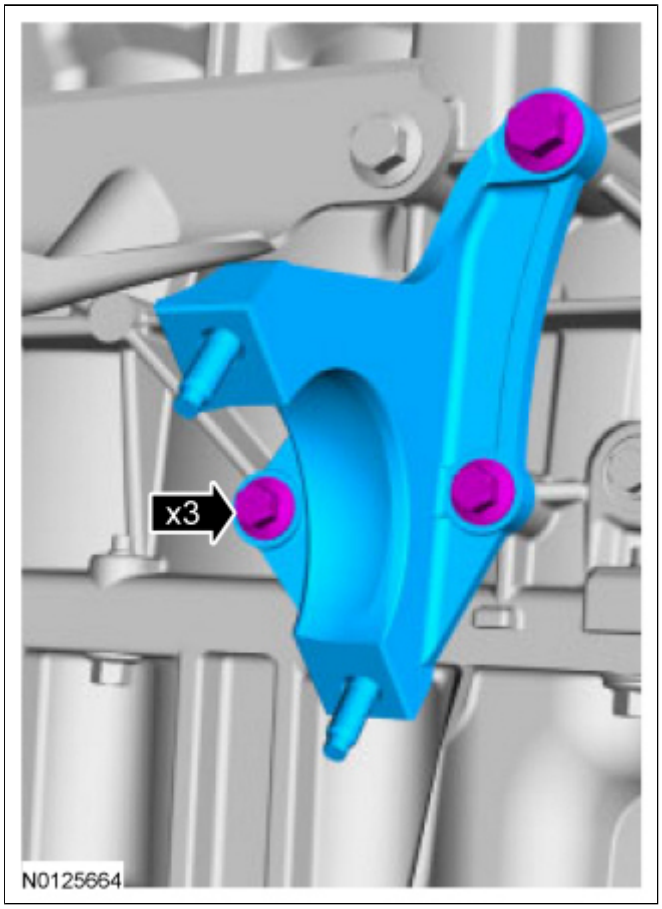


32. Remove the bolt and position the engine ground wire aside.



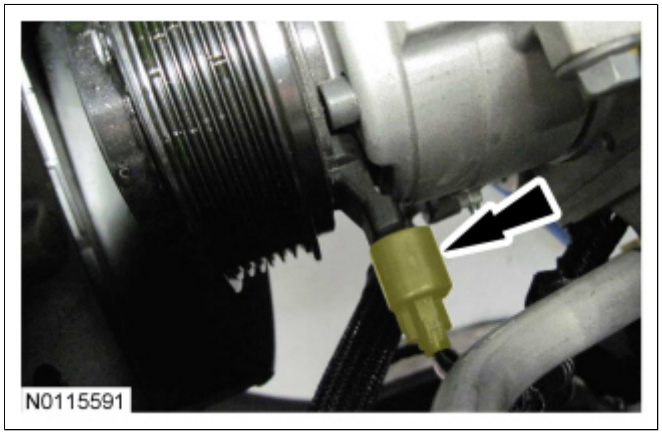
33. Remove the RH and LH halfshafts. For additional information, refer to Section 205-04 .

34. Remove the 3 bolts and the halfshaft bracket.

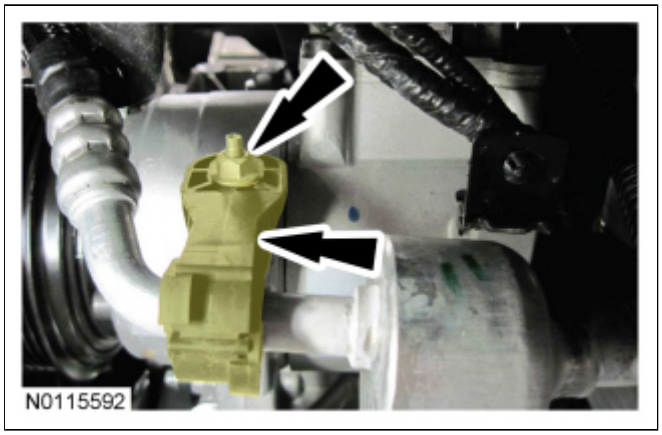


Vehicles with A/C

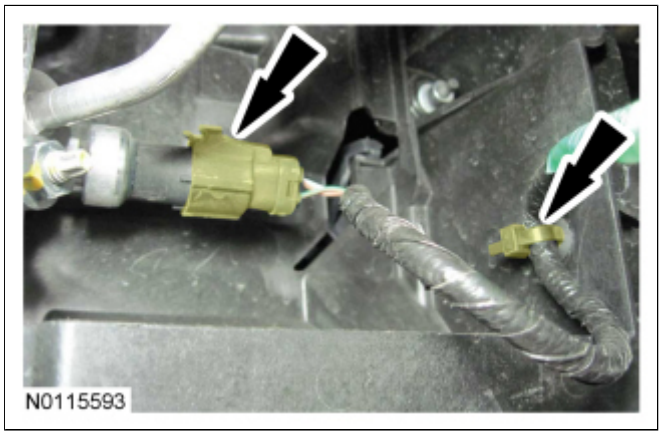
35. Disconnect the A/C compressor electrical connector.



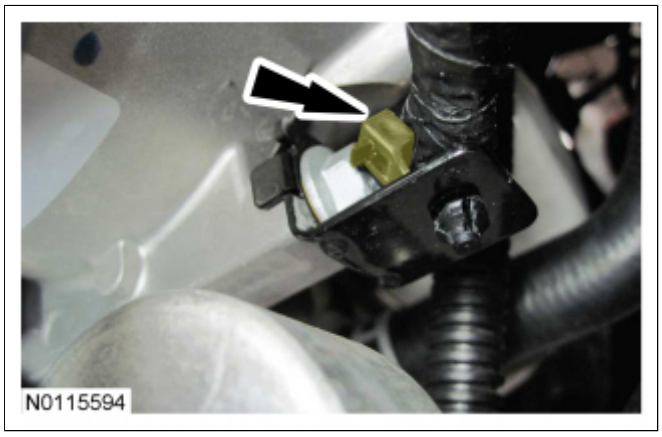
36. Remove the nut and position the A/C line bracket aside.



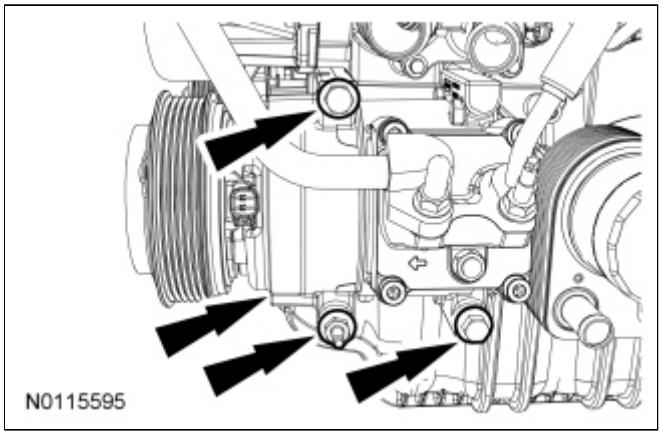
37. Disconnect the A/C pressure transducer electrical connector.
    - Detach the wiring harness retainer.



38. Detach the wiring harness retainer from the lower A/C compressor bracket.

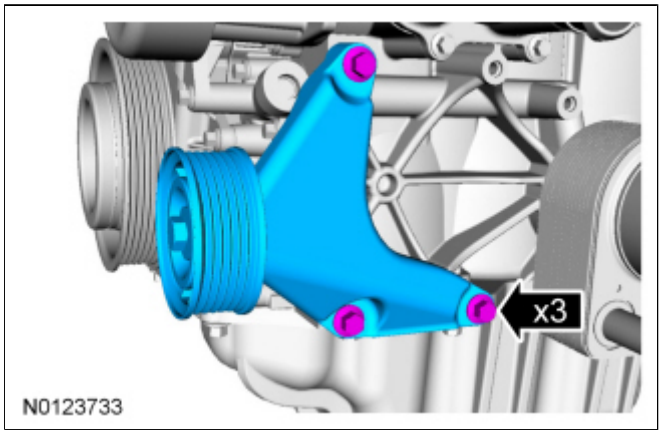


39. Remove the 2 bolts, stud bolt and position the A/C compressor aside and support with a length of mechanic's wire.



Vehicles without A/C

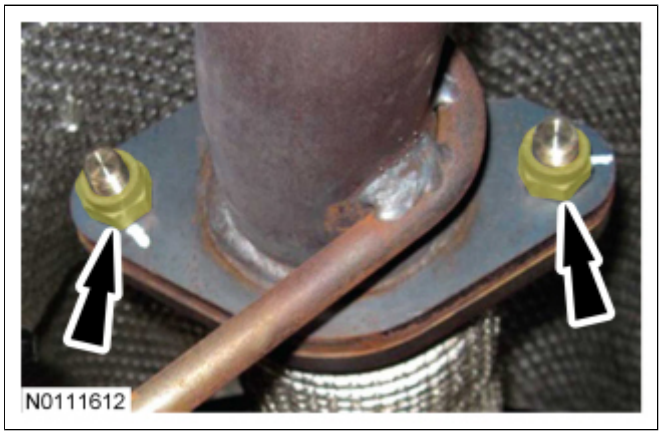
40. Remove the 3 bolts and the accessory drive belt idler pulley bracket.



All vehicles

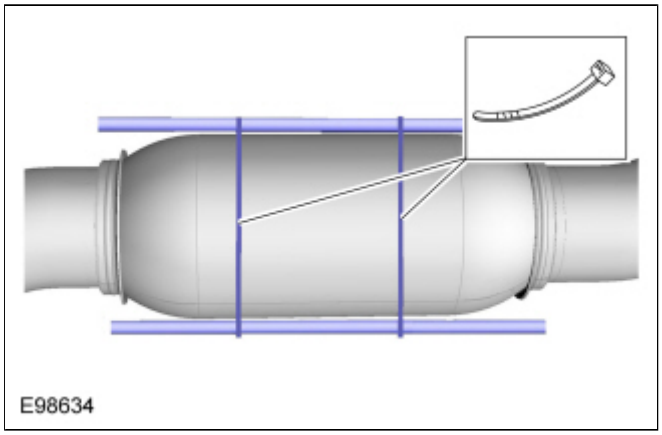
41. Remove the Catalyst Monitor Sensor (CMS). For additional information, refer to Section 303-14 .

42. Remove the 2 catalytic converter-to-muffler nuts and separate.
    - Discard the gasket.

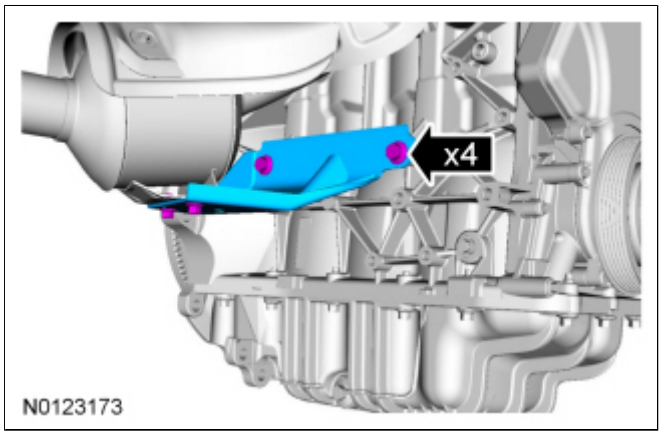


43. ***NOTICE:*** **Do not excessively bend or twist the exhaust flexible pipe. Failure to follow these instructions may cause damage to the flexible pipe.**

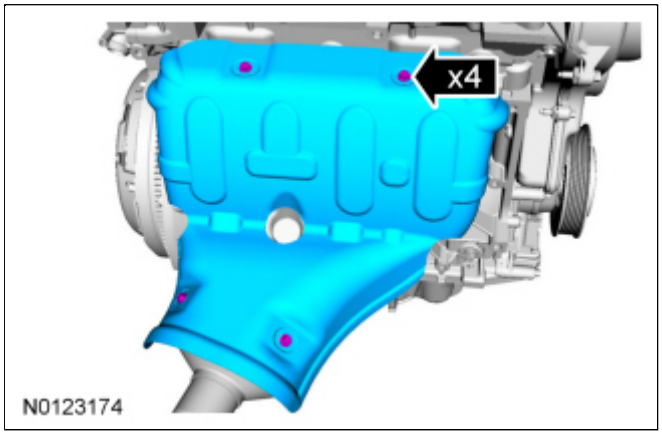
    Support the exhaust flexible pipe with a support wrap or suitable splint.



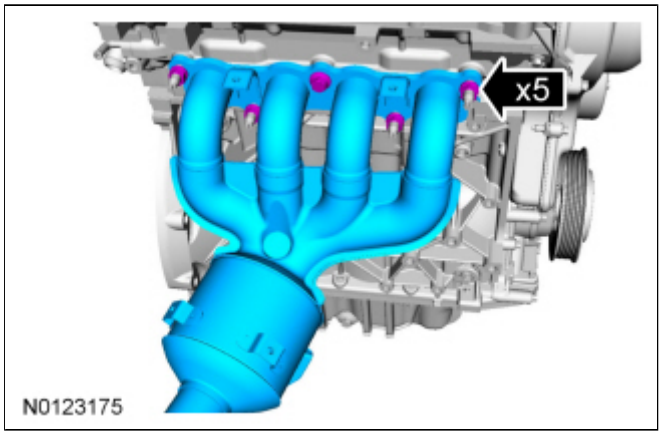
44. Remove the 4 bolts and the lower catalytic converter bracket.



45. Remove the 4 bolts and the catalytic converter heat shield.



46. Remove the 4 catalytic converter nuts and bolt.
    - Discard the bolt and 4 nuts.

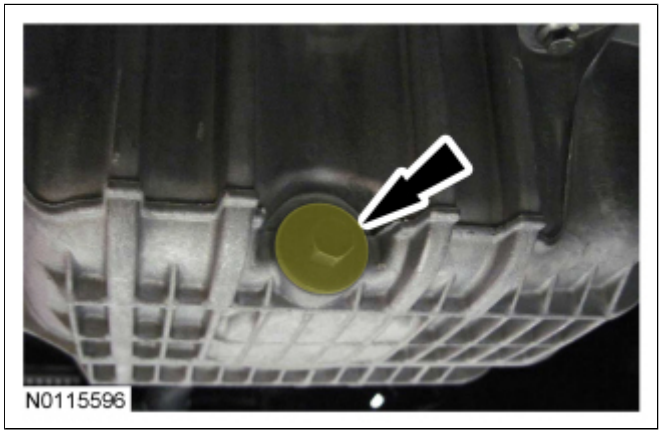


47. Position the catalytic converter back and secure with mechanic wire.
    - Discard the catalytic converter gasket.

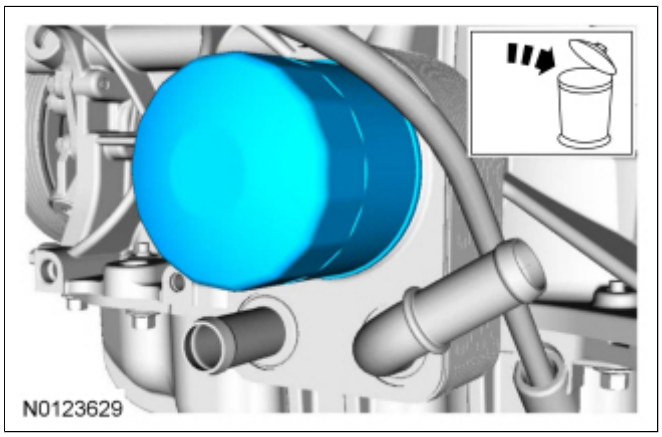
48. Clean and inspect the catalytic converter flange. For additional information, refer to exhaust manifold cleaning and inspection in Section 303-00 .

49. If equipped, disconnect the block heater electrical connector.

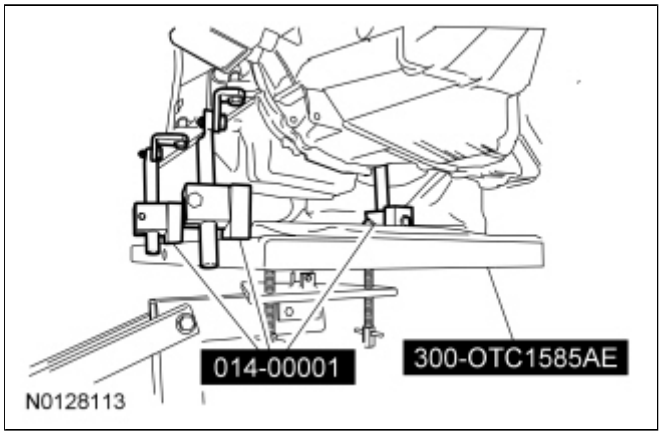
50. Drain the engine oil.
    - Install the drain plug and tighten to 28 Nm (21 lb-ft).



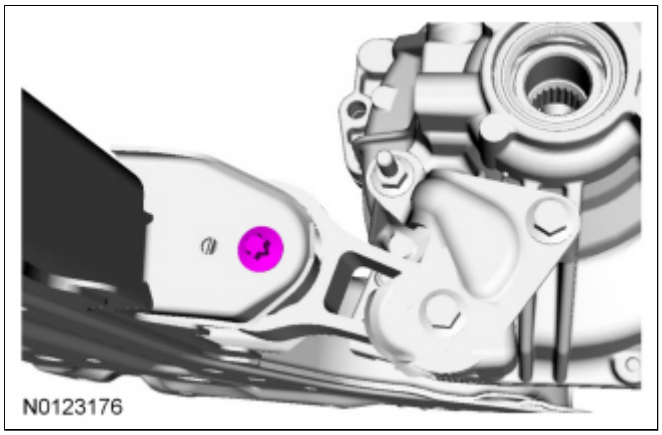
51. Remove and discard the engine oil filter.



52. Using the Powertrain Lift and Adjustable Grip Arms, secure the engine to the lift table.



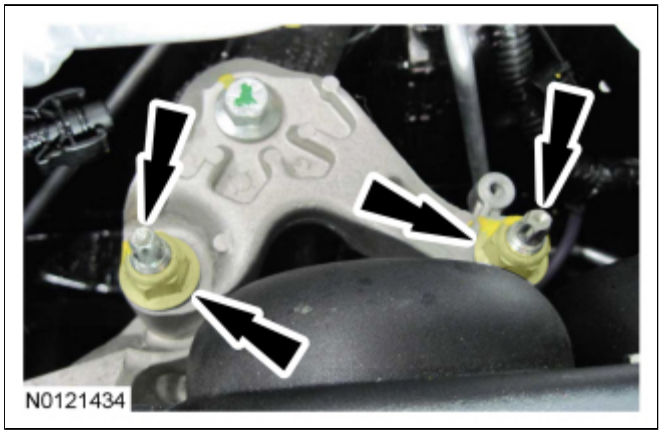
53. Remove the bolt for the transaxle roll restrictor.



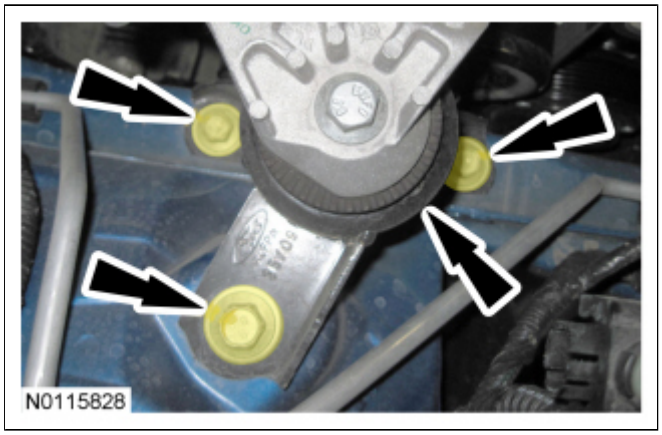
54. ***NOTICE:*** **The engine mount studs must be held while removing the engine mount nuts or damage to the powertrain may occur.**

    NOTE: Do not loosen the engine mount center bolt or the engine may become improperly positioned.

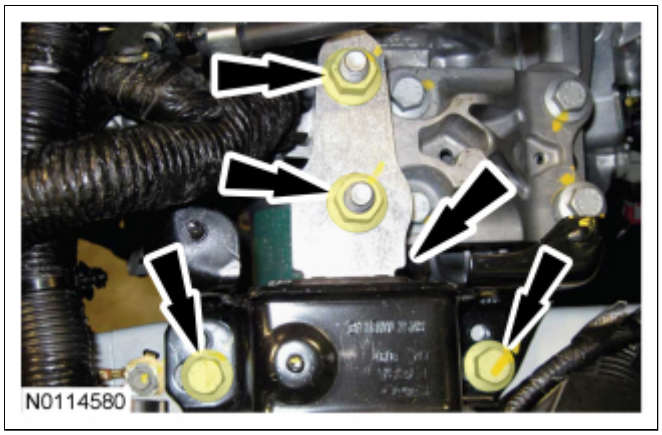
    Use the holding feature to prevent the engine mount studs from turning, remove the 2 engine mount nuts.



55. Remove the 3 bolts and the engine mount.

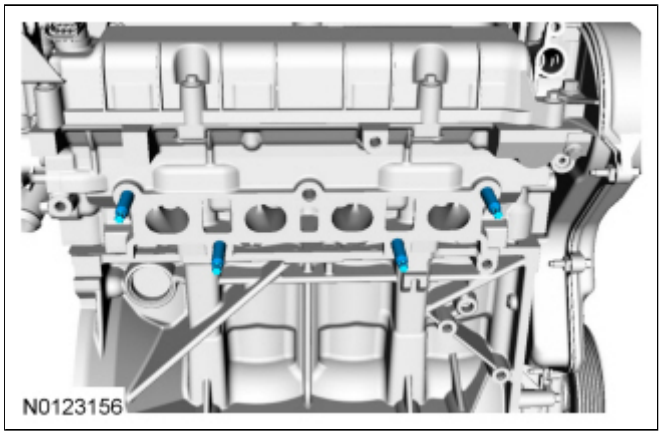


56. Remove the 2 bolt, 2 nuts and the transaxle support insulator.

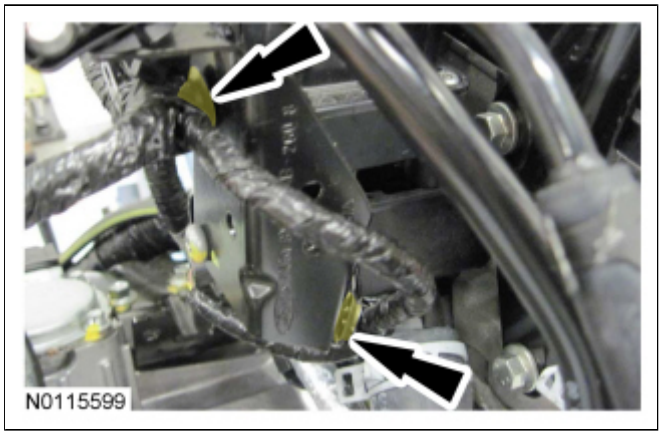


57. Lower the engine and transaxle assembly from the vehicle.

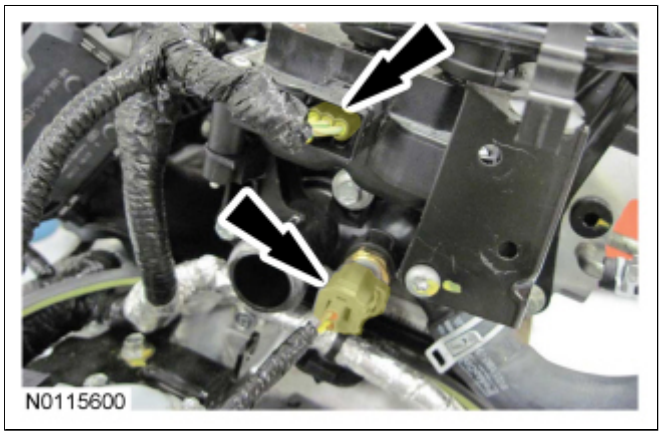
58. Remove the 4 catalytic converter studs and discard.



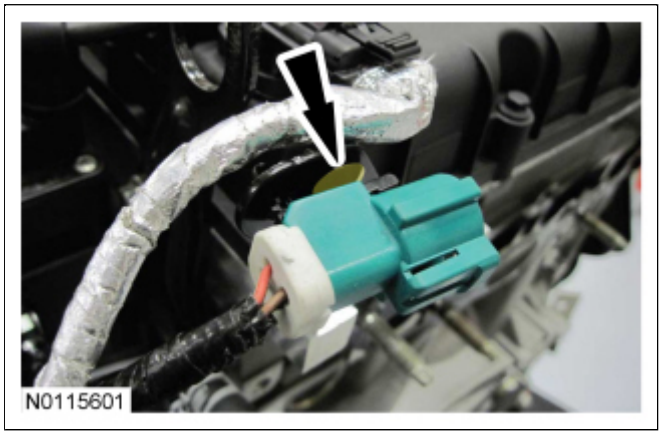
59. Detach the 2 wiring harness retainers from the coolant outlet bracket.



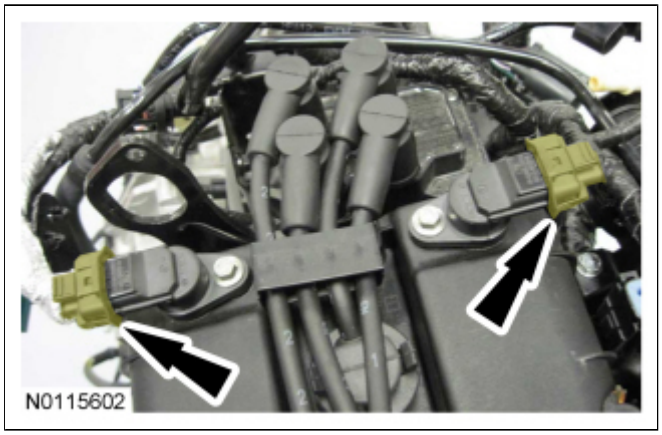
60. Disconnect the ignition coil and Engine Coolant Temperature (ECT) sensor electrical connectors.



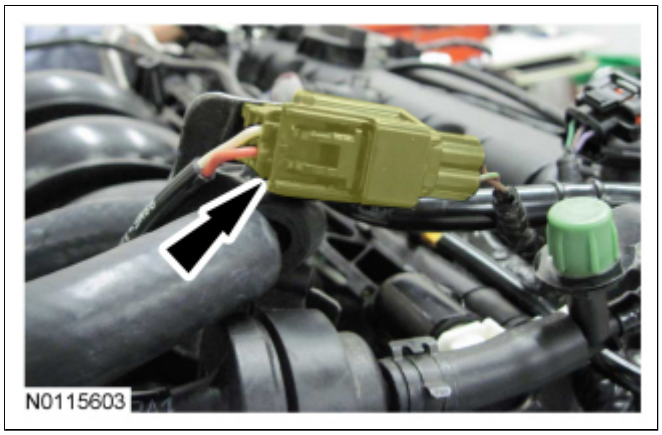
61. Detach the HO2S sensor electrical connector pin-type retainer from the bracket.



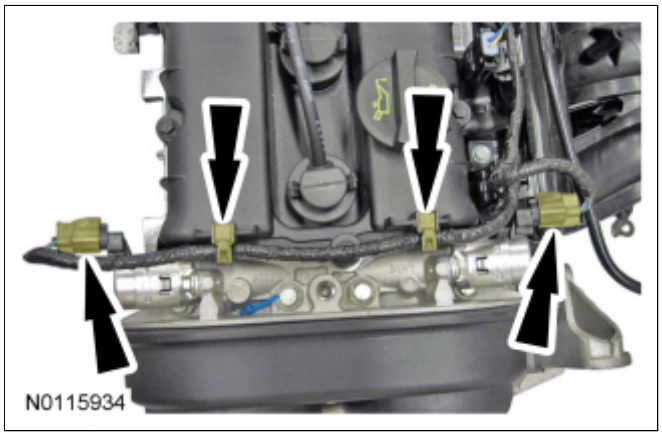
62. Disconnect the 2 Camshaft Position (CMP) sensor electrical connectors.



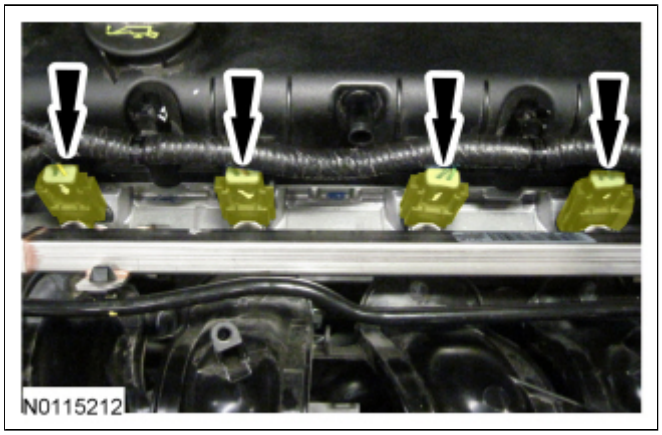
63. Detach and disconnect the LH Knock Sensor (KS) electrical connector.



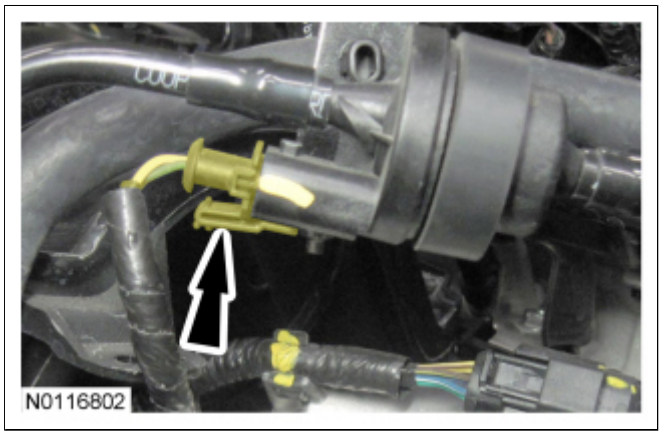
64. Disconnect the Variable Camshaft Timing (VCT) oil control solenoid electrical connectors.
    - Detach the 2 wiring harness retainers.



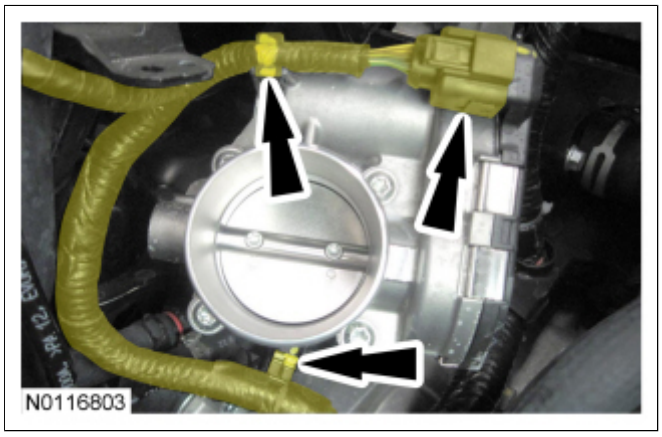
65. Disconnect the 4 fuel injector electrical connectors.
    - Detach the wiring harness retainers from the valve cover stud bolts.



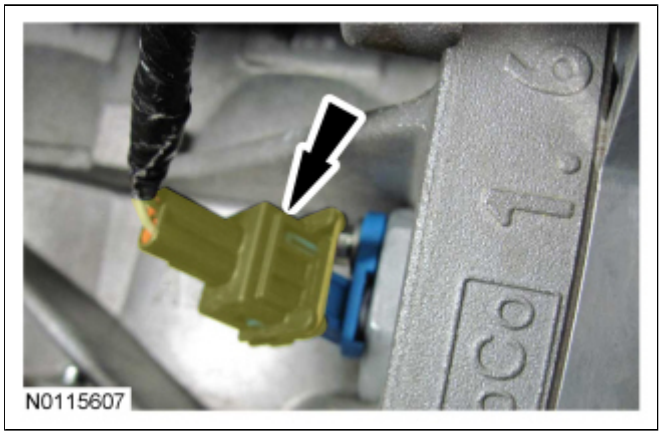
66. Disconnect the EVAP canister purge valve electrical connector.



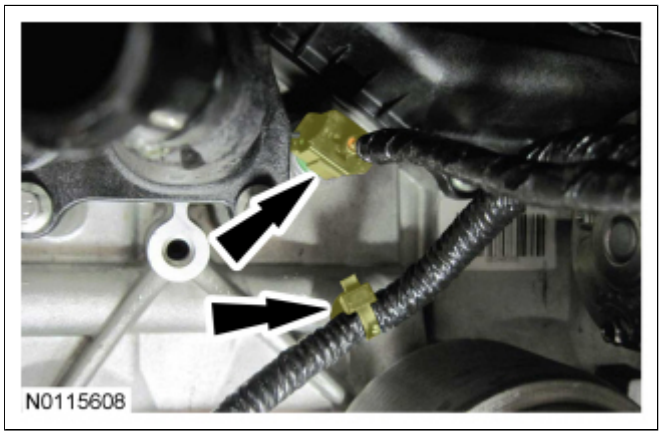
67. Disconnect the Throttle Body (TB) electrical connector.
    - Detach the 2 wiring harness retainers from the TB .



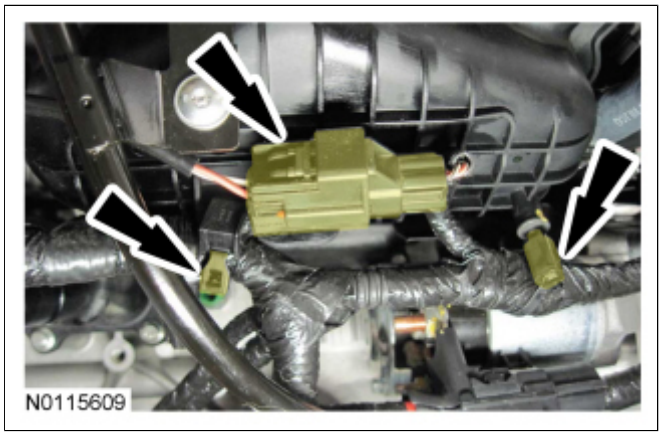
68. Disconnect the Crankshaft Position (CKP) sensor electrical connector.



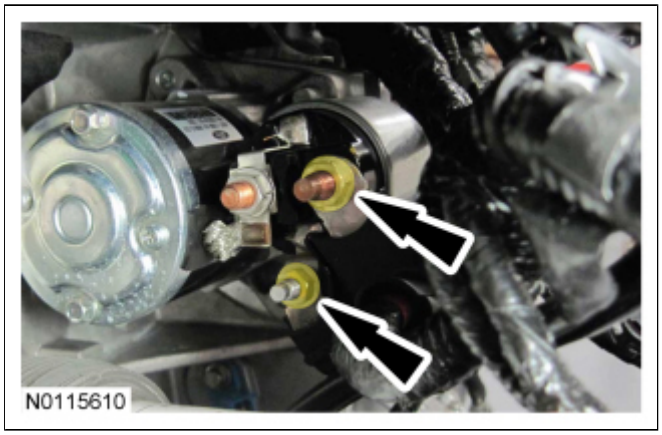
69. Disconnect the Engine Oil Pressure (EOP) switch electrical connector.
    - Detach the wiring harness retainer from the engine block.



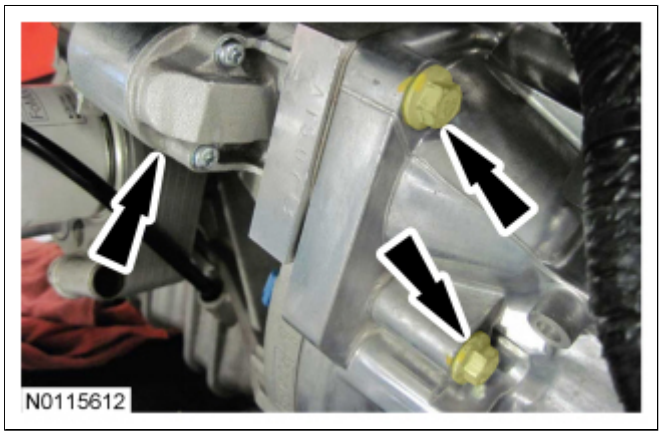
70. Disconnect the RH KS electrical connector.
    - Detach the 2 wiring harness retainers from the intake manifold.



71. Remove the 2 nuts and disconnect the starter motor electrical terminals.



72. Remove the 3 bolts (2 shown) and the starter motor.



73. Detach the wiring harness pin-type retainer and remove the 2 upper bellhousing-to-engine bolts and bracket.
